OUESTIONS AND ANSWERS Miscellaneous.

ALFALFA ON HILLSIDE

I have about one acre and a half on side hill which is quite gravelly, and at present seeded down. Would it be advisable to plow it this spring and seed down with alfalfa?

Ans.-Alfalfa usually does well on high land. It would likely be advisable, if you break up the hillside in order to sow it to alfalfa, to work it for a season, or grow some hoed crop, giving it a good dressing of barnyard manure. The alfalfa could be sown the following spring with or without a nurse crop, or it could be sown this year in midsummer, after a thorough fallowing. It would also be advisable to inoculate the seed with culture, supplied by the Bacteriological Department of the O. A. C.

IRON PYRITES

A child at play found a pretty stone rough, but about the size of a small hen's egg. It was filled with bright specks, and the child put it in a large spoon in a hot wood fire. In only a few minutes the spoon was found to contain a small amount of bright yellow metal was seen by older members of the mily, but unfortunately was lost while not. There was perhaps a little more than half a teaspoonful, heavy, and very bright. Would this metal be gold, or are there other yellow metals so easily melted? What is the law governing the finding of minerals?

Ans .- The mineral was probably iron pyrites-sulphide of iron-when melted, left a yellow trace on the spoon, but was consumed by the fire. Neither gold nor any other metal found in this part of the country could be melted in an open fire. This form of iron is quite common in the drift. The law governing minerals depends altogether on the wording of the S. WOOLVERTON. deed.

PROBABLY RINGBONE.

Mare four years old has ridges on hoofs of fore feet, just below the hair. Heels seem rather large also. She is lame when travelling on hard road, and in stable keeps them pointed in front of her.

1. What is the trouble with her? 2. Is it curable?

3. Kindly prescribe treatment. SUBSCRIBER.

Ans.—The symptoms indicate ringbone. (lip the hair off the parts and rub well with a blister made of biniodide of mercury two drams, cantharides two drams, and vaseline two ounces, daily, for two days. Tie so she cannot bite the parts. On the third day apply sweet oil. Oil daily until scale comes off, then repeat the blister. Repeat the blistering three times, allowing three or four weeks between, and if not cured call in your veterinarian. Obstinate cases require firing and blistering, performed by a competent veterinarian. She may have some other trouble. The pointing indicates navicular disease.

STAGGERS IN PIGS.

What is the trouble with my pigs, and how can I treat them? I have a pen of 14, about 10 weeks old. They have een weaned about three weeks. When go to feed them they rush to the trough, and the moment they get a mouthful or so of food, they will tumble over in a sort of a fit and lay there quivering several minutes. When they come to again they will go back to the trough and eat a hearty meal. Every feeding time three or four will take these spasms and stiffen right out. I am feeding them on milk and shorts. I have nipped a piece off their ears and tail, and they seem to bleed an immense J. O. C. lot, but does no good.

Ans.-This trouble occurs not infrequently with young pigs in winter even when in apparent health and doing well. It usually occurs when the pigs are feeding The cause, while not well understood, is usually attributed to indiges-Eating too fast may cause it. thange the manner of feeding for a time. Fred meal dry for a few days, and give the will and milk separately. This may ind by slower eating and better dires Feed the milk and swill warm. Air food which tends to relax the howand keep charcoal, ashes, old sods It where they may take it it wi

F. E. PETTIT. Burgesaville, Ont.

has the "Teat Cup with the Upward Squeeze," which pushes the blood back with each pulsation, overcoming the stumbling block of all former mechanical milkers. It leaves the teats in a perfectly normal condition, the same as after hand milking. The cow is treated so gently she enjoys it, and fears no injury, no abuse. She stands perfectly contented giving down her milk more readily and more freely than when milked by hand. The yield is increased—your dairy profits grow. Read this letter from Hon. Wm. C. Sproul, Chester, Pa.

"The Sharples Mechanical Milker seems to be entirely comfortable to the cows; in fact, our cows are in much better condition now than they were when the milker was started, and the quantity of the milk has increased about ten per cent. Altogether, I consider it about the most satisfactory investment about my dairy."

Fill Out the Coupon—Send for Catalog Today Let us tell you how we will put a Sharples Milker in your dairy and guarantee it to give you perfect satisfaction or no sale. We prove it does the work to your satisfaction. We give you ample time for trial. Send the coupon now for catalog. Guaranteed by a company that has been making high-class dairy machinery for 31 years.

THE SHARPLES SEPARATOR CO WEST CHESTER, PA. Chicago, Ill.; San Francisco, Cal.; Portland, Ore.; Dallas, Tex.; Toronto, Can.; Winnipeg, Can.

The Sharples Mechanical Milker has few parts, is easily cleaned, and pro-duces milk of the lowest bacterial content. It milks the cow cleaner than the average hand milker. SHARPLES THE MECHANICAL MILKER
