The Tale of Perfect Time in a Watch

From Hairspring to Hairspring, between them lies the steel.
The Mainspring is the power which it transmits to the active parts of the watch. The Hairspring has the control and completes the motion. The Spring is most delicate: it is a thin part of a hair. Impossible to break! Yet it is strong enough to interfere in its performance, so wonderful is the adjustment. The friction from accumulating dirt, lack of oil, etc., destroy these perfect settings. Do not let your watch run to ruin from neglect. Remember our business is the care of watches, and our opinion costs nothing.
