

# CHICAGO WIND MOTOR COMP'Y

CHICAGO, ILLINOIS.

The "CHICAGO" is the most practicable Steel Wind Mill ever built and is Back Geared to make 2 to 3 revolutions of wind wheel to one stroke of pump, also arranged so it can be changed in five minutes from back gear to make a stroke of pump to every revolution of wind wheel.

This is a valuable feature and one that no other mill possesses.

We also build the best steel tower ever made. All brace rods are made to tighten. We sell the mill with or without tower.

Every mill guaranteed to give entire satisfaction or money and freight refunded.
