

AN ENGINEERING DEPARTURE.

Building engineering foundations on a solid foundation of water is the rather startling plan by which W. E. Murray, a California engineer, expects to confer great benefit upon the world. The floating structures would have a large weighted base, with a broad projecting flange, and would be immersed in the sea until the lower portion would rest in the stable waters below the disturbed surface. With this form of construction it is believed that the action of waves would be slight. It is claimed that this form of building should have a wide range of usefulness, and it is specially adapted for breakwaters, lighthouses, forts and bridges.

Brunet, LaMarche & Co., brick manufacturers, St. Hugues, Que., have dissolved.

The following building firms have registered in Montreal: M. D. Baldwin; La Comygnie de Construction; Theo. Delage; St. Aubin, Poirier & Co. The Powell Paving Co., have also registered at Montreal.
