 Each.

Men's Handkerchiefs

White Linen Handkerchiefs, well hemstitched borders; neatly packed in a sanitary box; 2 in each box.

35c
 Box of 2.

Terrors of an Avalanche

AN EVER-PRESENT PERIL IN THE ALPS.

This is the avalanche season. When the thaws begin, the snow which has accumulated during the winter breaks off and slides downhill, knocking over or burying anything that happens to be in the way. Both the material damage done and the loss of life may be appalling.

Even in England avalanches are not unknown. The snow heaped up on the slopes of the South Downs fell, in December, 1836, on the little town of Lewes. Seven cottages were overwhelmed; eight persons were killed and five others severely injured. Happily the fall occurred in the daytime, and many of the inhabitants of the cottages were elsewhere. Had it happened at night there would have been at least forty casualties.

Far worse avalanches fall in the Alps. Sometimes the tail end of a steep glacier breaks off and falls with the snow. Such a thing happened at Randa, on the way to Zermatt, in 1919, and a traveller has given this account of the calamity:—

Blown One Hundred Yards.

"One hundred and eighteen houses," he says, "including barns and stables, were more or less destroyed; all the chimneys thrown down, and the greater part of the houses quite unroofed. A wooden hut, in which were two women, was carried more than a hundred yards from its original site, the women remaining unhurt. All the hay of the village was scattered over the woods and up the mountain."

A more remarkable avalanche occurred at Goppenstein, close to the entrance of the Lötschberg Tunnel, shortly after it was opened. The displacement of the air caused by the avalanche set up a gust of wind of irresistible violence. The wind blew off the top storey of a hotel and deposited it bodily in the midst of a mountain torrent, at the same time reducing the rest of the building to ruins.

Imprisoned by the Snow.

As the disaster occurred in March, few people were in the hotel; but ten were killed and fourteen others were so badly injured that they had to be removed to hospital.

Another avalanche story comes from Bergamo, in Italy. It created such a sensation that a book was written about it and translated into English. The actual casualty list was not long; but three women, working in a stable, were buried alive by it.

It was taken for granted that they must have been killed, and no one troubled to dig them out. At last, after five weeks and two days, the snow melted and they emerged alive. The stable walls—or at all events a portion of them, had withstood the shock. A goat in the stable was injured with the women, and the prisoners lived on its milk until the hour of their deliverance.

The most terrible of all avalanches, however, are those which fall into narrow gorges and completely block the course of mountain torrents.

When the Dam Burst.

The most famous avalanche of the kind was one which fell, early in the nineteenth century, in the upper reaches of the Dranse, blocking the whole valley which descends, like a funnel, to Martigny.

The drying up of the stream in the lower reaches of the valley warned the inhabitants. Engineers were sent for, and an attempt was made to dig a canal through the avalanche and drain the lake. The dam gave, however, before the canal was finished, and the resulting flood swept away practically every house in the Val de Bagnes and destroyed a great portion of Martigny itself.

Avalanches have been started by the most trivial causes. Even a whisper has been known to set them off, and many a life has been lost by a climber shouting to his comrades while crossing a snow slope. The tinkle of sleigh bells was said to be responsible for a terrific fall which swept away a caravan of sleighs crossing a dangerous Alpine path some years ago.—The Bits.

London's Leaning Dome

No one knew until recently that London has its leaning tower. Now it is believed by experts that the dome of St. Paul's Cathedral was built crooked, and that the foundations on one side settled more than on the other long before the dome was completed. The crookedness, it is alleged, was compensated for in the course of the dome's erection, but it has always been out of the straight; in other words, it is a leaning dome!

It is not a visible defect, like that of the leaning tower of Pisa, the most famous in the world. This tower, or campanile, overhangs its base by upwards of thirteen feet, and for long it was supposed to have been purposely built in this way. This is a mistake, however, for it is owing to the same cause alleged in the case of the dome of St. Paul's.

Not everyone knows that at Caerphilly, in Glamorgan, there is a tower which leans eleven feet in eighty. Even the Pisa tower leans only six feet in the same height.

Boals Rolls—The medicated real fruit for constipation. Price 20c. at McMurdo's.—apr.31

ACADIA ENGINES!

Labour Alliance

FOUR GREAT UNIONS MAY UNITE.

"The first step towards a great labour alliance in view of any future emergency," was taken by the executive of the Miners' Federation at Blackpool recently. Concerning this proposed alliance, Mr. A. J. Cook, the general secretary, submitted correspondence which had passed between himself and the secretaries of the National Union of Railwaymen, the Amalgamated Engineering Union, the Associated Society of Locomotive Engineers, the Transport Workers' Union and the National Transport Workers' Federation—most of which were linked up in the old Triple Industrial Alliance. According to the official report, issued afterwards, it has been decided to arrange for a joint meeting of representatives of those organizations in London to discuss a common line of action in regard to their general claims, and to see how far, after a preliminary consultation, it is possible to pursue a joint policy. Explaining afterwards the purpose of the step taken by the miners, the secretary, Mr. Cook, stated there was no secrecy about its object. "It is," he explained, "to discuss how best we can in any future emergency or crisis assist each other. The meeting in London will, however, be preliminary to our meeting the General Council." There is no question that four-parlers of a significant character are taking place among every industrial section

with wage claims under consideration or contemplated at the moment. While no kind of joint action is possible until after the whole of the movement had been consulted, the new co-ordination policy of the Trades Union Congress General Council is being evolved in the direction in which the miners aim. Another matter discussed by the executive at Blackpool was the War Office scheme for the establishment of skilled industrial units in connection with the Army Reserve, and it was agreed to forward to all mining areas the communication from the General Council on the subject, with a recommendation that no miner should join the Special Reserve at present.—News of the World.
