

Keep Your Farm Productive

Have you noticed any decrease in the crop yield of your farm?

Perhaps your farm is still yielding good crops, but if you are not properly fertilizing it, it will soon cease to do this. The removal of each crop takes substance from the soil, and although not noticed to any great extent in the first few crops, it will soon begin to show unless the substance is returned.

Farm manure contains just what the soil needs to maintain or improve the crop yield, but it must be spread in the right way, or the valuable elements which it contains will be wasted.

The proper way is with an I. H. C. manure spreader, for one of these machines so distributes the manure that a particle of manure comes in contact with every particle of the soil.

The I. H. C. spreaders are the Corn King, a return apron machine, and the Clover Leaf, an endless apron machine. Each of these spreaders is made in a number of different sizes. They are durable and substantial and are light in draft, as the simplicity of the power transmission requires but little more of the horses' strength than it takes to turn the wheels.

"Well-written ballads, sonnets and verses...rare power as a writer of fiction...sketches of exceptional merit...work rings true."—Toronto Globe.
