

peutic merit, but upon professional standing and your patient's health as well.

The many imitations of Hayden's Viburnum Compound, the original Viburnum product, best tells the story of the commercial greed of imitators who would profit at your expense and by the professional favor accorded H. V. C., as the original and reliable product in the treatment of dysmenorrhea, amenorrhea, menorrhagia, metrorrhagia and other gynecological conditions.

H. V. C. is a product of known composition and from the fact that it has been accorded commendation by the medical profession for over 45 years, best indicates the therapeutic efficiency of this remedy, as well as the assurance of satisfactory results when the original and not an imitation is prescribed.

The manufacturers of imitation products care not for therapeutic efficiency, the foundation upon which Hayden's Viburnum Compound was built. It would seem advisable therefore that in administering H. V. C. that the original and not an imitation is given to your patients. Samples of the original H. V. C. with formula and literature will be sent on request to N. Y. Pharmaceutical Co., Bedford Springs, Bedford, Mass.

#### CORPORA LUTEA NOW AVAILABLE.

Physicians who have been desirous of prescribing Corpora Lutea, but have been unable to do so through inability of their druggists to supply it, will be glad to know that the manufacturers, Messrs. Parke, Davis & Co. have taken steps to secure sufficient quantities of the glands in future to meet the probable demands of the medical profession.

As is known, perhaps, to most physicians, Corpora Lutea is largely used to control the symptoms following the removal of the ovaries, especially in young women, and to relieve the nervous disturbances attending the natural menopause. Reports have appeared on its successful employment in the treatment of amenorrhea, dysmenorrhea, chlorosis and menorrhagia. It is supplied in desiccated form, in capsules of five grains each, equivalent to about thirty grains of fresh corpus luteum. Only the yellow granular material from fresh ovaries is used in its preparation, the remainder of the gland being discarded because of its lack of therapeutic value.

While comparatively a new product, there is sufficient evidence at hand to warrant the opinion of one writer who expresses the belief that "in Corpora Lutea we have a preparation that will be a blessing to womankind."
