A JEWELER'S TREASURES.

All Gold Does Not glitter—Diamonds for Forty Cents—imitations.
Sometimes I think that the adage, "all that glitters is not gold," needs to be re-constructed by people in our line of business and made to read, "all gold does not glitter," remarked one of the leading manufacturing jewelers of Pittsburgh who exhibited several pieces of gold, as neatly pure as it can be, and still be worked to good advantage. The material looked very much like old brass, and was so dingy and unattractive that some of the people would have pronounced it gold. Two small straight pieces, in shape and size exactly like small horse-shoe nails, were shown, and these, the jeweler said, would be transformed into the main portion of a finger ring, after being bent, shaped and properly joined together. The pieces designed to form the top of the ring in which the stone is set, is separate. It is shaped like a tray, having been given this form by a die or stamp, by means of which it was cut from a piece of rolled gold.

The manufacturer next unlocked the safe and brought forth some of its rare and valuable treasures. He showed diamonds, rubies, pearls, emeralds, sapphires, amethysts and scores of other precious stones, and also a large sack of "hand," said the jeweler, "much larger than the eastern manufacturers, who are able to send out and buy for you at any time. A good deal of our work consists in the making of badges, pins, medals and other things, and we have a large assortment of precious stones for sale, and we have diamonds of every size, ranging from large and perfect stones several carats in weight and worth hundreds of dollars, down to the tiniest speck, costing less than half a dollar. Yes, you can buy a genuine diamond for 40 cents, but it won't be large enough to be remarkable. Besides, too, we have in great numbers, some larger than peas and others smaller than pinheads. The greater part of these are cut and polished abroad. Even the California diamonds, which are said to be the finest in the world, are cut and polished in the Pacific coast, and are sent to the hands of German lapidaries, who then bring them back to the country to be set in jewelry. The greater number of precious stones are imported, and we have to be cut, making what are known as half pearls.

We also have a large stock of imitation stones. Every real gem is imitated, and the more precious the stone the greater will be the number of imitations. Many of the imitations are so perfect that they are not easily distinguished from the genuine. All stones for jewelry are bought by us, cut and polished and ready for use. They are all graded according to the French measure, and the packages containing them are marked with the exact weight in milligrams. Take this line of goods, for instance, you will observe that each has the same pattern running through all the different sizes. Fashion runs in jewelry as in everything else. A stone at one time very delicate and in vogue, may be out of style in a few years. Hence, unless we take the utmost care, we are liable to have an accumulation of costly material on our hands, with no chance of getting rid of it. Our fashion's caprice brings it about that we have a large stock of imitation stones. Every real gem is imitated, and the more precious the stone the greater will be the number of imitations. Many of the imitations are so perfect that they are not easily distinguished from the genuine. All stones for jewelry are bought by us, cut and polished and ready for use. Many of the imitations are so perfect that they are not easily distinguished from the genuine. All stones for jewelry are bought by us, cut and polished and ready for use. They are all graded according to the French measure, and the packages containing them are marked with the exact weight in milligrams. Take this line of goods, for instance, you will observe that each has the same pattern running through all the different sizes. Fashion runs in jewelry as in everything else. A stone at one time very delicate and in vogue, may be out of style in a few years. Hence, unless we take the utmost care, we are liable to have an accumulation of costly material on our hands, with no chance of getting rid of it. Our fashion's caprice brings it about that we have a large stock of imitation stones. Every real gem is imitated, and the more precious the stone the greater will be the number of imitations.
