A reporter accountly called at this fanous sent of learning and was shown into the room of the president, Alvin P. Barnafay. When lastsees by the reporter Prof. Barnaby was in delicate health. To-day he was apparently in the but of health. In response to an inquiry the professor said:

"Ob, yes, I am much better than for some time. I am now in perfect health, but my recovery was brought about in rather a peculiar way."

"Tell me about it," and the reporter.

"Well, to begin at the beginning," said the professor, "I studied too hard when at school, endeavering to educate myelf for the profession. After completing the common course I came here, and graduated from the theological course. I cantered the ministry and accepted the charge of a United Brethren church at a small place in Kent county, Mich. Being of an ambitious nature, I applied myself dilingualty to my work and studies. A meteor is a mass of matter, chiefly solid rock, that follows a course of its own around the sun. Some meteors weigh many tons, while others are mere "earth dust." They sweep by billions around each planet and around the sun, and they may continue to toove until they meet some planetary body like our earth. Were it not for the fact that we are surrounded by a projecting blam ket of air, no doubt all life on the earth would long ago have been pelicd to death by these nesteoric showers, but when the meteor, travelling at the immense velocity of 20 miles z second, strikes the earth's atmosphere the fedition at once acts it to blazing, and we see its trail of fire shouling across the heavens. In cases of regular showers the meteors are entirely consumed before they reach the earth's aurface, although other meteors have piered or atmosphere and quenched their terrible fire deep in the earth.—Chicogo Record.
