Synopsis of Canadian North-west Land Regulations.

ANY person who is the sole head of a family, or any male over 18 years old, may homestead a quarter-section of available Dominion land in Manitoba, Saskatchewan or Alberta. The applicant must appear in person at the Dominion Land Agency or Sub-Agency of the district. Entry by proxy may be made at any agency, on certain conditions, by father, mother, son, daughter, brother or sister of intending homesteader.
Duties—Six months' residence upon and cultivation of the land in each of three years. A homesteader may live within five miles of his homestead on a farm of at least 80 acres solely owned and occupied by him or by his father, mother, son, daughter, brother or sister.
In certain conditions a homesteader in good standing may lease a quarter-section of available Dominion land for six months in each of six years from date of homestead entry (including the time required to earn homestead patent) and cultivate fifty acres extra. A homesteader who has exhausted the homestead right and cannot obtain a pre-emption may take a purchased homestead in certain districts. Price \$2.00 per acre. Duties—Must reside six months in each of three years, cultivate fifty acres and erect a house worth \$300.00.
W. W. CORY, Deputy of the Minister of the Interior. N. B.—Unauthorized publication of this advertisement will not be paid for.

CONSCIOUS AS LION CHEWED

African Hunter, Whose Aim Was Bad, Severely Maulled.
London. — Frederick Courtenay Selous, the well-known African hunter and naturalist, who is back in England after several months spent in the region in which Col. Roosevelt has been displaying his prowess, describes rather realistically the unfortunate encounter in June of Harry Williams, one of William N. McMillan's hunting companions, with a lion, which left his wicker marks upon him. Williams' escape with his life was very narrow, and it was for a long time a question whether he would not be compelled to sacrifice a leg.
It appears that Williams has nerve enough, but scarcely the cool judgment necessary in facing the fiercer beasts of the jungle. If Roosevelt errs seriously, says Mr. Selous, it is in holding his fire too long, thus vastly increasing the risk in the event of his missing. On the other hand, of course, the aim is all the surer from the shortening of the range. Williams' fault was of exactly the opposite sort. He fired too soon.
Going through grass about breast-high with his gunbearer one day, a lion suddenly arose and started to move away from them. This behavior, by the way, Mr. Selous says, is not at all unusual. Williams was anxious to get the lion, and clapped his hands to irritate it. It turned and walked toward the hunter, but the distance between them was started several hundred yards. Williams took aim, but instead of waiting calmly until the beast had drawn comparatively near, fired prematurely, one charge of his heavy gun immediately following the other. The first ball flew wide and the second merely grazed the lion's shoulder. Then, lashing his tail in intense anger, the great cat came forward by leaps. The gunbearer had another gun, but there was no time for him to hand it to his chief. There were no large trees near by that could be climbed. The only semblance of protection was a young bamboo copse and around this Williams ran. In less time than it takes to tell it, the lion had him. He seized one of his legs and sank his teeth deep into it. Luckily the lion, who was an old fellow, had lost one of his longer tusks, but the corresponding one on the other side of the jaw passed just between the two bones of the legged lion, and then the lion, with his grip upon him, shook the unlucky hunter as if he were a dog, and he was caught in a similar manner.
Williams' life at that moment was worth only a very small purchase. One stroke of the lion's paw upon the head would have finished him. All this time the gun-bearer was displaying a grit unusual in his kind. He had approached the lion, striving to discharge the other gun. But he did not understand the method of working the gun. Try as he would, he could not inject a cartridge into the firing-chamber. In tones of entreaty he asked Williams how it was done. Though suffering great agony, the hunter retained his consciousness. He gave the needed directions while the lion was ravenously chewing his leg. The lion's fire was limited only by the beast, and it rolled over dead. Yet it proved a rather difficult task to withdraw its teeth from the wound in Williams' leg. The latter was taken as quickly as possible into camp and one of the Uganda railway surgeons was summoned.
It was found after a few hours that poison from the fang of the lion had infiltrated the flesh, muscles and tendons around the bones of the leg. The consequent inflammation was severe and threatening. Unfortunately the compound was permitted to heal too rapidly in the outer part and thus was closed before the septic suppuration had ceased. Several operations were performed to save the leg. At last accounts Mr. Williams had not yet wholly recovered, but he has, at least, the satisfaction of owning the skin of the beast that mauled him.

The Work Cure.

If his stomach refuses to perform its legitimate functions and digest the food he puts into it, what is he to do? An answer is given in a recent article on "The Work Cure" by a prominent physician. He cites the case of a young man who got into such a condition that his stomach gave him pain whenever he put any food into it.
The young man cut down his diet until he was reduced to a mere skeleton, but still his digestion was no better. The specialist he then consulted told him he must eat whether his stomach hurt or not; that he must force his stomach to work. He did so. He hid defiance to the rebellious organ and it surrendered and set about performing its functions. He is now, the narrator says, a well man.
This case serves as a text for a prescription of the work cure for all kinds of ailments, physical and mental. The doctors cite the natural phenomenon of the river purifying itself by running and the fact that everything in nature is in a state of motion. The essential thing is to get an invalid to start to work. "If you wait until you feel able to work before you begin, you will never begin at all," he declares.
It is nothing new to sing praises to the healing power of work. Poets and philosophers and practical men have done it in all ages; but to prescribe work for a run-down invalid is something out of the common.—Minneapolis Tribune.

THE FARM

Hale, the well-known peach expert, says the white-fleshed peach is coming to be in great demand wherever quality is sought for, and, as it is more hardy than the yellow-fleshed, it is better for the grower in a cold climate. He further says the Greensboro is the earliest good peach; Waddell requires rich feeding and severe thinning; Champion, the most delicious-flavored peach we have, requires severe thinning; Belle of Georgia, good quality, handsome; Elberta, handsome, of inferior quality, but the best seller and a sure money-maker; Crosby, yellow-fleshed, but hardy, can get good-sized fruit by high feeding, and excessive thinning, has extra small pit, fine-flavored flesh; Hill's Chili, late, but a fine keeper, needs excessive feeding and good thinning.

Some trust growers believe that the most appropriate time to plant an apple orchard is in the fall, from about the last of October till the middle of November, when the ground is loose and moist enough to work well, but not wet and sticky. At that time the growing season is over and the trees will hardly be injured at all by the change from nursery to orchard. The roots that have been cut in digging and preparing for re-planting will callous over, and the ground will settle firmly about the roots, and in the spring the trees are ready to awaken into new life without a check to their growth.

A packer declares that the cost of picking a barrel of apples on very large, high trees is 20 cents per barrel, while on low-headed trees the cost does not exceed 7 cents.

The latest estimate is that the Cape Cod cranberry crop will amount to 200,000 barrels this year. Successful hogs in the Cape Cod vicinity are valued at \$1,000 per acre, although made from land which in its natural condition was nearly worthless. It was common swamp land, covered with growth of wood and bushes.

Eggs are used for other purposes than food. Cracked eggs are generally sold to bakers, confectioners and cheap restaurants. Calico printers buy from 5,000,000 to 8,000,000 dozen eggs a year in the United States, mostly bought in New England markets. It is claimed that one biscuit firm in New York buys 4,000 dozen eggs a week, or more than 200,000 dozen a year. Coffee roasters, manufacturers of photograph supplies, cracker and biscuit makers and the chemical trade are estimated to use in the United States 80,000,000 dozens a year. The makers of patent food preparations, tanners, liquor refiners and dye manufacturers need a great many eggs in their business.

A Maine dairyman has found the keeping of hogs and converting them into sausage a profitable side line. He has erected a sanitary slaughter house, with all the up-to-date conveniences, and with an ample supply of both hot and cold water. The piggery is also constructed on plans which insure the highest degree of sanitation, and the pigs are kept clean and healthy. The sausage are packed in oil and paper in one-pound boxes and in bags and find a ready sale to city customers at very attractive prices.

The best plan for ridding the fields and pastures of noxious weeds is to cut all of them out this month, before they get to seed. If no seeds are allowed to form, the crop will at least be reduced next year. Many of the weed seeds are biennials, blossoming and seeding the second year, hence by keeping them from going to seed the second year they will die and that will be the last of them. The Canada thistle belongs to this class.

Hardwood trees in the forest are attacked by many enemies. The mistletoe, the "witches' broom," and the southern mosses are all parasites that weaken and even destroy the trees. But by far the greater number of diseases of trees are caused by fungus growth. Some fungi destroy the leaves, some rot the roots and some girdle the bark. Chestnut orchards have been destroyed in many places in the east by a kind of fungus which girdles the bark and kills the tree. Then there are many kinds of fungi which rot the wood of standing trees, with no outward sign until after several years, and seeding the ground. The white-heart rot is the most dangerous of these. It attacks the oak, walnut, hickory, beech, maple and many other trees. The heart wood of the tree is changed by the action of the fungus into a light-colored, flaky sort of substance which has no strength and can no longer be called wood. Such a tree may live for many years, even though badly diseased, but it has no value for timber.

The great secret of the enormous yields made by the French farmers lies in the high state of perfection to which they have brought their top soils. The top soil can be enriched and built up until its possibilities of production are many times what they may be at the time improvement is begun. The capacity of the soil is limited only by the ability of man to enrich and cultivate it.

To produce the greatest return in next spring's crop of asparagus roots, remove the seed berries while they are yet green. This will take time. The foliage must not be seriously interfered with. The usual way, however, is to

TALK WITH AIRSHIPS

U. S. Signal Lieutenant Completes a New Device.

Washington, Sept. 24.—Commander Cleland Davis and Lieut. G. C. Sweet, the naval officers having in charge the selection near Washington of the site for the 37,000 mile radius wireless telegraph station for the Navy Department, consider it probable that the plant will be erected on the top of an old reservoir at Georgetown, near this city. The station will have the greatest radius for wireless telegraphy in the United States. From this the Navy Department will be able to communicate with war vessels in the Caribbean Sea or at nearly every port in the West Indies. The tower, which will house the powerful wireless apparatus, will be built of steel and concrete, and will be more than 600 feet in height.

The army, too, is paying much attention to both wireless telegraphy and wireless telephony. Lieut. Frank J. Lahm, chief of the aeronautical division of the United States Signal Corps, has just completed a wonderful little wireless telegraph apparatus for use in aeroplanes, or in free and dirigible balloons. While allowing of communication for about three miles between aeroplanes, or between aeroplanes and stations on the ground, it will, it is thought by Signal Corps officers, be of much value in case of warfare in the clouds.

The whole apparatus occupies the space of a small suit case. Instead of a long pole, at the top of which the Hertzian waves are caught, as in earth stations, a wire is dropped from the airship equipped with the apparatus, and communication is made at the end of that. As soon as these wireless stations can be manufactured each airship will doubtless have one.

At Fort Myer, Va., and Fort Omaha, Neb., the Signal Corps has for some time been conducting experiments with wireless telephony. Brig-Gen. Allen, chief signal officer, recently returned from Shenectady, N. Y., where he investigated a type of wireless telephone apparatus now being manufactured by an electrical company of that city. Gen. Allen said to-day: "We expect these instruments to be, in their particular field, what the Wright aeroplane is in aeronautics."

The experiments in wireless telephony at Fort Myer and at Fort Omaha have attracted little attention, but Signal Corps officers declare that remarkable results were obtained.

NICE FOR TAFT.

Bomb Found Near Platform Where He Meets Diaz.

El Paso, Tex., Sept. 24.—A bomb was found last night in the rear of the custom house at Juarez, Mex., a few feet from the platform which was erected for the meeting between President Taft and President Diaz on October 19th. The police say that ten more arrests will be made here to-day. The authorities at once started an investigation, making thirty arrests within a few hours.

MRS. BESANT

Now Recalls That She Was Hypathia and Bruno.

Cleveland, Ohio, Sept. 24.—Intimate friends of Mrs. Annie Besant, president of the Theosophical Society of the World, declared here to-day that her leader had confided to them that she was a reincarnation of Hypathia and Gloriano Bruno.
"It is certain that Mrs. Besant has been Hypathia and Bruno," said Mrs. E. O. Peets, president of the Cleveland Theosophical Society. "She remembers all—every day of her existence as those characters."
Mrs. Besant told her hearers that one of the strongest proofs of her claims that she is a reincarnation of the two characters is that she has been persecuted throughout her life. She avers her former selves have just been revealed to her after twenty years' hard study in England and India in an effort to clear her past.

During the time of Confucius, Mrs. Besant says, she lived as different characters, but she cannot recall their names. She predicts that she will live again.

SHOT HIMSELF.

Plattsburgh, N. Y., Sept. 24.—Frederick L. Hinds, of Ausable Forks, a well-known Adirondack hotel man, committed suicide last night by shooting himself in the head with a rifle. Temporary insanity resulting from injuries received from a recent fall from a horse is supposed to have been the cause.

Not So Bad.

Nervous Lady—Don't your experiments frighten you terribly, professor?
I hear that your assistant met with a horrible death by falling 4,000 feet from a balloon.
Professor—Oh, that report was greatly exaggerated.
Nervous Lady—Exaggerated? How?
Professor—It wasn't much more than 2,500 feet that he fell.—Puck.

A WANT AD IN THE TIMES IS A WANT AD IN THE HOME
