

DGCA—PUBLICATIONS DE RECHERCHE

An Analysis of North Atlantic Traffic as it affects Canadian Domestic Airspace	Mars 1971
Preliminary Analysis of Recorded Noise Data—Montreal International Airport	Avril 1971
Minimum Aircraft—Manoeuvring Airspace Requirements for a System of Airports	Mars 1972
A Fortran IV Computer Program to Determine Noise Exposure Forecast Contours	Juillet 1972
Aircraft Selection Methodology	Septembre 1971
Basic Methods—Cost Benefit Analysis	Juin 1972
A Description of the CNR and NEF Systems for Estimating Aircraft Noise Annoyance	Octobre 1971
A Survey of Control Tower Height and Line of Sight Requirements	Septembre 1972
Operational Requirements Extended Range Calibration Aircraft	Janvier 1973
An Analysis of Air Responses and Ground Responses-Airport Emergency Services Ministry of Transport	Mai 1973
Planning Peak Hour Forecasts-Air Carrier, Instrument Flight Rules and Itinerant Traffic	Octobre 1973
Aircraft Technology for Civil Aviation—The Present to the Year 2000	Juillet 1973
Determining and Forecasting the Daily Traffic Distribution (Air Carrier and IFR) for Fourteen Major Canadian Airports	Octobre 1973
Appraisal of the Aircraft Sound Description System (A.S.D.S.)	Janvier 1974
Hourly Runway System Capacities for Airport Planning	Septembre 1974
Planning Day Profiles Air Carrier Traffic	Juillet 1975
Environmental Factors in Canadian Air Transportation: Review & Prognosis	Décembre 1974
Noise Exposure Contours for General Aviation Airports	Juin 1975
