THE FIRST RUBBER SHOES.

They Melted In Summer and Becar India rubber shoes were first manu-actured in Roxbury, Mass., in 1833, and refily they were "fearfully and wonder they were "fearfully and wonder made." They really bore no re-ance whatever to a shoe. The semblance whatever to a snoe. Aney had the appearance of having been run into molds or blown, the same as glass bottles are made. They were made of pure rubber gum. No attempt was made to imitate the shape of the shoe or foot they were intended to cover. In

foot they were intended to cover. In shape they were hollow tubes, tapering At the place where the opening to pull on the overshoe should be was an irregular hole, without shape, just as they came from the mold. The hole was enlarged with a sharp pair of shears to fit the instep, or cut high or low to suit the taste or caprice of the customer. The work was done by the salesman after the buyer has selected, according to his requirements, heavy or light, thick or thin. Men's sizes were very heavy, the soles being frequently from one-fourth to a half inch in thickness. They were tied in pairs and stuffed with straw or hay to keep them in shape for shipment. A lady's foot, incased in such a huge, ill shaped mass of india rubber gum, weigh-

mass of india rubber gum, weigh shaped mass of india rubber gen, ing at least a pound, presented a clumsy appearance, indeed, particularly when compared with the light and truly are the present styles. appearance, indeed, particularly when compared with the light and truly artistic appearance of the present styles. The first attempt at making overshoes of india rubber did not prove a success, a large amount of capital being sunk in the experiment, as well as all the unsold stock. 'They answered the purpose in cold weather, but would not stand the heat, melting into a disgusting mass.

Experiments to remedy this difficulty resulted in reaching the opposite extreme, the cold weather freezing them brittle, so they could not be drawn over the shoe until they were thoroughly warmed, and this obstacle to success was not overcome until Charles Goodyear discovered his process of vulcanizing rubber, which has rendered his name immortal.

Expedity following this area of improve-

RADIATED HEAT.

An Easy Way to Cure Poisonous Wounds of All Kinds. Wounds of All Kinds.

The early application of radiated heat has been a long time known as an effective antidote to bites of snakes, insects and to punctured wounds, as from fish fins and sharp inanimate bodies.

I cannot recall reading this fact anywhere, yet I think that it is well known, and, like Wau-Kau-Mah, I mention it for the benefit of the readers of Forest and Stream. Even those who are "chained to business" may use it, as it is good for

usiness" may use it, as it is good for pider bites.

Dr. Constantine Hering, a noted science.

Dr. Constantine Hering, a noted scientist, who died in Philadelphia in 1880, aged 81 years, was the first person I know of who had used radiated heat to antidote the poison of a snake bite. This he did in his own person and successfully antidoted the virus of one of the most poisonous snakes of South America, the Lachesis trigonacephalus. It seems strange that, although the fact of radiated heat is so generally known to be an antidote to all kinds of virus, it is so seldom used as such.

Those who huut and fish usually have the means at hand to supply it. I have used a lighted cigar, a bunch of waste, a pine torch, the flame of a gasoline lamp, but, best of all, the glowing ombers of the campfire.

he campfire. When the fin of a fish punctures the When the fin of a fish punctures the finger or the hand, a sharp pain usually ensues and may extend from the wound up the arm to the shoulder. This pain is often excruciating and sickening. Hold the wound close to a redhot ember or anything giving off an equal amount of heat, and you will note that in a minute or two all the pain is gone and that it is seldom necessary to repent the application of heat. Healing takes place without further attention.

When the face or other parts of the body are tingling and burning and itching from mosquito bites so that it is impossible to go to sleep, give the parts a dose of radiated heat, and you will go to sleep without further annoyance from the old bites.—Forest and Stream.

without further annoyance bites.-Forest and Stream.

A Wall Street Conundrum

But wait a minute. It is selling at

tomer.

"Yes, sir," the old man explained. "I asked my wife about it last night, and she insisted that I should sell the 100 I bought at 76. I did arithmetic for her for three hours, but she insisted that I might should not take a loss when I might just as well have a profit. I thought just as well have a profit. It doubt you might make it simple enough to me to enable me to make it possibly clear to her. But I guess I'd better just do as she says. Sell the 100 I bought at 76, please."—New York Commercial Advertises.

A Budding Novelist.

A boy of 13 sends a story of a German who, being pursued by a policeman, ran into the store of a friend, who was a crockery merchant, and hid himself in a bng. The policeman, coming in after him, knocked on all the bags and baskets to find out where he was. When he came to the bag where the German was hid, he knocked and, not bearing the rattle of china, said:

"The German must be in here, for it it was china it would go 'tinkle, tinkle."

"Diugle, dingle," said the German inside.

"The German must be in here, for it it was china it would go 'tinkle, tinkle."

"Diugle, dingle," said the German inside.

The boy neglects to state whether or

the policeman was deceived.—San Near a certain quarry in Italy is a town the inhabitants of which pay no rent or taxes. They are quarry employ-ees, who have dug dwellings in the face of a steep rock.

THE TRUSTS.

ciation never killed a flea, and ever kill a trust.—Memphis Com-

There are several difficulties in the ty of making trusts effective, but the ief one is the inability to coax all the silable capital into them. As long as is impossible to do this there can be lead pipe cinch on the consumer.—San neisco Chronicle.

THE SHAMROCK.

The Shamrock may be a fast boat, too ut she will find in the Columbia a forman worthy of her aluminium.—Boston

Sir Thomas Lipton's yacht, the Saam-jek, will bear a coat of arms consisting a tea plant flower and a coffee blossom. Mr. Iselin will decorate his vessel with hop vine, everybody will bet on the olumbia.—St. Louis Globe-Democrat. Columbia.—St. Louis Globe-Democrat.
The report that Sir Thomas Lipton was all smiles at the second victory of his yacht over the Britannia, is by no means incredible. However, it remains to be seen if, after the Shamrock has sailed against the Columbia, he will continue wearing of the grin.—Boston Herald.

FRANKVILLE FAIR PRIZE LIST.

stood what was bothering him. The post herd also had waded through here since Brice's escape, and it took all the since Brice's escape, and it took an the scout's endless patience and wonderful eyesight to keep the trail where the Mikado, W G Richards Herbert Brezee, James Whitmore. Covered buggy Stewart Montgomery, C H

crow flies, for the edge of the slough near the brickkiln. Was he following the trail?

On he went until he came to the shore nearest the kiln; here he stopped, evidently bothered again. There was a scarcely discernible footprint in the mud and water right at the edge of the slough, apparently the last step the deserter had taken before reaching hard ground. This footprint showed the toes, so the deserter was now barefooted. Another thing about this print was its direction; it stood at right angles to the line previously followed. Either the man had taken a sideward spring for the land from his right foot, or he had turned around and started back over his own trail.

The same idea evidently instantly occur-red to both of us. The trail was lead-ing to the kiln! Then he rose, and, bending over, slowly advanced to the edge of the brick star. ton. Mower, Wm Reynolds, Joel Church, Wm Mitchell.

Dr. Von Stan's Pineapple Tablets Ribbon velvet will remain very much in vogue as a smart and becoming style of garniture, easily applied and endess in its novel and enriching effects.

There is a decided return this season to the delibertally soft and elingre an unfailing and delicious remedy for dyspepsia and all the distressing consequences of impaired digestion There is a decided return this season to the use of the delightfully soft and clinging camel's hair fabrics which have been displaced by the heavier faced fabrics.

Lace or net blouse vests beneath garcon de cafe or Eton jackets of satin or velvet are frequently seen among pretty autumn evening dresses. Skirts of satin, cloth or silk are worn with these jackets. Shades in yellow are among the fashionable tints, rivaling the new beautiful pink dyes in favor. Sunset is a brilliant, shade that appears among new matelasses, evening satins and soft bengalines.

shade that appears among new matelasses, evening satins and soft bengalines.

Many women of leisure who are skilled
in the art of fine embroidery are making
satin vest fronts, wrought in delicate
patterns in shaded silks, to be worn beneath open fronted coats of velvet or
cloth, finished with satin revers.

Besides the smart tailor costumes made
with five gored foundation skirts, a down
sweeping overdress quite as long as the
underskirt on the sides and at the back,
and a close fitting jacket, are the suits
showing a princess overdress.

The tendency most-evident in all that
fashion offers is still toward the svelt and
clinging effects of the past season, with,
however, simpler outlines, less of elaborate decoration and a natural reaction in
the matter of cutting up yards of expensive material into frills and furbelows. sufferers." C. Spooner, Editor King's County News, Hampton, N. B. Sold

AN INDIAN DETECTIVE SIOUX SCOUT WHO WAS A GENIUS

IN GROUND, READING. traordinary Skill In Trailing a Fugitive-He Had Instinct and a Pair

Arkichita, a typical Indian, was chief cout at Fort Sisseton. Dakota, in 1882. Although he knew English well, he held the old Indian hatred of its use, and would never speak it except under extraordinary circumstances. He stood about five feet nine inches in height, 34 years of age. Ordinarily he was slow and sedate in his actions—very dignified; but when the necessity arose, he could be as quick as a flash, and had, like every Indian on the north-

western plains, a pair of eyes that could equal any fieldglass. His services—for he had been employed as a scout for some years-had been very valuable to the government, and, in recognition of this fact, the officer in command had secured authority from the war department to promote quently he went around in a neat uniform with chevrons and stripes, very much impressed with his own impor-tance, which he considered second only to that of the commanding officer; and

so named; but he had sun mother name, which the Indians had given him before his entering military cir-cles, and that, translated into English, was the "grasswalker," or "trailer," from his absolutely marvelous ability to find the trail of anything that lef even the slightest trace on the ground even the slightest trace on the ground as it passed over it.

A desperate soldier named Brice broke jail one night and was pursued the following morning. The trail led to the west for a trifle over a mile; then it

turned north for a quarter of a mile and we followed until we came to a tree at the edge of a slough to the northwest of the fort, called the "gar-den bar slough." Here Arkichita pointed under the tree and said Brice had lain down there to rest. The trail here led into the slough.

A Dakota "slough" is a shallow lake,
the water of which is from six inches to three feet deep, with a soft, muddy

tule grass grows.

This particular slough was a mile long and varied from an eighth to a quarter of a mile in width, and there was a foot of water covering as much soft mud. During the night the wind had roiled the water up considerably. had rolled the water up considerably. It seemed hardly possible to track anything through it, except where the tule had been broken down. Where that was the case, even I could follow the trail; on reaching open water, where the different seems different.

the case was different.

The eastern end of the slough reached to a point near the fort not more than 150 yards from a brickyard, on which was a kiln that had been built during the summer. The kiln was now ready

for firing.

Once I thought Arkichita was baffled, after all; he had come to a dead standstill near the tule. Then an inspiration struck me; perhaps by a circle I could the standard of the s

I did no more trailing, but under

eyesight to keep the dark where cattle had passed through it. The grass stem was of no use here.

We had passed over half the slough in this circuitous route, when suddenly Arkichita started, straight as the Arkichita started, added of this slough.

his own trail.

Arkichita went down on his knees and inspected the grass, blade by blade. I kept a respectful distance at tone side, astonished at the turn the affair had taken. Now, inch by inch, the server the server the server had been a some side. on his knees, he wrenched the secret from the apparently unwilling surface of the earth. Eighty yards from the kiln, he looked up and glanced at it.

bending over, slowly attanced to be edge of the brickyard.

After reaching the yard, Arkichita walked slowly around the outer edge of it, examining the ground with the utmost care, until he came to the point from which he started, when he said, "Trail come in-no go out; man in there." pointing to the kiln.

And circumstances proved him to be right, though it was 36 hours before the fugitive was located in the kiln and captured.—Lieutenant W. C. Bennett, U. S. A., in St. Nicholas.

A LA MODE.

that when the door is open nothing in the shape of dirt can work in. This also serves as a check to any one who might thoughtlessly proceed to enter without having first removed his boots and put on the overalls that are kept just inside the door. Doors are made to open outward, so as to enable them to escape the more readily, and on the approach of a thunderstorm the works are stopped and the operatives repair to the different watch houses scattered over the 300 acres covered by these extensive works.

Every week the machinery is inspected, and the reports as to its condition are printed and filed. In the case of a danger building needing to be repaired it must first be washed out before a hammer or other iron tool is admitted to it. When artificial light is required, as when working at night or in duil weather, the lights are kept outside, being placed on the window ledges. In the case of the works magazine, which is surrounded with water, no light of any kind is ever permitted near it. These are only a few of the precautions against accidents at the works. They are sufficient, however, to show how lively must be the sense of danger. Men in powder houses usually have an arranged plan of escape in their minds and at the least unexpected noise have not hesitated to plunge into the can.—Cassell's Magazine.

ver blue, beech brown and deep Venetian green ladies' cloth, with long, close princess backs in which the center seam is omitted. The fronts are in jacket form, and the entire gown is finished with machine stitched straps of cloth of a deeper shape.—New York Post.

THE DREYFUS PARDON.

The consensus of opinion appears to be that Dreyfus can stand it if France can.

—Philadelphia Ledger.

-Philadelphia Ledger.

The pardon as it comes from the government is in the nature of an exculpation. It is simply the culminating act of a bargain which removes from the courts of France an appeal from a wrongful conviction—a compounding of a state inconviction—a compounding justice.—Detroit Journal.

The action of the French ministers will The action of the French ministers will improve the position of France in the eyes of the world. Even those who condemn it as a makeshift and confession must admit the desire of the authorities to do something for the condemned man. It may be that his entire vindication will come later.—Providence Journal.

Whatever other things this act of executive policy, miscalled clemency, may

course outer times this act of excettive policy, miscalled clemency, may
do, there are two things it will not do,
it will not remove the black blot put upon Dreyfus' military record by two
French courts martial; it will not cleanse
the blacker blot left by those unjust judgum of refusing even liberty to a victim of the acknowledged injustice of its military system. It substantially removes the cause for that strajued state of foreign opiniop that threatened serious consequences for the country. Especially it dissipates the heat of public dissension in France.—New York Times.

THE ROYAL BOX. The Prince of Wales holds the re as a godfather. He has acted in tha capacity on no fewer than 75 occasions. Queen Wilhelmina of Holland meas ures 42 inches around her bust, which i only two inches less than the bust measure of the portly queen of England.

Prince Ferdinand of Bulgaria is the European ruler whose features most markedly betray his Jewish descent, although, as a matter of fact, nearly all the reigning families have traces of Hebrew blood in the veins of their members.

According to the Constan

According to the Constanzer Zeitung, the sultan has a great affection for Switzerland. "I love it," says the sultan, "beyond all the other states in Europe, and for a good reason—because it sends no embassador to Constantinople to worry me with its grievances."

The German empress is a quiet, easy going woman who never allows anything to worry her for long. She is not pretty, but she has a remarkably pleasant face, and is the sunshine of the court. She is an admirable foil to her husband, and it is owing to an innocent observation of hers that he obtained his observation of hers that he obtained his nickname of "William the Sudden."

JEWELRY JOTTINGS.
