DESIRES to briefly outline the contents of his little

PRODUCTION OF COMB HONEY."

The "Introduction" gives a concise sketch of the pathor's experience in producing comb honey, and experience in producing comb witten. The first the advertise of the Harvest," Securing Workers for the Harvest," sets forth protection, "Aside from food in abundance, warmth is ing, a great thing needed to promote safe, early breeding, the first production of the production the one state in a state from food in abundance, warming ing." The cheapest and best method of securing this is abuse his favoring sease, and gives reasons for the Sames his favorite surplus case, and gives reasons for the preterence.

The next topic is that of "Separators." Their advansee and disadvantages; the conditions under which they Rea and disadvantages; the conditions under which they been and disadvantages; the conditions under which they head and the methods necessary to their abandon-the good briefly told. Then "Sections" are taken up; The needs alsa ovantages, where the dealer of the state of the different kinds mentioned; the state of the sta

baving them for putting them on given and the spring saling them filled with comb, especially in the spring of them filled with comb, especially in the spring of them filled with comb, especially in the spring of the saling of this system are explicitly describble to handle a "honey-shewer." Then follow: "Hiving a "honey-shewer." Then follow: "Hiving shade a "honey-shewer." Then follow: "Hiving of the saling of the saling with full sheets of foundation in the saling of the saling with full sheets of foundation in the saling of the saling with full sheets of foundation in the saling of the saling of the saling with full sheets of foundation in the saling of the saling of the saling with full sheets of the saling of the sa

MYERS 1887 CIRCULAR OF

BEE-KEEPERS

BEES, QUEENS, FOUNDATIONS, &c.,

Free to all. We would call special attention to Smokers as manufactured by us, we guarantee every one. The barrel is made of iron, the nozzel is tin and so arranted that embers cannot be blown among the bees, the sliding door at the rear of the barrel together with the strip of sandpaper on the bellows, enables us to light the smoker almost instantly with a match. The bellows is so constructed that fire cannot get into it, the spring is on the outside and can very easily be replaced if broken without injuring the bellows. We also manufacture the "Clark cold blast smoker" the same as made by A. I. Root, of Medina, Ohio. Price of smoker with 3 inch barrel \$1.00, 2\frac{1}{2}\text{ barrel 75 cents Clarks cold blast 50 cents, by mail each 30 cents extra. For wholesale rates send for Illustrated Catalogue to Free to all. We would call special attention to Smokers atalogue to
