

Roads Seem Pressed Flat By Wonderful New Triplex Springs

THE wonderful Triplex Springs of Overland 4 effect such a change in riding comfort that bad roads now seem to ride like good roads.

Overland 4 has the steadiness of larger cars of long wheelbase, with the light weight,

ease of control and low fuel and tire expense of 100-inch wheelbase.

Equipment, including Electric starting and lighting and three-speed transmission, is high class, in keeping with the general character of the car.

LADIES! DARKEN YOUR GRAY HAIR

Use Grandma's Sage Tea and Sulphur Recipe and Nobody will Know.

The use of Sage and Sulphur for restoring faded, gray hair to its natural color dates back to grandmother's time. She used it to keep her hair beautifully dark, glossy and attractive. Whenever her hair took on that dull, faded or streaked appearance, this simple mixture was applied with wonderful effect.

But brewing at home is messy and out-of-date. Nowadays, by asking at any drug store for a bottle of "Wyeth's Sage and Sulphur Compound," you will get this famous old preparation, improved by the addition of other ingredients, which can be depended upon to restore natural color and beauty to the hair.

A well-known downtown druggist says it darkens the hair so naturally and evenly that nobody can tell it has been applied. You simply dampen a sponge or soft brush with it and draw this through your hair, taking one strand at a time. By morning the gray hair disappears, and after another application or two, it becomes beautifully dark and glossy.

WHEAT IN SIGHT AT 4 DOLLARS

WASHINGTON, April 19.—Indication of a worldwide shortage of wheat this year, and a worldwide increase in demand, was reported today by the American Agricultural Trade Commissioner at London, who said bread was selling in England at what was generally considered the highest price the workingman would tolerate without grave disorders. With Russia still in chaotic state there is little to be expected from that country in the way of wheat, exports, and Europe naturally turns to Canada, Australia, India and the United States and Argentina.

PARTURIENT PARESIS

Disease More Commonly Known as Milk Fever.

Symptoms Described and Treatment Suggested—Nothing Should Be Administered by the Mouth—How to Treat the Udder and Teats.

(Contributed by Ontario Department of Agriculture, Toronto.)

PARTURIENT PARESIS, commonly, but improperly, called "milk fever" is a disease peculiar to breeding cows, and, as the name implies, appears at or near the time of parturition. In rare cases the symptoms have been noticed shortly before the appearance of labor pains, in some cases during the act of parturition, but in most cases not for a few hours or days after the young has been born. The exact cause and nature of the trouble, and the manner in which treatment acts, are still in comparative obscurity.

We know that it appears only in milk cows, and at or about the period of parturition, that it has never been noticed at or following the birth of the first calf, and very rarely the second; that cows that are heavy milkers or in gross condition, or both, are particularly susceptible, but it is occasionally met with in a poor milker or an animal in low condition.

Symptoms.—Shortly before, at, or in a variable time (say a few hours to three days) after parturition, the cows become uneasy, neglects her calf, stamps her feet, whisks her tail, and the eyes have a glassy appearance. She sways, has not proper control of her limbs, lies or falls down, may or may not be able to rise, goes down again. This may occur a few times, until she becomes unable to rise. She usually assumes one of two positions: lies either on her side with limbs and head outstretched, or on her back, with the head thrown backwards and the muzzle resting on the flank. There are few cases in which either one or the other of these positions are not observed. The temperature is subnormal in all uncomplicated cases, hence the term "milk fever" is not correct. More or less well marked coma is noted. In many cases she is apparently dead, except that breathing can be noticed. In many cases a sonorous breathing. She is insensible to surroundings and insensitive to pain. In some cases the development of the symptoms is very quick, while in others slow, and in some cases the extreme symptoms are not noticed. She may retain a degree of power of action and sensation.

Treatment.—It has been demonstrated that a full udder tends to prevent the disease. Hence it is good practice to allow the calf to remain with the dam for at least three days, as it will nurse frequently and a full udder, never leaving the udder without considerable milk. When, for any reason this cannot be done, the milker should simulate nature as near as possible, by milking frequently, but very little at a time for three days. It is also good practice to reduce the animal's milk producing food for a few days before parturition is expected.

Curative Treatment.—We wish to particularly emphasize the fact that on no account, and under no circumstances, should any attempt be made to administer anything whatever by the mouth. Even in the very early stages of the disease, the patient loses the power to swallow; hence, if fluids be introduced into the mouth some of it will almost surely pass down the windpipe and cause death by asphyxiation in a few minutes, or set up mechanical bronchitis, which will probably cause death in a few days.

We have stated that "a full udder tends to prevent," now we say that "a distended udder tends to cure." Inflation with oxygen gas or sterilized air is easier and less liable to cause complications than distension with fluids. The use of gas demands the possession of a tank of compressed pure oxygen gas, and special apparatus. Outlets for inflating with sterilized air can be purchased from dealers in veterinary instruments for from \$2 to \$3, and where neither can be obtained an ordinary bicycle pump with a teat syphon attached may be used, but complications from the introduction of septic material are more liable than when gas or sterilized air is used.

The udder and teats must be thoroughly washed with an antiseptic such as a 5 per cent. solution of one of the coal tar antiseptics, the hands of the operator and the instruments also sterilized. All milk is drawn off, as its presence interferes more or less with inflation. The syphon is introduced into a teat, and all the gas or air that the quarter will hold is forced in, and the teat then tied tightly with tape to prevent escape of it. Each quarter is inflated and the teat tied. The udder is then well massaged every hour until the cow rises to her feet, which is usually in from one half to two hours. The tapes should be removed in at most two hours. If not on her feet in at most six hours the udder should be re-inflated. She should be given some easily digested food, or a reasonable amount of her usual food, and all the water she will take. If the weather be cold, the chill should be removed from the water and the cow kept as comfortable as possible. She should not be milked at all for 24 hours after inflation, and for the second twenty-four hours she should be milked frequently, but very little drawn at a time. Forty-eight hours after inflation she should be milked and attended to in the ordinary manner.—Dr. J. H. Reed, O. H. A. College, Guelph.

Shade is important for all classes of stock.

The Pittsburgh Pirates stopped the victorious march of the Cincinnati National League team on Sunday.

"Beauty is Only Skin Deep"

but a beautiful skin is possible only when the liver and kidneys are active, and the bowels functionate properly. The secret of beauty as well as of health is to maintain perfect digestion and elimination.

BEECHAM'S PILLS

help to preserve beauty and maintain health, because they influence liver, kidneys, skin and stomach to functionate in harmony and efficiently.

Worth a Guinea a box. Sold everywhere in Canada. In boxes, 25c, 50c.

YOUR HOLIDAY THIS SUMMER

Make your reservations early for accommodation in the "Highlands of Ontario" this summer if you do not want to be disappointed. There will be a large influx of tourists from the United States this year and our cousins across the border are picking up the desirable places. Algonquin Park is one of the most attractive of these resorts and the "Highland Inn" (open all year) and Camp Minnesing and Nominigan Camp (open July and August, and probably September) offer most comfortable accommodation at reasonable rates. The hotels are owned and operated by the Grand Trunk Railway. Write N. T. Clark, Manager, Highland Inn, Algonquin Park Station, Ont., for illustrated folder telling you all about it, or apply to any Grand Trunk Agent, or C. E. Horning, D.P.A., Toronto, Ont.

WOMEN CAN FORTIFY THEIR HEALTH

With constantly aching backs, weary, dragging-down pains, dizzy and nervous headaches, women have a hard burden to carry. It is wise for every woman to fortify herself against those derangements which are present when extra demands are made upon the system by Nature's laws. No better remedy exists for woman's peculiar ailments than DR. HAMILTON'S PILLS, which possess tonics properties that act upon the proper organs at the proper time. To prevent headache, to overcome dragging weariness, backache, nervousness and pallor—to look well, sleep well, eat well and enjoy the manifold blessings of sound, regular health, every girl and woman should regulate her system by Dr. Hamilton's Pills, 25c. per box.

NOTICE TO CONTRACTORS

Pursuant to the requirements of the Canada Highways Act, separate sealed tenders marked "Tenders for water-bound macadam pavement section..." will be received by the undersigned until 12 o'clock noon on Tuesday, May 11th, 1920, for the construction of three inch water bound macadam pavement on the Provincial Highway between Stoney Creek and St. Catharines in the following sections—

- (1) From mile 5 to 9, a distance of four miles.
- (2) Between mile 9 and mile 14.5, a distance of three and one-half miles.
- (3) Between mile 25 and mile 31, a distance of three and three-quarter miles.

Tenders will also be received at the same time for the construction of a Bituminous macadam pavement on the same section of the highway.

Plans, specifications and forms of tender may be seen on and after Tuesday, April 20th, 1920, at the office of the City Engineer, St. Catharines, the office of the Resident Engineer, Beamsville and at the office of the undersigned.

A marked cheque for \$500 payable to the Minister of Public Works and Highways Ontario is to be attached to each separate tender.

A Guaranty Company's bond for ten per cent of the amount of the tender will be required when the contract is signed.

W. A. McLEAN,
Deputy Minister of Highways,
Department of Public Highways,
Toronto, April 16th, 1920.

Sunset Soap Dyes

Said to be the most wonderful dyes in the world.

Will not stain the hands nor soil the utensils.

Dyes silk, wool, cotton or linen.

Price 15c. Package
