

## TIME CONSUMED IN SELECTING A TRENCH EXCAVATING MACHINE IS NOT TIME LOST.

Trench Excavation is about the most severe and exacting work to which a Machine Excavator can be put.

The up-to-date Contractor wants to select a machine which will possess qualities on which he can absolutely rely when figuring on a contract.

The Machine must be dependable, durable and profitable.

The machine must be able to excavate in any kind of earth, so the Contractor will not have to choose the kind of earth for the machine,

Our Trench Excavator being beyond the stage of experiments, possesses all the above qualities. Our Trench Excavator will dig a trench from 27" to 60" wide and any depth down to 20 feet. *Mr. Contractor, if this is the machine you want for your work, we are at your command.*
