ANNUAL ANNOUNCEMENT

PUBLISHED BY AUTHORITY OF THE COMMITTEE ON EDUCATION

14TH SESSION,

1893-'94.

ST. JAMES' SQUARE, GERRARD STREET, - - TORONTO.

1893.

GILPIN, LANGDON & CO., BALTIMORE

We are the originators

Assayed Dowders

In this generation of rapid advancement in every profession, that of pharmacy has kept fully abreast 'with the times Appreciating this fact and also that this constant tendency towards a higher standard would bring with it a demand for better and more perfect Powdered Drugs and Powders for Percoiation, we established some years since a complete plant for their production.

With these facilities and our very exhaustive system for research and experiment, we have been for several years enabled to supply a class of powdered drugs heretofore unobtainable,

and judging from the numerous complimentary letters received from the leading pharmacists of the country, our efforts have not been in vain.

Weare-confident that every pharmacist will consult his best interests in adopting our Powders for Percolation, and being anxious to have their generally used, we offer to send them on approval, and if not better in quality, and if they do not make finer and handsomer preparations than ever before obtained, they may be returned at our expense.

It will therefore cost you nothing to see and to try what we are assured by several thousand pharmacists are the best articles of the kind they have ever seen or used

We make the offer knowing from our past experience that you will, on trial, adopt them in your laboratory.

Special prenticeship to the Pharito the date is

REGULATIONS REGARDING APPRENTICE SHIPS COMMENCED AFTER MARCH 23rd, 1880.

Every person who may be desirous of becoming apprenticed to a regularly qualified pharmaceutical chemist, must before the term of his apprenticeship begins, send to the Registrar of the College the sum of one dollar, together with a certificate or other evidence satisfactory to the Council, showing that the applicant has previously passed an examination on the following subjects:

ARITHMETIC.—Reduction, proportion (simple and compound), fractions (vulgar and decimal), square root.

MENSURATION.—Areas of rectilineal figures, volumes of parallelopipeds.

Algebra.—Elementary rules, greatest common measure, least common multiple, fractions, simple equations of one unknown quantity.

GEOGRAPHY .- Political, physical, and mathematical.

ENGLISH.—Grammar and composition.

The above requirements having been complied with, the applicant, on engaging himself by a written contract with a regularly qualified pharmaceutical chemist, then legally begins a period of apprenticeship, in which relation he must serve for a term of four years.

In order to become a candidate for the Council Examinations, the applicant must have attended two courses of lectures, comprising the following subjects, viz.:—Pharmacy, chemistry, materia medica, botany, and reading and dispensing of prescriptions; the first course at the Ontario College of Pharmacy, or at any college of pharmacy or school of medicine approved of by the Council; and the second or senior course at the Ontario College of Pharmacy.

The time occupied in attending the first course of lectures only, will be credited as a portion of the term of apprenticeship.

In case any apprentice shall, by reason of the death, failure in business, or removal, of his employer, or from any other cause satisfactory to the Council, be unable to complete his term of apprenticeship with such employer, such person shall be at liberty, when and as often as this may happen, to enter into a new contract to complete the remainder of the unexpired term with any other regularly qualified pharmaceutical chemist.

It must be borne in mind that no one is eligible to the Diploma of this College until the age of twenty-one years has been attained; apprenticeship may, however, commence at any age.

REGULATIONS GOVERNING APPRENTICESHIP COMMENCED PRIOR TO MARCH 23rd, 1889.

Special regulations will govern all persons having commenced a term of apprenticeship prior to March 23rd, 1889 (the date of adoption of the Amendments to the Pharmacy Act of 1884), and who were duly and properly registered previous to the date mentioned.

The term of service, as apprentice, for all such, is three (3) years.

Attendance at College is not obligatory, but is strongly urged in the interest of the apprentice, and all who shall avail themselves of the advantages of a full Junior and Senior Course, and who shall pass the Final or Council Examination, will become the recipients of the diploma of new design, which will record the fact that they have received a regular and systematic pharmaceutical education.

The student will not, however, receive credit for the time thus spent in attend-

ance at the course of lectures, as applying to his term of apprenticeship.

In order to become a candidate for the Final or Council Examination (held in December, 1893, or May, 1894, the applicant must furnish the Registrar with satisfactory evidence of having, in pursuance of a binding contract in writing for that purpose, completed an apprenticeship under a regularly qualified pharmaceutical chemist, extending over a term of three years, and must forward to the same officer the sum of ten dollars (\$10) with an application for examination filled out in his own handwriting on a printed form which may be obtained by application to the Registrar.

In case any apprentice shall, by reason of the death, failure in business, or removal of his employer, or from any other cause satisfactory to the Council, be unable to complete his term of apprenticeship with such employer, such person shall be at liberty when and as often as this may happen, to enter into a new contract to complete the remainder of his unfulfilled term with any other regularly qualified pharmaceutical chemist.

Examinations.

MATRICULATION EXAMINATION.

SECTION I.

Applicants for admission to the lectures of either course, and who intend to obtain the diploma of the College, will be required to pass a matriculation examination, unless exempted from such examination by virtue of representing one or more of the conditions mentioned in the List of Exceptions (vide Sec. ii.)

The names and limits of the several branches in which matriculants shall be

examined, are as follows:

ARITHMETIC.—Reduction; proportion, simple and compound; fractions, vulgar and decimal; square root.

Mensuration.—Areas of rectilinear figures; volumes of right parallelopipeds.

Algebra.—Elementary rules; greatest common measure; least common multiple; fractions; simple equations representing one unknown quantity.

English.—Grammar and composition.

LATIN.-Familiarity with terms used in ordinary Latin prescriptions.

The date of the Matriculation Examination will be September 12th, 1893, and will be held in the College building.

The examination will commence promptly at 10 a.m., continuing for three hours, and will be conducted in writing.

All perso not required t ing the Dean High School of the qualific reserves the t should there and subject the

SECTION II.

EXCEPTIONS TO THE ABOVE REQUIREMENTS.

All persons who may come under one or more of the following conditions are not required to pass the Matriculation Examination, and can matriculate by furnishing the Dean with properly authenticated certificates from the Head Master of a High School or Collegiate Institute, or from other satisfactory sources, as evidence of the qualifications prescribed, and on payment of the specified fee. The College reserves the right, however, in all cases to decline the recognition of any certificate, should there be doubt regarding the character of a diploma or certificate submitted, and subject the applicant to an examination.

The following are exempt from the examination :-

 Apprentices whose terms of service shall have been completed by October 1st, 1892.

Students who have attended a previous course of lectures at the Ontario College of Pharmacy.

3. Apprentices who have passed the Preliminary Examination specified in the amended Pharmacy Act (1889).

4. Matriculants in Arts or Medicine in any British or Colonial University or College.

Holders of second or third class non-professional certificates issued by the Education Department of Ontario; or persons who can furnish evidence of having passed an examination at least equivalent to the general standard required for the latter.

All prospective students coming under the above exceptions must, however, register their names with the Registrar of the College, after their certificates have been duly approved by the Council; they need not appear for registration before September 14th, at 9 a.m.

JUNIOR EXAMINATION.

The Junior Examination will be held by the members of the College staff at the conclusion of the Junior Course in December, and must be passed before the student can be admitted to the Senior Course. A Supplemental Examination will be held in January prior to the commencement of the Senior Course, for those failing to pass in December.

Students who have attended a course of lectures at some recognized College of Pharmacy or School of Medicine, and can submit evidence of having passed an examination at the conclusion of their studies, may, if such evidence be satisfactory to the Council, enter on the Senior Course without further examination.

This examination will be held on December 14th, 15th and 16th, and the Supplemental on January 4th and 5th.

SENIOR OR FINAL EXAMINATION.

This examination is held semi-annually by examiners appointed by the Council of the College, and must be passed before the candidate can be allowed a license to conduct business in Ontario. It shall be held commencing on the first Monday, which shall not be later than a week after the close of the College in May, and on the second Tuesday in December, or at such other dates during these months as the Board of Examiners may appoint.

ontinuing for three

The Council of the College established in 1892 the following regulations for an examination in practical chemistry:

The examination shall be required only from candidates who have taken full Junior and Senior Courses at the College, and are entitled to the diploma of new design, which certifies that a regular course of instruction has been obtained at the College, and also from candidates registered as apprentices under the provisions of the amendment to the Pharmacy Act in 1889. All candidates who successfully pass this examination, may, on applying to the Registrar, obtain a certificate of examination in addition to this diploma of new design. Any candidate who had commenced his apprenticeship prior to March 23rd, 1889, and who may not succeed in passing this examination, shall not be debarred from obtaining registration, providing he has successfully passed the examination in the other six subjects, as defined in College By-law, Sec. 13; but he shall not be entitled to receive the diploma of new design.

The following shall be the limit of the aforesaid examination:-

A knowledge of the articles used in chemical testing.

Preparation of the test solutions.

The qualitative analysis of the more important chemicals and detection of impurities in them.

The qualitative examination of unknown officinal salts or mixtures of salts in the state of powder or solution, having well marked characteristic reactions.

Preparation of solutions used in volumetric estimation of the strength of pharmacopœial preparations, and the practical application of these solutions in testing their strength.

Detection of the alkaloids.

The maximum number of marks attainable in this subject shall be 100, and the candidate must obtain not less than 50 marks to pass.

The time allowed for examination shall be three hours, or as much longer as the examiner may permit; an oral examination may be permitted, at the option of the examiner; standard works of reference or notes may be allowed the candidate for use in the examination at the discretion of the examiner.

Medals.

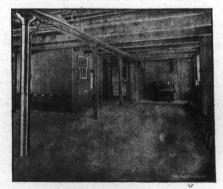

Seven medals are offered for competition at the Senior Examination in May only, and are open to all students who have attended two full terms at the Ontario College of Pharmacy, who have not failed at any previous examinations, and who have made pass marks on the Practical Chemistry Examination.

The College Gold Medal will be awarded to the candidate making the highest number of marks of not less than seventy-five per cent, of the total; the Silver Medal to the student attaining the next highest number of marks with not less than seventy per cent, of the total.

The Special Subject Medals will be awarded to the students making the highest number of marks in the respective subjects of not less-than seventy-five per cent. of the total in all subjects; the marks for term work will be considered in awarding the Pharmacy and Chemistry Medals.

Appointment of Assistants.

The appointment of students as assistants in each of the practical laboratories to aid the professors in their work will be made soon after the opening of the session. Librarians will be appointed by the Dean.

RECREATION ROOM.

Fees.

MATRICULATION OR ENTRANCE FEE - - - \$2.00

To be forwarded with application to the Registrar by all students wishing to enter, whether by examination or certificate. It is payable once only, but in the event of failure to pass the examination it will not be returned, but the candidate shall be allowed a second examination without any further payment.

GENERAL LECTURE TICKET-

Junior Course, including fees for Laboratory Chemicals, etc., \$42.00 Senior Course, do do do 53.00

This includes attendance on all the lectures and obligatory laboratory courses; payable strictly in advance.

Examination Fee for Diploma, *- - - \$10.00

This fee must be paid for each examination, and includes the Diploma. It must be paid to the Registrar at least two weeks before the date of such examination. The charge for engrossed Diploma other than Examination Diploma shall be two dollars (\$2).

DEPOSIT FEE FOR LABORATORY APPARATUS, Etc., \$5.00 for each term.

This amount will be returned to each student at the close of the term, less the amount deducted for breakage, damage or fines imposed.

SPECIAL LECTURE TICKET IN ANY DEPARTMENT,

This will be issued to such students as wish to perfect themselves in any one of the branches taught in this College. Fees will be arranged by the Dean, Professor of the Department and the Registrar, subject to the approval of the Council.

REDUCTION OF FEES TO STUDENTS WHO HAVE ATTENDED TWO COURSES OF INSTRUCTION.

Students who have attended full courses at the College during any term previous to that of 1887-8, will be allowed a reduction of twenty per cent. from the regular fees, and will not be required to pay the Matriculation Fee; the Laboratory Deposit Fee, specified before, must however in all cases be placed in the hands of the Registrar.

SYLLABUS.

General Chemistry.

PROF. A. Y. SCOTT.

Lectures will be delivered on chemistry according to the time table (p. 8). The course will be so arranged that the student attending the full course of theoretical and practical work shall have acquired a satisfactory acquaintance with the science, and such as to enable him to do his post-graduate reading with that intelligence and relish which is the mark of a thorough student.

During the Junior Term lectures will be confined to the non-metallic elements and their compounds, and during the Senior Term to the chemistry of the metals and of the carbon compounds.

Each element and compound will be treated as far as possible in the following way:—History and discovery, occurrence, preparation, properties (physical and chemical), impurities, tests, uses in the arts and medicine, etc. No compound will be taken up until the elements composing it have been touched upon.

The object being to render this course as practical as possible, some substances will be treated more in detail and fully illustrated by experiments on the lecture table.

Special attention will be paid to those substances used in the British Pharmacopæia.

JUNIOR COURSE.

NON-METALLIC ELEMENTS.

Historical introduction, relation of chemistry to physics, general principles of the science, such as laws of chemical combination, diffusion of gases, atomic theory, nomenclature, etc.

The elements and the compounds of these in following order:

Hydrogen, Chlorine, Bromine, Iodine, Fluorine, Oxygen, Sulphur, Selenium, Tellurium, Nitrogen, Phosphorus, Arsenic, Boron, Silicon, Carbon.

PHYSICS.

Lectures will be given on Saturday morning throughout the Junior Course and will embrace the following:

Introduction, definition and properties of matter; force; mechanical principles, phenomena of attraction, adhesion, cohesion, etc.

WO COURSES

ig any term previous it, from the regular Laboratory Deposit in the hands of the General properties and laws of liquids and gases, and the practical application of these in barometers, pumps, etc.

General properties and laws of heat, dealing with its application to everyday industries, and then with the change of state undergone by bodies, and the results which follow its application: thermometers, engines, etc.

General properties and laws of light, mirrors, lenses, optical instruments, such as microscope, etc., optics of human eye and photography.

Magnetism, magnets, compasses, etc.

Electricity, electrical machines and accumulation of electricity, batteries, frictional electricity, etc.

This course will be made as practical as possible, care being taken not to lose sight of the laws which underlie all natural phenomena.

SENIOR COURSE.

METALS.

The metals, metallic alloys, amalgams; general properties, as specific gravity, melting point, crystalline form, fracture, lustre, opacity, color, ductility, conductive power of heat and electricity, atomic heat, etc.

Classification of the Metals.—Hydroxides or Hydrates, Oxides, Acids, Salts: general properties of these.

Metals will be taken up under the following groups :-

Alkali Group.—Potassium, Sodium, Lithium, Rubidium, Cæsium, Ammonium.

Alkaline Earths .-- Calcium, Strontium, Barium.

Magnesium Group.-Magnesium, Zinc, Beryllium, Cadmium.

Lead Group .- Lead, Thallium.

Copper Group .- Copper, Silver, Mercury.

Cerium Group .- Cerium, Yttrium, Lanthanum.

Aluminum Group .- Aluminum, Indium, Gallium.

Iron Group.-Iron, Manganese, Cobalt, Nickel.

Chromium Group.-Chromium, Molybdenum, Tungsten, Uranium.

Tin Group .-- Tin, Titanium, Zirconium, Thorium.

Antimony Group .- Vanadium, Antimony, Bismuth, Tantalum, Niobium.

Gold Group.- Gold, Platinum, Palladium, Indium, Rhodium, Ruthenium, Osmium.

Spectrum analysis, natural arrangement of the elements, etc.

CARBON COMPOUNDS.

Historical introduction, definition of organic chemistry, nature and sources of organic compounds. Formulæ—Empirical, molecular, typical and graphic. Analysis—Elementary and Proximate. Calculation of analysis and formulæ. General principles of classification of the carbon compounds—Isomerism, metamerism, polymerism. Physical properties, boiling point, melting point. Optical properties.

PORTION OF CHEMICAL LABORATORY.

I .- FATTY COMPOUNDS.

Hydrocarbons.—Names and classification; Paraffin, Petroleum, Vaseline, etc.; manufacture of Petroleum products, uses, tests, methods of testing

illuminating oils.

Alcohols.—Methyl and Ethyl Alcohols, preparation, uses, tests, fermentation changes, Fusel Oil, Wines, Liquors, etc.; Haloid Ethers, higher monatomic, diatomic and triatomic alcohols and ethers; Chloroform, Bromoform, Iodoform, Glycerin, Nitro-Glycerin, Fats and Soaps, Butter, Oleomargarine; Hexatomic Alcohols and Ethers, Carbohydrates, Glucoses, Sugars, Starch, Cellulose, Gums, etc.

Aldehydes .- Chloral Hydrate, Croton Chloral Hydrate, Ketones.

Acids .- Formic, Acetic, Oxalic, Lactic, Tartaric, Citric.

Amines and Amides.

II.—AROMATIC COMPOUNDS.

GENERAL PROPERTIES.

Hydrocarbons.-Benzol, Naphthalene, Anthracene, etc.

Haloid Ethers.—Cyanogen, nitro, amido-derivatives, azo, diazo and hydrazine compounds, sulpho-derivatives.

Alcohols and Phenols.—Carbolic Acid, Naphthol, Resorcin, Quinone, Hydroquinones, etc.

Aldehydes and Ketones.

Acids .- Benzoic, Toluic, Salicylic, Gallic, Tannic, etc.

Terpenes. - Camphors, Menthol, volatile and essential oils.

Resins .- Balsams, Glucosides and bitter principles.

Alkaloids.—Conine, Nicotine, Opium, Cinchona, Strychnine, etc.; bases; coloring matters and dye stuffs, aniline, braziline, chlorophyll, etc.

Albuminoids and Gelatinous Bodies.—Albumin, Fibrin, Casein, Globulin, Myosin, Gluten, Gelatin.

Animal Chemistry .- Bones, Blood, Gastric Juice, Bile, Milk, Urine, etc.

Practical Chemistry.

PROF. GRAHAM CHAMBERS.

JUNIOR COURSE.

The work in this department will commence with a series of experiments in elementary physics, including the following:—

The general effect of heat upon solids and liquids.

Determination of the melting points of solids, and the boiling points of liquids. The effect of atmospheric pressure on the boiling points of liquids.

Determination of the specific heats and latent heats of solids and liquids. Use of the calorimeter.

The course in practical chemistry will commence with a study of the elementary principles, such as use of the bunsen burner, solution, solvents, crystallization, precipitation, filtration, decantation, washings, evaporation, distillation, sublimation, fusion, deflagration, etc.

The use of flame.

Elements of blow pipe analyses; formation of beads on loop of platinum wire; glass working and blowing.

The preparation, properties, and reactions of the so-called non-metallic elements and their compounds. Hydrogen, Chlorine, Bromine, Iodine, Oxygen, Sulphur, Nitrogen and Phosphorus. The study of the properties and reactions of the inorganic acids.

Study of the properties and reactions of the metals and their compounds.

SENIOR COURSE.

Classification of the metals into groups and detection and separation of the metals in each group.

Considerable time will be given in aiding the student to become proficient in determining the composition of unknown simple salts, and detecting the impurities commonly found in them.

Systematic course for the detection and separation of the inorganic acids and more frequently occurring organic acids.

The following organic compounds will be studied in detail:—Ethyl Alcohol, Sulphuric Ether, Acetic Ether, Chloroform, Chloral Hydrate, Cane Sugar, Grape Sugar, Milk Sugar, Starch, Benzine, Phenol, Resorcin, Aniline, Antifebrin, Oil of Wintergreen, Salol, Betol, Saličin, Naphthol, and Naphthalene.

Quantitative Analysis.—Principles of the gravimetric process, and of volumetric analysis; preparation of standard solutions; practical application of these solutions in the estimation of the strength of some of the British Pharmacopæia preparations.

Analysis of Potable Waters.—Standards of purity; qualitative examination of mineral waters.

Urinary Analysis.—Detection of Albumen, Mucin, Sugar, Phosphates, Bile, Acids, etc.

Quantitative Estimation .- Of Sugar and of Urea.

Toxicology.

PROFESSOR CHAMBERS.

Definition of a poison. Classification of poisons.

Each poison will be discussed as to its dangerous and probable fatal dose; symptoms of poisoning, antidotes, treatment and detection.

The action of some of the more common poisons will be illustrated practically by experiments on lower animals.

The practical work will be taken up during the hours assigned to practical chemistry, and will include the following:—

Systematic course for the detection and separation of inorganic poisons.

The study of the properties and reactions of organic poisons, including the alkaloids and ptomaines.

Methods for the detection of poisonous alkaloids.

Especial reference will be given to the methods of extraction of poisons from organic substances, such as occur in ordinary toxicological analyses.

Theory and Practice of Pharmacy.

PROF. CHAS. F. HEEBNER.

JUNIOR COURSE.

Lectures of the Junior Course will be delivered according to time-table.

After an introductory lecture on the outline history of Pharmacy, the Pharmacopeia, and pharmaceutical legislation, and a consideration of the text books and works of reference of service to the pharmacist, the classification and naming of drugs in general, and the contrast between modern and ancient pharmacy, the following subjects will be considered, viz.:—

Metrology.—Weight, weighing, systems of weights in use; the balance, its construction, verification, care and use; classification of scales as to mechanism involved; the metric system; measures, forms, uses and verification; systems, imperial, wine and metric; measuring.

Specific Gravity.—And methods for determination in connection with both solids and liquids. 'Hydrostatic balance; pycnometers; hydrometers; loaded cylinder, etc.; calculations.

Specific Volume.—Its use and practical application. Rules for averaging mixtures. Calculations.

Botanical Drugs.—Collection, desiccation, curing, garbling, tests for quality, etc.

Mechanical Subdivision of Drugs.—Comminution, contusion, trituration, grinding, drug-mills, levigation, separation of powders, sifting, elutriation, degrees of fineness; mortar and spatula, construction and correct use.

Heat.—Its determination, sensible and latent heat; thermometers, their construction; comparison of thermometric scales; sources of heat and its use in pharmacy; combustion of solids, liquids, and gases in the great variety of heating apparatuses; bunsen burner, blow-pipe; crucible and other media of application.

Processes Requiring a High Heat.—Ignition, incineration, calcination, de-hydration, fusion, determination of fusing-point, torrefaction, roasting, reduction, deflagration, oxidation, carbonization, sublimation.

Methods for Equalizing and Controlling Heat.—Baths, water, saline, steam, oil, glycerin, paraffin, hot air, sand, card-teeth, gauze, asbestos, etc., constant temperature regulators.

Vaporization.—Ebullition, boiling point and its determination, evaporation, conditions affecting the process, appliances for hastening spontaneous evaporation, evaporation in vacuo.

on, evaporation, ing spontaneous Distillation and its Uses,—Simple, fractional, and destructive distillation; structure and method of employing the various forms of distillatory apparatus applicable to the chemical and pharmaceutical processes of the Pharmacopæia. Rectification. Cohobation.

Sublimation.—Sublimates; powder and cake. Condensers; Liebig, dome and others.

Solution.—Simple, chemical, complex, saturated, super-saturated, means for facilitating, circulatory displacement, solvents. Refrigerating mixtures.

Gases.—Their generation, purification, collection, condensation, desiccation, and absorption.

Filtration.—Various filtering media with their general and specific uses; methods of conducting filtration; folding of paper filters; rapid filtration by use of pressure, aspirator, or vacuum pump; hot filtration; colation.

Funnels; construction, selection and uses.

Clarification.—Methods as applied to various typical liquids; deodorization; decolorization.

Decantation.—The siphon and its uses; various kinds of siphons; guiding-rods, etc. Separating funnels. Florentine receivers.

Dialysis.—Construction of dialyser, osmosis, endosmosis, exosmosis, crystalloids, colloids, septa, etc.

Precipitation.—Objects and uses; separation, washing, drying, and weighing of precipitates; affusion, decantation.

Crystallization.—Methods for effecting; hydrous and anhydrous crystals; water of crystallization; morphism; growth and size of crystals; recrystallization; granulation; deliquescence; efflorescence. Crystallography.

Extraction.—Principles involved; extractive, its determination and modifications; apotheme; methods of extraction; maceration, digestion, infusion, decoction, lixiviation, percolation. Expression.

Percolation.—Brief history and theories; principles involved; construction of percolators; requisites for satisfactory percolation to exhaustion; menstrua, determination of alcoholic strength; fluid extracts; estimation of cost to manufacture; tests for exhaustion; controlling flow of percolate. Pressure percolation, consideration of its advantages and disadvantages. Fractional and re-percolation. Recovery of alcohol from marc; testing percolates, etc.

SENIOR COURSE.

Senior Lecture Course.—Lectures will be delivered on Wednesdays and Saturdays at 10.15 o'clock a.m.

The mode of teaching, which educates the mind through impressions made on the eye, is now universally regarded as one of the most effective means of imparting knowledge. Through both courses this kind of instruction will be largely used; and the syllabic tables, drawings on cloth in colors, reactions, tests, views, etc., projected upon the screen by means of the oxy-hydrogen lantern, will, it is believed, add greatly to the usefulness and interest of the lectures.

One of the special features of this course will be the study of incompatibility, as viewed from chemical, pharmaceutical, and physiological standpoints.

The subject-matter of the lectures of the Senier Session will be divided into two heads, namely, inorganic and organic drugs, and will embrace a careful study of the important Galenical and other pharmaceutical preparations, whether official or unofficial, giving the methods of preparation, physical characteristics, internal structure, reactionseuses, doses, impurities, adulterations, and sophistications of each, which will be considered in detail.

A brief synopsis of this course is here given :-

Classification and consideration of pharmacopæial preparations; liquids; solids.

Inorganic. - Mineral acids and their preparations.

Preparations of the salts of the alkali metals. Volumetric and gravimetric assaying.

Organic.—Alkaloids, sources, methods of isolation and identification; alkaloidal salts, physical and chemical characteristics; assaying of alkaloidal drugs and their preparations in general and specifically. The artificial alkaloids and other new remedies; Acetanilidum, Phenacetinum, Phenazonum, Sulphonal, Paraldehyd, Glusidum, etc.

Glucosides: physical and chemical properties; official and unofficial glucosides; decomposition products.

Inorgani: .-Alkali earths: preparations of calcium, magnesium, barium, strontium, cerium.

Preparations of the halogens, and of cyanogen, sulphur, phosphorus.

Metals: Preparations of zinc, copper, iron, arsenic, antimony, bismuth, silver, mercury, lead, etc.

ORGANIC PHARMACY.

- The Cellulin Group.—Cellulin, its modifications and decomposition products, gossypium, pyroxylin, collodia, chartæ, parchment paper, oxalic acid, etc.
- Destructive Distillation of Cellulin.—Acetic acid, methyl alcohol, tars, creasote, carbolic acid, salicylic acid, salol, oils of cade and amber, charcoals, etc.
- Amylaceous and Saccharine Groups.—Carbohydrates, their relationships and decomposition products; starches, dextrin, glucose, sugar, honey, etc.
- Plant Exudations and their Manipulatory Products.—Gums, resins, oleo-andgum; turpentine, terebene, terpin hydrate; balsams, emulsions, benzoic acid, etc.
- Fermentation and its Products.—Ferments, malt, yeast, alcohols, rectified and proof spirit; wines, argols, tartaric and citric acids, spirituous liquors.
- Alcohol Derivatives.—Ethers, spts. æth. co., spts. nitrous ether, amyl nitrite, chloral hydrate, chloroform, iodoform, etc.
- Volatile Oils.—Will be fully and specifically considered; natural and synthetic oils; impurities and adulterations means of detection; stearoptens, official and non-official.
- Fixed Oils and Fats.—Preparation, purification, physical properties, chemical composition, liquid and solid fats; waxes; oinfment bases.
- Saponification Products.—Soaps, glycerin, glonoin, oleic acid, oleates and oleopalmitates.
- Animal Drugs.—Pepsins, pancreatin, trypsin, cantharis, coccus, cetaceum, castoreum, civet, ambergris, hæmaglobin, oxgall, lactic acid, isinglass, gelatin, cod liver oil, etc.

n will be divided into prace a careful study tions, whether official aracteristics, internal and sophistications of

PORTION OF PHARMACAL LABORATORY.

Practical Pharmacy, Pharmaceutical Chemistry.

PROF. CHAS. F. HEEBNER.

The value of theoretical instruction and lecture demonstration depends largely upon the opportunities which the individual student may have of applying the knowledge so gained. Many disappointments and failures in manipulation result wholly from lack of practical experience.

Great importance is attached to manipulative or technical skill, and, recognizing the difficulties which stand in the way of its attainment during the ordinary course of apprenticeship in the average drug store, it has been determined to make the instruction in the Pharmacal Laboratory of a thorough and practical kind.

To this end, work of an entirely practical nature has been selected for the laboratory exercises, including operations which, while typical of a class, can also be profitably repeated on a commercial scale with the apparatus and facilities which should be found in every retail establishment. The course has been arranged systematically upon this basis, keeping in mind the necessity of commencing with the more elementary general operations, and teaching correct methods of executing them, and proceeding to the more difficult.

The College places great emphasis on the practical value and importance of the laboratory work, and regular and punctual attendance on the part of students is demanded. The manipulations will be performed by the students, individually, under the guidance of the Director, by whom the work done will be accurately

rated.

A deposit of five dollars will be required from each student at the commencement of the laboratory course, to cover all breakage, damage or waste. The balance not so expended will be returned to the student at the expiration of the term. At any time, however, when the breakage, etc., shall exceed the above amount, a new deposit will be required.

It is intended that each student shall receive individual instruction, and to this end the class is divided into two sections.

Section 1 will meet on Monday and Friday mornings at ten o'clock, and Section 2 on Tuesday and Thursday at the same hour.

Before proceeding with the practical work, a short lecture and practical demonstration will be given, explaining in detail the various steps of the manipulatory exercise about to follow; the difficulties which will be likely to present themselves will be noticed, and the methods of overcoming them explained.

JUNIOR LABORATORY COURSE.

This course includes practical work in weighing, measuring, specific gravity, standardizing of thermometers, making specific gravity bottles, and the manufacturing of pharmacopæial chemicals or preparations, illustrating one or more of each of the pharmacal processes described in the didactic course, including the following:-Solution, precipitation, decantation, filtration, clarification, crystallization, dialysis, circulatory displacement, evaporation, sublimation, distillation, maceration. percolation, re-percolation, ignition, oxidation, calcination, fusion, carbonization,

Besides g be properly an be taken to ins and elegant pr make in a reta thorough drill and dispensing consideration. Solutions, Syr Iodoform, etc Cerates, Ointr various metal Resins, Collod Cinchona, Opi and other drug

specific gravity, nd the manufacor more of each ding the follow-, crystallization, ion, maceration, , carbonization,

SENIOR LABORATORY COURSE.

Besides giving due consideration to those pharmacal preparations which can be properly and profitably prepared by the retail pharmacist, particular pains will be taken to instruct the student how to prepare many pharmaceutical chemicals and elegant preparations which he has not ordinarily the opportunity to learn to make in a retail store. The Course will be completed by giving each student a thorough drill in the art of reading, recognizing incompatibles, and compounding and dispensing physicians' prescriptions. Metrical prescriptions will receive full consideration. The class will be instructed in the preparation of Chemical Solutions, Syrups and Elixirs, Spirits, including Spirit of Nitrous Ether, Ether, Iodoform, etc.; Masses and Pills, also coating of pills; Capsules, Suppositories, Cerates, Ointments, Plasters, Emulsions, Scale and Crystal Salts of Iron, salts of various metals and their purification, Organic and Inorganic Acids, Alkaloids, Resins, Collodions, Oleates, and Oleo-palmitates, etc.; Pharmaceutical Assaying:—Cinchona, Opium, Jalap, Scammony, Nux Vomica, Pepsin, Coffee, Tea, Guarana, and other drugs will be assayed.

Prescriptions and Dispensing.

PROF. CHAS. F. HEEBNER.

Prescriptions.—The method of instruction in the reading, translating and criticizing of Prescriptions will be one of the useful and interesting features of the Course.

The success attained during the past two years by the original plan adopted, warrants the continuance of the same, though on a more extended scale and with improved facilities.

Method.—Briefly stated, the prescription in the original handwriting of the physician is in a novel manner projected upon a screen by the aid of the oxy-hydrogen lantern, where it can be seen and studied by the entire class at the same time, and duly criticized in response to the interrogations of the instructor.

Opportunities are thus afforded for a critical consideration of many hundred prescriptions in such a manner as to indelibly stamp them upon the student's mind.

Dates and hour of exercises will be announced during the session.

Dispensing.—Dispensing will be taught in the Pharmacal Laboratory during the Senior Course.

The instruction will be wholly practical, and considerable time will be devoted to extemporaneous pharmacy; modern appliances in pharmacy will be presented and explained, incompatibles and decompositions will be thoroughly considered, and the compounding of prescriptions will receive the careful consideration which the subject demands.

The following topics are included:-

Solutions and Mixtures.—Simple solutions, chemical solutions, temperature, utensils to be used, order of mixing, measuring, bottling, corking, labelling, capping, etc.

Pills. - Active ingredients and excipient, class of preparations properly dispensed as pills, choice and preparation of excipient, massing, rolling, cutting, rounding, finishing and coating; shapes of pills, globular, ovoid

or lenticular; incompatibles.

Emulsions.-Theory of emulsification, rules for perfect and permanent compounds of this class, emulsions of fixed oils, English and Continental methods, emulsions of volatile oils, resins, gum-resins, oleo-resins, wax, wool fat, camphor, etc.; seed emulsions; emulsifiers; comparison and preparation; flavoring, etc.; saponification.

Powders.-Trituration, dilution, sifting, dividing, folding, boxing, labelling, etc., hygroscopic powders, preparations of substances for admixture,

decompositions, explosive mixtures.

Suppositories .- Sizes and shapes made by hand and by mould, both hot and cold; bases, instructions for special kinds of medicaments, tannic acid,

alkaloids, extracts, liquids, salts, etc., bougies.

Ointments and Cerates .- Bases, hot and cold methods, preparation of ingredients for incorporation, elements, salts, liquids, extracts, powders, etc., masking of odorous ingredients, dispensing, labelling, etc.

Troches.—Bases, massing, rolling, dividing, drying, boxing, preservation, use

of solid and liquid ingredients.

Plasters and Plaster Spreading .- Forms of plasters for various uses, border, form-cutting, spreading with hot iron, blisters.

Cachets.—Mixing ingredients, dividing, use of cacheteur.

Capsules.—Preparation for use with solids or liquids, closing.

Incompatibilities.- Including such as are likely to arise in everyday practice, as well as those which are less common. This subject will receive the special attention which its importance demands.

Botany.

PROF. A. Y. SCOTT.

JUNIOR COURSE.

For time of lectures see time-table.

In this course the object will be to make the lectures as practical as possible. Each student will find it to his advantage to procure the text books recommended, and following the directions therein given as to collection of plants, to make and preserve before and during the session as large an assortment as possible of ordinary flowers, roots, leaves, etc., for examination during the term.

After defining the subjects, the following divisions will be considered:-

- I. Organography-Or the branch which treats of the organs by which the plants do their work.
 - 1. Organs of Vegetation .- Root, Stem, Leaf, Plant Hairs or Trichomes, Branching.
 - 2. Organs of Reproduction.-Introduction, Anthrotaxy, Prefloration or Æstivation, Flower, Pollination, Fertilization, Fruit, Seed.
- II. Vegetable Histology-Or the branch which treats of the minute structure of the plant. Cell-Its Contents, Wall-formation, etc. Tissues. Histology of the Root, Stem, Leaf and Floral Organs.

III. Vegetab plants, and Foc perature Irritabil IV. Vegetat

SENIOR COURSE.

III. Vegetable Physiology—Or the branch which treats of the functions of plants, etc. Comparison of Plant, and Animal, Protoplasm, Constitutents and Food of Plants, Absorption, Assimilation, Metastasis, Influence of Temperature and Light, Parasites, Saprophytes, Movements, Locomotion, Irritability, Heliotropism, Geotropism, etc., Reproduction and Death.

 Vegetable Taxonomy—Or the naming, classifying, and account of the life histories of plants.

The Linnæan and natural system of classification will be compared. The Cryptogams will then be considered as to their Structure, Modes of Growth, Reproduction, etc. Phanerogams will be taken up, special attention being paid to the following orders:—

Ranunculaceæ, Cruciferæ, Leguminosæ, Rosacæ, Umbelliferæ, Compositæ, Lobeliaceæ, Labiatæ, Solanaceæ, Polygonaceæ, Lupufliferæ, Orchidæ, Iridaceæ, Liliaceæ, Smilaceæ, Cyperaceæ, Graminaceæ, Coniferæ, Filices, Fungi, Algæ, Lichenes. Practical examination illustrating knowledge of anatomy of specimens of fresh plants.

LECTURE ROOM-BOTANY AND MATERIA MEDICA.

Latin, Materia Medica, Posology, Microscopy and Pharmacognosy.

PROF. J. T. FOTHERINGHAM.

IUNIOR COURSE.

During the Junior Term the class is taken carefully over the following work, introductory to the heavier subjects of the Senior Term;—

 Latin.—The rudiments of Etymology, especially that of the Noun, Pronoun and Adjective.

Prescriptions.—Especially the syntax, abbreviations and essential component parts of the Classical Prescription.

3. The Exhibition of Drugs.—Discussed (a) as to Form of Drugs, (b) as to Mode of Administration. This latter question leads naturally to the important one

- 4. Absorption, the mode of entrance of drugs into the body-fluids and tissues, and demands a short statement of the rudiments of Physiology, particularly that of Circulation and Digestion. No defence of this addition to the course of instruction in this College need be given.
- 5. Posology follows in natural order, and is discussed first as to general principles, such as age, sex, body-weight, and other modifying influences, then lists of doses of all the preparations are given.
- Therapeutic Terms and Definitions, with such explanations as are likely to be useful to the pharmacist rather than the medical student.

SENIOR COURSE.

- Materia Medica.—The Lectures on this subject take up the crude drugs of
 Animal and Vegetable origin, each in the following order:—J. Names
 of Drugs, official and common, English and Latin.
 Plant and Natural
 Order.
 Definition, Description and Varieties.
 Habitat.
 Mode
 of Collection and Preservation.
 Constituents and Impurities.
 Medical Properties.
 Official preparations and their doses.
 Toxicology,
 if any.
- 8. Pharmacognosy is taken up partly under the head of Microscopy, and partly in the lectures on Materia Medica, under the head given above, "Definition, Description and Varieties." A sample of each drug, so far as is possible, is laid upon each desk before the lecture begins. This feature of the instruction given during the past two years here is a marked improvement upon the methods employed in some of the best American Colleges, and meets with the marked approval of the classes.
- 9. Microscopy.—The main object in this branch being the acquisition of methods, that those who choose may follow out their investigations after graduation, the rudiments of Structural Botany are first taught, then Pharmacognosy is taken up, and typical drugs, particularly roots, rhizomes, barks, and powders, are studied. The student is taught to do all the necessary manipulations, staining, dehydrating, clearing, mounting, etc., an apparent advance upon the method of magic lantern slides in Pharmacognosy. Appliances such as slides and covers, etc., to be obtained in the College.

Text Books.

Of the following list of text books those printed in italic should be provided by the students for their own use; the others will be found valuable aids to those students who wish to extend their reading over a large field. The more expensive books of reference may be consulted in the College library.

CHEMISTRY.

Fowne's Manual of Chemistry, Roscoe's Lessons in Elementary Chemistry, Madan Wilson's Inorganic Chemistry, Remsen's Advanced Course of Inorganic Chemistry, Roscoe & Schorlemmer's Chemistry (eight volumes).

PHYSICS.

Balfour Stewart's Elementary Physics, Ganot's Physics, Peck's Ganot's Physics, Miller's Chemical Physics.

PRACTICAL CHEMISTRY.

Jones' Practical Chemistry, A. H. Elliott's Qualitative Analysis, Douglas & Prescott's Qualitative Analysis, Fresenius' Quantitative Analysis, Hoffman & Power's Examination of Medicinal Chemicals.

BOTANY.

Spotton's High School Botany, Bastin's College Botany, Bessey's Botany, Gray's Lessons in Botany, Gray's Structural Botany, Sach's Physiological Botany.

PHARMACY.

British Pharmacopæia (latest edition) and the Addendum, Hechner's Manual of Pharmacy and Pharmaceutical Chemistry, Hechner's Synopsis of B. P. Preparations, Pereira's Prescription Book, Squire's Companion (1890), Remington's Practice of Pharmacy.

MATERIA MEDICA.

Maisch's Organic Materia Medica, Pereira's Materia Medica, National Dispensatory (1886.)

PHARMACOGNOSY AND MATERIA MEDICA.

Fluckiger & Tschirch's Principles of Pharmacognosy (Powers' Translation), Goodale Physiological Botany, Poulsen's Micro-Chemistry.

LIBRARY

Curriculum of Study for Apprentices.

The following plan of study is submitted in order that the apprentice may during four years of service, train himself into habits of systematic study previous to attendance at the College, and prepare the ground work for the intelligent reception of the instruction there given, which must of necessity be somewhat crowded upon him, owing to the shortness of the course.

In arranging such a course of study, one can hardly make it of equal value and applicability to apprentices in all localities, as advancement in the knowledge of pharmaceutical practice and dispensing on the part of the apprentice will depend largely upon the character of business transacted in the shop and the practices resorted to by the proprietor or master, as to whether a fair percentage of the former is the compounding of physicians' prescriptions, and as to whether the great majority of the Galenical or other officinal preparations used in the shop are prepared on the premises or purchased from wholesale manufacturers.

Before entering upon a course of study, the apprentice must arrange for time to devote to his books, and this he must mainly arrange for himself. He should be able to secure an hour each day at the beginning, and as his interest increases, the study hours will receive augmentations.

In the time set aside for this purpose let him read with eagerness—read for facts to turn over in the mind and memorize while cleaning up the store and washing bottles. The knowledge thus acquired should be safely guarded and the omission of a day's reading avoided as he would avoid the loss of a dollar from his pocket.

For the duties of pharmaceutical practice the proprietor is the teacher. It belongs to the proprietor, by virtue of his position, to encourage and favor the professional improvement of his employees by all suitable measures. It is to be the better qualified for these duties that a systematically graded course of study is to be undertaken by the assistant.

The synopsis here laid down is designed to co-operate with the direction of the master of the pharmacy.

FIRST YEAR.

- First Principles of Pharmacy.—Systems of weights and measures, including the metrical system, and their relations to each other; specific gravity and specific volume; mathematical calculations involving the above; minor pharmaceutical operations, as the sub-division of drugs; solutions, with and without heat; filtration, the proper folding of filters, etc.
- Text Book: Manual of Pharmacy and Pharmaceutical Chemistry.
- References: Preface to B. P., Parrish's Treatise on Pharmacy, Remington's Practice of Pharmacy.
- Elements of Physics.—This study will prove to be of so much interest that it may be rapidly mastered.
- Text Book: Peck's Ganot's Physics.
- First Principles of Chemistry.—The assistant should familiarize himself with the contents of the first 128 pages of Attfield's Chemistry, and from time to time review the same (particularly the first 58 pages) until the important truths of chemistry are understood. General chemistry is here treated of from a pharmaceutical standpoint.

Botany.—The Bastin's organs o however advised, portions pursued

easures, including ; specific gravity olving the above; drugs; solutions, filters, etc. mistry. nacy, Remington's

h interest that it

rize himself with ry, and from time until the importtry is here treated Botany .- The study of Organography, as given in the first 123 pages of Bastin's College Botany, which includes the vegetative and reproductive organs of plants, is the limit of study recommended in this subject. If, however, time should permit, the further study of Vegetable Histology is advised, and at all times the collection and preservation of plants or portions of plants, exhibiting the marked features learned of, should be

SECOND YEAR.

Titles .- The correctly spelled and unabbreviated Latin and English titles of official drugs and preparations should be learned and written from time to time during this year; the synonyms by which these are known should also be memorized.

Reference to any pharmaceutical substance by its syllabic abbreviations should be discountenanced, it being unscientific, inaccurate and tending to carelessness-as "pot. chlor." for chlorate of potassium"; "sod sulph." for sulphite of sodium, etc.

References: British Pharmacopœia and Addendum, Squire's Companion, National Dispensatory.

Operative Pharmacy.—The common pharmaceutical operations should be carefully studied and carried into practice in the preparation of tinctures, syrups, wines, vinegars, ointments, etc., required in the shop.

Text book and reference same as used in first year with the British Pharmacopæia and Addendum.

Latin.-The rudiments of etymology, accidence, etc., of nouns, adjectives (especially numerals), pronouns and verbs; syntax; abbreviations used in prescriptions and their translation.

Text Books: Robinson's Latin Grammar of Pharmacy and Pereira's Prescription Book.

Chemistry.—The remaining pages of Part I. of Attfield's Chemistry should be carefully studied, and reviewed from time to time during the remainder of the course. In the pages mentioned the methods of qualitative analysis are gradually introduced; the solubilities of salts are classified; chemical equations are explained, and directions carefully given for calculating quantities of materials from the chemical proportions stated by an equation.

Materia Medica .- Each important official animal and plant-drug should be studied as to its source, part used, habitat, active principles, medical properties and dose. The physical characters of the crude specimens, and the distinctive features by which they may be identified, should be

The studies of the first year should be reviewed, and a short time spent each day in the interpretation of prescriptions.

THIRD YEAR.

Pharmacopæial Preparations. - These should be studied as to their ingredients, methods of preparation, strengths and doses; these facts are conveniently arranged and tabulated for this purpose in Synopsis of B. P. Preparations. References: British Pharmacopæia and Addendum, Squire's Companion.

Prescriptions and Dispensing.—The prescription fyles should be carefully studied, and by mathematical calculation the quantity of each ingredient in the prescribed dose determined. The preceptor should permit the assistant to compound prescriptions under his direct supervision and in accordance with his specific instructions. Too much experience of this character cannot be gained, as opportunities are frequently presented whereby the preceptor may point out and explain incompatibilities, as to whether they are intentional or accidental, and the means of avoiding them, if required.

Operative Pharmacy.—Should be continued practically throughout the remainder of the course. Review work of second year, and pharmacopocial preparations of this year's course.

FOURTH YEAR.

A general review of the subjects of previous years, and a continuance of study in all subjects by reference reading, using the Dispensatories and Squire's Companion for reference, as well as the other text books already mentioned.

For general study during the apprenticeship period the following branches should be occasionally reviewed, mathematics receiving especial attention:—

Arithmetic.—Vulgar and decimal fractions, percentage, ratio, proportion, alligation, etc.

Mensuration.—Areas of circles, parallelopipeds, cylinders, etc. Algebra and Geography.

For the Guidance of All Students.

- 1. Preliminary examination, accepted certificate, see page 16.
- 2. All fees and deposits are payable to the Registrar strictly in advance.
- 3. On signing the roll, subscribing to the rules of the College, and producing receipts for fees paid, each student will receive from the Registrar a general lecture ticket, which must be preserved so that attendance may be certified to at the close of the session by the Dean.
- 4. Students are particularly requested, in their own interest, to be in attendance at the commencement of the course.
- 5. Choice of seats in Lecture Rooms will be according to precedence of names on the College Roll. The attention of those students who have already paid for two courses is directed to the necessity of applying to the Registrar for choice of seats, as in the case of other students of the Senior Course.
- 6. Junior students may secure their seats for the senior term by leaving a deposit with the Registrar at the close of the junior session.
- 7. Every student must attend at least three-fourths of the lectures and laboratory work in each subject, unless exempted by the Council on account of sickness or some other satisfactory cause. No ticket for attendance on lectures will be signed unless these conditions have been complied with.
- 8. Instead of a roll-call, each student will be marked absent whose chair or section is vacant or occupied by some other person; students will not be allowed to exchange seats without formal application to the Registrar.
- 9. Quiz classes may be arranged for by the Faculty after the work of the session has begun.
- 10. All drugs and chemicals required for the economical working of the test processes in the laboratories, or in the manufacture of preparations, will be furnished by the College without charge, but any student using an excessive amount of reagents, or other supplies, etc., provided by the College, or breaking or damaging the apparatus of the laboratories, will have the value of same deducted from his deposit fee, and in case this should be exceeded, the deficit must be paid before an examination can be tried or his tickets certified to.
- the Senior. At the first Senior Examination the six subjects, Practical Dispensing, Reading and Translating Prescriptions, Chemistry, Pharmacy, Materia Medica, and Botany must be taken, but any candidate who obtains sixty-six and two-thirds per cent. in each of four subjects, shall be deemed to have passed in these subjects, and has the option at any future examination of taking all subjects or only those in which he has failed, but in the latter case he must take sixty-six and two-thirds per cent. in each subject, and will not be entitled to either prizes or honors.
- 12. Each candidate must receive at least fifty per cent, in Pharmacy, Dispensing and Prescriptions, and sixty-six and two-thirds per cent. on the aggregate.

- 13. Application for permission to write on any examination must be made to the Registrar at least two weeks before the date set for the commencement of such examination. Forms of application will be supplied by the Registrar.
- 14. No diploma will be granted to any candidate who has not attained the age of twenty-one years, or who may not have had the necessary experience.
- 15. Any candidate who has not served a term of apprenticeship in the Province of Ontario, but has attended both Junior and Senior Courses at this College, and passed the Council Examination, will receive a certificate or diploma of examination, which, however, does not permit him to practic pharmacy in this Province.

BOARDING HOUSES.

16. Board and lodging may be readily obtained in close proximity to the College, at rates ranging from \$3 00 upward per week. The Janitor at the College buildings can provide enquirers with a list of addresses of suitable lodging-places on their arrival in the city.

CORRESPONDENCE

17. All correspondence should be addressed to I. T. Lewis, Registrar-Treasurer, who, when necessary, will communicate with the Dean of the College.

HISTORY AND DESCRIPTION OF THE COLLEGE.

An Act entitled the "Pharmacy Act, 1871," was granted by the Ontario Legislature, in 1871, to the "Canadian Pharmaceutical Society," a society which had grown out of the "Druggists' and Chemists' Association," formed in Ontario about that time.

By this Act, the authority of which was vested in a Council of thirteen, every person in the Province of Ontario who had been, or was carrying on business as a druggist, or who had served an apprenticeship of three years and had acted as a druggist's assistant for one year, was, upon payment of a fee of \$4, entitled to be enrolled as a member of the Ontario College of Pharmacy, and to the privileges therewith. This Act of Incorporation gave to the College the power of acquiring and holding real estate, and of erecting buildings for the purpose of lectures on chemistry, pharmacy, etc., and for a library or pharmaceutical museum: it also conferred on the Council elected by the College the right to examine candidates for certificates of competency to carry on the business of druggist.

The latter power the Council immediately took advantage of to protect the public at large and the drug trade in particular.

Prior to 1882, the training of students for their examination was left wholly to private enterprise, when, for the first time, the Council felt itself able financially to undertake a system of teaching, such as was required. Of this teaching department Mr. E. B. Shuttleworth was appointed Dean, with Messrs. Rose and Robinson. Temporary quarters were obtained and fitted up on Wellington Street, Toronto.

In the year 1886, the Council, seeing that greater accommodation was requiredpurchased a site on St. James Square, for the erection of buildings suitable for lectures, etc. These buildings were completed and equipped in 1887, at a cost of over \$21,000, and various sums have yearly been expended upon the purchase of additional fittings and apparatus.

The Act of 1871 did not specify any definite time for apprenticeship service, nor for qualification on entering the same. This was amended in the Acts of 1884 and 1889. The term of apprenticeship and regulations regarding junior and senior terms are fully given under their headings in the body of this Announcement. (Pages 15 to 18.)

By the Act of 1889 all students are compelled to attend two courses of lectures—the Junior in this or some other college approved of by the Council, and the Senior in this College. This Act also conferred on the Council the power of fixing and determining from time to time the curriculum of studies, so that the College can always be kept abreast with any improvement made in pharmaceutical education.

The Council of 1891 enlarged the building erected in 1887, at a cost of \$15,000, so that the building now covers the entire lot, 65 x 175. The total cost of the building was over \$40,000. The building is heated throughout by steam, well lighted and thoroughly ventilated. On the ground floor is a reading room for the students and next to it the library. (See cut, page 35.) On the opposite side of the hall is a private laboratory, in which the professors and assistants prepare the materials for

their lectures. At the rear is a large recreation room, 47 x 29. (See cut, page 19.) Adjoining this is a store room, from which a hoist runs up to the pharmacal and chemical laboratories above. There are also on this floor cloak-rooms and the steam-heating apparatus. On the second floor front are the Council Chamber and the Dean's room, separated by a wide hall-way. Back of these is the chemistry and pharmacy lecture room, 42 x 34, with accommodation for 140 students. The seats are of the latest improved design, with folding writing tablet, and are arranged as a theatre, so that those in the rear have a good view of the lecture table. The table is fitted with hot and cold water and gas, sinks, downdraught fume chamber and the other appliances necessary for effective lecturing. The room is well lighted and ventilated. (See cuts, page 14.)

In the rear is the pharmacal laboratory, 38 x 47 (see cut, page 29), which, with its present appointments, furnishes admirable facilities for instruction in the line of advanced modern pharmaceutical education, which are excelled by no similar institution on this Continent. This laboratory is fitted up with all modern improvements, and furnishes accommodation at present for 112 students, or for 56 working at a time.

Each student has seven and a half square feet of counter space, with a drawslide furnishing an additional two and a quarter square feet, also a cupboard and drawer containing all the apparatus necessary for his work.

Gas and water supply is conveniently arranged for each student, and a large steam or hot-water bath for evaporating, etc. In connection with this laboratory there is a fume room, a drug room, a desiccating room, and glass-stock room.

On the third floor is situated the lecture room for botany, materia medica and toxicology, dimensions 42 x 44. (See cut, page 33.) There is desk accommodation for 120 students. Around the room are arranged two long work-tables, extending the full length of the room, for use in the study of microscopy, microscopical botany and pharmacognosy. The tables are divided into compartments fitted with locked drawers. Each work-section is provided with a microscope, reagents and staining fluids, appliances for mounting, etc.

In the rear is the chemical laboratory (see cut, page 23), 38 x 47, fitted with desks for 116 students, or 58 at a time. Each student is supplied with all the bottles for reagents and chemicals necessary for pharmacy students. The laboratory is thoroughly equipped and compares favorably with any in the country Adjoining the laboratory are weighing and store rooms and private rooms for the professors. Altogether the building is admirably suited for the purposes of the College, and is a credit to the Council and the druggists generally.

In 1892 the Council successfully carried to completion the affiliation of the College with Toronto University, which is a matter of congratulation to intending students, and a recognition of the thoroughness of the College Course.

UNIVERSITY OF TORONTO AFFILIATION.

THE Senate of the University of Toronto, with the approval of the Lieutenant-Governor of Ontario and Council, on January 22nd, 1892, passed a Statute affiliating the Ontario College of Pharmacy, with the privilege of one representative on that body.

On May 6th, 1892, a further Statute was passed instituting a new degree of Bachelor of Pharmacy—Phm. B.—which may be obtained on complying with the following conditions:—

Vilkinson, T. O.

Candidates for the degree of Bachelor of Pharmacy must either-

- (1) Possess a degree in Arts (not an Honorary Degree) from some recognized University; or (2) Have already matriculated in the Faculty of Arts, or the Faculty of Law, or the Faculty
- of Medicine, in this or some other University in Canada; or
 (3) Be matriculants in the College of Physicians and Surgeons of Ontario; or
- (4) Have passed the 1st, 2nd or 3rd class departmental non-professional examination in which the Latin option has been taken.
- Provided always, that all candidates registered as apprentices of the Ontario College of Pharmacy, or who have received the Diploma_of the College of Pharmacy up to the first day of June, A.D. 1893, shall be admitted as matriculants in the Department of Pharmacy on payment of the registration fee of Five Dollars.

Regulations for the Degree of Phm. B.-

- (1) Undergraduates (candidates for the degree) resident of the Province of Ontario, must have complied with all the requirements prescribed from time to time by the Council of the Ontario College of Pharmacy for admission to examination for a diploma licensing to practice pharmacy in Ontario, and must have received from the Registrar of the Ontario College of Pharmacy a certificate of having passed the final examination of that College.
- (2) Undergraduates, not resident in Ontario, must have devoted at least four years (not being engaged in any other business) to the study of Pharmacy, being apprenticed during that time to a regularly qualified Pharmaceutical Chemist.
- (3) Must have attended the full course of lectures, embracing all the subjects of the curriculum, the length of each course being not less than that required from time to time by the Council of the Ontario College of Pharmacy, and including practical work at some College of Pharmacy recognized by this University: the last of which courses must be at the Ontario College of Pharmacy.
- (4) All candidates who have prior to August 15th, 1892, received the Diploma of the Ontario College of Pharmacy, shall not be required to conform to the above, but shall be allowed their degree on passing the examination on the subjects hereinafter given.

Examination

Candidates for a degree must pass an examination, to be held in the month of May of each year—hour and date of commencing to be hereafter given—and must present to the Registrar satisfactory certificates covering all the requirements relating to undergraduates, as given above, and of having passed the Final Examination at the Ontario College of Pharmacy.

The Subjects of Examination shall be as follows:-

- 1. Botany and Microscopy.
- 2. Theory and Practice of Chemistry and Toxicology.

- 3. Materia Medica, including Posology and Pharmacognosy.
- 4 Theory and Practice of Pharmacy, including Interpretation of Prescriptions and Dispensing.

These examinations shall be partly written, partly oral, and partly practical.

No candidate shall be considered as having passed the examination who has not obtained 50 per cent of the marks allotted; nor shall a candidate be considered as having passed in any subject who has not obtained at least 40 per cent of the marks allotted to such subject.

Fees

	Matriculation or Registratio	n o	f	Matr	icu	lat	ion	×				- !	\$ 5	00
For	Annual Examination -					-	-		-		-		5	00
For	each Practical Examination						-							50
For	the Degree of Phm. B.								-				10	00
