Bescription of the Region, Its Properties and Its Communications-The Growing Towns of Comaplix and Cambourne. The Coming Railroad.

Mr. William Devereux, P.L.S., who has been away in the Lardeau country for the past seven months surveying coperties in that important part of the country which is drained by Fish creek returned to Rossland recently and in speaking of the region of his late work said that it was a fine country and one that, as the projected railway was to pass through, must rapidly come to the front. At present the means of getting to, the district were via Arrowhead whence a steamunat were via Arrowhead, whence a steampoat connection took the passenger to Coma-plix, situated on an arm of the Upper Arrow lake, some eight miles from Arrowhead. The latter place was at present the terminus of the railroad from Revel-

Comaplix is a town of about 400 people in the summer season, when the nills are full of prospectors. Of these about 200 ngaged in the sawmill and in the camps in connection with it. The sawmill is owned by the Fred Robson company, formerly the Kootenay Lumber rempany. The townsite is owned by Mr. would be found at depth. purchased at prices which compare rably with Rosslan, a schoolhouse at which there is a fair attendance in sumwhen there is a fair attended in the wanter, when a great part of the population leave the township, to about a dozen to 18; a wharf, a lumber dock at which the C.P.R. cars, taken up on scows, are loaded, be-sides several other public buildings, in-cluding a recorder's office. In the winter menths the prospectors leave the vicinity and, as the sawmill closes down as the water in the bay gets low and freezes, the winter population does not exceed 200.

The proposed railway will run through
Comeplix and make a junction with the northern line at Arrowhead.

There are some good claims up Mill Creek, running into the lake close to the town, and others across the arm. On Mill there are quite a number, among which may be mentioned the Hawkeye, Welch and Grager, all of which have been surveyed with a view to obtaining crown grants. These are principally silver and lead propositions. Across the lake are other and similar claims. But the district cannot be said to have been reached until Cambourne is gained, which is situated some eight miles northeast of Comaplix on Fish creek. At present there is a good wagon road connecting the two tewns, but the proposed railway coming through will sweep up Fish creek on its way from Comaplix to the Slocan, past Cambourne on the northern side of Fish creek, and coming down on the other A Large Amount of Work Done During

Cambourne has a winter population of about 50 or more people. Of these there are not more perhaps than 15 resident, and the rest are made up of a floating elein gold. The ore for the most part is conare not more perhaps than 15 resument, and the rest are made up of a floating element going to and from the mines in the centrating. A recent assay gave a return contrainty. There is a hotel and a store, vicinity. There is a hotel and a store, silver; a total valuation of \$107.84 to the silver; a total valuation of shipping of the present. In the summer time there are many times ton. A considerable amount of shipping ore is on the dump. It is the intention of this population. At the present time in addition to those in Cambourne itself on to those in Ca there must be reckoned about another list of shippers during the coming year. hundred who are working in the

going on upon them.

Near Cambourne there are situated the Belipse, Harvey, Beatrice, Alma, Black Bear, Wide West and the Anglo-Lardeau property, besides a number of others.
Work is still going on in the Eclipse and
Harvey. All of these claims are situated
on Pool creek. Every one of these will be working just as soon as the snow

untains. Up Fish river there are the Brunswick. rial, Criterion, Oyster and others. On the Brunswick some splendid strikes have been made of late, and this is true of the Eva and Kingston. The ore on the Eva is free milling. Up till recently the prospectors were merely looking for silver, but lately there have been made several enormous strikes in gold, silver and copper. The prospectors are much elated with the finds, and are asking all kinds of prices up to \$75,000 for one claim. The ledge found upon the Eva is likely to run across the country, and will probably be found upon the Anglo-Lardeau property, as it has already on the King-

ides Fish creek, the list of the properties en which have by no means been exhausted by the above, there is also another creek in the same division which runs parallel to Fish river. This is Isaac ereek, which runs into Arrow lake on the line of the C.P.R. about 14 miles above Arrowhead. Entrance is gained from the railway at a place called Wigwam. A wagon road will be constructed up this new region during the coming summer. There is a trail at the present which will suffice for packing. This trail penetrates the country for 20 miles, but the government will construct an additional 25 miles. The capping here is some-thing similar to Rossland, but the ore discovered goes well in gold, silver and lead. In the opinion of Mr. Devereux this creek win make a good mining camp Many claims have been located, but the country has not been explored at all thor-In one spot there are 14 claims ocated in one straight line on a ledge

which is about 50 feet wide.

There is a little trouble just at the present owing to the liability of the lake to freeze over, especially at Whisky point, at the railway depot to wish him bon just above Arrowhead. As long as the voyage.

FISH RIVER MINING DISTRICT

Omaplix to fetch away the ore brought wown from Fish river there is little difficulty in keeping a channel open, but if this is not done there is a possibility that the output from this part of the Lardeau will be closed down altogether for the rest of the season.

Speaking generally of this district Mr.

Devereux said that no thought it was one of the best portions of the Lardeau, and one that was destined to come to the front at no distant period of time. The railway would make a wonderful difference in the cost of operating, and as the expense of opening up and working the mines on the creeks of this region became lessened there would be more and more work done with each coming year. Mr. Devereux said that he looked for one or more mining towns of considerable importance springing up in this country within a very few years.

A FIND ON THE HOMESTAKE.

The Ledge Has Been Cut and Drifted On

A finr which is considerable importance has been made in the Homestake. Mr. S. W. Hall, who is in charge of the operations on the Homestake, reports that in the tunnel, driven from the Gopher, at a point 450 feet from the end line of the thomestake, the vein has been cut. The tunnel has been driven along the ledge for a distance of 25 feet. This is within two feet of where Mr. Hall said the tunnel would intersect the yein. He followed the ledge and the faults on the surface and by projection figured out where it there is said to be a deal on with the ledge is of a fair grade, but the ledge is in place, is persistent and continuous, and there is no notals one big town has two hotels, one big store where things can be purchased at prices which compare than have been found at the point of intersection. The tunnel is gaining depth with each foot driven, and when it has reached a point under the tunnel, which is 300 feet from the present breast of the tunnel, it will have a vertical depth of 300 feet, or 100 feet lower than where the ledge has just been intersected. If the values under the shaft are as good as they were on the 200-foot level there will be no trouble about plenty ore shipping grade, as the ore on the 200averaged \$16 to the ton, and the ore shoot was 180 feet in length and six feet in width. It is thought by the man-agement that when a point below the influence of surface disturbance is reached that there will be found a ledge that will be strong and continuous.

The Sampler Is Running.

Mr. F. H. Oliver, manager of the Mor rison mine, in the Deadwood camp, passed through this city yesterday en route for Spokane. He reports that the develop-ment of the Morrison is making good progress along the usual lines. The sampof the Mother Lode smelter at Green wood is running in a satisfactory condi-tion, and it will not be a great while now before the furnace will be blown in.

THE SAND CREEK REGION.

distance up this tributary in order to tap the mines. About six miles above Pool areek is Lexington creek, another tributary on the same bank of Fish river. The railway on its way up and down the valley will probably penetrate to about a copen a large amount of development on the property; a tunnel is in 50 feet. But a copen will be copen as a large amount of development on the property; a tunnel is in 50 feet. An Unkillion of the copen will be copen as a large showing or from gas a large showing or from gas and coper, and the ledge on the in eith Leader.

But a way the result of the copen way and the ledge on the surface can be traced for over 700 feet, with a width of from 24 to 40 feet. There is a large showing or from gas and the ledge on the in eith Leader. openings. In all the openings the veins the owners to place the mine among the

Blue Grouse.-This is one of tains. The towns te belongs to Mr. Cory claims located on Sand Creek and a large Minhenit. There are several claims be-tween Comaplix and Cambourne, but at done. The main tunnel is in over 200 feet. the present season there is not much work At this point a crosscut has been run, showing the vein to be fully 25 feet wide. At the face of the tunnel a vertical depth of 150 feet is obtained. The ore is copper of a high grade. Development will pushed during the coming season, and efforts will be made to place the mine

among the shippers.
Waterfall.—The tunnel which is now being run, at some distance below the old tunnel, is now in over 45 feet, and it is expected that the lead will be tapped shortly. As soon as the lead is encountered a force of men will be employed, a winter camp established, and work con-tinued all winter.

The rock in the tunnel is highly min-

eralized, showing its near approach to the icad. The ore is copper and galena. Sand Creek.-Messrs, Burke and Higgins have done considerable development on the St. Lawrence, which is an extension of the Empire on the east. Extensive developments are contemplated for the

coming season.

The McBane and Bishop property on Sand Creek has been the scene of active development during the past season. The lead is six feet wide, and has been un-coverd for a distance of 200 feet. The ore is said to run high in copper. There is considerable shipping ore on the dump .-Fort Steele Prospector.

Departure of Mr. Howard Spensley, Jr. Mr. Howard Spenseley, jr., who for some weeks past has been the guest of Mr. Durant of the B. A. C., left on Sunday night by the C. P. R. train for Victoria During his stay in Rossland he has visited most of the properties here, also several in the Boundary and Republic and was greatly pleased with the evident signs of continued prosperity in these districts. Although a barrister by profession, Mr. Spenseley interest in the mining industry and has made a considerable collection of mineral specimens during his sojourn here. Being a keen horseman he was enabled to explore the country for many miles around. Before returning to England it is his in-tention to visit San Francisco and South-ern California. Many friends assembled

MOYIE'S GREAT PROSPERITY GENERAL MEETING OF LE ROI

YEAR.

Movie has passed through the most prosperous year of its history—the development in the mines and the growth of the town having almost doubled in that time. We find that during the past year the St. Eugene mine has shipped over 17,000 tons of ore, of a total value of over one million dollars. As no shipments were made until the month with a population of 800, is experiencing an unprecedented era of good times.
The St. Eugene is the principal mine in the Movie camp. The property is now world-famous, and stands as one of the largest silver-lead mines on the American continent. The St. Eugene Consolidated Mining Company's holdings consist of nine full claims and five large the entire mountain immediately to the rear of the town. The property is now well developed. The concentrator, which has a capacity of 400 tons per day, is running steadily and regular shipments

of the lake, and, according to the best authority, on the continuation of the St. Eugene lead, gives promise of becoming one of the big mines of this camp. There is a force of men driving a tunnel to tap the lead, and are close to the ore body. It is safe to say that within 60' days this property will be shipping ore to the smelter. The Aurora is owned by Thomas Rader, O. J. Johnson and Capt B. Sanborn.

I. B. Sanborn.

The Iron Mountain, situated to the south of Moyie about three miles, and owned by J. J. Murphy, is a gold and copper proposition, which is turning out in such a manner as to surpass all expec-

the head of the northeast arm of Upper Arrow lake at Thomson's landing or Evansport. The railroad then runs on making connection with Trout lake points in the Ainsworth district.

The past Year.

The Past Year.

Reports of the satisfactory results of development in the Sand Creek portion of the district have been coming in during the year ing the past few months. During the year ing the past few months are special mention. The town, from a commercial point of view, has experienced wonderful development more capital has been expended in delivery than in any previous personnel of the satisfactory results of development work done on them to development the town, from a commercial point of view, has experienced wonderful development work than in any previous personnel of the satisfactory results of development work done on them to development the town, from a commercial point of view, has experienced wonderful development work than in any previous personnel of the satisfactory results of development work done on them to development the town, from a commercial point of view, has experienced wonderful development work than in any previous personnel of the district have been coming in during the year in the past few months. During the year in the town, from a commercial point of view, has experienced wonderful development work done on them to development town, from a commercial point of view, has experienced wonderful development work done on them to development work done on them to development work done on them to development town, from a commercial point of view, has experienced wonderful development work done on them to development work done on them to development town to development work done on them to develop the development work done on them to develop the development work done on them to develop the properties in the vicinity of Moyie, but there has not been a sufficient amount the Ainsworth district.

Cambourne is situated in a deep gorge of the valley, 200 feet in altitude above the complication of the place is 1,400 feet above sea level. Just above Cambourne on the left bank of Fish creek is Pool creek, an important tributary on which is situated several promising properties. It is likely that the promising properties and creek, about two and one-half miles guence are doing a much better business. Every branch of trade has improved, and movie stands today one of the best towns lend and copper, and the ledge on the ledge on the ledge on the ledge on the ledge of the color of the leafter that this section is rapidly acquiring a reputation as a street has undergone a complete change, which is street has undergone a complete change, owing to the many new buildings erected and new firms that have engaged in business. Today the merchants are carrying that the business are that this section of the promotion of the pr Movie stands today one of the best towns in either of the Kootenays.—Movie

BULL RIVER PROPERTIES.

the group of ten claims there are eight distinct leads running parallel some 500 feet apart. The No. 1 tunnel is in 30 feet.

"The country rock in this belt consists feet and No. 2 tunnel 24 feet, all in rollid almost entirely of a thin bedded talcose ore. The vein at this point is 27 feet schist, with strata of lime running wide, ascertained by surface work, showing this width in several open cuts. The along those strata of lime that the trend of the veins is north and south, the eral occurs throughout this entire belt. ore is copper, and the walls are black There appears to be but the one band of ame and slate in contact. The ore carries copper, silver, gold and galena. A considerable amount of ore is on the dump. as seen by its outcrop. On either side

erty on a large scale next year.
Old Abe.—The Old Abe is situated on Bull river near the Chickamon Stone mine. A large amount of development has been done during the past year. A tunnel is in 90 feet; the first ore tered was galena, then copper sulphides, and then pyrrhotite. Some beautiful specimens of native copper has been taken from this property. The floor of the tun-nel is solid pay ore. With active development, which is promised for the coming tion is fairly well exposed, and it is there year, the Old Abe will prove to be that some development work has been of the best mines in Southeast Wootenay.

Chickamon Stone.—The development cuts of rather modest dimensions but in

gressed in a very satisfactory manner during the past season. A large amount of money has been expended. There are over 600 feet of tunnels, shafts, winzes, crosscuts and open cuts. Also a large amount of ore extracted that will average about \$40 to the ton. Mr. Chas. Theis, one of the principal owners of the proper transfer of the during sum and the state of the proper structure of the proper sum that the contract of the proper sum that the contract of the proper sum that the contract of the proper sum that during the contract of the proper sum that the contract of the past one of the principal owners of the property, says that during the coming summer a diamond drill will be the main factor in the development of the prop-

ertv. Molly Bawn and Cuckoo.-These claims are situated on the east side of Bull river, and separated from the Chickamon Stone by the Windsor fraction. Develop ment work consists of a tunnel now in 90 feet. The vein is two feet in width, carrying copper pyrites and galena. This property is one of the most promising in that section, and with further development it is believed that it will make

The company has now 270 men em- ably fifty thousand tons of ore now awaited treatment, so that it was not from ately to the east and on the same lead as the St. Eugene. The work done amounts to about 300 feet of tupnels and dond would be an accounted to the first divitwo shafts. There is a splendid showing in all of the workings. Several carloads of ore have been snipped during the year, and the mine has been euipped with a large boarding house, bunk house, ore bin, and everything is in shape for pushing work on a large scale. Charles Farrell, one of the course. Charles with a large boarding house, bunk house, ore bin, and everything is in shape for pushing work on a large scale. Charles Farrell, one of the original owners of the Lake Shore mine, is the owner.

The Aurora, situated on the west side the large scale on the west side that have the large capital of the large capital. Thanks to the Bank of Montreal at Rossland they had had no trouble with money thanks the large capital of the lar matters, and they were now practically even in their account with the Bank, so that the future profits would be all available for dividend. The accounts showed a loan of £104,000 (\$520,000) from the Bank, but the accounts were made up to June and that did not exist now. The cost of smelting was \$4 a ton and the average of the ore \$12 or \$13.

The shareholders left satisfied.

LARDEAU COMSTOCK A Wonderful Lime Ledge Giving High

Some weeks ago the Eagle gave its readers some idea of the Comstock group, up the north fork. Since then a report written by S. Shannon, B. A., of this place, has reached us and as it enters more into details we publish it in full. Mr.

"The group consists of two full sized mineral claims, viz: "Comstock" and "Silver Bullion' staked along the same Shannon says: location line and covering an area of ap-

proximately 100 acres.
"The property is most advantageously since it adjoins Circle City townsite on the north side, and slopes quite precipitately eastward towards Galena creek, and westward quite gradually to-wards the north fork of Lardeau creek, the Comstock claim being on the eastern, and the Silver Bullion on the western slope.

"The property is only seven and one-An Unknown Mining Region—But Little half miles distant from Ferguson, and an excellent pack trail on wagon road grade Prospected.

The Morning Group.—The property of the Bull River Mining Compan is situated on Quartz creek, whose waters empty into Bull river, about 12 miles from Fort Steele. There are three groups, one known as the Morning Star group, consisting of 10 claims; the White Swan group of two claims and the Susan Belle and Highland Mary comprising the third group. On the group of ten claims there are eight excellent pack trail on wagon road grade leads from the date hereof, to apply to the mining recorder for a certificate of by the mining recorder for a certificate of cate of improvements, for the purpose of obtaining a crown grant of the above claim.

And further take notice that action, under section 37, must be commenced before the issuance of such certificate of improvements.

Dated this 8th day of December, A. D.

lime running tarough this property, and The work done this year has been pre-liminary to the development of the pro-erty on a large scale next veer quartz, well mineralized with copper pyrites and galena. To quite an extent the copper pyrites seems to stay with the footwall of the hime and the galena with the hanging wall, but this does not hold throughout, as the minerals are found together and on either wall of lime.

"The trend of the formation he northwest and southeast, and the strata dip towards the northeast.
"On the Galena creek slope the forma-

tion is fairly well exposed, and it is there Chickamon Stone.—The development cuts of rather modest dimensions but in work on the Chickamon Stone has pro- each of them very fair showings of ore gressed in a very satisfactory manner are exposed. No. 1 open cut is well down

work has been done on it, but, across the north fork on the Sunset group, this same lead is exposed at intervals all up the slope, and some very fine showings of Take notice that I, F. W. Rolt, free

Comstock, there is rather a fine showing of both galena and copper pyrites.

The lead is locally known as the Hunter and Trapper, and is traceable and well mineralized throughout the length of eight claims in this section. On the divide between the north fork and Pool creek it seems to be capped over, but appears again from Pool creek to Fish creek, and further take notice that action, under section 37, must be commenced before the issuance of such certificate of improvements. there also some fine showings of ore are found on it. It parallels, and is situated about midway between the Black Bear lead and the Horn lead.

From samples broken from off the ledge by myself, I obtained the following assays: (1) Galena—Gold, \$3.33; silver, 34.5 ozs.; lead, 57 per cent.
(2) Copper Pyrites—Gold, \$6.67; silver, 9

(2) Copper Pyrites—Gold, \$6.67; silver, 9
ozs.; copper, 26 per cent.
(3) Gelena and Copper Pyrites—Gold,
\$8.00; silver, 19 ozs.; lead, 35 per cent.,
and copper, 9 per cent.
Estimating silver at 60 cents per ounce,
lead at \$4.25 per hundredweight and copper at \$16.50 per hundredweight, these
samples would indicate ore in all values
