CUTIVATION OF WHEAT. To the Editor of The Advertiser: With the hope that some of your readers will try to rival the wheat-growers in the old country, I again ask you to give space to extracts from the annual report of Sir J. B. Lawes' experimental farm, on which wheat has been grown every year for 53 years. On one piece no manure has been used for 56 years, and the crop this year is 16 3-4 bushels per acre, weighing 61 3-8 pounds to the bushel. One piece has been well manured each year, with farmyard manure, and the crop is 44 bushels, of 69 pounds. Three plots, manured with artificial manures, gave an average of 39 3-4 bushels, of 63 7-8 pounds to the bushel. The average yield of all, including the unmanured piece, is 33 1-2 bushels, of 63 1-8 pounds, of 35 1-4 bushels of 60 pounds. All the figures are much above the averages of 10, 34 or 44 years, and there is no former record of 64 pounds to a bushel. A later report of the general crop gives equally good results, viz. 50 bushels to the acre in one county. 48 bushels in two counties, 36 to 4 The Toronto Globe thus places the bushels in fourteen counties, and 30 stances in Canada: Professional-T.
