

BUTTER MAKING REVOLUTIONIZED !

BY H. CALCUTT'S PATENT COMBINED

CHURN & COOLER

AND

GILT EDGE BUTTER MAKER.

FARMERS can cool their milk by the use of this Cooler Churn to a low temperature before placing in pans for the cream to rise, or they can make butter from the milk directly after it is taken from the cow. The cooling and churning may be completed inside of an hour, saving the expense and trouble attending cream rising.

MILK SELLERS AND CHEESE FACTORIES can cool their milk to 50° at the rate of from 1 to 10 gallons a minute, thereby making it keep for several days during the warmest weather.
