

believe that at the next congress I will be able to remove epithelioma from the list of exceptions, having recently had sent to me a hopeless case of cancer of the uterus, on whom I determined to try the continuous current, and in whom half a dozen applications of the positive current have made such a difference in the whole aspect of the case that the patient believes that she is cured, in spite of my assurance to the contrary, and I am almost convinced myself that the disease has been arrested. What a reward for Apostoli's untiring efforts to introduce his method if it should be found that it was reserved for his treatment to cure the one hopeless disease of women—cancer of the uterus.

CASE I.—Mrs. S., 39, widow, artist; sent by Dr. Kennedy. Fibroid tumor since eight years. Menstrual symptoms had rendered her helpless and hopeless. After twenty-four applications during two and a half months, circumference of abdomen reduced six inches, and she is able to do all her work and enjoy life. Absolutely free from any subjective symptoms.

CASE II.—Miss W., 40, single, cook; sent by Dr. Reddy. Hopeless invalid, fibroid completely filling pelvis. Dysmenorrhea and pressure symptoms on bowels and bladder agonizing. After three months' treatment was able to start a large boarding house, for which she caters and cooks, and enjoys robust health one year after treatment was concluded.

CASE III.—Mrs. L., my own patient. Endometritis and perimetritis. Cured by ten applications of positive pole.

CASE IV.—Mrs. P., 31, millipara; sent by Dr. Chown, of Winnipeg, with rapidly growing fibroids causing great pain, rendering her helpless. Growth arrested by thirty-five intra-uterine applications. One year later is in good health, able to do her own work and goes tobogganing.

CASE V.—Miss C., 41, virgin. Metritis and ovaritis. Cured by nine applications of positive pole.

CASE VI.—Miss McP., 41, virgin, cook; sent by Dr. Reddy. Large, rapidly growing fibroid, causing intense pain from pressure symptoms. Pain removed and tumor diminishing after forty-five applications. Has resumed work as a cook in a large family.

CASE VII.—Mrs. D., 46, married, millipara; brought by Dr. Jeannotte with very large fibroid completely filling pelvis and extending above umbilicus. Had to be kept under morphia for eight days of every month for last ten years on account
