

Extra Profits with the Case Baler

CASE BALERS are real earners. They will keep your tractor or your portable engine busy when otherwise it might be idle; they bring better prices and better markets for your hay; they permit profit in custom baling for your neighbors.

No other baler, to the best of our knowledge, includes all the features combined in the Case Baler. We make them with a successful aim at simplicity and sturdiness. All complicated parts are eliminated and the Case Baler runs at the smallest expense of power. All its parts, save the feeding table, are of steel and built to Case rigid standards.

Case Baling Presses are built to make clean, square bales of marketable weights.

They do the work quickly. A special Case feeding arrangement and the design of the hopper—long, flaring and deep—make possible the feeding of large forkfuls, giving the big capacity necessary in baling time.

We make belt power balers in two sizes, the 14x18 size with a capacity of 3 to 4 tons an hour, and the 17x22 with a capacity for 3½ to 5 tons per hour. We also furnish sweep power balers for those who prefer to use horses.
