THE  
**Acetylene Lighting Co.**  
(LIMITED).  
LONDON, ONTARIO.

pany now have works at Hamilton and Port  
Hopo.

Bickell & Wickett will add two storeys to  
their tannery on Cypress street, and will do  
more business in buying and finishing goods.

Peuchen & Co. will add two additional  
storeys to their acid factory at a cost of  
\$2,000, which will give increased employ-  
ment.

The James Robertson Co., Limited, are  
also adding to their factory to the amount  
of \$2,000.

Perhaps the greatest increase of employ-  
ment of late by any one industry is in the  
case of the shipbuilding industry. The  
additions to the Bertram yards this season  
consist only of a two-storey machine shop,  
and a one-storey shed, costing \$3,000, but  
this small item covers a great deal. The  
yards are exceedingly busy on rush orders,  
and between 600 and 700 men, mostly skilled  
and highly paid mechanics, are employed,  
where last season not half so many were at  
work. Passenger steamers, grain barges  
and general trading steamers are being built,  
and the rush will continue for the balance  
of the season. Mr. George Bertram, in the  
course of conversation, said that he had no  
longer doubt as to the permanency of the  
shipbuilding business.

Speaking of the improvements being made  
by the Massey-Harris Co., the Globe, men-  
tioning the fact of a visit of the Mayor and  
City Council to their works, says: "The  
visitors were conducted through the works

by Mr. W. E. H. Massey, the president of  
the company, Mr. James K. Osborne and  
Mr. Lyman M. Jones. Every department  
was glanced at, from basement to roof, and  
the massive character of the whole impressed  
the spectators, as it could not fail to do.  
Mr. Massey stated that the extensive addi-  
tions which were being made to the works  
were called for by the large increase in the  
old country and European trade, to which  
continent they were this year shipping 10,000  
machines. From the roof of the main fac-  
tory an excellent bird's-eye view was obtained  
of the whole works, and a comprehensive  
idea of what further improvements are in-  
tended. The ground which the works now  
cover to the south of King street contain be-  
tween seven and eight acres, but their floor  
space is six or seven times greater than that.

The Massey-Harris Company now employ  
over 1,000 men, and are paying out over  
\$2,000 a day in wages. The extensive addi-  
tions which are to be made will increase the  
capacity of the works by fifty per cent., and  
of course correspondingly increase the num-  
ber of hands and the amount of wages paid.

**BALDWIN-WESTINGHOUSE ELEC-  
TRIC MINE LOCOMOTIVE.**

THE CANADIAN MANUFACTURER is in re-  
ceipt of a very handsome brochure describ-  
ing and illustrating a new type of mine  
locomotive manufactured by the Baldwin  
Locomotive Works, of Philadelphia, and  
the Westinghouse Electric and Manufac-  
turing Company, of Pittsburgh. The  
locomotive frame consists of heavy cast-iron  
side and end pieces, securely bolted to-  
gether and kept square by machined joints  
and accurately fitted shoulders. The frame  
is placed outside of the wheels, thus allowing  
all possible space between the wheel hubs  
to admit the greatest practicable width of  
motor. This is an important feature, and  
obtains maximum power on narrow track  
gauges and also permits ready accessibility  
to the journal boxes. The top of the loco-  
motive is made of heavy planks, with hinged  
trap doors. The journal boxes have bronze  
bearings, with oil cellars for sponging, as  
in steam locomotive practice. The brake
