Her Bronchitis Yields to Vicks

A "Very Effective Relief," Says This Toronto Lady

Mrs. R. K. Bankin, 116 McGill St., Toronto, Ont., says: "Last fall I had a very bad attack of bronchitis. I saw Vicks VapoRub advertised and tried it according to directions. I could not exaggerate about your valuable medicine. It is a most pleasant and effective relief for any kind of cold. I will always keep it in the house."

Vicks VapoRub comes in salve form, and for head or chest colds, you just apply it over throat and chest and cover with a warm flannel cloth. The body heat releases vapors that are inhaled all night long into the throat and lungs—Menthol, Camphor, Thyme, Eucalyptus and Turpentine. Vicks also absorbed the mucus and stimulates the skin, aiding the vapors to relieve congestion. Usually colds go on one night and croup is commonly relieved in 15 minutes.

By invitation of the manufacturers, fifteen thousand families in Canada tried Vicks last Winter for colds, coughs, and croup. The only condition being that they would report results. The above is just one of these enthusiastic reports received.

At all drug stores 50c a jar. For a free test size package, write Vicks Chemical Co., 844 St. Paul St., W. Montreal, P. Q.

The Vicks is new in Canada. It enjoys a remarkable sale. Over 17 million jars used yearly.

TOKIO DECIDES TO REMOVE BAN PLACED ON WIRELESS

Tokio, Dec. 20.—(By mail)—In view of the growing utilization of wireless telegraphy, the Communications Department has decided to revise the regulations governing the use of this means of communications. The revision will be made in favor of the general public so that they may be freely entitled to use wireless for private purposes, which is forbidden by the existing law. The draft bill will be introduced in the forthcoming session of the Imperial Diet.

NEW LAMP BURNS 94% AIR

Beats Electric or Gas

A new oil lamp that gives an amazingly brilliant, soft, white light, even better than gas or electricity, has been tested by the U. S. Government and 88 leading universities and found to be superior to 10 ordinary oil lamps. It burns without odor, smoke or noise—no pumping up, is simple, clean, safe. Burns 94 per cent. air and 6 per cent. common kerosene (coal oil).

The inventor, O. K. Johnson, 246 Craig St., W., Montreal, is offering to send a lamp on 10 day's FREE trial, or even to give FREE to the first user in each locality who will help him introduce it. Write him today for full particulars. Also ask him to explain how you can get the agency, and without experience or money make \$250 to \$500 per month.

The Loss of The Ship "London"

To the Editor of The Montreal Gazette:

Sir—The following beautiful poem, hitherto unpublished, entitled "The Foundering Ship" was composed by the late Rev. H. J. Fitzgerald, M. A., an Anglican clergyman, half-brother of the late William Howe, Esq., Q. C., of Halifax, N. S., nephew of the Hon. Joseph Brown, Minister of State in the Macdonald government.

JAMES PENNINGTON.

[The fine iron-built ship London, bound to Australia, founded in the Bay of Biscay, 13th January, 1866. When all hope was past from the long continuance of a violent hurricane, the captain, J. Bohun Martin, calmly announced the fact to the passengers, who were assembled in the saloon for prayer, as they had been for some days previously. They received the announcement with wonderful calmness and prepared to meet death in the face. The Rev. Dr. Woolley and a Wesleyan missionary, Daniel James Draper, were enabled to rise to the greatness of the occasion, and when the only boat that could leave the ship put off with nineteen on board, declared their readiness to remain for the consolation of their fellow passengers, and were employed in prayer and exhortation during the brief hour which remained of life. The captain, too, when asked by those in the boat, to take the only vacant place in her, quietly declined, saying: "My place is with the passengers. Good-bye, lads! God speed you safe to shore." More than two hundred went down into the great deep.]

With anxious look upon the main, The Captain paced the deck; Around him was the hurricane, No gleam of light or star to see. And waves in mountains, hissing by, Seem'd almost mingling with the sky.

"All hope is past—prepare for death," The seaman calmly said; The listeners heard with bated breath, And meekly bow'd the head; No screams of terror or despair; Were heard among two hundred there.

Nature a little space might claim To pause in every breast; And struggling sobs of sorrow came When hearts to hearts were prest; While children wiped their parents' tears.

And wondering, asked them of their fears. Whence found that helpless band the power? Unitedly to pray? Who aided them in that dread hour Their cares on God to lay? The Spirit, whose still voice can keep A sabbath on the unresting deep.

And sabbath peace and rest they found Amidst those boiling waves, As Christ's true ministers around, Fled the Name that saves; And every accent fell like balm On souls all filled with holy calm.

And were there then no hearts that felt, And only could feel? And did no loving soft eyes meet, Nor reason rising to meet? Yes—but to them He still was nigh Who said, on other waves "Thy I."

Oh, strength of faith, O power of prayer! To nerve the tender heart, And sanctify the farthest there. Brief parting—soon to meet again Beyond the raging of the main.

Mysterious goodness! They who gave Their cry to Christ for grace, One moment slept beneath the waves. Then woke—in death and prayer—United now forever there!

One minute drawing mortal breath With mortal weakness riven— The next forever freed from death, And face to face in heaven. Spirits just parted from their clay Emerged from night to endless day.

The voice of prayer to fill the skies— The hand of faith to grasp The all atoning sacrifice— And strength eternal clasp— Oh, in what quick succession given, The waves—a gasp—death—life—and heaven!

All honor to their names who pray'd Their latest hour to cheer; And honor to his name who stay'd Their ocean death to share—"My place is here till all is o'er; God speed you safely, lads, to shore."

All praise to Him whose spirit filled These hearts with courage true; With every rising terror still'd When man no more might do; And wrote one record more above Progress made by the electrical engineer in the transmission of electricity during the last few years had created such a condition of three hundred miles was of as great an importance in its possibilities for profit and comfort to a community as though it lay at its very door.

Dealing with the physical properties of water powers, Mr. Phillips divided these into two classes of power. In one class were powers such as at Grand Falls, where large quantities of power could be developed.

Twenty-four hours in the day and 365 days in the year, and in which such power must be generated throughout every second of the day, whether it is usable or not as being particularly suited to the service of specialized industry or as forming the base for very large and widely diversified distribution systems. In the other class he placed those powers whose value lay in the opportunity that existed to store up the power for use when needed.

Mr. Phillips pointed out that the production of power could be varied from day to day and during the different periods of the day but in which there would not of necessity have to be sufficient water stored to run the plant continuously. This type of plant, Mr. Phillips pointed out, was an almost entirely artificial production, owing little or nothing to the provision by nature of any waterfall and was, within its scope and for the purposes of such general operations as providing service to such a city as St. John, practically of equal value with water powers of the first class.

In dealing with the actual cost of such power in the province of New Brunswick, it was pointed out that there was abundant evidence that not only could hydro power be produced here at a cost not more than one-third of the cost of steam-produced power, but probably very much cheaper than power being produced and distributed on such a scale in any part of the Dominion.

In conclusion, Mr. Phillips dwelt upon the necessity that these developments should be undertaken in such a way as to secure the maximum amount of service to the whole people of the province.

The class in home nursing at St. Paul's church met last evening for instruction by Mrs. R. G. Schofield. Mrs. F. W. Peacock was elected secretary of the class. Teams are meeting every Monday and Wednesday under Miss A. Heales preparing for an examination which will be held in the near future by Col. Hodgetts, of Toronto.

VALUE OF OUR WATER POWERS

Interesting Address Before Teachers' Association by Herbert Philips.

An interesting paper on "Our Water Powers" was given by Herbert Philips before the meeting of the Teachers' Association in the Natural History Society's rooms last night. The president, H. C. Ricker, was in the chair and there was a large attendance of members. The hearty vote of thanks tendered to Mr. Philips was moved by J. Frank Owens and seconded by W. J. S. Miles. Others who spoke appreciatively concerning the interest and timeliness of the address were W. T. Denham and Miss Emma Fairweather.

Mr. Miles spoke of the forthcoming visit of Sir Henry Newbold, and urged all members of the association to attend the meeting at which Sir Henry will speak.

Mr. Philips dealt with the earlier development of water powers before the days of electrical equipment, showing how at that time the results obtained were far from satisfactory. The greatest difficulty then was occasioned by the fact that the direct application of water power to the use of industry necessitated the erection of the mill or factory at the exact place where the water power happened to be, without regard to the facilities which might or might not exist for the collection of raw material, distribution of the finished product and for the supply of labor. He emphasized the change made in this respect by the discovery of electricity and the development of long distance transmission. Particular stress was laid on the point that the progress made by the electrical engineer in the transmission of electricity during the last few years had created such a condition of three hundred miles was of as great an importance in its possibilities for profit and comfort to a community as though it lay at its very door.

Dealing with the physical properties of water powers, Mr. Philips divided these into two classes of power. In one class were powers such as at Grand Falls, where large quantities of power could be developed.

Twenty-four hours in the day and 365 days in the year, and in which such power must be generated throughout every second of the day, whether it is usable or not as being particularly suited to the service of specialized industry or as forming the base for very large and widely diversified distribution systems. In the other class he placed those powers whose value lay in the opportunity that existed to store up the power for use when needed.

Mr. Phillips pointed out that the production of power could be varied from day to day and during the different periods of the day but in which there would not of necessity have to be sufficient water stored to run the plant continuously. This type of plant, Mr. Phillips pointed out, was an almost entirely artificial production, owing little or nothing to the provision by nature of any waterfall and was, within its scope and for the purposes of such general operations as providing service to such a city as St. John, practically of equal value with water powers of the first class.

In dealing with the actual cost of such power in the province of New Brunswick, it was pointed out that there was abundant evidence that not only could hydro power be produced here at a cost not more than one-third of the cost of steam-produced power, but probably very much cheaper than power being produced and distributed on such a scale in any part of the Dominion.

In conclusion, Mr. Phillips dwelt upon the necessity that these developments should be undertaken in such a way as to secure the maximum amount of service to the whole people of the province.

The class in home nursing at St. Paul's church met last evening for instruction by Mrs. R. G. Schofield. Mrs. F. W. Peacock was elected secretary of the class. Teams are meeting every Monday and Wednesday under Miss A. Heales preparing for an examination which will be held in the near future by Col. Hodgetts, of Toronto.

PREPARE CASE FOR N.B. VETERANS

To prepare evidence for presentation to the Ralston committee on pensions and re-establishment which will sit here early in February, the central committee of the Dominion Veterans' Alliance, will be present to assist in the presentation of the evidence. Speaking at a public meeting here early in the year, Mr. MacNeill expressed the conviction that if changes were made in the existing mode of procedure respecting applications for pensions, a long step forward toward the solution of many vexed problems would be taken. Evidence will be taken along this line and also respecting the operation of the soldiers' memorial workshops.

RADIO TESTS ON DEARBORN STATION TOWER IN 1890

Aerials Once Rigged Atop Chicago Rail Terminal Recently Destroyed by Fire.

The recent burning of the old Dearborn station, in Chicago, recalls the fact that the clock tower, which suffered particularly from the flames, figured in the beginning of radio development. In the summer of 1890, according to John W. Clarke, assistant chief engineer of the Chicago Eastern Illinois railway, the aerials were rigged up from the tower and experiments were performed, which, while only partly successful, convinced the experimenter that wireless messages could be sent.

"Benjamin Thomas was general manager then," said Mr. Clarke. "Permission was obtained for a professor from Notre Dame to string aerials from the tower to the Tribune building. Words were exchanged, but the messages were broken. It was concluded that the aerials were too low and that the noises of Dearborn street interfered."

J. E. Murphy, treasurer of the railroad company, said he remembered that such experiments were conducted from the old tower. Mr. Murphy and Mr. Clarke are among the oldest officials of the road in point of service. Most of the other officials entered the service of the company since 1890, and were therefore unaware of the part played by the Dearborn tower in the early history of wireless invention.

SWEDISH EXPERT URGES EMIGRATION OF SKILLED

Believes Those of Technical Equipment Have Most Chance of Success

The emigration from Sweden of highly qualified engineers, expert foresters and agriculturists, of especially trained industrial workmen rather than of unskilled laborers and ordinary farmers, is recommended by Dr. Adrian Molin, of Stockholm, an authority on the subject of emigration. Since there must be emigration of some kind, argues Dr. Molin, it would be better for the home country, and would insure themselves, if those who establish a new domicile in America and elsewhere

were persons of professional or technical equipment. Swedish statistics show that, between the ages of fifteen and fifty there are now 200,000 more persons engaged in gainful occupations than there were in 1818. This surplus has been taken care of partly by increased work in the industrial world and partly by emigration, while the remainder, about 38,000, at the end of 1922, are unemployed and must to a certain extent be supported by the state.

Dr. Molin thinks that the time is ripe for government investigation of emigration with a view toward its control.

DIETETIC DIRECTOR SCOFFS AT "HERRING AND OATMEAL"

London, Dec. 26.—(By Mail).—"I do not belong to the diet herring and oatmeal school," declared Miss Copper Hodgson, superintendent health visitor for the County of Durham, addressing a gathering of women sanitary inspectors and health visitors at King's College, London, reported by "The London Daily News."

She was referring at the time especially to dietetics, and added that even in Scotland oatmeal porridge was not so popular as it used to be. "While fully realizing that value of both herring and oatmeal," she said, "I do not go about persuading people with no traditions about them to economize by living on them because I would dislike the diet myself."

The opportunity for a stupor or lazy mother to mislead her family a hundred or two hundred years ago were far fewer than they were today, she pointed out.
