No Friction Windmills

Mechanically Correct NOW, and Always Have Been

Originators of the Hub and Stationary Spindle PLAN of Carrying the Weight of the Wheel.

No part connected by the revolution of the wheel can be thrown out of line, while with other mills the weight and leverage of the wheel keyed to the shaft will wear out the boxing and gears. The wheel and gearing will become out of line, requiring repairs and new parts.
The use of the stationary spindle on all "BAKER" mills enables us to bring the wheel close to the tower, which greatly lessens wear-friction and permits us to place wheel within a few inches of the pump-rod. Supporting the weight of the wheel

the easiest running mill made, and has won for the "BAKER" the reputation of being a non-friction mill, in which class it has no competition.

The "BAKER" (built on a hub) has a long constantly lubricated bearing on both sides of the wheel. Other mills with wheel keyed to a shaft have bearing only on the inside, thus causing leverage, friction and excessive wear on boxings, which cannot be avoided in "shaft mills."

Any geared windmill with wheel keyed to a shaft, whether so-called single or "double-geared" mills, the weight of the wheel and consequent friction will seen wear out the boxings, causing the pinjons to bind and the gears to cut-

soon wear out the boxings, causing the pinions to bind and the gears to cut-out, and the wheel will become out of line and dip toward the tower.

With "BAKER" Windmills the wheel is carried lightly and with little or no friction, and even in the event of wear, the wheel will always be balanced and the gears cannot become out of mesh. Write for booklet.

Here's a wonderful little labor-saver that you can try for 30 days free—a hoist that holds the load in mid-air as well as hoisting it up.

Thousands of farmers are tickled at the way this hoist suves work. It's the handy way to lift wagon bodies, swing butchered hogs or anything else you want to hoist. It's a peach of a wire stretcher, too. It will save labor—earn its cost in scores of different ways.

How It Works—In the upper block of the large is an automatic.

Jumbo is an automatic lock which engages the pull rope the instant you let up on it. The heavier the load the tighter the grip. Yet so simple in conHALL MEG. CO.

action, that the mere pull necessary to lift the load is sufficient to release the lock. Simplicity is the secret of the Jumbo's big success. It is the only self-locking hoist on the market with patent adjustment for ropes of all conditions. Made of best steel, critically tested and inspected before shipment. Shipped for 30 days' FREE use anywhere; guaranteed everywhere. Besides the Jumbo Safety Hoist and Wire Stretcher, we make nine other sizes Hall

Hoists, capacity 400 lbs. to 4 tons. Mail your name and your dealer's for the catalog and that BIG FREE OFFER—right now!

THE MISSION OF

The RENFREW Handy Two-Wheel Truck Scale

Daily loss—that's what inaccurate scales mean to the farmer. Loss on everything he sells by weight.

Stop it now. Let the "RENFREW" do your weighing, and get every cent of profit on your produce that you should get. "RENFREW" accuracy is guaranteed by the Canadian Gov rnment—which means protection against loss through underweighing.

The "RENFREW" weighs anything from one pound to 2,000 pounds—and you can wheel it to anything you want to weigh. Are you interested? Mail this Coupon Now for this Free Booklet, "The Profit in the Last Ounce." It tells interestingly about the business side of farming—and ho money is saved with a "RENFREW" Handy Two-Wheel Truck Scale.
