

directory profiles 300 active Canadian exporters of computer products and services. Helpful indexes divide companies by their types of clients, areas of specialization and types of equipment. (English, 1986)

Electronic Products for World Markets

Canada exports more than \$4 billion worth of electronic products each year. From satellite earth stations for communications equipment in China to industrial process controls for pulp and paper mills in Brazil, from aircraft simulators in Japan to rural subscriber systems in Zimbabwe, Canadian firms have earned a reputation for competitiveness and quality. This catalogue describes the various sectors of the Canadian electronics industry and profiles 500 major Canadian original equipment suppliers, component manufacturers and consulting and technical services. An index lists companies by product or service categories. (English, 1986)

Remote Sensing Products and Services for World Markets

Remote sensing by airborne and satellite collection systems is an essential means of measuring the environment, and managing vital resources throughout the world. Since launching its first scientific satellite in 1962, Canada has been a leader in developing remote sensing equipment and applications. This guide outlines Canadian industry and government capabilities in remote sensing, and introduces a number of companies that provide the latest technology to solve the most challenging remote sensing problems. (English, 1987)
