BIAS Exhibition - By far the largest and most important show of its sector in Italy alternating on a three year basis as agreed with similar shows held in Germany and France. Italy is an important market for automation and instrumentation. While Italian companies are strong in machine tools, cells and flexible manufacturing systems production, they heavily count on foreign suppliers, most of which have sister companies or distributors locally, for the eyes and brains to be installed on their machines. Studies by post and sector divisions in Ottawa have established opportunities for technology transfer and joint ventures in advanced software and sensor applications in various Italian machine sectors. Good opportunities for Canadian sensor manufacturers to explore market possibilities as well as for manufacturing companies to view the latest in automation technology.
