So as regards the Massachusetts and Alabama decisions in actions brought under the employers' liability acts, there would seem to be good grounds for arguing that the position thus taken is in contravention of the familiar principle that the presumed intention

an assistant and sometimes without by a "ship" [i. e., elevator] from which one. It was held that, under these circumstances, he could not recover damages for an injury caused by the want of an assistant.

¹³ *Montith v. Kokomo Wood Framing Co.* (1902; Ind.) 58 L. R. A. 911, 64 N. E. 610, citing *Smith v. Baker* and the decisions which preceded it.

of a legislature which adopts a foreign statute is that it shall have the same construction as the courts have put upon it in the state where it was originally enacted. As regards Alabama, it is remarked that the situation is peculiarly unsatisfactory, as the prevailing English case was not even cited in the judgment by which the prevailing rule in that state was established.¹⁵ It remains to be seen whether a controlling force will be ascribed to this principle in any of the American states in which statutes modeled upon the English one have been, or may hereafter be, adopted.¹⁶

The obligation of the American courts to defer to the action of the English judges in actions at common law is of course equally strong. But the reasoning which has been employed to sustain the doctrine that the applicability of the maxim *volens, non nocet* is also primarily and essentially a question for the jury is itself quite convincing.¹⁷

B. PARTICULAR CIRCUMSTANCES BEARING UPON THE QUESTION WHETHER THE SERVANT WAS VOLENS.

378. Increased compensation given for encountering a specific

The advocates of both the doctrines discussed in §§ 376, 377 are apparently agreed upon the doctrine that knowledge is conclusive against a servant, where he is to receive higher pay in consideration of his doing the work which involves an abnormal risk due to a defective condition of the instrumentalities.¹

¹⁵ *Birmingham R. & Electric Co. v. Allen* (1892) 99 Ala. 359, 20 L. R. A. 457, 13 So. 8. This decision was rendered, as is apparent from a comparison of dates, in the year after *Smith v. Baker* had finally settled the English doctrine. See note 7, *supra*.

¹⁶ In the New York act of 1892, it will be observed that the legislature has introduced a clause expressly providing that an assumption of the risk shall not be inferred, as a matter of law, from the fact of the servant's knowledge. See chapter XXXVII., *post*.

¹⁷ The following remark made *arguendo* in a Maine case may perhaps be regarded as indicating that the English rule will be adopted in that state when the point is specifically presented: "The risk from the master's breach of duty never rests upon the protesting or even unwilling servant. *Volens*, not *sciens*, is the test." *Dempsey v. Surgey* (1901) 95 Me. 295, 49 Atl. 135.

¹ On the one hand we find it laid

down that there is "a marked distinction . . . [between] the case of one who undertakes dangerous work as an ordinary course of his employment and one who undertakes extra risk work for extra wages. In the latter case the servant should be properly considered a 'volunteer' and not a servant, and the master should be held liable for a higher rate of remuneration than he undertakes the risk, knowing the condition of the instrumentality." Channell, B., in *B. & Great Western Cotton Co.* (1877) 7 Exch. 430, 438, 41 L. J. Ex. 99, 27 L. T. N. S. 125, 20 W. R. 525. So also in *Smith v. Bole* (1891) 151 L. T. N. S. 325, 344, 60 L. J. Q. B. 65, 65 L. T. N. S. 467, 55 J. P. Week. Rep. 392. Lord Bramwell laid down that a servant who undertakes work exposing him to a particular risk for a certain compensation, and that which he demanded is in the situation as one whose wages the master agrees to increase in consideration of his incurring the additional

we find one of the

378a. Injury inevitable if the servant remains at work.—In the leading English case Lord Herschell conceded that there might be a case in which a workman would be precluded by the maxim from recovering, even though the risk which led to the disaster resulted from the employer's negligence. Such a case would, he suggested, be presented if the inevitable consequence of the employer's discharging his duty would obviously be to occasion him personal injury.¹

379. Assumption by the master of responsibility for any injury that may be received.—In some instances the evidence may justify the inference that it is the intention of the master to make himself answerable for any injury that the servant may receive. Under such circumstances the legal situation is simply that the master is deemed to have surrendered any right he might otherwise have had to protect himself by the maxim.¹ The shifting of the responsibility will, of

of advocates of the more liberal view expressing himself as follows: "I need hardly repeat that I detest the attempt to alter the law by maxims. They are most invariably misleading; they are for the most part so large and general in their language that they always include something which really is not intended to be included in them. I do not doubt that if we put this maxim into plain English part of it is true; that is to say, that if a thing is put before a workman, and he is told, 'Now, I do not ask you to do this unless you like; but I will give you more wages if you do. You see what it is. There is a rotten ladder; it is ten to one that it will break under you; but if you choose to run that risk, I will give you higher wages.' If the workman, seeing the risk, elects to incur it, no one could doubt that he would be precluded from recovering damages against his employer for any injury he might sustain from the breaking of the ladder. The same result would follow if the injured person was not a workman but for hire." Lord Herschell in *Yarmouth v. France* (1887) L. R. 19 Q. B. Div. 347, 36 Week. Rep. 281, 57 L. J. Q. B. N. S. 7.

Compare the following passage, which also suggests the limitation of the effect of the maxim to cases where there is adequate consideration for incurring the additional risk caused by defective appliances: "If the employed agreed, in consideration of special remuneration, or otherwise, to work under conditions in which the care which the employer ought to bestow, by providing

proper machinery or otherwise, to secure the safety of the employed, was wanting, and to take the risk of their absence, he would no doubt be held to his contract, and this whether such contract were made at the inception of the service or during its continuance,"—per Lord Herschell (*arg.*) in *Smith v. Baker* [1891] A. C. 325, 362, 60 L. J. Q. B. N. S. 683, 65 L. T. N. S. 467, 55 J. P. 660, 40 Week. Rep. 392.

¹ *Smith v. Baker* [1891] A. C. 325, 60 L. J. Q. B. N. S. 683, 40 Week. Rep. 392, 60 L. T. N. S. 467, 55 J. P. 660. The learned judge thus contrasted this hypothetical case with the one under consideration: "Suppose, to take an illustration, that, owing to a defect in the machinery at which he was employed, the workman could not perform the required operation without the certain loss of a limb. It may be that if he, notwithstanding this, performed the operation, he could not recover damages in respect of such a loss, but that is not the sort of case with which we have to deal here. It was a mere question of risk which might never eventuate in disaster. The plaintiff evidently did not contemplate injury as inevitable, not even, I should judge, as probable."

² Nonvoluntary action may be properly inferred by a jury if it is proved that the workman was told by his superintendent not to mind, and that if any accident happened the employer must make it good. *Yarmouth v. France* (1887) L. R. 19 Q. B. Div. 647, 661, 57 L. J. Q. B. N. S. 7, 36 Week. Rep. 281, per Lindley, L. J.

course, enure to the servant's benefit, whatever, theory may be adopted, as to the proper inference to be drawn from his knowledge of the risk.

380. Injury the result of the servant's own acts or omissions.

One of the exceptions to which it is conceded that the doctrine established in England is subject rests upon a distinction taken between cases in which the operations or conditions which produced the servant's injury were independent of his own volition, and cases in which the injury was the direct result of his own act of omission. In the former class his knowledge of the risk may or may not let in the operation of the maxim; in the latter class his knowledge of the risk is deemed conclusive against him.¹

No objection can reasonably be made to the enforcement of the qualification in any instance in which the servant created, or

contributed to, the danger in the operation of the machine. The master's acceptance of the responsibility is implied where he directs the servant to perform labor to which he is not accustomed, after the foreman of the work has sent him back for the reason that he is not deemed sufficiently strong. *Albertz v. Baché* (1890) 32 N. Y. S. R. 1014, 10 N. Y. Supp. 639.

¹ In *Smith v. Baker* [1891] A. C. 325, 60 L. J. Q. B. N. S. 683, 65 L. T. N. S. 467, 55 J. P. 660, 40 Week. Rep. 392, Lord Halsbury said (p. 338 of the Law Reports): "Every sailor who mounts the rigging of a ship knows and appreciates the risk he is encountering. The act is his own, and he cannot be said not to consent to the thing which he himself is doing. And examples might be indefinitely multiplied where the essential cause of the risk is the act of the complaining plaintiff himself, and where, therefore, the application of the maxim *Volenti non fit injuria* is completely justified."

Similar views were thus expressed by Lord Watson in the same case (p. 357 of the Law Reports): "The risk may arise from a defect in a machine which the servant has engaged to work, of such a nature that his personal danger and consequent injury must be produced by his own act. If he clearly foresaw the likelihood of such a result, and, notwithstanding, continued to work, I think that, according to the authorities, he ought to be regarded as *volens*. The case may be very different when there is no inherent peril in the work performed by the servant, and the risk to which he is exposed arises from a defect in the machinery used in another department over which he has no control. The present case belongs to

that category. There was no danger in the operation of the machine which the plaintiff was engaged to work, from which he suffered injury, the dropping of a large stone which struck over his head by a crane, evoked by his act, but was in no contact with him by workmen, in a different operation." This was cited as an authority in a case where a farm servant was injured by the fact that a cooperated the brake of a horse-drawn machine automatically gave way, the consequence being that the machine ran at a dangerous speed, driving wheel burst. It was held that the maxim was a bar to his recovery, the evidence showed that he understood the nature of the machine, he had made no complaint, and had been in the habit of replacing the brake whenever it became worn. *Heritt* (1893) 23 Ont. Rep. 6.

In *Membery v. Great Western* (1889) L. R. 14 App. Cas. 479, Q. B. N. S. 563, 61 L. T. N. S. 88, 54 J. P. 244, the court decided, in so far as it rested upon the applicability of the maxim, was by Lord Halsbury to the effect that thus explained (p. 186 of the Law Reports): "The man obviously entered a known risk which he counteracted for a period of seven years and therefore he is not entitled to recover, upon the ground that he voluntarily incurred the risk; that the risk existed; and, but for his own act, he was himself doing the very thing which caused danger and ultimately injury to himself."

to the creation of, the defect which caused his injury.² But there is a manifest danger that it may be construed by some judges in such a sense as to revive many of the hardships of the older doctrine in that large class of cases in which the employee's duties are restricted to the use of some particular instrumentality. Under such circumstances the injury is always, in a partial degree at least, the result of something done or omitted by the servant himself, and if this fact alone is sufficient to warrant a court in declaring the maxim to be inapplicable as a matter of law, the beneficial effect of the doctrine enunciated by the House of Lords in *Smith v. Baker*, must, it is clear, be seriously diminished. But perhaps it may be said that there is no longer any risk of such a result since the recent decision of the court of appeal mentioned in § 377, note 7, *supra*. That decision impliedly operates as an affirmation of the principle that the mere fact that the servant was using a defective instrumentality in the course of his employment does not constitute a sufficient reason for holding that his knowledge of the defect is conclusive against his right of recovery.

381. Work undertaken by the order of master or superior employee.—

The effect of evidence that the work in course of performance when the injury was received was undertaken in compliance with the direct order of a superior does not seem to have been discussed by any court which infers voluntary action from the mere fact of the servant's knowledge. But presumably the significance of this element in any such court is the same as it is in cases where the servant's rights are being considered with reference to the questions whether he had contractually assumed the risk, or had been guilty of contributory negligence. See chapter XXIII., *post*.

Under the English doctrine, the fact that the servant was injured in obeying an order to perform dangerous duties evidently cannot be of any differentiating import. But, so far as it goes, it makes in the servant's favor.¹

381a. Work undertaken outside scope of ordinary duties.—(Compare chapter XXV., *post*.)—In all jurisdictions, English, colonial, and American, it would probably be held, as it has been held in Massa

² *Highland Ave. & Belt R. Co. v. Walters* (1899) 91 Ala. 435, 8 So. 357, holding that a railway company cannot be held liable for the death of a yardmaster due to his being thrown off the foot-end on the front of a switch engine by striking against a pile of coal near the track, which had been deposited there by the consignee with his permission. See also *Poll v. Hewitt* cited in note 1, *supra*, in which the servant's

right of recovery might have been denied on the same special ground.

¹ In one case it was held to be a question for the jury whether the servant was willing to encounter the danger, where he was ordered to adjust a belt, that duty being outside the scope of his employment and dangerous. *Boater v. Wyman* (1888) 4 Times L. R. 255. In another he was allowed to recover while complying with an order to clean mov-

chusetts, that the servant is debarred from recovery, as a matter of law, where he was injured while engaged in work outside his ordinary duty, which was undertaken at the suggestion of a fellow workman and with the mere consent of his immediate superior.¹

If such work was undertaken by the orders of an employer who represented the master, the question whether the servant was negligent will depend upon the considerations adverted to in the preceding section. See the first of the two cases cited in note 1.

382. Servant's fear of losing his position.— (Compare §§ 2 (6), *ante*.)—It is manifest that, in the last analysis, the economic significance which shall be attached to the influence exercised upon the servant's mind by the apprehension that, if he declines to undertake a certain extra-hazardous duty, he may lose his position, must depend upon considerations which are sociological rather than juridical. § 62, *ante*.

One theory applied in the decisions embodies the same conception of the relation between masters and servants as that postulated by economic science which is commonly known as the mobility theory. The servant, that is to say, is assumed to be an entirely free agent in respect to taking up or abandoning an employment. This assumption obviously involves the corollary that no coercive influence is ascribed to his fear of the consequences of a refusal to incur a normal risk.¹ According to the judges who take this view

ing machinery. *Marley v. Osborn* (1894) 10 Times L. R. 388.

¹*Mellor v. Merchants' Mfg. Co.* (1890) 150 Mass. 362, 5 L. R. A. 792, 23 N. E. 100. There a loom fixer who was injured by a belt slipping off a pulley while he was attempting to repair a defect failed to recover, for the reason that he had voluntarily taken the risk of an obvious danger.

²The most uncompromising of the English exponents of this theory was the late Lord Bramwell. In *Ogden v. Rammens* (1863) 3 Fost. & F. 751, while he was trying a case one of the workmen testified that if he had complained of the danger of the work he would have been told that someone else would do it. The remark of the judge was that this was "a very sensible answer, . . . but that showed that he had an option to do it, or not to do it." This brief comment was expanded into the following incisive homily in the opinion which he delivered in *Membery v. Great Western R. Co.* (1889) L. R. 14 App. Cas. 179, 58 L. J. Q. B. N. S. 563, 61 L. T. N. S. 566, 28 Week. Rep.

145, 54 J. P. 244: "I hold that a man is not physically compelled where he can at his option do or not, and he does it, the master implies. What is *volens*? Willing. A man is willing when he wills a thing and does it. No doubt, popularly speaking, is said to do unwillingly, with no good will he does it, no matter what his will is, he prefers doing it to being alone. He wills to do it. He will not to do it. I suppose that the opposite of *volens*, its *involens*. There are two men; one refuses work, wills not to do it, and does not. The other grumbles, but wills it, and does it. Are both men unwilling? Suppose an extra inducement the man who did the work is *volens* or has the *volens* him *volens*? There must be a notion either that a man who grumbles and grumbles is *involens*, is unwilling, has not the will to do it, there is something intermediate *volens* and *volens*, something like

situation, the servant's proper course is to throw up his position, as he has a right to do.²

The other theory takes into account the notorious and indisputable fact that in those parts of the civilized world in which the common law prevails the industrial conditions are such that the labor market is normally more or less overcrowded, and in times of unusual stress is "thronged with suitors" to such an extent that fresh employment in any given line of business is almost impossible to procure. It is recognized that the servant's knowledge of this fact may reasonably be supposed to impair his freedom of will, to a greater or less extent, when he finds that a new hazard has been superadded to his environment by a breach of duty on his master's part, and that he is compelled to elect between encountering that hazard, or abandoning his position, or running the risk of a possible discharge, if, without actu-

ally without a will, and yet who wills. If the shilling made him *volens*, why does not the desire to continue employed do so? If he would have a right to refuse the work and his discharge would be wrongful, with a remedy to him, why does not his preference of certain to an uncertain law not make him *volens* as much as any other motive? There have been an infinity of profoundly learned and useless discussions as to freedom of the will; but this notion is new. This is an important question. Is the maxim to be got rid of? Are we to say *Volenti fit injuria* provided he grumbles, as Mr. Bell contended? To do so would be most unjust and unreasonable. The master says, Here is the work, do it or let it alone. If you do it, I pay you; if not, I do not. If he has engaged him, he says, I discharge you if you do not do it; I think I am right; if wrong, I am liable to an action. The master says this, the servant does the work and earns his wages, and is paid, but is hurt. On what principle of reason or justice should the master be liable to him in respect of that hurt? On this ground, also, I am of opinion the judgment should be affirmed. I may observe that the court of appeal thought that neither of the cases where this novel notion was entertained bore on the present." In the later case we find him reiterating these views: "It is said that to hold the plaintiff is not to recover is to hold that a master may carry on his work in a dangerous way and damage his servant. I do so hold, if the servant is foolish enough to agree to it. This sounds very cruel. But do not

people go to see dangerous sports? Aerobats daily incur fearful dangers—lion-tamers and the like. Let us hold to the law. If we want to be charitable, gratify ourselves out of our own pocket." *Smith v. Baker* [1891] A. C. 325, 346, 60 L. J. Q. B. N. S. 683, 35 L. T. N. S. 467, 55 J. P. 660, 40 Week. Rep. 392.

Other judges have used similar language. In *Yarmouth v. France* (1887) L. R. 19 Q. B. Div. 647, 57 L. J. Q. B. N. S. 7, 36 Week. Rep. 281, Lopes, L. J., was of opinion that the inference of a voluntary assumption of a risk caused by a master's breach of duty could not be rebutted by showing that he feared that a refusal to incur the risk would cost him his position. "This is a country of free labor. . . . It has been said that the servant is more powerful than his master. But I rather think the servant is not less powerful than his master; and certainly he is quite able to enforce the contract and defend his rights." *Crichton v. Keir* (1863) 1 Sc. Sess. Cas. 3d Series, 407, per Inglis, J.

Woodley v. Metropolitan Dist. R. Co. (1877) L. R. 2 Exch. Div. 384, 46 L. J. Exch. N. S. 521, per Cockburn, Ch. J., whose remark that "if a man, for the sake of the employment, takes it or continues in it, with a knowledge of its risks, he must trust to himself to keep clear of injury," seemed to Lopes, L. J., to embody the true principle. *Yarmouth v. France* (1887) L. R. 19 Q. B. Div. 647, 665, 57 L. J. Q. B. N. S. 7, 36 Week. Rep. 281.

In one case Bramwell, B., declared that he "could not consider that he [the

ally leaving the service, he declines to do the work which will in exposure to the hazard.³ See § 65, *ante*.

servant] was acting under compulsion, even if he had been bound by contract to serve." *Britton v. Great Western Cotton Co.* (1872) L. R. 7 Exch. 130, 27 L. T. N. S. 125, 20 Week. Rep. 525, 41 L. J. Exch. N. S. 99 (as reported in the latter serial only p. 101). The views of this learned judge, however, respecting what is and is not compulsion, are of a very extreme character. See note 1, *supra*.

³In *Yarmouth v. France* (1887) L. R. 19 Q. B. Div. 647, 57 L. J. Q. B. N. S. 7, 36 Week. Rep. 281, Lord Esher and Lindley, L. J., both declared that evidence of the servant's fear of being discharged tended to rebut the inference that he was *volens* in continuing to work. The former said (p. 657 of Law Reports): "Here the judge of the court below has come to the conclusion that the moment it appeared that the plaintiff knew and appreciated the danger, and did not at once quit the defendant's employ, he came within the maxim, and was therefore, upon the authority of *Thomas v. Quartermaine*, disentitled to recover. He did not bring his mind to bear upon the motives which induced the plaintiff to act as he did,—whether he relied upon the foreman's statement that the employer would be responsible in case of an accident, or whether he was influenced by the fear of being thrown out of employ if he disobeyed the foreman's orders. All that was for a jury; and the judge ought to have applied his mind to it." The latter said (p. 660 of Law Reports): "The act [i. e., employers' liability] cannot, I think, be properly construed in such a way as to protect masters who knowingly provide defective plant for their workmen, and who seek to throw the risk of using it on them by putting them in the unpleasant position of having to leave their situations or submit to use what is known to be unfit for use. . . . If nothing more is proved than that the workman saw the danger, reported it, but, on being told to go on, went on as before in order to avoid dismissal, a jury may, in my opinion, properly find that he had not agreed to take the risk, and had not acted voluntarily in the sense of having taken the risk upon himself. Fear of dismissal, rather than voluntary action, might properly be inferred."

Similar views were again expressed

in the following year by Lord Esher, who in discussing the meaning of vision in the employers' liability 1880 made these remarks: "There always been, I think, two schools of thought in relation to cases of this kind. . . . The view of one has been that, in order to prevent justice to masters, the construction of these enactments relating to masters and workmen should be narrowed so that they should be construed as liberally as possible. The view of the other school is that masters and workmen are not really on an equal footing; that there is danger in the employment does not exist with regard to the master, but only in the case of the man; and the workman is not on an equal footing, because he must run a risk or give up his employment. I myself have always belonged to the latter school." *Walsh v. Limerick* (1888) L. R. 21 Q. B. Div. 371, 58 L. J. Q. B. N. S. 586, 36 Week. Rep. 576, 53 J. P. 38.

About the same time we find Lord Esher, J., using the following language in *Thyness v. Handyside* (1888) L. R. 21 Q. B. Div. 359, 57 L. J. Q. B. N. S. 58, 36 Week. Rep. 277, 53 J. P. 27: "It cannot be said, where a man is lawfully engaged in work, and is in danger of dismissal if he leaves his work, that he voluntarily incurs any risk which he encounters in the course of such work, and here the plaintiff had asked the defendants' men to take care. It is different where there is no duty to be performed, and a man takes his chance of the danger, for there he voluntarily counters the risk. If the plaintiff had gone away from the dangerous place without incurring the risk of losing his means of livelihood, the result might have been different; but he was obliged to be there; his poverty, and his will, consented to incur the danger. The learned judge also suggested that if it had been impossible for the defendants to take precautions against danger, it might have been held that the plaintiff was bound to take his chance. The case was distinguished from *Woodley v. Metropolitan District Co.* (1877) L. R. 2 Exch. Div. 3, 46 L. J. Exch. N. S. 521, on the ground that, in the latter case the plaintiff only knew that there was danger, and had it in his power to protect himself."

to corroborate the inference of voluntary action. Under such circumstances it cannot be a differentiating element.¹

Under the doctrine that knowledge is not of itself conclusive of the voluntary character of the servant's action, the fact of his not having complained is ordinarily nothing but a circumstance for the jury to consider in connection with the rest of the evidence in the case. But in cases in which the court is justified, apart from this circumstance, in declaring that the maxim is applicable, the fact of the plaintiff having made no complaint sometimes appears as a corroborative element.²

b. Complaint, protest, or objection established by the evidence.

In any jurisdiction in which voluntary action is inferred, as a matter of law, as soon as it appears that the servant comprehended the nature of the work to which his injury was due, it is obvious that the fact of a complaint having been made is nothing but a circumstance which

judicial opinion seems intended to be limited to cases arising under the employers' liability act. If not so limited they are in direct conflict with the specific rulings of this court, as noticed § 288, *ante*. Compare § 65, *ante*.

¹The earliest case in which this situation is illustrated is *Skipper v. Eastern Counties R. Co.* (1853) 9 Exch. 223, 3 C. L. Rep. 185, 23 L. J. Exch. N. S. 23, where the servant was injured owing to the inadequacy of the number of servants furnished for the work. The judges, during the argument of counsel, unanimously declared that he could not recover for reasons stated by each of them as follows: "The case," said Platt, B., "falls within the maxim *Volenti non fit injuria*." "I acted upon that principle at the trial," said Martin, B., "being of opinion that the company was not liable, as the plaintiff had done the same work for several months without any intimation on his part that he was unable to carry it on; and I therefore considered him a voluntary agent." "The defendants," said Parke, B., "were bound to use all due and reasonable care only. Here the plaintiff was engaged in the same work for several months, and made no complaint whatever as to the inadequacy of the means employed. If he felt that he was in danger by reason of the want of a sufficient number of fellow servants, he should not have accepted the service." Similar language was employed by Martin, B., in his opinion: "I think that if the case had gone to the jury they must have found a verdict for the defendants.

But, as I entertained a very strong opinion upon the matter, I thought it clearly to be my duty not to leave the case to them upon the chance of finding a verdict for the plaintiff on motives of commiseration. The plaintiff brought the accident upon himself for if he found that he could not do the work which was set him, he ought to have declined it in the first instance. He, however, carried it on for several months, and never made the least complaint upon the matter."

In a very recent case a servant was denied recovery for an injury caused by his falling into an open culvert, where he knew at the time he accepted the service that the culverts were all in this condition, and he remained three years in the service without objection. *West v. Southey* (1898) 29 C. C. A. 219, 56 U. S. 323, 85 Fed. 392.

²The mere fact that he [the servant] continues his work, even though he knows of the risk and does not protest, does not preclude his recovery in respect of the breach of duty. In support of the doctrine, *Smith v. [1891] A. C. 325, 60 L. J. Q. B. 1, 63, 65 L. T. N. S. 467, 55 J. P. 6* Week. Rep. 392, per Lord Herschell; 365 of the Law Reports (1. See *Yarmouth v. France* (1887) 1 R. B. Div. 617, 57 L. J. Q. B. N. S. 1, 63 Week. Rep. 283, per Lindley, J. (1. of the Law Reports).

³See, for example, *Phill v. [1893] 23 Ont. Rep. 619 (§ 380, 1, *ante*).*

conclusively that he understood the hazardous nature of his environment, and which therefore serves merely to establish the existence of the single element upon which, in this point of view, the applicability of the maxim depends.⁴

On the other hand, under the modern English doctrine, the servant's expressions of dissatisfaction are naturally regarded as evidence that he was not *volens* within the meaning of the maxim.⁵ Especially

⁴In *Yarmouth v. France* (1887) 1 L. R. 19 Q. B. Div. 647, 57 L. J. Q. B. N. S. 7, 36 Week. Rep. 281, Lopes, L. J., argued as follows in his dissenting opinion: "The point that Yarmouth was not engaged to drive a dangerous horse is met by the fact that he continued in the service after he knew the horse was dangerous; and his constant complaints may be regarded as evidence of his thorough appreciation of the risk he was incurring and of his willingness to incur that risk rather than relinquish his employment. After complaining he remains in the service for a long time, knowing the risk and knowing that no steps had been taken to prevent its continuance. This is more consistent with his acquiescence in a disregard of his complaints, and with a willingness to incur the risk, than with the contrary view. . . . The present case seems a stronger case of voluntary exposure to danger than that of *Thomas v. Quartermaine* (1887) 1 L. R. 18 Q. B. Div. 685, 56 L. J. Q. B. N. S. 340, 57 L. T. N. S. 537, 35 Week. Rep. 555, 51 J. P. 516. In the latter case there is little, if any, evidence that Thomas knew of or appreciated the danger; but in the present case the evidence is strong to show that Yarmouth thoroughly understood the danger to which he was exposing himself. With a knowledge of the danger, though complaining, he continues in the service, indicating thereby a willingness to incur the risk rather than give up his employment." Commenting on *Woodley's* case (see § 376, note 1, *supra*), the learned judge said: "The only distinctions that I can find between that case and the present are the following: Woodley was hired to do dangerous work, and knew its dangerous character and attendant risks. Yarmouth was hired to do work not dangerous, *viz.*, amongst other work to drive horses, which most frequently are manageable. The horse which did the mischief was intrusted to his care after he entered on the employment, and it was then first he learned its propensities;

but long after he had been made aware of its vicious nature he continued to drive it. There was no evidence that Woodley ever made any complaint to his employer. Yarmouth, on the contrary complained, but continued in the employment. Having regard to the judgments of the majority of the court, I do not think that what I have suggested furnishes any substantial ground for distinction."

See also the extract given in § 381, note 1, *supra*, from Lord Bramwell's opinion in *Memberg v. Great Western R. Co.* (1889) 1 L. R. 14 App. Cas. 179, 58 L. J. Q. B. N. S. 563, 61 L. T. N. S. 566, 38 Week. Rep. 145, 51 J. P. 244.

⁵In *Smith v. Baker* [1891] A. C. 325, 60 L. J. Q. B. N. S. 683, 65 L. T. N. S. 467, 55 J. P. 660, 10 Week. Rep. 392, where the servant had been exposed for two weeks to the danger which produced his injury, two members of the house, Lord Halsbury (p. 337) and Lord Watson (p. 357) explicitly rejected the contention that his remedy was barred because he had made repeated complaints. The latter said: "The complaints made to the foreman by his fellow workmen, coupled with the fact of their continuing to work, might be fairly construed as an intimation to the defendants that they must either discontinue the vicious practice of 'slinging stones over the heads of their workmen or take the consequences. It was a protest against the practice, which does not naturally or necessarily imply that they were willing to submit to it or to accept the risk of it."

In *Bacon v. Dances* (1887) 3 Times L. R. 557, it was held that the servant could recover where the evidence was essentially that he had complained of a defect in a machine, that the work had been stopped for the purpose of remedying the defect, and that when he resumed work he was told it was working properly. Cave, J., said that merely going on with work is not enough to let in the maxim; to produce that result there must be something to show

supervened after he began work, the applicability of the maxim was essentially a matter to be determined by the jury.² But this doctrine has now been definitely repudiated in that state (see § 376, *b. supra*), and there can be very little doubt that the distinction suggested by the decisions just referred to is neither warrantable on logical grounds nor sustained by any adequate authority.

The objections to which it is open on the former score are sufficiently obvious. Although a person who is seeking employment generally enjoys a larger liberty of action in regard to the acceptance or rejection of work which involves an abnormal amount of danger than one who, after he has entered upon the performance of his duties, finds himself confronted by the necessity of choosing between incurring an additional peril or looking for a new place, yet the unwillingness to decline a situation which is desirable, except in the single respect that some of the instrumentalities are in a bad condition, is a feeling which is the same in kind as his unwillingness to throw up a situation having the same drawback. There is, accordingly, no satisfactory grounds upon which it can be affirmed that evidence of the servant's having had notice of a risk before he entered the employment should be regarded as raising an absolute bar to an action for injuries due to that risk, while voluntariness of action is not a necessary inference from evidence that he obtained knowledge of a risk after entering the employment, and with that knowledge went on working. To ascribe essentially different legal consequences to the operation of a specific constraining motive, simply because it may exercise a somewhat more powerful influence in the one case than in the other, is, it is submitted, wholly unjustifiable. There is clearly no logical alternative between refusing altogether to treat this feeling as a factor in the problem, and declaring it to be a constant quantity in that problem, the effect of which is that, whether the extraordinary risk existed when the contract of service was made, or only arose after-

²Such were the circumstances involved in *Litigerald v. Connecticut River Paper Co.* (1891) 155 Mass. 156, 29 N. E. 461; *Mahoney v. Dore* (1892) 155 Mass. 513, 30 N. E. 366. In the latter case it was considered that the effect of *Smith v. Baker* [1891] A. C. 325, 60 L. J. Q. B. N. S. 683, 40 Week. Rep. 392, 65 L. T. N. S. 467, 55 J. P. 660, was that "a servant who continues to work where he is exposed to a danger which he understands and appreciates, and which results from his employer's negligence, and which he did not assume by his implied contract when he entered the service, does not, as matter of law,

voluntarily assume it by merely remaining in a place which is rendered unsafe by his master's fault." (See note 9, *infra, ad postum*.) The court said it was not aware of any adjudications in Massachusetts which were necessarily inconsistent with this just and reasonable doctrine.

Mr. Bowen treats the subject (1 Neg. pp. 767 *et seq.*) upon the hypothesis that the presumptions with reference to which the inquiry is to be conducted are wholly different, according as the known risk existed when the servant began work, or was afterwards superadded to the employment.

wards, the servant's assumption of that risk cannot be inferred from his knowledge alone.

It will be observed that, in this point of view, the question whether the contract under which the servant was working was one which bound him for a definite period, or one which was terminable at will, is wholly immaterial. The action is in no event sustainable unless the master has been guilty of some act of commission or omission which, when considered without reference to the servant's knowledge, and possibly whether that knowledge be treated as a factor or not (see § 374, *supra*), constitutes a breach of duty, and that breach of duty clearly absolves the servant from any obligation under which he might otherwise lie to remain in employment for a certain term. The only point that can be said with regard to such an obligation is that, if such a term had come to an end between the time when the risk was covered and the injury was received, that school of thought which regards the servant as a free agent will naturally view the fact of his having failed to take advantage of the expiration of the term as but absolutely conclusive evidence of his consent to acquiesce in the situation.³

The authorities are in full accord with the conclusions to which this reasoning conduces us.

Of none of these English decisions can it be reasonably affirmed that the time when the risk became an incident of the servant's environment was really treated as a differentiating factor. In the instances in which the risk existed when the servant began work, he was held unable to recover either because, as under the older theory, his knowledge was deemed to be conclusive proof that he had consented to incur the risk,⁴ or because, as under the later theory, the facts were such that a jury could not reasonably infer involuntary action.⁵ The decisions in which the maxim is held to be a bar to recovery for injuries caused by a risk superadded after entry into

³ In *Smith v. Baker* [1891] A. C. 325, if a servant found himself exposed to new danger after his term of employment had begun, the right course for him to take was to sue for a breach of the engagement, and that, if he continued work with a knowledge of the conditions, the maxim would prevent him from claiming any indemnity for an injury traceable to that danger.

⁴ *Woodley v. Metropolitan Dist. R.* (1877) L. R. 2 Exch. Div. 384, 46 L. J. Q. B. N. S. 521.

⁵ *Thomas v. Quartermaine* (1887) Q. B. Div. 685, 56 L. J. Q. B. N. S. 517, 57 L. T. N. S. 537, 35 Week. Rep. 51 J. P. 516.

employment are governed by precisely the same considerations, the former being the rationale of the conclusion arrived at in the older cases,⁶ the latter being relied upon in those of a more recent date.⁷

The negative testimony which is thus furnished against the soundness of any theory which would place on a different footing risks which existed when the employment began and risks subsequently added thereto is corroborated by the fact that none of the cases, either early or recent, in which the maxim was held to be applicable, attach any controlling importance to the time when the risk came into existence, the specific grounds upon which recovery was allowed being either that the duty infringed was statutory,⁸ or that knowledge was not of itself conclusive of the voluntary character of the servant's actions.⁹ Various specific circumstances are adverted to by the courts as evidence tending to negative such voluntary action (see preceding sections); but there is no suggestion that the servant's position is in any respect strengthened by the fact that the risk was one not originally incident to the employment.

The American cases lend even less support, if that be possible, than those of the English courts, to the doctrine stated at the commencement of this section. Setting aside the suggestions contained in the Massachusetts cases there cited, the authorities unanimously hold that the maxim constitutes a bar to the action in any case in which the servant is proved to have continued work with an appreciation of that

Risk supervening after employment began.—*Yarmouth v. France* (1887) 19 Q. B. Div. 647, 57 L. J. Q. B. N. S. 7, 36 Week. Rep. 283; *Smith v. Baker* [1891] A. C. 325, 60 L. J. Q. B. N. S. 683, 10 Week. Rep. 392, 65 L. T. N. S. 467, 55 J. P. 660; *Bocher v. Wignam* (1888) 4 Times L. R. 255; *Amos v. Duffin* (Q. B. D. 1890) 6 Times L. R. 339; *Branks v. Ramsden* (1890) 63 L. T. N. S. 287, 55 J. P. 262; *Bacon v. Davies* (1887) 3 Times L. R. 557; *Archib v. Osborn* (1894) 10 Times L. R. 388; *Sim v. Dominion Fish Co.* [1901] 2 Ont. L. Rep. 69.

In this connection it should be remarked that, although the actual substance of the decision in *Smith v. Baker* [1891] A. C. 325, 60 L. J. Q. B. N. S. 683, 40 Week. Rep. 392, 65 L. T. N. S. 467, 55 J. P. 660, is correctly stated by the supreme court of Massachusetts in the case cited in note 2, *supra*, there is no intimation, in any of the opinions delivered in the House of Lords, that the

risk, whether that risk existed when he began work,¹⁰ or subsequently.¹¹

Length of time which elapsed between the discovery of the risk and the occurrence of the accident.— (Compare §§ 284, 302.)—The cases in which the maxim is directly discussed throw no light whatever upon the materiality of the question whether the length of the period which elapsed between the time when the servant discovered the existence of the risk and the time when he received the injury was a long or short one. Under the English rule this question can very seldom be of any practical importance, inasmuch as the opinion of the jury must in any event be taken in the first instance, and since the most recent decision on the subject by the House of Lords,¹ it seems difficult to maintain that any period of continuing exposure, however long, would be conclusive against the servant.

Under the American rule, it might be that some courts would refuse to draw a legal inference of voluntary action under circumstances such as those discussed in § 302, *ante* (notes 6-9). But it is no matter of conjecture what position they would take in these instances. As a matter of fact it will almost always happen that, when a servant is held to have assumed a new risk, the injury was received sufficiently soon after the servant's knowledge was acquired to render it not unreasonable to say that he had had an opportunity for considering whether he should go on with or give up the work. The time may be only a few hours, or it may be several years, but if it has been long enough to furnish an opportunity for reflection and an estimate of the comparative advantages of continuing in or leaving the employment, it would seem that the respective rights of the master and servant are definitely fixed, and that an extension of the period cannot be made without producing additional or characteristic legal results.

386. Act rendered necessary by the arrangement of the place.

There is some authority for the doctrine that, where the character

of the servant's environment having been rendered more dangerous after he entered the employment is in itself to be regarded as a material circumstance.

a servant's action in taking a certain route through his master's premises is in question, the fact that, owing to manner in which the plant was arranged, he had practically no alternative but to take that route, tends in some degree to show that he was not a free agent in subjecting himself to the risks which were thus encountered.¹

In one case it was remarked that evidence deciding whether he voluntarily took the risk of using the steps. *Fitzgerald v. Connecticut River Paper Co.* (1894) 155 Mass. 155, 20 N. E. 464.

with ice was proper to be considered in

CHAPTER XXI.

WHEN KNOWLEDGE OF A RISK IS IMPUTED TO A SERVANT.

387. Introductory.

A. GENERAL PRINCIPLES.

388. Constructive and actual knowledge identical for juridical purposes.

389. Servant's failure to know of certain risks may be treated as contributory negligence.

390. Provinces of court and jury in determining whether knowledge shall be imputed to a servant.

391. When a servant is chargeable with knowledge; generally.

392. Evidential elements to be considered in determining whether knowledge shall be imputed to a servant.

B. WHAT RISKS ARE DEEMED TO BE WITHIN THE COMPREHENSION OF ADULTS.

393. Generally.

394. Risks which every adult is presumed to comprehend without special experience.

395. Risks not deemed to be, as a matter of law, comprehended without special experience.

396. Risks of which a comprehension has been imputed, as a matter of law, to servants having special experience.

397. Risks not deemed to be, as a matter of law, within the comprehension of servants having some experience.

C. MINORITY AS A DIFFERENTIATING ELEMENT; SIGNIFICANCE OF.

398. Generally.

399. Cases illustrating the capacity for appreciating dangers, which are imputed to minor servants.

400. Effect of cases discussed.

D. SERVANT'S MEANS OR OPPORTUNITIES OF KNOWLEDGE.

401. Generally.

402. No opportunities of obtaining knowledge before the time of the accident.

402a. Sufficiency or insufficiency of opportunities actually obtained before the accident.

403. Same subject continued. Illustrative decisions.

402a. Sufficiency or insufficiency of the opportunities of knowledge after the time of the accident.

404. Knowledge of particular risks; how far inferable from knowledge of general conditions.

404a. Knowledge of co-servant not imputed to injured servant.

D. COMPARISON BETWEEN THE POSITION OF MASTER AND SERVANT IN REGARD TO IMPUTED KNOWLEDGE.

- 405. Servant's means or opportunities of knowledge equal to those of the master.
- 406. Servant's means or opportunities of knowledge superior to those of the master.
- 407. Servant's means or opportunities of knowledge usually inferior to those of the master.

E. SERVANT'S DUTY AS REGARD INSPECTION AND INQUIRY.

- 408. Servant not ordinarily charged with the duty of inspection or inquiry.
- 409. Rationale of this doctrine.
 - a. Servant not bound to take notice of concealed defects.
 - b. Different standards of care in the case of master and servant.
 - c. Servant entitled to assume that the master has performed his duties properly.
- 410. Doctrine considered with reference to the sufficiency of the complaint.
- 410a. Doctrine considered with reference to the propriety of the instructions.
 - a. Correct.
 - b. Incorrect.
- 411. Decisions illustrative of the doctrine.
- 412. Doctrine considered in relation to the servant's opportunities of knowledge.
- 413. Limits of the servant's exemption from the duty of inspection; generally.
- 413a. Duty of inspection: when predicable from circumstances indicative of danger.
- 414. Duty of inspection inferred from the nature of the functions discharged by the servant.
- 415. When this inference is not drawn.
- 416. Duty of inspection under rules, special notices or orders, and express contracts, generally.
- 417. Limits of the duty under these circumstances.

As to the circumstances under which a servant is chargeable with knowledge of rules, see § 227, *ante*.

Other cases bearing upon the circumstances under which knowledge of risks is imputed to servants are discussed in the four following chapters, with special reference to the elements indicated in the titles.

387. Introductory.—In all the cases of the types reviewed in the five preceding chapters the primary and essential, though not the sole, question to be determined is whether the servant appreciated the risk to which his injury was due. Direct testimony bearing upon that question may be, and sometimes is, adduced;¹ but in the great

¹The fact that a servant who fell into that he had the danger in mind. *Car-*
right v. Washburn & M. Mfg. Co.
 a dimly lighted room was moving cau- (1898) 170 Mass. 79, 48 N. E. 1079.
 tionally just before the accident indicates

majority of instances the answer which it should receive is a matter of inference and deduction from certain facts which establish either the conclusion that the servant ought, in the exercise of reasonable care, to have known of and comprehended the danger, or the conclusion that he could not, by the exercise of reasonable care, have obtained such knowledge and comprehension of the danger. The ensuing chapter will be devoted to a review of the cases, and upon the effect of circumstantial evidence of this description.

A. GENERAL PRINCIPLES.

388. Constructive and actual knowledge identical for juridical purposes.— The proposition that a servant is presumed to have known and understood whatever an ordinarily prudent and intelligent person having the same means and opportunities as the servant would have observed and understood, and that he is presumed to have observed or understood anything more than he could, is as completely axiomatic as the corresponding proposition, which defines the extent of the master's liability. See chapter x., *ante*. It is to say, the true test of his right to recover is whether he could have known and comprehended the danger in question, and whether he did in fact know and comprehend it.¹ As the correctness of this principle is taken for granted in all the cases in the following sections, it would be a work of supererogation to quote more than a very few of the statements in which it has been recognized by the courts.² In any case where the evidence is susceptible of the construction that the servant ought to have known

¹*Klatt v. N. C. Foster Lumber Co.* (1896) 92 Wis. 622, 66 N. W. 791.

²"The master has a right to expect him [i. e., the servant] to be alert to inform himself of existing conditions, and he cannot attack the master from the shelter of unjustifiable ignorance of the business, machinery, and methods which he is employed to use. Actual ignorance will not alone suffice to charge a master; the ignorance must also be excusable." *Ragon v. Toledo, A. A. & N. M. R. Co.* (1893) 97 Mich. 265, 56 N. W. 612.

"The law requires that men shall use the senses with which nature has endowed them; and when, without excuse, one fails to do so, he alone must suffer the consequences, and he is not excused where he fails to discover the danger, if he made no attempt to employ the

faculties nature has given him." *Wright v. Cleveland, C. C. & St. L. Ry.* (1893) 137 Ind. 210, 36 N. E. 101.

In his dissenting opinion in *Forbes* (1898) 171 Mass. 518, L. R. A. 170, 51 N. E. 20, Koss speaking of cases of the plaintiff's actual assumption of the obvious permanent risks of the work, said: "The rights of the plaintiff depend, not necessarily upon the employee in fact understanding and appreciating, but upon that which ought to be understood and appreciated by the employee in making such a contract for service upon that which the employer has a right to suppose that he understood and appreciated."

In *Brown v. Louisville & N. Ry.* (1895) 111 Ala. 275, 19 So. 1.

the risk to which his injury was due, and it is therefore material that the jury should comprehend the doctrine that obligatory knowledge stands, in a juridical point of view, upon the same footing as actual knowledge, it is error for the trial judge to give any instructions which directly contravene that doctrine,³ or to omit to explain its significance and scope in the instructions formulated by himself,⁴ or to refuse to comply with a request by the defendant for an instruction in which it is enunciated,⁵ or to give, at the plaintiff's request, an in-

struction used the following language: "Notice is not, in such cases, of the equivalent of knowledge. A brakeman would have notice of a rule forbidding him to uncouple moving cars if he had information that his employer had adopted and promulgated a set of rules for the conduct of employees. This would put him on inquiry which, if pursued, would lead to a knowledge of the particular rule. Still, until the inquiry has been made and the knowledge gained, his conduct as to care or negligence cannot be measured by the rule,—a factor which did not operate upon him in the act done. He might be negligent in not pursuing the inquiry, but such negligence would be only a remote cause of the injury suffered by doing the act in a manner forbidden by the unknown rule." It is difficult to see how this argument can be reconciled with the principle now under discussion.

As, where the language used is such that the jury are likely to draw the inference that the servant's knowledge is maintainable unless he knew, a new of and comprehended the doctrine in question. *Louisville & N. R. Co. v. Hall* (1890) 91 Ala. 112, 8 So. 371 ("notice," said the court, "meets all the requirements of the law"); *Michison, T. & S. F. L. Co. v. Isdorf* (1892) 47 Ill. App. 200; *Pennsylvania Co. v. Ebaugh* (1898) 152 Ind. 531, 53 N. E. 763; *Louisville R. Co. v. Shirell* (1892) 13 Ky. L. Rep. 902, 18 S. W. 944; *Heritt v. Flint & P. M. R. Co.* (1887) 67 Mich. 61, 34 N. W. 659 (disapproving instruction to effect that train were not negligent in failing to secure a car on a side track, if they did not know that it followed them out onto the main track); *Hill v. Meyer Brothers' Drug Co.* (1897) 140 Mo. 433, 41 S. W. 909 (jury were told that they might find the servant negligent "if they believed that he knew of the danger"); *Bridgman, Atha & L. Co. v. Costello* (1899) 133 N. J. L. 27, 42 Atl. 766; *Ferguson v.*

Phoenix Cotton Mills (1901) 106 Tenn. 236, 61 S. W. 53 (held proper to refuse an instruction that the defendant, in order to escape liability, was required to prove plaintiff's knowledge of the existence of a certain obvious defect); *Wells v. Coe* (1886) 9 Colo. 159, 11 Pac. 50 (jury in effect told that the servant's means of knowledge concerning the conditions which caused the injury could not influence their verdict); *Klatt v. A. C. Foster Lumber Co.* (1896) 92 Wis. 622, 66 N. W. 791; *Carson v. Smith* (1891) 89 Wis. 119, 61 N. W. 317.

An instruction in an action for personal injuries to a painter whose clothing caught upon a set screw in a revolving shaft, that because he asserted that he could not see that there were protruding set screws he did not assume the risk of working near a coupling provided with such protruding screws, is erroneous, where his testimony warrants an inference that he knew that the shaft was not perfectly smooth, and that there might be some projection near the screws which would catch his clothing if it came in contact with them. *Taylor-Craig Corp. v. Hage* (1895) 16 C. C. A. 330, 32 U. S. App. 548, 69 Fed. 581. *Union P. R. Co. v. Houdon* (1893) 50 Kan. 539, 31 Pac. 1002.

Haley v. Jump River Lumber Co. (1892) 81 Wis. 412, 51 N. W. 321, 956; (train wrecked by large log lying near the track); *Illinois C. R. Co. v. Spordeder* (1900) 90 Ill. App. 590 (section hand injured while attempting to drive a claw bar under a snaken spike holding a rail).

In a case where the defense relied upon was contributory negligence, it was held error to refuse to give an instruction to the effect that if the jury found from the evidence that the injured servant knew, or by the exercise of ordinary care and prudence would have known in time to avoid injury, the alleged defects and the dangers of attempting to manipulate them under the

struction which tells the jury in unqualified terms that they find for him if they believe that the defendant did not use reasonable precautions to secure his safety.⁶

On the other hand, any instruction is unexceptionable and which lays it down that, in so far as the servant's right depends upon his knowledge, it is a matter of indifference whether danger was actually known to him, or whether he ought, in the exercise of ordinary care, to have known of it.⁷

As the servant is only bound to exercise ordinary care so that he may ascertain the dangers connected with his employment, it is error to give an unqualified instruction that it is his duty, during the employment, to ascertain those dangers.⁸ Compare *et seq., infra*.

In spite of a general allegation of the absence of knowledge on the part of the servant, a complaint is demurrable if the specific allegations show that he must have known of the defects, or had the same and opportunity for such knowledge as the master possessed.⁹

Special findings that the plaintiff might have known of the defect which caused his injury, and the manner in which the defective machine was operated, preclude the entry of a judgment in his favor.

389. Servant's failure to know of certain risks may be treated as specific contributory negligence.— For the purposes of the rule stated in the preceding section, the ultimate logical fact which is controlling is the servant's imputed comprehension of the risk. But it is not evident that, in any case in which his right to recover depends upon his being shown that he was excusably ignorant of the danger, it is proved that his ignorance was not excusable, his inability to comprehend the action may, by shifting the standpoint, be referred to his conception that his failure to acquire the obligatory knowledge

circumstances in evidence, the attempt to manipulate them was negligence. *Muldorsey v. Illinois C. R. Co.* (1874) 39 Iowa, 619.

⁶*Aldridge v. Midland Blast Furnace Co.* (1883) 78 Mo. 559.

⁷An instruction to the effect that "an employee must make reasonable use of his senses to avoid danger and injury in the course of his employment" states the law correctly. *Hughes v. Winona & St. P. R. Co.* (1880) 27 Minn. 137, 6 N. W. 553.

A charge to the effect that if a servant goes on working a machine, knowing, or having the opportunity of knowing, its faulty construction, he takes the risk on himself, has been approved.

Litton v. Thornton (1881) 7 Ky. (L) 4.

An instruction that if the danger was one which was known or comprehended by him, or was so obvious that, considering his age, intelligence, experience, judgment, and education, he ought, in the exercise of reasonable care, to have known it, assumed the risk, is proper. *United States Leather Co.* (19 Wis. 305, 83 N. W. 473).

(1881) 63 Iowa.

the danger was contributory negligence. Negligence, as has been observed, may, and often does, consist in failing to know, as well as in failing to do.¹

390. Provinces of court and jury in determining whether knowledge shall be imputed to a servant.—In all the cases it is asserted or taken

Howitt v. Flint & P. M. R. Co. (1887) 67 Mich. 61, 34 N. W. 659.

"The servant is culpable if he fail to discover such a defect as would have been apparent without a thorough examination, if he had used ordinary diligence to discover it." *Chesson v. John L. Roper Lumber Co.* (1896) 118 N. C. 59, 23 S. E. 925.

"It is the [servant's] duty to use ordinary care in informing himself of the dangers and responsibilities attending his employment. . . . Moreover, the servant's duty in this regard is a continuing one. He may not close his eyes to serious defects or weaknesses in machinery or appliances, occasioned by use, of which, considering his employment, he might reasonably take notice." *Wills v. Coe* (1886) 9 Colo. 159, 11 Pac. 50.

Where ordinary inspection and carefulness will enable the employee to avoid the danger, there he will be required to use such inspection and carefulness. *Steinhauser v. Spraul* (1893) 114 Mo. 551, 21 S. W. 515, 859.

The phrase "negligent in not knowing" occurs in *George v. Clark* (1898) 29 C. C. A. 374, 56 U. S. App. 595, 85 Fed. 608.

For other cases in which the conception that the servant's failure to observe a danger may be treated as specific contributory negligence has been recognized, see *Brooks v. Northern P. R. Co.* (1891) 47 Fed. 687; *Lake Shore & M. S. R. Co. v. Stupak* (1886) 108 Ind. 1, 8 N. E. 630; *Western & A. R. Co. v. Bradford* (1901) 113 Ga. 276, 38 S. E. 823; *Hill v. Gust* (1876) 55 Ind. 45; *Hammes v. Erk* (1893) 6 Ind. App. 332, 33 N. E. 637; *Eichler v. Haggli* (1889) 40 Minn. 263, 41 N. W. 975; *Frederburg v. Northern C. R. Co.* (1889) 114 N. Y. 582, 21 N. E. 1049; *Albert v. New York C. & H. R. R. Co.* (1894) 80 Hun. 152, 29 N. Y. Supp. 1126; *Philadelphia & B. R. Co. v. Huber* (1889) 128 Pa. 63, 5 L. R. A. 439, 18 Atl. 334; *Bemis v. Roberts* (1891) 143 Pa. 1, 21 Atl. 998.

The two kinds of contributory negligence—the failure to observe a continuing danger incident to the work, and the omission to use due precautions at the time of the accident—are sometimes

mentioned in the same case. *Gustafson v. Washburn & M. Mfg. Co.* (1890) 153 Mass. 168, 27 N. E. 179.

In *Goltz v. Milwaukee, L. S. & W. R. Co.* (1890) 76 Wis. 146, 14 N. W. 752, the question was as to the true construction of this finding in a special verdict: "Up to the time the hook was delivered to the plaintiff there was a defect in it that could be observed by the owner of the hook, or parties that used it, if they were exercising ordinary care in using or taking care of it." The court said: "The learned counsel of the respondent contends that this finding refers only to the defendant, the owner of the hook, and to parties that used it for the defendant before it was delivered to the plaintiff, and is a finding of the defendant's negligence. But the language is too broad and comprehensive for such a restrictive meaning. It may embrace the defendant, but it also embraces the plaintiff and all persons who used the hook. It is impossible to construe it otherwise. 'Up to [or at] the time the hook was delivered to the plaintiff there was a defect in it that could be observed by parties that used it if they were exercising ordinary care in using it' (or while using it). The defect at that time was such, and had been such, as to be observable to the plaintiff or any parties that used it, including the plaintiff, if he or they was or were exercising ordinary care in or while using it. The legal effect is inevitable that the defect was such that the plaintiff could have observed it if he had exercised ordinary care while he was using it. If he had observed or discovered the defect he was then negligent in continuing to use it. If he did not observe it then he was negligent in not observing it. In either case he was not exercising ordinary care, or he was guilty of a want of ordinary care. If he had exercised ordinary care he would not have been injured by that defect. He would have avoided it. The jury in this finding found certain facts, the legal conclusion of which is that the plaintiff was guilty of a want of ordinary care which contributed to the injury. This precludes his recovery."

for granted that there are two situations in which the question whether the servant was chargeable with notice of the risk from his injury resulted must be left to the jury to determine, and in their findings with regard to that question are conclusive in a court of review:

(a) Where the evidence is conflicting as to the material circumstances which are available for the purpose of determining whether the servant ought to have known of the risk.¹ It is clear that such a conflict is presented where the evidence tending to establish negligence is that of the injured servant himself, whether it merely has a direct relation to the physical conditions existing at or before the time of the accident,² or amounts to a general denial of his possession of knowledge which it is sought to impute to him.³ But it is also

¹The question whether or not a hole in the planking between the rails over a street crossing was so obvious that an employee ought to have known of it is for the jury, where the evidence is conflicting as to its size and whether or not there were others like it in the yard, as well as upon the question of what caused it. *Valley R. Co. v. Keegan* (1898) 31 C. C. A. 255, 58 U. S. App. 377, 87 Fed. 849.

It is for the jury to say whether a servant injured by the breaking of a ladder understood the risk of using it, where the evidence was that he had been using it for a considerable time, and that he knew it had been broken previously and was spliced; while the testimony as to the strength of spliced ladders was conflicting; some witnesses stating that they were only from one half to three fourths as strong as originally, and others that they were just as strong. *Jones v. Pacific Mills* (1900) 176 Mass. 354, 57 N. E. 663.

On the ground that the witnesses had expressed different opinions as to the dangerous character of the work, the question whether the servant should have so fully realized the perils to which he was subjected by continuing to work that he should have left the employment was held to be for the jury, in a case where a laborer was engaged in the operation of pulling up signal posts on a railway, and the method adopted was to take several turns round a post with the end of a cable which was attached at the other end to a car, and hold on to the cable until it was drawn taut by the movement of the car, and thus either broke or pulled up the post. *Union P. R. Co. v. O'Hern* (1888) 24

Neb. 775, 40 N. W. 293 (post while been pulled up and was dragging the ground struck an obstacle, and being twisted around, struck the rail).

²Whether or not an employee in a box car was guilty of contributory negligence in failing to discover a hole in the car floor about 6 inches wide, 10 inches long, 14 inches from the jam, and 5 or 6 inches from the wall of the car, precluding recovery for injury by stepping into the hole, is for the jury, upon his testimony that the hole was concealed by pieces of bark and snow and straw, and that the accident occurred about twenty minutes after he entered the car, although witnesses testified that the hole was in plain view and had been mentioned on the car. *King v. Chicago & N. W. R. Co.* 140 Iowa, 748, 78 N. W. 837. The question is for the jury where the plaintiff workman injured by the collapse of the sides of a trench which was not sufficiently shored up, swore that he had served nothing to warn him of the danger of the work. *Schmit v. Gilson* 41 App. Div. 302, 58 N. Y. Supp. 70. Where a servant injured by the breaking of a belt in a spinning room testified that she had seen only one break during her employment, and the defendant showed that belts were frequently breaking there, it could not be said, as a matter of law, that the servant assumed the risk of injury from breaking of the belts occasioned by the defendant's neglect to lace them properly. *McGarr v. National & P. Wash. Co.* (1901) 22 R. I. 347, 17 Atl. 1092.

W. v. B. & N. Y. Supp. 468

that if the courts were always to decline to interfere with the verdict of a jury in cases in which the servant has thus testified in his own favor, their controlling functions would, for practical purposes, be confined within very narrow limits. There are, it may be supposed, very few trials in which the servant does not swear that the risk was unknown to him. Due weight is attached to this consideration; for, taking the cases as they stand, it seems permissible to say that such a denial is treated as being a merely corroborative element which furnishes an additional justification for a conclusion in itself not unvarnished even if that element were abstracted. This predicament is exemplified by a case in which the servant's injury was traceable to dangers which could not be appreciated without experience or special technical training (see subtitle B, *infra*), and his own positive statement that he did not possess those qualifications has not been contradicted by any other witness;⁴ by a case in which the minority of a female servant was treated as a sufficient reason for refusing to impute knowledge to her, as a matter of law, although she was skilled in her work;⁵ and by the cases in which the servant's statement that the risk was not known to him is mentioned in connection with facts which justify the inference that his opportunities for obtaining such knowledge were not such that a reasonably observant man could not have failed to discover it.⁶ See subtitle D, *infra*. Both on principle

⁴*Mather v. Rilliston* (1894) 156 U. S. 391, 39 L. ed. 464, 15 Sup. Ct. Rep. 464 (properties of dynamite).

⁵*Crocker v. Banks* (1888) 4 Times L. R. 324. For facts, see § 399, note 1, subd. 2, *infra*.

⁶Whether one who had for two years been a brakeman on a road, the regulation distance between tracks on which is 7 feet, knew, or ought to have known, that a certain siding was only 5 feet 6 inches from the next track, and of the consequent danger, he testifying that he did not know thereof, is for the jury. *Forbes v. Lake Shore & M. S. R. Co.* (1899) 193 Pa. 115, 44 Atl. 335.

The question whether a conductor knew that certain ties at a place where a switch had been removed projected unusually far is for the jury, where he has testified that he did not know that the ties projected, though he had frequently stopped at or near them, and it had been his custom to alight at a freight house close by to deposit his waybills, while the train proceeded a short distance to a passenger depot. *Whitcher v. Boston & M. R. Co.* (1909) 70 N. H. 212, 46 Atl. 740.

Vol. 1. M. & S.—65.

The question whether a railroad switchman was chargeable with notice of obvious defects in a switch should be submitted to the jury, where he denies knowledge thereof and his service at that point was mainly at night. *Peirce v. Clarin* (1897) 27 C. C. A. 227, 53 U. S. App. 492, 82 Fed. 550.

A nonsuit is properly refused where it is a fair inference from the testimony that, considering the opportunities available for acquiring a knowledge of the location and height of an overhead bridge on a railway, the plaintiff was not chargeable with knowledge, and should have received instructions. *Atlee v. South Carolina R. Co.* (1884) 21 S. C. 550.

The plaintiff's knowledge is a question for the jury where he has testified that he did not know that the ditch into which he stepped had been dug, and that he had never been on that particular part of the spur track across which it had been dug. *Hollenbeck v. Missouri P. R. Co.* (1897) 141 Mo. 97, 38 S. W. 723, 11 S. W. 887.

Where a switchman was injured in attempting to jump onto a moving train

and authority it is indisputable that if the servant's testimony is contrary to all probability when the rest of the evidence is considered, it may be disregarded by a court of review.⁷

at a point where there was a pile of stones about 2½ feet high near the track, it cannot be said, as a matter of law, that he knew of the obstruction, where there were no other similar piles of stones along the track, and he testified that he had never seen the stones in question. *Doughlin v. Boston & M. R. Co.* (1901) 178 Mass. 251, 59 N. E. 661.

Where a street-railway conductor, being ordered to change from one car to another at an unusual place, where the company had paving stones piled up near the track, which it was repairing, was thrown by the sudden starting of the car, as he was attempting to board it, and, striking against the stones, was rolled under it, he will not be held, as a matter of law, to have assumed the risk arising from the presence of the stones; he testifying that his attention was first called to the stones at that time. *North Chicago Street R. Co. v. Dudgeon* (1900) 181 Ill. 477, 56 N. E. 796, affirming (1899) 83 Ill. App. 528.

In a case where a servant was injured while coupling a car to an engine, he testified that he had not been on the engine much; that he did not think he had coupled a car to the front of the engine more than four times; that, when the engine first approached the car, it stopped 10 feet from it; that he did not notice the height of the car, and did not know that there was any danger that the bumper would pass under the car until he actually attempted to make the coupling. The defendant produced adverse testimony. The court held the question of the servant's contributory negligence to be one for the jury, advertent to the general principle that its function is not to pass upon the weight of the evidence, but merely to determine whether there was evidence which should be submitted to the jury. *Lawless v. Connecticut River R. Co.* (1883) 136 Mass. 1.

In the face of the plaintiff's own express assertion that he did not observe the dangerous conditions, a court cannot say, as a matter of law, that a servant working occasionally near a planer was chargeable with a knowledge of the risk created by revolving knives which he could not see from the position which he occupied. *Fegiman*

v. Morse (1893) 160 Mass. 143, 451.

Knowledge of the risk is not a necessary inference where an employee engaged in using the defect, by the breaking of which he was injured testified that he had no knowledge of the defect. *Thomas v. Arthur R. Co.* (1897) 144 Mich. N. W. 40.

Whether a stevedore engaged in taking away lumber in the hold of a vessel where it was lowered through the hatchway, and who was injured by the lumber slipping from a box in the hold while the vessel was being lowered, because of the negligence of the crew, is a question of fact, nothing over the end of it. The warning as to its descent was assumed the unusual risk, the evidence that the ends were closed, depends on whether the jury understood and had a right to find that the stevedore knew and used it; and this is a question for the jury. *Thompson v. Chicago & N. W. Ry. Co.* (1899) 125 Cal. 627, 58 Pac. 299.

In a case where a servant was injured by a machine which fell while he was attempting to couple it, he is entitled to go to the jury, with his own testimony and that of his fellow-servants, to show that he had no knowledge of the machine before, and that he was required to handle it in a dangerous position. *Walsh v. Peet Valve Co.* (1888) 138 Mass. 23.

A statement by an employee that he did not know the risk of a cracked saw for the purpose of cutting an iron plate is insufficient to rebut the presumption of knowledge from an experience of fourteen years with machinery. *Tedman v. Steel Co.* (1897) 95 Wis. 6, 6993.

The testimony of a youth, years of age at the time of the accident, that he did not know that if he put his fingers into the rolls of a press they would be caught there, or that if they were caught he would be

(b) Where the evidence is of such a character that the proper inference to be drawn from it is a question with respect to which different opinions may not unreasonably be formed.⁸ This is the situation illustrated by most of the cases to be hereafter cited, in which the servant was allowed to go to the jury or to retain a verdict in his favor. Whether it actually exists in any given instance is a matter which, it is manifest, affords a very wide scope for a diversity of views, and which will, in practice, be determined according to the theory which in the jurisdiction where the right of recovery is being determined is entertained with respect to the proper significance of the extremely vague phraseology which is employed in this connection for the purpose of defining the boundary line between the prov-

does not raise a question for submission to the jury, where defendant, his employer, had a right to assume that he possessed the usual faculties of a boy. *Page, Roth v. S. E. Barrett Mfg.* (1897) 96 Wis. 615, 71 N. W. 1034.

Admissions by a brakeman spring for personal injuries incurred while coupling cars, that he could and did see the drawhead, and that the link and pin were properly adjusted, and his failure to deny that he knew the car had a sill, will render his statement that he did not have time to see the sill before the coming together of the cars not more than a scintilla of evidence, which need not be submitted to the jury. *Fang v. Pires* (1897) 26 C. C. A. 521, 54 U. S. App. 196, 82 Fed. 162.

It has been asserted that the question whether the unsound condition of an appliance should have been perceived by the servant is one of contributory negligence, in respect to which the master has the burden of proof, and which, by consequence, he cannot ask to have withdrawn from the jury. *Atchison, T. & S. I. R. Co. v. Mulligan* (1895) 14 C. C. A. 517, 34 U. S. App. 1, 67 Fed. 569. This reason for denying the power of a court to interfere in the decision of such a question would obviously have no particular weight in jurisdictions where the plaintiff has the burden of proving that he was not negligent.

Ramell v. Dibrath (1885) 111 Pa. 313, 2 Atl. 355, 363; *McDade v. Washington & G. R. Co.* (1886) 5 Mackey, 114, affirmed (1890) in 135 U. S. 551, 34 L. ed. 235, 10 Sup. Ct. Rep. 1011; *Parsons v. Fall River* (1897) 165 Mass. 60, 46 N. E. 408; *Magee v. North Pacific Coast R. Co.* (1889) 78 Cal. 430, 21 Pac. 111; *Ingram v. Moore* (1891)

Fitzpatrick* (1877) 31 Ohio St. 479; *Stone v. Oregon Mfg. Co.* (1870) 4 Or. 52; *Galveston v. Humais* (1889) 72 Tex. 558, 11 S. W. 29; *Litton v. Thoratam* (1881) 7 Viet. L. R. (1.) 4.

In an English case Pollock, C. B. is reported to have laid it down that the servant's means of knowledge is a question of law (*Dippen v. Leach* [1857] 26 L. J. Exch. N. S. 221), but this remark was presumably made with reference to the circumstances under discussion.

inances of courts and juries. A comparison of the decisions adverse to the servant indicates very clearly that some judges have and exercise more extensive powers than others in regard to the control and review of verdicts. Upon the whole, however, it is not possible to deny that in cases of this class the general tendency of judicial opinion has been decidedly adverse to the servant, and that the courts have often encroached upon the proper domain of juries to an extent which cannot be justified under any reasonable conception of that partition of functions which is the essence of the common-law system of procedure.

In the great majority of instances the doctrine that the servant's constructive knowledge of a risk is a question with regard to which the finding of a jury is *prima facie* conclusive is usually asserted to the benefit of the servant. But this doctrine will, of course, in the great majority of cases, be to the advantage of the master under appropriate circumstances.

391. When a servant is chargeable with knowledge; general rule. The juridical theory of imputed knowledge, which is applicable to actions by a servant against his employer, is simply this: that the master is or is not chargeable with a comprehension of the conditions which have caused his injury and of the risks created by those conditions, depending as it may reasonably be inferred that those conditions and risks would or would not have been comprehended by a person of ordinary prudence, whose mental and physical capacities, natural and acquired, and opportunities for observing the facts and the nature of danger, were the same as those of the servant himself.

**Hughes v. Winona & St. P. R. Co.* (1880) 27 Minn. 137, 6 N. W. 553. Plaintiff slipped on a pile of wet ashes while coupling cars, and fell under the wheels. Verdict for defendant upheld, the jury having found that the plaintiff had reasonable means of knowledge of the custom of the company to allow the ashes to remain on the track.

This principle has been enunciated so frequently that it would be a waste of time and space to attempt to collect even a tithe of the statements in which it has been stated with more or less precision and amplitude. The following paragraphs will illustrate sufficiently the language used by the courts:

"The question in each case is not whether the employee has actually observed, and by a conscious act of the will assumed, all of the risks involved, but whether the risks are incident to and naturally grow out of the employment in which he is engaged, and are such as, taking his age, intelligence, and

experience into account, he must be supposed to have appreciated if he saw, and as, if he did not see, he could be expected to have observed, and understood if he had looked. If the risks are of this character, they are said to be obvious, and the employee assumes them." *Kennedy v. L. & N. W. Ry. Co.* (1897) 168 Mass. 117.

"A servant will be deemed to have notice of all risks which are incident to his position, and standing, are or ought to be obvious." *Rumell v. Dilworth* 111 Pa. 343, 2 Atl. 355, 363.

An employee is not acquitted of the risk merely because he does not comprehend the danger; the true test is whether an ordinary prudent person of his age and experience under like circumstances would have comprehended the danger. *Craven v. Smith* (1891) 89 Wis. 317, N. W. 317.

Instructions are correct or erroneous, according as they are consistent or inconsistent with this principle.²

"If however the defect is patent, open to observation, or such as the ordinary use of the machine in the business the servant is engaged in would disclose to an ordinarily observant man operating it, and the servant had ample opportunity by operating it before being injured to observe the defect, his opportunity to know would be held as knowledge, whether in fact he knew of the defect or not." *Porter v. Hannibal & St. J. R. Co.* (1879) 71 Mo. 36, 77, 36 Am. Rep. 454.

"A servant assumes a risk which, from the facts before him, it was his duty to infer." *Russell v. Minneapolis & St. L. R. Co.* (1884) 32 Minn. 230, 20 N. W. 147.

Those risks are assumed which should have been seen by the employee if he exercised such prudence as a man of ordinary prudence would have exercised under like circumstances." *Guly, C. & S. F. R. Co. v. Johnson* (1892) 83 Tex. 630, 19 S. W. 151.

The servant is chargeable with "such knowledge of the character of what is apparent as, by his employment, he assumes to have or from his education or experience he actually has." *Pennsylvania Coal Co. v. Kelly* (1894) 54 Ill. App. 622.

An open and visible risk which is assumed by a servant is one so patent that a person familiar with the business will instantly recognize it, and about which there can be no difference of opinion between intelligent persons accustomed to the service. *Johnston v. Oregon Short Land & L. N. R. Co.* (1892) 23 Or. 94, 31 Pac. 283.

The servant is held to take the risk of such defects in an instrument which he is frequently using as are obvious to the senses, or with reasonable diligence ought to be discovered or known by him. *Anderson v. Minnesota & N. W. R. Co.* (1888) 39 Minn. 523, 41 N. W. 104.

In numerous cases the risks assumed by a servant have been declared to be those discovered by the exercise either of "ordinary care" (*Williams v. Delaware, L. & W. R. Co.* [1889] 116 N. Y. 628, 22 N. E. 1117; *Stevens v. Peters Bar & Lumber Co.* [1898] 151 Ind. 612, 50 N. E. 877, Rehearing Denied in 151 Ind. 602, 52 N. E. 399; *Johnson v. Isham Water Co.* [1890] 77 Wis. 51, 45 N. W. 807; *Greenleaf v. Illinois C. R. Co.*

[1870] 29 Iowa, 14, 4 Am. Rep. 181; *Gibbston, H. & S. A. R. Co. v. Garret* [1889] 73 Tex. 262, 13 S. W. 62; *O'Neil v. Chicago & L. Coal R. Co.* [1892] 132 Ind. 110, 31 N. E. 169; *Lundon v. Caspell* [1877] 47 Iowa, 159; *Wie v. Texas P. R. Co.* [1891] 82 Tex. 473, 18 S. W. 571; or of "ordinary diligence." (*Denver Tannery Co. v. Vesbit* [1896] 22 Colo. 408, 45 Pac. 105; *Chesson v. Jocke L. Paper Lumber Co.* [1896] 118 N. C. 59, 23 S. E. 925; *Hawes v. Chicago, R. L. & P. R. Co.* [1884] 63 Iowa, 562, 14 N. W. 340, 19 N. W. 680; *Rego v. Chicago, H. & St. P. R. Co.* [1897] 163 Iowa, 665, 72 N. W. 189; or of "reasonable care." (*Pennsylvania Co. v. Lehigh* [1898] 152 Ind. 531, 53 N. E. 763; *Kittlingham v. Sioux City & P. R. Co.* [1883] 62 Iowa, 285, 17 N. W. 585; *Pennsylvania Co. v. Butte* [1896] 15 Ind. App. 583, 43 N. E. 319, 44 N. E. 377; *Louisville, N. & C. R. Co. v. Quinn* [1896] 14 Ind. App. 554, 43 N. E. 240; or of "reasonable care and skill" (*Western T. Tug. Co. v. McMillan* [1895] 58 N. J. L. 155, 32 L. R. A. 351, 33 Atl. 384); or of "reasonable care and diligence" (*Moran v. Harris* [1884] 63 Iowa, 390, 19 N. W. 278); or of "reasonable care and prudence" (*Carlson v. Sioux Falls Water Co.* [1894] 5 S. D. 402, 59 N. W. 217); or of "reasonable and ordinary care" (*Haley v. Jump River Lumber Co.* [1892] 81 Wis. 423, 51 N. W. 321, 956); or of "reasonable observation" (*Whipple v. New York, N. H. & H. R. Co.* [1896] 19 R. I. 587, 35 Atl. 305); or of "reasonable care and caution" (*Lindroth v. Woods* [1891] 44 Fed. 855); or of "ordinary observation or reasonable skill and diligence" (*Latremouille v. Bennington & R. R. Co.* [1891] 63 Vt. 336, 22 Atl. 656).

²An instruction that, if the plaintiff could have seen or known of the abnormal conditions by the exercise of ordinary care and prudence, the defendant would not be liable, is proper. *Parsons v. Phenic Cotton Mills* (1901) 106 Tenn. 236, 61 S. W. 53.

A jury is properly instructed that it was plaintiff's duty to inform himself as to the danger in using the appliance in question, so far as he could by observation, and that if it was defective he cannot recover unless it appears by a preponderance of evidence, that the

The conditions and the risks which are presumed, as a matter of law, to be comprehended by a servant, are also frequently characterized by descriptive epithets or phrases, used either singly or in combination, which are intended to express in a brief form the effect that these conditions and risks must have been appreciated by the servant if he had used proper care.³

defect was not observable by ordinary, careful observation. *Chilson v. Lansing Wagon Works* (1901) 128 Mich. 43, 87 N. W. 79.

It is error to charge that plaintiff did not assume the risk incident to the method under which defendant conducted its business, unless he "must necessarily" have known of such method by the exercise of ordinary care; since if plaintiff by the exercise of ordinary care could have known of such methods, his knowledge might be presumed, and the expression "must necessarily have known" is not synonymous with "could have known" or "must have known." *Galveston, H. & S. A. R. Co. v. English* (1900; Tex. Civ. App.) 59 S. W. 626.

In instructing a jury it should be clearly explained to them that the test by which the servant's presumed comprehension of the risk is to be determined is his exercise or nonexercise of "ordinary care" in the premises. Accordingly, an instruction to the effect that even if the appliance in question was defective, yet if from his opportunities of observation the plaintiff's intestate knew, or should have known, of its defective condition, he is held in law to have assumed the risk of its insufficiency, is erroneous in that it fails to define with sufficient precision the degree of care or observation which the law requires. *Durand v. New York & L. B. R. Co.* (1901) 65 N. J. L. 656, 48 Atl. 1013.

"Obvious." *Garnett v. Phoenix Bridge Co.* (1899) 98 Fed. 192; *Whalen v. Whitcomb* (1901) 178 Mass. 331, 59 N. E. 666; *McIntire v. White* (1898) 171 Mass. 170, 50 N. E. 524; *Goldthwait v. Harrerhill & G. Street R. Co.* (1894) 160 Mass. 554, 26 N. E. 486; *Joyce v. Worcester* (1885) 140 Mass. 245, 4 N. E. 565; *Wilson v. Steel Edge Stamping & Retinuing Co.* (1895) 163 Mass. 315, 39 N. "Patent to the most cursory observation." *McCain v. Chicago, B. & Q. R. Co.* (1896) 22 C. C. A. 90, 40 U. S. App. 181, 76 Fed. 125. "Obvious to any person of n observation." *Bonnet v. Galveston & S. A. R. Co.* (1895) Tex. Civ. 31 S. W. 525.

The phraseology which is thus used to designate the risks of which a servant is bound to take notice is also employed with the addition of a negative, for the purpose of defining the limits of the knowledge which is imputed to him.⁶ But the risks of which a servant may be ignorant without necessarily incurring the charge of negligence are more usually described by the epithets "latent," "concealed," or the like. See §§ 408 *et seq.*, *infra*.

392. Evidential elements . . . be considered in determining whether knowledge shall be imputed to a servant.—As is indicated by the language used in stating the general principle enunciated in the preceding section, the elements with reference to which it is determined whether the injured servant was chargeable with a knowledge of the given risk are partly subjective, and partly objective. They are as follows:

(a) The servant's natural and acquired capacity for obtaining knowledge. The essential matters to be considered under this head are the extent of his intelligence, as deducible from his age or other circumstances; and the extent of his technical skill and information, whether that skill and information be derived from his practical experience in the employment to which the risk was incident, or from a special education and training received in some other way.

(b) The servant's opportunities or means of obtaining a knowledge of the material conditions which created the given risk.¹

(c) The extent of the servant's duty of active inspection and inquiry with regard to the existence of such risks as that to which the injury was due.

The precise significance of each of these elements with relation to the countless groups of slightly variant facts which are presented in actions by injured servants it is frequently impossible to ascertain,

v. Sherry Lumber Co. (1895) 90 Wis. 83, 62 N. W. 948.

Defects which the servant "by proper watchfulness might have discovered." *Coble v. Griffing Iron Co.* (1899) 63 N. J. L. 609, 47 L. R. A. 117, 44 Md. 665.

⁶Thus, it has been said that an employee does not assume the risk of using a defective appliance, where the defect is not open to observation in its ordinary use. *Nichols v. Crystal Plate Glass Co.* (1894) 126 Mo. 55, 27 S. W. 516, 28 S. W. 991.

Where the evidence tended to show that the defect was not a patent one, a charge that, to make plaintiff guilty of contributory negligence, it must appear that the defect was so visible that a

man could not overlook it except by gross negligence, is not erroneous. *Kansas City, P. & G. R. Co. v. Spellman* (1900) 42 C. C. A. 321, 102 Fed. 251.

¹The phrase "means of knowledge" occurs in the case which laid the foundation of the modern law of employer's liability. *Priestly v. Fowler* (1837) 3 Mees. & W. 1, 14 M. & W. 305, 1 Jur. 987, 7 L. J. Exch. N. S. 42. As is shown by many of the cases cited in subtitle D, *infra*, the phrase has always been, and still is, a familiar one. But the alternative combination of words, "opportunities of knowledge," is possibly found rather more frequently in the American reports.

for the reason that, in a large number of the cases in which some of them are involved, the language used does not indicate with certainty whether the court intended to attribute to two or more of them in combination a differentiating value which would not have been imputed to a single one of them when considered separately, to ascribe such a value to each of them independently, or to make the decision turn upon a particular one of them to the exclusion of the others. That the difficulties of classification are, under such circumstances, enormously increased, is sufficiently obvious; but it is believed that the arrangement adopted in the ensuing sections will be reasonably serviceable for the purposes of research.

B. WHAT RISKS ARE DEEMED TO BE WITHIN THE COMPREHENSION OF ADULT SERVANTS.

393. Generally.— The cases turning upon the natural and acquired capacity of adult servants may be conveniently divided into four classes, illustrative of one or the other of the following conclusions:

(a) That the risk was within the comprehension of any adult of ordinary intelligence, irrespective of the question whether he had or had not any special experience or training in the work in which he was engaged.

(b) That, by reason of his inexperience, the servant was not necessarily chargeable with a comprehension of the risk.

(c) That a comprehension of the risk was imputable, as a matter of law, to a person having the same amount of special experience or training as the servant.

(d) That the amount of special experience or training possessed by the servant was not sufficient to warrant a court in declaring, as a matter of law, that he ought to have understood the risk.

The decisions which illustrate each of these conclusions will be discussed in the ensuing sections. But it should be remembered that the actual effect of many of them is somewhat problematical, for the reason explained at the end of the last section.

To the situations indicated by the above statements may also be added a fifth, which is of such exceptional occurrence, and, comparatively speaking, of such slight importance, that it merely deserves passing notice; *viz.*, that the servant's previous experience of the conditions ordinarily prevailing in the employment in question may have led him to draw false inferences as to the conditions actually prevailing at the time of the accident. If the evidence is susceptible of

construction, a court will not say that he was chargeable, as a matter of law, with a knowledge of the resulting risk. See § 396, *infra*.

It will be observed that a considerable number of the cases cited in the two sections, 394, 396, *infra*, in which the servant's comprehension of the risk was treated as an inference of law, involve injuries resulting from risks which are included either by all or by some of the courts among the ordinary or normal class. Whenever this situation is disclosed by the evidence, the decision might be referred directly to the general principle that such risks, in so far as they are obvious, are presumed to be accepted by any servant who undertakes the employment to which they are incident. See §§ 259, *et seq.*, *ante*. But as the conclusions reached are arrived at without the aid of that presumption, and the material elements considered and the criterion employed are equally applicable whether the risk be ordinary or extraordinary, cases of this type must, in a logical point of view, and therefore for purposes of classification, be treated as belonging to a different category from those in which recovery is denied for the reason that the risk in question was an ordinary one.

394. Risks which every adult is presumed to comprehend without any special experience.—In the subjoined note are collected a large number of cases in which it is either certain, or seems to be a matter of reasonable inference from the language of the court, that the inability to maintain the action was predicated in spite of or independently of the element of special experience or technical skill.¹

¹ (a) *Railway tracks and appurtenances*.—The risk created by the want of ballast between the ties on a siding has been treated as one which, in respect to a brakeman, is obvious. *Ragon v. Toledo, A. A. & N. M. R. Co.* (1893) 97 Mich. 265, 56 N. W. 612 (experience of servant not adverted to).

The danger arising from the want of a block between a rail and a guard rail at a switch is so obvious that even an inexperienced brakeman will, as matter of law, be presumed to understand the risk incident to working without it. *Mayer v. Chicago, R. I. & P. R. Co.* (1884) 63 Iowa, 562, 14 N. W. 310, 19 N. W. 680, modifying on rehearing the opinion expressed at the first hearing, —that it was for the jury to say whether the inexperience of the brakeman was a sufficient excuse for his nonappreciation of the danger.

A carpenter in a railway shop is chargeable with a knowledge of the risk of being crushed against the wall inclosing a turntable, while he is helping to

pull it round. *Mellott v. Louisville & N. R. Co.* (1897) 101 Ky. 212, 40 S. W. 696 (element of inexperience was not adverted to, but was apparently regarded as immaterial).

(b) *Obstructions beside railway tracks*.—The danger of getting caught in a space 3½ inches wide, between a trail car and a doorway in the power house of a street railway, through which a street car must be pushed to attach it to the dummy, is presumed to be comprehended by a newly employed conductor. *Jennings v. Tacoma R. & Motor Co.* (1893) 7 Wash. 275, 34 Pac. 937.

(c) *Railway cars; construction and operation of*.—(See also subd. x, *infra*.) A servant who has for several months been handling various cars equipped with two kinds of self-couplers which are apt to pass each other when an attempt is made to unite them is presumed to understand the risk of such an accident. *Norfolk & W. R. Co. v. McDonald* (1891) 88 Va. 352, 13 S. E.

It will be seen that the general effect of these cases is that a servant of ordinary intelligence is presumed to have been capa-

706. It has been held that any adult of ordinary intelligence who accepts the position of brakeman is presumed to understand the risk incident to coupling cars with double deadwoods. *Hathaway v. Michigan C. R. Co.* (1883) 51 Mich. 253, 47 Am. Rep. 569, 16 N. W. 634. In this case a brakeman twenty-four years old, who had been warned in a general way as to the danger of coupling cars, was held to be affected with knowledge of the manifest risk of coupling cars with double deadwoods. The court, commenting on *Michigan C. R. Co. v. Smithson* (1881) 45 Mich. 242, 7 N. W. 791 (see § 396, note 1, subd. (d), *post*), said: "The correctness of that decision is not questioned, but admitted by the plaintiff's counsel in this case, and the only difference claimed between the two cases is that in the *Smithson Case* the coupler injured had long experience in coupling, and in the present case he had little or none at all. This fact, if admitted, cannot make this case an exception to the rule. If the character of any particular danger is so simple that it can as well be ascertained at a single view as at many, it is difficult to see how additional observation could be of any benefit to the party whose duty it is to encounter it." Later Michigan decisions to the same effect are *Dysinger v. Cincinnati, S. & M. R. Co.* (1892) 93 Mich. 646, 53 N. W. 825; *Fenton v. Duluth, S. S. & A. R. Co.* (1896) 108 Mich. 284, 66 N. W. 51. This rule holds even where the plaintiff is a brakeman temporarily employed in the absence of the regular brakeman. *East Tennessee, T. & G. R. Co. v. Turville* (1893) 97 Ala. 122, 12 So. 63. For other cases as to double deadwoods, see §§ 73, 253, note 8, 263, *ante*; § 395, note 1, subd. (b), *post*; § 396, note 1, subd. (d), *post*.

The danger caused by couplings differing so much in height that they overlapped and allowed the cars to come together is deemed to be obvious to any intelligent man. *Simms v. South Carolina R. Co.* (1886) 26 S. C. 490, 2 S. E. 486.

A switchman who has to supply himself with proper coupling pins for different drawheads on cars which he is to couple, from the pins scattered about the yard, assumes the risk of using a pin too large for the drawhead of a car,

which he finds lying thereon, and attempts to make a coupling. *W. K. & T. R. Co. v. Hauer* (1897) (Civ. App.) 33 S. W. 1010.

A brakeman, though without experience, assumes the risk of projecting 12 inches from the ends of cars which he undertakes to couple as to leave only an inch between them when the cars are shoved together where they are in plain view, although he seen, he has abundant opportunity to see them, his attention is directed to them, and he is told the necessity of keeping from between them. *Ch. J. & R. Co. v. Wagner* (1896) (Civ. App.) 22, 45 N. E. 76. *Behrman* (1897) 17 Ind. App. 28, 12, 1121.

The swing of a street car passing a curve is something which is so obvious that no one employed about a car can be permitted to claim ignorance of it. Hence, an employee in the sheds of a street railway assumes the risk of having his leg caught and between the ends of two cars on leading out of the shed in opposite directions, when one of the cars taken out is swung against the other standing on the other end at a point where the tracks are close together. The fact that the risk to him is thus exposed has been held during his term of employment, use of longer and wider open cars not render the street car company liable to him for such injuries. *Goldthorpe v. Haverhill & G. Street R. Co.* 160 Mass. 554, 36 N. E. 486.

A brakeman, although inexperienced, will be presumed to know that the subject of detaching an engine from a train is to let it move away from the train so as to allow the train to continue to move for a certain distance. *Gorman v. Minneapolis & St. L. R. Co.* (1889) 78 Iowa. 509, 43 N. W. 36.

The want of a fender on a street car creates an obvious risk. *Chandl. Atlantic Coast Electric R. Co. v. ...* 61 N. J. L. 380, 39 Atl. 674 (expressly not mentioned); *Deaver v. ...* (1896) 22 Colo. 408, 405 (servant had worked as conductor for a few weeks, but this element not specifically adverted to).

ascertaining every fact which could have been apprehended by the senses of a person having the same opportunity as he had for exer-

engine, and it is necessary, in doing this, to couple and move some cars, there is no obligation to warn him of the danger of placing his hand upon the deadwood of one car at the very place where it had been previously struck twice by the buffer of another car which he had unsuccessfully attempted to couple to it. *Warmell v. Maine C. R. Co.* (1887) 79 Me. 397, 10 Atl. 49.

It has been held that a carpenter who had been summoned, according to a common practice, to help the painters to move a car, was chargeable with knowledge of the danger created by the fact that a running board had been laid from the top of that car to the adjoining one, and would fall when the two cars were separated. *Dug v. Cleveland, C. C. & St. L. R. Co.* (1894) 137 Ind. 206, 12 N. E. 854. But the propriety of deciding such a point as a matter of law seems to be very questionable, considering that the servant was taken from another kind of work.

(d) *Locomotives; construction and operation of.*—The want of chains across the opening in an engine cab was held a risk which was obvious to a fireman. *Fancher v. New York, L. E. & W. R. Co.* (1894) 75 Hun, 350, 27 N. Y. Supp. 62 (plaintiff had been several years in the company's employ; but this circumstance was in no way relied upon). A common laborer is deemed to understand the dangers to his hand which are created by any inequalities there may be in a metal surface which he is directed to wipe. *McCain v. Chicago, B. & Q. R. Co.* (1896) 22 C. C. A. 99, 40 U. S. App. 181, 76 Fed. 125 (sliver projecting 1/2 inch beyond the tire of a wheel and extending six inches along the circumference, stuck in the arm of an engine wiper).

(e) *Hand cars; construction and operation of.*—Any person who has once worked the lever of a moving hand car, or seen another do it, is presumed to know without instruction that it is dangerous to "lose the motion of the lever." *Jones v. Louisville & N. R. Co.* (1894) 95 Ky. 376, 26 S. W. 390. A section man undertaking to work the lever of a hand car by means of a crowbar used as a substitute for a broken handle is presumed, as matter of law, to have known that the application of an unusual force in this manner might result in the

breaking of the walking beam. No special skill or knowledge is required to enable a servant to appreciate such a risk. *Powers v. New York, L. E. & W. R. Co.* (1885) 98 N. Y. 274. A section hand is chargeable with knowledge of the strain which a sound handle of a lever car will probably bear, when of a given size. *East Tennessee, V. & G. R. Co. v. Smith* (1882) 9 Lea, 685.

(f) *Weight sustaining structures.*—A knot running across a plank furnished an employee for a scaffold being obvious, he is bound to take notice of the defect and to know that it weakens and renders the plank unsafe. *Armour v. Brazon* (1901) 191 Ill. 117, 60 N. E. 904, Reversing (1900) 93 Ill. App. 235. It has been held that a servant who had been working for several years in a coal yard, and was injured by the breaking of a plank on which he was standing while trying to prise open the doors of a coal car, could not recover, as no technical skill or knowledge was necessary to enable him to understand the weight-sustaining power of a plank which was of a certain thickness and not inherently defective. *Warszawski v. McWilliams* (1901) 64 App. Div. 63, 71 N. Y. Supp. 680.

(g) *Elevated working places not protected by railings.*—The risk of injury by falling from a platform not protected by a railing is presumably obvious to any adult of ordinary intelligence. *Moulton v. Gage* (1885) 138 Mass. 390 (servant who had never done similar work before fell from a platform on the third day after he commenced the performance of his duties); *Chesapeake, O. & S. W. R. Co. v. McDonnell* (1894) 16 Ky. L. Rep. 1, 24 S. W. 607 (servant here was the foreman of a railway woodshop, who was injured owing to the fact that a scantling by which he was trying to prise a pulley loose broke under his weight; but his official position is not specially adverted to as a material element).

In another case recovery was denied where a servant (experience not mentioned) was injured through the absence of a barrier round a stack of ice on which he was working. *Thorn v. New York City Ice Co.* (1887) 46 Hun, 497.

The risk of falling from a trestle on which a servant was standing, which was 8 feet high and 5 inches broad at

eising those senses in relation to the dangerous conditions caused the injury.

the top, was obvious to any adult servant. *Garnett v. Phoenix Bridge Co.* (1899) 98 Fed. 192.

Where a privy erected over a river is not boarded up on the side of the river, and a servant familiar with the structure falls into the water while using it, the risk is deemed to be a patent one. *Marshall v. Kansas City Day Press Co.* (1897) 69 Mo. App. 256.

(h) *Unguarded openings*.—(See also subd. (j) *infra*.) An uncovered hole left in one of the floors of a building under construction creates a danger presumed to be obvious to an inexperienced laborer. *Schwartz v. Cornell* (1891) 36 N. Y. S. R. 646, 13 N. Y. Supp. 355. Full appreciation of the danger caused by an unguarded elevator well in a dark basement is established where the evidence of the servant himself shows he knew it to be unguarded, and, while feeling his way about in its neighborhood, he was looking for the well to slum it. *Taylor v. Carver Mfg. Co.* (1885) 140 Mass. 150, 3 N. E. 21 (servant had been in employment for several years, but this fact is not emphasized).

(i) *Deep water*.—No action can be maintained where a servant consented to work on a narrow plank over a river, and was jostled in. *Sullivan v. Louisville Bridge Co.* (1872) 9 Bush, 81. A workman is presumed to see and appreciate the peril of working near a dam having an angle of about 135 degrees with the surface of the water, where the current is so swift that he cannot swim out of it; demurrer to complaint sustained. *Bullivant v. Spokane* (1896) 14 Wash. 577, 45 Pac. 42.

(j) *Slippery surfaces*.—It is presumed that even an inexperienced servant can appreciate the danger of losing his footing on an icy surface. *English v. Chicago, M. & St. P. R. Co.* (1885) 24 Fed. 910 ("one of the dangers whose existence and extent everyone has equal capacity for determining"). Or that his hand will slip upon such a surface, if pressed against it at a certain angle. *Cochill v. Roberts* (1893) 71 Illn. 127, 24 N. Y. Supp. 531 (workman's hand slipped on an ice-covered girder to which he had climbed). Or that a block of ice may slip from under him while he is standing upon it. One injured while at work filling an ice house, by the slipping of a cake of ice

from beneath him, cannot charge employer with liability for it. *make inspection of the ice to which the employee stood, since tendency of an ice block to slip is and well known.* *Shea v. Kansas Ft. S. & M. R. Co.* (1898) 76 Kan. 29.

A servant who slipped and fell was going down a winding staircase owing to the fact that loose pasteboard had been placed in steps to protect them after it had been treated with oil, cannot charge the conditions being obnoxious. *McIntire v. White* (1898) 17 Mo. 170, 50 N. E. 524 (element of contributory negligence not referred to).

The risk of loosing one's foot on a slippery floor, and thus suffering from any dangerous part of the floor which happens to be in the neighborhood, is deemed to be obvious to a servant of ordinary intelligence, and recovery can be had where his negligence causes him to fall into a well of scalding water. *Fatch v. Pearson & Co.* (1894) 161 Mass. 426, 33 N. E. 368 (servant had been employed five weeks, but this fact is not referred to). Or against moving machinery. *Murphy v. American Rubber Co.* (1894) 159 Mass. 266, 34 N. E. 268. A servant who caught his foot between the rim of a shaft and the floor while working for a year in the same establishment, and for three weeks in the room where the accident occurred, these elements were not adverted to. *Kleinert v. Kunhardt* (1893) 162 Mo. 230, 35 N. E. 458 (experience referred to); *Scharnbroich v. St. Louis Fiber-Ware Co.* (1894) 59 Minn. 60 N. W. 1093 (there the foot of a servant who had worked in the defendant's factory for two years slipped on the floor while he was working a lever, and came into contact with a pin in the length of the employee's coat, and it bears on his opportunities of ascertaining the conditions); *Clark v. Starch Co.* (1885) 37 Illn. 389; *Storrs v. M. Starch Co.* (1901) 126 Mich. 666, 80 W. 134 (servant came into contact with a revolving screw across which he was stepping); *Dison v. New England Steam Brick Co.* (1898) 20 R. I. 1, 7 Atl. 7 (demurrer sustained to com-

which alleged that the servant slipped and fell into an unguarded hole, and which did not contain any averment of inexperience).

(k) *Saws*.—An inexperienced employee who, on the day after his employment, slipped on the bark and sawdust which had accumulated on the floor of a mill, and fell against the uncovered saws of the lathe-cutting machine which he was operating, cannot recover on the theory that he ought to have been instructed as to the dangerous conditions which caused his injury. *Doxen v. West Superior Lumber Co.* (1895) 91 Wis. 298, 64 N. W. 857. The general danger of contact with a circular saw is obvious even to an inexperienced workman just beginning to use it. *Wheeler v. Wason Mfg. Co.* (1883) 135 Mass. 294; *Hanson v. Ludlow Mfg. Co.* (1894) 162 Mass. 187, 38 N. E. 363. See further as to these cases § 395, note 1, subd. (h) *infra*.

Any mill hand is presumed to understand the obvious risk created by a saw projecting over its frame and partly across a narrow passageway. *Stephenson v. Duncan* (1889) 73 Wis. 404, 41 N. W. 337 (experience not mentioned).

An action for breach of the duty of instruction cannot be maintained where the complaint merely shows that the servant was injured owing to the sudden jumping of a plank which threw his hand against a rip-saw, although it also is stated that he had never before used such a saw; that his only experience in such work had been with a circular saw which he had used for half a day; and that he had not done any carpentering at all until about three weeks before the accident. *Guertner v. Schmitt* (1897) 21 App. Div. 403, 47 N. Y. Supp. 521.

(l) *Planers and similar machinery*.—In one case where the evidence was that an employee who had never worked at a planer, but knew that a board was cut when it ran through the planer, and could have seen the knives if he had looked, it was held that, even if it were assumed that the foreman was at fault for putting him to work without cautioning him, he was guilty of contributory negligence in putting his hand, without looking, on the planer, to steady himself, whereby his hand was injured by the knives. *Gossens v. Mattoon Mfg. Co.* (1899) 104 Wis. 406, 80 N. W. 589.

(m) *Cogwheels, gearings, and other*

revolving machinery.—(See also subd. (j), *supra*). An adult female employee, though she has only just gone to work and is unfamiliar with machinery, is presumed to understand without instruction the danger of getting her hands caught in cogwheels on the machine she is operating. *Ruchinsky v. French* (1897) 168 Mass. 68, 46 N. E. 417. A longshoreman, although inexperienced, cannot recover for an injury caused by allowing his hand to be caught in a wheel. *The Maharajah* (1889) 40 Fed. 781. A motorman who, prior to his entering the employment, had not been familiar with machinery, was held bound to appreciate, without special instructions, the risk of having his coat sleeve caught in gear wheels close to a commutator which he was cleaning, the evidence showing that he had been at work three days after having had eight days of general instructions as to his duties. *Burnell v. West Side R. Co.* (1894) 87 Wis. 387, 58 N. W. 772 (demurrer sustained).

A female employee thirty-two years old, engaged in a factory, is chargeable with knowledge of the danger of attempting to lower the sash in the frame of a window behind a rapidly revolving fan, in another frame, slightly projecting into the room where she is engaged. *Dillenberger v. Weingartner* (1900) 64 N. J. L. 292, 45 Atl. 638.

(n) *Machinery with revolving rollers*.—The absence of any duty to instruct has been asserted, in a case where an employee who had been for one year piling scraps in a rolling mill, but had had nothing to do with the machinery, was injured through attempting to clean the rollers from the wrong side the first day he was transferred to this new work. *Kean v. Detroit Copper & Brass Rolling Mills* (1887) 66 Mich. 277, 33 N. W. 395.

(o) *Shafts and set screws*.—An employee in a mill, who, acting within the scope of his duty, is ordered by the foreman to go up a ladder standing against a belt box into which a revolving shaft runs at right angles, and nail a board on the box, and in performing the service is injured by his apron and jacket catching on the shaft, which is plainly visible and is seen by him, cannot recover from his employer. *Russell v. Tillotson* (1885) 140 Mass. 201, 4 N. E. 231. No duty was owing by an employer to a

the servant's inexperience will not serve as an excuse for ignorance where the dangerous conditions were such as should have been

servant twenty-two years of age, to warn him of the danger of getting his clothes, or a sheet which he carried in the performance of his duty, caught in a revolving shaft placed 4 feet above the floor, and under which the servant is obliged to pass, where such shaft was plainly visible at the time the servant entered the master's employ, eleven days before the accident, and he had, during that period, passed under the shaft two or three times every hour. *Lemone v. Albrich* (1900) 177 Mass. 89, 58 N. E. 178.

(o) *Pulleys*.—The danger that a hand kept upon a rope which is running through a sheave will be drawn into the sheave has been said to be one which, without instruction, "should have been obvious to the most casual observer, or the veriest tyro in mechanics." *Findlay v. Russel Wheel & Foundry Co.* (1896) 108 Mich. 286, 66 N. W. 50.

(p) *Belting*.—A servant of ordinary intelligence is presumed to appreciate the perils of shifting a frayed belt with a stick, and the probability of its becoming entangled in the broken edges and being splintered. *Becker v. Baumgartner* (1892) 5 Ind. App. 576, 32 N. E. 786 (servant's eye put out by a flying piece of the broken stick; allegation that plaintiff was ignorant of the risk was held not to add to the strength of his complaint).

(q) *Punching machines*.—The fact that the wheel of a punching machine will not stop at the place at which it should stop if in good order was presumed to be obvious to an employee who was a boiler maker by trade, and had only just begun to operate this machine. *White v. Sharp* (1882) 27 Illn. 94 (plaintiff had testified that "anyone would know the danger").

(r) *Cleaning and oiling machinery in motion*.—The danger of cleaning machinery in motion is apparent even to a common laborer. *Stoff v. Hoopes* (Pa. 1888) 12 Cent. Rep. 553, 14 Atl. 658 (no instruction obligatory). If a female employee of mature years sees fit to put her hand into the recesses of a going machine, without knowing what she will meet, she cannot hold her employer answerable for the consequences, even though she may have been only a few days in the defendant's employ. *Robinska v. Mills* (1899) 174 Mass. 432, 54 N. E. 873 (top of cylinder by which

servant's hand was injured was not seen, and it was making a loud noise).

The risk created by the want of a platform to stand on while a servant is filling the oil cups on the shaft of an elevator is deemed to be obvious to one. *Anderson v. Gunnison* (18 Wash. 304, 37 Pac. 449).

(s) *Elevators*.—The want of the platform which employers are required by New York statute to place on elevators creates an obvious risk. *Robins v. Robins* (1896) 3 App. Div. 5, 180 N. Y. Supp. 214 (servant had twenty-one years' experience, but element was not expressly adverted to in the argument).

(t) *Other hoisting apparatus*.—The danger arising from the use of defective hoisting apparatus is obvious to a skilled longshoreman. *Reich v. S. S. Co.* (1893) 3 Misc. 526, 23 Supp. 3.

(u) *Pile drivers*.—The danger of the failure to use a guy rope to steady a log which is about to be raised is "a matter of common knowledge presumed to be within the common experience of all men of common sense." *De Lisle v. Ward* (1897 Mass. 579, 47 N. E. 436).

(v) *Ladders*.—A servant cannot recover for injuries due to the slip of a ladder not provided with hooks if it should have been for the work done. *Marsh v. Chickering* (1886 N. Y. 396, 5 N. E. 56). Where a ladder from one of the side rails of which a piece some inches in length was broken, slipped and swung round, throwing the short rail to pass under the upper casing of a door above, the plaintiff was doing some repair work and cannot recover for the resulting injuries. *Jenny Electric Light & Heat Co. v. Murphy* (1888) 115 Ind. 566, 18 Ind. E. 30.

(w) *Prise poles*.—The fact that a prise pole used for the purpose of lifting a turntable is not strong enough to support the weight of the turntable which is deemed to be open and obvious to a servant assisting in the operation where its weakness results merely from its insufficient size, and not from concealed unsoundness. *Boden v. Chicago, R. I. & P. R. Co.* (1891) 100 Ill. 629, 17 S. W. 780 (no reference made to factor of experience).

ference made to

(x) *Push poles*.—Where a servant had had charge of a stationary engine, and had stated that he was competent to be a railway fireman, but had no actual experience of railway work, and had never seen the process of "staking" cuts, it was held that the danger that the piece of timber used for this purpose might slip or break was one which he was presumed to understand without instruction. *Watts v. Hart* (1893) 7 Wash. 178, 34 Pac. 423, 771. See however, § 395, note 1, subd. (1), *infra*.

(y) *Poisonous substances*.—The fact that white lead is deleterious to those who handle it in the process of manufacture is so widely known that a person who takes employment in a factory cannot, it would seem, be held excusably ignorant of its properties. See *Berry v. Atlantic White Lead & Linseed Oil Co.* (1898) 30 App. Div. 205, 51 N. Y. Supp. 602, where, however, there were other elements corroborating the conclusion that the risk was understood.

(z) *Extreme cold*.—In one case the court laid down the general doctrine that the law does not speculate upon degrees of knowledge in regard to the effects of cold weather, and held that an ignorant negro could not recover on the ground that his employer had directed him to assist in loading bales of cotton covered with ice and snow, in weather of such unprecedented rigor that his fingers became frost-bitten and had to be amputated. *Yazoo City Transp. Co. v. Smith* (1900) 78 Miss. 140, 28 So. 807. But it seems scarcely proper to impute to a person of this description, accustomed to a mild climate, the knowledge which is supposed to be possessed by everyone in colder latitudes.

(aa) *Action of gravitation on loosely cohering substances*.—In one Minnesota case the effect and operation of the force of gravitation and of a thaw upon a perpendicular bank of earth were held to be within the comprehension of an ignorant foreigner of ordinary capacity. *Olson v. McMullen* (1885) 34 Minn. 94, 24 N. W. 318. In another a verdict for the plaintiff was set aside where the injury was caused by the removal of a layer of clay from underneath a layer composed of clay, sand, and stones intermingled, the court being of opinion that no skill or science was required to enable the servant to appreciate the danger, and that it was apparent to the commonest intelligence. *Pederson v. Rushford* (1889) 41 Minn. 289, 42 N. W. 1063. In two others, complaints which showed that the injury was re-

ceived by a section hand engaged in loosening gravel on a hillside for the purpose of allowing it to slide down were held to be demurrable. *Seaton v. Great Northern R. Co.* (1897) 68 Minn. 184, 70 N. W. 978 (court refused to ascribe any decisive weight to an allegation that the servant was unaccustomed to the work); *Reich v. Winona & St. P. R. Co.* (1898) 72 Minn. 245, 75 N. W. 219.

The earlier Indiana cases are wholly unfavorable to the servant. In one it was held that a common laborer cannot recover under a complaint the essence of which is that he was injured by the collapse of the unshored sides of a trench dug in gravel and sand. *Lincoln v. Water Supply Co. v. White* (1890) 124 Ind. 376, 24 N. E. 747. (In the *Christie Case* [1901] 156 Ind. 172, 59 N. E. 385, *infra*, it was declared, with regard to this decision, that the servant's inability to recover was affirmed with reference to the evidence, not to the pleadings; the workman's inexperience was mentioned in the complaint, but not specifically adverted to by the court.) To the same effect is *Seaton v. Lehigh etc.* (1893) 134 Ind. 625, 33 N. E. 1033. (The only comment passed upon this decision in the *Christie Case* [1901] 156 Ind. 172, 59 N. E. 385, *infra*, is that the complaint showed the danger to be as obvious to the laborer as to his foreman.) A demurrer was also held to have been properly sustained in a case where it was alleged that the servant was injured while undermining a bank of gravel and clay below the stratum of earth which fell upon him. *Griffin v. Ohio & M. R. Co.* (1890) 124 Ind. 326, 24 N. E. 888. (This decision was declared in the *Christie Case* [1901] 156 Ind. 172, 59 N. E. 385, *infra*, to have been correct.) In another case a complaint was successfully demurred to, where the allegation was that the injury was received through the fall of a stratum of "black, loose, and brittle loam" which projected about 1 foot outside a 6-foot stratum of gravel which plaintiff was shoveling. *Ratshack v. Wayne County Turnp. Co.* (1894) 10 Ind. App. 622, 38 N. E. 221. But the most recent expression of opinion in this state is to the effect that a common laborer is not bound under all circumstances to take notice of the liability of the unshored sides of a trench to fall in, and that his capacity for appreciating such a risk must be determined with reference to the specific facts. Upon this ground it was held that a com-

plaint was not demurrable which alleged substantially that such an employee was set to work in a trench dug through 2 feet of compact earth mixed with broken stone, and, underneath, through 4 feet of loose earth, the street having been graded at that point by filling in; that the sides of the trench, although they were weakened by the digging of several large "bell holes," as a result of the want of bracing, caved in upon the laborer; and that he had no knowledge or opportunity to acquire knowledge of the danger. *Fl. Wayne v. Christie* (1901) 156 Ind. 172, 59 N. E. 385. In stating its conclusion the court observed that "whether the work of digging a trench is dangerous or otherwise would seem to depend on a variety of circumstances;" as, for instance, the nature of the soil, the state of the weather, the season of the year, the dimensions of the trench. It was also pointed out that, while the work of excavation might be safe to the extent of justifying a workman in undertaking the employment, yet it might afterwards be rendered dangerous by lateral excavations, and that it could not be said, as a matter of law, that the additional risk thus created was assumed. Nor could it be said that the deposit of earth excavated, on the surface of the ground near the trench, created so obvious a peril that it was necessarily assumed by the plaintiff. It was for the jury to declare what inference should be drawn from this fact. Another fact for the jury to consider was the different qualities of the upper and lower strata; the court could not decide, as a matter of law, that the danger of caving in which the nature of the soil created was palpable. It seems impossible to reconcile this and the earlier cases without resorting to what an eminent English judge once spoke of as "desperate refinements."

In Tennessee it has been held that an ignorant and illiterate negro laborer must be taken to understand the danger that the sides of a ditch dug through soil which is principally composed of cinders may fall in. *Brown v. Chattanooga Electric R. Co.* (1898) 161 Tenn. 252, 47 S. W. 415 (following the Minnesota cases, *supra*).

In Wisconsin it has been laid down that any workman of ordinary intelligence, whether experienced or not, is presumed to know that, when a bank of earth is undermined by removing its foundation, it is liable to fall. *Naylor*

v. Chicago & N. W. R. Co. Wis. 601, 11 N. W. 24.

In South Dakota it has been held that there is no duty to warn a laborer that the sides of a trench, the embankment of made ground, are likely to cave in there the trench is in natural soil, he is in the fill and the natural soil is perfectly plain, owing to a difference of color. *Carlson v. S. Water Co.* (1895) 8 S. D. 47, 419.

A nonsuit has been granted in an action where a laborer, while shoveling sand at a bank, left an overhanging crust of sand. *Boies* (1891) 18 R. I. 513, 2 (factor of experience not admitted).

In one Texas case it was held that a servant, even though he was inexperienced, is supposed to know that earth will fall, especially if it is saturated with water. Every one was denied on this ground a member of a bridge gang who never dug a well, was injured by a caving in of this nature. *Galt v. S. A. R. Co. v. Lamp* (1891) Tex. 19. In another, when a ditch gave way and allowed timbers laid on the ground to fall on an inexperienced laborer, it was held that the defendant was not liable. An instruction that, if the plaintiff observed the danger, he was to his foreman, it was as a matter of fact, was given. It was said that no special skill was required to comprehend such a danger. *Texas & P. R. Co. v. French* (1896) 96 Tex. 23 S. W. 642.

An employee who without a permit goes to a derrick standing on a clay bank and in such a position that he cannot escape contact with it, is liable for an injury caused thereby. *Sergeant Bluffs & S. Co. v. Iowa* (1895) 94 Iowa, 725, Appx. 15.

An employee, though inexperienced, assumes the risk in going to a bank of overhanging gravel ledge and digging for the purpose of dislodging it. *Missouri, K. & N. W. Ry. Co. v. Spillman* (1896) Tex. Civ. App. 298.

In a case where the servant was killed by the fall of a bank of earth, the employee had shown itself before the accident, the court said that the danger was so patent that it was the duty of an observant person, whether

W. B. Co. (1888) 52 N. E. 241. It has been held that a laborer who is engaged to work in a trench dug in the ground are there the sides of the trench are not to be supported by oil, the laborer is presumed to know that the ground is not to be supported by a marked oil. *Johnson v. S. S. D.* 47, 65 N. E.

en granted in the laborer was not and at a bank was a gang. *Leary v. I.* 513, 28 Atl. 2d 111. It was not adverted to that it was held that he has no special knowledge to know that unsound fall, especially when the water is not in this ground where the gang, who had been injured by an accident. *Guthrie v. I. Leary* (1888) 102, 111. When the laborer and allowed to enter the ground beside the general laborer, it was held that the laborer was entitled to know that the risk was a question of the servant. It was assumed that special skill was required such a risk. *French* (1893) 102.

without compelling the laborer to stand beside a such a position that contact with the laborer cannot recover for thereby. *Michels v. S. C. R. Co.* 25, Appx., 62 N. W. 25. Although inexperienced in going above a ledge and digging a hole of dislodging a rock. *W. B. Co. v. I.* 513, 28 Atl. 2d 111. (Tex. Civ. App.) 34 S.

re the servant was of a bank in which it itself before the accident. It is not content that an order on, whether manner of

not, would have discovered it, within the time deceased was at work on the bank, then such opportunity to know it could be held as knowledge." *H. Bridge v. Mullan Blast Furnace Co.* (1884) 78 Mo. 564.

Any laborer on a farm is expected to know that the upper layer of a pile of soil will fall when it is undermined. *Wich v. Reinard* (1895) 108 Mich. 38, 65 N. W. 667.

A servant who goes into the mouth of an elevator bin to drag down cotton seed which has lodged therein, is presumed to understand, without any special experience, the danger that, while he is digging in the bottom of the bin the seed may slip and fall on him. *Brown v. Miller* (1904) Tex. Civ. App. 62 S. W. 547.

An ordinary laborer in a sugar refinery cannot hold his employer liable on the ground that he was not warned against the danger that, while sugar was being drawn from a bin, it would run and thus surround to a greater or less extent any person who might be working in the bin. *Bahn v. Harvener* (1889) 114 N. Y. 206, 21 N. E. 102. *Alfanning* (1887) 46 Ill. 557.

(bb) *Leverage*.—A servant is presumed to understand the operation of the force of leverage in its simpler manifestations. *Stobba v. Fitzsimmons & Co.* (1895) 58 Ill. App. 427; *Romona Granite Stone Co. v. Tate* (1894) 42 Ind. App. 57, 37 N. E. 1065, 30 N. E. 529. For the facts in both these cases see § 335, subd. 9, ante.

(cc) *Handling of heavy objects*.—(See also subd. (aa), (bb), *supra*). To lead an open flat car with lumber of uniform length, breadth, and thickness, by piling the same in parallel tiers one after another, "is to do work which common laborers can perform without more hazard to their own security than appertains to ordinary manual labor." *Sims v. East & West R. Co.* (1889) 84 Ga. 152, 10 S. E. 543. An inexperienced laborer who in piling ties in a box car ceases, at the direction of the foreman to hurry up and pile them on another, to block them in the usual manner, cannot recover for an injury caused by their falling upon him, on the theory that it was a case in which instruction should have been given. *Brown v. Oregon Lumber Co.* (1893) 24 Or. 315, 33 Pac. 557 (plaintiff had been at work only three weeks). The court said: "Necessarily, as the height of the tier increases, unless commensurate care is observed, its tendency to

fall is augmented. The risk of doing the work, however, was open to any observation. It needed no special knowledge to discover it. The piling of ties is not a work in which any peculiar knowledge or experience is involved, but is a work in which all have the same opportunity of judgment."

Since everyone is presumed to know the extent of his own lifting capacity, a recently hired employee in a mill, who ruptured himself in trying to lift a truck wheel out of a hole in the floor into which he had allowed it to run, cannot recover where it appears that the hole was necessary for drainage purposes and was in plain view. *Ferguson v. Phoenix Cotton Mills* (1904) 106 Tenn. 236, 61 S. W. 53. Compare *Worlds v. Georgia R. Co.* (1896) 99 Ga. 283, 25 S. E. 616, where a complaint was held demurrable on the ground that it showed the cause of the injury to have been the servant's miscalculating the amount of strength necessary to lift a heavy tie.

The risk that a pair of car wheels which are being loaded on a flat car by skids may slip back is assumed by a servant whose ordinary duties are those of a car washer. It is immaterial that his ignorance of English prevented him from taking advantage of a warning given by a fellow servant. *Golwitzer v. Pennsylvania R. Co.* (1889) 4 Monaghan, 72. The danger that a rail which is being loaded on a car may slip back in consequence of its striking upon a pile of snow upon the car is obvious. *Hantley v. Grand Trunk R. Co.* (1882) 62 N. H. 274.

A servant is bound to know that if a heavy iron plate is propped up by a stick which meets it at an acute angle, the stick is likely to slip on the smooth surface. *Brown v. Brown* (1888) 74 Tex. 355, 9 S. W. 261 (servant had been working six weeks, but this fact was not a material element).

The danger that an insufficiently secured brace which holds in place a heavy beam which is being raised to the perpendicular may give way under the pressure of the beam if it slips is presumed to be known to a servant, though he is inexperienced in carpentry work. *Stuart v. New Albany Mfg. Co.* (1896) 15 Ind. App. 184, 13 N. E. 961 (complaint held demurrable).

A laboring man thirty-four years old is presumed to know that, if a marble slab 3 feet wide and 5/8 inches thick, which stands in a position nearly vertical upon one side of a platform, in a

own to a "casual observer,"² or such as could be seen "at a glance by any one." It is also laid down that, where the conditions which caused the injury, although never actually seen by the servant before the accident, were open to detection from what was constantly before his sight, he cannot recover. The effect of any other doctrine, if adopted, would be to permit him to found a right of action "upon his sight."³

A man of ordinary faculties, placed in the same conditions, and using his faculties in the usual way, would have perceived the danger, and which he therefore must be held to have appreciated.

The obligation to use the other senses is equally imperative, and is also frequently referred to.⁴ But it is clear from the cases in this line, that the law imputes, even to inexperienced servants, a greater degree of knowledge than that which is acquired through the use of the senses. The law supposes every adult to possess such ordinary intelligence, judgment, and discretion as will enable him to appreciate any obvious danger.⁵ The master therefore has a right to assume that an adult employee possesses "that knowledge which is acquired by common experience;"⁶ that he knows of anything which is "a matter of common knowledge or presumption within the common experience of all men of common education; that he understands 'those dangers which are the subject of com-

wagon, is tilted very slightly as a result of his throwing his weight on the other side of the wagon and so depressing it, the effect of the tilting will be to make the slab fall towards him." *Motey v. Pickle Marble & Granite Co.* (1896) 20 C. C. A. 366, 36 U. S. App. 682, 74 Fed. 155.

Any servant of full age is presumed to understand the liability of round sticks of wood 4 feet long to slip and fall from the hooks of an upright, exposed, endless chain, upon which they are held by the force of gravity only. *Jones v. Manufacturing & Invest. Co.* (1890) 92 Mo. 565, 43 Atl. 512.

The danger that a heavy water pipe may roll off a block while it is being raised by a lever is presumed to be understood by every man of ordinary intelligence. *Johnson v. Ashland Water Co.* (1890) 77 Wis. 51, 45 N. W. 807.

A servant injured by the fall of a heavy mass of iron from a hand cart which he was helping to wheel on some loose planks laid across a pit cannot recover where the conditions of the work were perfectly familiar to him. *Chicago, B. & Q. R. Co. v. Merckes* (1890) 36 Ill. App. 195.

² *Ragon v. Toledo, L. A. & N. Co.* (1893) 97 Mich. 265, 56 N. W. 100. *Fordley v. Russell Wheel & Lumber Co.* (1896) 108 Mich. 286, 66 N. W. 100.

³ *Stephenson v. Duncan* (1895) Wis. 404, 41 N. W. 337.

⁴ *Goldthwait v. Haverhill & Q. R. Co.* (1854) 160 Mass. 51, 52, 486.

⁵ In *McClafferty v. Fisher* (Pa.) 1 Cent. Rep. 571, 2 A. 2d 100, held that a miner was affected by notice that gas was escaping from a well, when he could both smell and see it.

In *Thomas v. Missouri P. R. Co.* (1891) 109 Mo. 187, 18 S. W. 200, was held that the servant should have been guided to an appreciation of danger by his sense of smell. See § 403, note 1, subd. (c), *supra*.

⁶ *Lucke v. Berlin Block* (1894) 88 Wis. 442, 60 N. W. 707.

⁷ *Ruchinsky v. French* (1890) Mass. 68, 46 N. E. 417.

⁸ *De Lish v. Ward* (1897) 165 Ill. 570, 47 N. E. 426.

knowledge, or which can be readily seen by common observation."¹²
All servants, therefore, are presumed to be acquainted to some extent
with the properties of matter and the operations of the laws to which
it is subject.¹³ To this generic conception are referable the decisions
which proceed upon the hypothesis that a servant is, in some degree,
at least, bound to take notice of the dangers arising from the action of
gravitation under various circumstances;¹⁴ from the insufficient
strength of materials;¹⁵ from slippery surfaces;¹⁶ from the action of
extreme cold;¹⁷ from unlocked frogs;¹⁸ from obstructions beside
railway tracks;¹⁹ from some of the conditions incident to the construc-
tion of railway rolling stock;²⁰ from the want of railings to protect
platforms and similar places of work;²¹ from the operation of various
kinds of moving machinery.²²

It is highly instructive to compare a portion of the decisions cited
in note 1, *supra*, with those which, as will be seen by referring to the
following section, have been rendered in the servant's favor upon sim-
ilar states of facts. To define the precise grounds upon which the
different conclusions were arrived at is, in many instances, virtually
impossible.

**395. Risks not deemed to be, as a matter of law, comprehended with-
out special experience.**—(See also cases cited in § 462, *post*.)—In
many instances where the injured servant had had no experience, or
virtually none, in dealing with conditions similar to those which he
was required to encounter, it is deemed unwarrantable to take the
case from the jury or override a verdict in his favor, although it may
be certain that the risk to which the injury was traceable was one
which he would have been conclusively presumed to appreciate, if he
had been engaged for a longer time in discharging similar duties

Smith v. Peninsular Car Works
(1886) 60 Mich. 501, 27 N. W. 662.

¹⁰In *McIntosh v. La Plata Min. &
Smelting Co.* (1882) 3 McCrary, 393, 9
Fed. 861, the court said: "Within lim-
its, the law will assume that everyone
has knowledge of destructive forces in
the world and the powers of the earth
and air. Of such is the knowledge that
comes to every man of sound mind, in
the ordinary course of his life, that fire
will burn; that water will drown; that
one may fall off a precipice; and the
like. Recently in this court it was said
of one who mounted a push car on a
railroad, and went down a steep grade
to his hurt, that, knowing the grade,
it was his own folly not to heed the law
of gravitation; because it is known to
all men of sound mind and of all de-

grees of intelligence that wheeled vehi-
cles go down hill with increasing speed
if left to themselves."

More briefly it has been laid down
that one who enters the service of an-
other is bound to take notice of the or-
dinary and familiar laws of nature ap-
plicable to the subject to which the em-
ployment relates. *Ward v. Georgia
R. Co.* (1896) 99 G. 283, 25 S. E. 646.

No. 1043

under similar circumstances, either for the defendant or for other employer.¹ In the subjoined note are collected a large number of decisions exemplifying this situation.²

"It may frequently happen that the danger attending the operation of a complicated machine, or of performing a certain service, or working in a particular position, although obvious to persons of experience and knowledge of the situation, is nevertheless not appreciated by others on account of ignorance or inexperience; and in the application of the rules already adverted to [as to assumption of risks], due regard must be had concerning the intelligence and experience of the person employed in relation to the machinery or implement at or with which he is required to serve." *Jennery Electric Light & P. Co. v. Murphy* (1888) 115 Ind. 566, 570, 18 N. E. 30.

"The doctrine that a servant assumes all the dangers that are apparent to him when he enters the employment has no application . . . when it is apparent only to those possessing peculiar skill and knowledge in such matters." *Eddy v. Aurora Iron Min. Co.* (1890) 81 Mich. 548, 46 N. W. 17. "Risks and dangers that are apparent to the man of long experience and of a high order of intelligence may be unknown to the inexperienced and ignorant." *Bohn Mfg. Co. v. Erickson* (1893) 5 C. C. A. 341, 12 U. S. App. 260, 55 Fed. 943.

Stated in language which has a more particular reference to the duty under which the employer lies to communicate information in cases where the servant cannot work safely without it, this principle may be stated thus: "The rule by which 'the employee impliedly assumes the risks of the service and of such dangers as are obvious and open to ordinary observation does not embrace such risks as the employer knows, or which by the exercise of reasonable care he might have known, beforehand, that the employee by reason of his immaturity and inexperience, is ignorant of, or such as the employer knows the employee, without experience, cannot appreciate without instruction or warning." *Louisville, N. A. & C. R. Co. v. Fawcley* (1886) 110 Ind. 18, 9 N. E. 594.

Whenever the servant's inexperience is a material element in the case, the trial judge should distinguish, in his instructions to the jury, between the

position of a servant who has a peculiar knowledge of the work in question, and that of a servant who has such knowledge. *Baltimore & O. Co. v. Strucker* (1878) 51 Md. 301, 18 Am. Rep. 291. An instruction to the effect that the age and intelligence of a laborer injured by machinery, his experience in the use of machinery, may be considered by the jury in an action by him for the injury, in respect to the question whether he was cognizant of the risks incurred by one working near it, is correct. *Huizaga v. Cutler & S. L. Co.* (1883) 51 Mich. 272, 16 N. W. 18. It is proper to instruct the jury that a servant assumes, besides the risks of his employment, those which should have been observed by an ordinarily skilled in the employment. *Western U. Telog. Co. v. McElroy* (1895) 58 N. J. L. 155, 32 L. J. 351, 33 Atl. 384. The following instruction was held appropriate in the case of a servant who was wholly inexperienced in the use of machinery, and was injured by a rapidly revolving shaft about 10 inches in diameter: "The servant, knowing the fact of machinery being in the place where he is employed, and being close by the place where he is working, may be entirely ignorant of the fact that he would incur by falling against it, or coming into contact with it. In such case it is the duty of the master only to exercise due care, but good toward the servant, and to inform him of the risks he undertakes." *Palmer Palace-Car Co. v. Harkins* (1893) 10 C. C. A. 326, 17 U. S. App. 22, 55 Fed. 943.

² (a) *Railway tracks and appliances.*—A laborer unskilled in railroad building is not necessarily charged with notice of the defective condition of a newly constructed roadbed, although he has engaged in its construction. *Colorado Midland R. Co. v. O'Brien* (1896) 16 Colo. 219, 27 Pac. 701.

A locomotive engineer is not charged with knowledge of the fact that a culvert under the roadbed of a river is not large enough to carry off the water which may at times be expected to seek a passage. *Union P. R. Co. v. O'Brien* (1896) 161 U. S. 451, 10 Sup. Ct. Rep. 618.

An inexperienced switchman w

It will be observed that, in a portion of these cases, the specific conclusion to which the servant's inexperience points is that his failure to observe the material conditions which created the danger did

ordered to couple cars in the nighttime at a place where there is a cattle guard should be warned as to the danger he will encounter. *Fredenburg v. Northern C. R. Co.* (1889) 114 N. Y. 582, 21 N. E. 1049.

(b) *Railway cars; construction and handling of.*—An inexperienced brakeman is entitled to go to the jury where he is injured because he is not instructed as to the dangers incident to coupling cars with differently constructed coupling appliances. *Louisville, N. A. & C. R. Co. v. Fravelley* (1886) 110 Ind. 18, 9 N. E. 594; *Illinois C. R. Co. v. Price* (1895) 72 Miss. 862, 18 So. 415; *Reynolds v. Boston & M. R. Co.* (1891) 64 Vt. 66, 24 Atl. 134; *Louisville & N. R. Co. v. Veach* (1898) 20 Ky. L. Rep. 403, 46 S. W. 493. The duty to instruct an inexperienced servant is especially strong, where the couplings are not only materially different from those in use on the defendant's cars, but also from those which are in general use on other lines. *Missouri P. R. Co. v. White* (1890) 76 Tex. 102, 13 S. W. 65. Compare also *Graunis v. Chicago, St. P. & K. C. R. Co.* (1890) 81 Iowa, 444, 46 N. W. 1067. An inexperienced brakeman is not, as a matter of law, chargeable with appreciation of the danger of coupling a tender with a goose-neck to a freight car with an ordinary coupler. *Haugerford v. Chicago, M. & St. P. R. Co.* (1889) 41 Minn. 444, 43 N. W. 324. A verdict for the plaintiff on the ground that he was not instructed as to the proper way of doing the work will not be disturbed where the evidence is that he was injured, while coupling cars of different construction, four days after obtaining employment as a switchman; that he had stated, when he was applying for employment, that he had had no experience in the work; and that not less than four weeks' service as a learner was needed to qualify a person to handle safely the various kinds of cars which ordinarily came into the yard. *Louisville & N. R. Co. v. Miller* (1900) 43 C. C. A. 436, 104 Fed. 124.

The fact that a brakeman accustomed to cars with single drawheads observed that two cars which he was suddenly called upon to couple had bumpers as well as drawheads does not necessarily involve the conclusion that he appre-

ciated the peculiar dangers incident to an attempt by one inexperienced in handling cars of that construction to make the coupling. *Illinois C. R. Co. v. Price* (1895) 72 Miss. 862, 18 So. 415. "If it be argued," said the court, "that the appellee must have seen the drawheads and bumpers projecting from both cars when he went in to make the coupling, hurriedly, (which cannot be said to be certainly proved), and that he saw their unlikeliness to any he had ever seen and used before, he was bound to take such obvious instrumentalities, and their dissimilarity to those he knew how to use in coupling, as ample warning of the danger to which he was called to expose himself, and he should have withdrawn, it is to be answered: (1) He may have seen the drawheads and bumpers casually, and not observed them so as to form any opinion touching their construction or use. (2) He may have even observed them, and yet, in his ignorance and inexperience, he may have supposed that the drawheads would not be driven back by the impending impact of the cars as they came together, but would remain fixed, and prevent the bumpers coming together, as seems not impossible, since single drawheads are coupled with safety in the manner he employed in his attempt to couple the double drawheads in this case. Or (3), he may have reasoned, as he had a right to do, that his superior would not have sent him into an unaccustomed place of danger to do the service then required without giving him some instruction or warning, unless that coupling was to be made in exactly the same manner as he made the coupling on his employer's cars." Compare *Reynolds v. Boston & M. R. Co.* (1891) 64 Vt. 66, 24 Atl. 134, § 253, note (8), *ante*. See, however, § 391, note 1, *subd. (c)*, *supra*.

The danger that a link in a drawhead may prove to be stuck, thus exposing a person engaged in coupling to the danger of having his fingers crushed, if he does not let it go before the cars meet, is in a sense obvious, but it is one as to which the railroad company is bound to warn an inexperienced brakeman known to be ignorant of such danger. *Bonner v. Hoore* (1893) 3 Tex. Civ. '., 416, 22 S. W. 272.

Where hand brakes are in use, and

not necessarily import culpability. Usually, however, the ultimate fact established is that a jury is warranted in finding that, although the material conditions themselves were visible to him, he did

some of them have stiff and others limber staves, differing from each other only in the size of their staves, and the limber ones are shown to be inherently dangerous in the hands of inexperienced brakemen who do not understand how to handle them, it is the duty of the railway company either to adopt the less dangerous kind, or, if not, to warn the inexperienced operator placed in charge of the more dangerous, of their dangers. *Louisville & N. R. Co. v. Binion* (1894) 107 Ala. 645, 18 So. 75.

(c) *Locomotives: construction and operation of.*—See *Bridges v. St. Louis, I. M. & S. R. Co.* (1879) 6 Mo. App. 389, cited in § 397, note 1, subd. (b), *infra*, also this note, subd. (t), (w), *infra*.

(d) *Telegraph poles.*—In a case where a lineman, while sawing through a telegraph pole, supported his weight by grasping the section above the place where he was sawing, and the pole, when the sawing was partly completed, suddenly broke off and allowed him to fall to the ground, it was held that neither the fact that he omitted to inspect the pole for the purpose of ascertaining its soundness, nor the fact that he did his work in the manner described, can be said to show negligence, as a matter of law, where it appears that he had previously been accustomed to work on the ground, and had been assigned to this task without any instruction or warning. *Western P. Tel. Co. v. Burgess* (1901) 47 C. C. A. 168, 108 Fed. 26.

An inexperienced employee who is ordered to dig a trench so as to shift a telegraph pole, without being notified that props are necessary to hold it in an upright position, and that another employee has been sent to fetch them, may recover for an injury caused by the fall of the pole. *East St. Louis Contracting R. Co. v. Enright* (1893) 47 Ill. App. 494.

(e) *Masonry.*—A judgment for the plaintiff, a common laborer, will be upheld where the evidence sustains a finding that the danger of the fall of an arch by which he was injured was apparent to an experienced mason, but not to a person not skilled in mason work. *Gill v. Humphreys* (1891) 79 Wis. 634, 48 N. W. 862. An unskilled laborer who had had nothing to do with the

plans or construction of the wall cistern did not assume the risk of fall of that wall. It cannot be assumed, from the fact that he was standing near it, that he might have seen its fall, unless there is proof that he knew its real condition before it fell. *Mulcaire v. Jonesville* (1886) 67 N. W. 24, 29 N. W. 565.

(f) *Slippery surfaces.*—The danger of slipping on a marble stairway is deemed to be obvious to an employee who has been in the defendant's store ten days, where it was only after the stairway had been tested by actual use that the employer ascertained it was dangerous. *Kline v. Abrahams* (1898) 48 App. Div. 522, 62 N. Y. Supp. 522.

(g) *Saws.*—A verdict will not be set aside which finds that a rapidly revolving saw placed under a bench in the plaintiff's shop, in such a position that he could not see it unless he lowered his eye to within 18 inches of the floor, was an appliance on which it was manifestly improper to set an inexperienced workman without giving him proper and reasonable instructions. *Conover v. Eycketh* (1890) 83 Me. 50, 21 A. 21.

The particular danger caused by the tendency of a board when warped to spring back is not, as a matter of law, obvious to an inexperienced workman just beginning to use it. *Whitcomb & Watson Mfg. Co.* (1883) 135 Mass. 209. To same effect see *Leuser v. St. J. Furniture Mfg. Co.* (1897) 70 Mo. 209, where, however, the decision is broader, as, for aught that appears, the piece of timber which was thrown was not warped.

In another case recovery was allowed for reasons thus explained: "The general danger of contact with a circular saw in operation is of course obvious, but the particular danger by which the plaintiff was hurt is not one which is apparent. The saw teeth move with velocity that they are indistinguishable from objects which come in contact with the front of the saw in its ordinary use, not thrown upward, but by its teeth are held in contact with the table. The fact that objects which touch the opposite side of the saw will be affected in a different manner, and one attended with danger, although easily understood from explanation and readily learned

possess that measure of skill and technical knowledge which would have enabled him to understand the consequences which might result from those conditions. A general analysis of the cases cited in note 2

experience, is not of itself plain and obvious, but is one of those obscure dangers of which an employer should give warning if he has reason to suppose that a workman who may encounter it in his work does not know of this action of the saw, and is ignorant of this particular danger." *Hanson v. Ludlow Mfg. Co.* (1894) 162 Mass. 181, 38 N. E. 363.

It is for the jury to say whether a servant having no experience in the use of a saw of peculiar construction, dangerous because pieces of timber were liable to become wedged between the saws, and thus throw the operator's hands upon them, should have been instructed as to this peculiarity. *Chilton v. Lansing Wagon Works* (1901) 128 Mich. 43, 87 N. W. 79.

(h) *Planers and similar machinery.*—Where the testimony justifies the inference that the knives of a planing machine were concealed from one doing the work assigned to an inexperienced employee, it is error to nonsuit him in an action to recover damages for an injury caused by his stepping into the knives while they were temporarily left without the protection of the hood which ordinarily covered them. *Turner v. Caldwell Lumber Co.* (1896) 119 N. C. 367, 26 S. E. 23. An inexperienced workman who is injured a few hours after being set to work at a planer in company with an experienced operator is not, as matter of law, debarred from recovery on the ground that he should have known the danger of attempting to remove with his hand the shavings which had accumulated under the planer, while the machine was in motion, the evidence being that the knives on the inner side of the planer by which his hand was cut off were concealed from view by the tightly packed shavings. *Bennett v. Warren* (1900) 70 N. H. 561, 49 Atl. 105.

(i) *Machinery with revolving rollers.*—While the fact that if the hands are so placed between the upper portions of revolving cylinders as to be in contact with the surfaces there is danger is obvious to a man of ordinary intelligence after even a day's experience, a court will not say, as a matter of law, that the increased danger arising from their having been left on one occasion further apart by a coemployee of the plaintiff is

so patent to a new employee that the master is absolved from the duty of instruction. *Bjbjian v. Woonsocket Rubber Co.* (1895) 164 Mass. 214, 41 N. E. 265.

(j) *Cogwheels and gearings.*—An inexperienced employee who is set to work, without instructions, upon a boring machine with uncovered cogs, does not, as a matter of law, assume the risk. *Thompson v. Edward P. Allis Co.* (1895) 89 Wis. 523, 62 N. W. 527 (arm was caught in uncovered gearing, while he was feeding the shaft, according to his instructions, to see if it was hot).

(k) *Shafts and set screws.*—It is for the jury to say whether the risk of crossing a revolving shaft with two set screws projecting therefrom was appreciated by a servant who had no knowledge of machinery, and who was performing such duties that he had nothing to do with the operation of the shaft. *Roth v. Northern Pacific Lumbering Co.* (1889) 18 Or. 205, 22 Pac. 842. It cannot be said, as a matter of law, that a mere laborer charged with the duty of shoveling fat in the vicinity of an unguarded revolving shaft appreciated the risk of injury that would result from his touching the shaft, where he was unfamiliar with machinery, and was not employed in connection with the machinery or the shaft. *Johansen v. Eastman's Co.* (1899) 44 App. Div. 270, 60 N. Y. Supp. 708.

(l) *Belting.*—It is a question for the jury whether an inexperienced servant (a carpenter) injured while attempting to place a running belt upon a pulley with a stick understood the danger incurred, and thereby assumed it. *Demars v. Glen Mfg. Co.* (1892) 67 N. H. 104, 40 Atl. 902. Whether the risk incident to shifting a belt with a stick was appreciated by a servant who was injured while doing so is a question for the jury, where the evidence is that, although he had worked for a long time about machinery, he had never had anything to do with belts, that he knew nothing about the use of a shifter, and that he had been directed by the foreman to perform the operation with a stick. *Meltungall v. Ashland Sulphite Lumber Co.* (1897) 97 Wis. 382, 73 N. W. 327.

indicates that inexperienced servants have been held not to be necessarily chargeable with a knowledge of the risks incident to the handling of appliances of an unfamiliar construction (subd. b); the

(m) *Machinery for the treatment of cotton*.—An employer is not, as matter of law, free from negligence in failing

to instruct an inexperienced employee in regard to the danger of removing clogs from a cotton-picking machine, without stopping the beater, where the picker boss had removed clogs without stopping the beater in the presence of such employee, and had directed him to put his hand in when the machine became clogged and pull out the clog, without telling him not to do it when the beater was in motion, and the internal construction of the machine could not be seen while the beater was running. *De Costa v. Hargraves Mills* (1893) 170 Mass. 375, 49 N. E. 735. A nonsuit is erroneous where the evidence is that an inexperienced servant was injured while cleaning a "picker" machine four days after he went to work, and that he had not been notified of the danger caused by the fact that the "beater" continued to revolve by its own momentum for two or three minutes after all the rest of the machine had come to a standstill. *Hightower v. Bamberg Cotton Mills* (1896) 48 S. C. 190, 26 S. E. 222. A master who directs an inexperienced employee to tie in a bolt attached to a cotton-gin, without warning him of the attendant danger, violates his duty, although the employee knows that the saws will cut him if he comes in contact with them. *Greenville Oil & Cotton Co. v. Harkay* (1899) 20 Tex. Civ. App. 225, 48 S. W. 1005. Here the elements of danger which, according to the court, the servant could not be assumed to have understood, were the risk of doing the work without stopping the machine, and the risk that the atmospheric disturbance produced by the movements of the gin-saws and brushes might draw a coat sleeve against the saws.

(n) *Grinding machinery*.—Where an employee unskilled in the use of machinery is assigned to the work of tending a grinding machine, at the bottom of which is a spout which occasionally becomes clogged with the ground stuff which is discharged through it, he should be instructed as to the proper way of unclogging it, viz., by striking it with a heavy object, and warned against attempting to unclog it by running in his hand, and so running the risk of being struck by the machinery. *Standard Oil*

Co. v. Eiler (1901) 22 Ky. L. Rep. 61 S. W. 8.

(o) *Crushing machines*.—A servant finding that the plaintiff, a common laborer, was assigned without instruction to the work of poking brickbats into a crusher, and was injured fifteen minutes afterwards, is not inconsistent with a general verdict against the defendant. *Chicago Anderson Pressed Brick Co. v. Rembarz* (1893) 51 Ill. App. 54, affirmed in *Barnes v. Rembarz* (1894) Ill. 192, 37 N. E. 239.

(p) *Sugar-refining machines*.—Where an inexperienced employee was set to work upon a rapidly revolving machine used in the refining of sugar, and injured while cleaning it after the work was over, a verdict holding the employer liable was upheld on ground that there was evidence tending to show that his agents put a servant to work "in a place of peculiar danger which he had no knowledge or experience, without informing him of the danger or instructing him how to avoid it." *O'Connor v. Adams* (1876) 120 N. E. 427.

(q) *Sausage machines*.—Negligence properly inferred where an employee in a packing house, who was ordered to perform the unaccustomed work of running a sausage machine with cleaver meat, which was shoveled into a receptacle about a foot in depth above the revolving knives, was not warned that a mass of meat was sometimes formed at the top of the receptacle, the consequence being that, when he was attempting to press down what appeared to be a solid mass, his hand went through the crust and came into contact with the knives. *Richardson v. Swift & Co.* (1899) 37 C. C. A. 557, 96 Fed. 60.

(r) *Elevators*.—A jury is warranted in finding that a common laborer put in charge of an elevator should be instructed as to the manner in which it is to be operated. *Brennan v. Gilman* (1890) 118 N. Y. 489, 8 L. R. A. 819, N. E. 810.

(s) *Other hoisting appliances*.—Where the latch by means of which a coal bucket was closed and opened was constructed on the scientific principle that a force pressing such a contrivance perpendicularly against a resisting force has a tendency to hold it against the surface, it was held that a com-

of adjusting of parts of machinery (subd. *l*); the action of concealed parts of machinery (subd. *g, h, m, n*); certain peculiar results or incidents in the operation of machinery (subd. *h, m, n, q, u*); the combustion of a certain kind of fuel (subd. *z*). The same note shows

laborer could not be presumed to know the result which might follow if the angle made by the latch with the surface became slightly obtuse. *Pennsylvania Coal Co. v. Kelly* (1894) 54 Ill. App. 622.

If a servant is inexperienced and ignorant of the approaches to a meal conveyor, and the apparent approaches to the same are such as are likely to lead him, on account of his inexperience and ignorance, to undertake to ascend to the meal conveyor in a certain manner, and the danger of ascending to it in that manner is not apparent to him on account of such ignorance and inexperience, and the master's foreman knows or ought to know these facts, it is his duty to instruct and caution the servant sufficiently to enable him to comprehend the dangers, and to ascend to the conveyor safely by the exercise of proper care. *Ft. Smith Oil Co. v. Shover* (1893) 58 Ark. 168, 24 S. W. 106.

(*l*) *Air suction caused by moving machinery.*—The fact that a considerable suction is produced by a cooling fan is one not readily ascertained except by a person possessed of special knowledge, and a servant who is hired merely to oil such a fan should therefore be warned of the danger to which he will be exposed if he puts his arm in a place where it will be affected by the suction. *Swift & Co. v. Fuo* (1896) 66 Ill. App. 651.

Compare § 399, note 1, subd. (*q*), *infra*.

(*u*) *Hydraulic machines.*—Whether a master is negligent in placing a servant at work at a "hydraulic draw bench," without instructing him as to the difficulty or impossibility of exactly centering the valves so as to entirely stop the motion of the piston, is a question for the jury in an action for injuries sustained by the servant, just after he had begun work, by the motion of the piston after it had apparently been stopped. *Borison v. United States Projectile Co.* (1896) 2 App. Div. 57, 37 N. Y. Supp. 458.

(*v*) *Refrigerating machines.*—The tightening up of nuts on the generator of a refrigerating machine without reducing the pressure, when there is an

ammonia pressure of about 120 pounds which is increasing, is a dangerous work which a carpenter employed as a general laborer or handyman, but unfamiliar with and uninstructed as to the danger of the mode of operation necessary to preserve an equal strain on all parts of the generator, cannot be set to do without rendering the employer liable to him for injury resulting from an explosion caused by his lack of skill. *Ryan v. Los Angeles Ice & Cold Storage Co.* (1896) 112 Cal. 244, 32 L. R. A. 524, 44 Pac. 471.

(*u*) *Push poles.*—A servant in a roundhouse, with a limited knowledge of mechanical forces, who was injured by the coming together of two engines as a result of the breaking of a defective stick which was used to apply the power of one engine to the other for the purpose of turning the latter on a turntable, was not, as a matter of law, chargeable with a comprehension of the danger of operating the turntable in this manner. *McDonald v. Chicago, St. P. M. & Q. R. Co.* (1889) 41 Minn. 439, 43 N. W. 380. See, however, § 394, note 1, subd. (*w*), (*x*), *supra*.

(*x*) *Linemen's spurs.*—A "trimmer" employed by an electric company, who is inexperienced in climbing poles, is not, as matter of law, chargeable with notice of defects in spurs furnished him for that purpose, consisting in the spurs being set at an improper angle to the shank, and being made of soft material, since the defect is not necessarily obvious to an inexperienced person. *Indiana Natural & Illuminating Gas Co. v. Marskall* (1898) 22 Ind. App. 121, 52 N. E. 232.

(*y*) *Ice tongs.*—Ice tongs are simple tools, but a court will not say, as a matter of law, that an unskilled laborer of ordinary intelligence should have known that they were defective in that their points were too blunt to take a secure grip of the ice. *Neubauer v. Northern P. R. Co.* (1895) 60 Minn. 130, 61 N. W. 912.

(*z*) *Furnaces.*—A laborer in a quarry is not affected with knowledge that the hoisting apparatus is not so constructed as to prevent the escape of live cinders, which, by alighting on the blasting

that it cannot be declared, as a matter of law, that such a servant must be taken to have understood the operation of certain mechanical forces under special circumstances (subd. *s, t, u, v, w*); or that

powder, may cause an explosion. *Grant v. Drysdale* (1883) 10 Sc. Sess. Cas. 4th series, 1159.

An inexperienced fireman is not presumed to know that the use of fine and dirty coal may cause the flames to burst forth from the locomotive furnace. *Missouri, K. & T. R. Co. v. Walker* (1894; Tex. Civ. App.) 26 S. W. 513.

The danger that, if too many shavings are thrust at once into a boiler furnace, the draft will be stopped, and the gas formed by combustion will be prevented from passing off by the chimney, the probable consequence being an explosion, is not an obvious risk nor one which it can be said, as a matter of law, an inexperienced servant should understand. *La Fortune v. Jolly* (1896) 167 Mass. 170, 45 N. E. 83.

(aa) *Lime kilns*.—It is the duty of the proprietor of a lime kiln to warn an inexperienced laborer who is set to work on the top of the kiln as to the danger of falling into the fire when the stone at the base is removed, and the mass above consequently subsides. *Parkhurst v. Johnson* (1880) 50 Mich. 70, 45 Am. Rep. 28, 15 N. W. 107.

(bb) *Action of gravitation on various substances*.—The danger incident to a position under a perpendicular bank of gravel which is liable to fall at any moment is not, as matter of law, apparent to an inexperienced laborer. *Daly v. Kiel* (1901) 106 La. 170, 30 So. 254 (servant should have been warned).

One employed to operate and oil the machinery of a steam shovel used to remove shale from an embankment is not, as a matter of law, chargeable with knowledge of the danger of the falling of a bank of clay above the shale, where he is inexperienced in the work of excavation, and has nothing to do with the removal of the clay to prevent its falling. *Alton Paving, Bldg. & Fire Brick Co. v. Hudson* (1898) 176 Ill. 270, 52 N. E. 256, affirming (1897) 74 Ill. App. 612.

A complaint is not demurrable which alleges that the defendant's agent, in the exercise of the authority conferred upon him, ordered the plaintiff, without warning, into a place known to such agent to be one of extraordinary danger, by directing him to excavate earth from an embankment which, by reason of its

composition, was unusually likely to cave in, and that the plaintiff, by reason of his inexperience, was not aware of the danger to which he was exposed in undertaking the work. *Thompson v. Chicago, M. & St. P. R. Co.* (1888) 118 Ill. 629, 14 Fed. 564. The court said: "It is true that, ordinarily, every person of mature years and common intelligence is bound to take notice of the law of gravitation, and is presumed to be aware of the danger of earth in an embankment, when undermined, will cave in and fall. But amended complaint avers that the particular embankment at which Olsen employed was peculiarly and unusually dangerous by reason of the character of the earth, and that this peculiar and extraordinary danger was known to the defendant, and was not communicated to Olsen."

An inexperienced workman was, as a matter of law, guilty of negligence in contributing to his injuries from giving way of the side of a ditch where he was digging alongside a heavy roller, through the weight of such timber where he did not in fact see the danger, and dug the ditch at the place marked out for it. *Texas & R. Co. v. French* (1893; Tex. Civ. App.) 22 S. W. 866.

A servant unfamiliar with the value of excavating tunnels is not bound to know that when soil is saturated with water it has less cohesive power than when it is dry. *Quigley v. Baugh* (1894) 58 Mo. App. 192 (another embankment which operated in the servant's favor was that he was working in the dark, and therefore had no opportunity for observation).

It cannot be held, as matter of law, that the extent of the cohesive power of the soil, counteracting the operation of gravitation on the sides of a tunnel, in the manner in which that cohesive power is affected by the saturation of the soil with water, were facts constructively known to a servant who had never been engaged in the excavation of tunnels,—especially when the place where he worked was so dark as not to admit of any careful observation. *Quigley v. Baugh* (1894) 58 Mo. App. 192.

A mason's helper who has never been engaged in excavating work is not,

pertaining to the theory and practice of engineering or mechanical construction (subd. *a, s, x, y*); or certain properties of metals (subd. *ff, gg*); or the chemical properties of substances intended to

matter of law, chargeable with knowledge of the risk of the sides of a trench collapsing by reason of the weakening effect of the water which had been running into it. *Finn v. Cassidy* (1901) 165 N. Y. 584, 53 L. R. A. 877, 59 N. E. 311, Affirming (1899) 39 App. Div. 641, 57 N. Y. Supp. 1138.

See also *Et. Wayne v. Christie* (1901) 156 Ind. 172, 59 N. E. 385, as stated in § 394, note 1, subd. (aa), *supra*.

An inexperienced miner who has received no warning is not chargeable, as a matter of law, with a comprehension of the danger that an overhanging rock in a tunnel may fall. *Hanley v. California Bridge & Constr. Co.* (1899) 127 Cal. 232, 47 L. R. A. 597, 59 Pac. 577.

While every ordinarily intelligent man must be held to know that earth will fall if undermined, an inexperienced laborer may not readily understand how far he can go with comparative safety when removing the lower layers of a stone wall. *Wolf v. Great Northern R. Co.* (1898) 72 Minn. 435, 75 N. W. 702 (distinguishing the "Gravel Pit" cases, § 394, note 1, subd. aa).

The questions of an employer's negligence and his employee's assumption of risk are for the jury in an action against the former to recover for the latter's death, caused by being suffocated by bran falling on him in a bin in which he was shoveling the bran away from the sides and towards an aperture in the center, through which it ran, where the bin was dark, and the employee was not warned of the danger and risk incident to going into a bin for that purpose, fully known by the foreman under whose direction he was working, but not open and patent or ordinarily discernible by the use of one's senses, although a movable light appliance was furnished, to be carried into the bin, if the employee had never seen it in use, and did not know what was necessary in order to make it available. *Lund v. Woodworth* (1899) 75 Minn. 501, 78 N. W. 81.

The removal of the contents of a barrel above which are piled three tiers of barrels, each weighing 300 to 400 pounds, is not an ordinary incident in the work of a laborer engaged to pile barrels in a pork-packing establishment, nor is the risk of a collapse of the pile,

owing to the weakening of the emptied barrel and the spreading of the tier in which it is placed, patent to such a laborer, where his experience is limited to a few weeks of work. *Libby, McV. & L. v. Scherman* (1892) 50 Ill. App. 123, Affirmed in (1893) 146 Ill. 541, 34 N. E. 801.

A common laborer, although chargeable with knowledge of the operation of the force of gravitation under ordinary circumstances, cannot be said, as a matter of law, to understand the risk incident to unloading from a car by the roller method a stone several tons in weight. Whether the stone under such circumstances will cause the car to tip up would depend largely upon certain conditions,—such as the gauge of the track, the width of the platform, the weight of the car, and the stone itself, and the like. The danger, therefore, is not obvious. *Higgins v. Missouri P. R. Co.* (1890) 43 Mo. App. 547.

(cc) *Handling of heavy objects.*—(See also preceding subd. *ad finem*, and subd. (cc) *infra*.) To require a gang of men to range themselves in line along a train of moving cars, and pick up from the ground and throw on a car rails weighing from 600 to 700 pounds each, running from one to another fast enough to be in position as the train passes,—especially without notifying a new and inexperienced man of the great hazard of the work,—is negligence. *Palmer v. Michigan C. R. Co.* (1892) 93 Mich. 363, 17 L. R. A. 636, 53 N. W. 397.

It cannot be said, as a matter of law, that an entirely inexperienced man relying, as he has a right to do, upon the assumption that the master knows his duty to his employees and will fulfil it properly, is chargeable, on the day he begins work, with the knowledge that the method adopted by his foreman for removing rails from a bridge is not a reasonably safe one. *Bonnet v. Galveston, H. & S. A. R. Co.* (1895) 89 Tex. 72, 33 S. W. 334, Reversing (1895) 31 S. W. 525 (removal from a railroad bridge of iron rails 20 feet long, weighing 400 pounds, was being effected by four persons carrying the same, stepping from tie to tie).

Whether the raising of an immense iron smokestack, and placing it in posi-

be used as explosives, and the conditions under which other substances not designed for such use may produce an explosion (subd. *hh*), or the poisonous properties of the fumes arising from certain

tion on a base prepared for it, is an operation which requires such special skill or knowledge that a servant previously employed as a blacksmith, who is called upon to assist in pulling upon the rope of the hoisting apparatus, is entitled to instructions as to the dangers of the work, is a question for the jury. *Consolidated Coal Co. v. Harner* (1893) 146 Ill. 614, 35 N. E. 162, Affirming (1891) 48 Ill. App. 115.

A common laborer who is assisting in hoisting a boiler which is being removed is not chargeable, as a matter of law, with the duty of inquiring whether the manner in which it is lifted and sustained is safe or not. *Chicago Edison Co. v. Moren* (1900) 185 Ill. 571, 57 N. E. 773, Affirming (1899) 86 Ill. App. 152.

The possibility that a plank 2½ inches thick, which is held in a horizontal position with one end on a wagon bed, so that a heavy barrel may be rolled on to it, preparatory to its being gradually depressed for the purpose of making an incline plane along which to lower the barrel to the ground, may be pushed back by the movement of the barrel so far as to drop from the wagon together with the barrel, and thus injure the workman who is holding the plank, is not an open and glaring peril which is obvious to an ordinarily prudent person. *Beard v. American Car Co.* (1897) 72 Mo. App. 583.

A servant unaccustomed to such work is not, as matter of law, chargeable with knowledge of the fact that it is unsafe to handle piles with crowbars and pinch-bars. *Anderson v. Illinois C. R. Co.* (1899) 109 Iowa, 524, 80 N. W. 561.

(*dd*) *Operation of grindstones.*—The danger that the end of an iron bar on a grindstone on which it was being trimmed would be caught and turned down, and so bring the other end and the hand which was holding it against the stone, was deemed an apparent one to an employee who had been engaged in the factory as a common laborer for eighteen months, and was injured the first day after he was transferred to the work of operating the grindstone. *Metz v. Peninsular Car Co.* (1889) 76 Mich. 94, 42 N. W. 1078.

(*ee*) *Sustaining strength of materials.*—(See also subd. (d), (e), *supra*.)

The danger that a shed may fall to the weight of *débris* and snow is allowed to remain upon the roof, is not one of those which are deemed within common observation. *First Nat. Bank* (1891) 79 Wis. 48 N. W. 712.

An ordinary laborer employed in a foundry, who, under the direction of the superintendent, climbed up a plank 16 feet above ground, for the purpose of lifting an iron tank by means of tackles, the beam supporting the tackle to fall, striking and throwing him to the ground, is no matter of law, chargeable with an appreciation of the risk, where the evidence shows that he had had no experience to enable him to form an opinion as to the weight of the tank to be lifted, the resistance it would encounter in the pressure of the soil around it, or the strength of the beam. *Two Chalmers v. Collier* (1897) 75 Ill. 194.

(*ff*) *Liability of iron and steel.*—The danger that chips might fly off from a steel chisel with a battered head, which was being used to cut a rail, was to be appreciated by a trackman. *Fordyce v. Stafford* (1893) 57 Ark. 22 S. W. 161. The extent of such experience was not referred to, but may probably be inferred that he had been engaged for some time in the work.

The risk of being injured by a pipe breaking from a piece of iron pipe, the plaintiff was holding against the head of a bolt to receive the blows of a hammer by which the bolt was driven was held not to be, as matter of law, obvious to him, where the work was new to him, and there was no specific evidence to show that he knew that iron pipe was more brittle and liable to break than metals ordinarily used, and that he had seen any part of it break and fly before he was injured. *Field v. Edward P. Lums Co.* (1900) 151 Mass. 151, 58 N. W. 102.

The danger that a liver may be injured from a claw bar which is cracked and battered at the edges is not obvious as a matter of law, to a more laborer section gang. *Booth v. Kansas City Air Line Co.* (1898) 76 Mo. App.

stances (subd. *nn*); or the dangers incident to the transmission of electricity (subd. *oo*).

As regards the cases in which the servant's comprehension of the

A verdict finding the employer guilty of negligence in not instructing a servant as to the dangers of holding red-hot rivets while they are being hammered into boilers will be upheld where the evidence tends to show that he was ignorant of the dangers of the work. *Monahan v. Hagan* (1896) 9 App. Div. 98, 41 N. Y. Supp. 86 (portion of rivet broke off and entered servant's eye).

(gg) *Elastic properties of copper wire*.—It cannot be presumed, as a matter of law, that the danger from the sudden recoil of a trolley wire when it is cut is known to an inexperienced man in such a sense that his employer is free from negligence in failing to inform him as to the proper manner of cutting and removing the wire. *Walker v. Lake Shore & M. S. R. Co.* (1895) 104 Mich. 606, 62 N. W. 1032.

(hh) *Explosives, use of*.—In a case where the servant injured by an explosion in a mine was apparently an inexperienced laborer, as he had been hired to work either in the mine or on the dumps, it was held proper to instruct the jury that it is the employer's duty, before using a highly dangerous explosive, to ascertain and make known to his employees the dangers to be reasonably apprehended from its use. *Bertha Zin Co. v. Martin* (1895) 93 Va. 791, 22 S. E. 869.

Negligence is predicable of the failure to notify a workman who is not a miner and knows nothing about dynamite or other explosives, of the danger that dynamite may explode from overheating or from the jarring produced by machinery. *Mather v. Rillston* (1895) 156 U. S. 391, 39 L. ed. 464, 15 Sup. Ct. Rep. 464.

Negligence is a warrantable inference where a man not employed to perform that particular service was ordered, without instructions, to warm a quantity of dynamite, and was injured by the explosion. *Lofrano v. New York & M. E. Water Co.* (1890) 55 Hun. 452, 8 N. Y. Supp. 717.

Where the plaintiff's work in stone quarries had consisted in removing the stone after a blast had been made, and he had no knowledge that a blow or a spark would cause dynamite to explode, he cannot be held to be guilty of contributory negligence, as a matter of law,

in not going to a safe distance while a hole in which there was an undischarged charge of dynamite was being unloaded with an iron spoon. The risk of an explosion, under such circumstances, was not obvious to a person of ordinary intelligence having little experience with dynamite. *Grimmally v. Lane* (1901) 177 Mass. 565, 59 N. E. 451.

A workman who has been employed for a few weeks as a shoveler at a mine is not chargeable, as matter of law, with knowledge of the fact that dynamite becomes extra-hazardous if it is exposed to the weather for a considerable period (here two months). *Gyrborg v. Baltimore & S. Min. & Reduction Co.* (1901) 25 Wash. 364, 65 Pac. 539 (dynamite was struck by a fellow servant and exploded).

A common laborer who has had no experience in or knowledge of the use or danger of explosives employed for loosening frozen ground which is to be excavated for the roadbed of a railroad is entitled to assume that the representative of his employer will not put him to work with a pick in a place where a blast has been set off, without taking proper precautions to guard against the consequences of a part of the blast being left unexploded, and warning him of the danger to be apprehended from this source. *Burke v. Anderson* (1895) 16 C. C. A. 442, 34 U. S. App. 132, 69 Fed. 814, distinguishing *Minneapolis v. Lundin* (1893) 7 C. C. A. 344, 19 U. S. App. 245, 58 Fed. 525, and *Cornelson v. Eastern R. Co.* (1892) 50 Minn. 23, 52 N. W. 224, where the injured servants were experienced and hired for and engaged in the use of the explosives.

(ii) *Explosive gases*.—A servant who had begun work as assistant stillman about two months before he was killed by an explosion of the gas which issued from the manhole of a refining still when the cover was removed was held not to be, as matter of law, chargeable with notice of the danger. *Rannon v. Lutz* (1893) 158 Pa. 166, 27 Atl. 890.

(jj) *Explosions resulting from steam generated by heated metals*.—(See also § 397, note 1, subd. (h), *infra*.) A master is not, as matter of law, free from negligence in omitting to instruct

risks arising from the action of gravitation (subd. *bb*) was held to be a question for the jury, it is clear that, in some instances, the conditions involved furnish an adequate differentiating element

a common laborer as to the danger which arises from the expansive force of steam generated by the fall of molten lead upon a sheet of ice. *Smith v. Peninsular Car Works* (1886) 60 Mich. 501, 27 N. W. 662.

The fact that molten iron will explode if it is brought into contact with rust is not one which can be appreciated without some scientific skill and special knowledge. The employer's negligence is therefore for the jury, where a servant in a foundry, after only a few weeks' experience, was ordered to pour molten metal into molds which were rusty, but was not informed that the metal while in that condition would explode upon coming into contact with rust. *Hall v. United States Radiator Co.* (1900) 52 App. Div. 90, 64 N. Y. Supp. 1002.

The explosive power of hot slag when cast into water is not presumed to be comprehended by an ordinary workman without special training or experience. *McGowan v. La Plata Mining & Smelting Co.* (1882) 3 McCrary, 393, 9 Fed. 861.

Compare *Kiras v. Nichols Chemical Co.* (1901) 59 App. Div. 79, 69 N. Y. Supp. 44, where the same doctrine seems to be taken for granted.

It is conceded that even an educated man would not be aware of the danger of an explosion from the contact of slag with water or ice. *Ribick v. Lake Superior Smelting Co.* (1900) 123 Mich. 406, 48 L. R. A. 649, 82 N. W. 279.

The danger of putting damp leaden dross into a kettle of molten lead is not, as a matter of law, obvious to a servant who has merely been engaged for three months in melting lead and dipping it out of the kettle, and who has never seen any dross melted during that period. *Redmond v. Butler* (1897) 168 Mass. 367, 41 N. E. 108.

(*kk*) *Explosions of masses of molten metal.*—The tendency of a "boil" of molten iron to explode when punctured is one which is latent as to an inexperienced person. *Holland v. Tennessee Coal, I. & R. Co.* (1890) 91 Mo. 444, 12 L. R. A. 232, 8 So. 524. The court said: "The evidence tended, in some degree, to show two distinct elements of danger incident to the work upon which the

plaintiff's intestate was engaged—the injury was suffered—one of ordinary observation, and capable of being measured and judged of by any person of ordinary intelligence upon the premises; and the other of a latent character, with nothing which could be seen and understood by the plaintiff, and uninstructed to give warning of its presence, or suggest means of avoiding it. The 'boil' of iron while in that condition had sunk down considerable distance—3 feet, may be—into the earth, and protruded above the surface, and was liable to those engaged in cutting a trench. It was common knowledge, and appreciable by inexperienced as well as experienced persons, that, if the trench were open entirely up to the melted bottom being below the lowest point of the 'boil,' the iron would immediately flow into and along the trench, thus imperiling those who stood there at the time. This was a latent and unobscured danger, which should have been sought to be guarded against by the erection of a wall of earth between the trench and the 'boil,' of from 8 to 10 feet thick, the purpose being to break the flow of this wall by piercing it with crowbars after the laborers had finished cutting the trench. Of such a patent danger there was no duty on the defendant to give the employees warning. The danger arose from the fact, supported by the tendency of the evidence here, that the 'boil' of iron, upon being punctured, having its shell broken, immediately throws out molten metal in all directions—'explodes,' as some of the witnesses stated as to this one, though it was said to be inapt and inaccurate to use the word 'explode' in this connection. Of this peril—the danger of the flying molten iron—resulting from the unseen and unappreciated causes and forces, the inexperienced man could know nothing by the exercise of common sense. It was a state of things which would not address itself to his vision, and of which he could not come to a knowledge by being in the vicinity in regard to it."

(*ll*) *Explosions caused by the contact of water with potassium.*—The danger of throwing water on a fire of potassium is not presumed to be known to persons not possessed of expert knowledge; it is apparently taken for granted

which to distinguish the decisions from those to the opposite effect, which are cited in § 324, note 1, subd. (a), *supra*. But an examination of the cases in which the servant was allowed to recover in spite of the absence of this element renders it extremely difficult, if not

H.H. v. Meyer Brothers' Drug Co., 1897, 140 Mo. 433, 41 S. W. 390.

(100) *Explosions caused by the contact of water with burning grease*.—A man employed as an ash wheeler in an engine house is not chargeable with knowledge of the fact that the consequence of suddenly turning a stream of water on a burning building in which there is a large amount of grease will probably be a dangerous explosion. *Sent & Co. v. Crosby* (1900) 9 Kan. App. 363, 61 Pac. 344.

(101) *Poisonous fumes*.—If chemical experts differ as to whether certain fumes are poisonous if inhaled, it cannot be that the danger of exposure to them is so open and obvious to a common laborer that he should be deemed to have voluntarily assumed the risk as one incident to his employment. *Vapor v. H. W. Japp Chemical Co.*, 1892, 147 Pa. 475, 23 Atl. 772 (defendant not free from negligence, as matter of law, in exposing the servant to the danger without warning). The court said: "It is a well-settled rule of law that an employee will be deemed to have assumed all the risks naturally and reasonably incident to his employment, and to have notice of all risks which, to a person of his experience and understanding, are or ought to be open and obvious. This is a reasonable rule, for when a man seeks employment in any particular department, of either industrial or intellectual activity, he thereby represents himself to be qualified by the necessary experience or learning, as the case may be, for the performance of the duties which he proposes to assume, and such experience or learning necessarily brings a knowledge of the ordinary risks of the employment. . . . But when the reason of the rule fails, the rule itself ceases to have any application. And therefore, while a physician would have no ground of complaint if his health should be permanently impaired by reason of exposure, at the call of a patient, to a contagious or infectious disease, he might recover damages for the slightest injury suffered in consequence of a defect in the floor of the house which he was invited to enter, unknown to him, but which was known or ought to have been known to

his patron; and this because there is nothing in the science of medicine, in which he professes to be learned, to affect him with notice of the latter danger. Neither is there anything in the employment of a common laborer that presupposes any scientific knowledge, such as a knowledge of the properties of acids, or that poisonous fumes are likely to be evolved in a manufacturing process in which nitric acid is used; and for that reason, the law does not presume that such laborer either possesses or professes such knowledge. And, although some of the work required to be done in the manufacture of dinitrobenzene may be mere drudgery, it cannot be said to be of such ordinary character in its surroundings as to justify a presumption that a common laborer has by experience acquired a knowledge of its attendant dangers. Without some such previous knowledge, either scientific or experimental, the dangers, if any there be, of exposure to the fumes of nitric acid, would not be open and obvious, and the laborer could not, with propriety, be deemed to have assumed such risks unknown to him as are naturally and reasonably incident to his employment." The court distinguished *Bethenmiller v. Bergner & E. Brewing Co.*, 1888, 22 W. N. C. 33, a case in which the servant was injured by a lot of ammonia, on the ground that there the plaintiff knew the danger to which he was exposed, having previously tested it, and retreated, and that the superintendent merely assured him, at the time he was ordered to return to work, that the ammonia was not so bad as it had been, thereby impliedly admitting the existence of some danger. As the plaintiff must have observed that this statement was not true as soon as he entered the room, the real state of facts being apparent to the dullest apprehension, he was properly deemed to have assumed the risk.

A laborer who is injured by the poisonous fumes exhaled from Paris green after he has been engaged for only five days in stirring up the constituents in a vat may recover on the ground that he received no instructions as to the danger of the process and the precautions which should be taken to avoid

Vol. I, M. & S.—67.

impossible, to avoid the conclusion that there is, upon the real conflict of opinion between the courts in respect to the knowledge which is imputable to the servant under such circumstances. For other similar decisions with respect to risks of foreign nature, see § 339, *infra*.

396. Risks of which a comprehension has been imputed, as a matter of law, to servants having special experience.—Under certain special circumstances, the servant's previous experience in the employment may be the occasion of his drawing false inferences with respect to the actual conditions which exist. His experience may be a positively misleading element, and tends strongly to show that he was not guilty of negligence in failing to appreciate the possibility of

injury. *Par v. Pearsular White Lead & Color Works* (1891) 81 Mich. 376, 48 N. W. 203.

(60) *Action of electricity.*—The case is for the jury, where a workman who has been in the employ of a telegraph company about one month is injured by a current of electricity which passes from an electric light wire suspended on the same pole as a telegraph wire which he is handling. *Western U. Tel. Co. v. McMullen* (1895) 58 N. J. L. 155, 32 L. R. A. 351, 33 Atl. 384.

An unskilled workman employed to dig post holes and assist in general street work should not be ordered to ascend a pole and scrape an electric wire without being instructed as to the danger to which he would be exposed if it was carrying a current of electricity. *Tedford v. Los Angeles Electric Co.* (1901) 131 Cal. 76, 54 L. R. A. 85, 66 Pac. 76.

In the two following cases, the defendant was not the plaintiff's employer; but they may usefully be cited for purposes of illustration:

Constructive knowledge of the effect of moisture in destroying the insulation of an electric light wire is not imputed to a dishwasher at a hotel. Nor has such an employee such an interest in the sufficiency of the insulation of electric light wires that he is chargeable with negligence in failing to notice that such insulation was defective at any particular spot. *Girardi v. Electric Improvement Co.* (1895) 107 Cal. 120, 28 L. R. A. 596, 40 Pac. 108.

In *Perchem v. Portland General Electric Co.* (1897) 33 Or. 151, 19 L. R. A. 799, 53 Pac. 11, the court, in discussing the contention that the plaintiff, a carpenter in the service of a railway com-

pany, was chargeable with not discovering the insulation of certain electric wires was defective, said: "It is no part of the duty of the deceased to have any knowledge of electricity or its effects, such as is possessed by persons of average intelligence. He knew that electricity is such a force carried by wires, as is used in driving cars and lighting houses, and that the wires were used for that purpose. He supposed, as is the common understanding, that the insulating material with which such wires are covered placed there for the purpose of making them safe, and that the result of making them safe was that he had no knowledge of the fact, as shown and disclosed, that wires are dangerous in the transmission of electricity on account of the high voltage, and that it is the duty of the company to coat so as to make them safe, and that the insulating material sometimes affords no protection against injury. Nothing can, therefore, be claimed in this case on account of special knowledge of electricity or its effect possessed by the deceased. There is no pretense that he had any knowledge of the fact that the wires were in fact dangerous. These wires were visible, insulated, and appeared perfectly safe. There was nothing in them at the time to warn the deceased of the danger being carried over them, or that there was any danger in coming in contact with them. The danger was hidden, and secret one, and the insulation of the wires deceptive. The fact that one who deliberately goes to work in a place of known or apparent danger is injured must take the consequences of his hardihood can have no relation here, because there was a

risk which caused the injury.¹ Obviously, however, experience is a factor which, as a general rule, militates against the conclusion that the servant's ignorance of the risk in question was excusable.² That conclusion has been deemed unacceptable, and the inability to recover affirmed, as a matter of law, in the cases collected in the note below.³

apparent danger, but, on the contrary, for as the deceased, a nonexpert,

had ascertain from an examination, the wires were entirely safe and in perfect condition. He had a right, therefore, to believe that the place was safe, and to assume that the defendant company had exercised due care and caution to prevent injury to him, and had not placed on the bridge, in such a position that he would likely come in contact with them, wires which it knew to be dangerous.

(pp) *Hydraulic pressure*.—A common laborer in a slaughter house was held not to be, as a matter of law, chargeable with knowledge of the danger of going into a sewer hole and undertaking single handed to wash it out with a hose in which the water was under a pressure of 80 pounds to the square inch, the evidence being that, with such a pressure, it required three men to manage it properly. *Dick v. G. H. Hammond Co.* (1901) 156 Ind. 783, 60 N. E. 353.

(pp) *Ships*.—An employer is not, as a matter of law, free from negligence towards his employee, an "idler" on a scyrlent, who, while assisting, as ordered, in putting a freight boat into commission, sustained injuries from falling into an open hatchway which was invisible because of the darkness, he being wholly unacquainted with, and not informed as to, the construction of a freight boat and with the custom to leave the hatchways open when a boat is out of commission. *Brown v. Inn Vha R. Co.* (1898) 118 Mich. 205, 76 N. W. 107.

¹ As, where the dangerous conditions consist in the unusual construction of an appliance, and that construction is so uncommon that a servant of long experience in the manipulation of such appliances may well have had no opportunity of becoming acquainted with one of that particular kind. See *Missouri P. R. Co. v. Callbreath* (1886) 66 Tex. 526, 1 S. W. 622.

A boy who has been accustomed to work with a guarded machine should be instructed if he is directed to work an unguarded one. *Rose v. Paisley*

(1894) 163 Pa. 253, 29 Atl. 907. In *Timony v. Philadelphia & R. R. Co.* (1896) 137 Pa. 118, 20 Atl. 632, it was held that the danger that a pole not supported by guys or set in the ground, but merely held in place by a pile of coal round it, may fall at any moment during the time that the removal of the coal is going on, is not a danger which is patent to one who is ignorant of the facts, and whose experience has been that such poles are, as a rule, either held in place by guys or securely set in the ground.

An instruction explaining the different significance of the fact that an imput servant was experienced in the work in which he was engaged would be given when the evidence indicates that he had had such experience. *Watt v. S. F. R. Co.* (1907) 106 Tex. 100, 100 S. W. 867. One who had been working as a car repairer for some months did not put out a sign.

Refused to allow an employee to state whether or not his employer ever told him how to operate a machine, or warned him of its danger, is not prejudicial error, where the employee had operated the machine for three years. *McCarthy v. Mahgen* (1898) 107 Iowa, 76, 77 N. W. 527.

(a) *Railway tracks and appliances*.—A helper of a railroad hostler assumes the risk incident to the insufficient depth of an ash pit into which he goes under an engine for cleaning the ash pan, where its depth and nature and the amount of space and all the dangers arising from its condition are known to him both by observation and experience. *Chen v. Chicago, B. & Q. R. Co.* (1891) 56 Ill. App. 235.

(b) *Obstructions above railway tracks*.—An experienced brakeman is presumed to understand the risk to which an employee whose duties require him to be on the top of a high car is exposed by reason of the fact that that car is behind, and not in front of, the engine, and is run under a low bridge in that position. *Maier v. Boston & A. R. Co.* (1893) 158 Mass. 36, 32 N. E. 950. An experienced brakeman who is

In many of the cases cited, the fact that the injured person possessed a certain degree of technical skill and knowledge unique

familiar with the situation of an overhead bridge, and knows that he cannot, even on the top of an ordinary car, stand upright while passing under it, is properly nonsuited where his own evidence shows that he stood with his back to the bridge while the train was approaching it, upon a car which, from its appearance, he ought to have recognized as being of more than ordinary height. *Rock v. Ketsoff Min. Co.* (1891) 40 N. Y. S. R. 556, 15 N. Y. Supp. 872.

(c) *Obstructions alongside railway tracks.*—A brakeman experienced in construction work, who is injured by striking against a tree close to a temporary track running through a forest, while he is on a construction train using the track, cannot recover. *Manning v. Chicago & W. M. R. Co.* (1895) 105 Mich. 260, 63 N. W. 312.

A skilled engineer cannot recover for an injury caused by striking his head against a bridge while leaning out of the cab of his engine, on the ground that he should have been notified that this engine was 6 inches wider than those to which he was accustomed. *Belious v. Pennsylvania & A. Y. Canal & R. Co.* (1893) 157 Pa. 51, 27 Atl. 685.

A conductor of a street car is chargeable, as a matter of law, with comprehension of the risk of standing upon the running board of an open car in such a position as to be struck by a car upon the adjoining track, which was 37½ inches distant from the track on which his car was standing, where he had been a conductor for nine years, although he had never before worked on an open car, and the open cars were wider than the closed ones. *Fletcher v. Philadelphia Traction Co.* (1899) 190 Pa. 117, 42 Atl. 527 (no duty to instruct).

(d) *Railway cars; construction and operation of.*—An experienced brakeman is presumed to understand the danger of coupling cars with double deadwoods. *Michigan C. R. Co. v. Smithson* (1881) 45 Mich. 212, 7 N. W. 791. There the court thus discussed the liability of the railroad company: "We have had produced for our inspection, on the argument, a model of the double deadwoods which caused the injury, and it seems impossible to give to the couple any better or more effectual notification of their presence, and of the dif-

ference from those belonging to tenders than their very form suitably gives of itself. The difference is very marked and striking, and quite impossible to couple the deadwoods, or to approach them with any degree of accuracy without observing it. This, whether the coupling is done daytime or in the nighttime; to night every switchman has his eyes to inform him what was him. Moreover, the business of the was of itself a notification that differences requiring attention in coupling were to be encountered by switchmen and brakemen. The Central is a great common carrier of the country, and every man employed of the defendant, if he has ordinary intelligence, is perfectly cognizant of the fact. He knows, to the cars of the several railroad transportation companies differ that at one time or another differences may appear in the coupling. Every train is likely to be several kinds, and he cannot assume he passes from one to another, that two will be alike, much less that the whole train will be. To notify him of the differences would not be troublesome and expensive, and, as above explained, could be done by a work of inspection, for any man capable of performing the duty would be wiser after the notice than before a man who would not heed the notice the very nature and course of the business would impart to him without notice. The liability is that which a man must of duty see and which cannot be mislead him; he needs no prior card to announce a precipice stands before it."

To the same effect, see *K. & N. Va. Co.* (1893) 147 U. S. 235.

150, 13 Sup. Ct. Rep. 298 (double dead-woods of unusual length caused injury to a servant who had had two months' experience in coupling, and was therefore not "inexperienced"); *Northern P. R. Co. v. Blake* (1894) 41 C. C. A. 33, 27 F. S. App. 190, 63 Fed. 45 (brakeman of seventeen years' experience was denied recovery where foreign cars with double deadwoods were passing daily over the road); *Balsard v. Louisville & A. R. Co.* (1894) 106 Ala. 641, 18 So. 29, *Reaffirming* (1893) 96 Ala. 626, 18 L. R. A. 260, 11 So. 667 (no obligation to instruct a brakeman familiar with couplings of the ordinary type, with regard to the obvious danger incident to the handling of cars with double buffers); *Chicago, B. & Q. R. Co. v. Curtis* (1897) 51 Neb. 442, 71 N. W. 12 (held that a brakeman who has been working seven years for a company which uses cars with single deadwoods is bound to know that foreign cars equipped with double deadwoods are constantly coming on to his employer's lines).

It is error to direct a jury to find a railroad company guilty of negligence on the ground of failure to instruct a brakeman specially as to the danger of coupling cars with double deadwoods, where evidence has been given which tends to show that the plaintiff had had five years' experience. *Hughes v. Chicago, M. & St. P. R. Co.* (1891) 79 Wis. 264, 48 N. W. 259.

An experienced brakeman is chargeable, as a matter of law, with a knowledge of the risk that the drawbars of two cars may slip and pass each other when they come together on a sharp curve, and thus render it dangerous for him to attempt to couple them while standing on the inside of the curve. *Tuttle v. Detroit, G. H. & M. R. Co.* (1887) 122 U. S. 189, 30 L. ed. 1114, 7 Sup. Ct. Rep. 1166.

If the coupling links and pins used by a railway company are not as strong as they should be, their insufficient strength is a fact presumed to be known to an experienced brakeman. *Illinois C. R. Co. v. Jones* (1882) 11 Ill. App. 324. But *quite* as to the soundness of this decision.

An experienced brakeman cannot recover for an injury caused by his miscalculating the actual difference between the heights of two drawheads, he being aware that there was some dif-

ference. *Hubert v. St. Louis, K. C. & A. R. Co.* (1878) 37 Mo. 239.

No recovery can be had for an injury received by an experienced brakeman, who while he was uncoupling a pusher engine from the rear end of a box car which was used as a caboose according to the common practice of the defendant, but which had no platform guarded by a railing, was thrown off by the jerk which accompanied the taking up of the slack by the draft engine, such a jerk being a well-known incident under such circumstances. *Davis v. Baltimore & O. R. Co.* (1893) 152 Pa. 314, 25 Atl. 498.

A brakeman of experience is bound to appreciate the perils arising from the use of brakes of an obviously peculiar construction. *Philadelphia & R. R. Co. v. Hughes* (1888) 119 Pa. 301, 13 Atl. 286.

A freight handler with three years' experience, put off whose duty it was to hook up the door of a certain freight car, and who, on the occasion when he received the injury, had looked to see that the door was all right, was held to be chargeable with knowledge of an obvious defect in one of the hooks, which caused the door to fall when the car vibrated in the course of loading it. *Cassady v. Boston & A. R. Co.* (1895) 164 Mass. 168, 41 N. E. 129.

Where an experienced brakeman knew that it was the custom of his employers to haul cars on the line, and it was part of his duties to make up a train and check every car, it was held that he could not recover for injuries caused by going at night on to a partially burnt box car, the condition of which, though apparent, he had failed to notice after the car had been in the train an entire day. *International & G. N. R. Co. v. Stacey* (1901) Tex. Civ. App. 62 S. W. 130.

The risks incident to working at the coupling of cars on a trestle with a descending grade, down which the cars to be coupled were sent after being "kicked" across scales and weighed while in motion, such cars being apt to acquire considerable speed and imperil persons on the trestle, were deemed to be obvious to a servant accustomed to the work. *Woods v. St. Paul & D. R. Co.* (1888) 39 Minn. 135, 40 N. W. 519 (servant fell through opening on trestle, and was dragged by a car).

them with the decisions collected in § 394, *supra*, to avoid the conclusion that this fact carries no really controlling weight, and

There can be no recovery where a brakeman familiar with his duties was injured because he failed to look at a car which he was about to couple, and so did not notice that its load projected. *Walash, St. L. & P. R. Co. v. Deardorff* (1883) 14 Ill. App. 401. A brakeman with four months' experience is chargeable with knowledge of the danger incident to coupling cars loaded with lumber projecting over the ends. *Lothrop v. Fitchburg R. Co.* (1890) 150 Mass. 423, 23 N. E. 227.

(c) *Locomotives; construction and operation of.*—An experienced locomotive engineer is chargeable with an appreciation of the risk incident to operating a locomotive with a pilot so high about the rails that it is likely to cause the engine to run over an animal on the track, instead of throwing it off. *Forbiger v. Edwards* (1895) 60 Ark. 438, 30 S. W. 758 (1898) 65 Ark. 98, 44 S. W. 1034.

An experienced engineer operating a hard riding locomotive apt to jar and sway is chargeable with knowledge of the increased hazard in going out on the running board while the engine is in motion. *Southern P. R. Co. v. Johnson* (1895) 16 C. C. A. 317, 44 C. S. App. 1, 69 Fed. 559.

The risk caused by using for switching purposes an ordinary road engine was held to be comprehended by an experienced yard hand in *Young v. Boston & M. R. Co.* (1898) 69 N. H. 356, 41 Atl. 268. A similar decision is rendered in *Gulf, C. & S. F. R. Co. v. Schrabbe* (1892) 1 Tex. Civ. App. 573, 21 S. W. 706, where the extent of the plaintiff's experience is not stated. Apparently he had had some; if not, the decision can scarcely be correct.

(4) *Hand cars; construction and operation of.*—There is no duty to instruct a section man of several years' experience as to the danger that a light hand car may be derailed if it is run rapidly. *Gulf, C. & S. F. R. Co. v. Williams* (1888) 72 Tex. 159, 12 S. W. 172.

An experienced railroad employee who goes upon a hand car with knowledge that a fast train is due and expected and has the right of way assumes the risk of injury. *Wright v. Southern R. Co.* (1897) 80 Fed. 260.

(g) *Wright—sustaining structures.*—An experienced carpenter employed by the hour in side-boarding an air shaft

in a building, after he has worked three others exactly like it, assumes the risk of working by standing on 15 to 17 inches wide, above the shaft, which is continually in the course of the work. *Edgar v. Bath* (1893) 117 Me. 475, 22 Me. 1113. Reversing (1890) 43 Me. 41. A carpenter cannot recover injury caused by the fall of a beam built by his employer without leaving to support it, since the character of its construction is as obvious as to the employer, and he is capable of judging as to its sufficiency. *Pyromski v. Szczek* (1897) 71 Ill. 670.

An employee who has had no experience in handling shingles has been engaged for thirty years in saw mills, is presumed to comprehend a plank 16 feet long, braced to the side of a house with three or four shingles is not sufficiently strong to bear the weight of three men and also shingles. *Daniel v. Forsyth* (1890) 68 Ga. 568, 32 S. E. 621.

The liability of a million of a year in a flat roof to break under the weight of a man is a sure danger, and is an obvious danger to a glazier directed to go on the roof and replace a pane of glass in the window. *Seaton v. Eastern Hydraulic Pressed Brick Co.* (1899) 63 N. J. L. 554, 44 Atl. 101.

A skilled workman cannot recover for an injury caused by the giving of a floor, where he has had an opportunity of seeing how the floor itself and its foundation were constructed. *Ryan v. Porter Mfg. Co.* (1890) 57 Hun. 10 N. Y. Supp. 774.

An experienced carpenter who goes out making any examination of a box handed to him by his principal, who to his knowledge has no examination thereof, assumes the risk of the box not being strong enough to bear his weight. *Southern v. Indianapolis International Electric Co.* (1896) 68 Minn. 18, 70 N. W. 796.

A freight handler of two months' experience cannot recover for injuries caused by the breaking of a grain-car door which was being used as a platform for the transfer of grain from one car to another, the employee being that he himself and his colleagues, without any express instruction from a superior, had selected the door

avoid the con-

the action would in any event have been declared not to be maintainable. In others, while it may be impossible to draw any absolutely

tion and tested its sufficiency, and that he had fully as thorough a knowledge as anyone of the capriciousness of such plat-
forms and the accidents which might happen in using them. *Pennsylvania Co. v. Lynch* (1878) 90 Ill. 333. A brakeman who uses a gang plank for the purpose of unloading a car assumes the risks caused by the want of hooks or spikes to hold it in place, where he is an experienced railroad employee, the unloading has always been done in the same manner, and he is familiar with it. *La Pierre v. Chicago & G. T. R. Co.* (1894) 99 Mich. 212, 58 N. W. 60.

An employee who has worked in a lumber yard for ten years is chargeable, although he has never been warned, with the knowledge that, if boards of unequal length are piled with their ends uneven at the front side of the pile, some of the boards will project over the others at the other side, and he cannot recover for an injury caused by the breaking of an unsupported end of a board while he was standing on it. *Campbell v. Dearborn* (1900) 175 Mass. 183, 55 N. E. 1042.

(3) *Slippery surfaces.*—(See also subd. (8), *infra*.) A verdict for the plaintiff should be set aside where the evidence shows that he was a man of ordinary intelligence; that he had been employed in defendant's tin plate factory for several months; that he was familiar with the premises, and knew of the custom of applying sawdust to the floor to absorb oil which was frequently spilled thereon; that in passing over such a spot, otherwise perfectly safe, in search of a hook which should have been supplied him, he slipped, and fell into an open vat of boiling oil, and that the place where the oil was spilled was exposed, and the sawdust and open vat in plain view. *Hattaway v. Atlanta Steel & Tin-Plate Co.* (1900) 155 Ind. 507, 58 N. E. 718.

The danger that a plank resting on greased iron rails will slip under persons who are engaged in moving heavy articles while standing on it, and that those persons may consequently be precipitated to the ground, is deemed to be obvious to any of them who are familiar with the method of work. *State use of Hamlin v. Malster* (1881) 57 Md. 287. A complainant is demurrable where it shows that the plaintiff went between piles of scantling so slippery with snow

that "a slight jar would cause them to fall," and stooped down to count the lower tiers, without taking the precaution of first ascertaining whether they were likely to receive such a jar. *Both v. Peters* (1882) 55 Wis. 105, 43 N. W. 219. Where a servant who had for five years been employed as a mechanic in establishments similar to that of the defendant's paper mills and for some three months with defendant, before the injury, was accustomed to use in his work a pine board pivoted by a bolt at one end and resting loosely at the other on a smooth iron plate covered with grease, he is presumed to understand the risk to which he was exposed by the continuous enlargement of the pivot hole resulting from the abrasion of the wood when the board was swung round, and by the probability that the board would slip on the plate, if by leaning over it he subjected it to lateral pressure. *Belton v. Tamahawk Pulp & Paper Co.* (1901) 110 Wis. 307, 85 N. W. 960.

An employee who has worked three years in a sawmill is presumed to understand the dangers which may arise from the freezing of condensed steam so as to form a layer of ice on the rollers. *Peterson v. Sherry Lumber Co.* (1895) 90 Wis. 83, 62 N. W. 948. A servant familiar with the work, who was injured by a block of ice which ran off a skidway in a packing house, cannot recover. *East St. Louis Packing & Provision Co. v. McIntroy* (1888) 29 Ill. App. 504.

(4) *Saws.* Negligence is not imputable to a master failing to notify an experienced employee that a circular saw was dangerous, where the latter, while supplying wood to the man in charge of the saw, was injured by being struck by a piece of wood caught in it. *Delaware River Iron-Ship Bldg. & Engine Works v. Nuttall* (1888) 119 Pa. 149, 13 Atl. 65. The court said: "The negligence which the plaintiff imputes to the defendant, and for which a recovery was sought and allowed in the court below, is the failure to inform the plaintiff, when he was sent to carry the lumber, that a circular saw was a dangerous machine, and the failure to provide the saw with an attachment called a spreader. As to the first of these, it must be remembered that the work Nuttall was asked to do was simply that

certain inferences upon this point (see general remarks in *ante*), a collation of the authorities renders it either very dan-

ger of a bearer of burdens; work which is done by cheap and unskilled labor. He was a mechanic, and had for weeks been working in the same room in which this saw was operated. All that could have been told him by way of warning was, that there was a possibility of injury from a flying stick, but that during many years no such accident had happened in the defendant's works. That the omission of such a warning to a mechanic under the circumstances of this case was a failure in duty on the part of the employer is simply preposterous."

There is no obligation to instruct an employee who has worked during six seasons in sawmills and for the defendant six months, that a board lying on the dead rollers may be shoved forward and to one side by another board coming from the live rollers, and that if it is thus brought in contact with a revolving circular saw close by it may be thrown off the saw, and injure anyone who may be operating it. *Mississippi River Logging Co. v. Schneider* (1896) 20 C. C. A. 390, 34 U. S. App. 743, 74 Fed. 195. The court thus laid down the law: "If, however, it may be assumed that there was failure of duty here by the master with respect to the safeguard, its absence was an open, obvious fact. That it was wanting should have been observed by one of even slight experience in the business; certainly by one in the exercise of that ordinary care that the law casts upon the servant. The defendant in error was a man of mature years. He had had some six years' experience in this business. He was of ordinary intelligence and was no novice. He knew the operation and the use of every piece of machinery employed. He knew that the service was a dangerous one, and that even with the utmost care accidents would occur. He knew that material striking the revolving saw would be hurled with great force towards the operator. What warning from the master could have given him better instruction than he had,—instruction acquired by the experience of six years in the vicinity of dangerous machinery?"

An employee, after working for three years in a sawmill with a machine called an "edger," assumes the risk of the improper location of the iron band or guard placed above the saws of an

edger to prevent boards or fragments from being thrown back. *Pike Sherry Lumber Co.* (1895) 90 W. 62 N. W. 948. An employee of years' experience is charged with knowledge of the risk that a board left after sawing off the strips may come into contact with an unguarded circular saw used for *Tennedy v. Boston Wfg. Co.* (1890) Mass. 320, 49 N. E. 654. After months' experience in operating a servant will be deemed to understand the risk created by the fact that there was no guard behind it to keep the wood away from it, and no shield in front of it to prevent such blocks from being thrown against the operator. *United States Rolling Stock Co. v. Wick* (1889) 35 Ill. App. 174. A servant cannot recover for personal injury received in the use of a "hand" in a sawmill, where he had been working in the mill for more than a year, and upon this machine for four years, when injured, and its dangers were apparent to a casual observer. *Boyd Wilson* (1892) 5 Wash. 160, 31 469.

A complaint is demurrable which shows that the employee, after working for six months in operating a band, allowed his hand to come in contact with it while looping up a cord which an electric drop light was suspended. *Eberhard v. Diamond Co.* (1899) 98 Fed. 555.

No action can be maintained by an experienced employee in a sawmill in removing the sawdust which was blocking the sawdust carrier below a running at a high speed, and extending in an unguarded condition several feet below a table on which it was placed his hand in contact with the saw. *Anderson v. C. A. Nelson Lumber Co.* (1896) 67 Minn. 79, 69 N. W. 100.

A servant thirty-five years old, with fourteen years' experience in making and assuming the danger of letting a circular saw 4 feet in diameter, cracked 3 feet from the outside, on a large iron stand for the purpose of cutting it in two. *Erdman v. Illinois Steel Co.* (1896) Wis. 6, 69 N. W. 993.

An employee of nine years' experience, who, with full knowledge of the location of a machine at which he is employed, and of the relative strength of hard and soft wood, continues in

rks in § 392,
very doubtful.

whether that fact is a material one, or very probable that it is immaterial. It is apparent, therefore, that in a large proportion of the

employment after a change in the character of the plates in which a saw runs from hard to soft wood, assumes the risk incident to the use of such plates. *Freeman v. Dennison Mfg. Co.* (1899) 40 App. Div. 99, 57 N. Y. Supp. 478.

(1) *Planers and similar machinery.*—The risk of having the hand caught by revolving knives in a planing machine while it is being oiled is a danger patent to a servant who had been working for ten months on other planing machines of a different construction, and for two months on the one in question. *Watchdog Lumber Co. v. Bethen* (1892) 57 Ark. 76, 20 S. W. 808.

To an employee who has had four or five years' general experience, and has been three months in the employment where he is injured, the risk resulting from the absence of a guard to prevent the hands of the operator from being thrown against the knives of a jointer by the reaction of the pieces of timber is deemed to be obvious. *Guelthofer v. Erusting* (1899) 23 Ind. App. 188, 55 N. E. 113.

An employee is chargeable with comprehension of the risk of having the fingers cut by the knives of an unguarded "jointer" working along a slot in a table, where he had worked at other machines for sixteen years, and at a planer of the same kind for a week some years before the accident. *Rudd v. Bell* (1887) 13 Ont. Rep. 47.

(2) *Machinery with revolving rollers.*—A woman who has been employed for three and a half months in a laundry, and for one month on an ironing machine, cannot recover for injuries caused by her hands being drawn between the rollers of the machine. *Doddle v. Peuff* (1900) 92 Ill. App. 301. The failure to instruct cannot be relied on as a ground of action, where an employee, after working about three weeks, was injured while assisting to put a new covering cloth on the upper roller of an ironing machine. *Connolly v. Hildebrand* (1894) 160 Mass. 566, 36 N. E. 169. It is not negligent to omit to warn an adult female employee who has been working several months in a laundry, and has been engaged for two months in cleaning a revolving cylinder, that, if a part of the cloth which she wraps around her hand while she is doing this work is allowed to hang down it is likely to be taken up by the cylinder and

to draw her hand into the machine. *Boyle v. Excelsior Steam Laundry Co.* (1894) 95 Ga. 34, 21 S. E. 1001.

It may reasonably be assumed that a woman of full age, whose hand was injured by being caught in the rollers of a drying machine in a steam laundry, was not in need of any instructions, where the machine was similar to those which she had been handling for two years. *Ex facili* is such an assumption warrantable where the person in charge of the machine questioned her as to her familiarity with it before starting it, and watched her operate it, until satisfied that she was a skilled operator. *Kennan v. Wabers* (1897) 181 Pa. 247, 37 Atl. 312.

Where the space between the rollers of a drying machine is increased or diminished by raising or lowering a weight, a servant who has been operating the machine for nineteen months is presumed to be capable of understanding the effect of this process, and cannot recover if, on a certain occasion when he returned after a temporary absence, he was injured owing to his failure to notice that the distance between the rollers was greater than it was before he ceased work. *Stamitz v. Sarits Cable Co.* (1900) 53 App. Div. 500, 65 N. Y. Supp. 942.

Where a servant has been working for eighteen months in various industrial employments, some of them requiring the operation of machinery, there is no obligation to instruct him as to the danger of having his fingers caught between the rollers of a "jigger" and the cloth which is being wound about it. *Rich-
stain v. Washington Mills Co.* (1893) 157 Mass. 538, 32 N. E. 908.

An employee who has had over two years' experience in working a small mill is presumed to comprehend the danger arising from the jumping movement of the rollers, which occurs when the tobacco is wetted. *Johnson v. Dwyer Sawmill Co.* (1898) 62 N. J. L. 417, 41 Atl. 936.

The risk of having the arm caught in a spindle used in making steel cores to be employed in casting iron water pipes is obvious to a man of ordinary comprehension who has been engaged in similar work for several months. *Donaherty v. West Superior Iron & Steel Co.* (1891) 88 Wis. 343, 60 N. W. 274.

cases cited, the precise evidential significance attached to the fact of experience cannot be gauged with any precision. Under su-

A skilled workman, foreman of the rollers in a rolling mill, who steps on a tub near the rollers and slips off upon them, cannot recover. *Shaw v. Sheldon* (1886) 103 N. Y. 657, 9 N. E. 183.

(c) *Cogwheels and gearings.* To an adult who has worked many years round machinery, the risk created by uncovered gears in a sawing machine is presumed to be obvious. *Williams v. J. G. Wagner Co.* (1901) 140 Wis. 456, 86 N. W. 157. After working one year on a machine with an unboxed gearing, a servant is chargeable with a comprehension of the risk of being injured by that gearing. *Galins v. Locomotive Co.* (1895) 68 N. H. 196, 38 Atl. 1047. A machinist who had had five years' general experience, and had operated for two weeks the particular machine which injured him, was held unable to recover where, without looking, he put out his hand to take hold of the lever by which the machine was stopped, and it was caught in a gearing a few inches away from the lever. *Foley v. Pettic Mach. Works* (1889) 149 Mass. 294, 4 L. R. A. 51, 21 N. E. 304.

In a case where the injury was received on the day that the servant began to operate the machine in question, but it appeared from the evidence that he had been doing various jobs in connection with the machinery in the same establishment for several years, it was held that negligence was not predicable of the omission to instruct him that cogwheels in plain sight were uncovered, or that if he got his hands in the cogs he would be hurt, or that if he attempted to grasp a lever near the cogs without looking he was liable to be injured. *Wilson v. Massachusetts Cotton Mills* (1897) 169 Mass. 67, 47 N. E. 506. An experienced employee who has worked for four months in a room in which a loom having unprotected gearing is situated assumes the risk of injury from being pushed against such gearing by a person passing him in the aisle. *Goodridge v. Washington Mills Co.* (1893) 160 Mass. 234, 35 N. E. 184.

(m) *Shafts, set screws, etc.* An experienced workman not shown to have been under full age or of less than average understanding assumes the risk of his glove catching on the set screw of a machine used for reeling wire, while reaching in his hand to get the wire for the purpose of taking the reel from the

block. *Dunham v. Washburn App. Co.* (1897) 169 Mass. 574, 47 N. E. 842. A machinist will be presumed to know that the collar of an axle is kept in place by such a common set screw, and will not recover on the theory that he has never been warned as to the danger which he was exposed by being caught by such a screw. *Goodhue v. Loring Mills* (1888) 146 Mass. 576, 16 N. E. 576; *Kent v. National Mach. Co.* (1895) 13 C. C. A. 1, 1 U. S. App. 656, 65 Fed. 940.

The danger of being caught by a screw in a shaft visible when the machine is at rest, but not when it is in motion, is not one of those with regard to which there is a duty to instruct a novice who has been a sailor for many years and has never handled or had close contact with machinery, but has worked near a factory. *Rumney v. Seawall Cordage Co.* (1894) 161 Mass. 589, 35 N. E. 789.

A servant who had worked for some time in mills cannot recover for injury caused by his apron and catching on a revolving shaft while he was standing on a ladder beside the shaft to replace a board on the belt by which it ran. *Russell v. Loring Mills* (1885) 140 Mass. 200, 4 N. E. 100. *Holmes, J.*, said: "The plaintiff does not pretend that he was ignorant of the danger of a revolving shaft, or that the order to him carried any obligation to put the ladder in such a position as he might deem best, nor that there was anything in the form of it that would lead him to suppose that it would not disturb his judgment; but he simply that he had not sufficient intelligence—for that is what it comes to—see that he was less likely to be in contact with the shaft if he had been behind the barrier of the belt box between the shaft and the belt; or, if he took a worse position to keep away from the danger which he knew. As it is not suggested that he was a man of manifest inferior intellect, we think that the foreman was not bound to assume that the plaintiff would not take care of himself by whatever precaution was necessary."

In a case where a rope which was carrying a weight was caught on a pulley and it appeared that he had been caught in other establishments

to the danger
under such cir-

Washburn & M. Mass., 351 N. E. 188. It will be presumed that of any premises now a common domestic crew, and that he was to the danger by being put to which there is *Mar. v. Hagan*, 106 Mass., 2d 13. *Automatic Rev. C. v. A.*, 221, 231, 910.

caught by a belt when the shaft is in motion in regard to what a servant for many years or had changed worked near a *S. v. Scott & B.*, 61 Mass., 153.

worked for a long period for many years on a revolving shaft where he stood beside it. The belt box in *Ell v. Felt*, 111 N. E. 23. The plaintiff does not know of the shaft, nor that there is any probability in such position, nor that there is any danger of it to him by judgment; but she has sufficient notice that it comes to her likely to come to her if he had been between him and the shaft. He took a worse place of danger which suggested that the best industry in was not that it would be a preparation to

one which a servant caught in it. He had no knowledge of the

circumstances it seems scarcely worth while to subject these decisions to an analysis of the same kind as that attempted in the two preceding

same kind as the defendant's, and that for two days before the accident he had been engaged in work which gave him an opportunity of ascertaining the conditions, and that a co-servant had warned him of the danger, it was held that the defendant was entitled to an instruction that, if the risk was a permanent, visible one, the servant could not recover. *Stone v. Oregon City Mfg. Co.* (1870) 4 Or., 52. The danger of being caught by a friction clutch pulley on a rapidly revolving shaft, while it is being adjusted, is presumed to be understood by a servant whose duties are to look after the machinery and make the necessary repairs, and who has been working about a year in mills of the same kind as the defendant's. *Illinois River Paper Co. v. (Thert)* (1893) 49 Ill. App., 363.

(n) *Spinning mules*.—An experienced spinner cannot recover for injuries to his hand, received while he was reaching out to stop his spinning mule when the electric lights had gone out, where he had worked for defendant for four months, during which time the electric lights had gone out several times. *Kell v. Calumet Woolen Co.* (1900) 177 Mass., 128, 58 N. E. 182.

(o) *Machinery operating vertically*.—A servant who has been operating a stamping machine for three years is presumed to understand any obvious risks which result from the manner in which it is constructed. *Towney v. Bonoran* (1893) 158 Mass., 232, 33 N. E. 396 (servant had worked for three years on a machine with no guard to prevent the descent of a headblock).

(p) *Grinding machines*.—Where a servant was "tuning" a grind-stone by holding a piece of gas pipe against it, and the gas pipe and his hand were drawn between the stone and a "rest" extending across and in front of the stone and on which the gas pipe rested, he cannot recover if the evidence shows that he had long been familiar with the work. *Smith v. Bandy* (1900) 175 Mass., 286, 56 N. E. 596.

An employee who has worked in a shop for four years as a machinist assumes the risks of using an emery wheel, arising from such obvious defects as that it is not properly encased, that it is made of an inferior kind of stone, that it has no rest, and that it is run at an excessive speed. *Birig v.*

Chicago & W. H. R. Co. (1893) 98 Mich., 222, 57 N. W. 118.

(q) *Windlasses*.—A seaman cannot recover for an injury sustained through a defective windlass, where he was of full age, had been in sea on vessels of the same kind for many years, and was familiar with that kind of a windlass, and observed it and its condition before entering upon the voyage. *Anderson v. Clark* (1892) 155 Mass., 368, 29 N. E. 589.

An employee in a car repair shop, who was mortally injured by a blow received from the revolving handle of a windlass, defective because it has no catch, but which he endeavored to stop, was guilty of such negligence and voluntary assumption of an obvious risk as will bar a recovery by his personal representative for his death, when he was a man of mature years and experience, and had worked in the shop some time, although the precise work in which he was engaged was not familiar to him. *Chambers v. Lyon & B. Street R. Co.* (1898) 170 Mass., 298, 49 N. E. 440.

(r) *Ventilating fans*.—No action can be maintained by a female employee who, after six months of service, had her hand caught by a fan inserted in the frame of a window, while she was attempting to lower the sash. *Dillonberger v. Wagonmaster* (1900) 64 N. J., 1, 292, 45 Atl. 638.

(s) *Automatic starting of machinery*.—An experienced employee who knows that a lever on the machine at which he is working is liable to slip when there is a jar, and to throw the machine into gear and set it in motion, cannot recover for an injury resulting from such an occurrence while he is loosening a screw on the machine with a wrench. *Bailey v. Burch* (1901) 82 Minn., 382, 85 N. W. 167.

(t) *Steam pressure*.—An employee of a railroad company, who had been a locomotive fireman for six months, and had run a stationary engine before that time, must be taken to be familiar with the action of steam, and the liability of the glass tube of the boiler to burst from the pressure upon it from within, and all the danger resulting therefrom. *Fuller v. New York, N. H. & H. R. Co.* (1900) 175 Mass., 424, 56 N. E. 571. As the effect of steam pressure is a matter of common knowledge, an em-

sections. It cannot be said that they have established any doctrines, except, perhaps, in respect to a few of the more fre-

quency of the cases. In the case of a boiler, one of whose duties was to keep the blow pipe in order, is presumed to have understood the risk of the parting of the blow pipe as the steam was turned into it, at the point where the vertical section entered the elbow connecting it with the horizontal section, the result being that the horizontal section flew up and struck him, where a common laborer who, shortly before the accident, had disconnected the pipe at the elbow in order to clean it, informed him that there was only one thread on the pipe, and that it was barely caught in the elbow, and was instructed by him to replace it in the same condition. *Mackey v. Newberry Furnace Co.* (1899) 119 Mich. 552, 78 N. W. 783.

An experienced engineer who, without ascertaining the condition of the stop-cock between the boiler and a supply pipe, proceeds to remove the pipe while steam is up, is negligent. *Rischhoff v. St. Paul Bethel Assn.* (1901) 82 Minn. 105, 84 N. W. 731.

(n) *Furnaces*.—A boiler inspector who represented that he possessed the requisite experience to perform such work, and saw and knew the conditions surrounding him, cannot recover for an injury sustained by falling into the combustion chamber, in which were hot ashes and burning soot. *Westville Coal Co. v. Milka* (1897) 75 Ill. App. 638.

(y) *Ladders*.—An experienced mechanic who mounted a ladder standing upon the floor of a factory, and was thrown from it to his injury, by reason of its slipping from beneath him, is guilty of contributory fault in failing to observe the absence of spikes to hold it in place, since the defect was open and obvious. *Borden v. Daisy Roller Mill Co.* (1898) 98 Wis. 407, 74 N. W. 91.

(w) *Bars for lifting, etc.*—A machinist of twenty years' experience is presumed to be aware that a pinch bar may slip upon a rail, if its heel becomes dull. *Holt v. Chicago, M. & St. P. R. Co.* (1896) 94 Wis. 596, 69 N. W. 352. Where a claw-bar slips while a section hand is putting a spike, and strikes him in the head, he cannot recover. *Louisville, E. & St. L. Consol. R. Co. v. Allen* (1893) 47 Ill. App. 465 (servant here presumably had some experience at

all events, but no specific reference made to this element).

(x) *Push poles*.—A brakeman, familiar with switching cars with push poles used in that way, cannot recover from his employer for personal injuries received in the use of a push pole of green wood, 8 feet in length, only 5 inches thick at the end and 3 inches thick at the other end, and not iron bound in the middle, which he picked up and placed in the engine, and at the place of the accident, threw from the engine and picked up and used in the work in which he was injured. *Maul v. Queen Anne's* (1899) 1 Penn. (Del.) 531, 42 A. 2d 101.

(y) *Kettles*.—An experienced employee in a candy factory, well acquainted with a furnace used in the factory, which has no rings belonging to it, is not adapted for the use of kettles of different sizes, is guilty of contributory negligence in not observing the risk that a ring belonging to a furnace, selected by him and laid upon the furnace in use, may cling to the full of melted sugar, and fall upon the floor while he is removing the kettle. The equally obvious fact that it happened in this particular is immaterial. *Barnard v. Schoff* (1897) 108 Mo. 214, 46 N. E. 621.

(z) *Action of electricity*.—An employer is not bound to instruct an experienced lineman as to the danger of using live electric wires. *Dunbar v. Southern Electric Light & P. Co.* (1897) 70 Mo. 29, 29 S. W. 988.

The fact that the upper switch of an electric lamp is wanting is obvious to an experienced lineman. *Boyd v. Southern Electric Light & P. Co.* (1897) 68 Mo. App. 38.

(aa) *Condition of steam*.—The danger of working in a mill where steam from a leak is so abundant that it is difficult to see is presumed to be understood by a skilled employee. *Peterson v. Sherry Lumber Co.* (1890) 30 Wis. 83, 62 N. W. 948.

(bb) *Action of gravitation upon various substances*.—An employee of twenty years' experience, excavating at the base of a frozen sand bank, assumes the risk of injury by its falling down upon him, where he knows that blasting has been resorted to, to break down the

recurring situations and conditions. In much the larger number of instances they are, as precedents, valuable merely by way of analogy.

and the danger of its falling is open and
deposits. *Larsson v. McViney* (1897) 95 Wis. 533, 70 N. W. 662 (plaintiff ad-
mitted that "he did not look to see").
A bricklayer engaged in building a
sewer in a trench in which the bracing
was done after consultation with him,
must be held to have assumed the risk
of the caving in of the bank at a point
where the sheathing was not driven
down to within 2 or 3 feet of the bot-
tom of the trench, caused by the pene-
tration of water, aided by the force of a
blast, where he had had experience in
such work, and where he returned after
the explosion, looked at the bank as he
passed down into the trench, and was
just resuming work when it fell upon
him. *Curley v. Hoff* (1899) 62 N. J. L. 758, 42 Atl. 731. A servant expe-
rienced in excavating work was held to
understand as well as his employer the
danger incident to being in an unshored
trench dug where there was a layer of
quicksand underneath layers of hard
earth and gravel. *Reagan v. Pabst*
(1898) 62 N. J. L. 36, 41 Atl. 364
recently expressly referred to the fact
that the inexperience of the servant was
not relied on by his counsel. A bar-
tender who has previously worked at
quarrying stone, mining, and digging
wells cannot recover for an injury
caused by the collapse of an unshored
trench 13 feet deep. *Walker v. Scott*
(1901) Kan., 64 Pac. 615, Reversing
(1900) 10 Kan. App. 413, 61 Pac. 1091.
The danger that an unshored trench
four feet deep may cave in is presumed
to be appreciated by an employee who
has been engaged for three years in lay-
ing service pipes and taking up street
mains. *Foley v. Grand Rapids Gas-*
light Co. (1901) 127 Mich. 671, 87 N.
W. 53. A railway company is not li-
able for the death of a shoveler caused
by the falling of a bank of earth upon
him, where he has been for a year en-
gaged in the same duties, and the ordi-
nary method of work has been to under-
mine the bank and allow it to fall to
the bottom of the excavation. *Rosens-*
son v. Chicago, R. I. & P. R. Co. (1884)
65 Iowa, 236, 21 N. W. 583.

The risk of injury to a person shovel-
ing coal at night in an uncovered coal
yard, from the falling away of a frozen
rust of soft coal overhanging the coal
bank, is assumed by an employee who
has worked four years in the day gang,

and four years in the night gang,
and is thoroughly familiar with all the
surroundings. *Casely v. Great Trunk*
R. Co. (1894) 68 N. H. 462, 44 Atl.
92.

An experienced miner who volun-
tarily prosecutes the work of sinking a
shaft in a mine assumes the risk of a
cave in while timbering the shaft, where
he knows more of the shaft and the
character of the ground than his em-
ployer, and believes that it can be tim-
bered before it will cave in. *Stiles v.*
Rail Co. (1896) 8 Colo. App. 303, 16 Pac.
694.

(3) *Handling of heavy objects.*

(See also subd. (2) *Infants*.) Where
a workman who has been engaged for a
considerable time in unloading logs
from cars on to a skidway removes the
obstacle which holds a log in its place
on a car, and thus sets it rolling to-
wards him while he is in such a posi-
tion that he cannot escape from it into
the "bulge hole" provided as a refuge,
no recovery can be had for his death
consequent upon such action. *Guth, R.*
& K. C. R. Co. v. Hernandez (1898)
Tex. Civ. App. 15 S. W. 197. The risk
of being struck by a log which slipped
on a log deck, the skirts of which were
unprovided with any stops or barriers
to prevent such accidents when the saw
carriage was in motion, was held to
have been assumed by a servant who
had worked about sawmills, a portion
of the time inside, and who had rolled
logs with a cant hook, though not on to
a saw carriage. *Shadley v. Marquette*
Lumber Co. (1900) 107 Wis. 250, 83 N.
W. 514.

From the nature of his employment
a section foreman is presumed to have
a full appreciation of the danger of
handling a heavy body like a rail with
insufficient appliances, and he cannot
recover if, in trying to straighten the
rail without the proper implement, it
strikes and injures him. *Tous & P. R.*
Co. v. Bradford (1886) 66 Tex. 732, 59
Am. Rep. 739, 2 S. W. 595.

An employee twenty five years of age,
experienced in handling freight in a
warehouse, is chargeable with knowl-
edge of the dangers involved in moving
across an uneven floor a mill-stone
which, on account of the ledge on one
of its surfaces, is heavier on that side.
Walsh v. St. Paul & D. R. Co. (1880)
27 Minn. 367, 8 N. W. 145.

397. Risks not deemed to be, as a matter of law, within the comprehension of servants having some experience.— In the note below

A carpenter of ten years' experience cannot recover for an injury due to the fact that one end of a beam slipped into the mortise prepared for it so far that the other end slipped off of its support, and, falling upon a scaffold, broke it down. *Smith v. Teasdale* (1895) 64 Minn. 68, 65 N. W. 191.

It has been held that an employee of a lumber company, who had been at work for three weeks, could not recover for injuries caused by the fall of an unusually long piece of lumber from a truck to which it had not been secured as it should have been. *Hall v. Brunswick Lumber Co.* (1894) 100 Me. 535, 19 S. E. 756.

That the moving by hand of heavy and unwieldy pieces of iron, on their edges, requires care to prevent their falling on the workmen, is deemed to be manifest to an employee who has been engaged in work of the same general character, though the pieces of iron are larger and heavier than usual. *Copple v. Pitt River Works* (1901) 197 Pa. 625, 47 Atl. 846.

A servant who has had experience in handling heavy objects, and, while engaged with others in unloading by hand heavy iron beams from a wagon in which he has helped to load them, is injured by one of them in a manner not explained by the evidence, is presumed to know as much about the danger as anyone. *Nelson v. Whitehead* (1900) 123 Mich. 255, 81 N. W. 1083.

It is not negligence for one superintending the handling of a heavy stone, to fail to give specific instructions to experienced workmen to be careful not to get their hands or feet under the stone as they are letting it down. *La Belle v. Montague* (1899) 171 Mass. 453, 54 N. E. 859. The insecure position of a large stone left standing on its edge without props is presumed to be known to a servant engaged in the specific work of loading and unloading stones and placing them in his employer's yard; and he cannot recover for injuries caused by its falling on him when he was about to attach the "dogs" to it. *Salem Bedford Stone Co. v. Hobbs* (1894) 11 Ind. App. 27, 38 N. E. 538.

An experienced longshoreman who obeys an order to get into a position where he can push a draft of goods towards the middle of the hatchway, instead of pulling it, as he would prefer

to do, cannot recover for an injury caused by the bale of goods, which from the cargo piled behind him, being a risk which he is presumed to comprehend. *O'Connell v. Clark*

22 App. Div. 166, 48 N. Y. Supp. 101, 102, 103, 104, 105, 106, 107, 108, 109, 110, 111, 112, 113, 114, 115, 116, 117, 118, 119, 120, 121, 122, 123, 124, 125, 126, 127, 128, 129, 130, 131, 132, 133, 134, 135, 136, 137, 138, 139, 140, 141, 142, 143, 144, 145, 146, 147, 148, 149, 150, 151, 152, 153, 154, 155, 156, 157, 158, 159, 160, 161, 162, 163, 164, 165, 166, 167, 168, 169, 170, 171, 172, 173, 174, 175, 176, 177, 178, 179, 180, 181, 182, 183, 184, 185, 186, 187, 188, 189, 190, 191, 192, 193, 194, 195, 196, 197, 198, 199, 200, 201, 202, 203, 204, 205, 206, 207, 208, 209, 210, 211, 212, 213, 214, 215, 216, 217, 218, 219, 220, 221, 222, 223, 224, 225, 226, 227, 228, 229, 230, 231, 232, 233, 234, 235, 236, 237, 238, 239, 240, 241, 242, 243, 244, 245, 246, 247, 248, 249, 250, 251, 252, 253, 254, 255, 256, 257, 258, 259, 260, 261, 262, 263, 264, 265, 266, 267, 268, 269, 270, 271, 272, 273, 274, 275, 276, 277, 278, 279, 280, 281, 282, 283, 284, 285, 286, 287, 288, 289, 290, 291, 292, 293, 294, 295, 296, 297, 298, 299, 300, 301, 302, 303, 304, 305, 306, 307, 308, 309, 310, 311, 312, 313, 314, 315, 316, 317, 318, 319, 320, 321, 322, 323, 324, 325, 326, 327, 328, 329, 330, 331, 332, 333, 334, 335, 336, 337, 338, 339, 340, 341, 342, 343, 344, 345, 346, 347, 348, 349, 350, 351, 352, 353, 354, 355, 356, 357, 358, 359, 360, 361, 362, 363, 364, 365, 366, 367, 368, 369, 370, 371, 372, 373, 374, 375, 376, 377, 378, 379, 380, 381, 382, 383, 384, 385, 386, 387, 388, 389, 390, 391, 392, 393, 394, 395, 396, 397, 398, 399, 400, 401, 402, 403, 404, 405, 406, 407, 408, 409, 410, 411, 412, 413, 414, 415, 416, 417, 418, 419, 420, 421, 422, 423, 424, 425, 426, 427, 428, 429, 430, 431, 432, 433, 434, 435, 436, 437, 438, 439, 440, 441, 442, 443, 444, 445, 446, 447, 448, 449, 450, 451, 452, 453, 454, 455, 456, 457, 458, 459, 460, 461, 462, 463, 464, 465, 466, 467, 468, 469, 470, 471, 472, 473, 474, 475, 476, 477, 478, 479, 480, 481, 482, 483, 484, 485, 486, 487, 488, 489, 490, 491, 492, 493, 494, 495, 496, 497, 498, 499, 500, 501, 502, 503, 504, 505, 506, 507, 508, 509, 510, 511, 512, 513, 514, 515, 516, 517, 518, 519, 520, 521, 522, 523, 524, 525, 526, 527, 528, 529, 530, 531, 532, 533, 534, 535, 536, 537, 538, 539, 540, 541, 542, 543, 544, 545, 546, 547, 548, 549, 550, 551, 552, 553, 554, 555, 556, 557, 558, 559, 560, 561, 562, 563, 564, 565, 566, 567, 568, 569, 570, 571, 572, 573, 574, 575, 576, 577, 578, 579, 580, 581, 582, 583, 584, 585, 586, 587, 588, 589, 590, 591, 592, 593, 594, 595, 596, 597, 598, 599, 600, 601, 602, 603, 604, 605, 606, 607, 608, 609, 610, 611, 612, 613, 614, 615, 616, 617, 618, 619, 620, 621, 622, 623, 624, 625, 626, 627, 628, 629, 630, 631, 632, 633, 634, 635, 636, 637, 638, 639, 640, 641, 642, 643, 644, 645, 646, 647, 648, 649, 650, 651, 652, 653, 654, 655, 656, 657, 658, 659, 660, 661, 662, 663, 664, 665, 666, 667, 668, 669, 670, 671, 672, 673, 674, 675, 676, 677, 678, 679, 680, 681, 682, 683, 684, 685, 686, 687, 688, 689, 690, 691, 692, 693, 694, 695, 696, 697, 698, 699, 700, 701, 702, 703, 704, 705, 706, 707, 708, 709, 710, 711, 712, 713, 714, 715, 716, 717, 718, 719, 720, 721, 722, 723, 724, 725, 726, 727, 728, 729, 730, 731, 732, 733, 734, 735, 736, 737, 738, 739, 740, 741, 742, 743, 744, 745, 746, 747, 748, 749, 750, 751, 752, 753, 754, 755, 756, 757, 758, 759, 760, 761, 762, 763, 764, 765, 766, 767, 768, 769, 770, 771, 772, 773, 774, 775, 776, 777, 778, 779, 780, 781, 782, 783, 784, 785, 786, 787, 788, 789, 790, 791, 792, 793, 794, 795, 796, 797, 798, 799, 800, 801, 802, 803, 804, 805, 806, 807, 808, 809, 810, 811, 812, 813, 814, 815, 816, 817, 818, 819, 820, 821, 822, 823, 824, 825, 826, 827, 828, 829, 830, 831, 832, 833, 834, 835, 836, 837, 838, 839, 840, 841, 842, 843, 844, 845, 846, 847, 848, 849, 850, 851, 852, 853, 854, 855, 856, 857, 858, 859, 860, 861, 862, 863, 864, 865, 866, 867, 868, 869, 870, 871, 872, 873, 874, 875, 876, 877, 878, 879, 880, 881, 882, 883, 884, 885, 886, 887, 888, 889, 890, 891, 892, 893, 894, 895, 896, 897, 898, 899, 900, 901, 902, 903, 904, 905, 906, 907, 908, 909, 910, 911, 912, 913, 914, 915, 916, 917, 918, 919, 920, 921, 922, 923, 924, 925, 926, 927, 928, 929, 930, 931, 932, 933, 934, 935, 936, 937, 938, 939, 940, 941, 942, 943, 944, 945, 946, 947, 948, 949, 950, 951, 952, 953, 954, 955, 956, 957, 958, 959, 960, 961, 962, 963, 964, 965, 966, 967, 968, 969, 970, 971, 972, 973, 974, 975, 976, 977, 978, 979, 980, 981, 982, 983, 984, 985, 986, 987, 988, 989, 990, 991, 992, 993, 994, 995, 996, 997, 998, 999, 1000.

Connell v. Connors & Co. 36 N. Y. S. R. 852, 43 N. Y. Supp. 101, 102, 103, 104, 105, 106, 107, 108, 109, 110, 111, 112, 113, 114, 115, 116, 117, 118, 119, 120, 121, 122, 123, 124, 125, 126, 127, 128, 129, 130, 131, 132, 133, 134, 135, 136, 137, 138, 139, 140, 141, 142, 143, 144, 145, 146, 147, 148, 149, 150, 151, 152, 153, 154, 155, 156, 157, 158, 159, 160, 161, 162, 163, 164, 165, 166, 167, 168, 169, 170, 171, 172, 173, 174, 175, 176, 177, 178, 179, 180, 181, 182, 183, 184, 185, 186, 187, 188, 189, 190, 191, 192, 193, 194, 195, 196, 197, 198, 199, 200, 201, 202, 203, 204, 205, 206, 207, 208, 209, 210, 211, 212, 213, 214, 215, 216, 217, 218, 219, 220, 221, 222, 223, 224, 225, 226, 227, 228, 229, 230, 231, 232, 233, 234, 235, 236, 237, 238, 239, 240, 241, 242, 243, 244, 245, 246, 247, 248, 249, 250, 251, 252, 253, 254, 255, 256, 257, 258, 259, 260, 261, 262, 263, 264, 265, 266, 267, 268, 269, 270, 271, 272, 273, 274, 275, 276, 277, 278, 279, 280, 281, 282, 283, 284, 285, 286, 287, 288, 289, 290, 291, 292, 293, 294, 295, 296, 297, 298, 299, 300, 301, 302, 303, 304, 305, 306, 307, 308, 309, 310, 311, 312, 313, 314, 315, 316, 317, 318, 319, 320, 321, 322, 323, 324, 325, 326, 327, 328, 329, 330, 331, 332, 333, 334, 335, 336, 337, 338, 339, 340, 341, 342, 343, 344, 345, 346, 347, 348, 349, 350, 351, 352, 353, 354, 355, 356, 357, 358, 359, 360, 361, 362, 363, 364, 365, 366, 367, 368, 369, 370, 371, 372, 373, 374, 375, 376, 377, 378, 379, 380, 381, 382, 383, 384, 385, 386, 387, 388, 389, 390, 391, 392, 393, 394, 395, 396, 397, 398, 399, 400, 401, 402, 403, 404, 405, 406, 407, 408, 409, 410, 411, 412, 413, 414, 415, 416, 417, 418, 419, 420, 421, 422, 423, 424, 425, 426, 427, 428, 429, 430, 431, 432, 433, 434, 435, 436, 437, 438, 439, 440, 441, 442, 443, 444, 445, 446, 447, 448, 449, 450, 451, 452, 453, 454, 455, 456, 457, 458, 459, 460, 461, 462, 463, 464, 465, 466, 467, 468, 469, 470, 471, 472, 473, 474, 475, 476, 477, 478, 479, 480, 481, 482, 483, 484, 485, 486, 487, 488, 489, 490, 491, 492, 493, 494, 495, 496, 497, 498, 499, 500, 501, 502, 503, 504, 505, 506, 507, 508, 509, 510, 511, 512, 513, 514, 515, 516, 517, 518, 519, 520, 52

1899), 171 Mass.

(122) *Inadequacy of the number of servants in a given instance.* As a carpenter is presumed to know something by experience about the weight of timber and the capacity of a certain number of men to handle it, he cannot recover for injuries received while he was helping to load a heavy piece on a car with a gang of four men, his own testimony being that he thought this number sufficient. *Reynolds v. Southern R. Co.*, (1904) 128 N. C. 387, 38 S. E. 914. A servant who had been engaged for a long time in such work was held capable of judging the number of employees necessary to perform safely the work of unloading rails from a push car. *Southern Kansas R. Co. v. Drake* (1894) 53 Kan. 1, 35 Pac. 825.

An experienced coal miner having sole charge of the ventilation of the mine, and who knows better than any other employee the character and location of wooden buildings at its entrance, and the danger of smoke being carried into the mine in case of their burning, assumes the risk of being suffocated there by. *Coal Creek Min. Co. v. Davis* (1891) 90 Tenn 711, 18 S. W. 387.

collected some cases in which the ignorance of experienced servants was held to be excusable.¹

An examination of these cases shows that, if we except such as that in subd. (a) of the note, which is preferably referred to, consideration that the accident was due to conditions which occurred, the rationale of all the decisions cited is that the particular kind of technical knowledge acquired by the servant was not of a character that the only reasonable inference was that he was competent to understand, and should have understood, the risks of

In *Heath v. Whitecast Coal & Min. Co.* (1885) 65 Iowa, 737, 23 N. W. 118, the court thought that an experienced miner was chargeable with knowledge of the want of some system to prevent the escape of cars on the grades in the entries, but reversed the judgment for the plaintiff on another ground.

(ii) *Quarries*.—In *Reed v. Stockmeyer* (1896) 20 C. C. A. 381, 34 F. S. App. 727, 74 Fed. 186, the plaintiff was called away from his regular work to split stones in a quarry by means of wedges, and, while so engaged, a piece broke off and fell upon him. The court in discussing the question whether the circumstances required a warning said: "The only possible concealed risk arose from the presence of seams in the stone in the quarry. Stockmeyer was no novice in this work. He was a man of mature age, of ordinary intelligence, and for several years had been employed in and about quarries. His testimony shows beyond contention that, for some two months during his previous employment by Reed, he had worked at channelling stone; that he knew generally of the existence of seams throughout all the quarries in the neighborhood, and that the stone was liable to break by reason of the seams during the progress of the work of channelling and of cutting out the stone. He did not, it is true, know of seams in this particular block of stone; nor could Drehoble or the defendant in error know; and for the like reason,—that it was covered with earth and dust. He, however, knew the fact that seams existed in stone throughout the quarries, and the danger therefrom, and had equal opportunity with the master and Drehoble of ascertaining the existence of seams in this particular stone, for he, with Drehoble, had been at work upon it prior to the injury. All the warning that could have been required of the master, or of the vice prin-

cipal acting for the master, was the attention of the servant to the possible existence of seams in this particular stone. But Stockmeyer knew that from his general knowledge of the character of the quarries. It was of which he was bound to take notice. No warning could make the danger manifest to him."

(jj) *Erection of buildings*.—Employer is not bound to warn an experienced workman engaged in the erection of a building, of temporary conditions incidental to construction against which such workman should upon his guard. *Beique v. F. (1897)* 160 Mass. 541, 48 N. E. 1. The fact that a roof will be in a dangerous condition up to the time when a certain piece shall have been put in place is presumed to be known to a workman familiar with the construction. *Co. v. Mollen (1895)* 60 Ill. App. 497.

(kk) *Demolition of structure*.—The cause of action is stated by a declaration framed upon the theory that in view of the intelligence to direct a laborer accustomed to such work to take down a structure fourteen years old, without having an examination made to see whether the operation could be safely performed. The presumption is that he understood what was necessary to be done in that the work might be safely executed. *Wright v. Dunlop (1893)* 20 S. C. Cas. 4th Series, 363 (demurrer sustained).

(ll) *Work on ships*.—(See also (oi), (oc), *supra*.) Handling the bowsprit at the bow of a tug is a risk assumed by a man employed to do general work on the deck, although he has never previously handled any line but that of the stern. *Williams v. Churchill (1897)* 137 Mass. 213, 50 Am. Rep. 304, also § 404, *infra*.

(a) *Railway cars; construction and operation of*.—The necessity for m-

by the conditions which caused the injury. It is evident, therefore, that these decisions are, in the last analysis, illustrations of the same class of situations as those exemplified in § 395, *ante*.

C. MINORITY AS A DIFFERENTIATING ELEMENT; SIGNIFICANCE OF.

For other cases bearing upon the extent of the knowledge which is imputed to minor servants, see §§ 249, 318, *ante*, and chapter xxv., *post*.

398. Generally.—It has already been shown (§ 291, *ante*) that, where the injured servant is a minor, the defense is not aided by the

car furnished with an ordinary coupler to one furnished with a "Miller" coupler is not such a common occurrence that even an experienced brakeman who has never observed such an occurrence can be said, as a matter of law, to know that the lateral motion of which a "Miller" coupler is capable will sometimes cause it to slip past an ordinary coupler, and thus allow the two cars to come together. *Russell v. Minneapolis & St. L. R. Co.* (1884) 32 Minn. 230, 20 N. W. 147.

(b) *Construction and operation of locomotives.*—Where an engine having too high a pilot was derailed by a collision with a horse, it was held to be for the jury to say whether the engineer, an experienced employee, understood the risk of such an eventuality. *Fordyce v. Edwards* (1895) 60 Ark. 438, 30 S. W. 758.

As a locomotive engineer is not presumed to have knowledge of defects in his engine which arise from its being constructed on wrong mechanical principles, it is not error, in an action for his death caused by the derailment of the locomotive, to refuse to charge the jury that, if they believed that the engine was topheavy or unequally balanced, that the boiler was unduly elevated above the rails, that such condition of the engine was the proximate cause of decedent's death, and that the defective condition of the engine was open to observation, they should find for defendant. *Galveston, H. & S. A. R. Co. v. Smith* (1900) 24 Tex. Civ. App. 127, 57 S. W. 999.

The fact that a locomotive wheel was open to the inspection of a fireman, and was so worn as to be more than ordinarily dangerous, will not defeat his action for an injury due to the defect, since he is not an expert, and it is a

matter of special skill to determine how much wear such a wheel will stand. *Bridges v. St. Louis, I. M. & S. R. Co.* (1879) 6 Mo. App. 189.

(c) *Weight-sustaining structures.*—Although an employee had been accustomed to work on the "traveler" containing the engine and other appliances by which the girders for an elevated railway trestle were hoisted, and may have seen that it was constantly being moved forward on the trestle before the span on which it was to rest was properly braced and bolted, he was not, as matter of law, chargeable with knowledge of the danger that, while the "traveler" was being moved forward, its weight might communicate a swaying movement to the imperfectly secured span and cause it to fall. *Davidson v. Cornell* (1892) 132 N. Y. 228, 30 N. E. 573.

A carpenter of ordinary skill is not chargeable, as matter of law, with knowledge of the fact that hemlock boards $\frac{1}{2}$ of an inch in thickness are unfit to use for the supports of a scaffold in cold wet weather, inasmuch as such timber becomes very brittle when exposed to rain and frost. *Twomey v. Swift* (1895) 163 Mass. 273, 39 N. E. 1018.

One engaged on the construction of a scaffold between piers in a river, for the erection of a bridge, though an efficient laborer, is not, as matter of law, chargeable with a comprehension of the risk of collapse of the scaffold from improper driving of the piles and bracing of the structure. *Pursley v. Edge Moor Bridge Works* (1900) 56 App. Div. 71, 67 N. Y. Supp. 749, Affirmed in (1901) 168 N. Y. 589, 60 N. E. 1119.

(d) *Masonry.*—Whether plaintiffs assumed the risk of putting terra cotta coping on a wall without having it bound together with iron ties, or were

presumption which is entertained in respect to an adult, that who enter any given employment appreciate the ordinary risks it involves. Speaking more generally and without reference to particular class of risks, it may be said that the fact of minor creases, to a greater or less extent, the probability that his faculties of observation and comprehension are more limited than those of a typical person of ordinary intelligence, whose supposed capacity of appreciating dangers furnishes the juridical standard by which existence or absence of obligatory knowledge is tested. The oblique effect of this consideration, when viewed in relation to the common law system of jury trials, is that the range of circumstances

not in the exercise of ordinary care, is a question for the jury, where there is evidence that they knew nothing about any irons, and relied entirely on the foreman, and were not familiar with the kind of terra cotta they were using, which projected more than that they had been accustomed to, although there is evidence that they were of more than ordinary skill and experience as masons, *Gibson v. Sullivan* (1895) 161 Mass. 557, 42 N. E. 110 (part of coping belt).

(c) *Machinery*.—It is for the jury to say whether a man who, before hiring himself to the defendant, had worked for about a year in the picker room of a cotton mill, but who testifies that he knew nothing of the internal construction of a picker, should have been instructed as to the risk of removing clogs of cotton from the machine while the beater was in motion,—especially where it is also in evidence that the picker boss had, in his presence, removed clogs without stopping the machinery, and had thus set an example which it might have been dangerous for the plaintiff to follow, *De Costa v. Hargreaves Mills* (1898) 170 Mass. 375, 49 N. E. 735.

A servant who is familiar with machinery as an operator, but has no technical knowledge of its properties such as is possessed by a mechanical engineer, is not chargeable with knowledge of the danger of running a grindstone at a certain high rate of speed, *Helfenstein v. Hedart* (1896) 136 Mo. 595, 36 S. W. 863. Affirmed in Banc in 136 Mo. 619, 37 S. W. 829. Affirmed on Rehearing in 136 Mo. 619, 38 S. W. 294.

Whether a workman of average intelligence, who, after working off and on for two or three months in positions which gave him an opportunity of becoming acquainted with shafting, was directed for the first time to assist in

fastening a parted belt by standing on a platform suspended beneath a revolving shaft, and holding one end of the belt so that it formed a loop around the shaft, with no special instruction other than "to hold the belt of the oil the shaft," and to "be sure and it on the plain piece of shaft,"—have been instructed that his fall do so would render the belt his "crawl" towards the pulley, or, have inferred the existence of projecting set screws in the hub of a pulley easily seen in the dim light, from knowledge of the manner in which pulleys in the shop were secured, shafting,—is a question for the jury in an action against the employer for death of the employee, caused by a fall from the platform by which he was caught between the shaft and the pulley on each side of and over the set screws. *Lintell v. Yashua Lumber Co.* (1899) 69 N. H. 628, 44 N. E. 107.

(f) *Elevators*. In a case where an employee was injured by an elevator falling to the bottom of the shaft, owing to its having been overloaded, it appeared that he was informed as to how much the elevator would carry, or that, if overloaded, ropes supporting it would slip in grooves and the elevator would fall; that he had been running a similar elevator for seven years, and knew the lie of its various parts. It was that a request for an instruction there was no sufficient evidence that the plaintiff did not assume the risk of injury he sustained was properly refused, such a risk not being within comprehension of any servant not a mechanic. *Sullivan v. Thorndike* (1893) 175 Mass. 41, 55 N. E. 17.

phor, 107 N. E.

which obligatory knowledge can be imputed, as a matter of law, is more restricted in cases where the injured person was a minor, than in those where he was of full age, at the time when the cause of action arose. In this respect the element of minority operates in precisely the same manner as that of inexperience.

The hypothesis is that a minor is inferior to an adult as respects both the ability to obtain material information and the ability to draw deductions from such information as may be obtained.¹ But an examination of the decisions collated in the next section shows very clearly that it is the latter description of inferiority which is most frequently the real differentiating factor in the case. That is to say,

in a trench where he was told to work, and having no discretion as to where he should stand, had a right to rely upon the inspection of the shoring and of the condition of the sides of the trench, made by his superiors after each blast before allowing the workmen to again enter the trench, and was not, as a matter of law, charged with the decision of the question whether there was danger, although it is also in evidence that he had worked a good deal in trenches; that he knew the nature of the soil and the depth of the trench; that blasting was done to remove rock from the bottom, and that small quantities of earth frequently fell from the sides. *Con v. Marlborough* (1895) 164 Mass. 206, 41 N. E. 238.

Whether an employee who had had considerable experience in working in trenches was guilty of negligence in working in a deep and unshored trench, the sides of which caved in upon him, was held to be a question for the jury in *Bartolomeo v. McKnight* (1901) 178 Mass. 242, 59 N. E. 304.

An experienced workman engaged in digging a ditch under the direction of a superintendent does not, as a matter of law, assume the risk from the existence of cracks in the earth causing the ditch to cave in, in the absence of evidence showing that cracks like the one in question are liable to occur in digging and in sloping trenches for sewers, and, if so, frequently, and whether he should have anticipated it. *McDon v. Westborough* (1899) 172 Mass. 504, 52 N. E. 1064.

(h) *Explosions resulting from steam generated by heated metals.*—(See also § 395, note 1, subd. (ff), ante.) In *Doe v. Brown* (1901) 64 App. Div. 89, 71 N. Y. Supp. 623, the jury was held

to be justified in finding that a case in which instructions as to the danger should have been given was established by evidence which showed that plaintiff's intestate, an experienced molder employed by defendant, after completion of his regular work, under direction of the superintendent and foreman, who were experienced molders, went to where they had arranged defective castings, and started to fill holes therein with molten metal, when an explosion occurred, caused by rust and damp in the holes, injuring intestate, who had never done or seen such work before, and did not know of the effect of rust or damp thereon.

(i) *Methods of handling heavy objects.*—Whether an employee who was injured by reason of his compliance with an order of his superintendent to get on and hold down a timber transported on a truck, with its narrow sides at the top and bottom, had had sufficient experience to enable him to comprehend the risk, is a question for the jury, where he had worked at logging a few months in each winter for several years. *Gagnon v. Sawconnet Mills* (1896) 165 Mass. 221, 43 N. E. 82.

¹An instruction in an action for personal injuries to a minor employee from a defective machine, that he was bound to see patent and obvious defects, and assumed all risks thereof, and was guilty of contributory negligence in continuing to work when he should have known of such defects in the machine, was properly refused as calling for the application to a minor's conduct of the rule applicable where minority and inexperience are not factors. *Blumenthal v. Craig* (1897) 26 C. C. A. 427, 55 U. S. App. 8, 81 Fed. 329.

the inference that the danger created by certain conditions, as the conditions themselves, was known to the servant, is less drawn where he is a minor than where he is an adult.²

The epithet "obvious," or one of its equivalents, is quite freely used to designate and characterize the risks which a minor exclusively presumed to understand.³ So, also, it is sometimes said the mere fact of infancy is of no importance, where the danger which the injury resulted were of such a kind that they were obvious to the senses of a boy as to those of a man.⁴ But in view of

"The supreme court of Missouri considered the doctrine to be well settled by the authorities "that, although the machinery, or that part of it complained of as especially dangerous, is visible, yet if, by reason of the youth and inexperience of the servant, he is not aware of the danger to which he is exposed in operating it or approaching near to it, it is the duty of the master to apprise him of the danger, if known to him." *Doebling v. Allen* (1881) 74 Mo. 13, 41 Am. Rep. 298.

In *Louisville & N. R. Co. v. Boland* (1892) 96 Ala. 626, 18 L. R. A. 260, 11 So. 667, it was said: "The duty of the master in cases of latent defects, to explain, is the same whether the servant be a minor or an intelligent adult; the difference being, however, that as great diligence in observing and comprehending the dangers is not to be expected of the young and inexperienced."

A servant may ordinarily be expected to know when his tools need repairs, but in the absence of experience and instruction a lad cannot be expected to know intuitively, or as fully as his experienced master; and it is reasonable that he should be warned against such deterioration of them as endangers his safety,—especially when it is of such a nature as requires instruction to arrest his attention or excite his apprehension. *Heavey v. Hudson River Water Power & Paper Co.* (1890) 57 Hun. 339, 10 N. Y. Supp. 585.

The mere general knowledge possessed by a minor that when he engages in a given employment he will be exposed to certain dangers which are not incident to other employments does not constitute that full appreciation of the dangers which will absolve the master of the obligation of instructing him as to the particular nature of the perils to which he will be exposed. *Nolan v. White River Lumber Co.* (1890) 76 Wis. 120, 43 N. W. 1135.

Where the danger to which the injury

was due was not necessarily and some reflection and judgment needed to appreciate the consequence of a defect, the defendant is not liable in an action by a minor servant charged that if the injured person had knowledge of the defective condition of the appliance in question there would be no recovery. *McCarraugh v. ...* (1890) 120 N. Y. 526, 24 N. E. 801 (effective car). In a case where a boy of eighteen was injured by an iron guard rail, it was held improper to charge the jury that the plaintiff had knowledge of the fact that there was a defect in the guard rail, the defendant blocking was knowledge of the danger. *Davis v. St. Louis, S. R. Co.* (1890) 53 Ark. 117, 7 S. W. 283, 13 S. W. 801.

The evidence of the plaintiff—of seventeen working as a brakeman—that he was not informed of the incident to the business, and of the plaintiff that he did not explain the danger to the plaintiff, was sufficient to sustain a finding that the employment was dangerous. *Texas Ft. S. R. Co. v. Preacher* (1900) 179 U. S. 1, 16 S. W. 593, 59 S. W. 593.

In the following cases the servant was held chargeable with knowledge of risks described by the words in brackets: *Williamson v. Sheldon Mfg. Co.* (1893) 66 Vt. 327, 29 Atl. 689 (latent); *Crowley v. Pacific Mills* (1888) 148 Mass. 228, 19 N. E. 344 (obvious); *Dorsey v. Sargy* (1892) 157 N. Y. 418, 32 N. E. 654 (obvious); *Baugh v. Gutta Percha & Rubber Mfg. Co.* (1893) 113 N. Y. 540, 21 N. E. 717 (obvious); *Orr* (1893) 140 N. Y. 450, 35 N. E. 176 (plain and obvious); *Toledo, S. W. R. Co. v. Trimble* (1893) 179 U. S. 333, 35 N. E. 716 (obvious); *Fones v. Phillips* (1882) 17, 43 Am. Rep. 264 (latent).

O'Keefe v. National Folding Paper Co. (1895) 66 Conn. 38, 587.

that the capacity of minors is a variable quantity (compare next section), it is manifest that, in the present connection, these vague epithets are even less serviceable for purposes of differentiation than they are in cases where the injured person is an adult.

399. Cases illustrating the capacity for appreciating dangers, which is imputed to minor servants.—If the mental and physical capacity of minors for ascertaining dangerous conditions and estimating the extent to which they affect his personal safety could be assumed to be, in the language of mathematics, a constant quantity, as it is, theoretically at all events, in the case of adults, it would be feasible and proper to arrange the authorities with reference to the predicaments indicated by the section headings used under the preceding subtitle. But as the significance attributed to minority varies considerably according to the actual age of the servant, and it is therefore necessary to take into account many degrees both of natural intelligence and of acquired knowledge, conjoined in an endless series of different combinations, classification on these lines is manifestly an impossibility. The difficulties of arrangement are still further augmented by the fact that, speaking generally, minor servants are less able than adults to take advantage of the opportunities of observation which they may have obtained in the course of their employment,—though it must be admitted that there is little or nothing in the cases which bears upon this precise aspect of their obligatory knowledge. Upon the whole, therefore, it would seem that the only course open to a commentator is to exhibit the views of the courts by bringing together in a single note all the decisions which involve the question whether or not the servant was chargeable with an appreciation of the risk to which his injury was due. In doing this it will be necessary to anticipate to some extent the doctrines illustrated in the two following subtitles. For the purpose of facilitating comparison, the decisions are distributed into groups similar to those found in the other extended notes to this chapter.¹

¹(a) *Defective railway tracks.*—The risk of the derailment of a construction train operating on an unfinished track is deemed to be appreciated by a youth nineteen years of age who engages in the work of delivering ties. *Evansville & R. R. Co. v. Henderson* (1893) 134 Ind. 636, 33 N. E. 1021.

A verdict has been sustained which held the company liable for an omission to instruct a youth of eighteen years who had been injured, after working four months as a brakeman, through having his foot caught in an unblocked

guard rail. *Davis v. St. Louis, I. M. & S. R. Co.* (1890) 53 Ark. 117, 7 L. R. A. 283, 13 S. W. 801. The court said: "Service about the unblocked rails was attended with danger, and the knowledge of the fact that the rails were unblocked did not necessarily imply knowledge of the attendant danger. Knowledge of the danger was itself a question of fact."

(b) *Obstructions above railway tracks.*—A minor brakeman who had passed under an overhead bridge daily for three weeks before he was struck by it was

400. Effect of cases discussed.—The only general principle which seems possible to extract from the decisions in which an appren-

held to have assumed the risk. *Bevitt v. Pacific R. Co.* (1872) 50 Mo. 302.

The question whether a servant who was struck by a steam pipe extending over a track while he was standing on the top of a car should have appreciated the risk is for the jury, where the evidence is that he was about sixteen years old, and had been hired about six months before the accident to serve as errand boy, and to act as brakeman, if he had time, on cars switched to the defendant's buildings; that he had never before worked round railway station or cars; and that he had passed this pipe about a dozen times, but never when he was on the top of a car. *Ream v. United States Leather Co.* (1900) 107 Wis. 305, 83 N. W. 473.

(c) *Construction and operation of railroad cars.* In several cases it has been held that minors hiring themselves out to do such work must be taken to appreciate the risks incident to coupling cars under ordinary circumstances. See § 291, note (5), *ante*.

A brakeman over twenty years of age who has been working in a yard for one year, and has been engaged in switching for two months, is presumed to understand all the ordinary risks of the service, such as that of coupling cars over the ends of which iron rails project, where it is customary for rails to so project. *McIntosh v. Missouri P. R. Co.* (1894) 58 Mo. App. 281. It has been held that there is no duty to instruct a minor of sixteen when he is assigned to the new duty of catching and climbing on moving cars. *Winthampton v. Go-forth* (1899) 124 Ala. 656, 26 So. 531.

In *Yeager v. Burlington, C. R. & N. R. Co.* (1894) 93 Iowa, 1, 61 N. W. 215, a verdict was held to have been properly directed for the defendant, where an uninstructed youth of nineteen years who, to the knowledge of the company's officers, had had no previous experience, was injured on the day he began work, while attempting to mount a moving car by the sideladder.

It is error to direct a verdict for a defendant railway company, where a youth who has received no instruction is injured on the day he begins work, while engaged in the performance of such a dangerous duty as the making of a "kicking switch." *Williams v. South &*

North Ala. R. Co. (1890) 91 Ala. So. 77.

In an action by an employee six years old for personal injuries, while coupling cars, it is a question for the jury whether the service is dangerous and its danger so obscure that the plaintiff's information so immature, as to render it to give him instructions. *Woods v. P. R. Co.* (1894) 94 Cal. 26 S. E. 763. "The report does not show what experience the plaintiff had. Whether a lad seventeen years old employed as a brakeman should be instructed in the duty of coupling is a question for the jury." *Starr v. West R. Co.* (1889) 84 Ga. 152, 543. A jury is justified in finding it was negligent to omit to give instruction where a minor of seventeen employed as a messenger in a railway was ordered to couple cars. *Todd v. Ft. S. R. Co.* (1890) 109 Mo. Civ. App. 59 S. W. 593. A jury erred in finding that a boy of ten who had been employed to put up vegetable crates, and was then ordered to the work of pushing cars on a side track, should have been instructed as to the dangers incident to the kind of work. *Camp v. Hall* (1901) Fla. 535, 22 So. 792.

There is no error in permitting a minor brakeman to testify that the time of injury complained of, he never observed that cars or engines constructed with double doors. *See Louisville, V. L. & C. R. Co. v. L.* (1886) 110 Ind. 18, 9 N. E. 594.

(d) *Push cars.*—In *York v. City, C. & S. P. Co.* (1893) 117 N. 22 S. W. 1081, the duty of going down a grade to fetch a car was pronounced to be one of the simplest character, and the trial was held to have rightly directed a verdict for the defendant, where a boy of ten years of age was injured while performing that duty, although the accident occurred on the same day that he began work.

(e) *Weight-sustaining structure.*—An employee sixteen years old cannot be said, as a matter of law, to know the peril to which he is exposed when sent up to a platform on which the boards liable to turn over, where

principle, where
it appreciates

at the risk has been imputed, as a matter of law, to minor servants is

he v. California Horseshoe Co.* (1894)
106 Cal. 77, 38 Pac. 535. See also next
subdivision.

(4) *Dangerous gangways*.—A servant
over seventeen years old and of ordinary
intelligence who slips on a slippery
plank which surrounds a vat, and falls
into it, while he is lowering certain ma-
terials into the coloring fluid, cannot re-
cover on the ground that he was not
instructed as to the dangers of his work.
Perry v. Northhammick Co. (1900) 91
Mo. 61, 46 Atl. 806.

Whether a boy sixteen years old who
has been engaged in the same work for
several months can recover for injuries
caused by his falling into a mill race,
while he was propelling a rickety wheel
barrow across a narrow foot bridge, was
held to be a question for the jury in
Lubke v. Berlin Mach. Works (1894) 88
Wis. 442, 60 N. W. 741. But in a later
case involving somewhat similar circum-
stances it was held that a servant eight-
een years old, of ordinary intelligence,
assumed the risk of injury from wheel-
ing dirt over a timber 10 inches wide and
10 or 12 inches from the ground, in a
wheelbarrow whose axle did not run
true, his own testimony being that he
knew that, if he lost his balance, and the
barrow ran off, he was liable to fall.
Casey v. Chicago, St. P. M. & O. R. Co.
(1897), 108 S. E. 113, 62 N. W. 624 (no
duty to be instructed). The earlier case was
referred to recently only for the gen-
eral principle shown in it, no attempt
being made to reconcile the decisions.

(5) *Unusual danger*.—A girl sixteen years old,
of reasonable intelligence and judgment
for one of her age, who is entirely fa-
miliar with the conditions, as a result
of six months' work for the defendant,
assumes the risk of continuing in service
as a cook in a kitchen, the floor of which
is covered with pieces of board placed
over steam pipes in the form of an in-
verted V, extending 5 inches from the
floor, as the danger of falling over such
an obstacle is open and manifest. *Hers-
old v. Pfister* (1896) 92 Wis. 417, 66 N.
W. 355.

(h) *Slippery surfaces*.—A minor who
for four weeks has been working on a
block 14 inches square and 5 inches in
thickness, placed on a wet, greasy, and
slippery floor by himself, cannot recover

risk and danger of the slipping of the
block on the greasy floor, the result be-
ing that his hand is involuntarily
thrown into the cylinders of a chopping
machine. *Cutlery Packing Co. v. Har-
ran* (1904), 141 R. A. 258, 45 C. C. A.
545, 106 Fed. 645.

In *Williamson v. Sheldon Marble Co.*
(1893) 66 Vt. 427, 29 Atl. 609, a verdict
was held to have been rightly directed
for the defendant where a boy of sixteen
years' experience, not stated, had been
killed through the "apparent" danger of
slipping on a sheet of ice which had
formed on a rock in a quarry. See also
subd. (j), *infra*.

(i) *Saws*.—See also, subd. (x),
infra. When a servant who was with-
in one month and a half of twenty-one
years of age had worked a little with a
circular saw before entering the defend-
ant's employment, and the accident hap-
pened on the tenth day after he began
work, it was held that he could not re-
cover on the theory that he ought to
have been instructed, as the danger that
the hand of a workman pressing against
a circular saw or stick which, as he
knows, is liable to be thrown up and
back, will be carried against the saw,
is obvious. *Watson v. Steel Edge Stamp-
ing & Retention Co.* (1895), 163 Mass.
315, 39 N. E. 1039. A youth nineteen
years of age who had for three years
been operating machinery, and had been
running a certain split saw for three
days when his hand was injured by com-
ing into contact with it, is presumed to
have appreciated all the ordinary dan-
gers accompanying its use, and cannot
recover damages. *Prentiss v. Kent Fur-
niture Wkg. Co.* (1886) 63 Mich. 478, 39
N. W. 109. The case should be taken
from the jury where a youth eighteen
years old, who had acquired some knowl-
edge of mechanics during his employ-
ment in a pulp mill and his apprentice-
ship to a plumber, is seeking to recover
on the ground that he should have been
instructed as to the danger of allowing
his fingers to come in contact with a
buzz planer. Such a danger is obvious
to a much younger boy. *Mackin v.*
Thatcher Refrigerator Co. (1894) 100
Mich. 276, 58 N. W. 999. The danger of
contact with a circular saw over which
he has to reach in the course of his em-
ployment is assumed by a lad eighteen
years old who had been instructed how

minor who has reached years of discretion is bound to take notice of the ordinary operation of familiar natural laws, and to govern

himself to do the work, and had worked three years in other factories. *Schlurmann v. Hammond Tapermill Co.* (1895) 11 Misc. 546, 32 N. Y. Supp. 748. A boy of sixteen who has had sufficient experience at other factories to enable him to understand the working of a buzzsaw cannot recover for an injury to his hand on the ground that he should have been instructed as to its use. *Ogley v. Miles*, (1893) 139 N. Y. 458, 34 N. E. 1059. A youth of seventeen years who is injured because he attempts to adjust a piece of rubber in a vise without moving it back from a saw, where the danger is perfectly obvious and he has been warned to look out for his fingers, is guilty of such contributory negligence as to prevent recovery, even though he has not been fully warned of the danger. *Burke v. Thomson Meter Co.* (1892) 45 N. Y. S. R. 272, 18 N. Y. Supp. 636. In a case where a youth eighteen years old who had held himself out as being competent to do ordinary work, and had been for three months engaged in piling wood in a sawmill, was injured on the first day that he was set to work upon a circular saw, owing to the fact that the want of two teeth caused it to jump, it was held that he could not recover. *Michael v. Stanley* (1892) 75 Md. 464, 23 Atl. 1694. A boy fifteen years old who, after working four months in the same room with a certain saw, stumbles and comes into contact with it, while carrying pieces of timber, cannot recover. *Journeaux v. E. H. Stafford Co.* (1899) 122 Mich. 396, 81 N. W. 259. The danger of sawing a plank with a circular saw is presumed to be appreciated by a boy of fourteen, where he has used it three or four times, and admits that he knew that, if his hands touched it, they would be injured. *Hettehen v. Chipmunk* (1898) 87 Md. 729, 41 Atl. 65.

Whether or not failure to warn a boy of nineteen employed in a sawmill, of the danger from a circular saw set in a table over which he was required to throw blocks of wood, was such negligence as to render the employer liable for the loss of the boy's fingers from coming in contact with the saw, is for the jury upon evidence that the saw extended above the top of the table about 3 inches, and was partially covered with sawdust, and ran very swiftly, being scarcely visible, and that throwing things over the table when the saw was

running was "pretty risky" and had not previously performed such work, although he had some knowledge of the existence of the saw and had been considerable experience in working in mills. *Lyons v. Sawyer & L. Lumber Co.* (1896) 94 Wis. 137, 68 N. W. 200. Verdict finding the foreman of the defendant negligent in omitting to warn a youth of nineteen suddenly called to fill the place of the regular operator as to the dangers of an "olger" saw, not be disturbed, although it appears that he had been working for a considerable time close to the saw, in turn and carry off the lumber which trimmed by it. *James v. Rapids Lumber Co.* (1898) 50 La. Ann. 717, 44 A. 33, 23 So. 160. In this case, it should be noted that the court expressly declared that the plaintiff's minority was not an element in the conclusion arrived at, as he was apparently a full-grown man, and there was no evidence to show that the defendant was aware of his minority. Where a youth seven years old who has had an experience of several years in sawmill work is set to a day and a half after beginning to use a circular saw in a manner which he declares to be unfamiliar, it is for the jury to say whether he knew or ought to have known of the particular danger incident to such use. *Hanson v. Ludlow Lumber Co.* (1894) 162 Mass. 187, 38 N. E. 101. A verdict against the employer was allowed to stand, where he had instructed as to the dangers of a circular saw a youth of seventeen years who had no experience in the use of such machine. *Smith v. Irwin* (1889) 57 J. L. 508, 18 Atl. 852. An inexperienced employee of seventeen does not, as a matter of law, understand the risk of using a "bolting saw" without a carriage attachment, after using it three weeks without such attachment, where he had been on it at any time while he was the same. *Oluscheid v. Nelson Lumber Co.* (1896) 66 Minn. 61, 68 N. W. 605.

Whether an employer is negligent in failing to instruct a boy sixteen years of age unfamiliar with machinery, as to the dangers of removing a tub placed underneath a rapidly revolving saw, to catch the scraps and sawdust which fall from it is a question for the jury. *Wright v. Bousfield* (1896) 65 Minn. 355, 68 N. W. 45. An inexperienced boy of

working machi-

N. E. 587. A boy fourteen years of age, injured on the first day he went to work, by the contact of his hand with a buzz saw, was held unable to recover in *McLean v. Hathorn* (1895) 12 Misc. 214, 33 N. Y. Supp. 263. But *quære* as to the correctness of this case.

Putting a belt on a pulley within a few inches of a rapidly revolving saw is a work of too great hazard to require any servant to do, however skillful or experienced, and the danger is not one which a minor can be said to appreciate as such a sense as to charge him with assuming the responsibility for an injury received in obeying an order to fasten a belt under such circumstances.

Nelson Mfg. Co. v. Stoltzenburg (1895) 50 Ill. App. 628.

(j) *Planes and other cutting machinery*.—(See also subd. (xi), *infra*.) A youth nineteen years old who has been engaged for three weeks in the work of carrying off dressed lumber after it has passed through a planer cannot recover for an injury to his hand, resulting from its contact with the knives, while he is putting a hood in position, *Crown v. Orr* (1893) 140 N. Y. 450, 35 N. E. 648.

Reversing (1893) 71 Ill. 613, 24 N. Y. Supp. 620.

A youth seventeen years of age who has worked several years in a carriage factory and two months on a planer is presumed to appreciate the danger that, in attempting to walk on boards piled alongside the planer, he will slip, and so fall upon the machine, *Adel v. Ferguson* (1889) 25 N. Y. S. R. 960, 5 N. Y. Supp. 774, affirmed in (1889) 117 N. Y. 658, 22 N. E. 1134. In *Palmer v. Harrison* (1885) 57 Mich. 182, 23 N. W. 624, a case of injury to a boy of sixteen, caused by contact of his hand with revolving knives of a jointer, it was held that a verdict for the defendant had rightly been directed, for the reason that no notice or warning could have helped him. The evidence showed that he had worked in the shop where the jointer was located for two weeks previous to receiving his injury, and had seen the machine in which the accident occurred every day during the period, both stand-

ing still and when in use, and that he knew all about its location and use, and worked about it every day. He himself testified that he knew the jointer was there; that, if he came into contact with it he would be injured; and that if he had looked at it he would have known whether it was running or not.

A boy of fifteen years who has been engaged for several weeks in pushing wooden rails against revolving knives is charged with knowledge of the danger of permitting his hand to come under them, *Baker Mfg. Co. v. Erickson* (1893) 5 C. C. A. 344, 42 F. S. App. 260, 55 Fed. 913.

A verdict in favor of a minor of eighteen who is injured in handling a "pony planer," in the use of which he has had no practical experience except such as he has acquired on a few previous occasions during the period of two months which has elapsed since he entered the employment, will not be set aside, *Terrell v. Grant's Harbor Commercial Co.* (1897) 115 Cal. 517, 17 Pac. 361.

In *Twiss v. Phillips* (1882) 39 Ark. 17, 13 Am. Rep. 264, the court reasoned upon the assumption that it was for the jury to say whether recovery could be had by a boy of fourteen years who had been instructed as to the proper manner of operating a planer, but was injured on the third day after he began work, through allowing his hand to come into contact with the knives while he was removing chips, a position which required him to work with his back to the machine, and which involved a danger as to which he had received no caution. In *Adams v. Clamer* (1893) 4 Mary. (Del.) 80, 36 Atl. 4104, it was left to the jury to say whether the manipulation of a pony planer with knives running at the rate of 3,500 to 4,500 revolutions a minute involved dangers which were latent as respects a youth sixteen years of age, after two and a half months of experience in the use of it.

The danger of permitting one's finger to be caught in a tuft of hay about to pass between the knives of a hay cutter is perfectly apparent to a servant of twenty years, without instruction, even though he has never done any work of the same description before the day when the injury is received, *Stuart v. West End Street R. Co.* (1895) 163 Mass. 391, 40 N. E. 180.

A comprehension of the danger of having his fingers caught between the cylinders of a "skiving machine," and thus drawn against the knife, was imputed to a boy of sixteen who had been told that

if he get his fingers in he would be hurt, and that he must look out about his fingers. *Pratt v. Prouty* (1890) 153 Mass. 333, 26 N. E. 1002. See also subd. (x), infra.

(k) *Cogwheels and gears*. (See also subd. (x), infra.) In a case where a youth of seventeen had been engaged for one month in carrying away the finished products of a machine, and was injured the first day he was set to work on the machine itself by some uncovered gearing, it was held that the risk was apparent. *Cunningham v. Bath Iron Works* (1899) 92 Me. 501, 13 ME 166.

A verdict has been held to be rightly directed for the defendant where a servant sixteen years old was injured by coming into contact with moving cogwheels the same day that he began work. *Dunaway v. Sawyer* (1892) 157 Mass. 418, 32 N. E. 654.

A paper cutter in defendant's mill injured by being caught in an unguarded gearing in a machine was held unable to recover, where the evidence was that he had worked in another paper mill for two years, five weeks of which he was employed as a paper cutter; that he was sixteen years old, and understood the danger of working around machinery; and that he was caught in the machine while changing his clothes, preparatory to going home. *Hobbs v. Thiboutot* (1900) 107 Wis. 216, 83 N. W. 360.

An employee sixteen years old who has worked sufficiently long to become acquainted with the conditions cannot recover for an injury caused by his slipping from a box on which he was standing, and so coming into contact with a cogwheel. *Letourbault v. Elsas Paper Co.* (1900) 30 Misc. 138, 62 N. Y. Supp. 597.

It has been held that a boy fifteen years of age who undertook to operate a machine having unguarded cogwheels assumed the resulting risk, where he had worked for several months in the same room with the machine, but was injured, owing to the absence of the guards, two days after he had been transferred to the work of feeding it. *E. S. Higgins Carpet Co. v. O'Keefe* (1897) 25 C. C. A. 220, 51 U. S. App. 1, 79 Fed. 300. No specific reference was made by the court to the experience obtained before the transfer to the new work, and, apparently, recovery was denied independently of this element.

An employer may properly assume that even a boy of fourteen years need not be told that, if he puts his fingers into gearing, they will be crushed.

S. Lee v. Sagamore Mill Co. (1890) Mass. 476, 29 N. E. 73.

In a case where an unmastered thirteen years old was injured in the e months' work by placing alone the one into contact with cogwheels, it was held that a verdict should not be returned. *Whitely v. White and Co.* (1890) 18 Hun 381, 12 N. Y. 188, (1892) 13 N. Y. 641, 30 N. Y.

A boy twelve years old who was working at a machine for two years is injured by contact with a cogwheel while putting into place a cogwheel belonging to the machine, carrying on the theory that he should be instructed as to the dangers of the machine. *Buckley v. Galt Paper Mill v. Hagg Co.* (1889) 113 N. Y. N. E. 717.

In another case it was held that negligence was predicable of the defendant in instructing a boy twelve years old after he had worked for two months in the room with the cogwheels. *Merchants' Wood Co.* (1888) Mass. 482, 15 N. E. 579. The having been set aside there was a trial upon a somewhat different theory, and another verdict for the plaintiff rendered. This was sustained. Mass. 452, 6 L. R. A. 733, 23 S. 230 on the ground that the verdict for the jury, because the master was aware that the boy possessed below average intelligence, and had not an errand requiring haste, to a lighted place, where the cogwheel was likely to catch his clothes, and the plaintiff, although he had worked in the room which contained the cogwheels, and was undoubtedly familiar with the machine, had never been near them as to have had occasion to consider the risk of getting clothing caught in it.

A female employee of less than twenty-one years (preteen age) who had been working "some time" on a machine (not specified, but apparently for cutting), was held to understand the risk of contact with it. *O'Keefe v. English Paper Co.* (1890) 25 C. C. A. 217, 6 N. Y. Supp. 501, 13 N. Y. 189, 119 N. Y. 331, 23 N. E. 1.

In *Rumford v. Delworth P. Co.* (1890) 131 Pa. 509, 19 ME 315, the plaintiff was a lad of about seven years, having very little acquaintance with the business or its dangers, who went into the employ of the defendant on Tuesday, and was injured on

ts danger
If the de
injured on Friday

at the same week. He was employed as a drag-down, but was found while performing the duties of a roller in opening and closing the gate between the first and second pairs of rollers. The cog wheels by which the rollers were moved were covered along the whole length of the train, except at the point over which Rimmel had to reach to open and close the gate. If they had been covered at that point the accident could not have happened. The court said: "In view of the youth and want of experience in the business on the part of Rimmel, it was necessarily a position for the jury whether his employer had sufficiently warned and instructed him about the dangers of the employment, and how to avoid them, or had done all that was reasonably necessary to protect him from injury." In *Coombs v. New Bedford Cordage Co.*, 6809, 102 Mass., 72, 3 Am. Rep. 506, it was held proper, and a master negligent in not instructing a boy of fourteen, injured the second day after he began work in a very noisy room, his duties requiring him to break strands of hemp at intervals, an operation which brought his hands very close to the cogs of another machine very close to the one he was working with. According to the court in *Crook v. Merchants' Warehouse Co.*, 1888, 116 Mass., 182, 15 N. E. 579, the controlling factor in this case was the short time the servant had been at work.

In *Nadon v. White River Lumber Co.*, 1890, 76 Wis., 120, 43 N. W. 1135, a verdict for the plaintiff was upheld in a case where the injury was received only five days after the servant began work, so the ground that the owner of a saw-mill who hires an inexperienced youth nineteen years of age to do work which requires him to keep moving along a narrow alley way only 19 inches in width, with revolving cogwheels behind him, is bound to warn him as to the nature of the perils to which he will be exposed.

A boy twelve years of age who is injured by an uncovered cogwheel, while attempting to replace a roller in a flax-scutching machine, should not be non-suited, where he testifies that he had never worked round the machine before the day of the accident, that he received no instructions as to the proper manner of handling it, and that, having been suddenly called upon to put the roller in its place, he did this in the same way that he had seen his fellow servants do it. *Young v. Keith* (1873) 34 L. C. 12, B. 212.

The question about a boy ten years of age who was injured by being caught in an uncovered cogwheel after having worked for three weeks had a substantial understanding of the nature of the employment to which he was bound to be a question for the jury in *Bailey v. South's Mill Co.*, 1861, 20 Conn. 478.

Evidence that a boy was coming over the box of a wheel on a boy sixteen years of age, occurring when his hand was drawn into the wheel is admissible as part of the evidence, and as a fact to be considered in determining whether the boy was negligent, and, therefore assumed, the risk, and whether the master was negligent in not guarding the wheel and in not warning the plaintiff of danger. *Kearney v. Maxwell Lumber Co.*, 1870, 50 Wis., 647, 66 N. W. 374.

In a case where a youth sixteen years old, on the twelfth day after beginning to work again in a mill in which he had once before been employed, caught his clothes in cogs while he was removing slabs, it was held that he could show the changes made in the arrangements of the mill as bearing upon his want of familiarity with them when hurt. *Hart v. Carter & S. Lumber Co.*, 1883, 51 Mich., 272, 16 N. W. 344.

The following instructions formulated in *Coombs v. New Bedford Cordage Co.*, 1890, 102 Mass., 672, 3 Am. Rep. 506, were expressly approved in *Sullivan v. Latta Mill Co.*, 1873, 113 Mass., 396, as "carefully guarding the rights of employers and employees," in a case involving facts similar to *Crook v. Merchants' Warehouse Co.* Upon the new trial of the *Crook* case, the jury should be instructed that the defendants had the best right to have their machinery without fencing or boxing it, unless by so doing they exposed persons in their employment, or other persons who came upon the premises by their procurement or invitation, to danger of which they gave no sufficient notice; that if, by the fact that the cogs were in sight, and the danger from them apparent, the jury should be satisfied that the plaintiff had reasonable notice of the peril to which he was exposed, and, notwithstanding it, chose to undertake the employment which exposed him to it, he cannot recover; but that if, on the other hand, they should be satisfied that the defendants knew or had reason to know the peril to which he would be exposed, and did not give him any sufficient or reasonable notice of it, and if he, without any negligence on his own part, from inexperience or reliance upon the direc-

tions given him, failed to perceive or appreciate the risk, and was injured in consequence, they would be responsible to him in this action."

(1) *Mangles and ironing machines.*—(See also subd. (x), *infra*.) There is no duty to warn an inexperienced girl seventeen years of age as to the danger of injuring her hands by bringing them into contact with the rollers of a mangle. *O'Hare v. Keeler* (1897) 22 App. Div. 191, 48 N. Y. Supp. 376 (injured after working about one hour). A girl seventeen years old, of ordinary intelligence, employed to work at a mangle, is chargeable with a knowledge of the risk of her hand being caught between the heated cylinders of the mangle. *Greef Bros. v. Brown* (1898) 7 Kan. App. 394, 51 Pac. 926 (accident occurred two days after she began work). Recovery has been denied to a girl sixteen years of age whose hand was caught between the rollers of a mangle after she had been working two weeks in the laundry, and for three or four days on the mangle. *Id.* A girl sixteen years of age who has been working for two weeks in a laundry, and for three days at a mangle, cannot recover for injuries caused by catching her hand in the rollers of the mangle. *Jones v. Roberts* (1894) 57 Ill. App. 56. Since the wrinkling of the canvas which surrounds the rollers of a mangle is a constantly recurring obvious defect connected with the daily use of the machine, a female operative sixteen years old who has worked six months in the laundry and six weeks on the mangle assumes the risk of having her hand drawn between the rollers as a result of that wrinkling. *Walsh v. Commercial Steam Laundry Co.* (1895) 11 Misc. 3, 31 N. Y. Supp. 833. A girl fifteen years old and of ordinary intelligence is presumed, after ten days' work with the machine, to understand the risk of having her hand caught between the roller and jacket of a mangle operated by her. *Groth v. Thomann* (1901) 110 Wis. 488, 86 N. W. 178.

The fact that a girl fourteen years old, who is injured by having her hand drawn between the ironing rollers in a laundry, has received no instructions as to the dangers of the work, will not entitle her to recover, where, at the time of the accident, she had been feeding the machine for a period of six weeks. *Hickey v. Taaffe* (1887) 105 N. Y. 26, 12 N. E. 286 (held that plaintiff should have been nonsuited).

A girl of fourteen who had worked in a laundry ten days, but was injured the

first day she was assigned to the machine in question, was not, as matter of fact, guilty of contributory negligence in not understanding that a piece of canvas which had been partially torn loose from a mangle which she was feeding was liable to catch her hand and draw it into the machine, where the evidence showed that the injury was due to the want of repairs, and not to the ordinary negligence incident to the operation of the machine. *Fitzhenry v. Lamson* (1897) 132 Mass. 51, 45 N. Y. Supp. 875.

It is for the jury to say whether a girl of fourteen years, hired to feed paper in a mangle in a paper mill, should have been instructed how to perform the duty of carrying off the paper, to which she was transferred two weeks after entering the service. *Allen v. ...* (1898) 115 Mich. 484, 73 N. W. 55. In another case a minor eighteen years of age who had been working round the rollers of a mangle for three months was held chargeable with an appreciation of the risk of having his hand drawn between the rollers to which he was feeding sheets. *Gordon v. Reynolds's Carpet Co.* (1888) 47 Ill. 278.

Whether instruction should have been given is a question for the jury. In an action by an inexperienced girl of fifteen years of age, who was away from the particular branch of employment in which she was employed and had her hands caught in the rollers of an ironing machine, on the ground that she operated it. *Coffey v. ...* (1897) 21 Misc. 663, 47 N. Y. Supp. 1105. Distinguishing *Hickey v. ...* (1887) 105 N. Y. 26, 12 N. E. 286, on the ground that the servant had acquired some experience.

The case is for the jury where an experienced girl fifteen years of age was put at work passing linen through the rollers of a machine which had no guard before it to prevent the operator's hand from getting caught, and was not guarded at the time of the accident, was given no warning, and was posing that the rollers were too close together to permit her hands to get between, allowed one of her hands to get caught. *Levy v. Clark* (1899) 90 Atl. 146, 44 Atl. 990.

In *Grizzle v. Frost* (1863) 3 East, 622, where a girl of sixteen was injured by the rollers of a machine for calendering, Cockburn, Ch. J., left the determination of the employer's responsibility to the jury, charging them as follows: "I am of opinion that if the owners of the dangerous machinery, by their fore-

employ a young person about it quite inexperienced in its use, either without proper directions as to its use, or with directions which are improper and which are likely to lead to danger of which the young person is not aware, and of which they are aware—as it is their duty to take reasonable care to avert such danger, they are responsible for any injury which may ensue from the use of such machinery.” This ruling was never questioned in any court of review.

(m) *Other machinery with revolving rollers*.—There is no duty to instruct a youth nineteen years old and of ordinary intelligence as to the obvious danger of getting his fingers squeezed while feeding scrap rubber into a machine containing two revolving cylinders about $\frac{1}{8}$ to $\frac{3}{4}$ of an inch apart. *Sullivan v. Simpler Electrical Co.* (1901) 178 Mass. 35, 59 N. E. 645, holding that the fact of the master's vice principal having told the boy that he might use his fingers to press down the rubber did not relieve him of his duty to safeguard himself.

After having operated a kneading machine for three years, a youth of eighteen is presumed to appreciate the danger of being injured by slipping and falling against the rollers. *McCarthy v. Mulgreave* (1898) 107 Iowa, 76, 77 N. W. 527.

A servant nineteen years old is presumed to appreciate, without instruction, a danger so “open to the senses” as that of putting his hand between the rollers used to flatten boiler-plates, where, although he has only just begun to operate the machine, he has been working in sight of it for two years. *Burger v. St. Paul, M. & M. R. Co.* (1888) 39 Minn. 78, 38 N. W. 814 (verdict for plaintiff set aside).

In a case where a boy on which an inexperienced boy of fourteen years was standing while he fed a “cake-crusher” slipped or turned under him, and the arm which he threw out to save himself was caught in the rollers, it was held to be a question for the jury whether he appreciated the danger, and failed to use the caution appropriate to the circumstances. *Emma Cotton Seed Oil Co. v. Hale* (1892) 56 Ark. 232, 19 S. W. 600.

A verdict for the plaintiff, a youth of twenty years, was set aside in *Auger v. Kauffman Mill Co.* (1895) 131 Mo. 241, 33 S. W. 428, where, after working for six months near machinery with moving rollers, he allowed his hand to be drawn between them. The court said: “It would be a thing of folly to say that de-

fendant was negligent because he failed to tell the plaintiff, a young man twenty years of age, that the revolving cylinders or rollers into which he had been feeding wheat and sweepings from the mill floor, for six months, in order that it might be pulverized to flour, would be dangerous to the hands if they came in contact with them.

A boy eighteen years old is presumed to understand, without any special skill or experience, that if he gets his fingers into the rolls of a straw cutter they will be caught thereby, and that, if they are caught, they will be injured. *Roth v. S. E. Barrett Mfg. Co.* (1897) 96 Wis. 615, 71 N. W. 1034.

Where a boy of sixteen who was feeding corn stalks to the rollers of a machine for extracting the pith put his hand between two sets of rollers in an attempt to remove a stalk that had jammed, the result being that his hand was crushed, it was held that the failure to warn him of the danger of so doing was not negligence. *Marshall Co. v. Johnson* (1899) 89 Ill. App. 100.

A boy fifteen years of age who has worked for three years with a machine with revolving iron rollers placed within $\frac{3}{4}$ of an inch of each other is presumed to appreciate the risk incident to its use. *McCarthy v. Mulgreave* (1898) 107 Iowa, 76, 77 N. W. 527.

A master is not bound to give an intelligent boy of fifteen years warning that his hand, if inserted too far between a belt of felting and a hot cylinder over which it runs, will be drawn in and brought into contact with the cylinder. *Larveck v. Franklin Paper Co.* (1897) 169 Mass. 313, 47 N. E. 1000.

It is not negligence to omit telling a seventeen-year old boy of more than usual enterprise and intelligence, employed on a “drier” machine five or six weeks, who understands the danger of getting his hands drawn in the machine, knows that if they are drawn in they will be burned, and that cloth of various sizes frequently passes through the machine, in which he knows that there are tears of various sizes and shapes, that there are liable to be holes also in the cloth, although he testifies that he had seen no holes in the cloth, and that his hand was caught in a hole and drawn into the machine, where others testify that the holes frequently occur. *Shine v. Cocheco Mfg. Co.* (1899) 173 Mass. 558, 54 N. E. 245.

A master is, as a matter of law, free from negligence in failing to give in-

structions to a youth who has worked for six months on a machine substantially the same as that which causes the injury, and nearly one month on the latter, in reference to the danger of injury from allowing his hands to be caught between a roll of cloth and one of the cylinders between which it has to be passed. *Crowley v. Pacific Mills* (1889) 148 Mass. 228, 19 N. E. 344 (verdict for defendant should have been directed).

In *Kaillon v. Northwestern Bedding Co.* (1891) 16 Minn. 187, 48 N. W. 779, the contention of defendant was that the danger of allowing the hand to come in contact with revolving rollers was self-evident to anyone who used his senses, and that, in the exercise of ordinary intelligence the plaintiff, a boy fourteen and a half years old, ought to have known that if his hand came in contact with the rollers it would be drawn in. The court said: "At first sight the position of defendant seems plausible; but when we consider the fact that the surface of the rollers was smooth, and the space between them very small, we think it not improbable that there may be a great many boys, and even men of ordinary intelligence, without experience with machinery, and with a limited knowledge of the principles of mechanics, who, while knowing and seeing that the rollers drew in wool compressed almost to the thinness of paper, would yet, like this boy, fail to realize or appreciate that they would suddenly compress and draw in, as quickly as it came in the slightest contact with them, an object like the hand or fingers, many times thicker than the aperture between the rollers. . . . While the facts do not make out a very strong case for the plaintiff, yet we are not prepared to say, as matters of law, that the defendant owed this boy no duty to caution him as to the danger of allowing his hand to come in contact with these rollers, and that he ought to have understood this without being told."

(u) *Shafts and set screws.*—(See also subd. (x), *infra*.) An employee eighteen years old who had been working for three weeks in the machine shop where he was injured, and had previously been operating weaving machines to which power was communicated by shafting, was held to have assumed the risk from a projecting set screw as a part of the machinery with which he had to do in his work, although his attention had not been particularly called thereto. *Demers v. Marshall* (1899) 172 Mass. 548, 52 N.

E. 1066, on Second Appeal (1900) Mass. 9, 59 N. E. 454.

A servant of nineteen years with experience as a factory workman of four and a half days' experience in defendant's mill, was held unable to recover for injuries resulting from cloth being caught in a set screw while he was operating a machine driven by the shaft, the evidence being that the nature of his work had been explained to him by the foreman, and that he noticed that the shaft was not run smoothly. *Kreider v. Wisconsin Paper & Pulp Co.* (1901) 110 W. 86 N. W. 662.

An intelligent boy of seventeen years accustomed to working about machinery cannot recover for injuries received while leaning over a revolving shaft drawing up buckets from a lower shaft, by his loose skirt catching upon the shaft. *Kelly v. Barber Asphalt* (1892) 93 Ky. 363, 20 S. W. 271.

A verdict against a master who failed to give an inexperienced servant fifteen years old special instruction as to the danger of coming into contact with a set screw will not be disturbed. *Keller v. Gaskill* (1894) 9 Ind. App. 36 N. E. 303, Second Appeal (1895) Ind. App. 502, 30 N. E. 363.

It is not a conclusion of law from the fact that a servant seventeen years old who had been working three weeks before the accident was aware of the existence of a set screw on a revolving shaft, and was "sprightly" for one year, that he was aware of the danger of passing over the shaft while it was in motion. *Dorling v. Allen* (1874) 74 Mo. 13, 41 Am. Rep. 298, (1888) Mo. 293, (1890) 102 Mo. 213, 14 751.

(v) *Belting.*—The danger involved in attempting to remove an inkling from a printing press by getting into the frame of the press, while the shaft through which motion is communicated to the machine is revolved on the pulley and the shifter left unsecured, open and obvious, and therefore assumed to be appreciated, without instructions, by an employee seventeen years old, after he has been working round the machine for several months, and has removed the rollers several times. *Loren v. Bingham* (1893) Ind. App. 677, 34 N. E. 128 (roller came in contact with the shifting lever and the belt onto the tight pulley).

To let a young man of seventeen years without experience and to whom

seventeen years
l to whom the

foreman has given erroneous instruc-
tions, undertake the work of lacing a
broken belt without stopping the shaft
over which it hangs, is negligence.
Tinkham v. Yelle (1897) Rap. Ind. Que-
bec, 6 B. R. 334.

Where a girl seventeen years old em-
ployed in a spinning room was injured
by the parting of a belt, the fact that
she was present when the ends of the
belt were laced would not impute knowl-
edge that the belt was laced in an un-
safe manner, and hence would not show
that she assumed the risk of such acci-
dent. *McGar v. National & P. Worsted*
Mills, (1901) 22 R. 1, 347, 47 Atl. 1092.

In *Cleveland Rolling Mill Co. v. Cor-
rigan* (1889) 46 Ohio St. 283, 3 L. R.
A. 385, 20 N. E. 466, the court affirmed
a verdict absolving from the charge of
contributory negligence a youth fourteen
years of age who, without instructions,
had been put to work only a few days be-
fore the accident, in close proximity to a
revolving shaft from which hung a loose
belt, the result being that his feet were
caught in the belt and whirled round the
shaft.

(p) *Pulleys*.—It is error to give an
instruction which permits the jury to
find for a minor servant over fourteen
years of age and with six months' ex-
perience, provided they find that he was
directed to go up a ladder and put a belt
on a pulley without being notified of the
danger of doing so. It cannot be as-
sumed that a person of that age and
that experience is incapable of forming
a judgment as to the risks of such an
act. *Greenway v. Conroy* (1894) 169
Pa. 185, 28 Atl. 692.

The danger of one's sleeve being caught
by a pulley made of rags, the ends of
which are left loose, is not so obvious
that an employee fifteen years old who
has had no experience in handling ma-
chinery, and has never worked near the
pulley, is, as matter of law, chargeable
with a comprehension of the risk of
being caught while holding a belt on the
pulley to assist in its repair. *Dodd v.*
Bell (1897) 15 App. Div. 258, 41 N. Y.
Supp. 198.

(q) *Grinding machines*.—The failure
to warn a new employee about fifteen
years of age as to the danger of putting
her hand into the interior of a chocolate-
grinding machine in which scrapers were
revolving may be properly found to be
negligence. *O'Connor v. Barker & Co.*
(1898) 25 App. Div. 121, 49 N. Y. Supp.
241.

(r) *Carding machines*.—In *Tinkham*

v. Saurer (1891) 153 Mass. 185, 27 N.
E. 6, the court was "unable to discover
in this case any ground on which it can
be held that the defendants are liable,"
under the following state of evidence.
The plaintiff at the time of the accident
was somewhat over sixteen years of age,
and of at least ordinary intelligence, and
had been in the employ of the defendants
about a month. Up to the forenoon of
the day before the accident, he had been
attending to cards in the carding room
of the defendants' mill. He was then
set to work to help tend the machine on
which he was injured, the accident oc-
curring about the middle of the forenoon
of the next day. He was told by the
man who set him to work on it that the
machine was a dangerous one, and not
to touch it when in motion. This was
repeated to him by the man who was
running the machine. He himself testi-
fied that he knew the machine was dan-
gerous when it was going, and that it
was going at the time of the accident.
During the day and more that he worked
on the machine, he helped to clean it a
number of times, and had therefore the
knowledge thus acquired, in addition to
the warning and instruction which he
had received. He had to sprinkle the
wool with oil before it was put into the
machine, and this made the floor very
slippery, so that, as he testified, he had
to walk carefully. It was a part of his
duty to gather up the wool from the
floor as it was blown out of the machine,
and put it back, so that it would go
through the machine again. The open-
ing out of which the wool came was
about 2 feet from the floor, and was 4
feet horizontally by 1 foot in height.
Two or 3 inches inside of it was a large
revolving cylinder with teeth in it. At
the time of the accident he was gather-
ing up wool from the floor so near to
the machine, as he testified, that if he
slipped he would go into it. He did slip,
and his arm went into the opening and
the injury complained of resulted.

A bright boy seventeen years old em-
ployed to spread wool, and cautioned
against allowing his hand to be caught
in the teeth of a revolving roller, as-
sumes the risk in that respect, where
there is no hidden danger and the ma-
chine is simple in construction and
operation, although he has only worked
on the machine a few days before the
accident occurs. *O'Connor v. Whittall*
(1897), 169 Mass. 563, 48 N. E. 844.

A verdict has been set aside which
found a master negligent in failing to

instruct a minor fifteen years old who had been working four days at the time when he was injured through allowing his shirt sleeves to rest on the rough surface of the card cloth on the revolving cylinder of a carding machine, the result being that the sleeve, and with it his arm, was drawn between the rollers. *Trumble v. North Star Woolen Mill Co.* (1894) 57 Minn. 52, 58 N. W. 832.

(s) *Cotton pickers*.—In *De Souza v. Stafford Mills* (1892) 155 Mass. 476, 30 N. E. 81, the court held that, upon the whole case, a verdict for the defendant should have been directed, where the plaintiff, who was a foreigner nineteen years old, speaking no English, and had been working only sixteen days, had his hand drawn into the roller of a beater picker and mutilated by the beater, which revolved at a high rate of speed behind the rollers. Since this danger was obvious, and the plaintiff also knew that the beater revolved in close proximity to the rollers, the principle was applicable that it is not a breach of duty to omit to give instructions as to elements of danger which may be appreciated by a person of the plaintiff's age after a brief period of experience in the work.

(t) *Machinery operating vertically*.—A jury is justified in finding that one who employs a boy between fourteen and fifteen years of age at a steam-power punching machine is guilty of negligence in failing to notify him that, if he keeps his foot on the treadle, the press will keep coming down and going up, and to tell him how to take his work from the press after it is punched. *Armstrong v. Forg* (1895) 162 Mass. 544, 39 N. E. 190 (accident happened just after the boy began work). The failure of a master to caution a boy of sixteen years who is operating a punching machine, against the danger from the slippery condition of the floor, does not render him liable for injuries to the boy's hand from its coming into contact, on the first day that he worked, with the lever by which the punch was released, as he attempted to save himself from falling when his stool, which he placed in a tilted position, slipped on the floor, where the condition of the floor and the danger from slipping were perfectly apparent. *Kochler v. Syracuse Specialty Mfg. Co.* (1896) 12 App. Div. 50, 42 N. Y. Supp. 182, 1105.

No duty to instruct can be predicated where a boy of fifteen was injured by catching his hand under the die of a ma-

chine for stamping numbers on plates, and his evidence showed he had operated similar machinery and was aware that, as long as his foot on the lever for the machine into gear, it would operate. *Wahl v. Chatillon* (App. Div. 554, 67 N. Y. Supp. 100).

A boy fourteen years of age, he was unfamiliar with the machine, was injured on the second day he began work, was held to be, as well as an adult, the danger to his hand caught under a stamping machine. *O'Keefe v. Thorne* (Monaghan, 73, 16 Atl. 737).

A girl sixteen years old injured by using a card-cutting machine, of which she had a tendency to descend when she placed her foot on the treadle, cannot recover for injuries sustained by the descending knife, where she has been in the mill's service for six years and operating the machine for six years. *Beardon v. New York Consolidated Co.* (1884) 19 Jones & S. 134.

Whatever danger is incident to work of removing the margins of calendars by a knife applied and suspended by a slowly descending counterpoise weight is presumed apparent to a bright boy of fifteen years. *Malsky v. Schumacher* (7 Misc. 8, 27 N. Y. Supp. 331 (order of complaint held proper)).

An inexperienced boy sixteen years of age who had his hand caught under a plunger of a brick-moulding machine was allowed to recover in *Chicago Pressed Brick Co. v. H.* (1891) 41 Ill. App. 324, Aff'd (1892) 140 Ill. 334, 29 N. E. 1.

Whether the duty of instructing an ignorant foreigner sixteen years of age as to the proper way of pushing pieces of clay into the machine where they were pressed by a lever was adequately performed is a jury question, where the evidence is that the boy was told that he should kick them with his foot, and was not warned of the danger of pressing his foot so he entered the cylinder. *Addicks v. C.* (1899) 62 N. J. L. 786, 43 Atl. 100.

(u) *Machinery in cordage factories*.—Where plaintiff, an inexperienced less than thirteen years of age, was injured while operating a bobbin in a cordage factory, and the evidence tends to show that she was instructed as to the general operation of the machine, or as to the danger

dent thereto, the question of the mas-
ter's negligence is for the jury. *Dono-
ran v. Greeman & S. Cordage Co.*
(1900) 22 K. L. Rep. 777, 58 S. W.
798.

(v) *Thread-forming machines.*—In a
case where injury was received on the
first day that the plaintiff began to
operate a machine which formed by com-
pression the thread of screw caps for
tin cans, it was held warrantable to
render a general verdict in his favor,
where it is also specially found that he
was only thirteen years of age, and was
working under an agreement with his
mother that he should not operate any
machinery; that he was placed at work
at a certain machine; that he had no
previous knowledge of its character; and
that no warning or instruction was given
him. *National Enameling & Stamping
Co. v. Brady* (1901) 93 Md. 646, 49 Atl.
845.

(w) *Sewing machines.*—A Quebec case
recognizes the duty to instruct a young
girl (age not stated) as to the danger
of having her hair caught in moving ma-
chinery. *Parent v. Schloman* (1897)
Rep. Jud. Quebec, 12 C. S. 283 (-he had
gone under a sewing-machine table to
replace the band).

(x) *Risks incurred in cleaning, etc.,
machinery in motion.*—In one case it
was laid down in general language that
oiling dangerous machinery while in mo-
tion was contributory negligence, even
though the servant was a boy (age not
stated). *Sutton v. Stead* (1897) 3
Times L. R. 499.

A superintendent who orders a servant
eighteen years old who has been working
for several days, to oil a hand saw while
it is in motion, the operation being
effected by pouring oil into a cup in
front of and above the saw, is not bound
to warn him of the obvious danger that
his hand may come in contact with the
saw if he attempts to reach round from
behind the saw. *Battle v. George G.
Page Box Co.* (1900) 175 Mass. 318, 56
N. E. 583. The rule under which a mas-
ter is required to instruct a minor of
tender years who is set to work on a
dangerous machine has no application
where a boy seventeen years old is in-
jured by unencased cogwheels which he is
engaged in oiling, after he has been al-
ready doing this work for a year and ten
months. *Sanborn v. McElison, T. &
S. P. R. Co.* (1886) 35 Kan. 292, 10
Pac. 866 (sustaining a demurrer to the
evidence). A verdict has been set aside
by which it was found that an employer

was negligent in having failed to caution
an inexperienced youth nineteen years
of age, who had been injured after five
days of work, as to the dangers of allow-
ing the ends of a piece of cotton waste
with which he is wiping the top of a
machine to hang down so that they are
liable to be caught in uncovered cog-
wheels revolving underneath. *Atlas En-
gine Works v. Bendell* (1881) 100 Ind.
293, 50 Am. Rep. 798. A complaint
should be dismissed which is framed on
the theory that a master was negligent
in failing to instruct a youth of eighteen
years who has worked for him three
years, as to the danger of cleaning a re-
volving shaft. *Smith v. Martin* (1891)
39 N. Y. S. R. 126, 14 N. Y. Supp. 935.

In *Stewart v. Patrick* (1892) 5 Ind.
App. 50, 30 N. E. 811, it was held that a
general verdict for the plaintiff would
not stand where the jury had found
specially, in answer to interrogatories,
that the appellee was a bright, intelli-
gent boy sixteen years of age; that he
had knowledge of the dangerous condi-
tion of the machine (a planer) he was
operating, and knew that he must be
careful in order to avoid injury; that he
had received from the appellants some
instruction and caution as to the use of
the machine and its hazards, though not
as much as they should have imparted
to him; that he had been using the ma-
chine from five to eight weeks before the
injury, and that he had no other experi-
ence in connection with such machinery;
that he was hurt by the machine while
wiping its platform, in front of the re-
volving knives, with pieces of cotton
waste; that it was not necessary for the
appellee to do this in the performance of
his duty in operating the machine; that
he knew how to stop the machine and
could easily have done so; that he was
not ordered or directed by the appellants
to do the work in which he was so en-
gaged when his fingers came in contact
with the revolving knives.

A boy twelve years old employed to
take lumber away from a flooring ma-
chine and load it on a wagon, who is
injured in attempting, under orders of
the foreman of the mill, to oil dangerous
machinery while in motion and without
proper instructions, may recover damages
from his employer, even though he may
have been doing this work for some time
before the accident happened. *Hinchley
v. Horndousky* (1890) 133 Ill. 359, 8
L. R. A. 490, 24 N. E. 421. Affirming
(1889) 33 Ill. App. 259. The controlling
feature here was the essential danger

the work, not that it was outside the scope of the plaintiff's employment, as in the cases cited in chapter XXV., *post*.

A verdict is not improper which declares an employer to be liable for injuries received by a girl thirteen years of age, who testifies that she was not instructed as to the manner in which a wheel at the end of a spinning frame might be cleaned safely by giving a peculiar motion to another part of the machinery, and thereby securing a partial revolution of the wheel. *Glover v. Dwight Mfg. Co.* (1888) 118 Mass. 22, 18 N. E. 597 (plaintiff had been working four weeks, but the injury was received when she was trying for the first time to clean the machine). A court cannot say, as a matter of law, that a boy twelve years old does not need instruction as to the danger of having his hand drawn between cogwheels, where his only experience had been with cogwheels arranged in a manner much less likely to lead to an accident of that kind. *Chapin v. Budget Paper Co.* (1892) 83 Wis. 193, 53 N. W. 452 (a case where the plaintiff, after working for a year in oiling a single row of cogwheels, was set to work upon a double row). The danger incident to wiping the cogs of a gearing is not so plain and open to a boy of fourteen years wholly unacquainted with the working or use of machinery, that he can be held, as a matter of law, to have assumed the risks attendant thereon, where he has received no caution or warning from the master. *Nelson v. Horibeth & H. Paper Co.* (1890) 75 Wis. 579, 44 N. W. 772. Whether a boy (age not stated) ought, in the exercise of reasonable prudence, to have anticipated an accident due to the starting of a sand elevator by another while he was engaged in cleaning out the boat, was held to be for the jury upon evidence that no such accident had ever happened before. *Hess v. Adams Mfg. Co.* (1893) 96 Minn. 79, 68 N. W. 774.

In a case where the injury was received not in the ordinary operation of the machine, but while the cylinder was being waxed, it was held that the danger of having her arm caught between two cylinders of a mangle revolving toward each other is not, as matter of law, obvious to a girl of thirteen years. *Kilhearn v. Tinckery* (1895) 165 Pa. 584, 30 Atl. 1013.

A complaint is not demurrable which alleges in effect that the plaintiff, a minor sixteen years of age, was without skill and experience in handling ma-

chinery, that this fact was known to the defendant, and that the plaintiff was injured by reason of his failure to work in wiping that machinery without any warning as to the danger of doing this while it was in motion. *White v. San Francisco Works Co.* (1895) 9 Tex. Civ. 29 S. W. 252. Whether a boy twelve years old fully appreciated the danger involved in oiling a machine between cogwheels after working for six months is a question for the jury. *B. F. Averca & Son v. Meck* (1895) 45 S. W. 355, holding that a boy of that age had knowledge of the danger of doing so, which, as the court had decided in a previous appeal (1894) 90 Ky. 337, must be imputed to him, and did not necessarily imply that he realized the actual danger to which he was exposed in doing the act in which the injury resulted.

In *Fisk v. Central P. R. Co.* (1892) 72 Cal. 38, 13 Pac. 141, the court, *arguendo*, that it was the duty of the master to warn a child about ten years of age as to the dangers of working as cleaning a drill in rapid motion.

(2) *Air suction produced by machinery.*—It is for the jury whether instruction should be given, where a boy of fourteen years had previously been engaged in years in a spinning room in such work as was suited to his age, and had thus obtained some knowledge of machinery in the factory, was to undertake the essentially new work of standing on an ordinary lathe and holding a belt away from the running shaft, to prevent it from being caught while it was being mended, the thus occupied being one in which he was exposed to a considerable danger produced by the rapid motion of the drum and the belt which revolved with the gearing of a water wheel. *Cochester Mills* (1894) 137 N. H. 269. "It is evident," said the court, "that this is not a case in which it can be said, as matter of law, that the service the plaintiff was called upon to render was or was not such as his contract duty to perform, and that the service had come within the line of his employment if his advancing years and experience had prepared him to take it. It had not come within the line of his employment if it was beyond his capacity. It was a proper . . . to treat the negligence of the defendant's negligence in

as done his duties
ree months cannot

to warn a boy of

fifteen working on a farm, as to the
danger that while helping to put new
trucks under a wheat binder the machine
may tip over. *Wagner v. Plains Mfg. Co.*
(1901) 110 Wis. 48, 85 N. W. 633.

There is no presumption that a lad
eighteen years old who has usually been
employed as a cook in a lumber camp,
but who, at the time of the accident,
had been engaged for five days in "skid-
ding logs," appreciates the danger of
undertaking to stop a rolling log by a
"back cut." *Wolski v. Knapp-Stout &*
Co. Co. (1897) 90 Wis. 178, 63 N. W.
87 (verdict for defendant set aside).

(jj) **Action of moisture in softening
timber.**—A nonsuit should not be
granted in a case where the plaintiff, a
boy fifteen years of age, without any
previous experience, fell into a vat of
heated liquor, owing to the fact that
the end of a wooden pole had become
soggy with use and slipped on the sur-
face of a movable pipe which he was
pushing. Under such circumstances the
jury might properly find that he ought
to have been instructed as to the proper
treatment of the pole in case the end
should become soft. *Hoarby v. Hudson*
River Water Power & Paper Co. (1890)
57 Ill. 339, 10 N. Y. Supp. 585.

(kk) **Furnaces.**—A blacksmith who
fails to warn an apprentice fifteen years
old of the danger arising from heaping
fresh coal on the furnace without the
precaution of taking measures to pre-
vent the gases thereby generated from
escaping into the bellows, is liable for
injuries to him from the bursting of the
bellows by such gas. *Reisert v. Williams*
(1892) 51 Mo. App. 13.

(ll) **Inflammable fluids.**—A complaint
is not demurrable which alleges that the
employer, knowing that the clothing of
a young and inexperienced boy had be-
come saturated with dangerous and in-
flammable oils and gases in the course of
his employment, ordered him to warm
himself at a hot stove, not only without
instructions as to the hazard arising
therefrom, but with an assurance that
his clothes were no more liable while in
that condition to take fire than if wet
with water, the result being that the
boy's clothing ignited, and he was burned
to death. *Wallace v. Standard Oil Co.*
(1895) 66 Fed. 260.

It is for the jury to say whether a
boy fourteen years of age who was burnt
to death, after working three days, by
the ignition of a vat of turpentine into
which it was his duty to insert heated
spoons for the purpose of removing a

coating of grease, should have been in-
structed as to the temperature at which
it was safe to insert the spoons in the
liquid. *Labaree v. Central Stamping Co.*
(1896) 9 App. Div. 115, 14 N. Y. Supp.
99.

(mm) **Poisonous papers.**—It has been
held that a demurrer was properly sus-
tained to a complaint which alleged sub-
stantially that the plaintiff, a youth
nineteen years old, had been taken away
from the duties which he was hired to
perform, and temporarily put to work in
placing colored paper saturated with
poison into a box heated with steam;
that the vaporization of the poison re-
sulting from the heat caused it to be
absorbed into the plaintiff's system to
his injury; that such steaming of the
paper was not usual in the defendant's
establishment; that the defendant knew,
or ought to have known, the effect which
the process would have upon the person
employed in the work; and that the de-
fendant failed to give the plaintiff notice
of the poisonous nature of said work, or
of the effect of said employment. The
grounds of this ruling were that it was
not alleged that the paper bore the ap-
pearance of being poisoned, or that it
was of a kind in the manufacture of
which poison is commonly used, or that
the defendant had neglected to submit it
to proper examination. So far as ap-
peared, the plaintiff's means of deter-
mining whether the paper was poisoned
were as good as the defendant's. If it
were not so, the complaint should have
stated the facts which made the differ-
ence. *O'Keefe v. National Folding Box*
& Paper Co. (1895) 66 Conn. 33, 33
Atl. 587. It seems scarcely possible to
suppose that any court which has dis-
carded the old doctrines of technical
pleading would reach a similar conclu-
sion under similar circumstances; but
the decision, even when considered with
reference to those doctrines, seems to
the present writer to be of very doubtful
correctness. The essential effect of the
complaint, it is submitted, is that the
defendant knew, or ought to have known,
that he was directing the plaintiff to do
work which involved a latent danger of
which he had neither actual nor con-
structive notice. That allegations which
fairly convey this meaning state a good
cause of action is indisputable.

(nn) **Action of electricity.** The fact
that the rollers used for finishing paper
in a paper mill generate a strong cur-
rent of electricity as they revolve, and
that this current tends to draw frag-

if he holds his hand in fire, it will be burned, or strikes it with a sharp instrument, it will be cut, or thrusts it between the teeth of revolving cog-wheels in the gearing of a mill, it will be crushed. From infancy and through childhood, as well as in later life, we are all making observations and experiments with material substances, and every person of ordinary faculties acquires knowledge at an early age of these familiar facts which force themselves on our attention through our senses."² Manifestly, however, the criterion thus suggested is too indefinite to be of much real service in settling the ultimate question which is involved, *viz.*, the extent of the respective province of courts and juries in drawing inferences from the testimony. That there is room for a very wide difference of opinion as to the theoretical acquaintance which minors shall be assumed to possess with the properties of matter and the results of the operation of physical laws is abundantly demonstrated by the cases cited in the note to the preceding section. In regard to many groups of facts, conclusions have been arrived at which are either flatly contradictory, or are only susceptible of being reconciled by ascribing to certain minute differentiating factors a significance which seems to be entirely disproportionate to their actual importance.

D. SERVANT'S MEANS OR OPPORTUNITIES OF KNOWLEDGE.

401. Generally.—The reports contain a large number of cases exemplifying the operation of a principle which may be formulated thus: A servant will be affirmed or denied to be chargeable with knowledge of a given risk, according as it is considered that a reasonably observant person possessing his natural and acquired capacity for observation would or would not have ascertained the existence of that risk, if he had made a proper use of the means or opportunities of knowledge which were available before the injury in suit was received by him.¹ The scope and effect of this principle will be discussed in the ensuing sections.

If there is any evidence going to show that the servant had an op-

¹*Chester v. Merchants' Woolen Co.* (1890) 151 Mass. 152, 6 L. R. A. 753, 23 N. E. 829. See § 399, note 1, subd. (k), *supra*.

²Knowledge may be inferred from "opportunities of obtaining that knowledge in the exercise of ordinary care." *Mulderson v. Illinois C. R. Co.* (1871) 59 Iowa, 615; *Wells v. Burlington, C. R. & N. R. Co.* (1881) 56 Iowa, 520, 9 N. W. 364. Opportunity of knowledge of a defect is legally equivalent to knowledge, wherever an ordinarily observant

man in his everyday use of the appliance could not fail to notice it. *Porter v. Hannibal & St. J. R. Co.* (1879) 71 Mo. 66, 77, 36 Am. Rep. 451. A servant "assumes all risks which naturally arise from the conduct of the business, and those risks which the exercise of his opportunities of inspection while giving diligent attention to such service would have disclosed to him." *Baltipore & O. S. W. R. Co. v. Welsh* (1897) 17 Ind. App. 565, 47 N. E. 182.

A master has the right to rest on the

portunity of ascertaining the existence of the risk in question, the employer is entitled to have the jury instructed to the effect that, one not having an opportunity to know of a risk is presumed not to know of it.²

The risks to which the doctrines discussed in the following section are peculiarly, if not exclusively, applicable, are those belonging to the classes designated by the term "obvious," or one of the adjectives which are used to express the idea that their existence and character were ascertainable, without any special examination, by a ordinarily intelligent person who made a proper use of his sight and other senses.³

It is manifest that, in many instances, facts which tend to show that a servant had means or opportunities of ascertaining the existence of certain general conditions may, by changing the logical point, be viewed as evidence which indicates that he had, in the

probability that any servant will know what is generally to be seen by his own observation, or by information from those who are on the spot working with him, and who may fairly be expected to do their duty. *Batterson v. Chicago & G. T. R. Co.* (1881) 53 Mich. 125, 18 N. W. 584. "The courts decline to hold the master liable when the defects in the machinery are perfectly obvious to anyone, and the servant has had the time and opportunity to consider and appreciate the extent of the risk." *Moore v. St. Louis Ware Mill Co.* (1893) 55 Mo. App. 491. It is the duty of a servant to improve every opportunity furnished by his employer to learn about his duties and their accompanying dangers. *Bathuray v. Michigan C. R. Co.* (1883) 51 Mich. 253, 47 Am. Rep. 569, 16 N. W. 634.

²*St. Louis & S. F. R. Co. v. Marker* (1883) 41 Ark. 542 (railway laborer had his leg caught in a cattle guard, while sitting on the side of a car).

In a case where a railway servant was injured by a low overhead bridge, it was held that the defendant had no cause to complain of the following instructions: (1) That if the servant knew or had opportunity to inform himself of the condition of the bridge and of the position of the braces and their proximity to the top of the caboose, he could not recover; and (2) that "if he had a fair opportunity for acquiring a knowledge of the condition of the bridge and its danger while passing thereunder, if there was any, but ignored such knowledge or opportunity, and neglected to avail him-

self thereof, he cannot derive any advantage from such ignorance or want of knowledge, but his rights are determined the same as if he possessed knowledge he might have improved by the reasonable exercise of his faculties." *St. Louis, Ft. S. & M. R. Co. v. [?]* (1887) 37 Kan. 701, 16 Pac. 110.

³The positive aspect of this question is exemplified by such passages as the following: "The duty to observe and make himself acquainted with the obvious dangers to which his employment exposed him was not discharged. The opportunity to observe and acquire a knowledge of the dangers had been enjoyed by him for many days. Under such circumstances a fair legal presumption is that he improved the opportunity to observe and discharged the duty towards himself and his employer which his service required of him." *Boyd v. Harris* (176 Pa. 484, 35 Atl. 222).

The negative significance of this position is indicated by the ruling in *Boyd v. Harris*, where a man was injured by the want of notice between the ends of ties, to which the servant requested instruction that a servant was presumed to know of such risks if he had an opportunity to observe. *Rock & H. R. Co. v. Moschen* (117 U. S. 225, 12 U. S. App. 511). In 1099, where the court emphasized the fact that the servant is entitled to notice only of such "obvious" defects, he had an opportunity of observing the course of the performance of his duties.

of his employment, acquired that combination of special knowledge and aptitudes, mental and physical, which the law assumes to be the result of experience in any given line of work. See subtitle B, *supra*. Sometimes it is not very easy to ascertain, from the wording of the opinions, which of these alternative conceptions it was intended to rely upon as the rationale of the decision. Indeed, it seems safe to say that the possibility of considering evidence of this sort under two aspects has not been fully apprehended, or at all events, not remembered in particular cases, by some of the courts. Owing to the uncertainty engendered by obscurity of language, and by the failure of judges to appreciate or to bear in mind the double significance of such evidence, it is often a matter of difficulty to determine the category to which a given decision belongs. This difficulty the writer has endeavored to surmount to the best of his ability, though, he fears, not with entire success.

402. No opportunities of obtaining knowledge before the time of the accident.—In any case which involves the question whether the servant had an opportunity of ascertaining the existence of dangerous conditions, it is necessary to determine, in the first place, whether he had ever, at any time prior to the conjuncture when the accident occurred, been in such a situation with respect to those conditions that, supposing the circumstances to have been favorable, he might possibly have discovered the peril to which he was subjected by their existence. If the evidence is fairly susceptible of the construction that he had never been in such a situation, the master's responsibility is established in so far as it depends upon this element, and the plaintiff is entitled to recover unless it shall be demonstrated that he ought to have taken notice of the danger at, or just before, the moment when he was injured.¹

¹ (a) *Railway tracks*.—A switchman who steps into a hole in an unsurfaced track cannot be declared, as a matter of law, to have known of the existence of the hole, or of its depth, if he had worked theretofore in another part of the switch yard, which was surfaced, and testified he had never walked along this particular track before. *Gull, C. & S. F. R. Co. v. Warner* (1899) 22 Tex. Civ. App. 167, 54 S. W. 1961.

A brakeman upon entering the employ of a railway company is not chargeable with notice of the risk of a hole 5 inches deep between the ties. *San Antonio & A. P. R. Co. v. Parr* (1894) 7 Tex. Civ. App. 26 S. W. 861.

On the ground that the constructive

knowledge of the plaintiff, a brakeman, depended upon a variety of hypothetical circumstances which it was necessary to establish by specific evidence, it was held in one case that he was not, as a matter of law, bound to take notice of the danger created by a sheet of ice formed by water which had dripped on the track from a defective engine pipe. *Flynn v. Malash, St. L. & P. R. Co.* (1885) 19 Ill. App. 235.

(b) *Obstructions above railway tracks*. A brakeman is not, as a matter of law, chargeable with notice of the risk of running in contact with an overhead bridge which is so low as not to admit of the passage of a person standing upright on the top of a car, and

402a. Sufficiency or insufficiency of opportunities actually observed before the accident.—Supposing the evidence to be of such a nature that a jury would not be justified in finding that the servant had the opportunity whatever to discover the dangerous conditions, the next stage in the investigation is to determine whether the opportunities which it is apparent that he had were sufficient to render a person of his natural and acquired capacity for observation chargeable

with negligence, which is not guarded by telltales or other signals, where he is on his first trip. *Fitzgerald v. New York C. & H. R. R. Co.* (1899) 37 App. Div. 127, 55 N. Y. Supp. 1124.

The fact that other railway companies have maintained some of their overhead bridges so low as to be dangerous is not sufficient to charge a brakeman with notice that there is such a bridge on his own line. *Louisville, N. A. & C. R. Co. v. Wright* (1888) 115 Ind. 378, 16 N. E. 145.

(c) *Obstructions beside railway tracks.*—A brakeman making his first trip over the road is not bound, as a matter of law, to know the danger caused by structures near the track, which are new and exceptional. *Scutlan v. Boston & A. R. Co.* (1888) 147 Mass. 481, 18 N. E. 209 (see further, as to this case, § 404, *infra*).

A brakeman who was not familiar with the surroundings, and had had no opportunity to make himself familiar with them, was held not to be chargeable with notice of the risk of being struck by a fish chute adjoining a part of the main track outside the defendant's yards. A distinction was taken between such a structure and similar structures near side tracks. For the latter kind, trainmen are bound to look out, as they are usually necessary in the conduct of the business of a railway company. *Philips v. Chicago & W. M. R. Co.* (1899) 122 Mich. 171, 81 N. W. 101, 84 N. W. 66.

In the absence of evidence showing that he had ever switched a car on the track in question, or had some other reason for apprehending the special risk from which the injury resulted, it will not be held, as a matter of law, that a switchman was chargeable with notice of the fact that a building occupied by a customer was close to a siding constructed solely for the purpose of reaching it. *Sweet v. Michigan C. R. Co.* (1891) 87 Mich. 529, 49 N. W. 882.

A jury is justified in finding that a brakeman was not chargeable with no-

tice of the danger caused by a structure near the track, where there is no evidence to show that his duties had, at a time prior to his being struck by it, placed him into a position to have observed the position of the structure with reference to the track. *Illinois & St. L. R. Co. v. Whalen* (1886) 49 Ill. App. 116.

Evidence as to the construction of chutes on defendant's road on which an injured servant was employed as a brakeman prior to the accident is competent as showing his knowledge of the dangerous proximity of the chutes to the track. But evidence as to the construction of stock chutes on other railways on which he had never worked is incompetent, where it is not shown that he had worked on that part of the railways where such stock chutes were erected. *Krist v. Chicago & W. M. R. Co.* (1899) 110 Iowa, 32, 81 N. W. 101, also § 404, note 5, *infra*.

(d) *Railway cars; coasting and operation of.*—In *Wedge and v. Chicago & W. M. R. Co.* (1878) 14 Wis. 418, the absence of evidence that the plaintiff had ever before been in charge of a car which injured him was held to be no ground for inferring want of opportunity to learn its defects.

It is for the jury to determine whether a railroad switchman knew, or was guilty of negligence in not knowing, that telephone poles upon coal cars projected beyond the deck of the car, and, to what extent, where the cars arrived at the yard after dark and shortly before the plaintiff was injured, and he was in the yard at the time when the foreman notified them, and during that time he was engaged in blocking the wheels of a freight car joining the coal car. *Gouge v. Clark* (1881) 100 Cal. 374, 56 P. S. App. 505, 8 Cal. 608. See also *Camden v. Wisconsin R. Co.* (1883) 78 Mo. 374 (§ 402, *infra*).

The danger of coupling to a locomotive a passenger locomotive with a "neck" attachment is not one which a brakeman who has, according to his testimony, seen no locomotives

knowledge of those conditions. The most important of the evidential elements which determine the answer to this question are these:

(a) The natural capacity of the servant for taking advantage of the chances for observation which presented themselves. This element is often emphasized in cases where the injured servant was a minor.

his five or six months of service on freight trains, except those with the ordinary drawhead attachment, must be presumed, as a matter of law, to appreciate. *Galveston, H. & S. A. R. Co. v. Garrett* (1889) 73 Tex. 262, 13 S. W. 62.

(c) *Unguarded openings*.—Where the testimony of the plaintiff in an action to recover for an injury resulting from his stepping into an unguarded opening in the floor of defendant's sawmill showed that he had worked in the mill only an hour before the injury, and then not in the vicinity of the opening; that he had never worked in such a mill before, and was given no instruction—it is error to instruct the jury, in effect, that, if the hole was in plain sight, plaintiff was bound to see it. *Nyback v. Champagne Lumber Co.* (1901) 48 C. C. A. 632, 169 Fed. 732.

(d) *Machinery*.—A court cannot say, as a matter of law, that a servant was negligent in not observing the peculiar perils incident to handling in the dark a new machine which he had never before seen. *Walsh v. Port Vale Co.* (1872) 110 Mass. 23.

The case is for the jury where an employee in a millinery, having had occasion to go through a passageway between two machines, struck his leg against an iron rod projecting from one of the machines, the evidence being that he had never used the passage before, but had seen it used by operatives and overseers; that the light in the passageway was insufficient, and the similarity in color between the machines and floor and rod tended to render the obstruction invisible; and that the plaintiff had looked for obstructions, but saw none. *Edwards v. Tilton Mills* (1901) 70 N. H. 571, 50 Atl. 102.

A foundry hand who is suddenly called upon to assist in raising a heavy weight by means of a crane which is defective in having no "dog" for holding the weight when raised to the desired height, its place being supplied by inserting an iron spike in the cogwheels, is not necessarily negligent because he catches his finger in the wheel while thus using the spike, if it appears that, although he had been working several

years in the foundry, he was employed in another shop where the cranes were operated differently, and that he had never seen this particular crane operated before. *Dziabinski v. J. L. Mott Iron Works* (1900) 56 App. Div. 58, 67 N. Y. Supp. 256.

A servant injured by the fall of a loose wheel from a bucket used in unloading a ship is not chargeable with knowledge of the defect, where he had had no opportunity to examine the appliance. *Horton v. Ziobrowski* (1900) 91 Ill. App. 162, affirmed in 192 Ill. 328, 61 N. E. 413.

(e) *Vehicles*.—A servant who, at the master's direction, loaded a wagon with lumber, and was run over by the backing down of a wheel, is not, as a matter of law, chargeable with a knowledge of the risk, when he had never used the wagon. *Bender v. Ross Lumber Co.* (1890) 193 Wis. 724, 79 N. W. 243 (the defendant incorrectly urged that the case was one for the application of the principle that the defects of all simple appliances are presumed to be known to the servant).

(f) *Ladders*.—The servant's knowledge of the risk is for the jury where he was injured by the overturning of a ladder of rotten metal, due to the use of a common round stick for a lever with which to tip it, the evidence being that this particular ladder had never before been seen by the plaintiff, and that he did not know there was anything wrong with it or the lever. *Flaerty v. Norwalk Engineering Co.* (1898) 172 Mass. 134, 51 N. E. 193.

(g) *Mines*.—It cannot be said, as a matter of law, that an employee in a mine, visiting a low, narrow passage for the first time, and carrying no other light than a miner's lamp, ought to have observed that the grade of the drift was sufficient to cause a loaded cart to run by its own momentum on an iron track. *Consolidated Coal Co. v. Reece* (1894) 150 Ill. 149, 37 N. E. 912, affirmed (1894) 47 Ill. App. 144.

(h) *Banks of earth, etc.*.—An employee engaged in the morning of the day when he was injured by the collapse of a bank of earth which he was excavating may

See § 399, note 1, *supra*. But in respect to adults also it is recognized that, in view of the fact that some men have greater power of observation than others, and a stronger desire to investigate and understand, knowledge cannot be imputed to a servant, as a matter of law, on the ground that some persons having the same opportunity of observation as he had would have ascertained the existence of dangerous conditions.¹

(b) The acquired capacity of the servant for taking advantage of the chances for observation which presented themselves. It is obvious that, in many instances, a court will be justified in declaring as a matter of law, that an experienced servant having the chances for observation disclosed by the evidence ought to have discovered the danger, although that conclusion would not be a necessary one if he had been inexperienced in the employment. Cases illustrating situations analogous to each of those discussed in §§ 394-396, *supra*, will be found in various subdivisions of note 1 to the following section.

(c) The length of the period during which the chances for observation presented themselves. See next paragraph.

(d) The number of occasions on which those chances presented themselves. This and the element last mentioned must always, obviously, be considered together, since the material question to be ultimately decided is really whether the servant had been so often in a position where he might have observed the danger that his failure to observe it must be pronounced culpable in point of law. Usual, of course, the number of actual chances for observation will be found to have been greater when the period available for observation was a long one than when it was a short one. But manifestly there is no necessary or invariable relation between these two circumstances.²

properly be found to have been exculpably ignorant of the dangerous condition in which it was, owing to the fact that iron wedges had been driven the night before into the top, and that afterwards there had been a heavy fall of rain. *Thomas v. Ross* (1896) 21 C. C. A. 414, 417, 57 L. S. App. 571, 75 Fed. 552. A laborer who had been engaged in excavating a bank for about five hours before it fell on him was not chargeable with knowledge of a dangerous crack in it which was not visible from the place where he was at work. *Ellidge v. National City & O. R. Co.* (1893) 100 Cal. 282, 34 Pac. 720.

(k) *Formation of ice.*—A brakeman's general knowledge of the physical conditions in the vicinity of a tank is not conclusive upon the question of his neg-

ligence in a case where the injury was due to his slipping on a sheet of ice formed by water leaking from the tank, and it was shown that there had been no ice there until a few days before the accident, and that he had not been in that part of the tank since then in that part of the case. *McFall v. Iowa C. R. Co.* (1896) 100 Iowa, 723, 65 N. W. 321.

¹ *Loggman v. Moore* (1891) 90 Cal. 410, 27 Pac. 306 (for facts, see § 399, note 1, subd. (r), *infra*).

² In *Hutchan v. Green Bay W. & N. P. R. Co.* (1883) 58 Wis. 319, 17 Wis. 17, it was urged that the complainant was denominated for the reason that, as the averments showed that the servant, a brakeman, had been for several years in the employment of the defendant, he was necessarily chargeable with know-

that can be safely affirmed in this connection is that, if the chances occur every day in the regular course of the servant's employment,—and this is the most common predicament to be reviewed—his ignorance of the danger becomes less and less excusable as the period available for observation is prolonged. The decisions in which the effect of this element is discussed are far more numerous than any other class of cases which turn upon the servant's opportunities of knowledge, and, as will be amply apparent from an examination of the following section, are, if not absolutely irreconcilable, only reconcilable by the aid of wire-drawn distinctions.

(e) The character of the servant's duties, whether favorable or unfavorable for the purposes of observation. With respect to this element, it would appear that a large number of the cases which have been decided in the servant's favor proceed upon a principle which may be enunciated thus: If it was not a recognized fact of the functions of the servant to look out for dangerous conditions of the same kind as those which caused the injury (see §§ 114 *et seq.*, *infra*), and his chances of observation were merely such as were casually afforded by occasional proximity to the defective instrumentality, it is for the jury to determine whether he ought to have discovered the conditions. But a comparison of the rulings upon virtually identical groups of concrete facts shows very clearly that some of the courts, even if they accept this principle as theoretically correct,—which cannot be affirmed with certainty,—construe it in such a sense that it is of very little advantage to the servant.³

Considered under another aspect, this element is also suggestive of the principle that knowledge ought not to be imputed, as a matter of law, when it is a reasonable inference from the testimony that the servant could not, without unduly neglecting or delaying the performance of his work, utilize the opportunities of observation which were afforded by his local relations to the dangerous conditions.⁴ But it

of the existence of the obstructions on the track by which he was injured while coupling cars at a certain station. But this contention did not prevail, the court being of opinion that there was no averment inconsistent with the hypothesis that, when injured, the plaintiff was coupling cars at that station for the first time, and then first became aware that the obstructions complained of were on or near the track. Whether he ought to have known of the obstructions was a question to be determined by the evidence.

³ Contrast especially the antagonistic

decisions cited in § 403, note 1, subd. (a)-(c), *infra*.

⁴ The risks assumed by the servant are "those risks which the exercise of his opportunities for inspection, while giving diligent attention to such service, would have disclosed to him." *Franklin & R. R. Co. v. Henderson* (1893) 134 Ind. 636, 33 N. E. 1021.

The servant cannot recover without making it appear that the defect was "of such a nature as not to be discoverable in the reasonable and ordinary exercise of diligence in the course of his duty." *Central R. & Bkg. Co. v. Kenney* (1877)

is apparent from an examination of the cases that this principle has been very differently construed by various judges. By so doing it seems to be, for practical purposes, wholly ignored.⁵

In any case where the defect was a concealed one, it is obvious that a servant who has had nothing to do with the operations which caused that defect cannot be charged with knowledge of its existence, because he was required to work near that part of the plant while

58 Ga. 494; *Baker v. Western & A. R. Co.* (1882) 68 Ga. 706.

"The servant is especially entitled to assume that his master had furnished him with suitable and safe materials, machinery, and surroundings, and relieved him of investigation and inquiry in that regard, where the performance of his duties requires constancy of attention to other matters. A man whose attention is constantly directed to moving cars and their coupling cannot possibly give much attention to the ties, switch-bars, etc., over which he may, from time to time, have to pass." *Chicago & A. T. R. Co. v. Hines* (1890) 132 Ill. 169, 23 N. E. 1021.

"Unless the defects are such as to be obvious to anyone giving attention to the duties of the occasion, the employee has a right to assume that the employer has performed his duty in relation to the implements and machinery furnished." *Louisville, N. & C. R. Co. v. Buck* (1889) 116 Ind. 536, 2 L. R. A. 529, 19 N. E. 453. See also *Carpenter v. Merriam Nat. R. Co.* (1889) 39 Fed. 315, where similar language is used.

Among the factors rendering the servant's ignorance excusable have been mentioned the "exigencies of the situation" (*Widaregood v. Chicago & A. W. R. Co.* [1878] 44 Wis. 14); and the engrossing nature of his duties (*Carroll v. L. St. L. & C. R. Co. v. Long* [1887] 112 Ind. 166, 13 N. E. 659; *Mason & O. R. Co. v. Yackon* [1900] 43 C. C. A. 228, 163 Fed. 265).

In *Dorson v. Phillips & C. Constr. Co.* (1877) 42 Wis. 583, where the plaintiff was struck by a cattle chute near the track, the court argued thus: "The safety of railroad trains depends largely upon the exclusive attention of those operating them, to the track and to the trains themselves. It is not for the interest of railroad companies or of the public with like, if not equal, concern in the safety of trains—that persons so employed should be charged with any duty or necessity to divert their attention. And it appears to us very doubt-

ful whether persons operating trains, and passing adjacent objects in rapid motion, with their attention upon their duties, ought, with press proof of knowledge, to be charged with notice of the precise relation of such objects to the track. As with actual notice of the dangerous proximity of adjacent objects, it will be doubted whether it would be reasonable to expect them, while engaged in their duties, to retain constantly their minds an accurate profile of the objects in their employment, and lateral places and things, so as to be always chargeable, as well by night as day, with notice of the precise position of the train to adjacent objects, and the case of objects so near the track as to be possibly dangerous, such a duty might well divert their attention from their duty on the train, to the safety in performing it. Notwithstanding some things said in some cases for the appellant, we should be inclined to think that, in the absence of express notice of immediate danger, employees operating trains may perform their duties under an implied warranty that they may do so without exposing themselves to extraordinary danger, that is, danger not necessarily incident to the course of their employment.

Compare also *Vaden R. Co. v. Vaden* (1898) 31 C. C. A. 255, 58 L. R. A. 377, 87 Fed. 849 (§ 403, note 1 (a)), *infra*; *Bryce v. Chicago & N. P. R. Co.* (1897) 103 Iowa, 605, W. 789 (same note, subd. (1)).

In a case where a brakeman was injured by striking against the upper members of a covered bridge, it was proper to instruct the jury that such employee is not required to know fully all the defects of construction, all obstructions along the railroad, to neglect his duties to be on a lookout for defects along the road." *Chicago & A. R. Co. v. Johnson* (1888) 111 Ill. 206, 4 N. E. 381.

defective.⁶ The cases involving the opposite situation are reviewed in § 405, *infra*.

(f) The physical environment of the servant at the time or times when the chances for observation presented themselves. One important circumstance to be considered under this head is the quality of the light which was available at the times when the servant was in a position where, so far as the conditions of space and distance were concerned, he might have observed the danger.⁷

Another element of a more special character than those so far mentioned is presented by those cases in which recovery has been allowed or refused on the ground that certain fellow servants of the injured person, who had had the same opportunities for observation as he had, had failed to notice, or had noticed, the dangerous conditions.

403. Same subject continued. Illustrative decisions.—In the note below are collected a large number of decisions illustrating the evidential significance of the elements which have been discussed under their general aspects in the preceding section. For the purpose of facilitating comparison, they are arranged under subdivisions designated by headings similar to those employed in all the longer notes in the present chapter. Other pertinent cases will be found cited in §§ 405, 406, *infra*.¹

¹ See *McMahon v. McHale* (1899) 174 Mass. 320, 54 N. E. 854 (§ 403, note 1, subd. (aa), *infra*).

In several cases cited in § 403, note 1, *infra*, the courts seem to have proceeded on the theory that a servant could not be charged with knowledge, as a matter of law, when the opportunities for observation occurred in the nighttime. *Coll v. Chicago, St. P. M. & O. R. Co.* (1894) 87 Wis. 273, 58 N. W. 108 (subd. d); *Illinois C. R. Co. v. Welch* (1899) 52 Ill. 183 (subd. d); *Frederburg v. Northern C. R. Co.* (1889) 114 N. Y. 582, 24 N. E. 1049 (subd. a); *Texas & P. R. Co. v. Crow* (1893) 3 Tex. Civ. App. 266, 22 S. W. 928 (subd. c). Compare also *Hunt v. Kane* (1900) 40 C. C. A. 372, 106 Fed. 256 (subd. a). But a strong decision to the contrary is *Rean v. New York, N. H. & H. R. Co.* (1897) 169 Mass. 267, 47 N. E. 877 (subd. d). For a case in which the servant was allowed to recover on the ground that the light in a mine was dim, see *Serence v. New England Tale Co.* (1900) 72 Vt. 181, 47 Atl. 833 (subd. ee).

In several of the cases cited in the note referred to, the circumstance that

the opportunities for observation presented themselves in the daytime is mentioned among those which were deemed to be adverse to the servant.

² *Prake v. South Park Foundry & Mach. Co.* (1897) 68 Minn. 305, 71 N. W. 276 (§ 403, note 1, subd. (r), *infra*).

³ *Anderson v. Winston* (1887) 31 Fed. 528 (§ 403, note 1, subd. (dd), *infra*).

⁴ (a) *Railroad tracks and apparatus, generally*—The risk from the fact that the fastening of the rails on a road under construction was not completely finished was held to have been assumed by a servant who, for some time before the accident, had been traveling over the line daily. *Moss v. Johnson* (1859) 22 Ill. 633. A railroad company is not liable for injuries to a brakeman by being thrown from the top of a car on which he was standing, near his brake, tripping a bump, by the jerking and lurching motion given the car by the unevenness of a new and unfinished side track over which he had passed several times, and the condition of which was open and obvious. *O'Neal v. Chicago & I. Coal R. Co.* (1892) 132 Ind. 110, 31 N. E. 669.

A brakeman who has been for a con-

403a. Sufficiency or insufficiency of the opportunities of knowledge at the time of the accident.—Where the question to be decided

is whether a railway company's servant, while passing a certain yard, is chargeable with knowledge of any holes that can be seen by a casual observer. *Reynolds v. Toledo, T. & N. W. R. Co.* (1893) 97 Mich. 265, 56 N. W. 612.

A railway servant who has worked for two months at a station where there is a side track laid across a large depression, on ties which are blocked up and not ballasted, is chargeable with a knowledge of the patent danger that his feet may be caught between the ties while he is coupling cars. *Batherson v. Chicago & A. T. R. Co.* (1884) 53 Mich. 125, 18 N. W. 584. A switchman and car coupler who has been employed in a yard for several months, and has passed an open ditch under the track every day, is presumed to appreciate the danger created by it. *D. Forest v. Detroit* (1881) 23 Hun. 490, affirmed in (1882) 88 N. Y. 261. There can be no recovery for an injury from a passing train, to a switchman whose foot was caught in a hole in the blocking between the railroad tracks, which he could have seen every day for six weeks. *Glasgow v. New York & A. E. R. Co.* (1893) 159 Mass. 68, 31 N. E. 79. Notice that the space between the ties of a side track is not filled, and that it is laid with old iron rails, is imputed to a brakeman who has been a baggage-man and brakeman for six years, and a brakeman on a particular road for three months, and has worked recently as brakeman on a gravel train ballasting the track in the vicinity of a place where he is injured, and during such employment has often been on and about the side track. *Adkinson, T. & S. F. R. Co. v. Alsdorf* (1892) 17 Ill. App. 200.

Knowledge of the want of fencing on a certain division of a railway is imputed, as matter of law, to an engineer who has been running over it two and a half years before an accident. *Sweeney v. Central P. R. Co.* (1880) 57 Cal. 15.

A watchman at a railroad roundhouse required to assist in moving an engine without steam or power to move itself, into the roundhouse for repairs, assumes the risk of being caught between such engine and another engine standing upon one of the divergent tracks, where the position of each is seen by him, and he takes his position of his

own choice, with full knowledge of the fact that the engine as it moves will come closer to the stand. *Anglin v. Texas & P. R. Co.* (1890) 130 U. S. App. 62, 553.

A section foreman has been held liable to recover for injuries to the derailment of a work train part of the track which was in his charge. *Taylor, B. & H. Timber* (1890) 70 Tex. 104, 14 S. W. 2d.

The falling of a mass of rock from a railroad track, is not an ordinary occurrence of which a brakeman employed on a freight train which passed at the dangerous point while he was in position which prevented him from seeing is presumed to take notice. *Benn v. Western North Central* (1890) 107 N. C. 531, 12 S. E. 2d.

A brakeman upon a freight train, knowing the output of a coal mine, never been upon the track before, and has no knowledge of its dangerous condition, does not assume the risk of the lack of necessities to prevent the escape of loaded cars from a coal track steep grade onto the main track, the right to act upon the facts that the coal track is reasonable and suitable for the use to which it is put, and that the cars stand there properly secured. *Continental v. Toledo, St. L. & K. C. R. Co.* (1892) 32 U. S. App. 133.

A watchman employed by a company to guard its property when attempting to board a passing train, stumbled over a pile of lumber which had been lying beside the track for four or five days, and fell on his wheels, cannot be said, as a matter of law, to be chargeable with notice of the fact that the lumber had been left there. *R. I. & P. R. Co. v. Kimball* (1890) 111 U. S. 9, 60 N. E. 57, affirming (1889) 111 U. S. App. 508. It cannot be said, as matter of law, that a brakeman required to know the condition of the planking at each of the forty cars on his run where he is required to stop, and that he assumes the risk of injury from defects in such planking. *Fluhger v. Lake Shore & M. S. R. Co.* (1899) 121 Mich. 212, 80 N. W. 2d. Ignorance by a yardhand upon

whether the opportunities for observing the danger at or immediately before the moment when the accident occurred were such as to charge

road, of the dangerous character of the road where it crosses a public highway, will not be held inexcusable as matter of law, where the yard was a mile long, he rode as often as he walked, and when on the ground his duty required active work and great attention. *Valley R. Co. v. Acogan* (1898) 31 C. C. A. 255, 58 U. S. App. 377, 87 Fed. 849. A brakeman is not, as matter of law, chargeable with a knowledge of the existence of a steep grade at a particular point on the track, and of the risk incident to making a coupling upon it. *Leonard v. Grand Rapids, St. P. & Ste. M. R. Co.* (1895) 63 Minn. 489, 65 N. W. 1084.

A yard switchman is not, as matter of law, negligent in failing to notice a small incline a few feet in width, forming the connection between an out-of-the-track of the railroad and the sidewalk, although he has been passing and repassing it for several days. *Rouse v. Lehigh R.* (1896) 56 Kan. 348, 43 Pac. 249. The risk incident to walking on an incline on which a car track is laid, at one particular point in which there is no opportunity for stepping off the track, is not an obvious risk to a servant who has often passed along it before, where there was nothing to direct his attention to the risk on any of the previous occasions when he had been on the track. *Bogham v. Taylor* (1896) 66 Mo. App. 308.

A railroad engineer is not conclusively bound to take notice of all crossings of the company by which he is employed, to maintain the statutory fences and cattle guards, so as to constitute his failure to complain of such an omission an assumption of the risk thereby caused. *Terre Haute & I. R. Co. v. Williams* (1897) 69 Ill. App. 392.

A brakeman who, after three days service, falls into a cattle guard while coupling cars in the nighttime, is not, as matter of law, guilty of negligence in being ignorant of its position. *Fredenburg v. Northern C. R. Co.* (1889) 114 N. Y. 582, 21 N. E. 1019. One who enters the employ of a railroad company as a brakeman does not thereby assume risk of injury from an uncovered cattle guard within the yard limits, although in passing over the road he was in a position where he might have known of the danger. *Galveston, H. & S. A. R. Co. v. Stinkard* (1897) 17 Tex. Civ. App. 585, 44 S. W. 35.

Vol. I. M. & S.—70.

A brakeman will not be held, as matter of law, to know that there are unbolled ties and an uncovered cattle guard in one of the yards in which he is required to do switching, because he has acted with such capacity for three weeks, passing through such yard twice a day on a round trip of 100 miles. *Illinois C. R. Co. v. Sanders* (1897) 166 Ill. 270, 49 N. E. 799, *Assuming* (1896) 66 Ill. App. 439.

A brakeman is not chargeable, as matter of law, with a knowledge of the danger created by uncovered signal wires in a yard in which he had done switching work only twice before the day on which he was injured. *Indiana, I. & L. R. Co. v. Bundy* (1899) 152 Ind. 590, 53 N. E. 175.

(b) *Frogs, switches, and guard rails.*—The risk resulting from the want of blocking between switch rails is assumed by a switchman who has worked for two months in a yard where this arrangement is in common use. *Chicago, B. & Q. R. Co. v. Smith* (1885) 18 Ill. App. 119. A servant who has been working for several years as brakeman and as conductor of freight trains, and is frequently brought by his duties into a certain yard to make up his train, is presumed to know the kind of frog which is in use there, and cannot recover if he receives an injury owing to the fact that they are not blocked. *Southern P. Co. v. Seloy* (1894) 152 U. S. 145, 38 L. ed. 39, 14 Sup. Ct. Rep. 539. A brakeman who has been engaged for several years in the performance of duties which were of such a nature that he must unquestionably have known that a large portion of the frogs on defendant's road were not blocked, and who had been employed in broad daylight around and near the frog where the accident occurred, for an hour and a half before his injury was received, must be taken to have understood that that frog was unblocked. *Spencer v. New York C. & H. R. Co.* (1893) 67 Hun. 196, 22 N. Y. Supp. 100. A railroad employee cannot recover against the railroad company for an injury caused by catching his foot in a frog of standard make in the yard where he was employed for a considerable time (period not specified) as yard brakeman, and where he could observe the possibility of danger from the frog. *Richmond & D. R. Co. v. Risdon* (1891)

the servant with notice, the element contributed by the number of occasions on which observation was possible is necessarily excluded, since, in the nature of the case, there is only a single occasion

87 Va. 335, 12 S. E. 786. A brakeman is chargeable with notice that frogs and switches at a certain station were unblocked, where they were in the same condition as when he began work eighteen months before he caught his foot in one of them. *Lake Shore & M. S. R. Co. v. McFormick* (1881) 74 Ind. 440. To an employee who had become more or less familiar with a yard while working as a signalman for several months, and who for a month previous to the accident had been engaged in switching, the fact that a plank used for blocking of a frog was not as thick by one inch as that ordinarily used in the yard in question was held to be a palpable defect. *Rajotte v. Canadian P. R. Co.* (1889) 5 Manitoba L. Rep. 365. A switchman who has been employed for seven months in one of the yards of a company which, as a general rule, does not use blocking, assumes the resulting risk. *Narramore v. Cleveland, C. C. & St. L. R. Co.* (1899) 48 L. R. A. 68, 37 C. C. A. 499, 96 Fed. 298. A switchman is chargeable with knowledge of the defects in a switch in not having a proper space between the main rail and the point of the switch rail, and in not having blocking in that space, where he has worked over and about the switch in question for many years, and hundreds of times within the year preceding the accident, and the condition of the switch and its surroundings has been unchanged during that time. *Quinn v. Chicago, R. I. & P. R. Co.* (1898) 107 Iowa, 710, 77 N. W. 464. A skilful railroad brakeman of mature years, who frequently passed an unblocked guard rail, must be presumed to have known of the obvious danger incident thereto. *Wabash R. Co. v. Ray* (1898) 152 Ind. 392, 51 N. E. 920. One who had worked as section man and brakeman for two years on a road where the frogs and guard rails were not filled or blocked was held, as matter of law, to appreciate the danger of getting his foot caught in such frogs and guard rails while stepping about and over them. *Gillin v. Patten & S. R. Co.* (1899) 93 Me. 80, 44 Atl. 361. See also *Appel v. Buffalo, N. Y. & P. R. Co.* (1888) 111 N. Y. 550, 19 N. E. 93 (switchman after working daily for several years in a yard is presumed, as matter of law, to understand the risks created by the want of

blocking); *Rush v. M. & N. R. Co.* (1887) 36 Kan. 129. A switchman who has been employed for six months in a yard is chargeable with notice of the want of blocking between the main rail and a certain switch. *Peoria, D. & E. R. Co. v. Robinson* (1887) 55 Ill. App. 638 (switchman who worked for sixteen months in a yard is chargeable with knowledge of the want of blocking caused by the want of filling between the main guard rail and a main rail); *K. & T. R. Co. v. Thompson* (1897) 33 Tex. Civ. App. 658, 33 S. W. 2d 101, arising from the want of blocking between the main guard rail and a main rail, presumed to be known by a switchman who has been employed in a yard for about seven weeks. In question whether a switchman has noticed that a particular guard rail was not blocked was held to be a question for the jury in *Curtis v. Chicago & N. W. R. Co.* (1897) 95 Wis. 460, 70 N. W. 2d 101. The ground that the condition of the rails, whether blocked or not, would not be likely to be observed by a brakeman passing on trains, it was held that evidence to the effect that there were numerous other guard rails besides the one which was the subject of the injury in suit was inadmissible in an action by such an employee. *Chicago, R. I. & P. R. Co. v. Quinn* (1898) 107 Iowa, 80, 77 N. W. 33. An employee who worked in different yards where there were many switches, and who was continually employed in making repairs, cannot be charged, as matter of law, with knowledge of the condition of the blocking of a switch in one of those yards, where it was required to use in the night, though the defect had existed for a long time, and was obvious in the day. *Hunt v. Kane* (1900) 40 C. C. A. 100 Fed. 256.

Whether or not a railroad employee was guilty of contributory negligence in pursuing his duties in a switch yard where a frog projected several feet above the track at a point where it was frequently to pass, without detecting the defect and reporting the condition, or taking precautions against danger, is for the jury, after considering the nature of the defect, its location, and the movements with reference to it, and his familiarity with the surround-

the number of

quired the relative height of the bridge
and the cars on the line); *Wells v. Bur-*
lington, C. R. & N. R. Co. (1881) 56 Iowa,
320, 9 N. W. 364 (servant had been em-
ployed as brakeman for four years on a
road where he had often passed under
bridges of the same height as the one by
which he was injured); *Hooper v. Col-*
umbia & G. R. Co. (1884) 21 S. C. 541,
53 Am. Rep. 691 (bridge had been passed
daily for three months); *Clark v. Rich-*
mond & D. R. Co. (1884) 78 Va. 709, 49
Am. Rep. 394 (bridge passed several
times by daylight).
After two months' service, a freight
brakeman on a railroad will be presumed
to have become acquainted with the low
bridges over the track. *Brossman v. Le-*
high Valley R. Co. (1886) 113 Pa. 491,
45 Am. Rep. 479, 6 Atl. 226 (brakeman
was killed at night).
An employee who has passed for three
months four low bridges in close proxim-
ity, which had a warning signal in front
of the east side of the east bridge and
also in front of the west side of the west
bridge, and understood that these signals
were a warning for all the bridges, as-
sumes the risk of an omission of the sig-
nals from the intermediate bridges. *Ryan v. Long Island R. Co.* (1889) 51
Hun, 607, 4 N. Y. Supp. 381. A brake-
man who on several occasions has been
near a bridge is chargeable with notice
that it is not protected by warning sig-
nals. *Fitzgerald v. New York C. & H.*
R. R. Co. (1891) 36 N. Y. S. R. 755, 12
N. Y. Supp. 932 (accident occurred at
night).
If the car on which a brakeman was
standing when he came into collision
with an overhead bridge was higher than
others used by the company, and he was
aware of that fact, he cannot recover if
he had been on the road a sufficient

length of time to charge him with a
knowledge of the height of the bridge.

Lyons v. New York, L. E. & W. R. Co.
(1892) 44 N. Y. S. R. 1063, 18 N. Y.
Supp. 417; *Baltimore & O. R. Co. v.*
Stricker (1878) 51 Md. 47, 34 Am. Rep.
291 (brakeman had passed under the
bridge about 1,500 times since cars like
that on which he was had been put into
use); *Pittsburgh & C. R. Co. v. Scot-*
tneger (1879) 92 Pa. 276, 37 Am. Rep.
684 (several months employed).
A brakeman injured by coming into
collision with the overhead braces of a
covered truss bridge is not, as matter of
law, chargeable with a knowledge of the
distance between them and the tops of
cars, where it is a fair inference from
the testimony given by several experi-
enced trainmen that it was an extremely
difficult matter to discern by merely
looking at such a bridge how far its over-
head timbers were above a train, and
there is evidence going to show that, al-
though he had crossed the bridge daily
for several months before the accident,
he had not been on the top of the cars
while they were passing over the bridge,
more than once before the accident oc-
curred, and that there was no other
bridge with braces so low as the one in
question. *St. Louis, Ft. S. & W. R. Co.*
v. Levin (1887) 37 Kan. 501, 16 Pac.
146. If it is not shown that the serv-
ant's attention had even been called to
the additional risk created by the occa-
sional use of cars higher than the aver-
age, or that he had ever ridden upon one
of them, and the jury would therefore
be warranted in finding that he was not
familiar with them, the court cannot de-
clare, as matter of law, that he was
guilty of negligence in not ascertaining,
by measurement or accurate observation,
whether he could pass safely under the
overhead timbers of a bridge while stand-
ing erect. *Atchison, T. & S. F. R. Co.*
v. Rowan (1895) 55 Kan. 270, 39 Pac.
1010.

Knowledge of a dangerously low over-
head bridge was held not to be, as mat-
ter of law, imputable to a brakeman who
had passed underneath it eight or nine
times during the daytime, and as often
at night, but never while he was on the
top of the cars. *Louisville, C. & C.*
R. Co. v. Wright (1888) 115 Ind. 378, 16
N. E. 115.

A switchman who has been working in

and all the other facts and circumstan-
ces. *Walker v. Atlanta & W. P. R. Co.*
(1898) 103 Ga. 820, 30 S. E. 503.
(c) *Obstructions above railway tracks.*
—A brakeman who is injured by his
head coming in contact with a bridge
while standing on top of a car cannot re-
cover, where he had on numerous occa-
sions passed under the same bridge. *Wil-*
hams v. Delaware, L. & W. R. Co. (1889)
116 N. Y. 628, 22 N. E. 1117; *Green v.*
New York C. R. Co. (1863) 1 Laus. 108
brakeman had been every day for a year
in a position where he might have ac-
quired the relative height of the bridge
and the cars on the line); *Wells v. Bur-*
lington, C. R. & N. R. Co. (1881) 56 Iowa,
320, 9 N. W. 364 (servant had been em-
ployed as brakeman for four years on a

Lyons v. New York, L. E. & W. R. Co.
(1892) 44 N. Y. S. R. 1063, 18 N. Y.
Supp. 417; *Baltimore & O. R. Co. v.*
Stricker (1878) 51 Md. 47, 34 Am. Rep.
291 (brakeman had passed under the
bridge about 1,500 times since cars like
that on which he was had been put into
use); *Pittsburgh & C. R. Co. v. Scot-*
tneger (1879) 92 Pa. 276, 37 Am. Rep.
684 (several months employed).
A brakeman injured by coming into
collision with the overhead braces of a
covered truss bridge is not, as matter of
law, chargeable with a knowledge of the
distance between them and the tops of
cars, where it is a fair inference from
the testimony given by several experi-
enced trainmen that it was an extremely
difficult matter to discern by merely
looking at such a bridge how far its over-
head timbers were above a train, and
there is evidence going to show that, al-
though he had crossed the bridge daily
for several months before the accident,
he had not been on the top of the cars
while they were passing over the bridge,
more than once before the accident oc-
curred, and that there was no other
bridge with braces so low as the one in
question. *St. Louis, Ft. S. & W. R. Co.*
v. Levin (1887) 37 Kan. 501, 16 Pac.
146. If it is not shown that the serv-
ant's attention had even been called to
the additional risk created by the occa-
sional use of cars higher than the aver-
age, or that he had ever ridden upon one
of them, and the jury would therefore
be warranted in finding that he was not
familiar with them, the court cannot de-
clare, as matter of law, that he was
guilty of negligence in not ascertaining,
by measurement or accurate observation,
whether he could pass safely under the
overhead timbers of a bridge while stand-
ing erect. *Atchison, T. & S. F. R. Co.*
v. Rowan (1895) 55 Kan. 270, 39 Pac.
1010.

Knowledge of a dangerously low over-
head bridge was held not to be, as mat-
ter of law, imputable to a brakeman who
had passed underneath it eight or nine
times during the daytime, and as often
at night, but never while he was on the
top of the cars. *Louisville, C. & C.*
R. Co. v. Wright (1888) 115 Ind. 378, 16
N. E. 115.

A switchman who has been working in

are essentially similar to those which are controlling in the lected in the two preceding sections.

a yard for three years, but always at night, is not necessarily chargeable with notice of the defective condition of a spout several feet above the cars, which has been out of repair three months. *Texas & P. R. Co. v. Crow* (1893) 3 Tex. Civ. App. 266, 22 S. W. 928.

(d) *Obstructions beside railway tracks.*—A yardmaster is chargeable, from the character of his duties, with knowledge of the location of a pole which has been set too near the track, and cannot recover for injuries caused by striking against it while on a moving train. *Blackstone v. Central R. Co.* (1901) 112 Ga. 762, 38 S. E. 79. An engineer who has crossed a truss bridge 200 times before the accident is chargeable with a knowledge of the distance of the timbers from the cab of the locomotive. *Hick v. Flint & P. M. R. Co.* (1888) 67 Mich. 632, 35 N. W. 708. A finding of a jury that a fireman did not have an opportunity to know that a certain cattle chute was in dangerous proximity to the side of his engine is not warranted where the evidence is that, before the accident, he had been, for more than sixteen months, continually employed upon the same engine upon which he was at work when struck by the chute; that the chute in question was so conspicuous that it, and its location, could be seen for a distance of a half mile and more along the track and each side thereof; that during this period of time the fireman, in the discharge of his duties, passed the station where the chute was located twice each week, and frequently did work and switching at this station; and that a rule of the company required trainmen to take note of dangerous points, and to take time to do their duty. *New York, C. & St. L. R. Co. v. Ostman* (1896) 146 Ind. 452, 45 N. E. 651. Reversing on Rehearing (1895) 41 N. E. 1037. A brakeman is presumed to know of the obvious danger from the location of a cattle chute near a siding, where he has passed the same almost daily for nearly two months, and has on more than one occasion taken cars out on the siding. *Boyd v. Harris* (1896) 176 Pa. 484, 35 Atl. 222. A brakeman who has been over a division of a road about 400 times must be presumed to know the distance, from the rails, of wing fences at cattle guards, so as to charge him with the risk of hanging low on a ladder at the side of

a car in order to look und. *Kee v. Chicago, R. I. & P. R.* 83 Iowa, 616, 13 L. R. A. 817, 209 (dissenting Beek, J.) A man had worked for five years as on a night train was held to assume the risk of being struck descending from a freight car nearly 4 feet from the nearest. *v. New York, N. H. & H. R.* 169 Mass. 267, 47 N. E. 877.

A section man who has been for two hours on a track close to a pile of lumber is presumed to assume the risk that, in getting way of a train, he may strike. *Bengtson v. Chicago, St. P. & Co.* (1891) 47 Minn. 186, 50 N. W. 501.

A switchman is not, as matter of law, chargeable with notice of the location of a switch stand which he has practiced, where he had always worked at night, and the switch, not being provided with a light, was not provided with a light. *Chicago, St. P. M. & O. R.* 87 Wis. 273, 58 N. W. 408.

A brakeman is not chargeable, as matter of law, with notice that a cattle chute was dangerously close to the track, where the evidence is that the distance between the track and the chute was only 7 or 8 feet, and the distance which it stood from the track had never, before the accident, passed or attempted to pass the side ladder of the car, and that the only opportunity the plaintiff had had to judge of its proximity to the track were from passing it on the tops of moving cars in the course of his employment. *Whipple v. New York, N. H. & H. R. Co.* (1891) 157, 35 Atl. 305. A similar question with regard to facts alleged was reached in *Potter v. New York, N. H. & H. R. Co.* (1899) 122 N. W. 80, Judgment Reversed on Rehearing (1900) 122 Mich. 203, 245 (but not on this point).

A railroad switchman who, in a yard but two weeks is matter of law, chargeable with notice that a certain switch pole, 18 inches from the wall of the car, was 4 feet from the track. *Johnson v. Short Line & P. V. R.* 23 Or. 94, 31 Pac. 283.

Whether or not a conductor on a freight road assumed the danger

The servant has been held entitled to go to the jury on the ground that, at the moment where the danger first came within the range of

look under it. *St. & P. R. Co. (1891)*, 18 R. A. 817, 50 N. E. 877. A servant years as brakeman was held to have been struck by a freight car, by a trolley pole, the nearest rail. *St. & H. R. Co. (1891)*, 18 N. E. 877.

who has been working on the track close to a trolley pole was presumed to appreciate the danger in getting out of the way, and may stumble on a trolley pole. *St. P. M. & O. R. Co. (1891)*, 18 N. E. 486, 50 N. W. 727. It is no matter of law, as a matter of fact, the location of the position which he had never got to always worked at, and he had never got to, not being up with a light. *St. & O. R. Co. (1891)*, 18 N. W. 408.

It is chargeable, as a matter of fact, that a pole was on the track, where the difference between it and the track was 7 or 8 inches. However, before the accident, the trolley pole was attempted to pass the ladder of a car, and the opportunity which it afforded its proximity to the track, passing it on foot, and the cars in the ground. *Whipple v. St. P. R. Co. (1896)*, 10 E. 100. A similar case, *Potter v. Detroit & M. R. Co. (1899)*, 122 Mich. 100, 80 Mich. 205, 82 N. W. 100 (this point).

A man who has worked on the track for weeks is not, as a matter of fact, chargeable with knowledge of the location of the trolley pole. *St. & H. R. Co. (1891)*, 18 N. E. 877.

A conductor on a trolley car was held to know the danger from the

location of a trolley pole not more than 4 inches from the outside edge of the platform steps along the side of the track. It is for the jury upon evidence that the poles were set at irregular distances from the track, and that he had run a car past the poles only on one occasion, where it does not appear on which side of the car he was on that occasion, or whether the car was an open or closed one. *Pierce v. Camden, G. & W. R. Co. (1890)*, 58 N. J. L. 400, 35 Atl. 286.

In a recent case it was held that an engineer who was running an engine back to its starting point on a railway which was about to be converted into a trolley line was chargeable with knowledge of the fact that the trolley poles had been erected, and also of their position with relation to the track, although it was the first time he had run over the line since they had been erected, and on the outward trip he had been sitting on the side of the engine opposite to that on which they stood. *North Birmingham Street R. Co. v. Wright (1901)*, 130 Ala. 419, 30 So. 500 (no duty to warn). This is certainly a strong decision.

As a fireman's duties have no relation to the roadbed and track, he is not chargeable by law with knowledge of the location of a station limit board so near the track that he is struck by it while leaning out of the gateway to inspect the condition of a hot box, under direction of the engineer. *Central Trust Co. v. East Tennessee, V. & G. R. Co. (1896)*, 73 Fed. 661, Distinguishing *East Tennessee, V. & G. R. Co. v. Head (1893)*, 92 Ga. 723, 18 S. E. 976, on the ground (1) that the injured employee there was an engineer, whose duty it was to watch the track, and who therefore had greater opportunities of knowledge than a fireman; and (2) that the object which struck the engineer was the post of a "tell-tale," which would be much more likely to attract the attention of employees than a station-limit board.

See also *Dorsey v. Phillips & C. Constr. Co. (1877)*, 42 Wis. 583 (§ 402a, note 4, *supra*).

The question as to the assumption by a brakeman of the risk of catching his clothing on a bolt projecting from the top of a truss while standing on the side of a box car is for the jury, not-

withstanding he had frequently passed the point in question, where his attention at such times was directed to releasing the brakes, and, by reason of the curve on either side and his ordinary position on the train, it was difficult to estimate the distance between such cars and the truss. *Bayer v. Chicago, W. & St. P. R. Co. (1897)*, 103 Iowa, 606, 72 N. W. 780.

In a case where a brakeman on a freight train had been in the service of the railroad company for twenty-eight days, and had made several trips past a coal shed, a trestle board of which was 164 inches from the ladders on the cars, and his train had stopped there at least twice to receive coal, the court refused to say, as a matter of law, that he knew that the structure was so near the track as to render it unsafe for a brakeman to use the ladder on that side of the cars while passing. *Chicago & N. W. R. Co. v. Stevens (1901)*, 189 Ill. 226, 59 N. E. 577, Affirming, 1900, 91 Ill. App. 171.

Whether a brakeman who was injured, while descending a side ladder, by a trestle-work near the track, was chargeable with knowledge of the risk created by the structure, after having been four days in the employment and passing it a few times, is a question for the jury. *Rebel v. Chicago, W. & St. P. R. Co. (1886)*, 35 Minn. St. 27 N. W. 205.

In *Illinois C. R. Co. v. Welch (1869)*, 52 Ill. 183, 4 Am. Rep. 593, where a brakeman was injured by a structure projecting dangerously far towards the track, defendant's counsel urged that the rule of law governing the case was that a person engaged for a particular service, and knowing, or having full opportunity to know, of the conditions and circumstances of the service, assumes all risk arising therefrom, in the absence of fraud or concealment on the part of the master. But the court considered that this proposition was not applicable to the facts of this case, saying: "It would have been morally impossible for him to have ascertained the existence of all such special perils as this which caused the injury, and there is no reason for supposing that he had acquired such knowledge before the accident, as he had been but two months upon the road, and had always passed the station where he was injured, in the

cept upon two trips. More is to be remarked that the danger was of such a character that it might well escape the observation of a person who had been even for a long time upon the road."

Contributory negligence or assumption of the risk cannot, as a matter of law, be imputed to a servant who was crushed between a car which he was assisting to move and a platform at the side of a switch track upon which the car had, without his knowledge, been thrown by the direction of the foreman, merely because he had on one previous occasion, and possibly two, assisted in pushing a car on the track furthest from the platform, and was passing along the track past the switch with the other employees about the time it was thrown. *Consolidated Kansas City Southern & Ref. Co. v. Peterson* (1899) 8 Kan. App. 316, 55 Pac. 673.

A fireman is not chargeable with knowledge that the fastenings of the spout of a water tank, which gave way and allowed the spout to fall on him, were defective. *Missouri, K. & T. R. Co. v. Gordon* (1895) 11 Tex. Civ. App. 672, 33 S. W. 684.

(c) *Railway rolling stock; construction and operation of.*—After a week's work on a road where foreign cars with double deadwoods are being constantly received, even an inexperienced brakeman is presumed to understand the danger incident to coupling such cars. *Hathaway v. Michigan C. R. Co.* (1883) 51 Mich. 253, 47 Am. Rep. 569, 16 N. W. 634. As a servant employed to couple cars is likely to know as much about the peculiar construction of a bump on a foreign car as any other agent of the company, negligence is not predicable of the omission to warn him of the danger created by such bumper. *Simons v. South Carolina R. Co.* (1886) 26 S. C. 490, 2 S. E. 486. The risk of being injured by a defective kind of drawbar is assumed by a brakeman who has been using such drawbars daily for a considerable period. *Secord v. Chicago & M. L. S. R. Co.* (1895) 107 Mich. 540, 65 N. W. 559. A freight brakeman who has been in the company's employment eighteen months assumes the risk in 'dent to stock cars having no bumpers. *Houston & T. C. R. Co. v. Barrager* (1890; Tex.) 14 S. W. 242. A switchman who, on several previous occasions, has coupled foreign cars laden with oranges, is presumed, both from the special circumstance of the fragance

of that fruit issuing from them, and from his previous experience, that foreign cars might come into the yard any hour of the day or night; that, when such a car arrives, he is called on to handle coupling of an unusual kind ("Miller"), a task, at his peril, and by no means for securing his safety. *v. Missouri P. R. Co.* (1899) 187, 18 S. W. 980. The negligence of a switchman in uniting two couplings of a pin and nut, intended to be drawn together is for the jury, where the evidence shows that, although he had been a switchman for two years, he had to unite such couplings three times; that the pin used was a flat pin; that if it had been a pin, fitting the hole in which it was used, he could have drawn it with his hands; that, as it was found it jammed he was compelled to get a rock and attempt to draw it, and that, in doing this, he was injured by the backing train. *South v. Burke* (1893) 9 C. C. A. 8, 18 S. App. 1, 60 Fed. 704 (Per curiam).

A brakeman after being eight months in the employ of a railway company is chargeable with knowledge of the projecting sills of a certain class of cars in common use on the road, and is not liable for being dangerously close when two cars are brought together to be coupled. *Beaudin v. Central Vermont R. Co.* (1893) 38 N. Y. S. R. 473, 10 Supp. 700.

In a case where a stove in a car was not properly secured, and subsequently fell over on a brakeman, the train was derailed, the brakeman was held entitled to an instruction that if it was the duty of the injured man to light the stove, and its condition was open and patent, and he nevertheless carelessly overheard him, he could not recover. *C. Air Line R. Co. v. Ray* (Ga.) 674.

A brakeman on a narrow-gauge road cannot recover for an injury to the manner in which the cars are carried, where he was working on the train for several years and has had his attention called to the alleged source of the accident by having worked, before he came a brakeman, on the hoisting of the car bodies were transferred

ing from the car and experience that some into the yard at any or night, to take car arrives, to middle couplings of iller"), and that in use apparatus his safety. *Th*

Co. (1891) 100 D. The contractor, Lehman injured wings of peculiar led to be made injury, where those ough he had been years, he had on couplings two or a used was a equ it had been a reple in which it w drawn it out w as it was, when e was compelled mpt to drive n this, he was mar in. *Southern P. C. Co.* (1900) 221 704 (Perdee, J. de

r being eight or nioy of a railway on with knowledge of of a certain kind e on the road as when two such ac ce to be comp el *Vermont R. Co.* S. R. 473, 14 N Y

a narrow-gauge rail for an injury de which broad-gaug where he has bee ain for six months attention specifc l source of the acc rked), before he be on the hoist by wh e transferred to be

tracks. *Titus v. Bradford, R. & A. R. Co.* (1890) 136 Pa. 518, 20 Atl. 517.

A fireman who has been at work in that capacity for two years is presumed to be aware of the risk resulting from the want of air brakes on his employer's train. *France v. Rome, H. & O. R. Co.* (1895) 88 Ill. 318, 34 N. Y. Supp. 498.

A fireman who has been working for a week on an engine between which and the tender there is no apron cannot recover for injury caused by that defect. *Chambers, H. & St. P. R. Co. v. Standart* (1884) 16 Ill. App. 145. A fireman was held not to be, as a matter of law, chargeable with knowledge of the danger caused by the fact that water had seeped from the engine tank, and had frozen on the apron connecting the engine and the tender. *Mason & O. R. Co. v. Yockey* (1900) 43 U. S. A. 228, 103 Fed. 265. The presumption is that a brakeman who has been working six days on a logging train knows that a bumper on an engine tender, which is six inches higher than one on the car next to it, will overlap the latter when the engine and car come together. *McLaren v. Hillston* (1892) 48 Minn. 299, 51 N. W. 373.

A painter who, while traveling on a steam car, has got on and off at every station, has helped to push it a considerable distance, has, according to his own testimony, examined it, and has several times wiped the wheels, is chargeable with notice that the flanges of the wheels were unusually shallow, and that the wheels were worn flat. *PeQueen v. Central Branch Union P. R. Co.* (1883) 30 Kan. 689, 1 Pac. 139.

A section hand, after twenty months' use of an iron rod which communicates motion from a lever to the wheels of a hand car, is presumed to know its condition. *Burlington & C. R. Co. v. Luche* (1892) 17 Colo. 280, 29 Pac. 175. It is for the jury to say whether a railway servant who, while coupling two engine tenders, was crushed between them, was negligent in obeying an order to couple them, where the evidence is that he was employed in the capacity of a hostler helper, assisted in knocking fires out of engines, in coupling engines and cars, and in moving them, and when injured had been so engaged for about eighteen months. *Thompson v. Chien-wai, H. & P. R. Co.* (1890) 86 Mo. App. 141. A switchman new to work, who is injured, after only seven hours' work, by a "stuck link," is not necessarily de-

barred from recovery. *Bauer v. Moore* (1890) 3 Tex. Civ. App. 416, 22 S. W. 272.

The plaintiff's knowledge of a defect in the ratchet of a brake wheel is for the jury, where he has made only one trip on the car and there is evidence that the wheel was partially concealed, and that its condition might not have been disclosed by frequent use. *Central R. Co. v. Washett* (1884) 73 Ga. 53.

It is a question of fact for the jury whether, by the exercise of ordinary care and diligence, a locomotive engineer might have discovered a defective condition of the pilot before starting on the trip, where the engine was standing in a depression on the track at the time he took charge of it. *Fordney v. Edwards* (1898) 15 Ark. 98, 44 S. W. 1034.

Whatever danger there is in the fact that a screw projects beyond the crank of a hand car, and that there is for this reason an increased probability that the clothes of a man turning the crank may be caught, is as well known and as obvious to one who has used the car for several days as it is to his employer. *Conry v. Boston & M. R. Co.* (1893) 158 Mass. 228, 33 N. E. 512.

A jury is justified in finding that a track walker whose connection with a hand car was only incidental and casual was excusably ignorant that rubber on the brake shoe constituted a dangerous defect. *Gabreston, H. & S. A. R. Co. v. Parrish* (1897) Tex. Civ. App. 40 S. W. 191.

Whether a servant in a stone mill, who has gone once over a tramway with a car having projections upon it which almost fill the space between it and a certain structure close to the track, has constructive knowledge of this fact, and of the further fact that there are similar projections upon other cars also, is a question for the jury. *Salem Stone & Lumber Co. v. Griffin* (1894) 139 Ind. 441, 38 N. E. 411.

(f) *Bridges and trestles*.—The risks arising from the unsafe condition of a bridge are presumed to have been known, where the servant had passed over it daily for several months, and, according to his own testimony, it swayed so much under the passage of a team that the horses could scarcely keep their feet. *Monsfield Coal & Coke Co. v. McParran* (1879) 91 Pa. 185, 36 Am. Rep. 662.

An employee injured while on a railroad cannot recover for injuries

sustained through the toppling over of the car and derrick while standing upon a bridge which was defective and insecure because of injuries at the time of the wreck, and their temporary repairs, and the improper fastening of the ropes used to secure the derrick upon the car, where the defects of the bridge were patent and readily discoverable, and he participated with the wrecking master in handling the ropes. *McGuith v. Texas & P. R. Co.* (1894) 9 C. C. A. 133, 23 U. S. App. 86, 64 Fed. 555.

No action can be maintained for injuries caused by a fall from the track of an elevated railway company, where the evidence is that the plaintiff had been in the defendant's employ for ten years as lampman, brakeman, and conductor; that, according to his own testimony, he had observed narrow, unguarded walks along the sides of the tracks similar to that from which he fell, and had passed along such a walk in switching a train, but at the time of the accident had not observed the width of the walk in question, nor that it was unguarded; and that he had previously traversed similar walks, and also the one from which he fell. *Nugent v. Brooklyn Union Fier. R. Co.* (1901) 64 App. Div. 351, 72 N. Y. Supp. 67.

A servant injured by the giving way of a roughly built bridge over certain piping across which he was wheeling cinders in a barrow is not necessarily chargeable with a knowledge of its unsafe condition, where it had been constructed by his foreman, and he had been working there only a short time. *St. Louis S. W. R. Co. v. Masfield* (1901; Tex. Civ. App.) 60 S. W. 896.

(2) *Platforms and scaffolds.*—A workman inexperienced as regards scaffolds is not, as matter of law, chargeable with negligence in failing to observe, after a few hours of work, that one of the boards is not secured. *Douglas v. Missouri, K. & T. Trust Co.* (1897) 110 Mo. 1, 41 S. W. 255. There can be no recovery for the death of an experienced engineer who lost his balance and fell off a platform into machinery which he was oiling, where the evidence shows that the accident was due to the dim light, the unevenness of the platform, and the want of a railing, and that these conditions were or ought to have been known to him, as he had already traversed the platform several times. *French v. First Ave. R. Co.* (1901) 24 Wash. 83, 63 Pac. 1108.

It has been held that a workman not

a carpenter, who had been engaged about three hours in carrying along a narrow runway on a scaffold the side of which was placed point an additional plank to space for the laborers to pass on, was not chargeable, as a matter with knowledge that this plank nailed to its supports, and that he had known of the defects, but not necessarily have been guilty of negligence in using the scaffold. *Missouri, K. & T. Trust Co.* (1897) 110 Mo. 1, 41 S. W. 255.

(3) *Parts of buildings.*—A person in the concrete floor of a way, less than a foot in diameter from 1½ to 3 inches deep, and filled with leather dust of a darker color than the concrete, created a risk which was as regards an employee who had been working about six months in the room, and whose duties for at least six weeks before he was injured by falling into the depression were such as to make it necessary or convenient for him to pass over this passageway every day. *Whalen v. Whitcomb* (1901) 173 Ill. 33, 59 N. E. 666.

The omission of an employer to secure a servant of the removal of scaffolding supporting the rafters of a building in which he was working, the fact that the building fell, is not itself negligence, as he must be presumed to have been aware of a circumstance which he had an ample opportunity of observing, and which was clearly to his sight. The true question is, under such circumstances, whether the employer acted with reasonable prudence in compliance with the rule which requires him to provide for the safety of his servants to the best of his judgment. *Sykes v. American Ice Co.* (1882) 99 Pa. 465.

(4) *Slippery surfaces.*—(See next subd.) The owner of a dredge is not liable for injuries to an employee slipping upon an incline upon which he went to oil machinery because of the absence of cleats, he had frequently been on the incline during the six weeks preceding the accident, and had also had his attention called to the risk. *American Ice Co. v. Wells* (1898) 28 C. C. 255 U. S. App. 460, 84 Fed. 428.

(5) *Unguarded openings.*—An employee familiar with the condition of the premises assumes the risk of the want of railing to guard a

been engaged in carrying the plank to the vat, and was placed at the vat to pass each other. On a matter of fact, his plank was not and that, even if defects, he was not been guilty of it. *D. H. V. Co.* (1897) 14

ings.—A defective floor of a passage in diameter and deep, and filled with water color than the risk which was the employee who had six months in the for at least two injured by stepping there such as to convenient for him geway every day. (1901) 178 Mass.

employer to notify val of some tax ters of a building, the result of fell, is not in must be held to a circumstance opportunity of was clearly visible question for the circumstances, is acted with reasonable compliance with s him to proceed vants to the fact *Lykes v. Power*

rs. — (See also er of a stair or injuries to an an inclined table o oil machinery, of cleats, where on the table descending the a ad his attention *American In. Co.* 8 C. C. A. 413, Fed. 428.

ings.—An employee conditions from cars in that place the risk from guard a vat con-

taining vitriol, in the floor of the factory, and from the obscurity preventing him from seeing it, whether such obscurity arises from a want of light, or from steam, or both; and he cannot recover for injuries sustained by falling into the vat while attempting to pass from one part of the factory to another. *Corrigan v. Washburn & M. Co.* (1898) 170 Mass. 79, 48 N. E. 170.

A servant who had worked several days in a tannery where the planks and along the edge of open vats for the employees to walk upon were occasionally rendered slippery by the vapors which rose from the vats and settled upon them, is presumed to comprehend the danger caused by this slippery condition and by the obscurity created by the vapors thus rising from the vats, and cannot recover for an injury received in attempting to cross the planks before daylight and in vapors so dense that he was compelled to feel his way. *Shipley v. Grand Rapids Leather Co.* (1900) 124 Mich. 523, 83 N. W. 284.

A servant who, when going to clear space from a dune rack, fell into an open space between two platforms, was held unable to recover, where it appeared that the planks by which the space had been covered had been removed a week or ten days before the accident. *Roberts v. Brownville Paper Co.* (1900) 53 App. Div. 644, 65 N. Y. Supp. 935.

(k) *Obstructions above roadways*.—A person employed to drive a team for hauling materials from a platform, to reach which it is necessary to pass under a beam over a gateway, assumes the risk of the beam being too low so that he is likely to be struck by it in passing back and forth, where the defect is plainly visible, and he has been driving teams under the beam for several years. *Baker v. Barber Asphalt Paving Co.* (1899) 92 Fed. 117. A man who has driven a coal truck for a year is chargeable with knowledge of the relative height of a beam on the coal bin and the seat on the truck. *Miller v. Grice* (1900) 53 App. Div. 276, 65 N. Y. Supp. 813.

(l) *Vehicles*.—The absence of large pins about 18 inches long, which it was customary to insert in the top of a buggy to keep the load securely in its place, is such a conspicuous and manifest fact to one who has been engaged for eight days in handling such buggies that his failure to notice the defect is negligence, as a matter of law. *Benisch*

v. Roberts (1891) 143 Pa. 1, 21 Atl. 398.

(m) *Saws*.—The danger that a man standing between the rolls which convey all the planks coming from a circular saw is liable to be hit by one of them is deemed to be obvious to an employee who has been working for 2½ months in the room where the saw is, though not in connection with the saw itself until the morning of the accident. *Dimers v. Deering* (1899) 93 Me. 272, 44 Atl. 322.

A servant who has been operating a saw for three days is not necessarily chargeable with knowledge of the danger incident to his place of work, as a result of another unguarded saw close by. *Christianson v. Northwestern Compo-Bond Co.* (1901) 83 Minn. 25, 85 N. W. 826.

(n) *Planers*.—Where a servant who had been working for the most part in a mill yard was injured while engaged in the work of carrying away the smooth lumber which had passed through the planer, by striking his foot against revolving knives which could not be seen by a person standing in the position occupied by him, and he himself testifies that he knew nothing about these knives, it cannot be declared, as a matter of law, that the opportunities he had previously had of observing them charged him with notice of the danger created by them. *Vepinan v. Morse* (1893) 160 Mass. 143, 35 N. E. 451.

(o) *Cogwheels, and gearing*.—The master's omission to instruct as to the dangers of contact with cogwheels cannot be relied on as a ground of action by a servant who got into the narrow inclosed space where the cogwheels were, after he had been engaged for several weeks upon work which enabled him to see them in operation. *Casen v. Pennsylvania Asphalt Paving Co.* (1901) 198 Pa. 348, 47 Atl. 1128. Contributory negligence is not predicable, as a matter of law, where the evidence is that a mill hand was injured by uncovered cogs three days after returning to his duties, that the cogs had been covered prior to his absence, and that his attention at the time of the accident was distracted by his duties. *Craver v. Christian* (1885) 34 Minn. 397, 26 N. W. 8 (1887) 36 Minn. 413, 31 N. W. 457. A sawmill hand is chargeable with knowledge of the position of an uncovered cogwheel near the place where he has been working for three days, if the only

obstruction to the view is a skid considerably narrower than the cogwheel. *Olson v. McMurray Cedar Lumber Co.* (1894) 9 Wash. 500, 37 Pac. 679.

An employee who has been working only one or two days is not, as matter of law, chargeable with knowledge of the fact that the rods protecting a gearing have become so bent as to produce an opening dangerously large. *Lore v. American Mfg. Co.* (1901) 160 Mo. 608, 61 S. W. 678. It is for the jury to say whether a servant in a sawmill should have known of the danger arising from cogwheels which had been uncovered since his employment began, one week before the accident. *Barbo v. Bassett* (1886) 35 Minn. 485, 29 N. W. 198.

(p) *Revolving cylinders, etc.*—An employee engaged to remove waste from a slowly revolving cylinder, who has been engaged at the work for fifteen months, and has received full instructions as to the manner of performing it, assumes the risk of having his arm caught in the machinery. *Daigle v. Lawrence Mfg. Co.* (1893) 159 Mass. 378, 34 N. E. 458.

An inexperienced servant injured within fifteen minutes after he began work upon a machine with swiftly revolving toothed rollers, between which he was told to push brick bats with a short stick, is not necessarily debarr'd from recovery. *Chicago Anderson Pressed Brick Co. v. Rombarz* (1893) 51 Ill. App. 545.

(q) *Revolving tumblers.*—No recovery can be had for the death of an employee who stumbled against a revolving tumbler from which flanges and rivet heads projected in such a way as to catch his clothing and throw him between the tumbler and the shafting, where he had worked for many years and was familiar with the machinery. *Carlson v. Monitor Iron Works* (1899) 38 App. Div. 38, 55 N. Y. Supp. 992.

(r) *Set screws.*—A carpenter who is injured by a set screw in a revolving shaft after he has worked on the employer's premises for a considerable time cannot recover on the ground that he ought to have been instructed as to the danger. *Keats v. National Heeling Mach. Co.* (1895) 13 C. C. A. 221, 21 U. S. App. 656, 65 Fed. 940. A servant who had been working about three weeks in a factory cannot recover for injuries caused by his sleeve being caught in a set screw on the shaft while oiling it, where there is uncontradicted evidence that the screw could be seen from the

floor, as the servant must be as having assumed the risk. *Marshall* (1901) 178 Mass. 9, 454.

The question of the contributory negligence of a servant injured by his coat sleeve upon a set screw revolving shaft while he was attempting to adjust a belt upon a pulley shaft is for the jury, where it is shown that he had often adjusted the belt and had never noticed the set screw, and that other employees who had the belt in the same manner had noticed it. *Pruke v. South Portland Dry & Mach. Co.* (1897) 68 Me. 71, N. W. 276.

In a case where the injury was caused by a projecting set screw, the plaintiff's own testimony showed that he had worked inside of a mill, taking care of the big saw, for nearly two years, and had been employed as assistant on the scantling machine—that is, the machine for putting the lumber in place to be cut by the saw—for about nine months, during that time he had, upon many occasions when the foreman was absent, run the machine in all eight hours prior to the accident. The court said: "It does not appear that plaintiff was an assistant as such as would necessarily give him knowledge of the nature of the machine or of the position of the projecting set screw, which was a concealed danger. It is not shown that he had ever been called upon to adjust it, or that it was any part of his duty to become acquainted with this machine. It is not shown that he was out of order to adjust it when out of order, or that it was doubtless true that some men who had the same opportunity would have become acquainted with its mechanism and its danger. It is a matter of common experience that men who are not familiar with its mechanism and its danger would not. There is a question in the capacity of men to acquire particular knowledge of machinery, and the arrangement of its parts, or of its construction, some having more power of observation, and more power of investigation and understanding, than others. The extent of plaintiff's knowledge of this machinery was therefore a question of fact for the jury to determine from the evidence before them." *Ingle v. Moore* (1891) 90 Cal. 410, 27 P. 100.

(s) *Carding machines.*—In a case where a door in the fence room of a carding machine fell out while a servant was wiping the machine, and he was injured by his hand being caught in the door, it was held that the door could be maintained, the

t must be regarded
the risk. *Dowry v.*

showing that he was experienced in the use of machines, and that he had himself taken off and put on the door several times. *Riverside Cotton Mills v. Green* (1900) 98 Va. 58, 34 S. E. 963.

(1) *Pulleys*.—Knowledge of the danger of the work is not conclusively imputed from evidence that the plaintiff had habitually put belts on the pulley in question during a period of rather over a year before the accident. *McDuff v. Washington & G. R. Co.* (1886) 5 Mackey, 144. Affirmed in (1890) 135 F. S. 554, 34 L. ed. 235, 10 Sup. Ct. Rep. 1044.

(2) *Belting*.—A woman of mature age and average intelligence assumed the risk of working in a narrow space in the vicinity of ungraded cross belts and pulleys, where she had worked nearly two months in such place before the injury, and four years previously at a machine similar in almost every respect, though the belt was straight instead of a cross belt, where the narrowness of the space was obvious and was observed by her before she commenced the work. *Kenney v. Hingham Cordage Co.* (1897) 168 Mass. 278, 47 N. E. 117. A servant who has been oiling a machine for one year, and is injured owing to the absence of a bolt, which causes a belt to shift from a loose on to a tight pulley while he is working, is chargeable with notice of the defect, where the bolt has been missing for nine months. *Coyte v. Griffling Iron Co.* (1899) 63 N. J. L. 609, 47 L. R. 2. 4 Atl. 665. Affirming (1898) 62 540, 41 Atl. 680, where the was put upon the ground that the section of the machine had been adequate.

(3) *Steam shovels*.—It is a question for the jury whether a man employed for the first time to operate a steam shovel, who was not instructed by the master as to the risks of the occupation, had time to learn of them before his injury, which occurred within five days after he began work. *Alton Paving, Bldg. & Fire Brick Co. v. Hudson* (1897) 74 Ill. App. 612. Affirmed in (1898) 176 Ill. 270, 52 N. E. 256.

(4) *Machinery for cutting or breaking metal*.—The direction in which the fragments of bolts will fly after they are cut off by nippers operated by a servant is presumed to be known to him. *Chicago & A. R. Co. v. Pettigrew* (1898) 82 Ill. App. 33.

(5) *Steam engines*.—Whether a servant was guilty of contributory negli-

gence in failing to discover that it was impossible to exactly center the valves controlling the operation of a piston rod so as to stop its motion entirely, is for the jury, where the servant had only operated it for about two hours, and the motion was so slight as to be almost imperceptible. *Bowman v. United States Projectile Co.* (1896) 2 App. Div. 57, 37 N. Y. Supp. 158.

(6) *Machinery for breaking up metal*.—A servant in a foundry, who has for two months seen the effect of the operation of an appliance used for the breaking of castings, and for two weeks has been a daily witness of that process, is presumed to understand the risk that pieces of iron may sometimes fly somewhat farther than usual. *Wood v. Heiges* (1896) 83 Md. 257, 34 Atl. 872.

(7) *Elevators*.—An employee who had run an elevator many times a day for 60 days before the accident, will be held to have appreciated the danger that the jerking and shifting of the elevator, of which he knew, would cause boxes placed by him on the elevator floor in piles 6 feet or more high to be so moved and shaken in the ascent of the elevator as to be caught under a projecting beam, the place of which he also knew. *Barnes v. New York Biscuit Co.* (1901) 177 Mass. 449, 59 N. E. 75.

An employee injured by an elevator of which he is almost the only user, occasioned by a premature loosening of the elevator from its fastenings at the bottom of the shaft, being occasioned by the weakness of a wooden spring in plain sight of the plaintiff, may not recover from his employer, as it was his duty and he had an opportunity to see the defect before getting upon the elevator. *Juchatz v. Hochman Malt Co.* (1899) 120 Mich. 654, 79 N. W. 907.

An employee, a part of whose duty for more than two years had been to sweep and clean out the bottom of an elevator shaft several times a week, who was injured, while performing such duty, by the descent of the car upon him, cannot recover, as the risk was an obvious one. *Foll v. B. F. Sturtevant Co.* (1900) 43 C. C. A. 527, 104 Fed. 276. Affirming (1900) 39 C. C. A. 646, 99 Fed. 532.

A servant cannot recover for injuries caused by falling down an elevator shaft, where he had been in the same employment for three months, and had opportunity of knowing where the elevator was, and that it was used by others and liable not to be standing at the door

of the shaft. *Browne v. Siegel, C. & Co.* (1901) 191 Ill. 226, 60 N. E. 815. Affirming (1900) 90 Ill. App. 49.

Whether the dangerous condition should have been observed by a servant is a question for the jury, where injury was caused by his coming into contact with a girder projecting into an elevator shaft so far as to come close to the platform of the elevator, and it appears that he could not see the girder readily on account of the darkness. *Olson v. Hanford Produce Co.* (1900) 111 Iowa, 347, 82 N. W. 903.

(aa) *Other hoisting apparatus.*—A common laborer who has been working round a crane for three weeks, and is injured owing to the fact that the hook attached to the crane, which is used for hoisting pieces of timber, is too dull to hold them properly, cannot recover where the jury has found specially that he could have seen the defect if he had looked. *Rietman v. Stolte* (1889) 120 Ind. 314, 22 N. E. 304. Where a servant engaged in loading bales of cotton on a ship was confined by his duties to the lower hold, where he did not and could not have seen the hooks by which the bales were lowered, he is not chargeable with knowledge of their defective condition. *Ocean S. S. Co. v. Matthews* (1890) 86 Ga. 418, 12 S. E. 632.

Where employees injured by the falling of a derrick had nothing to do with its erection or operation, and were required to work so near it that they might be injured by its fall, it cannot

said, as a matter of law, that they were negligent in working there or that they assumed the risk of such injury. *McMahon v. McHale* (1899) 174 Mass. 320, 54 N. E. 854.

An employee of mature years and ordinary mental capacity, who has been working for two weeks or more about a machine by which round logs 4 feet long, covered with ice, are raised 38 feet upon logs nearly 4 feet apart, on which they are placed, should be held to have assumed the risk of injury from a log falling from the hook. *Jones v. Manufacturing & Invest. Co.* (1899) 92 Me. 565, 43 Atl. 512.

(bb) *Ladders.*—The risk incident to using a ladder made by nailing horizontal slats to upright posts which extend only 18 inches above the brick work of a boiler is presumed to be appreciated by an employee who has been engaged for a month in stoking the boiler, and he cannot recover for injuries due to his

falling off the ladder while he was working in the dark for the post, and had mounted to the highest slat. *Smith v. Bence* (1895) 105 Mo. 63 N. W. 517.

(cc) *Trenches and banks of earth.*—Whether a servant injured by the subsidence of a trench, caused by a wall which had occurred not long before the accident, should have known of the washout, is a question for the jury. *Brown v. Field* (1892) 157 Mass. 31 N. E. 1075.

A laborer was not, as a matter of law, guilty of contributory negligence in working, under the direction of a foreman, in that part of a trench which was not sheathed or curbed, so as to provide for recovery for injuries caused by the falling of the trench, where he had worked in the trench for an hour before the accident happened, he was familiar with the character of the trench, and the danger was not unnecessary to a person of his experience. *Laporte v. Cook* (1899) 21 R. I. 1. Atl. 519.

A laborer who reached the place of work only a few minutes before a fall of earth fell upon him while he was working, determining it is not chargeable with knowledge of its specially dangerous condition owing to the fact that the wedges had been driven into the trench the previous day, and that there had been a fall of rain during the night preceding the accident. *Thomas v. ...* (1896) 21 C. C. A. 444, 41 U. S. 574, 75 Fed. 552.

(dd) *Tunnels.*—A laborer engaged in excavating a tunnel is chargeable with knowledge of a crack in the walls, if all his fellow workmen have observed it. *Anderson v. Winston* (1887) 31 Fed. 7.

(ee) *Mines.*—No action can be maintained for the death of a laborer in a mine who was killed by one of the pillars which it was his business to remove from the bottom of the excavation, where he was working, after they had been thrown down from the sides by the miners. *Lopez v. Central Arizona Co.* (1883) 1 Ariz. 464, 2 Pac. 7.

Whether an employee in a mine has knowledge of alleged defects in a way is a question for the jury, where it was not part of his duty or business to be on the lookout for such defects, and he had opportunities to observe them during the course of his employment, the character of the defects being of such a nature as to afford ground for a

while he was look-
ing post, after the

ch defects, but
observe them in
ment, the oppor-
ing of such
ound for an in-

ference that he had observed and did
know of them. *Whalley v. Zenida Coal
Co.* (1899) 122 Ala. 118, 26 So. 124.

Whether a mere laborer employed to
haul ore from the interior of the mine
to the ore house by means of a vehicle,
and not having anything to do with tim-
bering a tunnel, had knowledge concern-
ing the condition of the roof, is for the
jury. *Sampson Min. & Mill. Co. v. Schaad* (1890) 15 Colo. 197, 200, 25 Pac.
89. A miner's knowledge of the dan-
gerous state of the roof of a drift is for
the jury, where he had passed under the
place several times a day in the course
of his work. *Cherokee & P. Coal & Min.
Co. v. Britton* (1896) 3 Kan. App. 292,
45 Pac. 100.

A miner injured by the falling of a
rock which had negligently been allowed
to remain on the side of a shaft when
it was excavated cannot be said, as mat-
ter of law, to have been chargeable with
knowledge of the risk, where it appears
that, although he had been employed
several months in the mine, he had not
helped to excavate the shaft, that the
only light in the shaft was by lanterns,
and that the place from which the rock
fell could scarcely be seen in ascending
and descending the shaft. *Servance v.
New England Tale Co.* (1900) 72 Vt.
181, 47 Atl. 833.

A complaint which states that, with-
out any fault or negligence on plaintiff's
part, the slate composing the roof in a
coal mine fell upon him, and that he
had no knowledge of the unsafe or dan-
gerous condition of the roof, inasmuch
as he had been in the mine only ten
days before the injury occurred, suffi-
ciently alleges that the injury occurred
without any fault or negligence on his
part. *Hochstetler v. Mosier Coal &
Min. Co.* (1893) 8 Ind. App. 442, 35 N.
E. 927.

**Dangerous chemical properties of vari-
ous substances.**—An employee of a cor-
poration engaged in the business of
manufacturing white lead assumes the
risk of his health, necessarily incident
to such business, of which he has knowl-
edge or means of knowledge afforded by
his frequent opportunities to observe the
precautions adopted by other employees
for their protection. *Berry v. Atlantic
White Lead & Linseed Oil Co.* (1898) 30
App. Div. 205, 51 N. Y. Supp. 602.

An employee who has been employed
in a guano factory for several years, and
has had constant opportunities of ascer-
taining the dangers caused by the poi-

sonous gases generated in a sulphuric
acid tank, assumes the risk of injury
from inhaling those gases while en-
gaged in repairing a leak in the tank.
*State use of Eckhardt v. Lazaretto
Guano Co.* (1899) 90 Md. 177, 44 Atl.
1017.

A servant injured by an explosion
caused by throwing water on potassium
is not entitled to an instruction which
declares him to be free from negligence
unless he actually knew of the danger
caused by putting potassium into water,
where there is evidence that he was
warned of his peril by the shouts of by-
standers, and that frequent explosion,
from the same cause had occurred near
him. *Bill v. Meyer Bros. Drug Co.*
(1897) 140 Mo. 433, 41 S. W. 909.

(2g) *Incompetency of servants.*—
Knowledge of a fellow servant's quali-
ties will be conclusively presumed, after
working with him in the same railway
yard for twenty years. *Latremouille v.
Bennington & A. R. Co.* (1891) 63 Vt.
336, 22 Atl. 656.

A complaint alleging that the injured
servant was a track repairer and was
carried on the construction train for six
weeks preceding the injury, and that the
engineer in charge of the engine draw-
ing the train "was habitually careless
and negligent in the discharge of his
duties as such engineer, during all the
time, and was not possessed of sufficient
skill to run the engine in an ordinarily
careful and prudent manner," shows
that the injured servant was chargeable
with notice of the incompetency of the
engineer. *Lake Shore & M. S. R. Co. v.
Stupok* (1886) 108 Ind. 1, 8 N. E. 630.

A section hand who has daily oppor-
tunity to observe the incompetency of
his foreman cannot recover for an in-
jury caused by that incompetency. *Mc-
Dermott v. Hannibal & St. J. R. Co.*
(1885) 87 Mo. 285.

See also § 405, *post*.

To render a servant chargeable with
knowledge of the incompetency of a co-
servant, his means of knowledge as to
such incompetency must have reference
to the circumstances which necessarily
attend the performance of his duties as
such servant. *Daly v. Sang* (1895) 91
Wis. 336, 64 N. W. 997.

(h) *Number of employees assigned
to certain work.*—The danger arising
from the fact that there are not a suffi-
cient number of servants to manage the
master's machinery properly is pre-
sumed to be known to a man who has

possible observation, the weather was dull and stormy;¹ or darkness prevailed;² or temporary conditions prevented him from using eyesight effectively;³ or the work in which he was engaged was grossing as to divert his attention from his surroundings⁴ (see

been in his employ for three years. *Sutton v. Hawthorn* (1872) 26 L. T. N. S. 851.

(ii) *Systems and methods of work.*—A section man who for fifteen months has been repairing tracks in a yard is presumed to have become acquainted with the rate at which trains are usually run there. *Baughman v. Chicago, St. P. M. & O. R. Co.* (1891) 17 Minn. 486, 50 N. W. 531. A section man who has been working for three months on a railway where one third of the trains are irregular or extra is chargeable with notice of the practice of running such trains. *Larson v. St. Paul, M. & W. R. Co.* (1890) 43 Minn. 423, 45 N. W. 722. After serving on a particular train for several weeks a brakeman is presumed to understand the danger of a collision which is created by the running regulations under which the train has been operated during the whole of that period. *Wright v. New York C. R. Co.* (1862) 25 N. Y. 562.

A civil engineer whose duties are to look after the building and maintenance of railroad bridges and trestles assumes the risk of injury from the failure of the company to provide a watchman at a bridge which gives way under the train upon which he is traveling in discharge of his duties, as he must be presumed to know that no watch is kept upon such bridge. *Texas & P. R. Co. v. Smith* (1895) 51 L. R. A. 321, 14 C. C. A. 509, 30 U. S. App. 176, 67 Fed. 524.

An employee who has worked in a switch yard a short time only, and who has seen men on cars which were being switched, is not, as matter of law, chargeable with knowledge of a custom in the yard not to have men on cars while they are being switched. *Chicago & N. W. R. Co. v. Kean* (1897) 70 Ill. App. 676.

¹ Whether knowledge of the dangerous conditions shall be imputed to the foreman of a switching crew, who, while attempting to couple freight cars on a spur track, stumbled over piles of ashes between the rails, and was caught between the cars, is for the jury where the evidence is that the day was dark, with rain and sleet falling; that the ash piles were from 4 to 8 inches high, and covered with snow and ice; and that the

foreman, whose duties did not include him to observe and make safe the condition of the tracks, had never so before the accident. *Kennedy v. Superior Terminal & Transfer Co.* (1895) 93 Wis. 32, 66 N. W. 113.

² In *Fish v. Illinois C. R. Co.* (1896) 96 Iowa, 702, 65 N. W. 495, it was held that a brakeman who knew of falling from gravel cars along the track did not assume the risk caused by the presence, where the company was in the habit of cleaning off such stones, time to time, and he began work at night, when he could not see where any stones were on the track.

The fact that a brakeman is upon unexpectedly to make a collision soon after midnight has a material bearing upon the question whether he exercised due care in ascertaining the condition of the coupling appliances. *Wells v. R. Co. v. Foley* (1893) 220, 21 S. W. 866.

³ A tinner in the employ of a railroad company, who is directed to make repairs on the roof of a passenger car standing on a side track, and is injured that it will remain there several days, is not, as a matter of law, guilty of negligence in remaining on the upper side of the car, and failing to discover a stretched across the track, by which he is struck and injured, when he started soon after he gets on, and smoke and cinders from the engine strike directly in his face. *Stoltz v. Pittsburg & L. E. R. Co.* (1895) Pa. 377, 30 Atl. 980. The court remarked that the nature of the duties was not such as to bring danger to his notice.

⁴ A "machine runner" operating a machine to undermine coal cannot, as matter of law, be held to have his attention drawn to the fact that the duty of inspecting the roof of the machine which the foreman had agreed to assume, was being neglected, because he had been in the room about two hours and there had been no inspection though frequent inspections were required, where it is a fair inference from the evidence that he was giving the machine his constant attention in an attempt to break the record for *Westville Coal Co. v. Schwartz* (

or darkness from using his lighted was so dangerous (see also

did not require safe the never seen this *Connelly v. T. & T. Co.* (1897) 113 N. W. 1137. *P. R. Co.* (1897) 113 N. W. 1137. 1895, it was known of stones along the track caused by their company was in the track stones that can work at and not see whether track.

man is called make a coupling a material bear whether he examining the conditions. *Looney v. (1893) 94 Ky*

loy of a railroad ed to make passenger car ck, and is told e several hours, w, guilty of ne the upper deck discover a wine ck, by which he when the car is ets on, and the the engine come *Stollenberg v. Co.* (1895) 163 The court re of the servant's as to bring the

350, note 1, *ante*); or was such as to give him no time to make observations.⁵ On the other hand, notice of all obvious dangers is imputed, as a matter of law, to a servant whose opportunities for observation are not restricted or diminished by any specially unfavorable conditions.⁶

As to the effect of the servant's temporary forgetfulness of a previously ascertained danger, see §§ 281, 350, 351, *ante*.

404. Knowledge of particular risks; how far inferable from knowl-

177 Ill. 272, 52 N. E. 276. Affirming (1897) 75 Ill. App. 468.

⁵ Whether a brakeman was negligent in attempting to unite two cars with defective couplings is a question for the jury, where the evidence is that he had at no time been called by his duties to examine or observe the coupler; that, as testified by experienced brakemen, he would not be likely, in the ordinary time of uncoupling a car and keeping his face to the engine, to have seen the defect in the deadwood, and certainly would not have seen or known of any defect in the springs; and that he had not been warned by any servant of the company of any defects therein. *Bender v. St. Louis & S. F. R. Co.* (1897) 137 Mo. 240, 37 S. W. 132. The danger of coupling a foreign car, the drawbar of which differs so much in height from those on the employer's own cars that it will slide past them and permit the cars to come close together, is not a danger of which a servant engaged in coupling cars can be required to take notice. *Ohio & W. R. R. Co. v. Wangelin* (1892) 43 Ill. App. 324. A brakeman was not guilty of contributory negligence in attempting to couple a car having timbers projecting over the end, where he went toward it rapidly and without good opportunity to see that the projection would prevent his making the coupling safely, and was compelled to act in great haste. *Illinois C. R. Co. v. Beardon* (1894) 56 Ill. App. 542. A court will not declare, as a matter of law, that a brakeman is guilty of negligence in not discovering a defect in a brake and ceasing to use it, when he has only two or three minutes to uncouple the car and regulate its movements so as to bring it to a stand-still at a given point. *Philadelphia & R. R. Co. v. Huber* (1889) 123 Pa. 63, 5 L. R. A. 439, 18 Atl. 334. A brakeman who, while hastily attempting to get on a slowly moving car, is injured by the giving way of a stirrup which he had no opportunity to inspect, and which was

not palpably defective, is not necessarily debarred from recovery on the ground of contributory negligence. *Leak v. Carolina C. R. Co.* (1890) 124 N. C. 455, 32 S. E. 884. A locomotive engineer does not assume the risk from a defect in an engine, where he does not have time to inspect or examine the engine before using it. *Missouri, K. & T. R. Co. v. Durlin* (1899) Tex. Civ. App. 50 S. W. 1634. That an employee might have seen that the key to a pin holding in place apparatus for hoisting material from a trench was out was not negligence preventing a recovery for an injury caused by the fall of material, where he was hurriedly put to work in the trench without an opportunity to examine the machine. *Higgins v. Williams* (1896) 114 Cal. 176, 45 Pac. 1041.

Whatever may be the obligations of a servant to acquaint himself with the condition of a temporary appliance, such as a scaffold, he is entitled to recover for injuries due to its defects, where it is furnished to him complete and he has no time to inspect it. *Chicago & I. R. Co. v. Scanlan* (1897) 170 Ill. 106, 48 N. E. 826.

See also: *Mann v. Oriental Print Works* (1875) 11 R. I. 152, where the fact that the servant had been suddenly called upon to undertake new duties, and the want of opportunity to examine and estimate the danger, were adverted to as elements favorable to him.

⁶ In *Hathaway v. Michigan C. R. Co.* (1883) 51 Mich. 253, 47 Am. Rep. 569, 16 N. W. 634, one of the grounds on which the plaintiff was held unable to recover for an injury received in coupling two cars with double deadwoods was that the brief period that elapsed while the moving car was slowly approaching the stationary one afforded an ample opportunity for appreciating the precise nature and extent of the risk.

A brakeman is bound to take notice of the absence of the nut which keeps a brake wheel on the shaft. *Thorn v. Central R. Co.* (1900) 5 N. J. L. 45 Atl.

edge of general conditions.—The range of circumstances under which knowledge may be imputed to a servant who has the means and opportunities of knowledge has been considerably extended by the recognition of a principle which may be stated as follows:

A servant who is, or ought to be, aware of the fact that dangerous conditions arising from the construction, arrangement, or operation of the master's instrumentalities are found in certain places or are of such frequent occurrence as to be normal incidents of the employment is deemed to be chargeable, as a matter of law, with knowledge of each single instance of those conditions, although it may be apparent that this would not have been a necessary conclusion if his constructive knowledge had been considered with reference solely to the nature of his opportunities for observing that particular instance, and without respect to the deductions which might be drawn from the wide distribution or frequent occurrence of conditions of similar description.¹

1032 (short *per curiam* opinion, not stating clearly the precise rationale of the decision).

Anyone using a stairway, even for the first time, in broad daylight, is bound to notice such obvious defects as that it is steep, that it has no railing, and that its steps are placed at irregular intervals. *Sweet v. Ohio Coal Co.* (1890) 78 Wis. 127, 9 L. R. A. 861, 47 N. W. 182.

¹ (a) **Railway tracks and appurtenances.**—If low joints in a railway track, causing jolts and jars, are to be expected by a brakeman because of their frequency, he cannot recover for an injury caused by one, unless there is evidence that it was caused by a joint so unusually low as to import negligence of the company. *Texas & N. O. R. Co. v. Dillard* (1888) 70 Tex. 62, 8 S. W. 113. A section hand who knows the general condition of the railroad track to be defective in certain particulars assumes the risk of injury from all defects of that nature, whether particularly known to him or not. *Green v. Cross* (1890) 79 Tex. 130, 15 S. W. 220 (hand car derailed owing to worn condition of rails).

A railroad engineer assumes the risk incident to the opening of a road blocked by snowdrifts, when he sets out upon a train made up for that purpose, with full knowledge of the nature of the work and the dangers incident, although he does not know the exact location and size of every drift which must be re-

moved. *Dorr v. Lehigh Valley* (1893) 158 Pa. 365, 27 Atl. 10.

A railroad fireman assumes the risk of using a particular switch without a lamp, where he knows that lamps are supplied for switches generally, although he does not know that the particular switch has no lamp, unless he has had no opportunity of acquiring such knowledge. *Illinois C. R. v. Swisher* (1895) 61 Ill. App. 301, 100 Ill. 365. The district court said: "The distinction between a condition existing in a class of cases and a condition peculiar to a particular appliance is pointed out in *Chippewa, B. & W. R. Co. v. Smith* (1875) 77 Ill. 365. In this case the condition was common to switches on that part of defendant's road, and plaintiff had no opportunity to know, and it was known, that there were no lamps on switches on that part of the road. He did not deny that he knew the general condition of the switches, but confined his denial to one that was left open, which was different from the others. If the hazard increased in his employment by the use of switches without lamps, he knew that he was exposed to that hazard every time he went upon the road after dark."

An employee familiar with the work who undertakes to block the driving wheel of a locomotive on a down grade, assumes the risk

locking does not hold, of having his hand caught on a spike in one of the sleepers, where he knows that the sleepers are secondhand, and that spikes are in some of them, although he does not know of the particular spike which causes the injury. *O'Neil v. Keyes* (1897) 168 Mass. 517, 47 N. E. 416.

Where all the frogs and guard rails in the yard where a servant is working are, so far as he has observed, unblocked, he cannot, in the exercise of ordinary care, assume that the particular one which causes his injury is blocked, even if he has not had an opportunity to inform himself as to its condition. *Burnham v. Concord & M. I. Co.* (1896) 68 N. H. 567, 44 Atl. 750. Similarly, it has been held that an experienced switchman who had been working nearly two months in a certain yard where all the guard rails were unblocked assumed the resulting risk. *Missouri, K. & T. R. Co. v. Thompson* (1895) 11 Tex. Civ. App. S. W. 718.

A brakeman cannot recover for an injury caused by an unblocked guard rail, where he was familiar with the yard in which the accident occurred, and knew that the guard rails in that and other yards on the line were not blocked. *Rice v. New York C. & H. R. R. Co.* (1900) 55 App. Div. 339, 67 N. Y. Supp. 135. To same effect see *Haas v. Buffalo, N. Y. & P. R. Co.* (1886) 40 Hun, 145, where it was held that no action could be maintained by a workman who knew that there were no blocks in similar places on the road, although he did not have actual knowledge of the precise location of this particular guard rail. Recovery was also denied in *Banks v. Georgia R. & Bkg. Co.* (1901) 112 Ga. 655, 37 S. E. 992, on the ground that all the frogs on the line were unblocked.

A verdict is rightly directed for the defendant, where a brakeman is suing for injuries caused by a cattle guard while he was coupling a car, and it is shown that such guards existed at intervals over the whole road. *Fuller v. Lake Shore & M. S. R. Co.* (1896) 103 Mich. 690, 66 N. W. 593.

(b) *Obstructions near railway tracks.*—An engineer who was struck by a signal post while leaning out of his locomotive cannot recover where he knew that there were other structures on the road at the same distance from the track (3 ft. 8 in.), although he knew nothing about this particular post. *Lorejoy v. Boston & L. R. Corp.* (1878) 125 Mass. 79, 28 Am. Rep. 206. The Vol. I. M. & S.—71.

court said: "If there was any danger to the plaintiff while in the performance of his duty, from the structures thus placed, it was a risk he had assumed. He knew the manner in which the road was constructed, the proximity to the track of these structures, and the methods employed in the management of the trains."

The fact that an engineer knew nothing about the position of a temporary post will not enable him to recover for injuries caused by striking against it, when he is familiar with the road, and there are many other structures closer to the track than the post. *Tham v. Old Colony R. Co.* (1891) 161 Mass. 353, 37 N. E. 309. The court said: "It is necessary for railroad companies to put up structures near enough to their tracks for it to be possible for persons on the trains to come in contact with them. Parallel tracks usually must be laid near enough to each other to create a similar danger between trains moving in opposite directions. A company is not bound to give warning of every such structure to every person employed upon its trains. There must be some point within the limit which it is possible for a man on a train to reach at which the railroad company has a right to build without notice, and to assume that those on the trains will keep out of the way. Everyone knows that there is danger as soon as he gets outside of the line of the train when it is in motion."

A railroad employee knowing of the existence of "clearing posts" between the switch and main tracks along the line of the road assumes the risk incident to the existence of such a post at a particular switch, although he had no actual knowledge of its existence. *Sedmore v. Milwaukee, L. S. & W. R. Co.* (1895) 89 Wis. 188, 61 N. W. 765.

A brakeman aware that a large number of cattle guards are dangerous because of their proximity to the track, and that in this regard they are all substantially alike, must be held to take the risks incident to their general condition, and cannot recover for an injury received by being struck by one of them while stooping, on the lower step of a car, to throw off a defective brake, although he did not know that the particular cattle guard in question was so near the track. *Missouri P. R. Co. v. Somers* (1888) 71 Tex. 700, 9 S. W. 741; (1890) 78 Tex. 132, 14 S. W. 779.

Notice that a coal bin close to a siding may be encountered at any point is

Such a principle obviously has no application to cases in which it is shown that conditions like those which caused the injury were a matter of fact, exceptional rather than normal.²

Imputed to a servant who admits that he knew of the company's practice to locate this class of structures in such a position; and he cannot recover if, owing to his failure to keep a lookout, he comes into collision with one of them while pushing a car along a siding in the dark. *Paddon v. Detroit, G. H. & M. R. Co.* (1899) 122 Mich. 232, 81 N. W. 103.

The fact that a brakeman was unacquainted with a yard where he was struck by a fish chute will not enable him to recover, where he knows that there are many similar structures at various points on the road. *Phelps v. Chicago & W. M. R. Co.* (1899) 122 Mich. 171, 81 N. W. 101, 84 N. W. 66.

A brakeman on a short section of railroad, who is notified that stones have been piled so near the road that a person on the side of a car passing them is liable to be struck, assumes the risk from that cause, although the precise location of the danger is not stated to him. *Smith v. Winona & St. P. R. Co.* (1899) 42 Minn. 87, 43 N. W. 968.

See also *Fisk v. Fitchburg R. Co.* (1903) 158 Mass. 238, 33 N. E. 510 (subd. (c) *infra*).

(c) *Railway cars; construction and operation of.*—A servant assumes the risk incident to the handling of broken and disabled cars placed upon the repair track, where he knows the location of the repair tracks and the purpose for which cars are placed thereon. His finding a car on a repair track is in effect a warning as to their condition. *Brown v. Chicago, R. I. & P. R. Co.* (1898) 59 Kan. 70, 52 Pac. 65.

An instruction that, if cars constructed in the manner of the car occasioning the injury were in common use by well-managed roads, and were received in exchange by the defendant company, to the knowledge of the plaintiff, the plaintiff assumed the risk of finding one in the train on which he was brakeman, is erroneous in limiting the use to the plaintiff's knowledge, which was unimportant where he had had ten years' experience. *Benson v. New York, N. H. & H. R. Co.* (1901; R. 1.) 49 Atl. 689. A brakeman who has been working on a certain division of a railway for two years, and is injured by a projecting awning upon a permanent

structure, while he is climbing a ladder on a foreign car which is of unusual height, but similar to one of a like construction, which he occasionally received on the road, is deemed to have assumed the risk, which he was exposed by the negligence of the company. *Fisk v. Fitchburg R. Co.* (1903) 158 Mass. 238, 33 N. E. 510.

(d) *Unguarded openings.*—A servant who knows that a vat may be uncovered at any time for the purpose of his employer's business is deemed to accept the risk of such a temporary condition whenever it may supervene. *Wagon v. Washburn & M.* (1898) 170 Mass. 79, 48 N. E. 510.

A longshoreman who from previous experience is familiar with the usual conditions prevailing on a ship, where cargo is being stowed on ships to the same owners as the one on which he is injured cannot recover damages while obeying an order of the captain to go forward between decks, to secure some dunnage, he falls through a hatchway. *The Padje* (1881) 133 Fed. 354. An experienced stevedore is to take notice of the effect of the operation of discharging cargo from the opening of the scuttles. *Krafft v. (1896) 92 Wis. 252, 65 N. W. 510.*

(e) *Management of trains.*—A servant knowing that steam engines, boilers from time to time, are loaded to a place near boilers, and cover for an injury caused by a horse he was driving was frightened by steam escaping automatically from such a boiler. *Tramway Co. v. O'Brien* (1899) App. 74, 44 Pac. 766.

² In *Scanton v. Boston & M.* (1888) 147 Mass. 484, 18 N. E. 510, where a brakeman was injured by a structure close to the track, the court refused to apply the doctrine of cases cited in note 1, *supra*. "He did not know that there were obstructions so near the track as to injure him. Such erections were, in fact, and exceptional. Within 15 feet of the track in Boston there were but seven telegraph poles, one telegraph pole, one bridge and abutments. It does not appear whether there were any obstructions upon the road. It was the

Other qualifications of the principle are these: That the servant's knowledge of the existence of a condition which may and usually does produce certain defects in a large number of cases does not charge him with an acceptance of the risk created by any particular one of that class of defects as soon as it actually supervenes;¹ that his knowledge of the fact that the general condition of that portion of the master's plant which caused the injury is unsatisfactory will not charge him with knowledge of a particular defect;² and that he is not

first trip as brakeman; he was unfamiliar with the route and with the running of trains, and was not informed that there was any such danger, or in any way cautioned in regard to it; and he had no reason to know that there were permanent erections so near the tracks as to make it dangerous for him to be upon the place on the car which was provided by the defendant."

Where the master has adopted certain structural safeguards, and, to the servant's knowledge, has failed to replace them in a large number of instances after they have been worn out, this does not amount to the establishment of a dangerous system, the risk of which the servant assumes by reason of his knowledge. To defeat his recovery it must be shown that he knew of the want of the safeguard at the particular place where he was injured. *Sherman v. Chicago, M. & St. P. R. Co.* (1885) 34 Minn. 259, 25 N. W. 593 (said of a case where the blocking of frogs had been worn out).

The fact that a brakeman injured by having his foot caught between ties in a railway switchyard knew of the generally dangerous condition of the tracks in the yard in not having spaces between ties filled in will not warrant a court in declaring that, as matter of law, he knew of the extra hazard to which he was exposed, where his injury occurred where the exposure of the ties was greater than in other places. *St. Louis, I. M. & S. R. Co. v. Robbins* (1893) 57 Ark. 375, 21 S. W. 886.

The fact that ballast of the same general character was used at points other than that at which the accident occurred will not serve as a notification to the servant of the fact that at the point where he was injured there were used stones so large that it was culpable to have put them there. *Galveston, H. & S. A. R. Co. v. Pitts* (1897: Tex. Civ. App.) 42 S. W. 255.

A railroad employee did not, as matter of law, assume the risk of falling

into a ditch 8 inches deep between the ties at a switch in one of three railroad yards in which he worked, where all the other ditches in the same yard were much shallower and less dangerous, and there were no ditches in the other two yards. *Hennessen v. Chicago & N. W. R. Co.* (1898) 93 Wis. 109, 74 N. W. 534.

An employee of a railroad company will not be presumed to know that a particular coal car is furnished with a hand hold and stirrup, where most of the company's coal cars are not so equipped, so as to charge him with contributory negligence in not using them. *Light v. Chicago, M. & St. P. R. Co.* (1894) 93 Iowa, 83, 61 N. W. 380.

Actual knowledge of the particular defect alone will bar the action of a brakeman injured by the pulling out of a hand hold from the rotten top of a car, where, though he knew that there were a number of cars on the road with rotten tops, the cars were not so uniformly rotten as to establish a condition of which he was bound to take notice. *Fordyce v. Culver* (1893) 2 Tex. Civ. App. 569, 22 S. W. 237. Distinguishing *Missouri P. R. Co. v. Somers* (1888) 71 Tex. 700, 9 S. W. 741, note 1, *supra*.

¹ Thus, the fact that the ground on which a side track was laid was known by the brakeman to be wet and soft, and that low joints were liable to be raised thereby, will not charge him with actual knowledge of the existence of such a defect whereby he was injured while making a coupling. *Texas & P. R. Co. v. McCoy* (1897) 17 Tex. Civ. App. 494, 44 S. W. 25.

² *Geahan v. Chapman* (1890) 33 N. Y. S. R. 349, 11 N. Y. Supp. 318 (notice that the ties were rotten at a certain point not necessarily imputed to an employee because he knows the track to be in a generally rough condition).

The fact that a brakeman has been in the defendant's employ for two weeks,

deemed to be affected with notice that a certain instrument was dangerously placed merely because he had had, in the course of his employment, sufficient opportunity to ascertain its general location.

Even as thus restricted in its operation, the conception that the knowledge of the particular may be deduced, *as a matter of law*, from the knowledge of the general, would seem, in many instances, to lead to extremely harsh consequences. The present writer ventures to express the opinion that in most, if not all, of the cases in which this doctrine has furnished the foundation for a conclusion adverse to the servant, the doctrine of imputed notice has been beyond the justifiable limits.

404a. Knowledge of coservant not imputed to injured servant.

One servant is not the agent of another in such a sense that the knowledge of a defect which is possessed by the former can be imputed to the latter. This principle endures to the benefit of an injured servant whether he was or was not under the control of the employer at the time he knew of the defect.¹

D. COMPARISON BETWEEN THE POSITION OF MASTER AND SERVANT IN REGARD TO IMPUTED KNOWLEDGE.

405. Servant's means or opportunities of knowledge equal to those of the master.—Constructive knowledge of a danger is frequently imputed to a servant on the ground that his means or opportunities of knowledge are equal to those of the master.

and has thus acquired a general knowledge of the neglect of the company to keep the tracks near the wood yards free from pieces of wood, will not preclude him from recovering for injuries caused by tripping over such a piece while coupling a car, where there is no specific evidence showing his knowledge of the condition of the track at the place where he was injured. *Hickman v. Green Bay, W. & St. P. R. Co.* (1887) 68 Wis. 520, 32 N. W. 529.

¹In a case where a brakeman was struck by a cattle chute, it was held proper to refuse an instruction to the effect that, if the jury found that the plaintiff had been employed as brakeman or conductor on trains passing the chute several times a week, during some months before he was hurt, and had also assisted several times in running cars into and out of the siding to which the chute was adjacent, they must find that he had means of knowledge as to its situation. The court considered it to be "contrary to the experience of human life that one knowing generally of a

thing, without opportunity of ascertaining its precise relations and location, is to be charged with notice." *Dowsey v. Phillips & C. Co.* (1877) 32 Wis. 583. Contradiction by the same court, cited 1, *subd. 3d, supra*.

The fact that a brakeman had general knowledge that there was a stand at a certain point does not bind him, as a matter of law, with notice that it was dangerously close to the track, where the evidence shows that the rule of the company forbade the use of any obstruction so close to the track as this was, and he had, therefore, reason for expecting to find it clear. *Paldeck v. Union P. R. Co.* (1888) 5 Utah, 612, 1 L. R. 386, 191.

²The knowledge possessed by a man in charge of a piece of work is imputed to his subordinates, though no agency in such a case. *Hooper* (1890) 52 N. J. L. 411, 215 (Cromwell). Compare *Humboldt & St. L. R. Co.* (1888)

person of ordinary intelligence who had a reasonable chance of serving them.² Not infrequently, however, this form of exception is naturally suggested by the fact that the servant was in a position of relatively favorable position for ascertaining the existence of the danger. Under these circumstances, it possesses a certain special appropriateness. One class of cases exemplifying this situation is that in which it appears from the evidence that it was the function of the injured servant himself to remedy, prevent, or report the con-

ter (*Ererhard v. Diamond Match Co.* [1899] 98 Fed. 555; *Connors v. Morton* [1894] 160 Mass. 333, 35 N. E. 860; *Steffen v. Mayer* [1888] 96 Mo. 420, 9 S. W. 630; *Clark County Cement Co. v. Wright* [1897] 16 Ind. App. 630, 45 N. E. 817); or "open and obvious" alike to the servant and the employer (*Louisville & N. R. Co. v. Kemper* [1897] 147 Ind. 561, 47 N. E. 214; *Denver Tramway Co. v. Nesbit* [1896] 22 Colo. 408, 45 Pac. 405); or "equally open to the observation" of the servant and the master (*Eronsville & R. R. Co. v. Henderson* [1893] 134 Ind. 636, 33 N. E. 1021; *Eronsville & R. R. Co. v. Barnes* [1894] 137 Ind. 306, 36 N. E. 1092; *Baltimore & O. S. W. R. Co. v. Welsh* [1897] 17 Ind. App. 505, 47 N. E. 182); or "open" to both master and servant (*Svenson v. Lafayette* [1893] 134 Ind. 625, 33 N. E. 1033); or "open alike to the knowledge and observation" of the master and servant (*Chicago, St. L. & P. R. Co. v. Champion* [1894] 9 Ind. App. 526, 36 N. E. 221, 37 N. E. 21).

Another way of stating the same conception is that a master is not liable for injury to an employee where it does not appear that his knowledge of the danger was, or in the exercise of due care could have been, greater than the employee's. *Dube v. Gay* (1899) 69 N. H. 670, 46 Atl. 1049.

² Such are the following: *Ames v. Lake Shore & M. S. R. Co.* (1893) 135 Ind. 363, 35 N. E. 117 (injury caused by unblocked frog); *Rojotte v. Canadian P. R. Co.* (1889) 5 Manitoba L. Rep. 365 (injury from unblocked frog); *Peoria, D. & E. R. Co. v. Hardwick* (1892) 48 Ill. App. 562 (brakeman injured by the striking of a loose plank at a crossing against the footboard of a switch engine, after he had been riding on the board over the same crossing many times a day for a considerable period); *Texas & N. O. R. Co. v. McKee* (1894) 9 Tex. Civ. App. 100, 29 S. W. 544 (glass lubricator on locomotive,

which had no shield, exploded, injured fireman); *Wright v. New R. Co.* (1862) 25 N. Y. 562 (injured by collision due to crossing regulations, under which on which he served had been for several weeks); *Naylor v. C. & H. R. R. Co.* (1888) 33 C. (engineer killed through mis-switch, and consequent dowing to change in color of signal); *Hamilton v. Richmond Co.* (1889) 83 Ga. 346, 9 S. (yard watchman run along platform in the dark; nothing that it was intended for such pose); *Southern P. Co. v. Leas* 2 Tex. Civ. App. 68, 21 S. W. (man of engine on a pipe-drive injured through the failure of ter's representative to replace of the car); *Atlas Engine & Randall* (1885) 100 Ind. 293, Rep. 798 (hand caught in cog); *Rudd v. Bell* (1887) 13 Ont. (hand caught by knives of *Quigley v. Thomas G. Plant Co.* 165 Mass. 368, 43 N. E. 205 (ing from use of a certain p-guard of a machine operated servant for nearly three years *v. Naumburg* (1890) 123 N. Y. N. E. 385, Reversing (1889) 392, 3 N. Y. Supp. 227 (defe-vator injured employee who w-tomed to ride on it); *Boyers v. ton City R. Co.* (1890) 76 Tex. S. W. 540 (driver injured by s-on a board nailed on platform a worn spot); *Diamond Pl Co. v. Bellority* (1895) 143 40 N. E. 681 (panel of a f-leaning against the permanent f-blown over); *Salem Bedford S v. Hobbs* (1894) 11 Ind. App. N. E. 538 (large stone set on smaller stones fell over); *S. in question.³ In another class the action has been held not main-
tainable because the servant had himself produced, or assisted in pro-

frightened by a train); *Larich v. Moies* (1894) 18 R. I. 513, 28 Atl. 661 (over-
hanging bank of sand fell); *Swanson v. Lafayette* (1893) 134 Ind. 625, 33 N. E. 1033 (bank of gravel fell on shoveller); *Texas & P. R. Co. v. French* (1893) 86 Tex. 98, 23 S. W. 642 (error in use of this type, to refuse a charge th. if the danger to be expected from the caving of a bank was as open to the observation of the servant as it was to the foreman, the servant could not recover).

The danger involved in using a simple appliance like a 12 foot ladder with a defect so obvious as the absence of about 20 inches at the top of one of the side rails is presumed to be known to a servant of mature years and average mental capacity. *Jenney Electric Light & P. Co. v. Murphy* (1888) 115 Ind. 366, 18 N. E. 30. A hand car being a simple appliance, it will be assumed that a section hand who has used it for about twenty months is as familiar with its condition as his foreman. *Burlington & P. R. Co. v. Lieke* (1892) 17 Colo. 280, 29 Par. 175.

The danger of losing his balance and having his hand caught in unguarded cogs near a ladder which a servant who has been at work in a brick factory for three months is using is as obvious to him as to his master. *Buhle v. Harland* (1890) 37 Ill. App. 350.

The danger that the clothes of a man on a hand car may be caught in a screw projecting from the crank is as obvious to him, after helping for several days to run the hand car, as it is to his employer. *Cacey v. Boston & M. R. Co.* (1893) 158 Mass. 228, 33 N. E. 512.

A superintendent of bridges and assistant superintendent of the construction of a railway, who has made a personal inspection of the condition of the track, and is aware that the cross-ties are not sufficiently secure, being only half tied, and that the road, which has not been opened for passenger traffic, is not safe for a rapidly moving train, assumes the risk of the derailment of a train upon which he is riding. *Evansville & R. R. Co. v. Barnes* (1894) 137 Ind. 306, 36 N. E. 1092.

Knowledge of the risk of injury from the narrowness of a platform is imputed to a servant, where he has wheeled his barrow many times, both night and day, during the three weeks he has been at

work, over the same platform, in the same condition, and under similar circumstances. *Kaue v. Troy Steel & I. Co.* (1893) 139 N. Y. 369, 34 N. E. 901. The fact that stronger couplings are required for the special work of running cars down an incline to a transfer boat is a fact presumably as well known to an experienced brakeman engaged in the work for a considerable time as it is to his employers. *Illinois C. R. Co. v. Jones* (1882) 11 Ill. App. 324.

The danger caused by the sudden dropping of an elevator while a servant is engaged in placing heavy granite sills therein is as obvious to him as to the master. *Connors v. Morton* (1894) 160 Mass. 333, 35 N. E. 860.

The fact that the poles of a derrick which is being unloaded from a wagon are wet, and therefore liable to slip during the operation, is as obvious to a workman as to his foreman. *Pintorelli v. Horton* (1900) 22 R. I. 375, 48 Atl. 142.

The servant's allegation of ignorance is overcome by another allegation showing that he was injured by slipping on loose ashes while pushing a heavy car. *Louisville & N. R. R. Co. v. Kemper* (1896) 117 Ind. 561, 47 N. E. 214.

A servant who was thrown against gearing by the shutting of an automatically closing gate which he touched while rising from a floor which it was his duty to keep clean cannot recover. *Brady v. Ludlow Mfg. Co.* (1891) 154 Mass. 468, 28 N. E. 901.

Where the evidence shows that the danger of collapse of an arch became known only when it actually began to subside, such danger is regarded as one which can be observed as well by the men who undertake the work of shoring it up, as by their employer. *Ogden v. Rummens* (1863) 3 Fost. & F. 751 (verdict for defendant was not disturbed).

A condutor under whom an incompetent engineer has been serving for six weeks is presumed to have had as good an opportunity as the company of ascertaining that incompetency. *St. Louis, I. M. & S. R. Co. v. Morgart* (1885) 45 Ark. 518.

In *French v. Adls* (1893) 72 Hun. 432, 25 N. Y. Supp. 188, a servant was denied recovery for injuries caused by the breaking of a rope on the ground that, having often seen and constantly

406. Servant's means or opportunities of knowledge superior to those of the master.—Another way of applying the test of a comparison between the relative positions of masters and servants is exemplified in those cases in which servants have been held chargeable with knowledge for the reason that their means or opportunities of knowledge were superior to or better than those of the masters.¹ A controlling effect has been ascribed to this conception in cases where the fact emphasized is that the servant had been habitually handling the defective instrumentality, or had been constantly brought into close local relations thereto.² Other classes of cases in which the more favor-

strutive knowledge of its condition. *Wolf v. Big Creek Stone Co.* (1897) 148 Ind. 317, 47 N. E. 664. *Milrining* (1894) 138 Ind. 496, 38 N. E. 52.

An employee in a shipyard, at work in a dark place between the decks on a ship in the course of construction, who, stepping off a platform, fell into a hole and was injured, cannot recover therefor if, a few days before, under the master's orders, he had assisted in boarding up the hole, which had thereafter been reopened without the master's knowledge. *Rick v. Crump* (1888; Pa.) 11 Cent. Rep. 400, 12 Atl. 495.

A railway servant who helps to place a car on a certain track is chargeable with knowledge of its position, and cannot recover for an injury caused by projecting his person so far beyond the car on which he is riding, on an adjoining track, that he is struck by the standing car. *Kansas City, M. & B. R. Co. v. Burton* (1892) 97 Ala. 240, 12 So. 88.

Recovery has been denied to a char-woman who cut her hand on a piece of glass in a washtub, she herself having poured in the water which covered it. *Flynn v. Beebe* (1863) 93 Mass. 575. The danger that certain iron plates which had been insecurely placed by the servant himself might fall is presumed to be better understood by him than by his employer. *Reese v. Clark* (1892) 146 Pa. 465, 23 Atl. 246. The risk resulting from a floor being slushy is presumed to be obvious to a servant, if it is caused by oil from machinery, of the oiling of which he himself has charge. *Murphy v. American Rubber Co.* (1893) 159 Mass. 266, 34 N. E. 268.

¹ The use of this form of the test also is traceable to the leading case of *Priestley v. Fowler* (1837) 3 Mees. & W. 1, Murph. & H. 365, 1 Jur. 987, 7 L. J. Exch. N. S. 42, where Lord Abinger observed that, under the circumstances, the

servant "must have known as well as the master, or probably better," the danger to be apprehended.

² "The duty which the master owes to his servants is to provide them with safe tools and machinery where that is necessary. When he does this, he does not, however, engage that they will always continue in the same condition. Any defect which may become apparent in their use it is the duty of the servant to observe and report to his employer. The servant has the means of discovering any such defect, which the master does not possess." *Baker v. Allegheny Valley R. Co.* (1880) 95 Pa. 211, 40 Am. Rep. 634 (rope on derrick became defective from wear). Compare *Philadelphia & R. R. Co. v. Hughes* (1888) 119 Pa. 301, 13 Atl. 286, where the same phrase is repeated.

When the master has provided his servant with safe tools it is "the duty of the latter who has them in use to observe their condition, and, if defective, to report the fact to his superior. Having them under his control, he is better able to observe their condition than is the master. If defects exist, and are not observed by those who have them in daily use, how can the master be better able to know of any defects existing? and if the servant uses them without objection the master has a right to assume that no cause of complaint exists. We are now speaking of those articles with which the employee is brought in actual contact when in use, and where by handling them he must necessarily see and know of their condition. When a master provides his servant with an axe or a pick to be used in the latter's ordinary business or employment, there would arise no duty on the part of the employer to inspect them, unless after complaint made. To allow a servant to handle and use a chain for days, weeks,

able position of the servant has been asserted are those in whom the master had acquired, by experience or technical training, special skill in the work and a capacity for appreciating the dangers which it involved.

or months, and then hold a master responsible for accidents resulting from wear and tear or breaking would be harsh law. That such articles will in time wear out or break is evident, but who is better able to judge of their condition than those who have them in daily use? To hold otherwise would be to offer a premium for carelessness; for the servant, by mere inattention to his duty, might allow his tools to become unfit for use, and then visit the consequences upon his employers. A different rule would prevail with reference to machinery or perishable articles which experience teaches us require regular inspection, and which are ordinarily presumed to demand repairs or attention." *Kinney v. Corbin* (1890) 132 Pa. 343, 19 Atl. 141.

In a Wisconsin case the court, in laying down the doctrine that the duty of a railway company to know of the difference between the heights of the couplings on its own cars and those of another company was not absolute, and that it was not presumed, as a matter of law, to know of this difference, said: "The difference in the elevation of the coupling irons of this foreign car and the caboose or other cars of the defendant's road would not have been very easily or readily observed when they were distant from each other; and yet the company is sought to be held liable for its want of ordinary care in not knowing this difference when consenting to take this foreign car into its train. When the car and caboose were brought nearly together, this difference could have been at least much more readily seen and observed by comparison. The company is charged with negligently endangering the lives of its brakemen by not knowing of this difference, and, if presumed to know of it, in allowing this car to be attached to its train; and the intestate is alleged to have been in the use of proper care when he endangered his own life by not seeing, observing, or knowing of such difference in the elevation of the coupling irons. Did not the intestate have the same, if not superior, means of knowing of this difference, as or to that of the company? If the negligence of the intestate and that of the company in this respect are equally balanced, ought the plaintiff to recover?

The duty of the company to know of this difference is not absolute, but is presumed to know of it as a matter of law." *Kelly v. Abbot* (1885) 307, 53 Am. Rep. 292, 23 N. W. 273.

An employee in a sawmill was injured by a saw held by a wire rope, knowing it to be worn and to sustain a weight of 1000 pounds, and knowing that it should break the saw will start and strike him, assumes the risk." *Week v. Fremont Mill Co.* (1890) 629, 29 Pac. 215.

An employer is not liable for the death of an employee killed by the fall of a projecting rock by blasting in an adjoining street. He had no reason to expect that the blasting would weaken the rock. The employee had better opportunity of observing changes in it than the employer. *Dolan v. McLaughlin* (1898) 100, 628, 53 N. Y. Supp. 273.

Negligence cannot be imputed to an employer for failure to shore up a building in which an employee injured by falling in of the sides thereof was working. The latter and those at work with him were better informed than the employer as to the danger to be apprehended from the liability of the building to cave, and the shallowness and other special characteristics of the dirt. It was not such as to suggest danger. *The Mount Cemetery Assn. v. Davis* (1890) 4 Colo. App. 570, 36 Pac. 911.

In an early New York case it was held that an engineer was not liable to know of occasional defects in the cattle guards or bridges than the company or its officers elsewhere. *McMillan v. Saratoga & W. Ry.* (1855) 20 Barb. 449. But it is held that no court at the present time would lay down the rule so against the servant. See § 40.

Where the evidence is conflicting as to whether carpenters who were working on a ladder had a better opportunity to detect a knot in the side piece of the ladder, into which a nail holding the piece was driven, than a servant who afterwards used the ladder, is for the jury. *Flavin v. Guggenheim & Son* (1899) 63 N. J. L. 647, 44 Atl. 771, generally, § 390, *supra*.

those in which the master has special skill in the work, and those in which it involves special skill in the work, and those in which it involves special skill in the work.

company to know of the defect, and in the case of a servant, the master is presumed to know of it as a matter of course. *Boat* (1885) 63 W. 23 N. W. 890. A sawmill where a saw held back by a defect in the machinery, it to be held that if the master will swing the saw, it assumes the master is liable. *Hill Co.* (1892) 15.

not liable for the death of a man killed at his place of work, where the rock, causing the injury, was not expected to be in the rock, and the opportunity of the master was greater than the employee's. *Hill Co.* (1898) 33 A. 273. The master is not to be imputed to a servant the knowledge of the shore upon which the servant was injured by the breaking of a rope, where the rope was worn, and the knowledge of the shore was not within the knowledge of the employee. *Ray v. Jeffries* (1887) 86 Ky. 367, 5 S. W. 867. The question of the liability of a master for injuries to a servant by reason of defects in machinery is for the court, and not for the jury, where the defects were obvious and known to the servant when he entered the service, and were constantly brought under his notice in the discharge of his regular duties, while he was skilled, and had opportunities to observe and understand the danger, superior to those of the master. *Detroit Crude-Oil Co. v. Grable* (1899) 36 C. C. A. 94, 94 Fed. 73.

An experienced railway employee is presumed to be better acquainted than the company's representatives with the danger created by the insufficiency of the light furnished while a new track is being laid in the nighttime. *Gulf, C. & S. F. R. Co. v. Jackson* (1894) 12 C. C. A. 507, 27 U. S. App. 519, 65 Fed. 48.

(compare § 396, *supra*),³ and those in which it was his duty to repair the defective instrumentality,⁴ and those in which the injury was caused by conditions supervening during the progress of the work, as a result of some temporary arrangement of the appliances made by the servant himself or by his coemployees.⁵

407. Servant's means or opportunities of knowledge usually inferior to those of the master.—Although, as has been shown in the two preceding sections, it is a well-settled doctrine that knowledge is imputable to a servant in all cases where his opportunities or means of knowledge are equal or superior to those of the master, it is also clear, both upon principle and authority, that, if such equality or superiority is relied upon by the master in a case where the injury was due to a defect in some part of the plant, he has the burden of establishing their existence by specific testimony, and that, in the absence of such testimony, the obligatory knowledge of the servant is determinable with reference to the hypothesis that both his means and opportunities of knowledge are normally inferior to those of the master.⁶

³Where the servant professes to have special skill in the work for which he is hired, and the master disclaims the possession of such skill, the obligation of ascertaining the peculiar construction of the appliances to be handled and the proper mode of handling them rests on the servant, and not on the master. Hence, an instruction is erroneous which leaves the jury to infer in such a case that the master was bound to know the character of an appliance and the manner in which it should be used so as to prevent injury. *Ray v. Jeffries* (1887) 86 Ky. 367, 5 S. W. 867. The question of the liability of a master for injuries to a servant by reason of defects in machinery is for the court, and not for the jury, where the defects were obvious and known to the servant when he entered the service, and were constantly brought under his notice in the discharge of his regular duties, while he was skilled, and had opportunities to observe and understand the danger, superior to those of the master. *Detroit Crude-Oil Co. v. Grable* (1899) 36 C. C. A. 94, 94 Fed. 73.

An experienced railway employee is presumed to be better acquainted than the company's representatives with the danger created by the insufficiency of the light furnished while a new track is being laid in the nighttime. *Gulf, C. & S. F. R. Co. v. Jackson* (1894) 12 C. C. A. 507, 27 U. S. App. 519, 65 Fed. 48.

An experienced well digger who examines carefully a rope furnished him by his employer, and who testifies that he had a better opportunity to know how good the rope was than anyone else, cannot recover for injuries due to the breaking of the rope. *Reid v. Central R. & Bky. Co.* (1888) 81 Ga. 694, 8 S. E. 629.

A coachman has been declared more competent than his master to form a judgment as to the safety of driving a pair of spirited horses without blinders up to his master's house. *Wooster v. Bliss* (1895) 90 Hun. 79, 35 N. Y. Supp. 514.

⁴An employee of a steam sawmill whose duty is to take charge of hands and keep in proper repair a tram road on which engines and truck cars are run to haul logs, cannot recover, if, owing to the bad condition of the road, he is injured while riding on the top of a load of cross-ties. *White v. Kennon* (1889) 83 Ga. 343, 9 S. E. 1082.

⁵*Martin v. Louisville & N. R. Co.* (1901) 23 Ky. L. Rep. 798, 64 S. W. 417 (blade of iron along which lumber was being conveyed from one car to another was not properly secured).

⁶See, generally, the cases cited in the following notes and under the next subtitle.

Where the master has created the danger, he is bound to guard against it; and if he admits that he did not know or believe that the danger existed, he cannot

The decisions also show that the courts do not consider it able to impute knowledge to a servant, as a matter of law, ground that his means or opportunities of knowledge were superior to those of the master, unless the risk to which the was traceable belonged to the class to which the description "ob-
"visible," "manifest," etc., is applicable.² Since it is to this

require superior knowledge and judgment from the servant. *Farran v. Sellers* (1887) 39 La. Ann. 1011, 3 So. 363 (injury received through stepping on a loose puline while a building was in course of demolition, the method adopted being unscientific and dangerous).

In *Whipple v. New York, N. H. & H. R. Co.* (1896) 19 R. I. 587, 35 Atl. 305, it was urged that, if the proximity of a pole to the track was not sufficiently obvious to the plaintiff to put him on his guard against injury from the pole, it was not sufficiently obvious to the officers of the defendant for them to observe it in the exercise of reasonable care, and that the defendant could not be deemed negligent in maintaining the pole in its position. The answer of the court was that the officers of the defendant located the pole; and that it was their duty to have so located it as to make it safe.

In an action for injuries sustained by the fall of a defective scaffold, the employee need not prove affirmatively that he did not know, or had not equal opportunity with the employer of knowing, that the scaffold was unsafe. *Chicago & A. R. Co. v. Maroney* (1897) 170 Ill. 520, 48 N. E. 953, Affirming (1896) 67 Ill. App. 618.

² It is the duty of the servant to use reasonable care to inform himself in respect to the hazards to which he is exposed, but he is not under the same obligation as a master to know the nature and extent of the risks, unless they are patent. *McDonald v. Chicago, St. P. M. & O. R. Co.* (1889) 41 Minn. 439, 43 N. W. 380.

"The doctrine that the servant cannot recover if he had equal means with the master of ascertaining the defect is not applicable to a case of latent defects in machinery, but only to cases where the defect is obvious to the senses, or would have been disclosed to an ordinarily observant man in the ordinary use of the machinery in the business the servant was engaged in, within the time the injured servant operated such machinery before the accident, or in the case of the

negligence of a fellow servant probably others; but certainly not one new under consideration, if here to the doctrine announced case when here on a former case. If the servant, as was then held, and the master is, required to diligence to discover defects in ery with which the servant is e to work, the latter may rec though he may have had equal of ascertaining its defects, if in was ignorant of their existence were not patent or such as w been disclosed by operating it a stated. If the master did not the defect, and reasonable care part would not have disclosed would not be liable. If, how the exercise of reasonable care, employer could have discovered, a like exercise of care on the part servant would also have disc him, a latent defect, yet, if in did not know it, the master w liable, although the servant's o nities to ascertain it were equal of the master. The servant has to assume that the machinery o ments furnished him by the e are safe and suitable for the l and he is not, while the maste quired to examine them for ti pose. The master is charged knowledge which he might have by the exercise of due care, tho if he actually possessed it, whe servant has the right to assume necessary examinations have bee by the master, and is not r either in person, or by another e by him for the purpose, to exam machinery as to its fitness an ciency." *Porter v. Hannibal & R. Co.* (1879) 71 Mo. 66, 36 A 151.

risks alone that the doctrine as to equal means of knowledge is applicable, it is error to give an unqualified instruction which may lead

risk depends, not upon the equality of his opportunities with those of his master, but upon the fact that by the exercise of reasonable care he ought to have known of the danger, and is therefore held to have known it. It is conceded by counsel for both parties that the defect in this case was a latent one. We think it clear that as to such a defect the master and servant are not upon an equality. The duty resting upon them is different, and the acts required of them to constitute care with reference to the discovery of the defect are different. It could not, therefore, have been correctly said that the servant assumed the risk because his opportunities to observe the defect were equal to those of his master." *Pittsburgh, C. C. & St. L. R. Co. v. Woodward* (1894) 9 Ind. App. 169, 38 N. E. 412.

Where a brakeman was injured while running alongside a moving engine in the nighttime, by tripping over wires stretched across the path, the conclusion that the danger was equally open to the observation of the servant and the master is not necessarily deducible from special findings that the wires from a semaphore ran across the track on which the engine was, to a pulley box about 4 feet south of it, being strung about 7 inches from the ground between the track and the box, and from the box to the tower station the wires were strung higher than the box, and the wires running each way from it were in full view; that the brakeman was in full view of his sight, and had worked as a brakeman for many years, and in that capacity for the defendant for several months, but did not know that the wires he tripped over were not boxed. Considering the difference between the duty of the master to provide a safe place to work in, and that of the servant to use his opportunities to discover the dangers of his position, there is nothing in such findings to forbid a conclusion that the servant had a right to assume that his path was not rendered dangerous by means of wires stretched across it at such a distance from the ground that a person properly intent upon his duty was liable at night to be tripped up. *Flutter v. New York, C. & St. L. R. Co.* (1901) 27 Ind. App. 511, 59 N. E. 337.

On the ground that the members of a train crew have not the same oppor-

tunity as the company to know of defects in the track, it has been held unwarrantable to declare, as matter of law, that an engineer who suffered injury by reason of such defects was guilty of contributory negligence simply because he knew the track was somewhat out of repair. *Mehan v. Syracuse, B. & N. Y. R. Co.* (1878) 73 N. Y. 585. That the servant had not equal opportunities with the master to discover the dangerous condition was also the basis of the decision allowing recovery in a somewhat similar case where the injured servant was a fireman, and in passing over the section of road on which the accident ultimately occurred, had observed that it was a rough part of the track, that the rails were short, and inferred that it was a bad track from the bumping of the cars in passing over it. *Dale v. St. Louis, K. C. & N. R. Co.* (1876) 63 Mo. 455.

That the rule as to equal means of knowledge does not apply where the defect could not be discovered by the use of ordinary care was laid down in *East Chicago Iron & Steel Co. v. Williams* (1896) 17 Ind. App. 573, 47 N. E. 26.

In a case where a brakeman was injured by striking against a car left by the conductor of another train in an improper position on the adjoining track, it cannot be said that his opportunity to know the dangerous position of the car was as good as that of the conductor, since it was the latter's duty to see that the car was properly placed. *Chicago & E. I. R. Co. v. Richards* (1901) 28 Ind. App. 46, 61 N. E. 18.

In *Mayer v. North Pacific Coast R. Co.* (1889) 78 Cal. 430, 21 Pac. 114, the following statement of principles from Shearn, & Redf. Neg. 4th ed. § 27, was expressly approved: "It has been often said that the master is not liable for defects in such things to a servant whose means of knowledge thereof were equal to those of the master. But this is an erroneous statement. The master has no right to assume that the servant will use such means of knowledge because it is not part of the duty of the servant to inquire into the sufficiency of these things. The servant has a right to rely upon the master's inquiry because it is the master's duty so to inquire; and the servant may justly assume that all these things are fit and suitable for the use which he is

the jury to suppose that the law infers constructive notice in all where his means of knowledge were equal to those of the master

directed to make of them. The true definition is that, when circumstances make it the duty of the servant to inquire, it is contributory negligence on his part not to inquire." This passage, however, has been considerably modified by the learned authors in the last edition of their treatise. Their present view is thus summarized: "The true rule as to equal knowledge is that, when the means of knowledge and the duty to use those means are equal, between master and servant, and neither uses those means, both are equally at fault." They also cite some recent cases which, in their opinion, show that the doctrine formerly enunciated in other cases to the effect that no action can be maintained where the servant's means of knowledge were equal to those of the master has now been repudiated. The present writer is unable to concur in the theory that this doctrine is no longer accepted by some courts. It never was applied to any risks (except those of certain classes, (see note 2 to this section, and §§ 405, 406, *supra*), and it is quite clear from the later volumes of the reports that judges have evinced no disposition to treat it as an inappropriate criterion of the servant's constructive knowledge of such risks.

In *Justin v. Appling* (1891) 88 Ga. 54, 13 S. E. 955, it was remarked that the rule to the effect of an equality of the means of knowledge must always be considered with reference both to the duties of the servant and to the question whether the defect was or was not an obvious one.

*An instruction that, if servant had the same means of knowledge as the master, he could not recover, was held to have been rightly refused for the reason that it did not appear from the evidence that it was a part of his duty to inspect the defective appliance. *Austin v. Appling* (1891) 88 Ga. 54, 13 S. E. 955. An unqualified instruction to the effect that knowledge is imputable to the servant if the dangerous conditions were equally open to his inspection and that of the master is erroneous. *Texas, S. V. & N. W. R. Co. v. Guy* (1893; Tex. Civ. App.) 23 S. W. 633. So is an instruction that the servant could not recover if he could have discovered the alleged defect as well as

the master, and did not do so (*Edwards v. Chamberlain* [1893] 40 S. C. 194, 19 E. 213); or if he had the "same means of knowledge as the master" (*London & N. R. Co. v. Kelly* [1894] 11 C. 260, 24 U. S. App. 103, 63 Fed. International & G. N. R. Co. v. [1897] 16 Tex. Civ. App. 386, 41 665; *Muldorney v. Illinois C. R. Co.* [1873] 36 Iowa, 470; but see *Ogden v. Rummena* [1863] 3 Fos. 751, § 405, note 1, *supra*); or "equal opportunities" of knowledge (*Pittsburgh, C. C. & St. L. R. Co. v. Wood* [1894] 9 Ind. App. 169, 36 N. E. 1; *Champion Ice Mfg. & Cold Storage Co. v. Carter* [1899] 21 Ky. L. Rep. 3, 1 S. W. 16); or "as good means or opportunity" of knowledge (*Bedgewood & N. W. R. Co.* [1878] 44 Vt. [court declined to say that the defect should have been given because defect was one of long standing]; "equal means" of knowledge (*Texas P. R. Co. v. Kenna* [1899; Tex. Civ. App.] 52 S. W. 555 [building new way track]; *Williams v. Missouri C. Co.* [1891] 109 Mo. 475, 18 S. W. [incompetent co-servant]); or "facilities" for ascertaining the defect (*Lawrence v. Texas C. R. Co.* [Tex. Civ. App.] 61 S. W. 342 [competency of servant]; *International G. N. R. Co. v. Elkins* [1899; Tex. Civ. App.] 54 S. W. 931 [defective rope]).

It has also been held proper to give an instruction that the servant could not recover unless he had not equal means of knowledge, as compared with the master. (*Silveira v. Iversen* [1900] Cal. 187, 60 Pac. 687 [defective pennant]); or unless he showed that he did not have opportunities equal to those of his master for discovering the defect. (*Pittsburgh, C. C. & St. L. R. Co. v. Woodward* [1893] 9 Ind. App. 1, 1 N. E. 442, [drawbar]).

An instruction (words not given) to the effect that the servant could not recover unless he exercised the reasonable care and diligence of a prudent man in the same position as that of the plaintiff is ignored, and the jury are required to find for the plaintiff if the opportunities as between the plaintiff and defendant are equal, without guide as to when either party should be chargeable with knowledge of the defect. (*Western Stevedoring Co. v. Whalen* [1894] 151 Ill. 472, 1 E. 241).

In some instances it is possible to deduce the impropriety of testing the obligations of the master and servant by the same standards from the consideration that the former possessed a larger measure of technical knowledge and skill, and was therefore able to obtain a more correct appreciation than the latter of the dangers incident to the employment.¹ In others the excusable character of the servant's ignorance will be suggested by the fact that, at the conjuncture or conjunctures at which the servant was, so far as regards locality, favorably situated for ascertaining the existence of the dangerous conditions which caused his injury, his attention was absorbed in the performance of duties which were of such a character that it was impossible for him to utilize fully his faculties of observation.² See §§ 402, *supra*, and 413, *infra*.

"It is, in most cases, impossible that a workman can judge of the condition of a complex and dangerous machine yielding irresistible mechanical power, and, if he could, he is quite incapable of estimating the degree of risk involved in different conditions of the machine; but the master may be able, and generally is able, to estimate both." *Clarke v. Holmes* (1862) 7 Hurlst. & N. 937, 948, 31 L. J. Exch. N. S. 356, 8 Jur. N. S. 992, 10 Week. Rep. 405, per Byles, J.

"The degrees of care required of the master and servant also differ because defects in a piece of machinery or in the roof of a mine that to the eye of a competent inspector, such as the master employs, portend unnecessary and unreasonable risks and great danger, may have no such significance to a laborer or miner who has had no experience in watching or caring for machinery or roofs of slopes in a mine; and the latter is not chargeable with contributory negligence simply because he sees or knows the defects, unless a reasonably intelligent and prudent man would, under like circumstances, have known or apprehended the risks which those defects indicate." *Union P. R. Co. v. Jarri* (1892) 3 C. C. A. 433, 10 U. S. App. 439, 53 Fed. Rep. 65.

The servant, although a man of ordinary prudence, as well as experience, may be quite incapable of appreciating the degree of risk involved in the use of a certain kind of machinery, while the master may be and generally is capable. *Russell v. Minneapolis & St. L. R. Co.* (1884) 32 Minn. 230, 20 N. W. 147. A fireman is not necessarily barred from recovery for injuries caused by a de-

fective wheel on the locomotive, even though the wheel was open to his inspection and very much worn, for it is a matter of skill to know how much wear such a wheel will stand. *Bridges v. St. Louis, I. M. & S. R. Co.* (1879) 6 Mo. App. 389.

A miner is not bound to know whether an elaborate system of timbering in the slope of a mine is efficient or insecure. *Eddy v. Aurora Iron Min. Co.* (1890) 81 Mich. 548, 46 N. W. 17.

An inexperienced miner cannot be expected to search the rock and ground at the bottom of a shaft to see if there are any missed shots, before starting a drill. *Anderson v. Daly Min. Co.* (1897) 15 Utah, 22, 49 Pac. 125.

On the ground that the danger incident to the use of a switch rope as a coupling between two cars in a construction train was not an abnormally dangerous contrivance, contributory negligence was denied to be an inference in point of law in *Wairhead v. Hannibal & St. J. R. Co.* (1885) 19 Mo. App. 634.

²In *Haley v. Case* (1886) 142 Mass. 316, 7 N. E. 877, the servant was a teamster, and he was injured by striking against the top of a gateway through which he was backing his team in the presence and under the direction of his master. The court said: "From the testimony it was competent for the jury to find that the defendant Dodge assumed the personal direction and control of the plaintiff in determining where the team should be driven, and that he was familiar with the practice of driving loaded vans under the gateway; that the plaintiff had never driven under the gateway before; that the dan-

But it is clear that there are numerous cases in which none of these considerations is pertinent. The technical knowledge of the servant in regard to such conditions as those which caused the injury is not usually as great as that of the master. See § 406, *supra*. It may be denied that, in many instances, time and place and the nature of the work are perfectly favorable for a searching and exhaustive examination of the environment by the servant. As a matter of ultimate fact, it will be found that the logical basis of the doctrine which places the master and the servant upon different footings in regard to imputed knowledge of risks is to be found in the fact that the master has a special and appropriate function of the former to furnish and supervise the instrumentalities of his business, and the special and appropriate function of the servant to use those instrumentalities. The duty of making a reasonably careful examination of the instrumentalities is a natural and necessary incident of the former function, but not of the latter.⁶ See the following subtitle.

In the opinion of the present writer, the practice of comparing the master's and the servant's means of knowledge has been productive of much confusion of thought, which is apt to operate to the disadvantage by imposing upon him too high a standard of care. It would have been far preferable to refrain from importing into discussions in this class of cases an element which is wholly unnecessary, inasmuch as the ultimate question in every instance is simply whether a person who had the same natural and acquired capacities for observation, and had been placed in the same position as the servant, would have discovered the danger by the exercise of ordinary care. The extent of the obligatory knowledge of the facts under the given circumstances seems to be wholly irrelevant for consideration.

The danger was not obvious from the place where the plaintiff started his team, in any such sense that it was not a reasonable opinion from observation at this place that he could drive through the gateway in safety; that the plaintiff's attention was necessarily chiefly devoted to the management of the horses, and that he did not discover the danger until it was too late to save himself; and that the defendant had better means of observation and of seasonably appreciating the danger, and either did not warn the plaintiff at all, or warned him when it was too late. On such findings, we cannot say that the plaintiff was not in exercise of due care, or that the defendant was. The test is not only what each

party knew, but what each reasonably should have known, concerning the facts. We cannot say that identically the same duty rested on the servant and the master seasonably to ascertain the extent of the danger involved in driving the work in the manner in which the master.

⁶ In *Louisville & N. R. Co. v. McGee* (1891) 11 C. C. A. 260, 21 Fed. 103, 63 Fed. 407, the court said: "The railroad company owed the plaintiff a duty of care in selecting firemen, engineers, and others with whom he was to work, and to that end was bound to use diligent use of its means of investigation, but the defendant in error

E. SERVANT'S DUTY AS REGARDS INSPECTION AND INQUIRY.

408. Servant not ordinarily charged with the duty of inspection or inquiry.—From the remarks at the end of the preceding section it is apparent that an investigation into the meaning and effect of the doctrine there discussed conduces us directly to another doctrine which has been enunciated and applied with great frequency; *viz.*, that, as a general rule, the servant is under no obligation either to inspect that part of the plant by which his safety may be affected, or to inquire into the details of the system adopted for the conduct of the master's business, for the purpose of discovering concealed dangers which would not be disclosed by superficial observation.¹

The duty of inspection does not rest upon a superior servant, any more than upon mere subordinates, except in so far as it may be properly incident to the functions assigned to him.²

In some cases language is used which seems to imply that there is an essential distinction between the extent of a servant's obligations, according as the instrumentality in question was or was not one which he was required to use in the course of his employment. Thus, it has been said that he is entitled to assume that an instrumentality is safe, where the defect existed in a department of the work with which he had nothing to do by way of inspection or re-

no duty in that respect, and therefore could be effected only by the knowledge which he had including what was within his observation at the time of the injury."

"A servant is not under the duty of inspecting the appliances about which he works, in search of hidden or unapprehended sources of danger. *Acheson, T. & S. F. R. Co. v. Mulligan* (1895) 14 C. C. A. 547, 34 U. S. App. 1, 67 Fed. 569. A servant is not bound "to make close scrutiny into all the details of the instrumentalities with which he deals." *Johnston v. Oregon Short Line R. Co.* (1892) 23 Or. 94, 31 Pac. 283. A servant is under no primary obligation to investigate the fitness and safety of the instrumentalities. *Chicago & P. L. R. Co. v. Hines* (1890) 132 Ill. 169, 23 N. E. 1021, affirming (1889) 33 Ill. App. 271; *Pioneer Coöperage Co. v. Romaniuk* (1899) 85 Ill. App. 407, affirmed in (1900) 186 Ill. 1, 57 N. E. 861. See also cases cited in the ensuing notes.

²One employed to take entire charge of the business in his employer's store until the latter is able to be out has a right to rely upon the employer's having

put a proper elevator in the store, without inspecting it. *Eastman v. Curtis* (1895) 67 Vt. 432, 32 Atl. 232. The contention of the master was that the duty of inspection devolved on the servant under the circumstances, but there was no evidence that the injury was due to an omission to inspect during the time the servant was in charge, but, so far as appeared, it was caused by a defective construction.

That an employee is foreman of the shop in which he works will not prevent his recovery for damages caused by defective appliances, unless it is his duty to see that they are kept in order. *Nichols v. Crystal Plate Glass Co.* (1894) 126 Mo. 55, 27 S. W. 516, 28 S. W. 991.

A yardmaster is not bound to inspect the ties in the yard where he is employed. *Pennsylvania Co. v. Brush* (1891) 130 Ind. 317, 28 N. E. 615.

The foreman in charge of a derrick car, its crew, and the work performed by them, who has no knowledge or opportunity to acquire knowledge of latent defects in the car, has the right to repose confidence in the prudence and caution

pair;³ that the law requires the servant to know such defects which might be seen by the exercise of diligence in his employment; that he is not obliged to look for defects in connection with which he is not obliged to look; that it is incumbent on an employee to know whatever is common in his special line of employment, but that he is not required to know things which belong to a different branch of service; that he is not bound to look out for sources of danger entirely unconnected with his work;⁴ that the law does not under any circumstances exact of an employee the use of diligence in ascertaining defects in regard to such appliances or instruments as he is not actually engaged in using, but charges him with knowledge of such defects as come within his observation.⁵ It is obvious, however, from a review of many of the decisions cited in § 1, that the former statements are not to be understood as embracing the doctrine that the only conditions in respect to which a servant is exempt from a duty of inspection are those parts of the machinery which are thus designated. Such forms of expression were evidently suggested by the particular circumstances which happened to come under review.

In other cases a distinction has been taken between simple and complex instrumentalities, the theory being that a servant is required to see that one of the former description is safe when it is in his hands, but that no such obligation is predicable with respect to the latter.⁶ If this distinction is intended to lead up to the conclusion that the responsibility for injuries caused by defects in simple appliances always rests upon the servant, it seems impossible to concede its validity. In such appliances, not less than in those of a more elaborate description, there may be latent defects which are quite impossible for the servant to discover by means of the inspection which he has the means of making. No logical reason can be suggested why the general principle that a servant cannot assume any abnormal risks of which he has neither actual nor constructive knowledge should in this instance be broken into.

of the railroad company in furnishing him a car in a reasonably safe condition. *Chicago & E. R. Co. v. Bryan* (1894) 10 Ind. App. 570, 37 N. E. 190.

³ *Walthier v. Hannibal & St. J. R. Co.* (1885) 87 Mo. 37.

⁴ *Pennsylvania Co. v. Burgett* (1893) 7 Ind. App. 352, 33 N. E. 914, 34 N. E. 650.

⁵ *Bowers v. Union P. R. Co.* (1885) 4 Utah, 215, 7 Pac. 251.

⁶ *Johnson v. Tacoma Mill Co.* (1900) 22 Wash. 88, 60 Pac. 53.

⁷ *Missouri P. R. Co. v. ...* (1889) 75 Tex. 61, 12 S. W. 8.

⁸ *Nichols v. Crystal Plate ...* (1894) 126 Mo. 55, 27 S. W. 391, distinguished between pliers as a spade, hoe, horse-sledge, and a crane. It has been held that a company does not owe a player the duty of inspecting a push pole 8 feet long and 1/2 inch in diameter, but may rely on the presumption that the one using it will detect any defect. *Matter v. ...*

409. Rationale of this doctrine.—The doctrine which exempts servants from the duty of inspection may be referred to any one of three conceptions. Which of these conceptions is to be regarded as the primary one it is impossible to say. Nor is it a matter of any great practical importance. It will be sufficient to observe that they are interdependent in such a sense that any one of them may be deduced from either of the other two.

a. Servant not bound to take notice of concealed defects.

In the first place it is possible to view the doctrine as being simply a mode of expressing the idea that a servant is not chargeable with knowledge of conditions which may be described by the terms "concealed," "hidden," "latent," etc. Assuming this to be a fundamental principle, it is clear that the servant is not bound to make any attempt to discover such condition.¹

(1897) 21 App. Div. 45, 47 N. Y. Supp. 285.

"The servant is not bound to inspect the appliances to see whether or not there are latent defects that render their use more than ordinarily dangerous, but is only required to ascertain such defects or hazards as are obvious to the senses." *Yates v. McCullough Iron Co.* (1888) 69 Md. 370, 16 Atl. 280.

"A servant is expected to observe such objects only, in the absence of notice, as would in an instant convince him of their danger." *Johnston v. Oregon Short Line R. Co.* (1892) 23 Or. 91, 31 Pac. 283.

The case is for the jury where the risk was one which was "not open and patent or ordinarily discernible by the use of one's senses." *Luad v. T. S. Woodworth & Co.* (1899) 75 Minn. 501, 78 N. W. 81. The servant's duty to use "reasonable care" does not cast upon him the duty to discover latent defects. *Wabash & W. R. Co. v. Morgan* (1892) 132 Ind. 430, 31 N. E. 601. A servant is not bound to observe "latent" defects. *Faren v. Sellers* (1887) 39 La. Ann. 1011, 8 So. 363. A servant is not chargeable with knowledge of dangerous conditions which can only be discovered by a careful inspection. *Rice & B. Malting Co. v. Paulsen* (1893) 51 Ill. App. 123.

In *Oregon Short Line & P. N. R. Co. v. Tracy* (1895) 14 C. C. A. 199, 29 U. S. App. 529, 46 Fed. 931, the court in declining to hold a trainman chargeable, as matter of law, with notice of an obstruction on a side track, created by a growth of brush, thus differentiated be-

tween the position of such a servant in the cases where the dangers arose from "fixed conditions and in cases where the dangers were the result of changes in those conditions: "The distinguishing principle between these two classes of cases is that in the one the defects are visible and apparent, and the dangers therefrom are presumed to be known and assumed, while in the other the danger is not seen, and no such presumption arises. The condition of the switches and frogs, the degree of the curvature of the track, are all fixed conditions which are visible to the eye. The experienced employee knows that he is to serve the railroad company with its road and cars in the condition in which he sees them, and he knows the danger that may attend such service. But he does not necessarily know, and he cannot be expected to meet, dangers which arise from changes in the conditions, how ever apparent may be the causes which produce them. He is not presumed to know that the rains and floods will have covered the track with earth and sand at a place where common prudence would require that provision be made against the occurrence of such an obstruction. He is not presumed to assume that ice and snow will be allowed negligently to accumulate upon the track, and switches or other obstructions will be placed on or about the same, so as to render the train unsafe, or his work more dangerous, than it otherwise would be.

See also §§ 113, 114, 115, 116, 117, 118, 119, 120, 121, 122, 123, 124, 125, 126, 127, 128, 129, 130, 131, 132, 133, 134, 135, 136, 137, 138, 139, 140, 141, 142, 143, 144, 145, 146, 147, 148, 149, 150, 151, 152, 153, 154, 155, 156, 157, 158, 159, 160, 161, 162, 163, 164, 165, 166, 167, 168, 169, 170, 171, 172, 173, 174, 175, 176, 177, 178, 179, 180, 181, 182, 183, 184, 185, 186, 187, 188, 189, 190, 191, 192, 193, 194, 195, 196, 197, 198, 199, 200, 201, 202, 203, 204, 205, 206, 207, 208, 209, 210, 211, 212, 213, 214, 215, 216, 217, 218, 219, 220, 221, 222, 223, 224, 225, 226, 227, 228, 229, 230, 231, 232, 233, 234, 235, 236, 237, 238, 239, 240, 241, 242, 243, 244, 245, 246, 247, 248, 249, 250, 251, 252, 253, 254, 255, 256, 257, 258, 259, 260, 261, 262, 263, 264, 265, 266, 267, 268, 269, 270, 271, 272, 273, 274, 275, 276, 277, 278, 279, 280, 281, 282, 283, 284, 285, 286, 287, 288, 289, 290, 291, 292, 293, 294, 295, 296, 297, 298, 299, 300, 301, 302, 303, 304, 305, 306, 307, 308, 309, 310, 311, 312, 313, 314, 315, 316, 317, 318, 319, 320, 321, 322, 323, 324, 325, 326, 327, 328, 329, 330, 331, 332, 333, 334, 335, 336, 337, 338, 339, 340, 341, 342, 343, 344, 345, 346, 347, 348, 349, 350, 351, 352, 353, 354, 355, 356, 357, 358, 359, 360, 361, 362, 363, 364, 365, 366, 367, 368, 369, 370, 371, 372, 373, 374, 375, 376, 377, 378, 379, 380, 381, 382, 383, 384, 385, 386, 387, 388, 389, 390, 391, 392, 393, 394, 395, 396, 397, 398, 399, 400, 401, 402, 403, 404, 405, 406, 407, 408, 409, 410, 411, 412, 413, 414, 415, 416, 417, 418, 419, 420, 421, 422, 423, 424, 425, 426, 427, 428, 429, 430, 431, 432, 433, 434, 435, 436, 437, 438, 439, 440, 441, 442, 443, 444, 445, 446, 447, 448, 449, 450, 451, 452, 453, 454, 455, 456, 457, 458, 459, 460, 461, 462, 463, 464, 465, 466, 467, 468, 469, 470, 471, 472, 473, 474, 475, 476, 477, 478, 479, 480, 481, 482, 483, 484, 485, 486, 487, 488, 489, 490, 491, 492, 493, 494, 495, 496, 497, 498, 499, 500, 501, 502, 503, 504, 505, 506, 507, 508, 509, 510, 511, 512, 513, 514, 515, 516, 517, 518, 519, 520, 521, 522, 523, 524, 525, 526, 527, 528, 529, 530, 531, 532, 533, 534, 535, 536, 537, 538, 539, 540, 541, 542, 543, 544, 545, 546, 547, 548, 549, 550, 551, 552, 553, 554, 555, 556, 557, 558, 559, 560, 561, 562, 563, 564, 565, 566, 567, 568, 569, 570, 571, 572, 573, 574, 575, 576, 577, 578, 579, 580, 581, 582, 583, 584, 585, 586, 587, 588, 589, 590, 591, 592, 593, 594, 595, 596, 597, 598, 599, 600, 601, 602, 603, 604, 605, 606, 607, 608, 609, 610, 611, 612, 613, 614, 615, 616, 617, 618, 619, 620, 621, 622, 623, 624, 625, 626, 627, 628, 629, 630, 631, 632, 633, 634, 635, 636, 637, 638, 639, 640, 641, 642, 643, 644, 645, 646, 647, 648, 649, 650, 651, 652, 653, 654, 655, 656, 657, 658, 659, 660, 661, 662, 663, 664, 665, 666, 667, 668, 669, 670, 671, 672, 673, 674, 675, 676, 677, 678, 679, 680, 681, 682, 683, 684, 685, 686, 687, 688, 689, 690, 691, 692, 693, 694, 695, 696, 697, 698, 699, 700, 701, 702, 703, 704, 705, 706, 707, 708, 709, 710, 711, 712, 713, 714, 715, 716, 717, 718, 719, 720, 721, 722, 723, 724, 725, 726, 727, 728, 729, 730, 731, 732, 733, 734, 735, 736, 737, 738, 739, 740, 741, 742, 743, 744, 745, 746, 747, 748, 749, 750, 751, 752, 753, 754, 755, 756, 757, 758, 759, 760, 761, 762, 763, 764, 765, 766, 767, 768, 769, 770, 771, 772, 773, 774, 775, 776, 777, 778, 779, 780, 781, 782, 783, 784, 785, 786, 787, 788, 789, 790, 791, 792, 793, 794, 795, 796, 797, 798, 799, 800, 801, 802, 803, 804, 805, 806, 807, 808, 809, 810, 811, 812, 813, 814, 815, 816, 817, 818, 819, 820, 821, 822, 823, 824, 825, 826, 827, 828, 829, 830, 831, 832, 833, 834, 835, 836, 837, 838, 839, 840, 841, 842, 843, 844, 845, 846, 847, 848, 849, 850, 851, 852, 853, 854, 855, 856, 857, 858, 859, 860, 861, 862, 863, 864, 865, 866, 867, 868, 869, 870, 871, 872, 873, 874, 875, 876, 877, 878, 879, 880, 881, 882, 883, 884, 885, 886, 887, 888, 889, 890, 891, 892, 893, 894, 895, 896, 897, 898, 899, 900, 901, 902, 903, 904, 905, 906, 907, 908, 909, 910, 911, 912, 913, 914, 915, 916, 917, 918, 919, 920, 921, 922, 923, 924, 925, 926, 927, 928, 929, 930, 931, 932, 933, 934, 935, 936, 937, 938, 939, 940, 941, 942, 943, 944, 945, 946, 947, 948, 949, 950, 951, 952, 953, 954, 955, 956, 957, 958, 959, 960, 961, 962, 963, 964, 965, 966, 967, 968, 969, 970, 971, 972, 973, 974, 975, 976, 977, 978, 979, 980, 981, 982, 983, 984, 985, 986, 987, 988, 989, 990, 991, 992, 993, 994, 995, 996, 997, 998, 999, 1000.

b. Different standards of care in the case of master and servant.—In another type of statements in which the servant is declared not to be under any obligation to inspect the plant from a logical standpoint seems to be that the absence of that obligation is properly deducible from a principle, the correctness of which in this connection taken to be axiomatic, *viz.*, that, in view of the relative positions occupied by the parties to the contract of employment, the standard of duty implied by the phrase "ordinary care" or "reasonable care" bears a different meaning according as the constructive knowledge of the master or of the servant may be in question. But it will be observed that, in some of these statements the conception discussed in the next subdivision of this section is quite prominent.²

*"Both master and servant must use reasonable care to ascertain defects and dangers; but reasonable care upon the part of the master demands inspection and search for latent and hidden defects and causes of danger, while reasonable care upon the part of the servant requires attention and observation of known or obvious defects and perils." *Louisville, N. A. & C. R. Co. v. Quinn* (1896) 14 Ind. App. 554, 43 N. E. 240. "An employee is required to observe and avoid all known or obvious perils, even though they may arise from defective machinery and appliances; but he is not bound to search for defects, or make a critical inspection of the appliances which are provided for his use. These are duties of the employer." *Ohio & M. R. Co. v. Percy* (1891) 128 Ind. 197, 27 N. E. 479. "Both master and servant must exercise reasonable care, but reasonable care upon the part of the servant does not require of him an inspection to discover latent defects, while reasonable care upon the part of the master does require such inspection for him." *Salem Stone & Lime Co. v. Topps* (1894) 10 Ind. App. 516, 38 N. E. 229.

"While it is true that both master and servant will be held to know that which by the exercise of reasonable diligence they might have learned, still, this rule does not by any means place the master and servant upon equality as to the acts necessary to constitute diligence. He is not bound to search for defects, or make a critical inspection of the appliances which are provided for his use. These are duties of the employer." *Pittsburgh, C. C. & St. L. R. Co. v. Woodward* (1894) 9 Ind. App. 169, 36 N. E. 442.

"The duty of inspection is by law imposed upon the master. He is under obligation to search for and discover defects discoverable by proper examination of those things which are hidden from the careful observation of the servant. The discharge of his ordinary duty is not to those hidden or concealed defects. The master and servant are not upon equality of obligation. The master must search diligently; the servant must observe carefully." *Pennsylvania v. Witte* (1896) 15 Ind. App. 583, 43 N. E. 319, 44 N. E. 377.

In *Guthrie v. Louisville & N. O. R. Co.* (1883) 11 Lea. 373, 47 Am. Rep. 171, where the plaintiff was injured by defective mail, the court remarked with reference to a case like this, that the rule is that the duty of the master is absolute to use active diligence to prevent improper or unsafe tools or instruments being furnished an employee which he may be injured. [*Nash v. C. R. Co. v. Elliott* (1860) 11 Ind. 613, 78 Am. Dec. 506. In reference to this matter the employee may be held to some extent, at least, on the performance of duty on the part of the employer, and therefore what may be ordinary care in avoiding an imminent danger might well not be required to the same extent to guard against breach of duty on the part of the employee which the party could have no reason to anticipate. The employee had no right to perform, under the facts in this case, as to the repair of the tools; he was called on to inspect them and to report whether the master might not have neglected his duties in this reference being no special care imposed

imposed by the

c. *Servant entitled to assume that the master has performed his duties properly.*—The most common conception of the doctrine is that which treats it as a deduction from the principle already developed under another aspect in a previous chapter (see §§ 354, 355, *ante*), that, in the absence of circumstances suggestive of the imprudence of such a course, a servant is warranted in acting upon the assumption that his master has fulfilled, and will continue to fulfil, either personally or by means of some employee who represents him *ad hoc vicem*, his duty to see that due precautions are taken to protect his servants against avoidable and unnecessary dangers.³

nature of his position, nor obligation to inspect the tools, there could be no want of it, or negligence, or carelessness, in not doing what he was not bound to do by the nature of his employment and the legal obligations arising out of the relations existing between the parties."

"The servant is bound to take notice of those dangerous defects of which he has knowledge and which are obvious to his senses, but he is not bound to investigate for himself a department of work with which he has nothing to do, and set up his judgment against that of his master." *Dolan v. Wabash, St. L. & P. Co.* (1885) 87 Mo. 549.

"It is the duty of the employer to exercise reasonable care to furnish safe machinery, and to discover defects therein. But the employee is not under like obligation to resort to means for the discovery of defects. He has a right to presume that his employer has done his duty, and complied with the requirements of the law. And it is only when he has knowledge of defects in the machinery which he is required to use, and continues to use them without objection, that he is presumed to waive the defect." *Kroy v. Chicago, R. I. & P. R. Co.* (1871) 32 Iowa, 357. . . . Of course, the situation of the plaintiff and his means of knowledge may be proved in order to enable the jury to determine the fact of his knowledge of the condition of the machinery with which he works. But it is his knowledge, and not his means of knowledge, which affects his right to recover." *Muldowney v. Illinois C. R. Co.* (1873) 36 Iowa, 470.

"The difference in the duty of the master and servant is, the master is bound to look for defects, while the servant is bound only to discover what the ordinary use of the appliance would make known to a man of ordinary prudence.

The master is held to know the defect, if by the exercise of ordinary care he might know it. The servant has a right to assume that the master has furnished him safe machinery, unless its condition is such that by the exercise of ordinary care he would have discovered its defects." *Gutridge v. Western P. R. Co.* (1891) 105 Mo. 323, 16 S. W. 913.

That a servant is not required to exercise the same degree of care and diligence as the master in inspecting and investigating risks was also recognized in *Dodge v. Missouri, K. & T. Trust Co.* (1897) 140 Mo. 1, 41 S. W. 255.

In *Houston & T. C. R. Co. v. McNamara* (1883) 59 Tex. 258, the court, after speaking of the duty of the master to keep the track in good order, and the diligence required of the employer, said: "The law requires no such extraordinary vigilance and care of servants, nor charges them with knowledge of facts which they could have known only by their exercise." Quoted with approval in *Trans & P. R. Co. v. Johnson* (1896) 89 Tex. 519, 35 S. W. 1012.

It is error to sustain a demurrer to the evidence, based on the theory that a servant is bound to exercise every precaution for his safety. *Bender v. St. Louis & S. P. R. Co.* (1896) 137 Mo. 240, 37 S. W. 132.

"It being the duty of the master to provide suitable and proper appliances, the employee had the right to rely on the master having discharged his duty in this respect, and he is not bound to search for defects." *Ohio & M. R. Co. v. Percy* (1890) 128 Ind. 204, 27 N. E. 479.

"A person when employed and instructed to commence work at a particular place . . . is under no obligation, in order to protect himself from the charge of contributory negligence,

This confidence on the part of the servant is more especially justifiable where a promise to remove certain dangerous condition has been given (see chapter XXII., *post*), or where the servant is complying with a direct order (see chapter XXIII., *post*), or where he has been assured that there is no danger (see chapter XXIV., *post*).

Where the employer's rules charge two servants with the co-

first to go all through the building, and make himself familiar with each piece of machinery, and the danger he may incur in case he comes in contact with it in its then condition. It is sufficient for him that in entering upon the active discharge of the duties assigned him he ascertains what he is expected to do, and the dangers directly connected therewith, and he has a right to assume that, in the performance of that particular duty, reasonable facilities therefor will be afforded him, without coming in contact with other unobserved or unsuspected dangers." *Saoboda v. Ward* (1879) 40 Mich. 423.

"The duty of the company to this class of its employees is to provide a roadway in all respects reasonably safe for the running of its trains and the performance of the functions imposed upon them by the exigencies of the service, and they have the right to assume without inquiry or investigation, that this duty has been discharged. The onus of inquiry or investigation is not upon them." *Georgia P. R. Co. v. Davis* (1890) 92 Ala. 300, 9 So. 252, quoted with approval in *Birmingham R. & Electric Co. v. Allen* (1892) 99 Ala. 359, 20 L. R. A. 457, 13 So. 8.

"It is the duty of the master, and not of the servant, to exercise due care and diligence to ascertain whether the appliances furnished are safe and suitable, and a servant has a right to assume, without inquiry or examination, that the appliances furnished him are safe and suitable." *Carter v. Oliver Oil Co.* (1890) 34 S. C. 211, 13 S. E. 419, citing *Lasure v. Graniteville Mfg. Co.* (1882) 18 S. C. 281.

The servant "is not bound to make an examination to find defects. There is no such legal obligation imposed upon him. That is the duty of the master. The servant is not bound to search for dangers, except those risks which are patent to ordinary observation: he has a right to rely upon the judgment and discretion of his master, and that he will fully perform his duty toward

him." *Little Rock, M. R. & T. Co. v. Leavitt* (1886) 48 Ark. 333, 3 So. 50.

"The duty of the employee to exercise ordinary care as to any risk or danger does not serve to relieve the company of its duty of careful and vigilant inspection, or devolve it on the employee; for the latter, while in the exercise of ordinary care, and not admonished in some manner to the contrary, has a right to assume that the company has properly discharged its duties it owes to him to secure his safety." *Curtis v. Chicago & N. W. Ry.* (1897) 95 Wis. 460, 70 N. W. 665.

"The burden of furnishing safe machinery, appliances, surroundings, is upon the master, and while the master is not to be held liable for dangers of which the servant is fully informed, yet the servant is authorized to rely upon the acts of the master in that respect, and is under a primary obligation to investigate and test the fitness and safety of the machinery, surroundings, etc., in the absence of notice that there is something wrong in that respect." *Chicago I. R. Co. v. Hines* (1890) 132 Ill. 23 N. E. 1021, Affirming (1880) App. 271.

"We think it equally well settled that it is not incumbent upon the employee to search for latent defects in machinery or implements furnished him by the employer, but that without such investigation he has the right to assume they are safe and sufficient for the purpose." *Porter v. Hannibal & St. L. Co.* (1879) 71 Mo. 66, 36 Am. Rep. 240, *Dale v. St. Louis, K. C. & N. W. Ry.* (1876) 63 Mo. 459.

"There are cases where, in the use of machinery, or in the prosecution of work involving some degree of technical knowledge, the servant cannot be presumed to know the risks and dangers well as the master, and in such cases the servant can rely on the master's superior knowledge and his assurance of the absence of danger. This is also true where the danger proceeds from a part

specially just conditions has not is comply where he has post).

work or the character of appliances which the servant's labor does not call him in contact with, or make him conversant with their condition." *O'Connell v. Clark* (1897) 22 App. Div. 466, 48 N. Y. Supp. 74.

"The master is chargeable with knowledge which he might have acquired by the exercise of due care, the same as if he actually possessed it; whereas the servant has the right to assume that all necessary examinations have been made by the master, and is not required, either in person or by another employed by him for the purpose, to examine the machinery as to fitness and sufficiency." *Houston & T. C. R. Co. v. McNamara* (1883) 59 Tex. 258, quoted with approval in *Texas & P. R. Co. v. Johnson* (1896) 89 Tex. 519, 35 S. W. 1042.

A servant has a right "to rely somewhat on the expectation" that the master will provide safe machinery, and is "not called upon to be overstrict in an examination into its safety." *Uyers v. Hudson Iron Co.* (1889) 150 Mass. 125, 22 N. E. 631. "A servant has a right to assume that his employer will not, by any act over which the servant has no control, render his position extra-hazardous." *Wills v. Cape Girardeau & S. W. R. Co.* (1890) 44 Mo. App. 51.

It is the master's duty to see that the place of work is safe, and the servant has the right to rely upon the belief that the master has made it safe. Hence, the obligation of the servant to be acquainted with the danger is not the same as that of the master. The master is liable if it might have known of the danger by the exercise of due care. *Illinois Steel Co. v. Schymanowski* (1896) 162 Ill. 461, 44 N. E. 876, affirming (1895) 59 Ill. App. 32.

A servant is not under any duty to make an examination where he has a right to expect safety and there is nothing to put him on inquiry as to the existence of danger. *Southern P. R. Co. v. Markey* (1892; Tex.) 19 S. W. 392.

The primary responsibility, it has been said, rests on the employer or his representative, and the servant may well trust something to them in determining whether he can work in safety. *Hennessey v. Boston* (1894) 161 Mass. 502, 37 N. E. 668.

The servant's right to rely upon the

master's proper performance of his duty is also adverted to as the rationale of the servant's exemption from the duty of inspection in the following, among many other, cases: *Cumbe v. Belleville Stone Co.* (1896) 59 N. J. L. 226, 36 Atl. 473; *Louisville & N. R. Co. v. Orr* (1890) 91 Ala. 554, 8 So. 360; *Kansas City, M. & N. R. Co. v. Burton* (1892) 97 Ala. 240, 12 So. 88; *Panama Coal Co. v. Royce* (1900) 181 Ill. 402, Reversing (1898) 79 Ill. App. 469; *Goodrich v. New York C. & H. R. R. Co.* (1889) 116 N. Y. 398, 5 L. R. A. 750, 22 N. E. 397; *Bird v. Long Island R. Co.* (1896) 11 App. Div. 134, 42 N. Y. Supp. 888; *Chicago & E. R. Co. v. Bauman* (1894) 16 Ind. App. 579, 37 N. E. 190; *Jones v. Shaw* (1897) 16 Tex. Civ. App. 290, 41 S. W. 690; *Boule v. Duquesne-McLean Constr. Co.* (1900) 47 App. Div. 311, 6d N. Y. Supp. 1043, Leave to Appeal Denied (1901) 49 App. Div. 636, 63 N. Y. Supp. 1105; *Louisville, N. A. & C. R. Co. v. Wright* (1888) 115 Ind. 378, 16 N. E. 145; *Boyer v. Fitzpatrick* (1881) 80 Ind. 526, 529; *Vand Deutscher Lloyd S. S. Co. v. Brachhausen* (1894) 57 N. J. L. 401, 31 Atl. 319.

Variants upon this form of expression are exemplified in the statements that the servant "has a right to assume, in the absence of notice to the contrary, or of something to put him on inquiry, that the master has performed his duty, and hence, to a certain extent, to rely on the superior judgment of his master." *Russell v. Monrovia & St. L. R. Co.* (1884) 32 Minn. 230, 20 N. W. 147; *Austin v. Appling* (1891) 88 Ga. 54, 13 S. E. 955; that a servant has the right to rely on the superior knowledge and judgment of his master, and to assume that the latter will not expose him to evitable risk, and that he has taken proper precautions to guard him from danger. *Faren v. Sellers* (1887) 39 La. Ann. 1011, 3 So. 363; that a servant is not bound to inform himself as to the safety of the premises or material to be used, "where the master has superior means of knowledge, and the circumstances authorize the servant to rely upon him because of want of equal opportunity." *Bogenschutz v. Smith* (1886) 84 Ky. 330, 1 S. W. 578).

The servant's reliance upon the knowledge or judgment of the employee in charge of the given instrumentality has

upon both of them, the other may rely upon the presumption that duty has been properly performed.⁴

If an appliance has just been inspected by the proper employee, the obligation of the servant to examine it may be said to reach its vanishing point.⁵

410. Doctrine considered with reference to the sufficiency of the complaint.—The servant is not required to aver facts showing affirmatively that he had no means of knowledge; it is sufficient to aver that he had no knowledge.¹ Nor is it necessary for him to aver that he carefully examined the dangerous instrumentality before using it.²

A complaint is not demurrable where the defects alleged are of such a nature that the injured servant was not bound to look for them.³

410a. Doctrine considered with reference to the propriety of the instructions.—*a. Correct.*—In any case where no evidence has been introduced which would warrant the inference that the function of the injured servant were of such a nature as to cast the duty of inspection upon him (see §§ 413 *et seq.*, *infra*), an instruction which directly enunciates the doctrine that he is not subject to that

been treated as an element which renders it impossible to say, as matter of law, that the servant ought to have known of the risk. *Helfenstein v. Med- orte* (1896) 136 Mo. 595, 36 S. W. 863, 37 S. W. 829, 38 S. W. 294; *McDonald v. Chicago, St. P. M. & O. R. Co.* (1889) 41 Minn. 439, 43 N. W. 380.

In one case it was said that a station agent required to set the brakes of cars left at his station has the right to presume that they are in proper condition for use, since it is not his duty to inspect such appliances or to repair them. *Chicago, B. & Q. R. Co. v. Kellogg* (1898) 54 Neb. 127, 74 N. W. 451. The writer has found no other example of the logical sequence of ideas indicated in this statement.

¹On this ground it has been held that an engineer had a right to assume that the conductor and trainmen had repaired a leaky air pipe without cutting off the air brake from part of the train. *Merritt v. Great Northern R. Co.* (1900) 81 Minn. 496, 84 N. W. 321.

See also *Peoria, D. & E. R. Co. v. Johns* (1891) 43 Ill. App. 83 (§ 411, note 1, subd. (dd), *infra*).

²This was the situation in *Chicago & E. I. R. Co. v. Knutrim* (1891) 152 Ill. 458, 39 N. E. 324, affirming (1892) 18

Ill. App. 243; *New Orleans & N. O. Co. v. Clements* (1900) 40 C. C. 100 Fed. 415.

³*Ohio & M. R. Co. v. Pearey* 128 Ind. 197, 27 N. E. 479.

⁴*Rouse v. Schroeder* (1898) App. 28, 51 N. E. 376.

⁵*Carley v. Coleman* (1901) 1994 39 S. E. 558 (complaint alleging radment caused by a rotten tree across the track, held not to be a defect). A complaint alleging that a servant was injured by reason of negligence of the master in allowing track and rails along which loads were pushed to become worn, rusted, or rotten is not demurrable as showing its face that the defects to which injury was due were obvious. *Saltford Stone Co. v. Hill* (1901) 2 App. 543, 59 N. E. 97.

An averment that four cross-bents had been torn down, leaving support for the roof of a tunnel, is not demurrable on the ground that it admits constructive knowledge of the plaintiff's peril. *Louisville, C. & O. R. Co. v. Cornelius* (1895) App. 399, 43 N. E. 31.

A complaint cannot be excepted to on the ground that it does not show the servant's opportunities for

is, of course, correct.¹ So, also, is an instruction which explicitly affirms the right of the servant to act upon the assumption that the master has properly performed his obligations in the premises.²

b. *Incorrect*.—On the other hand it is error to give, and proper to refuse, instructions by which the jury is given to understand that it was the servant's duty to know whether the dangerous conditions existed,³ or that he cannot recover if the dangerous conditions which

edge were not equal to those of the defendant, where the danger arose, not from the bad repair or decayed condition of the structure, but from its negligent construction,—a fact the knowledge of which is necessarily imputed to the master. *Salem Stone & Lime Co. v. Griffin* (1894) 139 Ind. 141, 38 N. E. 411.

¹ *Carpenter v. Mexican Nat. R. Co.* (1889) 39 Fed. 315 (defective bridge). The following clause in a charge has been held correct: Nor is there imposed on the servant any duty of watchfulness and care to discover defects, when he has no notice of danger, and the defects are not so glaring and apparent as to be open to the observation of ordinarily prudent men. *Pennsylvania Co. v. McCormack* (1891) 131 Ind. 250, 30 N. E. 27. A jury is properly instructed that an engineer was not bound to examine the roadbed of a railway to see if there were any latent defects. *Little Rock & Ft. S. R. Co. v. Foss* (1892 — Ark. —) 18 S. W. 172. A jury is properly instructed to the effect that a brakeman is not required to stop and examine the draw-heads to see whether they are safe, before he makes the coupling, although he is bound to use such care and caution as a reasonably prudent man would use under like circumstances. *Galtoshan, H. & S. A. R. Co. v. Briggs* (1895, Tex. Civ. App.) 30 S. W. 933. A jury is properly charged that it is not the duty of a railroad brakeman to inspect the track to discover defects therein which may result in injury to him. *Texas & P. R. Co. v. Magrill* (1897) 15 Tex. Civ. App. 353, 10 S. W. 188.

² In instructing the jury it is proper to tell them that, in determining whether the servant was negligent, they should consider him as a person entitled to assume that the master had performed his duty. *Vord Deutscher Lloyd S. S. Co. v. Inghelastien* (1894) 57 N. J. L. 401, 51 Atl. 619. A jury is properly instructed that, in the absence of knowledge to the contrary, a train hand has a right to presume that the employer's

duty to furnish a safe track has been performed. *Chicago & E. R. Co. v. Brokopski* (1897) 72 Ill. App. 22. A jury is properly instructed that a servant has a right to assume, without looking for latent defects, that the master has done his duty in providing safe premises or working places for his servants, unless he has or can obtain knowledge to the contrary by reasonable observation. *Summit Coal Co. v. Shaw* (1896) 16 Ind. App. 9, 14 N. E. 676. A railroad employee has the right to assume that the company has established proper rules for his protection in the performance of his duties. *Texas & P. R. Co. v. Loberhart* (1897) 91 Tex. 321, 43 S. W. 510. Affirming (1897; Tex. Civ. App.) 40 S. W. 1060. In a case where the evidence tends to show that the derailment of a car was caused by a defect in one of its trucks, it is proper to charge the jury that a servant "has a right to rely on the company's implied promise to furnish safe machinery, and it is not his duty to inspect the appliances furnished him, but he takes the risk of such secret defects as cannot be discovered by ordinary diligence, and no more." *Jones v. Shaw* (1897) 16 Tex. Civ. App. 290, 11 S. W. 690.

In a case where insufficient bad-lasting caused a switchman to fall in front of a train, it is proper to instruct a jury that he is not precluded from recovery by the fact that he might, by the exercise of ordinary care, have ascertained the condition of the track, and that the action may be maintained unless he had "equal opportunity" with defendant's servants having charge of the track to know of its condition. *Louisville & N. R. Co. v. Ross* (1900) 21 Ky. L. Rep. 1730, 56 S. W. 11. See also § 414, c. *infra*.

³ *Ohio & M. R. Co. v. Pearce* (1890) 128 Ind. 208, 27 N. E. 479 (brakeman injured by defect in brake staff). It is proper to refuse an instruction that the servant's knowledge of the danger of coupling cars with mismatched couplings is a necessary inference from the

caused the injury were known to him, or could have been discovered by ordinary care,⁴ or by proper care,⁵ or by reasonable care,⁶ or by the use of diligence,⁷ or by "care and diligence."⁸

See also § 407, note 3, *supra*, and § 412, note 1, *ad finem*, in

fact that they were of different weights. *Muldorney v. Illinois C. R. Co.* (1873) 36 Iowa, 470. A charge (words not stated) which would give the jury to understand that a brakeman is required to inspect the drawheads of cars handled by him is properly refused. *Missouri, K. & T. R. Co. v. Cox* (1900; Tex. Civ. App.) 55 S. W. 354, Rehearing Denied (1900; Tex. Civ. App.) 56 S. W. 97. An instruction (words not stated) requiring the servant to acquaint himself with the condition of a railway track was held to have been properly refused in *Atchison, T. & S. F. R. Co. v. Swarts* (1897) 58 Kan. 235, 48 Pac. 953.

The following instruction was held erroneous in a case where cattle strayed through a defective fence on to a track: The jury are instructed that, if the defect in the fence was known to the plaintiff he cannot recover unless the evidence also shows that he notified the company of such defect, and was induced to remain in the employment by a promise that the defect would be repaired. *Dickson v. Omaha & St. L. R. Co.* (1894) 124 Mo. 140, 25 L. R. A. 320, 27 S. W. 476.

It is a misdirection to charge the jury that the risk of the dangerous conditions was assumed by the servant if they were known or ought to have been known to him. *Houston & T. C. R. Co. v. Kelly* (1896; Tex. Civ. App.) 35 S. W. 878 (brakeman injured by defective car wheel).

Where a railway fireman was injured, while standing on the side of the engine tender, by being crushed against a coal bin standing near the track, an instruction denying recovery because of the assumption of the risk of an obvious defect was held to have been properly omitted, for the reason that no presumption arises as to the dangers created by objects extraneous to that with which a trainman is working. *Gulf, C. & S. F. Co. v. Gray* (1901; Tex. Civ. App.) 63 S. W. 927.

It is error to instruct a jury that, if an engineer is required in the performance of his duties to go upon a platform, it is his duty to keep it in safe condition, and that if he failed to know of any rottenness or defect therein, ow-

ing to his failure to examine it, the diet should be for the defendant. *Tower v. Tower* (1881) 11 Mo. App. 190.

⁴*Mexican C. R. Co. v. Murray* (1892) 42 C. C. A. 334, 102 Fed. 261; *Loe v. Missouri, K. & T. R. Co.* (1892) Tex. Civ. App. 319, 55 S. W. 376 (man injured by results of engine act); *San Antonio & A. P. R. Co. v. Brooking* (1899; Tex. Civ. App.) 58 S. W. 537. A master is not entitled to an instruction that a servant is bound to use ordinary care to see whether the master has adopted a reasonably safe plan for the conduct of the work. *Missouri, K. & T. R. Co. v. Hanning* (1891) 91 Tex. 347, 43 S. W. 508, Reversed (1897; Tex. Civ. App.) 41 S. W. 11. It is not error to refuse to charge the plaintiff assumed all the risks from defects in appliances used by him, which he might have known by the exercise of ordinary care. *Missouri, K. & T. R. Co. v. Baker* (1900; Tex. Civ. App.) 58 S. W. 964.

In a case where the following charge was requested, it was held that, in giving it, the words in brackets were properly omitted: "Now, if you believe that there was a custom of defendant company to inspect or repair cars when they were brought over to be loaded and return, and the plaintiff knew this custom, he could have known it by the exercise of ordinary care, then he assumed the risk of being injured by any defect in the [said car]." *Texas & P. R. Co. v. Albald* (1896) 21 C. C. A. 520, 41 U. S. App. 567, 75 Fed. 802, Affirmed (1898) 170 U. S. 665, 42 L. ed. 118, 118 Sup. Ct. Rep. 777.

In a case where plaintiff, while cleaning on an engine to clean its headlight, slipped and was injured, due to an accumulation of grease on the engine, the reason assigned for holding it to be error to instruct the jury that the plaintiff, by the exercise of ordinary care, "could" have known of the condition of the step, he was debilitated from a recovery, was that the word "could" tended to cast on plaintiff the duty of inspection or inquiry, while the question of negligence depended on what he "could" have seen, but what he "would" have seen if he had

411. Decisions illustrative of the doctrine.— In the subjoined note are collected a large number of cases in which the refusal of the court to impute knowledge, as a matter of law, is based upon one or other of the various phases of the doctrine developed in the last four sections.¹ For other cases illustrative of situations in which servants

ordinary care. *Bookrum v. Galveston, H. & S. A. R. Co.* (1900; Tex. Civ. App.) 37 S. W. 919. But the distinction thus taken seems to be of more than dubious propriety. It is submitted that an instruction in which the word "would" is used is not less likely to be misleading than one in which the word employed is "could."

In a case where a splinter flew from a nail and struck a laborer, it was held that the defendant could not complain of an instruction that the plaintiff could not recover if the defect was known or "might have been known by the use of ordinary care." *Guthrie v. Louisville & N. R. Co.* (1883) 11 Lea, 372, 47 Am. Rep. 286.

Gulf, C. & S. F. R. Co. v. Kelly (1896; Tex. Civ. App.) 34 S. W. 140.

Gulf, C. & S. F. R. Co. v. Warner (1899) 22 Tex. Civ. App. 167, 54 S. W. 1064 (switchman injured by defective track).

Porter v. Hannibal & St. J. R. Co. (1875) 60 Mo. 160; *Terrill Compress Co. v. Arrington* (1898; Tex. Civ. App.) 48 S. W. 59; *Gulf, C. & S. F. R. Co. v. Hohl* (1895; Tex. Civ. App.) 29 S. W. 1131.

Louisville & N. R. Co. v. Foley (1893) 94 Ky. 220, 21 S. W. 866.

¹(a) *Railway tracks and appurtenances.*—It has frequently been recognized that trainmen, having no duties to perform in respect to construction and maintenance of the roadway, are not chargeable with notice of defects therein (*Georgia P. R. Co. v. Davis* [1890] 92 Ala. 300, 9 So. 252); and that diligence in inspecting a roadbed is not required of any servants of a railway company except those whose duty it is to inspect it (*Southern P. R. Co. v. Aylward* [1891] 79 Tex. 675, 15 S. W. 697).

In the following cases trainmen were injured either by an accident to the train on which they were working, or by the dangerous condition of the roadbed considered as a footway: *Pennsylvania R. Co. v. Zink* (1889) 126 Pa. 288, 17 Atl. 614 (brakeman in yard injured by derailment resulting from rotten ties); *Mehan v. Syracuse, B. & N. Y. R. Co.* (1878) 73 N. Y. 685 (rails not properly

secured); *Lake Shore & M. S. R. Co. v. Conway* (1897) 169 Ill. 505, 48 N. E. 483, Affirming (1896) 67 Ill. App. 155 (train derailed by defective track ran against tower in which a gateman was at work); *Corley v. Coleman* (1901) 113 Ga. 994, 39 S. E. 558 (rotten tree fell across track); *Chicago & N. W. R. Co. v. Sweet* (1887) 45 Ill. 197, 92 Am. Dec. 206 (train fell through a culvert in bad repair); *Southern P. R. Co. v. Aylward* (1891) 79 Tex. 675, 15 S. W. 697 (bolt in guard rail had become loosened, and, as it projected, caught the plaintiff's foot while he was sitting on the edge of a hand car); *Texas, S. V. & N. W. R. Co. v. Guy* (1893; Tex. Civ. App.) 23 S. W. 633 (rotten tie caused a subsidence of the track, the result being that a car which was about to be coupled was thrown over to one side, and its drawhead slipped past that of the car to which it was about to be mated); *Houston & T. C. R. Co. v. McNamara* (1883) 59 Tex. 258 (rotten ties); *Northern P. R. Co. v. Teeter* (1894) 11 C. C. A. 332, 27 U. S. App. 316, 63 Fed. 527 (hole under ties concealed by slush); *Porter v. Hannibal & St. J. R. Co.* (1879) 71 Mo. 66, 36 Am. Rep. 451 (hole under tie); *Little Rock, M. R. & T. R. Co. v. Leocroft* (1886) 48 Ark. 333, 3 S. W. 50 (no ballast); *Cherlund, C. C. & St. L. R. Co. v. Sloan* (1894) 11 Ind. App. 401, 39 N. E. 174 (no ballast; ties irregularly spaced); *Illinois C. R. Co. v. Sanders* (1897) 166 Ill. 270, 46 N. E. 799, Affirming (1896) 66 Ill. App. 439 (unfilled space between ties); *Little Rock & M. R. Co. v. Mosley* (1893) 6 C. C. A. 225, 56 Fed. 1009 (want of filling between the ends of the ties); *Clegg v. Chicago & W. M. R. Co.* (1892) 91 Mich. 624, 52 N. W. 62 (piles of snow shoveled from between the rails of a side track and left lying beside it); *Little Rock & Ft. S. R. Co. v. Voss* (1892; Ark.) 13 S. W. 172 (landslide obstructed track); *Pennsylvania Co. v. Brush* (1891) 130 Ind. 347, 28 N. E. 615 (split ties); *Derlin v. Wabash, St. L. & P. R. Co.* (1895) 87 Mo. 545 (engineer, though knowing that rails are old, light, and well-worn, is not bound to pursue the inquiry and determine whether the road is fit for

have been held excusably ignorant of the risks, see §§ 1453a, 457, notes 1, 2, *post*.

use); *Dale v. St. Louis, K. C. & N. R. Co.* (1876) 63 Mo. 459 (defective rail joint); *Chicago & E. R. Co. v. Binkowski* (1897) 72 Ill. App. 22 (hole 6 inches deep close to track); *Bird v. Long Island R. Co.* (1896) 11 App. Div. 134, 42 N. Y. Supp. 888; *Louisville, A. t. & C. R. Co. v. Wright* (1888) 115 Ind. 378, 16 N. E. 145; *Atchison, T. & S. F. R. Co. v. Scurts* (1897) 58 Kan. 235, 48 Pac. 953; *Jones v. Shaw* (1897) 16 Tex. Civ. App. 290, 41 S. W. 690; *Houston & T. C. R. Co. v. McNamara* (1883) 59 Tex. 255; *Southern P. R. Co. v. Mackey* (1892; Tex.) 19 S. W. 392; *International & G. N. R. Co. v. Benatz* (1898; Tex. Civ. App.) 48 S. W. 767.

That a switchman engaged in coupling cars is not bound to observe whether guard rails are blocked was laid down in *Curtis v. Chicago & N. W. R. Co.* (1897) 95 Wis. 460, 70 N. W. 665. A similar doctrine seems to be adopted in *Tratt v. Chicago, R. I. & P. R. Co.* (1901) 115 Iowa, 80, 86 N. W. 33. But the precise rationale of the decision is not quite clear. The obligation to notice such conditions is, however, asserted in several other cases. See § 403, note 1 (b), *ante*.

In *Waldhier v. Hannibal & St. J. R. Co.* (1885) 87 Mo. 37, where a brakeman's foot caught under the loose plate of a frog, he knowing that the point of the frog was broken, but not that the plate was loose, it was held that he was entitled to recover, unless a prudent person would not have worked about a broken frog, since he was not bound to inquire into the condition of the whole frog. *Gulf, C. & S. P. R. Co. v. Hohl* (1895; Tex. Civ. App.) 29 S. W. 1131 (track was not properly surfaced; guard rail was not at proper distance from main rail, and its ends were not on the ties).

A brakeman is not bound to examine into the location of sidings with respect to adjoining tracks. *Pennsylvania Co. v. McCormack* (1891) 131 Ind. 250, 30 N. E. 27 (space between main and side tracks being insufficient, a brakeman was struck by a car standing on the side track).

Train hands are not bound to examine into the condition of the fences along the track. *Dickson v. Omaha & St. L. R. Co.* (1894) 124 Mo. 140, 25 L. R. A. 320, 27 S. W. 476.

(b) *Obstructions beside tracks.*—*Johnston v. Oregon S. R. Co.* (1892) 23 Or. 94, 31 (switchman not expected to carefully the distance between target and the rail); *Georgia v. Davis* (1890) 92 Ala. 300, (brakeman not bound to know there is a projecting rock so close to track as to be dangerous); *Chesapeake & P. R. Co. v. Cheeland* (1897) 111 Ill. App. 308 (for jury to say trainman should have known of building erected for the purpose of signaling trains was dangerously close to track).

A brakeman is not required to direct his attention to the discovery of obstructions caused by impediments and obstructions in no way required in the operation of the road, such as a post erected to the track by a station agent for the purpose of supporting a clothes line by his family. *Keams v. Chicago & N. W. R. Co.* (1885) 66 Iowa, 231.

A switchman whose duties are to perform manual labor in moving and placing cars on yard tracks, and to determine their location or see that the tracks are clear of obstructions, is not guilty of contributory negligence, because he did not ascertain that the cars had been left standing in such close proximity to an adjacent track as to render it unsafe for him to perform his duties. *Kansas City, M. & St. P. R. Co. v. Burton* (1893) 97 Ala. 248, 83.

A railroad switchman has the right to presume that a car which he is moving to assist in moving is on the track, and that he will not be caught by a car and cars standing on an adjoining track, because it has been started by a pair of wheels is off of the track. *Chicago & E. I. R. Co. v. Driscoll* (1897) 70 Ill. App. 91. Reversed in 111 Ill. 330, 52 N. E. 921; but the court was on the ground that negligence of the defendant's passenger was not shown. The question of contributory negligence was not discussed.

(c) *Obstruction above tracks.*—A trainman has a right to presume that overhead bridges are constructed sufficiently high to be clear of the tracks. *Louis, Ft. S. & W. R. Co. v. Burton* (1887) 37 Kan. 761, 16 Pac.

412. Doctrine considered in relation to the servant's opportunities of knowledge.—A doctrine resting on such foundations as those explained

brakeman is not required to go over the road on a tour of inspection looking for dangerous bridges, before he enters the service. *Louisville, N. A. & C. R. Co. v. Wright* (1888) 115 Ind. 378, 16 N. E. 145.

(d) *Railway cars.*—It is no part of the ordinary duty of a brakeman to inspect the various parts of the brakes which he handles; nor does he hold himself out as having sufficient skill to determine by an inspection their fitness for use. *Central R. Co. v. Haskell* (1884) 74 Ga. 59.

Knowledge was held not to be imputable to trainmen, as a matter of law, in the following cases: *Goodrich v. New York C. & H. R. R. Co.* (1889) 116 N. Y. 398, 5 L. R. A. 750, 22 N. E. 397 (bumpers of unequal height); *Rauzier v. Minneapolis & St. L. R. Co.* (1884) 32 Minn. 332, 20 N. W. 332 (ratchet was so much worn that it would not hold the ratchet wheel when it was shaken by the movement of the cars); *Ohio & M. R. Co. v. Pearcey* (1890) 128 Ind. 208, 27 N. E. 479 (threads of screw on top of brake staff were so worn that they did not hold the nut which secured the wheel); *International & G. N. R. Co. v. Emery* (1896) 14 Tex. Civ. App. 551, 40 S. W. 149 ("dog" intended to catch in the ratchet of brake was too loose to hold it); *Van Tassel v. New York, L. E. & W. R. Co.* (1892) 1 Misc. 299, 20 N. Y. Supp. 708. Affirmed in (1894) 142 N. Y. 634, 37 N. E. 566 (board forming brake step was sprung in such a way that the defect was only visible from below); *Galveston, H. & S. A. R. Co. v. Templeton* (1894) Tex. Civ. App. 25 S. W. 135. Affirmed in (1894) 87 Tex. 42, 26 S. W. 1066 (defect in brake which a switchman could have ascertained only by mounting the car); *Louisville, N. A. & C. R. Co. v. Buck* (1888) 116 Ind. 566, 2 L. R. A. 520, 19 N. E. 453 (brakeman injured owing to absence of reach rod on brake beam, a defect only discoverable by looking under the car); *Chicago & E. I. R. Co. v. Kneirim* (1894) 152 Ill. 458, 39 N. E. 324. Affirming (1892) 48 Ill. App. 243 (helper in yard, engaged in switching, not bound to examine brakes); *Bradshaw v. Chicago, R. I. & P. R. Co.* (1897) 58 Kan. 618, 50 Pac. 876 (janney coupler slipped too far into the casting which received it, owing to the fact that the middle projection of

that casting was defective, and a brakeman's hand was caught); *Mason v. Richmond & D. R. Co.* (1892) 111 N. C. 482, 18 L. R. A. 845, 16 S. E. 898 (no bumpers to prevent cars from coming together); *Doeber, T. & Ft. W. R. Co. v. Snaock* (1897) 23 Colo. 456, 18 Pac. 681 (drawheads in such a condition that they slipped past each other); *Taylor v. Missouri P. R. Co.* (1891) Mo. 18 S. W. 206 (switchman not, as matter of law, chargeable with knowledge of the danger of using a coupling consisting of a piece of brake beam rod, partly bent, but not sufficiently to stay in place when the cars came together); *Louisville, N. A. & C. R. Co. v. Howell* (1897) 117 Ind. 266, 45 N. E. 584 (broken link); *Bowers v. Union P. R. Co.* (1885) 4 Utah, 245, 7 Pac. 251 (workman employed as "track fixer," and to assist in replacing upon the track the cars which should get off a certain curve, not chargeable with knowledge that the couplings were made of iron of a bad quality); *Texas Mexican R. Co. v. King* (1896) 14 Tex. Civ. App. 290, 37 S. W. 34 (partition between upper and lower part of drawhead was broken); *Missouri, K. & T. R. Co. v. Chambers* (1897) 17 Tex. Civ. App. 487, 43 S. W. 1090 (wood in which the screw holding a round of a ladder was inserted was so rotten that the screw became loose); *Illinois C. R. Co. v. Hilliard* (1896) 99 Ky. 684, 37 S. W. 75 (top of bolt was so worn that the round of the ladder which it held came off when grasped); *Fordyce v. Culver* (1893) 2 Tex. Civ. App. 569, 22 S. W. 237 (top of car to which handhold was screwed had become rotten); *Jones v. Shaw* (1897) 16 Tex. Civ. App. 290, 41 S. W. 690 (defective truck).

A trainman is entitled to assume that a side holder is safe, where its appearance is not such as to awaken his doubts, and make him hesitate in the discharge of his duty, or refuse to venture on it. *Goodman v. Richmond & D. R. Co.* (1886) 81 Va. 576.

In a case where a brakeman was injured owing to the fact that the ratchet of a brake would not hold, the court declined to set aside a verdict for the plaintiff, where answers to interrogatories were conflicting, the purport of one being that the defect could have been readily discovered by the plaintiff, and of another that it could not have been

in § 409, *supra*, manifestly enures to the benefit of the servant though he may have had an opportunity to examine the ins-

discovered if an examination had been made. *Matchett v. Cincinnati, W. & M. R. Co.* (1892) 132 Ind. 334, 31 N. E. 792.

In a case where a car which the servant was ordered to mount careened, owing to the fact that the side bearings were missing and it was not properly blocked, it was held that he was not negligent in failing to examine into its condition before he obeyed the order. *Southern R. Co. v. Hart* (1901; Ky.) 64 S. W. 650.

The rule that trainmen are not bound to inspect cars is applicable to foreign cars, as well as to those belonging to their employer. *New Orleans & V. E. R. Co. v. Clements* (1900) 40 C. C. A. 465, 100 Fed. 415 (nut which held wheel of brake on the rod was missing); *Southern R. Co. v. Durall* (1900) 22 Ky. L. Rep. 56, 56 S. W. 988 (car dangerously high compared with the elevation of overhead bridges).

A brakeman in a repair yard is not required to inspect a car returned to the ordinary tracks for use after being repaired, before attempting to couple another car thereto. *Jennings v. New York, N. H. & H. R. Co.* (1895) 12 Misc. 408, 33 N. Y. Supp. 585.

The risk occasioned by the want of stakes or elents on a car loaded with stone and to be coupled to another is not so obvious that a brakeman is chargeable, as matter of law, with knowledge of it, where it is shown that the company's rules required the stones to be thus secured. Under such circumstances it is at least a question for the jury whether a brakeman is justified in assuming that the load is properly secured. *Austin v. Fitchburg R. Co.* (1899) 172 Mass. 484, 52 N. E. 527 (concussion of coupling threw a stone off the car).

A car repairer going under a car which is raised up for the purpose of repairs does not assume the risk of latent defects in the car, which he has not been ordered to repair, but on account of which it falls and crushes him. *G. H. Hammond Co. v. Mason* (1895) 12 Ind. App. 469, 40 N. E. 642.

(c) *Locomotives*.—The servants who use, or have occasion to be on, locomotives are not bound to inspect them. *Galveston, H. & S. A. R. Co. v. Smith* (1900) 24 Tex. Civ. App. 127, 57 S. W.

999 (engineer injured by top of locomotive); *St. Louis & S. F. R. Co. v. McElain* (1891) 80 Tex. 85, 1789 (fireman injured); *Tyler Co. v. Raspberry* (1896) 13 Tex. App. 185, 34 S. W. 794 (fireman necessarily negligent in continuing work on locomotive with defective boiler); *Sabine & E. T. R. Co. v. Ewing* (1892) 1 Tex. Civ. App. 8, 57 S. W. 700 (fireman injured by coupling between engine and car); *Atchison, T. & S. F. R. Co. v. (1895) 14 C. C. A. 547, 34 U. S. 1, 67 Fed. 569 (helper of engine injured by a cracked footboard); C. & S. F. R. Co. v. Kelly* (1898) 18 Tex. Civ. App. 34, 34 S. W. 140 (coalman injured while cleaning out the hopper by a defective damper).

(f) *Hand cars*.—Section hand is not chargeable with a knowledge of latent defects in hand cars. *Stichman & St. J. R. Co.* (1884) 82 Mo. 641, 8 S. C. (1887) 27 Mo. 170 (handle was made of brittle wood); *Gulf, C. & S. F. R. Co. v. Smith* (1888) 70 Tex. 623, 8 S. W. 67 (in lever covered by iron socket); *Tennessee, V. & G. R. Co. v. (1882) 9 Lea. 685 (latent unsafe in lever); Burton v. Missouri I. R. Co.* (1888) 32 Mo. App. 455 (particle of iron not stated).

(g) *Scaffolds, platforms, etc.*—A servant working on a scaffold has a duty to assume that it is safe, and is not to examine it. *Benzing v. Stearns Sons* (1886) 101 N. Y. 547, 5 N. Y. 547 (defect on lower side of plank); *v. Tower* (1881) 11 Mo. App. 185 (engineer allowed to recover where decayed timbers of a platform fell); *Edward Hines Lumber Co. v. (1896) 68 Ill. App. 523 (1898) 315, 50 N. E. 225 (knot in plank not visible); Rice & B. M. Co. v. Paulsen* (1893) 51 Ill. App. 185 (plank of scaffold was left unsecured and tipped up when the servant was on it); *Chicago & A. R. Co. v. (1896) 67 Ill. App. 618 (in-*

the servant, over
the instrument

l by top heavy lo
& S. F. R. Co. v.

over where the de
platform broke).
ber Co. v. Low
23 (1898) 172 Ill.
not in plank; *de*
& B. Matting Co.
11 Ill. App. 123
as left unfastened
he servant stepped
R. Co. v. Marston
618 (insufficient

raising and other defects not specified);
McLean v. Standard Oil Co. (1894) 50
N. Y. S. R. 626, 21 N. Y. Supp. 874
(cross-timbered plank gave way under au
ton workers); *Cunningham v. Seaboard*
Asphalt Paving Co. (1900) 49 App. Div.
80, 63 N. Y. Supp. 357 (rotten and
warped plank broke under servant);
Cole v. Morris Mfg. Co. (1899) 63 N.
E. L. 626, 14 Atl. 647 (plaintiff held not
to be negligent in standing on the end
planks of a scaffold which supported a
line of overhead shafting).

A common laborer employed in bring
ing timbers and in carrying a heavy
grader, although a carpenter by trade,
is not bound to inspect the materials in
a scaffold which he helps to build for
the purpose of carrying such timber over
it. *Goddie v. Werner* (1893) 50 Ill.
App. 297. Affirmed in (1894) 151 Ill.
551, 18 N. E. 95 (knot in a joist).

A servant working on or near a pile
of lumber is not bound to examine it for
the purpose of ascertaining whether it
has been safely constructed. *Zintek v.*
Stinson Mill Co. (1894) 9 Wash. 395,
37 Pac. 340; *Rigdon v. Allegany Lum*
ber Co. (1891) 37 N. Y. S. R. 514, 13
N. Y. Supp. 871.

A servant set to work beside a pile of
ore from which material is to be loos
ened by the use of explosives is not
bound to study the conditions affecting
the stability of the ore at the sides of
the pile. *Illinois Steel Co. v. Schyman*
owski (1896) 162 Ill. 447, 44 N. E. 876.

(h) *Gangways*.—A servant is not
bound to examine a gangway before go
ing on it. *Alabaster Co. v. Lonergan*
(1900) 90 Ill. App. 353 (defect not
specified).

Whether a break in a plank guarding
a tank was obvious to the servant was
held to be a question for jury as it was
only 3 inches high, and liable to be con
cealed by accumulations of dirt. *Moore*
v. St. Louis Wire Mill Co. (1893) 55
Mo. App. 491. A servant has been al
lowed to recover where a bracket sup
porting the plank footpath on which he
was working was knocked away by a
passing wagon, the result being that the
footpath fell. The grounds assigned
for the decision were that the liability
of the structure to be injured in this
way was not a risk "open to observa
tion," and that the servant was not re
quired to notice the manner in which the
planks were sustained underneath. *Sel*
lick v. J. Langdon & Co. (1891) 37 N.
Y. S. R. 511, 13 N. Y. Supp. 853.

(i) *Rails*.—An employee in a
brewery has the right to rely on the
safety of a run down which his keys
are permitted to slide into a hole, there,
where it is not part of his duty to re
pair defects. *Mayer v. Lebkun*
(1897) 16 App. Div. 54, 11 N. Y. Supp.
1067.

(j) *Buildings*.—A factory hand hired
to do knitting not required to examine
into the safe construction of a privy
provided for his use, or chargeable with
knowledge whether it was or was not
safely constructed. *Bunn v. Fisher*
(1862) 24 N. Y. 110, 82 Am. Dec. 315.

A carpenter hired to work on a roof
not bound to examine into the condition
of the building. *Giles v. Delaware State*
Iron Co. (1887) 7 Honst. (Del.) 63, 8
Atl. 368 (charge to jury).

A servant not a carpenter entitled to
assume that roof of building in which
he works is strong enough to protect
him from ice which may fall from an
adjacent building. *Gard v. Rochester*
Paper Co. (1893) 72 Ill. 485, 25 N. Y.
Supp. 443.

The mere fact that a servant knows
that the floor of his master's shop is de
cayed will not, as a matter of law, pre
vent him from recovering for injuries
received by its giving way under him,
since the accident would have happened
without his fault, if the existence of ac
tual danger could not have been ascer
tained without an examination of the
under side of the floor or of the parts
of the building under it. *Huddleston v.*
Lowell Machine Shop (1871) 106 Mass.
282.

In a case where the moving of a load
ed truck over the ends of the loose
boards of a defective floor caused them
to tip up, and thus throw a bale of cot
ton on the plaintiff, it was held that he
was not, as a matter of law, guilty of
negligence in having knelt down under
neath the bale just before the accident.
Norman v. Wabash R. Co. (1894) 10 C.
C. A. 617, 22 U. S. App. 505, 62 Fed.
727.

(k) *Seats*.—A servant is not charge
able with knowledge that a seat is li
able to tip up, where the amount of lev
erage can only be ascertained by look
ing underneath it. *Spaulding v. Forbes*
Lithograph Mfg. Co. (1898) 171 Mass.
271, 50 N. E. 513.

(l) *Unguarded openings*.—A servant
who, while employed at a part of the
premises where he had never worked be
fore, stepped back into an uncovered bar

rel of hot water close by, the top of which was level with the surface of the ground, cannot be debarred from recovery on the ground that he should have looked out for such a pitfall. *Jackson v. Tacoma Mill Co.* (1900) 22 Wash. 88, 60 Pac. 53.

A servant who has been working for one day on a trestle within a few feet of an uncovered hole leading down into a coal bunker is not, as matter of law, negligent in assuming, when his duties require him on a subsequent occasion to work near it during the night and with insufficient light, that it will be kept covered when not in use. *Boyle v. De-non-McLean Constr. Co.* (1900) 47 App. Div. 311, 61 N. Y. Supp. 1043, leave to appeal denied in (1900) 49 App. Div. 636, 63 N. Y. Supp. 1105. Where a hole had been dug in the floor of a boiler room in preparing a foundation for a piece of machinery, and left partly covered, but in an insecure and dangerous condition, a fireman had a right to rely on the general appearance of safety, and the presumption that his employer had provided him a safe place in which to work, and was not bound to examine the hole critically before stepping on the covering. *Frye v. Bath Gas & Electric Co.* (1900) 91 Me. 17, 46 Atl. 804.

A stevedore injured by falling into an unguarded trimming hole in a dark place between decks was justified in assuming that the place was as safe as on the last preceding workday. *The Proteos* (1891) 48 Fed. 919.

A member of an ice gang employed to put ice on board a ship is not necessarily negligent in assuming that a hatchway covered by a tarpaulin for the purpose of receiving the ice is in proper condition, notwithstanding one of the hatch covers has been removed, where there is nothing from its appearance to indicate such removal, and that is the customary way of preparing a ship for taking on ice. *Perkins v. Furness, W. & Co.* (1897) 167 Mass. 403, 45 N. E. 759.

(m) *Telegraph poles.*—A lineman who is ordered to climb a trolley pole and cut a guy wire is not imprudent in taking it for granted that the pole is planted sufficiently deep to stand without the support of the wire, where nothing indicates that the planting is too shallow to be secure without the wire. *Bland v. Shreveport Belt R. Co.* (1896) 48 La. Ann. 1057, 36 L. R. A. 114, 20 So. 284. The contributory negligence of the servant was held to be for the jury,

where the arm of a telegraph pole, owing to a defect which was not ascertainable without inspection, but which was partially concealed by an insulator and discolored to some extent by paint. *Mt. Postal Tel. Co.* (1900) 22 Atl. 46, 46 Atl. 107.

(n) *Ladders.*—As such a defect is not ascertainable without inspection, the question whether the bucking of a ladder, caused by a cross piece bucking because a nail that fastened the left end to the sole piece was near a knot in the side piece, was a serious risk, is for the jury. *The Guggenheims Smelting Co.* (1898) 100 Cal. 647, 41 Atl. 762.

(o) *Machinery.*—An inexperienced employee who injures his hand while engaged in rubbing off the known as a "beater" is not negligent in failing to examine it with a view to discovering dangers of which the outward indication. *Howard v. Farmer* (1882) 56 Tex. 301. A servant is not bound to inspect the of a pressing machine while operating. *Pioneer Co. v. Co-manorier* (1899) 85 Ill. App. 186, 186 Ill. 9, 864 (spring so loose that it did the press when the operator's taken off the treadle).

An oiler on a steamship is not negligent with knowledge of the condition of the cushion valves of the cylinder, where, although it was to examine the pump to see that it was all right, it was not his duty to the cushion valves, which were when the pipe was set up, and after touched. *Hicks v. Ocean* (1900) 56 App. Div. 259, 67 N. Y. 782. A servant is not charged with knowledge of a fracture in the steam drill at a place where indicated by the socket. *Salmon Lime Co. v. Topps* (1894) 161 Cal. 516, 38 N. E. 229. Knowledge of defective condition of a "jack" is put, as a matter of law, to the jury where it is only by taking the jack apart that the defect can be discovered. *Missouri, K. & T. R. Co. v. Fournier* (1900) 4 Kan. App. 219, 45 Pac. 963.

(p) *Elevators.*—A workman merely employed to load, ride, or unload an elevator is not negligent in assuming that the chain is sound. *Mulvey v. Island Locomotive Works* (1885) 20 Cal. 201 (worn link).

(q) *Derricks.*—A quarryman

tegraph pole broken was obviously not partially covered and obscured. *Metcalf v. Co.* (1900) 22 R. 111.

such a defect is not inspection, the breaking of a lamp glass piece then, until that fastened piece was disintegrated, is an injury. *Thompson v. Co.* (1899) 11 N. 2.

An inexperienced workman's hand is not negligent with a view to which there is. *Howard Oil Co. v. Tex.* 301. A servant inspecting the condition of a machine which he is operating. *Co. v. R.* 111. App. 667. M. 6 Ill. 9. 57 N. 1. that it did not stop operator's feet.

A ship is not chargeable of the condition of the machinery though it was his duty to see that it was in his duty to examine which were a defect up, and not there. *v. Ocean S. S. Co.* 259, 67 N. Y. Supp. not chargeable with injury in the leg of a pier where it is not. *Salem Steam* (1894) 10 Ind. App.

Knowledge of the fact of a "jack" not in law, to a servant making the apparatus can be discovered. *Co. v. Young* (1896) Pac. 963.

A workman who is loaded, ride on, and is not necessarily that the elevator. *Grey v. Rhode Is. R.* (1885) 14 R. 1.

quarryman operating

ing a derrick did not assume the risk of being injured by the breaking of the mast, where it was dry rotted in the centre, but sound on the surface. *Jarvis v. Northern New York Marble Co.* (1900) 65 App. Div. 272, 67 N. Y. Supp. 78. Where there is no evidence that a servant had any notice that a derrick which fell on him was defective, or of the danger attending its use, a finding, in an action for the resulting injury, that the manner of its construction and the danger attending its use were as apparent to the servant at the time it fell, and prior thereto, as to defendant, is erroneous. *Westbrook v. Cranston* (1900) Tex. Civ. App.) 68 S. W. 195.

(r) *Other hoisting appliances*.—A servant shoveling coal into tubs which are elevated by machinery to be emptied is not bound to make a personal inspection of a tub before using it, to see if there is any defect in a clasp or fastening for automatically dumping or emptying it. *Pennsylvania Coal Co. v. Kelly* (1895) 156 Ill. 9, 40 N. E. 938, Affirmed (1894) 54 Ill. App. 622. An underground laborer in a mine is not, as matter of law, chargeable with notice of a defect in the hoisting machinery. *Myers v. Hudson Iron Co.* (1889) 150 Mass. 125, 22 N. E. 631. A stevedore's employee is not bound to examine hoisting appliances. *The Carolina* (1886) 10 Fed. 190. A workman is not required to examine into the strength of a steel loop used for raising the stems of a bridge. *Mexican C. R. Co. v. Murray* (1900) 42 C. C. A. 334, 102 Fed. 261.

(s) *Chains*.—The foreman of a blacksmith shop is not, as matter of law, chargeable with knowledge that a chain used to support iron and steel bars while they are being manufactured into various implements was fractured and corroded. *Nichols v. Crystal Plate Glass Co.* (1894) 126 Mo. 55, 27 S. W. 516, 28 S. W. 991.

(t) *Vehicles*.—A porter is not chargeable with knowledge of a defect in a baggage truck, which could only have been discovered by examining the lower side of the bed. *Missouri P. R. Co. v. Crumshaw* (1888) 71 Tex. 310, 9 S. W. 262.

In an action by a servant to recover for injuries sustained from the falling of a load of lumber from a cart which he was driving, by reason of a wheel separating from the axle, it need not be averred that the plaintiff carefully examined the truck before using. *Boyce*

Vol. I. M. & S.—73.

v. Schroeder (1888) 21 Ind. App. 28, 51 N. E. 76.

Whether or not a driver or law in the negligence of a wagon in such an obvious defect as to charge a driver with contributory negligence precluding recovery, imputes sustained in a mine, caused by the breaking of the clip was held to be for the jury in *B. Co. v. Texas Brewing Co.* (1897) 17 Tex. Civ. App. 116, 43 S. W. 808, but the nature of the defect is not stated.

(u) *Tunnels*.—A servant assisting in the excavation of a tunnel is not bound to look for hidden defects in the roof. *Leach v. N. C. & O. R. Co. v. Co.* (1896) 899 14 Ind. App. 399, 43 N. E. 311.

(v) *Mines*.—A laborer in a mine is not, as matter of law, chargeable with knowledge that there is a defect in a pipe which carries to the open air the smoke from the furnace of an engine boiler on one of the lower levels, and that the timbers of the mine may consequently be set on fire. *B. Co. v. Co.* (1896) 899 14 Ind. App. 399, 43 N. E. 311.

A servant limited to work in a certain place, and not required to make a personal examination of that place, is not chargeable with knowledge of a defect in a tunnel. *Co. v. Co.* (1896) 899 14 Ind. App. 399, 43 N. E. 311; *Boys v. Shallen* (1900) 185 Ill. 390, 56 N. E. 1106. A mining (1899) 86 Ill. App. 144.

A miner is not bound to search for hidden defects in a tunnel. *Park County Coal Co. v. Barth* (1892) 5 Ind. App. 159, 31 N. E. 585.

Knowledge that a rib between two rooms was broken through by a blast was not imputed to a miner. *Suomut Coal Co. v. Shaw* (1896) 16 Ind. App. 9, 14 N. E. 676.

The driver of a coal car in a mine is not bound, equally with his employer, to inspect the roof of a passage through which the car is driven. The obligations of such an employee are different from those of one who, while making an excavation in loose earth, sand, or gravel, is required to take precautions to prevent injury to himself through the giving way of the sides or top of such excavation, which he has deprived of support in the prosecution of the work. *Harwood v. Keene* (1892) 5 Ind. App. 108, 32 N. E. 329.

A workman who sees an apparently safe gangway with new timbers just put

in place, and knows that under the eye of his employer experienced miners have just finished the work of making the gangway safe, and is commanded by his employer to work in a particular place, is not required to enter upon an inspection of the place between the timbers to determine whether such workmen have performed their duty with care, or have left loose material liable to fall upon him. *Vanesse v. Catsburg Coal Co.* (1893) 159 Pa. 403, 28 Atl. 200.

Where an examination of defendant's mine was made, but the record did not show that all the conditions were safe, and plaintiff was permitted to enter the mine to work, and was injured, the fact that he did not examine the record did not prevent him from charging defendant with a wilful violation of the mining act, § 4, providing that all mines shall be examined every morning, and that no one shall be permitted to enter until all the conditions are reported to be safe. *Paunce Coal Co. v. Royce* (1900) 184 Ill. 402, 56 N. E. 621, Reversing (1898) 79 Ill. App. 469.

In *Eddy v. Aurora Iron Min. Co.* (1890) 81 Mich. 555, 46 N. W. 17, it was recognized that a servant might be guilty of contributory negligence in "failing to find out" a defect in the timbering of a mine; but it was held that, under the circumstances, such negligence could not be attributed to him as a matter of law.

For other mining cases, see subd. (r), *supra*; and § 413, notes 1, 4, *infra*; and § 410, note 1, *supra*.

(w) *Trenches*.—It is not part of a servant's duties to study the conditions affecting the stability of the earth at the sides of a trench in which he is set to work. *Hennessy v. Boston* (1894) 161 Mass. 502, 37 N. E. 668; *Bartolomeo v. McKnight* (1901) 178 Mass. 242, 59 N. E. 804.

(x) *Banks of earth, etc.*—An employee engaged in shoveling dirt into a car from a bank of hardpan so hard that it has to be blasted is not, as matter of law, chargeable with knowledge of the risk of injury from an unexpected fall of earth, where the evidence is that the bank looked solid, but was really seamed with cracks, the result of previous blasts. *Hill v. Winston* (1898) 73 Minn. 80, 75 N. W. 1030. An employee in a quarry is not, as matter of law, chargeable with knowledge of the risk from the fall of an overhanging mud bank, the character of which, as distinguished from stone, was not open to visual inspection because of the ad-

mixture of sand and minerals though its true character could have been determined by the use of tools, evidence being that both stone and mud banks were to be met with in the case. *Pearless Stone Co. v. Wray* (1899) 101 Ind. 27, 51 N. E. 326.

(y) *Quarries*.—In view of the principle that the servant has a right to assume that his employer has fulfilled his duty, it is for the jury to say whether a quarryman should have appreciated the danger created by the sagging of a rope. *Comben v. Belleville Stone Co.* (1897) 59 N. J. L. 226, 36 Atl. 404.

(z) *Electric appliances*.—In a case where a servant while lubricating a dynamo box came in contact with a charged wire, it was held that, though no proof was made that he appreciated the danger, the presumption was that he did not appreciate it, for in that case he would have avoided the risk of contact. *Myhan v. Louisiana Electric & P. Co.* (1889) 41 La. Ann. 96, 18 R. A. 172, 6 So. 799.

(aa) *Risks from the fall of heavy objects*.—(See also subd. (r), (w), *supra*.) Recovery has been allowed where a door fell on a servant, owing to the fact that the rope which supported it was not properly fastened. *Turner v. Appling* [1891] 88 Ga. 54, 13 S. E. 242, and where a tank fell on a servant, owing to the fact that a nut slipped from a bolt. *Champion Ice Mfg. & Cold Storage Co. v. Carter* [1899] 21 Ky. L. 210, 51 S. W. 16).

A machinist of several years' experience who is hurt while working on a lathe, by the fall of an unfastened pulley reaching from a runway to the shaft timbers, and used to obtain access to a pulley for the purpose of adjusting a belt, will not be declared contributorily negligent as a matter of law, to have been injured by the result of an obvious danger or assumed as an incident to his employment. *Quimby v. Boston & M. R. Co.* (1898) 69 N. H. 334, 41 Atl. 266.

A servant employed to dress stone is not required to examine the stone in proximity to that upon which he is working, to ascertain if they are safely placed and free from danger of falling over upon him. *Blondin v. Quarry Co.* (1894) 11 Ind. App. 3, 18 N. E. 812.

(bb) *Inadequate provision against fire*.—An employee in a factory is not contributorily negligent as a matter of law, chargeable with knowledge that there is no fire escape outside of a building, where his business is on the inside, and his attention

minerals therein, meter could have use of tools, the stone and mud th in the quarry. *Gray* (1898) 152

w of the princis a right to as has fulfilled his to say whether a appreciated the agging of a drag *Grille Stone Co.* 36 Atl. 473.

sion against fire- tory is not, as a ble with know- e escape on the here his business s attention has

never been called to the absence of the escape. *Gorman v. McArdle* (1893) 67 Hun. 484, 22 N. Y. Supp. 479.

(cc) *Incompetency of fellow servants.*—In the absence of specific knowledge or information putting him on inquiry, a servant is not required to examine into the competency of the servants employed to work with him. He is warranted in acting upon the assumption that the master has performed his duty in selecting and retaining those servants. *Texas & P. R. Co. v. Johnson* (1896) 89 Tex. 519, 35 S. W. 1042; *St. Louis, A. & T. H. R. Co. v. Corgan* (1891) 49 Ill. App. 220; *Charles Pope Glucose Co. v. Byrne* (1895) 60 Ill. App. 20; *Pennsylvania Co. v. Roney* (1893) 89 Ind. 453, 48 Am. Rep. 173; *Chicago & E. I. R. Co. v. Beatty* (1895) 13 Ind. App. 604, 40 N. E. 753.

In *United States Rolling Stock Co. v. Wilder* (1886) 116 Ill. 100, 5 N. E. 92, the law was thus laid down: "The contention of appellant, as we understand it, is that where one is employed as an operative in a particular branch of service he is bound to investigate and find out, at his peril, whether the common master has used reasonable care and prudence in the selection of those already employed in the same branch of service. The law imposes no such duty. One thus employed is warranted in assuming that the master has discharged his duty in this respect, and until notice to the contrary is brought home to the employee he may safely act upon that hypothesis. All that the law demands of one thus employed is that he keep his eyes open to what is passing before him, and avail himself of such information as he may receive with respect to the habits and characteristics of his fellow servants."

A switchman who has complained of the incompetency of a fireman, and received a promise that he shall be removed, is not necessarily negligent because, on a subsequent occasion, when he has to signal to the same engine, he does not look closely at the fireman for the purpose of ascertaining whether the promised change of employees has been made. *Galveston, H. & S. A. R. Co. v. Eckles* (1900; Tex. Civ. App.) 60 S. W. 830.

(dd) *Nonperformance of a specific duty by a fellow servant.*—A servant is not bound to ascertain whether a co-employee who is not consociated with him has discharged his duty to report the existence of a defect. *Peoria, D. & E.*

R. Co. v. Johns (1891) 43 Ill. App. 83.

As a servant may, in the absence of actual knowledge of the incapacity of a collaborer, assume that he is competent, it is improper, in an action for injuries caused by his negligence, to instruct the jury that plaintiff would be put on inquiry to ascertain, before engaging in work with such laborer, whether he was a man of ordinary intellect and understood the English language. *B. Lantry Sons v. Lourie* (1900; Tex. Civ. App.) 58 S. W. 837. So, it was error to instruct the jury that, if the plaintiff had the same means of knowing the incompetency as defendant had, he could not recover. *International & G. N. R. Co. v. Cook* (1897) 16 Tex. Civ. App. 380, 41 S. W. 665.

As a servant is not charged with the same obligation of inquiry as the master, the general reputation of the delinquent servant for carelessness, recklessness, or other bad qualities is not in itself evidence from which the injured servant's knowledge of his incompetency can be inferred. *Olsen v. North Pacific Lumber Co.* (1900) 40 C. C. A. 427, 100 Fed. 384, holding it to be error to give an instruction from which the jury might be led to suppose that such a reputation charged the injured servant, not less than the master, with notice of the incompetency.

To escape liability on this ground, the defendant must go further and show that the injured servant knew of the general reputation, or had at some time been placed in such a position that a jury might reasonably infer that he did actually know of it. *Texas & P. R. Co. v. Johnson* (1896) 89 Tex. 519, 35 S. W. 1042, contrasting the different principle which prevails when the master's constructive knowledge is in question. (See § 202, ante.) Same case on second appeal, *Texas & P. R. Co. v. Johnson* (1897) 90 Tex. 304, 38 S. W. 520, Denying Writ of Error in (1896) 14 Tex. Civ. App. 566, 37 S. W. 973.

(ee) *Vicious animals.*—An employee who is not notified that a horse furnished for his use is vicious, has a prima facie right to recover damages for injuries caused by the animal. *Helmske v. Stetler* (1893) 69 Hun. 107, 23 N. Y. Supp. 392; *Lane v. Minnesota State Agri. Soc.* (1895) 62 Minn. 175, 29 L. R. A. 708, 64 N. W. 382; *Leigh v. Omaha Street R. Co.* (1893) 36 Neb. 131, 54 N. W. 134; *George H. Hammond Co. v. Johnson* (1893) 38 Neb. 244, 56 N. W. 967. (In the last two cases the

tality which caused his injury.¹ There are, of course, still strong grounds for holding him to be relieved from any obligation to inspect the plant, where he had no time for such inspection before his attention was absorbed in engrossing duties which demand rapid action, or because, for some other reason, an examination

special point made by defendant's counsel and negatived by the court was that the rule where animals were concerned was different from that which prevailed in regard to inanimate appliances.)

(ff) *System*.—An employee is not deemed to accept the danger of using defective appliances because of his knowledge of the general methods adopted by the employer in carrying on his business, or because, by ordinary care, he might have known of the methods, and inferred therefrom that danger from insufficient appliances might arise. *Texas & P. R. Co. v. Archibald* (1898) 170 U. S. 665, 42 L. ed. 1188, 18 Sup. Ct. Rep. 777, Affirming (1896) 21 C. C. A. 520, 41 U. S. App. 567, 75 Fed. 802. A servant is not bound to inquire what regulations have been made to secure his safety. *Missouri, K. & T. R. Co. v. Hannig* (1897) 91 Tex. 347, 43 S. W. 508, Reversing (1897; Tex. Civ. App.) 41 S. W. 196; *International & G. N. R. Co. v. Hall* (1892) 1 Tex. Civ. App. 221, 21 S. W. 1024. A baggage master is not presumed to know whether or not the rules and schedule provided for the running of his employer's trains were defective and ambiguous. *Georgia R. & Bkg. Co. v. Rhodes* (1876) 56 Ga. 645.

A servant is not bound to examine into the safety of the method adopted for taking down a building. *Faren v. Sellers* (1887) 39 La. Ann. 1011, 3 So. 363.

(gg) *Contagious diseases*.—Negligence is inferable where an employer allows an employee to work in a room where one of the household is sick with typhoid fever, and neglects to inform her what the malady is. *Kliegel v. Aitken* (1896) 94 Wis. 432, 35 L. R. A. 249, 69 N. W. 67.

(hh) *Illegality of act which servant is required to do*.—The danger of being arrested for obeying orders which put the servant in the position of violating an injunction not actually known to him is one with regard to which he has a right to expect to be warned. *Guirney v. St. Paul, M. & M. R. Co.* (1890) 43 Minn. 496, 46 N. W. 78. The court remarked that the liability of the principal does not, in such a case, depend

upon the ultimate determination of the question whether an alleged trespasser or upon the servant is or is not negligent, justifiable, or whether the injunction is legal and proper.

(ii) *Danger from acts of violent strangers*.—A master is negligent who fails to warn a workman employed to erect a fence, as to the risk of being shot by a person who is in adverse session. *Baxter v. Roberts* (1872) Cal. 188, 13 Am. Rep. 160.

¹ Masters and servants are not equally chargeable with knowledge merely because the reason that both have equal opportunities for acquiring knowledge. *Ilem Stone & Lime Co. v. Tepps* (1890) 10 Ind. App. 516, 38 N. E. 229.

A fireman is not chargeable with knowledge of a defective rail joint merely because he had ample opportunity to examine it. *Dale v. St. Louis, K. & N. R. Co.* (1876) 63 Mo. 455. The brakeman had opportunities to learn the condition of a track cannot be inferred from the fact that he had been working upon it for a year or more. *Texas & P. R. Co. v. Magrill* (1897) 15 Tex. App. 353, 40 S. W. 188 (rotten ties and loose spikes).

A brakeman is not charged with the duty of examining cars to discover latent defects, merely because his opportunities for discovering such defects are equal to those of the company and its superiors. *Pittsburgh, C. C. & St. L. Co. v. Woodward* (1894) 9 Ind. 169, 36 N. E. 442 (drawbar). An employee has the right to assume, in the absence of knowledge to the contrary, that the handle for working a hand car is reasonably safe, and he does not assume the risk arising from unknown latent defects, or defects not obvious to him while using ordinary care and observation. *Banks v. Wabash W. R. Co.* (1890) 40 Mo. App. 758. Defendant's contention was that plaintiff had opportunities of knowing the deficiency of the handle, and was, in the evidence, guilty of contributory negligence in failing to observe its condition. The fact that a servant had an opportunity to inspect the handle of a bucket for some time before

impossible under the circumstances.² Excusable ignorance may, of course, be inferred on this ground, although the defect is one of which

caused an accident does not show that he is chargeable with notice of the condition of the latch. The court said: "It was the unquestioned duty of the defendant to furnish plaintiff a safe bucket, and he had a right to assume that it had performed that duty, and was not bound to make a personal inspection of the same before using it."

If the servant must, at his peril, examine for himself, what he comes of the primary duty of the master to see that safe and suitable machinery and implements are furnished his employee?" *Pennsylvania Coal Co. v. Kelly* (1895) 156 Ill. 16, 40 N. E. 938.

The fact that a seaman injured while operating a defective steam winch used in shifting the cargo had an opportunity for seeing the winch before the ship sailed does not create a conclusive presumption that he sailed with knowledge of its condition. *Elbridge v. Atlas S. S. Co.* (1890) 58 Hun. 96, 11 N. Y. Supp. 168. An employee who has no knowledge which would suggest his looking for dangerous projections from a car over an otherwise safe walk on the employer's premises is not negligent in going thereon without looking. *Salem Stone & Lime Co. v. Griffin* (1894) 139 Ind. 141, 38 N. E. 411 (servant had previously worked below the walk, in a position from which the projections were not visible).

Evidence that a stevedore injured by falling down an open hatchway had previously worked upon the vessel, and had had an opportunity to learn the position of the hatchway and that it was open on such occasions as that on which he was injured, is not conclusive of knowledge on his part that the hatchway was open, but is to be considered by the jury in connection with the other evidence. *Smith v. Occidental & O. S. S. Co.* (1893) 99 Cal. 462, 34 Pac. 84.

The servant is not, as matter of law, chargeable with knowledge of a defect, where the evidence tends to show that it was one which would not be discovered simply by using it, but that it was discoverable only by an examination made by a competent person. *Nichols v. Crystal Plate Glass Co.* (1894) 126 Mo. 55, 27 S. W. 516, 28 S. W. 991.

An employee in a mine is not chargeable, after only twenty days' work, with knowledge of a defect in a hoisting rope,

which could not have been discovered by ordinary observation. *Perry v. Ricketts* (1870) 55 Ill. 234.

In *Louisville, N. A. & C. R. Co. v. Howell* (1896) 147 Ind. 266, 45 N. E. 584, it was contended on demurrer that, because it was alleged that the defect in a coupling was "patent and open to the inspection of the defendant if an examination of the same had been made," it therefore followed that the defect was one which was obvious "to ordinary careful observation," and consequently one which the servant should have seen and avoided; but the court said: "The words used, and their context, plainly indicate that the defect was one which could have been easily discovered on a careful examination by appellant's inspectors. There is nothing in the complaint to show that appellee had anything to do with the coupling link. Had he coupled the cars between which the link was used, and thus handled the defective appliance, and so had opportunity to observe it, there might be some propriety in holding him accountable for a knowledge of its condition. . . . The defect was one that might readily have been discovered by proper inspection, but this the employer, and not the employee, was bound to make."

An instruction announcing the naked proposition that mere means of knowledge are equivalent to actual knowledge is erroneous. *Norfolk & W. R. Co. v. Nunnally* (1892) 88 Va. 546, 14 S. E. 367.

It is error to charge that, if the servant had the opportunity to observe the degree of danger, he cannot recover. *Ft. Worth & D. C. R. Co. v. Wilson* (1893) 3 Tex. Civ. App. 587, 24 S. W. 686 (This decision was reversed in 85 Tex. 516, but merely on a point of practice.)

It is error to instruct a jury that if they find from the evidence that plaintiff, at the time of and before his injury, knew that the roof of an entry was unsafe, or had the means and opportunity to ascertain its defective condition, and did not avail himself of such opportunity, or use the means at hand, he was guilty of negligence. *Wellston Coal Co. v. Smith* (1901) 65 Ohio St. 70, 55 L. R. A. 99, 61 N. E. 143.

"It is not expected that the servant will make close scrutiny into all the details of the instrumentalities with which

the servant would otherwise have been bound to make an examination.³

he deals. His employment forbids that he should thus spend his time. If the rule were otherwise, the management of a great railway system would be needlessly slow." *Johnston v. Oregon Short Line R. Co.* (1892) 23 Or. 94, 31 Pac. 283.

A brakeman is not chargeable with contributory negligence in coupling defective cars, where the defects are of such a character as to appear only on inspection, and where, in the hurry incident to his work, he cannot discover such defects, and he is not warned thereof. *Chesapeake & O. R. Co. v. Lash* (1896; Va.) 24 S. E. 385; *S. P. Louisville & N. R. Co. v. Foley* (1893) 94 Ky. 220, 21 S. W. 866 (brakeman unexpectedly called upon at midnight to make a coupling of cars in a train recently made up.)

A brakeman, being obliged to act with promptitude in coupling cars, has a right to assume without inspection that the couplings are in a proper state of repair. *King v. Ohio & M. R. Co.* (1882) 11 Biss. 362, 14 Fed. 277, per Gresham, J. A servant who has to select a block for checking the speed of cars, from among a number which are so soiled that it is practically impossible to distinguish the sound from the unsound, without a more careful examination than his work permits him to make, does not assume the risk of selecting a worn-out block. *Lehigh Valley Coal Co. v. Warrek* (1898) 28 C. C. A. 540, 55 U. S. App. 437, 84 Fed. 866.

A servant is not chargeable with knowledge of a knot in a plank forming part of a platform on which he was about to work, when he had no opportunity of inspecting it, and it is quite doubtful whether he could have discovered it even if he had made such an examination, since there was a covering of paint on the upper surface, and it was difficult, as the plank was placed, to inspect its under side. *Benzing v. Steinway & Sons* (1886) 101 N. Y. 547, 5 N. E. 449.

An operator of a "former" machine in an oil mill, who is compelled to work with such great rapidity that he cannot carefully examine all bags furnished him and placed by other employees on top of the machine, and which for his safety should be free from holes, has the right to assume without examination that the bags furnished him are free from holes.

Carter v. Oliver Oil Co. (1892) 3604, 15 S. E. 928.

A workman in a dangerous position upon a railroad bridge, and hurried in his work, is not guilty of negligence in failing to inspect a maul handled by a foreman under whom he is employed. *Chicago, K. & W. R. Blevins* (1891) 46 Kan. 370, 2 687.

Compare also the following: *Great Northern R. Co. v. McLaughlin* (1895) 17 C. C. A. 330, 44 U. S. App. 189, 70 Fed. 669 (no opportunity to inspect amine skids used for loading railroad flat cars); *Louisville, N. A. & C. v. Howell* (1896) 147 Ind. 266, 43 584 (defective coupling link caused injury to brakeman); *Stewart v. Guson* (1898) 34 App. Div. 515, 5 Supp. 615 (servant had no reasonable opportunity to observe that the rungs of a scaffold were not properly braced); *Chicago & A. R. Co. v. Scanlan* (1896) 170 Ill. 106, 48 N. E. 826, Aff'd (1896) 67 Ill. App. 621 (bricklayer not chargeable with knowledge of defective construction of a scaffold prepared for his use, where he came from another portion of the building directly to the scaffolding without opportunity to inspect it); *Baldwin v. St. Louis, K. & N. W. R. Co.* (1896) 104 Mo. 45, 33 N. W. 356 (failure to inspect pile of lumber which fell on plaintiff, not negligence, as matter of fact where his view of it was obstructed by another pile); *Chicago K. & W. R. v. Blevins* (1891) 46 Kan. 370, 2 687 (servant received from his foreman a defective tool when he was hurried in his work and in a specially dangerous position which limited the opportunity for making an examination); *Atwood v. Williams* (1896) 114 Cal. 1, 1 Pac. 1041 (servant had no opportunity to examine hoisting machinery going to work in a trench).

In one case the doctrine that a servant may assume that adequate precautions have been made for his safety has been declared to apply with especial force where the performance of his duties requires constancy of attention to such matters. *Chicago & E. I. R. v. Hines* (1890) 132 Ill. 161, 23 N. E. 101.

Obviously, a similar reason may be given if it is not, assigned in many of the railway cases cited in § 411.

³In an Illinois case (see § 414.

413. Limits of the servant's exemption from the duty of inspection; generally.—The scope and effect of the doctrine discussed in the preceding sections must be considered with due reference to the existence of the servant's general obligation to exercise ordinary care. He is manifestly not warranted in assuming that he is not exposed to any abnormal dangers, where he has actual knowledge that one of the master's duties has not been performed;¹ nor where he has been expressly warned to examine the appliance in question.² He will not be heard to say that his ignorance of a danger was excusable if it could have been discovered by a reasonable use of his faculties of observation.³

infra), the fact that his duties require prompt action is mentioned as one of the reasons why a yard hand is not bound to examine brakes before using them. *Chicago & E. I. R. Co. v. Kneir* (1894) 152 Ill. 458, 39 N. E. 324.

¹In cases where the doctrine is enunciated, this necessary qualification is frequently recognized by the introduction of clauses of a restrictive tenor. See, for example, *Illinois C. R. Co. v. Sanders* (1897) 166 Ill. 270, 46 N. E. 799; *Louisville & N. R. Co. v. Orr* (1890) 91 Ala. 548, 8 So. 360; *Fordyce v. Farborough* (1892) 1 Tex. Civ. App. 260, 21 S. W. 421; *Chicago & E. I. R. Co. v. Hines* (1890) 132 Ill. 161, 23 N. E. 1021.

In *East St. Louis Connecting R. Co. v. Shannon* (1893) 52 Ill. App. 420, an instruction was condemned by which the jury was told that the servant was not required in the first instance to know that tracks were properly constructed, but had a right to rely on the implied undertaking of the company to make and keep them safe. "Given actual knowledge," said the court, "there remains no room for presumptions."

²*Senior v. Ward* (1859) 1 El. & El. 385, 28 L. J. Q. B. N. S. 139, 5 Jur. N. S. 172, 7 Week. Rep. 261 (hoisting tackle of mine). See §§ 363, 364, *ante*.

³"A man cannot decline to see, and then hold the master liable, excusing his own negligence by saying that he was under no primary obligation to investigate." *Illinois C. R. Co. v. Sanders* (1894) 58 Ill. App. 117. "It is his [i. e., the servant's] duty to use ordinary care in informing himself of the dangers and responsibilities attending his employment, and to take the same degree of care in avoiding accident and injury. He may not close his eyes to serious defects or weaknesses in ma-

chinery or appliances, occasioned by use, of which, considering his employment, he might reasonably take notice, and he may not forget or omit precautions which, under the circumstances, as a reasonable and prudent man, he ought continually to exercise." *Wells v. Coe* (1886) 9 Colo. 159, 165, 11 Pac. 50. "While the employee may repose confidence in the prudent and cautious adherence to duty by the employer, yet he may not repose that blind confidence in the performance of the employer's duty which fails to observe the patent defects which an ordinary observation of the employee's duty would readily disclose." *Evansville & T. H. R. Co. v. Ducl* (1893) 134 Ind. 156, 33 N. E. 355.

"The servant is culpable if he fail to discover such a defect as would have been apparent, without a thorough examination, if he had used ordinary diligence to discover it." *Chesson v. John L. Roper Lumber Co.* (1896) 118 N. C. 59, 23 S. W. 925.

A servant cannot be "permitted to rely blindly on the presumption" that the master has provided a safe working place, "to the utter disregard of the plain and palpable evidence of his own senses." *Muncie Pulp Co. v. Jones* (1894) 11 Ind. App. 110, 38 N. E. 547.

In one case it was remarked, *arguendo*, that the servant is not bound "to exercise care" to know defects, unless it is in the line of his duty. *Taylor, B. & H. R. Co. v. Taylor* (1890) 79 Tex. 104, 14 S. W. 918. This statement is plainly erroneous, if taken literally. But the context shows that nothing more is meant than that no duty of active inspection lies on the servant.

An experienced laborer when going to work in a trench is bound to exercise a reasonable degree of vigilance in regard to the safety of the place of work

The limiting operation of this principle is often recognized by the use of phraseology which is either actually or by implication qualifying significance, in connection with the statements in regard to the servant's exemption from the obligation to inspect the premises. Thus, we find it laid down that a servant is not required to use diligence to discover defects, and is chargeable with negligence thereof only when they are so obvious that it imports gross negligence to overlook them;⁴ that he is not bound to use more than "ordinary care and watchfulness" in discovering defects in the plant;⁵ that he is only required to notice obvious defects and such as he has an opportunity of noticing;⁶ that the law demands nothing more than that he shall keep his eyes open to what is passing before him, and avail himself of such information as he may receive with respect to such conditions as may expose him to danger;⁷ that he is not required to search for latent, concealed, or hidden defects or sources of danger;⁸ that he is not chargeable with knowledge of concealed defects not discoverable by "ordinary observation."⁹ In other cases it has been declared that a servant has a right to rely upon the safe condition of the plant unless the danger is one of which he must be presumed to be aware;¹⁰ or unless the defects are so glaring as to be discoverable by the observation of prudent men;¹¹ or where the defect could have been readily detected;¹² or the danger is not patent;¹³ or not ob-

Bartolomeo v. McKnight (1901) 178 Mass. 242, 59 N. E. 801.

The ignorance of a section hand of the condition of rough ground over which he is helping to carry a heavily laden hand car does not relieve him from exercising due care in observing where he is going, and looking out for snags. *Terry v. Louisville, N. A. & C. R. Co.* (1896) 15 Ind. App. 353, 43 N. E. 273. Rehearing Denied (1896) 15 Ind. App. 356, 44 N. E. 59.

In one case the law was said to be that, if the servant knew, or by the exercise of reasonable care and diligence could have known, the reputation of a negligent co-servant, "he was chargeable with notice of whatever that reputation was." *Western Stone Co. v. Whalen* (1894) 151 Ill. 472, 38 N. E. 241.

⁴ *Silveira v. Iversen* (1900) 128 Cal. 187, 60 Pac. 687.

(1891) 88 Ga. 51.

Donner Co. v. Lloyd 50 N. E. 225. At

or where there is no such obvious and palpable defect as to attract his attention.¹⁵

In several cases the character of the inspection which the servant is not bound to make is particularized by the addition of the epithet "critical."¹⁶ Such an epithet obviously implies a standpoint similar to that which is indicated by the various forms of expression collected above.

The correctness or incorrectness of an instruction will frequently depend upon whether the jury were or were not informed in appropriate terms that the servant's right to rely upon the safe condition of the plant is not an absolute one.¹⁷

Such examination of an appliance as is necessary to enable a serv-

firming (1896) 68 Ill. App. 523; *McDonald v. Chicago, St. P. M. & O. R. Co.* (1889) 41 Minn. 439, 43 N. W. 380. "The employee is not required to look for defects, but such as are patent, or known to him." *Norton v. Louisville & N. R. Co.* (1895) 16 Ky. L. Rep. 846, 30 S. W. 599.

Devlin v. Wabash, St. L. & P. R. Co. (1885) 87 Mo. 549.

McLean v. Standard Oil Co. (1893) 50 N. Y. S. R. 626, 21 N. Y. Supp. 874; *Baltimore & O. S. W. R. Co. v. Amos* (1898) 20 Ind. App. 378, 49 N. E. 854.

Cincinnati, H. & D. R. Co. v. McMullen (1889) 117 Ind. 439, 20 N. E. 287; *Consolidated Coal Co. v. Bruce* (1893) 47 Ill. App. 444; *Ross v. Shanley* (1900) 185 Ill. 390, 56 N. E. 1105; *Chicago, R. I. & P. R. Co. v. Cleveland* (1900) 92 Ill. App. 308; *Alabaster Co. v. Lonergan* (1900) 90 Ill. App. 353; *Frye v. Bath Gas & Electric Co.* (1900) 94 Me. 17, 46 Atl. 804.

"There is no error or unfairness in an instruction in which the court tells the jury that a yard switchman who is about to couple two cars has a right to assume that they are properly loaded and to act on that assumption, where it is added that if, by the exercise of proper diligence, he might have discovered the dangerous manner in which they were loaded, in time to avoid injury, he cannot recover. *Northern P. R. Co. v. Everett* (1894) 152 U. S. 107, 38 L. ed. 373, 14 Sup. Ct. Rep. 474.

An instruction that one employed in a mine was not required or expected in going up and down the ladder, with a candle, to his work, to investigate and discover its condition as to safety or otherwise, is not ground for reversal, where qualified by a statement that the

employee was bound to use his eyes, and to take reasonable care to avoid known dangers and those which could be seen by the use of ordinary care. *Beece v. Morgan Silver Min. Co.* (1898) 17 Utah, 489, 54 Pac. 759. A jury is properly charged that a servant has a right to presume that an appliance is safe for use, where the defect is not patent, and he has used due diligence to discover defects (*Missouri, K. & T. R. Co. v. Crowder* [1899] Tex. Civ. App. 55 S. W. 380); and that a servant has a right to assume, without looking for latent defects, that the master has done his duty in providing safe instrumentalities, unless he has or can obtain knowledge to the contrary by reasonable observation (*Summit Coal Co. v. Shaw* [1896] 16 Ind. App. 9, 44 N. E. 676). In any case where the defect was a visible one which might possibly have been discovered by a person in the servant's position, if he had been ordinarily observant, it is error to charge the jury, without qualification, that the servant had the right to presume that the appliance in question was in good condition, and that he was not required to inspect the same for defects. *Ludney v. Edwards* (1895) 60 Ark. 438, 30 S. W. 758, second appeal (1898) 65 Ark. 98, 44 S. W. 1031 (pilot of engine was hung so high that it failed to throw a horse from the track, and a derailment was the result); *Texas Mexican R. Co. v. King* (1896) 14 Tex. Civ. App. 290, 37 S. W. 34 (link bent and piece broken out of drawhead). A charge is erroneous which will probably lead the jury to suppose that a servant is not bound to notice the condition of the appliances used by him. *Wells v. Coe* (1886) 9 Colo. 165, 11 Pac. 50.

ant to understand the dangers incident to its use under normal conditions is perhaps always obligatory,—at least in the case of a

413a. Duty of inspection; when predicable from circumstances indicative of danger.—A situation in which the doctrine which releases the servant from the duty of inspection frequently comes into conflict with, and gives way to, the paramount principle that he must exercise proper care, is indicated by those cases in which it is held down that he is entitled to assume the existence of safety in the absence of anything to excite special apprehension of danger, where the appearance of the appliance was not such as to arouse his doubts and make him hesitate in the discharge of his duty to refuse to undertake it;² or unless he had knowledge which should have warned him that it was unsafe to act on such an assumption.

An unqualified charge to the effect that a servant may assume that a telephone pole which he is required to climb is safe and suitable is erroneous. *Cumberland Teleph. Co. v. Loomis* (1889) 87 Tenn. 504, 11 S. W. 356. It is error to instruct the jury that if the defendant's contract obliged him to inspect the place of work, then it was no part of plaintiff's employment to look after its safety, and, if he was injured by reason of defendant's omission to inspect it, there should be a finding in his favor. *Breckenridge & P. Syndicate v. Murphy* (1897) 15 Ky. L. Rep. 915, 38 S. W. 700.

In *Way v. Illinois C. R. Co.* (1875) 40 Iowa, 341, it was held error to refuse to give an instruction that the servant could not recover if he had gone on working when he had knowledge, or might "by the exercise of due care" have had such knowledge. This ruling certainly seems difficult to reconcile with several of those condemned in § 410a, *supra*. But the court was able to distinguish the instruction under review from that which was refused in *Muldowney v. Illinois C. R. Co.* (1873) 36 Iowa, 470 (see section just mentioned), upon the following grounds: "A brakeman, although he may have the means and opportunity of doing so, is not required to go around and under the trucks, with lantern and hammer, for the purpose of ascertaining whether there be any flaw or crack in a wheel or axle. The company employs parties to perform this duty, and the brakeman has the right to suppose that they will perform it properly, and he is justified in leaving the performance of it to them. At the same time he must make a rea-

sonable use of his senses, and if it is apparent and patent, and would have been discovered by the exercise of reasonable and ordinary care in view of the position which the brakeman occupies, the law conclusively presumes that he possesses the knowledge which a reasonable attention would furnish. A rule would be opposed to, rather than promotive of, the interests of humanity as it would encourage the gross negligence of the servant, and would reward it to the detriment of the master when it produced the professed ignorance."

"A servant engaged in the first instance to feed a machine, and incidentally to clean it up, is bound to examine it from a view to ascertain the character of the work which render this operation dangerous." *Stubbs v. Atlanta Cotton-Seed Oil Co.* (1893) 92 Ga. 495, 17 S. E. 746. A servant who is sent to do a piece of work with a machine with which he is not familiar is bound to make inquiry as to the proper method of operation, as was laid down in *Miller v. Madison Co.* (1895) 130 Mo. 517, 31 S. W. 217.

¹ *Johnston v. Oregon Short Line R. Co.* (1892) 23 Or. 94, 31 Pac. 257.

² *Goodman v. Richmond & D. R. Co.* (1886) 81 Va. 576.

³ *James v. Emmet Min. Co.* (1891) 10 Mich. 335, 21 N. W. 361. An instruction to the effect that, "while the master is not to be held liable for dangers incident to the work which the servant is to perform, yet the servant is authorized to rely upon the master's performance of his duty to furnish safe appliances, and is not to be held liable for any misleading, as it amounts to a statement that the converse of this proposition is true: that is to say, that the master is liable even though the servant may

er normal course of adults, circumstances in which relief comes into consideration that he must which it is laid safety in the of danger; or as to awaken his duty or which should have assumption.³ It

es, and if a defect, and would have exercise of reason in view of the brakeman occupies, presumes that he age which reason furnish. Any other to, rather than rests of humanity, the grossest inward it the highest the profoundest

in the first place and incidentally to examine it with the characteristics of a dangerous condition. *On-Seed Oil Mills*, 5 S. E. 746. That to do a piece of work with which he is to make inquiry of operating it. *Madison Car*, 7, 31 S. W. 571. *Short Line R.*, 21 Pac. 283. *and D. R. Co.*

n. Co. (1884) 55 601. An instruction while the master for dangers and servant is fully instructed is authorized. The master's performance of safe appliances, is to a statement is proposition is that the master's servant may have

is well settled that a duty of inspection or inquiry is predicable whenever the character of the environment would suggest to a man of average prudence that there is a possibility or a probability of being injured in a certain way.⁴ Such possibility or probability is also frequently assumed to have been suggested with sufficient distinctness to show the servant that some further examination into the conditions was prudent, where he had observed circumstances or incidents which pointed to the existence of that particular danger to which his injury was traceable, and which were therefore to be

had such information as would put a reasonably prudent man on his guard, provided that information did not amount to full information, or, as the average juror would understand the language, absolute certainty. *Illinois C. R. Co. v. Sanders* (1894) 58 Ill. App. 117.

It is negligence not to take notice so as to observe whether an event known to be likely to occur has occurred. *Barnard v. Schrafft* (1897) 168 Mass. 211, 46 N. E. 621.

Where a servant has a general knowledge that an appliance is in bad condition, his failure to examine it before using it is negligence. *The Truro* (1887) 31 Fed. 158.

A brakeman has no right to rely upon the supposition that the track on a siding is fully ballasted, and atep between the cars in motion, without first examining the character of the roadbed. *Ragon v. Toledo, A. A. & N. M. R. Co.* (1893) 97 Mich. 265, 56 N. W. 612.

A servant is not justified in assuming that a car furnished his employer by a railroad company is in good repair and supplied with proper brakes, if he knows that other cars so furnished have, many of them, been defective. *Roddy v. Missouri P. R. Co.* (1891) 104 Mo. 234, 12 L. R. A. 746, 15 S. W. 1112.

One of the dangers to be apprehended by a brakeman in the ordinary operation of a railway is the misfit of links and pins, and the possibility that an attempt to couple cars may be unsuccessful. Hence, a railroad brakeman who attempts to couple a car without inspecting the coupling pin and link to see if the former is loose, when he has the opportunity to do so, is guilty of contributory negligence. *Renninger v. New York C. & H. R. R. Co.* (1896) 11 App. Div. 565, 42 N. Y. Supp. 813.

The foreman of a switch engine in a railroad yard assumes the increased risk in coupling cars with drawheads of different makes, and must use all necessary

caution to ascertain the kind of cars to be coupled on each occasion. *Henry v. Bond* (1888) 34 Fed. 101.

A switchman who, from his experience in a yard, knows that any two cars which he may have to couple may have draw bars of different heights, is bound at his peril—not least where there is no hurry—to examine all the couplings he has to handle, with a view to ascertaining their condition before he ventures upon the coupling. *Toledo, W. & W. R. Co. v. Black* (1878) 88 Ill. 112.

In *Kelly v. Abbot* (1885) 63 Wis. 307, 53 Am. Rep. 292, 23 N. W. 890, the coupling iron of a foreign car passed over those of a caboose to which the plaintiff's intestate was coupling it, and crushed him to death. A demurrer to a complaint alleging the want of adaptation of the cars to each other, and the negligence of the defendant company in allowing the foreign freight car to be brought on its track and requiring it to be coupled, was sustained, the court saying: "There is no reason stated why the intestate did not or could not have discovered this apparent want of adaptation of the coupling irons of the caboose and car. It was presumably in the daytime, as it is not stated that it was in the night. That the coupling irons were so widely mismatched would seem to have been as observable and readily seen as the entire absence of coupling irons, one or both. It is not to be inferred that this was the only instance when the cars of different roads, brought together to be coupled, were so mismatched. It might rather be inferred that not unfrequently they have coupling irons higher or lower than each other, and that there is no reasonable assurance that they are always adapted to each other in this respect. This would seem to impose the duty upon the brakeman, before going between such cars and the caboose or cars of the road on which he is employed, to couple them together, to

regarded as carrying a definite cautionary or monitory sign. Compare §§ 135-138, *ante*.

observe more closely and to use more caution than if he was attempting to couple the ends of his own road, which are adapted to each other by construction or selection, in order to ascertain whether their coupling irons would meet or pass each other. There is no allegation that he even looked to see or that he could not have seen, if he had looked, this clearly apparent difference in the elevation of these coupling irons, or that his attention was diverted. In *Scott v. Oregon R. & Nav. Co.* (1886), 1 Or. 211, 16 Pac. 98, this decision was emphatically endorsed as one which went "far towards legalizing manslaughter."

A servant, part of whose employment is to handle and remove disaddled cars, has no right to assume that the couplings of a car are perfect. If he does not know its condition he is bound to assume that it may be disaddled, and act accordingly. *Arnold v. Delaware & H. Canal Co.* (1890) 125 N. Y. 15, 25 N. E. 1064.

Where it was a part of the regular duties of a switchman to handle defective and broken cars, which were taken from trains and placed upon special side tracks used for the purpose, the mere presence of a car on such tracks was notice to him that it was probably defective, which cast upon him the risk in handling it, and the duty of examining it for the particular defect, although sound cars, improperly loaded, were occasionally placed on the same tracks. *Chesapeake & O. R. Co. v. Hennessy* (1899) 38 C. C. A. 307, 96 Fed. 713.

It is not negligence for a foreman to order an employee to paint a machine, without informing him that others are also at work upon it, where, by the exercise of reasonable care, he can himself see that other workmen are so engaged. *Williams v. Hensler* (1890) 38 Ill. App. 584. One of those workmen unexpectedly put in motion a cogwheel which plaintiff was handling.

A coal shoveler familiar with the fact that tubs used in hoisting coal from a large are liable to be unlatched on striking the bulkhead, where they have a loose catch, assumes the risk of using such a tub while the hold is so full that he cannot get out of the way if a tub should dump, if he has an opportunity to examine the tubs before using them. *Dolan v. Atwater* (1897) 167 Mass. 274,

15 N. E. 742. A man who has skill to perform the duties of a brakeman is chargeable with knowledge that a rope used to hold back in a swinging frame, when in use, is liable to wear out, negligent if he fails to examine it at adequate intervals for the purpose of ascertaining its condition. *Schultz* (1893) 7 Wash. 403, 35 Pac. 111. The rope had never been examined. A miner who fails, after being notified, to examine the roof of the drift he is working, and place braces to support it, is negligent. *C. Cumberland & E. L. Coal Co.* (1896) 146 Pa. 67, 23 Atl. 221. The failure of a servant engaged in drilling to ascertain whether a hole which he had drilled exploded in a hole which he was to clean out is negligence. *Turner* (1892) 89 Va. 341, 15 S. E. 221.

In a case where a loose coupling was shaken off the joists on which a steam hammer was standing, and fell upon a man who was operating the hammer, the man was declared to be at least negligent for the jury whether he should have examined the beams overhead before he began to work. But the decision on another point. *Reading Iron v. Derine* (1885) 109 Pa. 246.

Where a certain kind of coupling frequently slipped past the one who was being united, a brakeman who is being handled it is charged with knowledge of its defective condition. *Thompson v. Missouri P. R. Co.* (1891) 51 Neb. 527, 71 N. W. 61. There was no recovery for the death of an employee caused by the collision of his car with stock which had strayed on to the track through a defective fence, where the evidence is that stock were frequently on such track and near the collision; that it was decedent's duty to keep a constant lookout for that, according to his reports during fifteen months prior to the accident, struck stock eight times. *Houston & T. C. R. Co.* (1900) 616, 57 S. W. 948. Affirming (1901) 114 Civ. App. 55 S. W. 1126. An employee in charge of a saw which is to drop back beneath planking after it is cut, is guilty of contributory negligence if he does not look to see whether the planking has gone down, where he knows

tory significance.

an who has sufficient knowledge of the fact that a rock is loose, when it is not put out, and is negligent in not examining it at reason- the purpose of ascertaining whether a blast has been examined or not, after a blast of the drift in which necessary precautions are taken, whether a blast has which he is directed to examine. *Stanton v. A. 341, 15 S. E. 802*. A loose beam was on which it was movement caused and fell on a serving the hammer at at least a question he should not have overhead before he the decision was *Reading Iron Works 9 Pa. 246*. Kind of coupling has the one to which brakeman who is chargeable with defective condition *P. R. Co. v. 7, 61*. There can be ment of an engineer of his engine was ayed on to the track, ence, where the en- ere frequently seen near the point of accident's duty to out for them, and is reports, he has prior to the acci- ht times. *Quill v. Co. (1900) 93 Tex. 126*. An employe- hich is intended to nking after its ne- tory negligence if e whether the sar e he knows that it

The rationale of this principle shows that it is inapplicable where the servant was excusably ignorant of the circumstances or incident which pointed to the existence of dangerous conditions.⁶ Nor can it be adduced as a foundation for ruling against the servant, as a matter of law, where the evidence is susceptible of the inference that the previous incident upon which the master relies was not produced by the same cause as that to which the injury was due.⁷ Nor,

frequently fails to drop back after use. *Johnson v. Hovey (1894) 93 Mich. 343, 57 N. W. 172*. A miner is guilty of negligence if he proceeds to work under a loose rock after he has observed indications of danger which he thoroughly understands. *Evans v. Chessmonnd (1890) 18 Ill. App. 615*. An employer is not liable to an employee for injuries sustained by the latter in jumping from a platform to avoid the splashing of molten lead out of a kettle without a hood, near which he was at work, where he was thoroughly familiar with the process of lead melting, had repeatedly seen the lead splash out of that particular kettle, and exposed himself to the danger without complaint, objection, or remonstrance. *Farrill v. Tatham (1899) 36 App. Div. 319, 55 N. Y. Supp. 199*.

A servant assumes the risk from the bursting of bottles of ale which he is engaged in packing, where two bottles, to his knowledge, have previously exploded. *Lehman v. Van Nostrand (1896) 165 Mass. 233, 42 N. E. 1125*.

Knowledge that there is a hole under a canvas stretched on a third story floor is imputed to a servant who sees his fellow workmen walk around, and not across it, shoves a plank over it, and sees it sag down, and supposes the canvas to be there to catch one if he steps on it. *Muncie Pulp Co. v. Jones (1894) 11 Ind. App. 110, 38 N. E. 517*.

A servant who knows that portions of debris which is being discharged down a chute have previously scattered cannot recover if he is struck by a piece. *Fannesssey v. Western U. Tel. Co. (1893) 6 Misc. 322, 26 N. Y. Supp. 796*.

A servant injured by the fall of a truss during the demolition of a building cannot recover, where it is shown that several of the trusses had already fallen while the work was in progress, and their condition was perfectly apparent to all the workmen. *Caron v. Schler, (1889) 41 La. Ann. 500, 6 So. 813*.

A laborer digging a well, the sides of which have fallen several times while he has been engaged on the work, assumes

the risk of another similar occurrence. *Gilchriston, H. & S. v. R. Co. v. Leape (1883) 59 Tex. 19*.

A servant who has the supervision of another employee, and knows that he is an incompetent and careless workman, is not free from negligence if he trusts himself upon a ladder constructed by the employee, without examining it. *Bolton v. Georgia P. R. Co. (1889) 83 Ga. 659, 10 S. E. 352*.

*An employee directed to feed a furnace, which was not a part of his usual duties, cannot be held, as a matter of law, to have assumed the risk of being burned because of the blowing open of the furnace door by the explosion of gas, where the risk was not an obvious one, and he had had but slight opportunity to learn of the condition of the furnace, and had never known of the door being blown open before, although it had occurred several times. *LaFortune v. Jolly (1896) 167 Mass. 170, 45 N. E. 83*. Where work in a machine shop, which caused small pieces of clapped iron to be thrown from the machinery, was so carried on that no chips were thrown towards a servant, to his knowledge, till the day he was injured by a piece of chipped iron thrown from a machine operated by a fellow workman, the servant had not assumed the risk of such danger, so as to prevent a recovery from the master for the failure of the latter to establish and enforce rules for protection against such injury. *Smith v. Lubenwood Mfg. Co. (1900) 56 App. Div. 528, 67 N. Y. Supp. 533*. Where plaintiff was injured by material falling from the walls of a building while he was engaged in excavating sand from the interior, and it appeared that he had seen no bricks or material falling from the wall prior to the injury, the question whether he assumed the risk of such injury was for the jury. *Wilkowski v. George W. Carter & Sons Co. (1901) 60 App. Div. 577, 70 N. Y. Supp. 232*.

*Whether or not an employee standing on an elevated platform, endeavoring to adjust a hood on a smokestack, was

speaking generally, is the servant necessarily debarred from maintaining an action, unless the previous incident was of such a nature that any reasonably intelligent man would have understood the danger which was thus conveyed, and taken appropriate steps to protect himself from injury.⁸

414. Duty of inspection inferred from the nature of the function charged by the servant.—The decisions cited in the last two groups deal with situations in which all servants, without respect to their particular functions, are not justified in acting upon the assumption that they are not exposed to any abnormal dangers arising from a breach of the master's duties. In another group of cases

guilty of contributory negligence precluding recovery for injuries caused by the slipping of a knot uniting two pieces of rope sustaining a piece of timber on which a tackle used in adjusting the hood was fastened, is for the jury upon evidence that shortly before the accident he noticed that the rope had slackened, and instructed the men below to tighten the same, it not appearing whether the slacking was due to the slipping of the knot or to some unexplained cause. *Folk v. Schaeffer* (1898) 186 Pa. 253, 40 Atl. 401. First appeal (1897) 180 Pa. 613, 37 Atl. 104.

*The mere fact that it was known to the servant that other machines which were of the same character as that which caused the injury had started automatically will not charge him with knowledge of the risk of such an occurrence, if it appears that those machines were not attached to the same pulleys and belts as the one which he was handling when the accident occurred. *Donahue v. Drown* (1891) 154 Mass. 21, 27 N. E. 675.

A switchman who does not know that a coupling pin furnished for use in making a coupling is too large is not, as a matter of law, guilty of contributory negligence in attempting to use it in making the coupling, and in continuing to insert it after the first failure to make it enter the hole, where it often happens that a pin difficult to insert at first can be made to go down. An instruction is erroneous which proceeds on the assumption that a defective condition had been discovered when the pin did not go down at the first attempt. *Missouri, K. & T. R. Co. v. Hauer* (1897; Tex. Civ. App.) 43 S. W. 1078.

The fact that a pole supporting the wires of a telephone company has been condemned and marked for removal is

not, as a matter of law, notice to the employee that it will not stand attached from the wires which are ordered to remove. *Southern Ry. & Tel. Co. v. Clements* (1901) 1, 34 S. E. 951.

An employee whose business is to examine revolvers which do not explode satisfactorily after a test by loading and firing is not, as a matter of law, bound to examine one which is turned to see if it contains a exploded cartridge, although the exploded one left one in on a former occasion. *Duckworth v. Duckworth* (1894) 251, 38 N. E. 510.

A miner is not, as a matter of law, guilty of negligence merely because he made no attempt to inform the actual condition of the mine of the entry from which slate fell. *Blazenic v. Iowa & W. Coal Co.* 102 Iowa, 706, 72 N. W. 292. A miner ordered by the boss to go into a confined room in the mine is not bound to test the safety of the room if he knows that rock and slate are falling from the roof before he enters, as it is the master's duty to provide a safe place to work. The fact that rock in such a case is a danger from which it is possible to escape is no inference that the place is dangerous, and the inference that the place is dangerous is not to be drawn forward be safe, and the inference that the place is dangerous. *Island v. Risher* (1895) 13 Ind. App. 158.

The fact that a gang planer was put out from a vessel to the wharf on two different occasions, for the purpose of transferring the captain's goods to the wharf, does not constitute a workman that the rigging is a safe means of exit. *McDonald v. McDonald* (1901) 25 Wash. 441, 6

inant conception relied upon is that, in view of the nature of the work assigned to the servant, it may reasonably be inferred that it was the understanding of the parties to the contract of employment that he should discharge the duty of inspection to a certain extent.¹ The existence of such a duty has been inferred on the following grounds:

(1) That the servant had been put in charge of that part of the plant which was defective or abnormally dangerous.²

It is the duty of the master to furnish and maintain suitable material and appliances for the prosecution of his business, and, in the absence of notice to the contrary, the employee had the right to presume that the employer had complied with its duty in this respect, and to act upon this presumption, unless the character of his employment was such as to devolve upon him the duty of examining and seeing that the particular material and appliances were in proper condition. If such was the duty of the employee, and he negligently assumed they were in proper condition when they were not, and the injury arose from his own failure in this respect, he would be guilty of contributory negligence. *Louisville & N. R. Co. v. Orr* (1890) 91 Ala. 554, 8 So. 360. For other examples of similar exceptive language, see *Clapp v. Minneapolis & St. L. R. Co.* (1886) 36 Minn. 6, 29 N. W. 340; *Pennsylvania Co. v. Brush* (1891) 130 Ind. 347, 28 N. E. 615; *Mayer v. Liebmann* (1897) 16 App. Div. 54, 44 N. Y. Supp. 1067; *Missouri P. R. Co. v. Crenshaw* (1888) 71 Tex. 340, 9 S. W. 262; *Austin v. Appling* (1891) 88 Ga. 54, 13 S. E. 955; *Curtis v. Chicago & N. W. R. Co.* (1897) 25 Wis. 460, 70 N. W. 665.

An instruction to the effect that a servant had a right to assume that the defective appliance was safe and suitable, and that it was not his duty to inspect it, is erroneous where there is a question of fact as to whether his duties required him to inspect it. *Cumberland Teleph. Co. v. Loomis* (1889) 87 Tenn. 504, 11 S. W. 356.

A railway company is not liable for injuries to a brakeman on a freight train, alleged to have been due to a defective lantern which he used in giving signals, if the company did not know and had no means of learning of the defect, and the brakeman, although not knowing of it, had the sole care and

custody of the lantern, and by proper diligence might have known its defective condition and reported the fact to the company. *Pennsylvania Co. v. Congdon* (1892) 134 Ind. 226, 33 N. E. 795. A servant injured by a defective track on a tram road of which he had charge cannot recover. *White v. Kennon* (1889) 83 Ga. 343, 9 S. E. 1082. An employee whose duty it was to operate cars upon an elevated tramway, and also from time to time to inspect said tramway and report any defects therein, cannot recover for injuries caused by a displaced rail in the tramway, which he had negligently failed to observe and report. *Cooper v. Butler* (1883) 103 Pa. 412. On the ground that a section master in temporary charge of a hand car must note such defects in it as are discoverable by ordinary care, it was held that he could not recover for injuries caused by a derailment resulting from the fact that the wheel was not properly attached to the axle. *Central R. & Bkg. Co. v. Kenney* (1877) 58 Ga. 485. A servant has been refused recovery for an injury from a defective staircase not under the special care of any employee except himself and a fellow workman. *Stroble v. Chicago, M. & St. P. R. Co.* (1886) 70 Iowa, 555, 31 N. W. 63, 59 Am. Rep. 456. It is the business of a foreman or boss of a gang of men with carts and horses to know whether the horses are fit to work or not, and, if they are not, to send them back to the stable; and he cannot recover against the employer for an injury to his foot by one of the horses in use which becomes unmanageable. *Smith v. Drake* (1889) 125 Pa. 501, 17 Atl. 449.

An employee who, with his own consent, undertakes as a part of his employment the duty of determining when an appliance which he constantly uses has become unsafe or insufficient from such use,—especially where he has shown

(3) That the servant was assigned to work which involved as one of its essential features the function of remedying certain abnormally dangerous conditions.¹ This class of cases has been considered under another aspect in § 29, *ante*.

(4) That, in view of the system on which the business of the employer was conducted, it was manifestly intended that the function of inspection should be discharged to a limited extent by the servant.⁵

experienced carpenter who had assisted in selecting it from a quantity of material, and hoisting it to its place. *Griffiths v. New Jersey & N. Y. R. Co.* (1893) 5 Misc. 320, 25 N. Y. Supp. 812. Affirmed in (1894) 8 Misc. 3, 28 N. Y. Supp. 75, and in (1896) 119 N. Y. 595, 44 N. E. 1124. The primary duty to know whether a piece of timber which has been used for a considerable time as a lever for raising the door of a furnace has become unfit for that purpose rests upon the servant who is in immediate charge of the furnace, and not upon any superior officer. *Allen v. G. W. & F. Smith Iron Co.* (1894) 160 Mass 557, 36 N. E. 581.

¹In *Kanz v. Page* (1897; Mass.) 46 N. E. 620, a servant was held unable to recover for injuries caused by the fall of a fragment of a fly wheel which had burst. Holmes, J., said: "When a room has been shattered by an explosion, it is plain to everybody that things are not in their normal condition, that the usual support of part by part has been shaken or interfered with, and that some portion may have been weakened to the point of being ready to fall. If the explosion was of an iron wheel, it is plain that the fragments probably have flown in different directions, and that they may have lodged above or below. When a workman is sent into such a room on the day of the explosion to clear away the ruins, it is manifest that he is taking one of the steps which are necessary to disclose just what has happened. It is not a natural inference on the part of one so sent that the place has been inspected and it is not a natural interpretation of the order to take it as implying that the superior knows that it is safe." A carpenter ordered to go and brace joists is bound to see that they are in a condition to be braced. *Meitzer v. Armour* (1883) 18 Fed. 373.

⁵In *Flood v. Western U. Teleg. Co.* (1892) 131 N. Y. 603, 30 N. E. 196, Vol. I. M. & S.—74.

Reversing (1891) 15 N. Y. Supp. 400, 39 N. Y. S. R. 674, the following reasons were assigned by the court for holding that an action could not be maintained for the death of the foreman of a gang engaged in inspecting the defendant's lines, the accident being due to the fact that a cross arm on one of the poles broke under him: "He had all the opportunity which any inspector could have to know the condition of this arm, having frequently inspected that portion of the defendant's line where this arm was. He saw it when he went upon it, and careful inspection was the first thing then suggested to him. He knew that he was in a place of danger, and thus was bound, before resting his weight upon the arm, to examine it to see if it was sound and probably adequate to support him. We know precisely how the defendant inspected its poles and the arms on them, and that it was not its custom to cause the arms on the poles to be inspected by someone climbing up the poles, and hence as to him carelessness in not inspecting the arms cannot be attributed to it. He knew that no one knew the condition of the arm which broke better than he did, and no one in fact knew better than he its sufficiency to bear his weight. If he gave the matter a thought, he knew that he must rely upon his own judgment in placing his weight upon the arm, but before placing his weight thereon he ought to inspect it and see if it was sound and strong enough to hold him, and that he had no right to rely upon the judgment or inspection of any other person."

As a lineman must know that it would be inexpedient and impracticable to have a man or company of men to go and examine each pole upon which a lineman is about to work, and it is easy to determine very quickly whether a pole is badly decayed a little below the surface of the ground, and no skill or experience is required to do it beyond

(5) That it was the customary practice of employees engaged in the same kind of work as the injured person to make an examination under the given circumstances.⁶

(6) That the instrumentality which caused the injury was one which the servant was required to use in the course of his employment. In some cases language is used which is broad enough, when taken literally, to cast upon the servant an unqualified obligation. He is said to be bound to take notice of abnormally dangerous conditions, for the reason that a person who is constantly using an appliance is in a more favorable position than anyone else for detecting such conditions. See § 406, note 2, *supra*. By no courts has the existence of a duty of inspection, considered as an incident of the use of instrumentalities, been asserted more explicitly than by those of Illinois.⁸

that which is possessed by ordinary linemen, he will be presumed to have accepted the risk that some pole of uncertain age may break and fall when a lineman is working on it, if he does not take measures to ascertain its condition before going on it. *McIsaac v. Northampton Electric Light Co.* (1898) 172 Mass. 89, 51 N. E. 524.

It cannot be held as an abstract proposition of law that linemen of telegraph and telephone companies have the right to rely upon the soundness and safety of poles upon which they are working, and that it is the duty of the companies to test and inspect poles, and support such as are insecure, before permitting their linemen to climb them; but the question upon whom the duty of inspection rests is usually one of fact, depending upon the terms of the contract of employment, the lineman's knowledge of the hazards of the work, and his ability and opportunity to discover the dangers incident thereto and avoid them, and other circumstances. *McGorty v. Southern N. E. Teleph. Co.* (1897) 69 Conn. 635, 38 Atl. 359.

⁶Under the general rules of mining it is the duty of the persons engaged in doing the blasting, as well as of the foreman, to make an examination for the purpose of ascertaining whether every blast has been exploded. *Kelley v. Cable Co.* (1889) 8 Mont. 440, 20 Pac. 669.

Where plaintiff was injured by the falling of a rock from the roof of defendant's mine, it is error, in instructing the jury, to assume that it was the duty of defendant to keep the roof in

safe condition at the point where injury occurred, as the most that plaintiff could ask was a submission of the question to the jury whether, under the custom of the mine and the contract between plaintiff and defendant, it was the duty of defendant or that of plaintiff to keep the roof in safe condition. *Sardy River Cannel Coal Co. v. Co.* (1900) 22 Ky. L. Rep. 1175, 60 S. W. 180.

⁷"Every workman is bound to know the nature of the instrument he uses. *Pollock, C. B., in Dynen v. Pollock*, 26 L. J. Exch. N. S. 221. Employees are chargeable with knowledge of the condition of the tools and of machinery and appliances which they use or with which they come in contact. *Louisville, N. A. & C. R. Co. v. H.* (1897) 147 Ind. 266, 45 N. E. 58.

It was negligent for a switchman to work five or six days about a steam engine without examining a drawbar which he knew he might have to use at any moment; and he cannot recover if he suffers injury owing to the fact that a V-shaped piece had been broken off it. *Goulin v. Canada Southern Ry. Co.* (1887) 64 Mich. 190, 25 W. 44.

⁸It is the duty of a servant to know the nature of the instrument he uses, and when it is not, to make it so to the employer. *Toledo, W. & M. R. Co. v. Eddy* (1874) 72 Ill. 138, 139. *Illinois C. R. Co. v. Jewell* (1866) 111 Ill. 99, 92 Am. Dec. 240, where recovery was denied for an accident caused by the fact that the nut which kept a wheel in its place on the upright

415. When this inference is not drawn.—An examination of the facts involved in the decisions cited under the last section shows that, however sweeping the phraseology may be which the courts have employed in declaring the servant to be subject to a duty of inspecting the instrumentalities, the duty contemplated is far from being one of the same peremptory nature, or of the same scope, as that which is incumbent on the master. Those decisions contain nothing which is in conflict with the principles explicitly laid down in other cases, that a servant is not required to make a more searching examination than is reasonably possible, taking into account the functions discharged by him and the exigencies of his work;¹ and

became loose and allowed the wheel to come off when the hrake was operated. The court said that "the condition of the brake was a matter under the special care of the brakeman, and it was his business at all times to see that it was in a fit condition for use, and report defects to the company."

In a case where a yard hand who had been at work for a considerable time, and had ridden many times a day on a footboard which was hung so low that it came into collision with a plank beside the track and threw him, it was held error to instruct the jury that the servant was not bound to test the safety and fitness of the plank. *Peoria, D. & E. R. Co. v. Hardwick* (1892) 48 Ill. App. 562. In another case it was said, *arguendo*, that, if the defective side ladder which gave way had been used on the road while he was a brakeman on the train of which it was a part, he would be presumed to have known of its condition. *Chicago & N. W. R. Co. v. Jackson* (1870) 55 Ill. 495, 8 Am. Rep. 661. Where a fireman was injured by the fall of the "shaker bar" of his engine, owing to the fact that the key which secured it to its post had fallen out, and the evidence tends to show that the defect had existed for six weeks, it is misleading to instruct the jury that a servant has a right to assume that an appliance furnished him is reasonably safe. *Chicago & E. I. R. Co. v. Garner* (1898) 78 Ill. App. 281. A servant's omission to examine the strength of window fastenings by which it is necessary for him to support himself while washing the window from the outside is negligent. *Chicago Consol. Bottling Co. v. Mitton* (1891) 41 Ill. App. 154.

The extent of the servant's obligations in this jurisdiction is made still more clear by the exceptive form of

statement in a recent case, that a servant is not bound to investigate and inspect any part of the property except that which pertains to and is connected with his employment. *Lake Shore & M. S. R. Co. v. Concaay* (1897) 169 Ill. 505, 48 N. E. 483, where it was remarked, *arguendo*, that a tower man employed by a railway company to raise and lower gates at a crossing is bound to examine into the condition of the tower and machinery.

A helper in switchyards, whose duties upon any particular car are limited to switching it from one train to another in the yards, is not chargeable with knowledge of the fact that the nut which secures a brakewheel to the staff is missing. *Chicago & E. I. R. Co. v. Kucirim* (1894) 152 Ill. 458, 39 N. E. 324. The position of such an employee was distinguished from that of a brakeman, who is required to be watchful as to the condition of the brakes. See this note, *supra*.

¹ In *Chicago & N. W. R. Co. v. Jackson* (1870) 55 Ill. 495, 8 Am. Rep. 661, it was urged that the servant was guilty of negligence in not seeing that a side ladder on a railway car was defective, and, in attempting to descend, in not placing his feet upon the two lower rounds of the ladder. The court said: "This was a question fairly falling within the province of a jury to determine. But when it is remembered that he occupied a subordinate, although a highly responsible, place requiring vigilance with prompt action, it is not to be expected or required that he should act with that deliberation and circumspection as persons having more time and less pressed to prompt action, in the performance of their duty. In the discharge of his duties on a switch he must keep a constant watch for the signal

that he is not bound to make such an examination as is necessary to discover invisible defects are to be discovered.² Compare §§ 407, 408, s.

It will sometimes happen that, even where the servant is charged with a specific duty of inspection, circumstances may occur which will justify him in acting upon the assumption that there is no normal danger to be apprehended, and for that reason omitting inspection which would otherwise be made.³

Whether a servant is bound to look for defects other than those open to his observation in the prudent use of the appliance is ordinarily a question for the jury,⁴ as is also the question whether,

from his superior, which to him is a peremptory order requiring instant obedience. This being so, we could not expect him to deliberately examine a ladder to see whether it was in repair." It was then remarked that the rule laid down in *Illinois C. R. Co. v. Jewell* (1867) 46 Ill. 99, 92 Am. Dec. 240 (see § 415, note 9, *supra*), was to be deemed applicable only in cases where the brakeman knew, or could by reasonable precaution know, of the defect. If the defect was inherent from improper material or from unskilful workmanship, and had not been developed, he should not be held to have known the fact.

² A brakeman whose duty it is to examine a brake chain every trip before starting is not required to go under the car and examine the chain link by link, but has a right to suppose that it was properly tested and inspected before it was placed on the car. *Morton v. Detroit, B. C. & A. R. Co.* (1890) 81 Mich. 423, 46 N. W. 111 (not chargeable with knowledge that the links were not properly welded together). Where an employee in a quarry whose duty it was to oil a derrick, to watch for signals, and give them to the engineer, and to direct the disposition of the slack which was hoisted by the derrick, was killed by the breaking of the mast, which was dry-rotted inside, it was held that the defendant was still liable for the inspection of hidden defects, although the superintendent when he set the deceased to work instructed him how to care for the derrick, and said he would hold him responsible for its proper care. *Jarvis v. Northern New York Marble Co.* (1900) 55 App. Div. 272, 67 N. Y. Supp. 78. In a case where the injured servant could not have discovered the defective loading of a car by inspection, it is error to give an unqualified charge to the effect that, if it was his duty to

see that the loads on cars were in condition, he was chargeable with knowledge of the condition of the load caused the injury. *Galveston, H. & A. R. Co. v. McCray* (1897; Tex. App.) 43 S. W. 275. That a servant, not, by the mere fact of his use of an appliance, charged with the duty of inspecting it for latent defects, was not recognized in *Missouri P. R. Co. v. Shaw* (1888) 71 Tex. 340, 9 S. W. 2d 100 (porter injured by defective truck, the defect being such that it could not have been discovered by examining the lower side of the truck).

³ In *Hough v. Chicago, R. I. & N. W. Co.* (1887) 73 Iowa, 66, 35 N. W. 100, it was held that a yardmaster, charged with the duty of seeing that cars are properly loaded, may, when he receives an unqualified order to load out a car immediately for transportation, assume that it is properly loaded. The car in question came from a siding. The court said: "The most honest business principles would suggest that the car should have been examined in time to enable it to go to the train, and with the despatch which shippers desired. We think that the deceased, in the absence of any information to the contrary, had no right to take this view of the situation, that the care and diligence which he was required of him should be measured by such fact. While he was bound to look at the car and lumber, he was bound to make the strict examination that he would have been if he had known that he was to make the car and sole examination."

⁴ *Nicholls v. Crystal Plate Glass Co.* (1894) 126 Mo. 55, 27 S. W. 991; *Habishar v. Standard Silver Co.* (1901) 131 Cal. 430, 52 P. 728.

posing him to have made an examination, the defect in question was one which he ought to have discovered by the exercise of reasonable care.⁵ In the absence of positive evidence establishing the deviation of such a duty upon the particular employee who was injured, a court will not presume that it rested upon him.⁶ The mere fact that it is proved to have been his duty to report any defect of which he obtained knowledge, or to repair it himself, is not enough to excuse the employer.⁷ Nor is the right of a servant to recover defeated by the mere fact that he is himself a foreman, and has helpers under him in the performance of the duties for which such appliances are required to be used.⁸

416. Duty of inspection under rules, special notices or orders, and express contracts; generally.—The duty of inspection may be cast on the servant by express contract, or by general rules, or by special orders of which he is notified.¹ In other words, it is permissible for the master to impose, and for the servant to accept, by mutual understanding, the burden of such an inspection as the latter is competent to make.² A breach of the duty thus assumed constitutes, within the limits explained in subd. *b. infra*, a bar to the

¹*Louisville & N. R. Co. v. Pearson* (1892) 97 Ala. 211, 12 So. 176.

Where in a suit against a mining company for the death of an employee, caused by the falling of rock from the mine roof, it appears that it was the duty of certain other employees called "inspectors," to examine the roof, and that it was also decedent's duty as a driller to examine the roof above and in the vicinity of the roof before setting the latter up, and that all of rock causing the accident was placed some 10 or 12 feet from the roof, it is a question for the jury whether a proper inspection by decedent, within the limits of the roof he was bound to inspect would have disclosed its dangerous condition, so that a failure to discover it would constitute contributory negligence. *Fisher v. Central Lead Co.* (1900) 156 Mo. 479, 56 S. W. 1107.

²In *Goodrich v. New York C. & H. R. R. Co.* (1889) 116 N. Y. 398, 5 L. R. A. 750, 22 N. E. 397, the court, speaking with particular reference to the duties of railroad servants, said: "While in the case of corporations the performance of this duty must be committed to employees, there is no presumption that it rests upon any particular individual. It is not within the apparent scope of a

brakeman's duty, and does not necessarily rest upon him. In the absence of all evidence upon the subject, we cannot, therefore, presume that the examination and inspection of the particular cars in question had been committed to the plaintiff."

A millwright employed in a mill is not, simply from his employment as such, under the duty of inspecting the machinery. *Cole v. Warren Mfg. Co.* (1899) 63 N. J. L. 626, 44 Atl. 647.

"There is nothing in the employment of a railroad brakeman which takes it out of the general rule that the servant has the right to rely upon the master's implied promise to furnish him safe machinery, and that it is not the servant's duty to inspect the tools and appliances furnished him." *Texas & P. R. Co. v. O'Fiel* (1890) 78 Tex. 486, 15 S. W. 33.

³*Condon v. Missouri P. R. Co.* (1883) 78 Mo. 567.

⁴*Nichols v. Crystal Plate Glass Co.* (1894) 126 Mo. 55, 27 S. W. 516, 28 S. W. 991.

⁵*Chicago & A. R. Co. v. Merriman* (1900) 95 Ill. App. 628.

⁶*Chicago & A. R. Co. v. Merriman* (1900) 95 Ill. App. 628.

maintenance of an action for an injury due to conditions which would have been discovered if an inspection had been made.

Some of the cases deal with the responsibility arising out of express stipulations entered into either at the time when the servant began work or afterwards.³ Others exemplify the obligation imposed by a special order or notice addressed to the employee in that situation, whether as an individual or as one of a class.⁴ But most of the decisions which exemplify its operation involve the infringement of rules which prescribe that employees shall examine certain specified instrumentalities. Such rules do not, of course, affect the servant's responsibility where he is neither actually nor constructively

³ See cases cited in note 9, *infra*.

⁴ A railway servant who has been directed by the trainmaster to examine cars used for a special work, and have them repaired if not in good order, and who is injured while using a car which he knows to be imperfect, is guilty of contributory negligence. *Shields v. New York C. & H. R. R. Co.* (1892) 133 N. Y. 557, 30 N. E. 596 (chain which held up trap door in the bottom of a coal car broke and trap door gave way; employee had undertaken to mend it instead of sending it to the shop, as he should have done).

In the cases cited below, no rule is adverted to by the court, and it may perhaps be assumed that the duty was imposed by a special order.

No recovery can be had for the death of a brakeman, caused by a car being off the track at the end of a stub switch when the train was about to be moved, where it was his duty, as the rear man of a switching crew, to examine the cars and see that they were all in proper position, and no other person is shown to have had knowledge of the condition of the car. *Chicago & E. I. R. Co. v. Driscoll* (1898) 176 Ill. 330, 52 N. E. 921, Reversing (1897) 70 Ill. App. 91. A verdict for the plaintiff should be set aside when his injury was the result of a difference between the heights of the drawheads of two cars, and he himself testifies that it was his duty to observe the cars and their couplings so as to determine, before attempting to couple them, what kind of link should be used. *Norfolk & W. R. Co. v. Emmert* (1887) 83 Va. 640, 3 S. E. 145. Where a brakeman has authority to examine the loading of cars, and, in the manner in which they are loaded makes it unsafe to couple them, to report the matter to the

roadmaster, with a view to having the load adjusted, he becomes to some extent an inspector of the cars, and, in fact, sees that they are properly loaded, and undertakes to couple them in that condition, he does so at his peril. *Scott v. Oregon R. & Nav. Co.* 14 Or. 211, 15 Pac. 98 (railroad projected over the ends of the tracks). A locomotive engineer, whose duty it is to inspect his engine and to minutely examine it for any defect which might require any repair needed, assumes the risk of an obvious defect which he is to report. *Peppett v. Michigan C. Co.* (1899) 119 Mich. 640, 78 N. W. 250 (worn centre casting). In a case where, owing to the loss of bolts attaching the drawhead, a car, when pushed, ran into the car next to it, and thus injured a brakeman, recovery was denied on the ground that it was the peculiar duty of a brakeman, and not the special duty of the conductor, to look to the condition of the coupling apparatus when the train was in motion. *Louisville & N. R. Co. v. Law* (1893) 14 Ky. 850, 21 S. W. 648.

A lineman cannot recover of an electric light company for injuries sustained from electric wires on account of defective gloves which it was his duty to inspect and keep in good condition, and to exchange when necessary, though they were thrown him from a wagon, with direction to put them on by a foreman who had no charge of the gloves, and whose direction was advisory rather than anything else. *St. Louis Louisiana Electric Light Co. v. Smith* (1900) 119 La. Ann. 869, 17 So. 346.

For a case in which the duty was imposed by a notice, see *Mobile & O. R. Co. v. Harms* (1893) 52 Ill. App. 1 (note 7, *infra*).

aware of their existence.⁵ See § 227, *ante*. But if his knowledge of a particular rule is established, the extent of his responsibility must be determined with reference to its provisions, so far as they are valid, and not with reference to the common-law doctrine that he is not bound to inspect the master's plant.⁶

⁵ Where a rule forbade brakemen to attempt to make a coupling unless the coupling appliances were known to be in good order, and there was evidence that the plaintiff did not know of this prohibition, it was held erroneous to charge the jury that there could be no recovery if the plaintiff attempted to make the coupling when the coupling appliances were not known to him to be in good order. *Fordyce v. Yarrowborough* (1892) 1 Tex. Civ. App. 260, 21 S. W. 421.

⁶ A brakeman who agrees to observe a rule requiring him to make an inspection of the brakes is chargeable with contributory negligence, if he fails to discover that the ratchet of a brake wheel is loose. *Matchett v. Cincinnati, W. & M. R. Co.* (1892) 132 Ind. 334, 31 N. E. 792. In one case in the same state, where a brakeman was injured by the breaking of a coupling pin, it was laid down that negligence was predicable of his failure to comply with a rule requiring him to examine the couplings of cars; but the case went off on the point that the rule was unknown to him. *Louisville, E. & St. L. R. Co. v. Utz* (1892) 133 Ind. 265, 32 N. E. 831. A brakeman who is required by the rules of the company to inspect the brakes of cars which he handles cannot recover if he is injured owing to the fact that the ratchet wheel and dog of a brake were defective, and the defect was such that it would have been apparent if the brake had simply been tried. *Chicago & A. R. Co. v. Bragonier* (1886) 1 Ill. 51, 7 N. E. 686. A brakeman was omitted to comply with a rule requiring the hand brakes on cars to be tested before the train starts, and was injured in consequence of the train's running away on a steep grade when the brakes failed to work, was held unable to recover, in *La Croy v. New York, L. E. & W. R. Co.* (1892) 132 N. Y. 570, 30 N. E. 391.

A railway employee injured in attempting to couple cars while standing between them on the short side of a curve is guilty of contributory negligence, where he had ample opportunity to observe that the drawheads were

about one third of the usual length, and a rule of the company known to him required employees to take time to examine all drawheads before making couplings. *Bennett v. Northern P. R. Co.* (1891) 2 N. D. 112, 13 L. R. A. 465, 49 N. W. 408. An experienced head brakeman, whose duty under a rule was to examine into the coupling arrangements of cars before attempting to couple them, was guilty of gross carelessness where he failed to see a defect in the coupling which would have been plainly visible to anyone looking. *Karrer v. Detroit, G. H. & M. R. Co.* (1889) 76 Mich. 400, 43 N. W. 370 (drawbar hung down 6 inches below its proper level). Where it is the duty of a conductor, under the rules, to know that each car is in proper running condition before moving his train, and he fails to make an inspection, and is injured by a defect that might have been discovered, he cannot recover for an injury caused by the failure of the brakes to act properly when a flying switch is being made. *Alexander v. Louisville & N. R. Co.* (1886) 83 Ky. 589. A switchman required by a rule to inspect and take notice of the construction and condition of drawheads cannot recover, where the drawhead which caused his injury was manifestly so short as to be dangerous. *Brooks v. Northern P. R. Co.* (1891) 47 Fed. 687. Where a rule required employees to see for themselves that machinery, etc., was in good condition, a conductor cannot recover where the cause of his injury was a defective fastening of an end gate on a gondola car, the result being that the gate fell backward when he jumped on to it. *Louisville & N. R. Co. v. Orr* (1890) 91 Ala. 548, 8 So. 360 (doctrine laid down, *arguendo*, in sending back the case for a new trial).

A fireman who has been sixteen months in the employ of a railway company, has frequently done switching on the siding where there is a cattle chute, and is required by the rules to take note of all dangerous points on the line, is presumed to know the extent of the danger caused by the proximity of the structure to the track. *New York, C.*

417. Limits of the duty under these circumstances.—The general effect of express contracts to examine instrumentalities is to narrow domain of facts within which the servant is entitled to claim the benefit of the principle that he is entitled to rely upon the proper performance of the master's duties. But it seems to be a legitimate inference from the decisions that, in regard to such examination as may be undertaken in compliance with contracts of this description, they do impose upon him the obligation of using a higher degree of diligence than that which would otherwise have been incumbent upon him. He is required to take notice of apparent defects like those involved in the cases cited in note 5 to this section. But he is not bound to look for concealed defects.¹ *A fortiori* he cannot be declared negligent, as a matter of law, on the ground that he failed to observe merely sporadic and transitory conditions resulting from the acts or omissions of his coemployees.² The extent of his undertaking

& *St. L. R. Co. v. Ostman* (1890) 146 Ind. 452, 45 N. E. 651.

An employee of a railway company cannot recover for injuries caused by a failure to inspect a defective foreign car, where by the rules of the company known to plaintiff the duty of inspecting foreign cars was cast upon him. *Fl. Wayne, C. & L. R. Co. v. Gruff* (1892) 132 Ind. 13, 31 N. E. 460 (precise defect not mentioned); *Illinois C. R. Co. v. Barslow* (1901) 94 Ill. App. 206 (cracked coupling link).

An instruction that, in the absence of notice of defects, a servant is under no primary obligation to investigate and test the fitness and safety of the machinery, etc., although it is correct in some states of the evidence, is not applicable in a case where the injured servant was charged by the rules of the employer to inform himself as to the condition of the instrumentality in question, and it is a possible inference from the testimony that he might, by taking notice of his surroundings, have ascertained that it was defective. *Illinois C. R. Co. v. Sanders* (1894) 58 Ill. App. 117 (brakeman had made several runs over a defective track).

Where there is a rule requiring trainmen to examine the cars, it is error to instruct the jury that a brakeman had a right to presume that the railroad had used reasonable care to furnish reasonably safe appliances. *Terre Haute & I. R. Co. v. Pruitt* (1900) 25 Ind. App. 227, 57 N. E. 949.

See also cases cited in the following notes.

¹ The foreman of a derrick car was required by a rule of the company employing him to see for himself by using them that the "machinery, tools and material" provided for him were in proper condition for the intended employment, is not, as a matter of law, guilty of contributory negligence in failing to discover a latent defect in the framework of the car, which is concealed by the floor, where it does not appear that he was the inspector of the car. *Chicago & E. R. Co. v. Brangan* (1901) 10 Ind. App. 570, 37 N. E. 190.

A rule requiring an engineer to inspect his engine has no reference to defects in the mechanical construction of the engine. *Gulveston H. & S. A. R. Co. v. Smith* (1900) 24 Tex. Civ. App. 57 S. W. 999.

A brakeman on a railroad train owes reasonable care to inform himself of the safety of the appliances to be used by him is not, as a matter of law, chargeable with such negligence as to bar his right to recover, in failing to discover a defect in a brake chain in the same way, notwithstanding a notice to employees of the company that "the duty of every employee to know

what the property with which he is working is in good and safe condition, if not, to report the fact to his immediate superior at once. Such a notice does not change the standard of care which the servant is required to maintain in regard to inspection. *Mobile & O. Co. v. Harries* (1893) 52 Ill. App. 227.

railway com
to see that the

that he will make such an inspection as is practicable, taking into account the exigencies of the employment. This implied qualification of his responsibility is not infrequently recognized in the phraseology of the rules on this subject.³ If such phraseology is used, the construction put upon the rule is that the servant is bound to make such an examination as his information and opportunities permit.⁴ But even if a limiting clause of this tenor is not used, it

premises upon which they work are safe, nor the law, requires a switchman to discover and remove from near a track in the yards in which he works an oil box which it is the duty of another workman to remove, and which, by reason of nearness to the track, catches his foot, slightly protruding from the foot-board of an engine on which he is riding, whereby he is thrown and killed. *Louisville & N. R. Co. v. Bouldin* (1898) 121 Ala. 197, 25 So. 903.

³ In a case where the cause of the injury was that four of the six spokes which connected the hub with the rim of a brake wheel were broken off, it was held that a brakeman whose agreement to examine the appliances was made at the time when he entered the employment, and included a clause stating that it was his "right and duty under all circumstances to take sufficient time," was entitled to recover. *Pratt v. Lake Shore & M. S. R. Co.* (1892) 63 Hun, 616, 18 N. Y. Supp. 682. The court said: "It is quite clear that it would not have been practicable for the deceased to have performed the duty of an expert examiner before using the machinery of the cars he was required to use in the discharge of his duties. The cars composing the trains he was required to work on were frequently changed in making up trains. The exigencies of the business prevented that deliberation which would obviously be necessary to a proper examination of the machinery. He was required to be attentive and vigilant in the discharge of his duties to discover defects in the machinery, and to refrain from using machinery if he learned it was in a defective condition; and that, we think, was the extent of the requirements of the agreement."

A railroad brakeman whose contract of employment provides that he will, for his own safety, examine the things in connection with which he works before using them, to ascertain as far as he reasonably can their "condition and soundness," is not required to look after

dark for defects in a car which he had reason to believe, and which in fact, had been inspected by the company the same day. *Lake Shore & M. S. R. Co. v. Ryan* (1897) 70 Ill. App. 45 (jury warranted in finding that there was no contributory negligence where the servant was injured by a handhold so badly bent that it could not be grasped).

Where a brakeman, in his application for employment, undertakes, as soon as possible, to make a careful examination of all things near the tracks, so that he may understand the dangers attending them, he assumes at least the risk of all the permanent structures which he had had a chance of examining before the accident. *Quinn v. New York, V. H. & H. R. Co.* (1900) 175 Mass. 150, 55 N. E. 891 (struck by cornice of roof over station platform, while he was sitting on the top of an unusually high car).

⁴ A rule imposing a duty upon employees to examine for their own safety the condition of engines and machinery before using them, so as to ascertain, as far as practicable, their condition and soundness, is reasonable and proper. *Memphis & C. R. Co. v. Graham* (1891) 94 Ala. 515, 10 So. 283 (held to be for jury to say whether a servant injured by a broken drawhead had made a proper examination). The court said: "So far as Rule 140 imposes the duty upon employees to examine for their own safety the condition of the car, engines, and machinery, . . . before using them or exposing themselves on or with the same, so as to ascertain as far as reasonably can be done, their condition and soundness, it is reasonable and proper. It cannot be expected of car conductors or brakemen to make the same careful examination, and to be able to discover defects to the same extent, as that expected and required of the employer or master, or persons intrusted generally with this duty for the public safety or safety of employees; but the character of the general duties to be performed by conductors and

seems to be an unavoidable deduction from the general principle discussed in §§ 408 *et seq.*, *supra*, that a master cannot shift upon his employees his responsibility to them for injuries resulting from defects due to wear and tear, by devolving upon them the duty of inspection, unless they are given time and opportunity to make such inspection as would reveal the defects. And this may be said to be the effect of the decisions.⁵ It is considered that such rules should

brakemen is such that they necessarily become more or less familiar with the appliances and machinery constantly in their use and under their supervision, and know, to some extent, when they are not in proper condition for safe use. To the extent of their information, and the opportunities afforded to make such examination consistently with their other duties, and the circumstances attending, they should observe and obey the rule." *Memphis & C. R. Co. v. Graham* (1891) 94 Ala. 545, 10 So. 283. In *Louisville & N. R. Co. v. Pearson* (1893) 97 Ala. 211, 12 So. 176, this passage was cited with approval, and it was held that a rule of this tenor imposed, within the limits there laid down, a duty upon the servants.

⁵In *McKnight v. Brooklyn Heights R. Co.* (1898) 23 Misc. 527, 51 N. Y. Supp. 738, a servant was held not chargeable with notice of a defect in a lame strap, which was visible only upon a detailed examination.

A railroad brakeman is not, as a matter of law, guilty of negligence in failing to observe a rule of the company requiring him to inspect the appliances which he is to use, which will prevent his recovery for injuries from a defective brake, where the defects are not so open and visible as to be detected at a glance, and his only opportunity for an inspection is while the train is standing at a station waiting for a connecting train, and is liable to start at any moment. *O'Malley v. New York, L. E. & W. R. Co.* (1893) 67 Hun, 130, 22 N. Y. Supp. 48.

"We are of the opinion that the duties put upon the brakeman by the rule in question adds very little to the duties placed upon him by the rules of law. Something more than the mere making of a rule requiring brakemen to make inspection of the implements and machinery used by them is necessary in order to shield the master from the consequences of a failure to perform the duties of furnishing safe implements and

machinery imposed by law upon him. He must have the appliances in proper condition, and the opportunity for making such inspection. The duty imposed by law upon the companies of furnishing reasonable cars and appliances for the use of men in its employ, is for the preservation of life and limb, both of which are sacred in the eye of the law; and a policy forbids that the master should be, in any manner, relieved of his duty without providing for the protection of the same by some other means. Full as required of the master in *St. L. & P. R. Co. v. Fry* (1891) 131 Ind. 319, 28 N. E. 989.

Compare, also, *Holmes v. Southern R. Co.* (1898) 120 Cal. 357, 52 P. 2d 101, where it was held that an employee not entitled to an instruction provided the plaintiff would not be injured if he had followed a certain rule, then the mere fact that such rule was impracticable or not observed did not excuse him for not following it.

A brakeman receiving a car from a train out on the line cannot be held to the same degree of care as a regular inspector or a man in a shop supplied with tools. *Matchett v. Cincinnati, W. & M. R. Co.* (1892) 334, 31 N. E. 792.

It has been held error to demur to a reply to an answer which alleges that the plaintiff, a brakeman, was called only a short time before the train went out; that he was not continuously, until it started, supplied with lamps and signals, and in consequence of loosening brakes, and therefore had no time to examine and discover defects in the brake staff which caused the injury; that it was dark, that the train was not lighted; and that he was not provided with an ordinary lantern, which was a negligent. *Chicago, St. L. & P. R. Co. v. Fry* (1891) 131 Ind. 319, 28 N. E. 989.

In jurisdictions where the burden of proving that the master is negligent is placed upon the plaintiff, the burden of proving that he is not negligent is placed upon the master, whether actual nor imputed knowledge of the dangerous conditions, it is

reasonable interpretation, and that the obligations of the servant should be determined with reference both to the character of the defect and to his ability to make an examination.⁶ Upon this basis the validity of rules or agreements of the ordinary tenor by which servants are obligated to examine appliances may often be upheld.⁷ But if they are couched in terms which indicate a clear and absolute intention on the employer's part to impose a more extensive obligation upon the servant than is thus declared to be permissible, they will be treated—by most courts at all events—as an illegal attempt to subject the latter to the duty which is incumbent on the former, of seeing that the plant is in a reasonably safe condition.⁸

A theory of responsibility which is less favorable to the servant than that which is outlined in the cases so far cited is possibly indicated by the conclusions arrived at, or the language used, in some cases. But it is doubtful whether the standpoint of the courts was in reality materially different from that exemplified in the decisions already cited.⁹

instruct the jury that a brakeman is not bound by a rule requiring him to examine the appliances, unless it is shown that he had been given sufficient time and proper facilities to fully examine and know that such parts and appliances were safe, as such instruction places the burden on the defendant to prove that sufficient time for inspection was afforded. *Terra Haute & I. R. Co. v. Pruitt* (1900) 25 Ind. App. 227, 57 N. E. 949.

The fact that the servant had ample opportunity for examination is emphasized in *Bennett v. Northern P. R. Co.* (1891) 2 N. D. 112, 13 L. R. A. 465, 49 N. W. 408 (note §. *supra*).

On this ground the contributory negligence of the servant was held to be for the jury, where he was injured by reason of his failure to observe a crack extending half way through a brake staff, about 3 inches above the dog, such a defect not being discoverable without a rather minute inspection. *Myers v. Erie R. Co.* (1899) 44 App. Div. 11, 60 N. Y. Supp. 422. There a brakeman had set the brake on a car, and four hours later, during which time he had no specific duties to perform, he was injured, while again attempting to set the same brake, by the breaking of the staff.

It has been declared that rules of a railroad company requiring its employees to examine the cars, machinery,

and appliances which they are expected to use are inoperative so far as they contravene the principle which requires an employer to furnish and maintain suitable appliances, and the right of the employee to presume that this has been done. *Louisville & N. R. Co. v. Pearson* (1892) 97 Ala. 211, 12 So. 176 (knowledge not imputable, as matter of law, where a bolt fastening the end of a handhold which gave way had become rusty).

It has been held proper to refuse an instruction that a railway servant was negligent if he violated a rule prescribing that he should not attempt to couple or uncouple a car, unless he knows the coupling is in proper condition. *Missouri, K. & T. R. Co. v. Wood* (1896; Tex. Civ. App.) 35 S. W. 879.

A requirement that, before a switchman shall couple or uncouple cars, he must "examine and see that the cars or engines to be uncoupled or coupled, the pins, links, drawheads, and other appliances connected therewith, the ties, rails, tracks, and roadbed are in a good, safe condition, and that the cars are so loaded that such work may be safely done,"—has also been held invalid. *Illinois C. R. Co. v. Cozby* (1896) 69 Ill. App. 256.

In *Chicago & A. R. Co. v. Bragonier* (1886) 119 Ill. 51, 7 N. E. 688, holding that a railway company is not entitled to an instruction that, if its officers in

An employee upon whom the duty of inspection is imposed by is not relieved from liability for its nonperformance by the mere fact that other agents of the employer who are charged with a similar duty in respect to the same subject-matter have also been negligent in regard to its performance.¹⁰

In Texas, the principle accepted seems to be that it is always for the jury to say whether the failure of the servant to examine, in

charge of freight trains habitually cause them to be made up and sent out without affording brakemen an opportunity to examine the brakes, that will not excuse the brakemen for their failure to perform the duty of inspection, the ground was taken that such a situation is controlled by the principle that an employee is not relieved of his obligations by the fact that other employees have failed to do their duty. (See next note.) But when the context of the passage in which the brakeman was thus declared unable to recover is examined, it will be seen that nothing more is meant than that the brakeman was still bound to perform his duty of inspection, so far as was practicable, and that the lack of opportunity for such inspection before the starting of a train would not excuse him for failing to make a due examination of the brakes while the train was on the road. It may fairly be said, therefore, that from the standpoint of this court the extent to which a rule as to inspection is to be treated as operative is really determined with reference to the ability of the servant to comply with such a rule, consistently with an efficient and reasonably expeditious performance of his work. That this is the actual effect of the doctrine laid down by the Illinois supreme court is apparently assumed by the court of appeals in that state, as it has decided, with reference to a notice declaring it to be the duty of an employee to know that the property with which he has to work is in good condition, that, if he used reasonable care to inform himself, considering the opportunities afforded him, and the appliance in question appeared safe, he cannot be charged with negligence on the ground of his having

failed to discover a defect. *M. O. R. Co. v. Harnes* (1893) 52 Ill. 649.

In a decision by one of the courts of appeal the dilemma in which the servant is placed by his duty of a rule requiring inspection is as follows: If an inspection in compliance with the rule would have disclosed the defect from which injuries resulted, and he failed to do the prescribed examination, he cannot recover; while, if the defect was so that a proper inspection would have disclosed it, his recovery is barred, as the accident was an inherent risk of the service. *Alabama R. Co. v. Carroll* (1898) 28 C. C. 52 U. S. App. 442, 84 Fed. 77. This doctrine was enunciated in *Chicago & N. W. Ry. Co. v. O'Connell* (1897) 160 U. S. 139, as to which the inspection made by employees is, as was said, "about the only one practicable."

¹⁰ *Beall v. Pittsburgh, C. & S. Ry. Co.* (1893) 38 W. Va. 525, 11 S. E. 729 (brakeman injured by the failure of a nut to hold brake wheel standard); *Memphis & C. R. Ry. Co. v. Graham* (1891) 94 Ala. 545, 10 S. E. 100 (fact that inspectors noticed defect and failed to report it, held no excuse plaintiff). *Chicago & A. R. Ry. Co. v. Bragonier* (1886) 119 Ill. 51, 1 S. E. 688, holding erroneous an instruction to the effect that the employment of inspectors to examine the running gear of the cars, but who made examination on the top of the cars, relieved the deceased from the duty of observing whether the brake was in need of repair, and that the rule was not authority, as it was habitually regarded by the company.

CHAPTER XXII.

RIGHT OF ACTION FOR INJURIES CAUSED BY DANGEROUS CONDITIONS WHICH THE MASTER HAD PROMISED TO GUARD AGAINST OR REMEDY.

- 418. Introductory.
- 419. Necessity of proving that a promise was given.
 - a. Generally.
 - b. Promise to furnish a new instrumentality.
- 420. Whose promise is binding on the master.
- 421. Recovery dependent upon proof that the servant was induced to
promise to continue working.
 - a. Generally.
 - b. Promise having no reference to the servant's safety.
- 422. Reliance upon promise given before work was begun.
- 423. Reliance upon promise given after the work was begun.
 - a. Generally.
 - b. Sufficiency of complaint.
 - c. Admissibility of evidence.
- 424. Rationale of the relations between the parties after the giving
of promise.
 - a. Responsibility for conditions temporarily undertaken by
employer.
 - b. Presumption of waiver by servant rebutted.
 - c. Servant absolved from charge of contributory negligence.
- 425. Assumption of risks as a defense.
 - a. During the period covered by the promise.
 - b. After the expiration of the period covered by the promise.
- 426. *Volenti non fit injuria*, as a defense.
- 427. Contributory negligence as a defense in cases where a promise
was given; generally.
 - a. During the period covered by the promise.
 - b. After the expiration of the period covered by the promise.
- 428. Contributory negligence, as inferred from the gravity of the
injury counteracted.
- 429. Contributory negligence, as inferred from the length of time
the servant worked after the giving of the promise.

430. Illustrative cases.

431. Decisions restricting or ignoring the doctrine as to the effect of a promise.

432. Duty of servant to exercise care with respect to the defective instrumentality.

As to the necessity of showing that the breach of the promise was the approximate cause of the injury, see chapter XLII., *post*.

418. Introductory.—It has already been explained that the fact of a servant's having entered or continued in an employment with knowledge of the abnormal risk to which his injury was due may be considered from two standpoints, *viz.*, as being indicative either of the conclusion that he had voluntarily undertaken that risk, or of the conclusion that he was guilty of contributory negligence in subjecting himself to that risk. See chapters XVII., XVIII., *ante*. It is manifest that the situation is not altered in these broader aspects where the work is continued for the reason that the servant is assured by the master, or by some agent authorized to speak for him, that steps will be taken to remedy the defective conditions to which the abnormal risk is traceable. That the promise was made and that the servant's conduct was influenced by it, are circumstances which merely introduce new factors into the investigation.¹ Both the defenses suggested by the servant's action in exposing himself to a new peril will therefore be equally available to the master, where he has undertaken to remove the cause of that peril.²

In this connection it may be remarked that, in cases of the type under consideration, as well as in those which do not involve the effect of a promise, the unfortunate ambiguity of the phrase "assumption of risks" has produced a confusion between the two defenses.³ See the discussion of this subject in §§ 309, 310, *ante*.

¹Adverting to the effect of such a promise in relation to the defense of contributory negligence, the court remarked, in *Union Mfg. Co. v. Morrissey* (1883) 40 Ohio St. 148, 48 Am. Rep. 669, that it takes the cases in which it is given out of the operation of the general principle that one who voluntarily and knowingly exposes himself to danger by using dangerous instruments cannot be said to be without fault.

²See *Clarke v. Holmes* (1862) 7 Hurlst. & N. 937, 31 L. J. Exch. N. S. 356, 8 Jur. N. S. 992, 10 Week. Rep. 495, more especially the opinion of Crompton, J., who stated that he founded his judgment on two propositions, *viz.*, that there was no defense under

the principle of law laid down in *Priestly v. Fowler* (1837) 3 Mees. & W. 1. Murph. & H. 305, 1 Jur. 987, and that the plaintiff had not contributed to his injury by his own negligence. The statement in the text is also supported by *Lewis v. New York & N. E. R. Co.* (1891) 153 Mass. 73, 10 L. R. A. 513, 26 N. E. 431; *Schlacker v. Ashland Iron Min. Co.* (1891) 89 Mich. 262, 50 N. W. 839, and many other cases cited in the succeeding sections.

³See, for example, *Schlitz v. Palst Brewing Co.* (1894) 57 Minn. 303, 59 N. W. 188; *Roux v. Blodgett & D. Lumber Co.* (1891) 85 Mich. 519, 13 L. R. A. 728, 48 N. W. 1092; *Taylor v. Star Coal Co.* (1899) 110 Iowa, 40, 81 N.

The effect thus ascribed to a promise to remove a specific danger is analogous to that ascribed to an express or implied assurance that there is no present danger. See chapters XXXI., XXXII. Not infrequently, indeed, the evidence shows that the servant relied both on an assurance of present safety and on a promise to remove the dangerous conditions.⁴

An analysis of the decisions involving the effect of a promise to remove the danger shows that the servant is deemed to have no cause of action unless he can prove the following facts:

(1) That a promise was given, either to the effect that the dangerous condition which caused the injury would not be permitted to continue into existence, or that such condition would be remedied.

(2) That the promise was given either by the master himself or by some agent authorized to make it in his behalf.

(3) That the servant's reliance upon the promise was the sole inducing motive for his consenting to subject himself to the given risk.

If these facts are satisfactorily proved the master may still be held liable by establishing one or other of the following propositions:

(1) That the servant was chargeable, in spite of the promise, with an assumption of the given risk.

(2) That the servant was chargeable, in spite of the promise, with contributory negligence in having undertaken, or in having consented to perform, the work in question.

(3) That, in view of his knowledge of the risk to which the work was related, the servant did not exercise proper care in performing his duties which he undertook or continued to perform after the promise was given.

419. Necessity of proving that a promise was given.—a. General principle.—As there must have been something amounting to a promise or assurance to the master it follows that a simple protest or complaint by the servant, if not followed by an assurance that the defect will be remedied,

W. 249. "Where the master promises to repair a defect or gives the servant reasonable ground to infer or believe that the defect will be repaired, the servant does not assume the risk of an injury caused thereby within such period of time after the promise . . . as would be reasonably allowed for its performance, unless the danger is so palpable, immediate, and constant, . . . that no one but a reckless person would expose himself to it, even after receiving such promise or assurance." *Virginia C. Wheel Co. v. Chalmy* (Va. 62, 34 S. E. 976).
⁴ *Hawley v. Northern C. R. Co.* 82 N. Y. 370; *Flynn v. Kansas J. & C. B. R. Co.* (1883) 78 47 Am. Rep. 99; *Szendzikowski v. Cormick Harvesting Mach. Co.* 58 Ill. App. 418; *Reddon v. R. Co.* (1887) 5 Utah. 344, 15 Miller v. Bullion-Beck & Co. (1898) 18 Utah. 358, 55 Pac.

not cast the responsibility upon the master.¹ Much less will the responsibility be shifted where the complaint is merely that the certain defect increases the difficulty of the work, and not that it is dangerous.² Nor will that result follow where there has been merely a surmise or expectation on the servant's part, based on no specific promise.³ In order to entitle the servant to recover, the master or his representative must have said something which could reasonably be construed as a stipulation to prevent or to remedy the dangerous conditions in question.⁴ But the mere fact that no formal promise was given is not sufficient to exclude the inference of an agreement by the master to furnish or restore normally safe conditions. Any acts or expressions by which the servant gives the proper agent of the employer to understand that he is unwilling to continue in the employment, unless the cause of the danger is removed, constitute a sufficient complaint; and any acts or expressions by which such agent gives the servant to understand that the cause of the danger will be removed, constitute a sufficient promise.⁵ Even a conditional promise

¹ *East Tennessee, V. & G. R. Co. v. Duffield* (1883) 12 Lea, 67, 47 Am. Rep. 319; *Texas & N. O. R. Co. v. Bingle* (1895) 9 Tex. Civ. App. 322, 29 S. W. 674; *Weld v. Missouri P. R. Co.* (1838) 39 Kan. 63, 17 Pac. 306; *Alexander v. Tennessee & L. C. Gold & S. Min. Co.* (1884) 3 N. M. 255, 3 Pac. 735; *Galveston, H. & S. A. R. Co. v. Drew* (1883) 59 Tex. 10, 46 Am. Rep. 261. See, generally, § 290, *note*.

² *Bolle v. Detroit Leather Co.* (1889) 73 Mich. 158, 41 N. W. 216. Compare § 421, subd. b, *infra*.

³ *McKelvey v. Chesapeake & O. R. Co.* (1891) 35 W. Va. 500, 14 S. E. 261; *Southern P. Co. v. Leash* (1893) 2 Tex. Civ. App. 68, 21 S. W. 563.

⁴ A promise cannot be implied where the only remark made by the master's representative in regard to the defective appliance was more in the nature of a rebuke for using it in its then condition than an assurance that it would be repaired. *Shockeltor v. Manistee & N. E. R. Co.* (1895) 167 Mich. 16, 64 N. W. 728 (assistant superintendent, on being informed by a freight conductor that a hand rail was missing on a car, told him to "get it fixed"). A servant cannot recover where the evidence merely shows that he put to his foreman the question: "Why not get a new wire rope?" and that the fore-

man remarked: "That might do." *Purcell Mill & Elevator Co. v. Kirkland* (1898) 2 Ind. Terr. 169, 47 S. W. 311. The fact that the master mechanic of a railway company, when replying to a complaint as to the construction of a car, stated that it ought not to be made use of for coupling with the coupling apparatus on other cars, is not evidence of an assurance by the defendant that its use would be discontinued. *Ft. Wayne, J. & S. R. Co. v. Gildersleeve* (1876) 33 Mich. 133. A promise to get a new hand car, which will relieve a railroad employee's use of a defective car from constituting contributory negligence, is not established by evidence that the foreman directed the employee to use the car with great care until he could get a new one, and that he expected a new one at any time. *McAndrews v. Montana Union R. Co.* (1895) 15 Mont. 290, 39 Pac. 85.

⁵ *Picart v. Chicago, R. I. & P. R. Co.* (1891) 82 Iowa, 148, 47 N. W. 1017. A notification issued to engineers by the master mechanic, directing them to modify their speed on a certain section of the road "until the track can be got into better condition," operates as a declaration that the defects will be remedied, and an engineer has a right to rely on such an assurance. *Flynn*

will be sufficient, in some cases, to fasten responsibility upon the master.⁶ But the servant is, of course, not justified in relying upon a promise, where it is made by a fellow employee who has not admitted that he could not do what was required without direction from some superior officer.⁷ See § 420, *infra*.

Reason and analogy are in favor of the position expressly taken in one case that, in order to justify a servant in relying upon his master's promise to repair defective machinery, it is not necessary that any time for making repairs should be fixed, as a reasonable time should be implied in the absence of an express arrangement.⁸

It is not necessary that the promise should have been addressed to the plaintiff individually, provided it was made in his presence, and the stipulated repairs would have removed a danger to which he was exposed.⁹

Whether there was actually a promise to remove the danger is a question for the jury, when it is a matter of implication.¹⁰

b. Promise to furnish a new instrumentality.—There is apparently no adequate ground upon which it can be maintained that a promise to furnish other instrumentalities in place of those from which the servant apprehends danger should not be deemed equivalent to a legal effect to a promise to remedy a defect in some instrumentality the use of which is to be continued. Such equivalence has been asserted or taken for granted in several cases.¹¹ But in some cases

v. Kansas City, St. J. & C. B. R. Co. (1883) 78 Mo. 195, 47 Am. Rep. 99.

⁶ It has been held that where the servant complained of the incompetency of his foreman, and was told that, if such foreman did not do better in the future, he would have to be discharged, it was for the jury to say whether the servant was negligent in remaining in the defendant's employ. *Laning v. New York C. R. Co.* (1872) 49 N. Y. 521, 10 Am. Rep. 417.

In the recent case of *Schlitz Brewing Co.* (1894) 57 Minn. 179, N. W. 188, the court said: "The rule in which the rule has been applied in cases where there was a defect on the part of the master to remedy the defect. But we can see no difference in principle between such cases and those where, upon the servant's promise to continue the use, the master, for his own convenience and purpose, induces the servant to continue

are intimations of a theory which would put promises of these two descriptions upon different footings.¹²

420. Whose promise is binding on the master.—In one case it was laid down that, in determining whether the injured servant was justified by a promise in continuing in his employment, the essential inquiry is not what authority the employee who gave the promise really possessed, but what authority the servant supposed him to have.¹ The soundness of this ruling, which is not sustained by any precedents, seems fairly open to question, unless—which is not apparent from the words of the opinion—is to be taken as being subject to the qualification that a promise has no obligatory effect where the servant's supposition was not a warrantable one, in view of the circumstances upon

short time, upon the promise that the use of all be discontinued at the end of such time. What, for instance, could be the difference on the matter of assuming the risk between a promise to remedy the defects of this particular wagon and a promise to furnish another without such defects? We can see none."

An employee cannot be held to assume the risk of bolts protruding from a coupling of a revolving shaft notwithstanding a promise of the foreman to cover it, on the ground that such promise is not to repair an existing defect in the machinery, but to supply a new or additional appliance which the employer is under no obligation to furnish. *Homestake Min. Co. v. Fullerton* (1895) 16 C. C. A. 545, 36 U. S. App. 32, 69 Fed. 923.

¹²In *Sweeney v. Berlin & J. Envelope Co.* (1886) 101 N. Y. 520, 54 Am. Rep. 722, 5 N. E. 358, the court expressed its opinion, *arguendo*, that a promise which merely concerns a new appliance not attached to the particular machine whose sufficiency is complained of, nor to any machines of the same make, does not fall within the general rule, but it was held that, upon the evidence, there was no promise made, nor any inducement offered him, to take the risk, and the case was finally decided in favor of the defendant on the ground that the servant had simply been requested to continue working with an old machine of a certain type, with the peculiarities of which he had been familiar ever since he had begun work, and therefore assumed the risk of any injury which he might thereafter receive in a service

which he was at liberty to quit. Considering the actual ground of the decision, it seems not unreasonable to infer that these somewhat obscure remarks about the effect of the promise to furnish a new instrumentality are not to be taken in a general sense, but are intended to be applicable merely to a case like that before the court, in which it was considered that the master was not bound to improve the quality of the plant supplied.

In *Indianapolis Union R. Co. v. Ott* (1893: Ind. App.) 35 N. E. 517, it was held that a servant who, until the arrival of others which the master has promised to obtain, uses a lantern which he has ascertained to be defective, assumes the risk of injury as one thenceforth incident to the service, and is not in the same position as if he had used it until promised repairs should be completed. But that ruling was changed on rehearing (1894) 11 Ind. App. 564, 38 N. E. 842, 39 N. E. 529.

In *International & G. N. R. Co. v. Williams* (1896; Tex. Civ. App.) 34 S. W. 161, the court thought that the general principle as to the effect of a promise was not applicable where a section hand was told that a defect in a hand car would be remedied, and, having been transferred to another car, was injured by the defective car running into it.

¹*Dells Lumber Co. v. Erickson* (1897) 25 C. C. A. 397, 46 U. S. App. 697, 80 Fed. 257 (no error in refusing to instruct that promise was not binding, unless the promisor was in charge of the concern "so as to represent the defendant").

which it was founded. The precise point thus decided does not have been raised in any other case. So far as can be inferred from the language of the American courts, the theory upon which the decision is that a promise by an employee is or is not binding upon the employer, according as he had or had not, as a matter of fact, a duty to take such steps as were appropriate, under the circumstances, to secure the safety of the complaining party.² The essential question in this connection, therefore, is whether the party who made the promise was the agent of the employer or a mere fellow servant. From this point of view a binding effect may be ascribed to a promise

²This principle is laid down in *Ehmeke v. Porter* (1891) 45 Minn. 338, 47 N. W. 1066.

The employer has been held liable for the promise of the undermentioned employees as respects the matters referred to:—Of a general superintendent of a factory to put in a new floor, to replace one which has become dangerously slippery (*Weber Wagon Co. v. Kehl* [1892] 139 Ill. 644, 29 N. E. 714, Affirming [1891] 40 Ill. App. 584); of a railway superintendent to repair a switch (*Patterson v. Pittsburg & C. R. Co.* [1874] 76 Pa. 389, 18 Am. Rep. 412); of an assistant general roadmaster, to repair a switch (*Lake Shore & M. S. R. Co. v. Winslow* [1894] 10 Ohio C. C. 193); of a yardmaster to have running boards put on a yard engine (*Picart v. Chicago, R. I. & P. R. Co.* [1891] 82 Iowa, 148, 47 N. W. 1017); of a section foreman to supply new tools (*Atchison, T. & S. F. R. Co. v. Sadler* [1887] 38 Kan. 128, 16 Pac. 46); of a conductor, that a defect in a car will be repaired (*Louisville & N. R. Co. v. Kenley* [1893] 92 Tenn. 207, 21 S. W. 326); of a foreman in charge of the work in which certain machinery is used, to remedy a defect therein (*Ray v. Diamond State Steel Co.* [1900] 2 Penn. [Del.] 525, 47 Atl. 1017); of a foreman with power to discharge an incompetent servant, that he will be replaced by another (*Galveston, H. & S. A. R. Co. v. Eckols* [1894] 7 Tex. Civ. App. 229, 26 S. W. 1117; *Wust v. Erie City Iron Works* [1892] 149 Pa. 263, 24 Atl. 291; *Little v. Chicago & W. M. R. Co.* [1890] 1 Mich. 289, 47 N. W. 571).

On the other hand, the master is not bound by the promise of an employee who merely makes repairs which have been determined upon by a person in

authority (*Ehmeke v. Porter* [1891] Minn. 338, 47 N. W. 1066); nor by the promise of an agent other than the master, whom the servant knew to be in charge of such matters (*Chesapeake, O. & A. R. Co. v. McDowell* [1894] 16 W. Va. Rep. 1, 24 S. W. 607); nor by the promise of an employee who is a mere servant acting under the instruction of the plaintiff himself, and not a representative of the master, qualified to give directions as to the continued use of a defective appliance (*Shackleton v. Distee & N. E. R. Co.* [1895] 100 N. W. 10, 64 N. W. 728).

There was held to be no promise as the rule contemplates, where a foreman to whom a yardmaster had authorized to improve a defective track in the yard, so as to lessen the risk, notified that he could not do it without the consent of his superior, but, upon a subsequent application, promised to do it "that he would do it if he had some Saturday afternoon." *Winona & St. P. R. Co.* (1887) 3 Minn. 326, 33 N. W. 908.

It is error to give an instruction which assumes that an employee is a representative of a railroad company, in regards the repairing of electrical machinery, used to facilitate the work of unloading iron from a car onto a steamer, where his promise to repair one of the cars for the company, where another employee was shown to have been in control of the entire work, and no evidence was offered to prove that the former employee was vested with any other duty than of overseeing the loading of the train. *Gulf, C. & S. F. R. Co. v. Ford* (1891) 79 Tex. 619, 15 S. W. 207.

³*Jones v. New American* (1898) 21 R. I. 123, 42 Atl. 508.

no promise such s, where a section rdnmaster applied truck in the yard, risk, notified him it without orders t, upon a subse- nised conditional it if he got time oon." *Wilson v.* (1887) 37 Minn.

e an instruction employee was the broad company as of electric lights work of loading steamer, and that one of them found nother employee is in control of the evidence has been the former em- any other power loading of the *P. R. Co. v. Brent-* [189, 15 S. W. 561. *American File Co.* 2 Atl. 509.

though the promisor was not a vice principal by virtue of his superiority of rank. See chapters xxviii.-xxx., *post*.⁴ But no right of action can arise out of a promise made by a fellow servant, whether a superior or not, with regard to the mere details of the work.⁵

The question whether the employee in question was authorized to make the alterations requisite to secure the servant's safety is for the jury, whenever evidence has been adduced which is reasonably susceptible of the construction that he was so authorized.⁶

In jurisdictions where the doctrine prevails that any employee, however high his rank, is a mere fellow servant of his subordinates in respect to acts done in carrying on the business (see chapter xxix., *post*), it is evident that the master is bound only by a promise which he has himself made.⁷

The master is liable for the nonperformance of a promise made by his representative, although the servant who received the promise may have requested certain of his fellow servants to take steps for his protection similar to those which the master's representative had agreed to take.

⁴ A promise given by the day foreman of a mine to an employee to cover a coupling of a revolving shaft, which has protruding bolts, dangerous to such employee while in the discharge of his duties, has the same effect as a promise given by the employer, and relieves the employee from an assumption of the risk attending such coupling, since it is within the authority of such foreman to cause the shaft to be covered. The position of the court was that such an act does not require a previous conference with the general superintendent, or the master mechanic, because it does not involve any alteration of the machinery, or interfere to any extent with its operation. *Homestake Min. Co. v. Fullerton* (1895) 16 C. C. A. 545, 36 U. S. App. 32, 69 Fed. 923.

⁵ A statement by a foreman that he intended to move the machinery slowly was not a promise or a warranty of the master that defects would be cured or dangerous places made safe. *Dwyer v. Nixon* (1901) 47 C. C. A. 666, 103 Fed. 751. A servant who asks to have a saw reset and is told by the employee intrusted with that duty to go on working until noon, when he will see what he can do, cannot recover for injuries which he receives before that hour. The neglect, if any, is in a detail of the

management of the machinery, not in a duty of the master. *Wehber v. Piper* (1888) 109 N. Y. 496, 17 N. E. 216. Affirming (1885) 38 Hun. 353.

⁶ *Swift & Co. v. O'Neill* (1900) 187 Ill. 337, 58 N. E. 416. Affirming (1900) 88 Ill. App. 162.

⁷ *Smith v. Howard* (1870) 22 L. T. N. S. 130 (complaint to and promise by foreman not sufficient). In *Allen v. New Gas Co.* (1876) L. R. 1 Exch. Div. 251, 45 L. J. Exch. N. S. 689, 34 L. T. N. S. 541, the court seems to have assumed that a manager's whole duty is performed if he gives directions to repair a defective appliance. The promise here had been given a "considerable time" before the accident, but its effect was not specifically considered.

These decisions embody the doctrine established in *Wilson v. Merry* (1868) L. R. 1 H. L. Sc. App. Cas. 326, 19 L. T. N. S. 30, which must be taken to have destroyed *pro tanto* the authority of *Clarke v. Holmes* (1862) 7 Hurlst. & N. 937, 31 L. J. Exch. N. S. 356, 10 Week. Rep. 405, 8 Jur. N. S. 992, in which it was expressly held by Byles, J., and assumed by the other judges, that a promise made by a manager of a factory was equivalent in law to the promise of the employer himself.

⁸ Where a foreman in a car-repairing

421. Recovery dependent upon proof that the servant was induced by the promise to continue working.-- *a. Generally.*--After the servant has shown that there has been a promise, actual or implied, on the part of the master, and that this promise amounts to an undertaking to make repairs, not only a danger, but a danger by which he himself is threatened, he still has the *onus* of proving that the inducing motive for his continuance in the employment was his reliance upon the fulfillment of the promise.¹ Recovery cannot be had where the only reasonable inference from the testimony is that the servant continued working because he relied on the master's promise, as given, but merely out of a cause of an expectation, based on the defendant's habit, that he would make the repairs in question.² But the mere fact that the servant has some suspicion that the master's assurances will not be made good is not enough to deprive him of his right of action.³

When complaining of defective instrumentalities or machinery, it is not necessary that the servant shall state in exact words that he apprehends danger to himself by reason of the defects, nor need there be a formal notification that he will leave the service unless the defects are repaired or remedied. It is sufficient if, from the circumstances

the shop has promised to protect an employee while he is under a cur for the purpose of making repairs, it is no excuse for the failure of the foreman to keep the promise that the employee also asked others to keep watch. *Missouri P. R. Co. v. Williams* (1889) 75 Tex. 4, 12 S. W. 835.

¹ *Showalter v. Fairbanks, M. & Co.* (1894) 88 Wis. 376, 60 N. W. 257. No recovery can be had where the evidence fails to show that the servant went on working in consideration of the promise. *Erdman v. Illinois Steel Co.* (1897) 95 Wis. 6, 69 N. W. 903. The testimony of the plaintiff that the defendant had promised to make certain repairs is not sufficient to show such reliance upon that promise as will rebut the presumption of an acceptance of the risk, where there is no evidence that plaintiff complained of the defect as making his work more dangerous, or that he ever thought of quitting his job unless repairs were made. *Budicell v. Nashua Mfg. Co.* (1900) 70 N. H. 390, 47 Atl. 613. A skilled machinist who on commencing work learned that the machine used by him was defective, and continued to work with it for five months without complaint, and who,

after making complaint to the foreman and being told that there was no time to make repairs, continued working for months, when he again made complaint to the general foreman and was told that it would be fixed after awhile when the machine was reached in the course of repair, assumed the risk of an injury caused by such defect a week after complaint to the general foreman. *Ball v. Detroit, G. H. & M. R. Co.* 114 Mich. 135, 72 N. W. 145.

² *Southern P. Co. v. Leash* (1898) Tex. Civ. App. 68, 21 S. W. 563. Instruction which tells the jury they may find for the plaintiff, if they believe the evidence that the plaintiff, at the time of the injury, "had reasonable grounds to believe that the defect would immediately cure the defect," has been held misleading and prejudicial to the defendant, as it leaves the jury to infer that the servant may recover if his belief that the defect would be cured was a mere surmise or expectation of his own, based on no specific promise. *McKelvey v. Chesapeake & O. R. Co.* (1891) 35 W. Va. 500, 14 S. E. 2.

³ *Weber Waggon Co. v. Kehl* (1899) Ill. 644, 29 N. E. 714, affirming 40 Ill. App. 584.

was induced by the servant, and, on the part of the master, in undertaking to remove the defect, the motive of his promise was the fulfillment of his duty, not the inducement of work, nor the promise that he would make good the injury.

machinery it was found that he appeared to need there be the defects be circumstances of

to the foreman, there was no time made complaint and was told that while when such on the course of work of an injury week after the foreman. *Hawley v. R. Co.* (1897) 145.

Leash (1893) 2 W. 563. An injury jury they must believe from plaintiff, at the "had reasonable the defect," has and prejudicial to the jury to recover, even defect would be use or expectation specific promise. *E. & O. R. Co.* 14 S. E. 261. *Kehl* (1892) 139 affirming (1891)

the case, it can be fairly inferred that the servant is complaining on his own account, and that he was induced to continue in the service by reason of the promise.⁴

It is ordinarily for the jury to say whether the servant's reliance on a promise by the master induced him to continue work.⁵

That the servant's reliance on the master's promise was the efficient cause of the injury cannot be inferred where the evidence shows that the servant apprehended no danger from the particular service in which, pending the fulfillment of the promise, he was engaged when he received the injury.⁶ Nor does a promise inure to the benefit of the servant unless he was injured at a time and place covered by it.⁷

b. Promise having no reference to the servant's safety. — Several decisions are based upon the principle that a promise cannot be regarded as the inducing motive of the servant's continuance of work, unless it appears that the immediate purpose of the stipulated alterations was to secure more effectually his personal safety.⁸

⁴ *Rothenberger v. Northwestern Consol. Mill. Co.* (1894) 57 Minn. 461, 59 N. W. 531.

⁵ *Union Mfg. Co. v. Morrissey* (1883) 40 Ohio St. 148, 4 Am. Rep. 689; *Rothenberger v. Northwestern Consol. Mill. Co.* (1894) 57 Minn. 461, 59 N. W. 531.

⁶ See *Holloran v. Union Iron & Foundry Co.* (1896) 133 Mo. 470, 35 S.W. 260, where a servant engaged in moving a derriek across the uncovered girders on the first floor of a building, after the master had promised to furnish more planks, fell into the cellar by reason of his foot sliding from the girder, upon which he placed it without apprehending any danger therefrom.

⁷ A promise to shore up a part of a trench where the servant expects to be presently working will not entitle him to recover for injuries caused by an earthslide at that part of the trench where he was at work when he received the promise. *Showalter v. Fairbanks M. & Co.* (1894) 88 Wis. 376, 60 N. W. 257.

⁸ Where a promise is relied upon either as showing an express assumption of the risk by the master, or as affording a reasonable guaranty that the danger will be removed in time to prevent injury to the servant, it must be shown that what passed between the master and servant "had in view either a transfer of the risk from the servant to the master, or

the removal of the dangerous condition as a protection to the servant. In other words, the master should have induced the servant to waive his right to leave the dangerous employment, either by taking upon himself the responsibility for injuries which might result, or by leading the servant to believe that the duty to repair the appliances, or supply the deficiency, would be performed within reasonable time." *International & G. N. R. Co. v. Turner* (1893) 3 Tex. Civ. App. 487, 23 S. W. 146.

"No case . . . has gone so far as to hold that, where the servant does not complain on his own account, and continues in his employment with full knowledge of the risk, he can recover of the master, because the latter, when the defective condition was called to his attention by the servant, gave assurances, which did not induce the servant to remain, that the defect should be remedied." *Lewis v. New York & N. E. R. Co.* (1891) 153 Mass. 73, 10 L. R. A. 513, 26 N. E. 431, where it was held that no action could be maintained by a servant whose employment required him to go upon a pier which had become unsafe because of the decayed condition of the planking, and who continued in the service with full knowledge of the risk, although he complained of the defects on the ground that "someone was liable to get hurt," and received the mas-

422. Reliance upon promise given before work was begun.—

In few cases the courts have sustained the right of a servant to recover in cases where, before he entered the employment or undertook a piece of work, he had received a promise that certain specific precautions would be taken to secure his safety. In some, at least, of these cases it would seem that the rights of the servant would have been the same even if the promise had not been given. But it is clear that, in every case, even may be the implied obligations of the master in a given instance, the actual extent of his duty after the promise has been given is determined by the scope of the express agreement evidenced by that promise.¹

the master's assurance that they should be remedied. It was considered that the complaint was made entirely in the interest of the defendant, and referred only to the danger incurred by strangers.

The general rule as to the effect of a promise has no application to a case where neither the master nor the servant contemplated any additional danger to the servant in the use of the defective instrument, but only imperfections in the work done with it. *Tesmer v. Boehm* (1895) 58 Ill. App. 609. Followed in *Chicago Bridge & Iron Co. v. Hayes* (1900) 91 Ill. App. 269. Nor to a case where the remonstrance of the servant is merely to the effect that, with another appliance, the work would be easier, and he himself admits that, before the accident, he never thought that the work involved any danger. *Gowen v. Harley* (1893) 6 C. C. A. 190, 12 U. S. App. 574, 56 Fed. 973.

An assurance given by the master that the number of hands will be increased will not relieve the servant of his assumption of the risk arising from the insufficiency of the number, where the master's promise was made in his own interest, and with reference to the more rapid despatch of his business, and not with a view to the protection of the servant, and to induce him to remain in the service. *International & G. N. R. Co. v. Turner* (1893) 3 Tex. Civ. App. 487, 23 S. W. 146. This decision was lately followed in another, where recovery was denied upon evidence which showed that the plaintiff, a brakeman, upon an objection being made by the defendant's agent to hauling a car with a defective drawhead, replied that he hoped the drawhead would break, as the

defendant would then have to replace it. That orders were thereupon given to repair it immediately, but that the man continued to use it for several days. *Industrial Lumber Co. v. Son* (1900) 22 Tex. Civ. App. 362, 36 S. W. 362.

¹ A railway company has been held liable for injuries caused by exposure to extreme cold, where the servant had been sent, in an emergency, to clear snow from the track, and had to go until he had received an assurance that provision would be made for his protection. *Hyatt v. Hannibal & J. R. Co.* (1885) 19 Mo. App. 2. A corporation engaged in putting in appliances to move cable cars is liable for injuries to its employee from running of a car over the line where it was under the track in the performance of his duty, where he acted in reliance upon the statement of the foreman that he was superintending the work, and that the car would pass until a time considerably later than the time of the accident. *Floettl v. Third Ave. R. Co.* (1893) 19 App. Div. 303, 41 N. Y. Supp. 2. A ship owner is liable for injuries resulting from his violation of a promise to station a man at the hatch of a ship in order to protect laborers in the hold while the loading is going on. *Coastal S. S. Co. v. Ocean S. S. Co.* (1893) 92 G. 19 S. E. 33. A servant who is injured by a boiler which he is to repair, but is not ready for him at a certain time in the absence of any notice to the contrary, rely upon such assurance, the master is liable for an injury occasioned to him by reason of his failure to keep his promise. *Keuance Co. v. Erickson* (1898) 78 Ill. App. 362.

423. Reliance upon promise given after the work was begun.—
a. Generally.—Stated in its most general form, the doctrine applied by most of the courts is simply this: If it is a reasonable inference from the testimony that the inducing motive of the servant's continuance in the employment was his reliance upon a promise that the dangerous conditions would be remedied, the mere fact that the servant knew of and appreciated the abnormal risk which caused his injury will not warrant a court in declaring that his continuance in the employment rendered him chargeable, as a matter of law, with an assumption of that risk, or with contributory negligence.¹

The doctrine may also be expressed in language which emphasizes the consideration that it is an exception ingrafted upon a general principle.²

¹ "If machinery upon which a servant is employed has become dangerous, and the servant has complained of it, and has been promised that it shall be repaired, but is injured before the defect is remedied, and while he is reasonably expecting the promise to be performed, the promise is a circumstance to be considered by the jury in determining whether he has assumed the risk in the meantime, and whether he was using due care in working when he knew there was danger." *Counsell v. Hall* (1888) 145 Mass. 468, 14 S. E. 530. Compare also *Greene v. Minneapolis & St. L. R. Co.* (1883) 31 Minn. 248, 47 Am. Rep. 785, 17 N. W. 378; *Gulf, C. & S. F. R. Co. v. Donnelly* (1888) 70 Tex. 371, 8 S. W. 52. *Smith v. E. W. Backus Lumber Co.* (1896) 64 Minn. 447, 67 N. W. 358.

An instruction that, if a servant relied upon the promise of his master to repair a defective appliance, and continued in the employment a reasonable time to permit the master to repair the appliance, he was not guilty of negligence in so doing,—is not erroneous, although it might have been better to inform the jury that, under the circumstances, the servant had a right, under the law, to continue in the employ of the master, relying upon his promise. *Donley v. Dougherty* (1898) 174 Ill. 582, 51 N. E. 714, Affirming (1898) 75 Ill. App. 379.

An instruction is not bad for the reason that it bases a master's liability for an injury sustained by his servant upon his failure to repair a defect com-

plained of by the servant within a reasonable time after receiving notice, instead of within a reasonable time after promising to repair, where the notice and promise were made at the same time. *Consolidated Coal Co. v. Bokamp* (1898) 75 Ill. App. 605 (notification that roof was in a dangerous condition was given three days before the accident).

² In one case it was said that the rule that a servant accepts the ordinary risks of his employment, and of defects in machinery and appliances of which he knows, does not apply to one who has informed his employer of such defects, and only continues in the employment for a reasonable time. *Lyttle v. Chicago & W. M. R. Co.* (1890) 84 Mich. 289, 47 N. W. 571. In another case the court remarked that the general rule that the servant assumes, not only the ordinary risks of the employment, but also those superadded by the negligent omissions of the master, where they are known to the servant, is modified where the servant, upon his discovery of a danger arising from such an omission, complains to the master and receives such promises or assurances as to make it reasonable for him to assume that the deficiency will be supplied before he is exposed to injury from it. *International & G. N. R. Co. v. Turner* (1893) 5 Tex. Civ. App. 487, 23 S. W. 140.

Woodward Iron Co. Ala. 123; *Union* (1883) 40 Ohio 669; *Missouri* (1883) 107 Ill. *Greene v. Mims* (1883) 31 Minn. 17 N. W. 378; (1883) 145 Mass. 468, *supra*.

denied on the sence of a guard defect, the em- ployed liable on the omised to supply *Fanning* (1880)

Ordinarily the protection afforded by the promise of a master to repair defective machinery is not postponed until after the arrival of the time at which the promise is to be performed, but commences as soon as it is made.⁷ But if the master has merely made a qualified promise to remedy a defect after the expiration of a certain period and not till then, the servant cannot recover for an injury received before the end of that period.⁸

Under ordinary circumstances a promise to protect a servant from a certain risk is construed as being merely an engagement that the dangerous conditions will be remedied, so far as that result depends upon the performance of the master's personal duties; not that the sporadic and occasional acts of negligence of servants, which he did not directly control, would not occur again.⁹

b. Sufficiency of complaint.—Any complaint which alleges substantially that the servant remained in the employment for a reasonable

195 Pa. 599, 46 Atl. 102. An employer is not liable where the elevator, in running which the operator was injured, was not out of repair, and was of a kind in ordinary use, though the operator had told the master's superintendent that there should be guards at the sides of the elevator, and the superintendent had promised to provide them. *Leonard v. Herrman* (1900) 195 Pa. 222, 45 Atl. 723 (there the court laid it down that no promise made by the master's superintendent "can give rise to a duty not recognized by law").

Where a floor has always been in the same condition to the knowledge of a servant, the fact that an engineer in charge of boilers led a person employed to assist in shoveling coal under the boilers and to keep their fronts clean, to believe that a new floor would be put in, does not affect the employer's liability; for even if the engineer was authorized to speak for him,—which was not shown in this case,—his promise under such circumstances would have been without consideration or binding force. *Nealind v. Lynn & B. R. Co.* (1899) 173 Mass. 42, 53 N. E. 137.

An employee of an independent contractor engaged by a railroad company to load slack on ears cannot recover from the company for personal injuries caused by the falling of a piece of slack upon the ground that he relied upon the company's promise, made to the contractor's employees, to cool the top of

the pile with water, since the promise to repair is only important to rebut the inference that defects are waived by continuance in employment with knowledge of their existence, and, as the company had omitted no duty, the employee waived nothing by continuing in the contractor's employment. *Branstrator v. Krokuk & W. R. Co.* (1899) 108 Iowa, 377, 79 N. W. 130.

In a New York case it was held that, even if the evidence had shown that a promise had been given,—a conclusion which was declared to be unwarrantable,—no obligation was imposed by it, as the machine had remained unchanged since the beginning of the servant's engagement and the master was not bound to furnish a better one. *Sweeney v. Berlin & J. Envelope Co.* (1886) 101 N. Y. 520, 54 Am. Rep. 722, 5 N. E. 358.

McFarlan Carriage Co. v. Potter (1899) 153 Ind. 107, 53 N. E. 465. Reversing on rehearing (1898; Ind.) 5 Am. Neg. Rep. 132, 52 N. E. 209, which reverses (1898) 21 Ind. App. 692, 51 N. E. 737.

⁸ As, where the promise was to repair a defect in machinery as soon as the "present order" was run out. *Standard Oil Co. v. Helmick* (1897) 148 Ind. 457, 47 N. E. 14, distinguishing cases in which there is a promise to repair generally, i. e., within a reasonable time. See § 429, *infra*.

⁹ On this ground recovery has been denied where, after the master had

time in reliance upon a promise by the defendant to remedy the dangerous conditions is good against a demurrer.¹⁰

On the other hand it has been held in one case that a complaint which fails to allege that the plaintiff relied on the promise to repair or that a reasonable time for repairing had elapsed after the promise was made, will be held bad on special demurrer, but is sufficient for a verdict;¹¹ and in another case that a complaint relying on a promise by the master to remedy a defect is demurrable, unless it alleges that after the promise, a reasonable time had elapsed before the accident for the master to have remedied the defect.¹² But the propriety of thus requiring an averment with respect to the expiration of a reasonable time appears to be quite disputable.¹³

promised a servant employed on a building to protect him from falling material, he was injured by a plank which a fellow servant allowed to drop upon him. *Vogt v. Honstain* (1900) 81 Minn. 174, 83 N. W. 533.

¹⁰ *East Chicago Iron & Steel Co. v. Williams* (1897) 17 Ind. App. 573, 47 N. E. 26; *Brown v. Levy Bros.* (1900) 21 Ky. L. Rep. 1724, 55 S. W. 1079.

A declaration in an action by an employee against his employer for personal injuries, which sufficiently sets out the defect in the machine relied on, avers that the plaintiff notified the defendant of the defect and received a promise that it should be repaired, and that, relying thereon, he went on with his work, is not obnoxious to a demurrer on the ground that it shows that the plaintiff assumed the risk. *Jones v. New American File Co.* (1898) 21 R. I. 125, 42 Atl. 509.

The averment of a complaint in an action by a servant against a master for personal injuries due to a defective machine, that defendant had promised plaintiff that it would repair the machine upon the completion of the job upon which the plaintiff was then working, is sufficient to withstand a demurrer upon the ground that the promise is too uncertain and indefinite as to time of performance, although it does not appear how long it would take to complete the job; but defendant's remedy, if any, is by motion to make more certain. *McFarlan Carriage Co. v. Potter* (1899) 153 Ind. 107, 53 N. E. 465, Reversing on rehearing (1898; Ind.) 5 Am. Neg. Rep. 132, 52 N. E. 209, Which

Reverses (1898) 21 Ind. App. 692, E. 737. In the same case it was held that, as a plaintiff need not prove the facts alleged, and shows a *facie* right to recover if he establishes sufficient facts to constitute a cause of action, proof of a promise to repair a table in which a rip saw was set was sufficient to support a recovery for personal injuries to a servant who continued in the employment in reliance on such promise, although the complaint alleges a promise to repair both the table and the saw, where there was no defect in the saw itself, and plaintiff was injured by the reason of a defect in the table.

A complaint which, in effect, avers that the injured servant was induced to remain in the service by the promise of his foreman that a fellow servant whose incompetence he had complained of would be discharged is complete without a further averment that the plaintiff was injured when he was injured, and ignorant of the fact that the incompetent fellow servant had not been discharged. To go to the merits would be to plead matters of evidence. *Galveston, H. & S. A. R. Co. v. Williams* (1894) 7 Tex. Civ. App. 429, 26 S. W. 1117.

¹¹ *Consolidated Coal Co. v. Brown* (1899) 181 Ill. 9, 54 N. E. 567, Reversing (1898) 75 Ill. App. 605.

¹² *Burns v. Windfall Mfg. Co.* (1899) 146 Ind. 261, 45 N. E. 188 (overruled on error; rails caused a car to stop suddenly and a servant was thrown off).

c. Admissibility of evidence.—Evidence that the master or his representative promised to remedy the dangerous conditions in question cannot be introduced unless the promise is specially pleaded.¹⁴ But any evidence which fairly tends to show that the servant's action was induced by a promise which is averred in the complaint is relevant and competent.¹⁵

424. Rationale of the relations between the parties after the giving of the promise.—*a. Responsibility for conditions temporarily undertaken by employer.*—In the opinion of the present writer the most satisfactory theory seems to be that indicated by the following remark, which Byles, J., interjected during the argument of counsel in a leading case where the servant was injured by machinery left unfenced in contravention of the provisions of a statute: "While the machinery was fenced, was not this the contract of the plaintiff, 'I will work with fenced machinery'? After the fencing was broken, was not the contract, 'I will continue to work, if you will restore the fencing'?"¹

admitted, he must specifically aver facts which show that his case falls within the exception to the doctrine which declares such knowledge to be a bar to the action. The court said: "There is an entire absence of allegation as to the time appellee had known of the defect or had promised to repair it. It may have been during all the time that the appellant knew of it, or it may have been at the moment the car was started down the track to the pit, and when repair was impossible before the car went upon it." It would seem, therefore, that the conception entertained was that the responsibility for the defective conditions is not shifted to the master immediately after the promise is given, but only after the lapse of a reasonable period. If this is really the theory of the court, its correctness may well be questioned. No adequate logical reason can be suggested for the doctrine that the master's immunity is prolonged for a more or less considerable period after the promise has been given. The writer confesses his inability to perceive any satisfactory grounds upon which it can be argued that, in spite of the admission of culpability which is implied by a promise, the master should be allowed a period of grace dur-

ing which he will be exempt from liability if an accident occurs. The decision under discussion seems, moreover, to be inconsistent with the doctrine laid down by the same court in the *Potter Case*, cited in note 7, *supra*.

¹ *Halm v. Thelin* (1896) 47 Neb. 686, 66 N. W. 650.

¹² No error is committed where a servant is allowed to answer in the negative the question whether he would have gone to work if the defendant's superintendent had not promised to repair the defect. *Taylor v. Star Coal Co.* (1899) 110 Iowa, 40, 81 N. W. 249.

¹³ *Cheske v. Holmes* (1862) 7 Hurlst. & N. 937, 31 L. J. Exch. N. S. 356, 8 Jur. N. S. 992, 10 Week. Rep. 405. A similar point of view may possibly be ascribed to the supreme court of Maine which has stated the situation as follows: "If it appears from competent evidence that an agreement of the servant, whether made by express words or by implication, to assume a risk has been canceled or terminated, that risk for the future falls back upon the master, and remains upon him until he establishes a new agreement or a renewal of the original agreement by the servant to assume the risk. Whether there has been such an agreement or renewal

In this point of view the effect of the promise is to bring into existence a new stipulation which operates so as to cast upon the master temporarily the responsibility for the particular risk in question. It must be admitted, however, that there is very little, if any, direct authority except that which has just been mentioned for explaining the rationale of the doctrine in this precise form.

All the courts are agreed that the essential effect of a promise to fasten the responsibility upon the master for a certain period. In some of the judicial statements of general principles this responsibility is assumed to follow from the continuance or revival of the liability of the employer which is deduced from the implied terms of the contract of hiring;² while in others—and these are far the most numerous—the language used is so far ambiguous that it is impossible to say with certainty whether the situation contemplated was that which would arise from the substitution of another contract, or that which would arise from the continuance or revival of the original one.³

is a question for the jury. *Dempsey v. Sawyer* (1901) 95 Me. 295, 49 Atl. 1035.

² See *Woodward Iron Co. v. Jones* (1885) 80 Ala. 125.

³ By giving a promise to make repairs "the master takes upon himself the responsibility of any accident that may occur during that period," i. e., until the repairs are completed. Pollock, C. B., in *Holmes v. Clarke* (1862) 6 Hurlst. & N. 349, 30 L. J. Exch. N. S. 135, 7 Jur. N. S. 397, 3 L. T. N. S. 675, 9 Week. Rep. 419. The views of the judges of the Exchequer Chamber were virtually to the same effect, but expressed in somewhat different language. See text at the beginning of this subdivision, and also subd. b, note 5, *infra*.

"The law charges the master with an assumption of the extraordinary risk pending his promise to repair." *McFarlan Carriage Co. v. Potter* (1899) 153 Ind. 107, 53 N. E. 465.

"The most logical reason of the rule is that, under such circumstances, it must be taken as understood between them that the continued use in the then condition of the instrumentality, being for the convenience and purposes of the master, is to be at his risk, and not at the risk of the servant." *Schlitz v. Pabst Brewing Co.* (1894) 57 Minn. 303, 59 N. W. 188.

"The reason why such a promise modi-

fies the rule which charges the master with risks resulting from defects which he has knowledge is that the master's promise to repair lessens the risk where the duty is, upon the master." *Texas & N. O. R. Co. v. [?]* (1895) 9 Tex. Civ. App. 322, 29 S. W. 674.

"The reason for this exception may be stated to be that, when the master has knowledge of the defects, and promises to repair the same, he implies that he requests the servant to continue to use the instrumentality, and that he, the master, will take upon himself the responsibility of any accident that may occur during that period." *Chicago Anderson [?] Brick Co. v. Sobkowiak* (1894) 187 Ill. 573, 36 N. E. 572.

The reason of the rule is "that the promise of the master a new relationship is created between him and the employee whereby the master impliedly promises that the servant shall not be liable for the risk for a reasonable time following his promise." *St. Louis & N. O. R. Co. v. O'Neill* (1900) 187 Ill. 303, 59 N. E. 416.

"The assurance of the employer that the danger shall be removed is an implied promise by him that he will assume the risk incident to the danger for a reasonable time. It obviates the objection that the continuance of the servant's service was an implied engagement."

So far as the servant's actual rights of action are concerned, it is obviously immaterial which of these theories is adopted. But in considering the subject from an abstract standpoint it is not amiss to point out that there seems to be one serious objection to the theory which is based upon the supposition that the original contract is kept alive by the promise. If this result be deemed to follow when the promise is given, it is difficult to offer any adequate reason for the distinction which must then be assumed to exist between the effect of an express promise as to the condition of the appliances, and the effect of the implied promise which the original contract conveys as to the same subject-matter. *Prima facie* it is decidedly illogical to ascribe to a contract, after its revival or renewal, a greater potency than it possessed in its original form. Nor have any of the authorities undertaken to explain away this apparent anomaly.⁴

him to assume such risks pursuant to the original presumption upon his entering the service." *Eureka Co. v. Bass* (1886) 81 Ala. 200, 60 Am. Rep. 152, 8 So. 216.

The master "assumes the whole risk for a reasonable time" after giving the promise. *Pleasants v. Raleigh & A. Air-Line R. Co.* (1886) 95 N. C. 195.

"If the servant, having a right to abandon the service because it is dangerous, refrains from doing so in consequence of assurances that the danger shall be removed, the duty to remove the danger is manifest and imperative, and the master is not in the exercise of ordinary care unless or until he makes his assurances good. Moreover, the assurances remove all ground for the argument that the servant by continuing the employment engages to assume the risks." Cooley, *Torts*, p. 559. Quoted with approval in *Hough v. Texas & P. R. Co.* (1879) 100 U. S. 225, 25 L. ed. 617.

In a Delaware case the jury were charged that, where a master promises to remedy defects in machinery, and the employee, relying on such promise, continues to use it for a reasonable time, he does so at the master's risk. *Ray v. Diamond State Steel Co.* (1900) 2 Penn. (Del.) 525, 47 Atl. 1017.

It has also been laid down that in cases of this type the presumption of an acceptance of the risk, arising from a continuance in the service, is rebutted. *International & G. N. R. Co. v. Turner*

(1893) 3 Tex. Civ. App. 487, 23 S. W. 116; *Galveston, H. & S. A. R. Co. v. Drew* (1883) 59 Tex. 10, 46 Am. Rep. 261.

In *Greene v. Minneapolis & St. L. R. Co.* (1883) 31 Minn. 248, 47 Am. Rep. 785, 17 N. W. 378, the court, after mentioning the various reasons assigned for the rule, favors the one which would place it on "the ground of a contract on the part of the employer . . . that if the servant continues in the service in the meantime, and until the defects are remedied, the employer, and not the servant, will assume the risks;" and observes that "if the emergencies of a master's business require him temporarily to use defective machinery, we fail to see what right he has, in law or natural justice, to insist that it shall be done at the risk of the servant, and not his own, when, notwithstanding the servant's objection to the condition of the machinery, he has requested or induced him to continue its use, under a promise thereafter to repair it."

"This aspect of the question is thus disensed in *Gulf, C. & S. F. R. Co. v. Brentford* (1891) 79 Tex. 619, 627, 15 S. W. 561. "It would be difficult to find a principle on which to base a rule relieving a servant from obligation to use proper care for his own safety because the master had promised to repair a known defect which exposed him to danger, and had requested him to remain in a service known to be dangerous. It cannot be placed logically on the un-

b. Presumption of waiver by servant rebutted.—Another view is that the deduction which would normally be drawn, that he is intended to assume the new risk in remaining in a service in which that risk must be constantly incurred, is rebutted by evidence that the promise was relied on. In other words, that waiver of a common-law right of action which, apart from the promise, would be imputed to the servant, as a consequence of his continuance of work, will not be inferred where a promise has been given.⁵ This theory is essen-

equal situation of master and servant in a country in which all men are free to serve or not to serve any particular employer. If it be placed on the ground that the promise to repair and request to continue in the service rebut the ordinary presumption that the servant assumes the known risk incident to the given employment, it will be difficult to maintain it in a case in which the servant continues in the service with a knowledge that the defect has not been repaired, and that he is in constant danger from the use of the defective thing. If it be placed on the broad, but very indefinite, ground that justice and policy require such a rule, it will be difficult to give a reason why the same rule should not exist in all cases in which injuries result from the use of defective appliances or implements known by employer and employee to be defective, and their use dangerous; for the law implies an undertaking on the part of the employer to furnish reasonably safe machinery, implements, and appliances, and to repair them when out of order; and it implies a request to continue in the service, and to use them until notified that this is no longer desired, unless the employment is for a definite period. When there is no express promise to repair, or request to continue in the service, the employee assumes the risks incident to a service conducted with machinery, implements, or appliances known by himself as well as the employer to be defective and dangerous. This being true, it is difficult to perceive that there should be a difference, on grounds of policy or justice, between the liability of the employer based on an implied promise or obligation and request, and that based upon an express promise to repair, and request to continue in the service in any case in which the employee knows that the defect has not

been repaired, but continues to use the defective thing, or to work with something known to him to be needful to his safety. . . . When the cause of the injury is the direct act of the master or his representative, it can be said that the servant remaining in the employment is the proximate cause of the injury, even though the servant may have known that the master or his representative had frequently done the same or similar acts which imperilled his safety; for the act which in such cases causes the injury is the wrongful act of the master or of his representative, the result of the exercise of the master's power, and hence the proximate cause of the effect, from which the master ought not to be permitted to be free from liability on the ground that the servant knew he had, before the happening of the injury, done as that from which the injury resulted, but still remained in his service. The force of this reasoning is considerably impaired by the fact that the common-law rule is based out with the assumption that the master is to be determined as whether the servant tends to exempt the servant from charge of contributory negligence by exposing himself to danger, and the court proceeds to discuss the rights of the servant with reference to the defense of contributory negligence, and the actual acceptance of risks. In the remarks of the court, though there is an exception in this one respect, the judgment is perfectly sound in so far as they emphasize the logical difficulty of ascribing any greater efficacy to a promise, than to an implied promise, in a case where both promises are made by the same contracting party, and an express promise can have no greater effect than that of binding him to certain conditions which the promise itself requires him to maintain.

the same as that discussed in the preceding subdivision of this section, the only difference being in the standpoint with reference to which it is enunciated.

c. Servant absolved from charge of contributory negligence.—In case it has been observed that the reason upon which the rule as to the effect of a promise rests is that the promise "relieves the servant from the charge of negligence by continuing in the service after the discovery of the extra perils to which he would be exposed."⁶ As an exposition of the juristic situation, however, this form of statement is logically defective, inasmuch as it ignores the fact that the servant's continuance of work with knowledge of an abnormal risk is indicative not only of the conclusion that the servant was negligent, but also of the conclusion that he impliedly agreed to assume the risk. In some cases this defect is avoided by a form of statement in which mention is made both of the responsibility resting on the master and of the servant's exemption from the charge of contributory negli-

356, 8 Jur. N. S. 992, 10 Week. Rep. 405, we find Chief Justice Cockburn arguing as follows: "It was, indeed, strongly urged upon us, on the part of the defendant, that as the plaintiff, upon becoming aware that the machinery was no longer properly fenced, instead of refusing to go on, as he might have done, continued to perform his service with a knowledge of the increased risk to which he was exposed, he must be taken to have voluntarily incurred the danger, and is, therefore, in the same position as if he had originally accepted the service as one to be performed on unfenced machinery. I am, however, of opinion that there is a sound distinction between the case of a servant who knowingly enters into a contract to work on defective machinery, and that of one who, on a temporary defect arising, is induced by the master, after the defect has been brought to the knowledge of the latter, to continue to perform his service under a promise that the defect shall be remedied. In the latter case, it seems to me that the servant by no means waives his right to hold the master responsible for any injury which may arise to him from the omission of the master to fulfil his obligation." This conception of a promise, being an evidential factor which tends to rebut the inference of waiver, is also relied upon

in the following cases: *Gorman v. Des Moines Brick Mfg. Co.* (1896) 99 Iowa, 257, 68 N. W. 674; *Picart v. Chicago, R. I. & P. R. Co.* (1891) 82 Iowa, 148, 47 N. W. 1047; *Union Mfg. Co. v. Horvick* (1883) 40 Ohio St. 148, 48 Am. Rep. 669; *Louisville & V. R. Co. v. Kenley* (1893) 92 Tenn. 207, 21 S. W. 326; *Powers v. Standard Oil Co.* (1898) 53 S. C. 358, 31 S. E. 276.

In a syllabus written by the court in a recent Kansas case, the somewhat singular language is used, that if the employer instructs the servant to go ahead and use certain defective tools, promising that he will send them in for repair, and the employee continues to use the tools under such promise, this is a waiver on the part of the company of the assumption of risk by the employee. *Missouri, K. & T. R. Co. v. Pickett* (1901) 62 Kan. 770, 64 Pac. 631. It is apprehended that the term "waiver" is properly, if not exclusively, applicable only to those cases in which a right of action is relinquished, and not to those cases in which a person sued does something which disables him from relying on a certain defense.

⁶ *Missouri Furnace Co. v. Abend* (1883) 107 Ill. 41, 47 Am. Rep. 425. Similar language is used in *Chicago Bridge & Iron Co. v. Hayes* (1900) 91 Ill. App. 269.

gence.⁷ But it seems to be decidedly preferable, in defining the effect of a promise with relation to the question of the servant's negligence, to say that the contract evidenced by the promise, whether be regarded as being entirely new, or as being simply a continuance of the original one (see subd. *a*, *supra*), differs from the original contract of employment in this respect,—that, even in jurisdictions where the servant's continuance of work with knowledge of an actual risk is considered to render him chargeable, as a matter of course, with negligence, the inference of culpability ceases to be a permanent one as soon as it is shown that the continuance of work was induced by a promise to remove the cause of danger.

425. Assumption of risks as a defense.—*a. During the period covered by the promise.*—An obvious corollary from the principle explained in § 424, subds. *a*, *b*, *supra*, is that, as long as the promise is running which is conceived to be covered by the promise, the defense of an assumption of the given risk cannot be relied upon by the master. This doctrine is affirmed or taken for granted in all the decisions cited at the place referred to.¹

It is not disputed that, if no specified time is designated by the promisor for the restoration of safe conditions, the suspension of the master's right to avail himself of this defense continues for a reasonable

¹As, where it is said that the effect of a promise is to continue or revive the liability of the employer, and to absolve the employee from the imputation of contributory negligence, springing out of the continued service. *Woodward Iron Co. v. Jones* (1885) 80 Ala. 123. Or that evidence of the giving of a promise tends to rebut the inference of contributory negligence and of a waiver of the servant's right of action. *Powers v. Standard Oil Co.* (1898) 53 S. C. 358, 31 S. E. 276.

²That the servant's nonassumption of the given risk is essentially a conclusion of law, which may be drawn whenever it is clearly established that a categorical promise to remedy the defect was given, and no evidence has been introduced which can fairly be regarded as indicating that only a qualified responsibility was undertaken by the master, would seem to be the more rational doctrine, in view of the effect ascribed to a promise. But in one case the court seems to have adopted the broad theory that it is for the jury, even when such a prom-

ise has been proved, to determine which party the risk lies. *Dem. Sawyer* (1901) 95 Me. 295, 41035, where the plaintiff, who was injured at a saw, notified his employer that he would not continue working on its defective condition, and the employer promised to remove the defect at a more convenient time for him, but the plaintiff returned, and to run the saw as easily and carefully as he could on its defective condition: upon which the plaintiff, making no reply or other test, at once went back to work on the saw, as directed, and was soon afterwards injured thereby.

In this point of view it is difficult to see of notice that, under a statute providing that an assumption of the risk shall not be inferred, as a matter of law, from the mere fact that the servant was employed at the risk, it has been held by the jury to say whether such an assumption shall be inferred from evidence that a promise was given. *Bodie v. C. & W. C. R. Co.* (1901) 61 S. E. 715.

able period.² See §§ 429, 430, *infra*. The rationale of the relations created between the parties by the giving of the promise seems to require that, in determining whether this period had expired in the given instance, the mere fact that the servant had observed, some time after the promise was given, that the dangerous conditions had not been remedied, is not to be treated as a controlling element; and that, in spite of his knowledge that the fulfilment of the promise had been delayed, it may still be an open question whether he was not justified in continuing to perform his duties. But there is also some authority for the doctrine that the promise is no protection to a servant who observes, after the lapse of an appreciable interval, that the dangerous conditions still exist.³ This doctrine the present writer considers to be entirely untenable, for the reason that there is no apparent ground upon which it can be maintained, as a rigid and unvarying proposition of law, that the servant's knowledge which, *ex hypothesi*, had existed at the time when the promise was given, took on another evidential significance from and after the particular moment when he discovered once more that the risk still existed.⁴

² See *Eureka Co. v. Bass* (1886) 81 Ala. 200, 60 Am. Rep. 152, 8 So. 216; *Swift & Co. v. O'Neill* (1900) 187 Ill. 333, 58 N. E. 416; both cited in § 424, note 3, *supra*.

³ Wharton, Neg. § 221. In *Gulf, C. & S. F. R. Co. v. Brentford* (1891) 79 Tex. 619, 15 S. W. 561, the court strongly indicated its preference for this theory.

The objection to the theory on this score is thus elaborated in *Texas & N. O. R. Co. v. Bingle* (1895) 9 Tex. Civ. App. 322, 20 S. W. 674: "It seems to us that such a view, unless it be limited to cases in which the servant has been guilty of negligence, disregards the effect of the promise of the master, as taking upon himself the risk incurred by the servant in doing the work. If the servant, by the promise, is at first justified in remaining in the service, and does not in so doing take upon himself responsibility of the danger incurred, how can it be said that he makes it his own when he continues to work with the defective appliance at the time he receives his hurt? Such a doctrine would entirely destroy the force of the promise as an assumption of responsibility by the master, and force the servant to stop working with the imperfect appliance, notwithstanding such promise, until the repair had been made. Of course, in supposable cases the servant may not be warranted in continuing to

use the machinery, though a promise to repair be made, for the danger may be so great and patent that no prudent man would incur it; or the servant may, by subsequent carelessness of his own, add to the risk assumed by the master, in either of which cases the promise to supply the defect could not avail him. But in our opinion the mere fact that the servant, acting under such a promise, knows at the time he receives his injury from the defective condition that it has not been removed, does not impose upon him the risk, any more than did his continuance in the service with knowledge of the defect at the time the promise was made. The opinion in the *Brentford Case* (see preceding note) deals mainly with the defense of contributory negligence, rather than with that of assumption of risk, and is not a decision of the point now under consideration, though there are expressions in the opinion which seem to controvert the exception to the general rule, arising from a promise to repair. A limitation, generally recognized, upon the doctrine that the promise to repair places the risk upon the master is that the servant can rely upon the promise only for a reasonable time for the master to comply with it; and must not himself be guilty of a want of due care contributing to his injury."

In those exceptional cases where the inference of an assumption of the risk is negative,¹ evidence showing that the servant's assumption of work was voluntary (see § 302, *ante*), the fact that a promise was given manifestly does not affect the servant's position so far as it depends upon the availability of that defense.²

b. After the expiration of the period covered by the promise. It has been laid down that, if the time for the fulfillment of the promise had gone by before the accident, and the servant knew that the promise had not been performed, there is a very strong argument that he was no longer relying upon the promise, but had decided to take the chance. This is a qualified form of statement would seem to justify the inference that the inability of the servant to maintain the action is deemed a question of fact, and this court not to be a conclusion of law, even where it appears that the accident occurred after the expiration of the period expressly or impliedly fixed for the fulfillment of the promise. If this is the meaning of the remark, the present writer ventures to express the opinion that such a doctrine is not a sound one. The master's acceptance of the responsibility is, *ex hypothesi* (§ 424, *supra*), merely temporary, and there is a manifest logical contradiction involved in a doctrine which would permit a jury to find that that responsibility still existed after the period during which he had agreed to undertake it had come to an end. The only rational view seems to be that, as soon as the period contemplated for the removal of the dangerous condition is terminated, the servant's position is precisely what it would have been if no promise had been given; that is to say, he reassumes the position of a free man.

426. Volenti non fit injuria, as a defense.— Under the modern English doctrine that the question whether the action is barred depends upon the operation of the maxim, *Volenti non fit injuria*, is almost invariably a question of fact, one which is to be determined by the jury (see § 377, *ante*).

¹In a case where the servant was working, subject to the provisions of a statute which provided that laborers who hired themselves out to serve on plantations had not the right of leaving the person who hired them, and that they could not be sent away by the proprietor until the term of their engagement had expired, unless good and just cause could be assigned, it was held proper to charge the jury that, if they found that the plaintiff had been employed under a contract for a specified time, and was discharging his duties under such contract, then and in that case it was immaterial whether the defendant, upon being informed of the incom-

petency of the assistant engineer, used to discharge him or refused to do so. *Fairrier v. Carroll* (1883) 10 App. 699.

²*Corrigan v. Hall* (1888) 147 N. E. 530.

³*Illinois Steel Co. v. Mann* 170 Ill. 200, 40 L. R. A. 781, 417, reversing (1896) 67 Ill. 319; *East Tennessee V. & G. R. Co. v. Field* (1883) 12 Lea. 67, 47 L. R. A. 257, 47 S. W. 425 (to evidence sustained where the defendant had worked several days after the accident when a new appliance was to be furnished).

an assumption of the servant's conduct, the fact that a promise was given to the plaintiff's position in the case.⁵

The promise.—It is of the promise that it had been made that he was not to take the risk.⁶ By the inference it is deemed by the court that it appears that the promise was made expressly or impliedly. This is the meaning of the promise, the acceptance of the promise is merely temporary, and in a theory of liability still existed. It is deemed that it had come into existence as soon as the conditions were met. It could have been assumed the risk.⁷ The modern English law is barred by the fact that it is almost invariably held (see § 377, *ante*), it is

clear that a diminished importance attaches to the fact that a promise was given. In the ordinary type of cases it is a merely corroborative circumstance, which tends to sustain the justifiability of a conclusion which the jury usually has a right to draw, even if this element is not present.¹

In the United States no decision has, it would seem, been rendered in which the provinces of the court and jury have been delimited with special reference to this defense. Judging from analogy, it may be supposed that, in a case where it was advisedly relied upon, the juridical situation would be regarded as identical with that which would have existed if the defense of assumption of risks had been raised. See § 376, subd. *b*, *ante*.

427. Contributory negligence as a defense in cases where a promise was given; generally.—*a. During the period covered by the promise.*—The question whether a servant was guilty of contributory negligence in view of the testimony which is commonly produced in cases of the kind under review will be found to depend upon two considerations, *viz.*, whether the election to take the risk was prudent, and if so, whether due care was exercised by the servant in view of the fact that the employment involved an unusual amount of danger.¹ (See chapters XVIII., XIX., *ante*.) But some cases seem to disclose a confusion of thought upon the subject.²

It is manifest that contributory negligence of the latter description merely involves a special application of the general principle that everyone is bound to use that degree of care which the circumstances require, and as the danger covered by the promise is, *ex hypothesi*, greater than that which the servant would ordinarily be called upon to incur, the inquiry in cases dealing with this aspect of his conduct is merely whether he has exercised the increased degree of care de-

ment engineer, promise or refused to do so. (1883) 35 La.

(1888) 145 Mass.

v. Mann (1897) 1 A. 781, 48 N. E. 67. Ill. App. 66; *G. R. Co. v. Doherty*, 67, 47 Am. Rep. 101, 102 (1898) 101 W. 425 (denied) where the servant was to have been

¹ See *Wallace v. Cutler Paper Mills Co.* (1892) 19 So. Sess. Cas. 4th series, 915; *Foley v. Webster* (1892) 2 B. C. 138, in both of which the plaintiff was allowed to recover, although he fully appreciated the risk.

In one Australian case it was held that the maxim, *Volenti non fit injuria*, was a bar to the action where the servant had continued to use a defective boiler after receiving a promise that it would be repaired. *Sinut v. Silva* (1887) 8 New So. Wales, L. R. (L.) 115. But this was decided before the modern English doctrine was established by the rulings of the court of appeal and the House of Lords, and is in any event irreconcilable with *Clarke v.*

Holmes (1862) 7 Harl. & N. 937, 31 L. J. Exch. N. S. 356, 8 Jur. N. S. 992, 10 Week. Rep. 405. See § 123, subd. *b*, *supra*.

² These two points are manifestly quite distinct, and are properly differentiated in *Cornwall v. Hall* (1888) 145 Mass. 468, 11 N. E. 530.

³ See, for example, *Corcoran v. Milwaukee Gaslight Co.* (1892) 81 Wis. 191, 51 N. W. 328, where the court appears to waver between a theory which would deprive the servant of a right to recover on the ground of negligence in continuing to work, and the theory that he did not take appropriate precautions in view of the dangers of the situation.

manded by the increased peril. These cases will be reviewed in a later section (432), and our attention will first be given to those which exemplify the more special and characteristic effects of the promise, and illustrate that form of contributory negligence which consists in staying in a position which necessitates exposure to a continuous risk greater than a prudent man would consent to in the absence of the promise.

The general principle underlying the decisions is that the effect of the promise is merely to strengthen the servant's position in resisting the inference that might be drawn as to his want of care in exposing himself to the particular danger to which the promise related. The promise does not, *ipso facto*, entitle the servant to recover. It would seem to follow, therefore, that the correct theory of the effect of a promise in this connection is simply this,—that in many instances in which, if the element of a promise were abstracted, a servant would have been held negligent, as a matter of law, the presence of the promise renders it necessary to submit the case to the jury.⁴ But

* It has never "been held that the promise of a master to repair a defective machine or implement used in his business, and known by both [him and the servant] to be dangerous, will relieve the servant from the ordinary result of contributory negligence on his own part, though cases may be found in which stress was laid on the fact that such a promise was made." *Gulf, C. & S. F. R. Co. v. Brentford* (1891) 79 Tex. 619, 15 S. W. 561. Disapproving an instruction which permitted the plaintiff to recover merely by reason of his having continued to work in reliance on the promise, and without regard to the question whether he may not have been negligent in the premises. In another case an instruction was held erroneous which in effect declared, as a conclusion of law, that, if the master promised repairs, he was liable, without regard to the character of the defects, or the probability or improbability of danger, or to the question whether, all things considered, the plaintiff was or was not so negligent in continuing to work that he ought not to recover. *McKelvey v. Chesapeake & O. R. Co.* (1891) 35 W. Va. 500, 14 S. E. 261. Compare *Counsell v. Hall* (1888) 145 Mass. 468, 14 N. E. 530; *International & G. N. R. Co. v. Williams* (1891) 82 Tex. 342, 18 S. W. 700, which are to the same effect.

* In a leading case, where the court declared that, apart from the promise, the servant's continuance of work would have been negligence *per se*, the following language was used: "We may add that it was for the jury to say whether

the defect in the cow catcher was such that none but a reckless, utterly careless of his safety, man could have used the engine without it being removed. If, under all the circumstances, and in view of the promise, the servant, by not remedying the defect, the engineer by not wanting in due care in continuing to use the engine, then the company will be excused for the omission to supply better machinery, upon the ground of contributory negligence. That the company knew of the alleged defect was under the circumstances, and as a matter of law, absolutely conclusive of want of due care on his part." *Hough v. P. R. Co.* (1879) 100 U. S. 225, 25 L. ed. 612, 617.

"As the risks to be incurred by a servant, under such circumstances (after a promise), are not assumed by him, but by the master, the loss falls upon the latter, unless the risk to the servant is so great that the law will forbid persons, under such a promise, to take it, and seek compensation in the courts; but, less, having taken it, the servant is not to be held negligent for his own carelessness in performing his duty, has increased the risk and contributed to his own injury. Although the promise may be given, the law does not relieve the servant of the duty to exercise upon men generally of using reasonable care for his safety. But in determining whether or not due care has been exercised in a given case, the promise is a natural effect upon a man of ordinary prudence are to be taken into consideration." *Texas & N. O. R.*

reviewed in a given to those effects of the diligence which exposure to a constant to incur.

O. R. Co. v.

doctrine upon the subject is usually enunciated in the unqualified form that the case is *prima facie* for the jury whenever it is proved that a promise was given.⁵

It is not very material, however, to determine which of these logical standpoints is to be regarded as the appropriate one. For practical purposes the adoption of either involves the result that, in order to preclude the servant from recovery, it must be shown that there is some special reason, apart from the mere continuance of work, for imputing to him contributory negligence. Whether there was such

Bingle (1895) 9 Tex. Civ. App. 322, 29 S. W. 674.

In another case the language used is that a servant who has been promised by the master that an incompetent and unsafe fellow servant shall be removed may remain for a time in the service, without being conclusively chargeable, as a matter of law, with contributory negligence, even though, without such promise, he would have been so chargeable. *Lyberg v. Northern P. R. Co.* (1888) 39 Minn. 15, 38 N. W. 632.

It has been aptly remarked that, relying upon the promises of a master to remove the cause of danger, "the most prudent workmen will often take risks, not merely on account of their own necessities, but in consideration of their employers, whose interests require their continued service." *Union Mfg. Co. v. Morrissey* (1883) 40 Ohio St. 148, 48 Am. Rep. 669.

"No doubt, a defect thus arising in machinery may be such that no man of ordinary prudence would run the hazard of working on it. If a jury should find that a party complaining had materially contributed to the injury by his own rashness, the action could not be maintained, inasmuch as it is well established that a plaintiff who has materially contributed to his own injury, by his own negligence, cannot recover, although he may show negligence in the opposite party. But the question whether the injury of which a plaintiff complains is to be ascribed wholly to the negligence of the defendant, or whether the plaintiff has had any share in bringing it about, is one wholly for the jury. In the present case, the jury have determined this question in favor of the plaintiff, and we are bound by their decision." *Clarke v. Holmes* (1862) 7 Hurlst. & N. 937, 31 L. J. Exch. N. S. 356, 8 Jur. N. S. 992, 10 Week. Rep. 405. See also *Williams v. Whittall* (Q. B. D.; 1835) 2 Times L. R. 165, 80 L. T. Journ.

101; *High Valley Co. v. Warrel* (1898) 25 C. C. A. 540, 55 U. S. App. 437, 84 Fed. 866; *Union Mfg. Co. v. Morrissey* (1883) 40 Ohio St. 148, 48 Am. Rep. 669; *Northern P. R. Co. v. reason in any given case is a question which involves a consideration

the two elements which indicate what may be termed the aggregate amount of the danger to which the servant has exposed himself by continuing work, *viz.*, the imminence and greatness of the peril, and the length of time during which the exposure to it has continued. On the one hand, the more serious the peril, the more rapidly will the permissible period of continuance run out. On the other hand, the fact that under the doctrine of probabilities some accident will sooner or later occur as a result of exposure to an even moderate peril, if it is constantly incurred, for a considerable period, justifies the argument that, the longer the time that has elapsed without a fulfilment of the promise to remedy a defect, the more certainly has the ser-

(1896) 67 Ill. App. 332 (inadequate number of employees); *Tennis & N. O. R. Co. v. Bimble* (1897) 91 Tex. 287, 42 S. W. 971, Denying Writ of Error in (1897) 16 Tex. Civ. App. 653, 41 S. W. 90, First Appeal (1895) 9 Tex. Civ. App. 322, 29 S. W. 674.

Clarke v. Holmes (1862) 7 Hurlst. & N. 937, 31 L. J. Exch. N. S. 356, 8 Jur. N. S. 992, 10 Week. Rep. 405, seems to overthrow the authority of a nisi prius ruling made by Martin, B., in the same year, to the effect that where work is being carried on, part of which is unsafe without certain precautions which the employer promises to provide, and he goes away leaving general directions to get on with the work, and in his absence the dangerous work is carried on before the precautions have been taken, and an injury results to a workman engaged on another part of the work, while knowing of the danger, the latter cannot recover against the employer. *Smith v. Darrell* (1862) 3 Fost. & F. 238. The effect of the promise was not discussed.

The New York court of appeals in one case adopted the theory that there is a formal distinction between the case of a servant who knowingly enters into a contract to work on defective machinery, and that of one who, on a temporary defect arising, is induced by the master, after the defect has been brought to the knowledge of the latter, to continue work under a promise that the defect shall be remedied. *Lanning v. New York C. R. Co.* (1872) 49 N. Y. 521, 10 Am. Rep. 417. In *Sweeney v. Berlin & J. Envelope Co.* (1886) 101 N. Y. 520, 54 Am. Rep. 722, 5 N. E. 358, the court seems to concede that, if the promise there made had related to the removal of a defect in a part of the machine, he

would not necessarily have been guilty of negligence. In both of these cases *Clarke v. Holmes* is cited with approval in a circumstance which leaves no doubt as to the actual position of the court, which is significant in view of the New York decisions commented upon in § *infra*.

Under the Missouri doctrine revised in § 301, *ante*, it is plain that the question of the servant to go to the jury on the question of his contributory negligence is not in any way dependent upon having received a promise from the master that the danger will be removed. *Pinck v. St. Louis Dressed Beef & Curing Co.* (1901) 159 Mo. 467, 61 S. W. 806. But the following statement sensibly has no special reference to the doctrine: "It would be simply intolérable to hold that if an employee, thinking machinery he is using is to some degree unsafe, reports its condition to his employer and is then told to continue to use it for a short time, and that it be immediately repaired, and then obedience to instructions, continues work cautiously, believing that he by great care avoid an accident until evil is remedied, and is injured in consequence of all these precautions, his master not guilty of negligence, but that the servant is, and that therefore there be no recovery. Such a rule, too, would be as bad for the master as it is for the servant. It certainly is not the law." *Conroy v. Vulcan Iron-Works* (1875) Mo. App. 105.

In *Hobbs v. Worthington* (1886) 101 N. Y. 520, 54 Am. Rep. 722, 5 N. E. 358, the court charged the jury as follows: "If the defendant knew of the defect, and undertook to repair it, and the plaintiff went on working, relying on their repairing it, the

been guilty of negligence in continuing in the employment.⁶ It is obvious that, in most instances, both these elements must be considered to some extent. Ordinarily, therefore, it may be said, in mathematical language, that the rights of the servant are determinable with reference to the sum of two variable quantities, though in the nature of the case it usually happens that the principal stress is laid upon one or other of these.

b. After the expiration of the period covered by the promise.—It is clear that, in all cases where the circumstances were such that, if the promise had not been given, the servant's continuance of work would have rendered him chargeable, as a matter of law, with contributory negligence, this defense furnishes a conclusive bar to the action, if the injury was received after the expiration of the period during which the servant was justified in relying on the performance of the promise.⁷ On the other hand, in cases where contributory negligence would not have been viewed as a necessary inference in point of law, the only effect of the expiration of the period covered by the promise is to introduce another evidential item for the consideration of the jury.

428. Contributory negligence, as inferred from the gravity of the risk encountered.—The general rule which is applicable in this connection has been thus laid down: "If the nature of the defects in the machine is such as to create an open, imminent danger such as no prudent man, careful of his life and limb, and none but a reckless man, would risk,

they may be liable. If the plaintiff complained of the defect, and the defendants promised that it should be remedied, he is not to be deprived of his remedy, merely because, relying on their promise, he remained in their employment."

"The probability of suffering injury is measured in some degree by the length of the period of exposure. One may be especially watchful to avoid danger for a time, while the same degree of watchfulness would not be so likely to be exercised continuously." "Reasonably prudent men may expose themselves, for a brief period of time, to possible risks, not of the gravest kind, when they would refuse to do so continuously." *Luberg v. Northern P. R. Co.* (1888) 39 Minn. 15, 38 N. W. 632.

⁶ *Woodward Iron Co. v. Jones* (1885) 80 Ala. 123. In a later case this court again defines its position as follows: "If the employee continues to expose himself to the danger by remaining in

the service longer than this [i. e., a reasonable period], he does so in the face of the fact that the promise of the employer is violated, and that he has no reasonable expectation of its fulfillment. He can no longer, therefore, rely upon the promise, and must know that his continuance in service under such circumstances is equally as hazardous and hopeless of remedy as if no assurance or promise had ever been made. A promise already broken can afford no reasonable guaranty of the fulfillment of any expectation based on its disappointed assurances. . . . The risk, therefore, again becomes his own, and his conduct, as we have said, although not necessarily or *per se* negligent, may or may not become negligent according to the circumstances of the particular case." *Larche Co. v. Bass* (1886) 81 Ala. 290, 60 Am. Rep. 152, 8 So. 216. To the same effect, see *Bridges v. Tennessee Coal, I. & R. Co.* (1895) 109 Ala. 287, 19 So. 495.

then the injury results from his own negligence, . . . but the nature of the defect is not such as to impress a prudent man with feeling or consciousness of imminent danger, then the master is liable."¹

The first half of this statement expresses the rule in the form in which it would naturally take in cases in which the servant's right of recovery is denied. It implies that the mere giving of a promise will of itself suspend the operation of the principle that a servant cannot recover for an injury of which his own negligence was an efficient cause, and that he will, therefore, be unable to maintain an action wherever the danger to which he was exposed after receiving the promise is such that no man of ordinary prudence would have run the hazard of remaining in the employment even for the briefest period.

The second half of the statement expresses the rule in the language which is appropriate to cases in which the servant's right of recovery is conceded. It affirms the principle, applied or enunciated in numerous cases, that the master's promise will entitle the servant to recover for any injury received within a reasonable time after the

¹ *McKelvey v. Chesapeake & O. R. Co.* (1895) 15 Mont. 290, 39 P. (1891) 35 W. Va. 500, 14 S. E. 261. (defective hand car likely to jump track at any moment); *Morb*

² "Where an employee knows that the danger is great and immediate, such as a reasonably prudent man would not assume, he cannot recover for an injury, even though he remained in the employer's service in reliance upon the latter's promise to remedy the defects which produced the danger." *Indianapolis & St. L. R. Co. v. Wm.* (1887) 114 Ind. 20, 14 N. E. 721, 15 N. E. 824. A promise to an employee by a vice principal, to make the place where he is at work safe, does not relieve the employee from the obligation to leave a place which is manifestly or immediately dangerous. *Miller v. Bullion-Breck & C. Min. Co.* (1898) 18 Utah, 358, 55 Pac. 58.

Similar language is used in *Clarke v. Holmes* (1862) 7 Hurlst. & N. 937, 31 L. J. Exch. N. S. 356, 8 Jur. N. S. 992, 10 Week. Rep. 405; *District of Columbia v. McElligott* (1886) 117 U. S. 621, 29 L. ed. 946, 6 Sup. Ct. Rep. 884; *Kane v. Northern C. R. Co.* (1888) 128 U. S. 91, 32 L. ed. 339, 9 Sup. Ct. Rep. 16; *St. Louis, A. & T. R. Co. v. Kellon* (1892) 55 Ark. 483, 18 S. W. 933; *Texas & N. O. R. Co. v. Bingle* (1895) 9 Tex. Civ. App. 322, 29 S. W. 674; *Harvey v. Alturas Gold Min. Co.* (1893; Idaho) 31 Pac. 819; *Smith v. E. W. Backus Lumber Co.* (1896) 64 Minn. 447, 67 N. W. 358; *McAndrews v. Montana Union R.*

Co. (1895) 15 Mont. 290, 39 P. (1891) 35 W. Va. 500, 14 S. E. 261. (defective hand car likely to jump track at any moment); *Morb* *Home Min. Co.* (1894) 53 Kan. 7 Pac. 122 (shaft insufficiently tight—servant already injured once of rocks); *Brewer v. Tennessee C. & R. Co.* (1896) 97 Tenn. 615, 37 549 (employee continued to use walk, upon dismounting from a piece of timber originally 18 inches after it had been worn until it was 2 or 3 inches wide on top). In a case where a laborer was by the fall of a gravel bank which had requested his employer to watch the bank, it is error to charge the jury that, terminating the question of contributory negligence, they need only inquire whether the plaintiff continued at his longer than was reasonably sufficient to enable the employer to provide a watchman to watch the bank. Such an instruction would leave the jury at liberty to find the plaintiff to have been free from contributory negligence, although they may have found from the evidence that no man of ordinary prudence would have altered his position and continued the work for any longer time, without someone being appointed to watch the bank. *District of Columbia v. McElligott* (1886) 117 U. S. 621, 29 L. ed. 946, 6 Sup. Ct. Rep. 884.

ise was given, unless the danger which the master agreed to remove was such that no prudent man would have exposed himself to it.³

Usually, of course, it is a question of fact for the jury whether the defect was one of such nature that only an imprudent man would have continued to use the defective appliance.⁴ The mere fact that the servant was aware that the danger to which he would be exposed was serious is not necessarily conclusive against him. The promise, and its natural effect upon a man of ordinary prudence, are to be taken into consideration.⁵

When the imminence of the danger is relied upon as a circumstance which precludes the servant from recovery, it is necessary to show that the injury was caused by an event which might reasonably have been expected to occur in consequence of the existence of that particular danger to which the master's promise related.⁶

429. Contributory negligence, as inferred from the length of time the servant worked after the giving of the promise.—The circumstances accompanying the promise are sometimes of such a nature as to show that the servant was placed under a peremptory and immediate obligation to discard the defective instrumentality altogether, or to dis-

* *Texas & N. O. R. Co. v. Bingle* (1895) 9 Tex. Civ. App. 322, 29 S. W. 674. A finding, in answer to a special interrogatory, that the danger of using a defective appliance was great, apparent, and continuous, will not overcome the effect of a general verdict for the plaintiff, where there is no finding that an ordinarily prudent man would not have used it under the circumstances. *Indianapolis Union R. Co. v. Ott* (1894) 11 Ind. App. 564, 38 N. E. 842, 39 N. E. 529. See also last note.

* An engineer is not, as a matter of law, negligent in taking out a locomotive with the "chafing-irons" in a defective condition, where he has reported the defect, and the foreman of the roundhouse has promised to repair it when the trip is finished; the only probable imminent danger in such a case being that the engine may part from the tender, and that is not a personal danger but one merely affecting the property of the railroad. A collision which causes the engine to override the tender, and thus cuts off the escape of the engineer, is not an event which is expected to be anticipated. *Greene v. Minnec. tis & St. L. R. Co.* (1883) 31 Minn. 249, 47 Am. Rep. 785, 17 N. W. 378.

continue its use until it should be restored to a normally safe condition.¹ But in the great majority of instances, the mere fact of giving the promise necessarily implies that the servant is expected to continue working. Sometimes the promise is given in words which obligate the master to bring about a restoration of normally safe conditions within a definite time. Under such circumstances it is presumably the duty of the servant to determine, immediately after giving of the promise, whether he will incur a risk which he may possibly have to endure for the entire specified period.² More usually, however, the time at which the promise is to be fulfilled is not expressly mentioned. The legal effect of the promise is then considered to be that normally safe conditions will be restored in a "reasonable time."³ In most of the cases in which this phrase is discussed with reference to specific facts, it is used to define the length of the period during which the servant may continue in the employment, without being necessarily chargeable with negligence.⁴ But

¹ In one case it was considered that the promise of the master in response to a servant's complaints, to furnish a new appliance, amounted to an implied condemnation of the appliance in use, and did not relieve the servant from the imputation of negligence in continuing to use the old appliance. *Purcell Mill & Elevator Co. v. Kirkland* (1898) 2 Ind. Terr. 169, 47 S. W. 311. The servant there was injured by the breaking of a wire rope, which supported him while he was painting a smoke-stack. The court emphasized the fact that the work to be done was only a temporary job, and took the ground that, as it was apparently the understanding of the master that the old rope was to be discarded, the servant was negligent in proceeding to use it without giving the master time to supply a new one. The case is merely a decision upon the evidence, and cannot be regarded as having established any definite legal principle.

If the promise to repair the defective appliance was accompanied by an order to turn it over to the proper agent of the defendant for the purpose of having the repairs made, the servant cannot recover if he goes on using it without any necessity. *Pleasants v. Raleigh & A. Air-Line R. Co.* (1886) 95 N. C. 195.

² Some cases bearing upon one phase of this situation are cited in § 430, note 1, *infra*.

³ *Swift & Co. v. Madden* (1897) 165 Ill. 41, 45 N. E. 979, holding that it was not error to refuse an instruction which

would disable the servant from recovering if the jury found that the promise was indefinite as to the time when the defect should be repaired, and that he continued to work from day to day with the knowledge that no repair had been made. S. P. *Standard Oil Co. v. Helmick* (1897) 148 Ind. 457, 17 14 (arguendo).

⁴ See *Lytle v. Chicago & W. R. Co.* (1890) 84 Mich. 29, 47 N. W. 100; *Swift & Co. v. Madden* (1897) 165 Ill. 41, 45 N. E. 979; *Ferriss v. Berlin Works* (1895) 90 Wis. 541, 63 N. W. 234; *Breckenridge Co. v. Hicks* (1894 Ky. 362, 22 S. W. 554; *Conroy v. Iron Works* (1876) 62 Mo. 102; *Atchison, S. F. R. Co. v. Midgett* (1895) 1 App. 138, 40 Pac. 995; *Louisville R. Co. v. Kenley* (1892) 92 Tenn. 21, 21 S. W. 326; *Woodward Iron Co. v. Jones* (1885) 80 Ala. 123; *Missouri Ice Co. v. Abend* (1883) 107 Ill. 100; *Am. Rep.* 425; *Illinois C. R. Co. v. Creighton* (1895) 63 Ill. App. 100; *Rush v. Missouri P. R. Co.* (1887) Kan. 129, 12 Pac. 582; *Huber v. Son & S. Co.* (1895) 1 Marv. (Del.) 41 Atl. 92 (charge to jury).

Other cases using the same form of expression are cited in the following note.

An instruction as to the effect of a promise is deemed to be erroneous if it omits to notice the qualification of the doctrine by which the servant is excluded from recovery if he continues to work beyond a reasonable time (*See*

ly safe condition. The fact of his expected to be in a safe condition. It is precisely after the time he may possibly be exposed to the danger, and is not a "reasonable time" then considered in a "reasonable time" phrase is disjunctive. The length of the time the employee is exposed to the danger. But, as

we have already seen (§ 425, *supra*), it is also appropriate as a description of the period within which the defense of assumption of risks is not available to the master. So far as appears, the permissible length of the period is determined with reference to the same considerations, whether the former or the latter defense is relied upon. But this aspect of the question has never been discussed; and it seems to be at least open to argument whether identical standards should always be applied in both of these instances.

It is primarily a question for the jury whether the servant had, at the time of the accident, exceeded the limits of the allowable period of continuance of work.² A "reasonable time" has been defined by some courts as being the time which would reasonably be allowed for the performance of the promise;³ by others as the time within which the defect might reasonably have been remedied;⁴ and by others as the time which may elapse while the servant is reasonably expecting the promise to be performed.⁵

In connection with the length of the period which has elapsed since

v. Jacob Dold Packing Co. [1900] 84 Mo. App. 565; or if it gives the jury to understand that the servant is not justified in relying on it, unless the dangerous conditions are to be remedied immediately (*McCormick Harvesting Mach. Co. v. Sendzikowski* [1897] 72 Ill. App. 402).

²*Joliet, A. & N. R. Co. v. Velie* (1891; Ill.) 26 N. E. 1086; *Union Mfg. Co. v. Morrissey* (1883) 40 Ohio St. 148, 48 Am. Rep. 669; *Smith v. E. W. Backus Lumber Co.* (1896) 64 Minn. 447, 67 N. W. 358; *Belair v. Chicago & N. W. P. Co.* (1876) 43 Iowa, 662; *Perriss v. Berlin Mach. Works* (1895) 90 Wis. 541, 63 N. W. 234; *Louisville & N. R. Co. v. Kenley* (1892) 92 Tenn. 207, 21 S. W. 326; *Morback v. Home Min. Co.* (1894) 53 Kan. 731, 37 Pac. 122; *Taylor v. Star Coal Co.* (1899) 110 Iowa, 40, 81 N. W. 249; *Mann v. Lake Shore & M. S. R. Co.* (1900) 124 Mich. 641, 83 N. W. 596.

It is error to charge a jury, without qualification, that a servant who continues to work for six months after ascertaining the existence of a defect is absolved from the charge of contributory negligence, if he notified the master of the existence of the defect which he discovered, and the master promised that the defect would be repaired. *International & G. N. R. Co. v. Williams* (1891) 82 Tex. 342, 18 S. W. 700.

³*Rothemberger v. Northwestern Consolid. Mill. Co.* (1894) 57 Minn. 461, 59

N. W. 531; *Parody v. Chicago, M. & St. P. R. Co.* (1892) 5 McCrary, 38, 15 Fed. 205.

⁴*Harris v. Hewitt* (1896) 64 Minn. 54, 65 N. W. 1085. In *Illinois Steel Co. v. Mann* (1897) 170 Ill. 200, 10 L. R. A. 781, 48 N. E. 417, it was held error (three judges dissenting) to refuse an instruction to the effect that the servant may, while relying on the promise, remain in the service only for such time as would be reasonably sufficient to enable the master to remedy the defect.

⁵*Counsell v. Hall* (1888) 145 Mass. 468, 14 N. E. 530. The better opinion is that a "reasonable time" means the "time which would elapse while the servant is reasonably expecting the promise to be performed." *Mann v. Lake Shore & M. S. R. Co.* (1900) 124 Mich. 641, 83 N. W. 596. It is "for the jury to say whether or not such time had elapsed as would preclude all reasonable expectation that the defect would be remedied." *Taylor v. Star Coal Co.* (1899) 110 Iowa, 40, 81 N. W. 249.

In a standard treatise it is laid down that the servant can recover for an injury caused by the defect "within such a period of time after the promise as it would be reasonable to allow for its performance, and, as we think, for an injury suffered within any period which would not preclude all reasonable expectation that the promise might be kept." *Shearn & Redf. Neg. § 96*, quot-

the giving of the promise with regard to an inorganic agency or business, it is proper to consider the frequency with which the servant was called upon to handle the defective appliance after the promise was received, the opportunities he may have had to examine and the necessity for making that examination, in view of his complaint as to its condition, and the right he had to suppose it had been repaired in pursuance of the promise.⁹ In determining whether the danger incident to a continuance of work with an incompetent subordinate, for a certain period, was such that a prudent man would not have exposed himself to it, even on the faith of the master's promise to remove him, the circumstances to be considered are "the general nature of the employment, the nature and extent of the danger necessarily and generally incident to it when carried on in connection with an incompetent subordinate, as well as the particular nature of the work being done during the period, . . . [covered by the master's promise] and the opportunities which the plaintiff's position presented for self-protection during a brief period by watchfulness, by so ordering the employment . . . as to lessen the risk of his want of skill."¹⁰

The permissible duration of the period of continuance of work is necessarily abbreviated where the master has indicated by his conduct of action that he has done all that he intends to do for the present

ed with approval in *Hough v. Texas & P. R. Co.* (1879) 100 U. S. 213, 25 L. ed. 612.

In *Illinois Steel Co. v. Mann* (1897) 170 Ill. 200, 40 L. R. A. 781, 48 N. E. 417, three of the judges considered the true doctrine to be that the responsibility of the master continues until he fulfills his promise, or notifies the servant of his inability or unwillingness to do so, or until such a length of time has elapsed as would, under all the attending circumstances, make it unreasonable for the servant to rely upon the promise. (The views of the majority of the court are stated in note 7, *supra*.) This doctrine was also adopted in *Texas & P. O. R. Co. v. Bingle* (1897) 91 Tex. 287, 42 S. W. 971.

In *Stephenson v. Duncan* (1889) 73 Wis. 404, 41 N. W. 337, the declaration was held fatally defective for the reason that it averred that the defendant had ample time to put the appliance in safe condition between the time when the plaintiff informed him of the defect and the time of the injury. This allegation was held to imply that the plaintiff continued in his employment beyond the time within which he might reasonably expect the defendant would keep his promise and remedy the defect. On the ground that the question whether a reasonable time to execute repairs had elapsed when the accident occurred was not logically identical with the question whether the servant continued work for more than a reasonable time, it has been held that a complaint in an action for personal injuries to an employee, which denies contributory negligence, alleges that plaintiff complained of defects in the machinery used by him, and that defendant promised to remedy them, and that plaintiff was injured within six days after the promise does not show contributory negligence on the part of plaintiff because of the other allegation that sufficient time for the fulfillment of the promise had elapsed at the time of the injury. *Daugherty v. Midland Steel Co.* (1893) 23 Ind. App. 78, 53 N. E. 844.

⁹ *Belair v. Chicago & N. W. R. Co.* (1876) 43 Iowa, 662.

way of remedying the dangerous conditions, and what has been done is insufficient to afford protection.¹¹

430. Illustrative cases.—In the preceding sections the two main elements involved in cases where a promise has been given have been discussed under their general aspects. In the present section it will be shown how the courts have dealt with evidence presenting various combinations of those elements,—that is to say, longer or shorter periods of continuance in the employment, and dangers of a more or less serious description.

In any case where a prudent man could be justified in remaining in the service at all after the discovery of the danger covered by the promise, the servant cannot be regarded as negligent where he continues to work under a well-founded belief that steps to secure his safety will be taken almost immediately.¹

"In a case where the master had promised to guard defective appliance, it was held erroneous to instruct the jury that if the defendant, pursuant to his promise, erected a guard for the defective appliance a certain time before the accident, but the guard so erected was insufficient, which fact the plaintiff well knew, yet he continued to use the appliance so adjusted without complaint, then he voluntarily assumed the risk of operating the appliance. *Lally v. Crookston Lumber Co.* (1901) 82 Minn. 407, 85 N. W. 157.

In *Morbach v. Home Min. Co.* (1894) 53 Kan. 731, 37 Pac. 122, it was laid down that the servant "should leave his dangerous employment within a reasonable time on discovery of the master's method of doing business, when he finds that the master will not remedy the danger or fulfil his promise in that respect."

¹*Fairbank v. Haentzsch* (1874) 73 Ill. 236 (danger from moving machinery,—no specific time mentioned in promise); *Szendzikowski v. McCormick Harvesting Mach. Co.* (1895) 58 Ill. App. 418 (defective machine,—no specific time mentioned in promise); *Schlacker v. Ashland Iron Min. Co.* (1891) 89 Mich. 253, 50 N. W. 839 (mining company liable for the death of a miner who was directed to remain at work by the mining captain, after complaining of expected danger, and, being left there for two hours, was killed in consequence of so remaining).

In *Madara v. Pottsville Iron & Steel Co.* (1894) 160 Pa. 109, 28 Atl. 639, a father was held entitled to recover for the death of his son, occasioned by the

fact that the platform upon which he was working was obviously too narrow, where the accident happened within twenty minutes after the father had been induced by the boss in charge of the work to allow the deceased to remain temporarily at his employment by the promise that he should be taken right down.

A servant is not, as a matter of law, guilty of contributory negligence because he works in the neighborhood of dangerous machinery from which the covering has been torn away, by continuing in the employment after discovery of the danger, when he has notified the superintendent of the defect, and the latter has directed him to continue at work until noon of the same day, at which time he promises to remedy the defect. *Roux v. Blodgett & D. Lumber Co.* (1891) 85 Mich. 519, 13 L. R. A. 48 N. W. 1092. Where a servant who had asked defendant, his employer, to repair a defect in a circular saw with which plaintiff was working, was assured that it would be repaired in a short time, he is entitled to recover for an injury occasioned by the defect, occurring about twenty minutes thereafter. *Virginia & N. C. Wheel Co. v. Chalkley* (1900) 98 Va. 62, 34 S. E. 976. The right of a servant to recover is a question for the jury, where, after notifying the master that a saw was so coarse as to be dangerous, he returned to work, upon receiving a promise that the defect would be remedied the same day. *Dempsey v. Sawyer* (1901) 95 Me. 295, 49 Atl. 1035. A hole in a road 1½ ft. x 3 ft. in area and 1½ ft. deep does

Courts are particularly inclined to put a lenient construction on the servant's continuance of work, where his immediate desertion from his post would cause extreme inconvenience to his employer and the public, and he may therefore be regarded as having exposed himself to danger from motives of duty. Such cases present themselves where the servant is in control of some machinery used in the business of transportation, which, as is well known, is not infrequently found to be out of order at a time when it will greatly inconvenience traffic to withdraw it temporarily from use.²

The servant has also been allowed to recover in many other cases in which there was no special reason for anticipating that the defect would be speedily repaired, and in which there was nothing to indicate that either the master or the community at large would have

not constitute a defect so imminently dangerous that a teamster employed in hauling bark over the road was not justified in relying on his employer's express promise to repair the defect before he returned with another load the following morning. *Velson v. Shaw* (1899) 102 Wis. 271, 78 N. W. 417.

A miner is justified in continuing his work, where his foreman has promised that a pile of debris, which would obstruct his escape in case of accident, would be removed on the following morning, where there is no indication that any such accident is likely to happen before the promise can be kept. *Kelly v. Fourth of July Min. Co.* (1895) 16 Mont. 484, 41 Pac. 273.

A miner injured by the fall of coal from the roof of the room where he worked is not necessarily chargeable with negligence for failing to saw props of the right length for use and put them up, when the straw boss promised to send someone to do so right away, but failed to keep his promise prior to the accident. *Sugar Creek Coal Min. Co. v. Peterson* (1897) 75 Ill. App. 631, Reversed in (1898) 177 Ill. 324, 52 N. E. 475.

Where a promise does not designate any time at which an incompetent fellow servant will be removed, the plaintiff may reasonably infer that he will be removed at once, or as soon as possible, and the jury, in determining whether he was guilty of negligence in continuing to work, may justifiably consider that such an inference will naturally influence his conduct. *Lyberg v. Northern P. R. Co.* (1888) 39 Minn. 15, 38 N. W. 632.

² In *Greene v. Minneapolis & N. W. R. Co.* (1883) 31 Minn. 248, 4 Rep. 785, 17 N. W. 378, the act was held not to be barred, where an employee was injured while running a defective engine to a certain station, his superior officer having promised to repair it there, if there was time, and, if not, to repair it on his return.

In *Kane v. Northern C. R. Co.* (128 U. S. 91, 92 L. ed. 339, 9 S. Rep. 16, where it was held that an employee on a train owes it to the public as well as to his master, not to neglect his post, and that the absence of a car on one of the cars did not create negligence so imminent as to subject him to charge of recklessness in continuing to work, upon receiving an assurance from the conductor that the defective car would be thrown out of the train before it reached a station a few miles from the place where he noticed the defect.

In another case it has been held that a master is not necessarily negligent for failing to take to the end of the line a defective engine, at the request of his superior officer (master mechanic), an engine the defect of which is a disabled air pump. *Flinn v. Kansas City, St. J. & C. R. Co.* (1883) 78 Mo. 195, 47 Am. R. 100.

In *Harley v. Northern C. R. Co.* (1880) 82 N. Y. 370, some stress was laid on the fact that a promise to repair the track which caused the injury had been given; but the grounds of the decision in the case were in favor of the plaintiff, and the grounds seem to have been that his negligence was imperfect, and that the defect was not so imminent that he was necessarily negligent in obeying the

prejudiced to an unusual extent, if the servant had not placed his personal interests by quitting the employment immediately after he discovered the danger in question. A number of decisions of this type are collected in the note below.²

¹In *Clarke v. Hays*, 142 N. W. 7 (Iowa, 1907), 31 L. Ed. 111, 8 S. W. 2d 356, 8 Am. N. S. 999, 10 Am. Rep. 314, 105, where the railway which caused the injury had remained undisturbed for about a year, and the servant had made frequent complaints, the court of exchequer chamber upheld a verdict absolving the plaintiff of the charge of contributory negligence in continuing to work during that period. But the question whether the time of continuance was unreasonable was not specifically raised either by the court or by counsel.

An electric railway company was held liable for an injury to a workman caused by a defective piece of track, where the company promised the day before the accident to have the defect repaired but neglected to do so. *Harris v. Heath* (1896), 64 Minn. 51, 65 N. W. 1087.

In *R. Heir v. Chicago & N. W. R. Co.* (1876), 13 Iowa, 662, the court refused to say, as a matter of law, that a brakeman waived his objection to a defective drawbar by continuing in the service about three months, during which he had occasional opportunities for a continuing objection. The master's promise had been kept.

A servant is not, as matter of law, to be held negligent for continuing to use a defective truck for six days, where he called attention to its condition three days before the accident and had been promised that, after one, would be furnished promptly. *Talbot Fall & Coal Co. v. Warren* (1898), 28 C. C. A. 540, 55 U. S. App. 437, 84 Fed. 806.

A brakeman is not, as a matter of law, negligent in continuing to use a defective lantern six days after the conductor has promised to furnish a new one. *Hickson, T. & S. P. R. Co. v. Farnigan* (1894), 56 Kan. 109, 12 Pac. 313.

A section hand is not, as matter of law, guilty of contributory negligence in remaining in the employ of a railroad company for three or four days after learning of a defect in the brake on a hand car on which he has been employed, where the road master states that he will have the defect repaired, and the section hand has left off work referred to another car on which he is

employed by the defective car running over it. *Leach & Coal & C. V. R. Co. v. Wood* (1896), Tex. Civ. App. 31 S. W. 101.

A servant is not, as matter of law, guilty of contributory negligence in continuing to work for two or three days on an inclined railway, some boards of which have become loose, where the superintendent has promised to secure them. *Cox v. A. V. & L. Iron Works* (1876), 62 Mo. 36. Remaining at work about fifteen days after a promise to repair a hip-roof floor is not such an unreasonable length of time as to charge a servant with knowledge that there was no intention to change the same. *Webb v. Waggon Co. v. Keck* (1891), 40 Ill. App. 585, 40 Ill. L. m. (1892), 139 Ill. 111, 29 N. E. 714.

In *Leach Co. v. Ross* (1886), 81 Mo. 299, 60 Am. Rep. 452, 8 So. 216, the court set aside a verdict for a miner where the tendency of the fuses supplied to him six days before he was injured, through his returning to the mine in the belief that the fire communicated to the fuse had been extinguished, and the court set aside a verdict for a miner the effect of which the plaintiff could not recover in he continued work beyond a reasonable time. This case was followed in *Dow v. Graham* (1892), 2 Colo. App. 210, 29 Pac. 1047, where a judgment for the plaintiff was reversed because the trial judge had not given an instruction instructing to the jury the law as to reasonable time.

Where a miner drew the attention of his superintendent to the danger arising from the constant fall of pieces of coal from the roof of a gateway which was being cleared without being timbered, it is for the jury to say whether he was negligent in continuing to work for three or four days in reliance upon the assurance of the superintendent that there was no danger, and that the defective conditions would be removed. *Redden v. Utah P. R. Co.* (1887), 5 Idaho 711, 15 Pac. 262. A nonsuit should not be granted in an action for injuries sustained in a mine, where plaintiff has shown that the place was dangerous, that he reported such con-

With respect to dangers created by the incompetency or untidiness of a servant, it has been laid down that contributory negligence will not be inferred in any case where the injured servant was justified in supposing that by the use of additional care he might safely per-

dition to the agents of the employer the day before the accident, who promised to watch the same and timber it when necessary, and assured him of its safety, and directed him to continue work; and, in reliance on such promises and assurances, he did so and received the injury complained of. *Milner v. Balltown Rock & C. Min. Co.* (1898) 48 *Unh.* 358, 55 *Pac.* 58. Where a servant in a mine who was exposed to the risk of injury, owing to the loose condition of the rock in the roof of a mine, went on working in reliance upon the superintendent's promise to have the place of work made secure, and was injured within twenty-four hours afterward by the fall of some apparently solid rock which was carried down with a portion of the loose rock, he was held not to have remained at work for an unreasonable time. *Taylor v. Star Coal Co.* (1899) 110 *Iowa*, 40, 81 *N. W.* 249.

A common laborer injured owing to the want of a guard on an endless chain, and the want of sufficient light, two days after a promise was given to remedy the dangerous conditions, was allowed to recover in *Jensen v. Hudson Sawmill Co.* (1897) 98 *Wis.* 73, 73 *N. W.* 434.

Where the collar of a wood-working machine, called a "shaper," was out of order, in such a way that the hands of the operator were liable to be jerked against the knives, the court refused to hold, as a matter of law, that a servant could not reasonably wait two weeks for the fulfillment of the promise of the superintendent to remedy the defects in the machine, although the latter had repeatedly made the same promise before and failed to keep it. *Meyer v. Gundlach Nelson Mfg. Co.* (1896) 67 *Mo. App.* 389.

In *Rothenberger v. Northwestern Consolid. Min. Co.* (1894) 57 *Minn.* 464, 59 *N. W.* 531, the court refused to set aside a verdict to the effect that a period of ten days was not an unreasonable period during which to continue work in a mill, although the defects in the machinery might have been remedied in about two days if all the other repairs had been postponed to the task of removing the danger complained of.

The case was left to the jury. The servant was injured two days after the giving of a promise of repair, the reason of the fact that the bearing saw became worn, the result of that a portion of the hatching was broken off and struck him. *Ball & C. v. Applegate* (1901) 23 *Ky.* 12, *Rep.* 12 *S. W.* 1124.

It is not negligence, as a matter of law, for a servant who is operating a pump used for converting pig iron into "chant iron," to continue work for a week after a promise has been given to remedy defects therein. *East Chicago & Steel Co. v. Williams* (1899) *Ind. App.* 573, 47 *N. E.* 26.

It is a question for the jury whether an employee in charge of a steam engine was so reckless that he could not recover, where the evidence is that he received a promise that, as soon as certain workmen returned, repairs would be made in a defective valve in a pipe which permitted an escape of steam into the cylinder, sufficient to stop the pump; that a new pump was ordered, but the valve was not repaired; that the escaping steam, while sufficient to stop the old pump, had not started the new pump until the occasion of the injury to the employee, which occurred thirty days after the promise to repair. *Hann v. Lake Shore & M. S. R.* (1900) 124 *Mich.* 644, 83 *N. W.* 57.

A servant who has received a promise that the valves of a hydraulic crane which were so much out of order that the crane was not under control, would be repaired, cannot be held, as a matter of law, to have waited so long as to forfeit the benefit of such promise, when he was injured within six days after the promise was made. *Dougherty v. Bond Steel Co.* (1899) 23 *Ind. App.* 53 *N. E.* 844.

A servant injured a few hours after receiving a promise that better tools would be provided is entitled to recover. *Swift & Co. v. O'Neill* (1900) 18 *Ill.* 337, 58 *N. E.* 416. Affirming (1900) *Ill. App.* 162.

his duties;¹ nor where he might reasonably have thought that he could supervise the other servant's conduct, so as temporarily to avoid any danger from his presence.²

The comparative rarity of the instances in which the courts have undertaken to declare, as a matter of law, that even the giving of a promise would not excuse the servant for remaining in the employment, is indicative of the extreme reluctance with which they interfere with the verdicts of juries on this class of cases. Some illustrative decisions are cited in the note below.³

431. Decisions restricting or ignoring the doctrine as to the effect of

pears that the accident happened two or three days after a promise had been given to remedy the defect. *Roy v. Diamond State Steel Co.* (1900) 2 Penn. (Det.) 525, 17 Atl. 1017.

Evidence that the master's representative had promised to increase the number of servants in a few days is sufficient to take the case to the jury, who have then to decide whether the plaintiff continued to work for more than a reasonable time after such promise. *Joliet, A. & N. R. Co. v. Velle* (1891 Ill.) 26 N. E. 1086.

Curran v. A. H. Stange Co. (1898) 98 Wis. 598, 74 N. W. 377 (servant in sawmill resumed work in reliance on a promise to furnish another sawyer, and was injured a few hours afterward).

The work of directing the movement of logs as they are rolled down on incline is not so extremely dangerous, in view of the incompetency of a fellow workman who starts such logs, that the court should charge, as a matter of law, that the workman injured was guilty of culpable negligence in remaining at work, notwithstanding the employer's promise to put a competent man in the place of the negligent employee. *Crass Lake Logging Co. v. Joyce* (1897) 28 C. C. A. 250, 55 U. S. App. 221, 83 Fed. 989 (time of continuance not stated).

Maitland v. Gilbert Paper Co. (1897) 97 Wis. 476, 72 N. W. 1121 (engineer in charge of stationary engine injured by incompetency of a fireman,—not stated how long after the promise the accident occurred).

A verdict for a blacksmith injured through the incompetency of a helper will not be set aside where the injury was received four days after the master promised to furnish another assistant, and the testimony leaves it doubtful whether he ought, as a reasonable man, to have apprehended the occurrence of

some accident. *Leberg v. Northern P. R. Co.* (1888) 39 Minn. 15, 38 N. W. 632.

*A locomotive fireman who, after completing of the escape of a shield on the glass, indicated the oil supply for the cylinder, and receiving the engineer's promise to see that a shield is furnished, leaves the terminal station where the shield can be procured, and proceeds on a trip, knowing that the promise has not been and cannot be fulfilled until the return, has been held unable to recover for an injury caused by the bursting of the glass. *Albrecht v. Chicago & N. W. R. Co.* (1901) 108 Wis. 530, 53 L. R. A. 653, 81 N. W. 882. In this case the essential ground of the decision seems to have been the minimization of the danger; but stress was also laid upon the facts that the fireman never expected to use the engine after the trip on which he was about to start, and that it was the regular course of the business to have such defects remedied at the end of each trip.

A vicious horse with an old and rotten harness upon it constitutes a combination of conditions so likely to cause an accident that, if the servant is injured in driving the animal, he cannot recover on the ground that he had received, three days previously, a promise that the harness would be repaired or a new one furnished. *Leresque v. Janson* (1895) 165 Mass. 16, 42 N. E. 335. An independent reason for denying recovery in this case was that a new harness had been furnished, in accordance with the promise, and might have been used.

An experienced employee cannot recover if he continues, even for an hour or two, to encounter the obvious and immediate danger of using a cracked saw to cut steel plates. *Erdman v. Illinois Steel Co.* (1897) 95 Wis. 6, 69 N. W. 993.

a promise.—In Scotland the scope of the doctrine with regard to effect of a promise has been considerably restricted by two cases owing to the fact that both cases were decided with relation to sufficiency of the complaint, it is difficult to say what the precatory is which prevails in that country.²

In Massachusetts a decision has recently been rendered in which the court shows some inclination to limit the application of the doctrine respecting a promise, to cases in which the servant was c

¹ According to one of these the doctrine inures to the advantage of the servant only in cases where the negligence of the master consists in the violation of a statutory duty. *Crichton v. Keir* (1863) 1 Sc. Sess. Cas. 3d series, 407, Distinguishing on this ground *Clarke v. Holmes* (1862) 7 Hurlst. & N. 937, 31 L. J. Exch. N. S. 356, 8 Jur. N. S. 992, 10 Week. Rep. 405 (see §§418, 420, *supra*). The precise ruling was that in an action by a railway laborer to recover for an injury caused by the unfitness of a horse, allegations that the master was aware of the animal's unfitness, had promised to provide another, and had induced the plaintiff to go on working by a promise of giving him an assistant to lessen the dangers, which promise the master had not fulfilled, show that the plaintiff knew of the danger of working with the horse and had no claim against the master. The position taken was simply that the servant had been working all along with the same horse. He was accordingly neither in a better nor a worse position in consequence of his resumption of work at the request of the defendant, while the implied contract remained the same as before. The theory thus adopted as to the effect of the English decision cited is based upon what the present writer conceives to be a misunderstanding of its rationale. It is submitted that there is nothing in the opinions which can fairly be construed as a declaration that the doctrine propounded was applicable only in cases where a statute had been violated. Nor does such a theory receive any support from the subsequent English cases in which a promise was involved. In *Smith v. Harvard* (1870) 22 L. T. N. S. 139, the case went off on the point that the servant by whom the promise was made was a mere fellow servant, and the scope of the doctrine as to the effect of a promise was not discussed under its general aspects. In *Wallace v. Whitall* (Q. B. D. 1885) 80 L. T. Journ. 101, 2

Times L. R. 165, the action in which the servant was allowed to recover was brought under the employers' liability act of 1880. But it cannot really be inferred from the language of the court that it was intended to confine the scope of the decision to such cases. The statement of Bowen and Fry, in *Thomas v. Quartermaine* (1887) 18 Q. B. Div. 685, 56 L. J. Q. B. 340, 57 L. T. N. S. 537, 35 Week. Rep. 555, 51 J. P. 516, that the effect of the decision in *Clarke v. Holmes* was, that the mere fact of the servant's knowledge of a risk created by a breach of contract was not sufficient to bar his claim, cannot fairly be construed as a categorical expression of opinion that the doctrine thus declared to have been established was never applicable, unless a breach was involved.

In the second of the Scotch cases referred to in the text, it was held that a complaint was demurrable which averred in effect that the plaintiff, well acquainted with the work done, that he knew there were no materials furnished for making, and that he had complained of the defects of which caused injury, and that he had complained this to the foreman, and had received a promise that the necessary materials would be supplied. *McGee v. T. Iron Co.* (1882) 10 Sc. Sess. Cas. 2d series 955.

² In *McLulay v. Brounlie* (1882) 10 Sc. Sess. Cas. 2d series 975, and in *McLulay v. Brounlie* (1883) 1 Sc. Sess. Cas. 2d series 768, the evidence showed that injured workmen knew of the danger which they were exposed, and that they received a promise from the foreman that the cause of the danger would shortly be removed. The question of the servants' acceptance of the risk or contributory negligence was not discussed, the cases being made to turn upon whether the foreman was a principal or not.

regard to the two cases.¹ But in relation to the precise the-

ered in which on of the doc- nt was operat-

tion in which the to recover was employers' liability cannot reasonably language of the led to confine th to such actions and Fry, L. J., *McAlpine* (1887) L. R. L. J. Q. B. Div. 7, 35 Week. Rep. The effect of the *Holmes* was the vant's knowledge breach of a statu- to bar his action as a categorical on that the doc- have been estab- able, unless such

Went (1860) 22 975, and *Se. Sess. Cas. 3*, showed that the e of the danger ved. The ques- ceptance of the gligence was not ng made to turn men were vic-

ing the defective appliance, and to deny its benefits to an employee whose functions are to keep certain parts of the appliance in order.² No reasons are suggested for drawing this distinction, and, so far as the decision is based upon the existence of such a distinction, it seems to be of very questionable correctness. But on the facts it is doubtless sustainable for the reason that the promise was not given by any employee who was authorized to make it in the employer's behalf.

In one Wisconsin case it was said to be quite doubtful whether the rule that a servant is entitled to go on work for a reasonable time after a promise to remove a danger, without his being charged with an assumption of the risk, is applicable to any other cases except those in which machinery or tools are found to be defective.³ But it will be apparent, on referring to § 424, note 8, *supra*, and note 5 to the present section, that the Federal decision cited by the court⁴ does not warrant this expression of doubt, -at all events with relation to the circumstances involved.

In a New York case in which recovery was denied on the ground that the injury was caused by a simple appliance, the defects of which were understood as fully by the servant as by the employer, and that, for this reason, no negligence was imputable to the master, the court declined to attribute any differentiating significance to the fact that the employer had promised to furnish a safer instrumentality.⁵ The

¹*Silvia v. Wampunog Mills* (1900) 177 Mass. 194, 58 N. E. 590. There the hand of a picker loom was caught, while it was repairing the machine, in the beater of a picker which started owing to the fact that a shipper was defective and allowed the belt to shift. Recovery was denied upon evidence which showed that he had made no complaint to the over-seeer, but that two or three days before the accident he had observed the shipper to be defective, and had taken it to the boss machinist, who had no authority over him, to get a new one, and, as there were none on hand, had put it back, by the orders of the machinist, who promised to procure another in a few days.

²*Shawalter v. Fairbanks* (1894) 85 Wis. 376, 60 N. W. 257 (trench caved in).

³*Gowen v. Harlow* (1893) 6 C. C. A. 190, 12 U. S. App. 573, 56 Fed. 973.

⁴*Marsh v. Chelvering* (1886) 101 N. Y. 396, 5 N. E. 56 (ladder not being provided with spokes slipped under a servant who had mounted it to light a lamp). The following extract from the majority opinion (Ruger, Ch. J., dis-

sented) shows the position of the court with regard to the main and subsidiary questions involved: "As a general rule it is to be supposed that the master who employs a servant has a better and more comprehensive knowledge as to the machinery and materials to be used than the employee, who has claims upon his protection against the use of defective or improper materials, or appliances while engaged in the performance of the service required of him. The rule stated, however, is not applicable in all cases, and where the servant has equal knowledge with the master as to the machinery used or the means employed in the performance of the work devolving upon him, and a full knowledge of existing defects, it does not necessarily follow that the master is liable for injuries sustained by reason of the use thereof. In considering the application of the rule just stated, due regard must be had to the limited knowledge of the employee, as to the machinery and structure on which he is employed and to his expertise and intelligence, and to the fact that the servant has a right to rely upon the master to protect him from danger and

injury, and in selecting the agent from which it may arise. . . . In cases, however, where persons are employed in the performance of ordinary labor, in which no machinery is used, and no materials furnished, the use of which requires the exercise of great skill and care, it can scarcely be claimed that a defective instrument or tool furnished by the master of which the employee has full knowledge and comprehension, can be regarded as making out a case of liability within the rule laid down. A common laborer who uses agricultural implements while at work upon a farm or in a garden, or one who is employed in any service not requiring great skill and judgment, and who uses the ordinary tools employed in such work, to which he is accustomed and in regard to which he has perfect knowledge, can hardly be said to have a claim against his employer for negligence, if in using a utensil which he knows to be defective, he is accidentally injured. It does not rest with the servant to say that the master has superior knowledge, and has thereby imposed upon him. He fully comprehends that the instrument which he employs is not perfect, and if he is thereby injured it is by reason of his own fault and negligence. The fact that he notified the master of the defect and asked for another instrument, and the master promised to furnish the same, in such a case, does not render the master responsible if an accident occurs. We have been referred to no adjudicated case which upholds the liability of a party under circumstances of the same character as those presented by the evidence here. A rule imposing such a liability in the case considered would be far reaching, and would extend the principle stated to many of the vocations of life for which it was never intended. It is one of a just and salutary character, designed for the benefit of employees engaged in work where machinery and materials are used of which they can have but little knowledge, and not for those engaged in ordinary labor which only requires the use of implements with which they are entirely familiar. The plaintiff was of the latter class of laborers, and the work in which he was engaged was not of a character which would entitle him to the protection of the principle referred to."

Later New York cases in which the doctrine of this case has been approved are cited in note 8, *infra*. It has also

been followed in other states, by the subjoined rulings:

One employed to make general about a building is guilty of negligence in attempting to ascend a ladder on a slippery floor, without him ranging, under his duty of general pairing, some appliance, fixture guard to make the foot of the ladder secure, although the employer had only promised to procure a safe *Carson v. Milwaukee Gaslight Co.* (1892) 81 Wis. 191, 51 N. W. 32. An employer is not liable for personal injuries sustained by his employee of an obvious defect in a ladder, the nailing of the nails being partially drawn from the steps, and which have been easily remedied with a nail or brick if a hatchet or hammer were obtainable, although he had informed the employer thereof and the latter had promised him it was safe for the present to remedy it. *Meador v. Stone & M. S. R. Co.* (1894) 132 Ill. 290, 37 N. E. 721. The rule that the master is responsible for damages resulting to a servant from defects in machinery and appliances of which the servant has notified him and which he has promised to repair governs cases in which machinery or tools that are in the work are discovered to be only defective while in use, and in which tools or machinery are necessary for the safe performance of work. It has no application to cases where the service required is manual labor without tools or machinery, and where no such tools or appliances are necessary to the performance of the work with a reasonable degree of safety. *Gowen v. Harley* (1893) 101 N. Y. 396, 5 N. E. 56, was applied in *C. A. 190, 12 U. S. App. 574, 580, 973*, where it was held that a servant could not recover damages for the breach of his employer's promise to furnish skids for the purpose of transferring a box weighing about 250 pounds from a railroad car to another, only a few feet away. The general principle was laid down in *Marsh v. Chickering* (1891) 101 N. Y. 396, 5 N. E. 56, was applied but the decision was also based on consideration that the promise was that a danger would be removed merely that additional facilities for doing the work would be furnished.

In a short *per curiam* judgment it has been held that a painter who uses a defective ladder, knowing its defective condition, assumes the risk of its use.

effect of this decision, when taken in connection with two other rulings of the same court⁷ is to establish in this state the doctrine that, notwithstanding a promise of the master to render the conditions safer, the risks arising from the character or condition of simple appliances, are assumed by the servant, in so far as they are known to him, while, in the case of appliances not coming under that description, the effect of such a promise is to shift the responsibility to the master for a certain period.⁸

cannot recover the injuries sustained by falling therefrom, although his employer promised to supply him with a better ladder, directing him to use the defective one in the meantime. The decision was put on the broad ground that the servant had wantonly and recklessly encountered a risk of an obvious character. *St. Louis, A. & T. R. Co. v. Kelton* (1892) 55 Ark. 483, 18 S. W. 933. No cases are cited, but the decision was probably based on *Marsh v. Chickering*, *supra*.

In *Illinois Steel Co. v. Schymannowski* (1896) 162 Ill. 461, 44 N. E. 876, the court seems to consider that this qualification of the general rule is referable, not only to the fact that the danger in such case is obvious, but that the continued use of the tool after knowledge of the defect, and after the lapse of more than a reasonable time since the promise to remedy it was made, indicates recklessness. This introduction of the factor of reasonable time is not justified by anything said by the New York court, and it must therefore remain somewhat doubtful whether the New York ruling would be followed in Illinois without reservation, if the consideration here emphasized were eliminated from the case.

In Missouri it is held that to continue using even a simple appliance in reliance upon the master's promise is not negligence, as a matter of law. *Warner v. Chicago, R. I. & P. R. Co.* (1895) 62 Mo. App. 192.

⁷ *Lanning v. New York C. R. Co.* (1872) 49 N. Y. 521, 10 Am. Rep. 417; *Successy v. Berlin & J. Euclidean Co.* (1886) 101 N. Y. 520, 54 Am. Rep. 722, 5 N. E. 358. See § 426, note 6, *supra*. The actual date of the latter of these cases is subsequent to that of *Marsh v. Chickering*, *supra*, though it was decided in the same year.

⁸ In *Spencer v. Worthington* (1899) 44 App. Div. 496, 60 N. Y. Supp. 873, the court rejected the contention of counsel

that this doctrine had been adopted in New York. But the writer confesses his inability to see how any other conclusion is possible, when the language used and the facts discussed in the cases cited in the last note, and in *Marsh v. Chickering*, are collated. In the earlier cases the doctrine of *Chickering v. Holman* (1861) 7 Hurlst. & N. 937, 31 L. J. Exch. N. S. 356, 8 Jur. N. S. 992, 10 Week. Rep. 105, was expressly approved. In *Marsh v. Chickering* that doctrine is not followed, and the differentiating element relied upon is unquestionably the simple character of the appliance.

In the *Spencer Case* the court expressed the opinion that the distinction suggested by counsel did not rest on any logical foundation. In this opinion the present writer fully agrees, for reasons stated in the text. But he is unable to concur in the inference which seems to be drawn by the court from this absence of any logical foundation for the distinction, *viz.*, that the doctrine of *Marsh v. Chickering* is applicable to all kinds of appliances, since it was held that no recovery could be had by a servant who was injured, while oiling machinery with a can which had a short spout, after the employer had promised to furnish one with a long spout. Such, also, seems to be the effect of two other decisions, in both of which contributory negligence was held to be a bar to the action, and the legal consequences of an assurance that there is no present danger was distinguished from those of a promise of future protection. In one, an employee engaged in moving sand from a sand bank, and familiar with that kind of labor, was denied recovery for an injury caused by the caving in of overhanging gravel and sod, notwithstanding the prior promise of his employer to make the bank secure in a day or two. *McCarthy v. Washburn* (1899) 42 App. Div. 252, 58 N. Y. Supp. 1125. In the other, an action was held not to be maintainable for an injury resulting

It is difficult to see any rational ground upon which the distinctness indicated can be sustained. Its adoption can, it would seem, be justified only upon the hypothesis that one or other of the following propositions is a correct statement of the juristic situation: (1) That in the case of simple appliances, the promise of the master does not in any way, alter or shift his responsibility, even temporarily. (2) That the quantitative value of the constructive knowledge imputed to the servant with regard to the defects in such appliance is different from the quantitative value of such actual knowledge as he may acquire in regard to more elaborate instrumentalities. (3) That the danger of handling simple appliances like ladders, spades, axes, &c. is, as a matter of law, so serious as to require the application of a rule that the master's promise will not warrant a continuance of service where the hazards to which the servant will be exposed are so imminent that no prudent man would encounter them. All three propositions are manifestly untenable: the first because it entails an anomaly of ganging the effect of an express stipulation by the nature of the subject-matter to which it relates; the second, because it involves a logical absurdity; the third, because it ignores the most obvious facts. The conclusion arrived at by the New York court appears to be possibly to be explained by the fact that its attention was not properly directed to the rationale of the effect ascribed to a promise, as being essentially a stipulation by the master to accept temporarily the responsibility for any accident that may occur. See § 4 subd. *a*, *ante*. It seems not reasonable to suppose that, if due prominence had been given to this aspect of the relations of the parties, the learned judges who concurred in the decision in *Marsh v. Chickering* would have been more fully alive to the anomaly of the position to which that decision commits them. It is evident that, so far as other jurisdictions are concerned, the authority of *Marsh v. Chickering* and the cases in which it has been followed is, to say the least, greatly impaired by the omission of the courts to discuss adequately the numerous decisions which, as the preceding sections of this chapter indicate, embody a doctrine essentially inconsistent with that adopted in New York.

In a Maine case the doctrine as to the effect of a promise has, for some reason which is not apparent, been altogether ignored.⁹

from the fall of a brick through the unplanked floor beams of a building under construction, although the employer had previously promised to safeguard him. *Hannigan v. Swift* (1898) 28 App. Div. 176, 50 N. Y. Supp. 845. But the correct theory, it is submitted, is rather that the earlier cases cited in note *supra*, represent the sound doctrine, and that the exception to that doctrine which is embodied in *Marsh v. Chickering* is untenable. See text.

432. Duty of servant to exercise care with respect to the defective instrumentality.—The fact that the master has promised to repair a defect does not relieve the servant of the duty of using reasonable care for his safety.¹ If the servant, by his own negligence in the manner of using the defective appliance, brings injury on himself, the master will not be liable.²

It has been laid down that, in view of the servant's knowledge of the existence of an abnormal danger, a greater degree of care will be required of him than if he had not known of the defect;³ and that it is always an essential question, whether the servant's own care and precautions were proportionately increased in view of his knowledge of the danger.⁴ On the other hand the position has been taken that where an employer directs a servant to continue using a defective tool, and at the same time promises to have it repaired, the employee is not bound to use extra care in using the tool. All that is required of him, it is said, is that, for the purpose of protecting himself against injury, he shall exercise that degree of care which a man of ordinary prudence would exercise when employed in a dangerous service of a similar description.⁵ For practical purposes, however, it may be presumed that the apparent conflict between the standards of duty thus defined is merely superficial. It will hardly be contended that a servant was in the exercise of ordinary care, if his conduct, while he was using a defective appliance, was merely as cautious as that of a prudent person using the same appliance in a sound condition. However this may be it is clear that the employer cannot hold the servant to the exercise of an unerring choice of the best method of obviating difficulties and lessening danger. If the servant uses reasonable and ordinary judgment, he does all that can be required; and the fact that

held that, as a thoroughly familiar with the complex apparatus, the plaintiff could not recover for injuries received from a fall while he was trying to push to a sliding door, although he had already received a promise that it should be repaired.

¹ *Texas & N. O. R. Co. v. Bingle* (1895) 9 Tex. Civ. App. 322, 29 S. W. 674. An employee having the supervision of another employee, and knowing that the latter is an incompetent and careless workman, who trusts himself upon a ladder constructed by the latter, without examining it, cannot recover from the master, although the latter failed to keep his promise to discharge the incompetent employee. *Bolton v. Georgia P. R. Co.* (1889) 83 Ga. 659, 10 S. E. 352.

² *Schlitz v. Pabst Brewing Co.* (1894) 57 Minn. 303, 59 N. W. 188. A servant does not assume the risk from defective machinery by continuing to use the machinery, where he relies upon the promise of the master to remedy the defect; but he may be guilty of contributory negligence in performing an act rendered necessary by such defect. *Gunnau v. Des Moines Brick Mfg. Co.* (1896) 99 Iowa, 257, 68 N. W. 674.

³ *Madar v. Lake Shore & M. S. R. Co.* (1894) 138 Ind. 290, 37 N. E. 721.

⁴ *James v. New American File Co.* (1898) 21 E. L. 125, 42 Atl. 509.

⁵ *Missouri, K. & T. R. Co. v. Puckett* (1901) 62 Kan. 770, 64 Pac. 631.

his judgment may not prove to be absolutely the best does not release the employer from liability.⁶

The doctrine deducible from several decisions is that a servant after intermitting the use of the defective instrumentality to the employer, if the promise relates, is beginning once more to work with it after a lapse of a period reasonably sufficient, if proper diligence has been exercised, to have effected the restoration of normally safe condition. The servant is entitled to act upon the presumption that the defect no longer exists, and is not bound to institute an examination for the purpose of ascertaining whether the promise had been performed, unless there is some indication of danger which would put a prudent man on inquiry.⁷ The rule thus laid down is merely a special application of the general principle discussed in §§ 354, 355, 409, *supra*. In New York, on the other hand, it would seem that the servant is deemed not to be in the exercise of ordinary care if, under the circumstances, he takes it for granted that the dangerous condition has been remedied; and he is bound to make an examination.⁸

⁶ *Illinois C. R. Co. v. Creighton* (1895) 63 Ill. App. 168.

⁷ An engineer who has received a promise that his engine will be repaired, and is absent on sick leave for several days afterwards, is not, as a matter of law, negligent in taking out the engine at the end of that period, without specific information that the repairs have been completed. *Northern P. R. Co. v. Babcock* (1894) 154 U. S. 190, 38 L. ed. 958, 14 Sup. Ct. Rep. 978. Whether one who knew that a machine was defective, and had made complaint as to its condition, was justified in operating it without making an examination, after returning to his work several days later, on the supposition that it had been repaired by the employer as promised, is a question for the jury. *Keeran v. Walker* (1898) 172 Mass. 56, 51 N. E. 449. That an employee, on Monday morning, went to work upon a platform which, the Saturday night before, he knew to be insecure, but which the person charged with the duty of making repairs promised to repair, without making any examination to see if such repairs had been made, is not conclusive of want of due care precluding recovery for injuries received from the insecurity of the platform. *Chapman v. Southern P. Co.* (1895) 12 Utah, 30, 41 Pac. 551.

A hole in a private roadway 18 inches deep, 14 feet one way, and about 3 feet the other way, near the foot of a descent of about 11 feet in a distance of

105 feet, is not so imminently dangerous as to make it contributory negligence as a matter of law, for a teamster in the employ of the owner of such roadway to drive down the hill without first ascertaining whether his employer had deemed his promise to repair sufficient. *Nelson v. Shaw* (1899) 100 N. Y. 274, 78 N. W. 417.

It is proper to instruct the jury that a servant may presume that the employer has complied with his promise to repair a defect in machinery which is apparent upon a casual inspection. The servant is not required to inspect the machinery before using it in order to ascertain whether or not the repairs have been made, unless there is something to indicate the condition of the machinery would cause an ordinarily prudent person to make an examination. *Missouri, K. & T. R. Co. v. Smith* (1899) 20 Tex. Civ. App. 362, 50 S. W. 601.

It has been held that an employer who knows that the machine at which he works is out of repair, and that his low servant has been ordered to use it on a specified day, is guilty of contributory negligence as will preclude recovery for an injury resulting from such defect, in subsequently going to work upon the machine of his own accord, without ascertaining whether or not it had been repaired. *See Roche* (1896) 149 N. Y. 132, 43 N. E. 129, Reviewing (1893) 4 Misc. 2.

he has some positive, tangible ground for supposing that the repairs have been undertaken and completed.⁹ In none of the decisions cited is it explained why the general principle just referred to, that a servant is prima facie entitled to rely upon the master's performance of his obligations, should be deemed subject to an exception in this class of cases.

Under any view of the servant's obligations it is clear that he is chargeable with knowledge of the conditions, where the defect was one of such an obvious kind that, if he had been making ordinary use of his eyesight at the time he was injured, he could not have failed to observe that it had not been repaired.¹⁰

The obligation of the servant to use due care after he has received a promise of repairs does not go to the extent of a requirement that he shall himself take active steps to lessen the danger covered by the promise.¹¹

N. Y. Supp. 118 (sausage-filling machine had a defective valve, which caused it to start suddenly and push the piston head into the meat cylinder, so that the fingers of the operator were liable to be caught). In *Carlson v. Walsh* (1900) 56 App. Div. 551, 67 N. Y. Supp. 516, recovery was denied to a servant who, upon resuming work, was injured by the sudden starting of machinery which the master had promised to repair several weeks previously.

⁹Where a servant resumed the use of a freight elevator several weeks after he received a promise that the automatically closing gates guarding the shaft of the elevator would be repaired, it was held that he was justified in assuming that they were operating properly, the evidence being that during the period that had elapsed since the promise was given, he had seen lumber on the premises, and had been told that carpenters were at work. *Larkin v. Washington Mills Co.* (1899) 45 App. Div. 6, 61 N. Y. Supp. 93.

¹⁰This was the position in *Brewer v. Flint & P. M. R. Co.* (1885) 56 Mich. 620, 23 N. W. 440. In the second of the New York cases just cited a second and

apparently independent ground for the conclusion arrived at was that it was broad daylight when the servant resumed working, and he could have seen the defect if he had looked.

¹¹The fact that a railroad engineer could repair a defective footboard himself, or run the locomotive with it entirely removed, does not render him guilty of contributory negligence in continuing to use it in its defective condition, where the rule of the company provides that employees shall report defects or repair them themselves, and he has reported the defect to the proper person, and been twice assured that it will be repaired. *Gibson v. Minneapolis, St. P. & S. M. R. Co.* (1893) 55 Minn. 177, 56 N. W. 686. Nor is an employee whose duties require him to pass under a coupling of a revolving shaft having protruding bolts under any obligation to turn aside from his ordinary duties and construct a box to cover such coupling, after the foreman's attention has been called to the defect and he has promised to send carpenters to cover it. *Homestake Min. Co. v. Fullerton* (1895) 16 C. C. A. 545, 36 U. S. App. 32, 69 Fed. 923.

CHAPTER XXIII.

RIGHT OF ACTION FOR INJURIES RECEIVED IN OBEYING DIRECT ORDERS.

- 433. Introductory.
- 434. Necessity of showing that an order was given.
- 435. — and was given by some employee who represented the master.
- 436. — and was the inducing motive of the servant's act.
- 437. — and was negligent under the circumstances.
- 438. Assumption of the risk, as a defense.
- 439. Contributory negligence usually negatived by evidence that servant acted under direct order.
- 440. Considerations upon which this doctrine is based.
 - a. Master and servant not upon the same footing.
 - b. Servant entitled to rely on the master's performance of duties.
 - c. Order considered to be an implied assurance that there is no abnormal danger.
 - d. Necessity for prompt obedience.
 - e. Direct order considered as tending to negative voluntary action.
 - f. Direct order considered as tending to produce confusion of mind.
- 441. Direct order not a justification where it was given without authority.
- 442. — nor where a prudent man would have refused to comply with it.
- 443. — nor where the servant fully appreciated the danger.
- 444. — nor where the servant executed it in a negligent manner.

The cases in which the duty to which the order related was outside the scope of the servant's original contract are collected in chapter xxv., *post*.

As to the extent to which the order of a superior employee is an excuse for doing an act violative of a rule, see § 366, note 10, *ante*.

433. Introductory.— The fact that the servant, at the time he was injured, was complying with a direct, specific, personal order of his master, or his master's representative, has, it is well settled, a material bearing upon the question whether he can hold the master responsible.

ble.¹ Broadly speaking, the evidential significance of this fact will be found to be simply this,—that, as it goes to show that the servant's ignorance of the risk to which his injury was due was excusable, or that his action was not entirely voluntary, it tends to negative the availability of the various defenses which, as has been shown at length in chapters xvii. xx., *ante*, are essentially dependent upon proof that the servant voluntarily encountered a danger which was, or ought to have been, comprehended by him.

As a condition precedent to establishing his right to recover for an injury, on the ground that it resulted from his compliance with a specific and direct order, the servant must establish the following propositions:

(1) That an order was given.

(2) That the order, if not given by the master himself, was given by his representative, within the scope of the authority conferred on him.

(3) That the act which led to the injury was done in obedience to the order.

(4) That the order was a negligent one under the circumstances.

The defenses open to the master are the same as those which are available in cases where a specific and direct order is not an evidential element,—*viz.*, that, having a full comprehension of the risks which an obedience to the order involved, the servant was chargeable either with an assumption of those risks, or with contributory negligence in complying with the order, or with contributory negligence in respect to the manner in which he executed the order.

As regards the essential element on which all these defenses are based,—*viz.*, the servant's knowledge of the danger,—it is not amiss to draw attention to the fact that this element is also involved in the investigation of the question as to whether the order was negligent. It will be seen, by referring to § 137, *infra*, that one form of negligence in giving an order is that which consists in not accompanying it by proper instruction and warning, where the person giving it ought to have seen that there was a probability that the servant did not appreciate the danger to which he was being exposed, or had not sufficient intelligence or technical skill to enable him to protect himself.

434. Necessity of showing that an order was given.—It is very sel-

¹ *Holzer v. Case* (1886) 142 Mass. 316, enunciated the doctrine as to the effect of the plaintiff's knowledge of the danger, where the act in question was done in obedience to an order, that an instruction adding words drawing the attention of the jury to the aspect of the evidence.

dom that the significance of the words or gestures which were the inducing cause of the act which resulted in the injury complained of can be a matter of doubt. But it is clear, both on principle and authority, that, in order that the servant may receive the benefit of the inferences as may be drawn from the fact that he was complying with an order, it is not necessary to show that the directions given were of a formally imperative character.¹

435. — and was given by some employee who represented the master.

—On general principles it is manifest that, where the order in question was not given by the employer himself, he cannot be made responsible for an injury caused by obedience to it, unless it proceeded from an agent who had authority to give such a direction with regard to the subject-matter. See chapter xxxiii., *post*. But whether it is also requisite, in order that the master may be charged with responsibility, that the directing employee should be a vice principal in the sense in which that term is understood in cases where the defense of common employment is relied upon, is a question which, under the authorities as they stand, can scarcely be said to have been definitely settled.

In most of the cases cited in the present chapter the servant giving the orders was one who, under the recognized exceptions to the doctrine of common employment, was a vice principal, either because he was a general representative of the master as respects the management of the whole business, or a particular department thereof,¹ or because he was a superior servant in a state where such superiority constituted a vice principalship at common law.² In some cases the directing

¹ A workman who said to the foreman when told to clear the track as a train was coming, "There are two stones on the track;" and was told, "It is time you were getting them off," is justified in considering this an order to take them off. *Stephens v. Hannibal & St. J. R. Co.* (1885) 86 Mo. 221, (1888) 96 Mo. 207, 9 S. W. 589.

² *Kean v. Detroit Copper & Brass Rolling Mills* (1887) 66 Mich. 277, 33 N. W. 395 (superintendent); *Illinois Steel Co. v. Schymanowski* (1895) 59 Ill. App. 32 (superintendent); Affirmed in (1896) 162 Ill. 447, 44 N. E. 876; *Hawkins v. Johnson* (1885) 105 Ind. 29, 55 Am. Rep. 169, 4 N. E. 172 (foreman of factory); *Shortell v. St. Joseph* (1891) 104 Mo. 114, 16 S. W. 397 (engineer in charge of construction); *Colorado Coalfield R. Co. v. O'Brien* (1891) 16 Colo. 219, 27 Pac. 701 (foreman in charge of construction); *Norfolk & Michigon C. R. Co.* (1886) 63 Mich. 121, 29 N. W. 525 (su-

perintendent of construction track); *Norfolk & W. R. Co. v. Ward* (1894) Va. 687, 24 L. R. A. 717, 19 S. E. 108 (foreman in charge of work of excavation); *Coyne v. Union P. R. Co.* (1893) 133 U. S. 370, 33 L. ed. 651, 10 S. W. 2d 382 (foreman of railway construction); *Indiana Car Co. v. Parker* (1890) 100 Ind. 181 (master mechanic); *Overton v. Overton* (1882) 87 Ind. 410 (foreman of road master to trackman).

³ In one case the order was given by a second mate. *Jones v. St. Louis, P. & O. R. Co.* (1890) 43 Mo. App. 119. In others the order was given by a foreman master to a laborer. *Patterson v. Western North Carolina R. Co.* (1890) 96 N. C. 455, 1 S. E. 863; *East Tennessee, V. & G. R. Co. v. Duffield* (1891) 12 Lea, 63, 47 Am. Rep. 219; *Brads v. Louisville & N. R. Co.* (1893) 111 Ky. 1, 11 L. Rep. 688, 21 S. W. 346; *Stephens v. Hannibal & St. J. R. Co.* (1885) 86 Mo. 221; *Schneider v. Chicago & A. R.*

ployee was one for whose negligence the master had been declared liable by a statute in force in the jurisdiction where the injury was received.³

But there are also some decisions which, when collated with others rendered by the same court, would seem to indicate that a master may be bound by an order given by an employee who is not a vice principal.⁴ Whether such a doctrine, if it is really embodied in the cases cited, can be justified on strictly logical grounds, is very doubtful. A mere co-servant who takes upon himself to give an unauthorized order is clearly guilty of negligence, and there is no apparent reason why this fact should not be deemed to let in the defense of common employment.⁵

Different considerations are, of course, controlling where the servant is seeking to exonerate himself from the charge of contributory negligence. See § 441, *infra*. Under such circumstances the essential question is merely whether the injured servant was justified in obeying the order; and in determining that question it is not material to inquire whether the directing party was a vice principal. This aspect of the subject is obviously in need of elucidation by the courts. As the decisions stand, there would seem to be some grounds for saying that a servant may, upon the same facts, fail or succeed in his action, ne-

(1891) 108 Mo. 322, 18 L. R. A. 827, 18 S. W. 1094. In others the order was given by a conductor to a brakeman. *Mason v. Richmond & D. R. Co.* (1892) Iowa, 368, 17 L. R. A. 289, 53 N. W. 111 N. C. 482, 18 L. R. A. 845, 16 S. E. 698; *Shauld v. Georgia, C. & N. R. Co.* (1895) 116 N. C. 968, 21 S. E. 554; *Richmond & D. R. Co. v. Rudd* (1892) 88 Va. 648, 14 S. E. 361; *Norfolk & W. R. Co. v. Ampey* (1896) 93 Va. 108, 25 S. E. 226; *Turner v. Norfolk & W. R. Co.* (1895) 40 W. Va. 675, 22 S. E. 83; *Greer v. Louisville & N. R. Co.* (1893) 94 Ky. 169, 21 S. W. 649.

³ In the following cases the order was that of a section foreman to a laborer: *Jones v. Galveston, H. & S. A. R. Co.* (1895) 11 Tex. Civ. App. 39, 31 S. W. 706; *Texas & P. R. Co. v. Lewis* (1894) Tex. Civ. App. 26 S. W. 873. See also *Bijlman v. Woonsocket Rubber Co.* (1895) 164 Mass. 214, 41 N. E. 265 (fellow servant deputed to instruct a new employee as to the manner of doing work); *Last Chance Min. & Mill. Co. v. Ames* (1896) 23 Colo. 167, 47 Pac. 382 (order of ship-tender to minor).

The following cases were decided with reference to statutes which preclude railway companies from relying on the de-

fense of co-servant: *Central R. Co. v. De Bray* (1883) 71 Ga. 406; *For v. Chicago, St. P. & K. C. R. Co.* (1892) 86 Iowa, 368, 17 L. R. A. 289, 53 N. W. 259; *Strong v. Iowa C. R. Co.* (1895) 94 Iowa, 380, 62 N. W. 799; *Frandsen v. Chicago, R. I. & P. R. Co.* (1873) 36 Iowa, 372; *Smith v. St. Paul & D. R. Co.* (1892) 51 Minn. 86, 52 N. W. 1068.

⁴ This remark is applicable to cases in which the order was given by the captain of a ship to a seaman (*Williams v. Churchill* [1884] 137 Mass. 243, 50 Am. Rep. 304); by the foreman of a gang of trackmen to one of them (*Cook v. St. Paul, M. & M. R. Co.* [1885] 34 Minn. 45, 24 N. W. 311; *Burlington & C. R. Co. v. Liche* [1892] 17 Colo. 280, 29 Pac. 175); or by a conductor to a brakeman (*Louisville, E. & St. L. Consol. R. Co. v. Utz* [1892] 133 Ind. 265, 32 N. E. 881; *Piqueyno v. Chicago & G. T. R. Co.* [1883] 52 Mich. 44, 50 Am. Rep. 243, 17 N. W. 232; *Denver, T. & G. R. Co. v. Simpson* [1891] 16 Colo. 55, 26 Pac. 339).

⁵ In *Bright v. Southern R. Co.* (1897) 80 Fed. 260, an improper order of a section foreman was treated as being the negligence of a fellow servant.

cording as the defense imposed is common employment or ordinary negligence.

436. — and was the inducing motive of the servant's act.—On general principles it is clear that a servant cannot recover on ground that, when the accident occurred, he was complying with an order, unless it is shown that the order was the operative influence led to his doing the act, and was the immediate cause of the injury.

437. — and was negligent under the circumstances.—Whether a given order was a negligent one is ordinarily determined by the application of principles which have been discussed under their general aspect in earlier portions of this treatise. Negligence may be attributed to the master even though he had no knowledge, either actual or constructive, of the possibility that the servant's compliance with the order would involve injury, or that it might possibly prevent a more serious peril. The question whether the peril was or was not known actually or constructively to the master. (See chapters x., xi., &c.)

If there is evidence tending to show that the master was, or the servant was not, chargeable with knowledge of the peril which compliance with the order would involve, and that the master was not, or ought to have been, aware of the servant's ignorance in this respect, the master may properly be found guilty of negligence if it is shown that he gave the order without instructing the servant as to the

¹The fact that an order was given and acted upon by the plaintiff's co-servants is wholly immaterial as an element, where he did not hear it himself, but simply followed their example in doing what he did. *Varach v. Michigan C. R. Co.* (1886) 13 Mich. 121, 20 N. W. 525. A direction to a servant to "hurry up" in her work is not a fact which can be supposed to distract her attention or to affect her power of observation two hours afterwards. *Harold v. Pfister* (1896) 92 Wis. 117, 66 N. W. 355. An angry summons from the master's representative, which the servant complies with so hurriedly that he inadvertently leaves the place of work in a dangerous condition, will not excuse him for shortly afterwards forgetting that condition, the consequence being that he suffers injury. *Brennan v. Front Street Cable R. Co.* (1894) 8 Wash. 363, 36 Pac. 272. (Servant was late on the morning when the accident occurred, and was so hurried when he was called that he left open a manhole containing machinery, and stepped into it a short time afterwards, while performing his duties in great haste).

²Where the employer had no knowledge which should have led him to suppose that the charge in question had not been exploded, it is no ground to order a servant to a manipulator a chain drill. *O'Neil v. O'Leary* (1895) 164 Mass. 11, 41 N. E. 662.

³A tug is not liable for injury to a man who is a member of its crew, falling into the water and being between the boat and wharf, when jumping ashore to catch a line, in obedience to the orders of the master, the distance from the wharf (5 feet) not so great as to render the necessarily dangerous work a matter of primary strength and activity. *Trotter v. Tugboat Co.* (1897) 82 Fed. 111.

⁴In a case where the master ordered his servant to drive a load through a passageway over a board sign was hung, the result was that he was injured, it was held that the question of negligence was left to the jury, upon a charge that the ignorance of the plaintiff and defendant were equal, so that he was either without fault or in equal fault.

ligence a proper inference where the servant was not only not charge-
able with knowledge of the peril, but was also physically and mental-
ly incapable of performing, with reasonable safety, the work to which
that peril was incident.³ But the question whether negligence shall be
predicated on account of the servant's ignorance or inability is deter-
mined with due reference to the consideration that the employer or
his representative is entitled to assume that the servant will exercise
ordinary care in carrying out the order.⁴ Compare § 2302, *note*.

As a servant is presumed to have accepted the responsibility for any
injury which is caused by one of the ordinary risks of the employment
(§§ 259-269, *ante*), negligence is not predicable of an order which
merely exposes him to such a risk.⁵

In several cases it has been held that, if the facts are other-
wise, such as to negative culpability, the master cannot be found guilty of
negligence merely because the testimony also shows that he or his repre-

the plaintiff could not recover. *Haley v. Mfg. Co.*, 1854, 9 Frob. 163, 33
v. *Case* (1884) 112 Mass. 316, 7 N. E. 692.

In *Sullivan v. I. & M. Co.* (1874),
113 Mass. 394, where the defendant had
a verdict, the court remarks, in dis-
cussing the correctness of the charge
given by the trial judge, that where a
boy fourteen years old is injured by
moving machinery, it is competent for
him, although he obeys the order, to
show that the employer was negligent
in exposing him to peril which he was
incapable of appreciating without proper
instructions. Compare § 2357, *note*.

³ *Kelley v. School*, 1 (1892) 151 Pa.
505, 25 Atl. 130 (young and inexperienced
boy ordered to leave his ordinary
work of slate packing and drive a dump
cart).

⁴ It was not negligence to order an
inexperienced railway employee who was
working in a roundhouse and railway
yard, to clean an engine which at the
time was standing still, and who was
injured by its being moved while he was
under it, where he was not told to go
under the engine and there was no reason
to suppose that he would do so.

gallant soil without its being chucked up).

Linberg v. Cress

Vol. 1, M. & S.—78.

representative gave directions by which the injured person was required to use special haste in performing the work in hand.⁶

The omission to give proper orders may, under certain circumstances, be no less culpable than the giving of an improper order. But negligence cannot be inferred on this ground where the master's representative simply failed to give an order to do something which would have the effect of securing them against some danger which the servant could appreciate as well as his superiors, and from which he could protect himself no less effectually than if he had received an order.⁷

438. Assumption of the risk, as a defense.—The principle that a servant, when he is directed either by his master, or by a fellow employee under whose control he is placed, to perform a certain piece of work, or to perform it in a certain place, will ordinarily be justified in obeying the orders so given, without being necessarily chargeable with an assumption of the risks incident to the work, has been recognized in several cases.¹ For practical purposes, however,

⁶The necessity of keeping a construction train out of the way of regular trains being one of the risks incident to the employment of a laborer working on the construction train, he is not entitled to recover on the ground that he and his co-servants were hurried by their superior in the performance of a certain piece of work which it was desired to complete before the arrival of a regular train, and consequently became confused, and failed to act in concert as they should have done. The servant's rights are not enlarged, under such circumstances, by the fact that the order was accompanied by an oath. *Coyne v. Union P. R. Co.* (1889) 133 U. S. 373, 33 L. ed. 655, 10 Sup. Ct. Rep. 382. A jury would not be warranted in finding that an oath addressed to a sailor who knew what to do was sufficient to shift the responsibility for a misstep, on the ground that it confused him and drove him forward into the danger, where the words accompanying the oath carried no specific or wrong direction as to the manner in which the plaintiff should act. *Williams v. Churchill* (1884) 137 Mass. 243, 50 Am. Rep. 304 (plaintiff became entangled in the loose end of a tow rope while acting in obedience to the directions of the master, after he had just cried out with an oath, "You won't get that rope fast"). Merely directing a servant to work "quick" does not render a master liable for injuries

received by him in operating a machine the dangers from which were open and obvious. *Ruchinsky v. French* (1891) 168 Mass. 68, 46 N. E. 417 (verdict for plaintiff rightly directed). An order "proceed quickly, and not waste so much time" in doing a certain part of work in hand, does not show negligence. *Wanner v. Kindel* (1893) 4 Colo. 168, 34 Pac. 1014.

In *Taylor v. Carver Mfg. Co.* (1888) 140 Mass. 150, 3 N. E. 21, and *Coffey v. Merchants' Wooden Co.* (1888) 137 Mass. 182, 15 N. E. 579, the evidence showed that the servant had been ordered to hurry with his work; but the effect of this element was not discussed.

⁷A railroad company is not liable for the negligence of a section foreman failing to direct persons in charge of a hand car upon a track in front of a passenger train to desert the car and get out of the way if they knew of the approach of the train and of the danger of attempting to save the car before the train reached them. *Texas & P. R. Co. v. Felt* (1899) 34 C. C. A. 530, 92 Fed. 811.

¹*Cook v. St. Paul, M. & M. R. Co.* (1885) 34 Minn. 45, 24 N. W. 799. *Strong v. Iowa C. R. Co.* (1895) 130 Iowa, 380, 62 N. W. 799.

In some cases there is traceable a misconception that an order has an effect analogous to that ascribed in some instances to a promise by the master to remove a certain cause of danger (

danger (chap

principle is not of much importance, as the ultimate question to be determined in this as in all other classes of cases when the defense of an assumption of the risk is put forward is simply whether the servant had knowledge, actual or constructive, of that risk, and encountered it without being subjected to what the law regards as coercion. "There is no doubt of the general rule that one who, knowing and appreciating the danger, enters upon a perilous work, even though he does so unwillingly and by order of his superior officer, must bear the risk."² No differentiating significance, therefore, can be ascribed to the fact that the injury was received as the result of obeying an order, where it appears that the servant was merely directed to do something which was a part of the regular work of the establishment in which he was employed, and that the risk to be encountered was fully comprehended by him.³ Similarly, in cases where the only possible inference from the testimony is that the responsibility for any injury that might result from the risk in question had, in consequence of his having remained in the employment with a full knowledge of that risk, been shifted to the servant before the date of the accident, the mutual obligations of the parties are in nowise modified by the fact that the immediate occasion of his being in the position in which he was when the injury was received was his compliance with an order.⁴

ter XXII., *post*); that is to say, it operates as an implied stipulation on the master's part that he will take upon himself the responsibility for any injuries resulting from obedience to the order. See *Indianapolis & C. R. Co. v. Love* (1858) 10 Ind. 554, where the master is said to "assume the risk." The phrase that "the master became subject to all the risk of an accident" is used in *Kehler v. Schwenk* (1892) 151 Pa. 505, 25 Atl. 139.

²*Ferron v. Old Colony R. Co.* (1887) 143 Mass. 197, 9 N. E. 608.

³*Demers v. Deering* (1899) 93 Me. 272, 44 Atl. 922 (servant required to take a position which would ordinarily be taken under the normal conditions of the work); *Fitzgerald v. Honkomp* (1892) 44 Ill. App. 365. One ordered by his foreman to clean rolls in a mill, and who has equal knowledge with the foreman of the danger in attempting to clean them on the front side, assumes the risk of attempting to clean them from that side, whether he ought to have obeyed the order of the foreman or not. *Kean v. Detroit Copper & Brass Rolling Mills* (1887) 66 Mich. 277, 33 N. W. 395.

In *Wilson v. Tremont & S. Mills* (1893) 140 Mass. 151, 34 N. E. 90, where a servant of full age was injured while attempting to hold a bag which was being filled with cotton taken from a dryer, over spikes driven in a beam so high that he could only reach it with his fingers, the court said: "The mere fact that the defendant told him to take the cotton from the dryer did not make a concealed danger of that which was obvious before, or render involuntary his assumption of a risk which was incident to and part of his regular work, and which he knew to be such and understood."

⁴*Linch v. Sagamore Mfg. Co.* (1887) 143 Mass. 206, 9 N. E. 728 (servant injured by explosion of steam pipe caused by his letting steam into it while it was full of water, the danger of doing this being known to him. No recovery, though he was acting under orders, and unwillingly); *Hoth v. Peters* (1882) 55 Wis. 405, 13 N. W. 219 (servant injured by fall of lumber from a car which was slippery from frost and ice cannot recover, though he assumed the place of danger by the direction of the foreman).

A carpenter sent to do some work in

The effect of the decisions, as a whole, may be said to be this,—that the doctrine which declares that a servant acting under the direct orders of the master or a superior co-servant does not assume the risk incident to the work is not applicable except where the service is a special one, and not even then where the danger is obvious to a person of ordinary prudence and intelligence.⁵ In other words, the master does not make himself an insurer of the servant's safety because the latter is requested to incur a danger, provided that danger is not manifestly incident to the employment.⁶

439. Contributory negligence usually negatived by evidence that servant acted under direct order.—For reasons explained in §§ 2319, *ante*, it is plain that negligence cannot be predicated of a servant's obedience to an order, where he had no knowledge, actual or constructive, of the dangerous conditions to which such obedience would expose him.¹ Under such circumstances the fact that a direct order was given obviously becomes wholly immaterial. But there is a large class of cases in which that fact is treated as a differentiating

a brewery, and there directed to place a stringer in a certain room, from which he is driven out by the fumes of ammonia, who when ordered by the superintendent of the brewery to try again, saying that the work must be done, makes another attempt, in which he is seriously injured, assumes all the risk, and cannot recover. *Beittemiller v. Berger & E. Brewing Co.* (1888) 22 W. N. C. 33, 12 Atl. 599. An employee of ordinary intelligence, who knows that trenches are liable to cave in, and that the one in which he is working has just partially caved in at a distance of a few feet, assumes the risk of returning to his work thereon upon an order of the superintendent. *Showalter v. Fairbanks, M. & Co.* (1894) 88 Wis. 376, 60 N. W. 257.

Where a section hand got on a hand car, which he had for three months known to be defective, in obedience to an order of his foreman to go home to dinner, an instruction regarding the liability of an employer who orders a servant into a position of extra hazard is inapplicable and misleading. *Burlington & C. R. Co. v. Liche* (1892) 17 Colo. 280, 29 Pac. 175.

⁵*Stuart v. New Albion Mfg. Co.* (1896) 15 Ind. App. 184, 43 N. E. 961.

⁶In *Welch v. Brainard* (1895) 108 Mich. 38, 65 N. W. 667, it was held that an employer is not liable for an injury to a servant caused by the fall of en-

silage 10 feet deep, resulting from latter's undermining the same, although the former directed the work to be done by undermining, instead of by taking from the top.

¹As, where the appearance of a vessel, in which a servant was ordered to use support himself while washing down, did not indicate its weakness, and he had no knowledge of the length of time it had been in use. *The Ethel* (1899) 96 Fed. 446.

A street-railway conductor who, in emergency and by order of the company's foreman, goes to work to release the brake of a car standing on the track over the pit in the station, and is injured by another car which ran in on the track, because a switch was negligently left open, is not chargeable with fault or neglect in accepting the employment, where he had never worked the pit previously, nor been advised of the risks and dangers of the situation. *Stucke v. Orleans R. Co.* (1898) 50 Ann. 188, 23 So. 342. On the ground that it was for the jury to say whether the servant, a miner, realized the extent of the danger, it was held that negligence was not inferable, as a matter of law, where he obeyed an order to go down the pit to help another miner whom earth had fallen on, and was injured by a second earth-slide. *Frank v. Burlington & C. Min. Co.* (1899) 19 Utah 56 Pac. 419.

this,—that the direct or the risk service is a to a person the master because the danger is one

vidence that in §§ 295, l of a serv- tual or con- ence would direct order ere is also ferentiating

element, and in which the courts apply a doctrine which, in so far as it is susceptible of formal enunciation, may be stated as follows: Although the circumstances, when abstracted from the fact of the giving of the order, may be such as to justify a court in holding that the servant appreciated the danger to which his injury was due, and was negligent in subjecting himself to that danger, such a conclusion is, in a large number of instances, not warrantable, if the testimony goes to show that the immediate occasion of his being subjected to that danger was his compliance with the order.² The effect of this doctrine is that, where the servant, in obedience to an order, performs a duty which, though dangerous, is not so dangerous as to threaten immediate injury, or where it is reasonably probable that the work may be safely done by using more than ordinary caution or skill, he may recover, if injured.³ It will be seen that this rule, when analysed,

² "Questions arise whether the action of a servant is his voluntary act, or done in obedience to the commands of the master or one in authority over him. When an act is performed by a servant in obedience to a command from one having authority to give it, and the performance of the act is attendant with a degree of danger, yet in such case it is not requisite that such servant shall balance the degree of danger, and decide with absolute certainty whether he must do the act, or refrain from it; and his knowledge of attendant danger will not defeat his right of recovery, if, in obeying the command, he acted with that degree of prudence that an ordinarily prudent man would have done under the circumstances." *Chicago Anderson Pressed Brick Co. v. Sobkowick* (1894) 148 Ill. 583, 36 N. E. 572. If the master, knowing of the existence of abnormal dangers, commands and urges the servant to do something which involves exposure to him, and an accident happens in consequence of the servant's obedience, his previous knowledge of those dangers will not, of itself, prevent his recovering damages. *Moline Plow Co. v. Anderson* (1885) 19 Ill. App. 417. That a servant may often be deemed to have used ordinary care for his personal safety, when acting under the express invitation or advice of the master, when, but for that circumstance, his conduct would be deemed clear evidence of negligence, was recently laid down in *Butler Ballast Co. v. Hoshaw* (1901) 94 Ill. App. 68.

³ In *Patterson v. Pittsburg & C. R. Co.* (1874) 76 Pa. 389, 18 Am. Rep. 412,

where the injury was caused by a defective switch, the court said: "Let it be considered that the switch in question was dangerous, yet, doubtless, many trains had passed over it safely, and hence a man of common prudence might well conclude that, though it was more than ordinarily dangerous, yet many more trains might in like manner be passed over it safely. Under such a state of facts the conductor might properly rest upon the judgment of his superiors who requested him to continue its use, hoping that by extra care and skill he might avert accidents until the switch was reconstructed or properly repaired. On the other hand, if the defect was so great that obviously, with the use of the utmost skill and care, the danger was imminent, so much so that none but a reckless man would incur it, the employer would not be liable."

In a case where an engineer was injured by the derailment of his locomotive, due to the fact that he was complying, under protest, with an order to run it to a certain station at a greater rate of speed than the customary rate of 12 miles an hour, the question whether he was guilty of contributory negligence in so running, when he knew, in a general way, of the defective condition of the track, was held to be for the jury. The court said: "It would be a very unjust rule which would allow a master to shield himself from responsibility for the consequence of his own negligence by alleging those acts, not inevitably or immediately dangerous, to have been negligent, which his servant performed by his express order." *Hau-*

amounts to nothing more than a statement that, in determining what ordinary care on the part of a given individual, all the circumstances of his position should be regarded, including, in cases like the present, the servant's orders, the demands of his duty, the apparent risk to be met, and the purpose of his action, no less than his physical su-

ley v. Northern C. R. Co. (1880) 82 N. Y. 370, affirming (1879) 17 Hun, 115, and following the Pennsylvania case *supra*, which has also been approved in *Chicago & N. W. R. Co. v. Bayfield* (1877) 37 Mich. 205, and *Richmond & D. R. Co. v. Kudd* (1892) 88 Va. 648, 14 S. E. 361 (following the Pennsylvania case, where a brakeman who was engaged in uncoupling a car without a stick, in contravention of rules, but by order of the conductor, was thrown off the flat car where he was standing and run over).

"Whether it be the fault of an employee to obey an order of his superior depends upon whether it would be rash and dangerous to do so; and where there was no apparent danger so to do it would not be fault on his part." *Central R. Co. v. De Bray* (1883) 71 Ga. 406.

Whether or not a section hand was guilty of contributory negligence in attempting, in pursuance of the direction of the track foreman, a vice principal, to board an electric car moving at the rate of three or four miles an hour, precluding recovery for his death, caused by falling from the car and being run over by it, is for the jury. *Chattanooga Electric R. Co. v. Lawson* (1898) 101 Tenn. 406, 47 S. W. 489.

Negligence is not a necessary inference from evidence showing that plaintiff's intestate, while in the employ of defendant as a carpenter, was helping to take down an iron pipe used in the erection of a steel grain elevator; that he was ordered by the general foreman of construction to take a pair of longs and go up on the scaffold, 18 feet above the floor, and stand on a board 1 foot wide, and assist in holding the upper sections of the pipe from turning, while the lower section was being unscrewed by the combined strength of three men, of whom the foreman was one; and that, while engaged in doing this, he fell off and was killed. *William Graver Tank Works v. O'Donnell* (1901) 191 Ill. 236, 60 N. E. 831.

The negligence of a member of a section crew in jumping from a train going about 4 miles per hour, to a station plat-

form, in broad daylight, in obedience to the command of the conductor, who was his direct superior, and after fellow laborers had jumped and landed safely, is not so obvious as to be a necessary legal conclusion, but is a question for the jury. *Northern P. R. Co. v. Egle* (1896) 163 U. S. 93, 41 L. ed. 82, 12 Sup. Ct. Rep. 975, affirming (1893) 150 U. S. 471, 12 U. S. App. 271, 56 Fed. 260. Negligence is not inferable as a matter of law, where the evidence shows that a brakeman who was injured by striking against a skid, when complying with an order to dismount at night from a train moving at the rate of from 10 to 15 miles an hour, used his lantern and got off carefully. *Central R. Co. v. De Bray* (1883) 71 Ga. 406.

Evidence of an order from a conductor to a brakeman to cut off some cars from a slowly moving train introduces an element which prevents a court from saying, as a matter of law, that he was negligent in attempting to disengage the cars by going in between them. Under such circumstances he may well have understood that, even if the order was not a specific direction to go in between the cars, he was authorized to get them apart by going in between them, and such a mode as appeared to him, in the exercise of ordinary care, to be necessary. *Hannah v. Connecticut River R. Co.* (1891) 154 Mass. 529, 28 N. E. 68.

A brakeman cannot be held negligent because, on a dark, cold, and stormy night, when he had to act promptly, he complied with an order of his conductor to take up and use a coupling link which was lying on the ground near the track, although it turns out that the link was not suitable for the purpose for which it was required. *Denver, T. & G. R. Co. v. Simpson* (1891) 16 Colo. 55, 26 Pac. 339.

A servant may recover on evidence which shows that he obeyed the order of his superintendent to hold the outer end of a plank, which rested at its inner end on the edge of a wagon bed; that his duty was to lower it slowly to the ground after a heavy barrel which was to be unloaded had been rolled on the inner end, and in this manner

roundings. Having weighed all these considerations, unless the case then discloses that the risk was such as would not be taken by a man of common prudence, so situated, the court cannot justly declare that the taking of that risk by the servant, in obedience to orders, was neg-

form a skidway for the barrel; that the barrel, being forcibly run against the plank, thrust it off of the wagon bed and fell upon it; and that the servant's arm was broken by the shock thus caused. *Beard v. American Car Co.* (1897) 72 Mo. App. 583.

On the ground that the danger was not inevitable nor imminent, the contributory negligence of the servant was held to be for the jury to determine, where the evidence was that, in taking down a furnace, the rear plate, weighing about a ton, and resting on an old brick foundation wall, was disconnected from the front plate, and inclined back against another furnace, 4 inches distant; that after it had so stood for a day to plaintiff's knowledge, he was directed by his employer, under whose immediate orders the work was being done, to take out the front wall bricks, and, on plaintiff saying the best way was to take the plate down first, defendant said that plaintiff should do as he told him; that another person also suggested to defendant that the plate was dangerous, and should be fastened; that the defendant, nevertheless, did nothing, and the plate fell because of the rear foundation giving way, plaintiff's work not affecting it. *Reese v. Clark* (1901) 198 Pa. 312, 47 Atl. 994.

To the same effect, see *Stuart v. Evans* (1883) 49 L. T. N. S. 138, 31 Week. Rep. 706, per Williams, J.; *Illinois Steel Co. v. Schymanowski* (1896) 162 Ill. 447, 44 N. E. 876; *Norfolk & N. R. Co. v. Ampey* (1896) 93 Va. 108, 25 S. E. 226 (servant knew that appliances for coupling were defective, but believed that the coupling ordered could be safely made by hand); *Louisville, E. & St. L. Consol. R. Co. v. Utz* (1892) 133 Ind. 265, 32 N. E. 881 (fact that brakeman walked along the top of a train moving at a high rate of speed not necessarily a bar to his action, where he was acting under orders); *Indiana Car Co. v. Packer* (1885) 100 Ind. 181 (workman not necessarily negligent in changing from one part of his work to another); *Harkins v. Johnson* (1886) 105 Ind. 29, 55 Am. Rep. 169, 4 N. E. 172 (rule that servant must at his peril choose

the safer of two methods of doing his work, not applicable where a servant drove a wagon by express orders along a particular way, and was caught by a shaft which he was stepping over, having found that it was too low to admit of his passing underneath it while seated in the wagon; *Central R. Co. v. De Roer* (1883) 71 Ga. 406 (dockman not necessarily negligent in getting off a moving train by the orders of the conductor); *Page's v. Hooper* (1899) 88 Ill. App. 469 (servant adopted dangerous method of arranging planks to be cut by a rip saw, and had his hand injured); *Harrison v. Denver & R. G. R. Co.* (1894) 7 Utah, 523, 27 P. 728 (ordered to take down a shaffing at night); *Thompson v. Chicago, R. I. & P. R. Co.* (1900) 86 Mo. App. 141 (engine hostler's helper obeyed orders of hostler to couple two tenders so constructed as to come dangerously close together, he not being aware of this fact); *Britton v. Northern P. R. Co.* (1894) 47 Minn. 340, 50 N. W. 231 (section man not necessarily negligent in attempting, at the command of his foreman, to remove a hand car out of the way of a slowly approaching engine); *Culson v. Prince* (1899) 80 Ill. App. 90 (employee operated circular saw without a helper, knowing that it was ordinarily operated by two men); *Verjalk & W. R. Co. v. Ward* (1894) 90 Va. 687, 24 L. R. A. 717, 19 S. E. 849 (servant entered an unusually narrow ditch under peremptory orders to dig it deeper, and it caved in upon him); *McFadden v. Sallitt* (1901) 94 Ill. App. 271 (workman directed by his employer to go under an overhanging bank of earth to assist in placing stone on a wall, not obliged to balance the degree of danger); *Wierzbicki v. Illinois Steel Co.* (1901) 94 Ill. App. 400 (servant knew that the rope on a spool was in an untwisted, loose, and raveled condition); and decisions referred to in this and the next sections.

In an action by a trackman for injuries sustained while attempting to draw a spike in a dangerous manner with a sledge, an instruction that, if the jury believed that defendant's foreman instructed plaintiff to draw spikes in a

ligence.⁴ The practical result of such a doctrine, when stated in terms of the servant's knowledge, is that the servant may maintain an action, unless he not only knows what is the risk to be encountered, but also that it will probably be attended with injury which he cannot avoid by the exercise of care and caution.⁵

In other cases the extent of the servant's right of action is indicated by a restrictive form of statement, and he is said to be entitled to obey a specific command of his superior without incurring thereby the imputation of contributory negligence, unless the execution of that command involves a hazard to which no ordinarily prudent person would have subjected himself;⁶ or unless a reasonably prudent person in that situation and with his knowledge of the danger would not have obeyed the command;⁷ or unless the danger was so "apparent,"⁸ or "obvious,"⁹ or "clear,"¹⁰ or "manifest,"¹¹ or "glaring,"¹² or "imminent"

more dangerous manner than plaintiff had been accustomed to draw them, yet if plaintiff, from his experience, knew that by obeying the order he was undergoing more danger, and obeyed without protest or objection, and was thereby injured, he would not be entitled to recover, is properly refused, since it could not be said, as a matter of law, that the danger that the head of the spike would fly off and strike plaintiff, as it did, by attempting to pull the spike in such manner, was imminent. *Illinois C. R. Co. v. Sporleder* (1900) 90 Ill. App. 590.

The rule that an employer who furnishes a proper machine is not liable to a servant injured while using it for an improper purpose (see § 342, *note*) does not apply in the case of an injury to an inexperienced employee who was using the machine in obedience to the direction of a superior whom it was his duty to obey. *Veachury v. Getchel & M. Lumber & Mfg. Co.* (1896) 100 Iowa, 441, 69 N. W. 743.

⁴ *Schroeder v. Chicago & A. R. Co.* (1891) 108 Mo. 322, 18 L. R. A. 827, 18 S. W. 1094 (where a section man tried to get a hand car off the track when a train was approaching).

⁵ This form of expression is found in *Halliburton v. Wabash R. Co.* (1894) 58 Mo. App. 27.

⁶ *Veachury v. Getchel & M. Lumber & Mfg. Co.* (1896) 100 Iowa, 441, 69 N. W. 743.

⁷ *Stephens v. Hannibal & St. J. R. Co.* (1888) 96 Mo. 207, 9 S. W. 589.

⁸ *Nall v. Louisville, N. A. & C. R. Co.* (1891) 129 Ind. 268, 28 N. E. 183, 611; *Thompson v. Chicago, M. & St. P. R. Co.*

(1883) 4 McCrary, 629, 14 Fed. 50; *Chicago Anderson Pressed Brick Co. v. Sobkowich* (1892) 45 Ill. App. 317, affirmed in (1894) 148 Ill. 573, 36 N. E. 572 (laborer injured by fall of overhanging bank); *Steinhäuser v. Sprague* (1893) 111 Mo. 551, 21 S. W. 515, 80.

⁹ *Texas & P. R. Co. v. Lewis* (1893) Tex. Civ. App. 26 S. W. 873 (section hand not negligent because he obeyed orders to take hand car off track when a train is close at hand). Comp. *Schroeder v. Chicago & A. R. Co.* (1891) 108 Mo. 322, 18 L. R. A. 827, 18 S. W. 1094.

In a case where a servant was ordered to assist in the adjustment of a shackle close to a moving circular saw which was not guarded, and who, after having suggested that the work was not safe unless the saw was stopped, complied with a second and peremptory direction to proceed with the work, and was injured owing to his clothes catching in the saw, the jury were held to have been properly instructed that the plaintiff would not be barred from recovery by the fact that the work was dangerous, unless the danger was so obvious and the injury thereby was so inevitable, that a man of ordinary prudence would have refused to obey, if ordered by his employer to do it. *Van Dusen & Gasoline Engine Co. v. Scheffer* (1899) 61 Ohio St. 298, 55 N. E. 993.

that a person of that average prudence and intelligence whose hypothetical conduct is the test of the existence or absence of negligence would have declined, under the given circumstances, to have complied with the order. In other words, if a danger is not so absolute or imminent that injury must almost necessarily result from obedience to an order, and the servant obeys the order and is injured, the master will not afterwards be allowed to defend himself on the ground that the servant ought not to have obeyed the order.¹⁴

It does not follow that, because disobedience to the order would have been justifiable, the servant was guilty of negligence in obeying it.¹⁵ Still less will the employer be permitted to escape liability on the ground that by disobeying the order the servant would have avoided injury, where it is a reasonable inference from the testimony that it was the servant's duty, under the given circumstances, to encounter the danger in question.¹⁶ Nor does it follow that, because it may

v. Murphy (1888) 115 Ind. 566, 570, 18 N. E. 30; *Lebanon v. McCoy* (1895) 12 Ind. App. 500, 40 N. E. 700 (laborer obeyed order to remove timber lying near a negligently erected bridge); *Norfolk & W. R. Co. v. Ward* (1894) 90 Va. 687, 24 L. R. A. 717, 19 S. E. 849 (day laborer injured by the caving in of the sides of a narrow excavation which the foreman ordered him to dig to a greater depth than was prudent); *East Tennessee, V. & G. R. Co. v. Duffield* (1883) 12 Lea. 69, 47 Am. Rep. 319; *Huhn v. Missouri P. R. Co.* (1887) 92 Mo. 440, 4 S. W. 937; *Shortell v. St. Joseph* (1891) 104 Mo. 114, 16 S. W. 397 (case for jury where a laborer was injured by the fall of an arch while he was taking down the supports); *Stephens v. Hannibal & St. J. R. Co.* (1888) 96 Mo. 207, 9 S. W. 589 (case for jury where section man tried to get two stones off the track when a train was approaching); *Ballard v. Chicago, R. I. & P. R. Co.* (1892) 51 Mo. App. 452 (servant jumped from moving train); *Fogus v. Chicago & A. R. Co.* (1892) 50 Mo. App. 250 (plaintiff injured by the fall of a large wheel which he was helping to move down an incline, against his better judgment); *Hallibarton v. Wabash R. Co.* (1894) 58 Mo. App. 27 (plaintiff injured while following foreman's orders as to way of placing drive wheels under a locomotive).

In a case where an injury caused by a defective car was shown, an instruction that the servant was justified in going in to uncouple the car, under the conductor's order, even though he knew

of its defective condition, unless the danger was so glaring that no prudent person would have attempted it under the existing conditions, is properly given. *Harney v. Missouri P. R. Co.* (1899) 80 Mo. App. 667.

¹⁶ In *Frandsen v. Chicago, R. I. & P. R. Co.* (1873) 36 Iowa, 372, it was held that the following instruction was properly refused: "7. If the jury find that the plaintiff was instructed by the section foreman to assist in removing the hand car, at a time when a person exercising ordinary care and prudence would reasonably apprehend danger to his life or limb, he is not required to obey such instruction; and if the jury further find that he does follow such instruction and is injured, and that by disobeying the same the injury could, by the exercise of ordinary care and judgment, have been avoided, then the defendant is not liable." The court said: "Under the evidence, it was not error to refuse this instruction. We would not say that it might not prop-

be negligence for a superior servant to order his subordinate into a dangerous position into which he himself is to accompany them; they are therefore negligent in complying with the order.¹⁷

The rule as to the qualifying effect of an order is deemed to be especially applicable where the servant is an immature boy, who objects to doing the work, but ultimately did it with reluctance.¹⁸

440. Considerations upon which this doctrine is based.—The doctrine stated in the last section depends upon several different considerations. Some of these, it will be observed, are more or less operative in every case, whether directly relied on or not. Others are applicable only under special circumstances.

a. Master and servant not upon the same footing.—A fundamental principle which has already been discussed under other aspects (§ 408 *et seq.*, *ante*), and which is frequently adverted to in cases of the type reviewed in this chapter, has been thus stated in a leading decision already cited: "The servant does not stand on the same footing with the master. His primary duty is obedience, and if, when in the discharge of that duty, he is damaged through the neglect of the master, it is but meet that he should be recompensed."¹⁹ This essential inequality in the positions of the parties is deemed to warrant the deduction that "a prudent man has a right, within reasonable limits, to rely upon the ability and skill of the agent in whose charge the common master has placed him, and is not bound, at his peril, to set his own judgment above that of his superior."²⁰ In other words, when

erly be given in some possible case, but the bare fact that a position to which an employee is ordered for the discharge of his duty is a dangerous one will not justify his disobedience, since he was employed for that duty, and its discharge may be necessary to save the lives of others; and a failure to do his duty, or disobedience under such circumstances, might be negligence on his part, rendering the employer liable to others injured thereby. To assume a position of danger is not necessarily negligence, but it is often a clear duty, and an employee in such case, even if injured, would have no right of action, since he was employed for such position of danger and paid for assuming it."

"In *Frandsen v. Chicago, R. I. & P. R. Co.* (1873) 36 Iowa, 372, it was on this ground that a section hand should have refused to go with a hand car into a railway cutting, when a train might arrive at any moment. But the court said: "A judicial sanction to such insubordination would breed an infinity of

accidents. Although the train was behind time, this would not justify the boss and men, who constitute the repairing force, in setting off their hand car and awaiting the train. It might not arrive for hours, or possibly might itself be awaiting the arrival of the hand car with men, tools, and material to repair a breach or remove obstructions which stayed its progress. The repairing force, then, should move on both prudently and obediently, to the discharge of its full duty."

¹⁷ *Kehler v. Schreck* (1892) 151 Pa. 505, 25 Atl. 130.

¹⁸ *Patterson v. Pittsburgh & C. R. Co.* (1874) 76 Pa. 389, 18 Am. Rep. 412.

¹⁹ *Indiana Car Co. v. Parker* (1881) 100 Ind. 181. "The master and servant do not stand upon an equal footing, even when they have equal knowledge of the danger. The position of the servant is one of subordination and obedience to the master, and he has the right to rely upon the superior knowledge and skill of the master. The servant is not entire-

servant did not assert his judgment in opposition to the supposed better judgment or stronger will of his master, the law usually allows a jury to determine whether he was negligent, or acted in reliance upon the judgment of his master, or out of a constrained acquiescence in the rule of obedience which his relation as servant imposed.³

free to act upon his own suspicions of danger." *Shortell v. St. Joseph* (1891) 101 Mo. 111, 16 S. W. 397. "Where an employer commands his employee, whom he assumes to direct, to use a defective implement in a particular way, leaving the latter no discretion as to the time or manner of its use, the employee may rely upon the superior knowledge and experience of the employer, unless the defect is so glaring and extreme as to make the danger of using the utensil apparent to anyone." *Jensen Electric Light & P. Co. v. Murphy* (1888) 115 Ind. 506, 48 N. E. 30.

In a case where the servant was injured by falling from a scaffold while he was engaged in taking down a shattering in an insufficiently high room, it was held proper to instruct the jury that if the work ordered to be done was not obviously dangerous, or of such a nature that the servant could see that it could not be performed with safety, or about which there could be a difference of opinion in the minds of reasonable and prudent persons, then the servant was not, at the peril of being discharged, bound to set up his judgment against that of his master. *Harris v. Denver & R. G. W. R. Co.* (1891) 7 Utah, 523, 27 Pac. 728.

³ *Collins v. Norton* (1889) 52 Hun, 9, 1 N. Y. Supp. 771 (servant set to work underneath an unexploded blast, which went off). This decision was reversed in (1891) 126 N. Y. 1, 26 N. E. 905, but merely on the ground that the defense of common employment was a bar to recovery.

In *Hawley v. Northern C. R. Co.* (1880) 82 N. Y. 370, the court argued thus: "We must take into account the plaintiff's position. His business was that of an engineer, and unless he obeyed orders and ran his engine he would have been obliged to abandon the defendant's service; of one thus situated the law should not be too exacting. We must assume that the officers of defendant, who had charge of the road, and must have known its condition, deemed it safe; and the plaintiff had the right to rely somewhat upon their judgment. Other employees of the road, and hun-

dreds of passengers, were daily trusting their lives upon the road, and on the day of the accident he was ordered to, and did, precede a passenger train. Under such circumstances, was the plaintiff bound to set up his judgment against that of all others, and determine for himself that the road was absolutely unsafe for the passage of his engine, and abandon his position as engineer, or take upon himself the risk caused by defendant's negligence? We think, under all the circumstances, and upon all the evidence given on both sides, that it was a question for the jury to determine, whether the plaintiff acted with reasonable prudence and discretion in venturing to run his engine over the road."

An employee injured by the falling of a scaffold, due to his changing, under the orders of the foreman representing the common master, the manner in which it was suspended, is not chargeable with the knowledge that it was unsafe, where there was evidence that scaffolds were sometimes suspended in that way by those engaged in similar work, although he objected to fastening it in that way, as rendering it "liable to come down." *Offutt v. World's Columbian Exposition Co.* (1898) 175 Ill. 472, 51 N. E. 651, Reversing (1897) 73 Ill. App. 231. A railway servant is not, as matter of law, guilty of negligence, where the method pursued by him in loading wheels on a car was adopted by him in reliance upon the judgment and experience of his foreman, and there is nothing to show that such reliance was not justifiable. *Kain v. Smith* (1880) 89 N. Y. 375. A mason is not negligent, as matter of law, in following the instructions of his foreman with regard to the proper manner of setting a certain kind of terra cotta with which he is not familiar. *Gibson v. Sullivan* (1895) 164 Mass. 557, 42 N. E. 110. A laborer in a quarry, who has stood aside while a "boat" loaded with rock is being hoisted to a ledge directly above where he is working, is not necessarily negligent in returning to the place of work in compliance with a signal from his foreman which he supposes to be an intimation that the "load" has been swung past the

The inequality of the positions occupied by a servant and by the master or employer who controls him is usually emphasized as a circumstance indicative of the conclusion that his knowledge was relatively inferior. But under some states of facts this consideration might be material, even though both parties have the same knowledge of the danger.⁴

b. Servant entitled to rely on the master's performance of his duties.—(Compare §§ 354, 355, *ante*.)—A second principle which is especially important in cases where the servant was injured as a result of his compliance with a direct order, and which naturally suggests itself as a material element under such circumstances, is that a servant is not necessarily negligent where he acts upon the presumption that his employer and his employer's agents have done, are doing, and will do, their duty.⁵ The servant

margin of the ledge and is no longer dangerous to a person below, although, as a matter of fact, the danger is not yet over, and the laborer is ultimately injured by the falling of the boat consequent upon its striking against the ledge. *Cor v. Spence Granite Co.* (1890) 39 Mo. App. 424.

Compare also *Illinois Steel Co. v. Schymanski* (1896) 162 Ill. 159, 44 N. E. 876; *McKee v. Touchette* (1896) 167 Mass. 69, 18 L. R. A. 542, 11 N. E. 1071; *Larson v. Center Creek Min. Co.* (1897) 71 Mo. App. 512; *Norfolk & W. R. Co. v. Ward* (1891) 90 Va. 687, 21 L. R. A. 717, 19 S. E. 849; *Colorado Midland R. Co. v. O'Brien* (1891) 16 Colo. 219, 27 Pac. 761 (laborer, not apprehending the risk, went on overloaded construction train); *Turner v. Norfolk & W. R. Co.* (1895) 40 W. Va. 675, 22 S. E. 83 (boy of sixteen years killed while riding on a hand car through a cut in a curve, which his foreman had entered without sending a man ahead with a flag,—not negligent in obeying order to get on the car); *Rogers v. Overton* (1882) 87 Ind. 410 (trackman not negligent in obeying an order of a road master to assist in bending rails without heating them).

⁴It cannot be said that the master and servant are on an equal footing, even where they have equal knowledge of the danger. To so say is against common experience, and in disregard of the fact that the servant occupies a position subordinate to the master. *Stephens v. Hannibal & St. J. R. Co.* (1888) 96 Mo. 207, 9 S. W. 589.

⁵Where an employee, who is not a

ship carpenter, or a joiner, or a mechanic of any kind, and knows nothing about the construction of scaffolding, the forces which it would be required to resist, is put into the hold of a gulch by his employer, and ordered to remove the chips and rubbish from beneath the scaffold, he is entitled to assume that his employer has exercised care in seeing that the scaffolding is of sufficient strength. *Connolly v. Padon* (1861) 11 Barb. 366.

A section hand engaged, under the direction of a foreman of the , eg, in attempting to remove a hand car from the track in order to avoid an approaching train, has the right to presume that a foreman, who is in a situation to devote his whole attention to the approaching train and the efforts of his men to get the hand car off the track, will give such directions as will protect him. *St. Louis, I. M. & S. R. Co. v. Rickman* (1898) 65 Ark. 138, 45 S. W. 56.

See also *Cowley v. Cutting* (1890) 165 Mass. 436, 43 N. E. 197 (servant ordered to steady a stone which is being hoisted by a derrick has a right to rely on the presumption that it is properly fastened); *McWilliam Marble Co. v. Bluet* (1890) 89 Tenn. 118, 14 S. W. 179 (boy set to work under a dangerous projecting rock entitled to assume that it has been tested); *Cook v. St. Paul, M. & W. R. Co.* (1885) 31 Minn. 45, 2 N. W. 311 (floor of depot which had been injured by fire and was under repair gave way); *McGowan v. Central Louisiana R. Co.* (1890) 123 N. Y. 280, 1 N. E. 373 (laborer in a grain elevator who is sent for by the superintendent

29, 57 Am. Rep. 169, 4 N. E. 172. "When

In a logical point of view the principle now under review is more properly treated as one which is distinct from, and independent of, the one noticed in the preceding subdivision, since it is essentially a particular instance of the operation of a general principle which is applicable, irrespective of whether the obligations in question are imposed upon a servant of superior, equal, or inferior, grade. (See §§ 354-356, 409, subd. *c*, *ante*.) But it is sometimes enunciated in a form which shows that it may also be deduced from the conception that the positions of a servant and his superiors are unequal. Thus, it is laid down that the servant has a right to assume that the master, or the master's representative, with their superior knowledge of the conditions, will not expose him to unnecessary perils.⁸ From the principle, considered under this aspect, are deduced the two subsidiary rules, that obedience to an order is not contributory negligence in any case in which the servant has a right to assume that the master will warn him as to any danger which the service may involve;⁹ and that, although a servant is usually deemed to be guilty of negligence, as matter of law, if he unnecessarily put himself in a dangerous position, his culpability, under such circumstances, will be for the jury, where he was entitled to assume that he was ordered to take that position, because his duty required it.¹⁰

the master undertakes to direct specifically the performance of work in a particular manner, we cannot say, as matter of law, that the servant is not justified in relying to some extent upon the knowledge and carefulness of his employer, and in relaxing somewhat the vigilance which otherwise would be incumbent upon him. The servant's attention must be principally directed to the performance of the work in the manner in which he is ordered to perform it, and he may be in a less favorable position to see and judge of the surrounding dangers." *Haley v. Rose* (1886) 142 Mass. 316, 7 N. E. 877.

⁸ *Illinois Steel Co. v. Schymannowski* (1896) 162 Ill. 459, 41 N. E. 876. See also *Powers v. Fall River* (1897) 168 Mass. 60, 46 N. E. 408 (tripod, used instead of derrick for hoisting water pipes, fell into ditch which servant was digging; servant's right to rely on superintendent's experience emphasized); *Holliburn v. Wabash R. Co.* (1891) 58 Mo. App. 27.

A servant "does not stand upon the same footing as his master, as respects the matter of care in inspecting and investigating the risks to which he may be

exposed. He has a right to presume that the master will do his duty in this respect, and, therefore, when directed by proper authority to perform certain services, or to perform them in a certain place, he will ordinarily be justified in obeying orders, without being chargeable with contributory negligence." *Cool v. St. Paul, M. & M. R. Co.* (1885) 34 Minn. 45, 21 N. W. 311.

⁹ *Lozano v. New York & Mt. V. Water Co.* (1890) 55 Hun. 452, 8 N. Y. Supp. 717 (inexperienced servant injured by explosion of dynamite which he was warning at a fire); *Newbury v. Getchel & M. Lumber & Mfg. Co.* (1886) 100 Iowa, 441, 69 N. W. 713; *Clerchard, C. C. & St. L. R. Co. v. Brown* (1890) 6 C. C. A. 112, 18 U. S. App. 10, 56 Fed. 801 (servant, ordered to cut in two one of the supporting posts of a shed, and ignorant that the shed would fall if the posts were cut, should have been warned).

¹⁰ *Light v. Chicago, M. & St. P. R. Co.* (1894) 93 Iowa, 83, 61 N. W. 380, holding that a railroad employee is not, as a matter of law, guilty of contributory negligence in attempting to mount a coal car in obedience to the orders of his

c. Order considered to be an implied assurance that there is no abnormal danger.—It has frequently been declared that a specific order to do a certain act carries with it an implied assurance that the act may be done with reasonable safety.¹¹ It is manifest, however, that under the principles explained in chapters x., xi., *ante*, an employer who would prima facie be held liable for injuries caused by a defective appliance when, without making any inspection, he urged his men forward with words which showed that in his opinion there was no danger, cannot be held liable if such an inspection, made with reasonable care, would not have disclosed the fact that there was a defect in the chain.¹²

As to the effect of an express assurance of safety, see next chapter.

d. Necessity for prompt obedience.—(Compare §§ 358-361, *ante*.)

—Another circumstance which is frequently emphasized is the fact that when a servant is suddenly called upon to execute a piece of work in a particular manner, under the eye of his employer, or his employer's representative, a careful observation of the conditions is generally quite impracticable, if the direction is to be carried out with that

superior, although he might have ridden safely to the place to which he was directed to go on the footboard of the engine.

"The servant has a right to rest upon the assurance that there is no danger which is implied by such an order." *Illinois Steel Co. v. Sekigunowski* (1896) 162 Ill. 159, 11 N. E. 876. See also *Keegan v. Kearsough* (1876) 62 Mo. 232; *Leland v. Hearn* (1900) 49 App. Div. 111, 63 N. Y. Supp. 201; *Dunn v. Connell* (1897) 20 Misc. 727, 16 N. Y. Supp. 584. Affirmed in (1897) 21 Misc. 295, 47 N. Y. Supp. 185.

The question whether, as a matter of fact, a trainman knew, or had an opportunity of knowing, the methods employed by the company in running its train by telegraphic orders, becomes immaterial where the superintendent gave a peremptory order that his train should proceed regardless of the movements of another train traveling in the opposite direction. *Sheehan v. New York C. & H. R. R. Co.* (1883) 91 N. Y. 332. An order by the general superintendent to engineers, "not to run faster than card time until the track can be got into better condition," was in effect a declaration that the road was not necessarily hazardous, and the engineer could continue to run over it, exercising care, and that the superintendent would remedy the defect. *Fulton v. Kansas City, St. J.*

& C. R. R. Co. (1883) 10 West. 418. Former Appeal 78 Mo. 195, 47 Am. Rep. 99. An inexperienced foreigner, imperfectly acquainted with English, who, after a machine has acted in an unexpected manner, appeals for advice to the employee whose duty it is to instruct him, and receives an answer which he supposes to amount to an instruction to go on as before, is not negligent in following that direction. *Bjorkjan v. Woonsocket Rubber Co.* (1895) 164 Mass. 211, 41 N. E. 265.

A servant who drives a wagon along a particular way by the express direction of his master's representative, and is injured by the projecting bolts of a revolving shaft which, when it is too late, he finds himself unable to clear, while seated in the wagon, is not debarred from recovery by the rule that a servant must, at his peril, choose the safer of two alternative methods of doing his work. Such a direction is an implied statement that the way indicated is reasonably safe, and an instruction withdrawing the consideration of the direction from the jury is erroneous, when the question of the servant's exercise of due care is submitted to them. *Hawkins v. Johnson* (1886) 105 Ind. 29, 55 Am. Rep. 169, 4 N. E. 172.

¹² *Rapman v. Dickinson* (1888) 31 W. Va. 148, 6 S. E. 53.

promptitude which is expected from subordinates.¹⁴ The quality import of this circumstance is obviously not diminished by the

¹⁴ *Haley v. Case* (1886) 142 Mass. 316, 7 N. E. 877; *Strong v. Iowa C. R. Co.* (1895) 91 Iowa, 380, 62 N. W. 799 (for the facts of this case and comments thereon, see § 281, notes 4, 5, *ante*); *Mason v. Richmond & D. R. Co.* (1892) 111 N. C. 482, 18 L. R. A. 845, 16 S. E. 638 (brakeman ordered to couple cars on a dark night not bound to examine coupling); *Dillingham v. Harden* (1894) 6 Tex. Civ. App. 474, 26 S. W. 914 (servant not bound to examine a skid which he is directed by his foreman to use in lowering rocks into a pit).

A carpenter employed by a railroad company, who obeys a hasty order to pick up his tools, bedding, etc., and put them on a push car and to get on, does not assume the risks arising from the fact that the car, which then starts down a heavy grade, is not provided with proper appliances to control its velocity. *Miller v. Union P. R. Co.* (1882) 4 McCrary, 115, 12 Fed. 600. It is for the jury to determine whether a boy of seventeen, who was working in a foundry, was negligent, where he was ordered to stop an engine and to hurry, this not being a part of his regular duties, and in executing the order his trousers were caught by an uncovered set screw and collar on a revolving shaft over which he stepped. *Douling v. Allen* (1881) 74 Mo. 13, 41 Am. Rep. 298. A servant who obeys a hurried order of his foreman to take hold of a car and push it is not, as a matter of law, guilty of contributory negligence in failing to look ahead and observe an obstruction near the track. The want of time for deliberation, and the position he would naturally assume in doing the work, are a sufficient reason for not holding him strictly to the duty of using his senses to discover danger. *Stackman v. Chicago & N. W. R. Co.* (1891) 80 Wis. 428, 50 N. W. 404.

Where a brakeman, when mounting a moving car, put his foot under it in a place where he expected to have the support of a jaw strap, and was injured owing to the fact that it was missing, it was held that, in view of the fact that he was acting under orders, and of the haste necessary under the circumstances, it was for the jury to say whether he was negligent in omitting to look and see whether there was a jaw strap, before he undertook to use it. *Coates v.*

Boston & M. R. Co. (1891) 153 N. E. 297, 10 L. R. A. 69, 26 N. E. 864. though a brakeman would have been justified in refusing to obey an order to mount a moving car, because he had served that it was traveling at the rate of about 10 miles an hour, or because the lantern had gone out, or because he discovered that the ground near the track sloped in such a manner that he could not readily seize the ladder to place his foot in the stirrup, yet a man may properly find him to have been negligent from negligence, where he was acting in an emergency which gave him no time for reflection. *For v. Chicago, St. & K. C. R. Co.* (1892) 86 Iowa, 368, 18 L. R. A. 289, 53 N. W. 259. A brakeman on a freight train is not guilty of negligence in attempting to make a couple between two cars of unequal height by a misshapen link which he had been directed by the conductor to take from the ground and use, when, owing to dark and storm, he did not discover the defect in the link in time to avoid an accident. *Denver, T. & G. R. Co. v. Simpson* (1891) 16 Colo. 55, 26 Pac. 339. Where a gang of men engaged in raising a track by putting stone under it on the sudden approach of a train is ordered to take off some stone remaining on the track, and immediately attempts to do so, without opportunity to observe and calculate the distance to the train and its speed, he is not necessarily guilty of contributory negligence such as will defeat his recovery. *Stephens v. Hannibal St. J. R. Co.* (1888) 96 Mo. 207, 13 W. 589.

In *Patton v. Western N. C. R. Co.* (1887) 96 N. C. 455, 1 S. E. 863, a plaintiff master ordered plaintiff to get off a rapidly moving train (rate of speed not shown by evidence). The court declined to apply the general rule that such an act is negligent, saying: "It seems that this command was given promptly obeyed without hesitation was rash, negligent, unreasonable, unwarranted, but the danger to him counteracted in obeying it was not so manifest and so great as, under the circumstances, to render a prompt obedience contributory negligence on the part of the appellant. An ordinary laborer on railroads—one of ordinary experience might make a leap without injury, might not unreasonably believe that

could, taking proper care, and especially so when commanded to do so by a railroad employee of long experience who had the right to command him in the course of his duty. While to jump from a rapidly moving train of cars is very hazardous, and, ordinarily, to do so is negligence, it is not contributory negligence where the plaintiff—a laborer on the railroad—is suddenly commanded by his employer or its agent to do so, in the course of his employment, and the command is at once obeyed from a sense of duty and without waiting to think of and consider the hazard. Such a case is exceptional. The agent of the employer suddenly commands the laborer to do an extra hazardous act in the course of his duty,—one that may, though not probably, be safely done by observing due care; one that must be done at once if done at all. The laborer obeys the command promptly, nerved only by a faithful sense of duty, and as a consequence suffers serious bodily injury. In that case the injured party does not, in legal contemplation, contribute to his own injury. The facts and circumstances were such as that he might, when suddenly called on, not unreasonably believe that the command was a proper one, and that he ought to obey. Although the act was hazardous, it was not essentially dangerous."

On the ground that the servant had a right to assume that the directing employee knew the extent of the danger, and would not order him to do an act which he could not safely do, it has been held that in an action for injuries sustained by an inexperienced section hand in alighting from a moving train in obedience to an order of the section foreman, while the train was running at the rate of from 7 to 12 miles an hour, it was not error to submit the issue of obvious danger to the jury, where plaintiff's evidence showed that it was no part of his duty to get on and off moving trains, and that the order was imperative, requiring immediate action, thus giving him no time for deliberation. *Texas C. R. Co. v. Hicks*, 1900 24 Tex. Civ. App. 499, 59 S. W. 1125.

In *Grubbs v. Illinois C. R. Co.* (1870) 29 Iowa, 11, 4 Am. Rep. 181, where a brakeman was killed owing to the want of a ladder on a car, the court argued thus: "Though decedent knew of the defective car, if he acted under instructions and directions of a superior the action would by no means thereby be defeated. Under such circumstances, compelled, as he necessarily would be, to

act with promptness and despatch, it would be most unreasonable to demand of him the thought, care, and scrutiny which might be exacted where there is more time for observation and deliberation. Thus, if a ladder is usually found upon such cars, in the haste necessarily attendant upon uncoupling cars and stopping the train he was not bound to deliberate and settle in his mind that a like means of ascending the car was on this one, though he knew by prior observation that it was wanting."

In *Cheney, R. I. & P. R. Co. v. McCarty* (1896) 49 N. H. 475, 68 N. W. 633, the court said: "Our conclusion, after a consideration of the subject, is that it is a harsh and unreasonable rule which charges a servant, when commanded to perform an act by his master, with the duty of at once determining whether or not the act can be safely performed, and then performing it at his peril, or refusing to perform it at the expense of losing his employment. The risk incurred by obeying a negligent command of the master is not one ordinarily incident to the servant's employment, and is not an assumed risk, because negligence on the part of the master is not presumed to be a feature of the employment. It is true that where ample time exists for examination and reflection a servant may not, beyond a certain limit, continue in the service, performing dangerous acts, except at his own risk; and it is this consideration which governs the employer's liability. The continued use of defective appliances without protest and a promise by the master to remedy them discharges the master from liability. With the case, however, at a command given suddenly, which must be obeyed immediately or not at all, a different question is presented. The servant is confronted with a new danger, one not contemplated when he entered the employment, and one not made a part of it by continued use. The servant has certainly, in the first place, a right to presume that the master gave the command lawfully and in the exercise of due care. If the servant disobeys, he forfeits his employment; and even though he be aware of the danger, whether or not it is to become for him a duty to obey depends upon the circumstances. The act may be so clearly, so obviously entailing danger, that the only reasonable course is to disobey. The test of negligence is, in such cases, as in others, whether or not a man of ordinary prudence so situated would obey or refuse. In many cases a man of ordinary pru-

that the servant had previously protested against being exposed to risk in question.¹⁴

In cases where the defense of contributory negligence is raised, the consideration thus relied on will sometimes serve to excuse servant's temporary forgetfulness of a danger the existence of which he had previously ascertained.¹⁵ See § 350, *ante*. But it would seem that, according to the more logical view of the situation, the fact that his forgetfulness of a previously known danger was excusable under the circumstances will not enable him to recover, where the master relies specifically upon the defense of an assumption of risk. See § 281, *ante*.

c. *Direct order considered as tending to negative voluntary action*.—(Compare §§ 288, 289, 381, 382, *ante*.)—The fact that the master urged or coerced the servant into danger is conceded to be an evidential element which tends to negative the inference which is ordinarily drawn, where it appears that the servant undertook or remained in an employment with a knowledge of the abnormal risk from which his injury resulted.¹⁶ The cases illustrating this exception from a positive standpoint are not numerous. Where the servant is of mature years, the compulsion which it contemplates will not be inferred in circumstances of a very unusual description.¹⁷ The case of a young child is different. He cannot be expected to have

defence, compelled to decide instantly, even though aware of the existence of danger, would prefer obedience, and would take the risk."

Contrast cases cited in § 442, note 5, *infra*.

¹⁴The action was held to be maintainable in *East Tennessee, V. & G. R. Co. v. Duffield* (1883) 12 Lea, 63, 47 Am. Rep. 319 (laborer, after protest, used defective hammer, where there was need of quick action to get the track ready for an expected train); *Chicago & Anderson Pressed Brick Co. v. Subbiachak* (1890) 38 Ill. App. 531 (servant ordered to proceed after he had objected to work on account of its danger).

¹⁵In *Lee v. Woolson* (1885) 109 Pa. 124, where the master was personally directing the work, and giving emphatic orders to move quickly, the court said: "If an employee is, in haste, called upon to execute an order requiring prompt attention, he is not to be presumed necessarily to recollect a defect in machinery, or a particular danger connected with his employment, so as to avoid it. A prompt and faithful employee, suddenly called upon by a superior to do a par-

ticular act, cannot be supposed to remember at the moment a particular danger incident to its performance, which he had previous knowledge of; and it would be most unreasonable to demand of him the thought and care which might be exacted when there is more time for observation and deliberation. (Servant here had failed to observe that planks had been removed over a space through which he was engaged with tackle and horse in hoisting timber. See also *Greenleaf v. Illinois C. R.* (1870) 20 Iowa, 14, 4 Am. Rep. 376 (brakeman not necessarily negligent in failing to remember that a car which was about to uncouple had not the usual end ladder)."

¹⁶*Patterson v. Pittsburg & C. R.* (1874) 76 Pa. 389, 18 Am. Rep. 414; *Pennsylvania Co. v. Lynch* (1878) Ill. 333; *Chicago, R. I. & P. R. Co. v. Clark* (1882) 11 Ill. App. 104.

¹⁷In *Wells & F. Co. v. Gorton* (1893) 50 Ill. App. 415, a laborer, understanding only a foreign language, was pushed into a position of danger by a foreman, and coerced to remain there by fear of the latter, superinduced

will power of a grown man in resisting his master's orders; and where the evidence tends to show coercive influence the opinion of the jury should be taken upon the question whether his compliance with the order was negligent.¹⁸

f. Direct order considered as tending to produce confusion of mind.

In § 137, *supra*, it has been shown that negligence may sometimes be imputed to the master on the ground that he or his representative had, at a dangerous conjuncture, issued an order which was calculated to create a confused condition of the servant's reasoning faculties, and thus diminish his capacity for making an intelligent choice between a safe and an unsafe course of action. From another standpoint it is clear that the existence of the condition thus induced, supposing it to be excusable, is a circumstance which tends to negative culpability on the servant's part. The situation is essentially identical with that which, as already stated, may result from obedience to an imperative

his language, actions, and position, which was greater than his fear of the danger of the place, and overcame his own judgment, was held entitled to recover for injuries sustained.

A railroad company is liable for injuries received by an inexperienced brakeman in making a dangerous coupling in the nighttime, where the conductor refused to allow anyone else to make it, and up to the time of the accident kept persistently urging him to expedite the task, with full knowledge of the danger to which he was exposed. *Shadd v. Georgia C. & N. R. Co.* (1895) 116 N. C. 968, 21 S. E. 551.

But where plaintiff, after a year's service in driving a coal truck, which was barely low enough to pass under a beam in the coal bin when he was on the seat, was injured by attempting to remain on the seat while driving out under it with a new truck two feet higher than the old one, the fact that he was directed by the foreman to drive out the truck was not sufficient to show that he was coerced into taking the risk, since he acted voluntarily, and with full knowledge of the situation. *Miller v. Grinnell* (1900) 53 App. Div. 276, 65 N. Y. Supp. 813.

¹⁸ In *Kochler v. Schoenk* (1892) 151 Pa. 595, 25 Atl. 130, where a boy of fourteen was injured, the court referred to *Patterson v. Pittsburg & C. R. Co.* (1871) 76 Pa. 389, 18 Am. Rep. 412, *supra*, and said: "The principle of this decision would exonerate the plaintiff in the present case from a charge of con

tributory negligence in engaging in a palpably dangerous service, even if he were a full-grown adult, because there was other testimony to the effect that the appliance might be used with safety although apparently dangerous; but when his youth and physical weakness are considered, and the fact that he was ordered to do this work, and that he objected to doing it, and went reluctantly to the service, it cannot be doubted that he is entirely free from any charge of contributory negligence, and also that the master became subject to all the risk of an accident. He was but little more than a child, either in years or in strength, and could not be expected to have the will power of a full-grown man in resisting his master's orders. He cannot be held, therefore, as one who voluntarily engages in a dangerous service, especially by a master who specifically directed him to do the hazardous work. On the contrary, the very fact of the plaintiff's youth and weakness is one of the elements that go to make up the charge of negligence on the part of the defendant in putting such a person upon such a service. It seems to us the master, in such circumstances, and not the servant, must be held to have assumed the risks of the service." In *Taga v. McGone* (1893) 155 Pa. 368, 26 Atl. 671, it was held that, where a foreman ordered a boy thirteen years old to hurry in his work of cleaning a dangerous machine in order that he might clean another machine which was ordinarily attended by another boy who

order which it is necessary to execute with great rapidity.¹⁹ See subd. *d*, *supra*.

441. Direct order not a justification where it was given without authority.—In § 435, *supra*, it has been stated that a master is not affected with liability for the consequences of an order proceeding from a coemployee of an injured person, unless that coemployee was authorized to issue it, and in so doing acted as the master's agent. The authority of the coemployee is also material in another point of view, since it is clear that, if he had no authority to give the order, and the fact was or ought to have been known to the injured servant, the latter must, in obeying the order, have been guilty of contributory negligence. The cases cited in the two preceding sections will furnish ample illustrations of the circumstances under which the authority of the directing employee has been taken for granted.

As the nature of the relations between superior and subordinate employees in different descriptions of business is usually a matter of common knowledge, the question whether the directing employee was invested with the necessary authority to issue the order is seldom a material element in the case. In the exceptional instances in which there may be a doubt as to those relations, the injured servant, if he undertakes to show that an act which, if done *proprio motu*, would have betokened carelessness, was excusable, for the reason that it was done in compliance with an order given by a party whom he was bound to obey, must prove that he had just reason for believing that his failure or refusal to obey the commands of the superior would be followed by a discharge from the employment.¹ But if

he was absent, and the boy was injured in the work, it is not improper for the court to charge that, if the boy was not aware of the danger, and his will was subjected to that of the foreman, and he obeyed him because he thought the foreman knew better, or because he was afraid to disobey, the jury might find for the plaintiff.

Whether a young apprentice was justified in obeying an order accompanied by threats is not a question which should be decided on demurrer. *W. Hill, Inc. v. W. Hill* (1861) 23 Se. Sess. Cas. 2d series, 1082.

Similar views seem to prevail in Quebec. *St. Leonard v. Gibson* (1898) Rep. Ind. Quebec, 13 C. S. 22.

¹ An employee fourteen years of age and of less than ordinary intelligence, who is injured while obeying peremptory orders to assist in operating a machine with revolving cylinders at which

he was not employed to work, the danger being partially concealed from view, cannot be said, as a matter of law, to have failed to exercise due care. *Leach v. Warren Cotton Mills* (1892) Mees. 283, 32 N. L. 161 (distinguishing earlier cases in which the danger was obvious and known to plaintiff). A seaman has been held entitled to recover his actual damages for injuries from falling into the hold because of the wrong way, through imperfect fitting which, as he was new to the ship, was excusably ignorant, of a section of the hatch upon which he was standing while adjusting another section, in the direction of the boatswain, who was hurrying him in his work. *Esquil v. New York & C. Mail S. S. Co.* (1895) 50 Fed. 325.

² *Tanner v. Goldsboro Lumber Co.* (1895) 119 N. C. 287, 26 S. L. *Wason v. Richmond & D. R. Co.* (18

not necessary that he should show that the superior was himself invested with the power of discharge. Any other doctrine, it has been pointed out, would enable the master to evade responsibility by providing that this power should be lodged in some person other than the immediate superior of the workman, while at the same time the power would, for practical purposes, be exercised by the superior himself, as a result of the fact that his recommendations in this regard would in practice always be followed.²

It is clear that an order given by one superior servant to do a manifestly culpable act—in the case cited, the violation of a rule—will not excuse the servant for doing that act after he has passed under the control of another superior servant, who has never given him a similar direction.³

The fact that the person from whom the order directly emanated was only a fellow servant of the injured person will not prevent recovery, if it appears that such fellow servant was simply the channel through whom the order was transmitted from an employee who had authority to give it.⁴

111 N. C. 482, 18 L. R. A. 845, 16 S. E. 698. See note 3, *infra*.

Turner v. Goldsboro Lumber Co. (1896) 119 N. C. 387, 26 S. E. 23.

Mason v. Richmond & D. R. Co. (1891) 111 N. C. 718, 19 S. E. 362 (brakeman injured while coupling cars with his hands instead of a stick). Referring to its former judgment in the case (1892) 111 N. C. 482, 18 L. R. A. 845, 16 S. E. 698, the court said: "We still adhere to the doctrine that a brakeman is not culpable for exposing himself, in obedience to the orders of the conductor in charge of the train, to peril to which his voluntary exposure of himself would constitute contributory negligence. Our ruling was founded both upon the principle that the conductor, as negligence, had on behalf of the company waived its express regulation, and upon the idea that the known relation between a conductor and a brakeman, running on the same train as his subordinate, was such as to subject him to a well grounded fear of dismissal should he hesitate to obey such an order, and thereby relieve him of legal culpability for conduct which, but for the fact of his acting under the fear of the consequences of disobedience, would constitute negligence. But we did not intimate that a brakeman would be warranted in assuming that another conductor, under whom he had served for

several months without receiving any order modifying the written rule, would discharge him for failure to couple with his hands when a stick would not answer the purpose. And we do not think that the command of Guthrie to "hurry up," coupled with the testimony of the plaintiff that he thought Guthrie had seen him couple with his hands before that time, is tantamount to an express command, such as was given by Conductor Dick, who had previously been his superior."

"In a case where it was contended that there was no evidence that an injured claimant was acting under the orders of the conductor, when he attempted to couple cars in motion, it was held that a brakeman, though inexperienced, is deemed to be acquainted with such matters pertaining to his duties as are of common knowledge, and is therefore presumed to be aware that brakemen are subject to the orders of the conductor with reference to their duties, and that such orders are often given by the conductor through one brakeman to another. It was for the jury to say, in the light of this common knowledge, and under all the circumstances of the case, whether the injured servant understood the order given him to be the order of the conductor." *Gorsman v. Minneapolis & St. L. R. Co.* (1889) 78 Iowa 569, 13 N. W. 303.

A master cannot relieve himself of responsibility for an order which is apparently within the scope of the authority of the superior servant, by showing that no such authority was conferred by the rule framed for the regulation of the business.³

442. — *not where a prudent man would have refused to comply with it.*—Upon general principles it is manifest that, although the servant may have been directly commanded or urged to undertake the work from which the injury resulted, he cannot claim an indemnity when the danger to be encountered was at once so obvious and so serious that no prudent man would have incurred it.¹ That is to say, the order must, if it is to serve as a justification, be in a matter with regard to which the servant has a right to rely on the superior judgment of the master.²

The courts decline to lay down a rule of law purporting to define accurately how dangerous a proposed action would have to be before a servant receiving an order from his master to perform it would be required to disobey under pain of being chargeable with negligence. But where there is no dispute as to the facts, and the dangers of obedience to an order are as apparent to the servant as to the employer or representative, there is no occasion to go to the jury to determine whether the servant should have obeyed the order.⁴

³The mere fact that the conductor of a train had, under the company's rules, no right to order a man off a moving train, is no defense to an action by a workman who is injured in obeying such an order. *Central R. Co. v. De Bray* (1883) 71 Ga. 406.

⁴In *Patterson v. Pittsburg & O. R. Co.* (1874) 76 Pa. 389, 18 Am. Rep. 412, the court remarked: "We are not to forget that the servant is required to exercise ordinary prudence. If the instrumentality by which he is required to perform his service is so obviously and immediately dangerous that a man of common prudence would refuse to use it, the master cannot be held liable for the resulting damage. In such case the law adjudges the servant guilty of concurrent negligence, and will refuse him that aid to which he otherwise would be entitled." Compare *Holme Plow Co. v. Anderson* (1885) 19 Ill. App. 417; *Shurtel v. St. Joseph* (1891) 104 Mo. 114, 16 S. W. 397; *Southwestern Teleph. Co. v. Woughter* (1892) 56 Ark. 206, 19 S. W. 575; *McDermott v. Hannibal & St. J. R. Co.* (1885) 87 Mo. 285 (disapproving of an unqualified instruction to the effect that an act done

in obedience to orders is not negligence). A charge is erroneous which assumes that an engineer cannot be negligent in operating his engine where he does in prompt and careful compliance with the signals of the conductor. Nonsuit cannot be predicated where a man, acting in obedience to an order, is injured while performing a duty which would be a negligent one. *Haboma S. R. Co. v. Richie* (1892) 99 Ala. 312, 12 So. 612.

²*East Tennessee, V. & G. R. Co. v. Duffield* (1883) 12 Lea, 69, 47 Am. R. 319.

³*Chicago Anderson Pressed Brick v. Schkoniak* (1890) 38 Ill. App. 5.

⁴*Kean v. Detroit Copper & Brass Rolling Mills* (1887) 66 Mich. 277, 31 N. W. 395. An employee who was injured in attempting to get upon an engine while it was running at the rate of from 6 to 12 miles an hour should be nonsuited, although he was acting in obedience to orders. *Rail v. East Tennessee, V. & G. R. Co.* (1890) 85 Ga. 197, 11 S. 558. Where a train is moving at a rate of from 4 to 6 miles an hour, experienced trainman is not justified in obeying an order to jump from it. *Arthur Bros. Co. v. Trout* (1900)

In cases where the essence of the servant's justification is that the order given was so urgent and peremptory as to leave him no time for reflection or for examination into the conditions to which he was required to expose himself (see § 410, *subd. d. supra*), he will necessa-

III. App. 638. See, however, *Northern Railroad v. Davis*, 11 Ky. 41, 43, 1888, 21 S. W. 93, 41 L. ed. 82, 16 Sup. Ct. Rep. 975. Cited in § 439, note 3, *supra*. A brakeman is guilty of contributory negligence precluding recovery for injuries received in attempting to uncouple cars having double deadwoods, which render the act specially dangerous, while the train is in motion, even if ordered to do so by the foreman. *Davis v. Northern R. Co.* (1891) 107 Ala. 626, 18 So. 173. A conductor who is injured by a collision will be denied recovery where he consented to the starting of his train in violation of the rules of the road, without a word of formal protest, although he had, at the time, every reason to expect that he would meet another train traveling in the opposite direction on the same track. On the one hand, if it was ordinarily his duty to obey the orders of the dispatcher, even though they were in violation of the company's rules, the order to start the train under such circumstances was so obviously wrong and was likely to involve such frightful consequences, that it was manifestly negligent to act upon it without inquiring the reasons for it. *Wescott v. New York & A. E. R. Co.* (1891) 153 Mass. 460, 27 N. E. 10. An employee who has just got off a hand car in safety before a rapidly approaching train is under no obligation to comply with a hasty and impulsive request of the foreman to save the hand car, in view of the obvious and imminent danger. *Wright v. Southern R. Co.* (1897) 80 Fed. 260. A section hand well acquainted with his duties is guilty of contributory negligence in attempting, in response to an order of the foreman, while seated on the rear of a hand car rapidly descending a grade, to take hold of the readily moving brake handles, in the absence of a sudden emergency. *Jones v. Galveston, H. & S. A. R. Co.* (1895) 11 Tex. Civ. App. 29, 31 S. W. 796. A section hand is not bound to obey an order of the section boss to get on to and help propel an already overladen hand car; and no recovery can be had for his being thrown off and killed in consequence of his obeying the order. *Ill. App. 638*. See, however, *Northern Railroad v. Davis*, 11 Ky. 41, 43, 1888, 21 S. W. 93, 41 L. ed. 82, 16 Sup. Ct. Rep. 975. Cited in § 439, note 3, *supra*. A brakeman is guilty of contributory negligence in standing upon a side-track repelling a car, and cannot recover for injuries from the car being put in motion by the moving of other cars by an engine which entered on the side-track on the end which was not guarded by the signals furnished for such purpose, where he was an experienced railroad hand, and had worked in his present position for seven weeks, and knew that that end of the track had not been guarded, and was aware that engines were likely to enter from that end. *Chicago, B. & Q. R. Co. v. McGraw* (1890) 22 Colo. 363, 45 Pac. 383. The orders of a superior will not justify a servant in exposing himself to the risk involved in the attachment of a portion of a machine while it is in motion. *Boylan v. Des Moines Rock Mt. Co.* (1890) 99 Iowa 257, 68 N. W. 171 (adjoining portion of machine), while it is in motion. Or in the operation of wiping moving machinery with a piece of waste. *Chas. L. Ames Works v. Randall* (1884) 100 Ind. 293, 50 Am. Rep. 798. To go to work in a dock collar in which the servant knows there is a deep well hole, without ascertaining whether it is guarded or not, is culpable negligence which will prevent him from recovering for injuries caused by the want of a guard, even though he was ordered to "hurry up the work." *Toul v. Carver Mfg. Co.* (1885) 110 Mass. 150, 3 N. E. 21. It is negligence to obey orders to clear out the debris from a mining shaft by making an excavation from a tunnel tunnel which enters it at the bottom. *Edelman v. Dintman* (1898) 96 Va. 41, 30 S. E. 442. It is negligence to go on to a scaffold after having observed circumstances indicating that it is unsafe. *Adams v. Shackle* (1879) 69 Mo. 336. But under the doctrine prevailing in Kentucky as to the effect of the gross negligence of a superior servant, a rail-

rily fail to make good his contention, unless he shows that the order was actually one of this description.⁵

443. — nor where the servant fully appreciated the danger

In view of the general principles developed in chapter xviii., *ante*, it is clear that the fact of the servant's having acted under a direct order is immaterial, if it is apparent that he fully appreciated the danger which he was required to encounter. Under such circumstances the essential question to be decided,—*viz.*, whether a prudent man would have undertaken the work,—is determined with reference solely to proper deductions to be drawn from his appreciation of the danger, except, of course, in so far as the order may have temporarily induced a forgetfulness of the danger, or a confusion of the mental faculties. See § 440, *supra*, and compare remarks in § 441, *supra*. In this point of view a few cases which, upon a superficial inspection, would seem to negative the doctrine that a differential effect is to be ascribed to an order, will be found quite consistent with the facts with the rest of those cited in this chapter.²

way company is not relieved from liability for injuries to a brakeman, incurred in uncoupling cars in obedience to an order, caused by the gross negligence of the conductor or other superior employee in the control and management of the train, by the fact that the danger of going between the cars to uncouple them was open and visible. *Greer v. Louisville & N. R. Co.* (1893) 94 Ky. 169, 21 S. W. 629.

² An employer is not liable for an injury to an employee using a circular saw, merely by reason of an order that he shall not waste so much time in cleaning the logs before sawing them, when he does not in any wise so command him to proceed as to preclude him from the exercise of due care in putting the logs into proper condition to be cut up. *Wanner v. Kimble* (1893) 4 Colo. App. 168, 34 Pac. 1014. A shout by the gang foreman of "All aboard" is not an order of that peremptory character that justifies one of his subordinates in taking such a manifest risk as that of mounting a moving train. *Norfolk v. Michigan C. R. Co.* (1886) 63 Mich. 121, 29 N. W. 525. An order by the skip tender of a mine, whose duty it is, under a rule of the mine, to prevent more than six men from riding in the skip at once, to an employee to get on the skip after ten other persons are on, does not relieve such employee from contributory negligence where no emergency called for sudden action on his

part. *Last Chance Min. & Mill. Co. v. Ames* (1896) 23 Colo. 167, 47 Pac. 101. In a case where a servant, in attempting to get on the front platform of a trolley car moving at the rate of 3 miles an hour, slipped and fell from the car, the court held that no imperative order demanding instant action was proved, and affirmed the correctness of an instruction to the effect that to justify the effort of a servant to obey an order of a superior in a hazardous matter, the order must be immediately upon a sudden emergency or exigency. *Chattanooga Electric R. Co. v. Lee* (1898) 101 Tenn. 406, 47 S. W. 404.

³ *White v. Newport News Shipbuilding & Dry Dock Co.* (1897) 95 Va. 28 S. E. 577, denying recovery where the plaintiff, who was not known to the directing employee, and was known to the injured employee, that the ring at the end of a chain wrapped round a heavy object was too small to be used with the object which was to support the object, it was being lifted.

⁴ In *Baker v. Western & A. L. Ry. Co.* (1882) 68 Ga. 699, the court formulated the rule that the fact that the plaintiff, who was known to the directing employee, knowingly undertook to work dangerously defective tool under the immediate command of a superior employee did not give him the right to recover. But the report shows that the plaintiff had known for several years that the sledge hammer which caused the injury was out of repair. The

444. — nor where the servant executed it in a negligent manner.—

The doctrine discussed in the present chapter is a protection to the servant *pro tanto*, only in so far as it relieves from the charge of culpability in the actual undertaking of the work which he was ordered to do. It does not relieve him of the duty of avoiding particular danger.¹ The necessary connection between the order and the act of the servant is not established, where the injury occurred owing to the manner in which the servant executed a general order which left him free to choose his own methods of carrying it out, and which might, so far as appears, have been safely performed by the selection of a different method.² Hence, a servant who relies on the orders of his su-

doctrine was again laid down in *Ball v. Western & A. R. Co.* (1883) 70 Ill. 566, where the plaintiff knew that the hand car on which he was ordered to ride was defective. See also *Velling v. Industrial Mfg. Co.* (1886) 78 Ga. 260 (doctrine laid down, *arguendo*, on the authority of the two cases just cited); *Central R. Co. v. Hoshitt* (1881) 71 Ga. 59 (brakeman knew that cogwheel of brake was defective); *Raul v. East Tennessee, V. & G. R. Co.* (1890) 85 Ga. 197, 11 S. E. 558 (order from the foreman of a roundhouse will not justify a fireman in attempting to mount a locomotive running 6 or 8 miles an hour); *Dural v. Hudt* (1891) 31 Fla. 85, 15 So. 876 (brakeman on a construction train removed all the standhions except four from a car loaded with rails, and afterwards rode on it by the order of the foreman), following Georgia decisions.

Another reason why these cases are not to be regarded as being essentially inconsistent with those decided in other states is that they are all founded on *Western & A. R. Co. v. Adams* (1875) 55 Ga. 279, where the extent of the decision was simply that a servant suing under the Georgia statute abolishing the doctrine of common employment in the case of railway companies cannot recover damages, unless he is himself free from fault, even though, in doing the act which caused the injury, he was complying with the orders of a superior employee. The rationale of the ruling was that, as the legislature had made no distinction between the several grades of employees, the court was not authorized to recognize any such distinction, the effect of which would be to enable the servant to recover in spite of his contributory negligence.

¹ *Cornwall v. Charlotte, C. & L. R. Co.* (1887) 97 N. C. 11, 2 S. E. 659; *South v. St. Paul & D. R. Co.* (1892) 51 Minn. 86, 52 N. W. 1068 (charge to the effect that orders would not justify a servant in going into known dangers was held not to be prejudicial error); *East Tennessee, V. & G. R. Co. v. Bridges* (1893) 92 Ga. 399, 17 S. E. 615; and cases cited in following notes.

An instruction that an order to do something which is a part of the regular routine work of the servant, and which does not increase the hazards which he is required to undergo, implies an assurance of safety, irrespective of the manner in which the work may be done, is erroneous. *McArthur Bros. Co. v. Nordstrom* (1899) 87 Ill. App. 551.

² When an employee has within his own control the manner of using an obviously defective tool, and the means of securing safety if he chooses to employ them, if he neglects the means of security to himself he elects to take the risk. In such a case, it cannot in reason be said that the employee has acted upon the confidence reposed in the employer, and that he is, therefore, entitled to remuneration. *Jenny Electric Light & P. Co. v. Murphy* (1888) 115 Ind. 568, 18 N. E. 30. A brakeman is not relieved from contributory negligence in attempting to uncouple cars while a train is in motion by the order of the foreman to cut off a car, in the absence of any emergency requiring prompt action, as it will be presumed that it was intended that the order should be complied with in a safe manner, even if the order, if construed as one to uncouple the cars while in motion, would have such effect. *Davis v. Western R. Co.* (1895) 107 Ala. 626, 18 So. 173. A general order from a conductor to a

perior as an excuse for pursuing a dangerous course of conduct in show, not merely that he was ordered generally to go to work, but that he was ordered to pursue that particular course of conduct.³ Even an order which is couched in words indicating that it is desired to have the work performed promptly will not excuse a servant for needlessly putting himself into a dangerous position, or doing the work in a dangerous manner.⁴

Foreman, to "catch" a car about to be kicked, did not justify the latter in attempting to do so when the car was moving at an unusual and obviously dangerous rate of speed, especially where the conductor, when giving the order, did not know that the speed would be unusual, and was not present when the foreman attempted to catch the car. *Whitley v. Macon & N. R. Co.* (1898) 104 Ga. 764, 30 S. E. 1003. The theory that the plaintiff's injury was caused by his obedience to an improper command is not sustainable where he was injured in jumping from a train while responding to a hasty summons to supper, where there was no command to jump from the train, and he determined for himself the particular manner in which the order should be carried out. *Piqueno v. Chicago & G. T. R. Co.* (1883) 52 Mich. 41, 50 Am. Rep. 243, 17 N. W. 232. A foreman's order to splice a short rope to the winch end of a longer rope to make it reach a pile lying on the ground, which was to be hauled into position by a pile-driver, will not render the master liable for injuries to the employee so ordered, where he undertook to make the splice in a manner not required either by order or the character of the work. *Wiggins Ferry Co. v. Heilig* (1892) 43 Ill. App. 238. An employee whose arm is caught in uncovered gearing while he is feeling the shaft, according to his instructions, to see if it is hot, is not, as a matter of law, guilty of contributory negligence. *Thompson v. Edward P. Ellis Co.* (1895) 89 Wis. 523, 62 N. W. 527.

³The mere fact that a laborer engaged in excavating a bank had been ordered to return to work, after the foreman had been trying unsuccessfully to prise off a portion of it, has been declared not to be a justification for his taking up a dangerous position under the bank. *Songstad v. Burlington, C. R. & N. R. Co.* (1889) 5 Dak. 517, 41 N. W. 755. In a case where a laborer was injured in getting off a slowly moving construction train (speed not mentioned), in

obedience, as was alleged, to an unauthorized order of the conductor to do this at a certain place, it was held error to refuse the defendant's request for an instruction that, if the jury found that the conductor said to the hands, "If the train is going slow enough, get off where it is at work; if not, go on to E. come back on the good train," and that the hands were then ordered to get off and on moving trains, and a decision was left to them whether they would jump or not, then the plaintiff could recover on account of the conductor's order. *Boaselle & V. R. Co. v.* (1892) 91 Tenn. 86, 48 S. W. 118. A verdict for the defendant was held to have been properly directed, when a brakeman, upon the signal for braking being given, undertook, without any imperative necessity, and without any request from any person in control of the train, to ascend a side ladder, as the train was going on to a bridge, the side timbers of which were, to his knowledge, dangerously close to the track. *Bliss v. Flint & P. M. R. Co.* (1888) 67 Mich. 632, 35 N. W. 488. Where, in removing the bents of a trestle work, an employee, in obedience to the order of the boss of the gang, put his feet against a bent, and pushed it whereupon its lower end struck the one on which he was sitting, knocking him down and injuring him, the negligence is that of the employee and not of the master. *Carnegie v. Pean Bridge Co.* (1900) 47 Mich. 355, 197 Pa. 111.

⁴Where a laborer on a work train was told by the conductor to "jump on where," and that they were "behind" and in a hurry, he is not justified in such an order in getting on the rear of the engine. *Baltimore & P. R. Co. v. Jones* (1877) 95 U. S. 439, 24 L. 506. An order to go ahead and use machinery used to hoist coal on a train, which were pushed down an incline, the place of landing does not justify a servant in unnecessarily passing them from a moving car. *Kansas Coal Co. v. Reid* (1898) 29 C. C. A.

the work in

Where the master orders a thing to be done by a servant, he will not be exonerated from liability for injuries to the servant arising from doing the act merely because the servant does not do it in the particular way directed by the master. The question in every such case is whether the servant pursues the less dangerous course.⁴

57 U. S. App. 464, 85 Fed. 914. See *Citizens' Gaslight & Heating Co. v. Wanner v. Kndel* (1893) 4 Colo. O'Brien (1886) 115 Ill. 174, 8 S. E. App. 168, 34 Pac. 1014, § 442, note 5, 310.

CHAPTER XXIV.

EFFECT OF A STATEMENT BY THE MASTER OR A COEMPLOYEE THAT CERTAIN WORK MAY BE DONE SAFELY.

- 446. Introductory.
- 447. Necessity of proving that an assurance of safety was given.
- 448. — and given by the master or an employee who represented him.
- 449. — and was given negligently.
- 450. General doctrine as to the effect of an assurance of safety.
- 451. Rationale of doctrine.
- 452. Assumption of the risk, when available as a defense.
- 453. When the servant is chargeable with negligence in undertaking or
continuing the work.
 - a. Negligence a question for the jury.
 - b. Negligence predicable as matter of law.
- 454. Contributory negligence in respect to the manner of performing
work.

446. Introductory.—A subject closely connected with that which was dis-
cussed under the last chapter is the effect produced upon the servant's right of recovery by evidence that he received from his master or some superior coemployee an express assurance that the work he was
about to undertake involved no danger, or that proper precautions would be
taken to protect him while he was doing the work. In many cases a specific
order and an assurance of safety are both factors to be reckoned with (see § 453,
note 10, *infra*); but, as this circumstance is not invariable, and each factor
obviously has its own characteristic significance, it has been deemed better
to treat the latter separately, even though, by so doing, we shall find our-
selves brought once more into contact with conceptions similar to those
already dealt with in connection with the former.

447. Necessity of proving that an assurance of safety was given.
It is very seldom that any question can arise as to the actual meaning
of the expressions which are relied upon by the servant as amounting
to a declaration that he might safely proceed with his work.¹

¹ The language used may sometimes imply, or an assurance that the instrument
was such as to leave it doubtful whether the instrument in use was a safe one.
It should be construed as embodying a belief held that, under such
promise to procure a new instrumentalities, the inference from the safe

As a master is under the duty of keeping the instrumentalities reasonably safe, or of giving notice of their insecurity, the invitation which is inferentially extended to servants to make use of any instrumentality which is required for the due performance of their duties may be regarded as being accompanied by an implied assurance that they will not be exposed to any danger from which ordinary care can protect them.²

448. — and given by the master or an employee who represented him.

—There is distinct and explicit authority for the view that an assurance of safety is binding upon an employer only when it was given by a vice principal.¹ This would seem to be the only logical doctrine in cases where the defendant explicitly denies the representative character of the employee from whom the assurance proceeds. Compare § 435, *ante*. But if this plea is passed over, and the defense of contributory negligence is relied upon, it seems not unreasonable to say that the employer ought not to be protected by the mere fact that the assurance was not given by a vice principal.² The essential question to be determined under such circumstances is simply whether the servant was justified in acting on the assumption that the statement made as to the conditions was correct. Such an assumption may, it would seem, be warrantable in some instances where the action would indisputably be barred if the defense of a want of authority to give the

immediately proceeding to use such appliance is that he did so, not in the belief that a new one would be furnished, but because he put faith on the master's assurance. *Perich & Elbert Co. v. Kitchell* (1898) 2 Ind. Terr. 169, 47 S. W. 311.

¹In *Murphy v. Boston & A. R. Co.* (1882) 88 N. Y. 116, 12 Am. Rep. 210, it was remarked that "the placing of a locomotive on the road for use would be an assurance that it was fit and safe." See also *Salem Street & Lumber Co. v. Griffin* (1891) 139 Ind. 141, 38 N. E. 411, for an instance of the same point of view.

²If the conductor who quieted the plaintiff's apprehensions of danger, and assured him of his safety and the sufficiency of the rope, was a vice principal, acting for, and in lieu of, the master in the control of the loads, and the superintendence of the work and machinery, we think the defendant would have been liable notwithstanding the plaintiff may have believed the rope to be unsafe. . . . If the conductor did not occupy the position of master to the plaintiff at the time of his injury, then

what he said and did, with reference to the rope, could no more bind the master than the words or conduct of any one of the eleven laborers who were working at the log in conjunction with the plaintiff." *McGowan v. St. Louis & L. M. R. Co.* (1876) 61 Mo. 528. It was not within the scope of a foreman's authority to assure a subordinate that there was no danger in unloading from a wagon a derrick, the poles of which were wet, and therefore liable to slip during the process. *Pintorelli v. Horton* (1900) 22 R. I. 375, 48 Atl. 112.

²Evidence that a railroad employee injured by being thrown from a ladder which was struck by a passing engine was promised by another employee, who he mistakenly supposed, had control of the movement of engines, that he would protect him from injury while engaged in his work, which is relevant on the question of contributory negligence, should be submitted to the jury by an instruction withholding any consideration of it on the question of negligence of the company; but the jury should not be expressly instructed that they may consider it in deciding the question of

assurance were specifically put forward. It must be admitted, however, that the authorities with regard to this aspect of the matter are not as explicit as might be desired.²

449. — and was given negligently.— The essence of the culpability alleged in cases where the servant seeks to recover on the ground

contributory negligence, as such an instruction might impress the jury that the court regarded it as of material weight on that question. *Missouri, K. & T. R. Co. v. Collins* (1896) 15 Tex. Civ. App. 21, 39 S. W. 150.

²In some cases the assurances were, as a matter of fact, given by an employee who, under the doctrine of the court which rendered the decision, was a vice principal; but the evidential significance of this fact was not specifically considered. *Hardee & H. Coal Min. Co. v. Schmidt* (1900) 43 C. C. A. 532, 104 Fed. 282 (superintendent); *Young v. Mercantile Steam Laundry Co.* (1901) 198 Pa. 553, 48 Atl. 497 (manager); *O'Brien v. Vute-Hallett Co.* (1901) 177 Mass. 422, 59 N. E. 65 (superintendent); *Nelson v. St. Paul Paper Works* (1891) 57 Minn. 43, 58 N. W. 868 (superintendent); *Stonine v. Hanford Produce Co.* (1899) 108 Iowa, 137, 78 N. W. 841 (superintendent); *Sealtham v. Kellogg* (1897) 169 Mass. 544, 48 N. E. 622 (superintendent); *Sopferstein v. Bertels* (1896) 178 Pa. 401, 35 Atl. 1000 (superintendent); *Duerst v. St. Louis Stamping Co.* (1961) 163 Mo. 607, 63 S. W. 827 (foreman of factory); *Burnside v. Voeclty Mfg. Co.* (1899) 121 Mich. 115, 79 N. W. 1108 (foreman of factory); *Chicago Drop Forge & Foundry Co. v. Van Dam* (1894) 149 Ill. 337, 36 N. E. 1624 (foreman of factory); *American Wire Nail Co. v. Connelley* (1893) 8 Ind. App. 398, 35 N. E. 721 (foreman of factory); *McIntyre v. Empire Printing Co.* (1898) 103 Ga. 288, 29 S. E. 923 (foreman of printing establishment); *Schmit v. Gillett* (1899) 41 App. Div. 302, 58 N. Y. Supp. 458 (foreman of construction); *Lambert v. Missisquoi Pulp Co.* (1900) 72 Vt. 278, 47 Atl. 1085 (foreman of construction); *Goggin v. D. M. Osborne & Co.* (1896) 115 Cal. 437, 47 Pac. 248 (local manager); *Monahan v. Kansas City Clay & Coal Co.* (1894) 58 Mo. App. 68 (foreman of mine); *Atchison, T. & S. F. R. Co. v. McKee* (1887) 37 Kan. 592, 15 Pac. 484 (superintendent); *Jones v. St. Louis, V. & P. Packet Co.* (1890) 43 Mo. App. 398 (second mate of ship);

Rouland v. Missouri P. R. Co. (1902) 20 Mo. App. 463 (section foreman); *Richard v. Hayes* (1897) 17 App. 422, 45 N. Y. Supp. 234 (foreman of vessel with the duty of constructing scaffold).

In other cases the status of the employee who gave the assurance was not that of a vice principal according to the doctrine established by the majority of the decisions in the jurisdictions in which the injuries were received. But apparently they were regarded by the courts as agents of the employer *ad hoc* *vicar*.

A workman is entitled to rely on the representation of a fellow servant in a province it is to inform the workman whether or not they may safely work in a given place. *Potter v. W. & A. (1851)* 1 Macq. H. L. Cas. 748, 28 L. & Eq. 48 (underground manager). A track master, as incident to his right to employ laborers for a road company, is authorized to give them an assurance that he will be responsible for the approach of trains. *Levy v. New York C. R. Co.* (1877) 100 N. Y. 288. The master was liable in *Pool v. Chicago, M. & S. R. Co.* (1882) 56 Wis. 227, 14 N. W. 100, where a servant in charge of a hand car assured a detective in the company that he might safely sit on the car with his feet hanging down. But in this case, as the injured servant was in a different department, the decision might be placed on that ground. An assurance given by the foreman of a switching crew in a railway yard was held to warrant a finding that the servant was not negligent. *Burnhaugh v. Concord R. Co.* (1897) 69 N. H. 45 Atl. 563. A similar conclusion has been arrived at where the assurance was given by a foreman of a gravel pit. *Haas v. Balch* (1893) 6 C. C. A. 12 U. S. App. 534, 56 Fed. 984. A foreman of track laborers, *Norfolk P. R. Co. v. Lento* (1892) 144 Va. 465, 36 L. ed. 506, 12 Sup. Ct. Rep. 465, 113, 49 Fed. 881, Affirming 46

he was injured by reason of his reliance upon the statement of his master or some coemployee, that he might, without undue peril, perform a certain piece of work, or go into a certain place, is that the party making that statement, being actually or constructively aware of the real conditions, exercised, by means of the statement made, a specific influence over the mind of the servant, and thus induced him to adopt a certain course of conduct from which he would possibly, or probably, have abstained if the statement had not been made. The appropriate domain of the obligation the breach of which is thus indicated is obviously found in situations identical with or closely resembling those which are presented in actions of which the gravamen is the nonperformance of the duty of instruction. See chapter xvi., *ante*. The giving of the assurance merely introduces an additional element, which enables the servant to charge the master with an act of positive misfeasance in imparting erroneous information, when, in the absence of such an assurance, he would have been compelled to rely upon the mere nonfeasance which consists in withholding information which should have been given. It will be found, therefore, that all the decisions cited in this chapter exhibit the servant as a person who was either excusably ignorant, or chargeable with knowledge of the danger in question, for one or other of the reasons explained in chapter xxi., *ante*.¹

450. General doctrine as to the effect of an assurance of safety.—

The doctrine applied in the cases cited in this chapter may be enumerated in its most general form as follows:

If the servant is shown to have entered upon the performance of

¹To assure a servant that an unlighted bin into which he was ordered to go was "all right," when in fact it had no floor, and the uncovered joists were dangerous to a person jumping into it, is negligence. *O'Brien v. Natick-Hollett Co.* (1904) 177 Mass. 422, 59 N. E. 65. It is a question for the jury whether a receiver operating a mine was in fact negligent, and whether his negligence was the proximate cause of injury to a miner, where there is evidence to show that he not only failed to warn the latter of the known presence of gas in the mine in such quantities as might cause an explosion, but that the latter was thrown off his guard and led not to expect the presence of gas by the assurance of those who employed him that the mine was safe and free from gas. *Gouen v. Bush* (1896) 22 C. C. A. 196, 76 Fed. 349, 40 U. S. App. 349. The

defendant's negligence is a question for the jury where the evidence is that the plaintiff expressed fears that the walls or the trench in which he was working might fall, but that, being a man of very limited experience in that kind of work, he continued in the employment, relying upon the assurance of the foreman in charge of the work that the same were entirely safe. *Walker v. Scott* (1900) 10 Kan. App. 413, 61 Pac. 1091. Where plaintiff, while operating defendant's machinery, being startled by an unusual sound, stopped work, observing which the defendant asked: "What is the matter?" and was answered, "The chain is going to break," upon which, without making an examination, which if made would have disclosed defects, he assured plaintiff that there was no danger, and ordered him to "go ahead on the chain,"—he is liable for injuries

certain work, or continued to perform that work, relying upon the assurance of his master or his master's representative that such would not unduly imperil his safety, the mere fact that, before receiving the assurance, his apprehensions as to the possibility of injury had been excited by circumstances which had come to his knowledge will not, as matter of law, render him chargeable, either with assumption of the risk involved in the work, or with contributory negligence.¹ A reference to the ensuing sections will show that, in a great majority of the cases in which the effect of an assurance of safety has been discussed, the latter defense has been the one asserted and raised.

451. Rationale of doctrine.— In Missouri it has been declared that an assurance from one representing the master that the machine or apparatus being used is all right, and an order from him to his servant to use it, notwithstanding a complaint of the servant as to its inefficiency, amount to a guaranty of safety.¹ But this conceives the master, which would obviously place the master in the position of having taken upon himself the whole risk of what might happen, irrespective of the prudence or imprudence of the servant in exposing himself to the danger, is inconsistent with the general principle stated in *ante*. A more satisfactory theory, recognized in Missouri itself as well as in other states, is that, as the knowledge and means of knowledge possessed by the servant are, under normal circumstances, inferior to those possessed by the master (compare §§ 407, 410, *ante*), the former is, as a general rule, justified in relying upon any statement made by the latter in respect to the extent of the danger of the employment.² In view of this disparity of information,

inflicted by the subsequent breaking of the chain. *Hoffman v. Dickinson* (1888) 31 W. Va. 142, 6 S. E. 53. *v. Jacob Dold Packing Co.* (1900) Mo. App. 565.

¹ A petition averring that plaintiff called the attention of his foreman to the condition of the instrumentality in question, and of the danger which might result therefrom; that defendant, through such agent, assured plaintiff that it was all right, and to go ahead; that it was unnecessary to do anything with it; and that plaintiff, relying on such representations, was induced to continue to operate the machine,—is not insufficient in failing to show plaintiff's ignorance of the conditions of the danger to which he was exposed. *Stalzer*

Testimony given by the plaintiff he believed there was no danger. His foreman's assurance that the machine was all right, and that the plaintiff was competent on the question of care, was not competent. *Malin v. Fuller* (1890) 160 Mo. 100, 15 N. E. 83. *McGowan v. St. Louis & I. M. & N. Ry. Co.* (1876) 61 Mo. 532; *Sullivan v. St. J. R. Co.* (1891) 107 Mo. 17 S. W. 748; *Rowland v. Missouri R. Co.* (1886) 20 Mo. App. 463.

² "When we say that a man creates a danger, we mean that he exercises a judgment as to the nature, and extent, of the danger, and that his judgment is right. But if, in the exercise of his judgment, he

452. Assumption of the risk, when available as a defense.

The effect of the servant's knowledge where his assumption of the risk is relied upon is open to no doubt. If that knowledge is imperfect and excuse¹ is no, the action is, upon general principles, not barred. See §§ 257, 271, *ante*. But an assurance that appliances are in good condition manifestly cannot prevent the operation of a defense which is regarded as completely made out, when it has been proved that the risk was known to and comprehended by the servant.²

son's want of vigilance. See *Pennsylvania R. Co. v. Ogier* (1860) 35 Pa. 60, 78 Am. Dec. 322. Compare also the language used in *Kinney v. Folkerts* (1889) 78 Mich. 687, 41 N. W. 152 (§ 453, note 3, *infra*); *Gowen v. Bush* (1896) 22 C. C. A. 196, 40 U. S. App. 349, 76 Fed. 349 (§ 449, note 1, *supra*).

Other cases which will be useful by way of analogy are cited in § 59, *ante*.

¹*Nelson v. St. Paul Flour Works* (1894) 57 Minn. 13, 59 N. W. 868 (superintendent told servant that a machine, the defects of which he had previously discovered, had been repaired—case held to be for jury); *Harder & H. Coal Min. Co. v. Schmidt* (1900) 43 C. C. A. 532, 104 Fed. 282 (roof of mine declared by superintendent to be safe).

²A servant "assumes the risk when he voluntarily enters into danger apparent to him, notwithstanding an agent of his employer tells him there is no danger." *Toomey v. Erie Iron & Steel Works* (1891) 89 Mich. 249, 50 N. W. 850. An employee operating a planing machine with which he is familiar assumes the risk of the belt by which it is run breaking apart, when he observes that the fastenings have partially given way, and continues to operate, although he calls the foreman's attention to it, and is told that the belt is all right and to go on. *Anderson v. H. C. Akeley Lumber Co.* (1891) 47 Minn. 128, 49 N. W. 664. An employee who knows that the lights about the machinery he works on are defective, and continues in the employment, assumes the additional risk, and is not relieved from such assumption by the statement of another employee in response to his inquiry, that the lights are all right, where he says nothing about their having been repaired,—especially in the absence of evidence that the latter employee represents the master. *Colorado Fuel & Iron Co. v. Cummings* (1896) 8 Colo. App. 541, 46 Pac. 875. A statement by a foreman to a boy fifteen years

old employed on a pasting machine, that it was foolish to use a split stock to the paper between the belt of felt and a heated cylinder, and that he could use his hands without danger, is an assurance that his hand would not be drawn into the machine if it came in contact with the surface of the belt and cylinder, so as to render the employer liable for an injury. *Loore v. Franklin Paper Co.* (1897) 169 Mass. 313, 47 N. E. 1000 (verdict for plaintiff set aside). See also *Rohrbach v. Woodward* (1900) 124 Mich. 125, 81 N. W. 797 (experienced employee operated planer for eleven months, knowing it to be defective); *Howey v. L. Shaw & H. S. E. Co.* (1895) 13 N. Y. 641, 34 N. Y. Supp. 1089.

Commenting upon the circumstance in *Weigroffe v. Durr* (1891) 40 Ill. 56, the court said: "This case is analogous to that upon which so many authorities have been cited, of defective machinery, and notwithstanding such condition the employee is urged by his employer that he can safely proceed with it; but it is a case as to the mode of proceeding with machinery that was defective, where, as to the mode of safely operating it, there was an honest difference of opinion between employer and employee. It cannot after such difference of opinion has manifested itself, that the employer, though after becomes an insurer of the employee against an accident, even if it should occur through a mistaken judgment of the employer, where the employee voluntarily continues at such work. In such case it would seem that the employer, if any, thereafter would be liable to the employee's service, which he voluntarily assumes."

In *Morris v. Pfeffer* (1898) 77 App. 516, where the defendant asked an instruction that the servant assumed the risk if he knew of it, that under such circumstances it was wholly immaterial that the order was

453. When the servant is chargeable with negligence in undertaking or continuing the work.—a. Negligence a question for the jury.—

A large number of decisions are reported in which the contributory negligence of the servant was held to be for the jury on the ground that he relied upon an expression of opinion as to the safety of the conditions to which he would be exposed if he undertook or continued to perform the work in question.¹ Other groups of cases governed by

he obeyed was coupled with a threat of discharge in case of disobedience, and that his foreman assured him that there was no danger, it was held that the instruction had been rightly refused, inasmuch as these elements were material in regard to the question of the servant's negligence. This ruling would certainly not be accepted as good law in every state. It is clear that, if the master elects to rely on the defense of an assumption of the risk, he cannot be compelled to deal with facts which would be material only on the supposition that the defense of contributory negligence was the one relied upon by him, or the only one available under the circumstances.

¹ An employer who ties two ladders together to make one sufficiently long to reach to the roof of his barn, and directs his employee to ascend, assuring him that it is safe, and that he is an old sailor and a skilful tier of knots, is liable where the employee relies on his assurances without examining the fastening, and is injured by its giving way because it is improperly tied. *Denning v. Gould* (1893) 157 Mass. 563, 32 N. E. 862. An employee who does not know the safe rate of speed for a grindstone turned by machinery has the right to rely on a statement by the superintendent of the employer that the speed at which it is revolving is safe. *Helfenstein v. Hedart* (1896) 136 Mo. 595, 36 S. W. 863. Allowing on rehearing (1896) 136 Mo. 619, 37 S. W. 829 (1896) 136 Mo. 619, 38 S. W. 294. A carpenter employed by an electric company has a right to rely on a statement by the foreman that uninsulated wires near which he is required to work are not dangerous, where there is nothing to indicate that any electrical current is passing through them. *Chicago Edison Co. v. Hudson* (1896) 14 Ill. App. 639. Whether an experienced brakeman who was struck by an overhanging arch in defendant's freight house while he was riding on the side ladder of a car of average height, with his body partly

projecting above the car, knew or ought to have known that the arch was so situated as to expose him to danger while he was on such a car, is a question for the jury, where the foreman of the crew had told him when he went to work, "to look out for himself in going through the arch on big, high cars; that on common cars he would be all right." *Burham v. Concord R. Co.* (1898) 169 N. H. 280, 45 Atl. 563. A brakeman induced to make a coupling by the promise of his superior to stop the car in time to avoid injury to him is justified in relying upon such promise until it becomes apparent that the superior will fail to perform his duty; and his right to recover for an injury sustained depends upon whether he could, by the exercise of ordinary prudence, have thereafter extricated himself from danger. *Louisiana Etc. R. Co. v. Carstens* (1898) 19 Tex. Civ. App. 190, 47 S. W. 36. When a laborer who is set to work upon a railway track, receives an assurance, express or implied, that the use of such track is suspended, he is not guilty of negligence if he goes on working without constantly watching for coming trains. *Maguire v. Fitchburg R. Co.* (1888) 146 Mass. 379, 15 N. E. 104 (servant was run over while he was sweeping up the grain which had fallen from cars on the track near the hoppers into which the rest of the car loads had been discharged). An employer of an inexperienced driver, who promises to furnish him with nothing but gentle teams, and assures him that a team furnished is gentle when in fact it is in the habit of running away, is liable for personal injuries sustained by the employee, without his fault, by the team becoming suddenly frightened and running away. *Wrought-Iron Range Co. v. Martin* (1894) Tex. Civ. App. 28 S. W. 577. Where defendant's superintendent assured plaintiff that an unlighted bin was "all right," and afterwards ordered him to get into it to empty sacks of grain, and plaintiff, in jumping over the side of the bin, was injured by fall

the same principle are those in which there had been an explicit assumption by the master, or some agent, for whose statement he was responsible,

ing on a joist, from the fact that the man had no foot in it, it was not error to refuse to direct a verdict for defendant. *O'Brien v. Natick Hallett Co.* (1900) 177 Mass. 122, 59 N. E. 65. Where a servant who had little experience in the work took a hammer from a foreman, and complained that it was not safe, and the foreman took it, and, instead of testing it, made a superficial examination, and returned it to plaintiff with an assurance that it was "all right," plaintiff was held to be entitled to assume it was safe, and was allowed to recover for an injury caused by a chip which subsequently flew therefrom. *Dawson v. St. Louis Stamping Co.* (1901) 163 Mo. 607, 63 S. W. 827. In an action for personal injuries to a girl fourteen years old, while at work on a machine used for setting up lids to boxes, evidence that she objected when ordered to work on the machine, stating that she was afraid to work on it, and did not know anything about it, and that the foreman told her that he had been hurt on the machine, but that it was due to his carelessness, and that it was now arranged so that she could not be hurt; and that she was hurt after working on it for a week, requires a submission to the jury of the question of plaintiff's contributory negligence. *McIntyre v. Empire Printing Co.* (1898) 103 Ga. 288, 29 S. E. 923. A servant who was employed to whitewash a house in which a person had died of smallpox, and who contracted the disease, may recover damages, where he relied upon the employer's assurance that the house had been thoroughly disinfected. *Spaul v. Elu* (1876) 8 Hun, 255. An employer who tells an employee that specified machinery is not difficult to manage or dangerous, and that he will "take all the risk of any accident" that may occur to her in operating it, is liable for an injury received by her while exercising ordinary care in operating the machinery. *Phillips v. Nichols* (1895) 11 Ind. App. 672, 39 N. E. 669.

A workman who has no knowledge concerning the mechanism of a machine with which he is working, and which cannot be seen without taking the machine apart, may rely upon the representations of the foreman as to its safety, when the foreman is an expert

and familiar with the machine, and expressly charged by the employer with the duty of inspecting and repairing it. *Burroughs v. Acworth Mfg. Co.* (1899) 121 Ark. 115, 79 N. E. 1168.

See also *Brookings v. Goodwin* (1886) 108 Ind. 283, 39 N. E. 302 (master assured servant that the appliances in a heavy safe were adquate for the purpose); *Turner v. Superior Iron Co.* (1878) 39 Mich. 192, 33 Ar. Rep. 423 (miner injured); *Daley v. School* (1882) 28 Hun, 311 (servant was assured that there was no danger of the fall of bricks, of which he was apprehensive); *Chadwick v. Briers* (1891) 39 N. Y. S. R. 718, 15 N. Y. Supp. 5 (servant, a house painter, was injured by the fall of a scaffold, the planks, which were not tied by him, in consequence of his reliance on the assurance of the master that they would hold without being tied); *Stamm v. Hartford Produce Co.* (1899) 108 Iowa, 137, 78 W. 811 (servant, although aware that an elevator cable was defective, held him to be necessarily chargeable with an appreciation of the danger of using where superintendent had told him it was safe); *Goodlack v. Scholt* (1900) 192 Ill. 569, 61 N. E. 332, Affirmed (1900) 95 Ill. App. 110 (servant was told that a defective belt which he was attempting to place on a revolving pulley was all right, and was ordered to ahead and put it on); *Harder & R. Co. v. Schmidt* (1900) 43 C. C. 532, 161 Fed. 282 (miner relied on superintendent's expression of opinion that the roof of a tunnel was safe); *Jepson & V. W. R. Co. v. Woods* (1900) Tex. Civ. App. 61 S. W. 830 (engineer told by a section foreman that a trolley which had been ordered to be defected had been repaired); *Shadford v. Labor Street R. Co.* (1899) 121 Mo. 224, 89 N. W. 30; *Forner v. Appeal* (1899) 390, 69 N. W. 651 (servant, being assured by foreman that there was no danger in working on the inside of the curve of a trolley wire which was held back by a vise, was injured by slipping out); *Watts & Cut Shoe Co. v. Small* (1899) 80 Ill. App. 995, Affirmed (1899) 80 Ill. App. 1007 (servant could not see); *Lane v. Stratton* (1897) 101 Ky. 67, 42 S. W. 756 (die dropped unexpectedly owing

sible, that certain dangerous conditions, of which the servant had acquired knowledge, had been remedied;² or that certain precautions to secure his safety could be taken;³ or that a certain future event which

defect in clutch; *Schmidt v. Gillen* (1896) 41 App. Div. 502, 78 N. Y. Supp. 478 (regulatory negligence of servant held to be for the injury, when defendant and his foreman had declared that a certain thing was all right, and the result, which occurred in fact, occurred in fact); *Phelan v. Phelan* (1897) 2 Ind. Terr. 169, 17 S. W. 311 (servant assumed that a wire rope, the safety of which he suspected was safe); *Woke v. Price* (1899) 22 Ky. L. Rep. 494, 58 S. W. 490 (servant injured by a defective shaft, while he was rolling a loghead); *Glen v. D. Aschub* (1883) 10 So. Sess. Cas. 10 (servant, in course of engine operation, when one was so placed that the live cylinders flying from it were apt to fall on the charges of powder which were used for blasting); *Emerson v. Schenck* (1890) 32 Misc. 680, 161 N. Y. Supp. 498 (servant assumed that ceiling, although cracked, was not dangerous); *Sadler v. A. Rose* (1897) 21 App. Div. 592, 17 N. Y. Supp. 809 (same facts); *Harper v. Chicago, R. I. & P. R. Co.* (1895) 62 Mo. App. 192 (servant was assured that ladder with worn rungs was safe); *Jones v. St. Louis v. & P. Pac. Co.* (1891) 43 Mo. App. 398 (plaintiff called the attention of the second mate to a defect in a plank, and was assured that it could be safely used); *American Wire & Cable Co. v. Campbell* (1893) 8 Ind. App. 335, 13 N. E. 721 (foreman assumed that a different wire was different and more dangerous than the one which was safe); *Becker v. City Chap & Coal Co.* (1899) 18 Mo. App. 68 (miner injured by falling of timber which had been assured to be safe); *Duches v. Grubbs* (1897) 17 App. Div. 422, 17 N. Y. Supp. 231 (servant, in construction of scaffolds, was told by foreman that the one on which he was working was safe); *Healy v. Healy* (1893) 4 C. C. A. 261, 12 Fed. App. 74, 56 Fed. 984 (the plaintiff assumed to engage in

shoveling gravel in to cars under an overhanging plank, and its appearance and required of the foreman as to its safety. The foreman, who had previously been upon the plank, endeavoring to throw it down, went up a run, when thus appealed to, for the purpose of examining it; and he then repeated the assurance of safety, accompanied with the order which he had given when he first instructed the plaintiff to assist in the loading of the cars. The court said: "It certainly cannot be said, as a matter of law, that the plaintiff was not justified in giving some weight to, and placing some reliance upon, assurances thus given and repeated. There were other facts to be weighed in connection with the assurances given by the foreman, upon the question of contributory negligence on the part of the plaintiff, such as the composition of the plank, the character of the overhanging crust, the fact that it had remained in its then condition since the previous day, and that it had resisted the efforts of the foreman to throw it down. Under these circumstances, we think that the questions of the assumption of the risk and of contributory negligence on the part of plaintiff were for the jury, and not for the court, in 1904 it was error to withdraw them from the jury."

² *Hudson, I. & S. P. R. Co. v. McKee* (1887) 37 Kan. 592, 45 Pac. 181 (superintendent told plaintiff that machine complete and had been repaired); *Lorenson v. Harpersford Co.* (1892) 93 Ky. 591, 20 S. W. 701 (servant had refused to use a saw unless it was repaired, and only resumed work when informed by the machinist that it was "all right"); *Grogan v. D. M. Osborne & Co.* (1896) 115 Cal. 437, 47 Pac. 248 (same facts); *Sophers v. Bechtels* (1896) 178 Pa. 101, 35 Atl. 1009 (employee, after discovering that a machine was out of order, and informing the superintendent thereof, continued to operate it after the superintendent had done some work upon it and pronounced it all right); *Nelson v. St. Paul & Northern Pac. Co.* (1891) 57 Minn. 13, 58 N. W. 898 (superintendent told servant that a machine the defects of which he had previously discovered had been repaired).

³ A servant whose business it is to examine revolvers after they have been

was expected to happen would not happen before a certain time;⁴ or that an occurrence which would endanger his safety could only happen as a consequence of some particular thing's being done;⁵ or that he would not incur any hazard in operating an appliance in a certain manner.⁶

If the servant is otherwise entitled to rely upon the master's assurance that there is no danger, the mere fact that he was told by a fellow servant that there was danger is not enough to render him chargeable, as matter of law, with contributory negligence.⁷

In some cases the doctrine has been laid down that, although a defect is apparent, yet, if the servant proceeds to work, on an assurance given by the master that it is safe to do so, the master is liable for a resulting injury, unless the extra hazard is so palpable that a man of

tested has a right to rely to some extent on the tester's assurance that he would leave no unexploded cartridges in the revolver. *Anderson v. Duckworth* (1894) 102 Mass. 251, 38 N. E. 510. Compare *Bradley v. New York C. R. Co.* (1874) 3 Thomp. & C. 288 (laterer entitled to rely on assurance of track master that warning of the approach of trains would be given).

Contributory negligence of the servant is for the jury upon evidence that the employee was injured by the descent of an elevator while he was at the bottom of the elevator well picking up paper, and that the superintendent had virtually promised to look out for him while so engaged. *Scullane v. Kiblogg* (1897) 169 Mass. 544, 48 N. E. 622. On the ground that, if the defendant by his own act has thrown the plaintiff off his guard, and given him reason to believe that vigilance is not needed, the lack of such vigilance on the part of the plaintiff is no bar to his claim, it has been held that one employed to fix the pipes on a blower used for removing sawdusts from a mill, and who is injured, while putting his hand through the casing to adjust the pipe, by the employer's starting the blower without his knowledge and without giving him notice, after inducing him to believe that it would not be started until he was notified, is entitled to recover for such injury. *Kinney v. Folkerts* (1889) 78 Mich. 687, 14 N. W. 152.

Compare, generally, the cases in chapter XVI, *ante*, as to the master's duty to warn his servant; and also those cited in § 355, *ante*.

⁴That the boss or foreman of a rail-

road told a trackman that no train or engine would come over a certain bridge until a certain hour may properly be taken into consideration by the jury in determining whether he was negligent in not seeing the engine which injured him while he was crossing the bridge before that hour, in the dark, although coming in a direction opposite to that in which he himself was walking. (Brewer and Brown, J.J., dissented on the ground that the plaintiff was negligent, as a matter of law.) *Northern P. R. Co. v. Amato* (1892) 144 U. S. 465, 36 L. ed. 505, 12 Sup. Ct. Rep. 740. Affirming (1892) 1 C. C. A. 408, 1 U. S. App. 113, 53 Fed. 881. Affirming (1891) 46 Fed. 561; *Floettl v. Third Ave. R. Co.* (1896) 10 App. Div. 98, 41 N. Y. Supp. 792. Trackman went under track in reliance on statement of foreman that no train would pass until a time much later than the time of the accident).

⁵*Blanton v. Dold* (1891) 109 Mo. 75, 48 S. W. 1149 (plaintiff not negligent as matter of law, in putting his hand inside a machine which, he was assured by the foreman, would not start without the pulling of a rope).

⁶The question of the servant's due care is for the jury, where his injury resulted from his reliance upon the assurance of his foreman that the jack-screw which he was operating might safely be lowered a certain distance. *Knight v. Overman Wheel Co.* (1899) 174 Mass. 455, 54 N. E. 890.

⁷*McKee v. Tourtellotte* (1896) 167 Mass. 69, 48 L. R. A. 542, 44 N. E. 1071.

ordinary intelligence and prudence would incur it.⁸ This doctrine would appear to be simply the logical equivalent of that which declares that the fact of a servant's meeting a known danger does not necessarily imply that he was negligent. See § 22, *ante*. If the language used means anything more than this, the doctrine is counselled by that which is found in the cases cited in our next subdivision of this section. But it is not amiss to notice that the decisions which embody this doctrine were all rendered in Missouri, a state in which the power of the courts to control or override verdicts seems to be more sparingly exercised than in most jurisdictions. See § 301, *ante*.

In our case it was argued that the rule as to the effect of an assurance of safety should be different where the appliance was of an extremely simple character, such as a ladder; but this contention did not prevail.⁹

The servant's position is, of course, proportionally strengthened where he was not only assured that the conditions complained of did not imperil his safety, but also that they would be altered for the better,¹⁰ (see chapter XXII., *ante*); or where the fact of the servant's having acted under a specific order constitutes a distinct and additional element in the case¹¹ (see chapter XXIII., *ante*).

⁸ *Aldridge v. Midland Blast Furnace Co.* (1883) 78 Mo. 559; *Monahan v. Kansas City Clay & Coal Co.* (1891) 58 Mo. App. 68; *Jones v. St. Louis, A. & P. Packet Co.* (1891) 43 Mo. App. 398.

⁹ *Warner v. Chicago, R. I. & P. R. Co.* (1895) 62 Mo. App. 192 (servant used a ladder with worn rungs).

¹⁰ Where a miner complains of being exposed to danger from the possible fall of a large stone in the roof of a tunnel, and is not only assured by the underground manager of the mine that there is no risk, but receives a promise from the same official that the stone will be very shortly removed, it is for the jury to say whether an injury which he suffers through going back to work before the manager's promise is fulfilled shall be considered due to his own rashness, or to his having implicitly relied on the assurances so given him. *Paterson v. Wallace* (1854) 1 Macq. II. L. Cas. 748, 28 Eng. L. & Eq. 48.

See also *Chicago Drop Forge & Foundry Co. v. Van Dam* (1894) 149 Ill. 337, 36 N. E. 1024, Affirming (1893) 50 Ill. App. 470 (inexperienced servant went on using a defective machine after the foreman had assured him that it was all right, and that he would shortly be supplied with a contrivance which would di-

minish the peril); *Warner v. Chicago, R. I. & P. R. Co.* (1895) 62 Mo. App. 191 (ladder with worn rungs); *Young v. Mercantile Steam Laundry Co.* (1901) 198 Pa. 553, 48 Atl. 997 (servant assumed that certain promised repairs in a mangle had been completed before she resumed work).

¹¹ *McKee v. Tourtellotte* (1896) 167 Mass. 69, 48 L. R. N. 512, 41 N. E. 1071; *Keegan v. Kavanaugh* (1876) 62 Mo. 230 (held to be a question for the jury whether a hod carrier engaged in helping to build a wall at the foot of an embankment of earth 20 or 30 feet deep, and not shored or propped up, was negligent in obeying orders to go down, although reluctant to do so, when he was told that there was no danger); *Jackson v. Georgia R. Co.* (1886) 77 Ga. 82 (section hand, after inquiry as to danger, was ordered, with a curse, to 'go or leave, and told there was no danger'); *Chicago Induscon Pressed Brick Co. v. Sobkowick* (1892) 45 Ill. App. 317, Affirming (1891) 148 Ill. 573, 36 N. E. 572 (servant, after protest, had gone to dig under a bank of earth in response to an express order and an assurance of safety).

The contributory negligence of the plaintiff was held to be for the jury

b. Negligence predicable as matter of law.—Contributory negligence is said to be predicable, as a matter of law, of the undertaking or continuance of work involving exposure to an abnormal danger whenever the condition to which the assurance related was apparent to a person in the exercise of ordinary care;¹² or where the inadequacy of the appliances was palpable;¹³ or where the servant had equal means of knowledge, as compared with those of the person giving the assurance.¹⁴

where the evidence was that he was engaged in tying a 4 inch wall in front of an old wall, and tying the two together; that the old wall was 13 inches thick, up to 14 feet in height, with an 8 inch fire wall and gable built on top of it; that, after building the 4 inch wall up 12 feet, defendant ordered plaintiff and others to take a course of brick from the old wall; that, when plaintiff inquired, "Aren't we getting pretty high?" defendant replied, "No; that's all right;" that, in consequence of removing such course, the gable wall fell on plaintiff; and that plaintiff had worked for defendant two years prior to the injury, and according to his own testimony did not know where the 8 inch wall began. *Starr v. Krenshberger* (1900) 129 Cal. 123, 61 Pac. 787.

The defendants are not entitled to a peremptory instruction in their favor where the injury was caused by the fall of a scaffold, and it was in evidence that the accident occurred when plaintiff was helping three others carry a timber near the place on a scaffold where he had been making repairs a short time previously, and that, fearing for the strength of the staging, he had asked the foreman if it was safe, who said it was if not loaded down with timber; and ordered plaintiff to go on with his work, and not ask so many questions. *Lambert v. Mississippi Pulp Co.* (1909) 72 Vt. 278, 47 Atl. 1085.

¹² *Lawrence v. Hagerman & Co.* (1892) 93 Ky. 591, 29 S. W. 704; *Grubbs v. Newburg Gravel Coal & Coke Co.* (1893) 38 W. Va. 273, 18 S. E. 581. In a case where plaintiff, who was employed by defendant to operate a machine used for planing boards, asked for an assistant, and his request was refused, the foreman assuring him that he could operate the machine by himself without danger, the defendant was held not to be liable for an injury resulting from a board turning over and pushing plaintiff's hand into the knives of the ma-

chine, as the knives were visible, and the danger to plaintiff from running his hands close to the knives was perfectly apparent. *Bis v. Struck* (1901) 23 Ill. App. 1113, 64 S. W. 729.

Where the servant knew that the place of work was unsafe, it is erroneous to give an unqualified instruction to the effect that he is entitled to recover if he had been assured by the master's representative that it was safe. *Breckinridge & P. Spool Co. v. Umphry* (1897) 18 Ky. L. Rep. 915, 33 S. W. 799. An instruction is erroneous which gives the jury to understand that a master employed a contractor is not absolved from a care in inspecting the construction of scaffolding on which he is directed to work, merely because the foreman told him that it is all right and ready for him to work on. *Bauman v. Sams* (1896) 68 Ill. App. 161.

That the assurance of the person in charge of the work that he would guard the plaintiff was guarded against danger was not sufficient to justify the latter's continued exposure to the known risk of the environment,—at all events where the circumstances were such that it was impossible for that person to give the plaintiff such warning as would enable him to escape the peril,—is deductible from the decision in *Reese v. Clark* (1892) 146 Pa. 465, 23 Atl. 246 (imposed by the fall of some heavy iron plates, propped up by bricks which plaintiff was removing). One ordered by his superior to make a car couple under such circumstances that the danger was great and apparent, although induced to act by a promise that the should be stopped in time to avoid accident to him, cannot recover for injury sustained, if ordinary prudence would have dictated a refusal. *Louisiana Tension R. Co. v. Carstens* (1898) Tex. Civ. App. 190, 47 S. W. 36.

¹³ *Bradbury v. Goodwin* (1889) 1 Ind. 286, 9 S. E. 302.

¹⁴ *Perschke v. Hencken* (1897) 44

454. Contributory negligence in respect to the manner of performing the work.—Although the servant may have been justified in relying upon the assurance of the employer that no abnormal danger would be incurred, his action will nevertheless be barred if it is shown that,

Y. Supp. 265. Where the evidence shows that a man employed to do work on a shift employed the deceased, who was a man of experience as a miner; that it was for that reason he was employed; that the matter of gas was talked over between them; that they both knew that the shaft was dealing a little gas; and that they both thought there would not be any danger by using care, — an instruction to the effect that if the jury believe that deceased went upon a shift in the shaft by request of and under employment of defendant, and that before he went thereon defendant or his agents informed him that it was safe from explosive gases, and that he had reason to believe it was safe, as defendant had informed him, then he did not go thereon voluntarily, — is not applicable to the testimony. *Cold Run Coal Co. v. Jones* (1899) 127 Ill. 379, 8 N. E. 865, 20 N. E. 89.

As a complaint alleging that the plaintiff, a carpenter, was injured by the giving way of a window casing by which he was supporting himself while doing some work on a roof shows that he was injured by a risk as open to his own observation as that of his employer, he cannot recover, although there are also allegations that his employer assured him of the safety of that manner of working, and commanded him to proceed in that way. *Heckle v. RRs* (1901) 110 Wis. 532, 86 N. W. 171.

In *Hogg v. Ritch* (1893) 6 C. C. A. 201, 12 U. S. App. 531, 54 Fed. 981, the cases which declare the general rule to be that, where the servant is of mature age, and of ordinary intelligence, he cannot recover for an injury caused by a known risk, even though assured by an agent or representative of the master that there is no danger, have been thus commented upon: "In all, or nearly all, these cases the employee had equal knowledge of the risk to be apprehended with the master or his representative, and hence was not relieved from the duty of exercising his own judgment upon the question whether he would or would not subject himself to the known

dangers of the situation. There are, of course, cases which hold the rule to be that when a servant is directed by the master or his representative to place himself in a situation of danger, the law will not charge him with the risks of the situation, or hold him guilty of contributory negligence, unless the danger is so glaring that no prudent man would subject himself thereto, even in obedience to the commands of a master. The difference observable in these cases in the weight given to an assurance of safety on the part of the master or his representative is mainly due to the different state of facts proven in the several cases upon the point of equal knowledge or means of knowledge between the master and servant of the risk to be incurred in the given instance. The fact that the assurance of safety has been given is one to be weighed in each case. The weight to be given thereto is dependent upon the circumstances of the particular case. If, in a given instance, the servant, being of mature age and of ordinary intelligence, has equal knowledge with the master of the dangers to be apprehended, and he voluntarily subjects himself thereto, knowing of their existence, the mere fact that he had received an assurance that there was no risk to be dreaded or avoided might be of little avail in relieving him from a charge of contributory negligence. On the other hand, if the master or his representative has superior knowledge or means of knowledge of a given situation and of its safety, or the contrary, and he assures the servant that he can safely undertake a given work, such an assurance may justify the servant in undertaking the work in reliance upon the superior knowledge of the master, and without being liable to the charge of negligence in so doing, unless the danger, in the language of the Supreme Court, in *District of Columbia v. McElhinott* (1886) 117 U. S. 633, 29 L. ed. 949, 6 Sup. Ct. Rep. 888, is so imminent or manifest as to prevent a reasonably prudent man from risking it."

while he was engaged in the performance of the work, he failed to exercise ordinary care in avoiding an obvious peril.¹

¹On this ground it has been held that no action could be maintained where the servant inserted his hand inside the fence which surrounded a saw, and came in contact with the saw, while he was attempting to pick up a piece of chain near it. *Schultz v. C. C. Thompson Lumber Co.* (1895) 91 Wis. 626, 65 N. W. 498. Where a servant employed to dig clay by undermining it was injured, while digging a trench 8 feet wide through a bank, by clay from the rear wall falling and catching him where he stood between it and the end of a cart

which was standing in the trench, it was held that he could not recover on the theory that the foreman had assured him that he could work in safety in the trench while digging as directed, inasmuch as the danger was not in the manner of the digging, but in undermining without leaving supports, which was understood by him, and in taking his position between the wall and the cart, where it was difficult to escape if the bank fell. *Cisney v. Pennsylvania Sewer Pipe Co.* (1901) 199 Pa. 519, 49 A. 309.

CHAPTER XXV.

LIABILITY FOR INJURIES RECEIVED BY THE SERVANT IN OBEYING AN ORDER TO PERFORM DUTIES OUTSIDE THE SCOPE OF HIS ORIG- INAL CONTRACT.

- 455. Introductory.
- 456. Necessity of showing that the servant was transferred to essentially new duties.
- 457. — and that the order by which he was transferred was within the powers of the employer giving it.
- 458. — that the order was negligent.
- 459. Special grounds on which negligence is inferred.
- 460. Assumption of risks as a defense; generally.
- 461. Risks not assumed unless known.
- 462. Risks assumed, if known.
- 463. What risks fall within this description.
- 464. Indiana doctrine as to assumption of risks.
- 465. Doctrine of common employment qualified as regards servants work-
ing outside the scope of their employment.
- 466. Contributory negligence in undertaking the new work.
- 467. Absence of compulsion an essential element of assumption of risks
and contributory negligence.
 - a. Generally.
 - b. Protest or objection omitted or made.
 - c. Fear of discharge.
- 468. Contributory negligence in regard to the manner of performing the work.
- 469. Injuries due to risks entirely disconnected from the servant's duties;
right of action for.

455. Introductory.—The risks with which we have hitherto been concerned fall into two categories,—*viz.*, those ordinarily incident to the employment, and those which are extraordinary, in the sense that they would not have existed if the master had not been derelict in regard to his specific duties to furnish reasonably safe appliances and see that they are used according to a proper system. In the present chapter it is intended to collect the decisions relating to injuries caused by another class of extraordinary risks,—*viz.*, those which fall into that category for the reason that, being incident to work which

was not within the scope of the original contract of hiring, they not among those which he expected to encounter.¹

456. Necessity of showing that the servant was transferred to essentially new duties.—The evidential prerequisites to the establishment of a right of action, and the defenses available to the master, are sufficiently indicated by the headings of the ensuing sections. To locate the application of the special principles appropriate to the classes of cases now under discussion, it must, in the first place, be shown that the order really did take the servant outside the scope of his original employment, and did not merely direct the performance of duties somewhat different to those which were required from him in the regular course of his work.¹

It should be noted that these principles have no application w

¹The hazards incident to the new work may be considered extra hazardous as being outside of the regular employment, and additional to the risks thereof. *Consolidated Coal Co. v. Hannon* (1893) 116 Ill. 611, 35 N. E. 162.

That the element of nonanticipation (see § 273, *ante*) is the connecting link between cases involving this and the other classes of extraordinary risks is clearly brought out in the arguments of several cases. See, especially, *Union P. R. Co. v. Port* (1873) 17 Wall. 553, 21 L. ed. 739, as quoted in § 465, *infra*; *Northern P. Coal Co. v. Richmond* (1883) 7 C. C. A. 485, 15 U. S. App. 262, 58 Fed. Rep. 756.

¹In *Curran v. Merchants' Mfg. Co.* (1881) 139 Mass. 374, 39 Am. Rep. 457, it was contended that the case was taken out of the ordinary line of cases in which the servant is an adult, by the fact that the plaintiff, who was fourteen and a half years of age, and had worked in the mill two and a half years, was of tender years, and was set to work in an unusual place, doing what he was not accustomed to do. This argument was rejected on the ground that the evidence was that the work he was doing was precisely like what he had been accustomed to do from time to time during the whole term of his employment by the defendant, and that his injury did not proceed from the fact that he was working in dangerous proximity to other machinery over which he had no control.

It is not without the scope of employment of one employed in a car shop to do general work,—such as lifting, carrying timber, painting, etc.,—to assist in lifting a car upon its trucks with a steam winch, where the like service had

been rendered on other prior occasions by him and his fellows. *Pindely v. Self Wheel & Foundry Co.* (1896) Mich. 286, 63 N. W. 50 (one day's work). The servant is not shown to have been injured in doing work outside the scope of his employment, when the evidence is that he had worked in the mine for some time as a "bottomger," but that when rock fell from the roof of the mine he would be called upon to help clean it up, and occasionally, there was loose rock overhead, he would be required to help pick it off; and on the occasion of the accident a foreman in the mine directed him to go down a rock in the roof of the mine in a different place from that in which he was employed. *Coal Valley Min. Co. v. Nelson* (1900) 87 Ill. App. 480.

Findings that the plaintiff was employed to operate machinery in defendant's mill, and that it was his duty to adjust it and keep it in order, and that he was injured while repairing the machinery, show that he was injured in the line of his employment. *V. Evans* (1900) 24 Ind. App. 33, 35 N. E. 725. A father cannot recover damages for the death of a mine through the negligence of a fellow servant, while he was engaged in the line of his employment, although it was outside the scope of his regular employment, if he had been doing the same kind of work at the time the injury occurred. *Ohio & W. R. Co. v. Morley* (1867) 28 Ind. 371.

A complaint alleging that the plaintiff was received while the servant, a repairer, was traveling on a train from one tunnel to another under the direction of the superintendent, does not show a wrongful transfer from his general

that the injury
servant, a man
on a train from
under the order
does not show a
his general line

the duties in which the servant was engaged at the time of the accident were being performed under a contract entirely distinct from that under which he first entered the employment. The same general reasons as those which are deemed to justify the doctrine of the assumption of the ordinary risks of an employment necessarily require the inference that the servant cannot recover for injuries due to the ordinary risks of such work, although they may be greater than those which he incurred in his former capacity.²

457. — and that the order by which he was transferred was within the powers of the employee giving it.—As in the case of an order given by a superior employee in respect to matters within the scope of the original employment of the injured servant (see § 435, *ante*), the master is not bound by an order of the kind considered in the present chapter, unless it was one which the directing employee had authority to give. See, generally, chapter XXXIII, *post*.

In one case the position is taken that an order by which one employee directs another to do work outside the scope of his employment is not binding on the master, unless the directing employee occupies the position of a vice principal, either by virtue of his official rank, or by reason of the fact that the order arises out of the exercise of some non-delegable duty of the master.¹ If the doctrine embodied in the cases cited in § 465, *infra*, had not been enunciated, it might be desirable to adopt this theory as one which would furnish a convenient criterion by which to define the boundary line between authorized and unauthorized orders, and which would obviate the difficulty suggested

of employment. *Copper v. Louisville, Wright* (1897) 16 Ind. App. 630, 45 N. E. 817.
E. & St. L. R. Co. (1885) 103 Ind. 305, 2 N. E. 749.

A servant employed to sweep the floors of a factory was allowed to recover for injuries received while he was complying with an order to wipe the belts of machinery in motion, there being no evidence to show that he appreciated the danger. *Norfolk Rock-Sugar Co. v. Hight* (1899) 59 Neb. 100, 80 N. W. 276.

An allegation that the work in which the servant was engaged, when injured, was entirely different from that which he was employed to do, and was more dangerous than such work, and had to be performed with different weapons, operating under different rules and methods, and with appliances and in a place distinct from those of the work which the servant was employed to do, is sufficient to show that he was engaged outside the scope of his original employ-

ment. *Clark County Cement Co. v. Adams* (1886) 105 Ill. 151, 5 N. E. 187.

In Jones v. Lake Shore & M. S. R. Co. (1883) 49 Mich. 573, 14 N. W. 551, it was laid down that where a servant signs a contract which binds him to obey all orders, rules, and regulations, but in which the general language applies equally to all classes of employees, the agreement to obey all orders must be construed to apply to all which are issued to him in the line of duty in which he is employed; and it does not empower the company to assign him to other duties wholly disconnected therewith and differing therefrom.

Boeing v. Carson (1894) 161 Pa. 26, 28 Atl. 996 (one employed as a weaver had been laid off until a new mill was started up, and was meantime employed to assist in moving into the new mill and making alterations).

Patishub, C. & St. L. R. Co.

by the consideration that, if employees other than vice principals should be regarded as having authority to give an order to perform new duties, the anomalous result would follow that different conclusions might, in some instances, be arrived at, according as the definition of common employment was or was not specifically relied on. The doctrine referred to, supposing it to be one of general application which is possibly not absolutely settled, renders it unnecessary to discuss the question thus raised.

A declaration is not demurrable on the ground that it fails to state that the agent of the employer, who commanded the employee to perform the act resulting in the injury, had exclusive control and authority over the injured employee, as a master may appoint as many agents as he pleases to execute any particular work, and the acts of each within the scope of his authority, are binding on the employer, unless the authority is a joint one only.²

Where the servant, in doing work outside the scope of his employment, was acting without proper authority, it is clear that the failure to give him instructions cannot be imputed to the master as negligence.³ See § 459, ¹ a, b, *infra*.

458. — and that the order was negligent.— Another prerequisite to the maintenance of an action on the special ground that the injury was received while the servant was performing duties outside the scope of his employment is that the order by which he was required to perform those duties should¹ be shown to have been a negligent one.

The doctrine which is most consistent with general principles of negligence which is supported by the great weight of authority is that such negligence is not predicable upon evidence which merely shows that the servant of mature years and of ordinary intelligence was directed to do a certain piece of work outside the range of the functions which he had agreed to perform, and that he consented to do such work without making any objection on the score of his unfitness or incapacity.²

² *Camp v. Hall* (1897) 39 Fla. 535, 22 So. 792.

³ *Leistritz v. American Zylonite Co.* (1891) 154 Mass. 382, 28 N. E. 294; *Gillen v. Rowley* (1890) 134 Pa. 209, 19 Atl. 504; *Hinckley v. Horazdowsky* (1890) 133 Ill. 359, 8 L. R. A. 490, 24 N. E. 421; *Stewart v. Patrick* (1892) 5 Ind. App. 50, 30 N. E. 814; *McNee v. National Starch Mfg. Co.* (1894) 142 N. Y. 106, 36 N. E. 809 (no liability where servant undertook *proprio motu* to repair machinery, when it was his duty merely to report to a machinist when the necessity for repairs arose).

¹ See, generally, the cases cited in and the following sections.

In *Boston Oil Co. v. Thon* (1890) 76 Tex. 235, 13 S. W. 60, it was held proper to charge the jury that the plaintiff would be entitled to recover if the superintendent ordered him to perform a service which was dangerous to the plaintiff, and if the plaintiff, not within the scope of his employment, if in this the superintendent did not exercise due care, provided plaintiff was injured while attempting, in the exercise of due care, to obey the command.

² *Cole v. Chicago & N. W. Ry.* (1888) 71 Wis. 114, 37 N. W. 84.

order that the servant may recover, therefore, it is necessary to prove that the order, in compliance with which he undertook the new duties, was culpable for some reason independent of the fact that his employment was changed. In other words, where a servant is ordered into a service which is not within the scope of his employment, the question of the master's negligence depends upon the particular circumstances involved in the case.³ This principle is controlling even in cases where the injured person was a minor.⁴

case was approved in *Hoyen v. Northern P. R. Co.* (1892) 53 Fed. 519, which was followed in *Richmond & D. R. Co. v. Finley* (1894) 12 C. C. A. 595, 25 U. S. App. 116, 63 Fed. 228. See also *Garrigan v. Lake Shore & M. S. R. Co.* (1896) 110 Mich. 71, 67 N. W. 1097; *Richardson v. Swift & Co.* (1899) 37 C. C. A. 557, 96 Fed. 699; *Chicago, R. I. & P. R. Co. v. Kinnare* (1901) 190 Ill. 9, 60 N. E. 57.

"An employee of mature years who was removed from one line of employment and set to work in another, without objection, and was then injured while operating machinery with which he was unfamiliar, or which he did not know how to operate, cannot recover from his employer for such injuries, unless his employer knew that he did not know how to operate the machine, or, he having informed his employer of his inexperience, the latter failed to instruct him." *ArCADE File Works v. Juteau* (1896) 15 Ind. App. 461, 40 N. E. 818, 44 N. E. 326.

The jury is properly charged that the mere fact that an employee is ordered to perform work in addition to that which he was originally employed to do will not of itself render the employer liable for an injury received while performing such work, unless the employer was guilty of negligence, and the employee free from contributory negligence. *Hillshoro Oil Co. v. White* (1897; Tex. Civ. App.) 41 S. W. 874.

In one case it was remarked that the master is "not liable, unless the outside work is more dangerous and complicated for the plaintiff to perform than that in which he was engaged." *Martin v. Highland Park Mfg. Co.* (1901) 128 N. C. 264, 38 S. E. 876. This statement would seem to involve, by implication, the converse doctrine, that the master may be liable in cases where the new work is shown to have been of the description designated in the last clause of the sentence. If this were really the

doctrine intended to be put forward, it would be erroneous according to most of the authorities cited in this and the next sections. But the context shows that the court was speaking of cases in which the master failed to warn an ignorant servant.

³*Consolidated Coal Co. v. Haenni* (1893) 146 Ill. 614, 35 N. E. 162, affirming (1892) 48 Ill. App. 115; *Cole v. Chicago & N. W. R. Co.* (1888) 71 Wis. 114, 37 N. W. 84; and the cases cited in the next section.

⁴In *Anderson v. Morrison* (1875) 22 Minn. 274, the court, in rejecting the contention that a cause of action arises in favor of a minor who is injured in consequence of being set at more dangerous work, whether this change in his duties was negligent or prudent, said: "This proposition is wrong, and the charge of the court correct. If an employer should set an adult who had capacity to take care of himself, and who knew the risks, to do a dangerous work, of course the employer would not be liable for an injury occurring to the employee in doing the work. And it would be the same if the employee were a minor, but of sufficient capacity to avoid the danger, and who knew of the danger to be avoided. There could be no greater wrong in putting such a minor to do a work accompanied with risk, than in setting an adult to do it; and when it would be proper to put a minor to do such work must necessarily depend upon the particular circumstances of each case,—upon the character and degree of the danger, and the capacity of the minor to comprehend and avoid it. Putting the minor to do the work becomes a matter of discretion and care, to be exercised with reference to such circumstances; and the employer can be held liable only where he does not exercise such discretion and care,—that is, where he is negligent. The case of *Union P. Co. v. Fort* (1873) 1, Wall. 553, 21 L. ed. 739 [see § 461, *infra*], proceeds upon

In the absence of facts which were such as to indicate that the man was not capable of performing the new duties, the master is entitled to presume that he was competent to discharge them.⁵

In § 161, *infra*, it will be shown that a theory which is to some extent inconsistent with the general principle just enunciated has been adopted.⁶

459. Special grounds on which negligence is inferred.—A special element justifying the inference of culpability, in respect to an order which transferred the servant to new duties is claimed to exist in the following situations:

(a) Where the servant was, to the knowledge of the master or of the servant who gave the order, unfitted, on account of his tender years, physical or mental weakness, lack of technical skill, or inexperience, for the work to be done.¹ The master's liability in this instance

rests on the proposition that the setting of the minor in that case to do the perilous work for which he had not been employed was an imprudent act, and not on the ground merely that the work was perilous and the employer a minor.²

¹ *Arcade Fire Works v. Johnson* (1896) 15 Ind. App. 161, 49 N. E. 818, 44 N. E. 326.

² In *Cincinnati, H. & T. R. Co. v. Madden* (1893) 131 Ind. 112, 31 N. E. 227, negligence seems to be implied from the mere giving of an order to perform new duties. The position of the court apparently is that the extra risks are not assumed, and that this fact, of itself, implies that the act of the master which was the immediate occasion of the servant's being exposed to them must have been negligent.

"If the particular work ordered to be done is of a dangerous character, and one which requires peculiar skill in its performance, and the person directed to perform such work has not the requisite knowledge or skill for doing the work with safety, and such want of skill or knowledge is known, or might be reasonably supposed to be known, to the employer, in that case the direction of the employer to do the work might be justly held to be a violation of a duty which he owes to his employee, even though the employee undertook to do the work without objection or protest upon his part. None of the cases go further than this, and we can see no reason for holding a stricter rule." *Coke v. Chicago & N. W. R. Co.* (1888) 71 Wis. 111, 37 N. W. 84.

In *Lalor v. Chicago, B. & Q. R. Co.*

(1899) 52 Ill. 101, 4 App. Rep. 1, the decedent, then acting substantially as the principal's decedent was killed in coupling cars, an operation outside the scope of the work for which he had been hired, and one in which he had, as known to the defendant's representative, no experience, was held not to die in the service. The court said: "The decedent was to perform work only and entirely in the ordinary course of his employment; he was compelled to do other extra hazardous work, by which he lost his life, the superintendent knowing him to be unskilled and unacquainted with the manner of doing such work when he ordered him to perform it. And the decedent was in the service of the company as the superintendent, his service as the superintendent, his position, however, was a special one, and subordinate as to counsel him to yield implicit obedience to the command of the superintendent. The company was strictly protected by and through the superintendent, and must be charged accordingly. It was then, by the direct order of the company, the decedent was exposed to this peril, and one out of the ordinary of the business he had contracted to perform."

Negligence may properly be inferred where the evidence shows that a person, after firing the boilers of a steam engine for one year, had been notified by the engineer in spite of protestations that he knew nothing of running it; and that he received instructions as to the manner in which it should be run. *Good, C. & S. T. Co. v. New York* (1901) 144 N. Y. 55, 80 N. E. 710.

A servant employed as an oil

gines on one ferry-boat, in which the hatchways are always covered when not in use, and transferred temporarily to a different kind of work on another boat out of commission, on which the hatchways are customarily left open under such circumstances, should be warned of that custom. *Brown v. Ann Arbor R. Co.* (1898) 118 Mich. 205, 76 N. W. 407.

For other cases in which the servant's action was sustained, for the reason that the person giving the order understood, or ought to have understood, the unfitness of the servant to do the work required, see *Union P. R. Co. v. Fort* (1873) 17 Wall. 553, 21 L. ed. 39 (foreman ordered a young, inexperienced boy who had previously worked as a helper at a mauling machine, or a common hand on the floor of a railway shop, to ascend a ladder and adjust displaced machinery while a shaft close by was rapidly revolving); *Jones v. Old Dominion Cotton Mills* (1886) 82 Va. 140 (boy of thirteen years hired to "sweep, carry water, and fill buckets with quills," ordered to mend a broken belt, in a position which required him to stand on a step-ladder near four belts in rapid motion); *Newbury v. Getchell & M. Lumber & Mfg. Co.* (1896) 100 Iowa, 441, 69 N. W. 713 (inexperienced minor ordered, without warning or instruction, to do work more dangerous than that for which he had been engaged); *Norfolk Beet-Sugar Co. v. Hight* (1899) 59 Neb. 100, 80 N. W. 276 (common laborer in sugar factory, hired to sweep the floor of one of the rooms, was injured while wiping water from a belt with a gunny-sack); *Foley v. California Horseshoe Co.* (1893) 115 Cal. 184, 47 Pac. 42 (boy of fourteen years, employed to operate a punching machine, ordered to assist in screwing in a misplaced nut, had his sleeve caught in a cogwheel); *Erickson v. Milwaukee, L. S. & W. R. Co.* (1890) 83 Mich. 281, 47 N. W. 237 (common laborer ordered to uncouple cars, and injured by the fireman's negligence in letting off brakes without warning); *Orman v. Mannix* (1892) 17 Colo. 504, 17 L. R. A. 602, 30 Pac. 1037, (gang boss negligent in ordering a boy fourteen or fifteen years of age to run and throw away an ignited stick of giant powder); *Brazil Block Coal Co. v. Gaffney* (1889) 119 Ind. 455, 4 L. R. A. 850, 21 N. E. 1102 (inexperienced boy of ten years ordered to leave his ordinary work and assist in switching coal cars); *Kehler v. Schwenk* (1892) 151 Pa. 519, 25 Atl. 130 (boy of fourteen employed as slate pick-

er, ordered, against his will, to drive a dump car).

A trial judge in a Federal court charged the jury that a higher degree of care is required of the master in the case of a minor employee than in the case of an adult, especially in seeing that he does not assume risks without the scope of his employment. *Robertson v. Cornelson* (1888) 34 Fed. 710.

In *Chicago & N. W. R. Co. v. Hayfield* (1877) 37 Mich. 205, the court upheld an instruction to the effect that, if they found that the deceased, at the time he was employed by the defendant, was a lad of seventeen or eighteen years of age, inexperienced in the handling of brakes; that he was unfitted for that work by reason of his unskilfulness, inexperience, and youth, and this was known to his foreman; that he was employed at the time of his death and for some months previous thereto in the capacity of a common laborer only, and was ordered by the foreman to brake on said train, out of the line of his duty as such common laborer; and that, while attempting to obey such order, he fell from the cars and was killed, without negligence on his part,—the case of the plaintiff was established and she was entitled to recover.

A complaint is not demurrable which alleges substantially that the plaintiff was employed to perform a certain service, unattended by danger; that while so employed he was ordered by defendant to perform a different and perilous service, in which he was inexperienced; that he was ignorant of the peril, and defendant negligently failed to warn him; and that the peril was not apparent to an inexperienced person. *Consolidated Stone Co. v. Redmon* (1899) 23 Ind. App. 319, 55 N. E. 454 (servant engaged as wheeler in a quarry was set to work on a channeling machine).

The fact that the servant had applied for and been given employment, and put to doing certain work, does not warrant the master in presuming that he knew the danger of other work, which, over his protest, he was thereafter, on the discharge of the person who had done it, told that he must do. *Hillsboro Oil Co. v. White* (1899; Tex. Civ. App.) 54 3, W. 432.

A simple finding of a jury that the plaintiff did not comprehend the dangers incident to the work will not render the master liable. It must also be shown that this lack of comprehension was, or ought to have been, known to the mas-

sometimes put upon the specific ground of a breach of that duty of instruction or warning, which, as already shown in a former chapter (xvii.), is always predicable under such circumstances.²

ter. *Cole v. Chicago & N. W. R. Co.* (1888) 71 Wis. 128, 37 N. W. 81.

In Quebec it has been laid down that the owner of a manufacturing establishment, who causes a workman to perform very dangerous work, especially when such work is not accustomed to such kind of work, and does not receive a salary in proportion to the risk he runs, is liable in damages for the death of the workman. *Priece v. Roy* (1898) 14 P. J. Ind. Quebec, 8 B. R. 170 (servant was ordered to assist in the task of saving a bridge which was threatened by a flood). The broad doctrine thus laid down obviously imposes a somewhat larger responsibility upon the master than that to which he is subjected in common-law jurisdictions, though it would seem that, upon the testimony, the decision rendered would not be considered improper in view of the facts that a jury would doubtless have been warranted in finding that the servant did not understand the danger, and that adequate precautions to protect him were not taken.

² "The master may not lawfully expose his servant to greater risks than those pertaining to the particular service for which he has engaged, and against which the servant, through want of skill, or by reason of tender age or physical inability, could not presumably defend himself, if unappraised of the danger. He is bound to warn the servant of the danger if it be not obvious, and to instruct him how it may be avoided." *Reed v. Stockmeyer* (1896) 20 C. C. A. 381, 34 U. S. App. 727, 74 Fed. 186. In this case the court declared that the proposition of plaintiff's counsel, that there was liability because the vice principal, acting for the master, directed the servant to engage in an employment other than that for which he was engaged, and also more hazardous, and that there was therefore a breach of positive duty by the master, could not be sustained in the broad language in which it was asserted. The liability, it was laid down, did not arise from the direction, but from the failure to give proper warning of the risks attendant upon the employment.

"When a servant is ordered by one having authority over him to do a temporary work beyond the work which he

had engaged to do, and the superior knows, or ought to know, from all circumstances of the case, that the work which the subordinate is directed to do is of a peculiarly dangerous character and is aware, or under all the circumstances should be aware, that the nature and hazards of the work, or the proper mode of doing the work to avoid the accident risks, are not obvious, or known, and appreciated by the subordinate reason of his youth, incapacity, or inexperience, it is the duty of the superior to caution and instruct such subordinate servant sufficiently to enable him to understand the dangers he will encounter and how to do the work with safety; he exercise due care himself." *Fell v. Grandy* (1900) 43 C. C. A. 442, 127 Fed. 127, holding that a refusal to accept a verdict for the defendant was proper, where a helper in a repair of a railway company was directed to go into the fire box of a locomotive which had steam up, and tighten a plug in a leaking tube of the boiler, without knowing that the plug, when screwed in, hammered it so that the threads broke and thus allowed steam to escape.

The duty of instructing inexperienced servants was also recognized in the following cases: *Brennan v. Glendon* (1890) 118 N. Y. 489, 8 L. R. A. 23, 23 N. E. 810 (common laborer put in charge of dangerous machinery); *Jones v. Rapides Lumber Co.* (1898) 50 La. Ann. 717, 41 L. R. A. 33, 23 So. 1 (minor nineteen years of age suddenly called on to work with a trimmer in a sawmill); *Camp v. Hall* (1893) 39 Fla. 535, 22 So. 792 (boy four years of age was employed to put together vegetable crates, and transferred to the work of pushing cars on a track); *Texasarkana & Ft. S. R. Co. v. Preacher* (1900; Tex. Civ. App.) 10 W. 593 (minor employed as a messenger on a railway once was directed to clean cars); *Michael v. Roanoke Mach. Wks.* (1894) 40 Va. 492, 19 S. E. 261 (helper in boiler shop assigned to duties where he was exposed to danger from a machine used to move machinery); *Lofgren v. New York & M. E. Water Co.* (1895) 55 Hun. 452, 8 N. Y. Supp. 717 (servant not employed to perform that particular service was ordered to work

(b) Where the master or his representative knew that certain specific hazards would be encountered by the servant in the new environment to which he was transferred, and the servant was not chargeable with knowledge of those hazards,⁴ and infrequently in this instance, also, a material element of the negligence charged is the failure to caution the servant.⁴

(c) Where new functions were superimposed upon those which the servant had been previously discharging, and the multiplicity of duties thus entailed produced a certain mental confusion and disturbance of judgment, which impaired his capacity for self-protection.⁵

(d) Where the superior employee who gave the order directly ang-

quantity of dynamite, and by its explosion; *Acubus & M. Lumber & Mfg. Co.* (Iowa, 441, 69 N. W. 7) *Bridge Co. v. O'Connor* (18 S. 1, 538; *Gulf, C. & S. I. A. v. Brown* (1901; Tex. Civ. W. 790; *Quinn v. Johnson* (1892) 9 Honst. (Del.) 858.

Whether instructions have been given was held to be for the jury in *Hillsboro v. White* (1899; Tex. Civ. App. 432, where the servant was to clear away notes from under a method especially dangerous under the circumstances.

A jury is properly charged that the servant was required to do work outside the sphere of his usual duties, thus subjected to a risk with which he was not acquainted, or to a greater risk at that time of which he was not informed, or that the defendant would be liable. *Mann v. Central Print Works* (11 R. (fireman was suddenly called upon to assist in throwing on a belt).

² *Rettig v. Fifth Ave. Trans.* (1893) 6 Misc. 328, 26 N. Y. Sup. *Gavigan v. Lake Shore & M. S. R. Co.* (1896) 110 Mich. 71, 67 N. W. (arguendo).

In *Chicago & N. W. R. Co. v. Baum* (1877) 37 Mich. 205, one of the grounds upon which it was denied that the risk was on the servant's shoulders was that, although it was apparent to him that the service was more hazardous than that which he engaged for, this must have been better understood by the master's agent.

A minor servant, nineteen years of age, hired to spike rails and do shoveling, is entitled to recover where the man-

aged or his department sends him to of removal of debris in a depot, and is injured by the giving way of the floor, the safety of which was known to such manager, but not to the servant. *Good v. St. Paul, M. & M. R. Co.* (S. 88, 41 Ann. 45, 24 N. W. 311. See *Pa. v. Michigan C. R. Co.* (1873) 87 Mich. 281, 49 N. W. 313; *Lane v. B. & A. R. Co.* (1885) 139 Mich. 180, 28 Am. Rep. 733, 2 N. E. 17; *Lane v. R. Co. v. Fort* (1873) 17 W. 43, 21 Mich. 739; *Gavigan v. Lake Shore & M. S. R. Co.* (1896) 110 Mich. 71, 67 N. W. 1097; *Walker v. Lake & M. S. R. Co.* (1895) 104 Mich. 96, 62 N. W. 1032; *Mary Lee v. R. Co. v. Chambliss* (1892) 97 Mich. 1, 11 So. 897; *Fl. Smith Oil Co. v. S. R. Co.* (1893) 58 Ark. 168, 24 S. W.

A servant who was transferred, without instructions, to a place in a ditch where were deposits of quicksand, was held entitled to recover in *Books v. Langham* (1895) 63 Ill. App. 223. In other cases dealing with the duty to instruct a servant who is ordered to undertake new duties, see § 248, notes ante.

In one case it was held to be for the jury to say whether or not the allotment to a boy nineteen years old, employed in a sawmill, of three different tasks, to which a considerable extent were contradictory in their requirements upon his attention, caution, and prompt action, and two of which were outside of his regular employment, constituted negligence, rendering the master liable for injuries which were the proximate result of the distraction of his attention by his diverse duties. *Egan v. Sawyer & L. Lumber Co.* (1896) 94 Wis. 137, 68 N. W. 756.

mented, by a wrongful act amounting to an abuse of his power, perils of the new duties.⁹

⁹In *Rodman v. Michigan C. R. Co.* (1884) 55 Mich. 57, 54 Am. Rep. 348, 20 N. W. 788, the court was equally divided upon the question whether a brakeman could recover for an injury caused by the conductor's undertaking to manage an engine in the absence of the engineer. This division of opinion was due simply to a divergence of views as to the principle which should control the case, and not to any difference of opinion concerning the doctrine stated in the text. Champlin, J., took the ground that it was implied, as part of the contract between the plaintiff and defendant, that the engine should be operated by a competent engineer, and that the plaintiff did not assume the risk which would be incident to the employment in case the engine should be operated by a person without the requisite skill and experience, as this would put him in a position of greatly increased peril. The learned judge then proceeded thus: "In this case it is alleged in the declaration that the conductor was the agent of defendant, and had charge of the train and command of the other employees of defendant on the train, including the plaintiff. He was put, therefore, by the defendant, in his place, to discharge the duty which the defendant owed to the plaintiff, to see that the employees of the defendant were discharging the respective duties required of them; and in the discharge of this duty the conductor was not a co-servant, but the representative of the defendant, who in that respect is bound by the acts or omissions of the conductor the same as though such acts had been done or omitted by defendant personally. And the defendant, having placed the conductor in a position of authority over the plaintiff and other servants, and made them subject to his direction and control, while the defendant is not chargeable for the consequences of directions given by such superior officer within the scope of the general employment, he is chargeable to plaintiff for an abuse of such authority, as much as he would be to a stranger. . . . Suppose the conductor had ordered a day laborer or an entire stranger to take the place of the engineer during his temporary absence, and through his negligence, carelessness, and want of skill plaintiff had received the injury complained of without fault on his part. . . .

would have constituted such an abuse of authority as to render the defendant liable. It was likewise an abuse of his authority in the conductor to order the brakeman to couple the car in the absence of the engineer, while himself, being a person unfit, incompetent, and lacking the requisite skill and experience, attempted to manage and operate the locomotive engine in the absence of the engineer, thus creating such peril. By the exercise of his authority the conductor ordered plaintiff to perform services of increased peril not contemplated by the contract with defendant. The case is no different from what it would have been had the defendant been a master person, and, without possessing the requisite skill and experience, ordering wholly unfit and incompetent persons to undertake to run and manage the engine, and had at the same time ordered the plaintiff to couple the cars, and the injury had resulted in consequence of the want of fitness, competency, skill, and experience of defendant. The defendant is equally liable for the acts of his agent, the conductor, as if they were his own, when such acts are an abuse of his authority, or when he stands in place of the defendant. Cooley, Ch. J., referring to the case of *Chicago & N. W. R. Co. v. Baugh* (1877) 37 Mich. 205 (see last note), which had been cited as controlling, showing the right of the plaintiff to recover, said: "That case seems altogether different from this. . . . a common laborer on a railroad was ordered by his superior to perform the duties of a brakeman, and while so was injured. He was ordered to a different service to any in which he had ever engaged, and the order was plainly wrongful. But in this case plaintiff was put to no new or different service, and the only complaint is in the very service he agreed to perform. He was exposed to a risk not peculiarly belonging to it, and therefore not contemplated by his contract of service. The risk was certainly unusual, probably not in the minds of the parties when the plaintiff was employed, but that fact would not of itself remove the responsibility. Accidents and injuries are often, perhaps most commonly, the results of unexpected causes, but if these causes arise in the course of a servant's employment, he is

460. Assumption of risks as a defense: generally.—Since every risk which is not caused by the master's negligence is deemed to be an ordinary one (see § 3, *ante*), it is evident that the inference that the usual risks incident to new duties were assumed may sometimes seem to be a necessary deduction from the fact that there is no ground upon which the master can be charged with negligence in giving the order to undertake these duties.¹ See § 458, *supra*. As long as the rights of the parties are examined from this particular standpoint, it is apparently impossible to dispute the applicability of the general principle thus invoked. But its introduction in this connection obviously entails an embarrassing conflict of results, inasmuch as such risks, although ordinary in relation to the new duties, are extraordinary in relation to the original employment. See § 270, *ante*. If this conception be treated as the controlling one, it is clear that the investigation in cases of this class must always start from the hypothesis that these risks are *prima facie* unknown to the servant, and that the fact of his knowledge must be established by positive proof. That this is the theory upon which nearly all, if not all, the cases proceed, is, we think, indisputable.

deemed to have assumed their risks. And the only question there can be in this case is whether the plaintiff was ordered to do something which, under the circumstances, was outside of his employment, so that, had he been inclined to do so, he might rightfully have refused obedience to the order. And this, as it seems to us, must depend upon whether, when the contingency appears to the conductor to render it necessary, that official may, for the occasion, take charge of the engine, and at the same time require the brakeman to continue to perform his service. That contingencies may and do arise in which the conductor should take charge of the engine for the time is undoubted. The necessity may sometimes be as urgent as it is plain; and lives may depend upon it. This might happen from injury to the engineer, or sudden illness; and when, to leave the train where the disability of the engineer occurs would endanger some other train. But there might be other reasons for the engineer leaving his post, for which the company would not be in fault; and the conductor, with the train in his charge and under obligation to avoid other trains, must act in the emergency as the necessities of the case shall require. His highest and plainest duty in some cir-

cumstances will be to take possession of the engine and operate it; and it cannot be possible that, when such is his duty, the brakeman may rightfully prevent its performance by refusing to remain at his post. . . . If, under any circumstances the conductor may rightfully take charge of the engine, this suit must fail, as there is no allegation in the declaration to show that in this case he was not justified. And he, being the person responsible for the safety and management of the train, must be allowed a certain discretion in deciding upon emergencies, and the presumptions must favor his action. And when he acts rightfully, it is contemplated in the employment of his subordinates that they, within their several spheres, shall assist him."

"This seems to have been the situation present to the mind of the court in the following passage of the opinion in a recent case: "If there is nothing particularly dangerous in the new work, and the master has no reasonable ground for believing that the servant is unaware of the dangers he will encounter or has not the requisite skill and experience to do the work with safety to himself, the servant may well be regarded, if he obey [as chargeable] with having assumed the usual and ordinary

461. Risks not assumed unless known.—The theory just adverted to obviously involves, as a corollary, the doctrine that a master who seeks to escape liability on the ground of an assumption of the risk by the servant must prove something more than the mere fact that the latter yielded obedience to an order which required him to undertake duties different from those covered by the agreement under which he entered the employment.¹ If the evidence is such as to warrant a jury in finding that the servant was neither actually nor constructively aware of the existence of the risk, a court cannot declare, as a matter of law, that the action is barred. This principle inures to the benefit where the risks to be encountered were those normally incident to the work undertaken;² and, *a fortiori*, where those risks were of an abnormal nature.³

risks incident to the employment." *Fellon v. Girardy* (1900) 43 C. C. A. 439, 104 Fed. 127.
¹In *Fl. Smith Oil Co. v. Glover* (1893) 58 Ark. 168, 24 S. W. 106, it was laid down, *arguendo*, that a servant, who, when requested by his superior to perform a new duty, voluntarily undertakes it, assumes all the risks incident to its performance; and also that when a servant voluntarily undertakes a duty outside the scope of his original employment, his rights and liabilities are measured by the same standard as if he had been specially engaged to perform that duty. The court seems to have been led into this unqualified language by the fact that it was discussing and condemning an instruction which followed *verbatim* the passage quoted in § 461, *infra*, from the opinion in *Pittsburgh, C. & St. L. R. Co. v. Adams* (1886) 105 Ind. 151, 5 N. E. 187. That passage, it may be conceded, is not a correct statement of the law, as it is applied in most states. But the Arkansas court has gone to the opposite extreme of error in enunciating the propositions above set forth. In the form in which they are expressed, they are clearly incorrect, unless it is assumed that the servant was conceived of as one who appreciated the risks of the new duties; and this element was not specifically adverted to.

A. 478, 15 So. 400 (workman killed by bursting of a boiler "and, having been tested, he having been called away from his regular duties"); *Michael Roanoke Mach. Works* (1894) 90, 492, 19 S. E. 261 (boiler maker's help temporarily removed to another department); *Consolidated Coal Co. v. Han* (1893) 146 Ill. 614, 35 N. E. 162, affirming (1892) 48 Ill. App. 115 (blacksmith directed to assist in raising smokestack); *Mann v. Oriental P. Works* (1875) 11 R. I. 152 (one hired as a fireman suddenly called on to assist the engineer in throwing a boiler); *Fellon v. Girardy* (1900) 43 C. C. A. 439, 104 Fed. 127 (boiler maker's help who was ordered to repair a leaky pipe work which should have been assigned to an experienced boiler maker); *G. C. & S. F. Ry. Co. v. Newman* (1901) Tex. Civ. App. 64 S. W. 790 (fireman of stationary engine ordered to take charge of it); *Fl. Worth & D. C. R. Co. v. Wrenn* (1899) 20 Tex. Civ. App. 50 S. W. 210 (engine wiper ordered to couple cars).

In *Ferris v. Old Colony R.* (1887) 143 Mass. 197, 9 N. E. 100, where a blacksmith, occasionally called from a railway shop to push a car, was injured by being crushed between a car and a building near which the track was located, it was held that appreciation of the danger was no conclusion of law, if he was called by his foreman to assist in this work which was outside of the work which he was employed to do and in a t

462. Risks assumed, if known.— The converse of the principle laid down in the last section is that a servant who undertakes new work with a full appreciation of the risks which its performance involves is deemed to have accepted those risks.¹ In so far, therefore, as he comprehends, or ought to comprehend, them, he assumes all the ordinary and extraordinary risks of the new duties,² whether he be a minor or an adult.³

where he had not before done such work, and if the peril was not obvious to him, and he failed to take notice that the space between the car and the building was too narrow for him to pass through with safety, and if his attention was given to the work which he was doing, so that he did not discover the danger till it was too late to save himself.

¹*Chicago, R. I. & P. R. Co. v. Kinmare* (1901) 190 Ill. 9, 60 N. E. 57, Affirming (1900) 91 Ill. App. 508 (watchman stumbled over a pile of gravel while trying to mount a moving freight train for the purpose of arresting trespasser thereon); *Cummings v. Collins* (1876) 61 Mo. 529 (complaint not denarrable which alleged that a heavy iron wheel, while it was being rolled, dropped into a concealed hole in the floor, and fell over on plaintiff); *Palmer v. Michigan C. R. Co.* (1891) 87 Mich. 281, 49 N. W. 613 (section man upon a railroad does not assume the risks incident to loading rails upon a moving train in an unusual manner); *Walker v. Lake Shore & W. S. R. Co.* (1895) 104 Mich. 306, 62 N. W. 1932 (section foreman killed by the recoil of a trolley wire which he was ordered by the roadmaster to cut. Grant, J., dissented on the ground that this consequence was a patent risk, as well as on the more general ground that no negligence on the part of the company was established in regard to the supply of improper tools for the work); *Hillsboro Oil Co. v. White* (1899) Tex. Civ. App. 54 S. W. 432 (servant ordered to clean notes out of a hinter while it was choked up with refuse).

A servant who was ordinarily employed as the foreman of a gang of diggers, and had been temporarily placed under a foreman of carpenters to assist in handling a "dolly" used for the transport of heavy timbers, was held entitled to recover for injuries caused by the insufficiency of the number of men assigned to the work. *Supple v. Tancor* (1904) 191 Ill. 139, 61 N. E. 392, Reversing (1898) 80 Ill. App. 437.

²"If the servant is possessed of knowledge and experience sufficient to comprehend the danger, and, without objection, undertakes the service, the master is not liable for injury received by the servant in such new and more dangerous employment." *Reed v. Stockmeyer* (1896) 20 C. C. A. 381, 34 U. S. App. 727, 74 Fed. 186.

³*Hanson v. Hammell* (1899) 107 Iowa, 171, 77 N. W. 839 (servant's hand caught while she was cleaning the rollers of a mangle); *Prentiss v. Kent Furniture Mfg. Co.* (1884) 63 Mich. 178, 30 N. W. 109 (plaintiff injured by a split-saw, which he had undertaken to operate, after being told that he could do this or lay off); *Willard v. Madison Car Co.* (1895) 130 Mo. 517, 31 S. W. 574, where the court remarked that by its ruling it did not mean that the servant assumed the risk of a defective appliance of which he knew nothing, or dangers which were not visible, but the risks that ordinarily attended the working of a reasonably safe appliance of the same character.

A trummer in a mine, who obeyed directions to help fix a roof and take down some ground in a slope, and was injured by ore or rock falling from a roof which had just been tested in his presence and seemed to be solid, was held to be chargeable with a comprehension and an acceptance of the risks of this temporary employment, as he had been trumming for four winters in this and other slopes. *Pante v. Florence Min. Co.* (1890) 80 Wis. 350, 50 N. W. 189.

⁴See the passage cited in § 458, note 1, *supra*, from the opinion in *Anderson v. Morrison* (1875) 22 Minn. 274. So far as the language goes, *Foley v. California Horseshoe Co.* (1896) 115 Cal. 181, 17 Pac. 42, seems to be *contra* as regards minors; but the case is one of those in which the phrase "assumption of risks" is improperly used to express a want of care. See § 309, *ante*.

463. What risks fall within this description.—The risks then deemed to be accepted are those susceptible of being described by the same words that are employed to designate those risks which, although extraordinary as respects the scope of the original contract, are held to have been undertaken, in they were appreciated. See chapter XXI., especially § 391,—*ante*. Thus, it is held that the servant cannot recover for an injury caused by a risk which was "apparent,"¹ or "obvious,"² or so "open and manifest" that an ordinary man under the same circumstances could have ascertained them by the exercise of reasonable diligence.³ So, also, it is held that no action is maintainable where the servant had, as compared with the master, an equal,⁴ or better,⁵ opportunity to see and know the extent of the danger.

As in all cases of extraordinary risks, the question whether the servant appreciated the risks of new duties is primarily for the jury.⁶ See § 390, *ante*.

Even where an assumption of the risk may be inferred, the servant may still recover if it appears that the master, by his failure to discharge his continuing duty to keep the appliances safe, had exposed the servant to additional risks after the new work had been undertaken.⁷

464. Indiana doctrine as to assumption of risks.—According to se-

¹ *Walker v. Lake Shore & M. S. R. Co.* (1895) 104 Mich. 606, 62 N. W. 1032. A servant "assumes the risk of any danger which is plain, open, and apparent to his mind, although engaged in doing extra work or work outside the scope of his employment." *Chicago, R. I. & P. R. Co. v. Kinnare* (1900) 190 Ill. 9, 60 N. E. 57.

² *Fecly v. Pearson Cordage Co.* (1884) 161 Mass. 426, 37 N. E. 368; *Lecky v. Boston & A. R. Co.* (1885) 139 Mass. 380, 52 Am. Rep. 733, 2 N. E. 115 (for facts see § 467, *infra*); *Wormell v. Maine C. R. Co.* (1887) 79 Me. 397, 10 Atl. 49; *Gavigan v. Lake Shore & M. S. R. Co.* (1896) 110 Mich. 71, 67 N. W. 1097 (experienced section hand engaged with others in relaying a spur track, during the progress of which it became necessary to move cars, was climbing, at the command of the section boss, upon one of the cars to set the brakes thereon, and was injured by the act of the other hands in violently bumping said car with another).

³ *East St. Louis Ice & Cold Storage Co. v. Sculley* (1896) 63 Ill. App. 147.

⁴ The fact that an employee in a quarry was called from a safe employ-

ment to that upon which he was engaged at the time of the accident will not enable him to recover for injuries from the fall on him of the stone under which he was drilling, such fall being due to seams in the stone, and the hammer by the foreman upon the wedges at the top, where such employee was experienced in quarry work, knew the existence of seams and the danger therefore, and had an equal opportunity with the master and foreman of ascertaining whether there were seams in the particular stone. *Reed v. Stockmeyer* (1882) 20 C. C. A. 381, 34 U. S. App. 727, Fed. 186. See also *North Chicago St. R. Co. v. Conway* (1898) 76 Ill. App. 621 (car oiler injured, while coupling a trailer to a motor car, owing to the fact that the hook on the latter was caught in the opening above the driver's bar).

⁵ *Houston & T. C. R. Co. v. Foster* (1882) 56 Tex. 452 (employee killed by derailment due to a washout, while traveling on a relief train).

⁶ *Foley v. California Horseshoe Co.* (1896) 115 Cal. 184, 47 Pac. 42.

⁷ *Nall v. Louisville, N. A. & C. R.* (1891) 129 Ind. 260, 28 N. E. 183, 6

eral decisions in Indiana, the fact that the risk involved was as open to the observation of the servant as of the master will not, necessarily, as in cases where the work was within the scope of the employment, warrant the inference that it was assumed.¹ In support of this doctrine two separate reasons have been assigned.

¹This theory was first enunciated in the following passage: The servant's implied assumption of risks is confined to the particular work and class of work for which he is employed. There is no implied undertaking, except as it accompanies and is a part of the contract of hiring between the parties. On the other hand, if the servant, by the orders of the master, is carried beyond the contract of hiring, he is carried away from his implied undertaking as to risks. If the master orders him to work temporarily in another department of the general business, where the work is of such a different nature and character that it cannot be said to be within the scope of the employment, and where he is associated with a different class of employees, he will not, by obeying such orders, necessarily assume the risks incident to the work, and the risks of negligence on the part of such employees. *Pittsburgh, C. & St. L. R. Co. v. Adams* (1886) 105 Ind. 151, 164, 5 N. E. 187 (minor of twenty hired to work as section hand was injured in coupling cars the first day that he was ordered to do such work). By the Indiana court of appeals the effect of this case has been said to be that the implied assumption of risk does not extend to more hazardous work outside of the servant's contract of hiring, unless he voluntarily goes into such hazardous work. *Indiana Natural & Illuminating Gas Co. v. Marshall* (1898) 22 Ind. App. 121, 52 N. E. 232 (defective spurs caused injury to a "trimmer" who was directed to climb a pole and adjust a wire).

The position of the supreme court was further defined in *Brazil Block Coal Co. v. Hoodlet* (1891) 129 Ind. 327, 27 N. E. 741, where it was held that a complaint alleging that the plaintiff, a servant who usually worked above ground, as a blacksmith, was sent down a shaft to repair a pump, and was injured by falling down a shaft which was not provided with the protecting gates required by statute, was not subject to demurrer on the ground that it showed that the risk was an obvious one.

The same doctrine was reiterated in *Nall v. Louisville, N. A. & C. R. Co.*

(1891) 129 Ind. 260, 28 N. E. 183, 611 (employee called out to avert the threatened destruction of a bridge by a freshet); *Louisville, E. & St. L. Consol. R. Co. v. Hanning* (1892) 131 Ind. 528, 31 N. E. 187 (car repairer directed by his superior to repair a car on a switch track, instead of on the tracks provided for that special purpose and upon which no trains are run or switched). In the last cited case the court, in discussing the sufficiency of the complaint, laid down the law as follows: The servant "does not necessarily assume the additional hazard in undertaking to perform the unusual and extra service, even although the dangers attending it are obvious." When a master orders a servant to do something which involves encountering a risk not contemplated in his employment, although the risk is equally open to the observation of both, it does not necessarily follow that the servant either assumes the increased risk, or is negligent in obeying the order. If the apparent danger is such that a man of ordinary prudence would not take the risk, the servant acts at his peril. But unless the apparent danger is such as to deter a man of ordinary prudence from encountering it, the servant will not be compelled to abandon the service, or assume all additional risk, but may obey the order, using care in proportion to the risk apparently assumed, and if he is injured the master must respond in damages.

See also *Cincinnati, H. & I. R. Co. v. Madden* (1893) 134 Ind. 462, 34 N. E. 227 (§ 458, note 5, *supra*).

The doctrine of the above cases was specifically adopted in *National Enameling & Stamping Co. v. Brady* (1901) 93 Md. 646, 49 A. 845, where the court approved of the refusal to give an instruction predicated a right to recover solely on the finding that plaintiff had been injured without fault of his own, because of the machine's defective condition. The condemnation of the instruction was based on the theory that it is incumbent on a plaintiff to establish one of two alternatives, either that he was injured while working outside the scope of his employment or that the defend-

On the one hand the servant's nonassumption of such a risk is deduced from the consideration that, in the absence of specific evidence to the contrary, the supposition is that new duties are undertaken voluntarily.² But it is not apparent why coercion should be presumed where a risk is extraordinary in the sense of being outside the scope of the servant's employment, any more than it is predicated where a risk is extraordinary in the sense that it was caused by the master's negligence.

On the other hand, it is said that the master's order to a servant to do work outside the scope of his original employment operates as an implied assurance that the new duties may be performed without incurring any abnormal risks.³ Under this theory it would seem that

the servant was chargeable with notice of the defect.

In *Jones v. Lake Shore & M. S. R. Co.* (1883) 49 Mich. 573, 14 N. W. 551, it was held that an inexperienced servant, who consented, rather than lose his place, to undertake a duty outside the scope of his employment, did not assume the risk. But this decision really rests upon the fact that the servant did not appreciate the risk which caused his injury.

In *Harrison v. Detroit, L. & N. R. Co.* (1890) 79 Mich. 409, 7 L. R. A. 623, 44 N. W. 1034, it was said, *arguendo*, that when the offending servant, having general power and authority to employ and discharge servants, and having authority to direct and control the injured servant, orders him to do an act not within the scope of the injured servant's employment, whereby he is exposed to danger not contemplated in his contract of service, and is injured in so doing, the master is liable for injuries received while he was acting under the order of the superior servant. But the doctrine thus indicated, if it be really intended to follow the lead of the Indiana court, is not that which is at present accepted in this state. See *Walker v. Lake Shore & M. S. R. Co.* (1895) 104 Mich. 606, 62 N. W. 1032; *Wheeler v. Berry* (1893) 95 Mich. 250, 54 N. W. 876.

² In *Brail Block Coal Co. v. Hoodlet* (1891) 129 Ind. 327, 7 N. E. 741, the court, in dealing with the contention that the plaintiff assumed the risk, said: "The complaint avers that he did this by the express command of the appellant. But, it may be said, he need not have obeyed the command. He was free to quit the service and thus avoid the danger; and that, by voluntarily continuing

in the service and obeying the command, it must be presumed that he consented to take the additional risk. While the theory of the employee whose master furnishes appliances which both know to be defective is at liberty to quit the service and refuse to be subjected to the enhanced danger, we cannot close our eyes to the fact that the necessities of struggle for existence tend strongly to deprive the employee of that theoretical independence and freedom of action. While the service cannot be compelled in the sense that the employee is compelled to work against the very nature of the relation existing between the parties carries with it an irresistible inference of dependence upon the one side." The following passage from Cooley, Torts, §555, was approved: "It has been often, and very justly, remarked that a man may decline any exceptionally dangerous employment; but he voluntarily engages in it he should not complain because it is dangerous. Nevertheless, where one has entered upon the employment and assumed the incidental risks, it is not reasonable to hold that other risks which he is directed by the master to assume are to be left to rest upon his shoulders, merely because he did not take upon himself the responsibility of throwing up the employment instead of obeying the order."

³ This is very strongly put in the earliest of the Indiana cases cited above. "When a servant is thus ordered to work at a particular place, or with particular machinery, etc., outside of his employment, the master impliedly assures him not only that he has exercised reasonable care to have the place, machinery, etc., in a safe condition, but also that the work is in a safe condition and fit for

the master is virtually converted, for the time being, into a guarantor of the servant's safety. Upon the assumption that this is the effect of the Indiana decisions, they have been condemned in Alabama.⁴

The disapproval thus expressed is, in the opinion of the present writer, well founded. There is no valid ground for departing in this instance from the general principle discussed in chapter x., *ante*. It should be observed, however, that the effect of the sweeping language used by the Indiana courts is considerably qualified by the fact that the defense of an assumption of the risks is conceded to be a bar to the action if the evidence shows that these risks were, as a matter of fact, appreciated.⁵ For practical purposes, therefore, it would seem that

business for which they are used." *Pittsburgh, C. & St. L. R. Co. v. Adams* (1886) 105 Ind. 151, 5 N. E. 187.

By the court of appeals it has been held that a cause of action is sufficiently stated by averments that the plaintiff was employed for no other purpose than to operate machinery in defendant's mill and work on certain articles, and that he was ordered to repair certain machinery; that the work was different from, and more dangerous than, the work he was employed to do; that defendant knew the danger; and that, while doing the work, plaintiff was injured through no negligence of his own. *Errin v. Evans* (1900) 24 Ind. App. 335, 56 N. E. 725.

See also the Maryland case cited in note 1, *supra*.

⁴ In *Mary Lee Coal & R. Co. v. Chambliss* (1892) 97 Ala. 171, 11 So. 897 (fireman seventeen years old was ordered to throw a switch which had a tendency to fly back), the court thus expressed its disapproval of the rule laid down in *Pittsburgh, C. & St. L. R. Co. v. Adams* (1886) 105 Ind. 151, 5 N. E. 187: "We think the rule declared in the case cited . . . imports into the contract of employment an obligation not within the contemplation of the parties, and one which no prudent employer would assume. . . . A railroad owes no higher duty to a passenger than that here imposed upon the master to his servant. Does not the master fully discharge his obligation in this respect to all his employees when he exercises reasonable care and diligence in seeing that the ways, works, and machinery are such as are in general use by well-regulated railroads, and that they are kept in proper condition. We know of no sound principle of law which exacts a higher degree of care

and diligence on the part of the master to his employee than reasonable care and diligence. . . . Where the evidence shows that the employment is more dangerous than that within the scope of his employment, or that the servant is called to use machinery which requires skill not possessed by the servant, and not in use in the regular course of his service of employment, the law very properly holds the master liable under proper circumstances for such injuries as may result from the increased danger; but the liability here rests upon different principles from those which would make the master an insurer that the ways, works, and machinery were absolutely perfect. It cannot be said that the master has exercised reasonable care and diligence for the safety of his servant, when by his orders the servant is exposed to greater peril than that which, by his contract of employment, he assumed; or when the master exposes his servant of immature years, or one inexperienced and unskilled, without proper instruction and warning as to the peril of machinery or ways and works dangerous in their use." The passage cited from the Indiana case undoubtedly lays down the rule too strongly against the master. That the implied "assurance of safety" deduced from a specific order is merely an assurance of safety so far as reasonable care can attain it has, we think, never been denied as regards risks within the scope of the employment; and there is no apparent reason why such an assurance should bear a different meaning where the risk is one outside the scope of the employment.

See also *Garrison v. Lake Shore & M. S. R. Co.* (1886) 116 Mich. 71, 67 N. W. 1037 (§ 467 note 5, *infra*).

⁵ In *Pittsburgh, C. & St. L. R. Co. v.*

these decisions, when analysed, merely go to the extent of laying down the doctrine that the master is prima facie an insurer of the servant's safety at the moment when he is transferred to the new duties, and also, as may be supposed, though it is not expressly so stated, for a period sufficient to enable the servant to observe the conditions of his new environment.

405. Doctrine of common employment qualified as regards servants working outside the scope of their employment.— An important exception to the doctrine of common employment is created by the rule that the giving of an order which requires a servant to perform duties not included in the original contract constitutes actionable negligence where such servant is plainly unfitted for the new duties. The nature and extent of this exception may be stated thus: The principle that the master is not precluded from relying on the defense of common employment by the mere fact that the plaintiff's injury was received in consequence of his complying with an order given by a superior co-servant having the right to control him as to the manner of doing his work,¹ is not applicable in cases where that order requires the performance of duties outside the scope of the plaintiff's original contract. Under these circumstances the sole question to be determined, in so far as the master's liability depends upon the representative character of the delinquent co-servant, is whether the order which occasioned the injury was one which he had authority to give.

Adams (1886) 105 Ind. 151, 5 N. E. 187, it was distinctly laid down that the liability to which the master was declared to be subject would be purged if the servant was competent to apprehend the danger.

¹ See chapter XXVIII., *post*.

² In *Union P. R. Co. v. Fort* (1873) 17 Wall. 553, 21 L. ed. 739, affirming (1871) 2 Dill. 259, Fed. Cas. No. 4952 (facts stated in § 459, note 1, *supra*), the court, after stating the rule as to common employment, said: "This rule proceeds on the theory that the employee, in entering the service of the principal, is presumed to take upon himself the risks incident to the undertaking, among which are to be counted the negligence of fellow servants in the same employment; and that considerations of public policy require the enforcement of the rule. But this presumption cannot arise where the risk is not within the contract of service, and the servant had no reason to believe he would have to encounter it. If it were otherwise, principals would be released from all obli-

gations to make reparation to an employee in a subordinate position for injury caused by the wrongful conduct of the person placed over him, whether they were fellow servants in the same common service or not. Such a doctrine would be subversive of all just ideas of the obligations arising out of the contract of service, and withdraw all protection from the subordinate employees of railroad corporations. These corporations, instead of being required to conduct their business so as not to endanger life, would so far as this class of persons were concerned, be relieved of all pecuniary responsibility in case they failed to do it. A doctrine that led to such results is unsupported by reason and cannot receive our sanction. . . . If the order had been given to a person of mature years, who had not engaged to do such work, although enjoined to obey the directions of his superior in might, with some plausibility, he might argue that he should have disobeyed it, and must have known that its execution was attended with danger. Or, at any rate,

It is apparent, therefore, that the practical effect of the decisions, when considered with relation to this particular phase of the doctrine of common employment, is to establish the principle that the act of

if he chose to obey, that he took upon himself the risks incident to the service. But this boy occupied a very different position. How could he be expected to know the peril of the undertaking? He was a mere youth, without experience, and not familiar with machinery. Not being able to judge for himself he had a right to rely on the judgment of Collett, and, doubtless, entered upon the execution of the order without apprehension of danger."

One of the grounds on which the decision in *Chicago & N. W. R. Co. v. Bayfield* (1877) 37 Mich. 205 (facts stated in § 459, note 1, *supra*), was based was thus stated by Cooley, Ch. J.: "We also think that where the superior servant, by means of an authority which he exercises by delegation of the master, wrongfully exposes the inferior servant to risks and injury, the master must respond. It is only where the risks properly pertain to the business and are incident to it that the master is excused from responsibility; and a risk of this nature not being one of the kind, the general rule applies, and he must answer for the misconduct of his agent." The court adopted the broad contention of the plaintiff that, if the master wrongfully sends his servant into a dangerous place, or exposes him to a risk not connected with the service, and in consequence he is injured, the rule which exempts the master from responsibility has no application, because the risk is not one which the servant has assumed; and that if, instead of being sent by the master in person, the servant is wrongfully exposed to danger by one whom the master has placed over him, and to whose orders he is subjected, the responsibility is the same; the wrongful act of this superior being in law the wrongful act of the master himself.

The principle of this case was again applied by two judges in *Rodman v. Michigan C. R. Co.* (1884) 53 Mich. 57, 54 Am. Rep. 348, 20 N. W. 788 (see § 458, note 5, *supra*).

In *Erickson v. Milwaukee, L. S. & W. R. Co.* (1890) 83 Mich. 281, 47 N. W. 237, the court held that a declaration was not demurrable which stated that the plaintiff, a common laborer on a construction train, was ordered by the foreman of the train to pull a coupling pin

while the cars were moving, and to jump from one of them to the other when they separated; that the foreman, without any notice to the plaintiff, let off the brake on one of the cars; that the speed of the car was thus suddenly accelerated and the distance to be jumped unexpectedly augmented; and that the plaintiff was thus caused to fall between the two cars. The court declined to pass upon the question whether the foreman was a fellow servant of the laborer, but the precise reason for this refusal is not specifically stated.

In *Walker v. Lake Shore & M. S. R. Co.* (1895) 104 Mich. 606, 62 N. W. 1032 (section foreman killed by negligence of division road master), the court explained its position as follows (p. 612): "In determining whether a servant is called upon to do work outside the scope of his employment, the question does not turn upon that of whether the master would be liable for the personal negligence of a superior servant. It becomes a question of authority; and if one having authority over the servant directs him to do an act outside the scope of his employment, the servant, in the performance of such outside work, assumes the risk only if such danger is apparent. . . . In order to bring the injured servant within the protection of the rule that, when called upon to perform a service outside of the scope of his employment, the master owes the duty of warning him against all dangers except those which are obvious to a person of his capacity, skill, and experience, it is not necessary that the order to engage in outside service be given by the *alter ego* of the defendant; it is enough if the superior servant have, in this respect, controlling authority."

In *Hayes v. Colchester Mills* (1894) 69 Vt. 1, 37 Atl. 269, the court argued as follows: "If this service was beyond the plaintiff's capacity, and so outside the scope of his employment, he did not assume the risks attendant upon it. A person of mature years might have been held to have assumed them by consenting to do the work; but the rights of a child are not permitted to depend upon his ability to discriminate promptly as to the work required of him, or to refuse obedience to the command of his superior. The limitation of the plain-

ordering a servant into a new place of work is the act of the master, and that the employee who gives the order is, for this reason, a principal, whatever may be his official rank.³ See chapter XX *post*.

In most of the cases in which this aspect of the master's liability

tiff's risk renders the doctrine of fellow servant inapplicable. In entering the defendant's service, the plaintiff assumed only such risks arising from the negligence of his coemployees as might be incurred within the scope of his employment. So it is not necessary to determine whether the nature and extent of Sturgis' authority over the plaintiff were such as to exclude him from the relation of fellow servant. The effect of his authority over the plaintiff is to be considered without reference to that relation. The defendant assigned Sturgis to the care of the machinery and placed the plaintiff under his orders. If Sturgis, acting within the sphere of his own duty, required of the plaintiff a service which was outside his employment, and which a prudent master would not have imposed upon a person of his years, strength, and judgment, the defendant is liable for the consequences of the improper order."

In *Mann v. Oriental Print Works* (1875) 11 R. L. 152, where a fireman was injured while complying with an order of the engineer to assist in throwing a belt, it was held that the jury were rightly told that, if the fireman was placed under the engineer as his superior, and this superior had a right to give orders in his department, the case did not come within the principle regulating liability in cases of fellow servants, and that the engineer must be looked upon as representing the employer. The court said: "If the person here injured had been an inferior servant, and had been injured by the negligence of a superior servant in the same department,—*c. g.*, if he had been placed under a superior fireman by whose neglect he had been injured,—the case would have been different. And it might then be argued that he must have known and calculated the risks of such employment. In the present case the fireman was not injured while working in his own particular department, but was injured by the neglect of a superior whose department was more extensive, including his (the fire) as a part of it. The engineer not only had a delegated authority or control, but it was the ex-

cise of this delegated authority which was the cause of the injury."

In *Brazil Block Coal Co. v. Galt* (1889) 119 Ind. 455, 4 L. R. A. 850, N. E. 1102, the court, in holding a mine boss who directed a ten-year boy to leave his own work and undertake more dangerous duties, was a fellow servant of the boy, said: "do we rest our conclusion upon maxim, *Respondent superior*. Must (if not Haines), under the circumstances of this case, was the agent of the plaintiff, and the superior of the appellee; it was his right to command, the appellee's duty to obey, and, considering the immature age of the appellee, we must assume that he obeyed commands of his superiors, supposing that it was his duty so to do, with regard to the dangers or hazards he would encounter, and without knowledge thereof."

See also, as illustrative of the same point of view, the following cases: *Blesville Foundry & Mach. Co. v. Mann* (1891) 3 Ind. App. 521, 30 N. E. 10 (miner ordered by foreman to work for which he was unfitted); *Jones v. Old Dominion Cotton Mills* (1882) 82 Va. 140 (order given by foreman); *German v. Hannan* (1892) 17 Colo. 17, 1 L. R. A. 602, 30 Pac. 1037 (order given by gang foreman).

³This conception emerges in *Louisville, E. & St. L. Consol. R. Co. v. Manning* (1891) 131 Ind. 528, 31 N. E. 100 (car repairer ordered to repair a car which was not on the track set apart for such work); *Gilmore v. North P. R. Co.* (1884) 9 Sawy. 558, 18 S. 66 (laborer ordered by gang boss to throw dynamite before a fire).

The language used in one South Carolina case would also seem to indicate the adoption of the theory that the transfer of a servant to work outside the scope of his original employment is a nondelegable function of the master, and that any superior servant (in the case cited a section foreman) who undertakes to order such a change of duties represents the master *ad hoc*, although he may be a mere fellow servant as to orders with respect to

come under consideration the injured servant has been a minor, and language has sometimes been used which indicates that the benefit of this qualification of the doctrine of common employment can only be claimed by minors.⁴ But with all deference to the eminent judges who have taken this view, the present writer ventures to express an opinion that it is neither consistent with the reason of the qualification, nor sustained by the case commented on.⁵

It should be observed that the principle thus laid down does not exclude the operation of the doctrine of common employment in cases where the injury was caused, not by the servant's compliance with the order to perform new duties, but by some subsequent act of negligence committed by a subordinate coemployee while those duties were in course of performance.⁶

ordinary duties. *Couch v. Charlotte, C. & A. R. Co.* (1884) 22 S. C. 557. But the position of this court in regard to the "superior servant doctrine" is very obscure (see summary of decisions in chapter XXX., *post*), and it is therefore difficult to say what is the precise effect of this ruling in the present connection.

⁴ In *Randall v. Baltimore & O. R. Co.* (1883) 100 U. S. 483, 27 L. ed. 1005, 3 Sup. Ct. Rep. 322, Gray, J., said that the principle of *Union P. R. Co. v. Fort* (1873) 17 Wall. 553, 21 L. ed. 739, was that, the servant "being a minor, he was performing, by direction of his superior, work outside of and disconnected with the contract which his father had made for him with the defendant." In *Leary v. Boston & A. R. Co.* (1885) 139 Mass. 580, 52 Am. Rep. 733, 2 N. E. 115, also, it was remarked that the controlling factor was that plaintiff was a minor.

⁵ One of the grounds upon which the Supreme Court of the United States upheld the servant's right of action in *Union P. R. Co. v. Fort* (1873) 17 Wall. 553, 21 L. ed. 739, was, as will be seen by reading the extract from the opinion in note 2, *supra*, that he "had no reason to believe he would have to encounter" the risk which caused his injury. Manifestly, this element of nonanticipation is of precisely the same evidential import in the case of adults, as in the case of servants, in so far as it operates *prima facie* to negative that knowledge which is supposed to exist with regard to the ordinary risks of work within the scope of employment. Up to this stage of the inquiry, therefore, adults and minors stand on the same footing. The second question involved

is that which is discussed in the latter part of the opinion, *viz.*, whether this presumption of excusable ignorance was overcome by the specific evidence which was relied upon to prove actual or constructive notice of the risk. This question is wholly distinct from the other, and, in considering it, the minority of the servant undoubtedly becomes material, for exactly the same reasons as where the extraordinary risk is one within the scope of the servant's employment. To this extent, therefore, and no further, it is submitted, the tender age of the plaintiff is a controlling factor in the cases which established this limitation of the doctrine of common employment. Minority, in short, makes it more difficult for the master ultimately to prevail on the ground of an assumption of the risks of new duties; but this is only because the general inference of a nonassumption of those risks, which is drawn from the servant's nonanticipation, is more readily rebutted by specific evidence in the case of adults than in the case of minors.

In several cases in which the doctrine has been applied the servant was, so far as appears, an adult: *Mann v. Oriental Print Works* (1875) 11 R. I. 152; *Erickson v. Milwaukee, L. S. & W. R. Co.* (1890) 83 Mich. 281, 47 N. W. 237; *Walker v. Lake Shore & M. S. R. Co.* (1895) 104 Mich. 606, 62 N. W. 1032.

⁶ A servant, who, after he had been at work in railway shops for two months, performing duties which bring him continually in the neighborhood of a steam hammer, and who, voluntarily and without objection, consents to work at the hammer, cannot recover for an injury

466. Contributory negligence in undertaking the new work.—(Compare §§ 142 *et seq.*, *supra*.)—The general rule applied by most of the authorities is that, where the master or his representative commands a servant to go outside of his regular employment to do a work which is attended with special danger, and the servant, in response to the commands so received, goes and does the work in the way, and in the time directed, the fact that the servant knew that it was dangerous does not render him, as a matter of law, guilty of contributory negligence, unless the character of the danger be so patent and so extensive that no one but a foolhardy, reckless man would attempt it.¹ Several reasons which have been assigned for not imputing negligence are the following: That the servant's excusable ignorance of the danger he encountered is a reasonable inference from the fact that he had

received through the negligence of another servant in operating it. *Hartley v. Northern C. R. Co.* (1876) 46 Md. 280.

¹ *English v. Chicago, W. & St. P. R. Co.* (1885) 24 Fed. 903, per Brewer, J.

In *Chicago & N. W. R. Co. v. Bayfield* (1877) 37 Mich. 205, it was argued that, even if the superior servant who gave the order represented the company *ad hanc vicem* (see §§ 457, 460, *supra*), the act of the plaintiff in obeying was his own voluntary act, and that the case was the ordinary one of contributory negligence. This contention did not prevail. Cooley, Ch. J., said: "When one person engages in the employment of another, he undertakes to obey all lawful orders, and he subjects himself, for any failure to do so, to the double liability of being expelled from the employment and of being required to pay damages. It is true the master had no right to direct him to do anything not contemplated in the employment; but when one thus contracts to submit himself to the orders of another, there must be some presumption that the orders he receives are lawful, the giving of the orders being of itself an assumption that they are lawful; and the servant who refused to obey would take upon himself the burden of showing a lawful reason for the refusal. This, of itself, is sufficient reason for excusing the servant who declines the responsibility in any case in which doubts can possibly exist. He should assume that the order is given in good faith and in the belief that it is rightful; and if, in his own judgment, it is unwarranted, it is not for the master to insist that the servant was in the wrong in not refusing obedience. Re-

spect for the master as well as consideration for his own interest may properly induce him to waive his judgment for that of his superior instead of engaging in disputes, and, perhaps, ejected from his employment, to leave questions of doubt future settlement. Now, although I think, on the facts, as the jury found them, there was no authority to send Williams to handle the brake, the point was not so clear but that a serious question was made of it on the ground that it would be grossly unjust to compel the servant, at his peril, to determine correctly on the validity of an order presumptively lawful, when the consequences of even a correct decision might be apparent insubordination, and perhaps, difficulty and litigation. I think perfectly just under such circumstances to leave upon the master the responsibility he assumed in giving an unauthorized order, and to hold that the servant is not blamable in yielding obedience to his superior."

time for reflection or choice;² that he relied upon the superior knowl-
edge of the employee who gave the order;³ that, although he was aware
of the material conditions which were the cause of his injury, he did
not appreciate the danger created by them;⁴ that by reason of his
youth and inexperience, he was incapable of determining whether the
work required was actually within the scope of his employment,⁵ or
believed himself bound to render obedience to the order.⁶ A servant,
it is declared, is not required to weigh nicely the question whether any
particular order is one which his superior has a right to give.⁷ Nor
will a servant who is charged with various duties be held, upon uncer-
tain and refined distinctions, to have been negligent when, in good
faith, he performed a service outside of the line of his duty.⁸ But
clearly he can never be justified in obeying an order which takes him
outside his regular duties, where he has been expressly instructed to

130; *Orman v. Mannir* (1892) 17 Colo. 564, 17 L. R. A. 602, 30 Pac. 1037; *Camp v. Hall* (1897) 39 Fla. 535, 22 So. 792.

² *Rush v. Missouri P. R. Co.* (1887) 36 Kan. 129, 12 Pac. 582; *Dorling v. Allen* (1881) 74 Mo. 13, 41 Am. Rep. 298 (boy of seventeen ordered to stop an engine, such work not being a part of his duty, and to hurry, was caught by an uncovered set screw); *Hale Elevator Co. v. Trade* (1891) 41 Ill. App. 253 (servant, in hasty response, abandoned his regular work to add his strength to that of other employees to overcome a present emergency).

A boy of fourteen who suddenly receives an order from his foreman to pick up and throw away a stick of giant powder which had caught fire is not, as matter of law, negligent in obeying, as he has neither time for the close weighing of chances, nor the opportunity to comprehend fully the danger of the service to which he was assigned. *Orman v. Mannir* (1892) 17 Colo. 564, 17 L. R. A. 602, 30 Pac. 1037.

³ *Frank v. Bullion-Beck & C. Min. Co.* (1899) 19 Utah, 35, 56 Pac. 419 (miner injured by a cave-in while he was complying with the order of his foreman to assist in carrying out a fellow workman who had previously been injured by an other cave-in).

⁴ The fact that a boy of fourteen injured in a mine by stumbling over a piece of coal lying upon the track, while endeavoring, in pursuance of an order of the superintendent directing him to

Vol. 1, M. & S. 82.

a service outside the duty of his regular employment, and without the knowledge of his parents, to throw off the brake upon a coal car, had seen such piece of coal before he was injured, does not render him, as matter of law, guilty of contributory negligence, since it does not follow, as a conclusion of law, that his judgment had reached such maturity that he was apprised of the danger of running alongside the tracks or scotting or removing the brakes under such circumstances. *Northern P. Coal Co. v. Richmond* (1893) 7 C. C. A. 485, 15 L. S. App. 202, 58 Fed. 756.

⁵ *Hays v. Colchester Mills* (1894) 69 Vt. 1, 37 Atl. 269.

⁶ *Mary Lee Coal & R. Co. v. Chambers* (1892) 97 171, 11 So. 897 (minor of seventeen years, employed as a fireman, was ordered to throw a switch).

⁷ *Orman v. Mannir* (1892) 17 Colo. 564, 17 L. R. A. 602, 30 Pac. 1037.

⁸ *Grannis v. Chicago, St. P. & N. W. R. Co.* (1890) 81 Iowa, 444, 46 N. W. 1067, where the court upheld the propriety of a finding that a wiper in a roundhouse, injured while attempting to couple an engine to a car, in assisting to take the engine out of the roundhouse, was acting within the line of his duty while making the coupling, the proof being that the plaintiff, although he had never attempted such work before, was a man of age and required to assist in taking engines into and bringing them out of the roundhouse; and it is shown that other wipers coupled cars.

obey the orders of the superior servant only in so far as they related to his own department.⁹

The doctrine adopted in Georgia seems to be that contributory negligence is inferable as a matter of law, where the servant knew that the abnormal risk which caused his injury was incident to the new work which he had undertaken.¹⁰ Compare §§ 298, 298a, *ante*.

A servant who is sent to do a piece of work with a machine with which he is not familiar is bound to inquire as to the proper method of operating it. The failure to seek this information will debar him from recovering for an injury caused by operating it, if it was free from defects.¹¹

As to contributory negligence, as a deduction from evidence that the servant undertook work for which he was not fitted, see § 291, note 3, *ante*.

§67. Absence of compulsion an essential element of assumption of risks and contributory negligence.—*a. Generally.*—As in cases of injuries from other kinds of extraordinary risks, neither an assumption of risks outside the scope of the original employment, nor contributory negligence in encountering those risks, can be predicated unless it is shown that the work was undertaken voluntarily. Actual compulsion will readily be inferred where the servant is a minor

⁹This doctrine is deducible from the language used in *Mann v. Oriental Print Works* (1875) 11 R. L. 152, where it was declared that, unless the plaintiff fireman had been instructed not to obey the engineer except in the line of the former's employment, the engineer was authorized to call upon him for assistance in any matter within the engineer's department, and that the defendant would be liable, even if there was another person who might more properly be called upon.

¹⁰The following headnote was written by Bleckley, J., for the case cited: A railway employee is in fault when he knowingly exposes himself to an extraordinary danger at night, by assisting to carry a train over the unsafe track of another railroad. The company does not insure his safety against reckless locomotion which he assists to conduct, with knowledge that it lies outside of his regular employment, and that it is extra hazardous on account of the unfitness of the appointments. *Gallberry v. Western & A. R. Co.* (1876) 57 Ga. 512.

¹¹*Miller v. Madison Car Co.* (1895) 130 Mo. 517, 31 S. W. 574. Compare, generally, §§ 412, 413, *ante*.

¹²In *Kehler v. Schwab* (1892) 1 Pa. 505, 25 Atl. 130, one of the elements of liability which was held to warrant a verdict for the plaintiff, a boy of fourteen, was that he was urged into a new service against his will.

An action is maintainable upon a complaint which alleges that a minor was not engaged in the service which he was hired to perform, but that he was "compelled" by a fellow servant, labor at a business much more perilous and was injured while so engaged. The court said: "There was, then, no opportunity to adjust the compensation with a view to the risk. There was consent to perform the service on a terms. It was a compulsory service, and, under such circumstances, neither justice nor policy requires that the minor shall be acquitted of responsibility." *Chicago & G. E. R. Co. v. Harris* (1867) 28 Ind. 30, 92 Am. Dec. 2. The rights of a child are not permitted to depend upon his ability to discriminate promptly as to the work required of him, or to refuse obedience to the command of his superior. *Hayes v. Chester Mills* (1894) 69 Vt. 1, 37 A. 269. See also *Putnode v. Warren C.*

See §§ 289, 302, *ante*. But where he is an adult, a voluntary action will presumably be ascribed to him only under the exceptional circumstances discussed in the sections just specified.

b. Protest or objection omitted or made.—The principle that the failure of the servant to protest against the maintenance of abnormally dangerous conditions due to the master's negligence is a circumstance which points strongly, and even conclusively, to the inference that the servant was willing to assume the resulting risks (see § 290, *ante*), is equally applicable where the peril is extraordinary in the sense with which we are now concerned.²

The evidential import of a protest actually made depends both upon the defense which has been raised, and upon the views of the court as to the economical and social principles discussed in chapter VII., subtitle B, *ante*. Where the defense raised is an assumption of the risks, the general principle, which is almost universally held in the United States, that the servant cannot countervail the effect of his appreciation of the risk by showing that he entered a protest before undertaking his duties, is considered to be equally applicable, whether the work to be done is within or outside the scope of the original employment. Accordingly, we find it laid down that

ton Mills (1892) 157 Mass. 283, 32 N. E. 161, where a servant of fourteen years of age and of less than ordinary intelligence, injured while obeying permanent orders, given with an oath, to assist in operating a machine at which he was not employed to work, was held not negligent, as matter of law. But there imperfect knowledge was also an element in the case, as the danger incident to operating the machine was partially concealed from view.

² In *Rod v. Stockmeyer* (1896) 20 C. C. A. 381, 34 F. S. App. 727, 71 Fed. 186, the court reasoned as follows: "It is urged that Stockmeyer, in obeying the orders of Drchable, acted under compulsion, and should not be, therefore, held to have assumed the risks of the work he was directed to perform. It is conceded that he made no objection to the order, that he did not protest any incapacity to comprehend the risk, but that he was coerced into compliance with the order through fear of discharge in case of disobedience. That, however, does not charge liability upon the master. In the absence of restrictive contract provisions, the master is at liberty to discharge the servant at any time. So, likewise, is the servant at liberty to abandon his service at will. The mas-

ter has the right to demand other service than that for which the servant has engaged. The latter is at liberty to decline at will. Declining to accept the employment, accepting, he assumes the risks attending the service. He has chosen, or has been properly warned, when he enters. The servant is not under guard or duress. He is a free man, at liberty to make such contracts as he will. That, through stress of circumstances he consents to the orders of the master rather than be discharged from employment, does not impose liability upon the master because of such demand, if he has otherwise performed the duty which the law imposes upon him with respect to the servant."

A brakeman engaged with the distinct agreement that he is not to couple cars except with a stick, and is, under no circumstances, to go between cars having an engine attached, cannot recover for injuries received in going between the cars by direction of the engineer, on the ground that the duty was outside the scope of his employment, where he makes no objection. *Richmond & D. R. Co. v. Finley* (1894) 12 C. C. A. 595, 25 U. S. App. 16, 63 Fed. 228.

To the same effect, *McCabe v. Chicago & N. W. R. Co.* (1888) 71 Wis. 114, 37 N. W. 84.

a servant of full age and adequate experience cannot cast upon his master all the risk of accident in the performance of new duties. Simply protesting against being called upon to perform those duties under such circumstances, he has the choice of either leaving his employment, or of remaining and assuming all the risks incident to the work he knows that he is expected to do.³

c. *Fear of discharge.*—In two of the cases just referred to it will be noticed that the effect of the servant's protest is considered with reference to the fact that dismissal from the employment must always be taken into account, as a possible, or rather probable, consequence of disobedience, and that the servant is presumed to be influenced by this consideration.⁴ Obviously, however, neither making nor the omission of an actual protest is a necessary or variable concomitant of this element; and in some cases its bearing

³ *Wheeler v. Berry* (1893) 95 Mich. 250, 54 N. W. 876, distinguishing *Chicago & N. W. R. Co. v. Bangfield* (1877) 37 Mich. 205, as being a decision based on the youth, weakness, and inexperience of the servant. See § 160, *supra*.

To the same effect is *Leary v. Boston & L. R. Co.* (1885) 139 Mass. 580, 52 Am. Rep. 733, 2 N. E. 115. (Freight truckman acting temporarily as fireman was thrown off the footboard of a switching engine by a jolt caused by the passage of the engine over a frog.) The court said: "While a person who engages for a particular service agrees to encounter only the dangers of that service, he may, perhaps, in the first instance, assume that the order given him by his superior is warranted by the legitimate scope of his employment. If, so assuming, he is induced to perform duties which, by his contract, he is not bound to perform, and is thus injured, he should be able to maintain an action for the injury against the employer. But in the case at bar the plaintiff knew that the duty of aiding as fireman on the engine was not within his original contract as a laborer. He determined to perform it as a part of his engagement with the defendant, rather than lose his position as a laborer. In so doing, he must be held to have assumed its necessary risks. . . . Morally to coerce a servant to an employment, the risks of which he does not wish to encounter, by threatening, otherwise, to deprive him of an employment he can readily and safely perform, may sometimes be

harsh; but when one has assumed employment, if an additional and more dangerous duty is added to his original labor, he may accept or refuse it. If he has an exsutory contract for the original service, he may refuse the additional and more dangerous service, and, if, for that reason, he is discharged, may avail himself of his remedy on contract. If he has no such contract and knowingly, although unwilling, accepts the additional and more dangerous employment, he accepts its incidental risks; and while he may repudiate of the employer to perform his duty cannot recover for an injury which occurs only from his own inexperience.

On the other hand, in *Jones v. L. Shore & M. S. R. Co.* (1883) 49 Mich. 573, 11 N. W. 551, where a brakeman on a passenger train was ordered to yard work, and, after a protest, complied with the order, and was injured by a projecting load of lumber, it was held that it was competent to introduce evidence of the protest as indicating a withdrawal of consent. In *Cole v. Chicago & N. W. R. Co.* (1888) 71 Wis. 114, 37 N. W. 84, the court referred to, but declined either to affirm or disaffirm, the ruling in this case.

⁴ The fact that there was no threat of dismissal in case of refusal to undertake the new duties was emphasized in *Barnard & D. R. Co. v. Finley* (1894) 101 C. C. A. 595, 25 F. S. App. 16, 137 U. S. 228, as a ground for inferring acceptance of the risks.

upon the question of the servant's willingness is treated from a more general standpoint.⁵

468. Contributory negligence in regard to the manner of performing the work.—In cases where the injury resulted from the manner in which the work was performed, and not from the risks which were an essential incident of that work, it is clear that, under the general principle stated in §§ 319, 320, *ante*, contributory negligence is negatived by evidence which shows that the servant did not understand the danger which that method involved.¹ On the other hand, he cannot recover if, with knowledge, actual or constructive, of the risks thereby incurred, he adopts an abnormally hazardous method of doing the new work, or fails to take the precautions against accident which would have suggested themselves to a prudent man as being appropriate under the circumstances.² This rule, is, of course, no less applicable to minors than to adults.³

¹In *Garrigan v. La Shore & M. S. R. Co.* (1896) 110 Mich. 71, 67 N. W. 1097, the court rejected the contention that, by consenting to perform the service, the plaintiff did not assume the risk, inasmuch as he might be discharged if he refused to perform the service; *or*, in other words, that the master is to be considered an insurer of the servant performing extraordinary service by direction of a superior, whenever he chooses to obey a direction of one in charge, for fear of discharge.

See also *Dougherty v. West Superior Iron & Steel Co.* (1894) 88 Wis. 343, 60 N. W. 274.

On the other hand the supreme court of Indiana has repudiated the theory that the servant is free to quit the service and thus avoid danger, and that, by voluntarily continuing in the service and obeying the command, he consents to take the additional risk. *Beard v. Black Coal Co. v. Hoodlet* (1894) 129 Ind. 327, 334, 27 N. E. 741. See § 461, note 2, *supra*.

²*Borttger v. Scherpe & K. Architectural Iron Co.* (1894) 124 Mo. 87, 27 S. W. 496 (servant hired as a common laborer is not required to possess such skill in choosing lumber for a scaffold as will debar him from recovery for injuries received through the breaking of a piece of timber used in erecting the structure); *Gulf, C. & S. F. R. Co. v. Verman* (1901) Tex. Civ. App. 64 S. W. 790 (fireman directed to take charge of a stationary engine was injured in trying to start it by lifting the balance wheel off its balance with an

iron rod, he having seen other employees doing this, and not being acquainted with any other method).

³*Winnall v. Maine C. R. Co.* (1887) 79 Me. 394, 10 Atl. 19 (workman whose ordinary duties were in a car shop was injured, while coupling cars under the direction of his foreman, by placing his hand where, as he could not help seeing, it must be caught by the buffer); *Jenkias v. Maginnis Cotton Mills* (1899) 51 La. Ann. 1011, 25 So. 643 (servant attempted to remove flats from the endless chain of a carding machine while it was in motion, and when the removal of the fly plate had, as he knew, exposed a rapidly moving cylinder); *English v. Chicago, M. & St. P. R. Co.* (1885) 24 Fed. 906 (servant was ordered to repair a water tank and fell from a narrow, uncovered platform on which he stood).

An instruction that if the servant is suddenly called on to perform a duty not falling within the scope of his contractual duties, and complies with the order, he will have a right to rely on the implied assurance of the master that the dangers to be encountered are such only as can be guarded against by the exercise of ordinary care; and that, if he uses such care, the master will be liable,—is not open to the objection that it relieves the servant from the duty of exercising his faculties to protect himself from the apparent dangers incident to the work. *Norfolk Beet Sugar Co. v. Hight* (1899) 59 Neb. 100, 80 N. W. 276.

⁴*Michael v. Stanley* (1892) 75 Md. 664, 23 Atl. 1094; *Morewood Co. v.*

469. Injuries due to risks entirely disconnected from the servant's duties; right of action for.—In one English case there was applied in favor of the servant a principle which, so far as it is susceptible of precise formulation, would seem to be this—that the servant's knowledge of a risk will not warrant the inference that it was assumed, where it arose from conditions which lay wholly outside the sphere of the duties which he was engaged to discharge, and had no connection whatever with those duties.¹

Smith (1900) 25 Ind. App. 264, 57 N. E. 199 (minor of seventeen went unnecessarily near cogwheels).

¹This is apparently the rationale of the decision in *Mansfield v. Baddley* (1876) 34 L. T. N. S. 696, where it was held that a woman employed as a dressmaker, who went into her employer's kitchen on an errand which had nothing to do with her work, was bitten by a savage dog which she supposed to be tied up, as was usually the case, was held to have been wrongly nonsuited, although she was aware of the character of the dog. In the course of his opinion, Grove, J., said: "If the plaintiff, when she entered her employment, knew the character of the dog, and that, in the ordinary course of her employment, she would have to go by the place where it was tied up, it might, perhaps, be said she took the risk. But here she was asked to do something which was no part of her service,—in fact, a mere

good-natured act, it being something *ultra* her service to go to the kitchen. The dog then rushes out and bites her. Such a risk was not incidental to the service, nor one which, by her conduct she has undertaken to bear. If there was anything exceptional in the case, the onus of proving it lay on the defendant." It should be observed, however, that the same conclusion might have been arrived at on the facts without invoking any special principle, for it is evident that the dressmaker was not chargeable with the assumption of any greater risks than those incurred from the proximity of the dog while it was tied up. The risk created by the fact that it was running loose was, in any view of the case, an abnormal one which was not assumed unless it was proved to have been known to her; and it is clear that, under the testimony, this condition precedent to the transfer of the responsibility was not satisfied.
