

Week's War News

London, Oct. 14—Seventeen German steamers which ply in Baltic Sea are missing, according to a Uterhelm despatch to the Exchange Telegraph Company, and are believed to have been sunk by British submarines.

Petrograd, Oct. 14—Russian general staff circles estimate that about three Tatar army divisions, 120,000 men, were shattered by the Russian success on the Tzupa in eastern Galicia. The army which suffered this blow is under General Von Linsingen, and includes German and Austrian corps.

Paris, Oct. 14—Private advices are to the effect that the Bulgarian division was almost annihilated in a fierce battle near Kraguevatz, Serbia, says a despatch to the Havas Agency from Bucharest, dated Tuesday, and delayed in transmission.

Paris, Oct. 14—L'Espresso optimistic French military experts today did not endorse the opinion expressed in some quarters that Germany is preparing for a retreat on the western front. In the face of the Allied drive, they said it was natural for the Germans to make advance arrangements with a view to the possible retreat that might become necessary. They did not think it safe to conclude that the Kaiser believed that would be the case.

RUSSIA'S LESSON AS A RESULT OF WAR

A Huge Nation Without Industries—How Would Canada Fare Under Similar Conditions?

"Country Life in Canada" of Winnipeg had a very interesting article in a recent issue entitled, "Nations, With and Without Industries." Russia was taken as a typical example of the nation without manufacturing development. The article calls attention to Russia's position when war was declared. Russia found herself cut off from the rest of Europe and America in great measure as far as supplies of manufactured goods were concerned. Russia could not export her vast stores of food products, nor secure in change for them manufactured goods, many of which were essential to the successful conduct of the war.

Result of Russia's Isolation
Food remained cheap, but imported commodities became dear. The importation of manufactured goods ceased; stock in stores grew less and less, imported commodities became dearer and dearer. Germany before the war, exported to Russia immense quantities of machinery, utensils, and chemically prepared materials. Nearly all drugs came from Germany, so a drug famine existed in Russia. Boots made in Vienna, and hats and costumes from Paris disappeared. Russian society ladies—among the best dressed in Europe—have been, and will be, without fashions. In this regard the upper and middle classes of Russia feel the pinch of war, because luxuries are abolished. The poor, however, had only a demand for food—and food was both plentiful and cheap. The peasant-farmer was better off, especially since he no longer could waste what money he had on vodka and beer. Economy and sobriety conserve the wealth of nations.

Russian General's Views
A Russian general stood with his staff on a hill in Poland. The Russians were fighting one of their dogged rear-guard actions, falling back on a line of new defences. Impotently the soldier raised his hand and shook it at the advancing German hordes. "Oh, for the machine shops of other lands," cried he, "for their looms and factories. Then we'd fire shell for shell, and our soldiers would have an equipment to face the best in the world!"

If Canada Were Embattled
What if Canada had enemies on her southern frontier, and part of the prairie provinces in their hands. To the north, the unnavigable Arctic; on the west the Pacific Coast blockaded by enemy warships. Halifax being bombarded, enemy troops overrunning Nova Scotia, and warships smashing their way up the St. Lawrence. It is not a pretty picture, and, but for the grace of God and the British Empire, we might be today as Russia is.

Could Canada take care of herself in an economic sense? We know that Russia has cheaper food as a result of the war, but even now Canada imports eggs, butter and other produce that now glut the home market in Russia. What would it avail us if our wheat was held in storage as in Russia's in her Black Sea ports?

Yet, in other ways, Canada is infinitely better prepared as a self-supporting country than is Russia. In ratio to population our factory production swamps that of Russia. We even produce the luxuries the upper classes of Russia lack owing to the

London, Oct. 14—Forty-one persons were killed and 101 were wounded in Wednesday night's Zeppelin raid on London. It was officially announced this afternoon. Of the casualties fourteen of the killed and thirteen of the wounded were soldiers. The others were civilians.

Halifax, N.S., Oct. 14—Word was received here today of the death of Corporal Harold Bennett, 25th Battalion, a son of Jos. R. Bennett, of this city. He was killed in action on Oct. 8th. Mr. Bennett has two other sons at the front.

London, Oct. 14—A Bucharest despatch says: Bulgarian cavalry and German and Austrian troops were concentrated today at Vidin, on the Bulgarian bank of the Danube opposite Roumania, apparently ready for an offensive or defensive against Roumania, or possibly to meet Russian forces reported on their way across Roumania to help the Serbians.

Berlin, Oct. 14—Reports that a serious epidemic of cholera is raging at Kiel, the German naval base, are denied. It is asserted there were only three cases all in the same family. These patients were isolated and there is no danger of the disease spreading. The infection was brought from the eastern war theatre.

war. We manufacture boots, and our ladies are quite well satisfied with Canadian-made clothing. We have the machine shops—the looms—that the war-worn Russian general longed for. We have, in fact, gone a good way along the road that proves a nation to be industrially organized. Economically we have as great recuperative powers financially as has Russia—if only we conserve them. Our population is a flea-bite to that of Russia—but Russia never suffered from a mania of land speculation. Her cultivated area has decreased owing to the passing of the serf system and emigration; her farmers did not leave the land to become real estate or grain gamblers—as was the case in Canada. Russia has unequalled national resources to-day—but no industries in ratio to her population. There is an obvious lesson in all this. Build up Home Industries. Fortunately Canada has endeavored to do so.

PROTECTION IN AUSTRALIA

Grain Growers' Secretary Exchanges Notes With Australian Organizer

A recent issue of the "Grain Growers' Guide" contained an interesting letter from the General Secretary of the Farmers' and Settlers' Association of New South Wales. Apparently co-operative organization among farmers is making big strides in the Australian continent. After reviewing the co-operative features of the farmers' organizations, particularly with respect to the dairy industry, the Secretary's letter has a paragraph bearing on the much vexed tariff question. Judging from the Secretary's views on this subject the policy of protection does not agitate the farmers nearly as much in Australia as it has in the Canadian West during recent years. While the organized farmers in Australia are somewhat opposed to protection, their opposition is by no means shared by the majority of the agricultural producers, as is evident from the following extract from the Secretary's letter:

"As regards the feeling among Australian producers the position is decidedly 'mixed,' and it will probably surprise you to learn that the majority support the Protectionist policy."

Organized effort has resulted in the creation of a certain amount of hostility towards the policy of a reasonable encouragement for Canadian manufacturing industries in this country, but it is doubtful whether the majority of the farmers in the West are much more against protection than their fellow-farmers of Australia.

Queen Victoria's Dolls

When Queen Victoria was a little girl she dearly loved dolls. She had 132 in all—dancing girls, lords and ladies, babies and maids. Each one dressed in garments that fitted his or her place in life. Victoria made the garments of 32 of these dolls her very own self. Such fine stitches as she took, too. Dainty pocket handkerchiefs, a half-inch square, she embroidered with initials, and drew the threads in the borders; silk and satin robes with long, graceful trains; caps and bonnets in the fashion of the day. Most wonderful of all was the way she finished off the tiny pockets on the tiniest of aprons. Many of these dolls are still preserved in the museum, where you may see them when you go to London.

Proposed Civic Improvement Organization For Canada

Proposal for National Movement to Secure Effective Interest in Municipal Affairs, and Advancement of Principles of Civic Improvement and Growth

The following appearing in the October issue of Conservation of Life, should be of much interest to the members of the Newcastle Town Improvement League, and to the citizens of the town in general:

At the International Town Planning Conference held in Toronto in May, 1914, the Canadian delegates met and passed the following resolution:

"That this representative gathering of Canadian delegates at the International City Planning Congress held in the Convocation Hall of Toronto University on Wednesday, May 13th, 1914, desires strongly to pray the Commission of Conservation, in view of the very practical co-operation and interest in the aims and objects of the present International City Planning Conference, to continue its good work by the creation of a special Bureau of City Planning and Housing in connection with the activities of the Commission of Conservation, to act as a Central Body to encourage and co-operate with provincial and other housing and town planning bodies."

Partly in consequence of the appeal contained in this resolution the Commission of Conservation has formed a Town Planning Branch, and has appointed a Town Planning Adviser. The branch is engaged in framing that town planning and housing legislation, in advising cities, towns and villages regarding the planning and improvement of their areas, and in educating public opinion. It is felt, however, that the work of the Commission will not meet with an adequate measure of success unless there is a more widespread interest in municipal matters on the part of the general body of citizens. An organization is required to stimulate public interest in municipal affairs, with special regard to public health, town planning and housing, and to encourage the study and advancement of the best principles of civic improvement and growth.

A proposal has therefore been made that Civic Improvement Leagues should be formed in each city, town and municipality in Canada; these leagues should together form federations in each province, and that these federations should unite in a Dominion Conference of Civic Affairs at suitable intervals. Where Boards of Trade have Civic Improvement Committees, or other bodies are in existence which deal with certain aspects of city or village improvement, it might not be necessary, or even desirable, to form a new league, but merely to attach the existing body to the provincial federation. Civic Improvement and Housing Committees of Local Councils of Women would also be welcomed as local units in the organization.

The scope and form of constitution of the proposed organization have not yet been agreed but a draft scheme has been prepared and will be submitted to a representative conference to be held in January, 1916, during the annual meeting of the Commission of Conservation. Existing Civic Improvement Leagues and other bodies which have been formed for the purpose of promoting public health, town planning, housing and associated movements are being invited to take part in a preliminary conference to be held in November next.

Many of the existing bodies are working without knowledge of each other's operations and are unable to get the benefit to be derived from co-operation with each other. A frequent exchange of views would be of great value. In regard to civic questions there is much need for education in Canada. There have been many interesting developments in recent years that require to be carefully studied. Experience in regard to town planning particularly is so new that it is of the utmost importance that the lessons to be derived from it should be fully discussed and erroneous ideas removed.

The time is considered opportune for a Dominion-wide movement in connection with these matters. The fact that the Empire is engaged in war is an added reason for considering how we can build up and conserve our national resources by reducing wasteful municipal expenditures, improving housing conditions, raising the standard of public health, obtaining better means of transportation, reducing unemployment and generally planning our towns, cities, and municipalities so as to secure health, economy and convenience.

As already stated, the leagues need not be limited to those dealing strictly with civic improvement, town planning and housing. Associations or committees in any city, town or district dealing with any question of civic improvement, town planning, housing, sanitation, public health, playgrounds, fire prevention, form of municipal government, etc., might join in the provincial organization.

General Consideration Regarding Scope and Objects of Leagues

The general object to be kept in mind should be to do that which is best for the public welfare—not for the interests of the few nor for the mere advertisement of the city, town or village. The business interests—especially those connected with productive enterprises—must have first consideration in connection with any scheme of civic improvement. Closely identified with these interests is the health of the people. To secure efficiency in connection with local industries and healthy conditions of life for the citizens, from the highest to the lowest, should be the first object of any association seeking to secure civic improvement of any kind, whether it be by a town planning or a housing scheme or by some other means.

The prosperity of a city, town or village is not determined by its central bodies, but by the average level of the prosperity of its individual citizens engaged in the various elements of the community as a whole. Neither in the human body nor in the city does mere size in itself denote strength—in both the various elements that go to make healthy growth must be present. It is for the local associations or leagues, guided and assisted by the central bodies, to discover what these elements are, and having discovered them, to see that they are present in their localities.

Much may be done to improve local conditions that have grown up in the past but perhaps more in the direction of preventing the recurrence of such conditions in future. The most urgent need is to safeguard future growth. This can be easily and economically done, when proper legal powers are obtained. To alter past growth is necessarily expensive and it will be slow accomplishment.

The worthy desire of many citizens to make their cities and towns beautiful, to secure wide roads, fine groups of buildings, large open spaces, must not be lost sight of, but after all these are, to some extent at least, the luxuries and not the necessities of the city or town. We should plan to have artificial beauty but not at the expense of business efficiency, or health, or cleanliness. Natural beauty can usually be obtained by mere planning and without extra cost. A city that is healthy and clean may be beautiful even if it is without expensive ornament; it can never be really beautiful if it is unhealthy or unclean, however ostentatious its public buildings may be. By keeping things in their proper places, and subject to reasonable proportions according to their value and use, there is no reason why better results in regard to beauty, utility and health should not all be obtained without greater expense than we incur at present. By planning our towns we will find that efficiency and health can be secured by the very means which also secure the greatest economy. In every city, town and village the problem of today is that we should be able to improve conditions without increased cost, that we should get higher standards of efficiency and health without spending more but by "spending more wisely."

We need groups of citizens in every community to study this problem and to consider and suggest means towards its solution.

Proposed Statement of Objects

The objects of each League should be defined as follows:—To assist in promoting the highest interests of the (city or town) and the welfare of its citizens by the study and advancement of the best principles and methods of civic improvement and development, and by securing a general and effective public interest in all municipal affairs.

A Blended Flour like—

BEAVER FLOUR

Is The Only One That Is Equally Good For Bread and Pastry

EVERY good Canadian housewife remembers the kind of Bread she got with western wheat flour—the tough, coarse loaf, uninviting, rather tasteless and full of holes. She knows that such flour cannot make good pastry, no matter how much water she uses in the dough.

"Beaver" Flour is a blended flour—made of the famous Ontario pastry wheat, with the proper proportions of Manitoba wheat added to increase the strength.

"Beaver" Flour makes a good size loaf of bread—sweet, tasty, appetizing—as white and light as snow—with crisp, brown crusts—a truly delicious, nourishing food, that everyone enjoys for every meal.

It makes the kind of Pies and Cakes that you are proud to serve and everyone is glad to eat. Tell your grocer you want to try "Beaver" Flour—the original blended flour. 160

DEALERS—Write us for prices on Feed, Coarse Grains and Cereals. The T. H. Taylor Co. Limited, Chatham, Ont.

with special regard to such questions as the following:

(1) The form and character of local government and the application of sound economic principles in regard to the administration of municipal business.

(2) The preparation of town planning schemes for the purpose of securing proper sanitary conditions, convenience and amenity in connection with the development of land within and surrounding the area of the city.

(3) The replanning of old districts, the removal of slum areas, the widening of public thoroughfares, and other reconstruction schemes.

(4) The conservation of the industrial and physical resources of the city, with special regard to the housing condition and health of its citizens and the adequacy and efficiency of its public services.

(5) The preservation and improvement of natural and structural beauty, the character and position of public monuments, the laying out of parks and open spaces, the planting and preservation of trees, the regulation of public advertising, and the abatement of smoke and other nuisances.

(6) The preparation of civic surveys and maps, and the carrying out of investigations into housing, transportation and industrial conditions, methods of land valuation and assessment, etc.

(7) The promotion of school and college courses in civics and civic design, of exhibitions of works of art and architectural engineering, and other designs relating to civic improvements, and of public performances of music; and the provision of facilities for the recreation and physical development of the young.

(8) The means of securing increased production from the soil within and in the neighbourhood of the city by encouraging the cultivation of idle suburban land and a more widespread interest in gardening.

The need for improvement leagues or associations is greater in some villages than in many towns. With a view to showing what work might be undertaken by a village improvement association a separate article in this bulletin describes the work of a successful New England association.

The above objects suggest the nature of the work to be undertaken. This, however, would differ according to the different conditions and different laws of each province and locality. For instance, in Nova Scotia, New Brunswick and Alberta there will be no need to consider the details of town planning legislation as Acts are already in force. In these three Provinces, therefore, the work of leagues or committees will probably be directed, so far as town planning is concerned, to encouraging the application of the existing legislation and to considering the details of schemes and their administration. In other provinces a large part of the work for a time will have to be in the direction of promoting legislation without which no effective town planning can be secured. Similar differences exist regarding other matters but a more extended statement of a suggested program of work for each province may be left over for the present.

An invitation is extended to all

HAVE YOU A—

MODERN BATH ROOM IN YOUR HOME? IF NOT, WHY NOT?

IN TOWN OR COUNTRY

We can equip your farm home and buildings with every city convenience, Heating Sewerage disposal System, Bath Room, Hot and Cold water at tap, pneumatic water system and efficient fire protection.

HOW TO GET INFORMATION

Call at our establishment and we will show you how, or drop us a post card and we will call upon you at your convenience. Estimates furnished free.

The readers of this paper will be pleased to learn that there is at least one dreaded disease that science has been able to cure in all its stages, and that is Catarrh. Hall's Catarrh Cure is the only positive cure now known to the medical fraternity. Catarrh being a constitutional disease, requires a constitutional treatment. Hall's Catarrh Cure is taken internally, acting directly upon the blood and mucous surfaces of the system, thereby destroying the foundation of the disease, and giving the patient strength by building up the constitution and assisting nature in doing its work. The price of the cure is \$1.00 per bottle. Next week the Observer announced that several hundred names had been added to its subscription list.

(Hartford, Ark., Observer.)

"If the young man who was seen Sunday evening kissing his best girl while standing at the front gate, will subscribe for The Observer before the next pressday, no further mention will be made of the matter." Next week the Observer announced that several hundred names had been added to its subscription list.
