

the wounds he received, he was carried, in derision, to all the breaches made in the walls, loaded with buckets filled with earth and mortar, and ordered to kiss the ground as often as he passed by Mustapha; a spectacle that raised pangs of pity, in the callous hearts of the meanest Turkish soldiers, but could not move compassion in the obdurate breast of Mustapha. Afterwards the brave Bragadino was cooped up in a cage, and ignominiously hung to a sail-yard in one of the galleys, where his intrepid soldiers were chained to the oars. This sight rendered them almost furious; they exclaimed against the baseness, the treachery of Mustapha: They called aloud for revenge, and desired to be set at

liberty, that they might, even without arms, rescue their brave general, and inflict the deserved punishment upon their mean, dastardly, and cowardly foes. Their request was answered with cruel lashes; Bragadino was taken down, conducted to the market-place, amidst the din of trumpets, drums, and other warlike instruments, where he was stayed alive, and a period put to his glorious life. His skin was hung, by way of trophy, to the sail-yard of a galley, sent round all the coasts to insult the Venetians. In which manner perished the intrepid Bragadino, who suffered equally by the dilatoriness of the republic, and the barbarity of an haughty enemy.

METHOD of preserving CABBAGES, RADISHES, TURNIPS, and other such PLANTS, from the GAME and INSECTS.

[From the European Magazine.]

PLANTS cultivated in the open field, where there is a great deal of game, are liable to be consumed, especially by hares. This is a very great misfortune in those places where a great deal of cabbage is planted; and many methods have been used to prevent it, though without success: That we are going to prescribe may be tried with great safety, seeing every time it hath been employed, it has always produced the desired effect. The misfortune must be prevented at the time of planting. For an acre of ground take two ounces of *Asa Fœtida*, such as sold by the apothecary or druggist; put it into a small pot full of dung-juice, and boil it until the whole is dissolved; then empty this decoction into a shallow tub, add a pint or two of dung-juice; stir it well with a piece of wood, and carry it into the field for use. All the plants, before they are put into the earth, must be steeped in this composition, in the following manner: A person must be expressly employed in preparing them, for being planted. Take as many of them as you can clasp in both hands, and dip them in the prepared matter, so that each plant shall be moistened in every part. This being done, lay them in heaps upon the ground, and sprinkle a little earth upon the roots. Distribute the plants, thus moistened, to the planter, who must immediately set them, in holes prepared for that purpose; then press the earth against the plant with a piece of wood made for that use, and con-

tinue so to the end. No game will touch these plants; but on the contrary avoid them with great abhorrence and precipitation. Yet, the plants which are either not at all, or not sufficiently sprinkled will soon be discovered and eaten by the hares; so that the place must be replanted. There is no danger of the plant's contracting any bad scent from this preparation; for the sun and air will purify it in time. As for caterpillars, and other insects, which bite the young cabbage plants, radishes, &c. They may be prevented very easily by the following remedy:—Take a pail of dung-water, and infuse into it, of *Asa Fœtida* 6 dw. Woad 3 dw. Garlick 3 dw. Laurel berries bruised 3 dw. leaves or tops of Elder, one handful; Carline, White Cameleon, or Thistle root, one handful. Let the whole digest for three days and three nights. When you have occasion to use this composition, take a whisp of straw, and dipping it in the pail, sprinkle the small plants that are infected by those insects, which will soon perish or forsake the place.—To this remedy we will add another, which is infallible against the caterpillars in cabbage. Sow with hemp all the borders of the ground where you mean to plant your cabbage, and you will see, with surprize, that although the neighbourhood is infected with caterpillars, the space inclosed by the hemp will be perfectly free; not one of the vermin will approach it.
