## WRINGBROIHER SEARCH

HOW CONTAMINATION IS CAUSED. demand and VEED FOR MORE POWERS OF INSPECTION.

"News of The World" Special) the people in this country, applies to bread-there are five or particularly by the poor. Much the food coming under this deion is unsound from the start, t perhaps the greater part is unnd through contamination and polcaused in a great variety of Much has been done, and is being done, by the health auties to ensure that only sound should be taken from the ighter-house, and that milk uld be clean and unadulterated, here is no power to prevent the lity of pollution in the preparn. storage, exhibition, and distri-Unnecessary handling of is universally practised, and is ectionable to the last degree. Why

women, even of good class, owed to pinch the greengages fruiterer's, or the buns at a tioner's, without penalty (when nching" of a different order is verely dealt with). There is hard-an article of consumption that is une from the possibility of polion. Dr. C. E. Goddard, the other y. in the "British Medical Journal," stanced the methods used in Smyr-1 a in the storage and packing of figs d sultanas. A member of Parlia. ent, who made an inspection of ese methods, gave most disgusting tails, calculated to make one never again touch a fig or a sultane for the rest of one's life. The naive admis sion was made: "No doubt in some the smaller houses evasions of sanitary regulations may take

flace, but not in those competing for ! e American market. If the British public," it was urged, "are anxious s to the purity of their sultanas. the remedy would seem to be to dopt the American methods of conular supervision." So it amounts to this, that for long years past we have all been obliged to consume, as Goddard phrases it, "vast quantities of filth," with results that we can hardly gauge. The doctor suggests, as a remedy, that our own Colonies should lose no time in placing on the British market in every town
