

"Prescription 1920" is supplied in two forms "With Sugar" (The usual Syrup of Hypophosphites) and "Without Sugar" (The latter for use in cases, such as diabetes, where sugar is contra-indicated).

Without doubt, these preparations which represent an advance in hypophosphite medication, will be found of much service to the profession.

"Prescription 1920" will be mainly prescribed, under the following headings, "Influenza and Pneumonia", "Nervous Diseases", "Pulmonary Diseases", "Cutaneous Disorders", "General Debility", and "The Child".

To acquaint the physicians of Canada with "Prescription 1920" a sample of each form, "With Sugar" and "Without Sugar", has been sent to every doctor in the Dominion and stocks of the preparation have been placed in the leading stores in practically every town, so that doctors may now prescribe same with confidence that their prescription can be filled without delay.

Any physician who has not received these samples can obtain same by notifying the Davis & Lawrence Company 356 St. Antoine St., Montreal, P.Q.

#### PREPARE THE BABIES FOR HOT WEATHER

During the month of June it is not a bad plan for the physician to take mental "stock" of the babies under his care, especially such as are bottle-fed, with the general idea of recommending such treatment as will tone up and vitalize those whose nutrition may be below par, so that they may enter the trying summer months in the best possible condition to ward off or withstand the depressing influences of extreme heat or the prostrating effects of the diarrheal disorders of the heated term.

Careful attention to feeding is, of course, a *sine qua non* and the details of the infant's nourishment should be carefully investigated and regulated. But this is not all. Many bottle-fed babies are below standard from a hematologic standpoint. The marasmic anemic baby deserves special attention in the way of building up and restoring a circulating fluid which is deficient in red cells and hemoglobin. In the entire *Materia Medica* there can be found no direct hematic quite as suitable for infants and young children as Pepto-Mangan (Gude). In addition to its distinctly pleasant taste, this hemic tonic is entirely devoid of irritant properties and never disturbs the digestion of the most feeble infant. Being free from astringent action, it does not induce constipation. A few weeks' treatment with appropriate doses of Pepto-Mangan very frequently establishes sufficient resisting power to enable the baby to pass through the hot summer without serious trouble, gastro-intestinal or otherwise.
