

## The Range---The Factory The Methods

You will be interested in knowing of the foundry where the Gurney-Oxford Range is made, also of the methods and organization which have brought it to its present high state of efficiency.

The Foundry Building is large and commodious, and laid out in a way that contributes to economy in manufacturing. Every single part of the range is made here under the closest scrutiny. We have never been content to accept traditions in range building. We experiment constantly to find something better, something which will effect an improvement or add to the value of the range when it reaches your kitchen to do your work.

The Gurney-Economizer, the greatest and most radical improvement in range making, was the subject of extensive tests in the factory.

We knew what a great improvement it would be to have an oven always properly and evenly heated, so we experimented until, by an arrangement of flues, this was accomplished.

We have never hesitated to make a change in design or principle when we found that change meant greater efficiency.

When you select a Gurney-Oxford Range you know that it has behind it one of the most competent factories in Canada and an accumulation of experience extending over 70 years.

## BEETHAM'S La-rola

Is a perfect emollient milk quickly absorbed by the skin, leaving no trace of grease or stickiness after use. Allaying and soothing all forms of irritation caused by Frost, Cold Winds, and Hard Water, it not only

### PRESERVES THE SKIN

and beautifies the Complexion, making it SOFT, SMOOTH AND WHITE, LIKE THE PETALS OF THE LILY.

The daily use of La-rola effectually prevents all Redness, Roughness, Irritation, and Chaps, and gives a resisting power to the skin in changeable weather. Delightfully soothing and Refreshing after MOTORING, GOLFING, SHOOTING, CYCLING, DANCING, ETC.

Men will find it wonderfully soothing if applied after shaving.

M. BEETHAM & SON

CHELTENHAM, ENG.

IN ANSWERING ADVERTISEMENTS PLEASE MENTION "THE CANADIAN COURIER."

the air, swooped, and clove the fugitive's haunches. The guide strode calmly forward, recovered his weapon and with a tap on the crown put the writhing beast out of misery.

By this time the cow, having somewhat recovered from her exhaustion, was struggling to her feet. Seeing this, the bull turned threateningly upon his rescuers. Rawson jumped away just in time to avoid a savage thrust.

"It's evident we're not wanted here any longer," he laughed, turning to go back to the grove. As he did so the bitch, hitherto unnoticed because she had made herself so discreetly inconspicuous, ranged up alongside him with a confiding humility that was unmistakable. The Englishman eyed her for a second or two in amazement, then remembered, and understood.

"You get out of this, and be thankful you get out with a whole skin!" he ordered coldly. "You're a turn-coat." He was about to enforce his command with the butt of his gun, but the guide, coming up at that moment, intervened.

"No," said he, decisively, "don't drive her away. I'm darn glad you've refused her. I'll keep her myself. She'll be worth a dozen of your ordinary brutes that have never had the spunk to kick over the traces. I reckon she's learnt her lesson, an' she won't go wrong again."

## In One Job 58 Years

TO have been for almost three-score years in the continuous service of one man is the proud record of Mr. Robert A. Courtenay, lumber surveyor, St. John, N.B. From 1854 till the spring of this year Mr. Courtenay was in the employ of Mr. Alexander Gibson, the "King of the Nashwaak," who is still living and is 92 years old.

In that long period Mr. Courtenay has seen both the condition of the workers and the process of manufacture in the lumber industry greatly changed.

Fourteen hours was the length of the ordinary working day in 1854 and for many years afterwards. And at that time there was no legal machinery to compel an employer to give compensation to a man injured in his employ.

Interviewed recently for the St. John "Globe," Mr. Courtenay recalled much that makes interesting reading. The best pine in New Brunswick, he stated, was burned in the great fire on the Miramichi. He was up there some years after that event surveying logs for Mr. Gibson and saw a windfall, which he measured. It was 112 feet long from the butt to where the top had broken off and at that place the log was 14 inches thick.

Mr. Courtenay is proud of the fact that the Gibson lumber had a unique reputation for quality among the ship captains who came to St. John. The deals and boards carried a uniform thickness throughout their length so that they would stow more closely and the cargo be less liable to shift. Mr. Gibson, he said, had always the best of filers in his employ and a jealous watch was maintained over the behaviour of the saws. The moment it was discovered that one of them was not running true it was stopped till the filer had put it in good order again. The size of the average log in those early times was 11 inches at the top. The gang saws were used for cutting the deals and boards. There were no patent edgers in those days and the men had to pull the lumber through by hand. The rate of compensation in those early days was not high, the best paid men in the mill receiving no more than \$20 a month and board and of course many got less.

"Easy."—Lucille—"Oh, you can win Marie's heart easily enough. All you need do is to give her all the money she wants."

Jules—"And do you call that easy?"—Le Rire.

Noisy Infant.—The automobile is only in its infancy, so there is hope that it may eventually become less noisy.—Louisville Courier-Journal.

The End.—"Well, dear, I guess the honeymoon is over."

"Why do you say that?" pouted the bride.

"I've been taking stock, and find I'm down to \$2.65."—Washington Herald.
