FOSTER SHAREHOLDER. Advises His Fellows to Refrain From Some Ottawa Political Views Sent to Selling Their Stock.

The writer of this, a small shareholder in this company, has watched the ton News Bureau says: actions of the market manipulators of this stock with considerable attention during the last several months.

Several advances and declines have and the Liberals have now held un-Strike Valuable Claim at Gowganda

cline in price, however, has very large-ly been the result of market manipulation by those who wish to secure the "Foster" shares at a low figure. Various means have been taken to bring about the desired result, innuen-A prospecting party composed of Messrs. Rub. Armstrong, Louis Mar-gueratt and Clare Walton, hit upon does and false reports among them.

The Forest management, howeveh, are going right on "sawing wood" regard-

vein of native silver at Gow Gonda less of market quotations, their busi-Lake last week and after stripping it for over 300 feet and gathering a fine ness unlike that of the manipulator being to by development work andother improvements increase the value of the showing of samples, came home to tell the story of a few of the young fel-lows who were with them on the deal. certificates to the shareholder.
Foster stock dropped with the gen-

lake. The first showing was but a trace of cobalt bloom. It was picked

That was all that was necessary. It uncovered a vein on the surface three and a half to four inches in width and chuck full of silver. The gang then set to work to do systematic stripping. The vein was uncovered for a distance of 300 feet till it seemed to pinch out at the foot of a hill of solid rock. A trench was accordingly run on the other side of the hill and the yein was again discovered. It was naturally inferred that the silver load raturally inferred that the silver load at another point a little distance. At another point a little distance of the adjoining properties being a sufficient reason for this statement. Prominent engineers a year or so ago reported Fester as having twelve in sight. This ore not having been shipped must still be on the property. Foster ore is reported to be "very lean." However, what has been sinpped must still be on the property lean." However, what has been sinpped must still be on the property lean." However, what has been sinpped must still be on the property lean." However, what has been sinpped must still be on the property lean. The building of the Georgian Bay without concentrating, comparing very lean. without concentrating, comparing very At another point a little distance away a second vein was found which favorably with other shipping mines

in this respect. About a year ago the Trethewey mine was a discredited property, making very few shipments with the stock selling as low as 46 cents. Rumors stated it was "a low grade proposi-

A Big Strike Reported at Gowganda Lake THREE CANADIAN RAILWAYS.

A despatch from Ottawa to the Bos-

Canada is in the throes of a flerce political conflict, Sir Wilfrid Laurier taken place during this time, the de- disputed sway for 12 years, and for-

The great gold discoveries of the Yukon, the wonderful mining, lumber and agricultural developments of British Columbia and the opening up of the most prolific wheat and pasture lead in the world in the Saskatchewan land in the world in the Saskatchewan Valley have given Canada an era of wondrous prosperity.

The Canadian Pacific and the Cana-

dian Northern Railways have gridironed the prairies of the Canadian Northwest with railroads and hordes American farmers have swarmed into this new El Dorado. The Saskatchewan eral market in the great slump of over valley embraces a territory more extensive than the Rhine and the Dan-

lows who were with them on the ideal.

The original syndicate was composed of just ten in fill, and any one of the ten shares to-day is worth, it is thought, as much as \$10,000. The boys put into the expedition about \$20 each. Originally the syndicate was composed of Rub. Armstrong, 'Jim White, Jim Taylor, A. David, Tom Fulton, William Haines, Len., Hill, M. Abraham and S. S. Ritchle, Jr., and R. G. Zahalan. The latter two had, however, sold their interests to Mr. Will Taylor before the discovery was known. Mr. Ritchle parted with his tenth for the sum of \$200. On Wednesday Mr. Haines was offered \$150,000?" was asked.

"Why, I could have got \$8000 for my tenth interest before I left the property," said Mr. Armstrong.
"It is said that you were offered \$150,000?" was asked.

"We were not exactly offered that amount," was the reply, "but there was a company organized there who had some experience in the floation of properties and he said that if we liked he was sure that he could dispose of the property in question lies on the rope of that kind," said Mr. Armstrong.

The property in question lies on the rope of the kind," said Mr. Armstrong.

The property in question lies on the rope of the property in question lies on the rope of the property in question lies on the rope of the property in question lies on the rope of the property in question lies on the rope of the property in question lies on the rope of the property in question lies on the rope of the property in question lies on the rope of the property in question lies on the rope of the property in question lies on the rope of the property in question lies on the rope of the property in question lies on the rope of the property in question lies on the rope of the property in question lies on the rope of the property in question lies on the rope of the property in question lies on the rope of the property in question lies on the rope of the property in question lies on the rope of the property of the property in question lies on the rope of the property in q

pose of the property for a figure of that kind," said Mr. Armstrong.

The property in question lies on the shores of Lake Gow Gonda. It is bounded on the west by the well-known Mann property, on the south by the Bloom Lake Mining Co. claim, on the north by what is calltd the Milne claim and on the east by the lake. The first showing was but a specifical position of the mine; however, the contrary was seen.

In every department work was proceeding quietly and steadily, no "sold-iering" on the part of the employes was noticed, the buildings and plant generally was in perfect order, method and general order seemingly prevailed.

another system of which Canada is justly proud. This has been up-built up by Mr. Armstrong and considered worthy of investigation. A very narrow vein was discovered and the three lads set to work stripping. They worked for a while with no very definite results, when a couple of trees were uprooted and there before them were the samples of the native. The little-nuggets were not in place, however. They were float matter from the real load. The fact that there was native silver in the neighborhood set the boys to work like beavers ripping the covering off the vein and in a little while the good stuff was found in the property of similar acreage and locality, namely, Crown Reserve.

Considering capitalization and present quotations the market value of these two mines is in a ratio of \$ to 1. Crown Reserve is undoubtedly a rich mine, and the shares worth what they are quoted, but there seems to be a great disparity in the price of Foster when compared with this one. Surely Foster should be considered as worth more than an eighth that of Crown Reserve.

They were float matter from the real load. The fact that there was native silver in the neighborhood set the boys to work like beavers ripping the covering off the vein and in a little while the good stuff was found in

If you have any doubts, go to Cobalt and see the property, then use your own judgment.

Another Shareholder. government to aid them in building to the Pacific and perfecting or building

their lines from the lakes to Montreal.

It was in line with the railroad policy of the Dominion to guarantee the bonds of both the Grand Trunk and Canadian Northern to enable them to expand and build up railroads across Canada from ocean to ocean. A guar-antee of bonds and small cash subsidies would have enabled them to perfect two other Canadian railroad sys-

tems with very low capitalization. It would have enabled them to build where railroads were needed.

But Sir Wilfrid Laurier had been dreaming about building a great transcontinental railroad of his own which would perpetuate his fame and he his would perpetuate his fame and be his monument forever. He put aside the Price Very Reasonable

The Gifford Cobalt Mines,

... LIMITED ...

EVERYONE CAN MAKE COMPARISONS

We are not all mathematicians, but the everyday man can read figures and satisfy himself of values, when the facts are placed before him in a

sufficiently clear manner.

HERE IS A PROPOSITION—The shares of the Temiskaming Mining Company sold one year ago at 27c, yesterday they sold at \$1.50, an increase of \$1.23 per share inside of twelve months. Now, take the capitalization of Temiskaming, which is \$2,500,000, and on the basis of the market value today the Temiskaming property has a valuation of

HERE IS A COMPARISON—The Gifford Cobalt Mines, Limited, is capitalized at \$150,000, or, in actual value, less than one-twenty-fifth part of its neighbor, the Temiskaming mine.

Seventeen months ago the Temiskaming didn't have a single pound of ore in sight. Up to date it has shipped \$1,000,000 worth of ore to the smelters. and of this has paid out \$210,000 in dividends to its shareholders. The whole of this ore has been taken out by development work, with the exception of a little stoping. The Temiskaming, up to the present time, is the only wonder of this part of the Cobalt camp. Can it be possible that nature has exhausted itself in this one twenty acres in this wonderful mining district?

Remember, the GIFFORD MINE is immediately adjoining the Temiskaming property, and has twenty acres the same as the Temiskaming.

On the surface of the Gifford several strong veins have been opened up, and it is believed by the best mining men in the camp that these are a continuation of the Temiskaming veins. The forma-

tion of both of these properties is identical, and sinking on the Gifford property should, therefore, encounter the same values as those on its rich neighbor.

Think what an investment in the Gifford means-1000 shares bought to-day means an investment of \$250.00. If rich ore is struck at the level reached by the Temiskaming the stock would be worth on the Temiskaming basis, \$6250.

It is possible for the smallest capitalist to become wealthy by an investment in the Gifford mine. Figure it out yourselves:

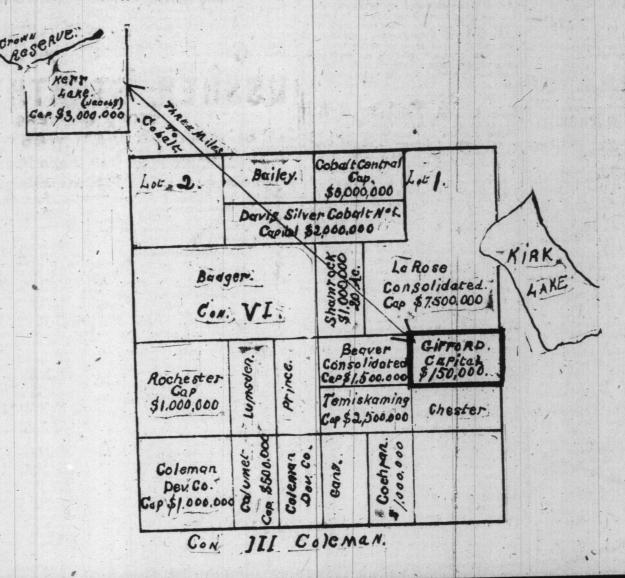

1000 shares of Gifford at 25c \$250 1000 shares of Gifford at the Temiskaming 10,000 at Temiskaming valuation\$62,500

Many MILLIONAIRES have been made in Cobalt. The small investor cannot make millions, but he can make thousands by judicious investment in the World's Wonder Silver Camp.

The greatest chance to investors is being offered to the shareholders in the Gifford.

Are you one? If you have any regard for your money and obligations to your family you cannot afford to ignore an investment in this company. The company will not guarantee to fill all orders, but will apportion subscriptions pro rata, ac-

cording to orders. Take notice of the flotation of the Gifford mine, and if you do not participate in this grand investment, watch its history in the mining market.
