

Mr. W. L. Kells records having found several nests near Listowel, and I have found it in summer near Toronto.

Arrives about the middle of May, departs at the end of August.

SUBGENUS GEOTHYLPIS.

273. Mourning Warbler.

(*Geothlypis philadelphia.*)

A rather rare summer resident. Breeds throughout its range in the Province.

Arrives about the twentieth of May, departs at the end of August.

274. Maryland Warbler.

(*Geothlypis trichas.*)

A common summer resident. Breeds throughout its range in the Province.

Arrives about the tenth of May, departs at the end of September.

GENUS ICTERIA.

275. Yellow-breasted Chat.

(*Icteria virens.*)

A very rare summer resident of the southwestern part of the Province.

GENUS WILSONIA.

***276. Hooded Warbler.**

(*Wilsonia mitrata.*)

A very rare summer visitor to the south-western counties.

277. Wilson's Warbler.

(*Wilsonia pusilla.*)

A rather rare migrant in spring and autumn, probably breeding in the northern part of the Province.

Arrives about the twentieth of May, departs early in September.

278. Canadian Warbler.

(*Wilsonia canadensis.*)

Common summer resident, breeds throughout its range in the Province.

Arrives early in May, departs at the end of August.
