Winnipeg.

The National Matte Smelter.

A practical and simple method of matting sulphide ores, such as nickel, copper, gold and silver ores, in localities where lead ores and fuels are scarce and almost unattainable, our pyritic, water jacketed Matte Smelter has been recognized with highly satisfactory results and has been thoroughly tested on various pyritic, sulphide and arsenide ores, in capacity of 2 to 50 tons per day. It is the most practical, cheapest and simplest method of gold and silver ore matting and concentrating that is known to-day.

It requires no extraordinary skill, no lead ores, no fluxing material, and no fuel of any kind for the smelter after it is started. The sulphur in the ore is its natural fuel only, and its cost has no comparison with any other process of concentrating.

We are prepared to furnish any size or cupric plant complete to substantial running people, set it up and furnish our men to run it for them on easy payments. Prices and specifications furnished with references and testimonials on application.
