TO PREVENT MILK FEVER

Breeding plants is becoming as the consistent breeding and improve not occupy the prominent place i ment of live stock has been. A few should in creamery practice, indicat years ago, the popular mind troubled ing that few are familiar with the dis itself little about such things. Not astrous results of careless testing and that it was by any means a new thing, practices of sampling which may lead for there were always men who realto an inaccurate determination of but ized this, practised it, too. Many ter fat. If the test applied to cream years ago old Aberdeenshire farmers, as well as others of a progressive type for payment, then it bears the same used to select their seed with care, relation to that industry that a sys and progress in the acquisition of new tem of weights and measures does varieties were constant. But the publany commercial business. lic never really grasped its true im Today, work along these

Few realize that the creamery over run will, on a 40 per cent. cream bas lines is developing on every hand and is, be increased or decreased three farmers are beginning to realize the per cent by introducing an error of one per cent. in testing. This means, in years ago, the practice of saving only plant averaging 700 pounds of butter the smaller potatoes for seed was a Jaily, a loss or gain of 20 pounds of common one. Then the importance of outter, worth about \$6-salary of two using good, healthy, plump specimens good men. Thus it becomes evident gations indicate the wisdom of going uniformly high is a source of constant still further in this work, and using drain to the plant. Should the error fall in the opposite direction, lific and healthy looking hills. Here plant must sooner or later suffer from a list of dissatisfied patrons.-Illinoi

COW FEEDING EXPERIMENTS

The North Carolina experiment station recently concluded a number of which will be selected as the ones experiments to determine the relative from which to choose seed for the following year. Go all over the plot, and efficiency of a narrow and medium wide ration for milk production. pick out the number which look the

Eight cows from three to six week best in all respects. Select from these the best specimens and keep them as seed for the following year. This is a simple matter. It is only following the system by which a progressive and careful breeder of high-class pure bred stock endeavors to select his breeding animals from each successive endeavors of vounestors by the second period the ratio of this ration was about 1.4. During the second period the ratio of the second period the ratio of this ratio was about 1.4. best in all respects. Select from these

sive crop of youngsters, but it is a 1.4. During the second period the raplan which can be followed by any tion was the same as the above ex farmer, and it will give such results cept that 2.5 pounds of cottonseed as will encourage him to extend the meal was replaced by 2.5 pounds of same system to every department on corn meal, giving this ration a nutr tive ratio of about 1.5.7. The results of this test indicate that the narrow milk produced 7.5 per cent. mor milk fat and increased the fat test Orchards which have been in clean 0.24 per cent., and the live weight 30 cultivation all summer should have pounds. The milk yield was practicover crops in. It will be better to cally the same. This trial was duallow even a weed growth to spring plicated with five cows, except that up than to continue cultivation. This the narrow ration was fed during the cover crop, as Rural New Yorker says first and thrd periods, and the me holds back the tree growth, and when dium ration during the second period. plowed under it adds to the soil. An The narrow ration increased the fat other most useful thing the cover crop test 0.17 per cent. and the amount of does is to save the soluble n crates in milk 93.4 pounds, the live weight re the soil. When organic matter demaining the same

CROSSED ATLANTIC IN MOTOR BOAT SAVED FROM

Met Rough Weather but Completed Journey in 24 Days --- Now Going to Russia.

A despatch from Queenstown says that the 35-foot motor boat Detroit, under command of Captain Thomas Heming Day of New York, which are rived there from New Rochelle, after a successful voyage, which ecupied 24 1-2 days, was welcomed by great crowds of , whople, the chairman of the Harbor Board, the president of the Town Council and other officials who extended their congratulations to Capt. Day. In an interview the captain declared that he never was in a better boat. She did no prove to be a good runner, but could fect in her design was the low midship deck. As a consequence she ship time in any danger.

Capt. Day said that he had proved from New York to Europe, and he

from New York to Europe, and he believed that a cup for such an event would be offered at an early date. The Detroit will remain here for a few days, and will then proceed for Cowes and thence for St. Petersburg by way of the English Channel and the North and Baltic seas.

The crew of the Detroit are all well, but suffered from stiff limbs, owing to the cramped space. The little craft encountered terrific weather and a succession of gales, with high seas. She was obliged to heave to nine of ten times, and pitched and relied trem endously. On one occasion the gasoline tank took fire in the englise room and was extinguished with dif ficulty. The fresh water turned foul. and thirst was one of the burdens they had to bear.

FOUR KILLED IN RAILWAY SMASH

Two enginemen and a passenger ere killed, a spectator dropped dead and forty or more passengers were in-

The train was rushing along at a speed of 35 miles an hour through Dorchester, and had reached a sharp curve opposite the Crescent Avenue the rails. Two of the passenger cars 4 p.m. followed the engine off the rails and

The locomotive then plunged off in to the marsh land and half buried itself. The momentum of the train carried two of the passenger cars over the engine, the projections of which ripped open the sides of the cars and tore out the seats along one side. The third passenger car and baggage car

The bodies of the engineer and fireman were found buried deep in the debris about the engine, and badly
