ounces to the ton. This vein has been proven for a distance of 35 feet with ore still showing in the floor and in the back. On the 700-feet level we are recovering a good grade of mill rock and some high-grade. On the 1,600foot level 206 feet of cross-cutting has been accomplished east of the station and 224 feet of the cross-cutting west of the station. Several small stringers have been encountered showing some mineralization. As to development in the company's Kirkland Lake claim, the report says:

During the quarter a great deal was accomplished in the way of development. The shaft was sunk from the 300 to the 400-foot level, the station cut, and 157 feet of drifting and cross-cutting done. The vein on the fourth level looks even better than on the third. It is over 11 feet in width and the south wall of the ore body has not yet been reached. We have obtained some very high assay values from the fourth level. Our development of the property so far has provement of the property so far has proven a large body of valuable ore.

Bear Attack on Newray Proved Costly Performance—Market APITAL, \$15 Stronger.

Determined efforts to depress the mining market yesterday met with comparatively little success, and some of the shorts experienced considerable difficulty in covering. This was particularly true in the case of Newray and Vacuum Gas, the bear drive resulting in higher prices for both these hdrawals to be issues.

Judges of the market hold the opinon that it is thoroly sold out and that would take but little public buying o bring about a sharp recovery.
