Detail Table

DESCRIPTION

THIS Table is intended for Detail work. It will take on a roll of paper 42 inches wide, and enables the draughtsman to make a drawing the whole length of the roll if necessary. It does entirely away with tacks. The paper passes through slots at each end of the table and is held firm by a bar pressing against it by two thumb screws. The roll is placed on one end and the paper rolls into a basket bracket at the other. The straight-edge, with nickel-plated steel scale attached, travels perfectly true from one end of table to the other, and is adjustable. Horizontal or vertical lines can be drawn instantly to any length. A nickel-plated steel scale is inserted along the full length of the table, making it convenient for horizontal or vertical measurements. It is a great time and labor saver.
