

No. 58	Image formation by crystalline media, by H. T. DAWES.	0.25
No. 59	Periodic precipitation, by Miss A. W. FOSTER.	0.25
No. 60	Regularity in the spectra of lead and tin, by R. V. ZIMMERS.	0.25
No. 61	New lines in the extreme ultra-violet of certain metals, by D. S. AYSEN and D. S. FETTER.	0.25
No. 62	Excess absorption of helium by charcoal, by STEVEN McLEAS.	0.25
No. 63	Optical absorption spectra of thallium, aluminium, lead and tin, and arsenic, by J. C. McLEAS, J. E. T. YOUNG, and H. J. C. BRITTON.	0.25
No. 64	On the optical transparency of certain specimens of thallium, by J. E. T. YOUNG and H. J. C. BRITTON.	0.25
No. 65	The use of the Lamm Interferometer for the estimation of small amounts of helium or hydrogen in air, by J. C. McLEAS and R. T. EDWORTHY.	0.25
No. 66	The estimation of the helium content of mixtures of gases by the use of a Katharometer, by V. F. MURRAY.	0.25
No. 67	The permeability of balloon fabrics to hydrogen and to helium, by R. T. EDWORTHY and V. F. MURRAY.	0.25
No. 68	A continuous flow apparatus for the purification of gaseous helium mixtures, by E. EDWARDS and R. T. EDWORTHY.	0.25
No. 69	The production of helium from the natural gases of Canada, by J. C. McLEAS.	0.25
No. 70	Comparison of the vapour and liquid phases of the system methane-nitrogen, by H. A. McFARLANE and E. EDWARDS.	0.25
No. 71	On the extreme ultra-violet spectra of magnesium and selenium, by J. C. McLEAS, J. E. T. YOUNG, and H. J. C. BRITTON.	0.25
No. 72	Absorption of light in thin films of rubber, by E. R. T. TRATT.	0.25
No. 73	The adsorption of gases by carbonized lignites, by STEVEN McLEAS.	0.25
No. 74	The density of adsorbing materials, by STEVEN McLEAS.	0.25
