

CONTENTS

CHAPTER I.

THE NATURE OF THE MACHINE

General discussion—Definition of the machine—Divisions of the subject—Plane constrained motion—Turning and sliding motion—Mechanisms—Inversion of the chain.Page 9

CHAPTER II.

MOTION IN MACHINES

Plane motion—Data necessary to locate a body—Relative motion—Illustrations—The virtual centre—The permanent centre—The location of the virtual centre.Page 26

CHAPTER III.

VELOCITY DIAGRAMS

Relative linear velocities of points in the same and in different links—Relative angular velocities—Graphical representation—Piston velocities—General discussion of methods.Page 36

CHAPTER IV.

THE MOTION DIAGRAM

Second method of determining velocities—The phorograph—Fundamental principles—Various examples—Steam engine—Whitworth quick-return motion—Stephenson link motion—Velocity of valvePage 43

CHAPTER V.

TOOTHED GEARING

Desirable conditions for gearing—Comparison with belting, etc.—Cycloidal teeth—Involute teeth—Internal gears—Racks—Definitions and proportions of parts of teeth—Helical gears. . .Page 61
