JUNE—In the Eastern portion of Canada, there is a good deal of work to be done in June. If the season is not advanced by what we call an early spring, corn planting must be promptly attended to. There is no need for advice about selecting good seed, and using a proper supply of superphosphate of lime. These are essential to a good crop. What we have too often noticed is the too great number of plants in a hill, and carelessness about the extirpation of weeds. If the season be wet and warm, these will develop rapidly. They should be kept down by frequent working. If the season be forward, the growth of stalk may be excessive. Remove the suckers from the roots. They are harmful to the fruit-bearing plant. We observe a disposition toward a greater cultivation of corn in Canada. With care it will be productive and profitable.
