The workers employed in the Okrug's main agricultural industry, reindeer husbandry, look on this clash of weathers with concern. Sharp drops in the temperature have sometimes led to the loss of animals during periods when the ground becomes covered with ice. It is precisely that danger which has now arisen. An ice cover has covered the grazing grounds of three regions, Iml'ina, Provideniye and Chukotka. In the face of these threatened ice conditions, the Okrug agricultural association gave the State Farms permission to move their herds around freely, without any boundary restrictions.
