The copy filmed here has been reproduced thanks to the generosity of:

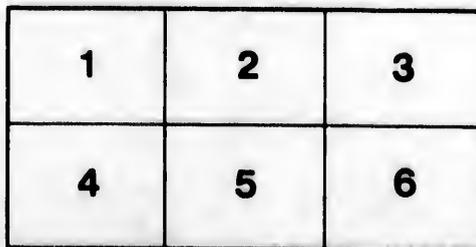

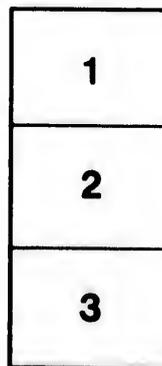

Library Division
Provincial Archives of British Columbia

The images appearing here are the best quality possible considering the condition and legibility of the original copy and in keeping with the filming contract specifications.

Original copies in printed paper covers are filmed beginning with the front cover and ending on the last page with a printed or illustrated impression, or the back cover when appropriate. All other original copies are filmed beginning on the first page with a printed or illustrated impression, and ending on the last page with a printed or illustrated impression.

The last recorded frame on each microfiche shall contain the symbol \rightarrow (meaning "CONTINUED"), or the symbol ∇ (meaning "END"), whichever applies.

Maps, plates, charts, etc., may be filmed at different reduction ratios. Those too large to be entirely included in one exposure are filmed beginning in the upper left hand corner, left to right and top to bottom, as many frames as required. The following diagrams illustrate the method:

L'exemplaire filmé fut reproduit grâce à la générosité de:

Library Division
Provincial Archives of British Columbia

Les images suivantes ont été reproduites avec le plus grand soin, compte tenu de la condition et de la netteté de l'exemplaire filmé, et en conformité avec les conditions du contrat de filmage.

Les exemplaires originaux dont la couverture en papier est imprimée sont filmés en commençant par le premier plat et en terminant soit par la dernière page qui comporte une empreinte d'impression ou d'illustration, soit par le second plat, selon le cas. Tous les autres exemplaires originaux sont filmés en commençant par la première page qui comporte une empreinte d'impression ou d'illustration et en terminant par la dernière page qui comporte une telle empreinte.

Un des symboles suivants apparaîtra sur la dernière image de chaque microfiche, selon le cas: le symbole \rightarrow signifie "A SUIVRE", le symbole ∇ signifie "FIN".

Les cartes, planches, tableaux, etc., peuvent être filmés à des taux de réduction différents. Lorsque le document est trop grand pour être reproduit en un seul cliché, il est filmé à partir de l'angle supérieur gauche, de gauche à droite, et de haut en bas, en prenant le nombre d'images nécessaire. Les diagrammes suivants illustrent la méthode.

CAPTAIN JAMES COOK, F.R.S.

*His FIRST VOYAGE, performed in His Majesty's Ship, the ENDEAVOUR
 SECOND VOYAGE, in the Resolution & Adventure
 THIRD VOYAGE, in the Resolution & Discovery.*

*He was Born at Marton in the North Riding of Yorkshire, and was distinguishedly known by
 the discovery of the Island of Otaheite, and so many other Islands.*

A Portrait of Cook from an Original, Engraved by W. Aitken.

A NEW, COMPLETE, AND
UNIVERSAL COLLECTION
OF
AUTHENTIC AND ENTERTAINING
Voyages and Travels
TO
ALL PARTS OF THE WORLD.

CONTAINING,
(Among other Voyages and Travels undertaken for Discovery, Conquest, Settlement, or the Opening of Trade)
COMPLETE NARRATIVES
OF THE FOLLOWING

MOST IMPORTANT JOURNALS,
Undertaken and performed by Royal Authority, VIZ.

New Historical JOURNALS of the VOYAGES of CAPTAINS PHILLIP, KING, BALL, WHITE, and HUNTER, in the Ships SIRIUS, SUPPLY TENDER, JULIANS TRANSPORT, &c. to BOTANY BAY, PORT JACKSON, SYDNEY COVE, NEW SOUTH WALES, NORFOLK ISLAND, &c. in the SOUTHERN OCEAN.

Captain WILSON's valuable Voyage from MACOA to the FELEW ISLANDS, in the Western Part of the PACIFIC OCEAN, where they were shipwrecked in the Antelope Packet.

PORTLOCK and DIXON's Voyages to the North West Coast of AMERICA and ROUND the WORLD, in the King George and Queen Charlotte. Captain MASSEY, TIPPING, and DOUGLAS's Voyages, in the Ships Nootka, Sea-Otter, Felice, and Iphigenia, from BENGOAL and CHINA to the North West Coast of AMERICA.

BRISTON and SAVONISA's Voyages to the Coast of AFRICA, containing an interesting Account of their Shipwreck on board various Vessels, and of their Slavery, &c. &c.

ROCHON's Voyage to MADAGASCAR and the EAST INDIES, including, among a great Fund of general Information, authentic Memoirs of the Chinese Trade and Merchandize.

The interesting Journal of Lieutenant BLIGH's Voyage, in his Majesty's Ship BOUNTY, for the Purpose of conveying the Bread Fruit Tree from the South Sea Islands to the West Indies, including a Narrative of the Mutiny on board the Bounty.

HAMILTON's Voyage ROUND the WORLD in the Pandora frigate, in pursuit of the Mutineers, who plitically carried off the Bounty.

And Including a New, Authentic, Entertaining, Instructive, Full, and Complete Historical Account of

The WHOLE of CAPTAIN COOK'S
FIRST, SECOND, THIRD AND LAST VOYAGES,
Undertaken by Order of his Present Majesty,

FOR MAKING NEW DISCOVERIES IN
GEOGRAPHY, NAVIGATION, ASTRONOMY, &c.
IN THE SOUTHERN AND NORTHERN HEMISPHERES, &c. &c. &c.

To which will be added, to make it the most Complete Work of the Kind,

BRUCE's most celebrated Travel, Complete into AETHIOPIA, to Discover the Source of the River Nile, in Egypt.

Likewise, HONGER's Curious Travels, or Tour in INDIA, including intire New Descriptions of the Manners, Customs, and Present State of the Coast of Coromandel, Madras, Bengal, Calcutta, Benares, Bidjegur, Ablaabad, Lucknow, Fyzaabad, Oud, Dowlah, Agra, &c.

Also, The History of FOUR TRAVELS, or JOURNALS into the Country of the HOTTENTOTS and CAPTARIAS, by Lieutenant PATTERSON.

And, New Travels through ARABIA, and other Countries in the EAST. Translated from the original of M. NEAUME, Captain of Engineers in the service of the King of Denmark.

Also, New Travels in the UNITED STATES of AMERICA. Translated from the French of M. BRISOT DE WAREVILLE, who suffered unfortunately by the Guillotine in France.

And, New TOURS and TRAVELS through FRANCE, AUSTRIAN NETHERLANDS, HOLLAND, SPAIN, ITALY, SWEDEN, POLAND, &c. &c. together with a NEW TOUR, or SURVEY of the RUSSIAN EMPIRE according to its present newly regulated State divided into different governments.—Likewise the Substance of all other Eminent Navigators and Travellers, such as Sir Francis Drake, Lord Anfon, Byron, Wallis, Carteret, Lord Mulgrave, Vancouver, Moris, Parkinson, Lutwich, Moore, Hanway, Howard, Drummond, Pocock, Shaw, Carver, Altympie, Burnet, Barret, Thicknes, Twiss, Bridone, Wrazhall, Johafon, Pennant, Smollet, Forster, Furneaux, Banks, Solander, Bouganville, Keate, Kuff, Anbury, &c. &c. &c.

Together with other VOYAGES and TRAVELS too numerous to mention in this Title Page.

DESCRIBING IN THE MOST ACCURATE MANNER,
UPON AN ENTIRE NEW AND INTERESTING PLAN,
EVERY PLACE WORTHY OF NOTICE

In Europe, Asia, Africa, and America.

The Whole Compiled from the Original Journals of the Respective Voyagers, &c. and now Published under the immediate Direction of
GEORGE WILLIAM ANDERSON, ESQ.

REVISED, CORRECTED AND IMPROVED,

BY WILLIAM HENRY PORTLOCK, ESQ.

Assisted by many OFFICERS and GENTLEMEN engaged in the Various Undertakings of which this Work is Composed.

The PREFACE.

IT must be acknowledged by persons of every capacity, the fact being indisputably notorious, that there is no Work which the pen can produce of more utility and entertainment, as a faithful Journal or Record of those extraordinary Adventures and daring Discoveries, which have been both made and improved, by our several great and intrepid Navigators. It is true, that I cannot presume to the credit of ALL the Discoveries herein contained, though without arrogance, I think I may say, that I have had some share in the fatigue and dangers of making several; it being therefore my design to furnish the Public with a complete View of the WORLD, I confess that besides my own labour to derive information, I am indebted to several Noble Gentlemen for their kind assistance and attention: I say NOBLE, though without TITLES, seeing that their own Worth, Abilities, and Merit, have raised them to Distinction and Command, and have consequently acquired more Fame than ever Birth or hereditary Honors could bestow. With such a Store of Information united, I hope therefore to complete a Task which in itself will be ample Compensation.

I acknowledge that the Public have, from time to time, been presented with Narratives of many curious Voyages and Travels well worthy our perusal and encouragement; but these are naturally confined to some PARTICULAR parts of the World: the Readers of such detached Publications must either abide in the SOUTH or the NORTH, in the EAST or the WEST; or if they are taken ROUND THE WORLD, they are only introduced to such parts as are within the knowledge of the Voyager. It is my ambition to make the curious Reader acquainted with the most important Voyages to ALL the different parts of the World; not that I can pretend indeed to have had ocular proof of every Discovery myself, because that is a labour no Hercules, if allowed only the common length of life could ever accomplish; but because I am in possession of so many interesting accounts (some of which have never been made public) by those ingenious persons of veracity and spirit, who in serving their Country have so essentially served me, and will, I presume, in this Undertaking serve the Public; though want of time, as still they would vainly employ the remainder as before, has prevented them from communicating their own Histories with that accuracy and attention which Publications of this kind require. I have been induced to undertake the arduous task, especially as the uncertainty of health prevents me from prosecuting those Nautical Exploits, which before occupied my leisure, when Novelty inspired my heart, and "Youthful Admiration vented itself freely;" consequently being obliged to return to a domestic life, I am still eager to apply it to the Improvement and Advantage of the Public.

As the dispositions of several are inclined to hear and learn all that can improve as well as entertain, and as no Curiosity whatever is more praise-worthy than an eagerness for such Discoveries, a volume of this nature must be acknowledged highly acceptable, particularly as it is not in the power of all the Curious to acquire ocular demonstration of the many Beauties of those remote places which are herein laid open to the view. Every man has not the ability, though possess of the inclination, to leave his own native Country for the sake of examining Foreign Parts; for a sea-faring life not only requires a competent degree of Resolution, but also the greatest blessing of life, a good Constitution: this Work will therefore particularly gratify the Curiosity of such who cannot otherwise be satisfied; and it must be undoubtedly the greatest Satisfaction to all such anxious Enquirers, to be able in a few hours to be acquainted with those several places which have cost Months and Years in exploring: nay, to be introduced, as it were, without fear or apprehension into those very Islands, to discover which our Adventurers have surmounted many inconceivable Dangers.

A Knowledge of the World is the chief forerunner of that which is so strongly recommended, A KNOWLEDGE OF OURSELVES; from an acquaintance with foreign Customs, Manners, &c. we derive much useful Information of Mankind; we see ourselves in a variety of shapes; this Mirror informs us what man *has been*, and comparison must shew what man *is*! nor is that all, a faithful Record like this enforces the duties of Religion, it displays the glorious work of Providence, the omnipotence of Heaven, and above all, the blessings of Christianity! for surely when we meet with the poor ignorant Natives of Desert Islands, we must feel, or be insensible indeed, a grateful something in our hearts, that we by distinguished grace and favour should be so enlightened, while these poor Wretches walk in absolute barbarism and utter darkness! Such sentiments must strongly recommend this Undertaking; the most hardened Unbeliever will, on perusing the Discoveries herein contained, be convinced that there is "A Power above which Nature cries aloud in all her Works."

The Information derived from Voyages, which have been undertaken for the laudable purpose of Discovery, is manifold and extensive; there is a secret pleasure in contemplating those ancient and modern Enterprises, which lead to a full and perfect Knowledge of the Globe, whereby we are acquainted with the various tribes which inhabit many places hitherto unknown, with an account of Animals strange and uncommon, and also of Vegetables, &c. equally surprising.

The unbounded liberality by which our Navigators have been lately encouraged, must and undoubtedly will be a perpetual memento of Honour and Fame which shall distinguish the Reign of his present Majesty. In former Annals the few experiments which were made, begun merely through motives of Ambition or Avarice, but our late Adventurers have been induced to continue those Experiments, and hand down to Posterity the fruits of their Exertions, for the Improvement of History, Geography, and Science; and when we consider the innumerable dangers which have been encountered in exploring untraversed Oceans, in travelling through unknown Countries, in discovering unthought-of Islands, in becoming acquainted with New Nations, and in being able to complete the Geography of the Whole World, we must admire the magnanimity of the actors, which shall remain an everlasting Monument of the Patronage with which they were honored.

There is nothing awakens an eager Curiosity or excites a Spirit of Enquiry so much as the relations of Voyages and Travels, nor can that spirited Curiosity be disappointed when both Novelty and Variety unite to engage the Attention and elucidate the History of Mankind.

What

The PREFACE.

What can be more interesting to Man than the History of himself? if unacquainted with the World, he is then "fixed to one spot, and rots just where he grew." Mankind, by the different accounts of Navigators and Travellers, is entertained by various pictures of his own species, and from these pictures many instructive lessons may be derived; particularly when we read of inhabitants, who without any other assistance than their own natural good sense, have not only emerged from the gloomy shade of Infidelity and Barbarism, but have also attained that perfection of Religion and Propriety, which have constituted at last the Essence of real Civilization. Nations which are now the most polished, have acquired their enlightened refinement by very slow degrees, and through long periods of intervening ages.

A taste for discoveries in every way is certainly the characteristic of an enlightened age, but it is inconceivably confessed that of all kind of Knowledge, that of the Globe we inhabit is the most useful acquirement; besides it is the only one we can ever hope of carrying to Perfection, seeing it consists only of positive things, the number of which is limited, notwithstanding they are many. Various parts of Europe have been long concealed, and places but a small distance from us long unknown, till explored and discovered by our bold Travellers, whose Zeal was neither damped nor Efforts repressed, though much difficulty appeared in penetrating into some of the inland parts.

The Utility of a good Collection of Voyages and Travels must be obvious to persons of every class and denomination; it would therefore be needless and unprofitable to expatiate on the advantages of a Work of this Kind. Valuable books are hereby prevented from being lost, also scarce ones rendered common; mistakes of many rectified, doubts of several cleared up, and the best Authors relating to all parts of the World are, with Illustrations and Improvements, united into one body. It must also be observed, that whatever Authors have been referred to, whether ancient or modern, are and have been men of respectability and esteem, otherwise their assistance would have been unavailing; *facts* and not *stories* should be the object of every Historian, nor is there occasion to call in the artificial aid of Romance when Nature herself has supplied us with *Works* worthy the commemoration of *Words*. Many Compilations have indeed been offered to the Public very undeserving either notice or encouragement: it is not a number of Volumes, swelled with uninteresting accounts and trivial relations, composed from the memoranda of unsteady men, which deserve the approbation of a discerning Public. That writer who is prolix is as much to be censured as the one who is too brief. Much should be contained in a moderate space, by which means the Curiosity of the Reader is not only kept alive, but immediately gratified; whereas Superfluities exhaust the patience, and Enquiries consequently cease before they attain sufficient Satisfaction. Notwithstanding there are many ancient Collections extant, yet as materials are very much increased, on account of the several late Discoveries; such Additions and Improvements must undoubtedly render a NEW ONE highly acceptable, being absolutely necessary, on account of the Modern Voyages and Travels, which are of such an important Nature.

It is not, in these our glorious annals, with a prospect of enlarging private dominion, or satisfying vain ambitious views, that the recesses of the Globe are investigated; but to gratify a laudable Curiosity and promote general Knowledge. Our bold Voyagers have traversed the World to visit new tribes of their Fellow-creatures, not as enemies but friends, to relieve their wants, bring them from darkness into light, and communicate to them our superior attainments. Those recent Voyages, which have been made under the patronage of our present KING; have not, it is presumed, been entirely useless. How many ignorant Islands have been enlightened by the introduction of our English manners: from the uncommon objects exhibited to them, and the frequent opportunities of intercourse, new materials have been furnished them for the exercise of their Reason, and their stock of Ideas naturally enlarged. Is it not probable that the Savage Natives, upon comparing themselves with their English Visitors, became soon conscious of their extreme inferiority, endeavoured to emerge from their brutal state, throw off all ferocious appearance, and rise nearer to a level with those who left behind them so many marks of their Generosity, Humanity, and Spirit? The Britons when first visited by the Phœnicians, are described to have been as savage as any of the uncivilized natives of Tongataboo or Otaheite; it is therefore very likely that the Britons may, in due progress of time, spread those blessings of civilization which they themselves have thus acquired, and be the happy means of abolishing the many abominable customs, and almost equally abominable sacrifices, which are too common among the Inhabitants of distant Islands.

Near Twenty Years have elapsed since any COLLECTION of VOYAGES and TRAVELS has been published, and during that space of time so many detached Voyages as well as Travels have been presented to the Public, that a Work upon the present plan (including all the MODERN VOYAGES and TRAVELS) is now absolutely necessary and much wanted by readers of every class and denomination.

The pleasure attending the perusal of Works of this kind, have made them more universally read than any other branch of Polite Literature. In a good COLLECTION of VOYAGES and TRAVELS, we have all the entertaining incidents of the most romantic Novel, with all the evidence of the most authentic History. It is a happy circumstance in this kind of reading, that it gratifies that thirst of knowledge which it excites, and that as we read on, we find new reason to wonder and to admire.

The most ample fortune of the richest man, and the longest life of the most laborious traveller, attended with all that Success which his most sanguine Expectations could hope for, would be insufficient to make him acquainted with the twentieth part of what will be found in this New Work; which is recommended to the Public as a faithful narrative of indubitable Facts; and on such easy terms as to be within the power of every person to purchase.

It is by the aid of VOYAGES and TRAVELS that the studious, the delicate, the infirm, those whose age, sex, disposition of mind, or habit of body, renders incapable of encountering the dangers and inconveniences of long VOYAGES and wearisome JOURNIES, may pass with ease over lonely DESARTS, vast MOUNTAINS, and interposing SEAS; view the most distant Lands, and become acquainted with all the Nations of the peopled earth: thus reaping in their closets the fruits of those accumulated labours, which have employed the most adventurous Spirits for a long succession of ages. Nay, it is to the enterprising Spirit of VOYAGERS and TRAVELLERS, that every enlightened Nation in the World is indebted for that state of Geographical, Historical, and Philosophical Knowledge, of which they can now boast.

In a word, if there be any Merit in blending the Useful with the Agreeable; if conveying the most valuable Knowledge, in the most pleasing manner, can merit Attention, this NEW UNIVERSAL COLLECTION of VOYAGES and TRAVELS bids fair to ensure the complete Approbation of the Public.

W. H. PORTLOCK.

No. 1.

A
GENERAL HISTORICAL ACCOUNT
OF THE
RISE AND PROGRESS OF NAVIGATION,
FROM THE EARLIEST AND MOST AUTHENTIC PERIOD OF INTELLIGENCE.

AS the race of Man have been ordained by Providence for social as well as rational creatures, it seems to have been the grand design of God and Nature, that after having multiplied and replenished the earth, they should hold intercourse with each other, and thereby derive such mutual advantages, as without a miraculous intervention could never otherwise arise to any separate community. It may possibly be objected, that if this were really the design of Heaven, men would not have been scattered at a distance from each other, with intervening wilds, deserts, mountains, and vast oceans to divide them; but upon an examination of the dispensations of Providence, this seeming weighty objection will vanish. Man is a Being capable of improvement, and intended to be constantly employed in exertions either of his corporal or mental faculties. It is for the brute creation alone, to remain, from their first period of existence, in their wilds and forests, till death assimilates them with their original dust. Man has a nobler claim, by arts enabled to remove the apparent obstacles of nature, to visit distant lands, and from experience to reap advantage and useful improvement, and, in all the various changes of the world, still to find employment for his rational faculties, and industrious efforts, thereby displaying those gracious attributes with which Heaven has endowed him.

The present appearance of this terraqueous globe is not that which it always exhibited: besides the general deluge so fully described in Holy Scripture, we have authentic accounts of partial deluges, dreadful earthquakes, and other phenomena, which from time to time have wrought amazing changes on the face of the earth, by levelling mountains, elevating valleys, rending asunder vast continents, producing new islands, burying vast tracts of land beneath the ocean, and causing the sea in other places to retire, and the dry land to appear. How far these changes may have conducted to the separation of mankind in some places, and to the associating them in others, is a matter, perhaps, worthy the discussion of the philosophical enquirer. Whether the various nations of the peopled earth were separated by such vast tracts of ocean in the antediluvian world, is more than we can take upon us to determine; but it seems clear that after the general deluge, men were fearful of trusting themselves upon the world of waters even for ages, till by slow degrees they were convinced of the utility, when numbers had experienced the advantages of a certain confined navigation peculiar to those ages, and were thereby encouraged to extend them.

The task would be both prolix and unnecessary to enter now into a detail of the expeditions of all the descendants of Noah, and the chiefs of fabulous times, of which all the accounts are so mixed with fable, that it is scarcely possible for the most accurate investigator to distinguish and separate truth from error. Of this sort are the expeditions of the Cretan Jupiter against the Sidonians, of Perseus into Africa against Medusa, with others, too tedious here to mention. The relation of the voyage of Jason in the ship Argo, said to be the first large vessel built by the Greeks, is likewise immersed in fabulous obscurity: it is only to be concluded that the Argonauts sailed under a brave commander of the name of Jason, to establish some branches of useful commerce at Colchis and elsewhere, and to clear the seas of many troublesome and dangerous pirates.

We have every reason to believe by the authorities of both sacred and profane history, that the Phœnicians were the first, and for a long period of time the most successful of the ancient navigators. We find the King of Tyre, whose subjects were of that nation, assisting King Solomon with gold and curious materials for building the famous temple at Jerusalem.—Though the virtue of the magnetic needle was totally unknown in those days, yet it is morally certain that these bold navigators not only coasted along the neighbouring shores of the Mediterranean, but sailed Southward to Africa, and North as far as Britain, trading for tin to the coast of Cornwall, at a time when the existence of this island was not known to the greater part of the nations inhabiting the continent. The Assyrians, Egyptians and other ancient states, are reported to have had great fleets before the days of David or even of Moses.—The accounts of the naval power of Semiramis are to be suspected as fabulous; that the Egyptians and some other nations have been represented as covering the seas with their fleets, may probably have arisen from the number of Phœnician vessels employed in their service.—The Greeks who learned other arts from them, acquired that of navigation among the rest, and almost as soon as they were formed into states, began to think of making themselves respectable for their fleets, with which they repeatedly defeated those of the Persians, and made themselves masters of the Eastern coasts of the Mediterranean, while the Phœnicians were employed in trading and planting colonies in various other parts of the world.

The famous Carthage, a colony from Tyre, from small beginnings rose to high estimation for her naval power, by which means, in a great measure she was enabled to contend with Rome for the empire of the world. But the indefatigable industry, unwearied application, and boundless thirst of conquest which marked the character of the Romans, caused them at last to triumph. Though at first they were little skilled in maritime affairs, to which their ancient genius had not led them, yet

finding themselves thus powerfully opposed by a people whose great resources were in trade, and whose naval strength contributed chiefly to their support; they resolved on manning great fleets, in which, though at first they were unsuccessful, they were at length enabled to combat their enemies, as it were upon their own element, and finally gave them such a terrible overthrow as induced them to accept of such a peace as the conquerors were disposed to grant.—The fleets at this time consisted of galleys of various sizes, with several benches of rowers, and were filled with soldiers who fought with their usual weapons of war, to which were added various engines peculiar to their situation, and some of the galleys had towers, from whence they shot or threw darts, stones, and other missiles. By the help of these, they could make safe approaches to the walls of towns in *offensive* war, and when attacked in their own vessels could carry on a *defensive* with as great security as if they were on shore.

Though by perseverance and assiduities the Romans had overcome great obstacles, and were become masters at sea, yet we do not find that their genius led them towards *discovery*.—Conquest engrossed their ideas, and as the then known world had furnished sufficient employment for their arms; and put them in possession of an empire, which was at last too extensive for them to preserve entire, they were little solicitous of penetrating farther, and exploring unknown regions in the manner of the more modern Europeans for the satisfaction of a laudable curiosity.

That distinguished power which the Romans thus wrested from the Greeks and Carthaginians they preserved till the division of the empire, after which it began to decline.—The distant provinces revolted.—The nations shook off the yoke of the conquerors; barbarians whose names were almost unknown, poured in upon the various parts of the divided empire; Rome sinking under her own weight, was at last sacked by the Goths, and Constantinople taken by the Saracens, which event put an end to the Eastern empire, in the reign of Michael Palaeologus.

Hence originated that consequence which the Arabs derived.—Though at first apparently enemies to learning and the arts, yet as they extended their power, they became encouragers of them, and, while the destruction of the Western empire had involved Europe in ignorance and distraction, these people began to cultivate useful knowledge, and to carry on an extensive trade with divers nations, though in ships of a very slight construction. Nor did the Division of the Arabian empire prove the extinction of this commerce, which long survived the destruction of the Khalifate, and the remains of which were yet visible to the Portuguese when they entered the Indian seas, along whose coasts the pilots, it is said, were found to have the use of sea charts, and even that of the compass, the discovery of which was then so recent in Europe.

During this period the rival Republics of Genoa and Venice, were almost the only powers that attended to trade and navigation in the Western World, the crusades abroad, and the feudal system which prevailed amongst the most respectable powers at home, joined to their intestine divisions, proving most unfavourable to the arts, and prolonging that night of ignorance, whose shades began to be dispelled about the 15th century. The conquests of Jenghiz Khan, and the wars of the successors of Saladin, as well as those of Tamerlane, had successively kept Asia in a ferment; and the two Republics maintained their naval consequence, till the Venetians at length prevailed, and secured to themselves the sovereignty of the inner seas.—Before a way to India was opened by the Cape of Good Hope, the great market for spices, drugs, and other valuable commodities of the East, was fixed at the city of Malakka, from whence they were fetched for the use of the Western nations as far as the Red Sea.—But the discoveries of the Portuguese turned the channel of this trade, and in effect proved fatal to the wealth and power of the Venetians, which had been the wonder, nay, the envy of Europe for a long succession of years.

This change may properly be attributed to the directive power of the magnetic needle, first discovered about the year 1300. Who was the author of this discovery is uncertain; but it is generally ascribed to an inhabitant of Amalfi, in the kingdom of Naples, of whose name there is no authentic account.—Indeed, whoever the person was, his claim could be only as a mere discoverer of this property, which was not applied by the Portuguese for the purposes of navigation till about the year 1495.

When Prince Henry, third son of King John of Portugal, returned from the siege of Ceuta, he conceived such a violent desire of making new discoveries that he spent near ten years in causing attempts of that nature to be made, in the prosecution of which he appeared to have at heart, a scheme for restoring the trade with Asia, by finding out a passage round Africa to the West Indies, which must necessarily divert it from its old channel, and prove most beneficial to those who first accomplished an undertaking so arduous and enterprising.

This Prince, it is said, was the more encouraged to proceed in his scheme by the information of certain Moors, concerning the situation of the Southern coasts of Africa, of which no European adventurers had any knowledge, none of them having ventured beyond Cape NAO, so called from

* The load-stone or magnet, as some say, was first found in Magnesia, a country of Lydia; according to others, the Magnetians were only the first who discovered its property of attracting iron. It is well known to have two poles, which constantly incline to those of the world, if nothing intervenes to alter their direction. This property is found to be communicable, and hence the nautical needle once properly touched points constantly towards the pole, unless some mass of interposing iron, or somewhat of a magnetic nature, interposes to prevent its direction. The cause of this wonderful effect is one of those secrets which it has pleased Heaven hitherto to conceal from the prying searchers into nature's volume. This wonder is augmented by another, namely, the different variations of the compass, which are found by observing the sun and stars, and appear not to be guided by parallels of latitude, nor regulated by meridians; some have attributed this to certain magnetic qualities in certain mountains; some to a principle of magnetism in the earth communicable from the pole in different degrees, at different distances.—But what tends to overthrow these various opinions, and seems almost to mock conjecture, is a variation of the variation itself, as it continues not the same at all times even in the same situations. On the whole, from whatsoever hidden powers in nature the cause of magnetism originates, it is to its effects, as employed in framing the mariner's compass, that mankind owe the discovery of a new world.

being considered as the utmost boundary of their navigation toward that quarter of the globe. But no obstacles appearing sufficient in the eyes of Prince Henry, who every day grew more bent upon his design, in the year 1417, he caused two vessels to be fitted out for the purpose of discovery; they ran 60 leagues beyond Cape Nao to Cape Bojador, where being discouraged by a swelling sea, breaking on the sands, they returned, and the Prince sent out, in 1418, Juan Gonzales Zarco, and Tristan Vaz Teixeira, gentlemen of his household, in a small ship, with orders to coast along the coast of Barbary, till they had passed the Cape, and discover all the land which the Arabs said reached beyond the equinoctial line: but their vessel was driven by a storm out of her course, till, accidentally, they made an island which they called Puerto Santo, or Holy Island, on account of their deliverance. The Prince, on their return, pleased with their discovery, sent them thither again, together with Bartholomew Perestrello, with cattle; as also corn and plants; but the intention was defeated by the fecundity of a couple of rabbits, these animals multiplying so exceedingly, as to destroy what was planted; and thus a circumstance so trifling, rendered the project of a settlement abortive. The year following, the same gentlemen made another voyage, in which they discovered the island of Madeira, where they found a chapel, tomb, and stone, erected by an Englishman, who, flying from his country with a woman whom he loved, was driven thither by stress of weather; the ship taking advantage of a favouring gale, having left the young couple behind them*. The land being covered with woods, the Portuguese set fire to them, to clear it: these are said to have burnt for seven years, and when the island was at last settled, wood became one of the scarcest articles in the country.—A course of time being necessary for furnishing the new settlements, it was not till 15 years afterwards that Gilianez passed the dreadful Cape Bojador, beyond which he sailed 30 leagues, and the year following, proceeded 12 leagues farther, returning with a quantity of sea wolves skins, but, on their landing, the inhabitants fled for fear of them, nor would they return though every persuasive means to retain them were made use of.

The prince still continuing to pursue his plan, Antony Gonzales, in the year 1442, by his order, coasted as far as Cape Blanco. Nunho Tristan passing still further, discovered one of the islands of Arguim, called Adeget, and another, to which the name De Los Garzas was given.

In 1447 Dinis Fernandez discovered Cabo Verde, or Cape Verde; but venturing up the river which the Spaniards called Rio Grande, he was cut off by the natives, as were also the chief part of his company.

After this Alvaro Fernandez sailed 40 leagues farther; and thus Prince Henry had the satisfaction of seeing his plans successively executed, till death removed him in the midst of them; after which they were pursued by his nephew, Alfonso V. in whose reign Gonzalo de Vello discovered the islands called Azores, which are eight in number, viz. St. Michael, St. Mary, Jesus, or Teresa, Graciosa, Pico, Fayal, Flores, and Corvo, lying nearly in the same latitude with Lisbon.

The succeeding year the islands of Cape Verde were discovered by Antonio Nole, a Genoese, in the service of Portugal. These islands lie about 100 leagues to the Westward of Cape Verde, and are called Brava, Bonavista, du Sal, St. Nicholas, St. Lucia, St. Vincent, and St. Antonio: the isles Maya, and S. Philip, and S. Jacob, were also discovered by him.

In 1471 John de Santeren and Peter de Escobar, went to the place called Mina, on account of the gold trade there, and proceeded from thence to Cape St. Catharine. The same year Ferdinand Po found out an island which he called Hermosa, a name which it has since lost, but retains that of him who discovered it. The islands St. Thomas, Anna Bom, and Principe were discovered about this time.

At this period the King of Portugal took upon him the title of *Lord of Guinea*.—It had heretofore been the custom to set up wooden crosses in the new discovered countries, but this prince ordered that stone ones should be in future erected by the captains, whereon his own name and theirs were to be inscribed. The first of these captains was called Cam: passing Cape Catharine, he came to the river Congo, sailing up which, he found by the signs of the blacks, that they had a king, who lived at a distance from the sea coast. This being all the information he could get, he returned home; where being arrived, and bringing some of the natives with him, King John gave them many presents, and ordered Cam to proceed again to Congo, and endeavour the conversion of the people, who were all heathens.—In this he happily succeeded, and returning to Congo, being admitted to the King of that place, persuaded him to lend some of the sons of his chief men to Portugal, to be baptized and to be instructed in all the principles of Christianity.

After the expiration of a few years, the King of Benin, a territory situate between fort St. George and Congo, pretending a desire to be converted to christianity, sent an embassy to the King of Portugal, desiring to have priests for their instruction: the ambassador, among other things informed King John, that 250 leagues beyond their country, reigned a powerful prince, called Ogane, by whom the kings of Benin were confirmed in their royalty, their messengers receiving from him a staff, with a head and a cross, like that of Malta; but added, that the persons receiving these, never were allowed to behold his face, his foot only being put out from behind a curtain, in token of his acquiescence with their wishes.

The surprising relations of a certain prince called Prester John, reigning in those parts, being at that time current in Europe, King John concluded this must be that very extraordinary personage.—To satisfy himself in this particular, as well as to get some account of India, Peter de Covillam, and Alonfo

* The lady died soon afterwards, and Macham, with his companions, having paid this tribute to her memory, made a boat out of the trunk of a tree, in which without sails or oars, he passed over to Africa; the Moors presented him to their king, who sent him to the King of Castile.

Alonso de Payva, were sent over land for intelligence: by way of Grand Cairo they went to Tor on the coast of Arabia, where they separated, Covillan setting out for India, and Payva for Ethiopia, both agreeing to meet again at Grand Cairo, by a certain appointed time: the former proceeded to Cammor, Calicut, and Goa, passing from thence to Sofala, and afterwards to Aden, at the mouth of the Red Sea, on the side of Arabia; when, coming at last to Grand Cairo, he found the companion of his travels was no more; from hence he sent the king an account of his proceedings by a Jew come from Portugal, and afterwards went into Ethiopia, where he was kindly entertained, but was never permitted to return from thence.

About the same time that these set out by land, Bartholomew Diaz put to sea, with three ships: he discovered the mountains called Serra Prada, and passed on in sight of a bay, which he named *De los Vaqueros*, on account of the great herds of cattle that he saw there; he touched afterwards at the island of Santa Cruz, entered the mouth of the river Del Infante, and at last came to the famous Cape which is the utmost southern boundary of Africa; to this Cape he gave the name of Tormentoso, on account of the storms which he there met with. But King John changed the appellation to that of Cabo de Buena Esperanza, on account of the hopes he entertained of discovering a passage round it by sea to the East Indies: however this (which was of more consequence than finding out Prester John's dominions) did not take place in the reign of King John, who, having fixed the Portuguese dominion in Guinea, died, and King Emanuel succeeded him.

As soon as this monarch began his reign Vasquez de Gama, being intrusted with the command of three ships and a tender, passed the Cape, and made his way to India by sea: previous to which, Christopher Columbus had sailed to the West Indies; the new world was thus discovered, and the conquest of Mexico and Peru was the attendant consequence.

In 1494, Sebastian Cabot discovered North America, in the reign of Henry VII. of England.— In the year 1500, Brazil was first found out by Peter Alvarez Cabral, who was sent on an expedition with 1200 men, to gain footing in India, but was driven by a storm on that part of the coast of South America; and in 1519, Ferdinand Maghellan found a passage from the Western to the Southern ocean, by those Straits to which the name of their unfortunate discoverer was afterwards given.

These happy beginnings caused happier continuations, each succeeding period furnished new discoveries of the English, the Dutch, French, and in effect all the nations of Europe, whose situation would permit them; eagerly followed the example of the successful Portuguese and Spaniards, who, equally jealous of them, and of each other, took all manner of pains to preserve their dominion where they had gained footing, and as much as possible to thwart all those who adopted the plan of making new discoveries. But notwithstanding this, we find the Dutch, at various periods, busy in settling themselves in India, and securing the possession of the spice trade. In 1600, an English East-India company was established by Queen Elizabeth; settlements in Asia were also obtained. A great part of the continent of North America, first discovered by Sebastian Cabot, was also peopled after that time by British subjects: nor were the French idle, they also got footing in Asia, the West-Indies, and North America, in spite of all the obstacles that at first appeared to hinder them, while the Portuguese and Spaniards, especially the latter, often found themselves much embarrassed to preserve their new possessions. A passage being opened from the Atlantic to the South Sea, by Cape Horn and the Straits of Maghellan, and the possibility of circumnavigating the globe, which before existed in idea, confirmed by experience, the settlements on the coasts of the Pacific Ocean were exposed to assaults from enemies whom the Spaniards little expected to visit them in those seas, the riches of the new world being alone sufficient to excite them to such an undertaking. Drake, Candish, and others, following the track, afterwards sailed round the world, and to their discoveries much has been added by MODERN NAVIGATORS. All these, together with all that is found remarkable in the relations of voyagers and travellers of former date, will be comprized in the following sheets; we shall therefore forbear to dwell upon the subject here, as we have already given the reader a summary account of the undertakings of those first adventurers, whose names will ever be momentos of their fame and magnanimity.

Having thus given a General Account of the Rise and Progress of Navigation, we shall now proceed with the work itself, in which will be included all the valuable and important Voyages and Travels by the most eminent Navigators and Travellers, whose discoveries forming an æra the most remarkable in the history of navigation, have poured the treasures of surrounding worlds into the lap of Europe, and thereby laid the foundation of her present grandeur and refinement, which have already attained the very summit of perfection.

To gratify the Public curiosity respecting the new discoveries in that immense tract in the Southern clime called New Holland, and the consequence of planting a Colony there, we shall commence with the valuable VOYAGES of Captains PHILLIP, HUNTER, &c. to BOTANY BAY, PORT JACKSON, &c. though in date more modern than other Articles.

JOURNALS AND VOYAGES

Of our late enterprising COMMANDERS, OFFICERS, &c. relative to *BOTANY-BAY, PORT JACKSON, NORFOLK ISLAND,* &c. with particular Accounts of all the adjacent PLACES.

Being an Entire New HISTORY of these Celebrated EXCURSIONS and DISCOVERIES, more Full and Circumstantial than any hitherto Published,

And Embellished with a Variety of most Elegant COPPER-PLATES, drawn and engraved by eminent Artists.

INTRODUCTION.

NO discovery ever tended to so much public utility as that of *BOTANY-BAY*, the credit of which, we must acknowledge, belongs entirely to the great and enterprising hero, Captain James Cook, who in his first voyage round the world explored all the east coast of New Holland, to which he gave the title of New South Wales. The only shore his vessel had then in view was that part which is now known by the name of Botany-Bay. It would be useless here to mention those transactions, which must of course be repeated when giving an account of his adventures; suffice it to say, that he was the discoverer of Botany-Bay, and the first who imagined any advantage could be made of this harbour.

The number of unhappy convicts with whom our several goals were filled, and whom the laws of their country condemned to temporary punishment, rendered it absolutely necessary that there should be some distant place appointed to transport such offenders. The dread of goal sickness, the alarm of insurrections at home, and above all the impossibility of decreasing the number of felons, &c. without the remedy of thus sending them away, were indeed strong inducements for adopting this salutary plan. Certainly our country laboured under a very grievous inconvenience when obliged to retain those criminals, who not only abounded, but were sad examples; besides, the dread of being exiled is in a great measure a discouragement to vice. On this account, and it must be acknowledged with no little propriety, it was suggested to government that this

No. 1.

new-discovered place, Botany-Bay, was the best and safest for the reception of those unfortunate wretches who are justly deprived of their liberty, either for ever, or for such length of time as justice thinks proper to limit. Thus might good result from evil, seeing that by the absence of such criminals we might in time, not only fertilize a land that was hitherto unknown, but make it perhaps a prosperous nation.

No place then seemed better adapted for this purpose than Botany-Bay, so called from the quantity of plants which are there collected. The country is described to be woody, low, and level, yet according to information there are but two kinds of timber wood. The trees are remarkable for their size, in which they far exceed ours; though one sort, it is said, has a resemblance to the English oak, the rest have some similitude to the pine; from the former, the wood of which is remarkably heavy and dark-coloured, proceeds a reddish gum like dragon's blood; the latter, which is also hard and heavy, seems much of the same nature as the American live oak.

The harbour lies in the middle of the land, and may be seen southward at some distance; the entrance is about a quarter of a mile, and lies to the W. N. W. The spot where our new settlement is made lies in latitude 34 deg. south, and in longitude from Greenwich 151 deg. 23 min. It is safe, convenient and extensive, though several steep rocky cliffs appear on the sea coast.

The

The woods are very much frequented with animals and birds. There are several kinds of the former; that which is called the Kangaroo, is most worthy of notice: the flesh is exceedingly delicate, and seems to the taste like good mutton. There are some which weigh 140 pounds; the tail 40 inches long, and 17 in circumference at the root. This animal is exceedingly strong, and, when hunted, springs and leaps with great agility; though it never lets its fore feet, which are very short, come near the ground in running. The strength of this animal lies in its hind quarters, and it frequently uses its tail in its defence, and as often its claws and teeth. The dog is much swifter, and is but a short time in chasing the Kangaroo. As soon as this animal is seized by the hound, he turns about, and catching hold with the nails of his fore paws, springs up and gives the dog such a violent blow with the claws of his hind feet as generally to overcome him; however the dogs, being naturally ferocious, frequently kill the Kangaroos in hunting them: indeed the dogs are so exceedingly savage, that no correction whatever can cure it: they will worry a pig, or snap off the head of a fowl, in defiance to their master; notwithstanding, when domesticated, they are very good-natured, though they retain this ferocity. The Opossum resembles the Kangaroo in strength, form, colour, &c. These animals are equally as numerous: they have pouches, or false bellies, for the safety of their young in time of danger: the rats in like manner, which have some resemblance to the Kangaroos: in short, there is such similarity in these animals, that it is naturally supposed the different sexes of each kind have a

promiscuous intercourse; so indeed we may judge of the fish, as it is a common thing to find a Skair's head and shoulders to the hind parts of a Shark, or a Shark's head to the body of a large Mullet, and sometimes to the flat body of a Sting-ray. There is shell-fish here in great abundance, particularly Oysters, Mussels, Cockles, &c. undoubtedly the chief food on which the natives subsisted. The fowls of the air are, in like manner, a combination of different kinds; but chiefly that of the Parrots: some have been frequently seen with the legs and feet of a Parrot, the head and neck of the same form and colour of a common Sea-gull, and the wings and tail like a Hawk; those that are most like the Parrots are remarkable for their beautiful plumage. There are besides several Crows, a vast number of Hawks, Pigeons, Quails, and a variety of smaller birds. Among the large ones, is a strange kind, first imagined to be the Ostrich, but now believed either the Emew or Cassowary. There is also a quantity of water-fowl near the mouth of the harbour, of an unknown kind, resembling the Pelican, and are black and white. Insects are equally abundant here: the Centipede, Scorpion, Spider, Ant, &c. &c. The plants and flowers display a great variety, and three different kinds of leaves may be seen upon one tree.

Government having deemed Botany Bay the most convenient, and best suited for their intended purpose, wisely and immediately decreed it the habitation for convicts under sentence of transportation.— This leads us to a new account of these voyages, the commencement, adventures, and success of which shall be the subjects of the ensuing Chapters.

BOOK I.

CHAPTER I.

The Vessels appointed for the First Voyage to BOTANY BAY with Convicts—Number of Criminals—Provisions taken in at the Mother-bank—Leave taken of the Hyena—An extraordinary accident—Captain PHILLIP's kindness to the Convicts—A Conspiracy formed among them—The Detection—Principals punished—Anchorage at Santa Cruz—Marquis Brancefort's Politeness, Attention, Invitation, &c.—Escape of a Convict—His Disappointments—Recapture—Remarks on SANTA CRUZ, LAGUNA, &c.—The Equator crossed—Cape Trio—Anchorage—Ingeniousness of a Convict—Victory's great politeness and attention—Strange Customs to avoid Smuggling—Prince of Brazil's birthday celebrated—Description of RIO DE JANEIRO—Anchorage at Table Bay—Live Stock taken in—Captain PHILLIP goes aboard the Supply—Takes leave of the Sirius—makes for BOTANY BAY before the Sirius—Condition of the Convicts—Latitudes, Longitudes, &c.

HIS Majesty's vessel the Sirius, which lay in the dock at Deptford, a very large and convenient ship, of about 540 tons burthen, which mounted 20 guns, and was remarkably well built; and the Supply armed tender, which was a brig, and one of those vessels lately employed in conveying naval stores from one of his Majesty's dock-yards to another, a strong little vessel, very flat-floored, roomy, and which mounted eight guns, and had a deep waist, were the appointed vessels for this excursion. Accordingly, October the 25th, 1786, the command of the ship Sirius was given to Arthur Phillip, Esq; and that of the Supply armed tender to Lieutenant Henry Lidgbird Ball. The Sirius's complement of men was 160; that of the Supply 55.

It was intended, when these two vessels had performed the designed voyage, and the criminals conveyed to the place of their destination, that they should be retained in the country for such employments as were necessary, until relieved by the arrival of other vessels from England.

December the 9th, the Sirius being ready to sail down the river, her moorings were slipped, and she sailed down to Long-Reach, where her guns and ordnance stores were taken in.

January the 30th, 1787, two transports dropped down to Long-Reach, one with female and the other with male convicts: these, in order to transact some

private business, proceeded as low as Gravesend, where the next day they were joined by the Sirius, and a little after upon reaching the Nore by his Majesty's armed tender Supply. Here, it is necessary to observe, that John Hunter, Esq; who had been previously employed in the equipment of those ships, was now appointed second Captain of the Sirius, with the rank of Post Captain, empowered with authority to command her during the occasional absence of Capt. Phillip, nevertheless to be subservient to his orders and directions.

February the 4th, on account of contrary winds and bad weather, these vessels were detained in the Downs for a fortnight; at the expiration of which time they ventured out; and about the 21st the Sirius, Supply and transports arrived on the Mother-bank; here it was deemed proper to rendezvous; the store-ships being in readiness. All necessary orders were now issued forth; and when the Agent for transports, Lieut. John Shortland, had executed his commission, and the Masters of the different ships now received their charges, they sailed from the Mother-bank on the 13th, attended with six transports, having six hundred male and two hundred female convicts on board, and three store-ships, with a large quantity of provisions. Major Robert Ruff, who was appointed Lieutenant Governor of the new settlement, was commandant of the batta-

lion; and there were with their proper officers also a surgeon, with necessary medicines, required. His Majesty's Captain De Courfey, these vessels a hundred as far as Capt. Phillip on account of an cat out at the Needles through St. Helen's down the Channel, changeable, which On the 21st Capt. to Captain De Courfey was taken of the the wind being, as S. On the 9th, the worse, it was deemed islands of Porto Sanc contrary to all expect Salvages, and on the air still continuing; they reached the illa Santa-Cruz, as it was anchorage before dar the place. In t they anchored in 15 understood that the soul; proper care w any danger, though the supposition was

The next morning Capt. Phillip, to the information accord were, and what they the anchorage, certa the Sirius to make th

lion; and there were a hundred and sixty marines, with their proper officers, to conduct the transports; also a furgoon, with three assistants, supplied with necessary medicines, &c. to be employed as occasion required. His Majesty's ship the *Hycna*, under Captain De Coursey, was likewise appointed to see these vessels a hundred leagues to the westward, or as far as Capt. Phillip deemed needful. The ships, on account of an easterly wind, were obliged to run out at the Needles, though it was intended to go through St. Helen's: they had pleasant weather down the Channel, but the wind continued very changeable, which was the occasion of some delay. On the 21st. Capt. Phillip delivered his dispatches to Captain De Coursey; and, after three cheers, leave was taken of the *Hycna*: it was now hazy weather, the wind being, as it was some days before, in the S. W. quarters: the vessels were, therefore, but slow in their progress, it requiring particular attention to keep together with all the transports.

An extraordinary accident now happened to Corporal Baker, of the marines, who, on laying a loaded musket down, which he had just taken out of the arms chest, was wounded by it in the inner ankle of the right foot: the bones, after being a good deal shattered, turned the ball, which, though changing its direction, still retained such force as to go through a harness cask full of beef at some distance, and after that to kill two geese that were on the other side of it. Notwithstanding the danger of such a wound, yet the Corporal, being a young man of a good constitution, so well recovered it as to be able in three months to return to his duty, with the perfect use of the wounded leg.

Such was the considerate humanity of Captain Phillip, that he suffered the male convicts to be released from their chains, in order that they might be more comfortable, and be enabled to frequently wash and keep themselves clean. It was now suggested by the commanding marine officer on board one of the transports, and likewise the master of the ship, that a conspiracy was formed by some of the convicts on board the *Scarborough*, who had taken an advantage of Captain Phillip's indulgence, and meditated an insurrection: their intentions, as discovered, were to have quitted the fleet in the night-time, and make such use of the ship as their future considerations might determine: however, this daring intention was happily discovered, before the attempt was put into execution, by the ingenuity and penetration of the marines, the ringleaders immediately corrected with some severity on board the *Sirius*, all parties divided, and heavy irons again applied to those who deserved them.

The wind was still precarious; at last, after some heavy rain, it became more settled, inclining to the N. W. This advantageous change improved the progress of the vessels, which was then at the rate of about four miles an hour.

On the 30th, the weather changing again for the worse, it was deemed advisable to make to the islands of Porto Sancto and Madeira. On June 1st, contrary to all expectation, the vessels reached the Salvages, and on the 3d had passed the rocks, the air still continuing variable; in a short time after they reached the island of Teneriffe, making on to Santa-Cruz, as it was the Captain's wish to effect an anchorage before dark, his men being unacquainted with the place. In the evening, about half past six, they anchored in 15 fathoms water. It had been understood that the ground all over this bay was foul; proper care was therefore taken to obviate any danger, though the labour was unnecessary, as the supposition was erroneous.

The next morning an officer was dispatched by Capt. Phillip to the Governor of this island, with information (according to custom) of whom they were, and what they wanted; though, previous to the anchorage, certain officers had come on board the *Sirius* to make these enquiries, it being a cere-

mony seldom, if ever, neglected. Marquis Branciforte, who was the Governor, and Captain-General of the whole of the Canary Islands, received this messenger with extreme courtesy, and politely returned answer to Captain Phillip, that he should command every refreshment the island could afford, and he sincerely hoped that the place might be capable of supplying him with such articles as he had most occasion for. Commodore Phillip, the Post-Captain, and several other officers, now waited upon the Governor, to return him thanks. The Marquis repeated his civilities, and received them with every mark of politeness and respect. A short time after he came on board the *Sirius* himself, with his attendants, and remained there about an hour, making enquiries (during conversation) about the extent of our intended voyage, and situation of the place for which we were making. Some short time after this, he sent an invitation to Captain Phillip, and his friends, to dine with him. Accordingly the Captain, and his principal officers, (in number about twelve) accepted the invitation, and were exceedingly hospitably and politely entertained. The Marquis is a genteel man, of an animated countenance, an easy and graceful deportment, and possessed very much of the dignity of a Spaniard.

Every proper advantage was taken of their stay in this island; during which time the ship's crew and convicts were supplied with fresh provisions, of which there was great abundance, but a scarcity of vegetables and fruit, only a few pumpkins, onions, potatoes, &c. could be procured.

Capt. Phillip's intention was not to have exceeded four days here at most; but his stay was unavoidably longer, the watering of the ships being as tedious as it was a necessary business, and what still added to the delay was, that only two boats could be loaded at one time. One evening, when it was rather dark, and all hands employed in clearing a boat of water, a convict, of the name of Powel, having dropt away from the ship unperceived, now contrived to slip into a small boat; when at some distance from the vessel, he then exerted all his strength, and by means of his oars soon reached a foreign East-India ship, which lay near the shore: he now offered himself as a seaman; but his expectations of getting off in this vessel were disappointed, as they rejected his services: baffled in his hopes, and apprehensive of being soon missed, he deemed it necessary to leave this vessel, and by concealment elude search. He landed to the westward of the town; but on an unfortunate place, surrounded with inaccessible rocks, where there was a good deal of surf. The convicts being now mustered as usual, at setting the watch, the officer of marines missing this man, immediately sent word to Captain Phillip. Next morning the Captain sent an officer to the Governor, requesting his assistance in recovering this deserter. The Marquis instantaneously issued orders for that purpose, and early in the morning boats were dispatched from the ships, to search for that one which the convict had taken: as they had also rowed along-shore to the westward, they immediately perceived it heaving on the rocks; accordingly they advanced to get her, and being naturally induced to look about the place, perceived the convict, who had not been able to ascend the precipice, concealing himself in the cleft of a rock. The officer forthwith presented a loaded gun at him, declaring if he did not immediately descend, and get into the boat, he would shoot him. This menace had the desired effect: he instantly complied; and, when taken on board, punished and put in irons during the remainder of their anchorage; but having afterwards presented a petition to Captain Phillip, he was released from his confinement.

It is now necessary to make some cursory observations on this island, and its adjacent places. The city of Laguna, which is reckoned the capital, is about three or four miles distance from Santa Cruz: the

the roads thereto are exceedingly bad, and the streets of the city irregular and cross each other at right angles, some of which are remarkable wide, but the buildings are in general good; the plain on which Laguna stands is pleasant and fertile, the soil is rich, and it contains many gardens. Notwithstanding, it is surrounded by such high mountains, which occasion many torrents of water in time of rain, that it is deemed exceedingly unwholesome; on which account few people of consequence inhabit the place, though once the established residence of many of distinction. Among the buildings are two parish churches, which have short square steeples, but which appear above all the other buildings; there are two nunneries and three or four convents; there is a conduit in the middle of the town to supply the inhabitants with water. The Peak is a mountain very much celebrated for its amazing height.

The bay of Santa Cruz is defended by several small batteries of four or five guns each, they are placed at a particular distance from one another, and close to the water-side; their principal fort near the landing-place is a strong work; it is imagined that on the whole they mount near one hundred pieces of cannon. The chief street in this town is so broad as to resemble a square; the buildings are irregular; the governor's house, which makes but a poor appearance, stands at the upper end; at the lower end there is a square monument, which was erected in commemoration of the appearance of Notre Dame to the Guanches, the original inhabitants of the island. Santa Cruz is the principal seat of commerce; all the officers of justice reside in the place; the manufactures are very few, and consist chiefly of taffeties, gauze, coarse linens, blankets, garters, &c. The principal dependence of the inhabitants is on their wine, oil, corn, and every kind of stock for shipping. The women wear veils, and some of them are so abandoned and shameless as to exceed even the prostitutes of London; indeed all the ladies are addicted to intrigue.

June 9th, the watering being now completed, orders were issued for every person of the fleet to return to his respective station; and at ten o'clock the succeeding morning they proceeded on their voyage with a favourable wind. On the 18th of this month they reached the island of Bonavista, with an intention to anchor in Port Praya bay, in the island of St. Jago; the weather was exceedingly hazy, and on account of contrary winds and many unfavourable circumstances, the attempt was given over as impracticable: accordingly they steered southward with an intention to cross the equator, but on account of the severity of the weather it was impossible to gain ground; therefore standing off at a greater distance from the coast of Africa, they were for several days without advancing; thus delayed with wavering winds it was not till July 14th in the evening that they crossed the equator: but the wind afterwards made ample compensation, by blowing steadily from East-fourth-east to East, otherwise they must have fallen in with the coast of Brazil, which would not only have been the cause of much delay, but be attended with great danger.

During this dark, cloudy, and unpleasant weather, the company entertained themselves at intervals with fishing; they caught two or three bonitoes. The boatwain struck with a pair of grains out of the cabin-window a most beautiful fish about ten pounds weight; it somewhat resembled a salmon in shape, but differed in the tail, which was more forked; it was of a fine yellow colour; when first taken out of the water it displayed two beautiful stripes of green on each side, which after some short time changed to a delightful blue and so continued; there was nothing particular in the internal formation of this fish, except that the heart was larger, and its respirations contracted and dilated longer

than ever appeared in any other aquatic animal. The sailors having never before seen a fish of this kind, and it being consequently a non-descript, gave it the appellation of the Yellow-Tail.

Aug. 3d. Having now made Cape Trio, they found it impossible to get hold of anchorage, and so proceeded on to Rio de Janeiro Sugar-loaf. On the 5th a boat came along-side in which there were three Portuguese and six slaves; one Thomas Barret, a convict, was discovered to have passed, with great ingenuity, in trafficking with these people, some quarter dollars which by the assistance of others he had coined out of a few old buckles, pewter spoons, buttons, &c. during his passage from Teneriffe; the fraud had been so inimitably executed, that had the metal been a little better it must have passed; the apparatus whereby this cheat was accomplished were sought in vain, and considering the disadvantages he laboured under, it is wonderful how he could accomplish it. The characters of those artful villains, and the crimes they had committed, were explained to the injured Portuguese for fear they might entertain an unfavourable opinion of the rest of the Englishmen. On the 6th of August the convoy anchored for the night in water fourteen fathoms deep in the islands which lie off the harbour: as Captain Phillip was some years ago on this coast, commander of a Portuguese man of war, during which time he behaved very gallantly, he was of course extremely popular here, and thereby recommended to the notice of the court of Lisbon.

The next morning an officer was dispatched to the town to wait on the viceroy and give him the usual information, and in the afternoon the Sirius with the whole convoy sailed into the harbour. Fresh provisions were immediately provided for the ships' companies, marines, and convicts; rice in lieu of bread, also vegetables and fruits, particularly oranges, which abounded here.

Much civility and politeness were testified at this place. Some short time after Captain Phillip's arrival, his officers paid their respects to the viceroy, who seemed very desirous to render every thing as comfortable and pleasant as possible, consistent with his instructions from the court of Portugal, relative to all foreigners; and indeed so far he extended this civility as to break through an old established rule of the place, it being the custom in order to prevent smuggling, a crime punished here with the greatest severity, for guard-boats to row constantly night and day, when foreign vessels come into the harbour; and whenever boats are sent on shore by those foreign ships, to put a soldier into the boat, who continues on board her during her stay; also, when any foreign officer lands, an officer from the guard attends him wherever he goes: it must therefore be acknowledged as none of these spies were allowed to watch Captain Phillip and his officers, nor even any restraint attempted in the beginning, but every officer permitted to walk wherever he pleased (a liberty never granted to strangers), nor any sentinels placed even in the boats of the transports, that the respect which was paid was both extraordinary and unusual; however the masters of the transports and their sailors were attended by these men when they went on shore. Much ceremony was used upon conducting the company to the palace; they were attended by an officer and a friar; as they passed the guard on duty the colours were laid at the feet of the commodore, which was a token of the greatest respect; they were then introduced to a large anti-chamber crowded with officers, soldiers, and domestics; some short time after a curtain, hung over the door of the presence-chamber was drawn aside, and each introduced in his turn to the viceroy by the commodore. The viceroy was seated so awkwardly that his back was to most of the officers. As to the room it was far from magnificent or elegant. The viceroy was a

stout

stout corpulent person.

Six female convicts removed from the lotte, on account of some number returning, who's conduct was done: with a view. A private in the militia, Connell was sent whipped, for having some of the female for endeavouring to trust in suffering but as he bore a circumstance, he was consequently forgiven. John Jones and James Cufed of similar offences.

The 15th of August and merriment and was now observed by the viceroy, who appeared between the city and sons of all ranks jointly illuminated here and observed the parade continued with fireworks and

stout corpulent person, middle aged, and of few words.

Six female convicts were now by the commodore's order removed from the *Friendship* into the *Charlotte*, on account of their good behaviour, and the same number returned to the *Friendship* in their stead, whose conduct had been exceptionable; this was done with a view to separate the good and bad. A private in the marines of the name of Cornelius Connell was sentenced by a court-martial to be whipped, for having improper intercourse with some of the female convicts; also, Thomas Jones for endeavouring to make a sentinel betray his trust in suffering him to go among the women; but as he bore a good character previous to this circumstance, he was recommended to mercy, and consequently forgiven by the commanding officer. John Jones and James Reily, privates, were accused of similar offences, but acquitted for want of evidence.

The 15th of August being a day of great parade and merriment among the Portuguese, the same was now observed by the inhabitants of Rio de Janeiro, who appeared in their best and richest attire between the city and the church of St. Gloria. Persons of all ranks joined in the crowd; Gloria church was decorated with various flowers, and most brilliantly illuminated; the people generally stopped here and observed some religious ceremonies: this parade continued the whole day, and concluded with fireworks and rockets.

In religion they are very exact, and introduce many unaccountable customs. Consecrated beads are hawked about. The women of the lower class are very fond of intrigue, but those of high ranks are prudent and reserved.

A private marine, James Baker, was punished for endeavouring to get passed on three one of the artificial dollars, which, no doubt, he had procured from some of the convicts, being the same of those before mentioned.

There is a small island about a mile and a half distance from where the ships lay, called *Enchados*, where Captain Phillip and his friends were permitted during their stay to erect a tent, for the sake of landing a few of the astronomical instruments, necessary for ascertaining the rate of the time-keeper; the weather however was too unfavourable for experiments.

August 21st. This being the anniversary of the Prince of Brazil's birth-day, every compliment was paid the viceroy usual on the occasion, who in return behaved with particular attention; nor were Captain Phillip and the other gentlemen by any means deficient in their endeavours to deserve his politeness.

September 3d, the watering of the convey and every other business being completed, all the persons of the fleet were summoned together, and the signal given for unmooring. As soon as the *Sirius* had got within about half a mile of Fort Santa Cruz, she was saluted by the castle here with twenty-one guns, which high and distinguished compliment she answered with one of the same number.

The vessels having now got clear without the islands before night, soon reached the harbour of Rio de Janeiro, which is very extensive and commodious; so convenient in respect to bays that several ships may find security here in bad weather.

Rio de Janeiro is so called from St. Januarius's day, on which it is said to have been discovered; it is the capital of the Portuguese settlements in South America, and is situated on the west side of a river; the principal street, which is like a square, on the south side of which stands the viceroy's palace, is broad and well built; it is called *Strait-Street*, and contains a number of large shops and a convent, belonging to the Benedictine friars; the rest are narrow, and for the most part intersect each

other at right angles: the houses are commonly two, sometimes three stories high; people of respectability live in the upper part, those of the lower class inhabit the shops, for whose service they are intended. The city and harbour are strongly defended, but with little judgment; every thing of the provision kind is very reasonable; the inhabitants are cheerful and pleasant; the women, though remarkably thin and pale, are delicately shaped, have good teeth, and beautiful long hair. The churches are very good, and remarkable for their decorations. The different mechanics of this place carry on their business in distinct parts of the town, as there are particular streets set apart for particular trades. Before the vessels left this port, they were supplied with several seeds and plants for which the town is remarkable.

After leaving Rio de Janeiro the winds were very changeable, and after the first two or three days unfavourable; the weather was for the most part thick and hazy, of course unpropitious for remarks. October 12th, the wind becoming a strong westerly, there was some expectation of making land, seven or eight leagues from which it proved 115 fathoms over a black sandy bottom, and at five leagues distance 90, over sand with small stones. October 14th all the convoy anchored in Table Bay, Cape of Good Hope, and next morning at sun-rise by Captain Phillip's command the fort was saluted by thirteen guns, which was answered by the same number.

Table Bay being the last port that refreshments could be had from, during this voyage, it was now wisely determined to lay in such quantities of articles as were needful, and could be conveniently lodged in the vessels, both for present and future consumption; but notwithstanding the Dutch Governor Mynheer Van Graaf received the commodore and officers with the greatest courtesy and politeness, still there was such an unaccountable delay, owing to a tedious ceremony, that nearly a fortnight had expired before a satisfactory answer was given whether the convoy could have those supplies that were necessary for their expedition; and no doubt had not Captain Phillip persevered in his entreaties there would have been greater delay, or perhaps some evasion; but his industrious zeal surmounted all supineness, and at last procured such things and in such quantities as were necessary and convenient.

On board the *Sirius* were embarked six cows with calf; two bulls, one of which was about seven months old, also a number of sheep, goats, hogs, poultry, &c.

On board one of the transports three mares, each having a colt of six months old, and a young stallion; all the officers of the transports provided themselves with as much live stock as possible, not for the sake of partaking thereof during their voyage, but with a view of stocking their little farms in the country which they were seeking, it being their chief consideration to commence as rich as possible, for which reason they intended during their voyage to subsist chiefly upon the salt provisions, and reserve the live stock for their arrival; there was also a number of cattle put on board the stock ships; also corn and other necessaries; it was however regretted, that there was not sufficient room for a larger quantity, as they could only supply those places which had been filled before with the provisions already consumed.

After the supplies had been granted, Captain Phillip and several of the officers (as many as could conveniently attend him) were invited by his Excellency Mynheer Van Graaf, the governor, to an elegant and sumptuous dinner at his town residence, which is delightfully situated nearly in the centre of an extensive garden, which being remarkably pleasant and well shaded, is very much frequented by persons of every description, particu-

larly those of respectability. There are several other walks about Cape Town, but all inferior to this. On approaching the Cape of Good Hope, Table Land, a very remarkable mountain, so called from its resemblance to a table, may in clear weather be seen at some distance: on account of the heat and ascent it is a very fatiguing expedition to go on the top of it; however, when accomplished, the view from the summit makes ample compensation for the labour. To defend this mountain is nearly as difficult as going it up. There were some runaway Negroes discovered round a fire on the cliff of a most stupendous rock, secure from the power of their masters, it being impossible for any person to come near them: how they reached this place of security is matter of great astonishment; here they remain all day unmolested, and during the night, as reported, make excursions and commit depredations on the inhabitants.

From September to March, which is here the mild summer season, this Table Land is sometimes on a sudden covered with a white cloud, which by some is called spreading of the table-cloth. On the first appearance of this the ships in Table Bay make preparations, by striking yards and top-masts, and placing every thing in a comfortable state.

The Sugar Loaf, a round hill, by some called the Lion's Head, one part of which is called the Lion's Rump, is somewhat westward of the Table Land, divided by a small valley on the right hand side of Table Bay; this hill very much resembles a lion with his head erect, whence originated that name: there is a flag staff placed on each side, to apprise the governor of the approach of vessels.

Charles's Mount, likewise called the Devil's Tower, inclines eastward, separated by a small chasm from the Table Land; there are several gulls of wind supposed to issue from it when it partakes of the cap that covers Table Land, from this originated its second appellation. As this fight is generally in the morning, it is a common saying among the facetious number of sailors (the Devil's Tower being very near Table Land) that the black gentleman is now going to breakfast; this humour is varied if the phenomenon appears in the middle of the day, for then they say, he is going to dinner; and if in the evening, they observe the cloth is spread for supper.

Cape Town is very extensive, well built, and in a good style; the streets, which are wide, intersect each other at right angles; the houses in general are built of stone, the mortar which is used is a kind of glutinous earthy compound; their buildings are afterwards plastered with much skill and neatness, and white-washed with lime. The height of the houses but seldom exceeds two stories, on account of the violence of the wind, which sometimes shakes them to the very foundation, and therefore instead of being tiled or slated, they are commonly thatched, though on account of fires which frequently happen, some have preferred tiles or slates. The lower parts of the houses are neat and well furnished, but the upper apartments are chiefly bare. The streets are in general rough and unpaved; the parts before the houses are commonly flagged, or with a few trees planted around forming an agreeable shade.

The castle and principal fortresses stand close to a wooden quay, which runs a few paces into the sea, and which on account of some excellent water that is conveyed by pipes, is very convenient for watering ships. In the castle there are good accommodations for the troops and many of the civil officers.

There are two churches, one large and another small; the larger for the Calvinists who are the prevailing sect, and the smaller for the Lutherans: they are both unadorned. There is a very handsome hospital at the upper end of the town close

to the company's garden, to which the convalescents have free access, and reap the benefit of a pure wholesome air. The inhabitants take great delight in gardens, and keep them in excellent order; there are several public buildings, particularly the stables and a house for slaves; the former is a handsome row of neat buildings, which hold an incredible number of horses; the latter is exceedingly extensive, wherein there are separate apartments for the male and female slaves, and which afford them a comfortable retirement after the fatigues of the day.

The militia consist both of horse and foot; the officers are chosen annually; crimes are punished by fines or forfeitures; their dress is chiefly long blue coats with white metal buttons. The men are stout and robust; the women lively, free, and good-natured: they resemble the English very much in manners and dress.

November the 11th, Captain Phillip gave a public dinner to several gentlemen of the town, and the officers of the fleet. An unforeseen accident having detained the Dutch Governor in the country, prevented him from being one of the party. A band of music was provided on shore upon the occasion, while cheerfulness and good humour added to the harmony.

As the trouble of laying in the necessary stores was now over, preparations were made for sailing, and on the 13th of the month they weighed anchor, and stood out of the bay: the gales were S. S. E. S. E. and S. in consequence of which there were strong apprehensions some of the cattle would perish.

One of the seamen on board the Prince of Wales fell from the top-mast yard the 22d of this month, and was lost. As the vessel was sailing very fast, and it being exceedingly dark, there was no probability of saving him.

November the 25th, as some of the convoy failed very heavy, Captain Phillip thought it prudent to embark on board the Supply, with a few chosen friends from the Sirius, in order to proceed in that vessel to the coast of New South Wales, and arrive as soon as possible before the rest: he took with him Lieut. King, Mr. Dawes, &c. also several carpenters, sawyers, blacksmiths, &c. with a view to examine the place, and make every preparation that was necessary before the coming of the remaining crew. Major Ross, the Lieutenant Governor, having already fixed upon the most eligible spot for building upon, intending to erect occasional huts for the preservation of the stores when the convoy arrived, deemed it necessary, as several hands would be required, to take with them a number of artificers; three therefore of the best-sailing transports, (viz. the Alexander, Friendship, and Scarborough,) which were under the command of Lieut. Shortland, the agent, received orders to quit the convoy, and endeavour to reach Botany Bay as expeditiously as possible. Major Ross, and the adjutant, removed into the Scarborough, and the rest of the vessels were left to the direction of the Sirius, now under the command of Capt. Hunter. The commodore and his company having put their resolutions into execution, took leave of the Sirius, and though the Supply and other ships were considerably ahead the next day, it was some time before the Sirius lost sight of her.

It is necessary now to take a review of the convicts, whose healthiness during this part of the voyage was remarkable: only six died between England and Teneriffe, which is allowed to be the most trying part, to people unaccustomed to warm climates, particularly as they were obliged to live upon salt provisions; several of those who were lost had been afflicted with discharges before they embarked, consequently there could be but little hopes of their recovery: very few were in fevers, and only about twenty or thirty who had any violent symptoms of the fever. Among the convicts who died, was one Ismael Coleman; worn out by debility and lowness

of spirits, he died without a pang: also James Clerk, who died of a dropy; he had been tapped ten days before, and discharged twelve quarts of water. At the Mother-bank, a sporadic disease appeared among the marines and convicts: also an epidemic dysentery among the convicts, after leaving the Cape of Good Hope, which found its way among the marines, and about Christmas became most violent; however, by great attention and cleanliness, this contagion was suppressed; only one man, Daniel Cresswell, among the troops intended for the garrison, died of this disorder; from the commencement of which to his death, being eleven days, he was in the greatest agony, and nothing could yield him momentary ease. There was one William Brown, who was a very well-behaved convict, that was lost: he was bringing some of his linen from the bowsprit-end, which he hung there to dry, and by some means or other fell overboard. The ship was instantly hove to, and a boat sent out, but without effect: notwithstanding every exertion, particularly of Lieut. Ball, of the Supply, he perished: some on the fore-castle saw the vessel go over him, which of course rendered his fate inevitable. One Catherine Pryor, a convict, was delivered of a son, during this part of the voyage.

It is now proper to give the curious reader the longitudes and latitudes of those islands that were passed, as nearly and correctly as possible.

The Salvages, according to observation, were,
In latitude 30 deg. 10 min. north.

In longitude 15 deg. 9 min. west.
The island of Teneriffe appeared on the road
In latitude 28 deg. 29 min. 5 sec. north.
In longitude 16 deg. 18 min. west.

Island of Sal,
In latitude 16 deg. 38 min. north.
In longitude 22 deg. 5 min. west.

Variation of the compass 21 deg. 52 min. west.

CHAPTER II.

The Convoy proceed on their Voyage, under the direction of Capt. Hunter—Remarks on the Weather—Uncommon Birds—Luminous Figures on the Sea—Strange Animals—A melancholy Accident—Extraordinary gust of Wind—Consequent Accidents—Land seen—Sail made for the Bay—Anchorage—Sirius and Supply meet—Universal joy—Natives surprised—Captain Phillip, &c. examine the South-shore—Account of the Anchorage-place—Latitudes and Longitudes—Success of the Commodore's search—Broken Bay preferred to Botany Bay—The reason—The Artificers employed—Natives become familiar with the Lieutenant Governor—Their Behaviour—Kind of Weapons, &c.—Description of their Persons—Ornaments—Remarks on the Females—Interview between the Natives and Captain Hunter, &c.—Their Threats—Second Interview—Their Gaiety and Good-nature—Another Meeting—Consequent Remarks—Their surprise at the explosion of a Pistol—An Introduction to the Women by Captain Hunter's perseverance—The Men's unwillingness to expose them—Alarm for their Safety—Manner of protecting them—Women's Behaviour—Their mode of sheltering themselves—Use of Fires—Way of hunting, fishing, living, &c. &c.

AS soon as Capt. Phillip left the fleet, Captain Hunter steered to the southward, being of opinion that they had hitherto kept in too northerly a parallel to insure strong and lasting westerly winds. The weather still continued changeable; sometimes very heavy, and at intervals clear, but on the whole unfavourable: on account of the damp and cold, several female convicts on board the Prince of Wales were severely troubled with the scurvy; which afterwards broke out in the Charlotte, particularly among those who had been previously afflicted with the dysentery: this, however, was got under, by the care and attention of Surgeon White, who on this occasion gave large portions of the essence of malt, and some wine, which had been given by Lord Sydney and Mr. Nepean.

During this part of the passage, several whales appeared of an uncommon size; some birds of the albatross and petrel kind, supposed to have been a species of sea-hawks; also some seals, and other oceanic birds, with many of those called Mother Cary's chickens.

Whenever it was hazy weather, in order to prevent any separation between the heavy-sailing ships and the Sirius, the convoy kept as close as possible: the sea was covered over with luminous figures, supposed to have proceeded from that animal of a jelly-like nature called the Blubber, or from the spawn of fish.

January 6th, 1788, Capt. Hunter, intending to run in for land, they were deceived by one of the transports, (the Lady Penryhn) who having pushed a little a-head, made the signal for seeing land; which only proved to be a fog-bank. On the 7th, the Prince of Wales being the headmost, made the same signal, and at last it became general.

A considerable number of animals were now discovered, at first taken for seals, but upon stricter examination they appeared different, at least from those that may be seen on the coast of America and Newfoundland; these having long heads, which were tapered to the nose, and remarkable whiskers: they now and then raised themselves half out of the water, and as often leaped out entirely to look about them; in short, they were something of the sea-otter species.

In running in with the land, which was somewhat high, several small heaps of snow were to be seen, which was rather extraordinary for the time of year. This part of the coast was rough, craggy, and irregular: very few trees to be discovered. Some eminences, or pieces of land, supposed to be islands, were perceived eastward of the eastwardmost rock, that is called Mewstone. The wind at this period was so violent from the N. N. E. and N. that the vessels were under close-reefed main-top-sail and fore-sail; but there being much thunder, lightning and

and rain afterwards, the wind changed to the S. W. quarter, and the weather became clear. In steering eastward, along shore, they approached the westward-most point of a large bay called Storm-bay, also Swilly, eastward to which is a small rock called Eddystone. Advancing still eastward, there were several trees mere stumps to be seen, whitish and without leaves: there was also an appearance of small pieces of verdure about Storm-bay; and on the east point of land which forms this bay there was a large fire, the only indication that the place was inhabited, as none of the natives could be seen.

A melancholy accident happened on board the Fishburne; the boatwain, having too freely celebrated the new year, was rather intoxicated with the grog, and as the ship was labouring much, fell from the top-sail yard, by which he was most severely bruised: in consequence of the scurvy, with which this man was previously afflicted, a mortification ensued, and he died January the 8th. The loss of this man was very much lamented by the captain of the ship, who placed no small value upon his abilities, and consequently regretted there had been no surgeon in his ship, as he attributed his death to the want of timely assistance. On the next day Edward Thompson, a convict, died: this man was worn out with long confinement and grief; as he seemed very sorry for his past misconduct, and anxious to make atonement, there is every reason to think that if he had lived he would have been a valuable member to the new society.

January the 10th, an extraordinary gust of wind occasioned much confusion: the convoy having too much sail out, were obliged to let go their tacks and sheets; in consequence of which the Prince of Wales had her main-yard carried away in the flings; another lost her jibb, another had her three top-sails blown from the yards: the main-sail of the Sirius was split, and had not the men been remarkably active, the masts would have certainly gone over the side. Had this squall continued, the vessels must have suffered considerably: some delay consequently ensued, but when these accidents were repaired, they proceeded to reach the coast, taking advantage of every blast of wind.

The wind still inclined to the southward and westward, and the sea was very rough and unpleasant. Several birds at this time were seen; also a large whale, and many seals, which, though frequently fired at, never betrayed the least fear or concern, though the balls dropped near them; from this, it was evident, they were never before so attacked: not one during the firings was killed.

The strongest exertions were made to get to the westward, and on the 10th land was seen over Red Point: as it was impossible to get in that night, the convoy, by order of Captain Hunter, came within hail, and they stood off and on till four o'clock the next morning, when they made sail for the bay, and anchored at eight o'clock in water eight fathoms deep; the Supply and the three transports were now discovered: the former had arrived the 18th; and the Alexander, Friendship, and Scarborough the 19th; they had not therefore that advantage of the Sirius as was expected. It was now cause of universal joy in having thus reached the destined port without any material accident; the people were all as healthy as could be expected.

Some of the natives who were on shore seemed surprised at the approach of the vessels, they assembled together, and by pointing their spears seemed to threaten. In the evening the boats landed on the north side to provide water and grass, where an officer's guard was placed to prevent the men from wandering or behaving improperly with the natives.

When Captain Hunter had anchored, he waited upon Commodore Phillip in the Supply; they and several other officers accordingly landed, with a

view to examine the south shore, and fix on the most promising places for building: the natives followed the boat as they were rowing along the shore, but on her putting in, they ran away and absconded in the woods. However, some of the gentlemen had a short conversation with a few, but they appeared very shy and distrustful, though condescending and civil.

Though the place for anchorage here is very extensive, yet it is in such a manner exposed to easterly winds without any shelter, that it is exceedingly inconvenient; the water is four, five, six, seven, and eight fathoms deep. Where the vessels anchored was on a north shore of a sandy bay. Cape Banks E. S. E. Point Solander S. S. E. The entrance of the bay between these two lands W. S. W. The ground is clear and good. The spot of four fathoms is higher up the bay, and would be very convenient for a few ships; but as there is a flat of twelve feet, and that depth but very narrow, they would require to be properly lightened in order to get over it.

During the remainder of this voyage the latitudes and longitudes agreed perfectly with those stated by Captains Cook and Furneaux, viz.

South West Cape,

In latitude 43 deg. 37 min. south.
In longitude 146 deg. 7 min. east of Green-
[wich.

South Cape,

In latitude 43 deg. 42 min. south.
In longitude 146 deg. 56 min. east.

Tasmen's Hill,

In latitude 43 deg. 33 min. south.
In longitude 147 deg. 28 min. east.

Storm Bay,

In latitude 44 deg. 3 min. south.
In longitude 146 deg. east.

Swilly Island or Rock,

In latitude 43 deg. 55 min. south.
In longitude 147 deg. 5 min. east.

Adventure Bay,

In latitude 42 deg. 21 min. 20 sec. south.
In longitude 147 deg. 29 min. east.

According to the nicest observations were found,

Cape Howe,

In latitude 37 deg. 30 min. south.
In longitude 150 deg. east.

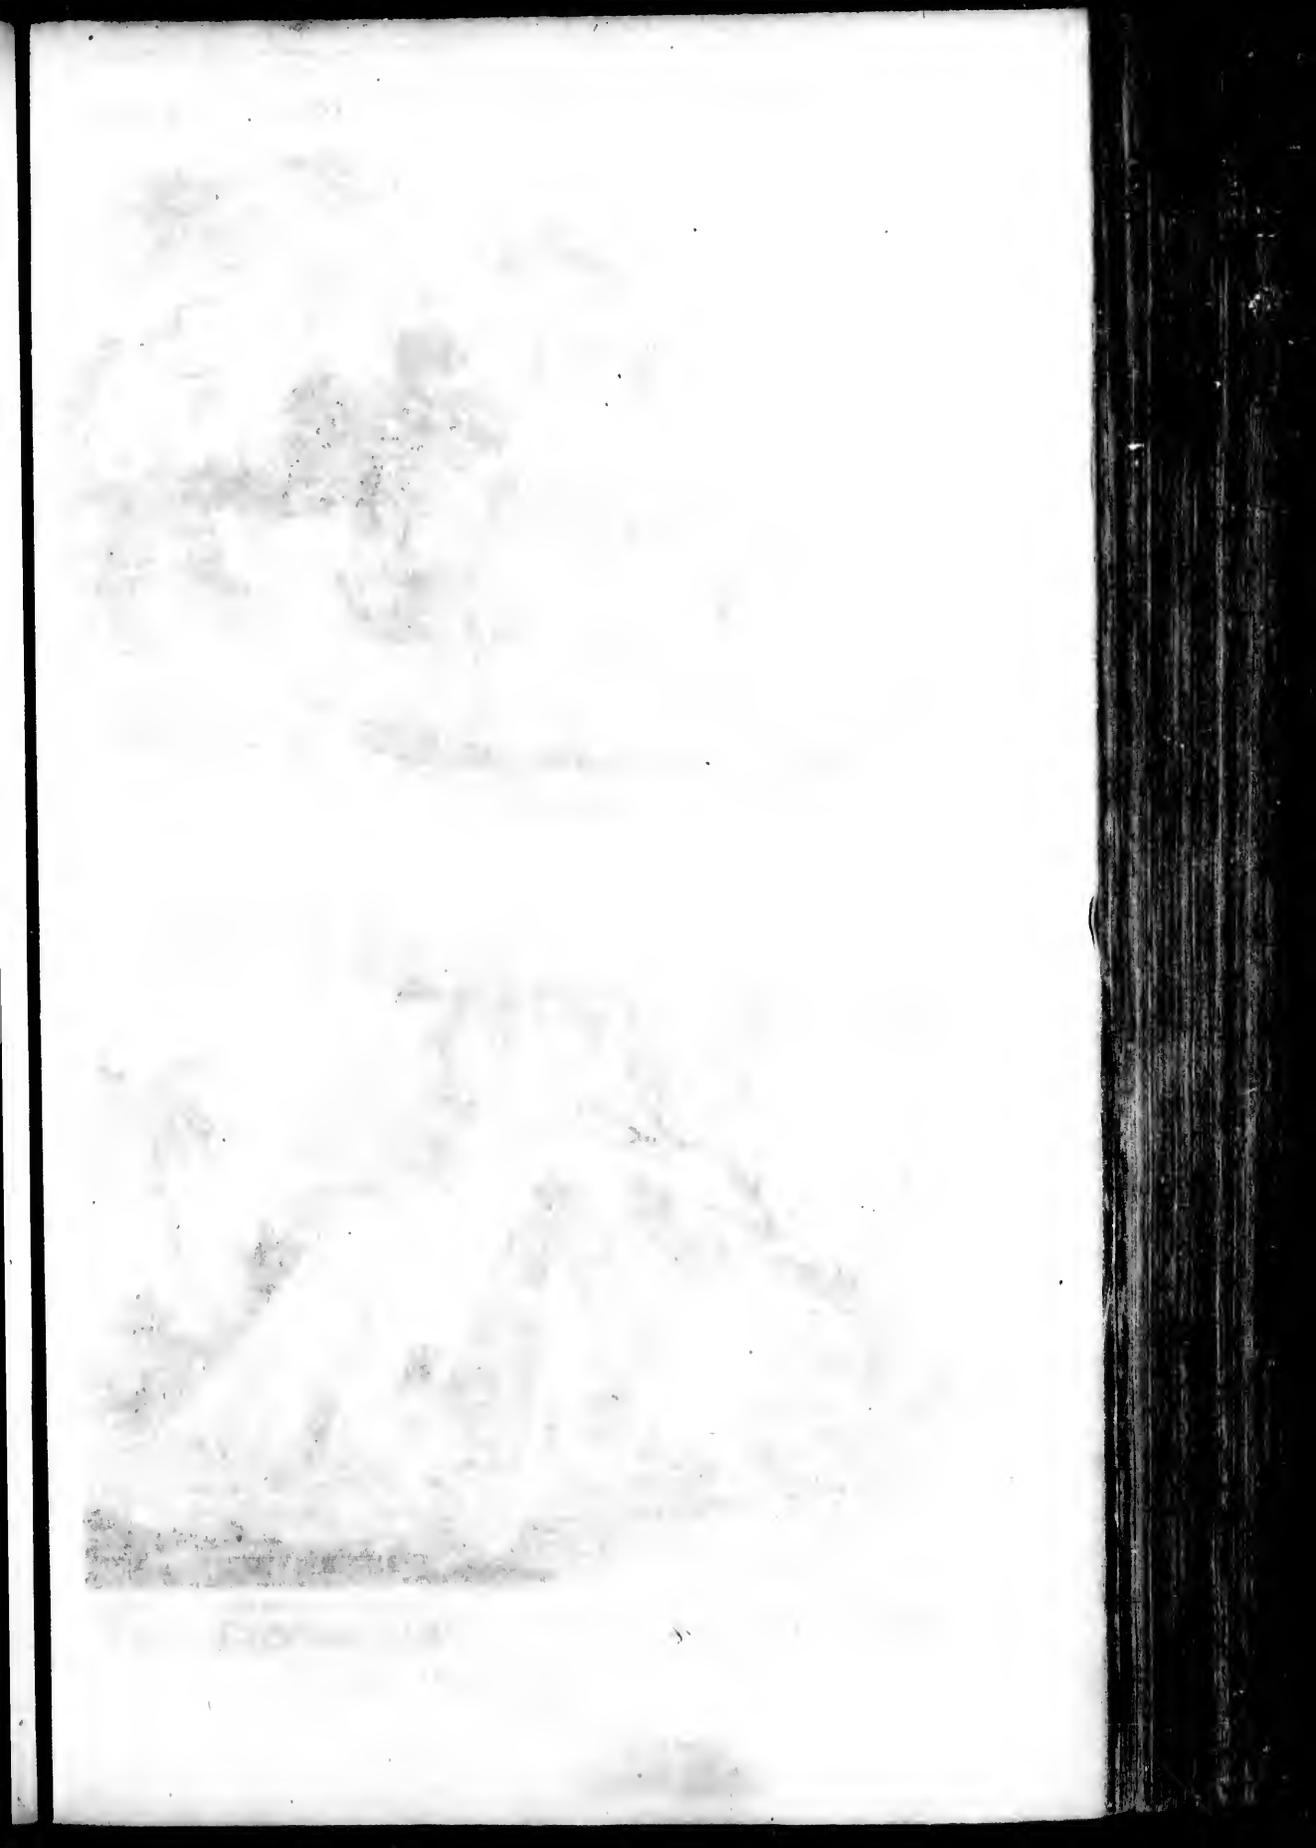

Red-Point,

(according to Captain Cook's determination)

In latitude 34 deg. 29 min. south.

Captains Phillip, Hunter, and their company, proceeded along the coast to the northward; for as they did not think Botany Bay, which at present required much improvement, an advantageous spot for an infant settlement, they were studious in seeking Broken Bay (as called by Captain Cook) with hopes of finding a more promising country and a better harbour. They spent two or three days in their search, and giving the preference to this place, it seeming far superior to any other round Botany Bay, the commodore was determined to make it the place of his residence, and thus resolved they returned to their vessels.

During Commodore Phillip's absence, the Lieutenant Governor called together all the artificers among the convicts, and others, and commanded them to clear the ground, dig saw-pits, mark the places, and in short perform every thing that was necessary in promoting their plan. The spot which had been fixed upon for the town, and which was undoubtedly the best to be found, was very poor and swampy, and indifferently supplied with water. As soon as the men began to work, the natives frequently, though cautiously, mixed with them; by degrees they became familiar, though still they retained their shyness: when they saw some of the men hauling in the seine, they were greatly astonished at the quantity of fish that was taken: joy was apparently mixed with their surprize; but as soon

as the fish were taken, they were deavoured to seize and prevent, which gave to each a part. After this they became convinced of its equity. After this they became though each of their weapon, sometimes a spear a rious manufactured and pointed with the ward off, or turned were terrified at the consequence thereof person in a red coat, tary dress.

The natives of Botany Bay by some as foolish and appeared quite the enquiring. The men were to five feet nine inches though small in the well made: they possessed the English dress, with little astonishment; they had the head, and the wonderful agility in the fly with the greatest a strong young man their lances are generally wear their heards, wide and short; the women the men, but are in chiefly of a sooty color as a Mulatto. Their ing, as they are in general have broad noses, with their skin being of a filthy adheres to it: themselves, for when is either by accident. They have some notion thrust a piece of bone in consequence of which they also paint their bodies encircling stripes upon which appear at a distance have red and white stripes an intent, it is supposed pearance; some have eyes; several a horrid head; some narrow with a broad line down the belly, and down the white streaks upon a ghastly and frightful and white; the tom of red earth which they the latter from a fine their bodies, chiefly the performing which the. The women in general the little finger of the is unaccountable) has men, young women with in girls about eight of the fingers have been ages; they are remarkable hair is strong, short, and no idea of keeping it natty. Men, women naked.

When Captain Hunter were taking a survey of the natives had their attempting to kill them in few angles, they appear naces extremely hostile on them, no doubt, as

as the fish were taken out of the water, they endeavoured to seize it: this the officer of the boat prevented, which seemingly displeased them; he gave to each a part: for some time they did not relish this fair proceeding; but being at last convinced of its equity, were at length reconciled. After this they became pacific and good-natured, though each of them always carried some sort of a weapon, sometimes a stick with a shell at the end, other times a spear and long dart; several had curious manufactured shields, made of the bark of trees, and pointed with the bones of fish: with these they ward off, or turned their own weapons. They were terrified at the explosion of the guns, and in consequence thereof shunned the soldiers, or any person in a red coat, or other appearance of a military dress.

The natives of Botany Bay have been described by some as foolish and void of curiosity, but they appeared quite the contrary, being both lively and inquisitive. The men are from five feet six inches to five feet nine inches high, exceedingly active, though small in their limbs; thin, straight, and well made: they paid extraordinary attention to the English dress, which created among them no little astonishment; they took the hat for a part of the head, and the cloaths for skins; they evince wonderful agility in throwing their weapons, which fly with the greatest rapidity. Captain Hunter saw a strong young man throw a lance full ninety yards; their lances are generally ten feet long. The men wear their beards, which like their hair is curly and short; the women are not so tall or so thin as the men, but are in general well made; they are chiefly of a foxy colour, some though are as light as a Mulatto. Their appearance is rather disgusting, as they are in general filthy and dirty; they have broad noses, wide mouths, and thick lips; their skin being of a greasy nature, every kind of filth adheres to it: they never think of washing themselves, for when they do go into the water it is either by accident or for the sake of provision. They have some notion of ornaments, as the men thrust a piece of bone or wood through their nose, in consequence of which their nostrils are widened: they also paint their bodies; the most valiant have encircling stripes upon their breasts and backs, which appear at a distance like cross-belts; many have red and white streaks all over their bodies, with an intent, it is supposed, to intimidate by their appearance; some have circles of white round their eyes; several a horizontal streak across their forehead; some narrow white streaks round the body, with a broad line down the middle of the back and belly, and down each arm, thigh, and leg; these white streaks upon a black skin appear exceedingly ghastly and frightful: the colours they use are red and white; the former is extracted from a kind of red earth which they have in great abundance, and the latter from a fine pipe-clay. The men scarify their bodies, chiefly their breasts and shoulders, in performing which they raise the skin considerably. The women in general want the two lower joints of the little finger of the left hand; this defect (which is unaccountable) has been discovered in old women, young women who have had no children, and in girls about eight or nine years of age; however the fingers have been perfect in females of all ages: they are remarkable for good teeth; their hair is strong, short, and curly, and as they have no idea of keeping it clean, is always matted and nasty. Men, women, and children, go entirely naked.

When Captain Hunter, Mr. Bradley, and others, were taking a survey of the harbour, a great number of the natives had assembled together, and on their attempting to land, in order to ascertain a few angles, they appeared by their signs and demeanours extremely hostile and outrageous, looking upon them, no doubt, as bold presumptuous invaders;

they collected additional forces from the woods, till at last their number was so increased, that the captain and lieutenant deemed it rather dangerous to attempt any acquaintance with them, particularly as they were inadequate in number, for there were no more with Captain Hunter than three officers and ten seamen, with only three muskets among them: however in a few days after Captain Hunter came to the same place better prepared for an interview; only a few of the natives at this time appeared, and that at some distance; it was supposed that their parties were absconding behind the woods, the captain endeavoured with signs expressive of good-nature and amability to court their friendship: having previously stationed two marine centinels on the Neck, in order to prevent a surprize. Some of the company being disposed for food, a fire was made in a very convenient spot of ground which projected; this roused the curiosity of the natives, and seven of them being at length won by the kindly invitations of Captain Hunter, &c. embarked in canoes and came over; however being still timid they stood at a distance: they laid by their lances, which encouraged Captain Hunter to approach them, and by holding up his hands to shew them he was unarmed, and offering them presents, they became less distrustful and shook hands. The mariners who were under arms by the boats intimidated them not a little, which Captain Hunter perceiving ordered them to ground them; this was sufficient encouragement; the natives appeared very gay and friendly, sat down among them, warmed themselves by the fire, ate and drank of their provisions, but they did not seem much to relish them.

Another time when Captain Hunter, Lieutenants Ball and King, Surgeon White, Mr. Daves, &c. went on shore, they met about thirty natives, who afterwards increased to about eighty, armed with lances and sticks, but who, after some mutual signs and friendly gestures, were quite tame and good-natured. Their leader, who appeared to be the most resolute, stuck the end of his shield in the sand, in order to shew them the use of it, though the company could not prevail upon him to throw his spear; whereupon Surgeon White fired a pistol at it, the ball went through it; the leader and his party were greatly alarmed at the explosion, and more surprized at seeing the hole which the ball had made in the shield; this seemed to increase their aversion to the English weapons. They became exceedingly noisy afterwards, though far from quarrelsome, were much delighted with the presents they received, but which in a short time they forgot, having left them carelessly on the beach. A number of females was now perceived at some distance; they were concealed in the woods, and were peeping at intervals from their concealments, but as it was totally against the will of the men that they should advance, who, as it appeared, were lords and masters over them, and yet like good-natured husbands, alarmed for their safety, they never once ventured to join the company. Captain Hunter, by signs, expressed a desire to be introduced to them, but the men would not agree; it was then signified to them that they wanted to make the women presents, which they very cunningly offered to take to them, still unwilling that the females should join them: however Captain Hunter, with a peremptory air, made them understand, that without they came themselves to receive them, they should not have any. A veteran now among the natives, who seemed the governor of the party, gave his permission that they should advance; the women immediately acquiesced with apparent joy and good-humour; but no sooner was this permission granted, than about twenty other strange men attended them from the wood, armed with lances and shields, and painted according to the custom of their warriors: these came, as it was imagined, to defend the women from any injury or insult: having drawn themselves up in a line on the beach, and that in a manner

which indeed bespoke much discipline and regularity: as a token of peace, if not provoked, each man held up a green bough in his hand. There were likewise two very stout armed men placed as centinels upon the rock, who, as they never quitted their station till the interview was over, had orders; no doubt, to be particularly vigilant. The women expressed much satisfaction at this meeting, though their timidity at intervals was evident, for even when they laughed they trembled, as apprehensive of some danger; they were extremely delighted with their presents, and while Captain Hunter and his friends were decorating them out with rags, beads, &c. they laughed most immoderately: the women were in general young, being from eighteen to twenty-two or thereabouts.

At other times the natives have been so good-natured and familiar as to dance and sing among the English, and to imitate their language and manners, while the English were imitating theirs: in short, they appeared so docile, gentle, and pacific, that little doubt could be entertained of being able in due time to conciliate their friendship and confidence.

These people have no idea of erecting or building any kind of place to shelter themselves from rain and cold: they have no fixed habitation, but take their rest wherever they can, and whenever they please. In times of rain and cold, they seek shelter in the hollow rocks upon the sea shore, the cavities of which are crumbly and soft, especially such (and which on this occasion are the most desirable) that are not exposed to the severity of the weather: they generally make a fire in them before they lie down, which communicates such an immense heat, that the rock contains the warmth for a considerable time; herein they sleep together.

Sometimes may be seen in the woods, when the country is not very rocky, or the rocks not inviting, a kind of habitation formed of the bark of trees, which is so extensive as to contain a whole family: this is generally their defence in winter, and as they lie very close, they keep one another warm: but these hollow places in the trees were originally designed for hunting kangaroos, who always take refuge in them; and as the natives in pursuit make a fire at the bottom of the tree, while others climb to the top with sticks ready for an attack, the animal, to avoid suffocation, runs out and generally becomes a prey: in this manner the natives employ themselves and get their food: they sometimes make such large fires that the conflagration extends several miles; this occasions a general disturbance among the kangaroos, and accordingly several of them fall victims: but there is another reason assigned for their making these fires. The underwood or brush grows so rapidly in this country, that when the natives feel themselves incommoded by such an inconvenience (for as they are naked the underwood must certainly be very disagreeable), this remedy is occasionally adopted to clear those places which they most frequent. The trees in the woods have been discovered entirely black, being so scorched with these fires: they likewise account for those great smokes, which on the voyage have been seen at a distance.

The natives have frequently altercations among themselves, and in all their quarrels with one another, they put themselves under the direction of a commander, whom they choose in their own way; notwithstanding which they associate in tribes of many families together, although they disperse when in search of food, but shortly assemble when there is any danger.

Their methods of kindling fire are doubtful. Some authors have declared that they produce fire with great facility, while others have observed that it was very laborious to them. No discovery could at present be made to ascertain which account is more correct, but it is the general opinion that they keep fire constantly burning.

They chiefly subsist on what the sea affords, and fish with spears or fish-gigs, which are somewhat longer than their war-lances. The women also are employed with lines and hooks; the former are manufactured from the bark of different trees, which are of a tough stringy nature; the latter from the talons of hawks, &c. or the inside of different shells. The women undergo great dangers in the course of this employment, as they frequently venture in old shattered boats with two or three children with them, and enter the most terrific parts of the sea: if the mother has an infant it lies across her lap, and according to the manner she sits, it is there perfectly secure. The men very often lie across the canoes with their faces in the water, as they have thus a better view of the fish, and having their fish-gigs prepared, are ready to strike whenever they see any, seldom or ever missing their aim; they also dive for shell-fish.

They always broil their food, and some of each party are appointed for that employment: as soon as these persons make ready a fire for cooking, they attend those who are fishing; the divers who remain some time under water, throw what they catch upon the shore, which these persons take away in order to dress. They have no idea of boiling fish, as appears from one of the natives having put his hand into a pot of boiling water, which one of the sailors had put on the fire with fish in it, to take it out, and having scalded his hand, he was as much astonished as he was hurt.

They have no notion of religion, nor do the sun, moon, or stars attract their attention; they burn their dead, as has been testified by Captain Hunter, who when employed on the survey of a distant branch of Port Jackson, being informed by some of the boat's crew, that they perceived something on a rising ground which resembled a new-made grave, had it immediately opened, and discovered a considerable quantity of white ashes, with a piece of a skull and jaw-bone, which had not been entirely consumed by the fire. This grave was no more than about six inches under ground; the earth which covered it was raised to an equal height; the captain had the ashes, &c. restored to their place.

The natives are not to be frequently seen in March and April, nor could it be ascertained where they retire. It was supposed that from Port Jackson they proceeded farther to the north, following the sun for the sake of a warmer climate: the land affords but a scanty subsistence, and therefore the sea-coast is the only part of the country which is most inhabited; the sea is their principal resource for support. They sometimes feed upon a fruit about the size of a cherry, yellow when half ripe, and black when full grown. The tree which produces it, is rather short, but full and bushy at the top; it tastes something like a fig. They also roast and chew the fern-root, and have frequently been seen accompanied by dogs of the wolf-kind, but of a reddish colour, which appeared as tame and good-natured to their masters as ours.

What tho' unciviliz'd, these natives stray,

As full of glee to-morrow as to-day!

For all they do, for all they know or get,

For all they have, to nature they're in debt!

If then they wear the aspect of a foe,

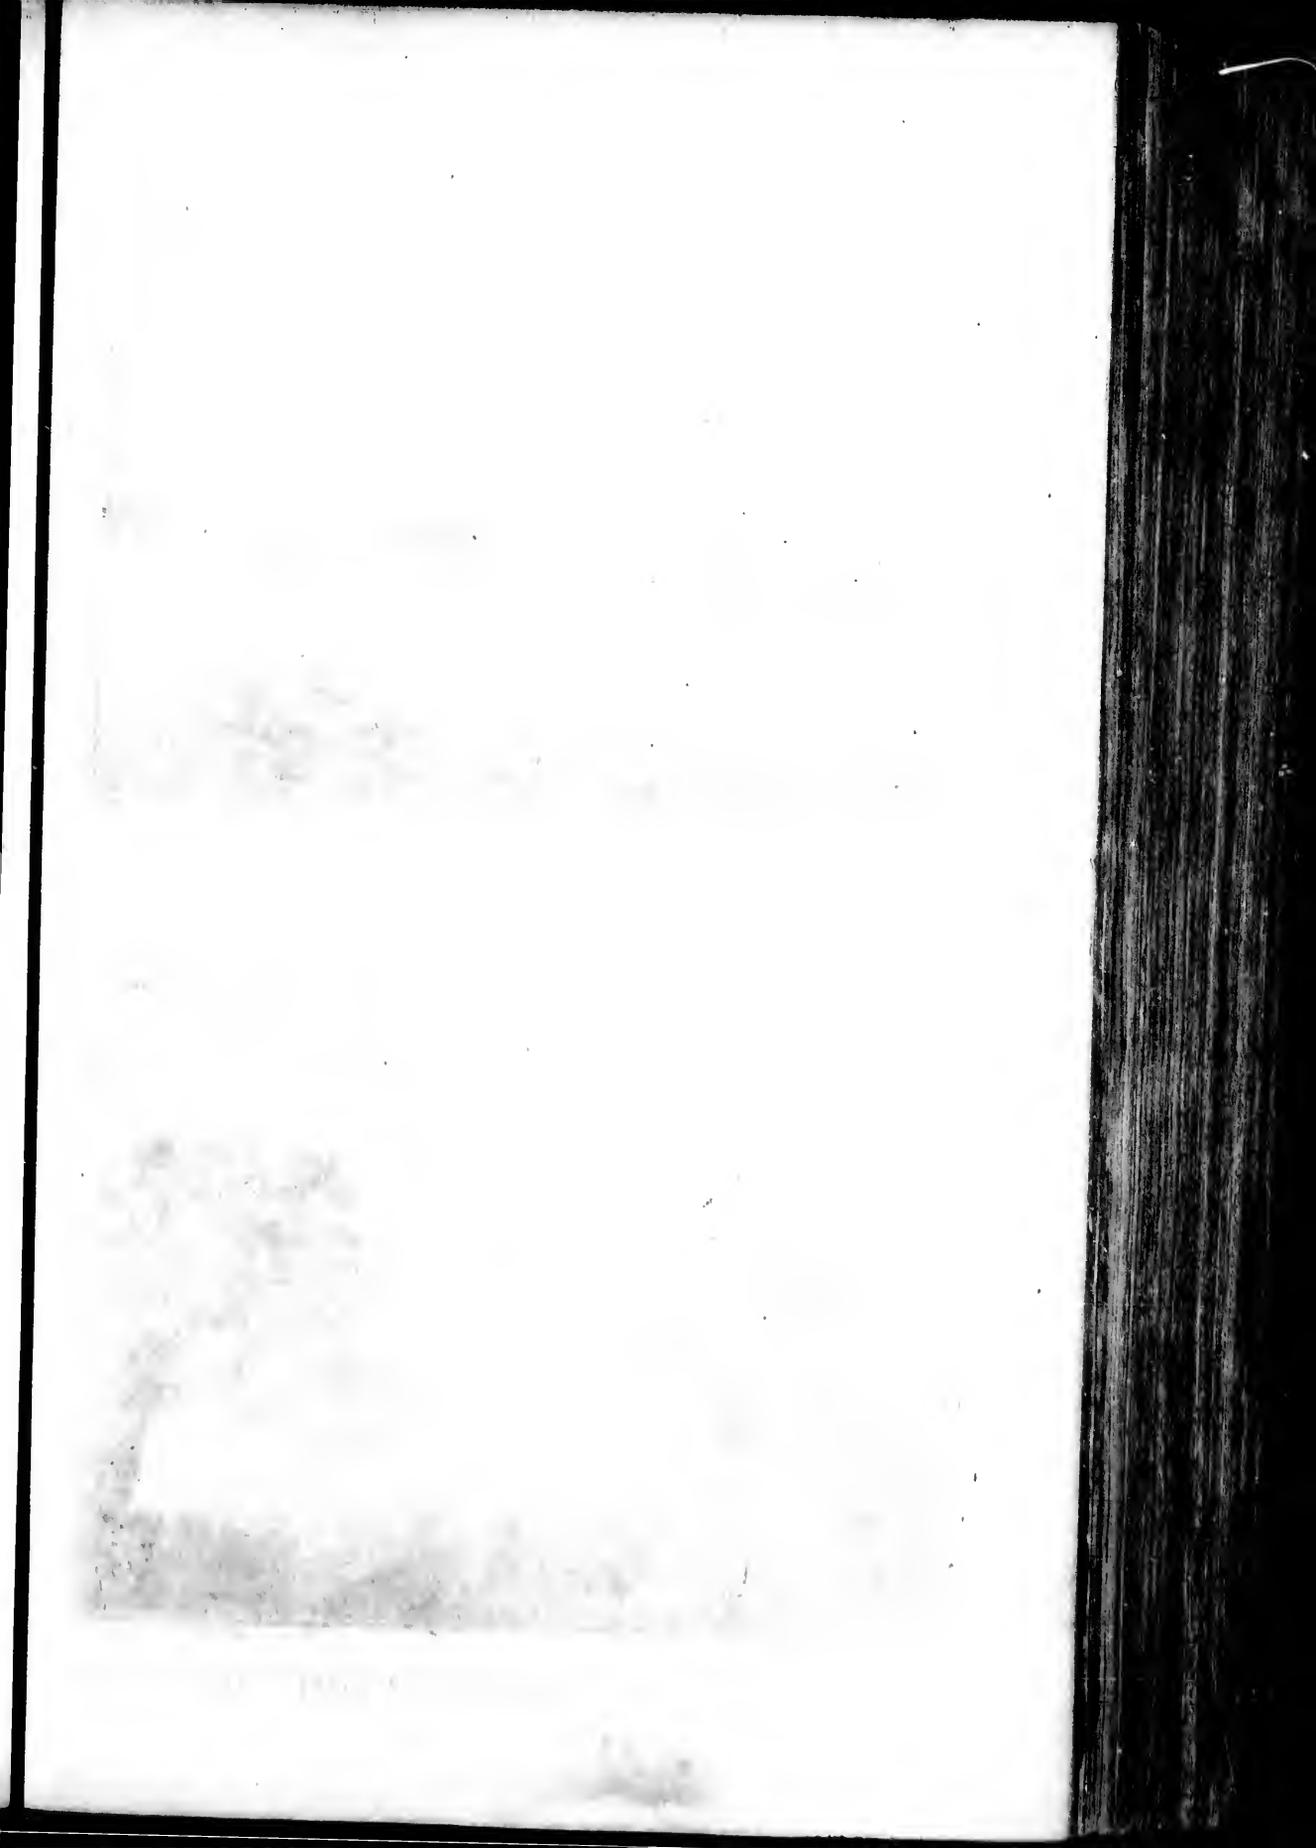

Why be amaz'd, for can they better know?

The wonder is, when they as friends appear,

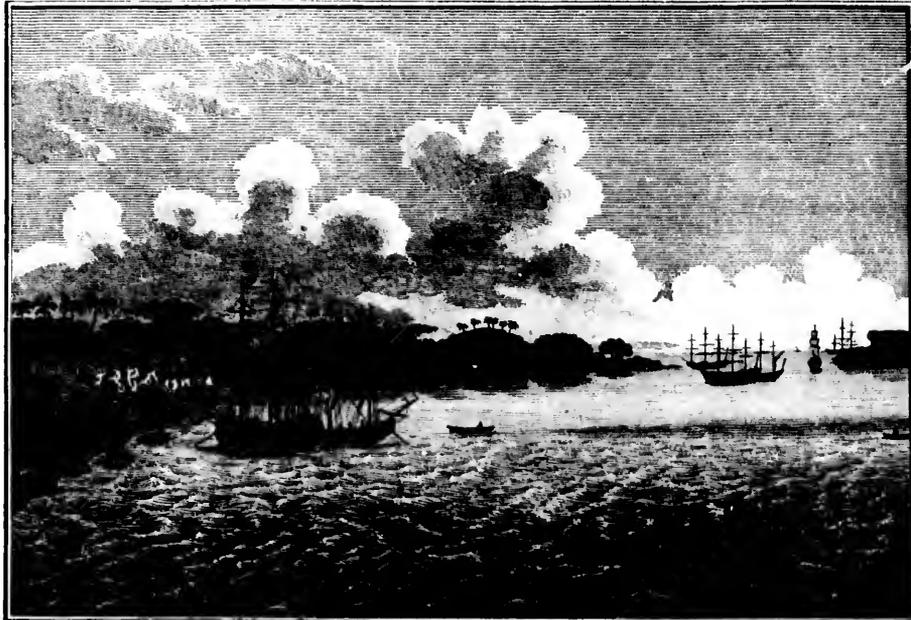

And in such friendships rival Christians here!

Having thus far deviated, in order to give a perfect and circumstantial account of the inhabitants, it is now proper to take a retrospect of the proposals and plan of the new settlement, the progress and success of which shall be the subject of the next chapter.

AS Captain Phillip had given the preference to Port Jackson, deeming it the most eligible place for forming the intended settlement, he was resolved to remove there, when sufficient water and grass were provided for the live stock. During these preparations, two large ships with French colours were seen exerting their utmost to get into the bay; but their endeavours were fruitless, the wind being too strong against them: on account of the haziness of the weather, the fleet lost sight of them.

January the 25th, the commodore, with a chosen number of seamen, went on board the Supply tender, to sail for Port Jackson. The convoy was again left to the care of Capt. Hunter, who when the weather permitted was to follow him with all the transports and victualers. The next day the French ships were seen in the offing, standing in for the bay: upon which Capt. Hunter sent a boat out with an officer to assist them in coming in; and some short time after, the wind becoming favourable, they found safe anchorage. These ships were the *Atrolabe* and the *Bouffale*, which sailed from France in the year 1786, under the command of Messieurs de la Peyrouse and De L'Angle. Captain Clonnard, the French commodore's captain, who commanded the *Artois*, that was taken by the *Bienfaisant*, waited upon Captain Hunter, and informed him that they had unfortunately lost at Masfuna, one of the Navigator's Isles, Captain De L'Angle, the second in command, and ten other officers, with two boats' crews, who were murdered by the natives, as vindictive as they were numerous. On this account they were induced to make for this port, with hopes to put in, and build some boats, which they had already in frames. The murderers, it seems, had, before that unfortunate day, been very friendly and familiar; but some misunderstanding having taken place between the natives and seamen, (from which side the insult originated is unknown) a dreadful quarrel ensued, and the sailors having before neglected keeping the boats afloat, the officers and crew were so exposed to the ferocity of these people, and so suddenly attacked, that they must all have been inevitably sacrificed, had not a small boat at hand taken up those who had quitted the shore and trusted themselves to their swimming. During this terrible massacre, several of the natives fell, and several were wounded: the boats were lost. The assaults had been made with stones, which were thrown with extraordinary force and aim. These vessels had sailed in June, 1785, from France. After touching the isle of Santa Catharina, on the coast of Brazil, they had gone into the Pacific Ocean, by the extremity of South America; where they had run along by the coasts of Chili and California. From thence they proceeded to Easter Island, Nootka Sound, Cook's River, Kamtschatka, Mumilla, the Navigator's Isles, Sandwich, and the Friendly Islands. They could not land at Norfolk Island on account of the surf, though they had anchored there. Besides the accident above-mentioned, two boats' crews unfortunately perished in a surf on the north-west coast of

America: none of their people had been lost by sickness. Monsieur Clonnard, on their first setting out, was the commodore's first lieutenant; but, in consequence of their loss, he was promoted.

The *Sirius* having worked out of the bay with the convoy, at ten o'clock weighed, and anchored in the evening in Port Jackson. Some of the vessels had been a little damaged, in running foul of each other in the working out: they were however soon assembled in Sidney Cove, so called by the governor.

Captain Cook had not visited Port Jackson; he only saw it from the coast, about the distance of two or three miles: there is no doubt, if he had explored the place, but he would have found it a harbour superior to any ever yet discovered; it has soundings sufficient for the largest ships, and space enough to accommodate with safety any number: it gradually extends into a capacious, beautiful basin, running chiefly in a western direction, about thirteen miles into the country, containing upwards of a hundred small coves, formed by narrow necks of land, which project in such a manner as to shelter from all winds. Sidney Cove, which lies on the south side of the harbour, between five and six miles from the entrance, being the smallest and the most convenient, (as vessels, let them be ever so loaded, could easily get into it, and heave out close to the shore) was therefore reckoned the best for building the town in: the soil about the rocks is good; in other parts of various qualities: between Botany Bay and Sidney Cove it is sandy, and full of swamps.

It is not to be wondered at, why Botany Bay should have been held in a more advantageous light by Captain Cook than by Captain Phillip: the former came with a small vessel, and only required temporary shelter and refreshment for a few; but the latter had numbers to provide for, who also required a permanent situation. He was therefore obliged to seek a place where vessels of magnitude could lie in security, and with ease approach the shore: for this reason Port Jackson was found, upon examination, preferable. Captain Cook was struck with the appearance of Botany Bay, which is indeed picturesque and beautiful, but there was something more essential to be sought at this time than outward show, a place fit for the immediate reception of exiled multitudes, who after they had established a residence in the most convenient spot, might then extend their labours, and both improve and fertilize every adjacent island.

The Supply had arrived the day before the *Sirius*, when the commodore, and every person that could be spared, were busily employed in clearing the ground for the encampment. Upon their general meeting, the English colours were displayed; when Governor Phillip, several officers and private men, drank his Majesty's health, and success to the government, at the foot of the flag-staff.

On the 27th, every man was put to his employment; there was no loss of time. Captain Phillip marked the places for the buildings, storehouses, &c. while proper overseers were appointed to keep the convicts

convicts from straggling, and to take such into custody as were wilfully retarding the business. Indeed, the necessary operations were more laborious than were at first imagined: it was as arduous a task to remove the trees, on account of their magnitude, as it was to fell them. The weather was indeed very favourable, but inclined to be warm. There had been a temporary habitation already formed in framework, with other materials, for the governor, brought from England: these were immediately landed, and put together as expeditiously as possible. A convenient place was soon formed for the cattle, which were accordingly landed: hospital-tents were likewise erected, and the necessity of them too soon discovered; for though the passage had been attended with little sickness, and few deaths, yet after landing the scurvy and dysentery raged with so much virulence, that in many instances the complaints proved fatal: what still added to the affliction of the patients was, that on account of the inconveniences of the place little assistance could be given them. A piece of ground had been enclosed, for the purpose of raising vegetables; but this not being a proper season for sowing, they withered a little after they appeared.

Very disagreeable weather began with the month of February: the rain was most remarkably heavy, and the thunder and lightning tremendous. On the 2d of the month some pigs and sheep were killed by the lightning under a tree, where a place for their shelter had been erected, and the tree itself rent to pieces. A centinel, whose post was near another tree, adjoining the camp, was very much hurt by a flash of lightning.

On the 5th they began to erect storehouses. Some of the convicts were missed this morning: it was immediately suspected that they returned to Botany Bay, in hopes of being taken on board the French ships, these vessels being in great want of hands, on account of the losses they sustained.

February 7th; this was the memorable day for establishing the new government: all possible solemnity was therefore observed. A space had been cleared, and every one assembled to hear the governor's commission for establishing a criminal court of judicature, admiralty-court, &c. &c. publicly read: for this purpose the military were drawn up, and under arms; the convicts placed apart by themselves, while those appointed for principal officers stood near the person of the governor. Mr. D. Collins, the judge-advocate, then read the royal commission, setting forth "that by this Arthur Phillip, Esq; was constituted and appointed captain-general and governor in chief in and over the territory called New South Wales, extending from the northern cape, or extremity of the coast called Cape York, in the latitude of 10 deg. 37 min. south, to the southern extremity of the said territory of New South Wales, or South Cape, in the latitude of 43 deg. 39 min. south, and of all the country inland to the westward as far as the 135th deg. of east longitude, reckoning from the meridian of Greenwich, including all the islands adjacent in the Pacific Ocean, within the latitudes aforesaid of 10 deg. 37 min. south, and 43 deg. 39 min. south; and of all towns, garrisons, castles, forts, and all other fortifications or other military works, which may be hereafter erected upon the said territory, or any of the said islands." The act of parliament was next read for establishing the courts of judicature: also the patents under the great seal, authorising proper persons to assemble and hold said courts whenever there was occasion. The ceremony concluded with three volleys, by the troops under arms. Upon which Governor Phillip advancing, complimented the soldiers for their fidelity and good conduct, and then turning to the convicts, addressed them in words to the following tendency:

"Let serious reflection, I request, now point out the happy advantages of your present situation. Consider, that the greater part of you have already

"forfeited your lives to the justice of your country; but, through the great lenity of its laws, you are now so situated, that by industry and good behaviour you may here regain those advantages and estimation in society, of which you have been deprived yourselves in your former habitation? Now you have not only every encouragement to atone for your past misconduct, but are happily removed from every temptation that may provoke to guilt. In this infant settlement, there is little that one man can plunder another of; and if any person should be so hardened, so presumptuous, as to be guilty of dishonest attempts, the detection must be as sudden as infallible, in so small a society! It is out of my power to pronounce the least sign of mercy, to those who may be so vilely vicious. I cannot upon any account, under these circumstances, behave in the smallest degree favourable, to such who should presume to offend against the peace and good order of the settlement. All that mercy can do, you have already experienced; and certainly no good can be expected from any, whom neither past warnings, nor the peculiarities of their present situation, can restrain from vice! I must therefore assure such offenders, that the rigour of the law shall unobscuredly be put in force; while every encouragement shall be given to all those whose behaviour and conduct promise reformation, and every man be rewarded according to his desert! As there is no crime which promotes a general profligacy of manners so much as an indiscriminate and illegal intercourse between the sexes, each therefore shall always meet with the utmost severity; and I request that, to avoid a vice which is every way injurious to society, you will, whenever opportunities offer, be ready and willing to enter into the matrimonial state: marriage is the great forerunner of domestic happiness and tranquility. Believe me, that I shall be ever proud and eager to countenance and assist all those who manifest their willingness to conform to the laws of morality and religion. Honestly, obedience, and industry, will no doubt render your situations comfortable and tranquil; whereas a contrary line of conduct must subject you to ignominy, disgrace, and punishment! It shall always be my unremitting care and assiduity to promote, as much as possible, the happiness of all those who are under this government, and to render the settlement in New South Wales both advantageous and honourable."

The governor's address was heard with profound attention; and, when he concluded, the acclamations were general! The speech had its desired effect, for no less than fourteen marriages took place among the convicts, in the course of the succeeding nine days. Governor Phillip now went to review the troops on the ground, previously cleared for a parade: he afterwards gave a dinner to the officers, in celebration of the first day of his government.

The next day several of the gentlemen of the garrison made a party to Botany Bay by land, to visit the French officers. They were received with every mark of hospitality and politeness. The convicts who were missed at Port Jackson had been (as it was now discovered) at Botany Bay; they were in hopes of getting away in the French ships; they offered themselves upon any terms, but their services were rejected; they were consequently obliged to return, and were almost starved to death, having delayed as long as possible to avoid the punishment they deserved. A man, and a woman named Anne Smith, were never heard of. The French commodore had given his honour that he would not admit any of them on board his vessels.

This day the criminal court sat for the first time, consisting of the judge-advocate and six officers of his Majesty's forces by land or sea. There were several convicts tried for felony; some were acquitted, and some found guilty, who were punished accordingly.

February 14th, Lieutenant, consisting mate) Mr. Jameston, Sirius) six marines, a victs, with two men and dressing of six, settle on a small island Zealand, which had by Capt. Cook (who of it) Norfolk Island, of that title. They provisions of every tools for cutting down chief design of this of this settlement wended by a perusal delivered to the superior previous to his departure:

"Instructions for the perintendent and of Norfolk Island.

"With these instructions, commission, appointed to command the settlement of Norfolk Island, and to observe from time to time the Governor in Chief the territory of New denies, or from my absence.

"You are therefore armed tender supplied orders to receive your stores and provisions intended settlement of Norfolk Island you execution of the trust commission, appointed to the said settlement."

"After having taken care of securing yourself, and the preservation of the flax plant, which is a necessary cultivation of cotton, the seeds of which you are to regard as the crease of which you that I may know from the island for it may be necessary to your discretion that is raised as to this you are to do

No. 2.

February 12th, very heavy rains began to fall; the people were of course anxious to erect their temporary helters. The number of artificers being inadequate to the work, as only sixteen carpenters could be hired from all the ships, and but twelve of the convicts were of that profession, (the greater part of whom were indisposed) it was impossible to complete either the barracks for the men, or the huts for the officers, agreeable to their wishes. Governor Phillip was still obliged to remain in his temporary house of canvas, which was by no means full proof against rain and wind. It being the desire of some of the officers, (whose presence with the battalion prevented their attendance on the governor before) the commissions were read a second time. Upon which the lieutenant-governor, and judge-advocate, were sworn justices of the peace: to the office of superintendent and commandant of Norfolk Island, and the settlement to be made upon it, governor Phillip appointed Philip Gidley King, Esq; second lieutenant of his Majesty's ship Sirius, and one whom the commodore very much esteemed.

February 14th, Lieut. King, and only a small detachment, consisting of Mr. Cunningham, (master's mate) Mr. Jamelson, (surgeon's first mate of the Sirius) six marines, and a few male and female convicts, with two men who understood the cultivation and dressing of flax, were sent out in the Supply to settle on a small island to the N. W. of the New Zealand, which had no inhabitants, and was called by Capt. Cook (who first discovered and approved of it) Norfolk Island, in honour to the noble family of that title. They were furnished with stores and provisions of every kind for six months, also with tools for cutting down the timber, which was the chief design of this mission: however the nature of this settlement will be much better comprehended by a perusal of the instructions which were delivered to the superintendent by the governor, previous to his departure, and which are as follows:

"Instructions for PHILIP GIDLEY KING, Esq; Superintendent and Commandant of the Settlement of NORFOLK ISLAND.

"With these instructions you will receive my commission, appointing you to superintend and command the settlement to be formed in Norfolk Island, and to obey all such orders as you shall from time to time receive from me, his Majesty's Governor in Chief, and Captain General of the territory of New South Wales and its dependencies, or from the Lieutenant-Governor in my absence.

"You are therefore to proceed in his Majesty's armed tender Supply, whose commander has my orders to receive you, with the men and women, stores and provisions necessary for forming the intended settlement; and on your landing on Norfolk Island you are to take upon you the execution of the trust reposed in you, causing my commission, appointing you superintendent over the said settlement, to be publicly read.

"After having taken the necessary measures for securing yourself and people, and for the preservation of the stores and provisions, you are immediately to proceed to the cultivation of the flax plant, which you will find growing spontaneously on the island: as likewise to the cultivation of cotton, corn, and other plants, with the seeds of which you are furnished, and which you are to regard as public stock, and of the increase of which you are to send me an account, that I may know what quantity may be drawn from the island for public use, or what supplies it may be necessary to send hereafter. It is left to your discretion to use such part of the corn that is raised as may be found necessary; but this you are to do with the greatest economy;

No. 2.

3

"and as the corn, flax, cotton, and other grains are the property of the Crown, and as such are to be accounted for, you are to keep an exact account of the increase, and you will in future receive directions for the disposal thereof.

"You are to inform yourself of the nature of the soil, what proportion of land you find proper for the cultivation of corn, flax, and cotton, as likewise what quantity of cattle may be bred on the island, and the number of people you judge necessary for the above purpose. You will likewise observe what are the prevailing winds in the different seasons of the year, the best anchorage according to the season, the rise and fall of the tides, likewise when the dry and rainy seasons begin and end.

"You will be furnished with a four-oared boat, and you are not on any consideration to build, or to permit the building of any vessel or boat whatever that is decked; or of any boat or vessel that is not decked, whose length of keel exceeds twenty feet: and if by any accident any vessel or boat that exceeds twenty feet keel should be driven on the island, you are immediately to cause such boat or vessel to be scuttled, or otherwise rendered unseaworthy, letting her remain in that situation until you receive further directions from me.

"You will be furnished with six months provisions, within which time you will receive an additional supply, but as you will be able to procure fish and vegetables, you are to endeavour to make the provisions you receive serve as long as possible.

"The convicts being the servants of the Crown, till the time for which they are sentenced is expired, their labour is to be for the public; and you are to take particular notice of their general good or bad behaviour, that they may hereafter be employed or rewarded according to their different merits.

"You are to cause the Prayers of the Church of England to be read with all due solemnity every Sunday, and you are to enforce a due observance of religion and good order, transmitting to me, as often as opportunity offers, a full account of your particular situation and transactions.

"You are not to permit any intercourse or trade with any ships or vessels that may stop at the island, whether English or of any other nation, unless such ships or vessels should be in distress, in which case you are to afford them such assistance as may be in your power.

"Given under my hand, at Head Quarters in Port Jackson, New South Wales, this 12th day of February, 1788.

(Signed)

"ARTHUR PHILLIP."

February 27, 28, and 29. These days were chiefly taken up with trials at the criminal court. The governor found with much regret, though with little surprise, that it was particularly essential to adhere to justice, and enforce the penal laws, for the preservation of the community committed to his care. Thomas Barrett, Henry Lovel, and Joseph Hall were indicted for feloniously and fraudulently taking away from the public store, beef and peas, the property of the crown: they were found guilty upon the clearest evidence, and having received sentence of death, were taken to the place of execution about six o'clock the same evening: the Rev. Mr. Johnson attended, to whom Barrett confessed his guilt, and acknowledged that he long ago deserved the ignominious death which he was now about to suffer: he was launched into eternity, but Lovel and Hall were respited until six o'clock the next evening, at which time they were in like manner

manner brought to the fatal tree, where the governor sent them by the judge-advocate their pardon, on condition that they should be banished to some desert island. Daniel Gordon and John Williams, both blacks, were found guilty of stealing wine, the property of Mr. Clarke; the Court recommended Williams on account of his ignorance and youth to mercy, accordingly he received the governor's pardon: Gordon had his sentence of death changed to banishment, when he accompanied Lovel and Hall to the gallows. John Freeman, a convict, was found guilty of stealing

seven pounds of flour from another convict: when according to his sentence he was at the tree, with the rope about his neck, he was offered a reprieve on condition that he would become hangman, and perform all the necessary duties of common executioner during his stay in the country. It was some time before he could be prevailed upon to accept this pardon; at last he consented, but with extreme reluctance. His accomplice William Sherman was sentenced to be whipped, and received three hundred lashes.

CHAPTER IV.

Weather in March—The Governor explores Broken Bay—Some Account thereof—Meetings with the Natives—One of the Females falls in love with the Governor's great coat—Her cheerfulness—Account of an Old Man and a Youth—Their Civility—The Old Man's theft—Governor's displeasure—The Native's valour—Account of the Timber—Departure of the French Ships—Death of Father Le Receveur—Inscription over his Grave—Lieutenant Ball arrived from Norfolk Island—Lord Howe's Island—Remarkable Turtle—Description of Norfolk Island—Salubrity of the Climate—Three Transports discharged—The Governor's first Excursion in April to explore the Country—His second—Success thereof—Curfory Remarks.

THE month of March introduced very disagreeable weather, which continued variable throughout; there were frequently strong gales from the southward and south-east, moist and hazy weather with a very high sea; both mornings and evenings inclined to be cold; the thermometer from 60 deg. to 75 deg. On the 2nd instant the governor went with a long-boat and cutter to explore the broken land, called by Captain Cook Broken Bay, about eight miles to the northward of Port Jackson, and remarkable for its extent.

The natives being very numerous here, though friendly-inclined, the governor deemed it advisable the first night to repose in the boats which lay within a rocky point in the north-west part of the bay. The next morning they passed a bar, which had only water for small vessels, and entered a very capacious branch, from which the ebb-tide flowed with such vehemence, that the boats could not possibly resist the stream. In this place the water was remarkable for depth. Not having leisure to seek a channel for the boats among banks of sand and mud, this place of course was not so sufficiently examined as to admit of a minute description: the land in the upper part of this branch was swampy and low, it was the resort of several birds, particularly one of an uncommon kind, called the hooded gull. From the north-west branch, they proceeded to the south-west, having crossed the bay; the entrance thereof is bold, and affords good shelter for shipping: the soundings are seven fathoms, which increased upon their proceeding, so that there is plenty of water for heavy vessels. There were large trees on the tops of the mountains: the land was higher than that at Port Jackson; equally covered with timber, but more rocky: there is excellent water near the southern entrance into the bay, to which the commodore accordingly gave the name of Pitt Water. Continual rains prevented a stricter search. During this excursion they had several meetings with the natives. One of the females fell in love with the governor's great coat, and practised every artful means to induce him to give it to her; she danced, played, wept, and immediately after laughed. Being however appeased, she became exceedingly cheerful and loquacious; frequently joined their party, and sung for them in a manner not unpleasing. The male natives were very friendly; and constantly assisted in lighting the fires.

On account of the heavy squalls of wind and incessant rains, there was great difficulty in getting round the headland which separates the branches,

on visiting the southern branch of Broken Bay. An ineffectual attempt was made to land, there not being water sufficient for the boat: on endeavouring to approach the rocks, two natives, an old man and a youth, who were standing thereon, perceiving how anxiously the English were labouring to get under land, pointed out with much solicitude the deepest water: they afterwards brought them fire, and were desirous to serve them. The old man conducted two of the officers to a distant cave, but they did not venture to go in, notwithstanding all the intreaties and persuasions which the old man expressed by signs; this was afterwards regretted, as they found next day that the cave was large enough to contain their party, and would have been a comfortable shelter from the rain; this friendly old native was rewarded with presents: in a day or two after this old man, his son, and other natives came to dance and sing. His excellency gave them presents as usual; but in the evening a spade was mislaid, and the governor having found it in the possession of this old man, thought proper to show some marks of his displeasure on account of the theft; accordingly, pointing to the spade, he gave him a few trifling blows, and pushed him away with indignation; the offender immediately seized a spear, and advancing towards the governor, threatened revenge; but finding his menaces disregarded, he threw it down and departed: at this time there were several officers and men with the governor, so that the bravery of this aged native was remarkable. He appeared with the rest of the natives the next day, but in order to convince him of his error, he was less noticed than his companions.

March 9th. Having now explored the country as much as the weather would permit, Governor Phillip returned from Broken Bay to Port Jackson. It was his intention to return by land for the sake of seeking a part of the country which was free from timber, but the constant rain rendered his design at present impracticable.

The chief employments now going on were erecting store-houses and huts of cabbage-trees for the men; these buildings were very much retarded for the want of good timber, for though all the trees were as remarkable for their circumference as their size, yet they are so crooked, so rotten and broken, that very few could be found of any service; indeed it appeared fit for nothing else than fire-wood, for which it was excellent, as it kindled instantaneously. The appearance of these trees is very deceitful, as they might be supposed fit for

any use whatever, not a piece thereof ever so well dried, a heavy nature, with water instantly penetrating natural weight, it is immediately on immersion is deficient in timber which is most excellent. Unfortunately no kind of unite it. All the timber extracted from shells residence of the governor towards the east.

March 10th. The tany Bay. Count two long-boats, are employed as the English intercourse between towards the north, their voyage. During Father Le Receveur come out as a native wounds which he received on his first encounter at the North of his untimely death, a common head loose earth which nailed against a tree, inscribing:

Here lies
E. F. F. M.
Physician

Duce
Ob.

As the painting of away by the rain, on inscription was, with a piece of copper, at the governor's command was to substitute a head day.

March 19th. The Supply tender from on the 29th of the difficulty and danger the coast before he could possibly land the fold was the violence the shore, which all this passage was discovered. 31 deg. 36 min. min. east, which was Lieutenant Ball; its circumference, and very have stopped at this as difficult as at North to Port Jackson he found anchorage was coral rock: the upon a sandy beach; not weighing less than him, and they were people in the hospital.

Norfolk Island is ference: it is one pine, the most remarkable grandeur. There being pumice stone mixed reason to imagine formed by the eruption of the sea. Near is a small mountain Mount Pitt, whence a very delightful vallies, each of which purpose of turning many other springs of constancy of breezes

any use whatever, yet, what is very extraordinary, not a piece thereof, though cut ever so thin and ever so well dried, will float in water: it is of such a heavy nature, without being truly solid, that the water instantly penetrates, with which and its own natural weight, it sinks to the bottom like a stone, immediately on immersion. Though this country is deficient in timber, it amply repays in stone, which is most excellent for building; but unfortunately no kind of mortar can as yet be found to unite it. All the lime that could be possibly extracted from shells was procured for the intended residence of the governor, but it was very insufficient towards the completion thereof.

March 10th. The French ships sailed from Botany Bay. Count De la Peyrouse had completed two long-boats, and the French being as busily employed as the English, of course there was little intercourse between them. Those vessels returned towards the north, where they were to make another voyage. During their stay in Botany Bay Father Le Receveur died; this French Abbé had come out as a naturalist in the *Atrolabe*; the wounds which he received during the unfortunate encounter at the Navigator's Islands were the cause of his untimely dissolution: his grave was but humble, a common head-stone was lightly stuck into the loose earth which covered it. There was a board nailed against a tree adjoining to it with the following inscription:

Hic jacet LE RECEVEUR,
E. F. F. Minimis Gallix Sacerdos,
Physicus in circumnavigatione
Mundi,
Duce De la Peyrouse,
Ob. 17th Feb. 1788.

As the painting on this board was either washed away by the rain, or destroyed by the natives, the inscription was, with some alterations, engraved on a piece of copper, and affixed to the same tree by the governor's command, whose intention it also was to substitute a handsome head-stone on a future day.

March 19th. Lieutenant Ball arrived in the Supply tender from Norfolk Island, which he made on the 29th of the preceding month with great difficulty and danger. He was about five days off the coast before he could discover a place where he could possibly land the stores; so great and manifold was the violence of the surf and the rocks of the shore, which almost surround the island. In this passage was discovered an unknown island in lat. 31 deg. 36 min. south, and in long. 39 deg. 4 min. east, which was named Lord Howe's Island by Lieutenant Ball; it is about twenty miles in circumference, and very barren. The lieutenant would have stopped at this port, but found the landing as difficult as at Norfolk Island. In his return to Port Jackson he examined it more particularly; he found anchorage at the west side, but the bottom was coral rock: there was an abundance of turtle upon a sandy beach; eighteen of which (the smallest not weighing less than 150 lb.) he brought with him, and they were highly acceptable to the sick people in the hospital.

Norfolk Island is about seven leagues in circumference: it is one entire wood, overpread with pines, the most remarkable for straightness, size and grandeur. There being a great quantity of scattered pumice stone mixed with the earth, there is some reason to imagine that the island was originally formed by the eruption of volcanic matter from the bed of the sea. Near the middle of this island there is a small mountain, named by the commandant Mount Pitt, whence a copious stream flows through a very delightful valley, which makes several divisions, each of which retains sufficient force for the purpose of turning mills: besides this, there are many other springs of excellent clear water. The constancy of breezes from the sea moderates the

natural heat of the climate: so that by such temperature it is pure and salubrious. Nothing can thrive so well as vegetables here, one crop always succeeding another: the leaves of the trees are so good, that they are an excellent substitute for grass, being equally as well relished by the sheep, hogs, goats, &c. and on which they both thrive and fatten.

Nature, uncourted, more than generous seems;
Witness the stately pines—the purling streams;
The air salubrious, and the noble foil,
Which amply compensates the sower's toil:
Now bounteous heaven sends refreshing rain,
From time to time its verdure to maintain:
And tho' no grass adorns the fertile ground,
The leaves of trees as good as grass are found.
Here vegetation flourishes indeed!
Crops after crops alternately succeed.
Blest climate! whose sun keeps off the zephyrs rude:
Whose heats by constant breezes are subdued!
Such thy mild temperature throughout the year,
That every winter summer doth appear.

March 25th, the Scarborough, Lady Penrhyn, and Charlotte, transports, were discharged from government service, being previously cleared of all their stores: they were left to their commanders free-will, who were about to depart for China in order to load home for tea, being so appointed by the East-India Company.

The month of April was much the same as that of March in respect to weather, which still continued variable. The mornings were cloudy, and the rain generally fell at night, with southerly and south-east winds; but when the wind changed to the westward or north-west, it was then fair and pleasant; when calm, it was very hot in the middle of the day, but the mornings and evenings were cold. Thermometer from 68 deg. to 72 min.

The chief events of this month were two excursions, which were made by Governor Phillip for the purpose of exploring the country. The first was on the 15th, when his Excellency, attended by Lieutenants Ball, George Johnston, the judge-advocate, Surgeon White, three soldiers, and two seamen, set out with provisions for four days, and landed at the head of Small Cove, called Shell Cove, near the entrance of the harbour on the north side: they arrived to a large lake, surrounded by extensive bogs and marshes, which rendered the examination thereof exceedingly laborious: but as the governor was desirous to acquire all the knowledge of the place that he possibly could, they were frequently up to their waists in water. On this lake they perceived a black swan of a very handsome kind, larger than a common one, and formed as beautiful. Being obliged to desist from their design, they proceeded a mile or two northward along to the sea-shore: they then fell in with a small salt-water lagoon; after rounding which, and proceeding four or five miles westward, they passed a swamp, and arrived to an immense wood, which displayed a variety of large high trees, which were at a considerable distance from each other. Though there was some appearance of meadow land here, the soil was far from being good: the grass, which was of a four nature, grew together in thick bushes. In this place, by the governor's orders, they pitched their tents adjoining a swamp, for the sake of being occasionally supplied with water, which was far from being good or clear. A large fire was kept before the tents, as it was very cold, and there was a heavy dew: during the night they were very much teased with muskitoes, which were no doubt allured there by the fires. The next day they proceeded many miles inland towards the west: they here discovered an attempt at sculpture by the natives, having found several large stones with various figures cut thereon, consisting of representations of themselves in different postures, fishes, animals,

animals, &c. Much ingenuity appeared in these likenesses, especially when proper allowance was made for the deficiency of tools. They walked several miles, and in the evening fell in with the north-west branch of Port Jackson harbour. The seamen were so fatigued, especially as their shoes were very bad, that they could proceed no further: they returned, therefore, with Lieut. Ball and a marine, to the ships, being supplied with a competency of provisions by the governor: the rest pursued their journey westward by the water-side, in hopes of soon finding better land; but were obliged in the evening to pitch their tents in a most melancholy desert place, near a steep valley, where there was a fresh water stream: here they washed their shirts and stockings, dressed their provisions, and refreshed themselves.

The next morning, April 17th, they put by their tents and remaining provisions, being now reduced to a small quantity of rum and bread, and proceeded westward about fourteen miles into the country, in search of land that had better water, but without success: under such circumstances they deemed it prudent to return to their tents in time, which they removed a little further down to the flowing of the stream. It rained this evening very heavily, which was attended with much thunder and lightning.

April 18th, early in the morning, they renewed their journey; proceeding down the river, they were obliged to climb prodigious heights, and wade through several tides, which rendered this day's march exceedingly laborious. After being very much spent and fatigued, they were agreeably surprised by the sight of two boats, which Captain Hunter had sent out to meet them, and by whom they were informed that the seamen (who had been obliged through fatigue to return with Lieut. Ball) had arrived safe at the ship the day after they left them. The governor's steward had sent provisions, which was very acceptable: they went on board the boats, and rowed down the river till they reached a little cove, where they dined with no little satisfaction; after which they embarked again, and about six o'clock in the evening were in Sydney Cove.

During this excursion, the country was found barren and rocky: there were so many obstacles on the hills, that both ascending and descending were difficult, and in many places impracticable. When about fifteen miles distant from the sea-coast, there was an excellent view of the inland country and its mountains, several of which at this time received their names from the governor; the most northern he called Carmarthen hills, the most southern Lansdown hills, and one which lay between these Richmond hill.

Another excursion took place on the 22d of this month. The same party, with the addition of Lieutenant Creswell and six privates, landed in the morning at the head of the harbour, with provisions for seven days, intending to examine the country westward: they were now equipped much better than before, having spare shoes, trowsers, shirts, &c. Every man carried his own allowance: the soldiers, in addition to theirs, carried two tents with the poles, a camp kettle, &c. They had also a small hand hatchet, for the purpose of marking the trees as they went along, that they might be a direction for their return. It seemed a good country at the first setting out, but they shortly arrived at a very close cover, which after long endeavouring to pass through, they were obliged to leave, lamenting their fruitless attempt. They pitched their tents near some stagnant water: during the night it thundered, lightened, and rained. The governor, who had not perfectly recovered from the fatigue of his last expedition, was suddenly seized in the night with violent pains in his side and loins: he was much better in the morning, and the day being remarkably fine, would not be dissuaded from pur-

suing his intentions. By keeping close to the banks of a small creek for about four miles, they were at length able to pass the cover. After which they fell in with a branch of Port Jackson, which had not been discovered till then; on the bank of which there was very excellent grass, and here and there some plants, which resembled the indigo. They proceeded along this branch westward for some miles, till at last they arrived to a fresh water stream: here they encamped; and Capt. White having shot a white cockatoo, and two crows, they made a kettle of soup, which they thought exceeding good. It thundered, lightened, and rained, as it did the night before. The country hitherto examined was delightful; sometimes rising in small hills, which added much to its beauty: the soil was excellent; the trees, which were immensely large, were about twenty to forty feet distance from each other, disencumbered with underwood, which is so common in the rocky places.

April 24th, they proceeded to trace the river, and discovered a quarry of slates, which afterwards proved unfit for use: they were induced, through the apprehension of rain, to pitch their tents about four in the afternoon, having previously shot a couple of crows, and some paroquets: their ducks being picked, they stuffed them with small slices of salt beef, and roasted them, than which nothing could eat better. The evening having cleared up, this night proved dry. An unaccountable noise, resembling the human voice, was frequently heard, but whence it proceeded could not be discovered. This country was by no means so excellent as that already passed, nor was the water so abundant and clear, though it was far from being bad. The next day they sowed some seeds, and then proceeded about four miles west: here they found an humble lute, which evidently belonged to some of the natives, though it appeared to be a long time uninhabited: at a little distance from this, there were three others, deserted in like manner. A tree was also discovered burning, which Lieut. Ball imagined to have been set on fire by lightning, as there was not the least sign of a native being at present in the place; there were three kangaroos near this burning tree. The company, though much tired, still went on about two miles further, in hopes of meeting with good water; but herein disappointed, they were obliged to encamp about four o'clock near a stagnant pool, where the ground was so exceedingly parched and dry, on account of the continual fires in this country, and the extreme heat of the weather, that it was with the greatest difficulty they could thrust the poles or drive the tent-pegs into it. A number of beautiful paroquets and paroquets frequented the trees hereabouts, on account of the height of which the guns could not reach them. These birds made such a chattering noise, that it was almost impossible to hear one another speak.

April 26th, they proceeded this morning still westward, and met another tree on fire, which, and the appearance of others which had been burned, led them now to imagine that it was done by some unperceived natives for the purpose of ensnaring the kangaroos. They crossed a water-course, and having ascended a very pleasant eminence, where there were no trees to incommode the prospect, Carmarthen and Lansdown hills were plain to the view. The country round this hill was so delightful, that it was called by the governor Belle Vue: in a valley beneath which was perceived a fire, with some scraps of a salt root, sufficient proof that some of the natives had been there lately: from this they crossed another water-course, and ascended another hill, but from whence nothing could be seen, on account of the thickness of the surrounding wood.

The provisions being nearly exhausted, it was deemed advisable to return, though much against the inclination of the company, who would have

have reached the opposite side of the bay sufficiently supplied with provisions had been made on their way back. They saw a hollow tree ascending as they went upon near examination the natives, there covered. Having (according to the custom) and some tents in the evening; this night was unaccountable voice now repeated, which, though it proceeded from the natives, did not give any ground for suspicion. April 27th. As they returned back as fast as possible, the situation in which they were, but by the marked hills, was not so bad as they thought. The utmost a direct line, was not though there had been the way they perceived large as that of a hog intermixed with approaching, the ground the boats, which were returning for them. Lieutenants and marine, were therefore cure whatever provisions mand the boats to these gentlemen had

have reached the opposite hill had they been sufficiently supplied with store. By the marks which had been made on the trees, they were safely guided on their way back. As they were returning they saw a hollow tree on fire, out of which the smoke ascended as through a chimney, and which proved upon near examination to have been set on fire by the natives, there being several combustibles discovered. Having shot two crows (according to custom) and some lorquets, they pitched their tents in the evening, and made a comfortable supper; this night was clear and fine, and the same unaccountable voice, which was heard before, was now repeated, which, as well as the ear could distinguish, proceeded from the same spot.

April 27th. As the stores were just spent, they hurried back as fast as possible, it being rather a disagreeable situation in case of misting the right path; but by the marked trees they were safely conducted back. The utmost extent of this excursion, upon a direct line, was not more than thirty-three miles, though there had been five days spent upon it. On the way they perceived the dung of an animal as large as that of a horse, but more like that of a hog intermixed with grafs. As the night was fast approaching, the governor was apprehensive that the boats, which he ordered to attend daily, might be returning for that day before he could reach them. Lieutenants Johnson and Creswell, with a marine, were therefore ordered to go a-head, and secure whatever provisions were sent up; also to command the boats to be out early the next morning: these gentlemen had very fortunately reached the

place in time; they returned with a seasonable supply of provisions to those they left behind, and the parties being re-united, they encamped about a mile's distance from the place where the boats were to meet them. The governor before this having got a fall into a pit, which had been concealed by long grafs, was again indisposed, and had a relapse of his former complaint. In the evening they returned to Sydney Cove.

As the governor's indisposition still continued, (for his complaint was very much increased by this last journey) he deemed it absolutely necessary to allow himself the respite of a few days before he encountered so much fatigue again; for as it was the wish of every one to seek a river, the discovery of which was so important, another expedition had been already planned with a view, if possible, to reach either Lansdown or Carmarthen hills.

When they had returned from this last excursion, the governor was very much displeas'd to find, that five ewes and a lamb had been killed during his absence, very near the camp and in the middle of the day; live stock being at this time very precious, the loss of any was therefore a very serious consequence: the cause of this misfortune was unknown; it was conjectured that some dogs belonging to the natives had been the occasion; others attributed it, but without so much reason, to the natives themselves. The live stock at present consisted of 87 chickens, 122 fowls, 35 ducks, 29 geese, 18 turkeys, 5 rabbits, 25 pigs, 49 hogs, 19 goats, 29 sheep, 5 cows, 2 bulls, 3 colts, 3 mares, and one stallion.

CHAPTER V.

Weather in May—Thefts punished—James Bennet executed for robbery—Departure of the three Transports—One of the Natives shaved—Small quantity of Vegetables sown—Foundation Stone laid of the Commodore's private House—Inscription for the Wall—William Ayres and Peter Burn attacked by the Natives—Disappointment of Turtle—Two punished for an assault—Meeting with an old man and a girl—William Okey and Samuel Davis murdered by the Natives—Governor's Concern—Determination—Search for the Murderers—Despair of succeeding—Interview with a number of Natives—Their Tokens of Anger—Confidence and Friendship—Governor's Behaviour—Parting between the English and Natives—Reason for supposing Lansdown Hills inhabited—Fresh accounts of the late Affray—A Native murdered—Several wounded—Proclamation—A severe Loss attending the Live Stock.

THE beginning of May was attended with much bad weather; strong gales from south to south-east, generally attended with rain in the night: the middle of the month was fair and settled for several days together, with a regular land and sea-wind. About the close of the month the wind prevailed between S. W. and S. E. the weather being then unsettled, and frequent showers of rain, which generally fell in the night: there was but little wind or warm weather in the day-time. The thermometer from 56 deg. to 67 deg.

May 1st. Several trifling thefts were brought before the criminal court, and those who were found guilty sentenced to receive corporeal punishment. James Bennet, a young man but an old offender, was executed for robbing a tent belonging to the Charlotte transport of sugar, and other articles. At the tree he made a confession of his guilt, and acknowledged other crimes.

The three transports, Lady Penrhyn, Charlotte, and the Scarborough, which were bound to China, sailed May 5th, 6th, and 8th. On the 6th the Supply tender sailed to Lord Howe's Island for some turtle, in order to make fowr for several who were sorely afflicted with the scurvy, there being at this time upwards of two hundred, who were so bad that they could not be employed.

Several of the natives came along-side the Sirius, and by signs expressed a desire to have their beards taken off. One of them, with the greatest patience,

No. 3.

and without the least apprehension, suffered the ship's barber to shave him, and seemed very much delighted during the operation.

As the clearing of the ground was not only attended with much time but great difficulty, it was impossible to pay any extraordinary attention to vegetables; at present no more than about eight or ten acres with wheat and barley were sown: the Lieutenant-Governor and others had previously made use of some ground for the support of their own live stock, in the labour of which they were occasionally assisted by the convicts, according to the governor's command. The foundation-stone of a private house for the commodore was laid, and a plate of copper with the following inscription upon it, was intended to be placed in the wall:

"ARTHUR PHILLIP, Esq.

Captain-General in and over his Majesty's Territory of New South Wales and its Dependencies,

Arrived in this Country on the 18th day of

January, 1788, with the first Settlers;

And on the 15th day of May, in the same year, the first of these Stones was laid."

May 21st. One of the convicts, William Ayres, who was for some time in an ill state of health, was permitted by Surgeon White to go into the country, a little distance from the camp, in search for herbs to make himself some tea; late in the evening he was brought to the hospital, dangerously wounded by the natives, having one of their spears

* G

sticking

sticking in his loins, which he received while he was stooping with his back to his adversary; this weapon stuck so fast, and was barbed in such a manner, that it could not possibly be stirred; it had penetrated the flesh near three inches, and it was by the dint of cutting very deep that the spear could possibly be extracted. When Surgeon White had performed this operation, Ayres said, that he had been wounded by three of the natives, who came upon him unawares: there was one Peter Burn who attended him in the same employment; this man was attacked by another party, who dragged him along in apparent distress, with his head bleeding: the situation of Ayres rendered it impossible for him to assist his companion; for after he was wounded he was beat in a most cruel manner, the clothes stripped from his back, which they carried off, telling him by signs, as he interpreted, that he might now go home to his friends. A shirt and a hat were afterwards found in one of the huts of the natives, which were both pierced with spears, and which, it was conjectured, belonged to Peter Burn. Neither the man, nor any remains of him, could ever be found. The governor would not be persuaded but that the natives had been insulted by these convicts, and consequently provoked to such outrage; but Ayres declared that neither he nor his companion were aggressors.

May 25th. The Supply tender returned from Lord Howe's Island, being very unfortunate in their mission, as not one turtle could they procure. The weather she met with was so exceedingly squally, that she was obliged to cut away her best bower anchor, but suffered no other damage: this disappointment of the turtle was very much to be lamented, as numbers were languishing under the scurvy, several of whom died.

26th. There were two men belonging to the Sirius, tried for assaulting and beating in a most terrible manner another of the same vessel, while he was performing his duty: they were found guilty, and sentenced to receive five hundred lashes; but in consideration of the weak state they were in, being very much afflicted with the scurvy, part of the sentence was only inflicted.

28th. Captain Hunter, his first lieutenant, and the surgeon of the Sirius, went to the point of land which forms the north-head of Port Jackson. In the course of this excursion they met an old man with a girl about four years old, who were lying on the ground, and were at first endeavouring to conceal themselves; after a little acquaintance the old man began to examine the surgeon's gun, who desirous to shew him the utility of it, fired at a bird which immediately fell. The native was exceedingly alarmed at the explosion, but when the bird was given him he forgot his fears, and having about half broiled it, with part of its feathers on, he devoured it, entrails and bones, in a most ravenous manner. The child's apprehensions still continued, and every now and then he would hide behind the old man to escape notice.

30th. William Okey and Samuel Davis, two men who had been employed in gathering rushes for thatch, at some distance from the camp, were found dead by Captain Campbell of the Marines, who went up to the harbour to procure some rushes from them. Their bodies were conveyed to the hospital, one of which (Okey's) was so mangled, that it exhibited the most shocking marks of cruelty: he had four spears in his body; there was one which had been lodged so deep in his breast, that it was with the greatest difficulty extracted; two others were equally fast. His skull was divided, out of which his brains had dropt; his eyes were gone, and he was otherwise terribly abused. Davis had but few marks of violence about him, and as he was neither stiff nor cold, when brought to the hospital, could not have been long dead. It was conjectured that the first injury had been of-

fered by these unfortunate men, especially by Okey, whose sufferings had been greater; this was the cause of much concern and uneasiness to the governor, who was in hopes of conciliating the affections of the natives, and establishing a friendly intercourse with them: he was however determined to examine more particularly into the business, and if the murderers or accomplices could be detected, to make known his displeasure; the rools of the ruff-cutters having been carried away, he was in hopes that these would lead to a discovery; the attempt was certainly worth making, for if he could find the assailants, he might not only convince them of their unwarrantable proceedings, but prevent future accidents of the same nature, and render permanent their mutual confidence and harmony. The next day was appointed for the experiment; the governor went out with a small party, in number about twelve, and landed at the place where the murder was committed: after a fruitless search here and about twenty miles further, they despaired of succeeding, not having seen one native for the whole day.

When they arrived to the north shore of Botany Bay, they discovered about twenty canoes, which were employed in fishing: none of those canoes had joined the party, according to their expectations, when they had encamped for the night; and the next morning, though they perceived above double the number of canoes which were drawn upon the beach, they could not see any person that belonged to them. The governor, deeming further search but loss of time, was now about returning to Port Jackson: on his way, near the sea coast, he met a vast number of the natives at the mouth of a cove, who were as much surpris'd as the English at this unexpected meeting. The governor had scarce time to order his men to halt, when several of them came out to meet him in arms: their leader, by signs, commanded the governor and his party to retire, seemingly threatening them if they disobeyed; however, when he saw the governor lay down his sword, and advance towards him alone, in a friendly manner, he immediately gave his spear away, and received him with the greatest good-nature. In about a few minutes, the governor and his party were surrounded by two hundred and twelve natives, who followed the example of their leader, having laid aside their spears and stone hatchets, and shaking hands in the most friendly manner: there was no appearance of treachery or deceit, nor any inclination to take advantage of the inferior number of the English. Several women and children were seen at a distance, some of whom were introduced by the men, to receive what little presents the governor had to give. There was no cause to suspect that any of these people were concerned in the murder, as they not only appeared averse to hostility, but very much inclined to amity. On their first approach the governor was induced, by their tokens of anger and superiority of number, to command the soldiers to fix their bayonets, and observe a close march down the hill, in case of danger. There were but six soldiers, besides two armed convicts, who were taken as guides. The natives did not betray the least apprehension at seeing these men, though in general they are afraid of soldiers. The women were so delighted with the presents they had received, that they danced and threw themselves into strange postures.

Governor Phillip was now introduced by their leader, who was respectfully attended by the rest of the natives, to the finest stream of water that had been yet discovered; the cove into which it ran was very much expedit to the sea. One of the natives, an old man, and who had been the most familiar, perceiving the governor's party approaching another cove, entreated by signs their permission to go before; this being readily complied with, he ascended the hill, and making an uncommon noise, held up both

his hands; whereupon another natives assembled in a bay, about half a mile: the English, however, ascending the cove, it being out of therefore parted with their new fr amicable manner. During this ex some smoke seen on the top of between those of Botany Bay an which was a certain indication of inhabited. About sun-set they camp.

hands; whereupon another large body of the natives assembled in a bay, about the distance of a mile: the English, however, declined desisting the cove, it being out of their way; they therefore parted with their new friends in the most amicable manner. During this excursion, there was a smoke seen on the top of Lansdown hills, seen thence of Botany Bay and Port Jackson, which was a certain indication of the place being visited. About sun-set they arrived to their quarters.

It was afterwards discovered, upon further enquiries, that one of the natives had been murdered, several wounded, in the affray between the cutters and them: this seemed to corroborate the governor's opinion, that the provocation had been given by the former; whereupon, on his return, he issued a reward of emancipation proclaimed to any individual who should discover and prove the real truth

of the matter. Notwithstanding this proclamation had not the desired effect of being attended with any real satisfaction, still it promised to be of much service, by deterring others from similar acts of future violence.

About this time a severe misfortune attended the live-stock; two bulls and two cows, which belonged to government, and two cows which belonged to the governor, being the only animals (except one cow) of this kind in the colony, were missed: this loss was very much lamented, as it was irreparable for some time. One Edward Corbett, who stole a frock, having eloped, was also suspected for driving them off to some distant wood; but as they had been left for a time by the man who was appointed to take care of them, it is very probable that they strayed away of themselves: they were traced to some distance, but never could be recovered.

CHAPTER VI.

Her in June—First Celebration of his Majesty's Birth-day—Governor gives a dinner—General Exultation—The banished Convicts pardoned—Bonfires, &c.—Territory nominated—Several Thefts committed during the festivity—Burn and Astott prosecuted for an assault—Acquitted for want of evidence—Corbett's return, after elopement, and being outlawed—His confession of a theft—Sufferings through hunger—His account of the natives—Their burning a human body—Their distress for food—Decree of Outlawry revoked—Referred to the Criminal Court—Sentenced to be hanged—Samuel Payton likewise condemned for Robbery—His Confession—Their execution—Pathetic and eloquent Address to the Spectators—Increase of the Scurvy—Scarcity of Fish—Surgeon White's report—Weather in July—Natives greedy with hunger—A proof of their distress—A3 of violence in killing Fish—Cookswain's prudence—A cause tried before a Civil Court of Judicature—Verdict given for the plaintiffs—Supply sails for Norfolk Island—Four Transports for England—Surgeon White and Master of Golden Grove victualler meet some Natives—Mark of unusual delicacy—A party of Convicts attacked by the Natives—Their Danger, and Escape—A terrible Accident—A Convict wounded by the Natives—His miraculous Escape—Another interview with the Natives—Occasional Remarks—Sudden Alarm.

THE month of June began with very fine and pleasant weather, attended with land and sea breezes, but it was succeeded with great storms and rain, the wind being chiefly from the S. E. Thermometer from 52 deg. to 63 deg. On the 4th. This being the first celebration of his Majesty's birth-day in New South Wales, it was attended with more than common festivity, as all ranks were very particular in their demonstrations of loyalty, which concluded with general hilarity and merriment. By the governor's command, the Sirius and the Adventure, at sun-rise, fired each a salute of twenty-one guns; the same was repeated in the middle of the day, and at sun-set. After the King's ships had finished firing at one o'clock, the transports fired five guns each. The marines on shore were under arms, and fired three volleys, which were succeeded with three cheers. This ceremony being over, the lieutenant-governor and all the officers paid their respects to Governor Phillip, at his house; where they all met again at dinner, during which the governor was playing the most loyal tunes: his Majesty's health, and the Royal family's, were drank in a toast. Throughout the settlement, this was a day of universal festivity, a holiday to every labourer; that the exultation might be general, the governor granted a full pardon to the four convicts who had been relieved from death on condition of being banished: these men were immediately released from their exile, to have their share of the vivacity: large bonfires were lighted, and every countenance displayed both joy and satisfaction. By the governor's command, every soldier had a quart of porter, besides his common allowance of rum; and every convict half a pint of spirits, made good use of; that they might all drink their Royal Master's health.

During this scene of loyalty and good-humour, the governor publicly nominated the part of the territory which he had taken possession of, Cumberland County. This title had been previously fixed upon, and is now published.

Though it might naturally be imagined, that the most evil-disposed would have been amused from their vicious inclinations, on such a day of harmony and pleasure, yet so depraved and abandoned were the majority of convicts, that they took advantage of this general mirth, and committed several thefts; they not only robbed many of the officers, but even one another: neither lenity nor severity seemed to have effect upon these wretches.

June 10th, Patrick Burn, and John Astott, were prosecuted by Lieut. G. W. Maxwell and Mr. Keller, of the Sirius, for having been concerned with other convicts in riotously attacking and assaulting several seamen belonging to the men of war: for want of sufficient evidence, they were acquitted.

On the 24th of this month, Edward Corbett, one of the convicts who had been concerned in the thefts on his Majesty's birth-day, and who for fear of detection absconded the next morning, returned to the camp almost perishing with hunger. This being the man who was suspected for driving off the cows, he was a few days before his return outlawed: the suspicion immediately took place after his elopement: he acknowledged his having stolen a frock, (the robbery with which he was charged) but declared his innocence of the cows. When he ran away, he was in hopes of being able to live in the woods; but to his grief found the impossibility of such a design; he had frequently met a party of the natives, who never used him ill, though they were never very kind to him; one, that behaved the most friendly, gave him a fish, and then by signs advised him to go home: once he was apprehensive that they would burn him; on which account he ran away, being much alarmed at seeing the head of a man in a large fire, and other remains of a human body, which was conjectured to be Burn's, who was carried off by the natives some time ago, when Ayres was wounded; however several, particularly the governor, doubted these reports, for there never was reason to suspect any of the natives were cannibals: Corbett, however, in their vindication, added,

that they appeared at that time in great distress for food; he had seen four of them languishing away who had perished through hunger. If therefore they did make occasional use of human flesh, they were compelled by dire necessity! Corbett's appearance was ample demonstration of the sufferings which he endured; the decree however by which he was outlawed was revoked, and he was referred to the criminal court, to be tried for the theft he had committed. As he pleaded guilty, he was accordingly sentenced to be hanged. Another convict, Samuel Payton, was likewise condemned with him, for having stolen on the 4th of June several shirts, stockings, combs, &c. His trial had been postponed, on account of a wound he received in his head from Captain-Lieutenant Meredith, who detected him in his tent, when he returned from the bontire; in consequence of this wound he was for some time senseless: while Surgeon White attended him, he frequently importuned him to confess his guilt, and accomplices; but he denied the robbery, though he could give no plausible reason for being found in the captain-lieutenant's tent: however, after condemnation, he not only confessed, but discovered where several of the articles were. Corbett and Payton addressed the spectators at the fatal tree, acknowledging the justice of their sentence, which they had long deserved, and recommending their fate as a caution to others. Payton spoke in a very affecting, sublime, and correct manner: they both died exceedingly penitent. The execution of these two unfortunate men, who were about twenty-two and twenty-four years of age, seemed to have made no small impression on the minds of those convicts who were present.

The erection of huts was now the chief concern, for as the season was remarkably wet, tents were found very uncomfortable; these huts were only temporary, being composed of very perishable materials. There were several violent storms of thunder and lightning. On account of the scarcity of fish (for fish never abounds here at the cold season of the year) they were obliged to subsist for the chief part upon salt provisions; this, no doubt, was the great cause of the scurvy, which now became almost general. The gum which is extracted from the trees, Surgeon White found in all cases of a violent dysentery, of the greatest service.

June 30th. This day Surgeon White made the following report:

Marines sick in the hospital	- - -	4

The month of July began as the last ended, a continuance of blustering rainy weather; in the middle of the month it was less windy, though dull and cloudy; towards the end it became fair weather, with westerly winds. Thermometer from 52 deg. to 63 deg.

The scorbutic patients were worse this month; the want of fresh food was very much lamented, and the scarcity of fish was as severely felt by the natives as the English, as they were equally sick and miserable. Whenever any of the birds that were shot were given them, they were so greedy as frequently to eat them without being plucked, or scarce warmed with the fire. A proof of their distress was apparent on the 9th of June: a party of them arrived to the place where the Sirius's boat had been to haul the seine; these natives were armed, and notwithstanding it was customary, by the governor's orders, to give part of whatsoever was caught (let it be ever so little) to the natives that were present, which always satisfied them, yet these men, without trying any fair means to obtain their purpose, began to threaten the crew, and seized with violence what fish they had caught: several stood at a distance to throw their spears, if any resistance was made; however the cockswain with much prudence suffered them to take whatever they chose; on which they departed with much satisfaction and good-humour. After this act of violence, the first that was known, an officer was always sent down the harbour with the boat.

A cause now came on to be tried, for which the governor had called a civil court of judicature, consisting of the Judge-Advocate, Rev. Mr. Johnson, and Surgeon White. This was a complaint made against Duncan Sinclair, Master of the Alexander transport, by Henry Coble and his wife Susanna (two convicts) for not having delivered a parcel, which was sent on board the Alexander by a Mrs. Jackson, containing wearing apparel, books, &c. value twenty pounds, intended for the use of Henry Coble, his wife, and child. It was proved by the defendant's confession, that this parcel had been received on board; and by further evidence, that this packet had come afloat, and the books which had fallen out of it had been delivered to the convict. A verdict was given for the plaintiffs, and the master of the transport obliged to compensate the loss which plaintiffs, Coble and his wife, sustained, which was the value of fifteen pounds; five pounds being allowed for the books which were received.

July 13th. The Supply tender sailed for Norfolk Island with provisions, &c. for the people there. Four transports, viz. the Alexander, Friendship, Prince of Wales, and the Borrowdale victualler, sailed for England; it was their intention to go northward, and pass through the Straights of Macassar and Sunda, it being too early in the season to attempt going round Van Diemen's Land, also to endeavour to get westward by that tract, or go eastward by Cape Horn.

On the 21st, Surgeon White and the master of the Golden Grove victualler, went down the harbour to look for a cabbage-tree, in order to cover the surgeon's hut. When returning they met three canoes that had been out fishing; they approached them, whereupon the natives appeared suddenly alarmed, and were making off with as much haste as possible; but as they were desirous to convince them that their fears were groundless, the surgeon and his companion rowed after them with an intention of giving them some presents, and courting their favour. As soon as they had reached them, an old woman that was among them began to throw her fish in a great hurry overboard, but the afterwards found by their behaviour that there was no cause for apprehension. She had a young girl with her, and what was very remarkable and uncommon, the girl had a long apron on, this being a mark of delicacy which was unusual. The girl was by no means alarmed, she was very free, and laughed immoderately, apparently delighted either with the presents received, or her old female guardian's timidity.

some herbs, particularly a vegetable like balm, which was very good and pleasant, were, crossing the country to Botany Bay, met by a vast number of natives, who were all armed: the convicts, being inferior in number, dreaded to meet them, they consequently took to flight, and were pursued by the natives upwards of two miles; had they been overtaken, in all probability, they would have been murdered, as the natives have generally insulted those whom they have had in their power: these people were accompanied with dogs.

A terrible accident happened on the 23d, the blacksmith's shop took fire: the wood which composed it being of a very combustible nature, like the generality of the timber, the flames became exceedingly fierce, and in a few minutes spread so rapidly, that it was with great difficulty the bellows and other tools were preserved.

July 20th. A convict was severely wounded in the breast by a party of the natives; had he not plunged into the sea and saved himself by swimming, they would certainly have murdered him: he was conveyed to the hospital as soon as possible. Surgeon White extracted a piece of a broken spear, which had penetrated the scalp, under his ear, and gave him exquisite pain: he was very faint, having lost a quantity of blood.

Some little time after this, three canoes, with a man and woman in each, came almost near the point

where the hospital is erected, to fish. Surgeon White, and his assistants, approached them: they did not betray the least fear, but on the contrary were very free and friendly: they were greatly pleased with some of the presents they received, and others they slighted. One of the women had an infant between her knees, for whom she solicited something with the most piteous signs. The surgeon gave her a piece of the linen he had to bind up the wounds of his patients, which she accepted with perfect satisfaction, and tied it round the child's head. One of the sheep was lying dead at some little distance; this caught the attention of one of the men, who seemed rather curious to know what it was: they then proceeded to fish, in which they were very successful. During the intervals, they danced and sung. What is somewhat remarkable, these people, especially the females, imitated the English language in a most distinct manner, and indeed much better than the English could theirs. While each party was thus mutually entertained, the natives in an abrupt manner were paddling away: the cause of this sudden alarm was the appearance of the gunner of the Supply, who at the surgeon's request laid down his gun. Upon this the natives were reconciled, and immediately resumed their sports: they afterwards parted in a very friendly manner.

CHAPTER VII.

Weather in August—Celebration of the Prince of Wales's Birth-day—Occasional joy—A substitute for Tea—A convict beaten and wounded by a party of the Natives—His Escape—The Governor and a party make an excursion—Land in Manly Cove—Interview with the Natives—Presents acceptable—A delay—A fine Duck shot—They arrive to the southern branch of Broken Bay—Return to the Sea-shore—Acres of Land fit for cultivation discovered—Shyness of the Natives at Pitt Water—An ingeniously constructed Hut discovered—Superiority of its Furniture—Opinions in consequence thereof—Interview with other Natives—Their Good-nature—Beans discovered—Boiled, and relished—The Governor and Surgeon seized with a violent vomiting—Encampment for the night—Return to Manly Cove—Surprise of some Natives—Timidity of the Girls—Kindness of an old Man—Occasional Remarks—Attention of a Female Native to Surgeon White—Her Coquetry—Surgeon White shoots a Hawk—The Governor gives it to one of the Girls—Cook-fewain's Information—Hostilities among the Natives—Lamentations of the Women—Arrival at Sydney Cove—A Report—Imposition of one Dailey, a Convict—His Proposal, Trick, Project, and Story—He absconds—The Deception apparent—Dailey secured, examined, and whipped—He carries on the Deception—Is frightened into a Confession—Examined again, and punished—Arrival of the Supply—Remarks on her Passage—Natives destroy some Cattle—Weather in September—A Phenomenon—Preparations for dispatching the Sirius to the Cape of Good Hope.

THE month of August commenced with rainy, cold and cloudy weather; in the morning a hoary frost; southerly and south-east winds. About the middle it was fair and moderate, and towards the end fair and pleasant, with light and variable winds. Thermometer from 56 deg. to 72 deg.

The 12th of August, being his Royal Highness the Prince of Wales's birth-day, the same was celebrated with every due respect. A salute of twenty-one guns was fired from the Sirius and Supply, and all the officers of the settlement and ships dined with the governor: there were bonfires in the evening, and other demonstrations of joy.

On the 16th, a convict was sent out to gather a creeping kind of vine, which runs a great extent along the ground, which is called Sweet Tea: the leaf is about the size, and somewhat like a bay-leaf; the stalk rather slender; the taste very agreeable, resembling liquorice: in short, it is an excellent substitute for tea, and as it doubtless sweetens the blood, much preferable, when the violence of the fever is considered. After this man had gone a mile from the camp, he was met by a party of natives, about fourteen, who were returning from the wood with cork, which they had been cutting either for their huts or canoes; they were consequently without their spears, having no other instruments with them than some stone hatchets and shell sticks, which they employ for this purpose: they attacked the convict, wounded him with one of the shell sticks, and beat him; after this mal-

reatment, they made him strip, with a view, no doubt, to deprive him of his clothes, perhaps would have murdered him, but providentially a report of two muskets, which were fired at some distance, alarmed the assailants, who ran precipitately away.

August 22d, Governor Phillip went with a small party, consisting of Lieutenants George Johnson, Crellwell, Surgeon White, and six soldiers, to examine the coast between Port Jackson and Broken Bay: they landed in Manly Cove; they perceived, at some distance from the shore, about twenty canoes, with two persons in each, but these men were so intent upon fishing, that they were very indifferent about the English. When they landed, they saw three times that number: these natives immediately approached, and behaved exceedingly kind; they were very ready to join their assistance, and one in particular, who was a black man, helped to carry the tents. There were some stockings among the presents that were given them, which seemed highly acceptable, as the extreme cold made these poor wretches fully sensible of the advantage of being clothed. On proceeding along the coast six miles northward, they were delayed near two hours, having sent back their boats, on account of a piece of water, which was somewhat deep, owing to the fullness of the tide. One of the natives, an old man, behaved with the greatest good-nature, and pointed out the shallowest part of the lagoon, but it was some time before they could wade it through, on account of the rapidity of the tide. A very fine

assure the lieutenant-governor of the veracity of the discovery. Dailey arrived to the camp early in the afternoon, and informed the lieutenant-governor that he had left the officer in possession of the mine, and that he was dispatched by Capt. Campbell for another guard: fill the lieutenant-governor doubted, but amused Dailey with promises: the impostor, foreseeing the miscarriage of his scheme, hastened to his own tent, took a few things out of it and absconded. Lieutenant Paulden had received orders to attend Dailey to Captain Campbell, but before the guard was ready to set out Captain Campbell and his party, who had waited several hours for Dailey's return, searching and hallooing through the woods for the cheat, returned very much fatigued and exceedingly vexed at the imposition. The deception was now apparent, and hunger having obliged Dailey to leave his concealment, his reward was very contrary to his expectations; he was immediately secured with two others who were suspected to be his accomplices, and having undergone a private and strict examination, ordered to be severely whipped. Dailey notwithstanding persisted that his late assertion was true, and pretended that his motive for deceiving the officer, was through an apprehension he would not receive the reward he demanded, which he thought himself sure of upon an application to the governor. He was threatened with a repetition of the whipping every week, between the intervals to be put to hard labour, and incessantly loaded with heavy irons, if he attempted to carry on the deception; notwithstanding which he still persisted, and when the governor returned, Lieutenant J. Johnston was suffered to accompany him to the place where the pretended mine was. Previous to their setting out Lieutenant G. Johnstone assured Dailey, that if he attempted to deceive him as he had done Capt. Campbell, or presume to move three yards from him or his party, he should instantly be shot. When he found this officer loading his gun with ball, he began to be somewhat alarmed, and acknowledged the imposition; confessing that the specimens which he had produced were composed of brass and gold, which he had filed for the purpose and melted down. The silversmith who tried the ore had separated the parts, and consequently discovered a small quantity of gold. He was accordingly brought back, examined again, and punished as before; afterwards he was set at liberty, but obliged to wear the initial of *rogue* upon his back. It was imagined indeed that this convict was insane, but

his cunning was too deep for that of a madman. When he circulated the report of the mine, he pretended that he had sold several pounds weight of the ore to the master and sailors of the Golden Grove: this artful addition to the tale rendered the story more plausible, and orders were consequently issued that none of the sailors should leave the ships after sun-set.

The Supply arrived on the 26th instant, after a rough, tedious, and disagreeable passage: she had landed the stores, with much difficulty, but not in a place of safety. So dangerous is the entering and embarking from this island, that Mr. Cunningham, a midshipman of the Sirius, and three seamen, were lost in a boat, owing to the violence of the surf: there is not an harbour capable of admitting even a small vessel with security, and the anchorage is likewise bad.

Some of the natives having discovered a few goats belonging to the Supply browsing near the hospital, threw a spear and killed a kid, with which they made off: they afterwards destroyed a he-goat belonging to the governor, and seized every opportunity that offered of destroying the cattle: they had been also violent with some of the convicts, but carefully avoided any that were armed with muskets, or dressed in military clothes.

It was very cloudy and rainy weather in September, till about the 20th; after that there were very strong gales from the south-east quarter.

A phenomenon appeared on the 5th of this month, uncommon in the southern hemisphere, which was an Aurora Australis, about half after six in the evening.

Governor Phillip signified to Capt. Hunter his intention of dispatching the Sirius very soon to the Cape of Good Hope, in order to purchase such quantity of provisions as she was capable of carrying; for which purpose he desired the captain to take from her some of her guns, and whatever articles could be spared, that she might be lightened, and have as much room as possible for the fresh stores: accordingly, eight guns, with their carriages, 24 rounds of shot for each gun, 20 half barrels of powder, an anchor, and several other things, were put on shore at Sydney Cove; also the ship's long-boat, as Captain Hunter was to purchase another when he arrived at the Cape. On the 30th instant Capt. Hunter received his final orders, and made preparations for his voyage, for the sake of relating which we shall take a temporary leave of the new settlement.

CHAPTER I.

Captain Hunter sails for the Cape of Good Hope—Departure of the Golden Grove—The Captain prefers the Eastern Passage—Changeable Wind and Weather—A serious Report of the Carpenter—Conjectures thereupon—An allowance of Wort given for the Scurvy—They fall in with dangerous Ice Islands—Captain finds Diego Ramirez to be a fabulous Island—Scurvy very violent—Deaths of two Seamen—Anchorage in Table Bay—Politene's and Attention of the Governor—Captain Hunter's Attention to the Sick and Invalids—Arrival of a Dutch India Ship—Information—Arrival of a Dutch Frigate—Account of Lieutenant Shortland—His Misfortunes, Distress, &c.—Arrival of the Alexander—Informations confirmed—Stores provided—Leak stopped with difficulty—Departure from the Cape of Good Hope—The Weather, Wind, &c. &c.—A Tempest, with the Consequences—Situation critical and dangerous—Embayed—Great Difficulties—Vessel leaky—Marie Islands passed—Arrival at Port Jackson—Casualty Remarks—Directions for sailing into Port Jackson, by Capt. Hunter.

CAPTAIN HUNTER having received his final orders, the Sirius was unmoored on the 1st of October. Governor Phillip and his friends dined on board her; and it being an east wind, she worked down to the lower anchorage: in the evening the governor and other gentlemen took leave, and on the 2d she put to sea, with a south-west wind, and the same day the Golden

Grove sailed for Norfolk Island, with a reinforcement of male and female convicts; two free men, as gardeners; a midshipman from the Sirius, to supply the room of the late Mr. Cunningham; a serjeant, corporal, and six privates; also a competency of provisions for eighteen months.

As soon as they were clear of the harbour, the wind changed more to the southward; the weather became

became foul and hazy, and there were some strong gales. A very serious report was made by the carpenter, signifying that the vessel already made water, though it was previously imagined that she was remarkably firm. It is not to be wondered, that Capt. Hunter was exceedingly concerned at this information, as the voyage now entered upon was of the greatest moment, for the scarcity of flour, as well as other necessaries, rendered it absolutely urgent, the stock of this article being by no means adequate to the quantity of salt beef and pork; indeed the ship's crew, for want of proper nutriment, were not sufficiently strong to undertake those hardships which are attendant on a leaky vessel: the governor had entirely left the route of this voyage to Capt. Hunter's choice, but gave some intimations of preferring the western route, which, as it had never been attempted, did by no means meet the approbation of Capt. Hunter, especially as he deemed his vessel not adequate to the task of making experiments, and likewise was inclined to think that such a voyage would have been both tedious and dangerous, for delay would certainly have been attended with much danger, on account of the unhealthy situation of the men: the captain, therefore, judged proper to pursue the track of his predecessors, and by making an eastern passage, pass to the southward of New Zealand, and round Cape Horn.

For two days they stood off to the eastward, with hopes of advancing several leagues; but the wind remaining in the same point, the weather continuing hazy and foul, their progress was still slow. On the 5th, the wind veered to S. S. E. and being now about 70 leagues from the coast, they tacked about, and stood to the S. W. notwithstanding this change of wind, the weather remained the same.

It became absolutely necessary to pump the vessel every two hours, as she made water from ten to twelve inches, chiefly upon the larboard. Captain Hunter imagining the leak to be somewhere about the starboard bow, near the surface of the water, was in hopes, when the weather became moderate, and the water smooth, that it might be easily stopped. Another report from the captain rendered him still more sanguine in his expectations, as he understood the leak was under the after-part of the fore channel, and it was suspected to proceed from one of the butt-holes being corroded by the copper which had been taken off upon the vessels being first sheathed.

On the 6th the weather became more clear; about noon the wind shifted to E. and E. by N. the vessel steered S. S. E. The wind (as it was wished) came next to N. E. and N. but still the weather was as before.

The crew were now served with slops, as it became rather cold, and it was expected, from the track which it was necessary to take, that it would be still colder. On the 9th the wind became settled in the S. W. quarter, and the vessel steered a course for the south cape of New Zealand, which on the 12th they passed; but the weather still continuing foul, they did not attempt to make it, but stood aloof about a degree and half to the southward of it. The wind now came from the N. W. quarter, attended with continual squalls, heavy rain, and cold weather. Several birds were seen at this time. The ship's company, according to the directions of Mr. Worgan the surgeon, who deemed the essence of malt of great service, had now a proper allowance of wort.

The wind continued for several days light and variable, sometimes from the south and south-east, and sometimes from the northward: the weather as usual. On the 22d it became rather fair, the wind being then westward: several divers were seen in the day, and heard at night. In sailing from New Zealand to Cape Horn, Capt. Hunter kept in

a parallel between the tracks of the Resolution and Adventure, in hopes of falling in with them, if any island lay between the parallels in which those ships sailed. The weather and winds became equally variable; and, by the frequent shiftings of the latter, the sea was in great confusion.

From the 2d of November to the 6th, the winds were from N. by W. to N. N. E. From the 7th until the 17th the weather was very variable; and, in like manner, the wind, which was between the S. E. and S. W. quarters, attended continually with very heavy snow and hail, and strong gales: these showers were, in general, accompanied with furious squalls.

On the 18th the wind veered to the west, and the weather became somewhat fair; there were some gentle breezes: from this to the 24th, they very often fell in with mountains of ice, and on this day the ice islands were so numerous, that they were often obliged to change their course: the weather was still hazy and foul, but there were fresh gales, which became the succeeding day (25th) so strong, as to occasion many heavy squalls. They were now approaching Cape Horn, and Capt. Hunter understanding, from the charts of Terra del Fuego, that there was an island bearing from the Cape about S. S. W. called Diego Ramirez, distant about twelve leagues from the land: he deemed it most proper to proceed in the way of making it, being desirous of expediting his voyage as soon as possible, on account of the urgent necessity thereof. On the 26th, about noon, they were exactly in the parallel of Diego Ramirez; but, as they continued their course N. E. the captain was convinced that there is no such island in existence. Still they encountered several mountains of ice; and frequently met with divers and seals. On the 27th the wind inclined to the northward, and from that to the N. E. attended with some fresh gales: they had now got but a very small distance to the eastward of the Cape. From this to the 12th of December, the wind was in the N. E. quarter, which constancy near Cape Horn was deemed uncommon. This day one of the seamen, Henry Fitz-Gerald, died: he was afflicted with some complaint in his lungs, but his chief ailment was the scurvy, which was at present so general as to be truly alarming, especially as there was nothing on board to afford any relief, except the essence of malt, which was very insufficient, on account of both the violence and continuance of this disorder.

On the morning of the 13th they passed a most remarkable large ice island, imagined to have been 350 feet in its perpendicular height, and about three miles in length. The wind changed suddenly to the 16th, attended with a steady gale; on the 19th it blew very strong from W. N. W. and on account of some frequent showers of rain changed to the S. W. quarter; the weather likewise changing from hazy to fair. Having been twenty-eight days among the ice, and made about 800 leagues, this day they got out from among the ice islands, which undoubtedly would have been very dangerous in the night time, but that the nights were very short in high latitudes, and scarcely any darkness. They had now strong westerly winds, which were very favourable, and on Christmas-day they arrived upon the meridian of Greenwich. Another seaman, John Shine, died on the 30th; and the succeeding day another, Joseph Caldwell: both perished on account of the scurvy. This evening they made a short trip off till midnight, when they tacked about and stood for land again, which they saw early on the next morning; the nearest was distant about four leagues, and the Table Mountain about ten S. by P. they had fallen to leeward on account of the continuance of a strong wind from the southward.

On the 1st of January, 1789, they stood along shore to the southward, and were a-break of Robin's

bin's Island in the afternoon. They endeavoured now, but in vain, to fetch round the reef and get into Table Bay.

It was Captain Hunter's wish to bring the ship to anchor before night, in order to give some recreation to the men, who, on account of their unhealthy situation, were scarcely able to perform the necessary duties; accordingly he ran round the north end, and anchored right off the flag-Staff and landing-place in nine fathoms water coarse ground.

A boat was dispatched with the first lieutenant on shore to the island, in order to make some necessary enquiries of the commanding officer there; he was received and treated with the greatest civility by the officer, who very politely gave him every information he could, but that in the most imperfect manner, as the officer could not speak a word of English, nor did the lieutenant understand Dutch. A basket of fruit was very kindly sent by the officer as some refreshment after a long voyage; this was divided among the sick, who till now were very apprehensive they were not in port.

On the 2nd of January they got under way and sailed up to Table Bay with a fine wind from the northward, where, about ten o'clock in the morning, they anchored in water about seven fathoms and a half, and moored a cable each way. A message was now received from Governor Van de Graaff, to inform Captain Hunter, that he was heartily welcome to all the articles he wanted, of which there was fortunately great abundance; it was therefore requested of the captain that he would signify what and how much he stood in need of, and orders should be immediately issued for the supplies to be prepared.

About forty invalids were landed under the care of Mr. Worgan, and comfortable places prepared for the sick, according to the directions of the captain, who was very anxious for their speedy recovery, as he required the services of all a-board, to return as expeditiously as possible.

On the 9th, a Dutch India ship arrived here, whence it was understood that one of the transports, the Prince of Wales, and the Borrowdale store-ship, had arrived at Rio Janeiro singly, in the greatest distress on account of the severe sickness and dissolution of several on board of her; in short, the men were so exceedingly weak, that it was with the utmost difficulty they could bring their vessels into a place of security. On the 19th a Dutch frigate from Batavia likewise brought an account of Lieutenant Shortland's arrival at that port, about the 7th of December, 1788, with a single ship; the crew had suffered so much through severe sickness, that the majority of them had died upon their passage, and the officers were obliged to join their assistance in securing the vessels and handing the sails; but the most distressing part of the information was, that Lieutenant Shortland was necessitated to sink the other ship which accompanied him, for the sake of uniting both crews, which notwithstanding was scarcely sufficient to man one; had not this been done, neither of the vessels could have reached Batavia. On his arrival there were only four out of the two crews that were able even to stand upon deck.

On the 18th of February as Captain Hunter was preparing to set sail, he was agreeably surprised by the arrival of Lieutenant Shortland in the Alexander transport, which he discovered as he was going off from the shore coming round Green Point. This interview was productive of great pleasure on both sides; the lieutenant had confirmed every thing which the Dutch frigate had imparted relative to his misfortunes; he was almost five months on his passage to Batavia. Previous to his departure from Port Jackson, he had been in

No. 3.

company with the two vessels of which the Dutch Indian had given an account.

During the captain's stay in Table Bay, he experienced much polite attention from the governor and other officers of the settlement. On the 20th of February he sailed for Port Jackson; having provided about six months store of flour for the whole settlement, with other necessary articles; previous to the embarking of these the vessel had been heeled for the purpose of stopping the leak, which was attended with great difficulty at first, but by the dint of perseverance and labour was at length accomplished. The principal hole, for there were several small ones, which was about an inch, was carefully stopped up with a wooden plug, which was afterwards covered with copper; notwithstanding all this precaution, the vessel still made water, it being impossible at present to remedy its defects.

After leaving the Cape of Good Hope the wind continued for several days southward, the weather foul and hazy; the trussel-trees of the main-top-mast having been sprung on the 20th, after striking they were unrigged, and new ones fitted; there were now very heavy gales and a tumultuous sea, the wind from N. N. E. and N. still continuing very unfavourable till the 20th, when it shifted westward; but when they were seizing this opportunity of making all the sail they could, it suddenly shifted to the southward, attended with a violent blast. Captain Hunter was in hopes, as they were near Van Diemen's Land, to be able to cross it, and complete his return in a short time; but the blast became a tempest, the sea was more tumultuous while the weather was most remarkably foul. The next day the fore-mast, and mizzen stay-sails were all split by the violence of the wind; on account of this misfortune they were forced to apply the reeved fore-sail and balanced mizzen, also to hand the fore-sail for some time. This tempest increasing instead of abating, rendered their situation both critical and dangerous; there were three days that they saw no sun, nor a star at night: it having cleared a little in the horizon, about half past three in the afternoon, there was land seen bearing east; they consequently wore the ship and stood to the westward; the wind was now S. S. E. still continuing violent. After several conjectures, fears, and experiments, they found themselves embayed, the sea swelling in a most alarming manner, the weather still foul, and a black gloomy prospect before them: every one was now ordered to keep on deck; the ship carrying all the canvas it could possibly bear, and upon the appearance of land under the lee, the men were prepared to wear and lay the ship's head the other way; ignorant of the part of coast they were upon, the deplorable situation of the crew can better be conceived than expressed. Every man now expected his last moment, not knowing what oppositions of rocks might be in the way, or how soon the ship might strike! Notwithstanding the despair and apprehensions so natural upon such a dreadful occasion, the sailors behaved with uncommon resolution, and executed their orders with the greatest facility. Reason in spite of horror prevailed; the men knew that if the vessel was lost they must all perish alike, for the escape of any one individual was impossible; impressed therefore with this idea, they united all their exertions for the benefit of all. It was wonderful what a press of sail the vessel bore: the close-reefed fore and top-sails were set over the reeved courses; the wind was rather favourable near two points, and the vessel seemed somewhat better in her present situation; but the swelling of the sea, the fury of the gale, and the haziness of the weather, rendered the prospect black and melancholy!

Every officer and man were upon the look out. The captain, anxious for the preservation of those

• I

who

who were with him, exerted his utmost to revive their drooping spirits: he was anxiously looking from the quarter-deck to the leeward; he saw, but with silence, the looming of a very rocky mountain: this was likewise observed by the sailors who were upon the look-out, and who immediately gave the signal of land; but the captain very nobly affecting an air of indifference, made light of it, assuring them as it was upon the beam it could be productive of no danger: the pressure of sail almost buried the vessel in the sea. After some time, and much difficulty, they found themselves near Tafman's Head, which passing, they endeavoured to weather Maria's Islands: they were now headed with the wind; which change would have been inevitably fatal before: the task of pumping was exceedingly laborious upon the men, but absolutely necessary, as the vessel made much water. Having, in a most wonderful and miraculous manner, accomplished their purpose of weathering Maria's Islands, they stood eastward, with the hopes of gaining an offing from the coast; the vessel at this time was very weak, as it suffered much material damage. The wind now veered to S. E. and E. S. E. which brought them again upon a lee-shore; but as the land was within twenty leagues, and the strong gales had ceased, their apprehensions were in a great measure abated.

On the 26th of April, the wind became northward, attended with strong gales and violent squalls: thus it continued till the 2d of May, when it veered to the southward, then to the eastward. They made land on the 6th in the morning, in latitude 33 deg. 30 min. south, and were in sight of the entrance into Port Jackson on the 8th. On the 9th they anchored in Sydney Cove, where they found the Supply armed tender.

"Remarks and Directions for sailing into Port JACKSON, by Captain JOHN HUNTER, of the *Sirius*.

"IN coming in with Port Jackson, you will not immediately discover where the harbour is; steer right in for the outer points, for there is not any thing in the way but what shows itself by the sea breaking on it, except a reef on the south shore, which runs off a small distance only: when you are past this reef, and are abreast the next point on the same side, you will open to the southward of an extensive branch of the harbour, into which you will sail, taking care to keep the shore on either side well on board, for there is a reef which dries at low-water, and lies very near the middle channel, right off the first sandy cove on the east shore: this reef is pretty broad athwart, as well as up and down the channel, and shoals very gradually: the marks for it are the outer north point and inner south point touching, Green Point will then be on, with a remarkable notch in the back land. To avoid it to the eastward, pass the inner south head a cable's length from it, and when you open any part of the sandy beach of Camp Cove, haul short in for it until you bring the inner north head and inner south head on with each other; that mark will carry you up in five and six fathom: but if you cannot weather the reef, tack and stand into Camp Cove, which shoals gradually. If you pass to the westward of the reef, steer in for Middle Cape, which is steep too; then steer up for the next point above it, on the same side: when you are that length, you may take what part of the channel you please, or anchor where you like.

"It flows full, and changes a quarter past eight,

"Rises 4 6 neap tide,

"Ditto 6 0 spring ditto."

CHAPTER II.

*Occurrences during Captain Hunter's absence—Murder of Cooper Handley—A general Court-Martial convened—Result thereof—A Marine lost—Consequent supposition—A Convict punished for Theft—Return of the Golden Grove—Her disasters—Muster's and Boat's crew's danger—Murder of Thomas Bulmore—Natives in the Small-Pox—Their deplorable situation—Several found dead in melancholy attitudes—Two Children and their Fathers (Natives) brought to the Hospital—Death of the old Men—Recovery of the Children—Death of Capt. Shea—Six Marines tried for Robbery—Found guilty, and executed—Governor's plan to reconcile the Natives—One of them brought to his house by force—Cloathed, and entertained—He becomes familiar—Dines with Captain Hunter—Sickness of the Small-Pox—His Death—A visit to Broken Bay—Occasional Remarks—Return to Port Jackson—Another visit—Success thereof—Events—The Sail-maker of the *Sirius* found—His Account.*

THE following are the most remarkable occurrences which happened at the new settlement during the absence of Capt. Hunter.

On the 4th of October, 1788, Cooper Handley, a convict, who went out with an armed party of marines to gather sweet tea, and other herbs, strayed away from his party, and being afterwards met by the natives, was murdered. The marines heard the noise of the natives, and the groans of Handley, but could not find the place where he was in time to preserve his life: they pursued the murderers, but did not overtake them. Having returned with his body most shockingly mutilated, it was in the evening sent out to be interred, attended by a party of soldiers and convicts, according to the command of the governor.

On the 10th there was a general court-martial, convened by his excellency's warrant. As soon as the deputy judge-advocate and the members were assembled, they all concurred in opinion that though the governor had full power and authority to grant and hold court-martials among regular troops, yet as a corps of marines, amenable to the instructions issued from the board of admiralty, and under the influence of a particular code of laws, they could not proceed to trial, the said board not having dele-

gated any part of their authority over the marine corps (particularly that of granting and holding court-martials) to the governor, neither did any part of the act of parliament for instituting a colony in New South Wales contain directions relative to the said subject in any degree: the marine instructions, with respect to court-martials, state, that no general court-martial can be ordered but by the Lord High Admiral, or the commissioners for executing the office; nor any sentence be carried into execution, until approved of by him or them, unless the marines, as in America, should be by act of parliament considered as a part of the army, which is not the case here.

On the 28th a marine went to gather sweet tea, and some herbs, but never returned, nor could any information of him be ever had; it was suspected, as he departed unarmed, that he was murdered by the natives.

On the 7th of November a convict received five hundred lashes for stealing eight penny-worth of soap, which belonged to another convict, according to the sentence of the criminal-court.

On the 10th the Golden Grove returned from Norfolk Island, with timber and some other articles for the governor. During her stay there, so

unfais is every harbour in the whole island, the was obliged to cut her cable and stand to sea: the master of the ship was swamped in the surf, and his boat's crew and himself had nearly perished.

Thomas Bulmore, a private marine, died on the 11th, in consequence of some severe blows he received from another, who was tried for his life on the 17th, and for want of sufficient proof acquitted.

Unfortunately the small-pox had found access among the natives, whose situation therein was exceedingly deplorable. Several of them, men, women, and children, were found dead: it was supposed, as none of these people were seen marked with the small-pox, that they were strangers to the disorder till now, and consequently unacquainted with any remedies for it; indeed it was very apparent, from the positions of those that were dead, that they were deterred by their friends, who, no doubt, were disgusted with their appearance. Several were found sitting on their haunches with their heads sloped between their knees, others reclining on rocks or any kind of eminence that offered itself; in short, their attitudes were as various as they were melancholy. A woman was found with her face on the sand between her feet, while her knees were drawn up to her shoulders: there were two children, a boy and a girl, of about eight and ten years of age, and two old men, who were supposed to be their fathers, found in a perishing situation; they were brought to the hospital; the two men died in a short time, but the children recovered, and seemed very thankful for the attention that was shewn them.

Captain Shea, of the marines, died of a galloping consumption; his loss was very much regretted. Six marines were tried and found guilty of robbing the public stores; it was proved upon trial, that these men had been often guilty of this practice, being seduced by some women convicts with whom they had a connection. Notwithstanding the loss of these men was very much to be lamented, they were however executed.

The continual attacks, murders, and depredations of the natives, so alarmed the governor, that he was resolved on trying every experiment to conciliate their confidence and friendship: he now imagined that by entertaining two or three of these natives, cloathing and keeping them entirely as if they were part of his own family, it would in a great measure remove their enmity and fears; for this purpose Lieutenant Ball, of the Supply, and Lieutenant George Johnston, were sent with two boats down the harbour: according to their wishes they met a native who was tolerably well made, and about thirty years of age; he was very familiar with the gentlemen, and while they were amusing him with presents, one of the seamen, according to his instructions, whipped a rope round his neck, and instantaneously dragged him into the boat; the man was exceedingly alarmed; he screamed in such a manner as to assemble several of his friends, who immediately made use of their spears, but without effect: however, the officers endeavoured to appease him; they removed the rope to his leg, and when they brought him to the governor's house, they put an iron upon his leg, in order to prevent his escape, and which he was led to believe was an ornament. As the governor and all present were particularly attentive to him, he became cheerful, and in time reconciled to his situation. His supposed ornament was soon taken away, as it evidently incommoded his leg, and he was permitted to go wherever he pleased. The name of this native was Ara-ba-noo; he was remarkably docile, having learned in a short time all the gentlemen's names.

At this time there was a number of huts erected, and the gardens were so improved as to promise, in due season, a very extensive farm: there

was a great quantity of ground already cleared upon Rose-hill for the cultivation of corn; but the difficulties in bringing cultivation to perfection were almost insurmountable; the want of sufficient hands to accomplish the necessary labour was, in a great measure, the chief cause of its being retarded; add to which, the scarcity of water, particularly at Rose-hill, where there is very little, and that little very bad: the corn, when sown, made a most promising appearance at first; but as soon as it attained two or three feet height, it was so miserable as to be worth nothing: indeed if it had been good, the rats, which are a very great plague in this country, would have destroyed it.

Captain Hunter, upon his return, having waited on the governor to pay his respects, to his little astonishment, perceived Ara-ba-noo drinking tea with his excellency and friends; he was very genteely dressed, and seemed perfectly acquainted with the use of a cup and saucer. Ara-ba-noo in a very short time learned Captain Hunter's name, and appeared to be remarkably attached to him.

On the 10th of May, 1789, the governor and his family dined with Captain Hunter, also Ara-ba-noo, who behaved exceedingly well, and was very loquacious. It was acknowledged by all the present company, that he was an agreeable companion.

On the succeeding day Ara-ba-noo sickened of the small-pox. Surgeon White was exceedingly attentive to him, but in spite of all his care he died on the 16th, and was universally lamented: he was buried, by command of the governor, in a very genteel manner.

The governor, desirous to explore again some parts of the harbour of Broken Bay, made a party on the 6th of June, which consisted of himself, Captains Hunter, Johnston, Collins, Surgeon White, Messrs. Worgan, Fowell, and a few armed attendants: they landed on the north part of Port Jackson, and at six o'clock in the morning proceeded northward on the sea-coast; previous to this Mr. Kellie was dispatched with two boats, containing such a quantity of provisions as they deemed sufficient.

Their march was at first very fatiguing, owing to the roughness of the paths, and the several ascents of hills: the carriage of their provisions too, which was no small burthen, rendered their journey still more tiresome.

About four o'clock they reached the fourth branch of Broken Bay, and were not a little pleased with the safe arrival of their boats, which contained their supplies.

The company was at present too much fatigued to go on further: in order to rest and refresh themselves, they pitched their tents, and having been very successful at this time in catching fish, they made a hearty dinner, and rested for the remainder of the day.

The next morning they reached Pitt Water, and here they delayed so long in exploring this and the adjacent places, that it was afterwards judged too late to prosecute their march, so they returned to the place where they had refreshed themselves the preceding day, and passed this night as before.

The boats crews discovered, on their rambles, several natives almost perishing in the small-pox: particularly a female who was lying on the wet grass in a most miserable situation. The governor and his friends, when informed of her misery, went to see her, made a fire for her, dried the grass, broiled some fish and birds which they had shot, and gave her refreshment; the poor wretch appeared exceedingly thankful: they now left her to repose herself; and having renewed their visit, found her with an infant lying on the ground; her maternal

maternal affection was extremely moving; the gentlemen gave her refreshments again, and in the morning repeated their kindness.

This day, June 8th, the governor and his party embarked in the boats, and crossed the bay to the north branch: they landed on the west shore, where they dined; they then took the east side, and having me: with many mangroves and shoals, returned and encamped on the west shore.

Early on the 9th they took the northward direction, and after rowing about seven miles up the head of the harbour, and meeting several extensive shoals, they approached the north entrance, and pitched their tents for the night: the two succeeding days were spent in exploring the north harbour, during which time they were very successful in catching fish, especially a kind of mullet, which was exceedingly good, and on which account the island received the name of Mullet. The governor and Capt. Hunter continued their examination for the day, while the rest of the party remained in the tents. They remained two nights in Mullet Island.

Early the next morning they proceeded to examine a point of high land, which they supposed an island; in this they were not deceived: they had the satisfaction also of making fresh discoveries. Having pitched their tents in the best place they could find, (but by no means a desirable situation) they refreshed and rested themselves: they did not renew their examination the next day till rather late, on account of the haziness of the weather; time, therefore, did not admit of much penetration: the next day was equally disagreeable; they therefore made for Pitt Water, where they encamped. The governor sought the mother and child whom he had relieved in this place; but as they were gone, he was in hopes she was so well recovered as to be no longer disgusting to her friends.

The wind being northerly, they sailed at midnight for home, and early the next morning proceeded by land: about three o'clock they reached the north cove of Port Jackson.

Another visit to Broken Bay was undertaken on the 28th of June, by the same party, with the additional number of five marines. In the course of this expedition nothing material occurred, as they were only reviewing the places which they had seen before. They met with two little children at Mullet Island, almost starved to death, who were very grateful for the relief which was bestowed them: they also met with several dead natives on the way; many of whom were so wasted, that they were mere skeletons. After a fortnight's ramble, Captain Hunter's shoes were entirely worn out with the roughness of the ground, so that he was determined to return to Broken Bay, where the boats were waiting: the

rest of the party, except Capt. Collins, who wished to join Captain Hunter, were inclined to walk about the head of the north-west harbour. While Captains Hunter and Collins were about entering into this determination, two of the gentlemen, who were desirous to cross through the wood to the Sirius, where there were about 400 yards of water. They accordingly made preparations for swimming; each tied his shirt, breeches, and shoes, up in a handkerchief, and threw the bundle across his shoulders; then, having taken a glass of rum, they plunged in, and swam for the opposite shore; but one of the gentlemen, being suddenly seized with the cramp, was obliged to drop his bundle, which was consequently lost. They made as much expedition as possible to go on board the ship, for fear, on account of being so long naked, they might get a severe cold. I y sent a boat for the other gentlemen, who were very happy at its appearance, being at this time exceedingly fatigued.

During this expedition, the sudden report of a great gun caused an alarm among the gentlemen; and as it was naturally supposed to proceed from some person who had gone astray in the woods, it was repeatedly answered. Another report awakened their attention, and they all fired several times together; they still imagined that they heard an equal repetition of the responses, which sounded as afar off. By perseverance, they approached the place whence the firings proceeded; and as they frequently called out together, they heard at last a faint voice at some little distance; this encouraged them to go on, and they soon discovered the lost person, who proved to be one Peter White, sail-maker to the Sirius, who had been absent four days. He was so exhausted with grief and hunger, that he could scarcely stand: he had only four ounces of biscuit when he left the vessel, some of which he had still remaining. It was a long time before he was quite recovered. The gentlemen gave him refreshments. As soon as he was able to speak, he told them, that the blast of his gun was so bad, he could not get it to strike fire all the preceding day, when he wanted to shoot some birds for his support: on the approach of night, being very cold, he endeavoured to strike fire with it again; and notwithstanding he had laboured so long in vain before, yet now he fortunately succeeded: the next day he could do no good with it; but when he wanted to answer the gentlemen's firing, it never missed. Such was the wonderful preservation of this man, who was truly sensible of the great mercies of Providence, convinced that, had it not been for divine interposition, he must have inevitably perished!

What tho' adversities bear 'gainst us hard,
Still heav'n can send relief, as well as guard!

CHAPTER III.

Def. of the Sirius repaired.—Removed, &c. from Sydney Cove.—Survey of Broken Bay.—The same of Botany Bay.—Abstinence of Provisions curtailed.—John Mara found.—His melancholy situation.—Manner in which he was lost.—Francis Hill lost.—Searched for in vain.—Conjectures thereupon.—Hostile disposition of the Natives curbed.—Sirius removed again to Sydney Cove.—Two Natives seized.—Meeting between them and the Children.—Description of them.—One of them meditates his escape.—Effects it.—Remarks and Directions for sailing into Botany Bay.—Also for sailing into Broken Bay.

THE Sirius had now undergone some necessary repairs: Captain Phillip, who examined her, declared she was in a very weak condition; her upper works were particularly defective. The carpenters were continually on board her; and the crew were chiefly employed in cutting down timber for her use. At this time, she lay in Carcening Cove, a convenient part on the north side of the harbour; her removal from Sydney Cove being judged absolutely necessary.

Captain Hunter, agreeable to the wishes of the governor, (while the Sirius was repairing) went with a party of the gentlemen belonging to the

settlement to make a survey of Broken Bay. This was in the middle of August: Their examination continued about sixteen days; during which time they penetrated and sounded every place with the utmost attention. About the same time (in September) they took a survey of Botany Bay, and had a very delightful excursion, as the weather at this time was most remarkably pleasant.

On the 1st of November, orders were issued to curtail the allowance of provisions one-third. This was deemed absolutely necessary, there being at present only a supply for five months; and though provisions were shortly expected from England, yet

it was impossible to attend to the one John Mara, he was frequently supposed that he had been murdered, found by Captain's absence, sitting in a guilty state, the captain to the been put on shore with water, was on and fell asleep till it was night—alarmed, he imprudently of the wood; but, night, unfortunately tinued rambling t apprehension, partly consequently in natives. The third side; but was so for the timely discovery certainly have died.

On the 6th of November, the master's mate walk round the S accompanied the preceding days. P, but without effect; of, it was concluded him, especially as of late, that several in their own defence them which sometimes created a proper aw

On the 7th of November, back to Sydney Cove Bradley, by command in search of a native, situated, as Araba natives might be children, who had pox, were accounted this desired reconciliation happy in their situation some of the English and his party approached harbour, according two natives; these familiar, nor was it them: they were being seized, and power; their hands fears seemed to dim the governor, the knowned entirely their infant natives perceived of joy, and called likewise knew the character (the girl) and these natives, as was was a distinguished about 35 years of age, lang, about 25; and lang was under for Co-al-by, as he was looked at him, and a

On the evening of it was very dark; the ers were at supper; to eat, as he was the outside of the Having by some means iron shackle which spontaneously jumped and eluded all attempts genteelly dressed, so ingly displeased with ever, became more fond of Co-al-by.

it was impossible to tell what delays or accidents might attend those store-ships. About this time one John Mara, the gunner's mate, was missing; he was frequently searched for, but in vain; it was supposed that he either lost himself in the woods, or had been murdered by the natives: he was, however, found by Captain Hunter, the third day after his absence, sitting upon a rock; but in such languishing state, that he was scarcely able to attend the captain to the boat. It seems, this man, having been put on shore one evening, to fill some casks with water, was overcome with the grog he drank, and fell fast asleep near the stream: he did not awake till it was night-time, when, being very much alarmed, he imprudently endeavoured to come out of the wood; but, on account of the darkness of the night, unfortunately went further into it. He continued rambling for two days, full of despair and apprehension, particularly as he was unarmed, and consequently in danger of being attacked by the natives. The third day he had reached the water-side; but was so exhausted, that, had it not been for the timely discovery of Capt. Hunter, he must certainly have died.

On the 6th of November, Mr. Francis Hill, one of the master's mates, lost himself in an attempt to walk round the Sirius, though he had already accompanied the gentlemen in this walk the three preceding days. Parties were sent in search for him, but without effect; and as he could never be heard of, it was concluded that the natives had destroyed him, especially as they were so hostile inclined of late, that several have found it necessary to fire in their own defence, and wound two or three of them which somewhat curbed this disposition, and created a proper awe.

On the 7th of November, the Sirius was moved back to Sydney Cove; and on the 25th Lieutenant Bradley, by command of the governor, went again in search of a native or two, in order to be domesticated, as Ara-ba-noo was, that the English and natives might be thereby reconciled. The two children, who had been preserved from the small-pox, were accounted too young as yet to promote this desired reconciliation; they were however very happy in their situation, and seemed to comprehend some of the English language. As the lieutenant and his party approached the north part of the harbour, according to their wishes they met with two natives; these men seemed very cheerful and familiar, nor was it any difficult matter to secure them: they were however very much alarmed upon being seized, and made all the resistance in their power: their hands were untied, upon which their fears seemed to diminish; and when conducted to the governor, the kind treatment they received removed entirely their apprehensions. As soon as the infant natives perceived them, they expressed a deal of joy, and called them both by their names: they likewise knew the children, whom they called A-ba-roo (the girl) and Nan-bar-ty (the boy). One of these natives, as was understood from the children, was a distinguished chief; his name was Co-al-by, about 35 years of age; the other was called Ba-na-lang, about 25; and it was supposed that Ba-na-lang was under some restraint in the presence of Co-al-by, as he was very silent whenever the chief looked at him, and apparently submissive to his will.

On the evening of the 12th of December, when it was very dark, these two natives and their keepers were at supper: Co-al-by was only pretending to eat, as he was now meditating his escape at the outside of the door, the rest being within. Having by some means loosened the rope from the iron shackle which was rivetted on his leg, he instantaneously jumped over the paling of the yard, and eluded all search. At this time he was very genteelly dressed, so that the governor was exceedingly displeased with his keeper. Ba-na-lang, however, became more lively and familiar, after the absence of Co-al-by.

No. 4.

Remarks and Directions for sailing into BOTANY BAY,
by Captain JOHN HUNTER, of the Sirius.

"The anchorage in this bay is extensive, and the passage into it easy. There is a cluster of rocks, which lie S. S. E. about two cables length from a little bare island, on the north shore; on which the sea frequently breaks very high; but if you keep Cape Banks open, you will avoid them. Both shores are bold to, till you come thus high. A little above Point Southerland (south shore) is another cluster of rocks, which to avoid, in turning, keep the land below this point open: from both the north and south sides, and from the bottom of the bay, the flats run off a great distance, from four to fifteen feet water. This river, in some parts, has good depth, and that near and within its entrance; but higher up it is all shoal water, and full of knowles of sand. It is only to be navigated by boats."

Remarks and Directions for sailing into BROKEN BAY, by the same.

"The entrance of Broken Bay lies in latitude 33 deg. 34 min. south, and longitude 151 deg. 27 min. east; the bay is large and clear; the distance, from north to south head, is two miles, and the depth is eight, ten, and twelve fathoms; but as you run up the bay it shoals to six, seven, and five fathoms. Just within the north head of the bay is the entrance of the northern branch, which, from the shoalness of the water, is only navigable for boats, or small vessels; the channel going in is very narrow, occasioned by a long spit of sand, which extends from a low sandy point on the west side of the entrance, and on which, when the wind is from the eastward, the sea breaks very high. A little within the south head of the bay is the entrance of the Southern Branch, or Pitt Water; this is a good harbour, though the entrance is rendered rather narrow by a shoal bank, which extends from the eastern point full two-thirds across; keep the west shore on board, which is pretty bold, and is a high, steep, rocky point, and steer right up the branch; three fathoms is the most you will have at low water, and that depth is only in the narrows, which are of very short extent, for as you run up you very soon deepen to four, five, six, and eight fathoms; to the shoal which narrows the entrance, it is very gradual soundings. When you are above the second point on the west shore, you have good depth of water, and good room; you may run up in mid-channel, without fear; both shores are pretty bold to, except off the points, from some of which it is shoal a small distance: in this branch there are several coves, in which a ship might lighten and careen; there is also fresh water in various parts of this harbour, with wood in abundance, and fish may be caught in all the sandy bays. The entrance of this branch is divided from the S. W. arm by several rocky points; the land over them high and steep; between which are some small sandy bays; and right off the mouth of this arm is a very high rocky island, of but small extent; its eastern end is very high and perpendicular: this island is a good mark, for any part of the bay may be known, with certainty, by the situation of it, which the chart will point out. If a stranger were coming in here for shelter in a gale of wind, I would recommend his pulling up the south-west arm, and steering in for the island, which is now called Mount Elliot, from its similarity to the north end of Gibraltar Rock; you may pass on either side, but the south side is safest. In going up the S. W. arm; keep mid-channel between the island and south shore; this shore is so bold, that you may run within two cables length of it. In your way up you will perceive a branch on the north side, which runs up north-west;

* K

when

"when thus high, you are above a bank or middle ground, on which the least water is 16 feet; you may, by keeping near the shore, pass on either side of this shoal, which has gradual soundings to it; the south side has most room, and deepest water; the north side has five fathoms: when above this, you may keep in the middle, if you wish to go higher, and the least water will be five

"or six fathoms for several miles higher: from this south-west arm several branches extend, most of which have good depth of water, but the chart will be the best guide. If you wish to enter the north-west branch, enter it by keeping the larboard shore on board; and for some distance up, as from the starboard shore, a shoal extends one-third of the distance over."

CHAPTER IV.

An Alarm—Sirius and Supply sent to Norfolk Island—Previous Account of the Progress made in Norfolk Island—Commencement of that Settlement—The Commandant's Commission read—Convicts addressed—Storehouse and temporary Dwellings erected—Wheat sown—Regulations for the preservation of good Order—Robberies—Punishments—Business retarded by Accidents—Seven poisoned by eating some Beans—Their Recovery—A Serious Misfortune—Murmuring among the Convicts—One punished for Sedition—Allotment of Provisions curtailed—Seasonable Supply—Sad Misfortune—Questions from the Governor—Answers from the Commandant—Encouragement to the Convicts—A Letter from the Governor publicly read—Number of Settlers—All places explored—Name of the first Male Child that was born—Cockswain of the Cable lost—Found—His miserable situation—Articles of War read—Conspiracy among the Convicts discovered—Their Scheme—Disimulation—Commandant's consequent Address to the Convicts—Orders published—Oath of Allegiance indiscriminately administered—A violent Hurricane—Much Damage—Additional Number of Convicts arrived—Arrival of Lieutenants John Cresswell, and fourteen Privates—A Female Convict whipped, and re-whipped—A Convict desirous to settle in the Island, after his time of Transportation—The Commandant's Indulgence—Lieut. Cresswell's House erected—Fresh Orders for the preservation of Harmony, &c.

THE time having now expired when the store-ships which were expected from England should have arrived, a general consternation took place; their exhausted state of provisions rendered this disappointment very alarming. The Governor, seeing the necessity of dividing the settlement, proposed sending an additional number from Port Jackson to Norfolk Island. Orders were therefore issued forth for the preparation of the Sirius and Supply to execute this salutary design, under the direction of Captain Hunter.

It will not be amiss first of all to apprise the reader of the progress which had been made in Norfolk Island, by those few persons who were sent there in February 1788, with Lieut. King, as mentioned in the third chapter of our first book.

As soon as this party had landed, Lieutenants King and Ball explored the island, for the purpose of fixing on the most commodious place for the new settlement. Lieut. King gave the preference to the shore close to the beach, which was overspread with iris; within which was an impenetrable forest, remarkable for its good soil: here the settlement was commenced, but on account of the scarcity of hands the progress of building was very slow.

After divine service on the first Sunday, which was performed by Lieut. King himself, his commission from the governor was publicly read, and the usual ceremony took place. He then addressed the convicts, in a speech of equal tendency with Governor Phillip's on the same occasion; and every man received that employment which was most adapted to his abilities. Instead of a bell, to summon them to church, a man was appointed to make a noise on the head of an empty cask.

In the space of about two months the storehouse was erected, and in the course of a little time temporary dwellings for the people: the garden-ground was also turned up, and a small quantity of wheat sown.

As it required no little rigour to keep the convicts within bounds, who were continually neglecting their business, and idling those who were disposed to labour; the commandant, for the preservation of good order and regularity, thought it highly essential to establish a certain number of regulations, and enforce a strict attention thereto. One Sunday therefore, after performing divine service as usual, he read to them the following orders.

"As it is highly necessary, for the preservation of good order, regularity, and cleanliness, to esta-

blish certain rules and regulations, the following are to be observed, and performed with the strictest attention.

"I. No person is to absent himself from public worship, which will begin every Sunday morning at eleven o'clock, in the commandant's house; when every one will come clean and orderly, and behave themselves devoutly.

"II. The hours of work are as follow, until further orders: to begin work at day light, and work till half past seven; at half past eight, to work again until half past eleven; and then to work again at two until sun-set.

"III. In order, to encourage the cultivation of gardens, every one will have the Saturdays to clear away and cultivate gardens for themselves; and those who are industrious will be encouraged, but those who misapply that indulgence will be deprived of it.

"IV. On application, at the proper time of the year, seeds will be distributed to those who have cleared away garden-ground; and those who raise the greatest quantity of feeds and vegetables will be encouraged and rewarded.

"V. The women are to sweep round the houses or tents every morning, and to cook the victuals for the men; and every person is strictly forbid cleaning any ship or fowls in or near the houses, but to go to the sea-side for that purpose.

"VI. Every person is strictly forbid going near Turtle Bay, and those who are found in it, or going there, will be instantly and severely punished.

"VII. The women are to collect the dirty linen belonging to the men every Friday, and to return each man his proper linen, washed and mended, on the Sunday morning.

"VIII. No person is to cut down or destroy any banana tree.

"IX. Exchanging or selling cloaths by the convicts, is strictly forbid. As their cloathing is the property of the crown, they are not to dispose of it. A disobedience of this order will be deemed a theft, and meet with a sensible punishment. It is recommended to every one to be careful of their cloathing and bedding, as accidents may happen which may prevent a speedy supply.

"X. Great care is to be taken of all the tools; each man taking his axe or hoe to his tent, or delivering them to the store-keeper, that they may not be injured by the weather.

"XI. As the future welfare of every person on

"this island depend recommended to disposition to work and, above all, to each other, which who may have it with and inclina honest, or idle, n being totally exc indulgences, but either by corpo be sent to Port J court there."

Notwithstanding several were detected one of the marines, mandant's tent: he lashed, and the qua deducted from his a fifteen years of age he received an hun found stealing a h which was fitting c lashes.

In order to facilitate employed; but for the work, particular trees, and occasioned entirely blinded by with violent colds. a carpenter, and th by eating some bea wards fired with bu lent vomitings, and ever by the assistan large quantity of swa tinued so weak that days: these beans w those which had be and Surgeon White when they were seiz before mentioned.

A very serious mis-

five ewes died of the perished with eating remained one ewe, of four hens, one cock,

As there was some in respect to the rec received forty lashes expressions of a fed so inconsiderate, the necessity of stinted mandant took ever economy.

About five months were finished. Prov that the common alle seasonable arrival of fully answered her t joy. A sad misfortu the loss of M in a former chapter) been dispatched, to of danger, were swe and overfet by a he except one man, wh rowly escaped.

"I. IN what tin be able to support independent of sup

"this

"this island depends on their good behaviour, it is recommended to them to persevere in that willing disposition to work which they have hitherto shewn; and, above all, to be honest and obliging towards each other, which will recommend them to those who may have it in their power, and who have a wish and inclination to serve them: but the dishonest, or idle, may not only assure themselves of being totally excluded from any present or future indulgences, but also that they will be chastised, either by corporal punishment on the island, or be sent to Port Jackson, to be tried by a criminal court there."

Notwithstanding the menace in the last article, several were detected in robberies. John Batchelor, one of the marines, stole some rum out of the commandant's tent: he was punished with three dozen lashes, and the quantity of rum which he had taken deducted from his allowance. A convict boy, about fifteen years of age, was guilty of the same theft: he received an hundred lashes. Another convict was found stealing a hatch of eggs from under a hen, which was sitting on them: he received thirty-six lashes.

In order to facilitate the business, every artift was employed; but some unforeseen accidents retarded the work, particularly a dust which fell from the trees, and occasioned many sore eyes; one man was entirely blinded by it; besides several were laid up with violent colds. There were also two sawyers, a carpenter, and three convicts, who were poisoned by eating some beans, which they boiled, and afterwards fried with butter: they were seized with violent vomitings, and pains in their stomach; however by the assistance of the surgeon, who applied a large quantity of sweet oil, they recovered, but continued so weak that they could not work for several days: these beans were certainly the same kind of those which had been eaten by Governor Phillip and Surgeon White, on one of their excursions, when they were seized with the like complaint as before mentioned.

A very serious misfortune attended the live stock: five ewes died of the scab, and two of the sows perished with eating a poisonous herb. There remained one ewe, one goat, two sows, two boars, four hens, one cock, three ducks, and one drake.

As there was some murmuring among the convicts in respect to the receipt of provisions, one of them received forty lashes for uttering several threatening expressions of a seditious tendency: these men were so inconsiderate, that they did not understand the necessity of stinted allowances, though the commandant took every opportunity to recommend economy.

About five months after their arrival, several huts were finished. Provisions, at this time, were so low, that the common allowances were curtailed; but the seasonable arrival of the Supply (which by supplying fully answered her title) was the occasion of much joy. A sad misfortune, however, damped this pleasure; the loss of Mr. Cunningham, (as mentioned in a former chapter) with a few others, who having been dispatched to assist the Supply's boat in case of danger, were swept away westward by the side, and overfet by a heavy surf. They were all lost, except one man, who was a convict, and had narrowly escaped.

For the reader's better information it will be necessary to subjoin the commandant's answers to the governor's several questions, which he received and returned by the Supply: the following is a correct copy of both.

Questions by GOVERNOR PHILLIP, addressed to P. G. KING, Esq; Superintendent and Commandant of the settlement of NORFOLK ISLAND.

1. "IN what time do you think the island will be able to support the people you have with you, independent of supplies from this settlement?"

2. "Do you wish to have more people sent you, and what number of men and women do you wish to have, in addition to those you have already?"
3. "In what time do you think the island will be able to maintain the additional number of people you wish to have sent you?"
4. "What ground have you in cultivation?"
5. "Have you discovered the flax plant?"
6. "How many acres of clear ground have you found in the island?"
7. "Have you any place round the island at which a vessel of thirty or forty tons can remain at anchor in security all the year round?"
8. "How far will it be possible to load any ship hereafter with spars for ships of the line: I mean in respect to the great difficulty I am told there is to land any thing on the island, or to take any thing off?"
9. "How does your stock thrive, and what does the island produce?"
10. "What live stock do you wish to have sent you?"
11. "Are those who are with you satisfied, or do they wish to be relieved?"
12. "What weather have you in general?"
13. "What are the prevailing winds?"
14. "Have you been at the small islands?"
15. "Are there any animals on the island, and what kind are they?"
16. "Have you found any lime or chalk there?"
17. "Have you been supplied with fish?"

Answers to the above Questions, by LIEUT. KING, addressed to ARTHUR PHILLIP, Esq; Capt. General and Governor in chief in and over the territory called NEW SOUTH WALES.

1. "From the excellence of the soil, and the present appearances, the island will produce more than a sufficiency of grain in two years: animal food depends on the supply and breed of stock; and clothing on the flax-plant being brought to work."
2. "With twenty more men, and women in proportion exclusive, I should be able to make a little progress in clearing and cultivating the ground."
3. "I think in two years, but in three at most, as answered by the first question."
4. "Two acres and an half in barley, and one acre in garden-ground: in September I shall have an acre in Indian corn and rice."
5. "Yes: some bundles of the flax-plant, which I put into water on the 17th of March, were taken up the 27th of July; when we found that the thick vegetable of the fibres had rotted away, but still they were covered with an hard woody substance, from which we have ineffectually tried to separate the flaxy part, which I have no doubt would make good cordage, canvas, and linen, as it appears to be of a fine and strong texture. Some lines were made of it, which were tolerably strong and good; but the want of a method to separate the woody part from the flax, will be a great hindrance to its being made useful."
6. "Not a yard square."
7. "None; without removing to the lee side of the island, as the wind changes. Anchorage is good all round the island, as the bottom is a coral sand: at about two miles from the land, the circular depth is 22 fathoms. An harbour might be made, by cutting a channel through the reef about 400 feet long; but it would be necessary to blow up some sunken rocks, to facilitate the entry: if it should ever be thought proper to do this, five vessels of seven feet draught might lie all the year round in security within the reef; they will not be able to enter but in the finest weather, with the wind from N. E. to N. W. and then they must warp in; perhaps less difficulty will be found when I am informed of the state of the weather during the summer months."

8. "I cannot answer this question so fully as I could wish, until I am acquainted with the state of the weather during the summer months. In fine weather, with the wind at N. E. spars of any dimensions may be sent off from Sydney Bay, by mooring a boat without the reef, and hauling the spars off. I have great reason to suppose anchorage will be very safe off Sydney Bay in the summer. I think vessels might be built and launched in Ball Bay; and when the flax-plant can be brought to work, cordage and sails can be made of the finest and strongest sort.

9. "Of the stock I brought with me, five ewes are dead with the scab, and two fews poisoned; the rest are all very thriving, and likely to do well. The productions of the island are, timber for the construction of vessels, pines for masting them; and, when the flax-plant can be worked, a sufficiency of cordage for the navy of Great-Britain, which needs no cultivation, as the island abounds with it, and fresh leaves shoot from the roots. Pigeons, parrots, parroquets, and other birds, are in abundance: the sea abounds with fish, and probably we may have turtle during the summer months. A number of banana trees have been found on the island.

10. "Stock of any kind would be acceptable for breeding. I have no she-goats. The leaves of the trees and underwood afford ample and wholesome food for many animals, and the fern-tree, which is very plentiful, is very good food for hogs.

11. "Every one is satisfied, and no person wishes to be relieved.

12. "During the months of March and April, we had very fine weather; since when it has been variable; and when the wind has been at S. and S. W. the air was raw and cold. The full and change of the moon has generally been accompanied with very heavy gales of wind and torrents of rain, from the N. E. or S. W. both of which have been very violent at times. We have had no thunder or lightning, nor ice.

13. "The winds have been variable; westerly winds appear to be most frequent during the winter, and I have great reason to suppose easterly winds are constant during the summer.

14. "I have been round Nepean Island once, but could not land on it, the wind being westerly, which made a great break in the small sandy bay which lies on the S. W. side of that isle. My not having men to row, and the uncertainty of the weather, has prevented my going to Phillip Isle.

15. "None but rats, which are destructive, and have been very numerous; but now they are much thinned.

16. "None.

17. "Fish in great numbers, and of a large size, abound all round the island. Some turtle were caught soon after I landed; but the approach of cold weather drove them off. I have not been able to send the boat off so often as I wished, not having men to row; but when she has gone out, a plentiful supply of fish has been obtained."

The time was now chiefly employed in erecting huts; as an encouragement to the convicts, they had permission to build houses for themselves, from the time of landing until the 30th of October: those of the best characters were allowed to build theirs in the vale, and to clear away the adjoining ground for their own use. A letter from the governor to the commandant was publicly read, enjoining him to make regular reports of the convicts, particularly of such whose conduct was reprehensible; and setting forth, that such who were content to remain as settlers; after the limited time of transportation, should have every encouragement; and further advantages be given to all such, who not being convicts, are still willing to become inhabitants of the settlement.

The present settlers consisted of a midshipman, surgeon's first mate, assistant surgeon, three seamen, a carpenter, serjeant, corporal, six private marines, 29 male convicts, 17 female ditto, two children. Total 64.

Every opportunity was taken of exploring the island, and all adjacent places: Ball Bay, Sydney Bay, Mount Pitt, Nepean Island, &c. The first male child that was born on this island (Jan. 8th, 1789,) was christened Norfolk. On the 18th of January the cockswain of the cable, who had been lost in the woods for four days, as he was returning from Ball Bay, was found by a party who were out on purpose, naked and lacerated; he was so exhausted, that they were obliged to carry him home: he kept his bed for several days.

Irregularities among the convicts still continuing, the articles of war were read to them; the next day Robert Webb, a seaman belonging to the Sirius, and Elizabeth Anderson, a convict, discovered a conspiracy among the convicts, who had entered into a scheme to take possession of the public stores, secure either the Supply, Royal Grove, or any other vessel that came in their way, and make their escape out of the island. It appeared, upon a strict examination, that all the convicts (except two rope-makers and a carpenter) were concerned in this diabolical scheme, which had been planned on their passage from Port Jackson to Norfolk Island; but, in order to evade suspicion, they testified every apparent satisfaction with their commandant's authority, who in consequence thereof was too indulgent to them. There was only one of them, Thomas Watts, who behaved (before this discovery) unruly and abusive: he received 24 lashes, for refusing to work. The ringleaders, Samuel Picket and William Francis, were put in irons; and the succeeding Sunday, after prayers, the commandant thus addressed the convicts:

"If you will vouchsafe to consider seriously for a few moments, you must certainly become truly sensible of the absurdity of your plan, even supposing that you did make yourselves masters of the vessel: you must have encountered the worst dangers, which in all probability would have been fatal to the whole banditti; then, when too late, you would have repented of having left behind those advantages you might have enjoyed in this island, if honest and industrious. Let me then, I conjure you, for your own sakes, to remove all impious ideas; the execution of which must be your ruin: let your future conduct wipe away the present impropriety of your behaviour. I shall always be happy to encourage and countenance those who are honest, regular, and pains-taking; but all of the contrary description shall be made dreadful and severe examples. Such who steal and plunder the gardens and grounds, shall ever meet with just punishment."

After this Address, the following Orders were published:

1. "The commandant strictly forbids any officer, soldier, free person, or convict, male or female, ever absenting themselves from the camp or town, for ten minutes together, without having first obtained leave from the officer charged with the guard, who will obtain the commandant's leave, on a slate which will be kept in the guard-house for that purpose."

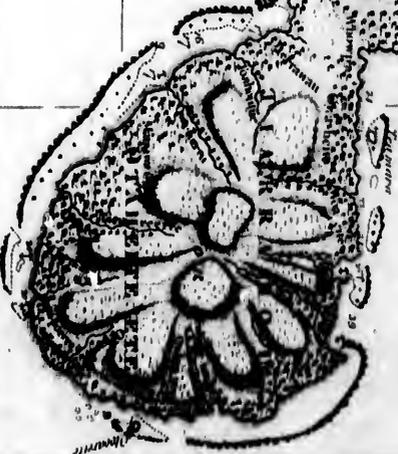

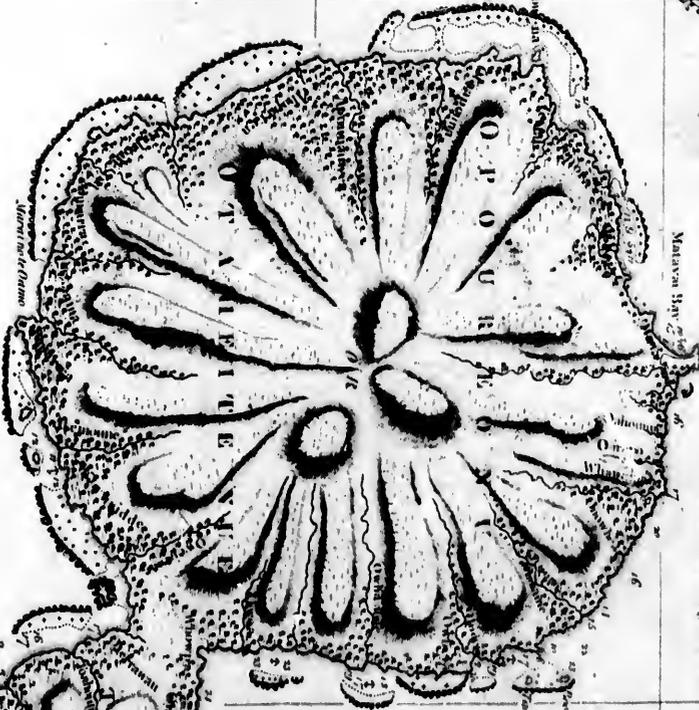

2. "Every person returning from that leave is to acquaint the officer of the guard of their return."

3. "Every convict who is observed to go over the hill to the farm, without having obtained leave, or going to work there; will be fired at by the centinel."

4. "The convicts, and not more than three together, are to build houses for themselves at their leisure hours, in such places as will be pointed out."

5. "No person, for the future, will be suffered to live out of the camp."

6. " John Thompson, and Samuel Rickett, are dispossessed of their garden-ground, in consequence of their ill-behaviour."

After this, the oaths of allegiance were administered to all the free people indiscriminately, in presence of the convicts.

About the latter end of February a violent hurricane was the occasion of much damage. Several had a very narrow escape of their lives, owing to the fall of many of the trees, which measured 180 feet in length, and were carried to a considerable distance. The stores were very much hurt: a fine English sow, and a litter of seven pigs, belonging to the commandant, and three sows and two boars belonging to the crew, perished by the falling of a tree upon the hog sty.

An additional number of convicts arrived in the Supply, which now increased the before-mentioned number of inhabitants by thirty: they still continued irregular, and inclined to plunder; on which account corporal punishment was inflicted upon every detection.

Lieut. John Cresswell, and 14 privates, arrived here in June: the governor had ordered the lieutenant to be under the command of Lieut. King; and in case of the present commandant's death, or absence, the government of the island was to devolve on him.

A female convict, who received fifty lashes for a default, received double the number the succeeding day, for a similar offence. Notwithstanding all these exemplary punishments, they still continued their wicked course, some few excepted, who were accordingly rewarded for their good behaviour.

Some of the convicts, whose time of transportation was expired, were satisfied to remain settlers: one in particular, Richard Phillimore, who was a sober industrious man, after a month's consideration, which the commandant gave him, was perfectly satisfied to remain in the island; he had his choice of the ground to reside on, and a sow with young and some poultry given him by the commandant.

A house for Lieut. Cresswell was erected; and, for the preservation of harmony and regularity, the commandant read the following orders, after divine service on Sunday the 16th of August:

I. " All persons on the island are regularly to attend sabbath and divine service, unless prevented by sickness: a disobedience of this order will be punished, by extra-work, or by stopping a day's provisions for the first offence; which, if repeated, will be punished by corporal chastisement.

II. " No persons are to absent themselves from their quarters, either by night or day, except they have obtained leave, or are going to their respec-

tive work; and if any one is observed lurking about after the watch is set, he will be fired at by the centinel.

III. " The working hours are to be regularly attended to, and all persons absent from their work, after the drum beats for that purpose, will lose a portion of the time they may save from their tasks; and, in case of a second offence, they will be severely punished.

IV. " The tasks will be continued as usual, and the time saved by the gangs is at their own disposal: those who distinguish themselves by employing their time in cultivating their gardens, and clearing ground for their own use, will meet with encouragement and reward.

V. " If the overseers, or the greatest part of any gang, should have reason to complain of the idleness of any one man belonging to that gang, and the complaint should be found just, the offender will be severely punished.

VI. " Those who render themselves unable to work by their neglect or obduracy, in not building themselves warm huts, or who cut themselves through carelessness, will have a part of their provisions stopped until they are able to go to work again.

VII. " All the tools and utensils are to be returned regularly every night to the store-house when the retreat beats; and any person who is found secreting any tool, or any article of the King's stores, or committing any robbery whatever, will, on detection and conviction, receive such punishment on the island as his Majesty's justices of the peace may judge the offence deserves; or the offender will be sent to Port Jackson, to be tried by the criminal court, as the commandant may judge proper.

VIII. " It is recommended to every one to be very careful of their cloathing; and every free person, or convict, is strictly forbid buying or selling any article of sloop cloathing: those who disobey this order will be prosecuted, for buying or selling the King's stores, whether free people or convicts.

IX. " Whenever it may be necessary to make any complaint, the person making the complaint is to inform the corporal of the guard, who will immediately report it; when the commandant is absent, Lieut. John Cresswell will hear the complaint, and decide upon it.

X. " Disobedience of orders, insolence to officers or overseers, or any other improper behaviour, tending to the disturbance of the peace, or hindrance of the King's service, will meet with severe punishment; and a regular, honest, good behaviour, will meet with encouragement and reward."

CHAPTER V.

Governor Ross appointed to supply the Commandant's place—Reason—Sudden change of Wind and Weather—Consequences—The Sirius drove to the back of a Reef—Strikes—In Danger—Attempt to save the Provision—A Wreck—Marital Law proclaimed—Lives of the Crew saved—Exertions for the preservation of the Stores—The Ship fired by two Convicts—Fire extinguished by another—Culprits secured—Provisions saved—Vessel entirely quitted—Entered afterwards—Casks and Parcels saved—Anecdote of the Sirius—Supply sails for Port Jackson—Universal Anxiety—A Council held—Orders issued—Apprehensions—Three Convicts punished for rebellious Resolutions—General Despondency—Deplorable State of the People—An Alarm—Consequent Joy—A Disappointment—Arrival of the Justinian and Surprise—Information—Provisions landed—An Accident—Seven drowned—Some recovered—Additional number of Convicts sent—Departure of the Vessel—Guns of the Sirius saved—Arrival of the Supply—Lost at Batavia—Departure of the Officers and Crew of the Sirius in the Supply.

HAVING thus far deviated, to acquaint the reader with the first transactions at Norfolk Island, in order that he may be the better informed of the progress of that settlement; I shall now pursue the business which concluded the third Chapter.

No. 4.

It has been already hinted, that the delay of the long-expected arrivals from England caused a general alarm at Port Jackson, and provisions being so very scanty, that Governor Phillip was consequently determined to divide the settlement; for which purpose

purpose the *Sirius* and *Supply* were prepared for sea, under the command of Captain Hunter, the lieutenant-governor: a company of marines, and the officers, with 186 convicts, baggage, &c. were on board the *Sirius*; also a company of marines, with 20 convicts, were on board the *Supply*, with Lieut. Ball, commander thereof, under Capt. Hunter. They were allowed as much provisions, &c. as could be spared.

On the 6th of March, 1790, they left Port Jackson, and as the wind was from the westward, they made Lord Howe's Island in three days. On the 13th of March they made Norfolk Island. The appearance of the *Sirius* and *Supply* created great joy among Lieut. King's party, who naturally supposed that the expected relief had arrived from England. As a great sea was running in the bay, and the wind blowing strong from S. W. their landing in Sydney Bay was at present impracticable: accordingly they bore up for Bail Bay, where Lieut. King met them. His hopes concerning the expected arrivals from England were soon crushed, as he had the mortification to hear that no relief had as yet been obtained. Governor Phillip had sent letters to Lieut. King, by Lieut. Ball, of the *Supply*, to acquaint him, that Lieut. Governor Rofs was appointed to take the command at Norfolk Island, as Lieut. Ball's return to England was deemed absolutely necessary, to give some necessary informations to his Majesty's ministers: he however continued his command of the island (by the lieutenant-governor's desire) till his departure. The vessels went round to Cascade Bay, and the people were landed on the 15th.

As the vessels were working up to the island, the wind suddenly veered to the eastward, and the weather became remarkably foul: the *Sirius* and *Supply* having parted, the latter stood in for the island on the 19th. The *Sirius* now hove-to, and made sail; but on account of the strength of the current, could not surmount the difficulties attending a reef of sunken rocks near Point Rofs: by an unfortunate change of the wind to the S. E. she was drove to the back of this reef. Upon this all the boats were employed; but only two boats of provisions could at present be got out: additional after-sail were applied without effect; she struck upon the reef, and, according to the carpenter's report, remained in imminent danger: the masts were now cut away, and every possible means taken to preserve as much of the provisions as could be come at, which were left upon the gun-deck for the purpose of throwing them overboard, in hopes they might be floated on shore. As the wind was blowing still stronger, and the gale increasing, it was recommended by Lieut. Ball for every person to quit the ship, in answer to a note which he received from Capt. Hunter by the surgeon's mate, who was hauled upon shore through a very tremendous surf, by means of a grating slung to a wooden heart fixed on a hawser from the ship, which was fastened to a tree on the shore: three or four sailors were fastened to this, and by the assistance of the people on shore were landed. The captain and Mr. Waterhouse were got on shore together: the former was so much exhausted, that he was near quitting his hold, when he got footing on the reef: it being very dark, the first and second lieutenant, with several of the sailors, were obliged to remain on board all night.

As soon as the vessel struck, the marines and convicts were assembled by drums, and the martial law proclaimed, setting forth that whoever committed any depredations, killed any animal or fowl, should be severely and immediately punished. There were several necessary regulations ordered by Lieutenant Governor Rofs, by which means the storehouses and barn were well defended.

The next day the lives of every person were saved;

several however were much bruised in escaping; the fallors, who were landed the last, said the fore-part of the ship was under water, as the gale way in the lower deck from the side; but that the chief part of the provisions were on deck, and might be saved: some hopes were therefore entertained of being able to save these, and several other things. The weather becoming more moderate, and the surf consequently running less heavy, some of the fallors who swam well were determined to use all their exertions for the preservation of the stores: also two convicts offered their assistance to save the live stock. Some poultry, and a number of pigs, by their means, were put on shore; but as these men remained on board, spite of signals for their return, a convict carpenter went spontaneously to oblige them to quit the wreck: these men had set fire to the ship, which destroyed the gun-deck, but which was put out by the carpenter. One of them was quite intoxicated, when he was hauled on shore: they were both ordered into confinement, in order to be tried for the conflagration.

The chief part of the provisions were now saved, and as it became too dangerous for any person to remain longer on board, the vessel was entirely quitted; however, by her being so much lightened, and her small bower cape cut by the rocks, she was continually shifting about, and coming nearer the shore; was frequently entered, with less danger. At this time the parcels and casks were saved, and every thing that could be got preserved. She was then very much dashed to pieces; notwithstanding her remains were to be seen for several months after.

The following anecdote of the *Sirius* is related by Lieut. King.

"She was built in the River, for an East Country ship; and, in loading her, she took fire, and was burnt down to her wales. The Government wanting a roomy vessel, to carry stores abroad in 1781, purchased her bottom, which was rebuilt with such stuff as during the war could be found. She went two voyages as the *Barwick* foreship; and, without any repairs, she was reported, when the present expedition was thought of, as fit for the voyage to New Holland, when she was named the *Sirius*."

On the 24th, the weather being calm and pleasant, Lieutenants King, Waterhouse, and Powell, with 20 of the crew which belonged to the *Sirius*, went on board the *Supply*, and sailed for Port Jackson; Lieut. Rofs being now in possession of the command of the island.

According to the proclamation of the law martial, all capital offences were punishable by death: this, no doubt, was the happy means of preventing much plunder. The number of people now left upon this island began to be seriously alarmed for their future subsistence: every day they were upon the look-out, in anxious expectation of relief. Near two months elapsed, without any signs of succour. On the 14th of May, the lieutenant-governor held a council, composed of officers, by whom it was unanimously agreed that the following orders should be published:

"At a meeting of the governor and council, held to consider of the very exhausted state of the provisions in this settlement, and to consult upon what means are the most proper to be pursued, in order to preserve life until such time as we may be relieved by some arrivals from England, of which we have been so long in expectation, but probably disappointed by some unfortunate accident having happened to the ships intended for this country: the state of the provisions having been laid before the council; and the alarming situation of the settlement having been taken into the most serious consideration, the following ratio of provisions was unanimously resolved, and ordered to take place on Saturday the 15th instant, viz.

"Flour, three pounds per week for every grown person;

"person; beef one
"in lieu of beef 17
"per ditto. Child
"half the above ratio
"old one pound and
"of rice, per week
"In future, all

 " by a farther reduction of the present allowance of
 " provisions."

It was in vain to look for relief from any other
 quarter than Port Jackson, this part of the ocean
 being unfrequented: day after day now passing
 without any prospect of a sail, it was apprehended
 that even the present scanty allowance of provisions
 must in time be reduced. At this time the people
 chiefly subsisted upon a kind of aquatic bird, which
 was now remarkably numerous, and was justly nomi-
 nated the Bird of Providence; though of a silly
 nature, it was very much relished, especially the
 eggs: upwards of three thousand of these birds were
 taken every night.

Notwithstanding their distressing situation, they
 did not forget on the fourth of June to celebrate
 his Majesty's birth-day, which they did with as
 much satisfaction as their deplorable condition
 would admit of.

A convict, who had been sent on the 6th of July
 to catch some birds, was stripped of his cloaths by
 three others, who had combined together to remain
 in the woods, and commit depredations. As soon
 as a report of this was made, two parties of marines
 were dispatched by the lieutenant-governor, and
 two parties of seamen by Capt. Hunter, to appre-
 hend them: they were immediately secured by the
 latter; and, as the court-martial was determined
 to make examples of these convicts, they received
 each three hundred lashes.

Towards the latter end of July a general despon-
 dency took place; the birds now became scarce,
 and a very small portion of victuals remained: on
 account of the insufficiency of food, the people were
 also in a very debilitated state.

On the 4th of August, the appearance of a sail
 caused a general alarm: it was now universal joy
 and hope; but this hope and joy were soon blasted,
 as the vessel, which had an English ensign flying,
 was, notwithstanding all their signals of distress,
 making sail from the island. Absolute despair was
 the result of this disappointment.

However, three days after, the discovery of two
 vessels, which proved to be the Justitia and the
 Surprise from Port Jackson, removed all their ap-
 prehensions. Information was received from the

masters of these vessels, that his Majesty's ship the
 Guardian was lost in her passage to Port Jackson
 with provisions, and that consequently the Gorgon
 was in preparation to bring farther supplies. Four
 ships, the Lady Juliana, Neptune, Surprise, and
 Scarborough, had arrived with 980 convicts, and
 provisions for the settlement in New South Wales,
 about the beginning of June.

Though every care was taken to prevent any
 accident in landing the provisions, yet, on the 17th
 of August, one of the boats, on making for shore, was
 thrown into a reef, by the sudden violence of several
 heavy fairs; and, notwithstanding there were several
 people on shore, yet seven persons were drowned:
 three besides, that were brought to land apparently
 dead, were recovered by the surgeon's exertions;
 two of whom were women. The persons lost con-
 sisted of two of the boat's crew, three women con-
 victs, a child, and a convict man, who perished in
 endeavouring to save the women.

An additional number of convicts, about 200,
 were sent to Norfolk Island, in these vessels; and,
 as the weather was exceedingly favourable, they
 were cleared in 23 days. On the 30th of August
 they proceeded on their voyage to China.

About the beginning of the year 1791 an attempt
 was made to save the guns and carriage, which were
 still lying in the remains of the Sirius: dangerous
 as this attempt may seem, yet as the fairs had
 made considerable alterations on the wreck, it was
 found, though difficult, not impracticable. Except
 two carronades, which had been carried away by
 the fall of the masts, every thing was got on shore
 by a traveller upon a nine-inch hawker.

Towards the latter end of this month the Supply
 armed tender arrived; she had been, on her return
 from Norfolk Island, dispatched to Batavia, for the
 purpose of hiring a vessel for the relief of the settle-
 ment; the particulars of which we shall have occa-
 sion to mention in our next Chapter. While at
 Batavia, the crew were so ill, that several were lost
 by fevers, among whom were Lieut. Fowel, and
 Mr. Ross, late of the Sirius, much lamented. It
 being governor Phillip's pleasure, that the officers
 and crew of the Sirius should return in the Supply
 to Port Jackson, Captain Hunter accordingly em-
 barked with them, and left Norfolk Island on the
 11th of February.

Such is the acknowledged salubrity of Norfolk
 Island, that all who were there were most remark-
 ably healthy: two children at a birth were very com-
 mon, and even women in advanced years, who
 imagined themselves past child-bearing, have been
 frequently brought to bed of fine promising infants.

C H A P T E R VI.

IN the mean time the people at Port Jackson, though they had not so much cause for apprehension and terror as the unfortunate settlers in Norfolk Island, were notwithstanding very much depressed at the long delay of the vessels expected from England: however all their fears were dispelled, and their late sorrows forgot, upon their arrival, though the loss of the Guardian was very much lamented by his excellency.

An excursion into the country was made by several officers in August 1790: they explored the greater part of Prospect hill, and the head of Nepean river. Several convicts were lost in the woods; one of whom was never found.

On 7th of September, a spot of rising ground being chosen from the south head, for the purpose of erecting a brick column, to shew the masters of ships (who were unacquainted with the coast) the best place for entrance, as the flag-staff, which was the present direction, was not only liable to be blown down, but could not be discerned at the smallest distance. This plan was accordingly adopted, and the work immediately begun.

The two native children, who had been preserved from the small-pox by Surgeon White, were now very tractable, and content with their situation: the boy lived with Mr. White, and the girl with the chaplain's wife. Ba-na-lang, the attendant to Co-al-by, (who had made his escape) became so free and apparently happy, that he was permitted to walk wherever he pleased; but he soon availed himself of an opportunity, and one evening, having taken off his clothes, left them behind and departed. He was dressed on week days in a coarse red kersey jacket, and a pair of trowsers; but on Sundays in nankeen: the former habit was intended by the governor to convince him of the comfort and use of clothes in cold weather: previous to his elopement, he used frequently to walk with the governor, and occasionally wear his sword, which the governor would give him in order to establish a more permanent acquaintance. He could not bear spirits, and was exceedingly angry if any one gave him ever so little in water: he was fond of wine, and shortly learned the necessary accomplishments of drinking healths, bowing, &c. After his departure, he had been frequently met with Co-al-by: though they were sometimes afraid of being taken, yet they were always glad to see their late friends. Ba-na-lang once sent a large piece of a whale, which they had caught, and on which numbers were assembled to feast, to the governor; who being now very desirous to renew the intimacy between them, went down the harbour to give them a general invitation, and assure them that they might return to their own friends whenever they liked: for this reason he was only followed by one seaman, who was loaded with some meat. When he saw Ba-na-lang, he scarcely knew him, being much altered by several wounds which he had received, and which he was very proud of showing. Co-al-by also exhibited his leg in a triumphant manner, to let him see that the iron which had been rivetted on it for his security was taken off: he also expressed by signs much satisfaction at Ba-na-lang's escape, and laughed heartily at the trick which he had played upon him. The governor, however, trusting too much to their generosity, incautiously ap-

proached, in this unprotected manner, another native, who had been a stranger, and consequently alarmed at his excellency's appearance, notwithstanding all his endeavours to remove his apprehensions; this man, therefore, seizing a spear, which had been previously laid upon the ground by Ba-na-lang, fixed it on a throwing stick, and instantaneously discharged it at the governor: it entered the right shoulder, just above the collar-bone, and came out behind the shoulder blade: it was with the utmost pain, and difficulty he reached the boat; as the spear, which could not at this time be extracted, was remarkably long. After some struggle, Mr. Waterhouse broke it, notwithstanding the danger of stopping, there being now several spears flying about. The governor fired a pocket pistol, and the cockswain (who at this time approached) a musket, which fortunately terminated this sudden hostility: the point of the spear was extracted by Mr. Bulmain, who afforded very great satisfaction to every anxious enquirer, by assuring them that no fatal consequences need be dreaded.

Though Governor Phillip issued forth orders to apprehend (if possible) the native who wounded him, it was not with a vindictive design, but on the contrary to keep him, and convince him that there was no harm intended him. It was strictly commanded by the governor, that no one should fire on the natives, except in his own defence, and unless they were the first aggressors in throwing their spears.

When Ba-na-lang had met with a party of the English, after this circumstance, he seemed very much concerned, and enquired if the governor was dead. When informed of the contrary, he promised to come and see him; which he did, and likewise promised to revenge the injury.

Ba-na-lang and Co-al-by, upon an assurance that they should never be detained, had accepted the governor's invitation, and became constant guests. A general intercourse succeeded these confidential visits; and the two natives were at last so familiar with the English, that they introduced their wives and families to them: this mutual harmony furnished fresh instances of the natives' dispositions and manners. It was found that the men used the women exceedingly cruel: the husbands frequently beat their wives, and sometimes killed them, while their relations would seem quite indifferent about the business, nor ever interpose in behalf of the suffering females. It seems the beginning of courtships is always a good beating, which the girls very patiently endure: the women, however, are very obdinate, and though aware of the consequences, prone to offend. It was with the greatest difficulty the governor and his friends could prevent Ba-na-lang from chastising his wife, who had in a fit of passion broke a valuable siz-gig: he calmly declared that he should be under the necessity of killing her, and meditated revenge for a long time; he was however prevailed upon to forgive her, which christian virtue these people are totally ignorant of. Indeed there were several natives under Mr. White's care in the hospital: men, who had suffered in fighting with each other, and women through the chastisement of their husbands.

Ba-na-lang and his family became at length so gracious with the English, that they consented to

live in a hut, which eastern point of the visited by other natives intercourse took place frequently visit the breakfast at the and meat were always

Such was the vindictive that he was determined to beat a woman who nor entreaties could purpose: he was the judge-advocate, a fee to protect the girl from him, and gave him remarkably outrage take away even the precaution, he fought sword, and strike the lying either asleep and, before the sergeant repeated the blow under the protection &c. None of her least concerned at were very solicitous which were taken returned to him.

The governor endeavoured to murder upon the vain: he even threatened any one's life, he feared but this menace had the course of time, the girl, which cooperate Ba-na-lang's was still in danger of soon corrected his ear, and sent her returned by the government of animosity had subsided.

Notwithstanding an unfeeling manner, that for each other. In men will be revengeful temper is once fatigued are immediately for

The convicts still honest as ever. Of five of these wretched Rose-hill to come down it for a four-oared boat. Notwithstanding the governor entered to suspect Ba-na-lang this man would free the natives as very he was constantly in with them; in short tion and ambiguity haviour was very near

As several of the spears and wounding were undefended, the

live in a hut, which was erected for them on the eastern point of the Cove. As they were frequently visited by other natives, of course a more general intercourse took place. Several natives would frequently visit the settlement at the same time, and breakfast at the governor's in the yard, where fire and meat were always prepared.

Such was the vindictive disposition of Ba-na-lang, that he was determined, for some unknown offence, to beat a woman with a hatchet. Neither threats nor entreaties could dissuade him from his sanguinary purpose: he was therefore followed by the governor, judge-advocate, a serjeant, &c. who were determined to protect the girl. They took the hatchet from him, and gave him a cane: however, as he was remarkably outrageous, it was deemed prudent to take away even the cane. Notwithstanding all this precaution, he found the means to snatch a wooden sword, and strike the poor girl with it, who was lying either asleep or hiding her face through fear, and, before the serjeant was able to disarm him, he repeated the blow: the girl was conveyed away, under the protection of Lieut. Ball, Surgeon White, &c. None of her friends or relations seemed the least concerned at her fate, but on the contrary were very solicitous that the hatchet, sword, &c. which were taken from Ba-na-lang, should be returned to him.

The governor endeavoured to impress the horror of murder upon the mind of Ba-na-lang, but in vain: he even threatened him, that if he took away any one's life, he should be put to death for it; but this menace had seemingly very little effect. In the course of time, however, he was reconciled to the girl, which reconciliation did not a little exasperate Ba-na-lang's wife, by whom the poor girl was still in danger of losing her life: but the husband soon corrected his lady with a violent box on her ear, and sent her roaring away. The girl was detained by the governor's command, till all marks of animosity had subsided.

Notwithstanding the men beat the women in this unfeeling manner, they profess a very great affection for each other. In every case of disobedience, the men will be revenged; but when that vindictive temper is once satiated, the injuries on both sides are immediately forgotten.

The convicts still continued as rebellious and dishonest as ever. On the 26th of September, 1790, five of these wretches, who had taken a punt from Rose-hill to come down on the look-out, exchanged it for a four-oared boat, and made off undiscovered. Their intention, as supposed, was to go along the coast to the northward, in order to reach some of their friendly islands; but not being aware of the attending danger, there is very little doubt but that they perished in the presumptuous attempt. On the 28th of October two convicts were executed, for robbing a hut, and dangerously wounding the owner, who made resistance.

Hitherto the weather was so remarkably dry, that rain was very much wanting: the new moon in the beginning of November was attended with some few showers, which became very frequent towards the latter end of the month, and the beginning of December; but the latter end of this month was most remarkably hot.

Notwithstanding the favourable opinion which the governor entertained of the natives, he began to suspect Ba-na-lang both deceitful and cunning: this man would frequently represent some tribes of the natives as very bad, deserving death; yet he was constantly in their company, and very free with them; in short, there was so much contradiction and ambiguity about Ba-na-lang, that his behaviour was very mysterious.

As several of the natives still persisted in throwing spears and wounding the English, especially such as were undefended, the governor found it expedient,

No. 4.

though contrary to his inclination, to make a few severe examples, in order to terminate this evil. At this time Lieut. Ball's game-keeper was dangerously wounded by a native; therefore, on the 14th of December, a party, consisting of two captains, two lieutenants, four non-commissioned officers, and forty privates, were sent out in pursuit of the offender, attended with the surgeon and a surgeon's mate, belonging to the Sirius; with also three persons who were with the game-keeper at the time of his being wounded, and the only men that could ascertain the culprit. It was deemed the best way to send out a large party, to prevent any resistance of the natives, or attempt to rescue whatever persons it might be judged proper to secure. The officer of this party had directions to seize six of them, and in case they did not surrender themselves, to put them to death on the spot: likewise every spear that was found they were commanded to break, and leave the remains of them for the natives to see: none of the party were to hold up their hands, or show any other sign of friendship; and they were upon no account to hurt the women or children. They had been out three days, but could apprehend none, for the natives as soon as ever they saw them at a distance, fled, and eluded all search. They went out again on the 22d, and staid two days, but were as unsuccessful as before. On the 28th some of the natives, who had been frequently entertained at Sydney Cove, were detected in stealing potatoes; and one of them threw a fiz-gig at the owner of them, on his attempting to drive them out of his garden: this culprit had been long remarked for his intrepidity: he and his followers made it a custom to demand bread at every hut, and threaten the owners thereof in case of refusal. To prevent therefore a continuance of such daring depredations, a serjeant and six privates were sent in pursuit of the offenders, particularly him who threw the fiz-gig: this party was followed by the governor, and two or three officers. Two men were laid hold of, but they escaped, and one of them throwing a club, which was mistaken for a spear, three musquets were discharged. Two women who were there were brought away, in order to lead to a discovery. These women, upon examining the fiz-gig, confessed to whom it belonged, and declared the owner to be a spirited, insolent man.

Ba-na-lang was now accused by two colonists of having robbed them of some fish they had caught. He, his wife, and sister, were returning from the Governor's, where they had dined; they had spears along with them, and the colonists were unarmed. Orders were consequently issued, that no boat should leave the Cove unarmed, nor that any of the natives should be admitted to that place whence the potatoes had been stolen.

There were three convicts found, who had been several days lost; and as they had gone into the woods without orders, they received a due number of lashes; notwithstanding which one of them committed the same fault again: whether he could not find his way back, was afraid to return, and so perished with hunger, or was murdered by the natives, cannot be ascertained, but he was never found. The number of those persons lost this year is as follows:

In sickness,	- -	142
In the woods,	- -	4
Executed,	- -	4
Drowaed,	- -	6

156

Ba-na-lang, not supposing the governor had heard of his crime, called as usual on the 3d of January, 1791. When accused by his excellency, he denied the charge; but, upon being confused, became insolent and outrageous. He then wished to make

M

it

it up with the governor; but finding he would not shake hands with him, he grew very savage, and vowed vengeance for the death of a native, who had been wounded by the party who had fired the musquets when sent to apprehend the persons who had stolen the potatoes. He departed in great anger; and aggravated his crime by stealing a hatchet, with which he made off. In the evening a party were sent to see if the wounded native was really dead, and whether or not to convey him to the hospital. His body was brought: upon examination it was found to be that of the transgressor, therefore his death was not much regretted. The game-keeper, who had been wounded, died on the 20th of this month.

The Dutch vessel, which had been hired at Batavia for the purpose of bringing provisions to the colony, was ready for sea on the 5th of February. The master of this vessel now offered her for sale, or to let her for freight; but knowing how much she was wanted, he was most exorbitant in his demands. There being no attention paid to those proposals, he became more moderate: at length the governor consented to give twenty shillings per ton for his vessel.

Ba-na-lang, some little time after he had stolen the hatchet, contrary to every one's expectation, appeared again at the hospital, where he enquired if the governor was angry, and if he might visit his house: he artfully insinuated that another had taken the hatchet, and endeavoured to vindicate himself by falsehoods. After this he met the governor, who forgave him, but would not permit him to enter his house: indeed it was the governor's intention, in order to keep up a friendly intercourse, to take very little notice of past offences.

On the 28th of February, a fishing-boat, in working up the harbour, having met with a sudden gale of wind, filled, but (being an English cutter) she did not sink. There were four natives in the boat at the time, consisting of a young woman, a girl, and two children. When the accident happened, the woman immediately put the children on her shoulders, and swam to shore with them: she was followed by the girl, and as many of the crew as were capable of swimming. Some of the natives, who were witnesses of this disaster, assembled, and very good-naturedly gave their assistance: among these was Ba-na-lang, who, to do him justice, was particularly assiduous. By their means, not only every life was saved, but likewise the oars and other articles. This office of humanity restored Ba-na-lang to the governor's good graces; his former misconduct being entirely overlooked, he was entertained at his house as usual, and consequently the former acquaintance was renewed between the English and natives: indeed the number of visitors to much increased, and their mutual confidence became at last so great, that both natives and English were frequently seen walking together. Co-al-by, and another young man, called Bal-la-derry, who was a constant guest, attended the governor, Lieutenants Tench, Dawes, one captain, two sergeants, eight soldiers, three convicts, &c. on an excursion into the country: by being accompanied with these two natives, they had frequent opportunities of conversing with others; but when they had rambled for about five days, they were very desirous of returning; accordingly the gentlemen, though inclined to delay longer, thought it prudent to acquiesce with their wishes.

March 25th. Preparations were now making by Capt. Hunter for his return to England. The governor had commanded the master of the ship to call at Norfolk Island, provided it would not be attended with much delay, and to take on board the dispatches of lieutenant-governor Ross. The account of this voyage we shall reserve for our next Chapter, and proceed in giving the most recent transactions at Port Jackson.

The weather becoming somewhat fair in June, 1791, Lieutenants Tench and Dawes, and two soldiers, made a second excursion; and, after some necessary discoveries, returned the sixth day.

Grants of land were now given to those who became settlers, under proper titles. To James Rufe were allowed thirty acres, called the Experiment Farm. One hundred and forty ditto to William Scaffer, who came from England as a superintendent; this was entitled the Vineyard. Sixty ditto to Robert Webb and William Reid, called Webb's and Reid's Farms, &c. &c.

A soldier, who had been out with others to collect some sweet tea, having left his party, went astray in the woods. He was met by several natives, who avoided him, as he had his gun; two, however, who had been visitors at the settlement, recollected the soldier, and joined him: to court their favour, and induce them to shew him the way to Parramatta, (a part between Rose-hill and the landing-place in the creek, so called by the natives, and which title, by command of the governor, it retained) he offered them presents; these they refused, and would have departed, had he not likewise offered his gun, which one of them took as security, and then conducted him to Sydney, observing by signs that Parramatta was too far off. On reaching Sydney, the native voluntarily returned the soldier his gun, nor would they accept any present for their trouble.

As the natives were particularly fond of bread and vegetables, a very necessary traffic took place between them and the English; by which means the governor was in hopes of establishing an excellent fish-market at Parramatta, for as the natives caught an abundance of fish, (frequently more than they could make use of) and which the English often stood in need of, they were very happy in exchanging the surplus for bread, &c. This traffic continued for many days, but by the imprudence of some convicts it was nearly put an end to. It seems these men, in disobedience to the governor's orders, had destroyed the canoe of a certain native, who was remarkably active in catching fish: he had set a great value on this canoe, and having painted himself with red, (according to their custom when angered) he came and complained to the governor, uttering the most violent threats. The villains being apprehended, were punished in his presence; and as he supposed one of them was put to death, his revenge was satiated. After this several spears were thrown at some of the convicts, when alone or unarmed: one man was wounded by Bal-la-derry, the owner of the canoe, as the natives confessed, for they are always ready to acknowledge any offender.

On the 9th of July the *Mary-Ann* transport arrived with 141 women, and six children; also stores, &c. Only three persons were lost on the passage.

On the 16th a centinel (who was a mariner) was detected by the serjeant stealing wine in a cellar: previous to his trial, he offered himself as evidence for the crown, and charged two others with having been frequently guilty of the like practice; but this man's evidence being insufficient, he thereby only saved his own life, and the others were acquitted. Being tried afterwards by a battalion court-martial, he was sentenced to be whipped, and drummed out of the corps. Those whom he accused, had been accused before in like manner, and acquitted for the same reason.

On the 18th twenty-seven convicts, who had consented to become settlers after the expiration of their time, took possession of their allotments, and began to build their huts. Twelve of them were allowed situations at the foot of Prospect-hill, and fifteen northward of the creek leading to Parramatta. In order to guard against the natives, who might be inclined to hurt them, as they had many opportunities here, there were some musquets distributed

among the settlers at Prospect-hill, and the appearance of a musquet, and ran to flight, advantage had been just ere the settlers took his musket, made them retreat, were sent out, for the

tributed among them. Shortly after, one of the settlers at Prospect-hill, being alarmed at the sudden appearance of several natives, discharged his musquet, and ran away. The natives, seeing him take to flight, advanced and set fire to his hut, that had been just erected. Upon this another of the settlers took his musquet, and firing at the natives, made them retreat. After this a party of soldiers were sent out, for the further security of the settlers.

The Matilda transport arrived on the first of August, with an ensign, twenty privates, 205 male convicts, provisions, &c. She was only five months coming from England, and though her passage was remarkably good, yet a serjeant and 24 convicts died; several were sick, and all the rest in an emaciated state. On the 20th arrived the Atlantic transport, with a serjeant, 17 privates, 202 male convicts, provisions, &c. A soldier was lost in a gale of wind, and 18 convicts died: there were very few sick, but all in general weak. The next day arrived the Salamander, with 12 privates, 154 male convicts, stores, &c. The crew were very weak. On the 28th arrived the William and Ann transport, with a serjeant, 13 privates, with some of their wives and children, 180 male convicts, provisions, &c. Seven convicts died on the passage, and 36 were sick.

The convicts were in such a weak state when landed, that numbers of them were shortly carried to the hospital. On the 1st of September there were 285 under medical treatment: there were also

several seamen very ill of a dangerous fever, which was imagined to have been communicated by the convicts.

The natives still continued their visits at the governor's, sometimes very gracious, and sometimes in disgrace. It was, however, deemed expedient to keep them in awe of the musquets.

In November 42 convicts died; about 500 were sick at Parramatta, and about 200 at Sydney. At this time the following parcels of land were in or ready for cultivation at Parramatta:

- 351 acres, 2 roods, 5 perches, in maize.
- 44 ditto, 1 ditto, 8 ditto, in wheat.
- 6 ditto, 1 ditto, 30 ditto, in barley.
- 1 ditto, in oats.
- 2 ditto, 3 ditto, in potatoes.
- 4 ditto, 2 ditto, fit for cultivation.
- 4 ditto, 2 ditto, 15 ditto, planted chiefly with vines.
- 91 ditto, 3 ditto, 2 ditto, in cultivation by the settlers.
- 28 ditto, in cultivation by officers of the civil and military.
- 134 ditto, inclosed and prepared for feeding cattle.
- 6 ditto, the governor's garden, partly sown, maize and wheat.
- 80 ditto, garden-ground belonging to individuals.
- 17 ditto, land in cultivation by the New South Wales corps.
- 150 ditto, intended for turnips.

CHAPTER VII.

Capt. Hunter's Departure in the Waaksamheyd Transport—Number of the Crew, &c.—Suggestions—They endeavour to make for Norfolk Island—Repulsed by an easterly Wind—A Consultation—Effects thereof—Norfolk Island relinquished—Ile of Pines made—A Mistake—Ill Consequences—A critical Situation—Five small Islands discovered—A Cluster of ditto, called Lord Howe's Group—Six Canoes seen—Description of the People in them—Three small Islands discovered—Sir Charles Hardy's ditto—A vexatious Disappointment—Becalmed—Meeting with several Canoes—Natives friendly and good-natured—A remarkable Proof of their Honesty—A small Cove discovered—Anchorage—Assembly of the Natives—Description of them—Their Weapons, &c.—Water taken in—Natives help them—One of them becomes troublesome—Stimulates his Companions to Hostility—A Conflict—Musquets discharged—Natives alarmed, and dispersed—Peace restored—Their Marks of Concern, Submission, &c. &c.—Their Song of Friendship—Several shaved—Description of the Island—Departure from the Bay—Name and Description of it—A Suspicion concerning the Water—Thought to be without Foundation—Sandwich Island discovered—Foul Weather—Changeable Wind—Two of the Admiralty Islands discovered—Five Canoes met—Description of them and the Natives—The Interview suddenly terminated—Gate of Wind—Assurance of Safety—Islands discovered—Progress slow—Death of a Seaman—Allowance of Water reduced—A Consultation held—Consequent Resolutions—Pitship Islands discovered—Also Part of New Carolines, as supposed—Rain—Advantage taken thereof—Coast of Mindanao perceived—Palmas Island—Hummock ditto—A Boat sent out to meet them—The Result—Anchorage—Ship watered—Civility of the Inhabitants—Visit from the Raja—His Reception—The Master of the Ship's Request—The Raja's seeming Compliance—His Visit repeated—Master of the Ship incensed with the Raja—Proceeds to Violence—Captain Hunter's Interference, and Advice—Perversefness of the Master—A violent Altercation—Smart Fire commenced—Raja and his Attendants make off—Departure of the Vessel—A Seaman left behind—Master's Conduct censured—Description of Hummock Island, Inhabitants, &c.—Poolo Sanguy Islands discovered—Island of Calibes made—A heavy Squall—Island of Bunnao, &c. seen—A sudden Alarm—Apprehension groundless—Two large Praus seen—Suspected to be piratical Vessels—Wind variable—Ground perceptible under the Ship—Brothers passed—Drawn into a Bight—Caraman Javo Islands made—Whirlwinds and Water Spouts—Boomkins Islands—Anchor in Batavia Road—List of the Latitudes and Longitudes.

MARCH 27th, 1791, Capt. Hunter left Port Jackson, in the Waaksamheyd transport. The governor, and several civil and military officers, accompanied him down the harbour, and took leave of him when he reached the lower part: they had sixteen weeks provisions with them, and the crew consisted of 123 persons. It was Captain Hunter's wish to enter the Molucca Islands, and water at Timor; he disapproved very much of touching at Batavia, as it was productive of so much sickness, which would at present be of the most serious consequence, on account both of their crowded state and their scarcity of necessaries. He deemed it imprudent to call at Norfolk Island, except it could be done without much delay, seeing their stock was so small; and therefore concluded it their most judicious way to make the best use of

what time they had, and sail for either Mauritius or the Cape of Good Hope. As the wind had changed upon their setting out, they were obliged to anchor until the next morning, when by a laid-wind they got clear out of the harbour.

In order to gratify the wishes of the governor, (whose orders it was however not to lose much time in the attempt) the master of the ship endeavoured to make for Norfolk Island: he persevered till the 18th of April, and was repulsed by a very strong easterly wind when only within 25 leagues of it. Captain Hunter now assembled the master of the vessel and the officers, to take into consideration the present situation of the ship, and consult on the best method of proceeding. The casks which contained their water, being hastily made of very wretched stuff, now leaked in such a terrible manner, that there

there was above three weeks allowance of water left already, and it was naturally supposed that this loss would be increasing every week; agreeable therefore to Capt. Hunter's wish, all thoughts of making for Norfolk Island were relinquished, and on the 23d of April they reached the Isle of Pines, but could not weather it on account of a strong northwardly east wind: unacquainted with this coast, and having no book of information with them, they mistook the island for the Prince of Wales's Foreland, S. W. part of New Caledonia, and bore away with an intention of running along the western coast thereof: thus deceived, they ran into great danger, having frequently discovered land and low islands a-head. Upon examination, they found themselves in a very deep bay between the eastward, and threatened by a dangerous reef on the west; it being a critical situation, they were determined to go round the reef, for it was impossible to find a channel through it, as the sea was breaking very high on every part. When it was dark they tacked, and during the night every person was kept upon deck. At this time they were fully convinced of their mistake. As they kept working all night to windward, they found the next morning at day-light that they had gained considerable ground, for the wind had varied several points, which was of the most essential service. They carried a press of sail, and having weathered the reef, about two or three miles passed without it: they then steered to the N. W. then N. E. with a view of passing between Queen Charlotte's Islands and that large piece of land lately discovered. On the 10th of May there was land seen about seven leagues distance, bearing W. N. W. this proved to be, upon a nearer approach, about five small islands, which seeming only one at a distance, was supposed to be Carteret's Island. As there had been no knowledge of these islands before, Capt. Hunter gave them the name of Stewart's Islands, after the Hon. Keith Stewart. It was not known whether they were inhabited or not; but two of them, which were the largest, were supposed to be about three miles in length: they abounded in trees, among which was the cocoa-nut.

A great cluster of islands were discovered on the 14th, some very extensive; 32 were counted from the mast-head, but in all probability there were more. Capt. Hunter gave them the name of Lord Howe's Groupe. About half a dozen canoes were also seen coming off, with large triangular sails: one of them, containing nine men, approached the vessel, but would not touch or come along-side of her. Some nails, &c. were thrown into their boat, which afforded them apparent satisfaction: they, in return, threw some cocoa-nuts on board the vessel, in an hour after they departed. These people were of a dark copper hue, very robust, and remarkably clean: they wore (which was very extraordinary) artificial beards, their own appearing to be shaved quite close; at the end of which hung a row of small bones, which seemed like teeth at a distance, making apparently two mouths: their hair was tied in a knot, on the back of their head: they had bones through their nostrils, and their skin was marked, according to the custom of the natives.

On the 18th in the morning, there were three small islands discovered, and several others in the course of the day. They seemed to lie in the direction of S. E. and N. E. and were supposed to be either the nine islands mentioned by Captain Carteret, or those which Lieutenant Shortland saw. Sir Charles Hardy's island was discovered on the 19th. The vessel being a very heavy sailing one, they were very slow in their progress, especially as the weather was unfavourable. A light breeze rising eastward on the 22nd, they wished to take advantage of it, and make for Wallis's Island, but could not proceed more than a knot and a half, having no

ground with 130 fathoms line, and therefore unable of forcing the ship on, nor could they reach anchorage in Gower's Harbour, though within three miles of it: they therefore bore away, in hopes of fetching Carteret's Harbour; which, as laid down in the chart, was four leagues from Wallis's Island: but this account, it seems, was erroneous, and they did not discover their mistake, till it was impossible to retract. They now ran along the shore, with a view of anchoring, but could not find bottom, though they were close in; this disappointment was exceedingly vexatious, as their present allowance of water was very insufficient for the remainder of their long voyage: it was therefore Captain Hunter's determination to try the coast of New Britain, and on the 22nd they were within three leagues of the shore; being becalmed, Mr. Keltie was sent in the boat to try to get bottom near the shore for anchorage. A light breeze having succeeded the calm, the vessel met the boat, but the Captain was exceedingly mortified to hear from Mr. Keltie, that there was no possibility of anchoring there: they then without delay made for the Duke of York's Island, and having reached the south-east part thereof, were soon convinced there was no anchoring there. Next day, the 23d, they met with several canoes, on account of the slender condition of which, the natives avoided the ship, being aware of the danger of striking against her: but they appeared very friendly and good-natured. One of these canoes approached the boat, and understanding that the English wanted water, took a keg from them, with which they went to shore, filled it, and returned with it immediately to the boat. The officer gave them another keg, which he meant they should keep as a compensation for their trouble: but this was filled in like manner, and brought back with the greatest expedition. These people seemed to be remarkably honest, nor would they accept of any trifling presents, without making some return.

Having now ran round the western side of the island, they discovered a small cove, and upon examination found anchorage here, in twenty-one fathoms soft ground. This bay being surrounded with canoes, and a great number of the natives having assembled on the shore, it was deemed prudent to make ready the ship's guns for fear of any hostility. The people were well made, very stout, robust, and of a light copper colour; their hair appeared woolly and nasty, owing to their manner of dressing it with grease and powder, both white and red, with which it is so loaded, that the sight is exceedingly disagreeable: they were entirely naked, several were scarified upon their arms and shoulders, and hollow reeds thrust through their nostrils. Their chief weapons were lances thrown by the hand, about ten feet long; they also carried stones with them, about the size of eggs, which they throw with great exactness from their slings. They had also a kind of musical instrument, doubtless intended for entertainment: their vocal music was far more harmonious than their instrumental. They seemed to be perfectly sensible of honors and distinctions, for several were more respected than others: the women were in general ordinary.

There was no appearance of hostility at first; on the contrary, those natives, though exceedingly clamorous, were disposed to be very friendly: they assisted the men in the boat to find water, which was done by digging holes in the sandy beach, and therein sinking the calks, which immediately filled; they introduced them to a place where there was a considerable flow of excellent fresh water. As they were now determined to lay in a sufficiency, for that purpose they delayed four days. On the first night a very strict watch was kept, and the natives were equally vigilant; they sung their watch-word, and the continual responses made very harmonious echoes. The next morning the same business was

repeated; twelve of the waterers, in natives were encreased appeared with large was all over which great chief among nor could he be a which were offered all in their power this native was so fence, that he sin they now appeared away. Several to which they blew a their displeasure, a of the natives reti slung. Upon this muskets, which w the ship, boat, &c the natives, but powerful effect, th and several who w ously into the wat that some of them terwards remarka awe. The English out any further m their watering was had directions to were seen in the w muskets, and pre the last evening of departing from sho many canoes at an boughs, the emble appeared extremely took every means provocation they l a boat sent from th on their landing, viously piled upon consisting of sugar what was very red and female, were b their mouths and tree stuck in the down. This was mission. Peace be assembled, and join was indeed true ha received trifles: t which is in general pieces of linen or lively colours. Se and expressed great Their music, thoug no means discordan tone, and though the nicest connoise viation in the sou make a noise like t they mean to testif

There was not island, but from t there is every reful lent, and producti seem to have found however, they are a Th'r huts evince the most part, ere of a cluster of coc clearing the ground residence, and of en a part of this grou where may be fou sugar-cane, &c. & sitting of high land, markable for abun ported by the carp

repeated; twelve men being sent armed to defend the waterers, in case of danger. This day the natives were increased in number, and the majority appeared with lances, stones, slings, &c. One who was all over white with powder, and evidently a great chief among them, became very troublesome, nor could he be appeased with any of the presents which were offered them. The men endeavoured all in their power to court his favour, but in vain: this native was so apparently enraged at their presence, that he stimulated the rest to hostility, and they now appeared determined to drive the English away. Several took out their boxes of red powder, which they blew all over; an emblem, it seems, of their displeasure, and an inclination to quarrel. Some of the natives retired; and several stones were now slung. Upon this the armed men discharged their muskets, which was answered by several shots from the ship, boat, &c. The guns not being known to the natives, but mistaken for clubs, had now such powerful effect, that they all ran away full of terror, and several who were in canoes jumped instantaneously into the water and swam away. It is supposed that some of them were wounded, as they were afterwards remarkably condoling, and full of awe. The English continued filling their casks, without any further molestation; and on the fourth day their watering was completed. The men having had directions to fire whenever any of the natives were seen in the woods, frequently discharged their muskets, and prevented any further attacks. On the last evening of their stay, when the sailors were departing from shore, the natives assembled; as did many canoes at an awful distance, holding up green boughs, the emblem of peace and friendship: they appeared extremely anxious for a reconciliation, and took every means to prove their concern for the provocation they had given. There was therefore a boat sent from the vessel, with every sign of amity: on their landing, the natives retired, having previously piled upon the beach their peace-offering, consisting of sugar-canes, cocoa-nuts, &c. &c. and what was very remarkable, two little dogs, male and female, were left on the top of this heap, with their mouths and feet tied: there was also a palm-tree stuck in the middle, with the head forced down. This was supposed to be a token of submission. Peace being re-established, all the natives assembled, and joined in a song of friendship; which was indeed true harmony: they also both gave and received trifles: they seemed to disregard iron, which is in general esteemed by natives, preferring pieces of linen or cloth, especially such as were of lively colours. Several were shaved by the barber, and expressed great satisfaction during the operation. Their music, though it boasts not of variety, is by no means discordant; they generally adhere to one tone, and though hundreds are singing together, the nicest connoisseur cannot discover the least deviation in the sound: when they have finished, they make a noise like the barking of dogs, by which they mean to testify their friendship.

There was not much time for exploring this island, but from the little which was discovered, there is every reason to think that the soil is excellent, and productive of several plants. The natives seem to have some notion of cultivation; in this, however, they are assisted more by nature than art. Their huts evince much ingenuity; they are, for the most part, erected of bamboo, near the shade of a cluster of cocoa-nuts: they have a manner of clearing the ground which is fixed upon for their residence, and of enclosing it with a kind of railing: a part of this ground is appropriated to a garden, where may be found the yam, banana, plantain, sugar-cane, &c. &c. The island, though not consisting of high land, is far from being low: it is remarkable for abundance of wood, which was reported by the carpenter of the *Sirius*, who was sent

No. 5.

to examine it, to be in general of the same nature of the cabbage-tree or palm in Port Jackson; but there was one kind, he said, which appeared somewhat like the ebony, that was remarkably hard and good.

The master of the vessel gave these natives two English pointers, male and female, and a cock and a hen, which he had received at Port Jackson, and with which these people were highly delighted: he now prepared for sailing, and in the morning at ten o'clock on the 27th they left the bay, which was called Port Hunter, after the captain. This bay, though not extensive, is nevertheless safe and convenient, particularly at this time. It is situated N. W. of the island; and in part of it there is anchorage from 25 to 15 fathoms. It is the worst ground at the shoal water: in that part of 20 fathoms it is soft. As the salt water is very near the watering-place, it created a suspicion that what they had taken was brackish, especially as it was remarkably soft; but Captain Hunter imputed this supposition to mere prejudice, as there was not the least inconvenience derived from it.

They now proceeded N. W. by W. and W. N. W. and discovered Sandwich Island the next morning, bearing N. W. This island appeared high, and well covered with wood. The extraordinary peaked hill, which Capt. Carteret takes notice of, was seen on the north side. At night they steered W. by N. deeming it safe to keep aloof of the Portland Islands; but in the morning, finding themselves more to the northward than they imagined, they hauled up W. by S. and passed the islands, which are nine in number, low, but covered with wood, at about four miles distance. The weather became very foul on the night of the 30th of May; and the wind, which was changeable, threatened much rain: there were, however, only a few small showers. Early the next morning (May 31st) one of the Admiralty Islands were seen, bearing N. W. by W. and afterwards another from the mast-head, bearing W. It was now their wish to bring-to for the night; being however becalmed, their progress was very slow. They met with five large canoes, containing each eleven men; five of whom appeared warriors or chiefs, being ornamented (according to their custom) with paint, &c. these were standing in the middle of their canoes: however, on approaching the vessel, they discovered no inclination to hostility, but would not come on board, though invited: they were very willing to exchange their arrows, darts, shells, &c. for other trifles. These people wore a wrapper round their waist; and their hair, which seemed of a woolly nature, was turned up, and tied at the top. One of them seemed very anxious to be shaved; which knowledge of the operation fully evinced a late acquaintance with some English. Their canoes were very ingeniously fitted up; being from about 40 to 50 feet long. This interview was suddenly terminated, by a black heavy squall, which alarmed them in such a manner that they all hastily made for land.

There being now a smart gale of wind, they endeavoured to clear these islands before night: they made all the sail possible, and met with land in every direction. The night was very dark, and the rain incessant. As they were westward of the Admiralty Islands, they deemed themselves clear of St. George's Channel, and perfectly safe.

On the 3d of June they discovered two islands, about two points from the starboard beam; and another the next morning: from those they steered to the N. W. and W. N. W. the wind very changeable, and the weather equally variable: there being also a disagreeable head sea, their progress was very slow. After this the wind was set in from W. N. W. to W. S. W. and from the 19th they had been setting to the eastward, at the rate of 30 miles every day. One of the seamen, William Phillips, died on the 30th.

* N

O 1

On the 11th of July the allowance of water was obliged to be reduced, and each man had only two purfer's quarts, which was to answer every purpose for 24 hours. This distressing scarcity was much aggravated by the heat of the weather.

On the 13th a consultation was held, to consider on what was best to be done. It was universally deemed improper to persevere in a tedious attempt of reaching Macassar, seeing that the provisions and water which remained could only supply them for ten weeks at most, at the half allowance; and if the casks were leaky, the water would be short even of that; besides, the Dutch captain observed, that when they did reach the Molucca Islands, their number could not possibly be supplied nearer than Batavia: it was therefore deemed their most eligible plan to make either for the port of Manila, or endeavour to fetch Macao in China; the latter, however, was rather a doubtful experiment, seeing that the vessel was so leewardly.

Land was discovered on the 14th, bearing north; which proved to be two islands nearly joined together by a long sandy spit above water, and on account of the projection of others, must be very dangerous at night-time: they seemed to be quite alone, about five miles asunder. A few natives were seen, who ran away at sight of the ship. Capt. Hunter called these Phillip Islands, after the governor of New South Wales.

Three islands were discovered on the 17th of July. A ridge of rocks, about half a mile in breadth, were perceived from the main-head to stretch from the vessel to the southward, towards the islands: they had, however, 15 fathoms of water, and presently after 20. These islands were supposed to be part of the New Carolines.

On the 23d the weather became very unsettled, attended with heavy rains. Every one took advantage of these showers, and endeavoured to save as much water as possible, by spreading his blanket or rug. This weather continued till the 30th: the wind then veered to W. and W. by S. with which they stood southward, with hopes of fetching the Balbec Islands. On the 2d of August the wind was W. N. W. they then stood to the S. W. On the 6th the coast of Mindanao was perceived from S. to N. W. by S. An island was discovered on the 8th, bearing south five or six leagues: this from its situation was conjectured to be the island of Palnos. Being southward of Cape Augustine, they carried all the sail possible, to get to the westward. It was now found that the land, which was taken for one island the preceding day, was three; that which is westmost is very high, and is called Hummock Island: it appears about six miles long, from north to south. The next eastward thereof is not so high, but about the same length; and the eastmost of the three is a confined round spot, overspread with shrubs and trees. They passed between the small island and the next; the channel being previously tried by a boat, which was found both clear and safe. During the remainder of the day, they continued to work between the fourth point of Mindanao and these islands. A boat, with twelve men on board, was sent in the afternoon to meet them, from Hummock Island. When they approached the vessel, they asked several questions; which were answered by the master of the ship, and some of his own crew, who were Javanese, in the Malay language. It appeared that the inhabitants of this place were upon friendly terms with the Dutch; therefore the articles which were required were accordingly promised. The master of the ship was desired to give them a letter, containing every necessary information; which they were to deliver to the Raja, under whose government, these islands were. A larger boat was sent out in the evening, to have some conversation with them; but as it was dark, they did not choose to come on board the vessel. In the morning of the

11th, they stood in for Hummock Island, and at noon found anchorage in 22 fathoms water, about a mile's distance from the shore. An answer to the letter was brought from the Raja, in the same canoe which had been sent out the preceding day with Dutch colours, signifying (in the Malay language) that their wishes should be complied with.

They now proceeded without delay to water the ship; while several canoes were sent from the shore with a great store of necessaries: poultry, goats, fruits, &c. were immediately bargained for. The natives behaved exceedingly friendly, and were remarkably courteous to those who were employed on shore.

Notice was sent that the Raja intended to visit the vessel; and for that purpose he came in a large boat, which was covered with an awning of split bamboo: he was very respectfully attended; and, on his arrival, saluted with five guns. During the Raja's visit, a party of ten men armed were placed on the top of the round-house abaft. The Raja and his attendants were shewn to the cabin, where every due respect was paid them. The Raja now produced his commission, whereby he proved himself in a great measure supported by the Dutch East-India Company in his authority over these islands. Seeing therefore that the Dutch Company's interest was so well established in these islands, the master of the vessel was encouraged to request of the Raja a proper quantity of rice, which was very much wanted: this solicitation continued for some time. The Raja promised to visit them the next day, and bring such articles as were wanted. The master, upon taking leave, gave him a very rich piece of silk, and a volley was fired upon his return to the boat.

On the 14th, which was the next day, the Raja repeated his visit, according to promise; but the scanty measure he produced of rice and fago powder (which would scarce have been six days maintenance for two men) so incensed the master of the ship, who was of a very hasty, ungovernable disposition, that he was resolved to detain the Raja until his request was complied with. Capt. Hunter endeavoured to dissuade him from such violence; and urged him rather to renew his request, than to make a demand, and in case of refusal to intimate that he would make a proper report thereof to the Governor and Council at Batavia: the captain very shrewdly imagining that such threat would have a much better effect than a hasty quarrel, particularly as the people on deck were unprepared for an attack.

The conversation being renewed between the Raja and master of the ship, the latter still appeared perverse and violent; and the Raja, seeing the long-boat hoisted in, and some cutlasses brought upon deck, according to the master's orders, became somewhat alarmed, which his attendants perceiving, instantaneously assembled their companions, who approached with drawn daggers. An aged attendant upon the Raja, who held him by the sleeve, drew his dagger, and was prevented by the Raja from stabbing the master of the vessel, who immediately snatched up a hanger in his defence, and vehemently called out for small arms. Captain Hunter, though he condemned the master's conduct, drew his sword; and a number of his sailors, who were on the fore-part of the deck, and had been, previous to this, trading with the natives, immediately armed themselves with clubs, hand-spikes, &c. while some of the officers got up the small-arms, and commenced a smart fire. The Raja jumped from the gunwale into his boat, followed by his attendants, who immediately cut the rope which held them, and pulled away from the vessel with the greatest expedition. Several of the natives made their escape by swimming. The boat, which had been sent to shore for the purpose of water,

returned

returned at this natives, and it is but not a man on injury: the master notwithstanding was unfortunately Javanese, and under possible that he might not fall a sacrifice to

returned at this critical period. Several of the natives, and it is supposed the Raja, were wounded; but not a man on board the vessel suffered the least injury: the master's violence and imprudence were notwithstanding very much censured. One seaman was unfortunately left behind; but as he was a Javanese, and understood the Malay language, it is possible that he might have saved his life, if he did not fall a sacrifice to rage and revenge.

These islands are exceedingly fertile, particularly Hummock Island, where the Raja resides. They abounded in rice, bees-wax, honey, sugar-cane, pine apple, oranges, mango, jack, limes, fago, cocoa-nut, Indian corn, tobacco, peas, potatoes, &c. also very fine fowls, goats, dogs, parrots, &c. The inhabitants were much of the same size, colour, form, &c. of the Malay: they wore jackets and trowsers, and a kind of turban. Their daggers, which had wooden scabbards, hung in a sash. A disease like the leprosy was very prevalent among them; and a kind of dry scurf, like the scales of fish, rendered their skin offensive to the eye.

In the evening, (eight o'clock) they weighed from the road and put to sea, and the wind being westward they steered to the southward. Early the next morning they discovered a small island, bearing S. W. in three hours after two others; and in the space of six hours more there were seven in sight, bearing from S. W. to W. N. W. A large island a-head was seen in the evening, and a number of small ones; one of which was about a mile's distance, called Poolo Sanguy: this is a large tract of high land.

On the 25th they made the island of Celebes, and were within nine leagues of the land thereof the 27th. The weather at present was very sultry, and there was but little wind, and that little from S. W. There was a very heavy squall on the 29th, which obliged them to clew all up. The island of Bonneo was perceptible on the 30th; and a small island, supposed to be one of those which are laid down to the southward of the Taba Islands, and near in upon the coast. There was a violent squall of thunder, lightning, and rain, on the 21st. On the 1st of Sept. at night, it being very dark, there was a sudden alarm; something being discovered on the weather-quarter like a large row-boat: the people were in expectation of a pirate, and accordingly kept themselves in readiness; but as this apprehension was groundless, it was afterwards concluded that it had been a large tree, or the remains of a wrecked vessel, which were floating; not bound at all.

On the 7th there were two large proas seen in the S. W. at first they were divided; but they presently joined each other, and stood in for land. It was supposed they were trading vessels; but for fear of their being pirates, the crew were in readiness to encounter them all the night.

The wind continued very variable, sometimes S. S. W. to W. N. W. and at other times (particularly night-time) from S. S. E. to S. On the 17th the ground was suddenly perceptible under the ship: it could not have been more than five or six fathoms; but they were soon afterwards in ten or twelve. They passed the Brothers next day, and stood on to the S. W. being drawn into a considerable bight, formed of the south part of Borneo and a large island called Poolo La'oot, they were obliged to stand off, and on, the winds being very trifling: at this time, seeing that they dropped in so fast upon the shore, they were apprehensive that they would be obliged to anchor; which loss of time would have been of considerable consequence. When they got out of this bight, and were eastward of the Brothers, they endeavoured to fetch the Celebes shore. After meeting with many changes of wind, which caused no little trouble and vexation, there was ground discovered under the ship on the 19th: they had ten fathoms over a very rocky bottom,

which was quite perceptible. They now steered W. S. W. which they continued for about fourteen leagues. On the 23d they made the Caraman Java Islands: the next day they met with some whirlwinds and water-spouts, which however they got clear of by a sudden smart breeze of wind. From Caraman Java they steered westward, and made the Boomkin's Islands on the 25th. Having passed three miles within them, the shore of Java was discovered; and on the 27th they anchored in Batavia road, being exactly six months on their passage.

The following is a list of the latitudes and longitudes of the different places seen in the course of this voyage, from Port Jackson by the northern route:

Reef from the S. E. point of New Caledonia, called by Capt. Cook Queen Charlotte's Foreland,
In latitude 23 deg. 00 min. south.
In longitude 167 deg. 18 min. east.

Stewart's Islands, (center)
In latitude 8 deg. 26 south.
In long. 163 18 east.

Bradley's Shoals,
In latitude 6 52 south.

CHAPTER VIII.

A Letter from the Shebander to Captain Hunter—Purport of the Contents—Captain waits upon the Shebander—Accompanies him to the Governor—His Business and Request made known—Governor's Answer and Scruples—Captain urges the Necessity of his Application—Is referred to the Council—His Application written in Dutch—Improved by the Shebander—Leave given Capt. Hunter to purchase the Vessel—Terms agreed upon between him and the Proprietor—Observations—Sailors taken ill of a Fever—Nature of it—Deaths of four Seamen—Indisposition of several—The Proprietor's Attention—Certain sails to the Island of Ornut—Stores taken in—Departure—Straight of Sunda cleared—Cape Lugullus made—Anchorage in Table Bay—Wind tempestuous—Vessel breaks loose—Cables cut—Put to Sea—Signal of Distress hoisted—Answered—Relieved—A Supply of Provisions and Anchors—Vessel secure—Detained—Defects remedied—Provisions laid in—Orders to proceed—Run down to Robins Island—Be-calmed—Oblivied to anchor—Make for Sea—St. Helena Island seen—Ship moored—Anchorage—An Officer sent to the Governor—Governor's Politeness and Attention—Captain lands—Is saluted—Kindly received—Departure—Arrival at Portsmouth—Extract of a Letter from Captain Hunter—The best Course from New South Wales to Europe described—Conclusion.

CAPTAIN HUNTER now received a letter from the Shebander, the reported owner of the Waakfamey Transport, requesting he would call upon him early the next morning, in order to be introduced to the governor; and being apprised of the captain's business and intentions by the master of the ship, who had waited upon him immediately after his arrival, he further advised him not to write to the governor, but endeavour to have matters settled by a personal interview, as such measures, in his opinion, were always attended with less delay. According to the invitation in this letter, the captain waited upon the Shebander, having previously committed to writing the nature of his business, in order that the Shebander (who understood the English language) might be the better able to represent to the governor the purport of captain Hunter's request.

The contents of Captain Hunter's writing, were chiefly to inform the governor of the loss of the Sirius, and the necessity of having employed the Waakfamey Transport, in order to convey to that port the officers and crew of the lost vessel, who had been on a voyage in his Majesty's service, with an intention of obtaining the governor's permission to return to England in the said Transport, after they had obtained the necessary supplies, for which purpose the captain solicited that the Waakfamey Transport might be refitted as soon as possible, and leave granted for them to proceed.

In answer to this, it was observed by the governor, that the vessel was Dutch property, and it was contrary to their established rules to permit any such vessel to proceed from thence to Europe, in the capacity of a Transport. The captain however urged the necessity of the application, and begged he would consider that it was for the accommodation of his Britannic Majesty, and not any one in-

dividual that he was making this request. However the captain's application was obliged to be referred to the council, the governor not being capable of doing any thing of himself. On this account, it was written in the Dutch language by the Shebander, who, by the way of facilitating the business, suggested one additional paragraph, which he deemed the most likely method of obtaining the vessel; this was, "That if it was still deemed inconsistent with the regulations of the company, to furnish the vessel to be hired for the purpose proposed, they would be so kind to grant their permission that the captain might purchase it of the proprietor, provided they could agree about terms." The captain attended the governor and council, and after some short consultation, the former returned answer, that it was the council's pleasure, he might, if he found it agreeable, purchase the vessel. Now the proprietor (Mr. Engelhard) and Captain Hunter, had previously agreed upon the terms, so that all further delay was obviated.

The property of this vessel must appear to every reader, as it did to Captain Hunter, of a very mysterious nature. At first (when in Port Jackson) the master of the vessel was willing to dispose of it without the permission of either the proprietor, or the company. Previous to the captain's arrival at Batavia, he understood that it belonged to one individual, Mr. Engelhard; and afterwards he was informed that it was the property of the company, and therefore subject to their established regulations. These contradictions can only be reconciled by a supposition that all those who have any material appointments under the company, have full power and authority to use their name when it answers any private interest.

Previous to the captain's departure, several of the sailors were taken very ill of a fever, which was very

very prevalent in the country, and thereby reduced to such a degree that it was to be able to stand such a sickness a fond was disagreed such a stubborn man, died on the ditto, on the 26th two indisposed. on the 14th of ditto, on the 11th Mr. Egenhard's vessel, it was read having left the Onrust, where the stores. They left days cleared the S. S. W. and made December, and arrived at Good Hope, on

The wind now being east, that they could not anchor. Thus particularly on the 20th of the vessel's anchors: it was anchors, which had not the least advantage was to be to the captain, and the reef off Robin's Island had both cast anchor under the fore weather now became therefore with the they made fail. They were close round the small anchor remain which was answered by the captain's Ship Provider and Pitt Transport, vessels immediately others were likewise and anchors: and the tion of all the com Hunter and his com vessel was secured by received from the ditto.

Being detained by the illness of the sick, Captain Hunter, having a small frigate, which was full of defects being also for

A quantity of provisions was completed on January 1st, and issued orders that all the provisions should be conveyed to the vessel: five men were their sick quarters, a smart breeze from down to Robin's Island, a sudden calm, they were made for sea on the 1st, and perceived the Island of February. In the evening they anchored in fourteen miles of the Valley.

An officer was sent to the captain's respects to the usual ceremony. With the accidents that immediately wrote to him great concern for what was assuring him that even if produced, should be

very prevalent in this town. The patient was thereby reduced to such a weakly condition, as not to be able to stand or walk; it likewise occasioned such a sickness at the stomach, that every kind of food was disagreeable; add to which, that it was of such a stubborn nature, as rendered it exceedingly difficult to be removed. One Daniel Puddle, seaman, died on the 19th of October; Terence Burne, ditto, on the 26th; at which time there were twenty-two indisposed. Robert Henderson, seaman, died on the 14th of November; and Edward Moore, ditto, on the 11th of December.

Mr. Egenhard having evinced the greatest attention and liberality in respect to the equipment of the vessel, it was ready for sea October the 20th, where having left the road, they failed to the Island of Onrust, where they anchored, and took in their stores. They left Onrust on the 22nd, and in four days cleared the Straits of Sunda; they now steered S. W. and made Cape Lagullus on the 15th of December, and anchored in Table Bay, at the Cape of Good Hope, on the 17th.

The wind now became so violent from the south-east, that they could not possibly fetch their upper anchorage. Thus it continued for several days, particularly on the 20th, when it was so remarkably furious that the vessel broke loose from the two bower anchors: it was in vain to trust any longer to anchors, which had no effect, especially as there was not the least abatement of the wind: the vessel was tossed to and fro by every gale that blew: the captain, apprehensive of being drove upon the reef off Robin's Island, in the night, immediately had both cables cut, and fortunately ran to sea under the fore-sail before it was dark. The weather now became fair, and the wind quite calm; therefore with the view of recovering the bay again, they made sail. In the evening of the 22nd, they were close round Green Point, and having but one small anchor remaining, hoisted the signal of distress, which was answered with several guns by his Majesty's Ship Providence, the Assistant armed Tender, and Pitt Transport, which were in the bay. These vessels immediately sent out all their boats; several others were likewise sent by some English Whalers and Americans, who supplied them with haulers and anchors: and by the great exertions and attention of all the commanders of these ships, Captain Hunter and his company were now in safety: their vessel was secured by anchors and cables which they received from the shore, for their own anchors were lost.

Being detained here through the weakly condition of the sick, Captain Hunter took this opportunity of having a spare top-mast converted into a mizen-mast, which was soon completed; some other defects being also found, were at this time remedied.

A quantity of provisions for four months being completed on January 13, 1792, Captain Hunter issued orders that all those who were sufficiently recovered should appear on board, and proceed upon the voyage: five men were obliged to continue in their sick quarters, being still too weak for labour. A smart breeze from S. S. E. enabled them to run down to Robin's Island, where, on account of a sudden calm, they were obliged to anchor. They made for sea on the 19th, the wind being S. W. and perceived the Island of St. Helena on the fourth of February. In the evening they moored ship, and anchored in fourteen fathoms and a half off James's Valley.

An officer was sent on shore to deliver the captain's respects to the governor, according to the usual ceremony. The governor when acquainted with the accidents the captain had met with, immediately wrote to him in a very polite style, expressing great concern for what he had heard; and likewise assuring him that every refreshment which the island produced, should be very much at the service of his

No. 5.

seamen, for the speedy recovery of their health and strength. The captain landed the next day with a salute of eleven guns, and met with a very kind reception from the governor and his family, who were particularly attentive and friendly, both to him and all his officers.

During their stay in this island, they received a quantity of fresh beef for the ship's company, and having completed their water, they departed on the 13th, and arrived at Portsmouth, April 2nd.

It will be necessary to subjoin here an extract of a letter from John Hunter, Esq. to the Right Honourable the Lords Commissioners of the Admiralty, wherein the captain has given his opinion on the best course from New South Wales to Europe, and which it is presumed, will be found both instructive and entertaining information.

"The passage from England to the Cape of Good Hope is already so well known that it would be superfluous in me to make any observations upon it. From the Cape to our settlement at Port Jackson, the navigation is now much better known, than it was when the first convoy to that country was left in my charge; it is a plain and easy track; any person who is acquainted with the common rules of navigation, and finding the variations of the compass, may, with the necessary look-out, run across that extensive ocean without danger: I have failed over it twice, and it has been crossed by many other ships since. The advantage of being able to ascertain the ship's place in longitude, by observations of the moon, will ever be satisfactory, but more particularly through so vast a tract of sea, in which the error of the log may considerably accumulate, when ships arrive upon that coast where the land lies so nearly in a north and south direction, there can be no difficulty in discovering what part of the coast they are upon, their latitude observed will always point that out, by applying to the general chart, given from the authority of that most correct and able navigator Captain Cook. When they arrive off Botany Bay, Port Jackson, or Broken-Bay, they will I hope receive some assistance into any of these harbours, from the surveys done by me, copies of which I delivered to the governor, as the different harbours were completed, in order that fair copies might, as early as he should judge proper, be transmitted home: but that nothing in my power may be wanting to assist those who may be strangers on their arrival off that part of the coast, separate copies of those parts, with directions more full than were given with the first, will be delivered at your lordship's board, with this, and also a copy of the three harbours, on one sheet, connected with the intermediate coast. It is the return from that country immediately for Europe, by the safest, most certain, and expeditious route, that should be the object of our particular attention. The passage from Van Diemen's Land westward, to the Cape of Good Hope, has never yet been attempted; we can therefore say but little upon it; some, however, are of opinion, that a passage may be made that way with as much ease and expedition as by any other route. I confess that I differ from these opinions: I admit that the passage may be made; but I think, whenever it is tried, that it will be found tedious, and fatiguing to the ship's company. The ship which pursues that route should be strong and well found, and her crew healthy and capable of bearing much blowing, and some cold weather. It is not from a single voyage that we are to judge of the eligibility of this passage; it will happen in some seasons that the wind may be more favourable for making that passage than in others; but it is on the general prevalence of westerly winds here, and the

• O

"heavy

" heavy sea which is constantly rolling from the westward; that I conceive this route may be tedious and fatiguing, and on which account I give the preference to the southern route by Cape Horn. This passage has been frequently tried, and never yet failed of being safe and expeditious; the other never having yet been tried, leaves in my mind some doubt of its certainty and expedition, and a strong suspicion, that whenever it is, it may be found twice out of three times, attended with the difficulties I have hinted at; but if from repeated experience it should be found to be as practicable, expeditious, and certain, as some imagine, it will no doubt be preferable to all the others, as being a shorter distance.

" This passage will of course be attempted only in the Summer months: for admitting a ship to have gained so much to the westward, as to enable her to clear the west coast of New Holland, and to stretch to the northward, until she falls into the south-east trade wind, she will carry this trade in the Summer-time probably quite home to the Cape; but in the Winter, north-west winds prevail in the neighbourhood of that coast, which would exceedingly retard her arrival there.

" The passage southward by Cape Horn, I have failed, and as a proof of the prevalence of westerly winds in those high latitudes, I made my voyage to the Cape of Good Hope, in ninety-one days, from Port Jackson, although I was so unlucky as to be detained beating off Cape Horn for seventeen days, with a north-east wind; which I believe is not very common there. This is rather a long voyage to be performed in that time, and yet I think it will be done twice in three times in less, although a distance of about 3300 leagues.

" The northern passage, which can only be attempted during the winter season, in the southern hemisphere, on account of the periodical trade winds in the Indian seas, and undertaken in such time as to ensure their reaching Batavia before the setting in of the westerly winds there, which is generally in the middle or end of October. The dangers, currents, calms, and other delays to which we are liable in these little known seas, and of which we had much experience in the Waakmanbeyd transport, is the subject of the preceding narrative, which was written particularly for the information of your lordships, and principally with a view of shewing the very great uncertainty of an expeditious voyage to Europe by that passage. I failed from Port Jackson in March, and I can take upon me, without, I hope, being supposed to have presumed too much on my own judgment and experience, to assert, that a ship leaving that port in the end of September, or beginning of October, taking her route by Cape Horn, would have reached England as soon as I have.

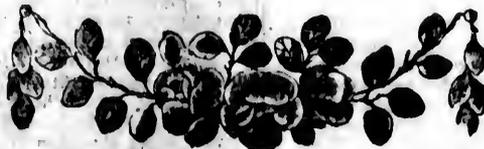

" If ever government should find it necessary to send ships to that country, which may be intended to return immediately from thence to England, I beg leave to suggest to your lordships, that the particular seasons in the southern hemisphere should be considered, in order to prevent those delays in the return of the ships which must inevitably attend their sailing at an unfavourable time.

" If such ships leave England in February, or earlier, if found more convenient, they should refresh at Rio de Janeiro, in preference to the Cape of Good Hope; as by the time they could arrive at the Cape the N. W. winds will be setting in there, which will oblige them to go into the False bay; this will considerably increase their expences, and probably occasion some delay: sail immediately from Rio de Janeiro for the coast of New South Wales, where, if they are not uncommonly unfortunate, they will arrive early in September; this is giving them good time.

" They will then have time to clear, ballast, and to refresh their people for six weeks or two months, and return by Cape Horn; or, if the western passage be found preferable, the season will be equally favourable for it. If they should take their route by Cape Horn, as they will no doubt require to refresh somewhere in their voyage home, they may either stop at Santa Catharina or Rio Janeiro, on the Brazil coast, or go to the Cape; in this case I would recommend the Cape, as more convenient, in more respects than one. If they are sickly, there they may get a supply of men, which it is well known they cannot at either of the other places; and in sailing from the Cape homeward they will have the advantage of being to windward; however, if as late as April, they would probably prefer Brazil. If water only were wanted, that could be had at Falkland's Islands.

" The ships upon this service will, no doubt, be under the inconvenience of coming upon the coast of New South Wales in some of the winter months; we have some bad weather on that coast in the winter, and some smart gales of wind; the easterly gales always bring thick or hazy weather; I would recommend the not making too free with the coast, until they be near the parallel of their port. In steering in for Port Jackson, if they should fall to leeward, either with a northerly or southerly wind, they can avail themselves of either Botany-bay or Broken-bay, Port Jackson being the center harbour."

Having thus far related (in a more satisfactory and ample manner than has been hitherto published) all the chief occurrences, relative to those instructive Voyages to and from Port Jackson, &c. which are not only entertaining, but on account of their public utility doubly interesting, we shall now, agreeable to promise, proceed with our further relations, and give in the second place (with the same accuracy and regularity) the valuable and remarkable Voyage of Capt. Willon, from Macao to the Pelew Islands, and so on.—The great encouragement and liberality already bestowed upon this undertaking, are alone sufficient to call forth all the exertions of the Author to complete in the best manner this universal Collection. It is with no little pride that he exults in the satisfaction, which has been already testified by the Public, even with the little that has been seen: in order therefore to make his triumph still greater, it shall be his unremitting study at present to be able hereafter to boast that the more they have read, the more they are delighted.

A NEW, GENUINE, AND COMPLETE
HISTORY OF
The Wreck of the Antelope Packet,
On a VOYAGE from MACAO;
UNDER THE COMMAND OF
Captain HENRY WILSON,
In the Service of the Honourable EAST-INDIA COMPANY:
WITH FULL AND CIRCUMSTANTIAL ACCOUNTS OF

The PELEW ISLANDS,

The King, Raa Kook, Arra Kooker, Lee Boo, and other Inhabitants.

Including all the ADVENTURES, DISCOVERIES, INFORMATION, &c. contained in the
JOURNALS and COMMUNICATIONS of

Captain WILSON, GEORGE KEATE, Esq. Surgeon SHARP, and several
of the other OFFICERS and GENTLEMEN.

Being an Entire New HISTORY of this Unfortunate WRECK, Immediate DISTRESSES,
Wonderful DELIVERANCE, and Intertelling ADVENTURES, more Accurate and Full than
any hitherto Published.

Which, with the several other VOYAGES and TRAVELS to be included in this Collection, will be Embellished
with a Variety of Most Elegant COPPER-PLATES, Drawn and Engraved by Eminent Artists.

INTRODUCTION.

THE discovery of the Pelew Islands has been entirely owing to the wreck of the Antelope: there has been some curious mention of this place, it is true, in the Spanish and other Histories, but never till now was there a satisfactory account: All informations derived from former relations, are not only trivial, but erroneous, as may appear from the following remarks:

These islands, which, as supposed, were first of all observed by some of the Spaniards of the Philippines, were by them called the Palos Islands, Palos signifying in Spanish, a mast; on account of the tall palm-trees, for which this place is remarkable, and which at a distance resembled the masts of ships. All the several islands of this Archipelago have derived their names from the Spaniards, though now the majority are chiefly known by the title of the New Carolines, which were discovered in the year 1696, as appears from the writings of the Jesuit missionaries; whereby it seems, that some of the inhabitants of Spain, venturing too far to sea, had been driven by a storm to one of the Philippines: this discovery was the occasion of a vessel called the Holy Trinity, being afterwards fitted out at Manilla by order of Philip V. to carry two missionaries there, i.e. Peres Duberon and Cortel; when they had passed Sonfrol, one of the Carolines, an altercation arose between the Captain, Don Padilla and the missionaries, wherein the latter contended to go on shore in the chaloupe, to fix the cross, and stubbornly persevered in the attempt. The vessel, as no anchorage could be found, unable any longer to encounter the force of the winds and currents, was obliged after a few days to quit her station, and leave the reverend fathers behind. There is also an account of another vessel being sent, which foundered at sea, and all the crew perished, except one

Indian, who, by some miraculous means got back to Manilla, and made known the fatal accident. In these writings there is also an account of a boat, belonging to the Carolines, which was driven by a tempest to Guahan, one of the Mariannes, in 1721; where, being detained, Catova (who was afterwards killed by the people of the Carolines) endeavoured to acquire some knowledge of their language and country; and from these natives, derived an imperfect account of the Pelew Islands. He records that this Archipelago was divided into five provinces, and that these islands formed the fifth division: then, upon the authority of these natives, who acknowledged, that they had no communication with those people, he adds, "They are an inhuman savage race; the men and women go entirely naked, and feed upon human flesh; this is the reason" (as given by the natives) "that the inhabitants of the Carolines looked upon them with detestation, as the enemies of mankind; and with whom they held it dangerous to have any intercourse."

From this accidental acquaintance, the four-fifths of these islands were called by the Spaniards New Carolines; but being reported by the missionaries as unprofitable, they were of course neglected by the Spanish monarchy. The account, as given by the natives, of the *first* part, was indeed sufficient to deter them from all enquiries; but it is evident that these people knew nothing of the Pelew inhabitants: at least, if they were then inhuman, savage, and enemies of mankind, they are now of a contrary description. Perhaps, through some mistake or other, they entertained a notion of their being cannibals, and therefore avoided them. Be this as it may, it is plain, on account of this imputation, those islands remained in total obscurity, being only known

known by the appellation of Palos, which the Spaniards had given them. They do not lie indeed in the way of any of the circum-navigators; sometimes they have been perceived at a distance, by vessels making the eastern passage to and from China against the monsoons, but it is evident that none of these vessels anchored there, or had intercourse with any of the natives. It is thought that Captain Carteret approached them the nearest of all. However, the great astonishment which the inhabitants of these islands betrayed upon seeing white people, is sufficient demonstration they were unacquainted with any of that colour; and we may therefore naturally conclude the crew of the Antelope were the first Europeans that they ever saw. How far they have been unjustly censured by their neighbours of the other divisions, will appear in

the following Chapters. It is a matter of doubt, whether those who have so wantonly styled them savage, inhuman, and inimical to mankind, have ever yet demonstrated so much natural courtesy, humanity, and philanthropy, as have been discovered in these people, too long unknown.

Why be astonished at a savage race,
Who want the light of godliness and grace?
No, NATUAS's children rather should surprize,
And bid our wonder at their wonders rise:
Those self-taught people, of unruffled mind,
Humane by nature, and by nature kind;
Who, tho' like us, ne'er blest as to receive
The GOSPEL's rays can yet instructions give,
And teach even enlighten'd Christians how to
[live.]

CHAPTER I.

The Antelope's Departure from Macao—Obliged to anchor again—Anchor weighed—Set sail—A high Sea—The Weather—Bashee Islands perceived—Foretop-mast sprung—Weather variable—A calm—The Chinese Men exercised—A Storm—Cattle lost—Weather fine—A Squall—Alarm of Breakers—General Confusion and Anxiety—Vessel filled with Water—Orders given—A violent Storm—Punctuality and Expedition of the Men—Fortitude and Humanity of the Captain—His Recommendation—Their cheerful Consent—Moderate Refreshment—Mutual Consolation—A small Island discovered—Other Islands eastward—Boats manned and loaded—Mr. Bengier, and others, depart in them—Injunctions—A Raft begun—Much Disquietude—Mr. Bengier's return—Agreeable News—Raft completed—A Man lost—Pinnace, Jolly Boat, and Raft filled—People assembled—Their Departure—Deplorable Situation of the People in the Raft—Their Exertions—Strength exhausted—A Mistake—Arrival of the Pinnace—Occurrences, &c.

IN the month of June, 1783, Capt. Henry Wilson arrived at Macao, in the Antelope packet, of about 300 tons burthen, belonging to the Honourable East-India Company. The vessel being reftituted with all possible expedition, the captain received his dispatches, and, after the usual business and ceremonies, they weighed anchor July 20th; but the weather turning out very foul and unsettled, were a few hours after obliged to anchor in seven fathoms. The next morning, the wind being from the E. N. E. they again weighed anchor, and set sail. Having met with a very high sea, they were obliged to lay-to, and secure their live stock, &c. The weather continued very unsettled; in general, cloudy and dark. There was much rain, thunder, and lightning. On the 25th they perceived the Bashee Islands, bearing from S. E. to E. N. E. They went round the northernmost island the next day, but on account of the haziness of the weather they had a very imperfect view of the islands. The foretop-mast being sprung, the sails were taken in, the topgallant-mast got down, and preparations making to get down the top-mast, which on account of the haziness of the weather could not be effected till the next day, when the vessel was also dried and aired, and the cattle and stock secured; a good part of which had perished.

For a while they had good weather, and a favourable wind, which afterwards changed, and remained very variable. A calm took place on the 1st of August, when some of the Chinese men, who were on board, were sent out by the captain in the jolly-boat to row awhile, that they might acquire a knowledge of the oars: the weather now continued fair, and the wind moderate, for two days. On the 7th a storm arose, which was of a short duration; but notwithstanding the cattle all perished, except one bullock. After this the weather became so fine, that they proceeded on their voyage with the greatest cheer and happiness.

On the 10th there was much thunder, lightning, and rain. The chief mate, Mr. Bengier, whose turn it was to watch on the deck, had lowered the top-sails; at this time the captain was in bed, nor did Mr. Bengier deem it necessary to have him called, as the squall appeared but of little consequence.

An alarm of breakers was given by the man on the look-out, but so short was the notice, that there was no possibility of avoiding them. So great was the shock upon this occasion, that the captain and all the other gentlemen immediately forsook their beds to learn the cause: they saw, with the greatest consternation, the breakers along-side, and the rocks which were making their appearance through them. The vessel taking a heel, was in about an hour's time filled with water up to her lower deck hatchways. Orders were instantly given to bring upon deck what provisions were likely to be spoiled, and to preserve them with a covering from the rain; also to secure the small-arms, gunpowder, ammunition, &c. While this was accomplishing, others, according to orders, were easing the vessel, which was in danger of oversetting, of her mizen-mast, the main and foretop-masts, and lower yards; the boats were likewise hoisted out, with two men in each, to take care of the provisions, &c. which were put in them. At this critical period there was a violent storm, which added not a little to the dreadful scene. The men were, however, remarkably attentive, and executed their orders with uncommon punctuality and expedition. The captain, round whom the people thronged with looks of anxiety and terror, behaved with the greatest fortitude and humanity, endeavouring to revive the drooping spirits of his crew with soothing expressions; he strongly recommended that they would abstain from spirituous liquors; to which they cheerfully consented; but as they were exceedingly wet and fatigued, each person was refreshed with a biscuit and two glasses of wine. The tedious hours of night now passed on in mutually endeavouring to console each other. Each man had taken what quantity of clothes it was convenient to him to secure; and every individual strictly conformed to the captain's command, to abstain from spirituous liquors.

At dawn of day they discovered a small island to the southward, distance about four leagues; and a little after some other islands were seen to the eastward. Upon this the boats were manned, and loaded in the best manner; Mr. Bengier, and a few others, were dispatched in these, to explore the nearest island; they were likewise enjoined to court the friendship

friendship and confidence of the natives, if they met any; and to avoid all hostility, unless necessity proved it urgent. Those who remained in the vessel were immediately at work to get the booms overboard, and make a raft for their security, as the situation of the Antelope was such that every hour they expected she would go to pieces. As there was a smart gale, they became now very apprehensive about the boats, whose delay caused much inquietude. These tears were, however, removed in the afternoon, by their appearance; and their spirits revived, by Mr. Benger's assurance that there was not only a secure harbour, which afforded a comfortable shelter from the wind, but also some excellent fresh water: he further added, that there was no appearance of any inhabitants. Five men were left with the stores upon shore. The crew were now encouraged with these agreeable tidings, that they renewed their work with renovated spirits, and in a short time the raft, which they begun during the departure of the boats, were completed: after which they refreshed themselves again with bread and wine. One Godfrey Minks was however lost, having fallen overboard while cutting the rigging of the mizzen mast, which had been entangled in the mizzen-chains: every method was taken to save him, but in vain.

The pinnace and jolly-boat were soon filled with provisions, small-arms, and ammunition; likewise the raft which they had finished loaded with as much provisions and stores as it could carry with safety. The boatwain was now desired to summon all the people from the ship, who, notwithstanding the captain's repeated entreaties to leave her, were still anxious to secure all that could be got, especially the carpenter, who was so busy in collecting his tools, &c. that he remained below after the pinnace and raft were gone, and was absolutely forced into the jolly-boat by the captain, so intent was he upon the preservation of every necessary.

The raft was taken in tow by the pinnace, and was awhile assisted by the jolly-boat, which however was so heavy laden as to be incapable of giving further aid; it accordingly proceeded alone to the shore, where they found the five men who had been left with the stores, and who had been employed in preparing the place for the reception of their fellow sufferers. Those people who had trusted themselves to the raft, were for a long time in a deplorable situation: in clearing the reef, they were frequently out of sight of the pinnace, and obliged to tie themselves, and cling with all their strength to the raft, for fear of being washed off by the tremendous surf and rise of the sea: during this the poor Chinese,

who were unaccustomed to such fatigue and cold, were making a most lamentable noise: after clearing the reef, their progress was somewhat more agreeable, but in approaching the land a strong current obliged them to use their utmost exertions; their strength being however exhausted, in the unavailing attempt of resistance, it was judged expedient that the pinnace should take the people from off the raft, which addition double banked the oars of the pinnace, and relieved the rowers; but they were consequently so burthened, as to be scarcely able to keep above water: they were now close under a rocky coast, in 16 fathom water. By this time the jolly-boat had laid her cargo in shore, and Captain Wilson, and four others, were returning in her to assist the pinnace and raft; it was very dark, and the pinnace having but slowly advanced, was hailed by the jolly-boat at a distance; but this was returned with such a shrill halloo, owing to their faintness and languor, that they were supposed to be natives, for the people on shore had now some reason to think that the island was inhabited: on account of this mistake, Captain Wilson and his company returned with all possible expedition to the cove: however, on the arrival of the pinnace, all these apprehensions ceased. They shook hands, kindled a fire, and refreshed themselves with cheese, biscuits, and water. The boats were hauled on shore, and a watch set, for fear of being surprised by any of the natives; but, on account of the heavy rain and wind, and more especially the distressing thoughts of their dismal situation, this night proved exceedingly tedious and uncomfortable. Several of the people, through the severity of their labour, and the condition of their clothes, which were both wet and stiff, had such a violent itching in their skins, as to occasion painful sores.

Early in the morning the pinnace and jolly-boat were sent to the raft; but, on account of the violence of the wind, found it impracticable to bring it up; they, however, got from it the remainder of the provisions and sails. In the afternoon there was a calm; during which the boats were so fortunate as to recover some rice, and other provisions, from the wreck. The weather became heavy again, and it was thought, as the wales had started out of their places, that the vessel must soon fall to pieces. This was very melancholy news, as expectations had been formed of her floating, and being thereby enabled to repair her. This hope being blasted, the deplorable situation of the company now aggravated their gloomy reflections: having, however, procured their clothes from the wreck, they felt themselves more comfortable than the preceding night.

THE men were now employed in improving their tents, and drying their stores and provisions: the wind being still boisterous, the boats were prevented from venturing to sea. Early in the morning, August the 12th, the captain and his

linguist, Tho. Rose, a native of Bengal, and who passed for a Portuguese, received notice that some natives were approaching in two canoes. The captain enjoined the people, who were apparently alarmed, to remain quiet and out of sight, but pre-

pared for the worst, in case that he and his interpreter were ill received. The canoes had advanced with the greatest caution; and Rose was desired by the captain to address them in the Malay language, which he did: they seemed somewhat surprised, and not to comprehend what he said; one of them, however, who very fortunately understood the language, enquired in the Malay tongue whether they were friends or enemies. Rose, according to his injunctions, replied, "that they were friends, unfortunate Englishmen, who had lost their vessel on the reef, and had landed here for their preservation." These words were explained to the people by their interpreter; upon which, after some hesitation, they stepped out of their canoes, and were met by the captain, who for that purpose waded into the water, and after embracing them, introduced them to his unfortunate countrymen. There were eight natives; two of which were the king's brothers. They still retained some apprehension, and were very cautious in all their proceedings, having left a man behind in each canoe. At this time the people were preparing their breakfast. The captain prudently dispersed his men, for fear their number might create an alarm, and prevailed upon the natives to sit down in the tent and breakfast with him, his linguist, and only two others. They cheerfully complied; and, by the very fortunate event of each party having an interpreter, a favourable friendship was contracted. It seems this Malay, who had been kept and favoured by the king, had been a year ago thrown on this island by a tempest, in the course of which time he became acquainted with their language. This being the first time, as it appeared evident, of their having seen a white man, their surprise could only be equalled by their curiosity: they examined very particularly the coats and waistcoats of the English, and were not a little astonished to find them only a covering, being unaccustomed themselves to any, nor were they less surprised at the whiteness of their bodies underneath, and the blueness of their veins.

These people having ventured themselves on shore unarmed, the captain deemed it highly imprudent to let them see their fire-arms, for fear of creating any dissidence or suspicion; he therefore gave his private directions to have them removed, but was frustrated in his hopes of concealing them, for one of them having found a bullet, and enquiring its use, understood from his interpreter the meaning of it, and was further informed of the great beauty and ingenuity of their muskets: this excited their curiosity so much, that it was found expedient to shew them one. They expressed great satisfaction at seeing it; and were equally delighted with the appearance of two dogs, as they had never seen any quadrupeds before, except some grey rats.

It was deemed advisable that one of the English should accompany these natives to Pelew, in order to be introduced to their King, that he might be able to form some idea of the English, before he was visited by the whole party, which might have too formidable appearance, and consequently make an unfavourable impression. Mr. Mathias Wilson, the captain's brother, was the chosen person: this gentleman cheerfully consented to accompany the natives, and being previously instructed by the captain, and possessed of some proper presents for his majesty, he departed about noon in their canoe, the other canoe and three men remaining behind; also the King's elder brother, Raa Kook, and the interpreter.

The English were still employed in rendering their temporary dwellings more commodious. They were frequently assisted by the natives, who shewed them where the best water was to be procured, and as these people felt no longer any restraint, they not only suffered themselves to be conducted round the cove, but readily assisted their new visitors in

helping them occasionally over every rugged path; for though the English could scarcely bear to walk in those stony places, yet either through habit or a less sensibility of pain the natives seemed to think nothing of it.

This evening, in ruminating upon their serious situation, and the danger of using strong liquors, which might not only be the cause of uneasiness among themselves, but if it came in the way of the inhabitants likewise intoxicate them, and be productive of universal harm, it was prudently proposed by the captain to save all the liquor casks which were on board the wreck, and instead of endeavouring to save any, cheerfully commit them to the waves. This proposition was universally approved of by the officers, particularly as some of the men had been already inebriated after the wreck, consequently clamorous and elated. Capt. Wilson was therefore resolved to make his wishes known the next morning to all the ship's company.

August 13th, the boatwain summoned all persons to work, by winding his pipe, the sound of which not only surprised, but very much delighted the natives. On account of the badness of the weather, Capt. Wilson's brother was not expected to return. The pinnace was sent off to the wreck, and did not come back till it was dark; when they reported that several articles, particularly iron, had been taken out of her by the natives, who had also made free with the chest of medicines, and carried away several bottles: the most useful medicines, however, had been previously secured by Surgeon Sharp. This intelligence was likewise imparted to Raa Kook, who expressed much indignation and uneasiness at his people's conduct. The captain was apprehensive that they might destroy themselves by a misapplication of the medicines; but Raa Kook seemed desirous that they might, as a just punishment for their behaviour: he declared that this treachery should be properly stated to the King, who, he was sure, would prevent its ever happening again. This noble chief had put on an uniform coat, and a pair of trowsers, which the captain had given him, and seemed highly delighted at being in an English dress: unaccustomed, however, to apparel, he could not long bear the confinement of it. When he had taken them off, he therefore put them carefully up among his collection of curiosities.

The captain took the earliest opportunity of assembling his men, and recommending the immediate destruction of the liquor. The ready assent and obedience of the sailors, is almost incredible: they acknowledged themselves that they might not use it always with discretion, and accordingly hastened to obey their captain's command, which they did with such cheerfulness and resolution, as testified not only a laudable fortitude, but the real affection which they bore their commander.

The next morning (Aug. 14th) Arra Kooker, the King's brother, returned with one of his nephews, and informed Raa Kook that three men had died of the medicine articles which they had taken out of the wreck; but the general did not regret this, deeming it a just punishment for their infidelity. He was accompanied with another canoe, loaded with ready-boiled yams and cocoa-nuts for Captain Wilson; at the same time informing him, that Mr. M. Wilson would speedily return. The King's son delivered his father's message, which being interpreted, signified, that the English were not only welcome to stay as long as they liked in his country, but had full leave and permission to build a vessel, either where they were, or were pleased to remove to, under his dominion; and that during their stay they should always command his protection. Upon this the general introduced the Prince to the English, who with the greatest eagerness and delight began to notice every transaction.

Mr. M. Wilson returned in a short time after, to the great satisfaction of all his friends, who began to be somewhat apprehensive for his safety. The account of his expedition and reception, we think proper to lay before the readers in his own words.

"When the canoe in which I went away came near the island where the King lived, a vast concourse of the natives ran out of their houses to see me come on shore; the King's brother, who accompanied me, took me by the hand, and conducted me from the landing-place up to the town, where there was a mat spread upon a square pavement, on which he by signs directed me to sit down. I obeyed, and in a little time the King appeared; which being notified to me by his brother, I arose, and made my obeisance after the manner of eastern nations, lifting up my hands to my head, and inclining my body forward; to which he did not seem to pay any attention. After this ceremony, I offered the King the presents my brother had sent by me, which he received in a very gracious manner—His brother, Arra Kooker, now talked a good deal with him, which I conceived was to acquaint him with our disaster, and our numbers; after which the King eat some of the sugar-candy, seemed to relish it, and distributed a little of it to several of his chiefs, and then directed all the things to be taken away and carried to his own house; which being done, he ordered refreshments to be brought, which consisted of a coconut filled with warm water, and sweetened with molasses; after tasting it, he commanded a little boy who was near him to climb a cocoa-tree and gather fresh nuts, he cleared one from the husks, and tasting the milk thereof, bade the little boy present it to me, making signs to me to send it back when I had drank; he afterwards broke the nut in two, eat a little, and returned it to me to eat of it.

"I now found myself surrounded by a vast concourse of both sexes: such conversation took place between the King, his brother, and the chiefs who were with him. As their eyes were repeatedly directed to me, I concluded I was the subject of it. Taking off my hat by accident, all who were present seemed struck with astonishment, which I perceiving, unbuttoned my waistcoat, and took my shoes from my feet, in order that they might see they were no part of my bod; being of opinion, that at first sight of me, they entertained a notion that my clothes constituted a part of my person; for, when undeceived in this, they came nearer to me, stroked me, and put their hands into my bosom to feel my skin.

"It being now grown rather dark, the King, his brother, several others, and myself retired into a house, where there was a supper brought in of yams boiled whole, on a stand or stool with a rim or edge round it of three or four inches high: in a dish or wooden bowl was a kind of pudding made also of yams boiled and beat together, just as we make potatoes, of which they put three or four in a bowl or dish. They had likewise some shell-fish, but of what kind I could not make out. They conducted me after supper to another house at some distance from the first, where I found at least forty or fifty men and women; I was led thither by a female, who, when I had entered the house, made signs to me to sit or lie down on a mat that was spread, as I understood, on the floor for me to sleep on. After the rest of the company had satisfied their curiosity by viewing me very accurately, they all went to sleep, and I laid myself down on the mat, drawing another mat over me, which I supposed was placed there for that purpose, resting my head on a block of wood, which serves the people here

as a pillow. Unable to slumber, I lay perfectly still; and some considerable time after, when all seemed quiet, about eight men arose, and began to make two great fires at each end of the house (which was not divided by partitions, but formed one large habitation). This operation of theirs, I confess, alarmed me very much; indeed, I thought of nothing less than that the natives were going to roast me, and that they had only laid themselves down that I might also drop asleep, and intended to seize me in that situation. —However, being surrounded by a danger which there was no possibility of escaping, I collected all my fortitude, and, recommending myself to the Supreme Disposer of all events, I expected every moment to meet my fate; when, to my great surprize, after sitting a little while and warming themselves, I perceived they all retired again to their mats, nor got up any more till day-break, when I arose and walked about, encircled by great numbers of men, women, and children. It was not long before the King's brother joined me, and went with me to several houses, where I was entertained with yams, cocoa-nuts, and sweetmeats—Being after this conducted to the King, I signified to him by gestures that I much wished to go back to my brother; he perfectly understood me, and explained to me by signs that the canoes could not go out, there being too much wind and sea. To describe the first he pointed up to the trees, and blew strongly with his mouth; and, to mark the too great force of the sea on the canoes, he joined his two hands together with the palms upwards, then lifted them up, and turned them the reverse way, to express to me that the canoes would overset.—The remainder of the day I spent in walking about the island, and observing its produce. I found it consisted chiefly of yams and cocoa-nuts; the former they cultivate with great care in large plantations, in swampy watery ground, like the rice in India. The cocoa-nut trees grow very near to their houses, as does also the beetle-nut, which they chew as tobacco."

It is impossible to express the general delight and satisfaction which this gentleman's account afforded. The captain immediately presented a silk coat and a pair of blue trowsers to the King's son, which he put on. Though Arra Kooker, his uncle, could not bear the confinement of trowsers, he took a liking to a white shirt, which was immediately given him, and which he no sooner dressed himself in, but he began to skip about with so much glee, as to create considerable diversion, not only by the contrast of the linen and his skin, but also by his mimicry and humour, which were abundant.

Two boats were sent off with Mr. Barker to the wreck, but came back with the jolly-boat, on account of the unsettled weather. In the evening the pinnace returned with some articles which they had preserved, and informed the captain that there were several canoes about the vessel, and some of the natives had been detected in plundering her: this being communicated to Raa Kook, Arra Kooker, and the king's son, were immediately dispatched in a canoe, to threaten and disperse them.

For fear of any attack from the inhabitants of adjoining islands, it was deemed advisable to appoint a regular guard every night; previous to which, for fear of creating any alarm among the natives, this custom, with its utility, was communicated to the king's brothers, and prince, who accordingly went to see the guard turn out, and were highly delighted with their manœuvres.

The next day the English were apprised of a visit intended them by the king: while in anxious expectation, several canoes appeared at a distance, who were all armed; others surrounded the harbour, where they lay-to: at last the king's canoe came, attended

attended with two at each side; while the rowers were splashing about the water, and flourishing their paddles with astonishing agility. Upon his advancing, the canoes in the harbour founded their conch-shells. Captain Wilson (understanding it was the ceremony) went to meet the king, and was carried by two of his men through the water. He then entered the king's canoe, and embraced him: their interpreters being with them, the captain renewed his request of being permitted to build a vessel, and received the same courteous answer, in addition to which, the king observed that the island he was then on, was deemed unhealthy, and that probably they might be insulted by some of the natives of the other islands, who were at war with him: therefore he recommended a removal to the place of his residence, where he should be under his immediate protection. Captain Wilson however observed, that such removal would be attended with much inconvenience, particularly as the wreck was so near this island, that they could, whenever the weather permitted, be able to save some articles from the wreck; but he added, that if he found any inconvenience from the unhealthiness of the situation, that he would avail himself of his polite offer. The King was very much pleased with this reply, and accepted a scarlet coat which the captain presented him. He then went on shore, but manifested the same reserve and caution which his brothers did at first; when seated his train, being about three hundred, attended, and in a little time his Majesty became more affable. He drank a cup of tea, but did not much relish it; other presents were made him.

Several of the English still retained their doubts and apprehensions, and as every chief among the retinue had looked stedfastly upon some particular person, it was immediately suggested that they were planning their destruction, but it was afterwards discovered that each was then choosing an individual to be his friend.

The King was as much delighted with every thing he saw, as his brothers had been. For his further amusement Captain Wilson commanded his men to be under arms, and drawn up on the beach, then to be exercised by the chief mate. This was accordingly done: they went through all the positions of their exercise, and fired three volleys. The explosion of the musquets created universal surprise among them: the king was afterwards shown the effect of these guns by Mr. Bengers, who shot one of their fowls in his presence. They were very much astonished at seeing the bird drop, and examined it with great wonder and attention.

The King, his brothers, and the rest of the chiefs, were highly entertained with every thing they saw, particularly a grind-stone, the tea-kettle, iron pot, bellows, frying-pan, &c. The novelty of these things worked upon the mind of his Majesty, that he was frequently lost in thought; and being informed of the great variety of nations these were, began for the first time to be surprised at the magnitude of the world: he was bewildered, and for a long time pensive! The general, his brother, took great pains to shew him every thing, and expatiated much upon the English contrivances.

When the King was about departing, a sudden loud shriek was given by his attendants, which did not a little alarm some of the Englishmen, who were apprehensive of a sudden attack. This was, however, a signal for assembling his train; who were accordingly united with surprising expedition. Raa Kook, the Prince, and five canoes with about twenty natives, remained behind. The King's departure was attended with as much ceremony as his arrival. After the guard was set, Raa Kook, the Prince, and natives, made such a hideous noise, that the sailors immediately seized their arms, and the captain was informed by Surgeon Sharp and Mr. Barker, that his men were apprehensive that the natives had some

treacherous design, and were giving the signal for others to assist them. The captain begged them to be calm, and appear undismayed, till he enquired into the cause, which he was very happy to find was only a prelude to their manner of singing. Each verse was given out by Raa Kook, which was sung by the next chief, all the natives joining in chorus. At their request, the English sung several songs, (particularly sea-ones) with which they were much delighted. Each party now went to rest, but there were many among the English who had not yet overcome their doubts and fears.

The King, like the rest of the natives, went entirely naked: he carried an iron hatchet on his shoulder, which created much wonder among the English, as all their other hatchets were made of shells; but as they seem to have a great notion of respect and distinction, it was supposed that iron was in the highest estimation. Their sovereign appeared gentle and gracious, though possessed of proper dignity. The chiefs had boxes on their wrists, by way of ornament; and the ring which Capt. Wilson wore on his finger, was imagined by them to be the ornamental mark of his rank and dignity. Arra Kooker appeared to be about forty: he was short in stature, but remarkably fat, and possessed of great humour and spirits; his countenance was very expressive and lively. Raa Kook was a chief of amiable principles, and evidently possessed of a nice sense of honour. His nephew was about twenty-one. This young man was extremely well made, but had lost his nose. The natives are in general of a deep copper colour: their skins glossy and soft, on account of the cocoa-nut oil, which they frequently used externally. They were of a middling stature, well made and muscular; very majestic in their walk: their teeth were black with chewing the beetle-nut and chinam; their legs very much tattooed. The hair was of a fine black, exceedingly long and rolled up behind in a becoming manner. None but the King's younger brother had a beard, it being customary with them to pluck it out by the roots, except when very strong and thick. Abba Thulle, the King, was the first person in the government: every mark of distinction was paid him, and even the greatest chiefs humiliated themselves before him. He had several islands over which he ruled. Raa Kook was the next in power, and would have succeeded the King in case of his death. Arra Kooker was next; and if these brothers had died during the reign of Abba Thulle, Qui Bell, and the rest of the King's sons, would then have reigned in their turns. There was a particular chief, or *stuppak*, who always attended the King. This office did not seem hereditary, but delegated: he was always the first chief that was consulted. The number of chiefs is very considerable. It is an honour solely conferred by the King; the ceremony of which we shall have occasion to mention hereafter. Every man has private property, and every family occupy a part of land for their maintenance. The women are rather domestic, but exceedingly courteous and attentive. They are chiefly employed in making mats. The Queen has a dwelling of her own.

Both sexes were very expert at swimming, particularly the men, who were excellent divers. A plurality of wives was allowable, but the general number was two. They had some kind of contract, which was as binding as marriage. The King had five wives: Raa Kook had three. Women, during their pregnancy, never sleep with their husbands. They seem to have no idea of religion, and yet are inclined to superstition. In their funerals, the body is committed to the earth in a very decorous manner, being attended by a due number of women, whose lamentations on this occasion are very violent.

THIS morning (August 16th) the King's chief attendant paid the English a visit, and was highly entertained with a view of their operations. He seemed desirous for a cutlasi, which Captain Wilton thought prudent to give him; but Raa Kook perceiving it in his hand, was much displeas'd with his acceptance thereof, and made him return it. This circumstance, though trivial, occasioned much uneasiness afterwards. The Malay (who was interpreter to the King) being an artful, jealous man, insinuated to the English that they had highly offend'd the King and his brothers, by neglecting to give them presents of equal worth, when they presented his chief with such a valuable thing as a cutlasi. Capt. Wilton therefore seized an opportunity of offering a remnant of cloth to the brothers, but their indifference and cool acceptance thereof seem'd to corroborate the account of their displeasure. After this, the captain understanding the King was on his return to Pelew, (for till now he remained at the back of the island, about a mile's distance from the cove), the propriety thereof being suggest'd to him, took Rose his interpreter and four others with him in the jolly boat, to take leave of his Majesty. Their fears and surprize were much encreas'd by the equal coolness of the King: there was a visible alteration both in his manners and behaviour, which much distress'd the English, who began now to think that these people were not only easily pleas'd, but of an inconsistent nature. However, this seeming indifference, this suppos'd coolness, were the result of honour and delicacy. The King had a request to make, of the greatest consequence, yet neither he nor his brothers had collected sufficient fortitude to ask it; at last, but with much difficulty, it was made known. The King, who was shortly to go to battle against an island that had offend'd him, wanted the company of four or five of Captain Wilton's men, to assist him with their musquets. The captain made answer by his interpreter, "That all the enemies of the King he looked upon as his own; and therefore hop'd his Majesty would look upon the English as his own people, and use his pleasure." This reply banish'd all gloominess; every face resumed its wonted gaiety, and the English and natives became as friendly and good-humour'd as before. The King said he would call for the men the next day, as preparations were already making for the battle, which was to take place in five days. The captain, upon communicating what had pass'd to his friends, was urg'd to return to the King, and assure him the men were ready whenever he was pleas'd to command them. The captain immediately acquiesc'd; and his Majesty was highly delighted with the readiness of the English. Thus apprehension was at an end, and every person betook himself to labour with an enliven'd countenance.

No. 4.

Every necessary preparation was made for building the new vessel. A piece of wood was already provided for a stern, and another for a stern-post. In the afternoon some of the floor timbers were laid; also the keel; stem and stern-post squared. During the presence of the natives, they had the prudence to conceal their tools; for if they had been covet'd by any of them, they must consequently have suffer'd much embarrassment, either by a refusal, which might have terminat'd their friendship, or a compliance, which would have totally destroy'd their hopes of a departure. Mr. Barker, second officer, who very fortunately understood the nature of this business, contributed all his assistance in designing the vessel, which for sake of expedition was determin'd to be a schooner. Every one consented to work according to the best of his abilities, under the command of Captain Wilton, who though, according to maritime laws, had lost all his authority with that of the vessel, was however oblig'd, by the entreaties of his men, to retain his power, and remain their commander as before. The captain, mov'd by gratitude, insist'd however, that all punishments should be decid'd by the majority of voices. Mr. Barker, by the captain's desire, was to give what directions he thought proper for the speedy construction of the new vessel; also to appoint for each man his employment. Mr. M. Wilton and Surgeon Sharp were accordingly appointed to fell trees, in which they were frequently assist'd by the captain himself. The boatwain, who had been a blacksmith, was put to his old occupation; and the mate direct'd to assist him. The Chinese were order'd to carry loads, and be occasional messengers: necessity sometimes oblig'd them to change their employments. They continu'd at labour till it was dark, and then united at the great tent, where the captain read prayers; thanksgivings having never been neglect'd.

When the king came for the men that were promis'd, the captain voluntarily offer'd to be one, but his people object'd to this, as his life was too precious at this critical moment to be risk'd. Every one vied for the preference: but the following five men, John *Cochran* (who was third mate), Nicholas Tyacke, James Bluet, Madan Blanchard, and Thomas Dulton, who were first in their application, were the persons appointed for this expedition. These men were accordingly clad in blue jackets, they had cock'd hats with blue cockades, musquets and ammunition: Thomas Rose accompanied them as an interpreter. They went into separate canoes, the king and chiefs having taken one man each: four natives were left behind by the king. As they were leaving the shore, the English who attend'd them to the water-edge, gave them three cheers, which were return'd both by the King and his men, upon understanding the nature of it.

The

The English took the favourable opportunity of their absence, to advance their undertaking as much as possible. The boats continually visited the wreck, and seldom returned without some articles preserved. A barricade was formed in front of the tents towards the sea: every necessary preparation was taken in case of an attack, and two swivels were mounted on the stumps of two trees, which could be directed to any point. The weather was very changeable, every fine day being generally succeeded with a showery one: their progress in building the new vessel was surprisngly rapid, especially when every disadvantage is considered. A cask of arrack belonging to Mr. Baker, which had not been perceived when the others were flaved, was brought among other articles, in the boats. It was delivered up to the captain, who agreed that this should be preserved in the tent, and each man be allowed a pint of grog every evening after his labour, during its continuance. The vessel being now begun (which was to be called the Relief), on August 22d she was celebrated, and every person allowed a double allowance of grog, to drink success to her.

August 25. Four canoes full of men came ashore. At first it was suspected they were some of the king's enemies: it was evident, however, that curiosity brought them to see the English. Captain Wilson paid them great attention, conducting them round the cove, and showing every thing that was deemed worthy their observation. These men, whose fears made them at first very cautious, appeared highly delighted, and went away without either seeking or accepting any presents.

The six men who attended the King to battle, were absent nine days. They returned this day in the afternoon, accompanied by Raa Kook the King's brother, with several baskets of yams, cocoa-nuts, sweet-meats, &c. for the captain and his friends. They met with a hearty reception, as every one was glad of their safe return: they declared that they were treated with much hospitality and kindness during their stay with the King. That they did not proceed to battle till the 21st, as all the King's canoes had not been got together: the English went in five different ones, and proceeded eastward near a dozen leagues. Their number consisted of about a thousand men, in one hundred and fifty canoes: the enemies number could not be ascertained. Previous to action, Raa Kook had some conversation with the enemy; but his proposals being received with indifference, the signal of war was given: whereupon the English fired, and the enemy seeing one of their men fall, they knew not how, were in the greatest confusion; those on shore took to flight, and those in canoes jumped into the water, and swam away. After a few more shots they were entirely dispersed. The King was highly delighted with this triumph: it being too late to return, they spent the remainder of the evening among a few small creeks: the next day they arrived safe at Pelew, where feasts and entertainments were prepared. Previous to their departure from Pelew, they were entertained by the King with stewed turtle, who took this opportunity of intimating a wish to have ten men on a future occasion; as a repetition of the battle was judged necessary.

It was promised him that the matter should be mentioned to the captain. The King attended the English down to the water-side, and took leave of them in the most polite manner.

By command of the captain, these men had the share of grog which was due to them during their absence, and which they shared with their comrades, while true joy and hilarity became universal.

Oroolong, which was the name of the island on which the English were, was now resigned to Capt. Wilson for the English by the King; in testimony of which voluntary donation, the captain this day

after breakfast had the British pendant hoisted, and by the way of taking possession, three volleys of small arms were fired. This grant of the island was made public by the King himself, who at the same time invited the captain to Pelew, but as his presence was so much needed in Oroolong, an apology was made; his brother Mr. M. Wilson, Mr. Benger, Thomas Rose, and one of the Chinese (who were accompanied by Raa Kook), were sent to congratulate the King upon his victory. As the Chinese are allowed to be the best botanists, this China man was sent with a view of making curious observations on the produce of the island.

August 17th the jolly-boat was sent out to haul the seine, but they got no fish: also to bring home some timbers and cabbages, if any could be found; in this last article they succeeded so well, that what they had dressed for supper was reckoned exceedingly good. Some of the people who assisted in cutting the timbers, having preferred walking home instead of returning in the jolly-boat, accordingly set out on their march long before the departure of the boat, and were so long absent after the boat's arrival, as to occasion much uneasiness and apprehension. Several were dispatched with lanterns to seek them, who hallooned every now and then, to recover those benighted travellers: fortunately the men who were gone astray, heard their voices, and prudently stopped till their companions had advanced. Had they proceeded one step further, their fate must have been inevitable, as they were then on the brink of a most terrible precipice! Their return was the occasion of much joy, and their wonderful escape of hearty thanksgivings!

The next day the captain had a spot of ground cleared on the top of the hill, that he might be able from that, every fine day to make his necessary observations. Previous to this, he had gone round the island in the jolly-boat, to examine the shores. It was plain from some traces of ancient plantations which were discovered, that this island had formerly been inhabited. A steep rock overpread with trees of a very fragrant nature, forms the northern side. The bay and harbour lie east and west, and it was supposed that the island is no more than three miles in circumference. The captain was anxious to discover a good passage for the Relief, as it was apprehended by some of his people that there was no passage whereby they might get clear over, seeing that the Relief must be of a tolerable size for the conveyance of themselves, stores, &c. to China. This anxiety therefore occasioned a strict look-out, nor did the captain let any opportunity slip him which promised the least information.

The men were still busy in the advancement of the new vessel; the departure of Arra Kooker (who left the island to-day) gave them a more favourable opportunity of proceeding. The next day the captain's brother, Raa Kook, Mr. Benger, Rose, and the China man returned in two canoes: and declared that both their reception and treatment during their stay at Pelew, manifested the utmost cordiality and most perfect hospitality.

As the captain, in making his observations, had imagined there was a passage apparently good right out from the west point of the island, Mr. Cummins was sent in the jolly-boat, on the 30th in the afternoon, to ascertain the truth. He returned with the pleasing intelligence that he had found (at low water) near three feet and a half of water, through a narrow passage without the reef; and as it rose eight or nine upon a spring-tide, of course there must be twelve feet of water, which was more than the Relief would require when finished: they had also found seven fathom water without the reef, and three within the shoallest part. This information afforded so much cheer and satisfaction, that every one resumed his labour with additional alacrity and spirits.

Wilson's Account of the ſecond Expedition—Of the Preparations for the Battle—Enemy diſſeſt for War—The King's Stratagem—Happy Effects—Six Canoes and nine Priſoners taken—Priſoners put to Death, &c. &c.

As the captain was under the neceſſity of paying a viſit to the King, he determined to ſet out for Pelew on the 30th; previous to which he dreſſed himſelf in the company's uniform, and after break-ſt, it being Sunday, read prayers in the great tent, while Raa Kook and the other natives, who were waiting to attend the captain to their iſland, ſtrictly conformed to that ſilence and ſolemnity which the ceremony required, kneeling (according to their ſiſhion) and ſtanding whenever the Engliſh did. After prayers, the captain fixed upon his ſon, Meſſ. Sharp and Davis, to attend him, and then taking leave of his people, ſet off about eight o'clock in the morning in the jolly-boat, accompanied by Raa Kook in a canoe with his people. When within a few miles of Pelew, the chief paddled away and got a-head of them, then ſtepping a while on ſhore, returned again, and preſently after another canoe met them with reſt reſhments. When in ſight of Pelew, the Engliſh hoiſted their colours, and fired three guns: they approached the ſhore about one o'clock, where they ſaw, in compliment to them, a white flag, which was ſtuck on a pole, it being ſome of the cloth that had been given to the King. When they landed they fired three guns again, and fixed their colours in the ground: they were then conducted to a houſe by Raa Kook, who ſent immediately a meſſenger to the King to appriſe him of their arrival. The beſt kind of reſt reſhments which they could provide were laid before them, and every thing placed in due order preparatory to the King's arrival: on his appearance, the captain roſe and embraced him. They then ſat down, (the King by the ſide of the captain) and partook of the provisions: after which Capt. Wilson preſented his Majeſty with a few preſents he had brought with him for that purpoſe. There was a great aſſembly of natives, whom no doubt curioſity had brought together, but who behaved with the greateſt reſpect, eſpecially in the preſence of Abba Thulle. The Engliſh attended the King up to the town, their colours being carried before them; for they were anxious to diſplay as much ceremony as poſſible, for the purpoſe of making a proper impreſſion upon the natives. They were introduced to a large ſquare pavement, which was ſurrounded with huts. The wives of the Rupacks aſſembled here, to ſee the Engliſh. Theſe women are of a lighter colour than the generality of their ſex; their breſts and faces are rubbed over with turmeric, and they boaſt of a few ornaments.

The captain was attended by Raa Kook to the Queen's dwelling; it having been ſignified by a meſſage, that ſhe wiſhed for the interview. The Queen converſed with the Engliſh out of her window; and ſent them a broiled pigeon; which, on account of its ſcarcity, is held by the natives in great eſtimation. She took great notice of their

dreſs, and particularly their ſkins. Though, as it has been obſerved before, the King had five wives, yet it appeared from the Queen's ſituation that one was poſſeſſed of greater dignity than all the reſt. Raa Kook now introduced the captain to his own houſe, which he no ſooner entered than he was welcomed by a little family, for whom he evinced the greateſt affection. This chief's wife alſo brought in a broiled pigeon, of which the captain and his friends cheerfully partook in return for the compliment. Having met with much hoſpitality and attention, the Engliſh retired for the night. The next day every opportunity was taken by the natives to prove their friendſhip and reſpect: by deſire of one of the Rupacks, Surgeon Sharp attended him to his dwelling, and examined a child of his who was afflicted with boils. The gratitude of the father, and his anxiety to render every thing comfortable to his gueſts, are inexpreſſible!

A council of ſtate was held this day, by command of the King, on the large ſquare pavement in the open air. All the chiefs attended, ſitting on a ſtone; that which the King ſat on being the higheſt, and near which was another ſtill higher for him to lean againſt: thoſe of inferior rank had humble ſtatements. The captain and his friends were now in an oppoſite houſe, where they had a full view of this grand council. The ſpeakers were on each ſide, who mutually delivered their ſentiments: it was evident that the buſineſs on which they were debating was carried by a large majority. As ſoon as they broke up, the King returned to the captain, and renewed his requeſt of having ten of his men, for a repetition of the battle: this was cheerfully complied with. The occaſion of this war was the murder of one of the King's brothers, and two chiefs, at a feaſt which was celebrated at Artungall, (the iſland againſt which war was proclaimed). Theſe people, inſtead of making ſome atonement for the outrage which had been done, on the contrary granted their protection to the murderers. Every thing that could be thought on to contribute to the entertainment of the Engliſh was ſimouſly practiſed by the King, his chiefs, and their attendants; nor were the women leſs anxious to increaſe this fellicity. There was a dance of the warriors; and two large tubs of a ſweet liquor provided for their mutual participation. After this a ſupper was prepared, and univerſal hilarity crowned the night.

The captain had determined on returning to Oroolong, but it being very bad weather both the 2d and 3d of this month, he was obliged to poſt-ponſe his intention till the 4th, during which the natives were ſtill as zealous in entertaining their gueſts as before.

The King would fain have detained the Engliſh longer, but finding them anxious to return, he at

last assented. The jolly-boat had been loaded with refreshments, the best which the island could afford, previous to their embarking. They departed about two o'clock, having given their kind hosts three cheers, which was returned by the natives, even the King himself, who on this occasion joined with the crowd, and made himself a conspicuous actor. They arrived at Orolong about nine o'clock, where they were received with unfeigned gladness. The captain was exceedingly happy to find that his people, during his absence, were not only very industrious, but had enjoyed the utmost harmony among themselves.

The boats were regularly sent to the wreck, and frequently brought home some materials: among other necessaries which were thus preserved, were a large quantity of coals; also planks, nails, &c.

The same eagerness was expressed as before by the captain's people to be the chosen persons that should attend the King on his second expedition; it was at last agreed upon, and Mess. M. Wilson, Benger, Harvey, Steward, Roberts, Duncan, Tyacke, Blanchard, Wilton, and Dulton, who were appointed, enjoined to keep themselves in readiness.

On the 7th the King paid a visit to Orolong: his brothers, and several other chiefs, attended. They had brought in their canoe some fish, of an unknown kind, but remarkably fine, which they had caught; it was in high estimation with the natives, and by the English allowed to be very good. The King was very much surprised at the construction of the new vessel, having had no idea before of its intended magnitude: he was also delighted with the barricade which was formed, and likewise the six-pounder and swivel-guns; these he beheld with the greatest surprise and admiration. The six-pounder was fired at the request of the King; the explosion of which made them keep their fingers on their ears for several minutes together. After this his Majesty was treated with sherbet; and he then retired to his canoes, observing that he should return with his boats at high water for the men who were promised him.

The King seemed very anxious to have one of the swivel-guns lent him, imagining that the execution which it would do would totally defeat his enemies; but the impracticability of using it in a canoe was pointed out to him by the captain.

Some time after this the King returned, and brought an additional present of fish, and a fine turtle. The number of men he desired being now ready, they embarked, and departed for Pelew.

The weather, which had been hitherto fine, was now changed; the rain being both constant and heavy, attended with a violent wind, thunder and lightning.

On the 15th Mess. Benger, Harvey, Steward, and Roberts returned about ten o'clock in the morning in a canoe, with an account that the war was over, and that the rest of their companions, who were all safe, would soon arrive. These tidings afforded much joy, and in the evening the remainder of the party came in other canoes.

Mess. Wilson and Duncan, with four natives, had been overset in their canoe, by a sudden squall of wind: two of the natives had, with one hand, secured the two muskets, and supported Wilson and Duncan, who could not swim, with the other; the remaining two were, in the mean time, making a small raft with the bamboos, &c. As soon as the rest of the canoes had put their people on shore, they hastened to the relief of Mess. Wilson and Duncan, who with struggling and clinging to the raft for near two hours were exceedingly faint and quite spent. A cartouche-box, and two bayonets, were lost. The natives who had thus saved these two Englishmen were instantly rewarded by the captain with presents agreeable to their taste.

This second expedition was attended with as much

success as the first: for the satisfaction of the curious reader we shall give Mr. M. Wilson's account of it in his own words, this gentleman having been present during the whole action, and the circumstances being frequently related by him among his friends.

"We reached Pelew the same night that we left Orolong, it being the King's pleasure to proceed directly on his way to Artingall; but, as the weather was very unfavourable, it was represented to him how injurious the rain would be to the fire-arms, upon which he cheerfully declined his intention till the succeeding day. We were entertained at the same house where the captain and Surgeon Sharp had been, and treated with the greatest respect and attention.

"The King, Raa Kook, Arra Kooker, all the Ropacks and great officers, with the English, were assembled the next day in the evening on the causeway. The canoes being now prepared we proceeded to the shore and embarked, attended by a number of old men, women, and children, whose curiosity and interest had brought them together. Our departure from the land was announced by the loud sounding of a conch-shell. There were several other canoes sent to different parts of the island to unite various forces that had been already collected, and were in readiness in some remote creeks to attend the King: as soon, therefore, as the signal was given, they joined us. The number of canoes were now above two hundred. We proceeded to Artingall; but a few hours before day-light stopped at one of the King's islands, where we went ashore, and having placed some mats on the ground, slept for near three hours. We then returned to our canoes, and after passing through a great number of narrow intricate channels, reached Artingall a little before day-break. As the natives of Pelew never attack their enemies in the dark, or take them by surprise, we stopped here till the sun was risen; upon which a canoe with four men, each having a white feather in his hair, was dispatched to the enemy's ground calling a parley. These men are in the capacity of heralds, either demanding an audience or bringing terms, and till their return all signs of hostility are suspended.

"The king of Artingall had already received notice from the king of Pelew that a renewal of the battle was intended; he had been, therefore, previously prepared for our coming. When the signal of parley had been given a canoe came from the enemy: it was demanded by Raa Kook that the king of Artingall should submit to those terms which had been already proposed by his brother, as an atonement for the murder which had been committed by his people. The canoe departed with this message, and returned immediately after with a flat refusal from the king, who declared himself ready for war; upon this Abba Thulle, who had been dressed in the scarlet coat which the captain had given him, stood up in his canoe, ordered the conch to be sounded, and gave a signal for all his forces to prepare for the attack by waving his chinam stick in the air.

"During this, the king of Artingall assembled his men by signals, and sounded their conch-shells in defiance, but were by no means willing to leave the shore and commence an attack. The ten Englishmen were in ten canoes, one being with the King, another with his brother, and the chiefest Ropacks having one each. The English were armed with muskets, bayonets, pistols, and cutlasses.

“dron. Their agility was so surprising that they were called by the English the *frigate canoes*.”

“The enemy having still retained their station, and apparently resolved upon not quitting the shore, the King of Pelew was convinced of the impropriety of attacking them under such defence; and accordingly dispatched some of the *frigates canoes*, to order a squadron to be concealed under a piece of distant high land, and not to make their appearance till a certain sign was given. This being secretly done, a few spears were exchanged; when suddenly Abba Thulle, pretending an alarm, sounded the conch-shell, and counterfeited a flight, his canoe setting the example, and the rest following with the greatest velocity.

“This appearance of cowardice encouraged the enemy to a pursuit. They quitted the shore in great haste, to overtake their antagonists; and while they were warm in the chase, the concealed squadron appeared, to their no little astonishment and confusion, and having cut off all retreat, the enemy found themselves forely entangled. Upon this the King turned round, and giving the signal for his canoes to form themselves into proper divisions, the attack became both general and warm. The spears flew about very thick, and the English kept up a continual fire, which did not add a little to their embarrassment, as they could not conceive by what means their people fell, when there was no appearance of a spear in them. Such was the effect of the firing of the musquets, that the enemy's forces did not know what they were doing: as there is seldom more than one good spearman in each canoe, the rest being only employed to paddle and guide it, if they are once put out of their way their confusion is generally attended with a defeat. When the guns were fired, the people of Pelew began to shout so much, and halloo with joy, that the enemies fears were naturally increased, and finding they were no longer able to make resistance, betook themselves to a real flight; herein they were for some time impeded, by the squadron that had been concealed; this subjected them to many wounds and disasters; however, as their numbers were not adequate to that of the enemy, the people of Artingall at last got to their land. There were, during the conflict, six canoes taken, and nine prisoners, which is accounted a very great victory, it being very seldom any are made captive, as the vanquished always endeavour to carry away the wounded, and even the bodies of those that are killed, that they may not be exposed in triumph by their victors. There was a *Rupack* among these prisoners: as soon as he was taken, the Pelew people endeavoured all in their power to deprive him of the bones on his wrist; but the heroic chief defended the mark of his dignity with uncommon courage, till at last he lost his

“life in the struggle. When his body was brought to Pelew, his head was cut off, and stuck upon a bamboo, fixed up before the King's house.

“There were two prisoners in the canoe with me, one had his thigh broken with a spear, and the other was wounded in several places: they were commanded to sit down in the bottom of the canoe; the one whose thigh was broken complied, but the other refused; upon which one of the natives hastily snatched my bayonet, and plunged it into his body: he died without a groan.

“Whenever any one is captured, he unties his hair, which was collected before in a great bunch on the top of his head, and pulls it over his face, patiently waiting the doom which is inevitable, it being always the rule to put prisoners to death.

“A wounded prisoner, who was in the canoe with Mr. Benger, had his life prolonged for about two hours, by means of his entreaties; however one of the King's people (who had been wounded by the enemy) no sooner saw him, than he snatched the Malay's dagger, and plunged it instantly into his breast, before Mr. Benger was aware of his intention. This prisoner met his fate with the greatest fortitude; and could not help gazing at the English during the hours of his distress.

“The surprise of seeing a white man apparently amused the pains of death.

“The King stopped at several small islands on his way to Pelew which belonged to him; for the sake of declaring his victory, and exposing the dead bodies of his prisoners. All these people manifested the greatest joy; and brought out refreshments, the best which the place could afford. When the King reached Pelew, the conch was sounded, to apprise the people of his arrival: it was now dark, and there was some delay before all the canoes were assembled. A great quantity of refreshments was provided, and universal joy testified on the occasion. There were songs and dances for the greatest part of the night. The natives attributed their success to our men, as they frequently repeated the word *Englet* in their songs.

“The number which the enemy lost could not be ascertained; it was universally believed to have been considerable. Not one man of Pelew was killed; a few were wounded. The bodies of the prisoners were exposed for several days, till at last they became very offensive; they were then either thrown into the sea or buried.

“According to all the observations which the English could make during this expedition, the island of Artingall was thought to be the largest of any yet seen. As soon as Mr. M. Wilson had communicated the particulars of the battle, he informed his brother that it was the King's intention to visit the English another visit in the course of a few days.

The Antelope still kept together, the boats were continually visiting her, and several materials of essential service were occasionally preserved, particularly planks and spike-nails. There were also fifteen bags of rice recovered, which at this time was very acceptable, for the men were not only undergoing the most fatiguing work, but at this time were also obliged to put up with short allowance.

The King of Pelew sent an apology to Captain Wilson for not having paid him a visit since his last conquest, having been detained by the congratulations of several islands, whose compliments he was obliged to receive. He also sent a quantity of yams, and a jar of molasses as a present.

The progress of the new vessel was still rapid; the planking of her was in great forwardness, and the men, stimulated with the hope of soon treading on English ground, pursued their task every day with fresh vigour, and persevered with uncommon assiduity.

It is remarkable that whenever the English hauled the seine, they were always unsuccessful; yet the natives never failed in catching fish. Either the English were not aware of the places where they were to be found in, or were ignorant of the proper bait.

Presents were continually coming from Pelew. On the 28th of September Raa Kook arrived at Orooloo with two chiefs of the neighbouring islands in three canoes; they brought with them three jars of molasses, yams, cocoa-nuts, &c. At the time of their arrival the English were just going to prayers. The inhabitants of Pelew attended divine service, and behaved with every due decorum; Raa Kook having enjoined all his people to observe the strictest silence. As soon as Captain Wilson had done reading, Raa Kook importuned him for fifteen men for the King, and the use of one of the swivel-guns (which was still coveted), as Abba Thulle having collected all his new allies together, was desirous to make the third expedition, and by avenging himself on all his enemies, render his victory complete. At this time there having been some things hinted to the captain through the artifice of the Malay, whom the King kept at Pelew, as interpreter to assist him in his conversation with the English, and who imagining his interest with the King was somewhat abated since the arrival of the English, artfully endeavoured (as before) to sow discord between the parties, and for this purpose, lately intimated to Captain Wilson some matters which he was in hopes would displease him, and render both the English and natives mutually jealous; the captain therefore availing himself of this opportunity to bring matters to an explanation, began with observing the cool manner in which the King and his people departed on their last expedition, and complained much of the cartridges, and one of the six-pounders, that were then taken unknown to him, especially the former, which was at present a scarce article. He then mentioned the Malay's intimation, which was, that the King expected the same homage to be paid him by the English as was by his own subjects. This intelligence, he added, very much disturbed his people, and he expressed great astonishment at the King's seeming inattention in sending home the Englishmen who were before sent, without any Rupacks to accompany them; the consequence of which was, that his brother and another man were very near being drowned, and notwithstanding the exertions of the boat-men, several articles lost. He then animadverted on the cruelty of putting their prisoners to death, which was quite contrary to English principles, and to which he could never agree.

Raa Kook was exceedingly hurt at these complaints, his countenance spoke his feelings, and assuring the captain that he would state the whole

truth, hoped it would be a sufficient vindication. In respect to the paper and cartouch-boxes, it was apprehended that they had not sufficient ammunition, which induced them to take more: that all possible means were taken to recover the paper which had been carried away from the ship, but it being too wet it was thrown away by the natives as entirely useless. He added, that the white cloth which had been given to the King, Arra Kooker, and himself, was still untouched, and should be returned for the purpose of making cartridges. In respect to the English being sent away without any chiefs, it was owing to Mr. Beuger's haste and anxiety; who, notwithstanding their entreaties, would not wait till other canoes were got ready. As to the six-pounder, it was not taken, but only borrowed to gratify the curiosity of several strangers who had visited the King, and whom the King was unwilling to bring to Orooloo, for fear of interrupting the English in their business. He also declared that it was the King's last injunction, that this great gun should be immediately returned. As to any homage being expected from the English, it was quite contrary to the King's expectations or notions, he never desired, he never would permit it! Their prisoners they were under the disagreeable necessity of putting to death for their own personal safety, as formerly having escaped, they behaved to treacherous as to do them great mischief: however, it was proposed by Raa Kook that they should in future be surrendered to the English, to do whatever they pleased with them.

The captain listened to the chief with the greatest attention, and admiring his candour and sincerity, assured him he was perfectly satisfied with his declaration. He then departed to consult with his officers respecting the King's request. They all deemed it expedient that the captain should consent to lend the swivel-gun and men; only instead of fifteen, they thought ten a sufficient number, as the absence of any person at this critical time was of material consequence. The captain immediately returned, and Raa Kook was highly delighted with his compliance. They all sat down to supper in the greatest good-humour, and Raa Kook's two friends being very much fatigued, they retired to rest in their vessel, it being observed by Raa Kook that the tent was too small.

In the morning Raa Kook acquainted the surgeon that his son was wounded in the last battle; part of the spear was broken in his foot, and he wanted Mr. Sharp to see if he could extract it. As it was much swelled, the surgeon advised it to be constantly fomented, and promised to take the earliest opportunity of visiting him. Mr. Sharp would have accompanied him that evening, but three of his own people (who were their best hands) were at this time dangerously ill.

Ten Englishmen were appointed to attend Raa Kook on this third expedition, which was intended to be of the greatest consequence, as all the Rupacks of the adjoining islands were to accompany the King. Raa Kook departed about noon, taking the swivel-gun and Englishmen with him, who were Messrs. M. Wilson, Cummin, John Blanch (the gunner, whose presence was deemed necessary in order to manage the swivel-gun), John Meal, James Swift, N. Tyacke, M. Blanchard, Thomas Whitefield, Thomas Wilson, and Thomas Dulton. Mr. Devis also accompanied them as a volunteer.

As the vessel had been already planked up as high as the bends, they now began to trench under her bottom, with a view to plank to the keel; however, the tide having in the beginning of the night rose higher than usual, broke into the trench, and the blocks were very near being washed away from under the vessel. This accident, which would certainly have destroyed all their labours, was very fortunately discovered in time, and the people were

all employed the blocks, and according to what was not effected.

Mr. Sharp's party he went, agreeable to the captain, in to Pelew for provisions. The jolly-boat was in weather. She returned with intelligence of the King being in action, reported during which the wonderful resistance was as usual victorious. The men till their feet brought home the carried away by them were restored by the surgeon visited Raa Kook's dejected countenance. He had to speak that was in expressed a desire to shake off his grief, countenance, lot of chiefs who were to Mr. Sharp soon unnecessary: the yet having had the swelling subsided, in this last battle, when body, of which he in

Mr. Sharp's patients having been now recovered, he went, agreeable to his promise, and the desire of the captain, in the jolly-boat, (which was sent to Pelew for provisions) in order to see if he could render any service to Raa Kook's wounded son. The jolly-boat was detained four days by the bad weather. She returned on the 6th, with the agreeable intelligence of those men who had been lent to the King being safe and well, after a successful action, reported to be the severest yet fought, and during which the inhabitants of Artingall made a wonderful resistance; but that the King of Pelew was as usual victorious, and had therefore detained the men till their feasting, &c. was over. Mr. Sharp brought home the ship's coppers, which had been carried away by the natives from the wreck, and were restored by the King's orders. When the surgeon visited Raa Kook, the chief met him with a dejected countenance. Mr. Sharp produced the instruments he had brought with him to extract the spear that was in his son's foot, and consequently expressed a desire to see him; upon which the chief, sensible of his humanity, bowed, endeavoured to shake off his grief, and refusing a more enlivened countenance, introduced the surgeon to a number of chiefs who were there assembled, and from whom Mr. Sharp soon understood that his visit was now unnecessary: the youth, who was about eighteen, having had the spear at last extracted, when the swelling subsided, was determined on being one in this last battle, wherein he received a dart in his body, of which he immediately died.

The day after Mr. Sharp's arrival, the 11 English who had joined in this battle returned, and testified the greatest satisfaction with the reception which they had met.

This battle was begun in the same manner as the others; but as there is something both novel and interesting in the conclusion, we shall here subjoin those particulars as they have been related by Mr. M. Wilson. This gentleman's information is as follows, in his own words:

"When we came to Artingall, we could see no canoes: there was notice given repeatedly of our arrival; but every attempt was at present in vain, to provoke the enemy's appearance. Upon this we landed, and advanced a little way from the sea-shore. The King remained in his canoe, to give his occasional orders to the *frigate* ones; and the command of the troops was now submitted to Raa Kook. The English were entreated not to land; but as they saw the enemy beginning to defend themselves, they jumped upon shore to assist their friends, and besieged several huts belonging to the enemy. The natives had prepared with great judgment and ingenuity a canoe for the purpose of fixing therein the swivel-gun, which being directed against the enemy's huts, was constantly played upon them. The enemy were soon dislodged by the musquetry which covered the Pelew people; and by some unknown means one of their huts was instantaneously in flames. The people of Artingall, still bold in their resistance, frequently rushed down with a shower of spears, but were as often repelled by the brisk firing of the English, which not only immediately dispersed them, but must undoubtedly have destroyed a considerable number. Arra Kooker was the most remarkable for his enterprising spirit: he ascended a hill in sight of the canoes, and perceiving one of the enemy's party coming down, concealed himself behind a bush till he had passed, and then pursuing him down the declivity, gave him such a violent blow with his wooden sword, as laid him in an instant prostrate at his feet. He was forthwith dragging him a prisoner

to his canoe, which several of the other party perceiving, were rushing down upon their antagonist to his relief, and Arra Kooker would certainly have fallen a victim in this unequal conflict, had not Tho. Wilson, with great presence of mind, hastened to his relief, and presented his musquet at the approaching enemy, the sight of which so alarmed them, that they instantly turned and took to flight. At this time the whole stock of ammunition had been expended in covering the landing, and Wilson had actually no charge in his musquet when he presented it, otherwise he would have fired: the circumstance, however, was the more fortunate, and Wilson's bravery the more conspicuous.

The enemy, notwithstanding their defeat, manifested true courage and magnanimity throughout the engagement: they defended the house that was in flames till it was just ready to fall; and as an instance of the equal temerity of the Pelew people, one of them on this occasion ran to the house while it was burning, and tearing off some of the brands which were on fire, admitted the flames to an adjoining hut, where several of the enemy had taken refuge. The materials of their building being of a very combustible nature, it immediately took fire, and was burnt down to the ground. The man who was so daring as to accomplish this, had the good fortune to return to his companions without the least hurt. The King rewarded him for his bold achievement, by immediately placing a string of beads in his ears with his own hands, and afterwards on his return to Pelew making him an interior Rupaek, as these chiefs always rise according to their merit.

There were five canoes belonging to the enemy destroyed during this action, which they hauled on shore; also their causeway, which is much broader and longer than that at Pelew. Several of the enemy were killed: their dwellings for the most part burnt down; and, besides other damage, the stone on which the King of Artingall sits when in council was taken away. This was looked upon as the greatest part of the victory; and was the occasion of much rejoicing on their return to Pelew. Notwithstanding this triumph was superior to the former ones, yet the joy was not so great or universal, for the death of Raa Kook's gallant son, and another heroic youth, were so truly felt and lamented, as to abate in a great measure the pleasures of their conquest. There were also about 30 or 40 of Abba Thulle's people wounded, several of whom died as soon as they returned to Pelew."

This account of Mr. M. Wilson's contributed not a little to the satisfaction of the captain's people, as they were consequently raised still higher in the estimation of the natives, who gratefully acknowledged their assistance, and imputed all their success to the English.

On the 8th Mr. Benger unfortunately fell from one of the scaffolds on his back, and was much hurt: he was immediately conveyed to a tent, where Mr. Sharp attended.

The King having invited Capt. Wilson, in order to introduce him to the strange Rupaeka who attended him on this last expedition, the captain accordingly took with him his son Henry Wilson, also Rose and Dulton, and accompanied Raa Kook, who was waiting for that purpose with two canoes at Oroolong. As soon as they left the harbour they tarried for other canoes, which had been out fishing. Upon their arrival, some of the fish which had been caught (among which was a turtle) was sent back to Oroolong, for the use of the tents, and the remainder they took with them to Pelew, where they arrived about ten o'clock at night. The King had departed about an hour before to Emungs (an island

so called) which was the residence of those Rupacks; but Qui-Bill, the King's son, was enjoined to wait for the captain, and to conduct him to this great island. Capt. Willson being however much indisposed, begged leave to decline the journey till the next day.

Early the next morning they embarked in Raa Kook's canoe, who on this occasion took with him two of his wives; and about noon they approached the mouth of a rivulet, which ran up into the island of Emungs. Raa Kook's canoe was now adorned with shells, and notice given of his arrival by sounding his conch.

They were frequently in danger of being a-ground in getting into this rivulet, which was both narrow and shallow. This the natives seemed much to dread, and took all possible means of avoiding, having frequently got out of the canoe in order to track it. When they had advanced about a mile up the creek, they came in sight of some huts. The conch-shell was again sounded, upon which three or four young men appeared; but upon seeing the English, were so alarmed, that they immediately retreated. Two of Raa Kook's attendants were consequently ordered to go up to the huts, which they did, and shortly after returned with a piece of board, on which Capt. Willson was seated, and carried to shore. At this time the canoe was a-ground, and Raa Kook accordingly walked at his side, and conducted the captain to a large hut, round which there was a great throng of natives, who had assembled for the sake of seeing these white men, who had gained them the battle. In order to gratify their curiosity, they made a stay here of about half an hour, and thence went the distance of a quarter of a mile, where they found the King and the Rupacks in a large public building. Abba Thulle made signs to the captain to sit down: here they remained for about two hours. From this they went to the habitation of the Rupack of the town, who was a venerable chief, unable to walk. They remained here for half an hour, and partook of refreshments, which were laid upon a low table. After this they returned to the great house, where other refreshments were prepared. A number of men and women then danced; during which the latter made a most hideous noise. Two butlers served the supper. It is worthy observation, that none of the Rupacks, or others, offered to eat till the King gave his permission; nor did any of them lie down to sleep, till he was first covered with his mat. The dancing continued the whole night, which prevented the English from enjoying much rest. Among the entertainments of the next day, there was also a mock-fight, and a warlike dance, with spears in their hands; in the course of which the chief of the band brought four large spears, and presented them at different times to Captain Willson; also a curious sword, inlaid with shells: the delivery of each was preceded by some short speech; after which the donor resumed his place in the dance. This entertainment lasted for an hour.

The captain having now perceived some human skulls, which were placed over the outside of the doors at the ends of the great house, was curious to know by what means they were there; and having desired Rofe to enquire of Raa Kook, was informed that a little while ago, during the absence of the superior Rupacks and chiefs of Emungs, who had departed on some particular occasion to another island, and had taken with them a considerable number of the inhabitants, a party of the enemy had secretly entered their town, and destroyed several of the people, (who had not time to escape into the woods) and afterwards set their dwellings on fire. The King, Abba Thulle, when informed of this treachery, without loss of time assembled all his canoes and warriors, and before these spies had time to effect their escape they were unexpectedly sur-

rounded by the King's forces, who attacked them with such vehemence, that several were killed, others having taken to flight, some into the woods, and some in their canoes: very few however, escaped. At about this critical period, the Rupacks who had been absent with their company, returned to Emungs, and assisting the attack, it was renewed with fresh vigour, while the Aringall people lost all their chiefs, whose heads were thus exposed as an example to all tractable enemies.

During Captain Willson's stay, there was continual dancing and merriment. On the 12th, the captain having signified his desire of returning to Oroolung, the conch-shell was sounded early in the morning, and the canoes were immediately prepared. Previous to their departure they were all assembled in the great house, and Raa Kook being desirous of firing a gun, was accordingly indulged in his request, but not aware of the shock that would ensue, he held the musquet in such a loose manner, that upon being discharged it came with great violence against his shoulder, upon which, he not only dropt the musquet, but fell himself upon his back. This created universal astonishment, nor could Raa Kook imagine how the English could fire their guns with such ease and facility, when he was neither able to stand nor hold one when discharged. Some little time after this they embarked, and it being almost high water, passed the creek with ease: one of the Rupacks who was going northward, now took leave of his friends, and carried away about nine canoes in his train. The king and his train (which were about forty canoes) returned to the southward. There being a violent squall of wind about ten o'clock, attended with thunder, lightning, and rain, every canoe was obliged to shift for itself. The natives having an antipathy to rain, had rather swim and be completely wet, than bear the dropping of it; which, as supposed, occasions a tickling, or some other disagreeable sensation on their skins. Accordingly the boatmen in the canoe where the captain was, jumped overboard as soon as even it began to rain, holding the canoe with its hands. During the thunder, Raa Kook's two wives who accompanied the captain, seemed much alarmed, and between every flash of lightning hid their faces under his boot-cloak, where they muttered something supposed to have been a prayer or ejaculation. Raa Kook covered himself with his mat. The weather still continuing heavy, they did not stop. As soon as they were landed, the boat-men took two pieces of wood, and rubbing them with much violence together, kindled a fire with remarkable expedition. When the rain was gone they arrived where the King was, who had a dinner of boiled fish prepared, for which like muller. At one o'clock they all landed at an island called Annalorgoo, where they had refreshments, and were entertained with another warlike dance. Having disembarked they came to another place, called Emullegue: this was a large island, situated about a mile from the sea-shore, and appeared to be a distinct government, as the chief of the island, who was a jolly-looking old Rupack, was paid every kind of respect and attention. A formal invitation came from him to our canoes, and the company solicited to land; the King, however, declined going on shore, but was willing that every one else should. They were treated here with much hospitality and kindness, invited to several houses, where there were broiled pigeons prepared, and an entertainment of dancing. It being dark when they were returning to their canoes, they were attended by the people with lighted torches in their hands, who assisted them with the greatest civility over all the uneven paths.

The captain and his party arrived at Pelew about ten o'clock, but as the King's canoe had not yet come in, none of the people attempted to go on shore,

shore, or remove ceremony was ever however, Raa Kook's English were executed however the captain of compliment to the house at the water. A council was held the superior Rupacks and the next day the captain if he was once more with him served, that he could with propriety till at Oroolung, for the men were sick, and worse, or others inclined would be totally in men permitted, th

As this deferred due chastisement ordered to be striped Raa Kook, who was perceived at the preparation given; but the necessity served, he readily and even waited to see it inflicted was far from think it of serious consequence heughed heartily at the Chinese, when they were Raa Kook had according in the jolly-boat to the three canoes arrived at of which was a woman at Oroolung: she brought greatest attention and

shore, or remove any thing from the boats. This ceremony was even observed by the King's brothers; however, Raa Kook informed the captain that the English were exempt from all their regulations: however the captain still retained his place, out of compliment to the King. They repaired to the house at the water-side, where they spent the night. A council was held by the King, his brothers, and the superior Rupacks, before they went to sleep; and the next day, before breakfast, the King asked the captain if he were willing to let the English go once more with him to battle? The captain observed, that he could not give a positive answer with propriety till he had consulted his own people at Oroolong, for before his departure several of his men were sick, and if on his return they should be worse, or others indisposed, a compliance at present would be totally impossible; but if the health of his men permitted, they should attend him with the

greatest pleasure. The King was perfectly satisfied with this reply, and enquired why the jolly-boat was not oftener sent to Pelew for refreshments. In answer to this, the captain observed, that they were obliged to sink their other boat at the head of the Relief, in making a bank to keep off the tide, and consequently the jolly-boat being their only one at present, she could not be so conveniently spared.

This day (the 13th) the weather becoming clear, the English, accompanied with Raa Kook, left Pelew at eleven, and arrived about four o'clock in the afternoon at Oroolong.

The captain was very happy to find, on his return, the great advancement of the new vessel; also the recovery of Mr. Barker after his fall, who was now able to walk about. Raa Kook remained at Oroolong, but sent away the canoes that accompanied him, for fear the number of inhabitants might impede the English in their work.

CHAPTER VI.

The Cook and two Chinese punished with a Cobbing—Their Crimes—Description of a Cobbing—Raa Kook's Conduct—He accompanies the English to the Wreck—A female Native visits Oroolong—Her Curiosity—Departure—News from Artingall—Proposals of Peace—Raa Kook's Satisfaction—King visits Oroolong—Brings his youngest Daughter, and a Company of Women—One of them remarkable for her Beauty, &c.—Proves to be one of the King's Wives—English attentive to her—The King imputes all his Victories to the English—Curfory Observations—Makes a Request—The Captain partly complies—The King's Satisfaction—Further Observations of the Captain—King retires—Reason—Sends the Captain an Invitation from the Watering-place—His Acceptance of it—Motive of the Invitation—King visits the Wreck—Captain Wilson invites three of the Artingall Inhabitants to Breakfast—Are introduced by Raa Kook—Their Astonishment, Behaviour, &c.—Presents of Fish from the King—Raa Kook's Indisposition—Capt. Wilson and Surgeon Sharp visit him—A Boil on his Arm—The Surgeon dresses it—King returns to Pelew—Is accompanied with Mr. Devis and the English Interpreter—The King's Request, and Promise—Sends paint for the Vessel—Progress of the Relief—Surgeon Sharp goes to Pelew to visit Raa Kook—King's Gratitude for their Attention—Visit from ten Canoes—Their Conduct and Familiarity—Behaviour of an old Rupack, &c.—Arrival of several Canoes—Return of Mr. Devis—Intelligence—Names of the Canoes appointed for the Expedition—Arrival of the King—His Departure with the English—A tremendous Storm—Occasion of much Disquietude—Arrival of the Rupack Arra Zeok—His Information—No Engagement—Inhabitants of Pelelew sue for Peace—The Chiefs warm Reception—Arrival of John Duncan—The Peace concluded—A Message from the King—Proposal to the English to visit Pelelew Island—Their Acceptance, and previous Caution—Their Reception—Description of the Island—Return to Oroolong, &c.—Names of the Islands whence the Canoes came from that joined the King—Raa Kook's abrupt Departure—Surgeon Sharp, &c. go to Pelew—Returns with a Present of Torches, &c.—His Information—Description of the King of Pelelew—Message to the English from Abba Tulle—The English entertain Suspicions in consequence thereof—The Captain's Arguments to remove them—Ineffectual—Their desperate Intention—Pears partly removed—Mr. Sharp, &c. dispatched with a Message to the King—Vessel ready to be launched—An extraordinary Proposal from Blanchard—Persists therein—His Character—Character of Rose, &c.

ON the 15th of October the cook, and two Chinese, were ordered to receive a particular number of stripes with a battle-axe, (which punishment was called a *cobbing*). This was decreed by a majority, according to the manner that punishments, at the captain's request, were to be decided. The cook had frequently spoiled the rice; and one of the Chinese and he were suspected of secretly appropriating some of each small quantity of meat that was boiled to their own use: the other China-man had wounded one of his countrymen on the head with a stone. As this treacherous behaviour certainly deserved due chastisement, the men were therefore ordered to be stripped, and tied against the tree. Raa Kook, who was present, seemed somewhat concerned at the preparations, and solicited their forgiveness; but the necessity of punishment being observed, he readily admitted the justice of it, and even waited to see it executed. As the punishment inflicted was far from severe, Raa Kook did not think it of serious consequence; on the contrary, he laughed heartily at the lamentable cries of the Chinese, when they were receiving their *cobbing*.

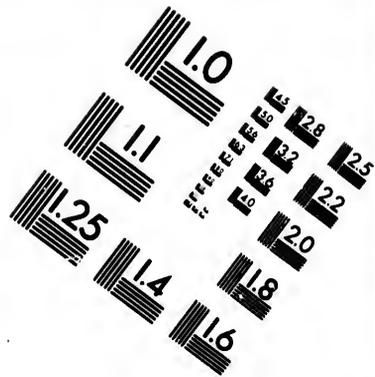

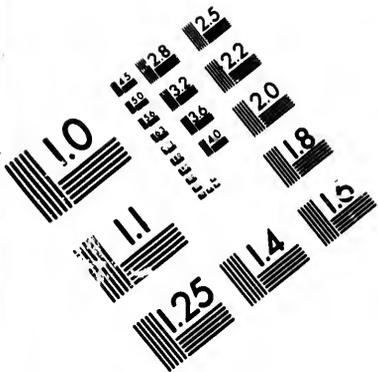

Raa Kook had accompanied a party of the English in the jolly-boat to the wreck: during their absence three canoes arrived at the watering-place, in one of which was a woman, the first that was ever seen at Oroolong: she beheld every thing with the greatest attention and surprize, particularly the new

vessel, the cook's kitchen, and the smith's shop. The men waited in their canoes till she had satisfied her curiosity, which seemed to get the better of her timidity; for though she approached every place with the greatest caution, she could not refrain from closely examining it. She walked about for some short time, and then returned to her canoe. On account of the absence of Raa Kook, the English could never learn who she was. As none of the men who accompanied her were ever seen at Pelew, it was supposed they came from Emillegue.

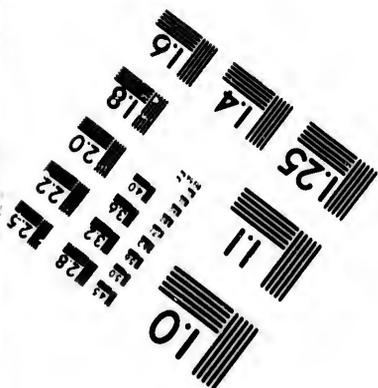

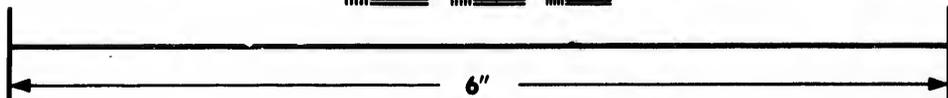

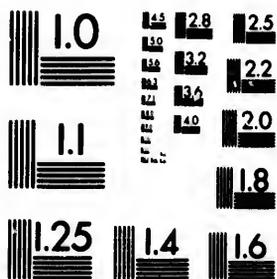

News was dispatched to Raa Kook and the English, that the chief minister of Artingall had arrived at Pelew with proposals of peace: this intelligence gave Raa Kook great satisfaction.

On the 17th the King paid a visit to Oroolong: he brought with him his youngest daughter, Erre Bess, who was attended with eight or nine women. Presents of yams, cocoa-nuts, sweetmeats, &c. were brought as usual. The King's daughter appeared to be about nine years of age: her father led her by the hand on shore, and appeared to be passionately fond of her. Raa Kook attended the other females, and introduced them to the English: one of these was remarkable for the graceful manner of her walking; she was young, and superior to all the rest for elegance and beauty: in short, her appearance made such an impression on the English, that they could not refrain from enquiring who she was.

They were informed by Raa Kook that her name was Ludee, and she was one of the King's wives. The English were very assiduous in showing her every thing worthy of her observation, and she testified the same degree of surprize and delight as did the rest of the natives on their first introduction. By command of the captain, a canvass was spread in the cove for the King, the chief, his brother, and the ladies. A dish of fish was laid before them, and some boiled rice, which was sweetened with molasses, and was very much relished by the King and his party.

The King now informed the captain that he was at peace with most of his neighbours, but that he looked upon himself as entirely indebted to the English guns for that happiness. He was however apprehensive that on the departure of the English, these people knowing his defenders were gone, might be tempted to renew their hostilities, and become troublesome. He therefore requested the captain would, before he embarked in his new vessel, leave him ten guns and a small quantity of powder (it being all that he would ask of him), that he might be able to defend his subjects from any future attacks. The captain expatiated much upon their scarcity of musquets, observing that the English were at that time at war with several nations, and consequently they were in danger of being attacked by some of their enemies on their passage home. He was afraid that it would not be in his power to spare ten musquets, but that at all events he would leave his majesty five, upon their taking leave. The King was perfectly satisfied with this reply, and the captain further observed, that if any of his neighbours should attempt a renewal of their hostilities, he was welcome to say, "that the English, mindful of the generosity of the King of Pelew and his subjects, are determined if any insult be offered to them during their absence, to return again to this island with a greater number of men and musquets, in a much larger vessel, and totally destroy such enemies and their islands." After this, the King retired with his retinue to the back of the island, for he was unwilling that the English should be incommoded by the number of his attendants, or that through him the progress of their vessel should be retarded. However, he was not long at this watering-place before he wished for the captain's company: accordingly he sent him an invitation, which the captain accepted, and took with him Messrs. Sharp and Devis: the chief reason that the captain was sent for, was to give him a share of some fine fish that had been caught. They staid with the King till sun-set, when by his own desire, for fear of their being benighted, the three gentlemen took leave of him. The next day the King visited the wreck, and left five or six canoes with the women at the watering-place: some tea was sent to the King, from the captain, by the time he returned to shore. At this time there were three of the Artingall inhabitants with the King (as they were now on the most amicable terms): these were invited by Captain Wilson to breakfast with him. They came accompanied by Raa Kook who introduced them: they appeared astonished at every thing they saw, and when shewn the musquets, six-pounder, &c. they seemed to describe by very expressive signs what numbers of their countrymen these weapons had destroyed: they did not however betray the least resentment, but on the contrary shook hands with the English as if they had always been friends. Presents of fish were continually sent to the captain from the King, which were very acceptable, as the English were not only unsuccessful in fishing, but at this time they were upon short allowance.

The next day Raa Kook was so ill that he could not come to breakfast. Captain Wilson and Surgeon Sharp went to the watering-place to see him: there was a large boil on his arm, which the surgeon

fomented and dressed: in consequence of the pain thereof he was very feverish; however, in the evening he was much better. The King seemed greatly concerned for his brother, and was exceedingly thankful to Surgeon Sharp for his attention to him.

The next day (October 21) the King fixed on his return to Pelew, and requested the company of Thomas Rose and another Englishman: this the captain readily granted, and Mr. Devis was appointed to go with the interpreter. The King further requested that the English would give him due notice of their departure, as it was his wish to send two of his people with them to England. He likewise promised to send them colours to paint their new vessel. Raa Kook, on account of his indisposition, was much pressed by the captain and surgeon to stay at Oroolong till he was perfectly recovered, but he said that his presence was absolutely necessary at Pelew, which led the English to imagine that a council of some consequence was to be held. He promised however that his return should be speedy.

The paint which the King had promised, was sent by the jolly-boat the next day: it consisted of red and yellow ochre. After enjoining the boatmen to take care of the baskets for fear they might get wet, he desired them to inform the captain that he would shortly return to Oroolong, and bring some men with him to assist in painting the vessel.

The caulking of the bottom of the vessel was now completed, and also the planking of the topsides: after this her upper works were immediately caulked, and the steps fixed for the masts.

On the 24th the jolly-boat was sent to Pelew with Surgeon Sharp, in order to visit Raa Kook and see how his arm was. It was also intended that Messrs. Devis and Rose should return in the boat: however as Mr. Devis wished to remain till the King went against Pelelew, that being the island which was at present at variance with Abba Thulle, Mr. Sharp returned the next day without him. Raa Kook's arm was much better, though it was roughly handled by one of the Pelew surgeons. Mr. Sharp, after dressing the wound, left him some other dressings, with proper directions to be used occasionally. The King was so highly pleased with the attention that was shewn his brother, that he loaded the boat with yams and sweetmeats: he also sent five young wild ducks that were just fledged, and which were the only ones that the English ever saw in these islands.

The caulking of the outside of the vessel was now finished, and on the 26th her bottom was breasted: they pursued their labour with great spirits, and every week their progress was considerable. Ten canoes came into the harbour to-day. It was supposed at first that they were enemies to the King; however, they proved the contrary, as they were going to join Abba Thulle on his expedition. They were very courteous to the English, and presented them with yams of a different kind to any yet seen: they were in return treated with sherbet, and every thing that was imagined might please, was exhibited. These people testified the same surprize, but not that timidity which the other natives did on their first interview with the English; and as they did not seem so much struck with the colour of the white men as their neighbours, there is no doubt but they were apprized by their friends of every thing, which, though it made them more curious, rendered the novelty less. Among these was a venerable Rupack, who was introduced to the captain's tent, where he perceived a book, with which he diverted himself for some time, reckoning the leaves; this he repeated two or three times, but could seldom exceed fifty. At last his patience being exhausted, he threw it away, shewing by signs that there were too many. Their stay was about two hours.

Several canoes arrived from Pelew on the 27th, in one of which Mr. Devis returned, and reported

that almost with Abba Thulle's assistance, he had succeeded in his expedition. The King in consequence of this success, was very much pleased, and ordered a great feast to be given to the English. The King also ordered that the English should be invited to his house, and that they should be treated with the same respect and attention as he himself received. The King also ordered that the English should be invited to his house, and that they should be treated with the same respect and attention as he himself received. The King also ordered that the English should be invited to his house, and that they should be treated with the same respect and attention as he himself received.

The two successive days were rainy, and the rain continued on the 29th of the month. The English, who were in the island, were very much distressed by the rain, and the breeze from the sea was very cloudy. A canoe came to the English on the 30th of the month, and brought with it a very warm news of the success of the English. The canoe was piloted by a man named John Duncan, who had been with the English on their expedition. He reported that the King had been very much pleased with the success of the English, and that he had ordered a great feast to be given to the English. The King also ordered that the English should be invited to his house, and that they should be treated with the same respect and attention as he himself received. The King also ordered that the English should be invited to his house, and that they should be treated with the same respect and attention as he himself received.

that almost every island had united their strength with Abba Thulle, and there were at present upwards of three hundred canoes at Pelew, which, previous to his departure, were separated in three divisions, and making all necessary preparations for their immediate expedition; two of these divisions were to proceed to Pelelew, and the other (which were to be joined by the King and his brother) were to come to Oroolong for the English. The reason that Mr. Devis did not wait for the King was his wish to seize the opportunity of viewing this formidable fleet. The following Englishmen were appointed to attend the natives on this expedition: the captain's brother, T. Wilson, N. Tyacke, M. Blanchard, James Swift, T. Whitfield, John Duncan, Thomas Dulton, William Steward, and William Roberts. They accordingly prepared themselves for the King's coming, who arrived at Oroolong about four o'clock in the afternoon. The English having embarked in separate canoes, now departed with three cheers.

The two succeeding days introduced very heavy weather, there was much thunder, lightning, and rain; and the tremendous storm which took place on the 29th occasioned great disquietude among the English, who began now to be alarmed for the safety of their absent countrymen. On the 30th the rain abated; there was notwithstanding a smart breeze from S. E. and the weather still remained cloudy. A canoe or two were seen to-day; at midnight, the weather having become very hazy, a canoe was perceived near the harbour, it was hailed by the guard, and the people therein replied *Engles*; permission was accordingly granted for its entrance into the cove. The Rupaek Arra Zook was in this, who informed the English that there was no engagement at Pelelew, as on Abba Thulle's approach the inhabitants all laid down their spears and sued for peace: this chief met with a very warm reception from the English, both for his good news, and as he was a favourite with the captain and Mr. Sharp. The next day another canoe brought word that the fleet was on their return; a short while after two others arrived with John Duncan, who confirmed the news of the peace, which had been concluded by Arra Kooker, who for that purpose went to Pelelew. A message came to the English from the King that if any of them were desirous to see the island of Pelelew Arra Kooker should accompany them there. It was for some time a matter of surprise why neither the King himself or Raa Kook offered to escort them there; but on a future explanation it was made known that the honour and condescension would be too great if either the king or the chief, who was next in rank, were to pay the island a visit. This being understood, several of the English were desirous to visit this island; but they had agreed in private to take with them their arms, nor upon any occasion to separate when they landed, for fear there might be some deception intended, and that they might be surprised, notwithstanding the confirmation of the peace, by these strangers. They were accompanied by several of the Pelew inhabitants, and their reception at Pelelew bespoke the people to be more friends than enemies. This island is defended by a stone wall about ten or twelve feet high, with a foot-bank of stone behind; the water near the shore is so shallow that no canoes can get in except at high-water. It is a very pleasant island; the land, which is supposed to be fertile, is more level than hilly. The English proceeded from this to Pelew, where they found the kings of Pelew and Pelelew on the most friendly footing. Raa Kook and a number of canoes came with the English to Oroolong, Abba Thulle, with the king of Pelelew, having gone to his own island, which was called Cooroora, of which Pelew was the capital. The several canoes which had prepared to attend the King in this last expedition came from Emung,

Aramalorgoo, Emillegue, Arraguy, Cooroora, Caragaba, Pethoull, and Oroolong, called the Englishmen's island. Raa Kook's departure from the English was at this time very abrupt, but he pleaded urgent business at Pelew. Surgeon Sharp and four Englishmen went in the jolly-boat in the evening to congratulate the King on the good news of the peace, and also to bring home some torches which Raa Kook had promised, and which the English were very desirous of, in order to reserve their candles for their voyage. Their stay was about two days; they returned in the evening, while the people were at prayers, with the torches, sweetmeats, &c. &c. Mr. Sharp reported that there were great feasting and rejoicings at Pelew, and that the Rupaek of Pelelew was still there. The king of Pelelew, he observed, was an elderly man, and rough in his manners; his hair was grey, and he wore his beard like a Jew; he was also tattooed up to the navel. Mr. Sharp also observed that he was commissioned by Abba Thulle, the King, to say he would in the course of four days pay the English a visit, in order to paint the vessel, and that he would stay with them till their departure, which every one hoped would be soon, as the Relief was in great forwardness.

It has been generally remarked that whenever the mind is agitated, with expectation, it is susceptible of the least alarm; there never was a stronger instance of this than at present. The English, who were now elate with the hope of soon reaching their native land, were struck with apprehension at the least thing that started, even the most distant idea of impeding their course; accordingly this message received from the King was productive of much uneasiness—their suspicions were immediately awakened, and they began to think that the King and his party entertained a notion of preventing their departure (on account of their great utility to them), by violently taking possession of their new vessel, and seizing their arms. Captain Wilson endeavoured all in his power to remove those idle apprehensions, and pointed out the improbability that those people, who have been hitherto so noble, so generous, and sincere, should be on a sudden so cruel, so treacherous, and artful: there never, he remarked, was a real cause for mistrust, and he was very sorry to find that his men should now give way to any; he therefore urged them, for their own sakes, to shake off those fears, nor to let those who have been all along their friends, and who they are foolishly afraid will be on a sudden their enemies, perceive those suspicions, lest, when acquainted with the cause, they might entertain notions they would not otherwise have thought of, and, perhaps, tempt them to realize the danger which he was very sure was now quite distant from their ideas: thus by their own indiscretion they might occasion what otherwise would never have occurred. The captain also expatiated upon the folly of their resistance, if any such design was in agitation, for even when the vessel was launched the natives could hinder their departure, by depriving them of the spring of fresh water, which must of course put a termination to all their hopes; and if they were to assemble in the island with any such hostile intention, the English must know that their ammunition would soon be expended, and that it would be impossible for them to support a contest of any duration. The captain, though he expressed himself according to the dictates of reason and prudence, found all his arguments at present ineffectual; his men still retained their fears, and could not be persuaded but that the natives really intended to detain them. These suspicions were very much increased by the appearance of two canoes near the harbour, neither of which came in: this circumstance was unusual, it seemed sufficient to corroborate their fears. The swivels and six-pounder were now loaded with grape-shot, and a strict watch appointed to prevent any

any sudden attack. A long consultation was also held, when it was resolved that every one should still continue to be vigilant, that all the small arms should be charged with ball, and all the cartouch-boxes filled with loaded cartridges: it was however further resolved that every man should disguise his sentiments before the natives, nor betray the least apprehension of any such design, except an unusual number of canoes should be seen entering the bay, or any of the natives come with spears: that in such case every man was then at liberty to use whatever means his prudence might suggest in his own defence. These resolutions were also succeeded with a determination still more desperate: it was intended if there appeared the least inclination to detain them to sacrifice the King, the noble, generous Abba Thulle, and his brave benevolent brothers, with all the rest of the chiefs, in order to occasion general confusion! Thus were the nice feelings of honour destroyed by that perturbation which was occasioned by the hope of being soon delivered, and the dread of being for ever detained! Happy it is that their fears were not increased by some seeming corroboration that might have tempted them to put their wild resolve into execution, and bring an everlasting disgrace upon their name!

Previous to this they had considered on the best method of launching the Relief, as this indeed was their chiefest concern; for should any accident have happened to the new vessel during this operation, it would have been impossible for them to renew their labour, as their tools were now worn out, and all the materials that could be got were already procured from the wreck. It was therefore agreed to lay ways; and as the vessel was nearly finished, they proceeded to cut down trees for the blocks and launching-ways.

Though the captain's arguments to remove the fears of his countrymen had not their due weight at first, yet when the people began to consider seriously, they were soon convinced of their force, and fortunately indeed the desperate resolves of a moment were but momentary! cool reflections weakened their apprehensions, and the next day the English and natives met with their usual gaiety and friendship.

Surgeon Sharp, and Mr. M. Wilson were commissioned by the captain to inform the King, that the English were in hopes of sailing in about a week. There was a letter, which Mr. Sharp was desired to read in the presence of the two interpreters, who were to explain it to the King; the contents of which signified, that the English hoped for the honour of seeing the King and his chiefs before their departure, that they might return them personal thanks for all their kind favours, and assure them that as soon as they reached their own country

they would make a public acknowledgment of their services and protection: the tools and the muskets (which the King wished to have) were also promised to be delivered to him immediately after the vessel was launched.

While the captain was thus instructing his brother and the surgeon, one of the seamen, M. Blanchard (who had accompanied the natives in every expedition) desired the King might also be informed, that it was his intention to stay behind, and remain with his subjects at Pelew. It seems this man was so delighted with the inhabitants, and their manners, that he often declared to his companions his intention of making the place his residence: it was his wish, he said, to partake of all the present labour of the English, and for that purpose he would cheerfully assist in the building of the new vessel, but on their departure he would bid them for ever farewell! Blanchard, however, was supposed at this time to be jesting, though he never once varied in his language: however, upon his application to the captain at this critical juncture, he was found to be serious. The captain used every argument in his power to dissuade him from his purpose; but his resolution was unalterable. Capt. Wilson also desired his companions to use their influence with him, and if possible make him change his intentions: but the men, after work, acquainted the captain that all their entreaties were unavailing, and that he was seriously determined to stay with the natives.

Blanchard was a man of a singular character: he was about twenty years of age, and notwithstanding he was inclined to gravity, yet possessed of a considerable share of dry humour. It was well known that he had formed no particular attachment on the island, which rendered the circumstance of his determined stay the more remarkable. He was universally beloved, being good-tempered, inoffensive, and ever ready to oblige. It is to be regretted, that he did not know how to read or write, as he might have been able to have taught the natives.

The captain, in hopes that Blanchard would still be dissuaded from his design, desired Rose (who was to accompany Mess. Wilson and Sharp) to take no notice of his proposal as yet to the King. The captain wisely intended, if Blanchard persisted in his determination, to make it appear to the King as a great favour. The gentlemen departed about ten o'clock, with Tho. Rose, their interpreter. This man was possessed of a great fund of pleantry and humour, and as he had the happy means of pleasing the natives, became a general favourite among them. He was very much esteemed by the captain, for his remarkable attention, fidelity, and great abilities.

CHAPTER VII.

Return of the Pinnace with the King, Erre Best, Raa Kook, &c.—Abba Thulle's Satisfaction at the King's Letter—The Malay's artful Remark—Raa Kook's severe Rebuke—The King's Indignation—Tools distributed by the King—A Messenger to the King—Purport thereof—King's Mode of Reply—The Reason why the King, &c. came in the Pinnace—The Boat promised to the King—The Natives paint the Vessel—Preparations for launching her—Message to the Captain from the King—His Desire—The Name of the new Vessel changed from the REALTY to OROOLONG—The King's Satisfaction—Blanchard determined to make known his Proposal to the King himself—His Wife communicated by the Captain—Received in a most gracious Manner—Raa Kook paints the Stern—An Attempt to launch the Oroolong—Ineffectual—Postponed—King's Promises to Blanchard—All assembled to see the Vessel launched—Their Success—Natives and English mutually delighted—Message from the King to Captain Wilson—Offers to make him a Ropack—Captain expresses much Happiness in being admitted a Chief—The Ceremony—Universal Joy—King's Address to the Captain—Captain congratulated—Natives delighted—King's Orders—His Proposal of sending his Son, Lee Boo, to England—Expatriates upon his good Qualities—The Captain's Reply, which gives apparent Satisfaction—Raa Kook seeks Permission to accompany the English—Is refused—Reasons—His Uneasiness—One of the Natives solicits the Captain to be taken in his Vessel—His Application reported to the King—Abba Thulle's absolute Denial, with the Reasons—English ready to depart—Mutual Presents—An Inscription nailed to a Board, and affixed to a Tree—King renews his Request for the Musquets—Takes notice of the Mistrust of the English—Effects of the Rebuke—Lee Boo's Arrival—Is introduced to the Captain—The Father's Speech—Capt. Wilson's Answer to Blanchard.

THE next day being the 7th of November, the pinnace returned with the King, his favourite daughter Erre Bels, Raa Kook, and several of the chiefs. Mr. Sharp had read the captain's letter according to his directions to the King, which was explained to him by the interpreters. Abba Thulle expressed great satisfaction at the politeness of the English, and was highly delighted with the tools which were sent to him as a present by the captain in the pinnace. It was remarked however by the Malay, that the musquets were not sent by the English according to their promise; for which he was severely rebuked by Raa Kook; who (as it was afterwards represented to Surgeon Sharp) thus addressed him:

“Wretch, the English are not, like thee, possessed of two tongues; they have honourably kept their word, by sending thee tools, and notice of their departure; while thou, oh thou piece of deceit! have brought disgrace upon us all, by advising the King to send boiled yams to the English, left, in sending them raw, they should thereby slock themselves, and depart without giving notice and leaving behind those things which they had promised.”

The King and all the Rupacks felt the full force of this rebuke, and Abba Thulle beheld the Malay with so much stern indignation, that he immediately withdrew from his presence. After this their wanted good-humour returned; and every one, even the King's attendants, had abundance of refreshments. The tools were distributed by the King among his chiefs. Mr. Sharp also reported, that a messenger arrived from one of the neighbouring islands about two in the morning previous to their departure to the King; on whose account Abba Thulle was awakened by one of his attendants, who brought in a lighted torch and introduced the messenger. This was to enquire when the English intended to sail, as some of the northern chiefs intended to make them presents of the best articles which their land produced, in addition to their stores. The King delivered this messenger a piece of cord for those chiefs, on which were tied as many knots as there were days before the English meant to leave Oroolong. The King, his daughter, and attendants, set out at first in canoes; but, on account of a violent gale, were obliged to make to shore for shelter. Raa Kook, who had accompanied Mess. Wilson and Sharp, was so delighted with the ease and steadiness of the pinnace, that he requested his friends would prevail upon the King to go on board her. It was by these means that Abba Thulle, his daughter, chief minister, &c. arrived with the English. Upon their admiring their comfortable situation, in the pinnace, the English informed the King that it was their captain's intention to make that boat a present to him, upon their departure. The King seemed very thankful for the intended gift, and desired his people to take notice how the sails were managed.

The King had brought with him several presents; and he and his brother, according to their promise, set their people about painting the new vessel, which was at this time preparing to be launched.

Every thing was ready the succeeding day for launching the new vessel. The King and his chiefs sat in view of her; and, after some conversation among themselves, a message came to the captain that the King wanted him. Captain Wilson immediately attended; when the King expressed a desire that instead of an English name the vessel should have a Pelew one, and he wished her to be called Oroolong, in remembrance of the island where she was built. Upon this the captain sent for his officers and people, and having communicated the King's request, it was universally approved of. The name of Oroolong was accordingly adopted, which seemed to give the King great satisfaction.

No. 7.

The captain was now secretly informed, by some of his people, that Blanchard, understanding his message had not been delivered, was resolved upon speaking to the King himself, and requesting his permission to remain at Pelew. Captain Wilson, seeing he was absolutely resolved, and that all entreaties to prevent him were in vain, assured him that his request should be immediately made known: upon which he came to the King, and told him, that in return for the hospitality which he and his subjects had shewn him, he would leave one of his men with him, to take care of the guns and other articles which he intended to present him with on their departure. This proposal appearing to the King as a fresh proof of their esteem, was received in a most gracious manner, and Blanchard, according to his ardent wish, introduced to his new friends.

Raa Kook, who was the most busy in painting the vessel, was directed by the King in decorating the stern, on each side of which he made two circles, one within another, in black and white, with some little zigzag ornaments hanging from them.

An attempt was made in the evening (Nov. 8th) to launch the vessel, but as they found it impossible to move her till the tide began to fall, they postponed their intention, with the hope of being able to discover and remove every obstruction by the next tide.

Blanchard appeared as much delighted with being allowed to remain at Pelew, as the King was in having him. Abba Thulle promised to make him a Rupack, and give him two wives, with a house and plantations; assuring him, at the same time, that he should always be with himself and his brothers.

The next day, the weather being very favourable, they began to try their work, and were happy to find that their preparations promised well. A message was dispatched to the King who came with all his attendants to see the vessel launched. The tide ebbed remarkably low the preceding night: about seven o'clock the next morning, in the midst of fears, hopes, and tremblings, she was got aloft. The English gave three huzzas; which were joined by the natives, who appeared equally interred; and by this their anxiety dissipated, in a great measure, all the suspicions of the English. The Oroolong was immediately hauled into a dock, that had been dug for her, and by breakfast-time she was safely moored. After breakfast they got up shears, and took in the masts, water-casks, six-pounders, &c. The remainder of what tools could be spared was presented to the King. In the afternoon, when the flood-tide came in, she was hauled into the basin in about five fathom water. In the night they got on board their provisions, stores, ammunition, &c. and early the next morning their anchors, cables, &c.

This day (Nov. 10th) Captain Wilson received a message from the King, requesting the pleasure of his company at the watering-place. He waited upon him according to invitation, and was informed that it was the King's intention to invest him with the order of the Bone, and make him in form a Rupack of the first distinction, before he left the island. Capt. Wilson declared himself fully sensible of the honour intended him, and expressed much happiness in being admitted a chief of Pelew. Upon this the ceremony commenced: the King and all the Rupacks sat down under some large trees, and the captain was placed at a distance. Raa Kook, who received the Bone, approached him, and presenting it from the King, desired to know which hand he most generally used; which the captain proving to be the right hand, by throwing a stone, the bone was applied to his left one, to see if it was large enough for his hand to slip through; but not answering, it was made wider. Notice being then

• T given

given that it would now do, he was joined by the chief minister and the other Rupacks in the performance. Raa Kook made a string fast to each of the fingers of the captain's left hand, and then rubbing the hand with oil, the chief minister stood behind the captain and held him fast by the shoulders; the different strings were passed then through the bone by Raa Kook, who gave them to another Rupack: upon which they both endeavoured to draw his hand through. Every one was now silent except the King, who was occasionally hinting some means to expedite this operation. At last by Raa Kook's compressing the captain's hand as much as he could, it was fairly got through, which occasioned universal joy. The captain was then addressed by the King in the following manner:

"You are to rub that bone bright every day, to preserve it as a testimony of the rank in which it is held, and on every occasion you shall defend with the utmost valour this mark of dignity, which you must never suffer to be torn from your arm, but with the loss of life."

As soon as the ceremony was concluded, the captain was congratulated by the Rupacks as one of themselves, while the rest of the natives who assembled around the new chief, seemed highly delighted, calling him *Engles Rupack*.

Orders were now issued by the King that none of his own people but the chiefs should go on board the new vessel, for fear of incommoding the English: however, the inferior natives were permitted to paddle along-side of her, and view her from their canoes. Raa Kook and Arra Kooker went on board, while she was carried to the west side of the island, and moored in six fathom, adjoining the well of fresh water. There was some fish offered the captain in the vessel, but as there was no convenience at present for dressing it on board, he went to shore and partook of it with the king.

The King had some time ago intimated his intention of sending two of his people to England with the captain, as soon as the vessel was ready to sail. He had now been considering his promise, and was at last resolved upon committing to the care of Captain Wilson his second son Lee Boo; that he might improve himself in the English manners, and be able on his return home, to benefit his own country; the father expatiated much upon the good qualities of this youth, and was likewise joined by his brothers in commendation of him. The captain assured Abba Thulle, that he looked upon this proposition as a singular mark of his great confidence and esteem, and that the young prince should consequently be treated by him with the same tenderness and affection as if he was his own son. This reply of the captain's gave the King apparent satisfaction.

Raa Kook, it seems, had before this urged the King his brother to permit him to accompany his new friends to England, but this was refused by the King on account of his being the next heir, and the consequent inconvenience that must arise from his own death if he were absent. Raa Kook, though convinced by his brother of the impropriety of his request, was notwithstanding sorely disappointed: there was a visible gloom which clouded his countenance, that was before so gay and cheerful. He could not bear the thoughts of bidding his friends farewell; and saw with the utmost regret the preparations making for their departure, for now they were watering the vessel, bending the sails, finishing the fire-place, and in short, getting the vessel ready for sea.

A nephew of the King, son of that brother whose murder at Artingall was the occasion of the war which was now terminated, made application to Captain Wilson (Nov. 11) for leave to accompany him and his people to England. This young man was so attached to the English, that he was conti-

nually with them, and had assimilated himself to all their ways and manners. Captain Wilson, however, declined giving any positive answer, till the King was consulted, observing that Abba Thulle had already spoken to him of his son, Lee Boo, and another man. When the business was made known to the King, he seemed exceedingly displeas'd at his nephew's application: he represented him as having a roving disposition, and being unworthy of any one's patronage. The young man, still anxious to depart with the English, made personal application to the King; but Abba Thulle absolutely refused his permission, in words to the following tendency:—"You are a worthless man; undutiful, and neglectful of your mother; you have for wives good and deserving women; and yet to these, as well as to all your relations, you behave ill; for which you have been justly exposed throughout the whole island. You are ashamed of your conduct, and that is the reason you would fly from your family; but instead of having my consent, on the contrary I request the captain not to countenance you: you shall stay at home, and may the sense of shame amend your life!"

It was intended by the English to depart from the island a day before the time they reported, as it was their wish to avoid the multitudes of strangers who were expected; the captain fearing that his men might be incommoded by the number of their canoes, and their passage over the reef be consequently attended with danger. The King was therefore informed, that the weather and wind went being favourable, and the vessel ready, he intended to sail the next day, which was the 12th. Abba Thulle was exceedingly concerned at this information, as all the chief Rupacks had been informed (by the knots on the cord before mentioned) that it was to be the 13th; and consequently the English would lose the presents that were intended for them. Capt. Wilson, however, observed, that they had already a competency of stores, and as the wind was favourable, he begged his permission to depart the next day. Though the King was very much concerned, he endeavoured to overcome it, and insisted, as it was the last day, that the captain and his people would dine with him on shore; which invitation they cheerfully accepted. After dinner, a Newfoundland dog, which the English brought with them, was made a present to Arra Kooker, as he frequently expressed a great desire to have it. Mr. Barker also drew a plan for a new vessel, at the desire of this chief, who was determin'd with the English tools to build one, if possible, where the Oroolung was formed. Captain Wilson was now obliged to go on board, and reprimand two of his men, who had a quarrel. Upon informing the King the reason of his departure, Abba Thulle observed, "that there were bad men in every country."

The following Inscription was cut upon a plate of copper, and having been nailed to a thick board, was affixed to a tree which was near the place where the Oroolung was built:

The Honourable English East-India Company
Ship the *AWTSLÖZ*,
HENRY WILSON, Commander,
Was lost upon the reef north of this island,
In the night, between the 9th and 10th of August:
Who here built a vessel,
And sailed from hence the 12th of Nov. 1783.

When the King was made acquainted with the meaning of this inscription, he assured the captain that it should always abide, as a memorial of the English having been there; and if by any accident it should happen to fall, he further promised that it should be taken care of and preserved at Pelew. After this he explained the nature of it to his

subjects, and paid it.

The King's guns, remains were gone, their hostility to his people their promises were not given up to the captain's should be greatly perceived the trust him with these suspicions? I had I been done it in my power to exercise after all you

subjects, and commanded every attention to be paid it.

The King now renewed his request respecting the guns, remarking as before, that when the English were gone, his enemies might malevolently renew their hostilities. The captain hastened immediately to his people, to urge the propriety of fulfilling their promise, immediately; but their suspicions were not quite eradicated, and they were unwilling to give up the arms till the last moment. Upon the captain's informing the King that his request should be granted the next day, Abba Thulle plainly perceived the reason of this hesitation, and calmly asked the captain if the English were afraid to trust him with five guns? "Why (added he) are these suspicions? Have I given any cause for them? I was never afraid of you, but eagerly courted your friendship, and why afraid of me? Had I been inclined to harm you, I would have done it long ago, for you have been at all times in my power; however that power I have hitherto exercised in your service, and is it possible that after all you cannot confide in me even now?"

Such was the keanness, the justice of this rebuke, that every one of them felt its force. The English accordingly desired the captain, that, in order to convince the King they could have no suspicions, his request might be immediately granted. A messenger was sent on board therefore for the articles; and the King was presented with five musquets, five cutlasses, and about a barrel of gunpowder, with a proportionable quantity of flints and balls. The captain also made him a present of his own fowling-piece; the effect of which having been frequently witnessed upon the birds, &c. the King was highly delighted therewith.

Lee Boo, the King's second son, arrived in the evening, brought from Pelew by his elder brother, Qui Bill. He was introduced to the captain by his father; then to the officers. Such was the good-humour and affability painted in this youth's countenance, that every one present was immediately captivated with his appearance. His canoe was loaded with refreshments for the English; particularly a basket of a fruit resembling an apple, the first of the kind which the English had seen there, and which was in great estimation among the natives: they were at this time just coming in season. The captain gave one to each of his men, and carefully reserved the remainder for his young friend, to treat him on his passage.

Lee Boo sat for some time near his father, who was continually discoursing with him about his voyage. It was understood that the King was giving him instructions respecting his future conduct in England, with true parental affection. After this he seized an opportunity of addressing the captain, and delivered his sentiments in words to the following purport:

"I know when my son Lee Boo arrives in England there will be so much to see, and he of course will be so very eager, that novelty and admiration may doubtless incline him to ramble; but I shall depend upon your attention to moderate that eagerness, and restrain his passions; notwithstanding I wish him to derive all the information that is necessary, nay all that is essential to constitute him one of yourselves, an Englishman! As to our parting, I have already resolved that in my mind: I have frequently considered the subject, and am prepared for the worst. I know that he must enter distant countries very unlike his own, and consequently must be exposed to all those dangers which result from change. He may meet with diseases which to us are unknown, and being unprepared for those maladies, peradventure he may die; but we must all die, whether in England or Pelew.—Death is our inevitable doom; and what signifies it whether

"my son dies here or there? The humanity which you have displayed upon every occasion among us, is sufficient for me to confide in: I know that when Lee Boo is sick, you will administer all the relief in your power; and if he should die, for death is the fate of all, which the most skilful cannot prevent, never let it deter either you, your brother, your son, your chiefs, or even the meanest of your countrymen, from visiting these islands upon any future occasion. The return of any of my friends would give me the greatest satisfaction. I shall rejoice to see you or yours again, or any of your people. You should always meet a hearty reception."

The King's sublimity and eloquence on this occasion made no little impression on Capt. Wilson's mind, who repeated his former declaration, that as he would henceforth look upon Lee Boo as his own son, he should be consequently treated with every parental attention: he would be a father to the youth, having experienced so much kindness and liberality from the youth's own father!

On the approach of night, Capt. Wilson took an opportunity of conversing awhile with Blanchard, advising him by all means to render himself as useful as possible to the natives, and to conduct himself with strict propriety. He conjured him never to forget in this situation that he was a christian, but to continue those acts of devotion which his religion requires: he was also conjured never to forget the sabbath, but strictly to adhere to all the precepts of christianity. The captain further remarked, that as he might be able to recover some other articles from the wreck, he should endeavour to benefit the natives by working iron, &c. and in taking care of the arms and ammunition he left them, which would be of the greatest consequence to them. He likewise exhorted him to be always covered, as he would thereby support a superiority of character among the natives, who in consequence thereof could not forget he was an Englishman. On this account the captain furnished him with as much clothes as he could conveniently spare, and recommended to him when they were worn out to make himself trowsers of mats, which he might easily get at Pelew, and be thus enabled to preserve that decency to which he was accustomed.

The captain now enquired, if he thought of any thing which he would wish to have: Blanchard, upon this, mentioned one of the ship's compasses, and requested to have the masts, sails, oars, and the rest of the things belonging to the pinnace, as that boat was to be left. These were promised to be granted, as soon as they had towed the vessel over the reef.

Blanchard, upon leaving the captain, returned to the natives, who were very industrious, especially the Rupacks that were present, in rendering the place as agreeable and commodious to him as possible. Nor were their endeavours lost upon their young countryman, who already appeared perfectly satisfied with their manners, and reconciled to his new situation.

The English being so full of their departure, did not enjoy much repose this night; every man was picturing in his mind the fond idea of being again united with his dear relations and friends in his own country; and the natural apprehensions resulting from the dread of a disappointment rendered their agitation of mind inexpressible. The natives were equally restless; the thoughts of parting so suddenly with their friends occasioned much uneasiness. The King was contemplating on the departure of his son; and the chiefs who were with him on the great loss they would sustain in the English. In short, it was a night of mutual perturbation, the English still doubting the practicability of their return, and the natives regretting most sincerely their departure.

Wilson and Lee Boo in the Morfe—Adventures at St. Helena—Arrival of the LaSelles—They reach the Isle of Wight—Arrival at Portsmouth—Domestic Occurrences—Anecdotes and Death of Lee Boo.

UPON the morning of departure, Wednesday, Nov. 12th, the English jack was hoisted at the mast-head of the vessel, and one of the signals fired as a signal for sailing. Abba Thulle, upon understanding this, ordered the canoes to take on board sweetmeats, cocoa-nuts, &c. while several others lay along-side the Oroolong, with presents from the different natives; so that had the northern Rupacks added their intended gifts, the ship would never have contained them. When the vessel was loaded, the captain went on board; the King having promised to follow him soon, with Lee Boo, in his canoe. Capt. Wilson took this favourable opportunity of making all his seamen kneel down, and return thanks to the Almighty, for having thus granted the means of deliverance, and supporting their spirits during their afflictions; also imploring his further grace to prosper their future endeavours. The King, his son, and chiefs, arrived while the captain and his people were praying; but till they had finished, they remained near the entrance of the house, and kept profound silence, being sensible of what the English were about.—It is necessary here to observe, that one of the conditions for establishing peace at Pelew, was for the King of that island to surrender two Malays whom he had to the King of Pelew: this was no doubt urged by the Malay who was Abba Thulle's interpreter. The condition being granted, one of them (whose name was Boyam) was now appointed to attend Lee Boo on his voyage, and be to him a servant. Boyam accordingly accompanied his young master to the vessel.

As the Oroolong was remarkably loaded with sea stores, it was doubted whether in this her situation she was capable of getting over the reef. After considering some short time upon this, it was deemed expedient to ease her: accordingly they landed the two six-pounders, and left behind the jolly-boat, which they deemed of little use to them, as she wanted to be repaired. The King being informed of this, dispatched his eldest son, Qui Bill, on shore, to provide the English with a canoe of a proper size, with which he shortly returned.

The King put his son Lee Boo under Mr. Sharp's care, till the Oroolong had reached China. The young man immediately became attached to the surgeon, and constantly kept close to his side.

They now proceeded towards the reef, while the multitude of canoes which were assembled on both sides was incredible: the natives therein continually imploring the English to take something from them in remembrance; and these supplications were made in such a piteous manner, that though there was a superfluity already, the English could not resist their importunities.

Blanchard, who had got into the pinnace to take the vessel in tow, was remarkably kind and attentive

to his countrymen; he gave them all the assistance in his power to the very last, and frequently wished them a prosperous voyage, yet he appeared quite indifferent of parting with them, nor testified the least regret, though he was leaving his friends for ever!

The pinnace was preceded by several canoes in order to point out the safest track for the vessel; while others, according to the directions of the King, were stationed at the reef to mark the deepest water. The King accompanied them almost to the reef, then made a signal for a canoe to come along-side; blessing Lee Boo, he wished him happy and prosperous: the youth received his father's blessing with grateful tears. Then when Captain Wilson had finished his directions to the seamen, the King embraced him with the greatest tenderness, shook all the officers by the hand, and took his leave in the following noble and cordial manner:

"I feel myself happy because you are going home, I feel myself happy because you are happy, and I feel myself unhappy because you are going away."

This being succeeded with repeated assurances of his hearty wishes for a successful voyage, he departed in his canoe attended with his chiefs; but Raa Kook with his attendants would see the English clear of danger to the outside of the reef. Happily the Oroolong cleared it without the least difficulty: they then took leave of Raa Kook, who, with all the rest of the natives, appeared extremely affected at their departure. The canoes having now surrounded that of their King's, the people therein gazed at the Oroolong as long as they could with aching eyes, while the English were so overcome with their generosity and attention, as to be scarcely able to give them three cheers.

They now hauled up along the back of the reef N. W. by N. Though there were some light squalls and rain, still the weather was tolerable both the 13th and 14th; the wind variable from E. to S. E. with which they steered to the northward.

The first night Lee Boo ordered Boyam to bring his mat upon deck, but he was presently provided by Mr. Sharp with a warmer covering; he was very much surprised the next morning at seeing no land. The captain now presented him with a shirt, waistcoat, and a pair of trowsers, which he always made use of when he understood that nakedness was offensive to the English, and at last he came to have such notions of delicacy, that he would never dress or undress in any one's presence: he was so cleanly that he washed himself several times in one day. At first he was very sea-sick: Captain Wilson gave him one of the apples, which he looked upon as a great indulgence, this fruit being so rare. His sickness however soon abating, he became quite affable and happy.

No. 7.

On the 15th the weather, though cloudy, was favourable: there was a swell from the N. E. As the weather still continued fair, and the wind from the N. E. and E. they endeavoured on the 17th to make more room by re-stowing their provision and stores: while they were doing this they discovered that the leak was under the end of one of the floor-timbers. At first it was deemed best to cut it away, in order to come at and stop it from within: but upon further consideration they declined the intention, for fear a plank might start, and the vessel consequently sink. At night the weather changed, attended with violent squalls and rain: they kept under an easy sail. There was no appearance of land. The weather continued very unsettled from the 18th to the 24th: still rain and squalls; the wind varying at times to the eastward, southward, and S. W. with heavy clouds, lightning, &c. On the 23d the wind shifted to the N. E. and the next day the weather became fair and moderate. On the 25th they haved up to the northward, and discovered Bachee islands, bearing W. N. W. about three leagues distance. The wind having changed to the northward, they bore away through a passage between the islands, and were at noon in the China sea. The next morning part of the island Formosa was seen. On the 27th it was still fair weather, but there was a swell from the northward, with which they were much wet: in the afternoon there was a fresh gale, and having been so long accustomed to hot weather, they now felt the cold more sensibly. At eight o'clock the next evening they saw land, bearing N. by W. At one o'clock the next morning, being the 29th, the wind blowing briskly, they got soundings at 25 fathom, soft ground, and about seven o'clock they saw land, bearing from N. by E. to W. S. W. They stood in amongst the islands, steering to the westward; and at six o'clock in the evening, in company with some Chinese vessels, they anchored in 10 fathom water.

Lee Boo, during this passage, made several remarks, and was very eager in learning the names of the islands they had passed. He was now quite delighted at the sight of land, and the multitude of boats which were on the water.

The vessel was conducted the next morning (Nov. 30) between the islands to Macao, by a pilot whom the captain procured. As soon as they were in sight of it, they hoisted an English jack at the main-head; which when the officers of the Portuguese vessels (who were at anchorage in the Typa) perceived, they immediately sent out their boats to meet the English with refreshments and assistants, as they conjectured, from the size of the vessel, that it was part of the crew who had been wrecked. One of the officers was so polite, as to wait with his boat to take the captain on shore to the governor. The governor at this time was particularly engaged, and having sent an apology to the captain, acquainted him by the officer on duty that he was heartily welcome to the port of Macao. The captain was now informed, that the honourable Company's supracargoes were all up at Canton, and no Englishman was at present in Macao, except Mr. McIntyre. The captain immediately repaired to that gentleman, whose friendship he had before experienced, and who on this occasion behaved to him with the greatest humanity and attention. Provisions were sent on board the vessel, by Mr. McIntyre's orders, to the officers and seamen, with every other necessary that was required.

Capt. Wilson now wrote to the Company's supracargoes a full account of the wreck, his arrival and situation. He was very happy in being informed that peace was established in Europe; and that there were at present a number of English and other vessels at Whampoa; also that some of the Company's vessels were ready to sail.

No. 7.

Mr. McIntyre and a friend of his, who was a Portuguese gentleman, accompanied the captain on board the Oroolong, bringing with them a sufficiency of provisions ready dressed. They returned in the evening, with Lee Boo, and all the officers except the chief mate, whose stay in the vessel was deemed necessary. The Portuguese gentleman was highly delighted with the Pelew prince, and introduced him to his family, calling him the New Man, Lee Boo, since their anchorage, seemed astonished at every thing he saw: he was surpris'd at the magnitude of the Portuguese vessels; he also displayed the natural benevolence of his heart, in bestowing the best things he had to the poor Tartar women, who surrounded every vessel upon its arrival to beg. The Prince's astonishment was much more encreas'd when he entered this gentleman's house: he was silent with admiration; the walls, ceiling, decorations of the room, &c. surpass'd his comprehension. On his introduction to the ladies, he was quite affable and good-natured, and behaved with the greatest ease and politeness. The English, as soon as they had landed, congratulated each other upon their happy escape: the Prince seem'd to participate of their joy, by expressing the same delight; in short, his behaviour render'd him agreeable to every one, and Mr. McIntyre took great pains in shewing him every thing he thought could please him. There was a large looking-glass, in particular, which caught his attention; this having reflected almost his whole person, the Prince was astonish'd at seeing himself: he laugh'd, retir'd, then return'd, and was in short quite lost in wonder: at last, supposing there was some one behind the glass, he slyly endeavour'd to detect him; but observing it was fasten'd quite close to the wall, he stood confounded: upon this a small one was brought in; he saw his face in this; but seeing no one behind it, could not conceive the meaning. Thus the evening was pass'd in mutual surpris'e and entertainment.

As Capt. Wilson was unwilling to encroach upon the hospitality of Mr. McIntyre, he was desirous of providing a temporary residence for his people elsewhere, which by Mr. McIntyre's assistance was at last accomplished, and the crew of the Oroolong, except one officer and a few men who remained on board, were accommodated with a house (and all suitable necessaries) which belonged to an English gentleman then at Canton. The men who were left on board were alternately relieved.

Lee Boo's curiosity was fully gratified the succeeding day: he was astonish'd at every thing he saw, especially the horses, being unaccustom'd (as before observ'd) to quadrupeds; but when he saw some gentlemen who were riding, his surpris'e was inexpressible. It was no difficult matter to prevail upon him to get on a horse's back, and having rode a few paces, he was so delighted with the animal, that he request'd one of them might be sent to his uncle Ras Kook.

Capt. Wilson in a short time received letters from the supra-cargoes, wherein he was advis'd to dispose of the Oroolong and stores, as it was impossible for her to come up to Whampoa, according to the rules of the Chinese government, without duty and port charges being paid, which were considerable. Mr. McIntyre then undertook to dispose of the Oroolong, while Captain Churchill, of the Walpole, accommodated Capt. Wilson and his people, (except Mr. Benger and half a dozen others, whose stay at Macao was thought necessary till the vessel was sold) with a passage up to Whampoa. A short time after the captain's departure, the Oroolong was put up to auction, and sold for 700 Spanish dollars. Captain Wilson, &c. were about six days in Canton before Mr. Benger and his party came up. They arriv'd in one of the country boats, accompanied by Mr. McIntyre, and were most cordially received by Lee Boo, who having perceiv'd the boat from a window,

U

sprang

spring from his chair without aprissing any one of the reason, and with uncommon expedition ran to the river to welcome his friends.

Lee Boo's curiosity was highly gratified during his stay at Canton. As every day afforded some novel attraction, his admiration of the English still increased. Mr. Sharp, who had been hitherto his guardian, now resigned his charge to Captain Wilson, and came home in the *Lafcelles* under Captain Wakefield. Captain Wilson and Lee Boo embarked in the *Morse* under Captain Joseph Elliot, while the rest of the people went on board in different vessels, but the majority of them embarked in the *York* under Captain Blanchard.

Captain Elliot was exceedingly attentive to Lee Boo during the voyage, which the prince returned with much grateful courtesy. In order to engrave upon his memory every thing that was told him, he would make some knots upon a cord, which knots he would be continually referring to, when desirous of aiding his recollection, and as he frequently recurred to this cord, it used to be wittily observed by the officers of the *Morse*, that he was reading his journal.

As soon as they arrived at St. Helena, Lee Boo was exceedingly pleased with the soldiers and cannon on the fortifications. He rode on horseback into the country according to his own request, during which he fat well, and though he galloped, betrayed not the least fear of falling, but on the contrary seemed highly delighted with the exercise. During their stay at *Morse*, Surgeon Sharp arrived in the *Lafcelles*, and was received in the most cordial manner by Lee Boo, who jumped from a window, as before, to welcome him. In approaching the British Channel he was astonished at the number of vessels he met. Having arrived at the Isle of Wight, Captain Wilson and his party quitted the *Morse*, and coming between the Needles in a boat, landed at Portsmouth July 14, 1784.

Though domestic occurrences are quite foreign to our design, yet this relation would undoubtedly be imperfect were we not to add some remarks on Lee Boo, while in England.

This prince was not only pleased with every thing he saw, but rendered himself pleasing to every individual he met. He was brought to the captain's house in Rotherhithe by Mr. M. Wilson in a coach. This machine and its utility struck him very forcibly: he called it a little house drawn with horses. He was quite delighted with his four-post bed, and said the English had houses for every thing. "All fine country—fine street—fine coach—and house upon house up to sky." The captain's family were particularly partial to him, and he in return was equally affectionate to them. His adopted father he always called captain, but to Mrs. Wilson he gave the tender appellation of mother. In company he was both polite and affable: indeed he made it his study to render himself agreeable every where. He was generous, mild, and compassionate, his charity was however guided by discretion: the aged he always relieved, but the young beggar he rebuked for not working.

His servant Boyam having proved to be a worthless dishonest man, was sent to Sumatra, while Thomas Rose supplied his place. Lee Boo was very happy with this exchange, as he was disgusted with

Boyam. The captain's son and the prince always lived like brothers, and one day there being a difference between the father and son, Lee Boo was so extremely affected, that he could not be reconciled till he had joined their hands.

The prince was very fond of tea, but had an aversion to coffee; however, he proposed drinking it, if it was Captain Wilson's pleasure. Having once seen a man intoxicated, he was very much concerned for his sickness, but when acquainted with the cause, was ever after an enemy to liquor. He always appeared uneasy when his friends were drinking, and if offered any himself, remarked that it was not fit for gentlemen.

Captain Wilson was afraid to introduce him to any public entertainments till he was inoculated, and this operation was postponed till the prince should be better acquainted with the English language, that he might be the less alarmed at this offensive disorder. Unfortunately he was seized with the small-pox while unprepared, and notwithstanding every attention was paid him, his dissolution became inevitable. While on the bed of death, he expressed the most unfeigned regard for Captain Wilson and his family, and having taken Surgeon Sharp by the hand, thus cordially expressed himself, "Good friend, when you go to Pelew tell Abba Thulle that Lee Boo take much drink to make small-pox go away, but he die; that the captain and mother very kind; all English very good men, am much concerned I could not speak to the King, the number of fine things the English have got." He died universally lamented; and his death being made known to the *India-House*, Captain Wilson received orders that his funeral should be as decent and respectable as possible. He was buried at Rotherhithe church-yard, and the following inscription was soon after erected over his grave by order of the *India Company*.

"To the Memory

Of Prince LEE BOO,

A native of the PELEW or PALOS Islands, and Son to ABBA THULLE, Ruppak or King of the

Island COOROOKAA,

Who departed this life on the 27th of Dec. 1784,

Aged 20 Years.

This Stone is inscribed

By the Honourable UNITED EAST-INDIA COMPANY

As a Testimony of Esteem,

For the humane and kind treatment afforded by HIS FATHER to the Crew of their Ship the

ANTELLOS, Captain WILSON.

Which was wrecked off that Island in the Night of the 9th of August, 1783.

Stop reader stop, let NATURE claim a tear,
A Prince of mine, LEE BOO, lies buried here!"

Having now given an accurate Account of Wilson's interesting adventures at Pelew, which it is presumed will be found more satisfactory and correct than all the voluminous Relations hitherto published; the Reader shall next be presented with the very valuable Voyages of Parilock and Dinno, including all the consequent Adventures, Discoveries, &c. while the same exactness and attention which have so evidently marked the former Numbers, shall be carefully continued throughout this much-admired Undertaking.

A NEW, COMPLETE, AND GENUINE HISTORY OF A Voyage ROUND the WORLD,

IN THE KING GEORGE and QUEEN CHARLOTTE;

UNDER THE COMMAND OF Captains PORTLOCK and DIXON.

Undertaken and Performed in 1785, 1786, 1787, and 1788.

WITH FULL AND CIRCUMSTANTIAL ACCOUNTS OF

The North West COAST of AMERICA;

Including all the ADVENTURES, DISCOVERIES, INFORMATION, &c. contained in the JOURNALS and COMMUNICATIONS of

Capt. PORTLOCK, Surgeon HOGGAN, Capt. DIXON, Surgeon LAUDER, and several of the other OFFICERS and GENTLEMEN.

Being an Entire New HISTORY of all those Interesting OCCURRENCES, EMOLUMENTS, &c. met with and acquired by the King George's Sound Company, in carrying on a FUR TRADE from the WESTERN COAST of AMERICA to CHINA, more Accurate and Full than any hitherto Published.

Which, with the several other VOYAGES and TRAVELS to be included in this Collection, will be Embellished with a Variety of Elegant COPPER-PLATES, Drawn upon the Spot, and Engraved by Eminent Artists.

INTRODUCTION.

THE principal motive for the following Voyage Round the World was the extension of commerce. Adventurers before were generally guided by a thirst after glory; or a rapacious view of acquiring wealth: these views, however, are beneath a British nation. We despise the Spanish mode of exciting the resentment of natives, and incurring their displeasure; it being the wish of Englishmen to gain the affection of strangers, and conciliate their esteem.

The several voyages which have been undertaken under the patronage of Government, have been of late encouraged for the benefit of mankind in general, and every well-wisher to his country must certainly rejoice when he contemplates the success, with which they have been attended; and the consequent improvement of navigation.

During Capt. Cook's last voyage to the Pacific Ocean, besides many salutary advantages of which it was productive, it was attended with one very material discovery, that promised no little emolument to our kingdom: this was the trading for furs of a very valuable kind on the N. W. coast of America. However, the discovery which was made in the year 1780 did not meet with that attention then which it so highly merited; for though it was obvious that immense wealth might be acquired by such a scheme, yet as it required spirit and activity, as well as patience and perseverance, of course it was some time before any were found who were capable of the undertaking. In May 1785 a society of gentlemen resolved upon accomplishing the business with becoming resolution. This society consisted of Richard Cadman Ritches, and several traders of respectability, who entered into a commercial

partnership, under the title of King George's Sound Company, for carrying on a fur-trade from the western coast of America to China. For the execution of this, a licence was obtained from the South-Sea Company, (who possess an exclusive privilege of trading in the Northern Pacific Ocean): at the same time another of a similar tendency from the East-India Company, who at the same time engaged to give them a freight of teas from Canton. Thus enjoying the sole right of carrying on this traffic to its utmost extent, they immediately purchased two vessels, one a ship of 320 tons, and the other a sloop of 200 ditto; these being the size and burthen which the experienced Capt. Cook recommended, as the most proper for distant employments. They were immediately put into dock, and fitted out with all possible expedition, in order to undertake this highly necessary voyage to the N. W. coast of America.

The proprietors appointed Nathaniel Portlock captain of the larger vessel, and George Dixon of the smaller: these gentlemen having attended Captain Cook in his last voyage into the Pacific Ocean, and consequently deemed the most competent for the present undertaking. There were several other officers, of well-known experience and abilities, that were to assist and facilitate this enterprise; the novelty of which had already attracted and procured the patronage of several persons, both of respectability and knowledge. The larger vessel was called by the Secretary of the Treasury the King George; and the smaller was named the Queen Charlotte, by the President of the Royal Society. The sons of several gentlemen of eminence were put under the care of those respective captains, for the sake of being initiated in navigation, and instructed in a sea-faring life;

life; in short the undertaking met with such universal approbation, that it received the hearty good wishes of several noble personages, particularly the Right Hon. Lord Mulgrave, Sir Joseph Banks, Mr. Rose, &c. These encouragements so stimulated the proprietors to prosecute their laudable undertaking with due spirit and vigour, that nothing was left untried or unattempted, that promised the least forwardness to the business. It was intended that

whatever furs might be procured in their traffic on the American coast should be disposed of in China, subject to the immediate controul of the East-India Company's supra-cargoes; and on account of this consignment, it was further intended that both vessels should be freighted home on the Company's account. Having thus far introduced the reader to the chief objects of this voyage, we shall now proceed in our accurate and faithful account of it.

BOOK I.

CHAPTER I.

Stores and various Antiforbatics laid in—They proceed down the River—Anchorage—Articles of Agreement read—Men refuse to sign—Reason—Capt. Portlock's powerful Arguments—They consent—Two of the Crew discharged—Anchorage in Margate Roads—In the Deal—Under Dungeness—Wonderful Escape of a young Gentleman—Arrival at Spithead—Spare Anchors, &c. purchased—Anchor in St. Helen's—The Caskets in view—Becalmed, and drifted within a Mile of them—Anchors unavailing—Tide turned—Danger over—Anchored in Guernsey Road—Spirits, &c. provided—Seven Isles seen—Something seen on the Water—Brought on board—Explanation thereof—Abreast of Funchal Bay—Meet with the Grampus—One of the Crew discharged—Two of the Canary Islands—Carpenters employed in caulking—Island Bonavista—Anchorage in Port Praya Bay—The Captain Moor haughty—Becomes civil—Obliging Behaviour of the People—Live Stock, &c. purchased—Price of Bullocks—Politeness of a Merchant—Weigh Anchor and make sail—Wonderful Preservation of a Bay—A Shark caught—Capt. Dixon comes on board the King George—Captain Portlock's Intentions—Dixon's Return to the Queen—Ships Companies indulged—Tempestuous Weather—Falkland's Islands seen—A Rock ditto—Mistaken for a Vessel—Description and Name thereof—Two small Islands discovered—Description thereof—Mate sent in the Whale Boat to sound a-bell—A Signal of Danger—Ditto for a Harbour—Mate's Account upon his Return—Anchor at Port Egmont.

ON the 29th of August 1785, all the stores being got on board, and a plentiful stock of various antiforbatics provided, through the liberality of the proprietors, for the preservation of the people's health; they weighed anchor, and stood down the river for Gravesend, where they came to anchor again; there were about 60 on board the King George, and 33 on board the Queen Charlotte. Their progress was now very near being retarded by a disagreement between the commander in chief for the voyage, Captain Portlock, and the men; for as soon as the articles of agreement were read by the former to both the ships' companies, they refused to sign without a greater advance of wages than is usually allowed; this the captain would not comply with, and having used very powerful arguments, they at last consented, except two of the King George's crew, who were consequently discharged.

On the 30th, the men received what wages were due, with a month's advance. They then weighed anchor, stood for the Downs, with a fresh south-westerly wind, and anchored about eight o'clock in the evening in Margate Roads. Early the next morning they proceeded towards the Downs, with the same wind, and anchored in Deal, where they laid in some fresh beef and other necessaries.

September the 2nd, they stood towards the Channel; but the wind being then contrary, they anchored the next evening under Dungeness. Charles Gilmore (one of the young gentlemen under Captain Portlock's care) being at the main-top-mast-head, and attempting to come down by the top-mast back-stay, unfortunately lost his hold, when he was almost at the top, and fell directly into the main-chains; his escape was, however, wonderful, as he was not in the least hurt, nor did he discover any alarm when he fell.

Having weighed anchor on the 4th, they arrived at Spithead on the 7th, where they remained a week in purchasing spare anchors, and a variety of other articles; also in supplying themselves with water, &c.

Preparations were making to sail on the 15th; the next day they bore up for St. Helen's, and anchored there in the evening; they proceeded the next day; the weather continuing from this time to the 19th thick and hazy, with incessant rain. On the 20th, the Caskets, which are a heap of rocks resembling *Caskets*, were in view E. N. E. and being

quite becalmed, they were drifted by the tide within a mile of them. Though there were soundings about twenty fathoms, yet as the bottom was hard rocks their anchors were unavailing; the tide turned about nine o'clock, and then all fear of danger was over. About six o'clock on the evening of the 21st they anchored in Guernsey Road. Here they staid till the 24th, in providing a quantity of spirits, Port wine, cyder, &c. also in removing some of the stores from the King George into the Queen Charlotte.

On the 25th, the wind being S. E. the pilots came on board: they unmoored and got ready to heave on head, when the wind suddenly changed to S. S. W. upon which the topgallant-masts were struck, and got down upon deck. In the evening the wind got round to the northward. They got under sail the next day, and proceeded with a favourable wind.

The seven Isles were seen on the 27th: the weather continued heavy till the 30th. This day Capt. Portlock signified his intention to Capt. Dixon of steering W. S. W. as long as the wind was favourable.

Oct. 2d. There being something seen floating on the water at a distance, every person was anxious to know what it was; but there being very little wind, the vessel could not reach it. The men in the Queen Charlotte were resolved on finding out what it was, and two or three determined (as it was not convenient to hoist out the boat) to jump overboard and swim to it: this Capt. Dixon opposed, as he was apprehensive of sharks: however, as the supposed prize was drifting away, he consented, and two of the men immediately swam after it, and brought it on board. It was a large cask, which when opened proved to be a hoghead of claret; it was entirely covered over with barnacles, which had eat holes almost through it.

On the 16th were seen two of the Canary Islands, Palmo and Fezzo, bearing S. by E. and about twelve leagues distance. On the 19th the carpenters were busily employed in caulking, as the decks leaked very much.

Early on the 24th the island Bonavista was seen: they anchored at noon in Port Praya bay, St. Jago, in eight fathom. Here they replenished their water, and procured fresh provisions, with other necessaries.

At

At first the commander of the fort, filed the captain Moor, was very haughty and reserved; but upon receiving something from Captains Portlock and Dixon, who also intimated their design of waiting on the governor, and reporting his unkindness, he became civil, and granted permission for what they wanted. Indeed the captains left nothing undone that could possibly expedite the business. The people of Praya were very well behaved, and seemed anxious to oblige. Several hogs, goats, sheep, turkeys, &c. with a quantity of oranges, were purchased at their market. Captain Portlock being desirous to purchase some bullocks, applied to the only dealer for beef there, who was a gentleman acting as agent for a mercantile house in Lisbon: the price of these bullocks, which were rather small, were ten dollars each; which Capt. Portlock thinking too much, only bargained for one. Such, however, was the politeness of the merchant, that it was with the greatest difficulty he could prevail upon him to accept the money for it.

On the 27th and 28th, the crew of each vessel were permitted to go on shore and recreate themselves: half the company went one day, and the other half the succeeding day; the sailors were attended by an officer, to prevent any disputes between them and the natives.

On the 29th they unmoored, and taking leave of the Diana, and a brig from Martinico, which had arrived the preceding day, they made sail and stood out of the bay, the wind being easterly. The weather was variable from the 4th of November to the 12th; during which the ships' company were alternately served with sweet-wort, kroot, and portable soup, for the preservation of their health.

On the 15th, David Gilmore, a boy of ten years old, fell overboard from the weather main shrouds. Every means were taken to save him, and, considering that he was 200 yards from the ship, and not able to swim, it was wonderful how he kept above water for near ten minutes, for the arrival of the boat, when he was taken up, quite exhausted with struggling. Early the next morning a shark was caught, with the greatest part of a large porpoise in his maw. How fortunate for Gilmore that he had not appeared the preceding day!

On the 24th Captain Dixon came on board the King George. Captain Portlock now acquainted him, that he intended to touch at Port Egmont in Falkland's Islands, in order to refit and water the vessels. This being mutually agreed upon, Captain Dixon returned to the Queen Charlotte in the evening.

The ships' companies were now indulged with an allowance of tea, coffee, and sugar; also vinegar, which was very acceptable with some fish, which they frequently caught.

Nothing material occurred till the 11th of December, when there was such a heavy gale of wind that they were obliged to close-reef their top-sails and main-sail: afterwards it was more moderate. There was another heavy gale W. S. W. on the 21st, while the sea was breaking in a very extraordinary manner. The weather continued tempestuous till the 2d of January, when they saw Falkland's Islands, bearing from S. to S. E. about seven leagues distance.

On the 3d a rock, which was whitened over with the dung of birds, was seen from the mast-head. It was supposed to be at first a vessel under sail, bearing S. E. This rock is situated about three leagues from the land, and is called Eddystone.

On the 4th, in the forenoon, two small islands were discovered, bearing S. by E. and S. by W. The westernmost land was about four leagues distance, and the easternmost near eight ditto; latitude 51 deg. 10 min. south. They had soundings in 32 fathom water over a bottom of mud covered with sand: there was a reef joining the two islands, and a rocky shoal, which ran out about a mile from each extreme.

On the 5th a fine opening appeared to the S. W. from which Captain Portlock expected a good harbour. He sent Mr. Macleod, his first mate, in the whale-boat, to sound a-head.

The Queen being apprised of the signals that were to be made, kept a-head of the King George. At half past seven Mr. Macleod fired a pistol: this being a signal of danger, the Queen stood off the land, and tacked occasionally, for the purpose of attending to the motions of the boat. About half past nine Mr. Macleod hoisted a flag at the top of the high land, which was the signal for a harbour. Capt. Portlock immediately made a signal for the boat to return, in order to hear the mate's account previous to any attempt.

Mr. Macleod, upon his return, reported that the harbour was a good one. At the time that he made the signal for shoal water, he was in seven fathom water, over a bed of rocks covered with weeds, which ascended to the surface, and were situated near the middle of the channel.

They stood in for harbour under an easy sail, and both vessels came to anchor at Port Egmont, about eleven o'clock, in 17 fathom water, over a sandy bottom.

CHAPTER II.

The Captains examine the Watering-place—Observations—Vessels secured—Watering Business begun—Ballast procured for the Queen—Continual Interruptions causing Delay—Excursions on Shore—Description of the Country—Ruins of Town—Some Vegetables—A wild Hog, &c.—Watering completed—Anchor weighed—Anchorage in Carcass Island—Description of the Harbour—Heavy Gusts of Wind—Loop's Head passed—Anchorage in States Bay—Sailors recreate themselves on Shore—Anchor weighed—Staten's Land seen—Left—Seen again—A Rippling a-head—Occasion thereof—Several Seals seen—A very remarkable Fish struck—They change their Course—Reason—Capt. Portlock's Indulgence to his Men, for their good Conduct—Hammocks and Bed-clothes aired—Obliged to carry more Sails than they can well bear—Gammoning of the Queen's Bowsprit gone—Secured with a new one—Seals about the King—Vessel cleaned and aired—Rigging repaired—Sails and Canvas got upon Deck—Allowance of Water by Capt. Dixon—Weather variable—Captain Portlock sends a Boat for Capt. Dixon—Result of their Meeting—Their Appointment—Appearance of a Trade-Wind—Allowance of Cyder—A strange Sail seen—The Armourer's Forge got on Deck the Queen—Carpenters employed—A Disappointment—King George passes the Equator—A Number of Sharks caught by the Queen—A favourable Respite from Salt Provisions—Second Mate on board the Queen taken ill—Scurvy appears—Capt. Dixon ill—Owbybee seen—Natives in their Canoes—A Traffic—Large Fires seen—Behaviour of the Natives—Their Visit—Captains' Determination—Anchorage of both Vessels—Inconvenience of watering—Supplied by the Inhabitants—Occasional Remarks.

Captains Portlock and Dixon now went on shore, to examine the watering-place which the mate, Mr. Macleod, had pointed out: it was situated on the north shore. The water was remarkably good, but the accesses thereto so rocky, it was

apprehended that the casks would suffer a material injury. The captains walked along shore, taking the eastward direction, with a view of finding a more eligible spot: every path however was equally stony and dangerous.

Capt. Portlock repeated his search the next day, taking the west direction: afterwards, with Captain Dixon, he proceeded to sound the bay; Portlock taking the southern shore, and Dixon the northern.

Not being able to find any water so convenient as that which lay northward, they proceeded to secure their vessels, and complete their watering business, which commenced the next day, Jan. 7th. The company of the Queen were likewise employed in fetching stones, to put in her hold by way of ballast, as she was not sufficiently deep in the water. Though the men exerted their utmost to expedite these employments, they were notwithstanding delayed by the continual interruptions of blowing, squally weather.

The people, in order to recreate themselves, were frequently permitted by turns to make excursions on shore. The country was in a wild state, and there was no appearance of cultivation. There were very few insects, and no trees to be seen; but there was the root of a long coarse grass, which served as excellent fuel. There were the ruins of a town discovered; near which was the appearance of a garden, with a few flowers. They found some vegetables, potatoes, horse-radish, celery, shallots, &c. but in a very degenerate state. They met a hog, but could not catch him, he was so wild: after this they saw several; also a bullock, cow, &c.

The watering was completed on the 9th; and their other business occupied them till the 14th. The wind was in general S. W. the weather heavy, and attended with much rain.

The crew of both vessels were alternately permitted to recreate themselves on shore, from the 16th to the 19th; which was indeed the chief refreshment they enjoyed here, as the country was very barren.

Early on the 19th they weighed anchor, and made sail with a moderate breeze at south, directing their course for Swan Island; but as the wind afterwards inclined to S. W. they worked through the passage between Saunders's Island and Low Islands. The next day was quite calm, attended with a thick fog; but as it soon cleared up, they passed between Beachy Island and the easternmost of the middle rocks; they anchored at noon with the best bower in west point harbour of Carcass Island, in seven fathom, over a sandy bottom. This harbour is esteemed the best in the world, being not only easy of access, but sheltered from every wind. When moored, the north point bore W. N. W. one mile distant; and the west point of West Point Island W. half N. three leagues distant.

They remained here till the next day, as the wind and weather were unfavourable. They then proceeded, and being afterwards directly opposite the S. W. point of West Island, were obliged suddenly to clew all up and keep the vessel large, on account of some heavy gusts of wind, which came from the very high land: this however, after rounding the point, they got clear of. They passed Loop's Head at one o'clock, and stood into State's Bay: there are several fine harbours in this bay. At three o'clock they anchored with the best bower, in 18 fathom water, over a muddy bottom.

On the 22d, the sailors of both vessels were permitted to recreate themselves on shore. Early the next morning they weighed anchor, and made sail with a fine southerly breeze.

From the 24th to the 26th the weather was moderate, but hazy, and the winds north-westerly.

On the 26th Staten's Land was seen very high, bearing south, about six leagues distant. The weather becoming tempestuous and thick, they lost sight of land; but on its clearing up at eight o'clock, it appeared again; and they accordingly made sail to run in for it: however, the hazy weather having returned again, they shortened sail, and took the northward direction. They tacked at midnight, and

at two o'clock the next day Staten's Land appeared again; the extremes bearing from S. S. W. to S. E. by S. about six leagues distance. About nine o'clock they saw a rippling ahead, which obliged them to shorten sail and bear up: this, as it was afterwards discovered, was occasioned by a current setting to the northward; upon which they again hauled to the southward, and made sail. The weather continued very stormy and tempestuous from the 28th to the 30th; the wind veering from S. E. to W. During this there were several seals seen. From the 31st to the 4th of February the weather was more moderate, and there were light breezes from the southward. Capt. Portlock struck a very remarkable fish; the hind part and tail of which were exactly like those of a shark, and its nose had the resemblance of a porpoise. Having now made a good offing from Cape Horn, they changed their course to N. W. it being the captain's wish to get still further to the westward, that in case of westerly winds they might keep well clear of the continent.

On the 5th the people had one pound and a half of fresh pork each, in addition to their allowance of salt provisions; with an half allowance of brandy extra. This indulgence of Captain Portlock was to testify his approbation of their conduct during the time they had been under his command. They continued their voyage, without making any considerable progress for a fortnight, as the wind was generally in the western board, blowing fresh and in squalls; the weather very stormy, and unsettled. Every change of wind was preceded by a sudden squall, and then succeeded by a calm, both of short continuance.

The sailors hammocks and bed-clothes were brought upon deck on the 22d to be aired, the weather being this day remarkably fine.

On the 25th there was a very strong breeze from the N. W. when they were obliged to carry more sail than the vessels could well bear, in order to prevent their being driven to the eastward.

On the 27th Capt. Dixon having found that the gammoning of the Queen's bowsprit was gone, immediately shortened sail, and got it secured with a new one.

On the 28th there were some seals seen about the King: there were also some rock-weed, and the branch of a tree floating in the sea. The King George was well cleaned between decks, and properly aired with good fires on the 5th of March: her rigging, which had been much damaged with the late tempestuous weather, was repaired on the 27th; also the sails and canvas, which were wet, got upon deck and aired. The same day Captain Dixon put his men to two quarts allowance of water each per day, besides an extra allowance three times a week for pease, as the time of their next anchorage was very uncertain.

The weather continued very variable, sometimes hazy and tempestuous, and at other times temperate and pleasant.

On the 21st Capt. Portlock sent a boat for Capt. Dixon, who returned in it, and came on board the King George. They agreed to stand on directly for Los Majos, where they were in hopes of being able to rest their vessels, and refresh the crew; instead of running down to the Sandwich Islands, which were entirely out of their way: besides they had some reason to expect both a good harbour and water there. The captains now appointed Owhyhee as the place of rendezvous, in case they were separated before their arrival at Los Majos. They were to wait for each other ten days, and if they did not meet then, they were to proceed to King George's Sound.

On the 25th the weather was very fine, and there was a comfortable breeze at E. S. E. The appearance of this trade-wind encouraged the captains to make for Los Majos agreeable to their resolution.

resolution. This day the King George was well scraped fore and aft, aired and washed with vinegar. Each man on board the King and Queen were allowed now a pint of cyder every day besides his usual quantity of spirits, which was very acceptable as it was exceedingly warm.

A strange sail was seen on the 25th in the evening to the N. W. she appeared to be either a brig or a snow. Both vessels showed a light, and the strange sail hoisted a light too: however she passed nearly within call of the Queen at ten o'clock, and was presently out of sight. She was supposed to be a Spanish vessel going to Boldivia or Conception, on the coast of Chili.

April 5th the Queen Charlotte got the armourer's forge on deck. When fixed up, sundry things were made for the vessel's use, and also for their future traffic.

On the 6th the carpenters of the Queen were employed in making ports for guns, and fixtures for swivels.

On the 10th the King George passed a turtle, and as the crew were very anxious for a fresh meal, Mr. Macleod was sent in the whale-boat after it. When brought on board, they found by its putrescent state that it had been dead for some time; of course it was returned to the sea, and the people were very much disappointed. However, in five days after they picked up a very fine one, which weighed sixty-five pounds; this came just in time to celebrate Easter-Sunday, which was the succeeding day.

As the cyder was now expended on board the King, the men had a pint of sweet-wort each day in lieu thereof: on the 20th the King passed the equator.

About this time the allowance of water was increased to three quarts each day, on board the Queen. The crew of this vessel caught a great number of sharks, with which the sailors made choulder: they also got a turtle. However, Captain Portlock's vessel being more fortunate in this respect, several turtles were occasionally sent by him to Captain Dixon, by which means the ships' companies had a favourable respite from salt provisions.

The vessels now kept eastward, in order to fetch Los Majos. The winds continued variable, and the weather extremely sultry.

Hitherto the people of both vessels had enjoyed a good state of health. However, the scurvy now began to appear, in spite of every precaution to prevent it. The boatswain (Mr. Brown) on board the King George, was so bad, that his recovery was despaired of. Several on board the Queen were very much afflicted: Captain Dixon was exceedingly ill, and likewise Mr. Turner the second mate.

Captain Portlock went on board the Queen, to visit Captain Dixon. On his return to the King, he sent him a cask of fine mould with sallad growing in it, likewise some garden-seeds (which was in a great measure the relief of the boatswain), and several other antiscorbutics.

On the 7th they were near the place where the Island Partida is supposed to be: there was however no appearance of land, which renders the existence of such place doubtful.

On the 12th of May, Mr. Brown the boatswain on board the King was out of danger, and Captain Dixon likewise grew better, though slowly.

As there was a fine trade-breeze, they steered W. by S. and on the 23d endeavoured to make Owhyhee, which is the principal of the Sandwich Islands.

On the 24th at seven o'clock, Owhyhee was in view; the east point bearing N. W. by W. about six leagues distant. The E. and S. E. parts of this island are apparently fertile and pleasant, but the S. and the S. W. parts seem the contrary.

While the King George was running along shore

within three miles of the land, she was surrounded by a number of the natives in their canoes: they had a few hogs of a small size, some plantains, and a number of excellent fishing-lines, which they cheerfully exchanged for beads, and pieces of iron: they did not seem then the least inclined to hostility or theft; on the contrary, when they had disposed of all they had got to part with, they took leave with apparent satisfaction.

When the vessel approached land, she was accosted by another number of canoes, who brought hogs and other refreshments, which were likewise exchanged for pieces of iron.

On the 25th when it was dark, there was a great number of fires observed on shore. Captain Portlock, as he had lately perceived the natives to be shy and distant, and knowing it to be their custom to light fires by way of offerings to their gods, when disposed to fight, was apprehensive of some meditated danger, particularly as the natives seemed equally suspicious, and began to think these English were come to revenge the untimely death of Capt. Cook.

It was the captain's wish to anchor in Karakakooa, but was delayed by an unfavourable wind: but a light breeze springing up at N. W. they stood in for the bay. About noon an inferior chief came on board, who said that Terecboo the late king was dead, and that the present king was Mailha Mailha. He requested the captain to come on shore, which he declined. Several canoes now came alongside, and the natives grew very troublesome. The vessel was very much retarded in her progress, by their hanging round her. In the mean time the Queen, after standing along the shore two days, was in like manner surrounded by the natives of both sexes, with whom they trafficked for various commodities. Both the King and Queen came to anchor on the 26th in the afternoon.

The natives continued to be exceedingly troublesome: besides hogs and plantains, they disposed of a quantity of salt potatoes, taro, &c. Their fires appeared again at night, and there was a constant battle among them on shore.

While Captain Dixon was making preparations for the watering, he was acquainted by Captain Portlock of his apprehensions relative to the natives, who now became so troublesome that he was obliged to place centinels with cutlasses to prevent their boarding them; he was of opinion that it was impossible to do any thing on shore without a strong guard, and such measure he again imagined, would be attended with fatal consequences. It was also understood, that the watering-place was tabooed. In short, the captains mutually agreed upon leaving Karakakooa as soon as possible.

On the 27th there being orders to unmoor, in which they were retarded by the concurrence of natives, there were six four-pounders, and six swivels fired, with a view of dispersing them; their colours were also hoisted, and the vessel was tabooed; which effectually alarmed the natives, who instantaneously fled: many canoes during their precipitation were overset, while those who were in them, were obliged to swim for shore.

They now unmoored without any interruption, and began about twelve o'clock to warp out of the bay to the westward. When distant about three leagues from Karakakooa, they brought to; intending to stand off and on for about a day, in order to traffic with the natives.

A brisk trade commenced early the next morning, when a quantity of fine hogs, and vegetables of different kinds were procured. They also began to purchase water in calabashes, which was an article at present of the greatest consequence, and the refreshments which they had already procured, were of infinite service to the sick, who were now recovering apace.

On the 29th the natives still continued to traffic, while the vessels stood to the N. N. W. for the sake of enabling the canoes to keep up with them. At this time Karakakoo bore N. E. by E. about eight leagues distant, and the high land of Mowee, which they were making for, was now in sight. At six o'clock in the afternoon a fresh breeze sprung up at N. E. which occasioning a cross swell, obliged the canoes to leave the vessels, and make quickly for shore.

It was supposed that the unkindness of the natives proceeded from a recollection of those losses which they sustained after the melancholy death of Captain Cook: however, the reason that they urged for their unwillingness to admit the English on shore was, that all their chiefs, being engaged in war with a neighbouring island, were absent, and on that account they could not suffer strangers to land.

On the 30th, the weather being very unsettled, and it still being doubtful whether they should be able to complete their watering at any of the Sandwich Islands, which consist of seven, viz. Owhyhee, Mowee, Morotai, Ranai, Woahoo, Attoui, and Oneehow, the allowance of water was consequently curtailed to two quarts per day. About noon the king was joined by a few canoes from Ranai, but they had nothing of consequence to dispose of. Captain Portlock now entertained hopes of anchoring in a bay situated on the west side of Morotai, being within three leagues of the west end; but the wind failing, and the day being far advanced, he could not accomplish his design. In the mean time the Queen kept standing for Woahoo. About eight o'clock she was nearly up to the King.

Early on the 31st they wore, and stood in for the land; but, when it was day-light, they were exceedingly mortified to find that they had been driven about nine leagues in the night to the S. W. This baffled Captain Portlock's expectation of anchoring at Morotai; and he was apprehensive of not being able soon to weather the east point of Woahoo, which was at present the nearest anchorage: resolving, however, to make the attempt, he stood in for the east point of that island, under all the sail they could carry, with a moderate breeze at E. N. E. Appearances were greatly in favour of the King; but the Queen Charlotte being a considerable way on her companion's lee quarter, her possibility of weathering the island was exceedingly doubtful. Upon this the King George tacked, and stood towards her. The Queen, about half past eleven, drove in shore; but Capt. Dixon, finding the attempt was ineffectual, tacked; which likewise induced the King to tack immediately afterwards. At noon the S. E. part bore W. S. W. five miles distant; and the N. E. part N. W. about four leagues.

This island appears high and craggy between the S. E. and N. E. points. It is divided into several high rocks, where there is supposed to be a tolerable shelter.

Finding it impracticable to get round the N. E. point of the island, without considerable delay, they bore away on the 1st of June for the S. E. point, where there was every appearance of an excellent anchorage. They hauled round the point, and stood in for the bay. The whale-boat was now dispatched by Captain Portlock to sound.

They anchored about half after one in the afternoon, in 12 fathom water, over a sandy bottom. Captain Portlock called this bay King George's: the east point he called Point Dick, in honour of Sir John Dick, the first patron of this voyage; this bore E. by N. one mile and a half. The west point he called Point Rose, after George Rose, Esq; secretary of the treasury, and their second patron: this bore W. S. W. half W. about two leagues; and the bottom of the bay N. two miles distant. They had

presently a number of canoes along-side, who bartered some cocoa-nuts, sugar-cane, plantains, sweet-root, &c. for a few trinkets, and pieces of iron. Hogs and vegetables were much scarcer here than at Owhyhee. On account of a fresh breeze, which came on in the evening, at E. N. E. those canoes departed.

Early in the morning (June 2d) a number of canoes visited the vessels again; these brought some vegetables, and a few small hogs. Several of the natives of both sexes had been induced to this visit through curiosity.

The captain went on shore early in the morning to seek a watering-place, which was now their chief object; their next consideration was to procure accommodations for the sick. They landed on some rocks just round Point Dick without being in the least interrupted by the inhabitants; but, on the contrary, received with great politeness, and satisfied in all their enquiries. They conducted them to some fresh water, which was lodged in a kind of basin, formed by the rocks, about fifty yards from the place where they landed; but there was so little as not to afford even a temporary supply. They then informed the English that a larger quantity was to be had at some distance to the westward; the captains accordingly proceeded in their search, but met with so many disasters on account of several little salt-water rivers, which impeded their progress, that they almost despaired of accomplishing their wishes. Every circumstance rendered the watering exceedingly inconvenient here; Captain Portlock, therefore, resolved upon sending two boats to examine the western part of the bay, and discover, if possible, a good landing-place, and convenient watering.

Mr. Hill now received orders from Captain Portlock to purchase every refreshment that came in his way, for the use of the company; accordingly this gentleman, during the captain's absence, procured several hogs, sugar-cane, vegetables, &c. of the natives.

As there was no possibility of being able to water the ships with their own boats, Captain Dixon suggested to Captain Portlock the probability of being supplied by the natives, as those people had several gourds in their canoes and calabashes full of water. It was, therefore, deemed expedient to induce the Indians to bring off water to the vessels; at least a sufficiency for the present. These people were indeed so fond of traffic that they readily complied, and for the sake of buttons, nails, and such like trifles, willingly employed themselves in bringing water. For a small or middling-sized calabash, containing about two or three gallons, they gave a small nail; for larger-sized, larger nails; and so on in proportion. In this very singular manner both vessels were completely supplied with water, not only at a trivial expence, but without either wearing or endangering their boats, casts, or tacklings; also preserving their men from wet, and catching cold.

During the time they were taking in water, the people of both vessels were busied in setting up the rigging fore and aft, scraping the ships' sides, and other necessary employments. Their present situation being the most eligible one that appeared about these islands, they resolved on not quitting it until they had completed all their business.

The sick people belonging to the Queen were taken on shore by the surgeon, who thought that the land-air would be of service to them; they were, however, obliged soon to return, on account of the heat of the weather, and the concurrence of the natives. The next day the sick of the King were taken on shore for recreation; these were likewise incommoded by the multitudes which curiosity brought about them.

King George without any scruples; but none of the great ones paid them a visit. There was an old priest, who constantly visited Captain Portlock, and always brought a small pig, and a branch of the cocoa-nut, by way of present.

On the 4th the watering business was completed; a great plenty having been brought by the inhabitants with the greatest facility. It was Capt. Portlock's opinion, that this was the most safe and expeditious method any body could adopt, of watering a vessel in these places.

It was now determined to proceed to Oneehow, in order to get a supply of yams, for which that island is famous. On the 5th they weighed anchor, and stood to the westward, under an easy sail, with a moderate breeze at N. E. The bay eastward, which appeared to be excellent, was called Queen Charlotte's. Attoui was seen on the 6th, and at noon the high point upon the S. E. end bore W. N. W. at nine leagues distance; Whaboo was still in sight. The winds were now variable, and the weather close and sultry. On the 7th they bore away, and made sail with a fine breeze from the eastward: in the afternoon they were abreast of Wymoa Bay, Attoui, where they intended to anchor; however, the wind blowing very strong from the S. E. Captain Portlock deemed it unsafe to ride in the anchoring, so wore and stood for Oneehow, under all the sail they could carry; the extreme of which at four o'clock bore from N. N. W. half W. to S. W. by W. about four leagues distant from the nearest land. They tacked occasionally during the night; and on the 8th, about ten o'clock, came to anchor in Yam Bay, Oneehow, so called from its abundance of yams, 17 fathom water over a sandy bottom. The north point of the bay bore N. N. E. and the fourth point S. by E. a mile and a half distant from shore. There is a fine sandy beach about the middle of the bay, within a quarter of a mile of which a ship may moor in seven and eight fathom water, over a fine sandy bottom: boats may also land with great facility and safety.

They were immediately visited by the inhabitants, who brought them a plentiful supply of yams; besides some small pigs, sweet potatoes, &c. which they bartered for beads, nails, &c. The sick were taken on shore, and there not being such a number of inhabitants here as in the other islands, and these few kept under proper order by the chief, they enjoyed the benefit of the land-air without any molestation. The captains were desirous to lay in a good stock of yams, and plenty of hogs for salting.

The name of the principal chief at this island is Abbenooe. He visited the captains, and recollected Captain Portlock, whom he had seen before. He seemed very much attached to the company, and on his account they were better accommodated.

Captain Portlock, accompanied by this chief as a guide, went on shore in search of fresh water. After examining some wells, he made an excursion into the country, the chief still attending him, with a few of the natives. Previous to this, six persons had been appointed to trade with the natives during his absence; and, on his return, the captain found that a brisk trade had been carried on. As Abbenooe had received several presents for his kind attention, he was still more anxious to render them his service; and on the 10th the captains were very agreeably surpris'd, by the appearance of several large double canoes, full of fine hogs, sugar-cane, taro, &c. which Abbenooe had sent to Attoui for, where the king of Oneehow was at this time. Presents were immediately sent to the king, for his generous consideration.

There was no time lost in making the best bargains: 30 hogs were procured on the 13th, which weighed about 60 lb. each.

A sufficient quantity of meat was salted, and some excellent bacon made of the pork. There were about 10 tons of fine yams on board the King, and eight ditto on board the Queen. Every thing being thus completed, they prepared to sail with all possible speed.

This island appeared well cultivated. It produces sugar-cane, sweet potatoes, a sweet root called by the natives Tee, but yams are the chief commodity. There are a few trees, scattered without any order; some 15 feet high, and proportionably thick; the bark smooth, and the branches extensive; the leaves round, and their fruit something like walnuts. There were others about nine feet high, with fine pink-coloured blossoms. There were others producing nuts like horse-chestnuts, which serve the natives for candles, as they burn well and give excellent light.

Among the refreshments these islands produce, that of the sweet-root, called the Tee, is the most remarkable: it served to make excellent beer. This drink (which was very good) was of great benefit to such as were afflicted with the scurvy. The sugar-cane was brewed in the same manner, which made very wholesome drink, but it was not so agreeable to the taste as the Tee-beer.

ON the 13th, about five o'clock in the morning, they unmoored, and at eight o'clock weighed and got under sail, standing with a fresh breeze at N. E. out of the bay. Their colours were hoisted, and ten guns fired, by way of taking leave of Abbenooe and the rest of the natives of this island.

On the 15th they were clear of the land, and changed their course to N. and N. by E. The weather for several days was close and sultry, but on the 20th it became clear and pleasant, attended with a fine easterly breeze: from the 23d to the 28th there were very strong breezes, with rain; the wind veering

veering from S. W. to N. W. the weather was thick and hazy. This day, in the forenoon, Capt. Portlock went on board the *Queen Charlotte*, in order to appoint a rendezvous in case of separation. The captains agreed on a situation in Cook's River, near Cape Bede; which cape forms the south side of a deep inlet, and Anchor Point the north side. This was chosen with an expectation of finding a good harbour there, and knowing that whatever vessel arrived first would be able to make signals to the other on her entering the river. From the 29th to the 1st of July, the winds were light and variable, attended with thick fogs and small rain.

On the 2d the water altered its colour, and several seals were seen playing about both vessels. There was a piece of wood floating on the water on the 3d, with several birds on it: there were also several whales, porpoises, and a great number of petrels, seen. The wind was now N. W. attended with much rain; towards noon the weather cleared up.

From this time to the 7th, their progress was greatly retarded by the wind keeping to the northward and westward; after this it shifted to the southward, and they now made for the entrance of Cook's River. The winds continued from S. E. to S. W. till the 11th, when, in the evening, the moon was totally eclipsed; but, on account of the fog-giness of the night, they could not see it.

The stock of yams on board the *Queen* were expended on the 13th; which was of serious consequence, as it served them for both bread and potatoes. The weather being very fine on the 14th, the King was well cleaned fore and aft, aired with good fires, &c. The next day, the water altering its colour very much, they frequently sounded with 90 to 120 fathom, and could get no bottom. On the 16th the *Queen* sounded likewise, and could get no bottom till the afternoon, when there was bottom 55 fathom, of black rock, shells and sand. The land was in sight at eight o'clock, from N. to S. S. W. about eight leagues distance. There were several Galicia whales seen near the shore. This land proved to be (on the 18th) the barren islands situated at the entrance of Cook's River. In the afternoon the island *Hermogenes* was seen, bearing from S. S. W. to W. at three leagues distance.

On the 19th, at eleven o'clock in the forenoon, they made the entrance of Cook's River, leaving the barren isles to the southward and eastward. They now intended, if possible, to make Anchor Point, before they let go their anchor. At seven in the evening, the report of a great gun was heard, from a bay nearly abreast of them, about four miles distance. There were now various conjectures, some thinking they were Englishmen, and others that they were French. Captain Portlock hoisted colours, and fired a gun: he answered the signal again, and then they heard another shot. At seven o'clock a boat came from shore to the King George, and the people proved to be Russians. There being no person on board that understood the Russian language, they were not able to get any satisfactory information. The party consisted of about 25 men: they were accompanied by seven Indians in their canoes, who seemed to be on friendly terms with them. The Russian chief brought Captain Portlock a quantity of fine salmon; which compliment the captain returned by a present of some beef, pork, and brandy.

On the 20th they came to anchor in 35 fathom water, as the crews required both food and exercise. Though there was not the least appearance of any inhabitants, they found a very convenient place, which promised an ample supply of both wood and water: parties were accordingly dispatched the succeeding day to cut down wood and fill water, while the captains repaired in the King George's whale-boat to the Russian factory, to pick up what intelligence they could respecting the furs and other subjects for enquiry.

They completed their watering, as the place was so very convenient, on the 21st: they then proceeded to cut wood, and at intervals recreated themselves with walking on shore.

The people on board the *Queen* frequently attempted to catch fish with a hook and line, but were very unsuccessful. Captain Portlock having had a seine on board, procured large quantities of fine salmon, which were divided with the *Queen*. The weather was now very unsettled, and the wind variable.

This country is exceedingly mountainous: the distant hills, which are remarkably high, are covered all over with snow; those sloping down nearest the shore are covered with pines, intermixed with birch, and several other trees and shrubs. It was very cold, damp, and disagreeable, and the whole place appeared barren and dreary. As there were some huts discovered, which appeared but lately deserted, it was naturally supposed that the inhabitants were frightened away by the Russians. There were about a dozen bears seen, but they kept at such a distance that none of them could be shot.

Every thing being completed on the 25th, the vessels were prepared for sea; previous to which the captains went to look into a bay, situated to the eastward of the north point of the harbour: this was found to be a very good one. There were soundings in eight, twelve, and fourteen fathom water, over a bottom of fine black sand. There were also discovered two veins of keanel coal, which being tried was found to burn exceeding well. On this account the place of present anchorage acquired the appellation of Coal Harbour.

On the 26th, early in the morning, they weighed anchor, and stood out for the main river; the captains being assured of meeting with furs, if they could find inhabitants, and there being no doubt but that there were some northward. The wind now came to the northward and westward: as the *Queen* was northward of the King, she was able to lie out, which the King could not accomplish. When she got clear out, Captain Portlock made her a signal to anchor; which she obeyed. At noon the weather grew moderate; yet, on account of the shifting of the winds, and the uncertainty of the tide, it was with the greatest difficulty this vessel joined the *Queen*: they were carried very rapidly by the tide to the N. E. into a deep opening, which is formed by the land to the N. E. of Point Bede and Anchor Point. Towards evening on the 27th, they came-to, with the stream anchor, in 20 fathom water, over a rocky bottom.

Anchor Point bearing N. 33 deg. E. 5 miles distant. Volcano Mount, N. 86 deg. west.

N. Land in sight on the western shore, N. 24 deg. W. A seeming opening on the W. side, N. 63 deg. W. Mount Volcano now vomited a prodigious deal of smoke; but there was not the least appearance of any fiery eruption, and notwithstanding the adjacent country seemed very pleasant, there were no signs of the coast being inhabited on either side the river. This seemed to corroborate the supposition that the Russians, who were in Coal Harbour, had quarrelled with and dispersed the natives.

About three o'clock in the afternoon of the 28th they anchored in eleven fathom water, over a sandy bottom. As the land on the western side near the shore was to all appearance very pleasant, Captain Portlock thinking it most probable that it was inhabited, determined to stand over and look for anchorage. They had soundings from 20 to 25 fathom of water, over a rocky bottom: at six o'clock they had 13 fathom over a shingly bottom, where they came-to with the best bower.

As soon as they had anchored, one canoe, with only one man, came along-side the *Queen*: he had nothing to dispose of but a little dried salmon, which he gave for a few beads. It was suspected that this man came on purpose to learn their intentions, as he seemed very curious; however, when he under-

flood that t and was like to barter with fion, and plenty of fur two large canoes accompanied with two in each, approaching, green plants, peace. Several very disgusting (which were beads or teeth) honest man's skins, and a few very neat delicious for requested one on board: at he would, if as an hostage this condition without any of self, with several Captain Portlock request, and perfectly safe, and as the native, he resolutely days.

flood that they were inclined to trade peaceably, and was likewise shewn the articles which they had to barter with; he seemed very happy on the occasion, and promised that the people should bring plenty of furs by the next day's sun. Accordingly, two large canoes, with twenty persons each, accompanied with several small ones, that had only one or two in each, came early the next morning. On their approaching, they joined in a song, holding up green plants, and extending their arms, as a sign of peace. Several of these Indians were painted in a very disgusting manner; their noses, ears, and lips, (which were cut) were adorned with small blue beads or teeth. These people traded in a very quiet, honest manner; they brought about 20 sea-otter skins, and a few cloaks made of the carles marmot, and very neatly sewed together. They seemed very desirous for the English to land. Captain Portlock requested one of them, who seemed a chief, to come on board: at first he hesitated, but at last promised he would, if the captain would send one of his men as an hostage into his canoe. While he was making this condition, one of his people ventured on board without any entreaty; presently after the chief himself, with several others, who followed his example. Captain Portlock, however, agreeable to the chief's request, and to convince them all that they were perfectly safe, sent one of his people into their boat; and as the natives were particularly kind and familiar, he resolved on keeping this situation for a few days.

On the 30th they had several canoes along-side them, from whom they purchased some very good sea-otter skins, marmot cloaks, racoons, foxes, bears, &c. they also bargained for some excellent fresh salmon: thus they carried on a very brisk trade, the Indians still behaving in the most quiet and peaceable manner: however, when an opportunity offered, they committed many little thefts; some of them, who were on board the King George on the 3d of August, stole a hook from a block-strap, and a grinding-stone handle, which being iron, were irresistible temptations. Captain Portlock, however, took no notice of those small depredations, but gave orders to his men to be very vigilant, and prevent any future losses.

An elderly chief paid Capt. Dixon a visit on board his vessel, and informed him that they and the Russians had a battle, in which the latter were worsted. He told the captain, that from the difference in their dress, he knew his men belonged to another nation, and for that reason they were by no means inclined to quarrel with them. This chief was accompanied by several other Indians, who intimated that all their furs were gone; but that they would shortly send to the adjacent islands for more. The occasion of this scarcity was no doubt owing to the Russians, who drained them previous to their altercation. It was not known how the quarrel between the natives and Russians originated; but it was conjectured that the former had offended their visitors, by committing some depredations.

Captain Portlock resolved upon taking the first opportunity of quitting Cook's River, and proceed to Prince William's Sound, where he was in hopes of meeting with plenty of furs.

There were strong breezes from the S. S. W. which were attended with much rain: the weather continued thus till noon on the 7th, when it became more moderate. They were then visited by a few canoes, who supplied the ships with a large quantity of salmon. In the afternoon Captain Portlock went on board the Queen, and advised Captain Dixon to weigh anchor the next morning. They accordingly weighed, and were making sail; when Capt. Portlock dispatched his third mate, Mr. Hayward, with a message, that as the weather was unfavourable, they had better keep their situation still. Upon this they moored ship again, with their best bower.

This day (the 8th) they were visited by several Indians; but nothing of any consequence occurred.

As the weather became more moderate on the 9th, they prepared for sailing, with the first fair wind. Accordingly, at three o'clock the next morning they began to unmoor, as there was now a light breeze from the N. N. E. On account of a very rapid tide setting to the S. W. and the wind inclined to the southward, they were obliged to anchor in 11 fathom water, over a bottom of dark and rather muddy sand. The Queen came off at the same time, about half a mile to the westward of the King. There was a dry shoal, bearing S. W. right in the direction of the tide's course; to avoid this was Captain Portlock's chief motive for anchoring: at low-water it was dry for about a mile and a half, extending from N. E. to S. W. The whale-boat being dispatched to sound all around, the land westward of this shoal was found very high, and covered in several places with snow. There were also some rocks seen; so that, upon the whole, it is more dangerous to navigate this river than has been hitherto imagined.

One of the natives having rendered himself particularly useful during their stay in the bay, by procuring several furs, acquired the appellation of *Factor*. This man with some others came off in their canoes, from a town near the south point of Trading Bay, and paid Captain Portlock another visit. At present they had nothing but a few salmon to dispose of: but the factor's chief motive for seeing the captain, was to solicit his assistance against the Russians. He urged his request in the most persuasive manner, but the captain expatiating upon the necessity of his immediate departure, did not comply. This disappointment was not a little mortifying; however, to divert the factor from his concern, the captain gave him several presents, particularly a horseman's cap, which he put on with great exultation, and was both envied and extolled by all his gazing countrymen. A few trifles were likewise given to the other Indians, by Captain Portlock, in order to make amends for his non-compliance.

At five o'clock in the morning of the 11th, they weighed anchor, and kept standing down the river. At eight o'clock they perceived two Russian boats, which at a distance were supposed to be some of the natives' canoes: there were eighteen men in each boat, steering for the island to the southward. It seems to be their plan to subjugate the poor Indians, and then exact as great a quantity of skins as they can get by way of tribute. However, as the natives are in so many parties, and the adjacent islands so numerous, this stratagem must certainly be dangerous in the end.

It was remarkably foggy from the 17th to the 19th. On the 17th the extremes of Montague bore N. 45 deg. E. and N. 9 deg. E. they were then three miles and a half from the nearest land. On the 19th Montague Island was seen about nine o'clock, the N. E. point bearing N. 39 deg. E. about four leagues distant.

Being fast towards some small islands and rocks, they were obliged to tack, and stand to the S. S. E. yet though they had a three knot breeze, and carried all the sail they possibly could for about three hours, it was with the greatest difficulty they could keep clear of the rocks. The captain would have anchored, but deemed 84 fathoms water, which they then had, too great a depth. Notwithstanding the boats were a-head to tow the ship, they could not possibly make the entrance, though they had every expectation before of getting into the passage. The wind was very unfavourable, and they plied constantly with but little advantage: the weather was continually thick and hazy; thus they kept beating about the coast till the 23d of September, without being able to get into any harbour.

Though the captains experienced much disagreeable

able and stormy weather during their stay in Cook's River, yet it was their opinion, that the climate is not in general so severe as it is supposed to be, for notwithstanding the smart breezes they met with, the air was mild and temperate. Cook's River produces native sulphur, ginseng, snake-root, black-ler coal, and very fine salmon; there were some berries of several sorts, particularly black-berries, equal to those in England, which the natives frequently brought.

The inhabitants seem not to have fixed on any particular spot for their residence, but are scattered about here and there, as best suits their convenience or inclination. 'Tis most probable they are divided into clans or tribes, as in every large canoe there was at least one person of superior authority to the rest, who not only directed their traffic, but kept them in a proper degree of subordination. In their manners they seemed harmless and inoffensive; but this might probably be occasioned by the different treatment they met with now, to what the Russians had used them to. Their weapons are bows and arrows, and spears; these are very useful in hunting, as well as fighting; the flesh of the various beasts they kill serving them for food, as their skins do for cloathing. One would reasonably suppose that the skins of large beasts, as bears, wolves, &c. would be held in the greatest estimation as cloaths by these people: this however is not the case, the greater part wearing cloaks made of marmot-skins, very neatly sewed together, one cloak containing perhaps more than one hundred skins: it is most likely that their women's time is principally taken

up in employments like these. Besides the sea-otter, here are bears, wolves, foxes, racoons, marmots, or field-mice, musquash, ermine, &c. &c. but the marmot and fox seem to be in the greatest plenty. The trade these people are fondest of for their skins, is toes, and light blue beads, scarcely any other sort (though they had their choice of a very great variety) being taken the least notice of.

In their persons, these people are of a middle size, and well proportioned; their features appear regular, but their faces are so bedaubed with dirt and filth, that it is impossible to say what sort of complexion they have. That person seems to be reckoned the greatest beau amongst them, whose face is one entire piece of smut and grease, and his hair well daubed with the same composition. It has been already observed, that their noses and ears are ornamented with beads, or teeth, if they cannot procure any thing else; that they have likewise a long slit cut in the under lip, parallel with the mouth, which is ornamented much in the same manner with the nose and ears; this it was discovered was always in proportion to the person's wealth. The Queen's company saw only one woman, and the people with her behaved with great civility, and attended her with great respect: her face, contrary to the general custom, was tolerably clean, and her complexion and features far from disagreeable: indeed there are much worse-looking women in England. The King's crew saw three. Their small canoes are so constructed, as to hold but one, or at most two persons; and both these and the large ones are covered with skins.

CHAPTER IV.

THE Captains finding it impracticable to get into Prince William's Sound by the S. W. passage, being at present too far to the eastward, were determined to try for the entrance by Cape Hinchinbrooke, as the weather was now moderate, and there was a favourable breeze.

There were fresh north-easterly breezes, with squally weather, from the 29th of August to the 3d of September. On the 4th, Captain Portlock, finding himself very ill, dispatched the whale-boat for Capt. Dixon, intending that if his indisposition continued, and he was thereby prevented from keeping the deck, the Queen Charlotte should take the lead, and make for Cross Sound; from thence to Cape Edgcombe, and afterwards to King George's Sound, where it was previously determined to winter, and build during their stay a shalop of about 60 or 70 tons burthen. Capt. Dixon immediately visited Captain Portlock, and promised he would faithfully follow whatever directions he might be pleased to give.

On the 9th Captain Portlock was so ill, as not to be able to keep the deck; accordingly the Queen took the lead. Mount Fairweather was seen in the

forenoon, bearing E. N. E. As the wind was E. S. E. they changed their course to N. E. in order to make Cross Sound; but a message came from Capt. Dixon, to acquaint Captain Portlock, that their expectations of making Cross Sound were baffled, there being no appearance of a port in this situation, agreeable to that which is laid down in Capt. Cook's chart, for it seems Capt. Cook mistook a deep valley with low land in it for an opening in the land. Accordingly they tacked, and stood to the southward. They saw land right ahead, at 11 o'clock in the forenoon; which at two o'clock bore from N. W. to E. by S. about six miles distance.

On account of the long continuance of bad weather, and the precariousness of making a port on the coast, Captain Portlock deemed it expedient on the 11th to put the ship's company to an allowance of water, two quarts each per day.

On the 13th they steered E. N. E. in order to make the land near Cape Edgcombe; and as their sails and rigging were very much damaged with the heavy gales, &c. they were the more eagerly bent upon making this harbour.

On the 14th there was land seen, bearing from E. by N. to N. W. about 14 miles distance. About noon Cape Edgecombe bore S. 60 deg. E. about ten miles distance.

They kept steering to the westward, in expectation of finding the Bay of Islands, where they had great hopes of making a good port; but even this attempt was fruitless, for when they had got within two leagues of the land they could not see the least appearance of an harbour, or even a safe bay. A ledge of rocks was perceived northward of the vessels, stretching some distance from the shore: as they were falling in with these very fast, through the rapidity of the current, Capt. Dixon found it necessary to haul off shore to the westward, and the wind backing a little to the southward, they were enabled to clear the reef.

The weather still continued exceedingly bad and tempestuous, though at intervals somewhat moderate: they plied with variable winds, but finding no likelihood of meeting with a harbour near Cape Edgecombe, and as the season was now slipping away very fast, they declined making any further attempts for the Bay of Islands, and resolved to steer for King George's Sound: notwithstanding, they intended to keep in with the coast, that if any harbour was accidentally met with, the opportunity might not be lost.

On the 18th they were well in with the land, when they were convinced that there was no harbour, nor was there the least appearance of the place being inhabited. The wind continued favourable, and the weather became moderate.

On the 21st an island was discovered, bearing N. E. by E. half E. about six leagues distant. In latitude 50 deg. 47 min. and in longitude 129 deg. 28 min. another was seen in the afternoon, which bore N. 28 deg. W. about five leagues distant; also another N. 45 deg. E. about 10 leagues ditto. A large shark was now along-side the Queen.

On the 22d they stood to the eastward, with a fresh breeze from the N. W. At some distance to the westward of the Point there is a rock, which seemed to be joined by a low reef to the coast: this was called Split Rock. The easternmost point of land bore N. N. E. and from that to Woody Point the coast forms a kind of bay, covered with pines, some of which looked very beautiful: the land next the sea was low, and tolerably level. On approaching the shore, Capt. Portlock dispatched the whale-boat to found; but at half past two, as there was no appearance of shelter, he made a signal for her to return. They were now about three miles from shore, in 34 fathoms, over a foul bottom.

On the 23d they were off King George's Sound. They met a canoe about two o'clock, coming off from shore, with two Indians, who could not be persuaded to enter the ship. Capt. Portlock made them a few presents, and bought some fish of them. They then made for that part of the coast which lies between Woody Point and King George's Sound. At five o'clock the north point of the entrance into King George's Sound bore N. 73 deg. E. the breakers that lie off that point E. half N. about three leagues distant; the easternmost land in sight, S. 73 deg. E. about nine leagues distant, and the westernmost land W. by N. half N. 13 leagues distant.

They were now very anxious to make this harbour, and persisted with great eagerness and assiduity: the 24th and the 25th they still kept beating off and on. On the 26th about three o'clock in the morning, the wind shifted to the S. E. and there was a most violent hurricane. The claps of thunder were remarkably loud, and the flashes of lightning so uncommonly fierce, that between every interval, the people on deck were blinded for a considerable time, every flash leaving a strong sulphurous stench behind; this brought on a very heavy sea, which occasioned the vessels to strain and labour exceed-

ingly. The meteors called by sailors compassants, were at each mast-head, and at every yard-arm. These gave a light at least equal to the same number of lights hung aloft: they were likewise flying about on all parts of the rigging. In about three hours the storm abated, but there was still a very heavy sea, and some light baffling winds, with thick hazy weather, which prevented them from standing in for the shore. About ten o'clock the land near the entrance into King George's Sound was visible, bearing from N. W. to E. about nine miles distant.

There were still variable winds, rain, and intervening calms, with a heavy swell setting right in shore, which rendered it necessary to keep from land as much as possible, particularly as there runs a reef of breakers for two miles to the northward from the point of the harbour, and about two miles from shore.

On the 27th a fresh gale sprung up at S. E. by E. attended with thick rainy weather. The King George now stood to the N. E. by E. the Queen stood directly for the harbour and made fail, but there being a heavy swell from the southward, they were set unawares on the breakers, which rendered their situation somewhat alarming. However they were out of danger about eleven o'clock. The King George being to the southward of the Queen, Captain Portlock felt no apprehensions on his own account.

The next day there being the same heavy swell to encounter, it was impossible to make the harbour, and Captain Portlock seeing no probability of getting into the sound this season, was determined, particularly as his men were very much exhausted for want of recreation, and the sails and rigging exceedingly damaged, to leave the coast and stand immediately for Sandwich Islands. Accordingly about seven o'clock, he hailed the Queen Charlotte, and communicated his determination to Captain Dixon: at the same time directing him to steer S. S. W. or S. by W. if the wind permitted. The harbour now bore E. N. E. about seven leagues distant.

On the 29th they were enabled by a fresh breeze which sprung up from the westward, to follow Captain Portlock's directions. They proceeded towards Sandwich Islands for several days, without meeting any thing worthy of notice, during which, the winds were variable.

On the 9th of November the wind blew very fresh and in squalls from the S. E. there was much rain, lightning, &c. they were obliged in the King George to close-reef their top-sails, but before it was accomplished, the main-top-sail was split: another was immediately bent and close-reefed; after this, they had variable winds and unsettled weather.

On the 11th there was a kind of fiery meteor seen playing about the Queen Charlotte, which did not a little alarm the sailors, who judged it an ill omen.

On the 14th the high mountain on the Island of Owhyhee was seen with some patches of snow on its top, bearing W. S. W. half W. about 30 leagues distant. This day the Queen Charlotte caught three large sharks.

On the 17th as they ran along the coast, several canoes were seen, who were discouraged from their attempt to approach the vessel, on account of the heavy sea and smart gales.

They now approached the north point of the island, and in rounding the point, founded, and had 16 fathoms water, over a bottom of white sand and beds of coral rock, but there was no shelter for ships to anchor under; nor was it safe, on account of a heavy swell proceeding from some steep black rocks, against which the surf beats with great vehemence.

By means of a gentle breeze, they ran along very near the shore, where a number of natives of both sexes had assembled, holding up slips of white cloth,

as a token of amity and peace. Captain Portlock expecting to find good shelter in a bay situated on the west side of the island, sent his first mate Mr. Macleod in the whale-boat to examine the bay; meanwhile the ships lay-to, in order to trade with the natives: by this means they had an opportunity of obtaining the different produce of the island, such as hogs, bread-fruit, plantains, cocoa-nuts, taro, wild geese, fowls, and a great quantity of excellent salt, for which they gave nails, toes, and other trifles: the trade which they carried on was so brisk, that within a few hours they had large quantities of every thing.

During the whole day, the natives traded in a very honest, fair manner; but those who attended their merchants could not refrain from thieving: their natural propensity for picking and stealing had taught them much art and sagacity. One of them, with peculiar dexterity, stole a boat-hook out of a boat along-side, though at the same time there was a keeper in her: another fellow also crept up the rudder-chains, and stole the azimuth compass out of one of the cabin-windows, and got clear off, notwithstanding there was a person appointed to watch them over the stern. There were several other articles likewise pilfered; indeed it was impossible for the captains' men to prevent it, as there were very near, if not more, than 250 canoes about the vessel, which certainly contained upwards of a thousand people.

At five in the afternoon Mr. Macleod returned. He reported that there was no safe anchorage in the bay; and that there was not only a bad bottom of coral and sand, but that the harbour was also entirely exposed to south-westerly winds. This being the case, their intention of anchoring at Owhyhee was laid aside: they determined, however, to keep near this point a day or two, if the wind would permit, in order to lay in a good store of hogs, which were in great abundance here.

This part of the island affords but few cocoa-nuts or plantains: those vegetables which are in greatest plenty are, sweet potatoes, bread-fruit, &c. Here and there are little spots of white sandy beach, where the natives generally keep their canoes. The adjacent country is very pleasant, and there appeared to be several villages, which were situated among fine groves of cocoa-nut trees. Among the various curiosities brought by the natives to sell, was a kind of baskets, about 18 inches high, and five or six ditto in diameter, of a circular form, and very neatly manufactured: the wicker-work of which they were made was frequently variegated with twigs of a red colour, and had a good effect in appearance. These baskets were quite new to the English, as they never met with any of them before.

During the 18th they lay-to and plied occasionally, as was most convenient, during their trading business. The men were very busy in killing and salting hogs for sea-store. There were light, variable airs, sometimes calm, attended with strong lightning to the westward.

On the 19th, in the forenoon, Captain Portlock went in his whale-boat on board the Queen Charlotte, in order to consult Capt. Dixon respecting the best manner of proceeding. This being a very fine promising day, Capt. Portlock proposed making his visit longer than usual. As their vessels were very light, on account of their water being nearly expended, and their rigging fore and aft very much damaged, they thought it necessary to quit their present situation as soon as possible, and were determined to proceed for King George's Bay, Whoohoo, where they were in hopes of lying well sheltered, and having an opportunity of repairing their hulls and rigging.

On account of a strong breeze springing up from the S. W. Capt. Portlock returned to his own vessel much sooner than he intended: they then bore away to the northward, hoping to pass to the eastward,

and run down for Whoohoo. Some few canoes, which had been along-side the vessel, now paddled for shore, on account of the smartness of the gale. The extremes of Mowee bore N. by W. half W. and W. by N. about four leagues distant.

When they were within two leagues of Mowee, they saw a canoe to the S. W. making after them. She had a small mat up for a sail, and was paddling very hard. Seeing her distress, the King brought-to, and picked her up. There were four men in this canoe, and a great quantity of potatoes, plantains, &c. They understood that these men were natives of Mowee, who on perceiving the vessels standing in for the east part of it, in hopes of bringing their little cargo to a good market, had accordingly put off therewith; but meeting with foul weather, and a strong contrary wind, after they bore away from the island, they could not possibly return to shore, and therefore set their little sail, and used every effort in their power to reach the King. Their canoe, when they came along-side, was almost full of water, and the men so exhausted with fatigue, that the sailors were obliged to help them up the vessel's side. Their things were got safe into the ship; their canoe hauled in upon deck, and every exertion used in order to recover them, which fortunately had the desired effect. These poor men were exceedingly grateful, for the favours and attention which they experienced.

In the evening the wind, which blew S. W. encreased to a strong gale, which was attended with much thunder, lightning, and rain. Accordingly, they lay-to during the night, under a close-reefed maintop-sail, wearing occasionally, and taking every method to guard against any mischief they might receive from sudden storms.

On the 20th the weather was more moderate; the wind still the same. About noon the breeze lessened, and there was a calm. They were now joined by several canoes; but what they brought to sell was very trifling. They had light, baffling winds, with alternate calms; on which account they kept standing along shore, in order to purchase whatever refreshments were brought to them by the natives; but the weather being very unsettled, no canoes ventured near them till about noon on the 22d: they were then visited by a number of both large and small ones, from Mowee and Morotoi; of whom various articles were purchased, for the ship's use. At this time the extremes of Mowee bore from S. W. to S. E. by E. four leagues distant; and the extremes of Morotoi W. half S. and W. S. W. half S. five leagues. These people, who came from Mowee and Morotoi, seemed to admire the English vessels more than any of the other inhabitants. It is probable, therefore, that these people were unacquainted with English ships.

On the 23d, the Indians who had been saved by the King now determined on going to shore, as the weather was clear and pleasant: Captain Portlock endeavoured to prevail upon them to remain on board till the next day, as he wished to have an opportunity of standing close in shore, when at the same time they might have departed with greater safety: however they made light of the distance to shore, though it was five leagues, and were very anxious on taking the present opportunity. The English, accordingly, loaded them with presents before their departure, so that these poor fellows had not much occasion to regret their late misfortune.

Nov. 24th. The wind still kept to the southward, and the weather remained unsettled. They wore, and stood to the S. S. W.

For the greatest part of the next day the winds were light and variable. In the evening a fresh breeze sprung up from the southward, which continued with very little alteration during the 26th and 27th: indeed the wind among these islands seemed never to blow from one point for any duration; nor could any dependance be placed, at this

time of the year upon a steady trade-wind, sometimes they had easterly winds, then southerly, S. W. W. N. W. and in short all round the compass, just as they opened different points of land.

On the 28th they were within four miles of Morotoi, where several canoes came along-side, of whom were purchased some small hogs, taro, potatoes, &c. In the afternoon there were some refreshing showers of rain, which rendered the weather more agreeable than it had been for some time past.

On the 29th, about eight o'clock in the morning, Whoohoo was seen; and at noon the East Hummock bore W. S. W. about eight leagues distant. During

the afternoon they kept standing along the coast of Morotoi.

On the 30th they bore away for Whoahoo; the west end of Morotoi bore S. 45 deg. E. and Whoahoo S. W. was about two leagues distant. At four o'clock they hauled Round Dick's Point; and at five o'clock came to anchor in King George's Bay, with the best bower, in 12 fathoms, over a bottom of grey sand, intermixed with small red specks; and moored with the stream anchor, in 11 fathoms. At this time the ships' company were in good health, and excellent spirits.

Portlock—Departure from Attoui—Description of the Country—Arrival at Oneebow—The King George's Anchors recovered—Curfory Observations—Departure from the Sandwich Islands.

AS soon as they had anchored, they saw a few canoes, but they had nothing material to dispose of. Application was now made to them for water, on the same terms as before; which they would gladly have complied with, but that not only the water, but also hogs, vegetables, &c. were tabooed by the king's orders.

On this account Capt. Portlock deemed it advisable to court the king's favour. Accordingly, he sent a present to the king, and another to his old acquaintance the priest, with a message that as they wanted both water and refreshments, his majesty was most humbly solicited to take off the taboo, that they might have a supply of those articles upon reasonable terms.

On the 1st of December, by day-light, a few canoes came along-side of the vessels, with some vegetables and water, (notwithstanding the taboo) which they purchased as before for nails. The people of the Queen began now to overhaul their rigging fore and aft, it being very much out of order.

This day the priest paid a visit to Captain Portlock: on their meeting, he handed up a small pig, which is a general token of friendship and peace; he then informed the captain, that the king was preparing to visit him, and that when he returned again to the shore, the taboo would be taken off, and they might be accommodated by the natives with every thing they wanted. For this information the captain made him a present; and also gave him another for the king, which he requested he would deliver to his majesty with his own hand. The priest departed about ten o'clock, and returned again at eleven, accompanied with several large and small canoes. A little after appeared a very large canoe, which was paddled by sixteen stout men, in which was the king and all the principal chiefs. Though there was much state and ceremony in his coming, yet when he embarked on board the King George he laid aside all his dignity, and would not permit any of his attendants to follow him, till the captain had granted his permission. The king had

brought some hogs and vegetables by way of present, and his chiefs likewise a few articles. The captain, in return, gave them presents agreeable to their fancy.

Tahceterre (which was the king's name) remained on board for some time; he then gave orders that the English should be furnished with every thing they wanted. At evening he took his leave, and was followed by all the rest of the canoes.

In consequence of the king's orders the taboo was taken off, and the natives now brought a plentiful supply of water, hogs, vegetables, &c. accordingly one party of Captain Portlock's men were employed in salting pork, while another were repairing the rigging; the carpenters were also at work in decking the long-boats.

On the 3d Tahceterre paid Captain Portlock another visit: also the priest who was constantly on board, and was remarkable for drinking large quantities of yava. He had generally two men with him, for the purpose of chewing this root for him, and they were employed so constantly that their jaws were continually tired.

The yava is a root somewhat resembling liquorice in shape and colour, but totally different in taste. None but the chiefs, or arees, have the king's permission to use it. These never chew it themselves, but thus employ their servants to chew and administer it. He first begins with chewing a sufficient quantity, till it is well masticated: then it is put into a neat wooden bowl made for the purpose, and a small quantity of water being poured over, it is well squeezed, and the liquor always strained through a piece of cloth. When thus completed, the servant gives it to his master, and it is drank with the greatest relish. This root is of an intoxicating nature, and seems rather to stupify, than exhilarate the spirits: its effects are very pernicious, as was apparent in the old priest, who in consequence thereof, was exceedingly debilitated, while his body was covered over with a white scurf, which had the appearance of a leprosy.

One of the old priest's attendants, who was employed

ployed in preparing the yava, informed Captain Portlock, that to the westward of Point Rose, in Queen Charlotte's Bay, there was a very agreeable harbour, where vessels could lie in great security. The captain was accordingly determined to send the long-boat, as soon as the carpenter had finished it, to examine it, intending to remove the ships there immediately, if it answered this yava-chewer's description. This man, whose proper name was Towanooha, notwithstanding his occupation of chewing yavas, possessed considerable property on the island, and was indeed a very intelligent man: he told the captain that when the boat was ready to go, he would very gladly accompany his mate, in order to point out the place. Captain Portlock returned his thanks, and readily accepted his polite offer.

This day about noon the Queen's company had completed their water, and could have procured a great deal more, the natives still bringing it with the greatest avidity. Indeed this is not to be wondered at, if we consider the great value they set on iron, and that water costs them only the trouble of fetching from shore.

Besides nails, the English found buttons very useful in their traffic with these people. To the credit of the men be it spoken, they looked on them as things of no value; but the females saw them in a very different point of view, and were exceedingly fond of wearing them round their wrists and ankles as bracelets, calling them Booboo, and sometimes Porceema. As gallantry is perhaps equally prevalent here, as in more civilized nations, the men frequently preferred buttons to nails (contrary to their better judgment) in their traffic. This is an incontestible proof, that the power of beauty is not confined within the narrow limits of our polite European circles, but has equal influence all over the world.

In the forenoon of the 4th, Tahceerre, the king, paid Captain Dixon a visit. He came in a large double canoe, attended by two young men, who, as it was understood, were his nephews, and a number of other chiefs.

The king is a good-looking man, and appears about forty-five or fifty years old: he is tall, straight, and well-made, but his eyes seem rather weak, and affected with a kind of rheum; but whether this is owing to disease, or to a temporary cold, cannot be ascertained. Though he frequently ate with the English, he never could be persuaded to touch either wine nor spirits; nor did he ever make use of the yava, water being always his drink. None of the chiefs had any thing striking in their appearance, though it was easy to see that they were above the common rank. The king's nephews were by far the finest men that were seen at any of the islands: they are not brothers. Piapia, the elder, being son to the king of Attoui; and Myaro, the younger, son to a sister of Teecererre. Piapia is about five feet nine inches high, straight, and well proportioned: his legs and thighs very muscular, his step firm, and rather graceful; and there is a dignity in his deportment which shews him to be a person of the first consequence. His countenance is free and open, but rather disfigured by the want of three fore-teeth, which, as it was understood, were broke for the loss of a relation, it being the custom here for the arees, or chiefs, to part with a tooth at the death of a friend; his legs, thighs, arms, and various parts of his body, are tattooed in a very curious manner. Myaro is nearly as tall as his cousin, but cast in a more delicate mould: he walks erect and stately, and his step is very graceful and majestic.

Captain Dixon presented the king with several presents, having received from his majesty the same marks of favour which he had bestowed upon Capt. Portlock. The king also repeated his visit to the King George, and in addition to his presents, brought a quantity of very fine mullet. This day Captain Portlock's company had completed their

watering. They were also supplied with fire-wood by the natives.

On the 5th four or five sharks were caught, and presented to the Indians, by whom they are greatly esteemed.

The people were all busily employed both on the 5th and 6th, with taking in wood, overhauling the rigging, killing and salting hogs, &c. &c.

From the 7th to the 11th there was no material occurrence, except that the old priest was still a constant visitor. During this time they had fresh gales from the N. E. and E. N. E. with frequent squalls and unsettled weather. The surf now ran so very high on the beach, that a few canoes, who had ventured off, were nearly overset, and of course obliged to give up their design; two of them who had got along-side of the King, after they had disposed of their articles, were making for shore, but not being able to land, were compelled to return to the ship, and stay on board for the night.

The carpenters having finished the long-boat on the 12th, Captain Portlock sent it out according to his former resolution, with Mr. Hayward, his third mate, and Mr. White, who was Captain Dixon's third mate, to make an accurate survey of the bay: Towanooha (according to his promise) accompanied them as pilot.

The behaviour of the priest became now very strange and mysterious: he appeared uneasy and restless, and upon Captain Portlock's enquiring the reason, intimated that the king Tahceerre was a bad man, and designed to do the English mischief: he pointed to a distant building, where he said the king and chiefs were going to make great offerings to their different gods, and if they were at all encouraged by their oracles, they would immediately attack the English; he therefore advised the captain, in a very friendly manner, to be upon his guard. Captain Portlock, accordingly, ordered a constant watch to be kept on the cables; though, at the same time, he doubted the information, as neither the king nor his chiefs ever betrayed the least inclination to hostility.

The next day the king, and a number of chiefs, visited Captain Portlock; who was well prepared for an attack, if offered; but, on the contrary, the natives behaved with their usual familiarity and good-nature. The king, however, took notice of those preparations, which were made in case of violence, and discoursed with his attendants about the fire-arms: after some time, he appeared desirous to know the effects of them; and Captain Portlock judged it prudent to gratify his curiosity; accordingly he took a loaded pistol, and killed a pig that was at some distance, to the great astonishment of the king and chiefs, who were all alarmed at the explosion, and more so at the fatal wound which the pig received. The king staid for about two hours on board, and then took his leave. If any attack had been meditated, there is little doubt but the impression which this pistol had evidently made upon their minds, removed all hostile intentions. The priest came on board soon after the king's departure, and still expatiated upon the evil designs of Tahceerre. He then left Captain Portlock, and visited Captain Dixon, where he repeated his former intimations.

Messrs. Hayward and White returned on the 15th, in the long-boat. They reported that there was no convenient anchorage in any part of the bay, and that there was from sixty-six to seventy fathom water, close in shore. The country, he added, was very pleasant, and the town where (according to Towanooha's information) the king chiefly resides, very large: it was called Whyteete.

Not a single native came near the vessel now for two days: it was accordingly suspected that they were tabooed. The ships' crews were busily employed about their rigging, and getting the vessel ready for sea.

 which the did: at
 Nov. 8.

On the 17th the old pilot visited both vessels, and appeared more than ever exasperated with the king. He said that the king and chiefs had made their offerings to their gods, and consulted them; but that the gods were good for nothing, and they themselves villains.

Captain Portlock was now strongly solicited by Piapia and Towanooha to take them along with him to Attoui. The captain, knowing it was agreeable to the king, (who had lately signified the same wish) gave his consent, and they immediately repaired to land, to equip themselves for the passage. After this, Towanooha no longer looked upon himself as the priest's servant, but drank as freely of the yava root as his former master. Towards evening the natives were seen pulling to pieces their new-built house; and about eight o'clock there was a general conflagration on shore. The next day (the 18th) Captain Portlock enquired of the priest what the reason of these fires was? The old man told him, that the chiefs had quarrelled with their gods, and had therefore burnt them and their houses together.

Several canoes now came to the vessels, and brought a supply of various articles; but no satisfactory account could then belearned why the taboo was laid on, or wherefore the women were not suffered to come near the vessels, with whom the sailors had lately indulged themselves: however, it was afterwards understood that one of their women had been detected in eating pork on board the King George, which being deemed among the natives a crime of the first magnitude, the poor wretch was offered a sacrifice to appease the wrath of their gods. The mysterious conduct of the priest was likewise accounted for by the following information, which was likewise the cause of the strict taboo. The king had just built a house, as a repository for all those articles which his countrymen might get from the English in the course of their traffic. Every thing was ordered to be deposited in this new-erected edifice, one half of which was to be appropriated to the king's own use. During the issuing of these orders, the bay, &c. were tabooed.

Piapia and Towanooha having now prepared themselves for their passage, came on board the King George. Some short time after the King and his attendants came on board, to request the captain to take care of his nephew; and on his arrival at Attoui to put him under the care of Taazo, who was the king's brother. Taheetera having taken leave of the English, and of Piapia, in the most cordial manner, returned to shore. In the afternoon every thing was ready for sailing.

About midnight on the 17th, the Queen Charlotte's small cable parted in a sudden gulf of wind, on which they let go their best bower. On heaving in the cable, they found it very much hurt, which some supposed had been done by the foulness of the bottom; others that it had been previously cut by some of the natives. The next day they searched for their anchor, but did not find it till noon, the buoy being sunk. They exerted their utmost to get it on board, and had nearly effected their purpose, when suddenly a squall came on and snapt the hawser, which they had bent to that part of the cable, remaining to the anchor when it was almost at the bows. They were greatly discouraged by this vexatious circumstance, and despaired of being ever able to recover it, as there was every appearance of tempestuous weather; however the next morning being very fine, they got it on board. They now found it impossible to keep their present situation, without damaging their cables; so that it was determined to leave this island, and steer for Attoui as soon as possible.

On the 19th they began to unmoor. Capt. Portlock made the signal to the Queen to weigh anchor, which she did: at night the signal was made to her

to anchor again, as the King's best bower cable had been cut by the Indians, which of course retarded their progress. The Queen accordingly stretched in the bay, and came to close by the King George.

On the 20th the King George being a-weigh, the Queen accordingly weighed, and made sail, standing out of the bay, with a moderate breeze at N. E.

On the 21st they had a strong breeze from the N. E. and on the 22d were in sight of Attoui. About three o'clock the King George anchored in 25 fathom; but as the Queen Charlotte was preparing to do the same, by checking the cable too soon, she dragged it off the bank, and could not get it to catch again with a whole cable out; therefore got her head off shore, hove her anchor up, and made sail. About five o'clock she came to in a very good situation, near three miles N. W. of the King George, in 18 fathom water, over a sandy and partly muddy bottom. The King George lay eastward of Wymoa, about two miles distant from shore.

Soon after their anchorage they were visited by a number of canoes, who were well loaded with taro, potatoes, cocoa-nuts, sugar-cane, hogs, &c. they also brought a plentiful supply of excellent water. This island produces no yams, and very little bread-fruit.

On the 24th, Captain Portlock, with his two passengers and a sailor, went on shore to Wymoa, in order to explore the place. He was received by the inhabitants in a very friendly manner, and was also joined by a few chiefs, by whose means the crowd were kept at a respectful distance. When they had walked about three miles, they sat down to some refreshments: Captain Portlock was now invited to dine with Tiaana; but, anxious to find out a good bay, he declined his polite invitation; he promised, however, to see him on his return. The captain disappointed in his search for a harbour, now determined on coming back; however he and his companions being very much fatigued, they took up their lodging for the night in a very comfortable dwelling, belonging to Abbeaooe, where they were well entertained.

The next day they reached the shore, a-breast of the Queen Charlotte. The captain's companions walked down to Wymoa, while he, being anxious to get on board, took a canoe, and visited the Queen Charlotte: thence he proceeded in his whale-boat, which he found there, and got on board the King George about noon.

In the mean time the ships' crews had procured large quantities of provisions, and several fine hogs. There were also a variety of curiosities purchased, viz. caps, cloaks, mats, fishing-lines, hooks, necklaces, bags, grass-ropes, &c.

On the 25th Captain Portlock was visited by Tiaana, who behaved exceedingly friendly: he told him that the king, Abbenooe, and several chiefs intended shortly to pay him a visit. This day the sailor, whom Captain Portlock left on shore with his passengers, returned. Piapia and Towanooha still remained among the natives for a day longer.

On the 28th Abbenooe came on board the King George, and brought two canoes, loaded with different kinds of provisions, as a present for both vessels. After staying some time with Captain Portlock he went on board the Queen Charlotte to pay his respects to Captain Dixon. In the evening he returned again to the King George, where he remained for the night, and likewise the next day, on account of the squally weather. On the 30th he went on shore, and shortly after returned with Taazo, and several of the chiefs. His majesty brought a very handsome present, for which the captain made an ample return.

The captain now introduced Piapia and Towanooha to the king, who were immediately taken under his protection.

The king was about forty-five years of age; he was stout and well made; he seemed possessed of more understanding and good-nature than any of the natives. His behaviour to the English displayed much friendship and magnanimity. As soon as they left Captain Portlock, they visited Captain Dixon. His majesty was attended by Abbenooe, who, when he had left Taaao on shore, returned to the King George, where he slept in a cot that was hung on purpose for him in a cabin.

The next day the king repeated his visits, accompanied by his uncle, an elderly man, and a chief of great consequence; his name was Neehow-hooa. He was the greatest warrior that was in any of the islands. This veteran appeared hardy, though a cripple, and covered all over with wounds: one eye he had lost, and the other was decaying, by reason of his wounds. Mr. Hoggan, at the desire of Captain Portlock, dressed his wounds, and gave him some fresh dressings to apply daily. After a few hours, the king, his uncle, and their retinue, took their leave.

January 1st there were no canoes to be seen, on account of a tabooa being laid on, which is a kind of tax that the king imposes on the property of those subjects whose plantations are near at hand; by which means a certain portion of their different produce is exacted. Captain Portlock was brought by Abbenooe to see the ceremony, which was remarkable for its great order and regularity, but more especially for the good-humour and cheerfulness of the people who were paying their contributions, which were all collected in separate heaps.

As soon as the tabooa was finished, the king ordered the several heaps to be made into two parcels, which when done he presented to Capt. Portlock, for the use of the vessels, and desired that the captain would send his boat for them. This being the most valuable present that was ever made, as it consisted of every thing the island produced, was accepted by the captain with much thanks and respect. The king retired to his residence, and Capt. Portlock and Abbenooe returned to the King George in the long-boat.

On the 4th the King George's crew caught an immense shark, which required much difficulty in getting on board. It was 13 feet and a half long, eight feet and a half broad, and six feet the liver. There were 48 young ones in her, about eight inches long; two whole turtles, weighing about 60 lb. each, several small pigs, and a great quantity of bones. This fish was given to the natives, (by whom it was deemed a valuable present) but the liver was kept for oil.

On the 5th the king paid Capt. Portlock another visit. He brought with him his eldest son, who was a fine boy, about twelve years of age: his name was Taaevee. This was intended as a farewell visit, as the king was about leaving the island for a while. He left instructions with Abbenooe to take care that the English should be accommodated with every thing they wanted. The king was likewise attended with his uncle, who, in gratitude to the surgeons for the kindness he shewed him, presented both Mr. Hoggan and the captain with a large double canoe full of hogs; nor could this noble veteran be prevailed upon to receive any thing in exchange.

Capt. Dixon imagining the island afforded plenty of game, (which he was very fond of) took several opportunities of going on shore with his gun in one of the Indian canoes, attended only by one servant. The owner of this canoe (who had occasionally supplied the Queen Charlotte with water) was highly sensible of the honour which the captain had done him, and was not a little proud to think that his canoe should have the preference of any of the rest. Notwithstanding, Capt. Dixon did not find game very plenty; he brought home a few ducks, and a kind of water-hen.

From this to the 10th, they were employed in

purchasing wood, provisions, &c. They had some pleasant weather, and light, variable winds. Capt. Portlock now made the signal for weighing anchor, as it was intended to make Oneehow the first opportunity; however, as the wind was baffling, the King George re-anchored very near the same situation.

On the 11th, about five o'clock in the morning, they weighed and made sail, standing directly for Oneehow, with a strong breeze springing up at E. S. E. They were in strong expectations of anchoring at Oneehow by three o'clock; but the wind suddenly shifting to the westward, they were disappointed in their hope.

On the 16th the King George came to anchor in Yam Bay, with the best bower, in 15 fathom water, over a bottom of coarse sand. The Queen Charlotte did not come to anchor till the 17th, owing to her being very foul, and consequently obliged to ply between the islands, making longer or shorter boards, as circumstances required.

Capt. Portlock, the next day after he had anchored, went on shore in the whale-boat, accompanied by Abbenooe: on account of the violence of the surf, they were obliged to row in under the reef, and not finding a place where the boat could lie at her anchor with safety, they went into a canoe to go on shore, which was suddenly overfet by the surf, so that they were obliged to swim for land. The country appeared now very barren. Towards evening they returned on board.

Capt. Portlock permitted his crew to go on shore and recreate themselves: three of them being in a very poor state of health, were allowed to remain on shore in a comfortable house, which was provided on purpose by Abbenooe, and where they were supplied with every necessary refreshment. The rest returned at their appointed time.

On the 17th the three invalids returned to the King George. During their stay on shore they were treated exceedingly well by the natives.

On the 19th Captain Portlock made the signal for weighing anchor, it being judged proper to make Wymoa-Bay, Attouli, which they did on the 30th, and came to anchor the next day, the King with her small bower, and the Queen with both, in 29 fathom, over a bottom of fine muddy black sand.

February 1. A messenger was now sent to the king by Abbenooe, to acquaint him of the vessels' arrival.

For several days the men were variously employed. Two chiefs who were on board the King George, at the request of the captain, displayed their wonderful dexterity in exercising their spears. All who were spectators flattered at the dangers to which they exposed themselves, and were surprised at their expertness in parrying off the blows.

On the 6th it was reported to Captain Portlock by Abbenooe, that the king had given directions for a house to be built on the island for him, in whatever situation was most agreeable: the captain for some time declined accepting the favour; but, being earnestly pressed by his friend, he was obliged not only to comply, but even to go on shore and chuse the situation. As soon as the spot was fixed upon, the workmen were immediately employed.

By desire of the captain a large flat stone was brought, and placed near the intended edifice, whereon the captain cut the initials of his name, the name also of his country, with the day of the month and year: this he requested the artists to place on the center of the house. The captain also requested to have windows that would admit both the light and air, for according to their mode of building those conveniences are excluded, which renders their dwellings very close and unwholesome, on account of the hot weather, which is so prevalent. The natives, however, think nothing of this; for whenever they find themselves incommoded by the heat, they plunge into the water; be it night

or day, in order to get relief; this proceeding concurred to the greatest good: returned to his by some chiefs, remarkably attached.

The people were very desirous of putting into the hands of the visited Captain Portlock, and from the Queen Charlotte, in order to weather was now

or day, in order to cool themselves. When every thing was settled respecting the building, the captain proceeded up the valley, attended by a great concourse of both sexes, who behaved with the greatest good-nature and decorum. The captain returned to his vessel in the long-boat, accompanied by some chiefs and Abbenooe, who was now remarkably attached to both the ships' companies.

The people were now employed in taking in provisions, which Abbenooe had previously prepared for putting into their boats. On the 8th the king visited Captain Portlock, attended by several large canoes; and from the King George, accompanied by Captain Portlock, he proceeded to the Queen Charlotte, in order to see Captain Dixon. The weather was now very close and sultry.

The English and natives were now on such good terms, that the former always appeared on shore unarmed; consequently the latter were under no apprehensions of danger, and a mutual confidence accordingly took place.

On the 9th, there being a fresh breeze from the southward, as the captains were resolved, on the first opportunity, to get out of the bay, both vessels now weighed. They were for some time retarded by bad weather and cross winds.

On the 16th, in the afternoon, the Queen Charlotte came to anchor in Yam Bay, in 29 fathom water, over a sandy bottom. At five o'clock the next morning the King George likewise anchored.

Their intention for anchoring here was to recover, if possible, two anchors which Capt. Portlock had left behind. Accordingly, as the weather was very fine, and the sea tolerably smooth, the boats from both ships were sent out to look for them: fortunately they found them, and both the King George's anchors were immediately got on board.

They were surrounded by several canoes, who supplied them upon easy terms, and in a very ample manner, with yams, water, &c.

From this to the 23d they had variable winds, and several calms: during which time they had weighed anchor, and stretched towards the N. W. intending if possible to make Attoui, and recover the Queen Charlotte's anchor that was left there. From the 23d to the 26th they were standing off and on, making longer or shorter boards, as occasion required. On the 26th they worked through the passage between Ouhooora and Attoui. On the 28th the weather being fine, and the wind favourable, they anchored in Wymoa Bay, with a small bower, in thirty-seven fathoms, over a sandy bottom.

The whale-boat was now sent out to search for the anchor, but all their endeavours to recover it were unsuccessful. The boat was afterwards dispatched to shore for some taro.

The month of March commenced with very fine and moderate weather. The people were very busy in procuring provisions: but the inhabitants were scarce. It was supposed that the king began to think that the English were encroaching too much, and was therefore induced by policy to adopt these measures, of sending the intruders away.

A man of some consequence among the natives, came on board the King George, who was particularly civil, and earnestly requested the captain to take him into the vessel with him. Captain Port-

lock was induced, by his repeated solicitations, to comply; and intended either to leave him on these islands, at their next touching, or to bring him to England. His name was No-ho-mi-ti-hee-tee. While he was addressing the captain, one of the king's messengers, whose name was Poo-a-re-a-ree, overheard him say that he was possessed of several valuables, which he presented to his aged father. Poo-a-re-a-ree accordingly seized an opportunity of seeing the old man alone, and demanded his treasure. The veteran denied his possessions, having previously buried them in a secret place: upon this, Poo-a-re-a-ree seized him by the throat, and vowed vengeance. The old man, to avoid being murdered, discovered all, and was accordingly plundered: about this critical time No-ho-mi-ti-hee-tee had returned to shore from the captain's, and became acquainted with the whole, yet awed by the great consequence of the king's messenger, who is next to the king himself, and always sways when his majesty is absent, he did not dare to interfere, but immediately hastened to the captain, and in the most melancholy manner reported the robbery. He wanted Captain Portlock to punish the thief: however the captain did not see him after the commission of his offence, and could do nothing. The grieved son having likewise taken a sudden leave of the captain, it was never known how this affair terminated.

It being the captain's determination to quit these friendly islands for the second time, it may be necessary here to give a description of this country.

The country of Attoui is tolerably level, and for the space of two miles very dry. The soil is a light red earth, which if properly cultivated it was thought would produce excellent potatoes; however, in its present situation, it is entirely covered with long, coarse grass. It is supposed that the inhabitants find plenty of ground near their habitations, which is more conveniently situated for their various purposes.

A tappa is a tolerable large village, which is situated behind a long row of cocoa-nut trees, which afford the inhabitants a most excellent shelter from the violent heat of the noon-day sun. Amongst these cocoa trees there is a good deal of wet, swampy ground, which is well laid out in plantations of taro and sugar-cane. It is in this village that the inhabitants carry on their manufactures.

The place where they bury their dead, is a high wooden pile, seemingly of a quadrangular form, on the side of a hill. This is called a morai, and is entirely appropriated to the purpose of interring.

The river is not one hundred yards over, in the widest place, in several others it is much narrower; it glides along in a smooth pellucid stream, scarcely perceptible, except in rainy weather, the eastern shore being steep and rocky.

The rocks are for the greatest part covered with a thin strata, of the light red earth before-mentioned, and which are doubtless washed into the river beneath, by every smart shower of rain; so that the water of this river is constantly muddy, and its stream rapid.

The ships' crews having got all the provisions they could procure, both vessels weighed on the 3d, and came to sail. They now stood out of the bay, with an intention of proceeding to the coast.

Dixon's Particulars of an Excursion—Curious Observations—Resolutions—Visit from several Natives—Audacious Thiefs—The Vessels leave Montague Island, and separate—The King George arrives at Hinchinbrooke Cove—The Queen Charlotte arrives at Port Mulgrave—Various Occurrences.

FROM

FROM the 3d to the 5th they had very foggy weather, which now becoming clear, the Queen Charlotte's people were employed in getting in a new jigger-malt, as the old one had been carried away. As there was some iron-work required, the armorer was likewise put to work; but a sudden roll of the ship threw his anvil overboard. This was a very unfortunate accident, as there were only a few toes at present made, which article was so highly essential in their traffic.

From this to the 24th of April there was little variety, except the wind and weather, which were continually changing. They now stood in for the S. W. point of Montague Island, with a light breeze at N. W. under all the sail they could make. They kept the shore of Montague Island, where there was soon an appearance of a good bay, for which they made. This harbour is situated about six leagues within the S. W. point of Montague Island, and nearly a-breast on the island that forms the west side of the channel. Captain Portlock dispatched the whale-boat in order to examine this bay, being desirous to anchor, as he perceived two single canoes at some distance up the bay, which led him naturally to suppose that the place was inhabited, and consequently that there might be some business done. The boat returned in about an hour, and the mate reported that they could ride in with the greatest security; accordingly they came to anchor in 20 fathoms, over a muddy bottom, about four o'clock: they moored with their best bower in 21 fathom, over the same bottom. The S. point of the bay now bore S. W. by S. two miles and a half distant, and the N. point N. N. W. half W. two miles. Their distance from the nearer shore was about one mile.

In the evening they were visited by five canoes, some with one man, and others with two, but they brought no traffic of any kind. They were ornamented with beads of various colours, and saluted the English in a very friendly manner. They were very much delighted with the barking of some dogs that were in the vessel, upon which they began to whistle, and call out, *Towzer! Towzer! here! here!* This English manner of addressing dogs created much wonder in the vessels, as none of the crews could account for their having any idea of the English language and manners. These visitors, before their departure, took the liberty of stealing several fishing-lines that were hanging overboard.

On the 5th the boats were sent on shore for wood and water; these were easily procured, but though the seine was hauled no fish could be got.

On the 26th there were several men sent on shore to gather shell-fish, which was the only refreshment that could at present be procured. The country was entirely covered with snow. Several wild geese and ducks were seen, but there were none within shot. From some cuts that were found in the wood it was evident that the Russians had been here.

As there was now no appearance of inhabitants, Captain Portlock was determined on leaving the bay. On the 27th they unmoored; but meeting with contrary winds, were obliged to run into the bay again and anchor.

The captains now resolved on examining the coast of Montague Island up towards the sound, which they did immediately after anchoring; but did not discover the least trace of inhabitants. They accordingly returned to their vessels. During this excursion they had seen some gulls and eagles of the white-headed species: likewise several small birds.

On the 1st of May, as the captains were desirous of examining every place where there was any likelihood of meeting inhabitants, they went out again

in the whale-boats; Captain Portlock having previously left orders with Mr. Macleod to weigh anchor during his absence, if the wind proved favourable. A number of the people of both vessels had permission to recreate themselves on shore, but as there was a sudden S. W. breeze, the signal was immediately made for them to return, when Mr. Macleod, according to the captain's orders, gave also the signal to unmoor: they therefore made sail, standing up the channel towards Prince William's Sound. At six o'clock they were close in shore, and came to anchor in a bay to the eastward, in 21 fathoms, over a muddy bottom. About four hours after, the captains returned, being as unsuccessful as before, in their survey. This bay where the ships were now lying, was called Hanning's Bay, after the family so called, who were chief supporters of the present undertaking.

On the 2d there being a S. W. breeze, they weighed, and stood up the channel towards Prince William's Sound. About two o'clock they approached the Green Islands: this passage is very dangerous in the night, or bad weather, as the channel is scarcely a mile in the broadest part, free from sunken rocks. At six o'clock they passed three beds of kelp, near which there was shoal water. It was now dead low water. About nine o'clock they got into a bay in Montague Island, where they anchored in 14 fathoms water, over a muddy bottom, and moored with the stream anchor to the N. E. in 14 ditto.

On the 3d the King George's carpenter was sent on shore to cut down some trees for sawing into plank. Captain Portlock also went up the bay to found and examine it; but meeting with no natives, returned on board not a little disappointed.

Early on the 4th they unmoored, and began to warp towards the head of the bay. When the King George was heaving up their stream anchor, the stock broke close to the flank, and rendered it good for nothing. In the afternoon they came to with the best bower, in eight fathom water, and moored the vessel with a stream cable to a tree on shore. The next day was employed in various operations.

On the 6th a single canoe, with one Indian, appeared; but he had nothing to dispose of. This visitor received a present, in order to encourage others to come, and as he departed in seeming good humour, future visits were every moment expected.

It was apprehended by Capt. Dixon, that part of the Queen Charlotte's false keel was knocked off, by a shock which the lately received against a whale, as it was supposed: however, upon examination, all was discovered safe: her sheathing was somewhat worm-eaten, but every thing else was in good order.

There were a great number of ducks and geese flying about: but the captains were unwilling to fire at them, for fear of alarming the Indians.

On the 8th they were visited by three canoes, which contained five Indians. They had nothing, however to dispose of, except two river otter-skins and two seal-skins, which Capt. Portlock purchased, and gave them also a present, by way of encouragement.

The boats having been sent out a few days before this with Captain Dixon, in order to acquire every necessary information, they returned on the 10th. The following are the particulars of this excursion, according to the captain's journal.

The captain intended first to make Hinchinbroke Cove, and to proceed from thence to Saug Corner Cove, where there was the greatest probability of meeting with inhabitants. He went with the two whale-boats and the King George's long-boat; but bad weather coming on, he was obliged to put into Cove in Montague Island about eight o'clock; in

about an hour after proceeded round a large bay. Here hunting party, belonged to Cape the afternoon, he and made the whale

boat at anchor and his progress, took a view whether part, or whether they with a false report.

He had not got bad, and his guides continued the search by which time the large bay, and the with heavy storms most advisable to be he arrived about the

about an hour after the weather cleared up, and he proceeded round the N. E. end of the island into a large bay. Here he found some inhabitants on a hunting party, who, as he afterwards understood, belonged to Cape Hinchinbroke. As it was late in the afternoon, he came to anchor in the long-boat, and made the whale-boats fast, one at each side.

As the Indians did not depart when night came on, Capt. Dixon ordered six hands to keep watch, and the remainder to have their arms ready, so that he might call them at a moment's notice. The Indians sculked about till near two o'clock, waiting no doubt for an opportunity to cut the boats off; but finding the men attentive to all their motions, they then left them.

At four o'clock in the morning of the 6th, the captain weighed, and stood over for Cape Hinchinbroke, where he came to anchor at half past ten. At this place he found several Indians, and purchased a few sea-otter skins. The Indians frequently pointed towards Snug Corner Cove, and endeavoured to make him understand that a vessel lay at anchor there. Though this circumstance strongly excited his curiosity, and made him particularly anxious to know whether this piece of intelligence was true, yet the day being by this time far spent, he determined to keep his present situation during the night, as the weather was very unpromising; so that their standing for Snug Corner Cove, under such circumstances, would be attended with some degree of danger and difficulty.

A brief and vigilant look-out was more necessary this night, if possible, than they had found it the preceding one. The Indians, whom they had traded with for furs during the afternoon, were a different tribe from that which was met with in the bay at the N. E. end of Montague Island: their behaviour was very daring and insolent, though they did not directly attack the English, and they did not leave the boats till day-light the next morning. There is no doubt but that a sight of the various articles the captain had brought to trade with these people, occasioned them to lurk about the whole night, in hopes of obtaining a booty; but finding themselves disappointed, they paddled away, seemingly much discontented.

Early in the morning of the 7th, the captain set out for Snug Corner Cove; but the wind during the whole day being very light, the long-boat made little way, so that the whale-boats were obliged to make her its tow; this retarded his passage so much, that he did not arrive in the cove till eleven o'clock in the evening. Contrary to his expectation, he found no inhabitants in the cove, neither did he perceive any of the natives; notwithstanding which, he ordered the boats to keep a strict watch to be kept as before, well remembering that the Discovery was boarded by the natives in this very cove, during Capt. Cook's last voyage, in open day.

During the night, none of the inhabitants came near them; but at day-light in the morning of the 8th, two Indians came along-side in a canoe, and gave the captain to understand that there was a ship at no great distance; at the same time they offered to conduct him to her for a string of beads. Glad to accept this proposal, he willingly embraced their offer, and set off with the whale-boats, leaving the long-boat at anchor, as he was afraid she would only retard his progress, and he was exceedingly anxious to know whether there really was a vessel in this part, or whether the Indians had been amusing him with a false report.

He had not got far before the weather grew very bad, and his guides gave him the slip; however, he continued the search along shore till twelve o'clock, by which time he had got into the entrance of a large bay, and the weather growing very squally, with heavy storms of snow and sleet, he thought it most advisable to return to the long-boat, where he arrived about three o'clock.

No. 9.

At half past six o'clock, six canoes came into the cove where they lay, and told the captain there was a ship not far off, to which they were going, and offered to shew him the way: the weather was then very bad, but as they were going up the inlet, and not out to sea, as his other guides had done in the morning, he set out with them in his own whale-boat, leaving the other whale-boat, and the long-boat, in the cove.

At ten o'clock in the evening, they arrived in the creek where the vessel he so much wished to see lay. He found her to be a snow, called the Nootka, from Bengal, commanded by a Capt Meares, under English colours.

Capt. Meares had wintered in the creek where Capt. Dixon found him, and his vessel was fast in the ice. The scurvy had made sad havoc amongst his people, he having lost his second and third mates, the surgeon, boatwain, carpenter, cooper, sail-maker, and a great number of the fore-mast men, by that dreadful disorder; and the remaining part of his crew were so enfeebled at one time, that Capt. Meares himself was the only person on board able to walk the deck.

It gave him very great pleasure to find two vessels so near, who could assist him in some measure in his distress; and Capt. Dixon had no less satisfaction in assuring him, that he should be furnished with every necessary he could possibly spare. As Capt. Meares's people were now getting better, he desired Captain Dixon not to take the trouble of sending any refreshments to him, as he would visit them very shortly in his own boat.

Capt. Dixon left the Nootka at three o'clock in the morning of the 9th, and got to his boats about eight: at ten o'clock he weighed, and stood down for their ships, being now convinced that there was no prospect of his meeting with any furs of consequence. Towards noon it grew nearly calm, and the whale-boats were obliged to take the long-boat in tow.

While they were proceeding in this manner across the sound, some canoes joined them, and one of the Indians had a few sea-otter skins, which he offered to sell. Happening to cast his eyes on a frying-pan, which the captain's people in the long-boat had to dress their victuals with, he requested to have it in barter; accordingly, it was offered him, but he absolutely refused to take it entire, and desired them to break off the handle, which he seemed to regard as a thing of inestimable value, and rejected the bottom part with contempt.

Towards six o'clock, the wind freshening, the whale-boats were cast off, and soon afterwards the weather grew very rough, with constant snow and sleet, which occasioned the boats to separate. The night was very stormy, and the captain did not get on board his own vessel till four o'clock in the morning of the 10th.

Captain Meares, accompanied by his first mate, Mr. Ross, waited upon Captain Portlock, in their own boat: he met with a very hearty reception, and exchanged some bags of rice for other articles, which he and his company were in great want of. Capt. Meares mentioned that several ships had, at different times, been trading on the coast, from India and China. This information gave Capt. Portlock much uneasiness; for as there had been so many before-hand, it was natural to suppose that the Indians were at present drained of their furs, and consequently their intended traffic would be much hurt. As Captain Portlock likewise understood that another ship was expected to arrive at King George's Sound early in June next, he deemed it expedient that the King George and Queen Charlotte should separate. A consultation accordingly took place with Captains Portlock and Dixon, and it was at last agreed upon that the Queen Charlotte should push on for King George's Sound, in order to get the start of the expected vessel. Mess. Hayward and Hill, with six of

B h

the

the best men, were likewise to make for Cook's River, in the King George's long-boat, while the King George was to stay in Prince William's Sound till the boat's return. Messrs. Hayward and Hill were to meet Captain Portlock in Hinchinbrooke cove, before the 20th of July: if they exceeded that time, they were to endeavour to procure for themselves and men a passage to China from this sound; but if they could not find a vessel that was that way bound, they were then to proceed immediately to Kodiak, and procure a passage to Europe by way of Asia.

On the 11th all hands were busily employed in wooding, watering, brewing, and working in the hold. The watering was completed in the afternoon.

In order to assist Captain Meares in carrying his vessel to China, Capt. Portlock lent him two good seamen, George Willis and Tho. Dixon, who cheerfully acquiesced to go on board the Nootka. These men were to be returned at China. Capt. Meares was likewise furnished with a large supply of refreshments of every kind, particularly cocoa-nuts, for the sake of his sick people. At five o'clock the captain, and his first mate, Mr. Ross, took leave of Capt. Portlock. The particulars relative to Captain Meares's misfortunes, are reserved for our future account of that voyage.

The 12th. Every thing was now getting ready for sailing. At six o'clock in the evening Messrs. Hayward and Hill set off in the long-boat for Cook's River, being furnished with six weeks provisions.

On the 13th several canoes visited the vessels; in one of them was a chief of great consequence, whose name was Sheenaawa. There was no trade, though every one was busy; the Indians in thieving, and the English in watching: these were the most audacious thieves that were yet met; their very children were expert in the art. Captain Portlock perceiving their intention to pillage the boat, was obliged to send out the whale-boat ready armed, in order to prevent it. The captain's motive for ad-

mitting the chief and his people on board his vessel, was in hopes that such indulgence would encourage them to bring furs: these rogues, however, while they sung and danced, in order to amuse the captain's people, were conveying every moveable away: at first they began to steal iron and clothes, and then every thing they could meet with. Whenever detected in a theft, they relinquished it without any kind of concern, but they could hardly be prevailed upon to restore any thing that they were once in possession of: the captain was at last induced, by compulsive means, to make them stop their depredations; and now having left the vessel, and seeing the Queen Charlotte's whale-boat lying at anchor about two miles off, where some of the crew were fishing, these Indians paddling out of the bay, made directly up to them, and finding them unarmed, presently seized their fishing-lines, and were about forcing their anchor out of the boat: upon this, Capt. Portlock dispatched his whale-boat and yawl, well manned, to prevent their designs. Capt. Dixon likewise fired a twivel gun, and the plunderers were immediately dispersed, but not without carrying off some spoils. One of these Indians attempted to run a spear through a young man in the boat, because he refused to give up his line: he was, however, prevented by their chief, who was fortunately contented with plundering in quiet.

Capt. Dixon having taken leave of Capt. Portlock, early on the 14th they weighed; the King George steered for Hinchinbrooke, and the Queen Charlotte kept standing for the passage between Cape Hinchinbrooke and Montague Island.

On the 15th the King George came to anchor, with the bell bower, in seven fathom water, over a muddy bottom, and moored with the small bower.

The Queen Charlotte having been delayed with the baffling winds, did not reach Port Mulgrave till the 23d. She anchored about eight o'clock at night, in the northward point, with the small bower, in 65 fathoms, over a muddy bottom.

BOOK II.

CHAPTER I.

Adventures of the King George continued—Appearance of the Country—Excellent Sea-Otter Skins purchased—Capt. Portlock examines the Harbour—Sees the Ensign flying—Returns on board—Five Canoes along-side—A few more Skins purchased—Captain Portlock determined to apply to Capt. Meares for a Supply of Articles to barter with—Fixes on the second Mate for the Expedition—The Carpenter and others build a Punt for it—Crabs and Mussels procured—Several Canoes—Various Employments—A Visit from two Canoes—Information—Great Uneasiness—Fears removed—Messrs. THE King George and Queen Charlotte being now separated, we must accordingly divide our relations of their adventures till they meet again; therefore, for the present, we shall follow the King George.

On the 16th, early in the morning, they hove up the small bower, and having hauled the ship within shore of the bell bower, re-anchored again, in five fathoms, over a muddy bottom, and moored the ship head and stern.

The appearance of the country was very unpromising, the land being covered with very deep snow. There were two fresh-water rivulets at the head of the harbour, doubtless productive of salmon in due season.

In the course of this day, several canoes came

along-side, with some fish and sea-otter skins. There were about twelve sea-otter skins (of excellent quality) purchased, but at a most exorbitant price.

On the 18th Capt. Portlock went in the whale-boat to examine the harbour: he was for some time engaged in this business, but when within sight of his vessel, he perceived the ensign flying, which was the appointed signal to signify a visit from the natives; accordingly, he returned on board, (having postponed his present business) and perceived some canoes along-side, of whom he purchased a few more skins of the same excellence. He enquired if there were any salmon in the fresh-water rivulets; but was informed that it was not yet the time, till the snow which covered the hills was melted.

Captain

Capt. Portlock which were like way of traffic, Meares for a supply had shewn him: this application of force might be mate, Mr. Macleate business, or care of the vessel of either under the ship for any determined to find man, with the Nootka. From this to the business from going interval only three cod and halibut party one day, an. The weather now fumed their differ

On the 4th of Bryant were sent a trading expedition harbour they lay which means they trade intended for

Capt. Portlock not being in possession of articles which were likely to make a good market in the way of traffic, was determined to apply to Captain Meares for a supply, in return for the favours he had shewn him: the captain first intended to make this application in person, but apprehended his absence might be of material consequence, as his first mate, Mr. Macleod, whom he generally sent on private business, or was occasionally entrusted with the care of the vessel, was now so ill as to be incapable of either undertaking an expedition, or minding the ship for any length of time: he was therefore determined to send his second mate, Mr. Cresleman, with the whale-boat and yaul, on board the Nootka. But now another difficulty arose, for as they had no boat left by the ship, nor any other way of getting on shore but in the Sandwich island canoe, which was both difficult and dangerous to manage, it was accordingly deemed expedient to contrive some safer kind of conveyance: the carpenter therefore, assisted by several other hands, began to build a punt of twelve feet long, six feet wide, and about three feet deep: the captain approved of the plan very much, as this punt could not fail to be useful in wooding and watering while the boats were absent.

As the harbour afforded very fine crabs and mussels, a number of the people were sent to procure some, and they returned in the evening with a good quantity of each. Several canoes came along-side with a trading party, who brought some very good sea-otter skins and a few indifferent ones. The weather being fine, all their operations on shore went briskly forward; one part were employed cutting wood, another sawing plank, and the carpenter, with his assistants, about the punt.

On the 22d two canoes visited them, and brought a few good skins. The captain now understood that the adjacent country was called Tacklaccimuke, and that it was inhabited by a tribe, the name of whose chief was Nootuck, and the name of another chief belonging to the same tribe was Coocha. Three canoes belonging to Nootuck's tribe came to the ship the next day, but brought nothing except a few halibuts.

The whale-boat returned on the 25th from the found; they had parted with the yaul just off the north point of the bay. The next day they had a very heavy gale of wind, and the yaul not making her appearance, it gave them great uneasiness, as her crew were not only exposed to the weather, but might probably be driven out of the found and all perish: neither could the whale-boat be sent to look for and assist them, without running a great risk of losing her crew likewise. However, the weather growing moderate on the 27th, the whale-boat was sent in search of the yaul, with proper refreshments for her crew, and at nine o'clock both boats came along-side; the yaul's crew in a much better state than could be expected. The whale-boat met the yaul at the entrance of the bay, making an effort to get in, which must have been a fruitless one, had they not met and taken them in tow; for the boats were scarcely got along-side before it began to rain and blow as violently as before.

From this to the 30th bad weather prevented any business from going forward on shore. During this interval only three canoes came along-side, with cod and halibut sufficient to serve the ship's company one day, and a few middling sea-otter skins. The weather now growing moderate, the parties resumed their different employments on shore.

On the 4th of June Messrs. Cresleman and Bryant were sent with the whale-boat and yaul, on a trading expedition, up an opening between the harbour they lay in and Snug-Corner Cove, by which means they were likely to obtain part of the trade intended for the Nootka. Just as night came

on a few Indians came along-side with some halibut and cod, but no furs.

On the 6th, the weather being fine, a party was sent to dig a piece of ground for a garden, on a small island situated in the entrance of the cove, and which was named Garden Island. After the ground was ready, a variety of seeds were sown in it, such as onion, cabbage, Scotch kale, favoy, radish, thyme, purslane, spinach, celery, cauliflower, mullard, turnip, cress and rape, with peas, beans, French beans, lettuce, oats, barley, &c. The soil being tolerably good, it would be rather extraordinary if, among so great a variety, nothing should come to perfection. In the evening the whale-boat and yaul returned from their expedition, with a few very good skins, which they purchased of a chief whose name was Sheenaawa, and who was conjectured to be the same person who paid them a visit at Montague Island. The captain intended them for a longer trip, but it seems they unluckily got into a large flat bay, where the boats grounded, and before they could extricate themselves from the shoals the tide ebbed, and left them dry for near two miles round.

Sheenaawa and his tribe, which consisted of near two hundred men, saw their situation and paid them a visit, most of them armed with knives and spears. The boats crews' at first were greatly alarmed at their situation; but their fears rather subsided, when they found that plunder was what the Indians wanted: this they endeavoured to prevent, but at the same time kept their plunderers in good temper; which was the most prudent method the people could possibly have taken, for had they acted in any other manner, and strove to have prevented them from stealing by force, not a man in either boat could have escaped the vengeance of their numerous opponents. This plundering party obtained an excellent booty in their own estimation; they stole most of the trading articles, two muskets, two pitols, and some of the people's cloaths; but what old Sheenaawa seemed to regard as a thing of inestimable value, was Mr. Cresleman's quadrant, which he seized, together with his ephemeris and requisite tables. It was at this time, that they purchased the skins just mentioned: Sheenaawa's people affecting to traffic as a sort of introduction to their depredations.

On the 9th, Captain Portlock being at Garden Isle, saw the Nootka turning in towards the port; on this, the whale-boat and yaul were immediately sent to her assistance; and in the afternoon, she anchored just without the King George.

On the 10th some Indians came into the bay, and appeared shy on seeing the Nootka, which could not be accounted for any other way, than they having fired at some of the natives just before they left Sutherland's Cove, and wounded one of them. Captain Meares went on board the King George, to request of Captain Portlock to send some of his men on board the Nootka, to examine her masts, pumps, sides, &c. and otherwise assist him, which was complied with.

On the 11th the long-boat returned from Cook's River, having been very successful. Messrs. Hayward and Hill assuring Capt. Portlock, that much more business might be done in another trip; as soon as the boat was cleared, he ordered her to be fitted out with provisions, and an assortment of trade, for a second expedition. After the boat's arrival in Cook's River, soon after getting above Point Bede, they fell in with a body of Kodiak Indians, who they supposed were hunting on account of the Russians; but they saw no Russian party, and the inhabitants in the river behaved in a friendly manner. Early next morning the boat sailed again for Cook's River; with positive orders to return by the 20th of July.

On the 19th, at one o'clock, the Nootka being ready for sailing, weighed anchor, and stood out for the

Captain

the cove. Spruce-beer, which was now in good order, was daily served out; and the sick people found great benefit from it.

On the 20th, Surgeon Hoggan, and the people who had been ill, through the dampness of the weather, took a walk on shore, and gathered a good quantity of water-creffes, which they found growing near the fresh-water rivulets. The people caught plenty of flounders along-side, with hook and line; these, together with crabs, which were now very fine, proved an excellent change from salt provisions: Some of them, in fishing along-side for flounders; caught several cod and halibut: on this, the canoe was sent, on the 22d, at some distance into the bay, to try for them, and they soon returned with a quantity of fine halibut and cod. This success induced them to send her out frequently with a fishing party, and they caught considerably more than what was sufficient for daily consumption, so that the remainder was salted for sea-store. In the afternoon, a party of Indians visited the ship, bringing a few sea-otter skins; they pointed to the S. W. and gave them to understand that plenty of furs might be procured from that quarter. On this, Captain Portlock dispatched the whale-boat and yaul on the 24th, on a trip to the S. W. part of the Sound, with provisions for a month, and a proper assortment of trade. Some of the people, who had leave to go on shore, ascended the highest hills in the neighbourhood; on the sides of which they found good quantities of snake-root, and a variety of flowers in full bloom. In the evening they observed two Indian boats, and several canoes, come into the bay: they landed on a sandy beach, about three miles distant from the ship. Early next morning their new visitors came along-side: the party consisted of about 25 persons. Their chief appeared to be a well-disposed man, rather low in stature, with a long beard, and seemed about 60 years of age: he was entirely disabled on one side, probably by a paralytic stroke; his name was Taatucktellingnuke; the country he came from was called Cheenecock, and situated in the S. W. part of the Sound. The old man made Captain Portlock a present of a good skin, but had little to sell except a few salmon. The whole of this party were very friendly, and well disposed. The country where Shecnaaws and his tribe take up their residence is called Taatucklagmute: they, it seems, are the most powerful tribe about the Sound, and hated by all their neighbours, with whom they are continually at variance. These Indians lodged in temporary huts, composed only of a few sticks and a little bark: the principal part of their food was fish, and by way of variety they eat the inner rind of the pine-bark dried, but their greatest luxury was a kind of rock-weed covered with the spawn of some fish or other, of which they gathered and ate great quantities; they also eat the inner rind of the angelica and hemlock roots, which though poison to Englishmen, by constant and habitual use, becomes to them familiar and serviceable.

The party who were daily sent out to fish for cod and halibut had their hooks and lines often broke by large ground sharks; several of them were killed, but they were of no use, their livers yielding scarcely any oil.

On the 26th, Taatucktellingnuke visited the ship, and was particularly anxious to take one or two of the people with him on shore to spend the night, offering at the same time to leave some of his people on board as hostages till their return. Capt. Portlock complied with this singular request, and gave two of the people leave to accompany him on shore: he left three of his tribe on board, being desirous to convince them that he intended no harm. This friendly old chief came, early the next morning, on board in one of his boats; and, after exchanging hostages, and receiving a few presents, he went on shore highly pleased.

On the 30th, in hauling the seine, they caught a large quantity of herrings, and some salmon: the herrings, though small, were very good; and two hogheads of them were salted for sea-store.

On the 6th of July at noon, the whale-boat and yaul returned from their expedition, without the least success, not having seen a single canoe during their trip. Captain Portlock was now convinced that nothing could be done by sending the boats on another expedition, and expecting the long-boat's return in a few days, after which he intended to get to sea as quick as possible, all hands were set to work in getting the ship ready. Large quantities of salmon were daily caught, but the unsettled state of the weather not permitting them to cure it on board, the boatswain was sent with a party on shore, to build a kind of house to smoke them in.

On the 9th the house was finished, and the boatswain, with his party, were employed in smoking salmon; they had sufficient room to hang 600 fish up conveniently, and seven fires being constantly burning, they were cured very well.

On the 11th the seine was frequently hauled, and not less than 2000 salmon were caught at each haul; indeed, they were now in such numbers along the shores, that any quantity whatever might be caught with the greatest ease.

On the 21st Captain Portlock took several of the people who were lately recovered from sickness on shore, to take a walk and gather water-creffes. This little excursion had a wonderfully good effect on every one; they sat down on the grass and made a hearty meal on fried pork and salmon; and, by way of salad, had an abundance of water-creffes: they likewise gathered a sufficient quantity to serve every person on board. Near the place where they landed was a fresh-water lake, in which there was abundance of salmon, and not far from it was a piece of wild wheat growing, at least two feet high, amongst which they found the water-creffes. This wheat, with proper care, might certainly be made an useful article of food. They returned on board in the evening without seeing any Indians.

Next day at noon, the long-boat came along-side, and all her crew in good health. In this trip they had experienced a great deal of very bad weather, and had not met with such good success as they expected. They fell in with numbers of the Kodiak Indians, who always behaved in the most friendly manner, as did all the inhabitants of the river.

On the 24th they completed their wood and water, and every thing from the shore was got on board. They lopped all the branches off the highest tree on Garden Island, and fixed a staff about ten feet long at the top, with a wooden vane on it, and near the bottom was inscribed the ship's name, with the year and day of the month.

On the 26th, every thing being ready for sea, they weighed anchor at two o'clock in the morning, and stood out of the cove. On quitting the harbour, (which obtained the name of Port Etches) Capt. Portlock at first intended to stand out of the Sound by way of Cape Hinchinbroke; but on opening that passage the weather looked very thick and dirty, on which he came to the resolution of pushing for the passage on the west side of Montague Island. Accordingly they stood to the S. W. but meeting with contrary winds, did not get through till the morning of the 31st, when they were well clear of the land, the S. W. point of Montague Island being three leagues distant.

We shall here relate some few observations which have been made by Captain Portlock on Prince William's Sound, but as we shall be obliged to renew our description of this place in the voyage of Capt. Cook, we shall there give a more copious account of the manners, customs, &c. of the natives.

good eyes, and a good scent. They wear their hair, (which is black and straight) very long; but they cut it upon the death of a relation or friend, which is the only way whereby they denote mourning. There is very little difference between the women and the men. They are fond of ornaments, like most of the inhabitants of other islands; yet notwithstanding their partiality to finery, they are very filthy in neglecting their persons, and consequently becoming lousy; and as a further proof of their uncleanliness, they frequently make use of those vermin whenever there is a scarcity of food.

The men are particularly attentive to the women; they are exceedingly happy when their ladies receive any presents, but highly provoked if there are any liberties taken with them. It is unnecessary to make any remarks on their thieving disposition, as the reader has had proofs of that; but we must add, that instead of dexterity in thieving being held in disgrace among them, it is on the contrary in high estimation, and he that is the most notorious is the most admired. The professed thief is curiously daubed with paint, in order to attract the notice and admiration of spectators, and give his fingers an opportunity of pillering. They slip their arms occasionally from out of the sleeves of those frocks of skins which they always wear, and under these frocks conceal their stolen articles, till they can convey them to their canoes; yet, notwithstanding this pilfering inclination, they are a good kind of people, and would no doubt be soon corrected of this vice, if the intercourse between them and the English had been of any duration.

The country abounds with large trees of the pine kind, a sort of hazel, and a great quantity of alder: there is also a great deal of fruit-bushes, bilberry, raspberry, strawberry, alderberry, red and black currant bushes, &c. They have also plenty of wild celery, water-creffes, four dock, shepherd's purse, angelica, hemlock, wild peas, &c. None of the seed which the English had sown produced any thing while they were there. The alder-buds were once used by the English as greens; they boiled exceedingly well and tender, and were much relished, but for a day and a half the partakers thereof were well purged: on some it acted as an emetic. The buds of the young black currant-bushes, mixed with the pine tops, made very pleasant tea.

The inhabitants live upon whatever fish and animals they can get. They dry their fish in the sun, having no other way of preserving it: their fresh fish they roast before a fire. They dress their animal food in baskets or wooden vessels, by putting thereto red-hot stones. They eat the vegetables their country affords, and the inner bark of the pine-tree.

Their winter habitations are ill contrived, being from four to six feet high, ten feet long, eight feet broad, or thereabouts, built with thick plank, and the crevices filled up with dry moss. In these confined dwellings a great number live together. In the summer they wander about, and occasionally shelter in small sheds erected of a few sticks covered with a little bark, or their canoes.

A fuller description of their weapons, customs, and dialect, shall be given in Capt. Cook's voyages.

Having got clear of the passage into Prince William's Sound, they proceeded E. S. E. with a light breeze from the westward, which changing afterwards to the southward, they steered E. by N. The weather was now very pleasant.

On the 3d every advantage was taken of the fine weather: the sailors' hammocks were got upon deck; the ship aired with fires, being previously scraped fore and aft, and sprinkled with vinegar.

Their progress to Cape Edgecombe was so retarded afterwards, by the wind shifting to the eastward, that the captain was now resolved to seek a port near the situation in which Capt. Cook placed Cross Sound.

No. 9.

On the 5th Mount Fairweather bore N. 10 deg. W. near twenty leagues distant. This is the highest land on this part of the coast, and forms several mountains.

On the 6th, an opening in the land was discovered, situated eight leagues to the S. E. of Cross Cape. The land seemed to be composed of low, woody islands, among which appeared several places for good shelter. On approaching it they had 20 and 25 fathoms over a muddy bottom, and there were some high barren rocks just in the entrance.

They were followed by a large Indian boat, with 12 people in her, three of whom were men, and the rest women and children. These people were, no doubt, led by curiosity to view the ship. The King George having run up towards the N. W. part of the harbour, after passing a small island near the north shore covered with trees, they anchored about noon with the small bower, in 31 fathoms, over a muddy bottom, and moored with the best bower to the eastward, entirely land-locked.

The boat which had followed them now came along-side, singing and extending their arms as tokens of peace: their language was totally different from that spoken by the natives in Prince William's Sound; nor were they marked with paint, as is the custom in the Sound and River. Their boat was made of a large pine-tree, the inside of which was neatly cut out, and the body ingeniously tapered away towards the ends until they came to a point.

The captain gave his new visitors some presents, and by shewing them a sea-otter's skin, and making signs, expressed a desire to have some: they, in return, expressed an inclination to serve him.

The captain having seen among their possessions a tin kettle and some towels, much like those which belonged to Capt. Dixon, he was inclined to think that the Queen Charlotte had touched near this neighbourhood, especially as he understood from these natives that they had received those gifts from a vessel which had been in a port eastward of Cape Edgecombe, and which had two masts. As Capt. Portlock had intended to send the long-boat on a trading expedition, he was now resolved to fit her out with all possible dispatch, as it was probable the Queen Charlotte might be somewhere about the Cape.

As soon as the Indians received their presents, they left the ship, and went on shore; they returned immediately after, with a few good dry sea-otter skins; but they were not so particular in dressing and stretching them as the natives of Prince William's Sound and Cook's River; one of their dressed skins being shewn to a chief among these Indians, he knew immediately whence it came, and also described what sort of people those in the Sound were, informing the captain that they had a frequent intercourse with them, in the course of which some quarrels arose, and battles were consequently the issue.

The daggers which these people use in battle can stab at either end, having three, four, or five inches tapered to a sharp point above the hand.

When evening approached, the Indians were about taking their leave again; but as they were desirous to secure the captain's friendship, they proposed leaving one of their party on board for the night, and taking one of his people on shore. This the captain cheerfully acquiesced with, as these men were neither inclined to thievery or mischief, and it was also a favourable opportunity of making some necessary discoveries relative to their country and manners. One of the captain's men was accordingly set with them on shore, while for his greater security two Indians (who were handsome, good-looking men, and appeared to be brothers) were retained. During their stay on board, they behaved remarkably well.

On the 7th, the Indians returned with the man they had taken away the night before, but they brought

C c

brought very little trade. The person who went on shore with them reported, that their residence was at the foot of a hill, near a river of fresh water, which issued out of an adjacent valley. Their house, for they had but one, appeared to be only a temporary habitation, and they seemed to have but few articles of trade amongst them.

About this time the long-boat was hoisted out, and having been properly equipped, was sent on a trading expedition towards Cape Edgcombe, and among the islands to the S. E. of that cape, with the same party that went with her to Cook's River. They had orders to return in 17 days; and in case they met with the Queen Charlotte, to desire Capt. Dixon to return with them, and stay in the offing till the King George was ready to join her; it being now Captain Portlock's intention to leave the coast about the latter end of the month, and proceed for China, unless they met with a better trade.

On the 8th the carpenter was sent on shore, to cut down some white cedar, with which the country abounded, for the purpose of sawing into sheathing boards. The remainder of the ship's company were put to several necessary employments.

A small canoe, with one man and a woman in her, came along-side this day; but they had nothing to dispose of: they staid for a short time, and then returned on shore, to inform their tribe (as it was supposed) of the ship's being in the harbour. The Indian boat repeated their visit towards evening, and the two young men who before slept on board were now desirous of spending another night in the vessel. The captain readily complied with their desire, and one of his apprentices, Joseph Woodcock, slept on shore with the natives. The Indians took up their abode that night in a small bay near the ship, where there was a hut erected, which was far more miserable than their other habitation.

The whale-boat caught some salmon to-day, some of which was exceedingly good, and others were very bad, with a disagreeable colour, which were thrown away.

The small canoe which came in the morning with the man and woman in her, repeated her visit about

eight o'clock; she was accompanied with two large boats, which contained about 25 men, women, and children. These people behaved exceedingly well, and promised to bring some good furs the next morning. They staid for about an hour, and when they took their leave retired to the small bay where the Indian boat went. Some had built temporary huts, and others sheltered themselves among the rocks. The next morning they fulfilled their promise, and brought with them some good sea-otter and a quantity of fine black skins. As this tribe did not shew the least thieving disposition, several of them were admitted on board, and they traded very fairly. It being dinner-time, and every thing accordingly prepared in the cabin, the captain asked his new visitors to partake; they readily accepted his invitation, and so well did they relish the victuals, that they were obliged in a short time to replenish the dishes. During the second course these guests eat as hearty as before. When they had satisfied themselves, they then admired the vessel, and in a short time after returned to shore, highly delighted with their entertainment, and some presents which they had received.

Another Indian boat, from the N. W. appeared in the afternoon, with two men, a boy about twelve years old, and a young child. One of the men appeared to be a person of consequence, being remarkably majestic and well-looking. There were some good sea-otter skins, and several wild geese bought of these Indians, who were adorned with ornaments quite different from any hitherto seen.

When they had finished trading, the good-looking fellow, who seemed to be a chief, requested the captain's permission to stay on board with the young lad for that night. Captain Portlock immediately acquiesced, and sent Joseph Woodcock on shore with the other man and child.

The next morning (the 10th) this man and boy took their leave of the English; the former assuring the captain that he would in ten days time visit him again, and bring with him more sea-otter skins.

CHAPTER II.

Portlock anchors at Oneebow—Visited by the King, &c.—Observations, Remarks, &c.—Anchor weighed—They proceed to China.

ON the 11th August another strange tribe came into the Sound from the eastward, in two large boats, consisting of 25 men, women, and children. They disposed of a few small black skins, and some good sea-otter ditto. When they had satisfied their curiosity, they retired to a convenient house on shore, in a bay not far from the ship, which was well covered with cedar-bark; for this tribe did not herd with the other Indians.

On the 12th some of the ship's company were sent on shore, to recreate themselves. This party, in their ramble, discovered a quantity of Indian tea: which, upon trial, proved an excellent substitute for their other tea, which by this time was nearly expended. Captain Portlock, in the forenoon, went in the whale-boat with Mr. Whilbye and one of the young Indians, (who were constant visitors) in order to visit their residence. After proceeding a considerable way up the Sound, they arrived at the Indian's habitation about noon, and found one small temporary house and the ruins of two others,

which had been much larger, and appeared to have been made use of as winter habitations. On the beach was a large boat, capable of holding thirty persons, and three others to hold ten people each. From this circumstance, the captain expected to have seen a numerous tribe, and was quite surprised to find only three men, three women, the same number of girls, and two boys about 12 years old, and two infants. The oldest of the men was very much marked with the small-pox; as was a girl, who appeared to be about 14 years old. The old man endeavoured to describe the excessive torments he endured whilst he was afflicted with the disorder that had marked his face, and gave Captain Portlock to understand that it happened some years ago: he said the distemper carried off great numbers of the inhabitants, and that himself had lost ten children by it. He had ten strokes tattooed on one of his arms, which were so many marks for the number of children he had lost.

As none of the of age were marked with the disorder raging for years; and a of the coast in a poor wretches were amongst them probably they came of August. To season of the year any of them escape and children were house near a lake with stinking fish hundred yards, creek that ran were strewn w places were beds or twelve feet in bad such a dreadful young Indian his wretched scenes now been absent earnestly entreated.

As none of the children under ten or twelve years of age were marked, there is great reason to suppose the disorder raged but little more than that number of years; and as the Spaniards were on this part of the coast in 1775, it is very probable that these poor wretches caught this fatal infection. They were amongst them in the height of summer, and probably they caught the disorder about the month of August. To see their manner of living at that season of the year, one would think it a miracle that any of them escaped with their lives: men, women and children were all huddled together in a close house near a large fire, and entirely surrounded with stinking fish: round the house, for at least one hundred yards, and all along the banks of a little creek that ran down by this miserable dwelling, were strewed with stinking fish; and in several places were beds of maggots a foot deep, and ten or twelve feet in circumference; nay, the place had such a dreadfully offensive smell, that even the young Indian himself, though habituated to such wretched scenes from his earliest infancy, having now been absent a few days, could not bear it, but earnestly entreated the captain to return on board.

The sufferings of the poor Indians, when the disorder was at its height, must have been inconceivable; and no doubt the country was nearly depopulated, it being at present very thinly inhabited. A number of the Indians who came into the Sound from the eastward were marked with the small-pox, and one man in particular had lost an eye by that disorder; but none of the natives from the westward had the least traces of it. These circumstances make it probable that the vessel, from which these unfortunate Indians caught the infection, was in a harbour somewhere about Cape Edgecombe; and none of the natives to the westward of this found having any intercourse with her, by that means happily escaped the disorder.

On the 13th another party of the ship's company went on shore to recreate themselves. They also brought home some Indian tea: some very fine sea-otter skins were also purchased of the natives this day.

On the 14th every person was employed, some in wooding and watering, and others in fishing; the carpenters in sawing cedar, &c.

On the 15th, the long-boat returned from her expedition to the eastward of Cape Edgecombe, when they had brought some pretty good sea-otter skins. The people with whom they bartered had a number of articles, the same as those on board the King George; such as tin kettles, rings, &c. so that it was pretty evident the Charlotte had been in that neighbourhood. Whilst they were at anchor, and busied in putting the boat to rights, some of the Indians cut their cable, and afterwards made for the shore. The people in the long-boat pursued them, and destroyed their canoes; but the Indians fled into the woods with precipitation. On the long-boat's return, James Blake, one of the people, fell overboard, but was providentially saved by another of the crew, John McCoy, swimming to him with an oar, by which he kept himself above water till they got him on board.

On the 16th and 17th the people were employed as usual, and on the 18th, Captain Portlock went in the whale-boat to survey part of the sound, and landing in a small bay, found a sort of monument, erected probably to the memory of some distinguished chief. This edifice was composed of four posts, each about twenty feet long, and stuck in the ground, about six feet distant from each other. About twelve feet from the ground there was a rough boarded floor, in the middle of which, an Indian chest was deposited; and on that part of the edifice which pointed up the sound, there was painted the resemblance of a human face. As none of the inhabitants were near, they intended to exa-

mine the chest; but on one of the boat's crew attempting to get up for that purpose, the whole fabric had like to have given way, on which he desisted, as Captain Portlock was not willing to destroy a building that probably was looked on by the Indians as sacred. The captain returned on board in the afternoon: during his absence Mr. Hill had purchased a few excellent skins.

On the 20th, their late visiter from the N. W. made his appearance in a large boat, along with about twenty men and women, and twelve children. This supposed chief came along-side with great parade, and singing in their usual way, and by way of addition, their singing was accompanied by instrumental music, such as a large old chest for a drum, and two rattles. He was dressed in an old cloth cloak that formerly had been scarlet, with some old gold fringe about the shoulders, and ornamented with buttons down each side: with this coat, and his hair full of white down, (which they always wear when in "ull dress) he displayed great importance. He had besides in his boat, another old dress that was composed of different coloured pieces, and worn chiefly by his wife. The chief did not produce any thing for sale, but soon went on shore, probably to sort his trade, for he soon returned; but did not come on board until he had entertained them with singing; during which time, the chief acted different characters, and always changed his dress for each representation; at the same time, some of his people held up a large mat by way of scene, to prevent them on board from seeing what was going on behind the curtain. At one time he appeared in the character of a warrior, with all the ferocity of an Indian about him; and at another time, he represented a woman, in which character he wore a very curious mask, representing a woman's face. After this entertainment was over, the chief and some of his people went on board, and trade commenced. During the day, Captain Portlock bought about twenty-five pieces of good sea-otter skins; but the chief traded in so very tedious a manner, that he could not purchase the whole of his furs before the evening came on. The chief remained on board with one of his people; and as he required a hostage, Joseph Woodcock was sent on shore with his party.

Woodcock having frequently been on shore as a hostage, was well known to the natives, and they seemed very fond of his company. On one of these occasions, he remained amongst the Indians for three days, during which time he had an opportunity of seeing their customs and mode of living. Their sith and nastiness were beyond conception; their food, which consisted chiefly of fish, was mixed up with stinking oil, and other ingredients equally disagreeable; and the remains of every meal were thrown into a corner of their hut, upon a heap of the same kind that was in a state of putrefaction, which, together with large quantities of fat and stinking oil, caused a very loathsome and offensive smell; and what rendered it still worse, the same apartment served them both to eat and sleep in.

This uncomfortable situation, frequently induced Woodcock to take a ramble into the woods; but he was always narrowly watched by some of his new companions, who seemed to apprehend that he was endeavouring to make his escape from them. Once in particular, having rambled a considerable distance from the Indians place of residence, he began to amuse himself with whistling, not expecting, if the natives heard him, it could possibly be a matter of offence; but in this he was mistaken, for several of them immediately ran up to him and insisted upon his giving over: at first he did not comprehend their meaning, and went on with his whistling; however, one of them soon put a stop to it, by laying his hand on Woodcock's mouth, being apprehensive that he meant the whistling as a signal for some

some of his companions to come for him. Except their watching him so closely, they always treated him with great kindness, and at meal-times gave him what they considered as choice dainties; mixing his fish with plenty of stinking oil, which in their opinion gave it an additional and most agreeable relish; and he found it no easy matter to persuade them to let him eat his fish without sauce.

On the 21st trade again commenced, and the chief at last disposed of all his furs. Captain Portlock finding the adjacent neighbourhood was stripped of all their furs, determined to go to sea the first opportunity. Accordingly, in the morning of the 22d, they weighed anchor, and stood out of the Sound.

This party from the N. W. were much more addicted to thieving than any of the Indians in the Sound; and it was astonishing to see with what patience they would wait, when once they had fixed on any thing to steal, and with what dexterity they would convey their booty away. One fellow took a liking to Captain Portlock's drinking-mug, and he got it under his frock; but, unfortunately for the poor fellow, it happened to be half full of beer, a part of which spilling over, discovered the thief. Notwithstanding two people were constantly in the cabin to watch the Indians, one fellow found an opportunity to get a cutlafs under his frock, and was not discovered till he was going down the side of the ship; and another found means to steal four pair of worsted stockings, with which he got out of the ship undiscovered. The men are about the size of Europeans: their aspect is fierce and savage; this and their dress give them an appearance of warriors. They use daggers, and long-pointed spears; are easily provoked, and are very vindictive when enraged. On account of some trifling disagreements in trade, the captain was frequently threatened: however, as he kept his pistols ready charged before him, he was prudently guarded against any violent attack. These natives, it is supposed, are unacquainted with polygamy, as not even a chief was seen with more than one woman, to whom he appeared particularly attentive and affectionate.

The women at this Sound, (which has obtained the name of Portlock's Harbour) disfigure themselves in a most extraordinary manner, by making an incision in the under lip, in which they wear a piece of wood of an oval form: they wear them large in proportion to their age, and some old women had them as large as a tea-saucer. The weight of this trencher weighs the lip down, and leaves all the lower teeth entirely exposed; which gives them a very disagreeable appearance. When eating, they generally take more in the mouth than they can swallow, and after masticating it, they put part on the piece of wood, and take it in occasionally as they empty their mouths. The children have their lips bored when about two years old, and wear a piece of copper-wire to prevent it from closing; this they wear until they are about fourteen years old, when they take out the wire and introduce a piece of wood nearly the size of a button. Both sexes (as is the general characteristic among the Indians) are addicted to indolence and laziness, are fond of dirt and filth, and differ but little in their manners and customs from those of Prince William's Sound: were it not for their nastiness, the women are very engaging; their carriage is modest, and their features in general pleasing. Their apparel is the same of that worn by the men. Long hair is deemed a great ornament: the women wear theirs either clubbed behind, or tied up in a bunch on the crown of their head: the men wear theirs sometimes tied, but more generally loose, dressed with birds' down. The wives dress their husbands' hair, and also keep their treasures. The men and women eat together.

On the 22d they weighed, and came to sail; the next day they cleared the rocks, and on the 24th

they stood to the S. W. by S. the land in sight; the wind S. E. by S. the weather thick and rainy. Nothing remarkable occurred during their passage from the coast to Sandwich Islands. Sept. 27th they saw Owl-hee, about eight leagues distant.

On the 28th they were visited by several canoes, who brought in great abundance the different productions of their island. A quantity of hogs, vegetables, &c. were purchased.

The King George now left Owhyhee, and pushed on for Attouli.

On the 1st of October, after it was dark, several Indians were heard calling after the English, and presently a canoe was seen paddling towards the vessel: she was from Mowee, but had nothing to dispose of; after staying a few minutes alongside the ship, she returned towards the shore. This canoe was so very small, that she could hardly contain the two men who were in her.

October 3d, they were about two leagues from the fourth point of Attouli; on which they edged away for Wymoa Bay. In running along-shore they met with several canoes, from whom it was understood that their king was at Oneehow, and that before he left the island he had tabooed the hogs. Capt. Portlock was also informed, that the Nootka and Queen Charlotte had been at that island; that the former did not anchor, but proceeded to Oneehow, where she lay; and that the latter remained but two days in the bay. The captain was likewise informed, that Captain Dixon had left a letter for him with Abbenooe, which lay at his house in Wymoa. This induced the captain to stretch in for the bay, and being about a mile from the shore, brought the maintop-fail to the main.

Tahiree the king's son came on board, and informed the captain that the letter was tabooed in the house, consequently the captain must wait till Abbenooe arrived, or sent directions for its delivery. As this was the case, Captain Portlock bore away for Oneehow, where he came to anchor on the 5th with a view of procuring all the yams that he could until the messenger who was sent for the letter arrived. The king's son and a chief of some consequence, named Tabooaranee, accompanied the captain to Oneehow.

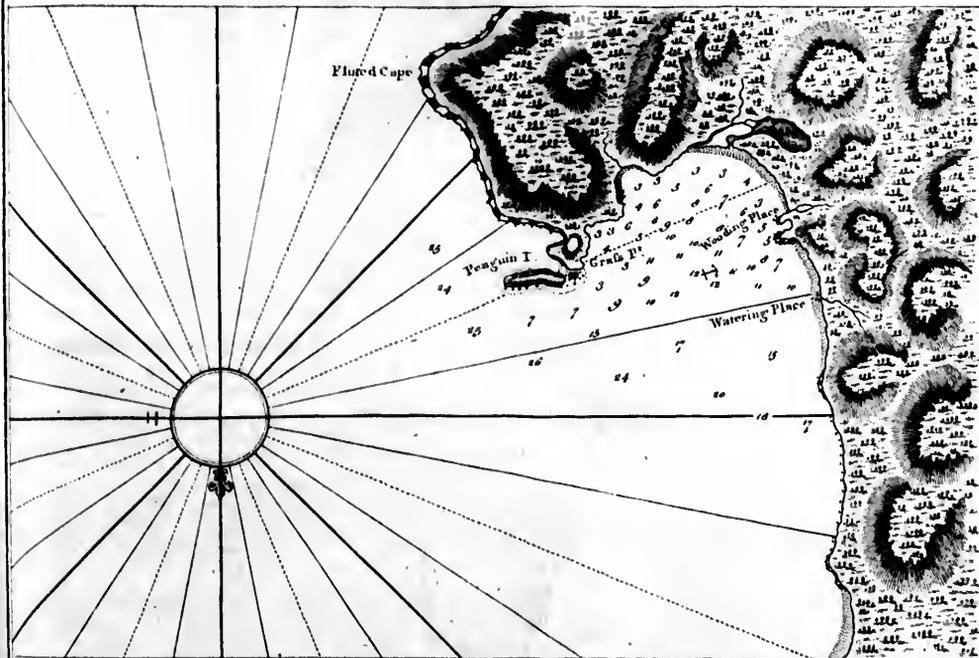

About two in the afternoon, the king, Abbenooe, and several chiefs, came on board, and brought with them a quantity of yams and potatoes. Tabooaranee the chief (who belonged to Owhyhee) was received very cordially by the king and his people. Abbenooe informed Captain Portlock, that the letter which was at Wymoa should be sent for immediately, and insisted upon the captain's staying at Oneehow, till the messenger returned, which would be in the course of thirty-six hours. A canoe was accordingly dispatched for it, and during its stay a brisk trade was carried on: they were likewise supplied with water by the natives. The captain's boats returned in the evening, not having made any great purchase. One of the crew had lost his shoe in the surf, and Abbenooe being informed of the place where he had dropt it, would, in spite of all intreaties to the contrary, go in search thereof, though it was now evening, and the wind blowing very fresh: for this old man observed that one shoe was of no use, and accordingly he went to seek it. In less than an hour he returned with the shoe and buckle, and exulted not a little upon his success.

The time was now diverted with different accounts: Tabooaranee the chief, informed Captain Portlock that he was present when Captain Cook was killed. A great number of the people were wounded from the fire at different times, the majority of whom perished. Several of the chiefs upon the return of the English, were afraid that they came to resent their countryman's fall. The chief also showed the captain a dagger, similar to that with which Captain Cook suffered. This chief was a tall, well-made, handsome fellow.

On the 6th, there was a letter brought on board by a chief, which was left by a Mr. David Ross, chief mate of the Nootka. This day they had completed their watering.

On the 7th the messenger whom Abbenoo sent for Capt. Dixon's letter, returned from Attou. It was immediately delivered to Capt. Portlock.

The following are Captain Portlock's sentiments upon the inhabitants and island, with his directions to other navigators. As to a minute description of the natives, their persons, houses, canoes, customs, civil, military and religious, he refers the reader to the voyages of Captains Cook and King, which voyages the reader will find more ample and satisfactory in this work than in any other edition.

" I advise all those whose business may lead them to these islands, for the purpose of watering and refreshing, to make the island of Owhyhee, a little to the southward of the east point, and run down the south side of the island: there is no danger but what shews itself, nor indeed did I perceive any that lay half a mile from the shore, until you come the length of the south point. There is off that point a reef that runs off about a mile, which is easily discovered by breakers and coloured water. In this run you may get small hogs and vegetables enough for present supply; and after sauling round the south point you will begin to get a supply of salt, which article cannot be procured at the eastern part of the island; I mean not after you get to the eastward and northward of Karakakooa Bay; and as you draw towards Karakakooa, you will get a plentiful supply of fine hogs, bread-fruit, and sweet potatoes, taro, sugar-cane, and cocoa-nuts.

" This island is not famous for the sweet-root; and between Karakakooa and the south point you may procure all the refreshments the island affords, and you may also get the natives to bring off fresh water enough for present use. Take care they do not cheat you, by filling their calabashes with salt water, which they will do, and sell it, if you are not careful in tasting: several of my people were cheated this way. And hereabouts is the situation I would recommend for salting pork; you will have the open and unconfined air, and at the same time moderate breezes and smooth water, which enable the canoes to come off with greater care and safety with their hogs and salt.

" From this part I would advise the navigator to run for the west end of Ranai, (the bearings and distances of these islands from each other will be

" found by consulting the chart of them in Capt. Cook's last voyage) and from that point sail directly for the west point of Morotoi. Should night come on, there is anchorage to the northward of the west point of Morotoi, sheltered from the prevailing winds. After leaving this island, sail directly for the S. E. point of Woahoo, and on rounding that point anchor in King George's Bay. If found necessary to stay there any time, it would be advisable to buoy the cables. At this island I would advise the watering and wooding business to be done, not by sending on shore for either article, but by encouraging the natives to bring them to the vessel.

" To give any further directions respecting the navigation among these islands would be superfluous, as every particular on that head may be collected from the detail of occurrences during our second visit to them. I cannot help observing, that I think their situation and produce may be productive of material benefit to our new settlement at Botany Bay, and at the same time be a considerable saving to government in the articles of provisions, which may be purchased here at a trifling expence."

On the 4th of November they passed the islands of Saypan and Tinian. The white cattle, which Lord Anson says the island of Tinian so much abounds with, were seen grazing on the plains. Both these islands appeared remarkably beautiful, on account of their abounding in trees.

From this to the 18th, nothing material happened. Early this morning they were surrounded by a number of Chinese fishing-boats; and soon afterwards a Chinese vessel was seen steering towards them. They shortened sail, and a boat was sent on board her for a pilot: she soon returned with one, who having made his terms with captain Portlock, conveyed the ship to Macao-roads.

On the 20th, at half past ten, they came to anchor with the best bower, in nine fathoms, muddy bottom. The city of Macao bearing N. W. half N. distant about six leagues.

On the 21st they weighed and stood towards Macao, and at half past four anchored with the best bower in four fathoms and a half, muddy bottom, in Macao-road. The town bearing E. by S. three leagues distant. The whale-boat was sent on shore to Macao at five in the morning: she returned with a letter from Capt. Dixon, whose adventures during this separation shall be the subject of our two succeeding chapters.

CHAPTER III.

Proceedings of the Queen Charlotte—Anchorage—Description and Name of the Harbour—Visited by the Natives—Their Character—Manners, Ornaments, &c.—Description of their Huts—Singular Way of depositing their Dead—Their Language—Scarcity of Furs, &c.—The Queen Charlotte weighs Anchor—Arrives at Norfolk Sound—Description of the Place—Various Remarks upon the Natives, &c.—The Vessel weighs Anchor—Proceeds along the Coast—Anchorage—Description of Port Banks—Various Transactions—Departure—Meet with Natives—A brisk Trade—Heppab Island discovered—Remarks—Trade kept up—Description of one of the Chiefs—The Indians attempt to steal Furs—Two English Vessels met—Brief Account of the American Coast—Character of the Natives, &c.

WHEN the Queen Charlotte took leave of the King George, she kept coasting along, in hopes of meeting with an harbour on her passage to King George's Sound. Nothing material occurred till the 22d of May, when there being every sign of an inlet, and consequently a likelihood of meeting with inhabitants and a good trade, Capt. Dixon was determined to try it; but as the weather was very unfavourable, the examination was postponed till the next morning, when about six o'clock the whale-boat was hoisted out, and Mr. Turner, the second mate, sent into the bay, which bore N. N. E. for the purpose of finding an anchoring-place.

No. 9,

In about two hours Mr. Turner returned, and informed the captain that he had discovered an excellent harbour, and seen a number of inhabitants. Upon this the yawl was hoisted out, and sent a-head with the whale-boat, in order to tow the vessel into the bay; but, after struggling for some time, they found all their towing was to no purpose, as the tide was very strong against them. They then began to warp up the bay; but their progress was very slow, as it was eight o'clock in the evening when they came to anchor with the small bower, in 65 fathoms water, over a muddy bottom, about a mile's distance from shore.

* D d

While

While warping into the bay, they were visited by several canoes. Those canoes were quite different from those in Prince William's Sound, being constructed altogether of wood, much in the form of the English whale-boats, and finished in a very neat manner.

On the 24th there were a great number of natives seen on the beach, near the entrance of a narrow creek, which appeared to lead a great distance into the country, and widened as it advanced in shore. Those natives made signals to the English to come on shore. There was also a smoke seen at a small distance round the point, proceeding from behind some pines: the captain imagining this to be the chief residence of the Indians, went in the whale-boat to survey the place, in hopes of finding a more convenient anchorage: he met with several inhabitants, and a few temporary huts. They weighed anchor at eight o'clock, and began to ply into the harbour to the northward, having now a fresh easterly breeze. In the forenoon they anchored in eight fathom water, over a soft muddy bottom, close to the shore, and very near two large huts. In this harbour they were comfortably sheltered from wind and weather, being completely land-locked. The islands which surrounded, were entirely free from snow: those islands formed several creeks and harbours. There was some high mountainous land to the northward and westward covered with snow, and which appeared to be part of the continent: there were a great many pine-trees of different species, witch-hazel, brushwood, &c. Their vegetation was at present in too young a state to admit of any judgment on its quality. There were several shrubs of different kinds springing up: also a few wild-geese and ducks, which the captain occasionally shot, to the great surprize of the inhabitants. This harbour, which was in latitude 59 deg. 32 min. N. and in longitude 140 deg. W. was named by Capt. Dixon Port Mulgrave, in honour of the Right Honourable Lord Mulgrave.

During their stay here, they were constantly visited by the natives. They were greatly pleased at the arrival of the ship; and understanding that they were come for furs, an old man brought ten excellent sea-otter skins, which he sold for towees. This circumstance, together with their seeing very few ornaments amongst the Indians, gave them reason to expect a good traffic; but a few days convinced them that their conjectures were built on a sandy foundation, for they procured very few valuable furs, and the Indians were remarkably tedious in their trading: four or six of them would come along-side in a canoe, and wait an hour before they produced any thing to sell; they then by significant shrugs, would hint at having something to dispose of, and wish to see what would be given in exchange, even before their commodity was exposed to view. If this manœuvre did not succeed, a few trifling pieces of old sea-otter skins were produced, and a considerable time was taken up in concluding the bargain. This harbour was calculated to contain about seventy inhabitants, including women and children; they in general are about the middle-size, their limbs straight and well-shaped; but like the other inhabitants on the coast, are particularly fond of painting their faces with a variety of colours; so that it is no easy matter to discover their real complexion: however, one woman was prevailed on by persuasion and a trifling present, to wash her face and hands, and the alteration it made in her appearance was absolutely surprizing; her countenance had all the cheerful glow of an English milk-maid; and the healthy red which flushed her cheek, was even beautiful: contrasted with the whiteness of her neck: her eyes were black and sparkling; her eyebrows the same colour, and most beautifully arched; her forehead so remarkably clear, that the translucent veins were seen meandering even in their minu-

test branches: in short, she was what would be reckoned handsome, even in England. But this symmetry of features is entirely destroyed by a custom extremely singular, and which has never been mentioned by any navigators whatever: an aperture is made in the thick part of the under-lip, and increased by degrees in a line parallel with the mouth, and equally long. In this aperture, a piece of wood is constantly worn, of an elliptical form, about half an inch thick; the superficies not flat, but hollowed out on each side like a spoon, but not quite so deep; the edges are likewise hollowed in the form of a pulley, in order to fix this precious ornament more firmly in the lip, which by this means is frequently extended at least three inches horizontally, and consequently distorts every feature in the lower part of the face. This curious piece of wood is worn only by the women, and seems to be considered as a mark of distinction, it not being worn by all indiscriminately, but only by those who appeared in a superior station to the rest.

Their huts are the most wretched that can be conceived: they are formed of a few poles stuck in the ground, without order or regularity, enclosed and covered with loose boards; and so little care is taken in their construction, that they are quite insufficient to keep out the snow or rain; the numerous chinks and crannies serve, however, to let out the smoke, no particular aperture being left for that purpose. The inside of these dwellings exhibits a complete picture of dirt and filth, indolence and laziness; in one corner are thrown the bones and remaining fragments of victuals left at their meals; in another, are heaps of fish, pieces of stinking flesh, grease, oil, &c. In short, the whole served to shew in how wretched a state it is possible for human beings to exist; and yet these people appear contented with their situation, and probably enjoy a greater portion of tranquillity than is to be found under the gilded roofs of the most despotic monarch. 'Tis probable, that the chief reason why these Indians take no greater pains in the structure of their habitations is, that their situation is merely temporary; no sooner does the master of a tribe find game begin to grow scarce, or fish not so plentiful as he expected, than he takes down his hut, puts the boards into his canoe, and paddles away to seek out for a spot better adapted to his various purposes; which having found, he presently erects his dwelling in the same careless manner as before.

The whale-boat was one day sent out with seven people to catch halibut, which are very plentiful at this place, but their success was greatly inferior to that of two Indians who were fishing at the same time; which is rather extraordinary, if we consider the apparent inferiority of their tackle to that of Captain Dixon's people. Their hook is a large simple piece of wood, the shank at least half an inch in diameter; that part which turns up, and which forms an acute angle, is considerably smaller, and brought gradually to a point; a flat piece of wood, about six inches long, and near two inches wide, is neatly lashed to the shank, on the back of which is rudely carved the representation of an human face. 'Tis not likely that this was altogether intended as an ornament to their hooks, but that it is intended as a kind of Deity to insure their success in fishing, which is conducted in a singular manner: they bait their hook with a kind of fish, called by the sailors *quid*, and having sunk it to the bottom, they fix a bladder to the end of the line as a buoy, and should that not watch sufficiently, they add another. One man is sufficient to look after five or six of these lines: when he perceives a fish bite he is in no great hurry to haul up his line, but gives him time to be well hooked, and when the fish is hauled up to the surface of the water, he knocks him on the head with a short club provided for that purpose, and afterwards stows his prize away at his leisure. This

is done to prevent (very large) from his canoe in their

They dress their into a kind of very fish, seal, porpoise sometimes they make same method, which ing; though Captain pans, and pointed. The Indians are plant which appears content, however, state, they generally sometimes the inner with a refinous substance a mile and a half were a number of ground; at that distance constructed with such Captain Dixon concludes Indian contrivance were erected by some be satisfied in this city of going to the found it to be a kind may be called so, was fished in the earth.

The manner in which is very remarkable: body, and wrapping into a square box, oblong chest. At certain the body, a thin drove into the earth, the upper ends meet with a kind of rope. About two feet from piece of timber goes to each pole: one which contains the cured with rope: that with two or three times both, which a let into the wood, a hours by way of ad however, are uniform are sometimes fixed side the body; the h in the manner already during their stay had what ceremony was their dead.

Their language is Prince William's Sound uncouth and difficult are in general very clear was some time before known, as they had their poverty. The wind having days they plied to the wind shifted to the for the coast. The a comb, and they had harbour; but as they not attempt to anchor

is done to prevent the halibut (which sometimes are very large) from damaging, or perhaps upsetting his canoe in their dying struggles.

They dress their victuals by putting heated stones into a kind of wicker-basket, amongst pieces of fish, seal, porpoise, &c. and covered up close; sometimes they make broth, and fish-soup by the same method, which they always preferred to boiling; though Captain Dixon gave them some brass pans, and pointed out the mode of using them. The Indians are particularly fond of chewing a plant which appears to be a species of tobacco; not content, however, with chewing it in its simple state, they generally mix lime along with it, and sometimes the inner rind of the pine-tree, together with a resinous substance extracted from it. About a mile and a half from where the ship lay at anchor were a number of white rails, on a level piece of ground; at that distance they appeared to be constructed with such order and regularity, that Captain Dixon concluded them beyond the reach of Indian contrivance, and consequently, that they were erected by some civilized nation: willing to be satisfied in this particular, he took an opportunity of going to the spot, and to his great surprize, found it to be a kind of burying-place, for that it may be called so, where dead bodies are not deposited in the earth.

The manner in which they dispose of their dead is very remarkable: they separate the head from the body, and wrapping them in furs, the head is put into a square box, and the body into a kind of oblong chest. At each end of the chest which contains the body, a thick pole, about ten feet long, is drove into the earth in a slanting position, so that the upper ends meet together, and are firmly lashed with a kind of rope prepared for that purpose. About two feet from the top of this arch, a small piece of timber goes across, and is very neatly fitted to each pole: on this piece of timber the box which contains the head is fixed, and strongly secured with rope: the box is frequently decorated with two or three rows of small shells, and sometimes both, which are very neatly and ingeniously let into the wood, and is painted with various colours by way of additional ornaments; the poles, however, are uniformly painted white. These poles are sometimes fixed upright in the earth, and on each side the body; the head, however, is always secured in the manner already described. The English during their stay had no opportunity of learning what ceremony was made use of in thus depositing their dead.

Their language is quite different from that of Prince William's Sound, or Cook's River. It is very uncouth and difficult to pronounce. These people are in general very close and uncommunicative. It was some time before their scanty stock of furs was known, as they had cunning enough to conceal their poverty. The different sorts of furs purchased here were the sea-otter, land-beaver, and a few cloaks, made from the earless marmot. They were bought with towees, beads, &c. Their large canoes are by no means so neatly constructed as the small one, being formed of one large tree, which is rudely excavated, and reduced to no particular shape; yet large enough to contain twelve or fourteen people.

The captain having got all the furs that were here to be purchased, determined on leaving Port Mulgrave the first opportunity. Accordingly on the 4th of June they carried a small anchor a-head, and warped out of the harbour. Having then made sail they stood out of the sound.

The wind having kept to the eastward for several days they plied to the southward. On the 10th the wind shifted to the S. W. and now they stood in for the coast. The next day they saw Cape Edgecombe, and they had the prospect of an excellent harbour; but as night was far advanced they did not attempt to anchor.

On the 12th the whale-boat was hoisted out, and sent a-head to sound. There was now a large boat full of people seen at a great distance; something like a white flag was hoisted up, and various conjectures were made of the people, some thinking them Russians, others Spaniards. Upon a nearer view the boat proved to be an Indian canoe, and the supposed flag was a tuft of white feathers, which was erected by these Indians on the top of a pole as a signal of friendship and peace. There were some furs purchased of these visitors, who informed the captain that the adjacent harbour was very populous, and that there were a quantity of furs there. The whale-boat returned about six o'clock, when the yaul was hoisted out, and both boats sent a-head for the purpose of towing the vessel into the bay.

They now stood right in for a bay, which they saw to the northward, and which appeared well-sheltered. The whale-boat was sent out again, with Mr. Turner, up the sound to look for a harbour, and the yaul was sent into the bay a-head, with Mr. White, to examine the soundings. Mr. White returned first, and reported that there was excellent anchorage in eight to twelve fathoms, over a sandy bottom. At twelve o'clock they came to anchor at eight fathoms. The whale-boat returned about four in the afternoon, and Mr. Turner reported that there were several good harbours, but that it was in general rocky bottom: the captain deemed it therefore best to keep his present situation. Mr. Turner further reported that he saw a large cave, formed by nature in the side of a mountain, about four miles to the northward of the anchoring-birth: curiosity prompted him to go on shore, in order to examine it, as there appeared something, which, at a distance looked bright and sparkling. On getting into the cave, he found the object which attracted his attention, to be a square box, with a human head in it, deposited in the manner already described at Port Mulgrave: the box was very beautifully ornamented with small shells, and seemed to have been left there recently, being the only one in the place.

This harbour, which was called Norfolk Sound, is a very extensive place; but how far it stretches to the northward is uncertain. The shore here, in common with the rest of the coast, abounds with pines. There is also greater quantities of the witch-hazel here than had been hitherto met with. There were also various kinds of flowering-trees and shrubs; amongst which were wild-gooseberries, currants, and raspberries; wild-parsley is found in great plenty, and they frequently picked great quantities of it, which eat excellently, either as a salad, or boiled among soup. The faranne, or wild-lily-root, grows here in great plenty and perfection. There were very few wild-ducks or geese seen here, and those shy and difficult of approach. Captain Dixon was frequently on shore with his fowling-piece, but he shot any thing that came in his way, indiscriminately; his motive being rather to show the Indians the effects of fire-arms, than to pursue game; and the event shewed that his intention was completely answered. The inhabitants frequently caught halibut: and large quantities of salmon were frequently seen hung up on shore to dry; but they were not willing to sell it, which shews that fish is a principal and favourite article of food here: a few salmon, indeed, were bought, but they were of a very inferior kind to those met with in Cook's River. Fish, however, being the only fresh provision in their power to obtain, the boat was frequently sent out with six hands, to catch fish for the ship's company; and they were always tolerably successful, catching great numbers of fine rock-fish, and some hake, but very few halibut. There are great quantities of muscles in some parts of the sound; together with a few crabs, star-fish, &c.

On the 15th a number of canoes, full of inhabitants, came along-side: after a considerable time spent in singing, a brisk trade commenced, and they bought a number of sea-otter skins. The people seemed far more lively and alert, than those they had left at Port Mulgrave; and from every appearance, they had reason to expect an excellent trade at this place. Towees were the article of traffic held in the first estimation by the natives; but they always refused small ones, wanting them in general from eight to fourteen inches long. Besides these, they traded with pewter basons, hatchets, howls, buckles, rings, &c. Of these, the basons were best liked; for though the hatchets and howls were obviously the best tools these people could possibly have had, yet they were only taken in exchange for furs of inferior value. Beads of every sort were constantly refused with contempt, when offered by way of barter, and would scarcely be accepted of as presents. Amongst the people who came to trade, was an old man, who seemed remarkably intelligent: he gave them to understand, that a good while ago there had been two vessels at anchor near this place, one of which was considerably larger than the *Queen Charlotte*; that they carried a great number of guns, and that the people resembled them in colour and dress. He shewed Captain Dixon a white shirt they had given him, and which he seemed to regard as a great curiosity: on examining it, the captain found it to be made after the Spanish fashion, and immediately judged these vessels described by the Indian to be Spaniards, who were on this coast in 1775. Though trade principally engaged Captain Dixon's attention, yet a variety of necessary employments were carried on, and parties were frequently sent on shore to cut fire-wood, fill water, &c. &c.

Though the natives were very civil at first, and suffered the people to follow their various employments unmolested; yet they soon grew very troublesome, attempting to pick their pockets, and even to steal their saws and axes, in the most open and daring manner: indeed they could scarcely be restrained from these proceedings without violence; which it was neither the captain's interest or inclination to offer, if it could possibly be avoided. Luckily, the natives had frequently seen him shoot birds, and as the people went on shore well armed, the sight of a few muskets kept the Indians in a kind of awe.

The number of inhabitants were estimated at four hundred and fifty, including women and children. Their make, shape, and features, are pretty much the same with those at Port Mulgrave. Their faces are also painted with a variety of colours. The women ornament, or rather distort their lips, in the same manner as has already been described; and it should seem, that the female who is ornamented with the largest piece of wood, is most respected by her friends, and the community in general. This curious operation of cutting the under-lip of the females never takes place during their infancy, but seems confined to a peculiar period of life. When the girls arrive at the age of fourteen or fifteen, the center of the under-lip, in the thick part of the mouth, is simply perforated, and a piece of copper-wire introduced to prevent the aperture from closing: the aperture afterwards is lengthened from time to time in a line parallel with the mouth, and the wooden ornaments are enlarged in proportion, till they are frequently increased to three, and even four inches in length, and nearly as wide; but this generally happens when the matron is advanced in years, and consequently the muscles are relaxed. Their traffic, and indeed all their concerns, appear to be conducted with great order and regularity: they constantly came along-side to trade at day-light in the morning; and never failed to spend more than half an hour in singing, before the traffic commenced. The chief of a tribe has the entire ma-

nagement of all the trade belonging to his people, and takes infinite pains to dispose of their furs advantageously. Should a different tribe come along-side to trade whilst he is engaged in traffic, they wait with patience till he has done; and if, in their opinion, he has made a good market, they frequently employ him to sell their skins; sometimes, indeed, they are jealous of each other, and use every precaution to prevent their neighbours from observing what articles they obtain in exchange for their commodities. About twelve o'clock they constantly left the ship and went on shore, where they staid about an hour, which time was taken up in eating. This evidently shews that they have at least one fixed meal in the day, and that it is regulated by the sun: they likewise frequently left the ship about four in the afternoon; but this time was not so exactly observed as at noon. When the traffic of the day is pretty well over they begin to sing, and never leave off till the approach of night: thus beginning and ending the day in the same manner. One peculiar custom is practised by the traders here, totally different from that of any other part of the coast: the moment a chief has concluded a bargain, he repeats the word *Coo Coo* thrice, with quickness, and is immediately answered by all the people in his canoe, with the word *Wboab*, pronounced in a tone of exclamation, but with greater or less energy, in proportion as the bargain he has made is approved of. One of the chiefs, who came one day with some furs, happening to call his eyes on a piece of Sandwich Island cloth, which hung up in the shrouds to dry, became very importunate to have it given him. The man to whom the cloth belonged parted with it very willingly, and the Indian was perfectly overjoyed with his present. After selling what furs he had brought with great dispatch, he immediately left the ship and paddled on shore, without singing a parting song, as is generally the custom.

Early the next morning he appeared along side dressed in a coat made of the Sandwich Island cloth, given him the day before, and cut exactly in the form of their skin-coats, which greatly resembled a waggoner's frock, except the collar and wrist-bands. The Indian was very proud of his newly-acquired dress; and the captain greatly pleased with this proof of these people's ingenuity and dispatch. The coat fitted exceedingly well; the seams were sewed with all the strength the cloth would admit of, and with a degree of neatness equal to that of an English mantua-maker.

On their endeavouring to get the meaning of some words in the Indian language from one of the chiefs, and pointing to the sun, he gave them to understand, that notwithstanding their apparent superiority, in possessing various useful articles which the Indians did not, yet that their origin was the same; that they both came from above, and that the sun animated and kept alive every creature in the universe. This man had, no doubt, some idea of a Supreme Being; and if the probability of their morning and evening hymn, being intended as a kind of adoration to that Supreme Being, be admitted, it will serve to give no very inadequate idea of their religion. Besides their ordinary dress, the natives at this place have a peculiar kind of cloaks, made purposely to defend themselves from the inclemency of the weather; they appear to be made of reeds, sewed very closely together, and are exactly the same with those worn by the inhabitants of New Zealand. The furs purchased at this place were about 200 excellent sea-otter skins, a good quantity of inferior pieces of sea-otter, together with a large parcel of indifferent pieces and slips; about 100 good seals, and a great number of fine beaver tails.

On the 22d Capt. Dixon determined to leave the harbour the first opportunity; and the next day, a light breeze coming on from the westward, they weighed and got under sail. It was the captain's intention to keep well in with the land all along the coast,

coast, in order to examine every place where there was a probability of finding inhabitants. At six o'clock, a fine entrance presenting itself to the E. N. E. they stood in for it, and soon afterwards came to anchor in a secure harbour, completely land-locked, and within musket-shot of the shore. Though this appeared a most eligible spot for the natives to take up their abode in, yet no people were to be seen; on this a four-pounder was fired in the evening, in order to excite the curiosity of the inhabitants, if there should be any within hearing.

On the 24th Capt. Dixon went in the whale-boat to look for inhabitants in the adjacent creeks and harbours. A passage up a corner of the bay, to the eastward of their station, first engaged his attention; but he returned without success. The creek run a considerable distance inland, and terminated at the foot of a mountain, from whence it received a copious supply of fresh water. Near this place were the vestiges of an Indian hut, which seemed to have been recently taken away, and probably had been the residence of some hunting party. Various kinds of flowers and flowering shrubs were springing up in the valley near the rivulet, and though no inhabitants were found here, yet the place seems peculiarly eligible for a summer residence, and the more so as there is a probability of meeting with fine salmon in due season. The captain called this harbour Port Banks, in honour of Sir Joseph Banks. The land to the northward and southward rises to an elevation sufficient to convey every idea of winter; and though its sides are perpetually covered with snow, yet the numerous pines, which ever and anon pop out their bushy heads, entirely divest it of that dreary and horrid cast with the barren mountains to the N. W. of Cook's River. To the eastward, the land is considerably lower, and the pines appear to grow in the most regular and exact order; these, together with the bush-woods and shrubs on the surrounding beaches, form a most beautiful contrast to the higher land, and render the appearance of the whole both pleasing and romantic.

On the 26th they weighed anchor, and as it was calm the boats were sent a-head to tow the vessel out of the bay. They now stood out of the harbour, keeping close in with the coast.

On the 27th they saw land, which had the appearance of two rocky islands, bearing N. E. They steered directly for these, and on approaching the land flattered themselves with the hope of meeting a fine bay; but Mr. Turner having been dispatched in the whale-boat to examine it, on his return declared that the greatest part thereof was shoal water, and that there was no convenient place for anchorage. The weather was now thick and hazy, and there were frequent squalls. They kept standing to the southward. On the 28th they saw land: from this time they plied occasionally, the weather being still hazy. On the 30th they saw an island to the northward, which bore from N. E. by E. to E. by N. about four leagues distant. On the 1st of July, about noon, they saw a deep bay, which bore N. E. by E. the extreme point to the northward N. E. by N. and the easternmost land S. E. about seven leagues distant. They made every effort to reach this bay, but without effect; however they stood in for the land close by the wind, with their starboard tacks on board.

About seven o'clock several canoes full of Indians came along-side the vessel. These displayed a quantity of excellent beaver cloaks, but which at first they did not seem inclined to dispose of, though offered various articles in exchange by the English. They were so attentive in admiring the ship, that they could not listen to any proposals; but when their curiosity was gratified they then began to trade, and the captain, for the value of a few towecs, was soon in possession of all their skins, cloaks, &c. From these people the captain understood that the island was very thickly inhabited, and that there were plenty of furs to be had on shore.

No. 10.

The captain accordingly made for shore, and when within a mile thereof he perceived the village where these people dwelt: it consisted of about six huts, which were regularly built, and pleasantly situated; but the shore being rocky, afforded no place for anchorage. They now advanced towards a promising bay, which opened to the eastward; but could not possibly make it, on account of the wind and tide: accordingly, they hove-to, for the sake of trading with the natives, who by this time were assembled about the vessel, in ten canoes, to the number of about 120. Several beautiful sea-otter, and other excellent skins, were bought; and as all the natives were eager in selling their goods, a brisk trade was carried on. About 300 sea-otter skins were purchased in one hour. As soon as business was over, they made sail, and stood out for the bay, with the hopes of making the harbour the next morning.

On the 3d the same Indians repeated their visit, but they had nothing now to dispose of.

On the 5th, a fresh tribe of Indians came along-side, of whom were purchased a number of excellent cloaks. These people bargained for pewter basons, brass pans, tin kettles, &c. but the other tribe preferred towecs.

Capt. Dixon now judged it more advantageous to ply along-shore occasionally than come to anchor, especially as he had every reason to conclude that the natives did not live together in one social community, but were scattered about in different tribes, and probably at enmity with each other. The Indians did not leave the ship till evening came on, and then promised to return the next morning with more furs; which they did, and which they disposed of with the same facility as before. The furs in each canoe seemed to be a distinct property, and the people were particularly careful to prevent their neighbours from seeing what articles they bartered for. Meeting now with a fresh tribe of Indians, Capt. Dixon was convinced that coasting along shore to the eastward was attended with better and speedier success than lying at anchor could possibly be.

On the 7th, being close in-shore, a number of canoes were seen putting off; on which they shortened sail, and lay-to for them. The place these people came from had a very singular appearance, and on examining it narrowly, it was found that they lived in a very large hut, built on a small island, and well fortified after the manner of an hippah, on which account this place was distinguished by the name of Hippah Island. The tribe who inhabit this hippah seem well defended by nature from any sudden assault of their enemies; for the ascent to it from the beach is steep, and difficult of access; and the other sides are well barricaded with pines and brush-wood. Notwithstanding which, they have been at infinite pains, in raising additional fences of rails and boards; so that they must surely repel any tribe who should dare to attack their fortification. A number of circumstances had occurred, since their first trading in Cloak Bay, which served to shew that the inhabitants at this place were of a more savage disposition, and had less intercourse with each other, than any Indians met with on the coast; and there was great reason to suspect that they were cannibals in some degree. Capt. Dixon no sooner saw the fortified hut just mentioned, than this suspicion was strengthened, as it was, he said, built exactly on the plan of the hippah of the savages at New Zealand. The people, on coming along-side, traded very quietly, and strongly importuned those of the Queen Charlotte to go on shore; at the same time giving them to understand, (pointing towards the east) that if they visited that part of the coast, the inhabitants there would cut off their heads.

A number of excellent cloaks, and some good skins, were purchased from this party, which consisted of not more than 30 people, and as they were well armed with knives and spears, it is probable

they had also a good quantity of oil, in bladders of various sizes, from a pint to a gallon: this was a most excellent sort for the lamp, was perfectly sweet, and chiefly collected from the fat of animals. Towards evening, these numerous tribes of Indians having disposed of every saleable article, they left the ship and paddled for the shore.

On the 30th eight canoes came off to the ship, but they brought very few furs, and those of an inferior quality, intimating at the same time that their stock was nearly exhausted. Some of them had been out on a fishing party, and caught a number of halibut, which proved a seasonable refreshment to the ship's company.

Hitherto all the people that had been met with at these islands, though evidently of a savage disposition, had behaved in a quiet, orderly manner; but this evening they gave a convincing proof of their mischievous disposition, and that in a manner which shewed a considerable degree of cunning. The people who had got the halibut to sell artfully prolonged their traffic more than was customary, and endeavoured by various means to engage the attention of the people on board. In the mean time several canoes paddled sily a-stern, and seeing some skins nailed against one of the cabin-windows, one of the Indians thrust his spear through it, in order to steal the furs, but perceiving the noise alarmed those on deck, they paddled away with precipitation: Capt. Dixon, however, willing to make them sensible that he was able to punish attempts of this sort, even at a distance, ordered several muskets to be fired after them, but did not perceive that they were attended with any fatal effects.

As no further trade was expected from this part, Capt. Dixon deemed it expedient to make for King George's Sound, especially as the time was nearly at hand when he expected to join Captain Portlock at that place.

On the 1st of August they were visited by a canoe which contained fourteen people: they had nothing to sell, and came merely on purpose to inform the captain that one of their companions was dead, in consequence of a wound he received when the muskets were fired; but notwithstanding they entertained no enmity against the English, and were still willing to be on good terms with them. They did not betray the least apprehension when they came along-side, but on the contrary, were very strenuous in assuring the English that they were not at variance with them.

On the 2d Cape St. James bore S. S. W. about four leagues distant. In the afternoon at five o'clock the rocks off the cape bore S. 36 deg. W. about two leagues distant. On account of a heavy swell proceeding from the S. E. attended with a calm, they were for some time in a critical situation, as the weather was drifting directly upon the rocks; and what still added to their danger, was the extreme haziness of the weather, which prevented them from discerning any object, even at the smallest distance. In the course of four hours the fog very fortunately dispersed, and the swell abated: the rocks bearing S. W. were then not quite a mile distant. The boats were now sent a-head to tow the vessel: they had soundings now from 75 to 100 fathoms over a rocky bottom: afterwards finding no bottom with a line of 120 fathoms, they concluded themselves safely over the rocks. They now stood on for King George's Sound.

On the 3d the boats were taken in, and the people permitted to rest. In an hour after the watch being alarmed with the noise of the surf beating against the rocks, the people were instantly called up, and the boats hoisted out again, to tow the vessel a-head: the weather was still hazy. In the evening they were clear of all danger, Cape St. James bearing W. half S. about five leagues distant.

The weather continued thick and foggy for several days. On the 6th Woody Point was seen bearing

N. W. by W. about four leagues distant, and a split rock off the point N. 28 deg. W.

On the 8th they saw a sail, and presently after a smaller vessel in company, which they imagined to be the King George and her long-boat. However, on coming up with them, they proved to be the Prince of Wales and Princess Royal, two vessels from London, which had been fitted out by the proprietors of the King George and the Queen Charlotte. Captain Dixon understanding from these vessels, which had been in King George's Sound, that the King George was not arrived there, deemed it unnecessary to make the Sound, and therefore determined on proceeding to Sandwich Islands.

On the 9th they took leave of the Prince of Wales and Princess Royal, and shaped a course for their next destination.

We shall conclude this chapter with some general observations which were made by the Queen Charlotte, relative to the Coast of America, and which, in addition to what has been said, and will be introduced on future occasions, must give the reader a perfect and satisfactory idea of the place.

This extensive country exhibits upon the whole, a picture of a large continued forest. It is covered with pines of different species, intermixed with alder, birch, witch-hazel, &c. besides various kinds of brush-wood: and the valleys and low grounds, which are exposed to the sun, and sheltered from the wind, afford wild currants, gooseberries, raspberries, and various other flowery shrubs. The soil on the hills is a kind of compost, consisting of rotten mofs and old decayed trees. This is frequently washed down into the vallies by the sudden melting of the snow, and there incorporating with a light sand, forms a soil in which most of the English garden productions might be cultivated with success.

It is impossible to ascertain the number of inhabitants the coast, from Cook's River to King George's Sound, may contain; but from a moderate computation, there cannot be less than ten thousand; indeed, appearances might warrant the conjecture of there being more, as the women appear very prolific, and the people are totally free from that long catalogue of diseases, which luxury and intemperance have introduced amongst more civilized nations. But then it must be remembered, that neighbouring tribes are generally at war with each other; and these commotions, both from the nature of their weapons, and the savage disposition of the people, must be attended with fatal consequences; besides, there is reason to suppose, that numbers are yearly lost at sea, as they go out to a very considerable distance from the land on fishing-parties, and should bad weather suddenly come on, it is impossible for their canoes to live. These circumstances certainly tend to depopulate the country, and in some measure account for its being so thinly inhabited.

The hair of both sexes is long and black, and would be an ornament to them, were it not for the large quantities of grease and red ochre constantly rubbed into it, which not only gives it a disgusting appearance, but affords a never-failing harbour for vermin. Sometimes, indeed, the women keep their hair in decent order, parting it from the forehead to the crown, and tying it behind after the manner of a club. The young men have no beards; but this does not arise from a natural want of hair on that part, for the old men had beards all over the chin, and some of them had whiskers on each side the upper-lip. As this supposed defect amongst the natives of America has occasioned much speculative enquiry amongst the learned and ingenious, every opportunity was taken of learning how it was occasioned; and they were given to understand, that the young men got rid of their beards by plucking them out, but as they advance in years the hair is suffered to grow. It might be imagined, that the children of these savages would enjoy the free and unrestrained

unrestrained use of their limbs from their earliest infancy: this, however, is not altogether the case. Three pieces of bark are fastened together, so as to form a kind of chair; the infant after being wrapped in furs, is put into this chair, and lashed so close, that it cannot alter its posture even with struggling; and the chair is so contrived, that when a mother wants to feed her child, or give it the breast, there is no occasion to release the infant from its shackles. Soft moss is used by the Indian nurse to keep her child clean; but little regard is paid to this article, and the poor infants are often terribly exoriated; and this neglect is apparent even in children of six or seven years old.

Ornaments seem to differ in particular places, more than dress. The aperture, or second mouth above the chin, seems confined to the men of Cook's River and Prince William's Sound; whilst the wooden ornament in the under-lip is worn by the women only, in that part of the coast from Port Mulgrave to Queen Charlotte's Islands. Besides the ornaments already mentioned, the Indians are very fond of masks or visors, and various kinds of caps, all which are painted with different devices; such as birds, beasts, fishes, and sometimes representations of the human face; they have likewise many of these devices carved in wood, and some of them are far from being ill executed. These curiosities are greatly valued, and are carefully packed in neat square boxes, that they may the more conveniently be carried about. Whenever any large party came to trade, these treasures were first produced, and the principal persons dressed out in all their finery, before the singing commenced. In addition to this, the chief (who always conducts this vocal concert) puts on a large coat made of the elk skin, tanned, round the lower part of which is one or sometimes two rows of dried berries, or the beaks of birds, which make a rattling noise whenever he moves. In his hand he has a rattle, or more commonly a contrivance to answer the same end, which is of a circular form, about nine inches in diameter, and made of three small sticks bent round at different distances from each other; great numbers of birds' beaks and dried berries are tied to this curious instrument, which is shook by the chief with great glee, and in his opinion makes no small addition to the concert. Their songs generally consist of several stanzas; to each of which is added a chorus. The beginning of each stanza is given out by the chief alone; after which both men and women join, and sing in octaves, beating time regularly with their hands or paddles: mean while the chief shakes his rattle, and makes a thousand ridiculous gesticulations, singing at intervals in different notes from the rest; and this mirth generally continues near half an hour, without intermission.

It is hard to say whether or no they make use of

any hieroglyphics, to perpetuate the memory of events; but their numerous drawings of birds and fishes, and more especially their carved representations of animals and human faces, warrant a supposition of the kind. Many of these carvings are well proportioned, and executed with a considerable degree of ingenuity, which appears rather extraordinary amongst a people so remote from civilized refinement.

It is unknown when iron was introduced on this coast, but it must doubtless be a considerable time ago, and their implements certainly are not of English manufacture; so that there is little doubt of their being obtained from the Russians. Their knives are so very thin, that they bend them into a variety of forms, which answer their every purpose nearly as well as if they had recourse to a carpenter's tool-chest.

Among their manufactures, there is a kind of variegated blanket, or cloak, something like the English horse-cloths; which do not appear to be woven, but made entirely by hand, and are neatly finished. These cloaks are made of wool, collected from the skins of beasts killed in the chase; they are held in great estimation, and only worn on extraordinary occasions. Besides the skin-coats, worn in common, they have large cloaks purposely for wear, made of the elk skin, tanned, and worn double, sometimes three-fold.

These people, notwithstanding their uncultivated state, have a notion of gaming. The gaming implements, which were seen, consisted of 52 small round bits of wood, differently marked with red paint, and about three inches long: two persons play with these, and the game consists in putting them in particular places. One man at Port Mulgrave lost his spear, knife, and several towees, in about an hour: notwithstanding, the unfortunate gamester was very patient and quiet.

They calculate time by the moons, and remember extraordinary events for a generation. Two or three different languages are spoken on the coast; but from the information gained from the old chief at Queen Charlotte's Island, it is supposed that they are not generally understood. Though every tribe at Queen Charlotte's Island is governed by its respective chief, yet they are divided into families, which seem to have regulations of their own. The chief usually trades for the whole tribe; but upon any disagreement, every family claim a right to dispose of their own furs; which the chief immediately assents to. Whether the chief is allowed any thing for his trouble, is unknown.

Some of the natives were very jealous of their wives, and would seldom permit them to come on board: other husbands were so kind, that they obliged their ladies to accept of the least invitation. The women are particularly fond of their children.

CHAPTER IV.

A Number of Canoes met—A brisk Trade—An audacious Thief punished—Ship's Company afflicted with Scurvy—Whahoo seen—Visited by their old Acquaintance—Their Friendship—Anecdotes—Remarks—Additional Observations on the People—Proceed for China—Pass three Islands—In sight of the Lima Islands—Anchor in Mas Roads—Proceed to Wampoa—Transactions—Meet the King George.

AUGUST 9th Woody Point bore N. by E. seven leagues distant: from this to the 12th the weather was tolerably fine, and they had a smart breeze at N. W. After this the winds were changeable, and there were frequent calms.

Sept. 2d they steered due west, in order to make Owbyhee, which they saw on the 5th, bearing from S. S. W. to W. one-fourth N. about 14 leagues distant.

On the 6th they bore away to the westward, where they met a number of canoes coming from shore: accordingly they hoove-to, and purchased several small hogs, and a quantity of potatoes.

In about three hours the canoes increased, and a brisk trade was carried on. Several of the Indians, both for the sake of plunder, and to gratify their curiosity, climbed up the vessel's side: one of them, whose audacity in thieving was remarkable, seized a poker which belonged to the armourer's forge, and jumped overboard. He swam away with great exultation, bearing off his prize, notwithstanding it was repeatedly demanded: the captain immediately ordered his men to fire at the offender, conscious that if he over-looked such an outrageous theft, the rest of the natives would be encouraged to act in the same manner, and it would be impos-

sible to withstand. The canoes were discharged, and the men to bring him further harm should be brought; Surgeon under-lip was few struck his under-lip the surgeon for a towee captain for a towee affair did not in for they still continue happened.

The captain now in order to procureables, &c. for he did anchor at this island.

sible to withstand their depredations. Several muskets were discharged, and the culprit was severely wounded. The captain now intreated his countrymen to bring him on board, assuring them that no further harm should be offered him: when he was brought, Surgeon Lauder dressed his wounds. His under-lip was severely lacerated by a ball which struck his under-jaw: he seemed very thankful to the surgeon for his attention, and petitioned the captain for a towee, which was given to him. This affair did not in the least intimidate the Indians, for they still continued their trade as if nothing had happened.

The captain now plied off and on occasionally, in order to procure a good supply of hogs, vegetables, &c. for he did not think it worth his while to anchor at this island.

Several of the ship's company at this time were very much afflicted with the scurvy: there was scarcely any person without some touches thereof, and many were laid up with it. Happy it was that they had such an extraordinary good passage from the American Coast to Owhyhee, it being reckoned a very good passage in five weeks, and this was performed in less than a month, for had they been any longer delayed, there is no doubt but several of the indisposed would have perished. However, the seasonable supply of fresh pork, vegetables, &c. did them considerable service. It was supposed that this scorbutic complaint was in a great measure accelerated by the vast quantities of halibut, which the people salted while on the coast, and always eat (at no kind of allowance) in preference to the ship's beef and pork.

On the 7th they kept plying occasionally as before, by which means they procured an ample supply of provisions by the evening.

On the 8th they stood along the shore for the westernmost point of the island, which was about five leagues distant, bearing south. They were followed by a number of canoes, which for the sake of a fresh steady breeze, they left behind. At one o'clock they hove-to, being well in with the S. W. point: the people took this opportunity of trading for curiosities: they also purchased a quantity of line for the ship's use. In two hours after they made sail, and bore up for Whaloo, where they intended to take in wood and water. At six o'clock the small island Tahoura bore N. 60 deg. W. about eight leagues distant. At noon the W. end of Ranai bore N. 10 deg. W. about 10 miles distant: several canoes came from Ranai, of whom they purchased some fishing-lines. On account of some heavy squalls in the evening, they were obliged to close-reef the top-sails, and single-reef the main-sail: at night the weather grew moderate.

On the 10th Whaloo was seen right a-head, and at twelve o'clock they came-to with the best bower, in eight and a half fathom water, over a sandy bottom interspersed with rocks. They did not mean to stay any longer here than was barely necessary to procure wood and water. Several canoes came along-side, and some of the natives were sent on shore for water; but there was very little brought, as every thing was tabooed by the king. They were visited by additional canoes in the evening, but they consulted chiefly of females, who became very fond of the English, and granted them favours as before. The people were now employed in getting the rigging fore and aft.

The next day Abbenooe came on board, to inform his old friends that the king would shortly pay them a visit, and afterwards they should be supplied with water and provisions.

The king Tahietterre accordingly came about noon, with his nephew Myaro, and the usual number of attendants: his majesty brought a fine hog, and some cocoa-nuts, as a present; and in return he received from the captain some towees, &c. &c. Tahietterre enquired after Captain Portlock, and

No. 10.

appeared very anxious to see him again; Myaro and some of the chiefs also enquired after Piapia, whom they left at Attoui.

As soon as the king went on shore, the natives were sent with a considerable quantity of water, and the next day they supplied them with wood, fruit, &c. they also brought a few hogs, vegetables, &c. The king and his attendants repeated their visit about noon, bringing and receiving presents as before.

Having now completed their wooding and watering business, they weighed anchor on the 13th, and made sail to Attoui. At this time Abbenooe and his attendants were on board, and as they were not willing to take the old man to Attoui, they made several boards in the bay. However in a few hours the priest's canoe came along-side, and afterwards another with the king and his retinue. His majesty now came on board, and expressed much concern at their going away so soon: he observed that they were expeditiously supplied with wood and water in consequence of his commands, and that Captain Portlock (whom he called Po-pote) should meet with the same attention whenever he arrived. The captain, in order to shew himself sensible of his goodness, presented his majesty with a few axes and saws, which were highly acceptable. The king was much delighted at seeing the vessel under sail, and admired greatly the activity of the sailors. When nearly abreast Whit-ti-tee Bay (which was the king's residence), he took his leave, with many professions of friendship.

On the 15th they saw the king's Mount, Attoui, bearing N. W. by W. half W. nine leagues distant. The next day they were within two miles of the east side of Attoui: they were now visited by a great number of canoes, which brought them potatoes, taro, &c. which were purchased for nails. Several here were so rejoiced to see their old acquaintance, that they could not refrain from tears. What a picture of true friendship!

No base dissimulation sways the heart,
Nor know they aught of wheedling flattery's art,
Still foes or friends, they are as they have been,
And nothing say, but what they really mean!

The captain now heard that Abbenooe and his son were on shore at Attoui, and having come-to with the small bower in 19 fathom water, over a sandy bottom, about two miles to the eastward of their former situation. They were visited by the son Tyheera, who reported that a vessel had been there since the Queen Charlotte left Attoui, by whom they were used very ill, the captain thereof having killed several of his countrymen; on which account, his father, not knowing the Queen Charlotte at so great a distance, was afraid to leave the shore. Upon Captain Dixon's declaring that no trade should be carried on till Abbenooe was present, the son dispatched a canoe for his father, and hoisted a signal to assure him all was well. In about half an hour the old priest arrived, and expressed much happiness on seeing his friends. He regretted very much the absence of Captain Portlock.

On the 17th they were surrounded with canoes, who supplied them with a great quantity of fine hogs and vegetables. The next day they received visits from several chiefs. Due notice was given of the king's visit, who came on board in the forenoon, with his daughter and two nieces, his attendants singing all the way.

Tiaao was greatly pleased to see them again, and enquired particularly after Po-pote. He seemed solicitous to accommodate them with every thing the island afforded; and, indeed, all the chiefs vied with each other in supplying their various wants. Amongst the many instances of kindness and good-natured attention they met with at this time from the chiefs in general, an action of No-ho-in-ti-lac-tee must not be omitted, as it does him the greatest

* F f honour,

honour, and would reflect credit even on a person of education and refined sensibility. No-ho-mi-ti-hee-tee had been often on board when they were last at Attoui, and by that means was personally acquainted with all the people: being naturally curious and inquisitive, he now took an opportunity of going amongst them, to ask a number of questions about the voyage. On going down between decks, he met with the carpenter, who had been troubled with a lingering disorder for a considerable time, and at present was very weak and poorly: his pale countenance and emaciated figure affected poor No-ho-mi-ti-hee-tee very sensibly; a tear of pity stole unheeded down his cheek, and he began to enquire about his complaint in a tone of tenderness and compassion; seeing him very weak and infirm, he gently chafed and pressed the sinews and muscles of his legs and thighs, and gave him all the consolation in his power: presently afterwards he came upon deck, called his canoe, and went on shore in a hurry, without taking leave of any person on the quarter-deck, which was contrary to his usual custom; but he returned very shortly, bringing a fine fowl along with him, which he immediately carried down to the carpenter; told him to have it dressed immediately, and he hoped it would make him better in a day or two. No-ho-mi-ti-hee-tee's father having been plundered by the king's messenger of the valuables which his son gave him, as before mentioned; it is necessary here to observe that the culprit was afterwards put to death, by order of the king, upon a complaint being made by the chief.

At noon a fresh breeze springing up from the northward, Captain Dixon wished to embrace this opportunity of weighing anchor; but on looking over his stock of vegetables, it was judged necessary to procure a further supply. No sooner were the king and chiefs informed of this circumstance than they all went on shore, promising to return shortly with great plenty of taro; accordingly, by three o'clock they all returned, each bringing a large double canoe, loaded with taro and sugar-cane, so that now they were completely furnished with every necessary article the island afforded. The expedition and dispatch with which this last taro was brought, and their free and generous manner in bringing it on board, both surprised and pleased Captain Dixon, and he was not slow in making suitable returns. To the king he gave a *pabou*, a large baize cloak edged with ribbon, and a very large towie; which pleased him so much, that he began to think himself the greatest monarch in the universe. The other chiefs were rewarded with towies, axes, and saws, entirely to their satisfaction. The ladies too (of whom they had no small number on board) were liberally ornamented with buttons and beads; in short, all parties were perfectly pleased, and were profuse in their professions of kindness and acknowledgment.

Notwithstanding all that has been said relative to this island and the inhabitants, we think it necessary here to insert some occasional remarks which were made by Captain Dixon and his company. He informs us, that these people, in their temper and disposition, are harmless, inoffensive, and friendly; not subject to passion, or easily provoked: in their manners they are lively and cheerful, ever ready to render any little service in their power even to strangers, and pursue every thing they undertake with unremitting diligence and application. When attached to any person, they are steady in their friendship; and are not easily tempted to neglect the interest of a person for whom they have once professed a regard. Their language is soft, smooth, and abounds with vowels: in their conversation with each other, it appears very copious; and they speak with great volubility, when conversing with each other; but when conversing with their visitors they only make use of those words which are most ex-

pressive and significant. The Sandwich Islanders, in general, are about the middle size; their limbs straight, and well proportioned. Some of the chiefs, and particularly the women, are inclined to corpulency, and their skin is smoother and softer than those of the common rank; but this is owing to want of exercise, and an unlimited indulgence in the article of food. They are in general of a nut colour, though some of the women are fairer, and their hands and fingers are remarkably small and delicate. Both sexes go naked, except about the waist: the men wear a narrow piece of cloth, called a *marow*, barely sufficient to cover the adjacent parts. The *abou*, or women's dress, is much larger, and generally reaches from the waist to the middle of the thigh. The beards of the men are suffered to grow; their hair is cut close on each side of the head, but grows long from the forehead to the back of the neck, somewhat resembling an helmet. The women cut theirs quite close behind, and on the top of the head: the front is turned up in the form of a toupee, and is frequently daubed with cocoa-nut oil, and lime made from shells, which often gives it a sandy, disagreeable colour. Sometimes, by way of ornament, they wear a wreath of flowers, fancifully disposed, about the head; instead of a bracelet, a shell is tied round the wrist, and a fondness for this ornament has rendered buttons so much esteemed by these gay damsels in general; the neck too is decorated with various sorts of shells, fastened on strings after the manner of a necklace. But the most beautiful ornament worn by the women is a necklace, or *arai*, made from the variegated feathers of the humming-bird, which are fixed on strings so regular and even as to have a surface equally smooth as velvet; and the rich colour of the feathers gives it an appearance equally rich and elegant. The caps and cloaks worn by the men are still superior in beauty and elegance. The cloaks are, in general, about the size of those worn by the Spaniards: the ground is net-work, and the feathers are sewed on in alternate squares, or triangular forms of red and yellow, which have a most brilliant appearance. The ground of the caps is wicker-work, in the form of a helmet; the elevated part, from the forehead to the hind part of the neck, is about a hand's breadth, and generally covered with yellow feathers; the sides of the cap with red. This cap, together with the cloak, has an appearance equally splendid, if not superior, to any scarlet and gold whatever. These truly elegant ornaments are scarce, and only possessed by chiefs of high rank, who wear them on extraordinary occasions. There are cloaks of an inferior kind, which have only a narrow border of red and yellow feathers, the rest being covered with feathers of the tropic and man of war bird. Nor are these caps and cloaks, though confessedly elegant in a superior degree, the only proofs of invention and ingenuity shewn by these people in matters of ornament. Their mats are made with a degree of neatness equal to any of European manufacture, and prettily diversified with a variety of figures stained with red. Those used to sleep on are plain, and of a coarser kind, but made with an equal degree of neatness and regularity. Cloth is another article which gives these Indians equal scope for fancy and invention. It is made from the Chinese paper-mulberry tree, and when wet (it being of a soft malleable substance) is beat out with small square pieces of wood, from 12 to 18 inches wide, and afterwards stamped with various colours, and a diversity of patterns, the neatness and elegance of which would not disgrace the window of a London linen-draper. The different colours with which their cloth is stamped are extracted from vegetables found in the woods. There is another kind of cloth, much finer than the above, and beat out to a greater extent; it is of a white colour, and frequently wore by the Aree women, in addition to the

the *abou*. Fans are used neatly woven; the and the handle frequently flaps are very c with alternate pieces distance has the upper part, or flap bird. the ahou. Fans and fly-flaps are used by both sexes. The fans are usually made of the cocoa-nut fibres, neatly wove; the mounting is of a square form, and the handle frequently decorated with hair. The fly-flaps are very curious; the handles are decorated with alternate pieces of wood and bone, which at a distance has the appearance of finished work: the upper part, or flap, is the feathers of the man of war bird. Fish-hooks are made of the pearl oyster-shell, and so contrived as to serve for both hook and bait: those intended for sharks are considerably larger, and made of wood. The form of their gourds or calabashes is so very various, that they certainly make use of it to give them different shapes: some are of a globular form, with a long narrow neck like a bottle; others are tall and circular, but of equal width from top to bottom; others again, though narrower towards the mouth, yet are sufficiently wide to admit the hand: many of these are very prettily stained with undulated lines, which at a distance appear like paint. Their houses greatly resemble an hay-stack in shape, and are neatly thatched with flags or rushes: the door-place is so very low, that they are obliged to enter almost double. They have no better contrivance for a door, than a few temporary boards. The inside of their dwellings are kept neat and clean; a coarse mat is spread on the floor, and as they have no separate apartments, that part of the room appropriated for repose is rather elevated, and covered with mats of a finer sort. The household utensils are placed on a wooden bench, and consist of gourds and wooden bowls and dishes, which, in general, constitute the whole of their furniture. Those who are possessed of hogs or fowls keep them in small out-houses appropriated for that purpose. The method universally practised to dress their victuals is baking, which is done in the following manner: a hole is dug in the ground, sufficiently deep to answer the purpose of an oven; at the bottom of which a number of hot stones are laid; these being covered with leaves, whatever they want to dress is laid on them; more leaves are now laid on, and another layer of hot stones being added, the oven is covered. If a hog is baked, the belly is always filled with hot stones. Custom has rendered this mode of dressing victuals so very familiar, that they can tell the exact time when any thing is sufficiently done; and in baking yams or taro they far exceeded them on board the *Charlotte*. They also dress the young tops of taro, so as to be an excellent substitute for greens, though on board they could never boil them so as to eat palatably. The canoes are not only furnished with neatness and ingenuity, but at the same time are lasting proofs of perseverance and industry. They are made of a single tree, and are from 12 to 40 or 50 feet long. The hollowing these trees, and bringing each end to a proper point, with their rude unfañioned tools, must be a work of time and unremitting attention: they are in general about an inch thick, and heightened with additional boards neatly fitted round the sides. The single canoes are steered by an outrigger, and the double ones are held together by semicircular poles, firmly lashed to each part of the canoe; over these, and parallel with the canoe, is a kind of platform, which serves to carry hogs, vegetables, or any thing they want to convey from one place to another, and at the same time is a convenient seat for the principal persons of both sexes, whilst the towtoes, who paddle, always sit in the body of the canoe. Their paddles are about four or five feet long, and greatly resemble a baker's pail. They are very dexterous at catching fish: and have a number of wooden images representing human figures, which they esteem as their gods; but it is a matter of doubt whether religion is held in any great estimation amongst them, for every god among the islands might be purchased for a few towees. Sometimes their yava dishes are supported by three of these

little wooden images; and this is reckoned a masterpiece in their carving.

These people appear subject to very few diseases; and though they doubtless have been injured by their connection with Europeans, yet so simple is their manner of living, that they pay little regard to this circumstance, and seem to think it an affair of no consequence. It is probable that most of their disorders proceed from an immoderate use of yava; it weakens the eyes, covers the body with a kind of leprosy, debilitates and emaciates the whole frame, makes the body paralytic, hastens old age, and, no doubt, brings on death itself.

Their songs, or heevas, rather resemble a quick energetic manner of speaking, than singing; and the performers seem to pay more attention to the motions of the body, than the modulations of the voice. The women are the most frequent performers in this kind of merriment; they begin their performance slow and regular, but by degrees it grows brisker and more animated, till it terminates in convulsions of laughter. It is very evident that these people have not the least idea of melody, as the tones and modulation in all their songs are invariably the same; however, there seems to be some degree of invention in the composition of the words, which are often on temporary subjects; and the frequent peals of laughter are, no doubt, excited by some witty allusion contained in them. They have drums, which sometimes are beat as an addition to their heevas; these are about 12 or 16 inches high, several holes are cut in the sides, and a hog's skin, and sometimes a shark's, is strained over one end: the sounds however are dull and heavy.

On the 18th of September every thing was ready for making sail; and having cleared the bay, their friends repaired to their canoes, and took leave of the English in the most affectionate manner: they now steered S. by E. with a fresh breeze at E. N. E. The next day they steered S. S. W.

There was little variety during this voyage: the weather was very changeable. There were two severe squalls on the 12th of October; but which providentially did no harm. On the 22d they saw two islands; one bearing N. 55 deg. W. and the other N. 80 deg. W. about four leagues distant. On approaching the land they saw three islands, supposed to be Tinian, Aguigan, and Saypan, according to Anson's description: the E. end of Tinian bearing N. 30 deg. E. about four leagues distant; the W. end of Aguigan N. W. by N. about four miles ditto; and the peak of Saypan N. N. E. ditto. Then appeared a small island at the W. end of Aguigan. As these islands are entirely free from rocks or shoals, they are a very comfortable harbour for vessels, and may be entered in the night-time with much security, provided the weather be moderate. Tinian is by far the largest, almost extending from S. E. to N. W. It has a beautiful appearance, and is said to afford variety of refreshments. Saypan is the next in extent. Aguigan is very narrow, and seems to be only six miles long.

From this to November, the weather continued squally, and the nights very dark. On the 4th they saw the *Bntel* Tabago Xima Islands.

On the 7th they saw land, bearing N. W. about five leagues distant. In the forenoon they passed six Chinese fishing-boats: in the afternoon they met a great number, and about five o'clock perceived the large rock, Pedro Blanco, bearing W. about ten miles distant.

On the 8th, the land which they saw the preceding day proved to be the Lema Islands, bearing from N. E. to W. N. W. about five leagues distant. These islands are very numerous; but dreary and barren to the view. They saw at a distance several Chinese boats; and having made a signal for a pilot, an old China-man came on board: he produced several certificates, and after some time agreed to convey

convey the vessel to Macao for thirty dollars, being twenty less than his first demand. After this several pilots came on board; and it was now understood that before they proceeded to Canton it was necessary to obtain a permit from the custom-house; during which time they were obliged to anchor at Macao, in six fathom water, over a soft muddy bottom.

On the 9th Capt. Dixon went in the whale-boat to Macao, in order to procure the permit. He returned the next day about noon, being delayed through the remarkable tardiness of the Chinese. The captain brought with him a pilot, to convey the vessel to Canton: upon which the old Chinaman was discharged. They weighed anchor at one o'clock, and made sail with a favourable wind and tide, proceeding towards the Bocca Tygris, which they passed on the 14th, and anchored in five fathoms and a half. They were now visited by an officer in a mandarine boat, whose business it is to prevent any illegal trade. The next morning they weighed anchor, and made sail: the winds being light and variable, the boats were sent out a-head to tow the vessel. On the 16th, about six o'clock in the morning, they came to anchor at the bottom of Whampoo Roads, in four fathoms and a half: the captain now went in a Chinese passage-boat to Canton for the purpose of learning from the East-India Company's supercargoes the best manner of facilitating their business. At eleven o'clock they weighed, and began to warp through the fleet up the river; about three they anchored with the small bower, in four fathoms and a half, over a muddy bottom, mooring with the stream-anchor. The people were now employed in unbending the sails, and other necessary business, while the captain was busy in procuring fresh provisions, which at this place is no easy mat-

ter, on account of the numerous impositions which are practised. The captain, during his stay, was informed that nothing could be done with respect to the furs, till the superintendent of the Chinese customs had been on board to measure the vessel, which would not take place till the King George, which was hourly expected, arrived.

A Captain Tasker, from Bombay, whose vessel lay near the Queen Charlotte, very kindly furnished Captain Dixon with beef for the present; for whenever the officer supplied a ship, he always modestly demanded a gratuity of 300 dollars, besides a very handsome profit he derived from his catering. The ship's company were now allowed two pounds of beef each per day, with greens. The vegetables were procured from the custom-house boat; and a leger of arrack was purchased from a Dutchman, for 45 dollars. The officer, however, having found out Captain Tasker's generosity, put a stop to it; consequently the ship's company were about to return to their salt provisions, as the captain was resolved not to indulge the officer's modest demand; however Mr. Moore, first mate of the Royal Admiral, (Capt. Huddart) upon understanding the business, undertook to supply them with beef, on condition that their boat was sent for it every day: this polite offer was readily accepted, and a quantity of beef every morning conveyed from the Royal Admiral to the Queen Charlotte.

On the 23d Capt. Dixon went to Canton, where he was informed that the King George was arrived at Macao: he returned the same evening, and the next day went in the whale-boat, with seven men, to meet the King George, and render her every possible assistance. On the 25th the King George and Queen Charlotte were together.

CHAPTER V.

Proceedings of the King George and Queen Charlotte—Death of Mr. Macleod—Vessels measured—Capt. Portlock's Surprise at meeting an old Acquaintance—Mutual Joy—Anecdotes of Tiaana—Queen Charlotte surveyed, and repaired—Disposal of the Furs—Teas sent on board—Description of Canton, &c.—Departure of the Vessels from Macao—Death of Surgeon Lauder—They proceed through the Straits of Banca and Sunda—King George and Queen Charlotte part—Particulars of each—They meet at St. Helena—Their Departure—Five of the King George's Crew nearly poisoned—Arrival in England—Conclusion.

AS soon as the King George had anchored, Capt. Dixon visited Capt. Portlock, and those gentlemen communicated to one another their success.

On the 26th Captains Portlock and Dixon went to Canton, and were amused by Mr. Browne, president of the supercargoes, that the superintendent of the China customs (John Tuck, as he is commonly called) would come as soon as possible to measure the vessels, after which their business should be dispatched with the utmost expedition. The captains returned from Canton on the 27th.

On the 29th Mr. Macleod, first mate of the King George, died, in consequence of an old complaint in the urethra: he was taken ill on the 28th, with drinking some stale porter after dinner on board the *Locko* Indianman, which occasioned a relapse of his disorder. He was buried on Frenchman's Island, in the forenoon of the 30th.

On the 2d of December the superintendent, or John Tuck, came down from Canton and measured the vessels; after which a factory was hired at Canton, and on the 5th the cargo of both vessels were sent up there.

As the Queen Charlotte's company were sometimes disappointed in receiving beef from the Royal Admiral, they were supplied now by Captain Portlock, who had agreed with an officer for fresh provisions on his arrival in the river.

Captain Portlock, a little after his arrival, paid a visit to a Mr. Cox, who was an English gentleman resident in Canton. The captain was very much surprised to meet with his old friend Tiaana here,

whom he became acquainted with at the Sandwich Islands; nor was Tiaana less astonished at seeing the captain, whom he embraced in the most cordial and affectionate manner. As soon as his transports of joy subsided, he asked several questions respecting the people at the islands, and informed the captain that he accompanied Captain Meares, who brought him to Macao, and placed him under the care of Mr. Ross, his chief mate, to whom Tiaana was particularly attached.

During his stay, Tiaana was introduced to every place worthy his notice: he was dressed in a cloak and a fine feathered cap, and carried always a spear in his hand, to shew he was a person of consequence. Afterwards, by the persuasion of Mr. Ross, he wore a light fatten waistcoat, and a pair of trousers. He frequently attended the places of divine worship, where he behaved with the greatest decorum, kneeling, standing, &c. according to the different ceremonies of the congregation. The customs and manners of the Chinese often provoked the indignation of Tiaana, and he was once going to throw the pilot overboard during his voyage, being offended with his behaviour: notwithstanding this warm disposition, he displayed several instances of generosity and humanity. Being once at an entertainment, which was given by Capt. Tasker, of the *Milford*, he was after dinner moved with compassion, at seeing a number of poor Tartars (who were in small sapans about the vessel, according to custom, asking alms; he solicited Capt. Tasker's permission to give them some food, remarking that it was great shame to let poor people want victuals, and

that in his country to his importunity of all the broken to distribute it at most equal and fix

Tiaana was singularly well made, and a pleasing animal, and other expressions admired; and, from the gentlemen of the cows, sheep, goats, oranges, mangoes, with instructions for that could be accepted to his country, was

The time was now and repairing the 1788: two East-India Charlotte, by orders their sending any not judge her proceeding accordingly given to expediting which a to assist them. On-plete, and a cargo of vessel. Their principal East-India company and the inferior on Chinese merchant, w

Canton is extremely healthy. The lower rice, and now and indulge themselves with tables consist of cabbages, &c. and abundance of these, meet with them. The pork, geese, ducks, so far remarkably long inants, their heads women dress their hair in curls on the top. Those of the higher class As small feet are esteemed ladies, they are cramped thereby frequently rendered both ingenious and cult to be understood in columns from the beginning at the right hand at the left. In respect every thing by tens, and fans, use wooden balls in a kind of open box. Their chief money is silver, which is idolatry, as even god, which is an image specious place, and ornaments: in the night burning near this image a number of wives, but no foreigner is allowed them, on pain of imprisonment. Notwithstanding this for painting, architecture, and important of music. By weight.

February 6th they were willing to lie below the ready to go down the on board, which he did jumped down the river, M. E. and anchored due of the King George's n. Hurison, and Tho. Portlock the ship, and absent and was immediately directed to look for them: he fo

that in his country they had no beggars. According to his importunities, there was a collection made of all the broken victuals, and Tiaana went himself to distribute it among them, which he did in the most equal and impartial manner.

Tiaana was six feet two inches in height, exceedingly well made, but inclined to corpulency: he had a pleasing, animated countenance, fine piercing eyes, and other expressive features; he was universally admired; and, previous to his departure for Attoui, the gentlemen of Canton furnished him with bulls, cows, sheep, goats, rabbits, turkeys, &c. &c. also oranges, mangoes, and different kinds of plants, with instructions for their cultivation: every thing that could be acceptable, or would be of importance to his country, was added to his cargo.

The time was now employed in disposing the furs and repairing the vessels. On the 20th of January, 1788, two East-India captains surveyed the Queen Charlotte, by orders of the supercargoes, previous to their sending any teas on board; and as they did not judge her properly secured, directions were accordingly given to remedy all the defects, for the expediting which a carpenter and caulker were sent to assist them. On the 23d she was rendered complete, and a cargo of teas were sent on board each vessel. Their principal furs were delivered to the East-India company's supercargoes for 50000 dollars, and the inferior ones were purchased by an old Chinese merchant, whose name was Chicungua.

Canton is extremely populous, but reckoned unhealthy. The lower kind of people live chiefly on rice, and now and then a little fish; but the rich indulge themselves with every luxury. Their vegetables consist of carrots, greens, turnips, potatoes, cabbages, &c. and notwithstanding there is an abundance of these, yet the poor people seldom meet with them. They have plenty of beef, mutton, pork, geese, ducks, fowls, &c. The men wear their hair remarkably long, in a neat triple plait: while infants, their heads are frequently shaved. The women dress their hair, which is long, in neat circular folds on the top of the head, in a conical form. Those of the higher class, wear different ornaments. As small feet are esteemed a great beauty among the ladies, they are cramped up from their infancy, and thereby frequently rendered cripples. Their artists are both ingenious and expert: their language difficult to be understood; their method of writing is in columns from the top to the bottom, always beginning at the right hand margin, and concluding at the left. In respect to numbers, they reckon every thing by tens, and instead of figures to cast up sums, use wooden balls, which run on small spindles in a kind of open box, which they are very expert in. Their chief money is Spanish dollars. Their religion is idolatry, as every family have their household god, which is an image generally fixed in some conspicuous place, and decorated with various ornaments: in the night-time a light is kept constantly burning near this image. The people of rank keep a number of wives, polygamy being allowable; but no foreigner is allowed to have any connection with them, on pain of imprisonment or a heavy fine.

Notwithstanding these people are very remarkable for painting, architecture, &c. yet they are totally ignorant of music. Every thing in China is sold by weight.

February 6th they weighed and came to sail, wishing to lie below the shipping, that they might be ready to go down the river when the pilot came on board, which he did at nine o'clock; they then warped down the river, with a light breeze from the N. E. and anchored during dinner-time. Three of the King George's men (Robert Spencer, John Hunsford, and Tho. Potts) stole a boat from along-side the ship, and absented themselves. Mr. Hayward was immediately dispatched with another boat to look for them: he found them near the Bank-

shells; they went for the purpose of buying liquor, and purchased sufficient to have kept all the crew drunk for some time. These men, since the vessel's arrival at Whampoo, were remarkable for their drunkenness, and consequent idleness.

The next day they were occasionally towing down the river. On the 8th they passed through the Bocca Tigris, with a fresh breeze at N. W. On the 9th they stood down Macao-roads to the southward. The pilot was now discharged: from this to the 13th the weather was for the most part fair.

Several on board the King George were laid up with fluxes and fevers, which were imputed by the surgeon to their frequent intoxications at Whampoo; however, on the 14th, they were all upon the recovery.

On the 16th they steered S. W. by S. with a view of making the island Pulo Sapata.

The surgeon and cooper's mate belonging to the Queen Charlotte were now taken very ill. Captain Portlock and his surgeon visited them the next day, and took with them some port wine. It was intended to remove the sick of the Queen Charlotte to the King George, that they might have the benefit of the surgeon's attendance, Mr. Lauder being now totally incapable of performing his duty: however, as they were in a fair way of recovery, this removal was afterwards deemed unnecessary. Capt. Portlock returned to his vessel on the 18th. The Queen Charlotte now made three inches of water an hour, and as her leak seemed to increase, Capt. Portlock deemed it necessary to stay by her till she was further examined.

On the 20th they saw the island Pulo Sapata, bearing S. W. about four leagues distant. On the 25th they saw the islands of Aramba, extending from E. N. E. to S. E. by E. about four leagues distant.

On the 26th Surgeon Hoggan, at the desire of Capt. Portlock, visited Surgeon Lauder on board the Queen Charlotte; this gentleman still continuing very ill. In the afternoon, at six o'clock, the island Panfang bore N. W. by W. about five leagues distant.

On the 27th they saw Dominis, bearing S. W. Pula-Taya bearing S. 45 deg. W. and the Peak of Linging N. 64 deg. W.

On the 28th, at half past eleven, the Queen Charlotte hoisted her colours half-mast high. The King George accordingly shortened sail, and spoke to her. Capt. Portlock was now informed that Mr. Lauder was dead. At noon they saw the three islands, which extended from S. by E. to E. N. E. the nearest distant about three miles, and the farthest seven leagues.

Nothing material occurred during the remainder of this month. On the 1st of March they were joined by the Lansdown-Indiaman, Captain Storey, from China, bound to London.

On the 2d they had variable soundings from ten to three fathoms over muddy and sandy bottoms. On the 3d they stood over to the Sumatra shore, and were driven very near a shoal that lies between the Island of Luspura, and the first point of Sumatra, by a strong tide setting to the S. E. Both the King George and Queen Charlotte passed it over in three fathoms, but the Lansdown struck, and stuck fast, upon which she made a signal of distress. The King George and Queen Charlotte now anchored in six fathoms, and hoisted out their boats to give assistance, but the Queen Charlotte's whale-boat was scarcely in the water, before she filled; she was therefore hoisted in again to be repaired by the carpenter. In a short time after this, the Lansdown made a signal for further assistance. Captain Portlock accordingly dispatched four of his men with an officer in the yawl, and Captain Dixon went himself in his own boat. The yawl returned in about an hour's time, and Captain Dixon early the

next morning. The Lansdown had grounded on the small shoals off Lufpura, but was soon hove off without any damage.

The Queen Charlotte now hove short, in order to be ready whenever Captain Portlock should make the signal for weighing: at twelve o'clock they weighed and made sail: the weather was now cloudy, and they had constant lightning. On the 7th they saw the Sisters bearing S. W. by W. about four leagues distant. On the 8th the Lansdown was almost out of sight. The next day they had very squally weather, with continual thunder and lightning: at mid-night the King George lost sight of the Queen, but recovered her at day-light. Several of the ship's company were now very ill with fluxes, and on the 11th the King George lost her armourer's mate, Thomas Pafford, who was buried in the evening. The whale-boat was sent out by Captain Portlock to look for some turtle about the reef, but returned the next day without success.

On the 14th the island of Java extended from S. E. by E. to S. about five or six leagues distant. The next day the boats were sent on shore for water, also to cut wood: the sick people were likewise sent with them to recreate themselves. The next day their wooding and watering were completed. The wood was obtained from North Island, where there are no inhabitants to prevent its being cut; the water from the Sumatra shore, which was remarkably good.

North Island is only two miles in circumference: it is entirely covered with trees of various kinds, and consequently a refuge for the feathered tribe. Sumatra is inhabited by Malays, who abide here for the purpose of trading with those vessels which occasionally anchor in the adjacent roads; and likewise to prey upon the wrecks. Some turtle was purchased from one of their boats, for the ship's use.

On the 30th Captain Portlock sent for Captain Dixon, and they now agreed to part, and make each of them the best of their way to St. Helena. On the 1st of April they lost sight of each other: during this month and the greater part of June, the weather was very bad, attended with thunder, lightning, and rain.

May 16th the Queen Charlotte's pumps were choaked up, which was very unfortunate, as the vessel, when on the starboard-tack, made a good deal of water: however, the starboard-pump was immediately hoisted up, and as it was found choaked with the sand, which had been used as a flooring for the teas (and which, owing to the tempestuous weather, had worked through the ceiling), nine inches were cut from its bottom, and being thus cleared, it was immediately got down again. The Queen's company had been hitherto upon a stinted allowance of water, but as the weather was now so remarkably stormy, they were permitted to take as much as they wanted.

Captain Dixon, by advice of the officers, had the fore-hold broke open, in order to examine that part. The tea that had been lodged there, was dry and in good order, nor was there the least appearance of any water being lodged in that part of the vessel: the larboard pump was hoisted up, and cleared of sand. May 18th they found a leak under the counter, upon which they got up a number of articles which were stowed in the run, and of little consequence, and hove them overboard. The weather still continued very squally.

The King George, in doubling the Cape of Good

Hope, kept much nearer the land than the Queen had done, and consequently did not experience a continuance of so much bad weather. June 12th the King George saw the island of St. Helena, bearing W. by N. about seven leagues distant. On the 13th they shortened sail and brought-to, there being a brisk breeze at S. E. with heavy weather. The whale-boat was now sent on shore with an officer, to inform the governor of the vessel's arrival. In about two hours the boat returned, with the governor's directions to come in: upon this, they made sail for the bay, and at five in the evening anchored with the small bower, in 13 fathoms, and moored with the belt bower in 19 ditto, to the N. W. over a fine black muddy bottom. The carpenters were employed in repairing the sheathing, cleaning the bottom, &c. &c. while the rest were busy in receiving fresh provisions on shore, &c. The people were permitted to recreate themselves on shore.

On the 18th the King George had completed her water, and the Queen Charlotte had just arrived, which prevented Captain Portlock from sailing that day, as he intended. The next day the King George, having received the governor's dispatches, made sail, having previously saluted the garrison with nine guns, which was returned with an equal number. They had now a continuance of moderate breezes from the S. E. On the 25th five of Capt. Portlock's men having eat hearty of bonnetos for dinner, which had been caught at St. Helena, salted and hung up, they were seized in about an hour's time with violent pains in their heads, their bodies were very much swelled and inflamed, and an eruption appeared upon their skins. Sweet oil was administered, which speedily removed those alarming complaints. In the evening they were nearly recovered: the remainder of this poisonous fish was thrown overboard.

Nothing material now occurred to either vessel, while proceeding for England. On the 22d of August the King George arrived; and on the 17th of September the Queen Charlotte, both ships' companies being well and in good spirits.

As the grand motive for this voyage was to trade for furs, with an expectation of acquiring emolument adequate to their labour and dangers, it will no doubt be enquired whether this design was fully answered. Though the King George's Sound Company have not obtained any wonderful gain from this voyage, yet they have been so far gainers, that it is evident this branch of commerce, instead of being a losing one, must be exceedingly profitable and lucrative to every enterprising merchant who is willing to engage therein. Proper allowance must be made for the inexperience of the first adventurers: it could not be expected that the King George would immediately answer the utmost extent of the Company's wishes. The King George and Queen Charlotte brought home upwards of two thousand sea-otter skins, which sold from eighty to ninety dollars each, besides a large quantity of inferior furs.

Having now furnished our readers in the most complete manner, with Captains Portlock and Dixon's interesting Voyage Round the World in the King George and Queen Charlotte, and regularly given the Adventures of each (which were never before properly united), we shall proceed with the Voyages of Captains Meares, Tippin, and Douglas, in the Nootka, &c. &c. as the most proper to succeed Captain Portlock's, on account of their meeting, which has been already mentioned.

INTRODUCTION.

THE following commercial expedition was particularly supported by several persons of distinction at Bengal, whose liberal encouragement on this occasion Capt. Meares has gratefully acknowledged.

January 20th, 1786, there were two vessels purchased for the sake of this expedition. They were fitted out by the commercial zeal of British subjects in the ports of the East: the first was called the *Nootka*, of 200 tons, which was to be commanded by Capt. Meares; and the other the *Sea-Otter*, of 100 ditto, to be commanded by William Tipping, a lieutenant of the royal navy.

A committee was now appointed by the proprietors to arrange the necessary preparations for this voyage, when (on the 20th of February) two offers were proposed, viz. to freight the *Sea-Otter* with opium to Malacca, and to convey Mr. Burke, Pay-Master General of the King's forces in India, with his suite, to Madras in the *Nootka*. As the former of these offers, it was calculated, would be productive of about three thousand rupees, and for the conveyance of Mr. Burke the same sum was to be

paid, the committee readily accepted them, and it was now intended as soon as possible to make sail.

At this time all kinds of stores and provisions were extremely scarce at Bengal: there was barely a sufficiency laid in for twelve months. They expected some assistance from Madras, which was to complete their equipment for eighteen months.

The *Nootka* was strongly manned, but the men were such as necessity made choice of. The ship's company were about forty, including the purser, surgeon, five officers, boatwain, and ten lascars, who embarked at Madras. Capt. Meares was very much disappointed in not being able to get a carpenter, especially as he experienced the disagreeable consequences of wanting so useful an artisan.

Captain Tipping was to proceed from Malacca to the N. W. coast of America, where it was intended that the *Nootka* and *Sea-Otter* should meet.

It is necessary here to observe, that these were voyages of commerce, and not of discovery; notwithstanding which, this commercial undertaking boasts of so many incidents, that to the reader it may *discover* something novel and original.

CHAPTER I.

The Nootka proceeds on her Passage—Arrives at Madras—Protest for Malacca—Death of the Boatswain—Arrival—Provisions, &c. laid in—Enter the China Seas—Anchor at Grafton Isle—Departure—Driven among five Islands—In Danger on every Side—Escape—Alarmed—Again—A thick Fog—In immense Danger for four Days—Anchor at Ounalashka—Remarks—Difficulties—Visited by the Natives—They become troublesome—Are dispersed—A Fall of Snow—Several sick—Deaths of the Surgeon and Pilot—Consequent Distresses—Horrid Situation of the Nootka and Crew—Visited by Capt. Dixon—Assisted by Captain Portlock—Thaw of the Ice—Recovery of the Sick—A young Female Native purchased—Weather becomes clear—The Island of Owhyhee made—Tiaana taken on board—Loss of the Sea-Otter, and Crew.

ON the 2d of March, 1786, the Nootka got under sail, and in the evening Mr. Burke and his suite came on board. They now proceeded on their voyage, in ten days they lost sight of land, and on the 27th arrived in Madras: nothing material occurred during the time, except the expedition of their passage, which was remarkable. They now landed their passengers, and procured necessary additions of stores and provisions.

On the 7th of April they prepared to put to sea: they now proceeded for Malacca: this passage was remarkably tedious; and the crew very much afflicted with the scurvy; the boatswain, who was one of the most useful hands on board, died: they did not arrive at Malacca till the 23d of May; previous to which Captain Tipping, having completed all his business here, sailed for America. They now procured another supply of provisions; and laid in a quantity of wood and water. On the 29th they put to sea, and entered in a few days the China seas, proceeding with a strong S. W. monsoon.

On the 22d of June they saw Balhee Islands; and on the 26th anchored at Grafton Isle, in six fathom water, about a mile distant from shore. This bay is small, but very pleasant: it is surrounded by high land, handsomely cultivated. A large village is near the water; on a gentle eminence; which, together with the trees, mountains, and a rivulet, form a scene romantic and beautiful.

These isles were taken possession of by the Spaniards in 1782, who expected to have found some rich metals in them. The natives seemed very free and inoffensive. Captain Meares, during his stay, which was four days, was treated very civilly by the governor and his garrison, who did not prevent his trading with the natives. They procured here a quantity of hogs, goats, ducks, fowls, yams, potatoes, &c. for pieces of iron.

They left these islands on the 1st of July, and proceeded along the Japan Isles. On the 1st of August they saw the isles of Amluc and Atcha: they made for the former, and anchored there two days, during which time they were visited by the Russians and natives.

In their passage to Ounalashka, they were driven among five islands, called Pat Sopka; and as they now could not see their way, on account of a continued fog, they were surrounded with dangers on every side: they had, however, a fortunate escape. These islands are uninhabited, and seem to be nothing more than huge masses of entire rock: two of them bear the resemblance of a sugar-loaf.

On the 5th of August they met some canoes who were fishing for whales. On the 6th at night they were alarmed by hearing the surge of the sea upon the shore: they tacked and stood on for two hours, and were alarmed again with the same noise: they tacked again, and saw some land at day-break over the mast-head, which was covered with snow. A thick fog continued for four days, during which time they were endeavouring, but in vain, to obtain a passage; every way seemed to be blocked against them. In this distressing situation, they were continually alarmed with the hoarse dashing of the surges; and as there were no soundings, their fears were inexpressible. On the 6th the fog dispersed; their joy could now only be equalled by their awe at seeing the immense danger they escaped. As it was impossible, on account of the strong current,

to go southward by the channel through which they came, they bore up and went to the northward. Having got as far to the eastward as Ounalashka, they were enabled by a strong N. wind to get through between Utimah and Ounalashka. As soon as they got round to the S. side of the island, a Russian came and piloted their vessel into an harbour.

On the 20th of August they left Ounalashka, and proceeded down the continent, with a view of passing the Shumagin Islands, which they saw on the 27th. Several canoes came to them from the shore, which was about four leagues distant: the dress and manners of the people, as well as the construction of the canoes, appeared to be the same as those of the Fox isles.

On the 28th they proposed to make one port to the westward of Cook's River. They steered for a large opening which they saw, and which seemed to be formed by an island, and appeared very extensive on being approached. In expectation of being visited by the natives, they continued their course for about twenty leagues up the strait, and at last met with a canoe which had three people in it, one of whom proved to be a Russian seaman. This man came on board the Nootka, and gave them some necessary information; but which was by no means agreeable, as it was contrary to their expectations of a good trade.

They continued their passage through the straits, which were called Petrie's Strait, in honour of William Petrie, Esq; they are upwards of 10 leagues in length, and 15 in breadth. They anchored in Cape Douglas, and were shortly visited by a number of canoes, of whom they purchased two or three otter-skins.

They were now detained by several heavy gales of wind, but were determined the very first opportunity to quit the river, and to proceed to Prince William's Sound; in order to winter there if possible.

On their arrival at Snug Corner Cove, in Prince William's Sound, the weather was very boisterous, nor did they see a native for three days, which led them to imagine that the inhabitants had retired from the coast, and were gone to the southward during the cold weather. Captain Meares from seeing some wood which had been fresh cut on shore, concluded that his partner Captain Tipping had been here before him, and was now gone for China: in this situation they were oppressed with difficulties, the badness of the weather discouraged them from proceeding, and from the dreary prospect of this place, they could neither expect trade or refreshments: the seamen were exceedingly dissatisfied and unhappy. However, on the 4th of October they met with several canoes, the natives were exceedingly affable and generous: from these they understood that the Sea-Otter had been here, and that Captain Tipping had purchased several skins.

As they were now satisfied that the sound was uninhabited, they were determined to look for a harbour where they might stay during the winter. The boats were accordingly sent out; and the next day they found a very commodious one, about 15 miles E. N. E. from their present situation; where they anchored on the 7th. The people were now employed in cleaning and airing the vessel.

They were constantly visited by the natives, who frequently exhibited their dexterity at thieving.

MEAS
About the middle few skins; but that they became English were rat they were distressed on the 25th, as the only incommoded signals, but even there were two gusted effect: afterwards was fired with gun created so much their canoes in n they became quieter, were afterwards put.

There were now prevented them from and closing it in all. Hitherto they caught they were leaving occasionally supplied. tain them, which were seen there. All the fish had entirely nor were there any were all white with with ice: the people fished them no less snow became as desirable, they were obliged and amusement.

The natives still could not restrain fire of course made the All the ship's crew were. Their situation was there was no prospect rest of all necessary for.

The beginning of by increasing the cold to keep fires night and proceeded from a ten of their forces, was at sequence thereof several the beginning of the and towards the end the surgeon, whose in sequence: four of the died. The number of ary, and four more were visions too were nearly apprehension became.

Notwithstanding they were constantly visited other clothing but from otters and seals to defend seemed to be as much the English; and were of Captain Meares's men.

The succeeding number of the sick ranged with additional of the month the first situation now was truly by the loss of the forti which was at present the indisposed received and the justice of the now obliged to best according to the belt was their present calam continually dragged up fetched the wood, and the ice: the groans of and their mournful con horror; their cordial pr and the only things that the sick were biscuit, r flour: crows and feathers. Two or three eagles were
No. 11.

About the middle of the month they collected a few skins; but the natives were at last so numerous that they became absolutely troublesome, and the English were rather perplexed how to behave, as they were desirous to avoid hostilities; however, on the 25th, as they continued to increase, and not only incommoded the English in spite of all their signals, but even endeavoured to steal their axes, there were two guns presented, which had the desired effect: afterwards a twelve-pound cannonade was fired with grape-shot, the explosion of this created so much alarm that half of them overset their canoes in making their escape; upon which they became quiet, and several fine sea-otter skins were afterwards purchased.

There were now frequent falls of snow, which prevented them from covering the vessel with spars, and closing it in all round the sides, as was intended. Hitherto they caught a quantity of salmon, but now they were leaving the small rivers. They were occasionally supplied by the natives with some mountain sheep, which were the only land animals that were seen there. About the beginning of November the fish had entirely deserted the creeks and coves, nor were there any birds to be seen: the mountains were all white with snow, and the vessel surrounded with ice: the people frequently skated, which afforded them no little recreation; but when the snow became as deep on the ice as it was on the shore, they were obliged to give over this exercise and amusement.

The natives still continued very friendly, but could not refrain from their itch of stealing, which of course made the English particularly careful. All the ship's crew were at present in good health.

Their situation was now extremely unpleasant; there was no prospect of any consolation, being bereft of all necessary support and recreation.

The beginning of the year added to their troubles, by increasing the cold: they were frequently obliged to keep fires night and day, but the smoke which proceeded from a temporary stove, formed of one of their forges, was at last so offensive, that in consequence thereof several of the crew fell sick. About the beginning of the month a dozen kept their beds, and towards the end two dozen, among whom was the surgeon, whose indisposition was of great consequence: four of these unfortunate people shortly died. The number of the sick increased in February, and four more were lost. Their stock of provisions too were nearly exhausted, while sorrow and apprehension became general.

Notwithstanding the severity of the weather, they were constantly visited by the natives, who had no other clothing but frocks made of the skins of sea-otters and seals to defend them from the cold. They seemed to be as much distressed for provisions as the English, and were greatly concerned for those of Captain Meares's men that died.

The succeeding month was still cold and raw: the number of the sick increased, and the scurvy raged with additional violence. About the middle of the month the surgeon and the pilot died. Their situation now was truly lamentable, being deprived by the loss of the former of that medical assistance which was at present so much wanted: several of the indisposed received great benefit from exercise, and the juice of the pine-tree. Capt. Meares was now obliged to perform the duties of a surgeon, according to the best of his abilities; but so great was their present calamity, that dead bodies were continually dragged upon the sledge on which they fetched the wood, and committed to chafins in the ice: the groans of the dying filled the vessel, and their mournful condition represented a scene of horror; their cordial provisions were long expended, and the only things that could be administered to the sick were biscuit, rice, and a small quantity of flour: crabs and sea-gulls were rare delicacies. Two or three eagles were killed, and esteemed de-

licious food: they were obliged also to kill, with great reluctance, a male and a female goat, who were made pots of during the voyage, in order to serve the sick with broth, which they kept for fourteen days. This month still continued cold and severe; the beginning of the next was the same; but about the middle thereof there were some heavy southerly gales, which promised a favourable change of weather; notwithstanding which the sick people grew worse, and the three Lascars, with four Englishmen, died.

About the 30th of April the natives brought them some herring and sea-fowl, which were distributed among the sick, and exceedingly well relished: every encouragement was given to the natives to continue their bounty; who now began to console the English with an assurance that the cold would soon be gone; the gradual appearance of the sun seemed to confirm their declaration; and on the beginning of May a wonderful change took place, both in the people and the weather. Several of the seamen, who had been very much reduced, were now miraculously recovered, chiefly owing to the salutary effects of the pine-juice.

On the 17th of May the king of the island, with his retinue, came on board in great state, to congratulate the English on the return of summer. Capt. Meares now understood that two vessels had been seen at sea; which comfortable intelligence was confirmed on the 19th, by the arrival of two canoes, conducting a boat with Capt. Dixon, of the Queen Charlotte: his presence afforded universal joy. Capt. Meares sent a letter to Capt. Portlock, requesting his assistance per favour of Capt. Dixon: however, a few hours after Capt. Dixon's departure, Capt. Meares thinking that his presence would have greater weight, had the long-boat hoisted out, in order to proceed to the King George; and, notwithstanding the boat was in a deplorable and dangerous way, yet the captain, with five of his men, and a first officer, ventured in her, and by the providential fineness of the weather got along-side the King George about three o'clock the following evening, the boat being half full of water: the boat was afterwards caulked by the King George's carpenter, and rendered fit for their return to the Nootka. Captain Meares brought back with him some brandy, gin, flour, molasses, &c. which Capt. Portlock delivered to him for the use of his men.

On the 12th of May the weather became very pleasant. The main body of ice being thawed, the vessel now swung to her anchors: the sick were recovering apace, except two, who were so far gone as to baffle the utmost attention: vegetables, as yet, were not attainable, the snow not being quite gone. On the 17th the ice was entirely thawed.

They were constantly visited by the natives, and the King and his chiefs. His majesty brought a young woman, and offered her for sale: the captain purchased her for an axe and a small quantity of glass beads. She remained on board the Nootka near four months, apparently content with her situation. The captain understanding that she belonged to a tribe who lived to the southward, intended, while coasting along in quest of furs, to have restored her to her country people; but unforeseen misfortunes prevented this humane design.

The reader has been already presented with a description of those natives: we shall, however, add some occasional remarks, which were made by Capt. Meares during his long stay in those islands.

"The people are remarkably ferocious, and possess an uncommon degree of insensibility to pain:
"of this there was a very singular proof on the following occasion; several broken glasses having been thrown out of the vessel with other rubbish,
"one of the natives, in searching among them for what he might deem worthy of preservation, cut his foot in a very severe manner. The English wanted him to dress the wound according to their
"manner,

"but he and his companions instantly turned the whole into ridicule, and to shew their disregard of pain, they took some of the glass and scarified their legs and arms in a most extraordinary manner."

After having buried 23 men in this unfortunate cove, they left it with great pleasure on the 21st of June. The crew now consisted of only 24 people, including the captain, his officers, and two sailors whom they got from Capt. Portlock; and notwithstanding some of these people were not quite recovered from their late illness, yet they were so elate with their departure, that they were all now in high spirits. On the 22d they got out to sea, and for ten days could get no farther to the southward than 57 deg. Several of the people were now laid up with swelled legs, from being so frequently wet upon deck. Captain Meares, therefore, judged it prudent to stand in for land; and accordingly made for a very high peak, of a singular form, about forty leagues distant. As soon as they approached the shore, they were visited by several canoes, which were made quite different to those in the Sound, being constructed of a solid tree, from 50 to 70 feet in length, but no broader than the tree itself. The inhabitants were likewise of singular manners and appearance: the women were particularly hideous and uncommon; they were ornamented, or more properly speaking disfigured, in the same manner as the natives of Prince William's Sound, though unacquainted with those people. This is the first time they were ever seen by any navigator.

The weather becoming very clear, they proceeded with a northerly wind to Owhyhee: indeed, had it not been so fine and favourable, in all probability they never should have reached the Sandwich Islands, owing to the miserable condition of the vessel: besides, the crew were not quite recovered, some being still laid up, one of whom was lost; however, as

soon as they entered this salubrious clime, every complaint vanished.

They remained at these islands about a month, during which they experienced much hospitality and kindness from the natives, several of whom when they were about to depart strongly solicited to accompany them. Capt. Meares consented to take Tiaana, the king's brother, who embarked with them, to the great dissatisfaction of the other chiefs, who envied his departure. The character of this native has been already given in the preceding voyage.

On the 2d of Sept. they left Sandwich Islands, and on the 20th of October arrived in the Typa, an harbour near Macao, after a very favourable voyage.

They had scarcely come to anchor, when there was every sign of a storm; which, if it had taken place before their arrival, their vessel, on account of its shattered state, could never have encountered. The people likewise, on account of so long an absence, being entirely unacquainted with the political state of the nation, were very much alarmed at seeing two French vessels of war in those seas; and as they saw several boats filled with troops coming off from them, they concluded the worst; however, their apprehensions of meeting with enemies were, after some time, removed. Now fresh calamities took place: the storm which threatened became to very violent, that the Calypso, one of the French vessels, could scarcely keep her place with five anchors; how great, therefore, must be the Nootka's danger, that had only one anchor left: they were obliged to run her ashore, as the only way of preserving her; and by the generous assistance of Count de Kergarieu, the officers and seamen of the Calypso frigate, they were happily enabled to accomplish their safety.

Captain Meares now anxiously enquired after his partner; but there being no intelligence whatever of Captain Tipping, it was concluded that the Sea-Otter and her crew perished.

CHAPTER II.

Two Vessels fitted out—Their Names and Commander—Crew, &c.—They leave Typa—Proceed to Sea—The Iphigenia sprung a Leak—Her Foremast dangerously sprung—Apprehensions—The Iphigenia in a critical Situation—The Captain's Determination—Proceed along the Coast of Luconia—Goat Island seen—Also Luban Islands, &c. &c.—The Vessels put in a State of Defence against Pirates—Captain Douglas's Men afflicted with the Scurvy—The Island of Panay passed—A Mutiny on board the Felice—Its happy Suppression—The Sandwich Islanders taken ill—Death and Character of the Woman—Cattle destroyed—Anchorage at Magindanao—The Carpenters employed in repairing the Iphigenia—A China-man lost—An Invitation from the Governor—Accepted—A kind Reception—Invitation to a Ball—Behaviour and Character of the People.

IN January, 1788, Captain Meares (by the assistance of some British merchants resident in India) purchased and fitted-out two vessels in the best manner: they were strongly built, copper-bottomed, &c. in order to endure every kind of severity; they were called the Felice and Iphigenia. The Felice was of 230 tons burthen, and to be commanded by Captain Meares: the Iphigenia, of 200 ditto, to be commanded by Captain Douglas.

The crews consisted of Europeans and Chinese: the latter, being esteemed industrious and hardy, were taken by way of experiment. Among these were artificers of every denomination, especially smiths, carpenters, &c. both Chinese and European, to the number of forty. The Chinese were, in all, fifty; several others solicited to embark, but the above number was deemed sufficient. Provisions of the most salutary kind were laid in, besides a sufficient stock of warm clothing, &c. A great quantity of useful animals were also taken on board, for the service of Tiaana's countrymen; every person being anxious to testify their regard for this amiable Indian. On board of each vessel were embarked six cows and three bulls, four bull and cow calves, several goats, turkeys, rabbits, pigeons, &c. &c. also several lime and orange-trees, which were destined for Attoui.

Besides Tiaana, there were other natives of Sandwich Isles, that had been brought to China by different vessels, who were now received on board in order to restore them to their country: they consisted of a woman of the island of Owhyhee, whose name was Winee: she enjoyed but a very poor state of health; also a man and a boy of the island of Mowee; the man was very robust and strong: there was likewise another of King George's Sound.

On the 22d of January both vessels weighed from the Typa, with a view of proceeding to sea; but being disappointed in their design by a sudden calm, were obliged to re-anchor. In the evening, about nine o'clock, being favoured with a S. E. breeze, the Felice made a signal for weighing: accordingly they put to sea, and continued standing to the Grand Ladrone till midnight, when the Felice was obliged to shorten sail, in order to keep up with the Iphigenia, which was now considerably ahead. At this time there was a great fog; on which account they were more careful not to separate; notwithstanding (the fog still continuing) Captain Meares lost sight of the Iphigenia the next night: as soon as the fog cleared away, she was perceived about a league to leeward of them. The Felice fired several times, that the other might judge of her situation.

They

As the weather was took this opportunity of pirates, with whom the guns were accordingly a day of powder and ammunition the masts of the Iph

They now kept eastward, in order to make the coast of Luconia; the Felice being frequently obliged to shorten sail, as the Iphigenia was not able to keep her: this suggested to Captain Meares the necessity of their parting company, when they had got clear of the Solow Sea.

The Iphigenia had now sprung a leak above the copper, which obliged Captain Douglas to keep one pump going. This accident occasioned much uneasiness, for fear it might discourage the seamen, who are too frequently influenced by superstitious ideas: the captain was therefore resolved to remedy it the first favourable opportunity.

The Chinese were exceedingly sea-sick, and the cattle began to droop, by the continual tumbling of the vessel: as it was therefore deemed impossible to preserve them all during so long a voyage, and being at present in want of fresh food, they judged it expedient to kill two of them now, and provide comfortable messes for the sick crew. They intended, if possible, to preserve two cows and a bull, and one bull and one cow calf, which they hoped would become inured to the voyage.

On the 25th the Iphigenia spread abroad the signal of distress; upon which the Felice bore up and spoke to her. It was understood that her foremast was so dangerously sprung, that it was necessary to secure it immediately; it was impossible, however, to afford her any assistance at present, as the sea ran very high, and the wind was remarkably strong. Indeed, the present situation of the Iphigenia, on account of the tempestuous weather, and the shoals which surrounded, occasioned no small apprehensions.

The weather being equally tempestuous on the 26th, no assistance could yet be afforded. There was a stage erected round her mast-head; but, on account of the great hollow sea, she was in a very critical situation.

Two fine goats on board the Felice were crushed, by a sudden roll of the vessel. Another of the cattle was also killed for the crew.

On the 27th Captain Meares understood from his partner, that the head of the Iphigenia's foremast was entirely rotten, and that it was with the utmost difficulty the carpenters could keep it in a state of security: however, before night, her fore-top was strewn over-head, and her lower rigging set up.

They now determined, on the first opportunity, to call a survey of the carpenters, and deemed it expedient to make for Samboingan, on the southern extremity of Magindanao, in order to repair the Iphigenia's mast, or build a new one, if the old was condemned.

The island of Luconia was seen on the 28th; previous to this they were apprehensive of falling in with the shoals. Towards evening it became calm, and at night they had a fresh breeze from the S.W. They now stood off and on the shore about five or seven leagues, and saw several fires, which continued burning during the greater part of the night.

The 29th the land bore from N. N. E. to S. S. E. about six leagues distant. It seemed very mountainous, and for the most part covered with wood: by the great quantity of smoke which was seen, the place was undoubtedly inhabited. The weather was now pleasant, and the sea remarkably smooth.

On the 30th they stood to the S. by E. in order to make Goat Island, guarding against the shoals which lay to the northward of that island. Goat Island was seen the next day, bearing N. E. by N. about six leagues distant. It appeared of a moderate height, and well covered with wood, but there was no sign of any inhabitants.

As the weather was very favourable, they now took this opportunity of defending the vessels against pirates, with whom those seas are infested. The guns were accordingly mounted, and a proper quantity of powder and ammunition provided. At this time the masts of the Iphigenia were also surveyed;

and she was supplied with necessary articles by the Felice, for her defence.

The carpenters having surveyed the Iphigenia, returned to the Felice, and declared the mast to be totally unfit for the voyage; indeed it was very much feared whether it would carry her to Samboingan: all that was possible they did to secure it.

At noon the island of Mindoro was seen, which bore S. E. by E. about ten leagues distant. They had now a strong easterly wind, proceeding from the Luban mountains. They made for the shore of Mindoro; but as the wind still continued from the E. they were greatly afraid of being drove in with the Calamine Islands, which are not only numerous, but attended with much danger. They kept up as much sail as possible, and fortunately reached Mindoro about midnight: as it was now dark and squally, the signal was made to the Iphigenia to heave-to, with her head off shore: Captain Meares deemed it too hazardous to run on an unknown coast with these disadvantages. There was a fierce gale, and no ground with a hundred fathom line. The inhabitants had lighted several fires along the shores on the tops of the mountains, which continued burning all night.

The island of Mindoro is very extensive; several parts seem very mountainous, and others moderately high. There is little doubt but what the place is very well inhabited, by reason of the continual and numerous fires which were seen: those parts which were distinctly seen were exceedingly delightful. The groves of trees, verdant hills, extensive lawns, &c. &c. displayed a most luxuriant and romantic prospect.

The next morning (Feb. 1st) the Iphigenia was four leagues a-head the Felice, but her partner having made sail, joined her by noon. Mindoro now bore S. E. by E. about six leagues distant. At night the wind was still fierce, and the sea rough, which occasioned some apprehension for the masts and yards. In order to clear the Calamine Islands, they hauled close under the shore of Mindoro. The fires on the mountains were now more numerous than they were the preceding night.

On the 2d, about nine o'clock, they saw the Calamine Islands, which bore S. W. to S. E. about 17 leagues distant. As the weather was very favourable, they kept the shores of the Philippines, carrying a constant press of sail.

The scurvy had now made its appearance on board the Iphigenia. Several of the seamen were ill, and particularly the carpenter and two of the quarter-masters: there were several alarming symptoms, particularly the swelling of their legs, and their gums becoming putrid. Every antiscorbutic that they had was applied, and spruce-beer given in the room of spirits. The salt provisions were always carefully soaked before they were made use of: rice and peas alternately boiled every day, and tea and sugar given for breakfast. There was also a plentiful allowance of water, and great pains taken to preserve cleanliness.

On the 3d, having lost sight of Mindoro, they saw the island of Panay about noon, which bore from N. E. by E. to S. E. about nine leagues distant. They had now agreeable weather, and a N. E. wind. On the 4th they ranged up this island, about four leagues distant from Panay, and their latitude 10 deg. 36 min. N. They had no soundings with eighty fathom line.

The country had a very rich appearance, and several villages were seen on the declivity of the hills. The houses appeared both neatly and regularly built, and their fine verdure and rivulets formed a most delightful scene. No canoe, or fishing-boat, was however seen.

A mutiny was now discovered on board the Felice, but (before it was productive of any fatal effects) it was immediately crushed by gentle means. The circumstances were inserted in the log-book of the vessel,

vessel, in order to stamp a degree of disgrace upon the authors, it being Captain Meares opinion that shame is in many cases more efficacious than even severe punishment.

The natives of Owyhee, who were on board, were exceedingly ill: Winee, the woman, had caught a fever, and the generous Tiaana, from his constant attendance upon her, was also confined to his bed: indeed the woman was so bad, that there were no hopes of her recovery. All that remained therefore to be done for her, was to make her dissolution as easy as possible: she expired on the 5th of February. Tiaana was so exceedingly moved with her death, that it was greatly apprehended his health would have materially suffered on the occasion. He had received from his poor country-woman, the day before her death, a plate looking-glass, a china basin and bottle, and a gown, hoop, cap, petticoat, &c. for his wife: this was a token of gratitude for his kind attention to her. The rest of her property she left to her father and mother, and were accordingly entrusted to Tiaana to be delivered to them.

The flock of cattle was now considerably reduced, through the bad weather. All the goats except two had perished; and only one bull, one cow, and one cow calf, now remained.

On the 5th the southern extremity of Point de Naffo bore E. N. E. about seven leagues distant. During night they steered to the southward and eastward; and on the 6th, at day-break, they made the southern extremity of the island of Magindanao, which bore east, about eight leagues distant. This island seemed very high and mountainous. They had no ground with 100 fathom line. They now steered for Samboingan.

On the 7th, at noon, they saw the island of Bafila, which had a very remarkable appearance, on account of a number of hills of a conical form: one of them (which being the highest was the most conspicuous) resembled the cap of a Chinese mandarin. At half past four they made Samboingan; but the tide of ebb being strongly against them, the signal was made for anchoring, which they did in 11 fathoms, over a muddy bottom, about two miles distant from the fort, and within a quarter of a mile from the shore.

The boats were now hoisted out, and the carpenters sent to survey the wood of the country: on their return they reported, that the timber was not only fit for their purpose, but they could get as much as they wanted. The next morning they were sent again, with an officer and a strong party of men, to cut down some spars for top-sail yards, and steering sail-booms, for the Felice. An equal number were dispatched by the Iphigenia, to cut a foremast, while the pinnace was employed in sounding and surveying the channel: they found from five to thirty fathoms, over a rocky bottom.

The carpenters returned about noon, with a top-sail yard and the booms; a foremast was also cut for the Iphigenia. A China man, who accompanied them, having strayed into the woods, was lost, and supposed to have been seized by the Malaysans, as the place where the men were at work was infested by several of these savages, well armed.

An officer arrived from the governor, to compliment the captains on their arrival, and invite them to an entertainment, which was prepared on purpose: he likewise gave some necessary information relative to the places which abounded with the best wood and water, and assured the captains that the governor would render them every assistance in his power. Meares and Douglas returned their hearty thanks, and accepted of the governor's polite invitation.

It was now resolved that the vessels should moor nearer to the village; accordingly they weighed, and anchored abreast of Fort Caldera, where they were saluted with nine guns; which compliment was immediately returned.

When the captains, with their officers, &c. waited upon the governor, according to invitation, they were received with the greatest politeness, and every attention paid them. The governor was attended by three priests, one, who was old, had been a long time resident in the island; the other two were young. They had plenty of refreshments, according to the Spanish fashions; and were also supplied with sweetmeats, cordials, and every thing that the island afforded, for the use of the vessels.

On the 10th, the governor sent two galleys, completely armed, to accompany the boats of both vessels, which were now dispatched for the sake of cutting another foremast for the Iphigenia, as the former was disappropos of. The boats were likewise well manned and armed, in order to be defended against the Malaysans, who were continually on the watch to commit depredations. The people on board the vessels were in the mean time employed in their different necessary operations. The carpenters, &c. returned with a very fine tree. During the excursion, they met with no enemy.

The captains had now resolved between themselves to separate, for as the Iphigenia could not possibly be ready for sea some time, Captain Meares thought his stay not only unnecessary, but would be a delay of some consequence; accordingly the Felice was provided with every thing she wanted, in order to leave Samboingan as soon as possible.

The native of King George's Sound remained on board the Felice, but Tiaana was now consigned to Captain Douglas's care, as it was intended that the Iphigenia should bend her course to his native country. It was hoped also that the novelty of the scenes on shore would amuse Tiaana, and remove that grief which the death of Winee had occasioned.

They received on board the Felice several fine hogs, and a quantity of rice, vegetables, fruit, &c. as they intended to put to sea as soon as the weather was favourable. Captain Meares, previous to his departure, sent an invitation to the governor, in return for his politeness: this was very readily accepted; and the captain's company, and that of his friends, were likewise requested to a ball which the governor intended to give that evening.

When the governor and his suite visited the captains, according to invitation, every exertion was used to render the place as agreeable and comfortable as possible, in return for the many favours which he had shewn them. On his going on shore, he expressed great satisfaction at the attention that was paid him.

On the 11th, at four o'clock, the Felice hove short, the tide being then in their favour, with a fresh breeze from the northward; one of the anchors had hooked a rock, and in endeavouring to disentangle it from its hold, the cable gave way, and it was unfortunately lost. The Iphigenia gave her partner three cheers, as the Felice was palling close to her under sail, which were accordingly returned.

The following is a correct description of the ball which the governor had prepared for his visitors the night before the Felice's departure: also Captain Meares's account of the country.

"The governor's ball commenced at eight o'clock in the evening: the company met at his house. The ladies, who were escorted by a number of young men of Samboingan, were dressed after the manner of the island, which borders on (as we may suppose it to be borrowed from) the fashions of Manila. It consisted of a veil, which fell gracefully to the ancles, and was so arranged as to heighten real charms, and to make one fancy beauty even where nature had denied it. The arms alone were bare; but the folds were so contrived as half to discover the bosom, while the entire figure, in all the simplicity of nature, could not be described, as being concealed from the exploring eye. Their ancles and wrists were adorned with bracelets of gold, which gave (at

" may be supposed) somewhat of a richness to an appearance that was already elegant. Many of them were extremely handsome; nor did certain arch looks, which appeared to be habitual, though they were heightened by the dance, render them less agreeable. The fandango was performed in its utmost perfection: the minuet was not disgraced by their motions; and English country dances, several of which were performed in compliment to the English, have been often exhibited with far less grace and agility in many of our best assemblies, than in this distant and remote corner of the Philippine Islands. This amusement lasted till twelve o'clock, when all the company retired, with every appearance of the most perfect satisfaction.

" For such means of innocent amusement, the people are indebted to the venerable padre, who himself joined in the dance. Indeed it would have been not only to the honour of Spain, but of the religion it professes, if such men had been employed, who, like this amiable priest, could make their missions a source of comfort and happiness, instead of accompanying them with that severity of discipline, and cruelty of compulsion, which renders conversion insincere or misunderstood, and is in such direct opposition to the mild and benevolent spirit of Christianity.

" The village or town of Samboingan is situated on the banks of a small rivulet, which empties itself immediately into the sea; and is agreeably shaded by groves of cocoa trees. The number of its inhabitants are about 1000, among which are included the officers, soldiers, and their respective families. In its environs there are several small look-out houses, erected on posts of 12 feet high, in all of which a constant guard is kept; so that it appears as if the Spaniards were in a continual state of enmity with the natives.

" The houses are built of those simple materials which are of very general use in the Eastern seas. They are erected on posts, and built of bamboo, covered with mats: the lower apartments serve for their hogs, cattle, and poultry, and the upper ones are occupied by the family. Nor did it a little excite our astonishment, that the Spaniards, instead of creating an emulation and improvement among the natives, from their own superior knowledge of the arts and conveniences of life, should insensibly sink into the manners and customs of the very people whose ignorance they affect to despise. But, though their houses have but little to boast, their piety has produced a decent church, which is built of stone. The fort is a very poor place of defence; and is, as far as they could judge, in an absolute state of decay; for the governor's cautious spirit took care to keep them from any particular examination of it. Towards the land, its whole defence consisted of a simple barrier, with two or three pieces of cannon. To a very moderate force, indeed, this place would become an easy capture: indeed the Felice and Iphigenia might, without any assistance, have rendered the Spanish power very precarious in this settlement. The military force consisted of from 150 to 200 soldiers, natives of Macilla; in which place also the governor himself was born.—They appeared to be in a state of discipline by no means unworthy of the fortresses which they garrisoned.

" Samboingan is the Botany Bay of the Philippines, and crimes of a certain nature are punished there by banishment to this place. We did not see any of the delinquents, but we had reason to suspect that there were several in some kind of close confinement.

" Inconsiderable, however, as this settlement may appear, the governor is supposed to clear 30,000 dollars in the three years of his residence there.

No. 11.

" This advantage he derives from furnishing the soldiers with clothing and provision,—from gold dust, cinnamon, spices, and other contraband goods.

" The conduct of the inhabitants was governed by the most pleasing decorum, for which they are solely indebted to the civilizing spirit of the old padre, as his two fellow-labourers in the spiritual vineyard were rather calculated to deprave than improve the poor people committed to their charge: indeed the former was of that amiable, conciliating disposition, which is so well adapted to the cultivation of savage manners. We were equally surpris'd at hearing a very tolerable band of music, which was composed of natives of the country: it consisted of four violins, two bassoons, with several flutes and mandolins. This unexpected orchestra were acquainted with some of the select pieces of Handel; they knew many of our English country-dances, and several of our popular and favourite tunes; but in performing the Fandango, they had attained a degree of excellence that the nicest ears of Spain would have heard with pleasure. The Malayans possess, in common with other savage nations, a sensibility to the charms of music, and are even capable of attaining no inconsiderable degree of perfection in that delightful science.

" Magindanao is a very extensive island, about 120 miles in breadth, and 160 in length. It is a fertile, luxuriant soil. There are in some places very high mountains, and several delicious pastures, where vast herds of cattle roam at large. There are several large lakes in the middle of the island; the borders of which are inhabited by tribes of savage natives, who think themselves as great as the sovereign of Magindanao, and equally free and independent. They are constantly at war with the Mahometans, who are the chief inhabitants of this island. They are called Hiloonas, and profess no kind of religion, but live in a state of barbarism and ignorance.

" These people are called by the Spaniards, *Negros del Monte*, or Negroes of the Mountain, on account of their resemblance to the race of Africa, both in their persons and manners. They are supposed to be the original lords of Magindanao, and, indeed, of all the Philippines; the *Isla de Negros*, or Isle of Negroes, is, in particular, entirely peopled by them, where they are at constant enmity with the Spaniards. The Mahometan natives of the island are a robust people, of a deep copper colour, and are esteemed intelligent merchants. If the Hiloonas are believed to have been the original inhabitants of Magindanao, it is very reasonable to suppose that they fled to the mountains to preserve their liberty, when they were invaded by the Mahometan hosts, which spread like locusts, during the thirteenth and fourteenth centuries, over the eastern archipelago. Their savage ignorance and barbarous dispositions seem to have become so habitual, as to leave them without the least desire, or, perhaps, without even the least idea of any superior degree of intellectual nature. The missionaries whom the zeal for infidel conversion, so well known in the Roman Catholic Church, employed to preach Christianity to these inhuman people, were instantly seized and murdered by them.

" The sovereign of Magindanao is a powerful prince, and has several inferior chiefs who acknowledge him as their head. Nevertheless there are others of them who refuse submission to him, and are consequently in a continual state of war; so that peace, at least, does not appear to be one of the blessings of this island. The Spaniards, indeed, assert their right to the entire dominion of Magindanao, but it is mere asser-

* 1 1

tion;

The lofty mountains of Jelolo had now a tremendous appearance. The great gulph of Chiauw was under their lee, while several low, sandy islands, connected with shoals, were about five leagues off Morinlay, in the channel along which they steered. They passed those islands, every attention being paid to the soundings, and the men continually on the look-out. The shoals, which were about four miles distant, were quite apparent, and as the surf was rolling in a dreadful manner over them, conveyed many alarming ideas. Their soundings were from six to eight fathoms; and when out of the channel from 14 to 30, over a hard sandy bottom. The islands are about five leagues in extent, N. and S. Being now clear of all danger, they made for the S. end of Morinlay, and continued their course to the E. S. E. with a N. E. wind, which was invariable, as well as the strong currents setting to the S. and S. W.

On the 22d they saw the island of Wagiew, which bore from S. E. by W. to W. about six leagues distant. The weather was still sultry, and the winds light. Having thus for a month endured a tedious and dangerous navigation, they were now approaching an island which they feared would also render it unprofitable. The people already began to feel the sad effects of the warm weather; and were not a little discouraged by the appearance of a tedious passage to America. Every means were applied to keep down the scurvy.

On the 23d a favourable wind revived the drooping spirits of the men: they accordingly changed their course to the N. E. and in a little time got a considerable distance from Wagiew. Another group of islands were now seen, very extensive, covered with wood, and surrounded with shoals and reefs of rocks, bearing from N. W. to N. E. by E. about five miles distant. Several canoes were seen paddling between the reefs, two of which, with five men in each, approached the vessel, and called out *Tate, tate!* but no entreaties could prevail on them to come along-side. They beheld the ship with the greatest surprise, and threw themselves into the strangest positions. These people were jet black, and woolly headed, like those at Papua; they were stout, and well made: their features like those of the African negroes. Their canoes were very narrow, and long: to keep them on a balance, a large out-rigger ran out on one side, with net-work between, made with strong cord, which was evidently worked from the rind of the cocoa-nut. As these islands had not been placed on the charts, Captain Meares called them the *Tate* Isles, after the word which the natives made use of. At noon they left those islands, the wind being still favourable.

On the 27th they saw Freewill Isles, being four, and the largest no more than five leagues in appearance: also a large village, situated on the shore of the island, seemingly an entire uncultivated forest.

They were visited by several canoes, containing at least 500 natives, all of whom were men. The canoes were built in the same manner as those of the Sandwich Islands, and held half a dozen or seven people. The people also possessed the same manners, and spoke the same language. They came along-side the vessel in a very free and friendly manner, and cheerfully exchanged a quantity of cocoa-nuts and coin-line for small bits of iron, which they received with reiterated expressions of joy.

They continued their course to the N. E. with a gentle breeze from the W. N. W.

On the 28th the wind was changeable, and the weather squally. The next day they discovered land from the mast-head; and, upon examination, found it to be the Freewill Islands. This circumstance was not believed at first, till it was confirmed by the return of some of their late friends, who brought a very handsome present of cocoa-nuts,

and could hardly be persuaded to take any thing in return for it.

On the 1st of March they lost sight of these islands, but still experienced the same disagreeable weather, and several squalls of rain, in consequence of which, the crew were very much dejected, and several of them laid up with colds, &c. Their progress was exceedingly slow, owing to the violent currents. Every means were still practised to suppress the scurvy, and a plentiful allowance of water continued.

On the 3d while the weather was extremely tempestuous, they discovered the foremast dangerously sprung below the hounds, while the vessel pitched exceedingly, owing to a heavy sail. The top-mast and top-gallant-mast were now got down on deck, and the sails unbent: every one, particularly the carpenters, were now employed to remedy this evil.

The majority of the cattle were likewise destroyed by the rolling of the vessel; the goats were all killed in one day: several plants intended for the Sandwich Islands, were likewise lost. The weather still continued stormy and unfavourable. On the 5th the mast of the vessel was secured: they kept standing to the N. W.

As soon as the weather became favourable, they overhauled their sails; and also prepared two new complete suits of sails new roped, lined, and middle-stitched: they also repaired their old ones. All the people on board, coopers, armourers, &c. were likewise employed.

It was now intended immediately on their arrival in King George's Sound, to build a sloop of fifty tons, which would be of the greatest use, not only in collecting furs, but exploring the coast when occasion required. The carpenters were therefore employed in preparing the moulds and model: the plan was immediately laid, and a party from the crew selected, who were to be left on shore with the artificers, while employed in building the vessel. It was thought necessary to make the arrangements soon, that there might be no delay when the operations were begun.

The month of April commenced with extreme bad weather, rain, thunder, lightning, &c. On the 1st the sea was remarkably rough, and the vessel was pitched so heavy, that she suffered great damage, her head-rails were carried away, &c. As there was every appearance of a violent storm approaching, the top-gallant yards and masts were got down, and the main-sail furled, the top-sails were close-reefed, and the mizen balanced; the main-top-sail was kept abroad, the rest handed. When the storm took place the vessel's head was kept to the N. E. there were heavy squalls from the S. E. and S. W. both very violent, but the latter more prevalent in this situation, it was expected every minute that the masts would be shattered to pieces. They set the fore-sail in order to scud before the storm: the vessel plowed her way remarkably fast, and they were obliged to heave-to in a high sea. As soon as this awful tempest was over, they scudded to the N. E. with a smart breeze from the S. W.

On the 3d the weather became calm, but the storm returned at noon, and the sea was as high as ever. At night it became moderate again: they stood to the N. E. till the 4th, the wind having shifted to the E. S. E. afterwards it fixed itself in the N. E. quarter; the weather became fine, and they stood to the N. W. They now saw land bearing E. N. E. about eight leagues distant.

On the 5th they steered to the N. E. the wind having shifted to the S. E. They thought they saw something like land to the E. S. E. but on account of the haziness of the weather, they were not sure whether it was land or a fog-bank: however, in a little time they were convinced it was land. It appeared to be a barren island of no great extent, about

about six miles distant: they sailed along the shores of this island, and presently after saw another: the fog still continued, and there was a strong breeze with much rain. They could not see the direct number of those isles, but as they perceived a large grampus spouting up water close to the shore, they called them Grampus isles. The weather continued tempestuous till the 6th, when it grew clear. It now became as cold, as before it was warm: accordingly they reduced the allowance of water without any inconvenience. Having now a favourable wind, they proceeded to the north as fast as possible: several small islands were seen on the 9th. In the morning at nine o'clock they thought they saw a large vessel under a great crowd of sail: They concluded it was a galleon bound to China from New Spain, accordingly they began to write several letters, to inform their friends in China of their welfare; but when they were within two leagues of the object, this supposed galleon was a huge rock, that was standing alone in the middle of the water. The first who discovered the deception, diverted himself for a long time with the different observations which were made by the sailors, one of whom began to fancy that he saw her colours. This rock, which is one of the most wonderful that was ever seen, was called Lot's Wife, as it resembled a pillar of salt upon a near view. At noon they were a-bread of it: it then bore E. N. E. about four miles distant.

This rock displayed a very awful sight: it rose almost perpendicular to the height of about 350 feet. A small black rock appeared a little above the water, about 50 yards from its western edge. On the S. E. side there were caverns, into which the waves rolled with most tremendous fury. As they met with a piece of a canoe floating on the water, they were in hopes of soon meeting land. From this to the 23d, there were continual storms; the wind then became moderate, and the weather somewhat fair. There were still several showers of snow and hail. On the 24th they had another fierce storm, attended with heavy rain: the vessel strained exceedingly in her rolling, and her rigging was very much damaged. The next day the wind shifted to the W. N. W. and the weather became moderate: indeed they had now a continual succession of gales, also of clear and stormy weather, during the remainder of this month.

The month of May introduced very pleasant weather: they pursued their course to the eastward. About the 5th they had occasional squalls, and threatening fogs. The squalls of hail and snow became very frequent about the 8th.

On the 10th they kept running during the night under a press of sail directly in for the American coast, which appeared on the 11th, bearing E. by S. about 13 leagues distant. There was a ridge of vast mountains on the continent, the tops of which were buried in the clouds; and which illuminated the atmosphere, by the reflection of snow, with which it was covered over. When within four leagues of the land, the wind shifted to the S. E. by E. upon which they tacked, and stood for sea.

The Princess Royal, of London, was now seen under the weather land of the sound, bearing down to them.

There were several heavy gulls, and continual squalls, on the 11th; which prevented them from carrying any sail: these squalls were attended with hail and snow, and at last terminated in a storm. They had now lost sight of land, and the vessel had so exceedingly strained, that two pumps were disabled, and there were six feet water in the hold. The storm did not abate till the next day at noon; in consequence of which the ship was in great distress, being very much worn, and bailing the water from the hold, which was still increasing. They stood in for land, which they saw again at seven o'clock in the evening: but finding they had been blown to leeward by the storm, they were obliged, mortifying as it was, to re-tack, and stand out again for sea, with a N. N. W. wind, the sound bearing N. E. about seven leagues distant. The night being very stormy, the crew were employed in bailing the water out of the pumps, it being then impossible to repair the pumps: they also lay-to, under the reefed foresail.

The next day was equally stormy, and the vessel as much distressed as before: she wore, and her head pointed in for the land. The weather moderated about eight o'clock; upon which they made sail, and at ten o'clock anchored (to their great satisfaction) in Friendly Cove, in King George's Sound, a-bread of the village of Nootka, within 100 yards of the shore, in four fathoms. In this comfortable harbour they enjoyed themselves, and the weather still continuing stormy, felt no little solace in being thus happily secured.

We shall now return to the Iphigenia, and inform our readers in the succeeding chapter how she has been employed during this tedious passage of the Felice from China to the N. W. coast of America. After which we shall resume the account of her consort; and thus give the proceedings of each vessel in a regular manner.

CHAPTER IV.

Proceedings of the Iphigenia—The extraordinary Behaviour of the Governor of Samboingan—Captain Douglas's Men arrested—Ship seized—The Governor's unreasonable Demand—The Captain's Behaviour—Business settled—Departure of the Vessel, without taking Leave—A tedious Passage—Dangerous Reef of Rocks—A small Island—Make for Land—Visited by several Canoes—Description of the Island, Natives, &c.—Recovery of Tianna—Death of Tawnee—Various Occurrences—Two Islands seen—Several Canoes—Arrival at the Pelow Islands—Concern of the Natives at the Vessel's not stopping—Amleck Island seen—Land mistaken for Trinity Island—A Hurricane—Particulars of their Progress—Visited by two Canoes—A Boat sent on Shore—Dealings with some of the Natives—A short Allowance, &c. &c.

AS soon as the Felice had departed, all hands on board the Iphigenia were employed in making ready for sea; but the governor now, who had been so exceedingly polite before, became all of a sudden ungenerous and assuming. Capt. Douglas having received some cattle, bags of rice, and a quantity of vegetables, waited on the governor and invited him to dinner, meaning to present him with some bars of iron, which Capt. Meares left behind on purpose, understanding that they were the most acceptable gifts: This invitation was accepted by the governor; and during the entertainment, he

appeared as quite agreeable as before; but understanding that the principal part of the cargo consisted of iron, he meditated artful means of procuring this valuable acquisition, as in Magindano it purchases gold. The governor invited the company in the evening to a ball. The next day Capt. Douglas sent his officer on shore, to know what demand was made for the articles received, the vessel being now ready for sea: it was supposed that the account would be about 250 dollars: however the officer was informed that the whole of the demand was expected to be paid in iron, which should

should be weighed according to his pleasure. As the officer was about returning with this answer, he was arrested by a file of soldiers and conveyed to a dark prison. The captain wondering at the extraordinary delay of his officer, sent another boat to learn the cause; these people were likewise arrested and detained, while a large proa, with fifty men, was dispatched to seize the Iphigenia. At first the captain was almost inclined to sink the proa; but knowing that his people on shore would consequently suffer, he gave them quiet possession of the vessel, and went on shore to the governor, to enquire the reason of those extraordinary proceedings. The governor informed the captain that he was determined to secure his payment, and therefore the vessel should not depart till the iron which he demanded was put on shore. In vain Captain Douglas remonstrated, the governor would hear no reason. The captain then returned on board, and ordered seventy-eight bars of iron to be landed (which was half of what he had): he also collected 120 dollars in the vessel; but the governor would accept of nothing but iron, which the captain at last peremptorily refused, and declared that if he persisted in such a dishonest demand the vessel should be immediately thrown upon his hands: this alarmed the governor, who forthwith accepted the iron and dollars; but refused, even now, to release the people whom he had put into confinement till he had received some wine, which was promised him, and which was accordingly delivered. On account of this cruel delay the Iphigenia did not leave Samboingan till the 22nd. She weighed anchor without firing a gun.

She had now a very tedious passage, and was obliged to proceed with the greatest care, on account of the numerous islands which they constantly approached.

On the 2d of March she fell in with a dangerous reef of rocks, which extend E. and W. about ten miles; they were not clear of them till the 6th. They proceeded now to the northward and eastward.

On the 9th they saw a small island, bearing E. half N. about 12 leagues. A great number of lights were seen on the shore.

On the 10th, they made for land, and were visited by several canoes, which at first kept at a respectful distance, holding up cocoa-nuts in their hands as a signal of peace. They were soon persuaded to come on board, and testified by their great astonishment that they had never seen a vessel before. From these people it was understood that plenty of good water was to be had at the island; it was therefore deemed advisable to stop here a day and get a supply.

They were revisited by the canoes in the afternoon, who brought with them cocoa and taro-root, which they exchanged for iron.

This island consisted of low land: it is about a league in circumference, and well covered with verdure and cocoa-nuts. The produce of the island is unknown, as there was nothing seen but cocoa-nuts and taro-root. There was one tree so remarkably tall that it appeared at a distance like a vessel under sail.

The natives are stout and robust, there seemed to be about two hundred in number. One of them seemed very anxious to have a pistol which he saw; but upon the captain's discharging it, he was so greatly alarmed that he would not touch it afterwards, notwithstanding he kissed the barrel to show his respect for it. Their canoes are the same of those at the Sandwich Islands, and the men seem equally as active in the water.

Tiaana was now entirely recovered; but Tawnee, another Sandwich Islander, who attended Tiaana during his illness, was now exceedingly ill himself, and in spite of all the care which was bestowed on

No. 11.

him died the 23d. Several of the crew were likewise ill.

As the winds continued light and variable, they made to the northward on the 28th, being determined to land the sick as soon as possible.

They had now frequent squalls of rain and variable weather for several days.

On the 4th of April they saw two low islands, also some land about twelve leagues distant. As they were at present in want of wood and other necessaries, the captain intended to take the first opportunity of supplying the vessel, accordingly they made for this land, which seemed likely to afford them a place of security; however, on nearer approach, it proved to be a cluster of islands, upon which they altered their course, and made for two low islands.

In the evening they were visited by several canoes, who exchanged some taro and cocoa-nuts for knives, nails, &c. Several others after this appeared, and the same traffic was continued; some of the natives, however, having got a few nails in their possession, refused to make any compensation, upon which Captain Douglas fired a musket over their heads, and the culprits were so alarmed that they immediately jumped into the water, and hid themselves under the lee of their canoe; those that were innocent kept their places, nor betrayed the least sign of fear.

They were now among the Pelew Islands, a description of which has been already given in Captain Wilson's voyage. Captain Douglas was, however, unacquainted with the misfortunes of the Antelope, nor could he understand why so many canoes followed the Iphigenia, upon her departure from the islands, wherein the people expressed an eager anxiety to discourse with her; but as the vessel's situation was critical, on account of the rocks, there was no attention paid to their cries, whereupon one of the natives discovered the greatest distress, which bordered upon absolute frenzy. It was afterwards supposed that this was the king Abba Thulle, who, perhaps, was expecting the return of his son Lee Boo.

The largest of the two islands was called by Capt. Douglas Moore's Island, in honour of his friend Mr. Hugh Moore, bearing S. by E. half E. about six leagues distant. Two others were called Good Look-out Islands, bearing W. S. W. half S. about four leagues distant. These were low and sandy.

They continued for some days looking out for a harbour; but not meeting with a commodious one, the Captain gave up the idea for fear his arrival at the coast of America might be too late.

On the 30th they saw the Island of Amluke, bearing N. by E. about 24 leagues distant.

On the 3d of May, as they were approaching land, and expecting a visit from the natives, they now cleaned their fire-arms.

On the 5th they thought they saw Trinity Island; but on the 9th it appeared to be an island forming part of the coast between Foggy Island and Trinity Island. The hills were covered with snow: the low lands seemed to possess good verdure, but there were no trees to be seen.

On the 10th they saw land, bearing E. N. E. about 10 leagues distant. This land was called Cape Collings.

On the 11th they saw the Island of Kodiack, and the next day Trinity Island. They directed their course through the passage between Trinity Island and the main, with a fine breeze from N. N. W. they had regular soundings from seven to seventeen fathoms, over a fine sandy bottom.

They were visited by a native in a small canoe, who complimented them after the Russian manner. A short time after another canoe, with one man, came up; he offered them the skin of a grey fox for a few beads, which he seemed very well pleased with; but as he was not able to fasten the skin in

° K k

time

time to the vessel, which at this time was making rapidly, he took it back with him.

The jolly-boat was now dispatched with an officer (Mr. Adamson) on shore, to get some fish. He procured some halibut from the natives, who requested snuff in return, holding out their boxes to be filled. These people, though they possessed much of the Russian appearance, were Kodiack hunters, or natives of Cook's river; though about two years ago, the latter seemed highly averse to snuff.

On the 16th they saw Cape Greville, bearing W. about nine leagues distant. The extremities of the land from the Island of St. Hermogenes bore N. W. by N. ten leagues to the S. W. by W. They passed Barren Islands at midnight.

On the 17th in the morning they were visited by two canoes from Point Bede, and a little while after by a Russian from the same place, with a few Kodiack hunters. They brought some fresh salmon, for which they had a little brandy and tobacco.

When they ran up Cook's River, they were visited by seven or eight canoes; but such was the poverty of this place, that not a bit of fur was to be had. On account of a strong tide, they were obliged to anchor in five fathoms and a half, about two miles from shore.

The boat was now hoisted out, in order to go on shore to look for the watering-place, and observe the behaviour of the natives. On landing, they found a small river running by the side of the huts, and the natives very shy. About fifty or three score of them sat basking in the sun, on the opposite side of the river, who took no notice whatever of the boat's crew. As the Iphigenia was in great want of wood, water, and fish, it was absolutely necessary to remain in their present situation, till a sufficient supply was obtained of these essential articles.

On the 18th they moved the ship higher up, so as to lie opposite the mouth of this river; but before the tide became favourable they touched the ground; they therefore ran out the keedge, hove-up immediately, slipped the hawser, and made sail, when they found a bank on the outside with only two fathoms and a half: it being at this time low water, the boat was sent a-head to sound; when they ran up the river about eighteen miles, and came to with the flood, over a sandy bottom, and about a mile and an half from the shore, which had a steep beach. The boat was then sent to find out the most convenient place for watering.

They were now revisited by several canoes which they saw yesterday: and though the natives had nothing to sell, they continued near the ship till the evening. Some of them, indeed, caught a few salmon, which were purchased with beads. It appeared as if these people were on the watch to prevent any of the natives up Cook's river from visiting the ship.

On the 19th they were employed in brewing, wooding, watering, &c.

On the 20th they sighted the anchor and moored ship, when all hands were employed in wooding and watering. The net was also hauled into the mouth of the river for salmon, but without success.

On the 21st five canoes came down the river, and the people in them called out *Noota, Noota*, as soon as they got along-side the ship. Five otter-skins were purchased of these people, but they would take nothing except broad bar-iron; two feet of which were paid for each skin.

It appeared as if they were at war with the Russians and Kodiack hunters, each of them being armed with a couple of daggers. They earnestly entreated the captain to go higher up the river, and gave him to understand that it was from the report of his guns, which he ordered to be fired morning and evening, that they knew of his arrival. They also informed him that they had got a considerable quantity of Natunichucks, or sea-otter skins, but were afraid to bring them down, on account of the Russians.

On the 22d their watering was completed. The long-boat also having received some damage, she was hauled up on the beach, and the carpenters and caulkers employed in repairing her; they were likewise to work to prepare a couple of masts and yards for her, as it was intended to dispatch her up the river as high as Point Possession, on the information of the natives.

On the 24th, the long-boat being finished, she was launched, and dispatched, with the turn of the tide, well manned and armed, on her intended expedition, under the command of the chief officer.

The captain ordered them to proceed up as high as Point Possession; to look into most of the small bays or low lands in search of inhabitants, and to barter his iron or beads for sea-otter skins, black foxes skins, and salmon. If he met with any Russians, he was instructed to treat them with civility; but at the same time to be upon his guard, and not to suffer either them or the natives to enter into his boat. In case of bad weather, or if by any unforeseen accident he should be detained four or five days, Captain Douglas mentioned his design, at the end of that time, to follow him with the ship up the river to Point Possession; and that he should fire guns to give him notice of his approach. The officer, however, was ordered to do his utmost to return to the ship at the end of five days.

The captain likewise sent the carpenter and caulker on shore to procure some spars for oars, which were very much wanted; but for which they were under the necessity of tracing the banks of the river to a considerable distance, before they could find any that would answer their purpose. When these people returned on board, they declared, that as the long-boat turned the point, they heard the discharge of eleven great guns. Though Captain Douglas was, in some degree, alarmed when he first received this intelligence; yet, as he had been informed, by a Russian who went on board the Iphigenia at Point Bede, that none of his countrymen were so high up the river; and as the long-boat, if she had been attacked, would have returned, the wind being fair to come back to the ship, it was concluded, as it afterwards turned out, that these great guns were nothing more than muskets, which the people had fired at some ducks, and whose report was conveyed by the wind, which blew right to the place where the carpenters were at work.

On the 25th they were visited by two canoes, which brought a sea-otter cut through the middle, and otherwise mangled. It appeared as if these natives thought that the flesh was wanted, and not the skin; but no satisfactory explanation could be obtained, as they did not understand any words that were addressed to them; and indeed gave no cause for supposing that they had ever traded with any European people. They had not a single bead of any kind in their possession; and the few which were now given them seemed to attract that kind of admiration which is awakened by objects that have been never, or at least seldom, seen before.

On the 26th two canoes came from the southward; in one of which was the Russian who had paid the Iphigenia a visit from Point Bede. He brought a present of some salmon, which was returned by a small parcel of tobacco. In the afternoon twelve double canoes came along-side from the southward; the people in them were Kodiack hunters, but they had neither skins nor fish, though they promised to bring some of the latter in the morning.

On the 27th the long-boat returned, having obtained nothing but one very indifferent sea-otter skin, and about two dozen of split salmon. The officer, Mr. Adamson, reported, that as high up the river as 60 deg. 42 min. N. he met with Russians and Kodiack hunters, who followed him from village to village, and had got entire possession of the river. At six o'clock the ship was unmoored; and, on the

turn of the tide down the river. They now stood with light winds; the seamen were now disappointed. On the 2d of the month, owing to a strong wind, the coast was so high that the natives of which

turn of the tide, they weighed anchor and dropped down the river.

They now stood to the southward and eastward, with light winds and calms. Both captain and seamen were now on a short allowance, owing to the disappointment in salmon.

On the 2d of July the vessel laboured exceedingly, owing to a heavy swell, and their progress along the coast was very slow.

On the 6th they saw Montague Island, the extremities of which bore from N. by E. to N. by W.

The captain wished to avoid this island, on account of the sunken rocks which lie in the inner passage; but, owing to a violent contrary wind, he was obliged to direct his course there. On the 7th they were within a mile and a half of the island. On the 8th they were in the mid channel, between Montague Island and the Green Islands. They now stood in for Snug Corner Bay, where they anchored on the 9th, in five fathom water, and where we shall now leave the *Iphigenia* and return to the *Felice*.

CHAPTER V.

Proceedings of the Felice continued—Camekala's Reception—Description of Maquilla and Callicum—A Spot of Ground given to the English for a House that is begun—Natives assist the Artists—Maquilla and his Chiefs ape the European Fashions—The Grindstone stolen—A general Commotion—The Pinnace stolen—Instructions given to the Commanding Officer, respecting the new Vessel they put to Sea—Occurrences—Description of Wacananih, and the Islands—Sudden Confusion, Presents, &c.—Departure of the Vessel, and her Progress.

DURING this time the *Felice* was visited by several natives, who assembled for the sake of admiring the vessel. Captain Meares used every insinuating means of attracting them; nor were his endeavours ineffectual, being constantly visited by a number of canoes, who supplied them with fish.

Camekala, the native who was on board the *Felice*, was exceedingly happy in being restored to his country: the absence, however, of his brother Maquilla, and another relation, Callicum, (who were chiefs of consequence, and on a visit) gave him some uneasiness. Camekala, being dressed in a scarlet coat with brass buttons, a cocked hat with a smart cockade, good linen, &c. attracted the notice of all his countrymen: he was welcomed on shore by the whole body of inhabitants, who made a most terrible noise on the occasion. His relations testified great joy at this meeting, especially an old aunt, who almost wept herself blind.

As soon as these salutations were over, they went to the king's house, where a magnificent feast was prepared; but Camekala being lately accustomed to the English cookery, did not much relish his countrymen's entertainment. The evening was celebrated with songs and dancing. Early in the evening the English returned on board.

Maquilla and Callicum, the relations of Camekala, who had been on a visit of ceremony to Wicananih, a prince of great consequence of a trix to the southward, returned on the 16th of May, attended with twelve war-canoes, containing each about 18 men, clothed from the neck to the ankle with beautiful sea-otter skins; their hair powdered with white down, and their faces bedaubed with red and black ochre. Maquilla, the chief, stood in the middle, with a high cap on, ornamented with feathers. They approached the vessel with a song, which was exceedingly melodious, as they were remarkably correct in respect to the tone and time: their action was likewise very expressive, as they beat time with their paddles against the gunwale of the boat. Twice they paddled round the vessel; then brought their canoes along-side; while Maquilla and Callicum came on board. On receiving some presents which were made them, they threw off their sea-otter garments, which they laid at the feet of the donors, and remained naked: in return, they were presented with blankets to cover them, which they accepted, and descending into their canoes took their leave. Maquilla seemed to be about 30 years old, with a good open countenance, and well made. Callicum was about 40, and likewise possessed of good features. Their attendants were very comely men.

A spot of ground was now granted to the English by Maquilla, for the purpose of building a house for their accommodation on shore. This was partly erected on the 28th, the natives having assisted in bringing timber, &c.

On the 5th of June the necessary business of the vessel was done, wood, water, &c. was brought on board. A very brisk trade was likewise carried on for furs; but there was such a fickleness in their traffic as occasioned some trouble.

On the 6th the English were invited on shore by Maquilla, who, on this occasion, was dressed in an European suit of clothes and a ruffled shirt, which were given him by Camekala; his hair was powdered and queued. The chiefs who attended had also some part of an English dress, and in imitating the European fashions of bowing, taking off the hat, &c. they afforded no little entertainment.

On the 7th the grindstone was stolen; application was made to Maquilla for its recovery, but in vain: as, therefore, there was no remedy, the theft, though of some importance, was overlooked.

On the 10th, as the natives were about to remove to a bay, about two miles from the sound, where there was a great quantity of fish, a general commotion took place in the village, and in a short time half the houses disappeared. These houses are so constructed that their removal requires but little trouble. About this time the pinnace, a very large fine boat, was stolen: large rewards were offered for her recovery, but all in vain. It was supposed that she was broken up for the sake of the nails, &c.

On the 11th preparations were made for sailing, the weather being now fine and pleasant, previous to which the officers and party, who were to remain on shore to complete the new vessel, were landed, and necessary instructions given to the commanding officer. This vessel was now in great forwardness.

Due notice was given Maquilla of the *Felice's* intended departure; he was acquainted that her return would be in about four months, when it was supposed the new vessel would be ready. His attention and friendship were earnestly requested to the party who were left on shore, and in order to secure his attachment he was promised all the goods and chattels belonging to the house upon their final departure from the coast. Maquilla readily complied with their requests. They now set sail, intending to trace the southerly part of the coast from King George's Sound, and pursued their course to the S. E. with the long-boat in tow. The wind becoming contrary the vessel tacked, and violent and squally weather ensued.

On the 13th they saw the hill above Wicananih, which resembles a sugar-loaf: it bore N. E. by E. about seven leagues distant. As they stood in for the shore they were visited by several canoes, some of which contained about twenty men, who were comely and brawny, and dressed in beautiful sea-otter skins. Two of them came along-side the vessel, and the people in them readily came on board. There were two chiefs, Hanwah and Ditooche, who were remarkably handsome; they earnestly invited the

the English to Wicananish: upon receiving some presents these chiefs took their leave.

In a little time the weather broke up, and they now stood along the shore. Presently after they were visited by another number of canoes, in the foremost of which was Wicananish, who readily came on board, and in a most excellent manner piloted the vessel into his harbour. They anchored between the main and the islands, where they were well sheltered. They now purchased of the natives wild-onions, berries, fish, &c.

On the 14th, as the weather was very fine, the captain and a party explored the island. They were invited by the chief to an entertainment, where they were received by a great concourse of women and children.

Wicananish, in a very hospitable manner, met them half way from the entrance, and conducted them to a seat near his own, where they indulged their curiosity.

The chief's house was enclosed with a vast area. It contained a large square, boarded up close on all sides to the height of twenty feet, with planks of an uncommon breadth and length. Three enormous trees, rudely carved and painted, formed the rafters, which were supported at the ends and in the middle by gigantic images, carved out of huge blocks of timber. The same kind of broad planks covered the whole to keep out the rain; but they were so placed as to be removed at pleasure, either to receive the air and light, or let out the smoke. In the middle of this spacious room were several fires, and beside them large wooden vessels filled with fish soup. Large slices of whale's flesh lay in a state of preparation to be put in similar machines filled with water, into which the women, with a kind of tongs, conveyed hot stones from very fierce fires, in order to make it boil: heaps of fish were stewed about, and in this central part of the place, which might very properly be called the kitchen, stood large seal-skins filled with oil, from whence the guests were served with that delicious beverage. The trees that supported the roof were of a size which would render the mast of a first-rate man of war diminutive, on a comparison with them; it was wonderful how such strength as must be necessary to raise those enormous beams, could be found by a people wholly unacquainted with mechanic powers. The door by which this extraordinary fabric was entered, was the mouth of one of these huge images, which, large as it may be supposed, was not disproportioned to the other features of this monstrous visage. They ascended by a few steps on the outside, and after passing this extraordinary kind of portal, descended down the chin into the house, where they found new matter for astonishment in the number of men, women, and children, who composed the family of the chief, which consisted of at least eight hundred persons. These were divided into groupes, according to their respective offices, which had their distinct places assigned them. The whole of the building was surrounded by a bench, about two feet from the ground, on which the various inhabitants sat, eat and slept. The chief appeared at the upper end of the room, surrounded by natives of rank, on a small raised platform, round which were placed several large bladders, over which hung bladders of oil, large slices of whale's flesh, and proportionable goblets of blubber. Lessons of human skulls, arranged with some attention to uniformity, were disposed in almost every part where they could be placed, and were considered as a very splendid decoration of the royal apartment.

As soon as the English appeared, the guests made a considerable advance in their banquet. Before each person was placed a large slice of boiled whale, which, with small wooden dishes filled with oil and fish soup, and a large muscle-shell, by way of spoon, composed the economy of the table. The

servants were busily employed in preparing to replenish the several dishes as they were emptied, and the women in picking and opening the bark of a tree, which served the purpose of towels. If the luxury of this entertainment is to be determined by the voraciousness with which it was eaten, and the quantity that was swallowed, it must be considered as the most luxurious feast that was ever beheld. Even the children, and some of them were not more than three years old, possessed the same rapacious appetite for oil and blubber as their fathers. The women, however, are forbidden from eating at these ceremonials.

As soon as the feast was over, the English were desired to shew the presents which they intended for the chief: a great variety of articles, brought for that purpose, were accordingly displayed; among which were several blankets, and two copper tea-kettles. The eyes of the whole assembly were rivetted on these unusual objects, and a guardian was immediately assigned to the two tea-kettles, who, on account of their extraordinary value and beauty, was ordered to place them with great care in the royal coffers, which consisted of large chests rudely carved, and fancifully adorned with human teeth. About 50 men now advanced in the middle of the area, each of them holding up before us a sea-otter skin, of near six feet in length, and the most jetty blackness. As they remained in this posture, the chief made a speech, and giving his hand in token of friendship, informed the English that these skins were the return he proposed to make for our presents, and accordingly ordered them to be immediately sent to the ship.

The chief appeared to be entirely satisfied with the presents he had received; and the English were equally pleased with his magnificence and politeness. When about to take leave, the ladies of the chief's family advanced towards the English from a distant part of the building, whither they had retired during the entertainment. Two of them had passed the middle age, but the other two were young, and the beauty of their countenances was so powerful as to predominate over the oil and red ochre which, in a great measure, covered them. One of the latter, in particular, displayed so sweet an air of diffidence and modesty, that no disgust of colour, or deformity of dress, could preclude her from awakening an interest even in minds cultured to refinement. As the English had not, very fortunately, disposed of all the treasure they had brought on shore, they presented the ladies with a few beads and ear-rings that remained.

From this to the 17th a brisk trade was carried on with the natives. The chief generally paid the Felice a visit every day, and both natives and English lived on very friendly terms. The natives brought them abundance of fish of various kinds, salmon and salmon-roe of the best flavour, cod, halibut, rock-fish, and herrings fresh from the sea; the women and children also sold them cray-fish, berries, wild onions, sallads, and other esculent plants.

On the 17th the English were invited by Wicananish on shore, to engage in a barter for furs. As soon as they had landed, they were conducted, as before, to his house, where they found the number of his family to be rather increased than diminished. No form or ceremony, however, was now employed; the whole family seemed to enjoy a sociable intercourse with each other; the women were permitted to eat with the men, and the whole company appeared with the familiarity of unbefeatured faces, so that the English had an opportunity of examining the comeliness of one sex, and the beauty of the other.

The sea-otter skins and other furs were now produced, to the number of thirty, and of the most beautiful kind; which, after a considerable deal of negotiation, were at length purchased; for the English found, to their cost, that these people, like those

of Nootka, possessed all the cunning necessary to the gains of mercantile life. The same rage for presents prevailed here as in the Sound, and even the ladies would interfere in making a bargain, and retard the conclusion of it till they had been gratified with additional donations.

When Capt. Meares was about to embark, there was a sudden and universal confusion throughout the village; a considerable number of canoes were instantly filled with armed men, and being launched in a moment, were paddled to the ship. At first the captain was apprehensive that some broil had taken place between the natives and the crew; but it appeared that a matter of political jealousy, respecting some of their neighbours, was the cause of this sudden commotion. Some strangers having ventured to visit the ship without the knowledge of Wicananish, the chief had ordered his people to fall upon the intruders, one of whom they had now seized and brought on shore; and though the English made the most earnest intercession in his behalf, and even proceeded to threats on the occasion, he was quickly destroyed. They are so remarkably fierce and cruel to each other, as to be totally unacquainted with mercy and forgiveness.

From this to the 20th they had very bad weather, and constant rain. As it cleared up in the evening, they got under sail, and was piloted again by Wicananish (who came on board on purpose) into a harbour which was named Port Cox, the boats being sent a-head to sound. They now anchored in a very commodious harbour.

The inhabitants here were very numerous, and as they were of a bold, intrepid nature, the English thought it highly prudent to be particularly careful and vigilant. On the 21st, therefore, they displayed their arms, and several blunderbusses. Wicananish, on seeing this, departed from the vessel in a great rage, and refused not only to trade himself, but prohibited his people: peace however was restored the next day, by some presents which were made him, and which were returned by the chief in a very grateful manner.

On the 28th the inhabitants of the village were about removing.

From a canoe which arrived from King George's Sound, with a present from Maquilla, the captain had the satisfaction to hear, that his people who were there were in good health and spirits, and the new vessel in great forwardness.

They now weighed anchor, and pursued their

course along shore; the weather was fine, and there was a light westerly breeze.

Captain Meares, in his description of Wicananish, &c. relates "that the harbour affords good shelter and anchorage. An archipelago of islands seems to extend from King George's Sound to this place, and still further to the southward. The channels between these islands are innumerable; but the necessary occupations of the ship would not allow us time to send out boats for the purpose of examining them: it is supposed, however, that there is no channel for ships but that which was entered, and which is an exceeding good one.

"These islands are covered thick with wood, with but very few clear spots, at least that we could discern. The soil is rich, producing wild berries, and other fruit in great abundance. The timber is of uncommon size, as well as beauty, and applicable to any purpose. There are several groves, almost every tree of which was fit for masts of any dimensions. Among a great variety of other trees that were observed, there were the red oak, the larch, the cedar, black and white spruce fir, &c.

"The men are very cunning, and practise much artifice. The women, in particular, would play a thousand tricks, and treat the discovery of their fineness with an arch kind of pleasantry that baffled reproach. They were very superior in personal charms to the ladies of Nootka, and possessed a degree of modesty which is not often to be found among the savage nations; but no entreaty or temptation could prevail on them to come on board the ship.

"The people of Wicananish are also very superior in point of industry and activity to those of King George's Sound. At day-break, without regard to the weather, the village was always empty; the men were employed in killing the whale, hunting the sea-otter, or catching fish, and the women were in the woods, gathering berries, or traversing the sands and rocks in search of cray and shell-fish.

"Besides two villages, there were several other places of residence, to which the chief occasionally resorted, according to the season of the year, the calls of necessity, or the invitations of pleasure. In one of these places there were about 26 houses, each of which were capable of containing 100 inhabitants."

CHAPTER VI.

Departure from Wicananish—Proceed to the Southward along the Shore—Visited by a Number of Natives—Their Savage Appearance—The Chief surly and disagreeable—Their rude and violent Behaviour to the Long-boat—Revisited—None of them invited on board—Visited by other Canoes—Cape Flattery seen—Bay of Queenhithe—A disagreeable Situation—Released by a favourable Wind—Remarkable Land visited by Strangers—Description of them—Continue their Course—Curious Observations—Possession taken of John De Fuca Straits in the King's Name—Anchor in Port Esfingham—Visited by the Natives—Occasional Remarks—Long-boat dispatched to explore the Straits of De Fuca—A violent Conflict with these People—Captain's Men return wounded—Injury not mortal—Account of the Attack—Departure from Port Esfingham—Anchor in Friendly Cove—Account of the Party that were left there—Progress of the new Vessel—A Mutiny happily terminated—The Mutineers made to work—They proceeded to Port Cox—Anchor there—Remarks—Their Return to Friendly Cove.

THEY now left Wicananish, and proceeded to the southward along the coast. The natives were exceedingly chagrined at their departure. In their course they perceived several villages, and were occasionally visited by canoes, the people somewhat resembling those of Port Cox in their manners and persons. They arrived at the entrance of a great strait, called John De Fuca, after its original discoverer, seeming to be about 14 leagues broad, and to consist of a small island which formed the entrance of this strait, adjoining which was a remarkable rock that resembled an obelisk. They were shortly visited by a number of natives, of a very savage ap-

pearance. Their chief Tatootche, who was among the number of visitors, was exceedingly surly and disagreeable: his face was entirely black, and covered with a kind of sand that glittered. He would hardly permit his people to trade with the English, and when he received a present made no return.

The long-boat was dispatched well armed and manned to look for an anchoring-place, but returned in the evening after a fruitless search. The island was a solid rock, and bore a deceitful appearance. The boat, during her excursion, was frequently incommoded by the natives, who committed many rude and violent depredations. The captain's men

were prevented by the prudence of the officer from retaliating.

They continued their course to the southward, standing along the shore with fine weather. They then entered John De Fuca straits.

On the 30th about 400 natives, with their chief, came from the island of Tootoche. They went several times round the vessel, admiring her; but as the English did not like Tootoche's conduct, there were none of them invited on board. These people, after singing a very melodious song, returned to their island, and the Felice still continued her course to the southward, with a gentle breeze. As they steered onwards, they were continually surrounded by canoes, from villages on the high banks of the sea. These people earnestly invited the vessel to their respective shores: they could not, however, be prevailed upon to come on board the vessel.

These villages were numerous and extensive, yet there was no bay that promised the least security: the land appeared exceedingly wild.

Cape Flattery was seen at a distance in the evening: this place seemed likewise destitute of any secure bay.

On the 1st of July, in the morning, they saw the bay of Queenhithe, where the crew of the boat belonging to the Imperial Eagle were destroyed. It was now so very gloomy, that they could not see the village; neither did they perceive any canoes, or inhabitants. Destruction Island, which is low, flat, and without a single tree, was seen about a mile distant from the island. They steered to the S. W. and were embayed with thick weather and rain; they could neither anchor, on account of a heavy swell which rolled into the bay, nor expect to weather the westerly land on account of the great westerly swell: as the better tack, they therefore stood till noon to the S. S. E. afterwards to the W. N. W. then kept under a press of sail, with hopes of weathering Destruction Island. The weather now clearing up, they saw the island a point under their lee-bow, about a mile and a half distant, while a heavy sea was drifting them fast in with the shore: they immediately cast anchor, in a very wild situation, on a muddy bottom, but where it was impossible that the anchor could hold long, on account of the continual rolling of the sea.

This situation was rendered still more disagreeable, by the constant reflections on the cannibals of Queenhithe, to whose savage cruelty they were nearly exposed: however the wind suddenly veering to the S. S. E. they were enabled to tack, and steer off the shore with a howling sheet. In the evening, thinking they had sufficient oiling, they wore and stood in again for land.

On the 2d they saw land, bearing E. about seven leagues distant: it was called Saddle Hill, on account of its strong resemblance to a saddle. They were prevented from making this land, owing to the bad weather, which endangered the long boat that they had stowed astern. The wind shifted to the S. W. the next day, and then they stood in for land.

On the 4th the land was seen, bearing from N. to N. E. It was remarkably high in the northern quarter; therefore this mountain was called Olympus. It was covered with snow.

On the 5th they still kept standing in for land. At noon they were within two miles of the shore, but the place seemed dreary, and there was no sign of inhabitants: the land was low and flat. They were in a short time, however, convinced that the place was inhabited, by the appearance of a canoe with a man and boy; they came along-side the vessel, which now hove-to, but could not be persuaded to come on board. They made them some presents, and in return received two sea-otter skins.

These people resembled those of Nootka in their dress and manners, but were without ornaments: their language sounded quite different; they had, however, an idea of trade.

As there was now a likelihood of trade, they became anxious to find an harbour: accordingly they coasted it along the shore, and were in expectation of meeting a good port at Cape St. Roe, which lay on a high bluff promontory, which they doubled on the 6th, though they did not see the least appearance of an inhabitant. There was now a prospect of a promising bay, the boundaries of which were formed of high land at a great distance. As they steered in breakers were seen right a-head, which extended across the bay as seen from the mast head; they therefore hauled out, and directed their course to the opposite shore, in order to see if there was any channel. This promontory was called Cape Disappointment, and the harbour Deception Bay. It was now proved that no such river as St. Roe exists.

Not being able to find any place of shelter for the vessel, they bore up for a distant head-land, keeping their course within two miles of shore. As they sailed along, they perceived many spacious lawns, and the land had a very delightful appearance: notwithstanding, there was not the least appearance of any inhabitants. A large opening now appeared, but being closed by a low sandy beach nearly level with the sea, they were disappointed again in finding an harbour. This they called Quicksand Bay, and the adjoining head-land Cape Grenville. The distant southerly head-land was called Cape Look-out. This cape, which is very high, terminates abruptly in the sea. There are three large remarkable rocks about two miles distance therefrom: they were about a quarter of a mile distant from each other, and were called the Three Brothers. They now proceeded to the northward, as their progress to the southward was so unfortunate. They did not make land till the 10th of July: then they perceived the high land which formed the eastern shore, in the straits of De Fuca.

On the 11th they dispatched the long-boat to seek an anchoring-place: she returned with a favourable report, and piloted them into a fine spacious harbour, formed by a number of islands, which were rather high, and well wooded: they anchored in eight fathoms, over a muddy bottom, well secured from the wind and sea. They called this place Port Ellingham, in honour of Lord Ellingham.

They were now visited by several canoes, which contained a large number of natives. Of these they purchased an abundance of fish, and plenty of wild berries and onions. They also took possession of the straits of John de Fuca, in the name of the King of Great-Britain, agreeable to the general form.

On the 13th they were visited again by the natives, who brought them furs of different kinds; also fish, &c. The long-boat was dispatched to explore the straits of De Fuca.

On the 20th the long-boat returned; but her surpris was the captain, to find that his men were severely wounded, in a violent conflict with the natives of the straits: this occasioned their sudden return. The attack was begun by the savages; they boarded the boat, with the design of taking her, in two canoes, containing between forty and fifty men, who were most probably some of their choicest warriors. Several other canoes also remained at a small distance, to assist in the attempt; and the shore was every where lined with people, who discharged at their vessel continual showers of stones and arrows.

A chief in one of the canoes, who encouraged the advance of the others, was most fortunately shot in the head with a single ball, while in the very act of throwing a spear of a most enormous length at the cockswain. This circumstance caused the canoes to draw back, and deprived the natives who were already engaged of that support which must have ensured them the victory. Indeed, it is wonderful how the boat's company, which consisted only of thirteen men, and who were attacked with the most courageous fury by superior numbers, escaped by numerous weapons which were instantly discharged from the shore.

In this engagement the natives behaved with a spirit and resolution that relished the usual terror of fire-arms among a savage people; for the contest was close, and for some time the English fought for their lives. One of them had been singled out by an individual savage for his victim, and a fierce engagement took place between them. The native was armed with a stone bludgeon, and the sailor with a cutlass. They both manifested, for some time, equal courage and dexterity; but if an intervening oar had not broke a blow, armed with all the force of his enemy, the Englishman must have sunk beneath it. It however failed of its object, and gave him an opportunity, by a severe stroke of the cutlass, to deprive the native of an arm, who, notwithstanding such a loss, and several other wounds, contrived to swim from the boat, indebted for his life to the noble mercy of his conqueror, who disdained to kill him in the water. The seaman who was wounded in the leg, continued, during the action, with the arrow in his flesh; and without attempting to rid himself of the torturing weapon, became, by his courageous and active exertions, a very principal instrument in preserving the boat.

The whole attention of the vessel was now transferred to their wounded people; but though several of them were much hurt, they were consoled with finding that no mortal injury had been received by any. The officer was wounded by a barbed arrow in the head, which would have killed him on the spot, if a thick hat had not deadened the force of the weapon. One of the seamen was pierced in the breast, and another in the calf of the leg, into which the arrow had entered so far as to render a very large incision absolutely necessary, in order to discharge it. A fourth received a wound very near the heart, but the weapon which gave it very fortunately fell short of the vital parts. The rest of the people were bruised in a terrible manner, by the stones and clubs of the enemy; even the boat itself was pierced in a thousand places by arrows, many of which remained in the awning that covered the back part of it, and which, by receiving the arrows, and breaking the fall of large stones thrown from slings, in a great measure saved the captain's party from inevitable destruction.

While returning down the straits, they were met by a small canoe, wherein there were two men who belonged to the tribe of Wicanamith; of these they purchased some fish; but these vile savages having offered for sale two human heads, which were apparently just cut off, and which they understood to be the heads of two people belonging to Tatootche whom they murdered, so disgusted the English that they held these natives in the utmost detestation during their stay with them.

They now prepared for joining their party in King George's Sound, as their endeavours to discover the extent of the straits were at present ineffectual.

On the 21st, in the morning, they put to sea, and were entirely clear of the Sound by noon.

Port Bellingham is an exceeding commodious harbour. There is excellent timber on the coast for building vessels. There are several places of shelter about the sound, though the sound is not near so extensive as that of Nootka.

On the 22d they stood to the S. W. and the next day to the W. N. W. to make land.

On the 24th the weather became so bad, that they could not possibly close with the shore.

On the 25th, the weather being clear, the entrance of King George's Sound was seen bearing E. N. E. about six leagues distant.

On the 26th they anchored in Friendly Cove, after an absence of one month and 25 days, where they found their party on shore safe and well, who were equally rejoiced at the safety and welfare of the Felice. The new vessel was in great forwardness; the chief part of her iron-work being done: she

was completely in frame, her sides planked, decks laid, &c.

The building of this new vessel having created much curiosity among the natives, several parties of strangers came to see it. This gave the English many opportunities of collecting a quantity of furs.

Captain Menres was very happy to find that Maquilla had strictly fulfilled all his promises, and that Callcum during his absence had relished great attention and friendship towards his people, by whose immediate orders they were regularly supplied with fish, and other provisions. They were not, however, a little alarmed, during the Felice's absence, by a report which some of the people of Wicanamith had brought to them, insinuating that a great part of the Felice's crew was destroyed by the natives of Tatootche. As this story was related previous to the action of the long-boat with the people of the straits, it proved to be a mere fabrication, but for what purpose is unknown.

On the 27th the crew were permitted to recreate themselves on shore, the weather being remarkably fine. The next day they returned to their labour, with their usual spirits.

It was now agreed upon to proceed again to sea, in order to visit Port Cox, and renew their commercial business there; this intention was, however, frustrated, by the boatswain and some of the boatmen belonging to the vessel, who had re-commenced a dangerous mutiny. It seems that ever since the first attempt the arms had been removed from the quarter-deck to the cabin: it was the mutineers' intention to seize the arms, and put the first officer to death, the rest of the people at this time being employed on shore; but the officer having fortunately gained the cabin before them, whereto the arms had been removed, he defended the door with a loaded blunderbuss, until some of the officers, who were sitting on the quarter-deck of the new vessel, being alarmed by his cries for assistance, immediately armed themselves, and hastened on board the vessel. Thus prepared, they turned the crew on deck, where they soon discovered the ringleaders in the business. Menaces being used of punishing those who persisted to be disobedient, the men who were inclined to serve the captain were therefore warned to separate from the disobedient; accordingly, on their presenting their arms, the crew joined the captain, leaving the ringleaders, who consisted of the boatswain and eight others, that obstinately refused to return to their duty. The captain (as now the vessel was perfectly secure) being unwilling to shed any blood, gave them their choice either to go into irons or be turned on shore with the savages; the latter being preferred, they were accordingly landed, with every thing that belonged to them, by which means good order was again restored.

The party on shore were prohibited from having any communication with these rebellious men, nor were they, on any pretence, to admit them, or any of them, into the house. A strict watch was also kept on board.

On the 29th one of the sailors made a voluntary confession of this business. They had bound themselves by a paper, which almost all the crew had signed, to get possession of the ship as soon as possible, quit the coast of America, and steer their course to the Sandwich Islands, thence to some port where they might dispose of the cargo. The writing being destroyed, their intentions with respect to the officers were not known; no doubt, they were either to be murdered, or to be left at Nootka. The sailors who had joined in the mutiny declared, that they were obliged to consent, through the menaces of the ringleaders.

From the loss of those seamen who had rebelled, they were prevented from making another voyage to Port Cox, as intended; so that now their chief object was to finish the new vessel as soon as possible.

The mutineers had built themselves a large hut, where they retired, and a canoe (which the captain had purchased) was sent them, in order to enable them to catch fish. Maquilla and Callicum came on board the day after the mutiny, and being struck with the magnitude of their offence, was equally surpris'd at the lenity which was shewn them. Maquilla requested permission to put the mutineers to death; which request was treated with the strongest marks of displeasure. Callicum propos'd taking them into his house: this the captain readily consented to, on an assurance that no personal injury should be offer'd them. The next day they were accordingly employ'd by Callicum in fetching water and other menial services, during which they were attended by low-conditioned natives, to watch and keep them to this duty. As they had part'd with some of their clothes before this to procure fish, the remainder of them were taken away by the chiefs, and they were now oblig'd to labour for their own maintenance, as well as for that of their new masters.

On the 6th of August the Princess Royal was seen. She disappeared afterwards. The captain now resolv'd to proceed to Port Cox, as he was apprehensive the Princess Royal might get the furs which were collect'd for him: accordingly, he renew'd his promises with Maquilla and Callicum, and as they were now going to war against an enemy (more powerful and numerous than themselves) at some distance to the northward, the captain promised to furnish them with fire-arms and ammunition, which would insure their victory, provided they still continued kind to his men. This proposal not only confirm'd their friendship, but animat'd them with new vigour. The captain was also promis'd, that instead of putting to death their captives, as was the general practice, they would make them slaves, like the mutineers.

They now prepar'd for war, while the power that Maquilla carried with him consist'd of twenty war-canoes, containing each thirty stout men, who were frightfully painted.

Captain Meares, previous to his departure for Port Cox, gave some necessary instructions to those men whom he left behind: he likewise strictly prohibited their having any connection with the mutineers.

After they had clear'd the mouth of the Sound, they saw the Princess Royal within two miles of them: the boat was hoist'd out, and Capt. Meares paid her a visit: he was received by Capt. Duncan in a very friendly manner: after some private conversation, they parted. The Princess Royal pursu'd her course to the S. S. E. and the Felice continued along-shore. In the evening Capt. Meares was oblig'd to tack and stand to sea, by reason of a contrary wind. On the 10th they got down a-breast of Port Cox, and found the Princess Royal had arriv'd a few hours before in a small bar-harbour. The Felice enter'd Port Cox.

On the 11th the long-boat was dispatch'd to Wicananith, with presents. This chief had remov'd to his winter-quarters, which were about 35 miles distant from the vessel. The boat came back in the evening, with presents in return: the next day she was dispatch'd again, with several articles to trade, and did not return till the 14th. The following is extract'd from the officer's account of the success of his trade; with a description of the winter-residence of Wicananith.

On the morning of the 13th he arriv'd at Cliquoat, which consist'd, like the other towns, of such houses as are already describ'd, but more commodiously construct'd, possessing a greater share of their rude magnificence than any which were yet seen. It was very large and populous; and the dwelling of the chief much more capacious than that which he occupi'd in the village near the sea, when they first visit'd his territories. The inhabitants were,

at this time, busily employ'd in packing up fish in mats, securing the roes of them in bladders, cutting whales into slices, and melting down blubber into oil, which they pour'd into seal-skins. All this mighty preparation was the provident spirit of catering for the winter: and the incredible quantities of these various provisions which the English saw collect'd, promis'd, at least, that famine would not be an evil of the approaching season. On these shores the winter is the happy portion of the year, which is appropriated to luxury and ease; nor are they then ever arous'd into action, but to take some of those enormous whales, which, at that season, frequent their seas, in order to feast on the neighbouring chiefs who may come to visit them.

Wicananith received all the presents which the captain had sent, with expressions of extreme satisfaction; particularly a copper tea-kettle which was honour'd with his peculiar attention: it was borne away by him with an air of triumph, to be plac'd among his treasures; and with repeated declarations, that no consideration whatever should again induce him to yield up such a valuable deposit. Twelve brass-hilted swords were likewise among their presents, which were favour'd with the most grateful admiration; and a great variety of articles had been purposely manufactur'd to suit the fancy of the women, who vie'd with each other in their cordial attentions to the English. A more brisk trade was then carry'd on with the inhabitants than had been hitherto experienced; a considerable quantity of furs were obtain'd, and the boat return'd well freighted with the produce of the voyage, and her people perfectly satisfi'd with their reception from Wicananith.

On the 18th the long-boat was again dispatch'd to the town, to take their farewell message, and which was of more consequence, their farewell present to Wicananith. The captain on this occasion intend'd to prove the disinterestedness of his friendship, by selecting such a variety of articles as would suit even the most varying fancy of this fickle people. To these were also added several coats, profusely trimm'd with buttons, and the head of a large copper still. This sumptuous present was order'd to be made without receiving any thing in return.

On the 19th in the evening the boat return'd, having punctually execut'd the captain's orders; and having brought a message from the chief, that he propos'd to visit the ship the next day; and therefore begg'd the captain to defer his departure for the purpose of receiving him.

On the 20th Wicananith, attend'd by his brother, his two sons, three of his wives, and a great number of people from the town, who attend'd their chief, in order to gain another opportunity of trading with the English, accordingly paid the captain a visit: no small quantity of furs were, at this time, procur'd from them. The chief present'd them with several sea-otter skins of the most valuable kind; and, though there was every reason to believe that he intend'd to rival the English in generosity, by refusing to receive any return, he could not bring himself to send back a couple of muskets, and a quantity of ammunition, which were too tempting to be resist'd by the delicacy of his sentiments, and might prove too useful in defending himself against his powerful neighbour, Tatootche, not to be received with the most grateful satisfaction. He enquir'd, in the most affectionate manner, how many moons would pass away before their return; and solicit'd the captain, in the strongest terms, to prefer his part and harbour to every other.

One of his sons, a young man of about nineteen years of age, express'd a very earnest desire to depart with the captain; but this offer he thought it prudent to decline, from a recollection of the anxiety he had suffer'd on Tiaana's account. This youth was the most pleasing, in his figure and appearance, of any person that had been seen on the American coast.

coast. He not only sagacious, but every token of fine disposition.

Wicananith an every token of fine disposition that the captain was.

On the 20th the 24th arriv'd safe.

coast. He not only appeared to be very quick and sagacious, but even to possess an amiable and docile disposition.

Wicaneanish and his people took their leave with every token of sincere regret, and repeated entreaties that the captain would soon return.

On the 20th the Felice put to sea, and on the 24th arrived safe at King George's Sound, where

she anchored in her old situation. The captain not only found that his men were all well, but they had been remarkably diligent, the vessel being now in great forwardness. The mutineers were still servants to the natives.

We shall now return to the Iphigenia, whom we left at Snug Corner Bay, in order to bring her again in company with her consort.

CHAPTER VII.

Proceedings of the Iphigenia continued—She leaves Snug Corner Bay—Her slow Progress—Long-boat sent out—Loss of her—Run down towards her—Take her in—Mount St. Elias perceived—Jolly-boat sent out—Returns with a Canoe—A Visit from the Natives—Islands of Ice—Visits repeated—An extraordinary Instance of Vengeance and Intrepidity—Several Skins purchased—Anchorage in Sea-Otter Harbour—Boats sent out—People employed—Anchorage at Port Meares—Three Chiefs invited to Dinner—Pass Rose Point—Joins the Felice at Nootka Sound—Arrangements made—Repentance of the Mutineers—Taken again on board—Vessels separate again.

AS soon as the crew of the Iphigenia had completed their wooding, watering, &c. on the 14th of July they weighed anchor, and turned out of the Cove: the weather was now calm and cloudy. On the 18th they stood for the S. end of Kay's Island. The succeeding morning they were close in with the Cape, when they had from 10 to 20 fathoms over a clayey bottom.

On the 22d they stood in for land, bearing N. N. E. about 16 leagues distance, in order to shew themselves to the natives; and thus, the weather being changeable, the Iphigenia proceeded to run parallel with the coast, sometimes near and at other times at a great distance from land.

On the 31st they made sail towards low land, where they saw smoke. As the weather was now clear, the long-boat was sent out, in order to explore the bay, and make every necessary enquiry. They had from 10 to 15 fathom water, over a rocky bottom. The Iphigenia having lost sight of the long-boat (which was driven out to sea) now wore and ran down towards her. In about an hour and a half they got sight of her, and in an hour after came along-side, when she was struggling with a heavy sea. She was now hoisted in, and they made sail.

On the 2d of August land was seen; and in the afternoon they perceived Mount St. Elias bearing N. W. by W. about 20 leagues distant.

The jolly-boat was sent out the next morning, to look about the shore and seek for inhabitants. She returned about noon, accompanied with near thirty natives in a large canoe. Upon this the Iphigenia anchored with her best bower, in 27 fathoms, over a fine bottom. This was called Tiaana's bay, in honour of that chief. Several dresses of sea-otter skins, &c. were purchased of the natives.

On the 5th they were re-visited by the same party, who brought some inferior dresses, but which notwithstanding were purchased, with a quantity of salmon. At nine o'clock they weighed anchor, and proceeded along the shore. Tiaana was now very anxious to return to Owhyhee, as the present climate did not agree with him. Though he had 25 much clothing on him as he could carry, yet he was scarcely able to bear the cold.

On the 6th they were high up the Sound, and thinking they saw some islands at a distance, the jolly-boat was sent out, and on her return it was understood that they were islands of ice.

They were now visited by one native, who notwithstanding the severity of the weather was quite naked. The captain gave him a hat, a pair of trousers, and a jacket; with which he was so delighted, that he offered to shew them the village whereof he was an inhabitant: As it was very dark and hazy, the captain piloted the vessel himself, which was no easy task. About 11 at night they came-to, in 17 fathoms, over a rocky bottom.

No. 12.

The next morning they were visited by five canoes, of whom some dresses and 40 sea-otter skins were purchased. These people were such arch dealers, that the captain was obliged to give them their own price.—The following extraordinary account of female vengeance and intrepidity, is related by Captain Douglas.

"One of the chiefs having unintentionally interrupted a canoe, in which was a woman, from coming close to the ship, she seized a paddle, and struck him so violently with it on the head, that he was almost disabled from employing a similar instrument to ward off the blows which followed. In this manner they continued their contest, the one striking, and he in defending himself, for near half an hour; when Captain Douglas, in order to put an end to this singular fray, fired a musquet over their heads, with concomitant signs of his displeasure, but without effect: for the woman now stepped into the canoe of the man, who appeared to be in a state of complete humiliation, and pulling out a knife from some part of her dress, she spoke for some time, and then cut him across the thigh. Though the blood gushed in streams from the wound, she was about to repeat her violence, when Capt. Douglas interfered in such a manner as to oblige this vengeful dame to return to her own boat, and give the bleeding object of her vengeance an opportunity to paddle away to the shore. During the whole of this engagement, if it may deserve that name, not one of the men dared to interfere; nay it appeared that they were in such an entire state of submission to female controul, that they could not dispose of a skin till the women had granted them the necessary permission."

On the 8th they were visited by eight canoes, of whom a large number of sea-otter skins were purchased. They now weighed anchor and made sail, proceeding S. E. along the shore. They saw a large bay in the afternoon; but there being no sign of inhabitants, they tacked and stood out. They also saw another the next day, which likewise proved deserted: accordingly they made sail, and on the 11th ran across the mouth of a large bay, which forms two capes: the southern one is high, and called Cape Adamson; the other to the N. is low towards the sea, but gradually increases to a great height: this is called Cape Barnett. Cape Adamson lies in latitude 55 deg. 28 min. N. in long. 226 deg. 21 min. E. Cape Barnett in lat. 55 deg. 39 min. N. in long. 226 deg. 4 min. E. They proceeded a great way up the bay, and entering the mouth of a strait passage, steered to the N. In the evening they anchored with the best bower, in 17 fathoms, over a sandy bottom, about half a mile distant from shore. The vessel was now entirely land-locked, and the bay was called Sea-Otter Harbour, from

M m

the great quantity of those animals which were seen in the water.

On the 12th the jolly and long-boats were sent out; the first to sound, and the other to look for a watering-place. The long-boat returned without success; however the captain discovered a plentiful run of good water on the opposite shore. There were no natives to be seen, though several places where there had been fires. The people were now employed in overhauling the rigging, cutting wood, getting water, &c.

The captain went out in the jolly-boat to explore the head of the straits, and returned in the evening, without making any material discovery. They steered through the mouth of the straits.

On the 13th they saw a small island about two miles in circumference, S. S. E. eight miles distant. It was called Douglas Island. There were a few others, low and rocky, lying off its N. and S. ends. They passed Douglas Island with clear weather, but a thick fog came on soon after, just as they were steering in for a bay, which bore N. E. by N. From this bay they were presently visited by two canoes, of whom they purchased 26 sea-otter skins, made in dresses, and a few birds.

On the 14th the weather became somewhat clear, and they made for shore. In the afternoon they got within a small island, that was about a quarter of a mile distant from the main land; where they were becalmed.

They were now visited by two large canoes, containing each about 40 people; with these there was a chief, and as they approached the vessel they sung a very pleasing chorus. The ship was driving down at this time very fast towards the island, which was under her lee, owing to an adverse tide: the chief was accordingly requested to take the rope, and tow the vessel higher up the bay; which he immediately performed, while his party still continued their chorus. The Iphigenia anchored in 23 fathoms, over a bottom of shells and sand. This bay was called Port Meares. It has two large arms or branches of the sea: the one turns N. N. E. and the other about N. N. W.

From this to the 17th a brisk trade was carried on: a quantity of sea-otter skins was purchased. These natives were exceedingly kind, and remarkably honest.

On the 18th they were visited by the natives of the northern branch of the sea, who approached the vessel with a chorus like their neighbours. Of these about 60 excellent skins, made into dresses, were purchased.

On the 20th the captain invited three of the chiefs to dinner: they seemed highly pleased with their entertainment, and communicated as much information as they were capable of. This afternoon they weighed and made sail, proceeding to the S. E. At night the weather became thick, so they hove-to, with the vessel's head to the northward and westward.

The next morning, the weather clearing up, they wore and made sail to the S. E. They now ran along the shore, with a fresh breeze from the westward, making for a bay which the natives had directed them to: they had from nine to 11 fathoms. The fog came on again very thick, and as they saw land from the mast-head, trending due N. they were resolved to know if this land joined the main, or if there were any passage; accordingly they set a press of sail, and steered for the bluff high land, that bore N. At this time there were no canoes to be seen. Towards evening it cleared up, so that they had a perfect view of both sides. They passed a sandy point, which was called Point Rose, and discovered that the land did not join the main, but formed a large island, which took a southerly direction.

On the 23d, seeing no canoes, they stood to the S. E. having land on both sides. The weather was now clear.

On the 25th they lost sight of land, and were now determined to steer at once for Nootka Sound, the entrance of which they were close in with the preceding evening; but it falling calm, and the tide getting out, they anchored with their best bower in 23 fathoms.

On the 27th they stood in for the sound, and about 11 o'clock anchored in Friendly Cove, where they joined the Felice.

This meeting was productive of so much hilarity, that by the command of the captains, it was made a holiday. At this time the crew of the Iphigenia were quite recovered from that disorder under which they laboured when they parted with the Felice: Tiaana was likewise in good health and spirits. On this day it happened that Maquilla and Callicum returned victors from their war-expedition, which did not add a little to the general joy. As there were several baskets in their canoes which they would not open, it was apprehended (as it afterwards proved) to contain the heads of those enemies who were slain: the number of which were about thirty: Maquilla also lost some of his men. The musquets which the English had lent them, were now returned: the ammunition had been entirely expended, for they had fired several times, by which means they gained the victory.

The artificers of the Iphigenia were likewise employed, as well as those of the Felice, in completing the new vessel. Every hand was now busy in forwarding this schooner, and also in preparing the other two vessels for sea, as it was intended as soon as the new vessel was launched, that the Felice should proceed to China, and the Iphigenia with the schooner perform the rest of their commercial concerns.

On the 7th of September Maquilla and Callicum visited Captains Meares and Douglas, and informed them, that they with all their people should remove to their winter residence, which was about thirty miles distant from the vessels.

The dismal situation of the mutineers began now to be considered: these unhappy wretches earnestly implored forgiveness, and made many promises of future fidelity. Notwithstanding the great danger there was in taking back those men, yet the captains thought it too cruel to leave them behind. On conditions therefore of forfeiting the wages which were due for nine months; and that their future pay should be proportioned to their good behaviour, they were admitted to their former situation: they were however divided among the two crews, in order to lessen the power of communication. The boatwain who had likewise added theft to his offence, was put under confinement in the house on shore, this being deemed absolutely necessary.

The chiefs, Maquilla and Callicum, now came to take their final leave. They were presented with a musquet, some ammunition, a few blankets, and other tokens of reward.

On the 17th a sail was seen in the offing: as it was supposed to be the Princess Royal, the long-boat was dispatched to her assistance. However, instead of the Princess, it proved to be a sloop named the Washington, from Boston in New England, of about 100 tons burthen, which they conveyed to the sound.

A little time after this the boatwain broke loose from his confinement, having stolen several articles, with which he escaped into the woods. It was afterwards understood, that the master of the Washington supported him in his concealment, and when an opportunity arrived, received him on board his vessel, in which he did duty before the mast.

On the 20th the vessel was complete, and ready to be launched: Maquilla, Callicum, and a numerous body of his people came from their winter residence to see it. This vessel was named the North West America, it being the first that was ever built

and launched in this part of the globe. On the gun being fired, the vessel started from the ways with uncommon velocity, and was nearly making her way out of the harbour, had not the boats towed her to her intended situation. It seems they had forgotten to place an anchor and cable on board to bring her up, as is the general custom in launching a vessel. Tiaana was on board the vessel when launched, and expressed the greatest astonishment and delight. All the natives were struck with wonder; nor were the Chinese carpenters less astonished, being totally unacquainted with this last operation.

A commander, officers and crew were appointed for the North West America, and she received stores from both the Felice and Iphigenia.

On the 24th the Felice was ready for sea, and the following orders were given to Captain Douglas by Captain Meares.

"On your return to Macao seal up your log-book, charts, plans, &c. &c. and forward them to Daniel Beale, Esq; Canton, who is the ostensible agent for the concern; and you have the most particular injunctions not to communicate or give copies of any charts or plans that you may make, as your employers assert a right to all of them, and as such will claim them.

"Should you, in the course of your voyage, meet with the vessels of any other nation, you will have as little communication with them as possible; should they be of superior force, and

"desire to see your papers, you will shew them. You will be on your guard against surpris. Should they be either Russian, English, Spanish, or any other civilized nation, and be authorized to examine your papers, you will permit them, and treat them with civility and friendship; but at the same time you must be on your guard. Should they attempt to seize you, or even carry you out of your way, you will prevent it by every means in your power, and rebel force by force: you will on your arrival protect publicly, before a proper officer, against such illegal procedure, and ascertain, as near as you can, the value of your cargo and vessel, and send such protest, with a full account of the transaction, to us at China.

"Should you, in such conflict, have the superiority, you will then take possession of the vessel that attacked you, as also her cargo, and bring both, with the officers and crew, to China, that they may be condemned, and their crews punished as pirates."

Having now sent all the stores they could spare on board the Iphigenia, and received in return her cargo of furs, &c. they took their farewell the officers, &c. of the Iphigenia, and North West America, having on this occasion come on board the Felice; and on the 24th, after three cheers from each vessel, the Felice put to sea, and another separation took place.

CHAPTER VIII.

Departure of the Felice from the Sound—A Storm—An Alarm—Consequent Uneasiness—Spars and Booms launched overboard—Vessel leaved—Proceed with greater Facility—Arrive at Toe-yah-yah Bay—Visited by Canoes—Quantity of Provisions purchased—Information—Proceed to Attoui and Oneebow—Anchor in Wymoa Bay—Occasional Visits—Feelings of the Natives on Tiaana's Account—Political State of the Islands—Death of Tiaana meditated—Communication with the English prohibited—Proceed to Oneebow—Surrounded by old Friends—A Letter left for Captain Douglas—Provisions laid in—Departure—The Island of Botol Tobago Xima—A Storm—Arrive at China—Translations of the Iphigenia and the Schooner, during the absence of the Felice—They quit Nootka Sound—A Meeting between Tiaana and his Brother—Anchor in Karakakooa Bay—Visit from the King and Queen—The North West America parts from her Cable—Divers procured to recover it—The Iphigenia parts from hers—Consequent Conjectures—Tiaana takes leave of the Captain, and is landed with all his Goods, &c. in Owhyhee.

THE night after the Felice left King George's Sound there was a great storm, accompanied with a very heavy mountainous sea: the vessel laboured exceedingly. On the 25th, about four o'clock in the morning, they were greatly alarmed with a supposition that the ship had sprung a dangerous leak, for at first there was four feet water in the hold, which gained in four hours that it was got above the ground tier of calks. The men were constantly employed at the pumps, which were at last choaked with the small ballast. They now baled the water from all the hatchways, while the carpenters were repairing the pumps. The progress of the vessel was very slow, she was so heavy with the water in her hull: at this time there was a violent gale from the N. W. and they proceeded to the southward.

The water in the vessel now increased in such a manner, that they were very much alarmed. They brought the ship to under the close-reefed main-top-sail, on the larboard tacks. All the spars and booms on the lee side of the deck were immediately launched overboard, by orders of the captain. When the vessel was put on the other tack, the same operation was performed on the other side: this being done, they discovered that their past danger proceeded from the great weight of timber lodged on the deck, which with the heavy rolling sea had opened her seams and admitted the water. This remedied, however, she was capable of proceeding with greater ease and rapidity.

Nothing material occurred after this. On the

15th of October they made the island of Owhyhee. On the 17th they discovered land bearing from E. S. E. to W. N. W. about six leagues distant: they now hove-to for the night, and the next day very early in the morning bore up, and proceeded under a gentle sail to close in with the land: they hove-to in the entrance of Toe-yah-yah Bay, which is situated on the western side of the island. They were soon visited by a number of canoes, of whom were purchased a quantity of hogs, pigs, taro-root, plantains, sugar-cane, fowls, &c. &c. This was a very seasonable relief, as the Felice was in great want of provisions, owing both to their tedious passage, and the large portion of stores which were given to the Iphigenia. The boats were all filled with hogs, upwards of 400 of which were now purchased with vegetables, &c. They were visited by only one chief, who came in a double canoe paddled along by twelve men: he was accompanied by his wife, and two daughters. This chief sent on board the Felice some large hogs and a quantity of cocoa-nuts, and presently after came on board, when the captain made him a suitable return.

From this chief it was understood that old Te-recoho was poisoned, and that he was succeeded by Tiaana's uncle. This revolution was the occasion of a very dreadful war between the people of Owhyhee, and those of the island of Mowee, under the government of Titeere. The chief was now informed, that Tiaana was on his way home in another vessel, and the captain willing to insure him a good reception, delivered, in the presence of a nu-

merous

and launched in this part of the globe. On the gun being fired, the vessel started from the ways with uncommon velocity, and was nearly making her way out of the harbour, had not the boats towed her to her intended situation. It seems they had forgotten to place an anchor and cable on board to bring her up, as is the general custom in launching a vessel. Tiaana was on board the vessel when launched, and expressed the greatest astonishment and delight. All the natives were struck with wonder; nor were the Chinese carpenters less astonished, being totally unacquainted with this last operation.

A commander, officers and crew were appointed for the North West America, and she received stores from both the Felice and Iphigenia.

On the 24th the Felice was ready for sea, and the following orders were given to Captain Douglas by Captain Meares.

"On your return to Macao seal up your log-book, charts, plans, &c. &c. and forward them to Daniel Beale, Esq; Canton, who is the ostensible agent for the concern; and you have the most particular injunctions not to communicate or give copies of any charts or plans that you may make, as your employers assert a right to all of them, and as such will claim them.

"Should you, in the course of your voyage, meet with the vessels of any other nation, you will have as little communication with them as possible; should they be of superior force, and

"desire to see your papers, you will shew them. You will be on your guard against surprisè. Should they be either Russian, English, Spanish, or any other civilized nation, and be authorized to examine your papers, you will permit them; and treat them with civility and friendship; but at the same time you must be on your guard. Should they attempt to seize you, or even carry you out of your way, you will prevent it by every means in your power, and repel force by force: you will on your arrival protest publicly, before a proper officer, against such illegal procedure, and ascertain, as near as you can, the value of your cargo and vessel, and send such protest, with a full account of the transaction, to us at China.

"Should you, in such conflict, have the superiority, you will then take possession of the vessel that attacked you, as also her cargo, and bring both, with the officers and crew, to China, that they may be condemned, and their crews punished as pirates."

Having now sent all the stores they could spare on board the Iphigenia, and received in return her cargo of furs, &c. they took their farewell: the officers, &c. of the Iphigenia, and North West America, having on this occasion come on board the Felice; and on the 24th, after three cheers from each vessel, the Felice put to sea, and another separation took place.

CHAPTER VIII.

Departure of the Felice from the Sound—A Storm—An Alarm—Consequent Uneasiness—Spars and Booms launched overboard—Vessel eased—Proceed with greater Facility—Arrive at Toe-yah-yah Bay—Visited by Canoes—Quantity of Provisions purchased—Information—Proceed to Attoui and Oneebow—Anchor in Wymoa Bay—Occasional Visits—Feelings of the Natives on Tiaana's Account—Political State of the Islands—Death of Tiaana meditated—Communication with the English prohibited—Proceed to Oneebow—Surrounded by old Friends—A Letter left for Captain Douglas—Provisions laid in—Departure—The Island of Botol Tobago Xima—A Storm—Arrive at China—Transactions of the Iphigenia and the Schooner, during the Absence of the Felice—They quit Nootka Sound—A Meeting between Tiaana and his Brother—Anchor in Karakakooa Bay—Visit from the King and Queen—The North West America parts from her Cable—Divers procured to recover it—The Iphigenia parts from hers—Consequent Conjectures—Tiaana takes leave of the Captain, and is landed with all his Goods, &c. in Oowhyhee.

THE night after the Felice left King George's Sound there was a great storm, accompanied with a very heavy mountainous sea: the vessel laboured exceedingly. On the 25th, about four o'clock in the morning, they were greatly alarmed with a supposition that the ship had sprung a dangerous leak, for at first there was four feet water in the hold, which gained so in four hours that it was got above the ground tier of casks. The men were constantly employed at the pumps, which were at last choked with the small ballast. They now baled the water from all the hatchways, while the carpenters were repairing the pumps. The progress of the vessel was very slow, she was so heavy with the water in her hull: at this time there was a violent gale from the N. W. and they proceeded to the southward.

The water in the vessel now increased in such a manner, that they were very much alarmed. They brought the ship to under the close-reefed main-top-sail, on the larboard tacks. All the spars and booms on the lee side of the deck were immediately launched overboard, by orders of the captain. When the vessel was put on the other tack, the same operation was performed on the other side: this being done, they discovered that their past danger proceeded from the great weight of timber lodged on the deck, which with the heavy rolling sea had opened her seams and admitted the water. This remedied, however, she was capable of pro-

ceeding. On the 15th of October they made the island of Oowhyhee. On the 17th they discovered land bearing from E. S. E. to W. N. W. about six leagues distant: they now hove-to for the night, and the next day very early in the morning bore up, and proceeded under a gentle sail to close in with the land: they hove-to in the entrance of Toe-yah-yah Bay, which is situated on the western side of the island. They were soon visited by a number of canoes, of whom were purchased a quantity of hogs, pigs, taro-root, plantains, sugar-cane, fowls, &c. &c. This was a very seasonable relief, as the Felice was in great want of provisions, owing both to their tedious passage, and the large portion of stores which were given to the Iphigenia. The boats were all filled with hogs, upwards of 400 of which were now purchased with vegetables, &c. They were visited by only one chief, who came in a double canoe paddled along by twelve men: he was accompanied by his wife, and two daughters. This chief sent on board the Felice some large hogs and a quantity of cocoa-nuts, and presently after came on board, when the captain made him a suitable return.

From this chief it was understood that old Te-recooboo was poisoned, and that he was succeeded by Tiaana's uncle. This revolution was the occasion of a very dreadful war between the people of Oowhyhee, and those of the island of Mowee, under the government of Titeere. The chief was now informed, that Tiaana was on his way home in ano-

merous body of natives, a present, which he said was a mark of Tiaana's attachment to his uncle: it was accepted with due reverence, and publicly tabooed.

As they intended to supply themselves in the most ample manner with pork in this island, and then proceed to Oneehow and procure a sufficient quantity of yams, a brisk trade was accordingly carried on with the natives, and in a short time they had purchased a plenty to suffice them till their arrival at China. They therefore made sail and proceeded to Attoui and Oneehow, though it was not without much difficulty that they got clear of the natives: they were prevented by light winds, from reaching Attoui till the 23d, on which day at noon they anchored in Wymoa Bay. During their passage by other islands, they were frequently visited by canoes, from whom they got young pigs, sugar-canes, &c. The canoes were prevented from approaching the vessel when anchored in Wymoa Bay, on account of a violent storm: the next day, however, as the weather was more moderate, though still tempestuous, they were visited by two men and a girl in a small canoe, of whom they purchased a small pig and some cocoa-nuts. These people on their first interview with the captain, burst into tears when enquiring for Tiaana. They informed the captain that Taheo on account of his old age resigned his government to Abineei, who was the avowed enemy of Tiaana. In consequence of which, Tiaana's brother (Namaatchow) had fled with his family to a distant part of the island to escape the tyranny of Taheo, and therefore war was pronounced on both sides. A proclamation was now issued by Taheo that Tiaana should be put to death if he landed, and all his subjects were forbid to have any communication with the vessel which it was imagined brought home Tiaana; but notwithstanding the prohibition, these people ventured out, with a view of apprising Tiaana of his danger.

As no other canoes ventured out, it was deemed unnecessary to stay here any longer; accordingly they weighed and proceeded to Oneehow, where they anchored on the 25th in the evening. They were here surrounded with old friends of both sexes, particularly the faithful Friday, who procured them a quantity of large yams (though at this time very scarce), and several other necessary articles. The captain left a letter with Friday for Captain Douglas, to apprise him of the political state of Attoui, and direct him how to act with respect to Tiaana, that he might be secure from the menaces of his unnatural brother.

On the 27th they prepared for their departure, and having weighed anchor pursued their voyage, with a wind from the E. N. E. From this to the 20th of November nothing material occurred. Preparations were now making for those tempestuous seas which they were about to enter.

On the 1st of December they made the Islands of Botol Tobago Xima. The weather was now thick and unpleasant, and as the clouds were exceedingly dark there was every appearance of an approaching storm, which came on at eight o'clock, attended with violent rain; they were now obliged to run the vessel in order to avoid the China Seas. They pursued their course to the S. W. the storm still continuing, and what was still worse, increasing in such a manner that they could hardly carry any sail at all.

As there was no sight of land on the 2d they imagined they were considerably advanced in the China Sea; they hauled up N. W. by W. in order to make the coast of China, which was seen on the 4th, and on the 5th in the evening they anchored in the roads of Macao.

The Iphigenia remained in Friendly Cove after the departure of the Felice till the 27th of October, on account of the necessary preparations in equipping

the North West America for sea; but as nothing particular occurred during this interval, we shall therefore, pass it over.

The Iphigenia and North West America proceeded on their way to the Sandwich Islands, and on the 6th of December were in sight of Owhyhee, just about the time when the Felice had made Macao.

When they had arrived off Mowee they were visited by several canoes, by whom they were supplied with hogs, plantains, yams, &c. This was a very seasonable relief, as their provisions were now nearly expended.

A present of hogs was ordered for the ship by Harwallence, brother-in-law to Tiaana, as soon as ever he was informed of his arrival. At the request of Tiaana an invitation was sent to Harwallence, and Tiaana now dressed himself in his best apparel in order to receive him. Their meeting was extremely affectionate, and felt by every spectator. Harwallence requested Captain Douglas to remain with him a few days, promising he should be supplied with whatever provisions he wanted; but as the captain could find no secure anchorage he was obliged (though reluctantly) to decline his politeness.

On the 7th Tiaana was visited by several friends, and on the 8th a number of canoes came off from Toe-yah-yah Bay with hogs, fowls, &c. There was now very heavy rain, and they lost sight of the North West America; but in seven hours after recovered her. The Iphigenia then went to till the North West America came up. Tiaana was now visited by several relations, and the captain received a present from the king, with the assurance of a visit as soon as he had anchored.

On the 10th they made for the bay. One of the chiefs, who had visited Tiaana, now went to invite the king, by his particular desire; about two in the afternoon the king approached the vessel in a large double canoe, attended by twelve others of the same size, beautifully adorned with feathers. As soon as he came on board, Captain Douglas saluted him with seven guns. After crying over Tiaana for a considerable time, the king presented Captain Douglas with a most beautiful fan, and two long-feathered cloaks. The light winds and number of canoes hanging on the ship, prevented her from making any way through the water: so that it became a matter of necessity to request his majesty to taboo the ship, with which he readily complied, desiring permission, at the same time, for himself and several of the chiefs to sleep on board.

They continued working into the bay till two o'clock in the morning; when they dropped anchor in twenty-one fathoms water, at the distance of three-quarters of a mile from shore. The king professed the warmest friendship for the captain of the Iphigenia, declared that the island should belong to him while he remained there, and to prove the sincerity of his regard, exchanged names with him. But however flattering all these attentions might be, Captain Douglas thought it not impossible but that some attempt might be made to seize the schooner, as she appeared to be small, and her crew few in number: he therefore, in the evening, carried the king on board the North West America, when by saluting him with all her guns, and other explanations concerning the possibility of defending her, when attacked, by retiring to close quarters, the difficulty of getting possession of her must have appeared very evident to the royal visitor. When, however, Tiaana explained to him the manner and time in which she was built, he intreated that a carpenter might be left at Owhyhee to assist Tiaana in forming such another; and, indeed, to earnest were the requests of them both on this subject, that it was necessary to make something of a conditional promise, at least, for their present satisfaction.

On the 12th the captains of both ships, Douglas and Funter, accompanied the king and Tiaana in the jolly-boat on shore. They were met on the beach by three priests, who chanted a kind of song, and presented a small hog and cocoa-nut; the former of which was given by the king to Capt. Douglas. This ceremony continued about ten minutes; after which they were introduced into a large house spread with mats, and a kind of party-coloured cloth; when, after the repetition of these ceremonies, and the priest had chanted a third song, two baked hogs were brought in, of which the English alone eat, and then proceeded to take a walk, in which they were not interrupted by a single person, as all the natives were tabooed on the occasion, and of course confined to their houses.

During this excursion nothing was seen worthy notice. It being extremely hot, they returned and dined with the king, on fresh fish and potatoes. The other chiefs sat at some distance during dinner, and made their meal on roasted dogs, taro-roots and potatoes; as at this season of the year even the chiefs are forbidden to eat hogs and fowls, from the king down to the lowest eree. In the evening the king and queen returned with Captain Douglas on board the Iphigenia, as they considered it the highest honour to sleep in his cot.

On the 17th the men were chiefly employed in killing and salting down the hogs; but as the coppers on board for heating the water were very small, they made but slow progress in this necessary occupation.

On the 14th the schooner came under the stern of the Iphigenia; when Capt. Funter gave the very disagreeable intelligence that she had parted her cable. After having moored her to the Iphigenia, Tiaana was requested to go on shore, and entreat the king to send off his divers, in order to recover the anchor; and at eight o'clock he came off with them. The schooner having lain in 30 fathom water, and not having lost more than three or four fathoms of cable, a very great depth must have remained for the natives to have explored, in order to succeed in the business about which they were to be employed. The following ceremony, however, was to be performed before they entered upon their search: when their canoes were arrived at the place where the anchor lay, several calabashes with taro-root were presented by a chief to six men, who employed about half an hour at the repast; when one of the chiefs who accompanied them gave three loud yells, and raised a piece of white cloth over his head: at this signal the six men plunged into the sea, and disappeared in a moment. Four of the six remained beneath the water about five minutes; the fifth continued about a minute longer, and when he came up was almost exhausted: two men immediately seized and dragged him to the boat. In the mean time there was no appearance of the sixth, who was considered as lost, when he was seen near the surface of the water, but sinking down again; three of the divers, however, plunged instantly after him, and brought him up, but in a senseless state, and with streams of blood issuing from his mouth and nostrils. It was some time before he was sufficiently recovered to inform them that he had not only got hold of the cable, but had cleared it. This man, according to the account of Captain Funter, of the North West America, was beneath the water the space of seven minutes and an half. It appeared, however, that the anchor was in too great a depth of water to afford any prospect of its being recovered. These people were amply rewarded for their exertions.

Captain Douglas having given orders to right the anchor, thought it prudent to move further in towards the village of Kowrowa, and dropped anchor in 20 fathom water, about a quarter of a mile from the shore; but, finding it to be bad ground, a warp was run out, and the ship hauled into 14 fathom water.

On the 15th the jolly-boat was sent to found, when, on its being discovered that the ground was by no means clear of the coral rock, on the Kowrowa side, they weighed anchor, and warped the ship opposite Sandy Bay, on the Karakakooa side, where they dropped the bower anchor in 20 fathom water, with a bottom of grey sand.

As the king had given Tiaana a large tract of land in Owhyhee, where he might live in a state of honour and security till the reigning distractions and jealousies of the government of Attoui had subsided, Tiaana was now resolved to remain in this island.

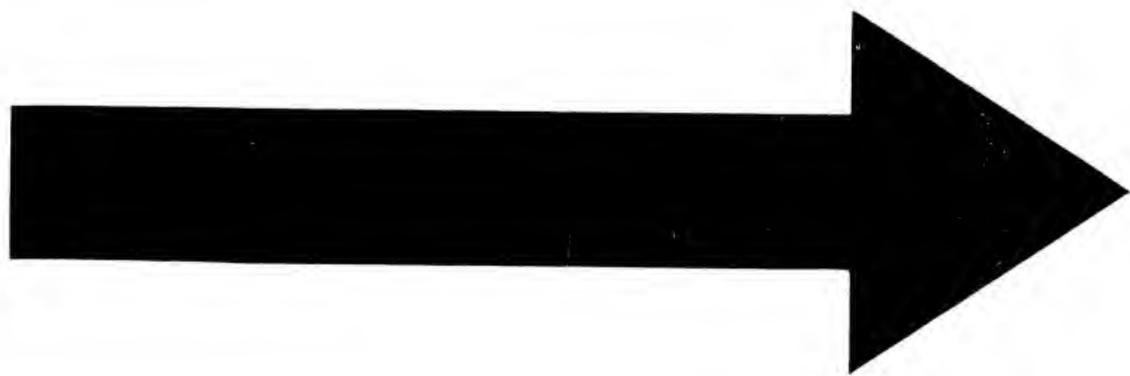

On the 19th, as there was every appearance of a storm, the captain was determined to get under way, and go in search of some place, among the other islands, where the vessels might lie in safety. In the morning, therefore, they unmoored the ship; but, in heaving the small bower, they found the cable had parted. On the very instant this discovery was made, the king and his chiefs secretly quitted the ship and paddled hastily to the shore. As the clinch was cut, to all appearance, by design, there was little doubt on whom to fix the mischief: Tiaana, therefore, was sent to inform the king of the circumstance, as well as the suspicions connected with it; and that if the anchor was not found, his town should be blown about his ears. This threat had the desired effect, for in a short time Tiaana returned with a party of divers, who, after a repetition of the ceremonies already described, leaped into the water and disappeared. The longest period which any of them remained under water was four minutes, but no anchor was to be seen. They were sent down a second time, with the same success: at length the buoy-rope was hooked with a small grapnel, so that the divers had now no excuse whatever as to the uncertainty where the anchor lay; accordingly two of them went down with a three and half inch rope, and bent it in 20 fathoms as well as if they had been on shore; so that this important object was fortunately recovered, the loss of which would have been very distressing, as they had only one bower left, and an heavy sheet-anchor, but without any cable of sufficient strength to bring the latter to the bows.

On the 20th, as they were heaving up the anchor, in order to get an offing, an heavy squall appearing to be brewing from the westward, the king, accompanied by Tiaana and several chiefs, came on board; but the former, when he found that we shot out from the bay, thought it time to depart, and accordingly left the ship, attended by upwards of 100 canoes.

Upon getting an offing they hove-to, and the weather becoming clear, Tiaana's treasures were ordered to be landed. Tiaana, after entreating Capt. Douglas again and again to bring his family from Attoui to Owhyhee, took a most affectionate leave of him and the whole crew, who had so long been his constant companions and friends, and who were equally concerned at this parting. As Tiaana left the ship, accompanied by a numerous train of his relations in their respective canoes, Capt. Douglas ordered a salute of seven guns, as a mark of esteem to that respectable chief, and immediately made sail to the N. W.

The greatest indignity which can be offered to any of these natives, and which is occasionally practiced by the great against the inferior, is to strike or kick them. One day the king being on board the Iphigenia while Captain Douglas was shaving, his majesty was requested by his attendants to undergo the same operation; but this not being agreeable to the king's disposition, he took the request in dudgeon, and thought proper to kick them all one after the other, not only without remorse, but even without mercy.

On the 21st they made for Mowee, and steering for the west point of the island, came to anchor in the evening, in five fathoms and a half, over a bottom of sand and shells.

CHAPTER IX.

Proceedings of the Iphigenia—Natives attempt to cut her Cable—Captain sends a Present to the King—A Visit from the King—Presents—Another Visit—Anchors and Cables stolen—Restored through Menaces—Joined by the North West America—Employments—Island of Attoui seen—Anchor in Wymoa Bay—Behaviour of the King and Natives—Captain informed of their dangerous Designs—Consequent Threats—They run over to Woahoo—Anchorage—They make Owhyhee—Visited by Tiaana—Political Situation of the Country unfolded—A Request of Tiaana's—Complied with—Fire-arms and Ammunition presented to the King and Tiaana—A Quarrel among the Captain's Men—Obstinacy of Jones—Disappointed in making Tam Bay—A Conspiracy—Discovery—Bird Island—Arrival at Nootka Sound—Conduct of the Spanish Commander—Iphigenia seized, &c.—Her Departure—Proceeds to the Northward—Visited by Natives—Anchorage—Various Accounts—A Conspiracy among the Natives—Discovered by the Women—Cox Channel passed—Trade carried on—Return to the Sandwich Islands—A Design formed against the English by the King, &c. of Owhyhee—Their Escape—Cursory Remarks—Proceed to China—Arrive off Macao—Conclusion.

WHILE at anchor off the Island of Mowee the natives attempted to cut the Iphigenia's cable, for which one of them was severely corrected. After having spent several days in beating about for a good anchoring-place, they worked round the S. E. end of the Island of Woahoo, and on the 30th in the evening were close in with a large bay. The next day, on account of a heavy sea, they were obliged to make sail, and push out from the land. Afterwards they tacked, and stood in, for the purpose of finding good anchorage; the jolly-boat was dispatched to sound a distant bay, and having given the signal for anchorage, the Iphigenia ran in, and on the 1st of January 1789 anchored in eleven fathoms.

The captain now sent a present to Titeere, the king, and an invitation to see him. The king paid the Iphigenia a visit in the afternoon. He was saluted on his arrival with five guns, and another present given him. The hogs, &c. having been tabooed, his majesty now promised that the taboo should be taken off, and that they should be immediately supplied with what they wanted.

On the 2d the king repeated his visit, and brought a very handsome present of hogs, fish, a turtle, taro-root, potatoes, &c. he returned on shore in the afternoon. Some short time after his departure Captain Douglas followed him in the jolly-boat. The king received him very kindly, and took him round the village to shew him every curiosity. On the captain's taking leave of the king he was promised another royal visit the next day. Accordingly on the 3d the king came again on board the Iphigenia, and brought another turtle, some hogs, &c. but notwithstanding he behaved with the greatest kindness and good-nature, he contrived, even in the midst of a violent gale of wind, to heave up, and get on shore two anchors, with their cables. As this was a loss of the utmost consequence, and, situated as they were, would have prevented their future progress, it became absolutely necessary to be very serious in their endeavours to recover them. The king did not attempt to hide the theft; and the people whom Captain Douglas sent the next day to him to demand the restoration of the anchors and cables, saw them lying in his house; indeed they seem to have been taken with no other view than to compel Captain Douglas to leave some of his armourers at Woahoo, as the condition of their being restored. However, the anchors, &c. were regained, on presenting the king with a pistol, a musket, and a small quantity of ammunition; accompanied also with some very necessary menaces, that if he did not restore the articles he had taken, he would immediately burn his town, and destroy the inhabitants.

The North West America, not being able to keep up with the Iphigenia, had been for several days beating off the W. point of the island till the 10th, when she joined her consort.

From this to the 25th they were employed in laying in provisions, also wooding, watering, &c. In the afternoon the two vessels got under way, and stood out of the bay.

On the 26th they saw the Island of Attoui, bearing W. by N. half N. They had a strong current against them, with a westerly wind during night.

On the 29th they anchored in Wymoa Bay in twenty-three fathoms, over a muddy bottom.

Upon the appearance of the Iphigenia and North West America, Taheo, the king, and all the chiefs, had gone to a considerable distance up in the country, dreading the effects of Tiaana's anger, who, they had been informed, was on board one of the vessels, and had tabooed every thing on shore; but as it was understood that the chief, whose vengeance was so much dreaded, had been left at Owhyhee, messengers were immediately sent after Taheo, who, in consequence of this information, returned in about three days to Wymoa; and on his arrival, several canoes were sent off with hogs, potatoes, and yams, for which a most exorbitant price was demanded. A couple of hatchets, or eighteen inches of bar iron, was expected even for an hog but of a middle size. This exorbitant disposition arose principally from the suggestions of a boy, whose name was Samuel Hitchcock, who had run away from Captain Colnett, and was become a great favourite with Taheo himself; indeed, so great was his influence with the king, that one of the natives having stolen from him a small piece of cloth which he wore round his middle. Taheo ordered the culprit to be pursued to the mountains, whither he had fled, and when the wretched creature was taken, both his eyes were torn from their sockets, a pahoo was then driven through his heart, and his flesh stripped from the bones, as a bait for sharks.

Notwithstanding Taheo returned to Wymoa, he still retained apprehensions as to his safety; nor would he accept of Captain Douglas's invitation to come on board the Iphigenia; but feigned, as an excuse, that he had been ill used by the crew of a ship some time before. This alarm, indeed, in a short time subsided, and he paid his occasional visits to the ship, and a friendly communication, at least to all appearance, took place between the English and the inhabitants.

However the captain now received secret information that the king, and Abinui his minister, were forming dangerous designs against him and his people. He was particularly cautioned against a poisonous root well known to the inhabitants of the Sandwich Islands, which, when ground to powder, might be easily scattered about the ship, or thrown upon their cloaths, without being observed, and whose power is of such a deadly nature, that if the smallest quantity should be inhaled by the mouth or nostrils, the consequence is immediate death. Captain Douglas, therefore, though he did not very much suspect any murderous intention in Taheo, or the natives, thought it a prudent precaution, at all events, to make known his intention, if any attempt was made to poison any of the provisions sold to them, that not only his island, but every inhabitant therein should be destroyed.

After they had laid in a quantity of hogs and roots (but which were by no means equal to their expectations, being insufficient for their immediate necessities)

necessities) and had made proper repairs sails, cordage, &c. &c. they determined to go to Onecheow; and as Namutahaw, with his relations, and four women, expressed their wish to accompany Tiaana's wife and child to Owhyhee, the captain took them all on board, in the expectation that they would be of great service to him in procuring such provisions as he wanted, in the which he now purposed to make.

On the 18th of February the Iphigenia and North West America got under way; but as they continued weilerly the captain thought it most prudent to run over to Woahoo. As they became so scanty in provisions as to require a new supply, on the 21st they bore away for Wymoa, and anchored in the same place as before on the 23d.

The king now came on board, and some of the passengers having informed him of the price for provisions at Attoui, he was disposed to increase the exorbitant demands of the neighbouring islands, and no inconsiderable quantity of powder and iron for those were now become the favourite articles. A hog was demanded for a single hog; so that very summary methods were obliged to be employed in order to procure the necessary supplies. In consequence it was found that manaces had always the effect.

On the 24th, having a favourable wind, the captain took this opportunity of making Owhyhee, where he hoped not only to meet with a greater quantity of provisions, but also more reasonable prices.

On the 2d of March, when they were about ten leagues from shore, they were visited by Tiaana, who came on board from a part of the island called Toee-hye; when he had embraced his wife and child, he conducted the ship into a bay called Tiroway, where they anchored in six fathoms of water, over a fine sand. In the evening by the provident care of Tiaana, they received a considerable quantity of refreshments.

On the 3d the jolly-boat was sent to sound the bay, when good ground was found all across from fourteen to twenty-two fathoms of water, over a fine brown sand. The king having been on board, the jolly party did not arrive till four in the afternoon. He was accompanied by his queen and daughter, two dispatch boats, having quitted his heavy car and attendants. He appeared to be overjoyed at their return, expressed his hopes that Tiaana paid them all proper attention in his absence, assured them that his power in the island, and he himself possessed in it, was at their command. Indeed, the quantity of provision with which he caused them to be furnished, and his anxious labours to forward the wishes of Captain Douglas, every thing, proved, beyond a doubt the sincerity of his professions.

On the 4th Tiaana, Tome-hony-haw, and several other chiefs, came on board the Iphigenia, and after the whole company were dismissed by the king except Tiaana; who having thrown a feathered cloak over Captain Douglas, in the name of the sovereign and himself, began to unfold the secrets of their political situation. Setting forth that Taheo, king of Attoui, and Titeere, the sovereign of Mowee, Ra Morotai, and Woahoo, had entered into a compact with Terremoweeere, the surviving son of Terremoweeere, who lived on the weather-side of the island, to possess Tome-hony-haw of his rank and power for no other reason but because he had permitted Tiaana to fix his settlement at Owhyhee; that Taheo had been furnished by the Captains Portlock, Dixon, &c. with a quantity of arms and ammunition, on an express condition that he would not afford supplies whatever to Captain Mearns and his associates; for the truth of which information, he appealed to the reception which that gentleman had lately found on putting into the island of Attoui, where he could not obtain any refreshments of any kind. The speech, which was of considerable length

under way, and

On the 26th they saw the Island of Attoui, bearing W. by N. half N. They had a strong current against them, with a westerly wind during night.

On the 29th they anchored in Wymoa Bay in twenty-three fathoms, over a muddy bottom.

Upon the appearance of the Iphigenia and North West America, Taheo, the king, and all the chiefs had gone to a considerable distance up in the country, dreading the effects of Tiaana's anger, who, they had been informed, was on board one of the vessels, and had tabooed every thing on shore; but as it was understood that the chief, whose vengeance was so much dreaded, had been left at Owhyhee, messengers were immediately sent after Taheo, who, in consequence of this information, returned in about three days to Wymoa; and on his arrival, several canoes were sent off with hogs, potatoes, and yams, for which a most exorbitant price was demanded. A couple of hatchets, or eighteen inches of bar iron, was expected even for an hog but of a middle size. This exorbitant disposition arose principally from the suggestions of a boy, whose name was Samuel Hitchcock, who had run away from Captain Colnett, and was become a great favourite with Taheo himself; indeed, so great was his influence with the king, that one of the natives having stolen from him a small piece of cloth which he wore round his middle. Taheo ordered the culprit to be pursued to the mountains, whither he had fled, and when the wretched creature was taken, both his eyes were torn from their sockets, a paho was then driven through his heart, and his flesh stripped from the bones, as a bait for sharks.

Notwithstanding Taheo returned to Wymoa, he still retained apprehensions as to his safety; nor would he accept of Captain Douglas's invitation to come on board the Iphigenia; but feigned, as an excuse, that he had been ill used by the crew of a ship some time before. This alarm, indeed, in a short time subsided, and he paid his occasional visits to the ship, and a friendly communication, at least to all appearance, took place between the English and the inhabitants.

However the captain now received secret information that the king, and Abinui his minister, were forming dangerous designs against him and his people. He was particularly cautioned against a poisonous root well known to the inhabitants of the Sandwich Islands, which, when ground to powder, might be easily scattered about the ship, or thrown upon their cloaths, without being observed, and whose power is of such a deadly nature, that if the smallest quantity should be inhaled by the mouth or nostrils, the consequence is immediate death. Captain Douglas, therefore, though he did not very much suspect any murderous intention in Taheo, or the natives, thought it a prudent precaution, at all events, to make known his intention, if any attempt was made to poison any of the provisions sold to them, that not only his island, but every inhabitant therein should be destroyed.

After they had laid in a quantity of hogs and roots (but which were by no means equal to their expectations, being insufficient for their immediate necessities)

necessities) and had made proper repairs in their sails, cordage, &c. &c. they determined to proceed to Onecheow; and as Namitahaw, with six of his relations, and four women, expressed their wishes to accompany Tiaana's wife and child to Owhyhee, the captain took them all on board, in the expectation that they would be of great service to him in procuring such provisions as he wanted, in the island which he now purposed to make.

On the 18th of February the Iphigenia and North West America got under way; but as the wind continued westerly the captain thought it most prudent to run over to Woahoo. As they became now so scanty in provisions as to require a necessary supply, on the 21st they bore away for Woahoo, and anchored in the same place as before on the 23d.

The king now came on board, and some of the passengers having informed him of the price paid for provisions at Attoui, he was disposed to imitate the exorbitant demands of the neighbouring island; and no inconsiderable quantity of powder and shot, for those were now become the favourite articles, was demanded for a single hog; so that very penny methods were obliged to be employed in order to procure the necessary supplies. Indeed it was found that manaces had always the desired effect.

On the 24th, having a favourable wind, the captain took this opportunity of making Owhyhee, where he hoped not only to meet with a greater quantity of provisions, but also more reasonable prices.

On the 2d of March, when they were about two leagues from shore, they were visited by Tiaana, who came on board from a part of the island called Toee-Hye; when he had embraced his wife and child, he conducted the ship into a bay called by the natives Tiroway, where they anchored in sixteen fathoms of water, over a fine sand. In the evening, by the provident care of Tiaana, they received a considerable quantity of refreshments.

On the 3d the jolly-boat was sent to sound the bay, when good ground was found all across it, from fourteen to twenty-two fathoms of water, over a fine brown sand. The king having been on a fishing party did not arrive till four in the afternoon; he was accompanied by his queen and daughter, in two dispatch boats, having quitted his heavy canoes and attendants. He appeared to be overjoyed at their return, expressed his hopes that Tiaana had paid them all proper attention in his absence, and assured them that his power in the island, and all he himself possessed in it, was at their command. Indeed, the quantity of provision with which he caused them to be furnished, and his anxious endeavours to forward the wishes of Captain Douglas in every thing, proved, beyond a doubt the sincerity of his professions.

On the 4th Tiaana, Tome-homy-haw, and several other chiefs, came on board the Iphigenia, and soon after the whole company were dismissed by the king, except Tiaana; who having thrown a feathered cloak over Captain Douglas, in the name of the sovereign and himself, began to unfold the secrets of their political situation. Setting forth that Taheo, king of Attoui, and Titeere, the sovereign of Mowee, Ranai, Morotoi, and Woahoo, had entered into a compact with Terremoweeere, the surviving son of Terrecoboo, who lived on the weather-side of the island, to dispossess Tome-homy-haw of his rank and power, for no other reason but because he had permitted Tiaana to fix his settlement at Owhyhee; that Taheo had been furnished by the Captains Portlock, Dixon, &c. with a quantity of arms and ammunition, on an express condition that he would not afford any supplies whatever to Captain Meares and his associates; for the truth of which information, he appealed to the reception which that gentleman had lately found on putting into the island of Attoui, where he could not obtain any refreshments of any kind. The speech, which was of considerable length,

concluded with entreating Captain Douglas to leave two of his men behind him, till his return from America, together with a swivel-gun, his own fowling-piece, and whatever other arms and ammunition could be spared by him. The preparations which Captain Douglas had seen at the other islands, and the great demand he had experienced for powder, shot, and musquets, induced him to give some credit to the scheme which Tiaana had just mentioned; he, therefore, complied with that part of the request which related to the fire-arms, and immediately ordered the carpenter on shore, to form a stage on one of the largest double canoes, to receive the swivel: which being finished, the next day was brought along-side the Iphigenia, when the gun was mounted; but it was with great difficulty that the king could prevail on his people to keep their paddles in their hands while he discharged the piece.

On the 6th early in the morning, the wind being from the southward and eastward, a signal was made for the king to come on board, when they got under way, steering for the bay of Toee-Hye. His majesty was accompanied by his queen, Tiaana, and other principal chiefs, while those of an inferior rank attended the ship in a fleet of thirty canoes. At half past five in the afternoon, they anchored in ten fathoms of water, opposite the village of Toee-Hye. The king and his company went on shore in the evening.

On the 7th, the king sent the captain a present of thirty hogs, a quantity of salt, cocoa-nuts, potatoes, and taro. As the trade-wind was now blowing fresh, Captain Douglas requested that he might, if possible, be favoured with immediate supplies, as he was in haste to sail for America. Tome-homy-haw, therefore, dispatched messengers up the country, with orders for every one who had an hog to bring it immediately to the village, on pain of death: and at ten the next morning, he himself came off with a present of fifty hogs, some of which weighed fifteen stone. In the course of the day other necessary articles were sent on board, particularly twelve geese. In the evening Captain Douglas, after presenting some fire-arms and ammunition to the king and Tiaana, took his leave of them; and at midnight got under way.

On the 9th they proceeded to Woahoo, where having got a considerable quantity of wood, and made some addition to the stock of taro and sugar-cane, they continued their course to Attoui; and on the 12th in the evening, came to an anchor about two miles to the eastward of the anchoring-ground.

On the 13th early in the morning they got the boats out, and towed the ship into her former berth. Taheo and the other principal chiefs were gone to Punna; and Abinui was the only person of consequence remaining at Wymoa, who sent a present of an hog on board, but did not think proper to accompany it.

On the 14th the long-boat was sent on shore for water, when the men on duty got to quarrelling with so much violence, as to draw their knives against each other; and when Mr. Viana attempted to part them, a seaman, of the name of Jones, threatened to knock him down. Captain Douglas ordered Jones to immediate punishment; to which, with the most horrid execrations, he refused to submit, and ran for the fore-top, in expectation of meeting with the blunderbusses which were generally kept there primed and loaded, in case of an attack from the natives, but was prevented from gaining his object by Captain Douglas, who fired a pistol over his head, and threatened him with a second discharge if he proceeded another step. As it was very evident that several of the ship's crew were disposed to support him, he was ordered either to deliver himself up to punishment, or instantly to leave the ship; which he did without the least hesitation.

hesitation, and tranquillity was immediately restored.

Their watering being now completed, they got under way for Oncheow, in order to obtain a supply of yams. But as they could not make Yam Bay, on account of contrary winds, they were forced to bear up for the other bay; and on the 15th they anchored in 13 fathoms of water.

Captain Douglas being now informed of a design agitated by several of the seamen to go off with the jolly-boat, gave orders to the officers to keep a strict watch; nevertheless, during the night, the quarter-master and two of the sailors had got on shore in some of the canoes that were along-side. They had formed a plan to get off with the boat, and at the same time to set fire to the ship; but being prevented in their diabolical enterprise, they had taken an opportunity to escape to the island: two of them, however, by the active zeal of honest Friday, the before mentioned native of Oncheow, were shortly brought back to the ship; but the quarter-master, who was the ringleader in the mischief, could not be brought off on account of the surf, and was therefore left behind: for such was the situation of both vessels, being in want of many necessary articles (the North West America having also lost her anchor) that though, according to Captain Meares's instructions, Capt. Douglas was to have proceeded to the northward, he was under the necessity of proceeding immediately to the coast of America, where he had every reason to hope he should meet with a ship from China.

They had now procured a sufficiency of yams for a month; accordingly, on the 18th, the vessels proceeded together to the N. W. from N. N. E. On the 19th land was seen, which bore the form of a paddle: it was high at each end, and low in the middle. It is barren on N. E. and W. sides: on the S. it is covered with verdure; and as it only seemed accessible to birds, was therefore called Bird island.

As the compasses flew about each way four or five points in a moment, it was impossible to steer the vessel for three days together. During this voyage they were likewise upon short allowance.

On the 20th of April the Iphigenia stood in for the Sound. The next day one Aching, a seaman, died, in consequence of a fall.

On the 24th a sail was seen in the offing. Captain Douglas sent out his long-boat, and found her to be the North West America. She anchored about noon in the cove. The next day her sails were unbent, and all hands employed to stop her leaks.

On the 26th she was re-fitted out for trade, and dispatched to the northward on the 29th, for the purpose of procuring commodities, and exploring the archipelago of St. Lazarus.

On the 6th of May a Spanish ship of war called the Princesa, commanded by Don Stephen Joseph Martinez, mounting 26 guns, anchored in Nootka Sound; and on the 13th she was joined by a Spanish sloop of 16 guns, called the St. Carlos, loaded with cannon, &c. Capt. Douglas had been invited on board the Princesa, and brought the commodore a present. These gentlemen, with Captain Kendrick, who arrived from Mowena, took a walk after dinner. After this the same party dined with Captain Kendrick, &c. The captain, his officers, the Spanish commodore, &c. dined also with Capt. Douglas.

Capt. Arrow, who commanded the Spanish sloop St. Carlos, requested Captain Douglas's company to dinner on the day of his arrival; but the captain, being indisposed, declined the invitation; he was, however, visited by the commodore, Captains Kendrick and Arrow, &c. in the evening.

On the 14th the Spanish commodore sent for Captain Douglas and Mr. Viana on board the Princesa. As soon as the captain was on board, he took out a paper, and told him, that it was the King of Spain's orders to take all the vessels he met with on

the coast of America, and that he was now his prisoner. The captain urged the distress they were in before they reached the harbour; the vessel without cables; no pitch nor tar on board, to stop her leaks; no bread on board, nor any thing to live on but salt pork; that if he had steered for any port in South America, the Spaniards would not have seized his vessel, but supplied him with the necessaries he was in want of, agreeable to the laws of nations; to take him a prisoner in a foreign port, that the King of Spain had never laid claim to, was a piece of injustice that no nation had ever attempted before; but that, sooner than be detained as a prisoner, (although the vessel had like to have foundered before they got into the harbour) if he would give him permission, he would instantly leave the port. This was denied. Forty or fifty men, with some officers, went on board, hoisted the Spanish colours, and took possession of the Iphigenia. The keys of the captain's chest were demanded; his charts, journals, papers, and in short every thing that was in the vessel they took possession of; he was not so much as allowed to go on board. He was told that his papers were bad; that they mentioned he was to take all English, Russian and Spanish vessels that were of inferior force to the Iphigenia, and send or carry their crews to Macao, there to be tried for their lives as pirates. The captain told him they had not interpreted the papers right; that though he did not understand Portuguese, he had seen a copy of them in English at Macao, which mentioned, if he was attacked by any of those three nations, to defend himself, and if he had the superiority to send the captain and crew to Macao, to answer for the insult they offered. The padries and the clerk read the papers over, and said they had interpreted the papers right.

On the 15th Captain Kendrick came down from Mowena: Captain Douglas having been informed that Capt. Kendrick was privy to his being taken prisoner, and that it was settled when the Spanish commodore was last at Mowena, when he came on board the Iphigenia he refused to see him. This being reported to the Spanish commodore, he was ordered, at ten o'clock at night, (although very unwell) to turn out, and carry his bed on board the Spanish sloop, it both raining and blowing at the time. Here he remained for some time, without any body to speak to: his servant, who was a Manila-man, and spoke the language very well, was not permitted to come near him, for fear of his discovering some of their proceedings that was carrying on. In short, they stole a number of things, and afterwards laid the blame on his servant. His people were divided between the two vessels, and every method made use of to entice them to enter. The sails were bent, and some new running rigging wove. A captain was appointed, and officers, to carry him to St. Blas. His officers were to be detained, and one half of his people on board the two Spanish ships, and he was requested to choose the quietest of his men to go along with him. A list of them he was desired to give to the commodore, as they were to sail in a few days. This he would not comply with, but told him he might send home if he thought proper; that the Iphigenia was not fit to go to sea till she was caulked, and her leaks stopped. This they immediately set about. After taking every thing out of her, copper, iron, trade of every kind, and all the Sandwich Island pork, they filled the after-hold with sand ballast, that they had been at so much pains to get out. The schooner North West America, and the Felice, being daily expected in, none of them were permitted to speak to the natives, although he found an opportunity to speak to Maquilla, and the other chiefs, as did Mr. Ingraham, chief officer of the Columbia. They requested them to have boats ready to go off to Captains Meares and Funter, and acquaint them not to come into Nootka. They instantly shifted

their

their village about four miles from Nootka, that Captain Douglas was now in the hands of Captains Meares and Funter, and that he was now in the hands of the Iphigenia, the servant, natives for some fish they Spaniards, not understanding him on board the commodore into the stocks, where he and threatened severely, if he had requested the natives to be taken to the Captains Meares and Funter. When they found he was doing about the other vessels, if the natives had not told him in the offing; he answered after this set at liberty, but verily with the Indians, nor by Captain Douglas afterwards. Captain Kendrick; he denied being taken; that the Spaniards obliged to him he would take as soon as he arrived in the said every thing, and made up prevent the business.

On the 22d the irons were which were made by Captain They were now to proceed and Captain Douglas was on choose one half of his men, as remain with his officers. This was denied. Forty or fifty men, with some officers, on board, hoisted the Spanish colours, and took possession of the Iphigenia. The keys of the cabin chest were demanded; his charts, journals, and in short every thing that was in the vessel was taken possession of; he was not so much as allowed to go on board. He was told that his papers were bad; that they mentioned he was to take all the Russian and Spanish vessels that were of inferior force to the Iphigenia, and send or carry the crews to Macao, there to be tried for their crimes as pirates. The captain told him they had not interpreted the papers right; that though he did not understand Portuguese, he had seen a copy of them in English at Macao, which mentioned, if he was attacked by any of those three nations, to defend himself, and if he had the superiority to send the captain and crew to Macao, to answer for the rest they offered. The padries and the clerk read the papers over, and said they had interpreted the papers right.

On the 15th Captain Kendrick came down from Mowena: Captain Douglas having been informed that Capt. Kendrick was privy to his being taken prisoner, and that it was settled when the Spanish commodore was last at Mowena, when he came on board the Iphigenia he refused to see him. This being reported to the Spanish commodore, he was ordered, at ten o'clock at night, (although very late) to turn out, and carry his bed on board the Spanish snow, it both raining and blowing at that time. Here he remained for some time, without any body to speak to: his servant, who was a Nilla-man, and spoke the language very well, was permitted to come near him, for fear of his differing some of their proceedings that was carrying on. In short, they stole a number of things, afterwards laid the blame on his servant. His people were divided between the two vessels, and every method made use of to entice them to enter the sails were bent, and some new running rigging made. A captain was appointed, and officers, to carry him to St. Blas. His officers were to be divided, and one half of his people on board the Spanish ships, and he was requested to choose the best of his men to go along with him. A list of them he was desired to give to the commodore, they were to sail in a few days. This he would not comply with, but told him he might send home the schooner thought proper; that the Iphigenia was not to go to sea till she was caulked, and her leaks mended. This they immediately set about. After getting every thing out of her, copper, iron, trade every kind, and all the Sandwich Island pork, filled the after-hold with sand ballast, that they were at so much pains to get out. The schooner North West America, and the Felice, being daily expected in, none of them were permitted to speak to the natives, although he found an opportunity to speak to Maquilla, and the other chiefs, as did Ingraham, chief officer of the Columbia. They expected them to have boats ready to go off to Mowena, and acquainted them to come into Nootka. They instantly stuffed their

their village about four miles to the northward, so that Captain Douglas was in great hopes both Captains Meares and Funter would have intelligence of his being captured. One of his people on board the Iphigenia, the servant, was bargaining with the natives for some fish they had in their boat; the Spaniards, not understanding what was said, ordered him on board the commodore's ship, and put him into the stocks, where he was strictly examined, and threatened severely, if he did not tell whether he had requested the natives to go and caution Captains Meares and Funter not to come into Nootka. When they found he had not mentioned any thing about the other vessels, they wanted to know if the natives had not told him they had seen a vessel in the offing: he answered they had not. He was after this set at liberty, but ordered never to converse with the Indians, nor speak to them in future. Captain Douglas afterwards had a conference with Captain Kendrick; he denied being accessory to his being taken; that the Spanish commodore had mentioned to him he would take Capt. Meares prisoner as soon as he arrived in the harbour; that he had said every thing, and made use of all his interest to prevent the business.

On the 22d the irons arrived from Mowena, which were made by Captain Kendrick's armourer. They were now to proceed instantly to St. Blas, and Captain Douglas was once more requested to choose one half of his men, as the other half was to remain with his officers. Finding not one of them would enter, or desert him, he declined giving the preference to any. Before they sailed, he requested his own private papers might be delivered up, likewise a copy of his ship papers, which was promised him. The interpreter, when he came to that part which mentions his defending himself in case he was attacked, and, if he had the superiority, to carry the aggressors to Macao to be tried for the insult, mentioned to the commodore, in his presence, that he thought the papers very good. Capt. Douglas told him, if that was the only cause he had to allege against him, it would not be difficult for him to call him in any court of justice in Europe. He had now got every thing out of her that he took a liking to; and what things he had belonging to himself he robbed him of in as gentle a manner as he possibly could, by letting him know he must have his gold watch, his secant, stove, charts, &c. &c. He now proposed to return the vessel, and supply the captain with provisions to carry him to the Sandwich Islands, if he would sign a paper that was already prepared and presented him. This he refused to comply with, till he had witnesses, and knew the contents of the paper. Mr. How, supercargo of the Columbia, was requested to write a letter to Captain Kendrick and Mr. Ingraham, to come down from Mowena to be witnesses to the papers he was to sign.

On the 24th they arrived; the papers were interpreted to Capt. Douglas, which mentioned that the commodore arrived on such a day, and found him in the bay of St. Lawrence, Nootka; that he was in distress, and in want of every thing; that he had not stopped his navigation, but supplied him with every necessary he was in want of to carry him to the Sandwich Islands. This paper Capt. Douglas refused signing, for two reasons; one was, he had not taken possession of the ship, and every thing that belonged to her; another was, the Spaniards could lay no claim to a port they had never before seen, nor had any of the King of Spain's vessels ever entered. The commodore said, in the year 1775 he was second officer on board a king's frigate that was on discovery, that saw the port, and named it the bay of St. Lawrence. Captain Douglas told him, having the chart of that voyage by him, he begged leave to differ in opinion from him. If he did not chuse to sign the papers, the commodore then said, he would keep the vessel, and send her along the

No. 13.

coast as a privateer, to trade with the natives. The papers were instantly laid aside, and Capt. Kendrick went up to Mowena. The same evening the commodore told him his orders were to take Captain Kendrick, if he should fall in with him any where in those seas; and mentioned it as a great secret, that he would take both him and the sloop Washington, as soon as she arrived in port.

On the 24th, and succeeding day, there was a violent storm; the commodore requested Captain Douglas would go on board the Iphigenia with his officers and people, and secure her: having nothing on board to secure her with, he declined having any thing to do with her; the commodore was therefore under the necessity of sending two eight-inch howitzers, and making her fast to Hog Island. As he was not permitted to go on shore, he did not know much of what was carrying forward there; they were busy in erecting forts on Hog Island, and, by what he learned, they were cutting down large trees to build houses. The commodore acquainted him, that last year, when he was at Onalaska, Mr. Ismyloff told him, he expected three vessels from Kamtschatka, with a number of men; that on their arrival at Onalaska, he was to take the command, and conduct them to Nootka Sound, where they were to form a settlement; that he expected to arrive at Nootka by the middle of July, or 1st of Aug. 1789; that two Russian frigates were to sail from Peterburgh by the way of Cape Horn, and join them in Nootka Sound, with stores and other necessaries that they might want. On his arrival at St. Blas last year, he sent an express to the viceroy, who ordered him to sail immediately for Nootka, and erect forts to keep the Russians out. He likewise acquainted him, that in the year 1786 two English vessels were cast away, one was drove ashore at her anchors on the island Maidenoi Ostroff; that all the hands perished, except three men that happened to be on shore: they were sent overland to Peterburgh. The officers of the other vessel being on shore, they put to sea, and as there was no person on board that could navigate the vessel, she was never afterwards seen or heard of. As they now had got possession of Capt. Douglas's charts and journals, the Spanish commodore intended to send the St. Carlos, Capt. Arrow, to the northward, as soon as they could get her bottom cleaned and her sides caulked. Capt. Kendrick was likewise ready for sea, and he was going to push to the northward. Captain Douglas's people were after him every hour in the day, requesting that he would sign the papers, that they might get on board their own vessel. Although the commodore had promised to supply him with what he thought would be necessary to carry him to the Sandwich Islands, and made this promise before Mr. How and Mr. Ingraham, still there was no dependence to be put on his word; however, on the 26th this paper was once more produced, and Capt. Douglas was under the necessity of signing it.

On the 26th Capt. Douglas carried his people on board, and took possession of the Iphigenia: he was not above half an hour on board, when a message came that he was wanted on board the Princeessa. When he went on board, he was told by Don Joseph Stephen Martinez (in the presence of Mr. Ingraham) that, although he had given him back the Iphigenia, he would not permit him to sail till the arrival of the schooner North West America, and that he must sell her to him for the price that Capt. Kendrick and his officers should set on her. The captain told him the schooner did not belong to him; that he had no power to sell her, and that he might act as he thought proper on the occasion. In the afternoon the Spaniards left the ship, each carrying off what he could lay his hands on.

Captain Douglas was still detained from proceeding to sea, until the arrival of the North West America; it being insisted upon that he should dispose of her for 400 dollars, this being the price

which

which one of the American captains had set upon her. After much solicitation, he obtained a scanty supply of stores and provisions; for which it was demanded he should give bills on his owners. The prices far exceeded either the quality or quantity of the articles.

As the North West America did not return so soon as was expected, Don Martinez insisted that Captain Douglas should order it to be delivered to him for the use of his Catholic Majesty; and as the captain had not liberty to depart till he acquiesced, he wrote a letter of an evasive nature, and left it for Captain Funter, which the commodore, being ignorant of the English language, was satisfied with.

The Iphigenia being at last free, on the 3d of June quitted Friendly Cove, and continued her course to the northward, with the wind at S. E. On the 5th it was very foggy weather; which cleared away on the 6th. They now saw a small barren island, which they lost sight of in the afternoon, when they were surrounded with a number of small islets and rocks; upon which they bore up, to look out for some place of shelter before night. They passed between a low island and the main land; being becalmed and set down by the current to a small island, where there were no soundings with 80 fathoms, the boats were hoisted out, and the vessel towed clear of the island into 26 fathoms, when they anchored over a muddy bottom.

On the 7th a ledge of rocks was seen above water, (it being now low water) within less than a cable's length of the vessel: upon which they weighed anchor (a fresh breeze springing up) and worked out of the sound. They afterwards anchored in 55 fathoms at the entrance of the sound. At noon they weighed again, and stood to the S. W. The weather was now clear and fair.

Early in the afternoon they perceived a canoe paddling towards the ship: upon which they shortened sail, and purchased three dresses of sea-otter skins. The Captain, understanding from these natives that there were more skins to be had at an adjoining village, accordingly wore and stood to the N. E. in company with the canoe. In the evening they anchored in 35 fathoms, opposite to a village which stands upon a high rock. Captain Douglas called this place Fort Pitt, as it has the appearance of a fort. In latitude 54 deg. 58 min. in long. 229 deg. 43 min. E.

The captain bought several sea-otter skins of the natives here, and the next day when trade ceased he weighed anchor and stood to the westward. The captain called this large sound Buccleugh's Sound; where there are several arms and branches, some of which take an easterly direction, and run as far as the eye could see; a few others took a northerly direction, and were in the captain's opinion joined with Port Meares and Sea-Otter Sound. A low island, which lies off Cape Farmer, was called Petri's Island; and an high mountain on the west side of the sound was called Mount St. Lazaro. They made sail at night, to clear a small rocky island that lies off Cape Murray. They now steered right up the sound, passing about eight islands which lay in the middle of it. In the afternoon an officer was sent out in the long-boat, to sound and discover a place of security; he returned in about three hours, and reported that there was a very fine cove about four miles higher up the sound. In the evening they anchored in 15 fathom water, over a bottom of sand and shells.

This harbour the captain thinks is by much the best on the coast of America. The entrance of it is about half a mile from shore to shore; off which an island is situated of about a mile in circumference, so that a vessel may lay there secure from all winds. At the bottom of the Cove, which is about two miles from the entrance, there is a very fine beach, where there is also a small island in the middle of it, round which the tide flows. It was called

Haines's Cove. In latitude 54 deg. 57 min. N. and in long. 228 deg. 3 min. E.

From this to the 17th they were employed in purchasing furs, fish, oil, &c. and making some necessary repairs to the ship and rigging.

On the 17th an altercation having taken place between the chiefs of the two villages, on different sides of the cove, they made preparations for war; but the bloody conflict seemed to have been prevented by the women, who having quarrelled among themselves for near an hour, reconciled thereby the hostile parties. One of these chiefs with his attending canoes, paddled round the Iphigenia, and saluted the captain with a pleasing song: this was understood as a compliment to the captain for not having meddled in the business. The other party hastened to shore, and were congratulated by the women and children, who testified no small triumph on the occasion.

On the 19th they weighed anchor, and made sail out of the cove. The weather was now cloudy, but moderate: the wind from the S. W. At noon there was an appearance of an inlet, which bore S. S. W. and they stood across a deep bay: their soundings were irregular. They called this McIntosh's Bay; in latitude 53 deg. 58 min. N. in longitude 228 deg. 6 min. E.

On the 20th the long-boat was dispatched to the head of the bay, to explore the place. The officer on his return reported, that toward the head of the bay a bar run across, on which the long-boat got a-ground, but that there appeared a large sound within it.

They were visited by several canoes, of whom they purchased a stock of furs. The weather now became thick and hazy.

The long-boat was dispatched again in the afternoon well armed and manned, in order to seek an anchorage, and examine the place. After this, the captain perceiving about a dozen canoes, which were followed by several others, he made sail after the long-boat, which by this time had given a signal for anchorage. They anchored in 25 fathoms, about two miles distant from shore, and the same from a small barren island, which was the residence of Blackow Conechaw, a chief whom Captain Douglas had seen in his last voyage, and who now came with his attendants, and welcomed his arrival with a grand chorus of two hundred voices: this done, he exchanged names with the captain, which is a great compliment among these chiefs.

This night they were visited by two canoes, these dropped down with the tide, as it was imagined, and lay on their paddles, with hopes of finding the English asleep: finding themselves, however, discovered, and being threatened with destruction if they did not keep off, they made for shore with great precipitation.

On the 21st they stood up the inlet, and anchored in 18 fathoms: this was called Cox's Channel. The long-boat was dispatched to sound: there were no soundings with 80 fathoms of line, but about the rocks there were from 20 to 30 fathoms.

Several female natives having been invited on board, they informed the captain this night, that there was a design formed against him by the same party whom they drove away the preceding night, and whose number was very considerable, to surprise them as soon as the lights were extinguished, and make an attempt upon the vessel: it was likewise their intention to cut off all their heads. The captain accordingly gave private directions to the gunner, who, when the lights were put out, perceived a canoe coming out from among the rocks, upon which he gave the alarm, by firing a gun, which was accompanied by several musquets, which obliged the canoe to make hastily for shore.

On the 22d they were visited by the old chief Blackow Conechaw, who was peculiarly ornamented on the occasion, having four skins of the ermine hanging

hanging from Captain Douglas of last night, upon his motive for it was for the sake that the tribe was the opposite the women had appeared moreover as these people if This old chief, consequence, be lie to the capta On the 23d the harbour, which Tartanez chief; about a cable's le

This diabolical design by Tiaana, with tears he could not prevent to have any there in was so closely watched with the greatest anxiety for the discovery The captain was soon by their secretly conveyed: however, he was stons, nor at present of distrust; knowing th

hanging from each ear, and one from his nose. Captain Douglas reported to him the proceedings of last night, upon which the chief assured him, that his motive for living at present along-side the vessel, was for the sake of giving her occasional assistance: that the tribe which offered this violence inhabited the opposite shore, and it was by his command the women had apprised the captain of their intentions: he moreover advised Captain Douglas to destroy these people if they repeated their malevolence. This old chief, who was one of great distinction and consequence, behaved exceedingly friendly and polite to the captain.

On the 23d they ran across the channel to a small harbour, which is called Beal's Harbour, on the Tartance side; here they anchored in 19 fathoms, about a cable's length from the shore.

From this to the 27th they were employed in purchasing skins, and making preparations for their departure. They were obliged to cut up the hatch-bars and chain-plates, as their stock of iron had been taken away by the Spanish Commodore.

On the 26th the chief went on shore to procure a fresh supply of provisions for the captain. The next day he returned, and the captain gave orders to unmoor: they now steered through Cox's Channel, while several canoes kept them in tow: having by the rapidity of the tide got out, they hove-to. Several skins were now purchased of the natives for jackets, coats, trowlers, kettles, pots, frying-pans, bakens, &c. &c. as the iron which belonged to the chain-plate was now objected to, on account of its brittleness, which rendered it to them of no utility in manufacturing it. Indeed, the captain lost a great quantity of furs, for the want of iron, and other necessary articles of trade.

The village of Tartance has an exceeding beautiful and romantic appearance: there are evident signs of former cultivation. The tribe is also very numerous.

They now quitted Nootka Sound, and proceeded to the Sandwich Islands; during which, nothing occurred worthy of relation.

Having reached Owhyhee, a very dangerous design was formed by the chiefs of this place to destroy the captain and his crew, and plunder the vessel. This villainous plan was happily prevented by the prudent and manly behaviour of the captain. The treacherous chiefs intended to have executed their evil purpose on board the vessel, for which reason the ring-leaders had now introduced themselves on board. Some had daggers in their hand, and one of them a pistol; in short, they were all secretly armed, and each had some vile part in this intended massacre allotted to him to perform. The king's elder brother and Aropee were the persons fixed upon to destroy the captain, the king's younger brother to murder the boatswain, and Parceonow, one of the chiefs, to make away with Mr. Adamson, who was the principal officer: the rest were to stab each a particular sailor, and throw all that remained alive into the sea. The natives were now to lie still in their canoes, till the chiefs on board gave them a signal for the attack. It was also intended when the vessel had been pulled to pieces, to carry the remains into the mountains, and conceal them, for fear strangers might be deterred from visiting the island hereafter.

This diabolical design was revealed to the captain by Tiaana, with tears and lamentations, who, though he could not prevent their intentions, nobly refused to have any share in the conspiracy: however, he was so closely watched by the conspirators, that it was with the greatest difficulty he found an opportunity for the discovery.

The captain was soon convinced of their treachery, by their secretly conveying away the queen from the vessel: however, he wisely concealed his apprehensions, nor at present betrayed the least appearance of distrust; knowing that if he gave an abrupt alarm,

his people might drive these disappointed assassins to despair, and perhaps bring on the evil which he wished to avoid: he was therefore determined to adopt a more quiet method, which would be productive of less danger; accordingly, under some pretences, he got the pistol from one of the chiefs, and the daggers one by one from the rest, and having thus completely armed himself by disarming his enemies, waited patiently the arrival of Tiaana, to consult with him how he should proceed. As soon as he arrived, the captain took him alone into his cabin, and bolting the door, insisted upon a full discovery of every thing. Tiaana, in the greatest distress, fell at his feet, and laid the whole blame upon the king, recommending at the same time that the captain should put him instantly to death: upon this the captain jumped on board with a loaded pistol in each hand, and the chiefs finding themselves not only detected, but baffled in their intentions, instantly hurried into their canoe, and left the vessel with the greatest expedition.

All intercourse between the English and natives would certainly have terminated now, was it not absolutely necessary to procure provisions for the remainder of their voyage. Accordingly, an humble apology was accepted of from the king, who threw all the blame upon his chiefs, and an occasional communication renewed with the natives, the English still retaining their utmost care and prudence. A quantity of hogs, fruit, &c. were now laid in. The king humbly requested the captain's forgiveness before his departure; while Tiaana still continued to lament the treachery of his countrymen. The captain readily shook hands with all, in hopes that as atonement for the past they might give their friendship and protection to whatever British vessels may hereafter reach this island.

On the 28th they anchored in Wittee Bay, in the island of Woahoo. The rudder-chains were cut up, in order to purchase provisions of several canoes by whom they were now visited.

From this to the 4th of October nothing material occurred, when they anchored safe in the roads of Macao.

The North West America, during her voyage amongst the Charlotte Isles, had procured about 215 excellent sea-otter skins, and about the same number of inferior ones: ignorant of the transactions which had taken place between Capt. Douglas and the Spanish commodore during her absence, she returned to King George's Sound on the 9th of June, 1789; immediately on her appearance, Don Joseph Stephen Martinez sent out several boats manned and equipped for war, and conveyed the North West America into the sound, where they anchored her close to the Spanish ships of war; they then took possession of the schooner, her cargo, &c. All the sea-otter skins were taken out of her, and put on board the Princess Royal, for their own use and advantage. Captain Funter and his men were made prisoners, and removed to the Spanish ships of war, where they were confined.

At last they were permitted by Don Martinez to return to China, in the American ship Columbia, where they arrived on the 2d of November 1789.

Such are the interesting Voyages of Captains Meares, Tipping, Douglas, &c. which are herein fully and properly united, for the satisfaction of our NUMEROUS Readers. We are happy, or to use a more significant expression, PROUD to think that the fruits of our labour, already exhibited, have acquired UNIVERSAL approbation. To retain that Accuracy and Attention which have so strongly recommended our Collection will be the greatest mark of Gratitude which we can shew. As we have, therefore, began, so we mean to continue. Our Readers shall next be presented with a NEW translation of Saugnier and Brisson's voyages to the coast of America; which we presume will be found equally interesting, entertaining and correct as any of the preceding narratives.

NEW,

NEW, COMPLETE, AND GENUINE
HISTORIES OF
Voyages to the COAST of AFRICA,

Undertaken and Performed in 1783, 1784, 1785, and 1786,

By Messrs. SAUGNIER and BRISSON,

SLAVERY, Various DISTRESSES, &c.

Including some Interesting DETAILS of the MANNERS of the ARABS of the DESERT,
the EMPIRE of MOROCCO, &c. &c.

Being an Entire New HISTORY of the ADVENTURES and HAZARDS of SAUGNIER, &c.
with an Impartial ACCOUNT of the SLAVE TRADE as carried on at SENEGAL and
GALAM, Fully and Accurately Translated from the FRENCH, by W. H. PORTLOCK, Esq.

Which, with the several other VOYAGES and TRAVELS to be included in this Collection, will be Embellished
with a Variety of Elegant COPPER-PLATES, Drawn upon the Spots, and Engraved by Eminent Artists.

INTRODUCTION.

THE hero of the Voyage of our first book (Saugnier) after completing his studies, and having no turn for the ecclesiastical profession, for which he was designed, resolved on seizing the first opportunity that offered to indulge his juvenile thirst for fame. He received a tolerable education; but from the narrowness of his circumstances it was a matter of doubt what line of life he should pursue. His parents were then endeavouring to settle one of his brothers, who bought a grocer's stock in trade at a very reasonable rate. M. Saugnier staid with him on condition of paying his board, worked hard, and after a year's apprenticeship he was capable of earning wages at other shops in Paris, and in this way he passed seven years of his life with different grocers. Becoming weary at last of this dull life, and not being anxious to enter the church, he still retained an ardent inclination of trying his fortune in the colonies.

Two of his countrymen having projected a plan of settling at Senegal, M. Saugnier was very desirous to join in their scheme, but then he wanted money; and as he well knew his parents would never indulge his romantic intentions, he pretended to them that he was about entering into treaty with a grocer's stock in trade. This having met their approbation, they advanced what money was supposed to be necessary at first, and this was all, indeed, he could obtain.

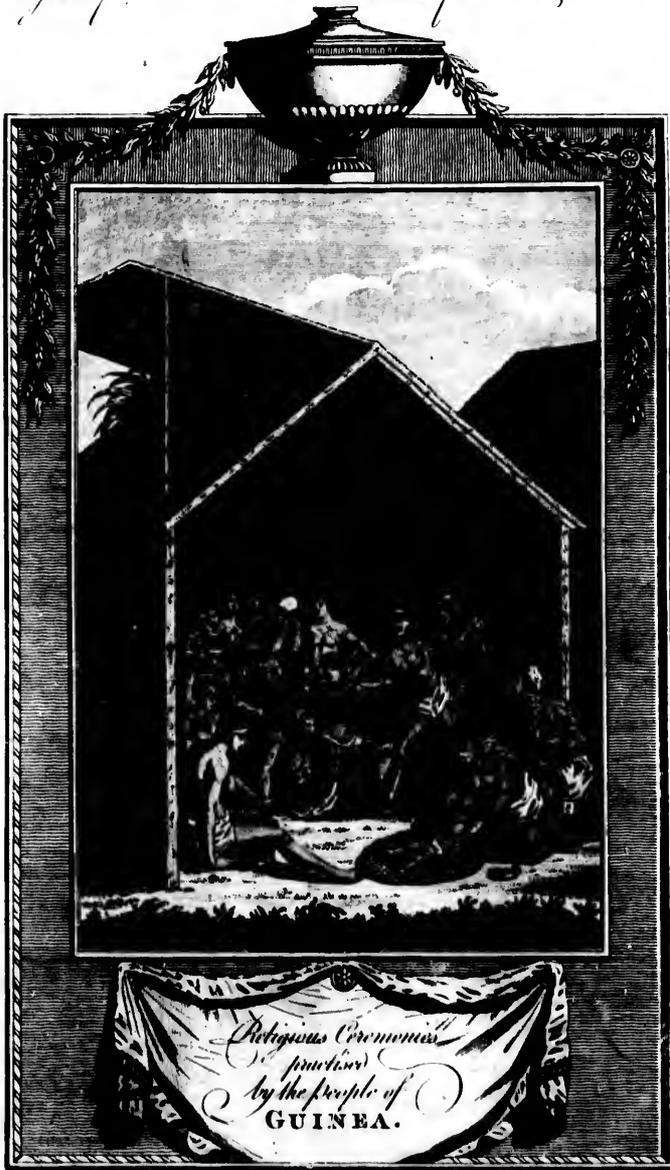

At Nantz the Marquis de Biccaria (of a Swiss family) second captain of the African battalion, was waiting for the Catherine, a vessel belonging to M. Aubry de la Fosse, the head of a commercial house in Senegal. The officer made a verbal agreement with M. Aubry, for M. Saugnier's and his companions passage, at 300 livres each. Accord-

ingly, when the vessel was ready, they set off; but as soon as they arrived at Nantz, M. Aubry understanding that it was their intention to settle at Senegal, became consequently alarmed at a competition in the colony, which might be prejudicial to the interests of his own house; he therefore demanded 1000 livres for the passage of each, without even allowing them any baggage but their trunks. M. Saugnier and his friends objected to these unexpected conditions, and were resolved to wait a more favourable opportunity. After delaying a fortnight at Nantz, they heard that there were vessels frequently fitted out at Bourdeaux for Senegal; where they accordingly repaired, travelling on foot behind their baggage. At Rochelle they put their things on board a Bourdeaux hoy, and proceeded on their journey. When they arrived at Bourdeaux, they began to be very uneasy about their clothes, &c. as they had not the precaution to insure their effects; however in three weeks their baggage arrived safe, which afforded no little satisfaction, as by this time their money was nearly expended, and they had not a change of clothes.

Count de Repentigny, brigadier of the king's armies, formerly colonel of the regiment, and afterwards governor of the French possessions in Africa, procured a passage immediately for M. Saugnier's two friends, on board the Bayonnois, while M. Saugnier was on the point of returning home in despair; however the Chevalier de Fresnel, a gentleman of Picardy, having received orders to remain in France, M. Saugnier obtained his vacant place on board the Deux Amies, a vessel Dutch-built, of about 300 tons burthen, and commanded by Capt. Carvin.

CHAPTER I.

M. Saugnier embarks on board the Deux Amies—Violent Storms—Care of the Vessel submitted to the Lieutenant—His Imprudence—Captain alarmed—Evil remedied—A terrible Shock—Boatwain's Agility—Mate's Intrepidity—Account of the People where they are wrecked—Their Cruelty to the Mate—The Captain's Resolves—Barge overset—Long-boat lost—Intrepidity of the Cooper—Captain becomes desperate—M. Bardon's Resolution—The Captain attempts his own Life—Bardon drowned—M. Saugnier, and others, swim to Shore—Behaviour of the Moors—Sufferings of M. Saugnier.

M. Saugnier embarked on board the *Deux Amies* the 19th of December, 1783; they were ten days in the river, detained by contrary winds. They sailed in company with the *Bayonnoise*, but towards evening lost sight of her. They met with violent storms on their reaching Cape Finisterre, and were consequently obliged to lay-to for five days. They now intended to put into the nearest port, but as the wind abated they proceeded again to sea.

On the 7th of January, 1784, as the wind and weather were now very favourable, the captain perceiving no danger, and exceedingly fatigued with the hardships of the preceding days, submitted the care of his vessel to his lieutenant, an inexperienced youth, while he retired to his cabin to repose. This young man, intoxicated with the idea of commanding a watch, let the helmsman steer as he pleased. The vessel soon felt the ill consequence of this negligence, and the captain, aroused by a shock which he received, instantaneously ran upon deck, and remedied the mischief with wonderful presence of mind. Every thing being now safe, and the weather still fine, the captain, after giving his lieutenant some instructions, submitted the vessel to his care again.

On the 14th the mate, taking the lieutenant's watch, saw land about three leagues distant, for which they were running with the wind abaft. They took the lofty mountains for Mogadore, where there are none at all; however, they soon discovered that they were those of Wel de Non.

In consequence of the lieutenant's imprudence, the crew began to murmur, and several sailors declared the vessel was in imminent danger, which proved to be the case on the 17th of January, at four o'clock in the morning, just after the lieutenant's watch had been relieved, without any one's having seen the land.

All the people in the cabins hastened on deck, on account of the terrible shock occasioned by their striking on the sand-bank, but nothing could be distinguished; horrible cries were heard on every side, and the sailors ran about the deck, not knowing what they were doing. One laid hold of a hen-coop, and another of the rigging, while the sea broke entirely over them; the darkness of the night, the fury of the waves, the officers' ignorance of the place where they had run the ship a-ground, and death before their eyes, deprived them of all recollection, and drove them to despair.

The ship, being Dutch built, made very little water at first: about half after five, being much beat by the breakers, which followed one another incessantly, she made a great deal, and the danger appeared more urgent. The boatwain perceiving that she continued upright, and wishing to keep her in that position, cut away the masts, and laboured to lighten the vessel, that she might drive nearer and nearer to the shore.

The captain now put a stop to all business, that they might come to some kind of resolution in these embarrassed circumstances. They knew not where they were. Some asserted that they were ashore on one of the Canary Islands, and others on the coast of Africa. Being recovered, however, from their first fright, their whole attention was turned to the safest means of reaching the land, be it wherever it was.

They were about a quarter of a league from it, nor could they distinguish any thing on the shore. M. Decham, the master's mate, about 19 years of age, of a bold and intrepid disposition, now tied the deep sea-line round his waist, that it might serve him to tow a somewhat thicker rope ashore, that would have been a great assistance to the crew in case of the ship's going to pieces, and bravely leaped into the sea.

The rocks, among which he was obliged to swim, obliged him to let go the line; so that his courage was unavailing. Overcome with fatigue and cold, he sheltered himself from the wind in a cask that was now carried to the beach by the sea. As soon as he entered it, they saw an animal running along the sea-side, which those in the ship supposed a tiger; it was a dog belonging to some Moors, who soon after made their appearance.

Those who occupy the country where they were wrecked are called *Mongcars*, governed by chiefs of hordes, but who acknowledge no sovereign but the Emperor of Morocco, to whom however they pay no tribute, and whose very laws they do not observe. These people are miserably poor, destitute of every thing, and live only upon what they can find or steal. The earth they inhabit being insufficient to supply their wants, they eagerly seize every thing that seems likely to satisfy them. They came running down in crowds to the sea-side, and made a most hideous noise. Upon which the wretched Decham left his cask, and throwing himself into the sea, attempted to swim back to the ship; but he was soon stopped by the Moors, who pursued him. They forced him back to the beach, stripped him of his shirt, and led him to the top of the hill. The crew now standing on the fore part of the ship, stretched out their arms towards them, and implored their mercy; but their weak voices did not reach them, nor did they take notice of their gestures. They saw them with their glasses make a hole in the sand, wherein they put the wretched Decham, and covered him.

He was guarded by two men, while the others returned to the beach; part of them leaped into the sea, and swam towards the vessel; the rest were employed in picking up the fragments of the casks which the sailors had thrown overboard. They then put fire to them, ran to fetch Decham, and carried him between four, and exposed him to the flames. They now handed him about from one to another, sometimes suspending him by the feet, and at other times holding him transversely. Being joined by another party, they began to dance round the fire, and make a horrid noise.

The sailors, not being able to conceive their reasons for thus tantalizing their countryman, supposed they were about killing in order to eat him. Indeed their imagination worked so strong, that some declared they saw them tearing him to pieces, and concluding them to be cannibals, they became deaf to all orders and advice, and declared that if they came on board they would fight while they had life. Thus, impressed with fear and the workings of fancy, they were for some time before they could be prevailed upon to lighten their vessel, and put their arms in order. As soon, however, as they began, the captain ordered them to leave off, with

• P P

view

view of repairing well armed in parties to the beach. For this purpose the barge was hoisted out, and four sailors, who were resolved to make a desperate defence, went into her, being provided with two swivels loaded with cartridge shot. However, this project failed, by the overloading of the barge. The men were saved by ropes, which were thrown out. They now resolved upon using the long-boat, and suggested the idea of laying a deck over her; the Captain supposing by these means to reach the Canary Islands, while others thought it would be easier to make Senegal; which opinion at last prevailed. After all their struggling, they were only able to nail on a few planks, and having now hoisted her out, they moored her along-side with stout ropes, for fear of its oversetting like the barge. Their provisions, arms, money, &c. were now put on board. They embarked, but were soon obliged to get out again, the sea ran so very high, and one of the ropes by which she was moored breaking, she dashed with great violence against the ship's side: however she was moored again, but became so full of leaks that it was impossible to hoist her in: they were therefore obliged to leave her to the mercy of the waves. The Moors perceiving her nearly upon the beach, seized and hauled her over the sand, and having taken every thing out of her, set fire to her. The crew, ignorant of their customs and laws, looked upon this as the greatest cruelty and indignity.

The vessel made but little progress, and was still suffering perceptibly: she beat towards the middle; her deck was loosened, and every thing threatened a speedy destruction. What still increased the crew's consternation, was the little prospect there appeared of an asylum upon shore, even if they were so fortunate as to reach it.

The cooper, who was a man of amazing intrepidity, and an excellent swimmer, declaring that suspense was to him more terrible than death itself, proposed swimming ashore, and told his friends that he would make them a signal if the Moors did not kill him. His surprising resolution astonished all, and he leaped without any hesitation into the sea. About a dozen Moors went to meet him, and having assisted him in reaching the beach, there stripped him of his shirt, and exposed him as they had Decham to a fire, while they danced round him, making a hideous noise. After this ceremony he was conveyed from the crew's sight, who were still in a state of ignorance whether he was killed or not.

Captain Carlin, who had hitherto supported his fate with becoming fortitude, now lost all his patience, and desperately resolved upon blowing up the vessel; this however M. Bardon, second lieutenant of the African battalion, opposed: this gentleman with a drawn sword, seconded by the officers, threatened to destroy any man that would approach the magazine, where there were several thousand weight of powder. Upon this the captain became cool, and begged forgiveness: the crew now retired to the fore part of the vessel. Messrs. Sauguier, Follie, a cabin-boy, and a landsman still watched the motions of the captain, who threw himself upon his bed, then rose, came upon deck, and was so alarmed at the dances and fires of the Moors, that he returned to his bed, began to pray, and leaning down his head, discharged two pistols in his mouth. At first he was thought dead, but the surgeon having dressed his wounds, perceived that he had missed the vital parts. The crew were, however, exceedingly discouraged by his lacerated countenance, and some proposed tying a swivel round his waist, and throwing him into the sea, lest the Moors should ascribe his wounds to them. This cruel resolve was however over-ruled.

The next morning at break of day, the mate assembled all hands on deck, and they were now employed in making a raft, intending to wait for the ebb-tide.

The Moors perceiving all quiet upon deck, about 11 o'clock swam to the vessel with an intention of boarding her. The crew upon hearing their noise, threw out ropes to them and took them on board: they now paid no attention to answers or questions, but proceeded immediately to plunder. The crew finding themselves disappointed in obtaining assistance, and anxious to reach land, got the raft into the water about two o'clock: ten only could find room therein, four of whom were washed off by the violence of the surf, and M. Bardon in consequence thereof drowned. The Moors who leaped instantaneously overboard, preserved two of the others, and the mate who was the fourth, returned to the vessel. The others, among whom was the captain, landed safe, and were conducted by the Moors to a hill, where they had kindled a fire, and there stripped and left them. Those that remained on board were now employed about another raft, which could only contain five persons, four of whom reached the shore without any accident, the other was assisted by a Moor.

Only six now remained in the wreck, among whom was M. Sauguier: there was no possibility of making another raft, so that it was suggested to get ashore by the help of bundles, which were thrown into the sea. Sauguier was the first who made the attempt, and his good success encouraged the remainder to follow his example, which they did with equal safety.

They were all assembled on the hill round a great fire, where they were left by the Moors for half an hour. On their return, which was about half an hour after, they examined them according to custom, and conducted them half a league up the country. Here they divided, one party having returned towards the beach, while M. Sauguier and the rest of his fellow-sufferers were left with the other, who began to dispute among themselves, who should be masters of those intended slaves.

They now rushed upon them with drawn daggers, while the helpless wretches, thinking they were about to destroy them, and anxious to procrastinate their lives a little longer, took to flight. They were pursued by the Moors, who were struggling one with the other to seize them. A bloody conflict ensued: several of the French were desperately wounded. Two Moors, who had stopped M. Sauguier, furiously contended with each other, while one insisted that he was his slave; this provoking the other, he endeavoured to settle the dispute by stabbing M. Sauguier, who parrying off the blow that was made at him, had two fingers hurt by the sabre. His adversary, seizing this opportunity, proved his claim by murdering this assassin.

M. Sauguier was now led by his new master to the place where his relations, wives, slaves, &c. were. They applied fire to his wound, which stopped the progress of the poison, and stanch'd the blood; also plants dipped in turtle oil, which effected a perfect cure.

As the Moors still continued to dispute among themselves upon every trifling business, M. Sauguier every now and then supposed that they were sacrificing his wretched fellow-sufferers. Two of his countrymen he saw knocked down by his side; and while they were bringing faggots to renew the fire, and stones to support it, he began to think that they were preparing torments: however their dressing his wound partly removed his apprehensions. Still he was tormented by the women, who were dancing round him, expressing both joy and wonder. Out of curiosity, they plucked his hair. In the evening they gave him some milk to drink, which was very acceptable.

The Arabs of Laara were the only persons present at the wreck, but notwithstanding they were obliged to share the spoils with the Moors of Biladulgasid, which is a well-armed warlike nation, known also by the name of Monselemines. It was to an Arab of this nation that M. Sauguier was slave.

Saugnier sold—His Occupations—Sold again—His Sufferings, Anxiety, &c.—Sold again—Sets off for Cape Non—Termination of his Sufferings—No longer a Slave, but attended like a Master—Is allowed to see his Countrymen—Proposals for his Liberty by the English and French Merchants—M. Saugnier, and five of his Countrymen redeemed—How his Countrymen were previously treated—Their mutual Congratulations—Further Adventures.

THE unfortunate slaves were the day after their captivity permitted by their masters to assemble upon the beach. Those who belonged to the Arabs of Zaara were treated with the greatest kindness, and allowed either skins or some of the clothes which their masters had plundered from the wreck to cover them. M. Saugnier, and the rest who belonged to the Monselemines, were all naked: this naturally led M. Saugnier to suppose that those who belonged to the former tribe possessed a more comfortable situation; and understanding that these people were accustomed to see Europeans in the river of Senegal and at Portaudie, he conceived hopes that if he belonged to them he might meet with an opportunity of being carried to Senegal.

Impressed with this idea, he began to form the project of escaping from the place where his master kept his wives and servants. As he was very little watched, about nine o'clock in the morning he made for the interior part of the country, though ignorant where he was going. Scarce had he travelled half a league, when he was met by a party of Moors: these men conducted him to their tents, which were full of camels and goats. They covered him with goat-skins sewed together, and gave him milk to drink.

Though exceedingly fatigued, he passed two nights without sleep. All day he was obliged to walk; at night they stopped to rest themselves.

One day, as soon as the sun appeared, the camels were prepared. A Moor now obliged M. Saugnier to get up behind him, and having left all the rest of the party behind by the sea-side, he continued to travel in this way, without knowing what for or where he was going.

He arrived about the middle of the day at other tents, where he was permitted to rest himself after the fatigue of the preceding days. Here he remained only two days, for three well-armed Arabs (who were naked) took him away by violence, and proceeded towards the south. They crossed several rivers, and after a tedious march of 16 days they stopped. On the first day the blood which issued from M. Saugnier's feet had marked the ground. Upon seeing this the Arabs drew out the thorns which were in them, and having scraped the soles of his feet with their daggers, plastered them over with sand and tar, by which means he was enabled to walk without any pain.

These people intended to sell M. Saugnier to the vessels that come to Senegal to buy gum; but the war which then raged between the princes of those cantons prevented the execution of their design. Three days they spent in a wood of gum trees. Finding it impossible to sell him at Senegal, they returned by the same way they came, and after a journey of 30 days they arrived at their tent. During this laborious march, M. Saugnier's food was milk, mixed with camel's urine, and a little barley-meal or millet stirred up in brackish water.

There is very excellent land in the forest, which, if cultivated, would no doubt produce all the necessaries of life. They found an abundance of truffles, which M. Saugnier relished very much; the Moors, in whose company he was, often procuring them for him. Being accustomed to live on milk, they contented themselves with that of their camels, and cheerfully denied themselves their roots on his

account. Indeed M. Saugnier was used exceedingly well by his conductors; they treated him with humanity, and procured him whatever seemed to please him the most, whenever it was in their power.

M. Saugnier was so sincerely attached to them, that it was not without regret he saw them set off the day after their arrival; nor did he ever see them again. During the journey, when they stopped in the evening, they went themselves in quest of wood for the night, and left him to take care of the camels and baggage: very often too, when they perceived he was much fatigued, they would stop two or three hours till he rested.

The horde to which he belonged consisted of 52 tents, sometimes united, sometimes divided, according as the convenience of pasturage required. These tents are made of a black and stout stuff, woven of goat's and camel's hair, and about 18 inches wide; they are sewed together, and two cross sticks support the tent. All their furniture consists of some straw ropes for their cattle, an earthen pot to warm their milk or boil their meat, a ladle, a mat, a knife, a pike, and a great stone, which serves them as a hammer to drive in the pins of the tent. Thus happy, though poor, they live in perfect tranquillity. The men keep their flocks, &c. the women spin, dress their victuals, &c. Both sexes wear goat-skins alike.

The finery of the men consists in the beauty of their arms, such as sabres, daggers, and muckets, and in a string of large white chrytal; that of the women in necklaces of amber, coral, or glass beads of every kind, in gold or silver ear-rings, according to their wealth, &c.

M. Saugnier passed two days without being desired to do any work; on the third he was sent to fetch wood for the tent. For this purpose an old cord was given him, and a child accompanied him, to shew him which was the best for the purpose.

Notwithstanding the whole country be covered with bushes, they are so careful in preserving them, that they never touch a green stick. M. Saugnier was frequently two whole hours seeking dead wood; and when his faggot was sufficient for the day's consumption he carried it to the tent, while his naked shoulders, lacerated by the burthen, used to be bloody all over.

Pleased with his punctuality and assiduity in furnishing the necessary quantity of wood, he was next employed in making butter. For this purpose they put their milk in a goat's skin, suspend it on three sticks, and shake it for about two hours. Such was his business during his stay with these people.

An opportunity at last arrived of disposing of M. Saugnier, when his master received a barrel of meal, and an iron bar about nine feet long, in exchange for his person.

Early the next day they set off, and walked for nine successive days. It is the custom of all the people of Africa to begin their journey at sun-rise, and not to stop till it is about 15 feet. In the daytime they eat nothing but a small wild fruit resembling the jujube-tree, which is in great plenty.

As soon as each day's journey was over, M. Saugnier was obliged, like the negro slaves, to go and fetch wood, to keep them warm during the night, and to protect them from the serpents and wild

beasts that over-run the country. A little barley-meal, mixed up, as before, with brackish water, was now his only food.

These people are all exceedingly kind and hospitable. When a stranger arrives, they greet him with the salutation of friendship, and often deny themselves food, for the sake of supplying him with refreshments.

As soon as M. Saugnier had arrived among the Moors in rebellion against the Emperor of Morocco, he was sold again. His new master gave him no rest, sending him the very next day to keep his camels, the care of the goats being generally entrusted to children. Thus abandoned to his own reflections, and totally ignorant of the fate of his fellow-sufferers, he passed every day in the midst of the mountains.

His long tedious journeys left him without an idea of the country he was in, and the hope of his deliverance began to vanish. He saw no period to his misfortunes; they grew more and more intolerable; his strength perceptibly diminished, and every time he changed his master he found it still a change for the worse.

Each evening, on his return to the tent, plenty of camel's milk was given him, but the unfrequency of his meals, and the poorness of this fare, would certainly never have sufficed to keep up his strength, if he had not, during the day, provided some truffles, and other wild roots, which necessity had made him acquainted with while on the road with his first masters.

M. Saugnier was sold again, his health being already impaired, and was conducted by his new master to his tent, where he did not remain long. Being very poor, he carried him to a neighbouring market, to endeavour to make some profit by his person. He there met with an Arab, who bought him for two young camels, and sold him at the market the day after. He received money in exchange.

In Zaara trade is only carried on by barter. It was in this place that M. Saugnier saw money for the first time: the sight of which revived his hopes, as he began to think he was not far from a civilized state.

Every new master now treated him worse than the last; while, by being thus handed over, he was approaching the Morocco dominions, where he would have had still more to suffer, if he had been unfortunate enough to belong to any one but the Emperor.

When it was dark they set off, and took their way towards Cape Non. Four Arabs, who were at the market while the Moor was buying him, lay in wait for them when the night was coming on. They were only armed with their daggers, and as M. Saugnier's present master knew them, he had no distrust of their intentions. Seeing one of them in the act of stabbing him, M. Saugnier cried out; his master avoided the blow, and shot his adversary dead. The others immediately attacked him; M. Saugnier now ran to his assistance, and with the help of his stick, stretched one of them at his feet; he stabbed him instantly, while the two others fled. They took nothing but the daggers of the two that were killed, and continued their journey. This master instead of selling M. Saugnier, as was his intention, now turned him over to his brother, who was remarkably rich.

Here terminated his sufferings. He was obeyed by the negro slaves; the women gave him every thing he could desire; he had no longer any work to do; and if he went out with the cattle it was for his own pleasure.

M. Saugnier began to have some knowledge of the Arabic, and was promised to be conducted to *Hali Laze*, the chief of Glimi, that he might be conveyed, as soon as possible, to the country subject to the dominion of the Emperor of Morocco. He

remained eight days at his house without belonging to him; at length, however, he bought him for a hundred and fifty dollars, all in little pieces, of the value of ten *sous*. As these pieces were fifteen hundred in number, for fear of any mistake, M. Saugnier and his master counted them over for two days running.

The chief of Glimi had a house, which in that country might well pass for a superb palace. He had a great number of negroes, negresses, horses, cows, camels, and almost every thing that is to be seen in their farm-houses. He had been formerly at Paris, in the suit of an Ambassador of Morocco; zealous of discontent, and the stronger one of saving his head, had forced him to take the command of the Moors in rebellion against the Emperor, and he resisted the power of that prince by the force of arms.

This chief treated M. Saugnier well, exacted no labour from him, and gave him clothes; he was now sheltered from the inclemency of the air, and had straw given him, of which he made a bed. He had two meals a day: indeed he had food in abundance, and frequently shared his dinner either with a sailor of Provence, who happened to be then at Glimi, or with M. Lanaspze, their mate, and son of the owner; for on the market-days M. Saugnier was allowed to have some of his countrymen to regale. He used to ask the women for victuals, and was never refused. This treatment soon restored our hero to his wonted strength and health.

Proposals were now made for M. Saugnier's liberty, by the French and English merchants who were settled at Mogadore, as soon as they were informed of his misfortune by the different brokers who were dispersed about the country for the sake of commerce; and Bentahar, a Moor, who lodged at his master's, bought him for 180 dollars. M. Saugnier was witness to the bargain, and argued himself concerning the price of his ransom; nor did the Moor buy him but on the assurance M. Saugnier gave him that he would be paid by the French merchants, the moment he should make himself known at Mogadore.

At the same time five of his companions were got together, namely, M. Follie, a native of Paris, and officer of administration of colonies, whom he purchased for 250 dollars. M. Decham, master's mate, a native of Bourdeaux, and the first who got ashore, cost him 95 dollars. The boatswain and two sailors were sold for only 85 or 90 each.

From the moment M. Saugnier left the wreck till his arrival at Glimi, the principal city of Cape Non, he was ignorant of the fate of the rest of the crew.

Their mate, M. Lanaspze, was in the same place, but left free from all constraint by his masters. He was not bought, though it could not be ascertained what motive could prevent Bentahar from entering into treaty for his ransom. As soon as he heard of M. Saugnier's arrival he came to see him, and found him in the outward court-yard: he looked like a walking spectre. At first M. Saugnier did not recollect him, nor did he remember him; taunted by the sun, wearing their hair and beards like the Moors, and dressed in their fashion; there was nothing surprising in their being so much altered. In a few moments, however, they were in one another's arms. Their words died away upon their lips; but the tears that trickled down their cheeks expressed the warmth of their sentiments. They passed the whole day together, and related their sufferings to each other with satisfaction.

M. Saugnier understanding M. Follie was in the same town with them, set off immediately, accompanied by the mate and several Moors, and repaired to the place where he was detained. M. Follie belonged to a cruel Moor, who treated him with the greatest barbarity; he slept upon the hard ground, and was denied the smallest liberty. Little accom-

tomed to fatigue, he was covered with sores, the consequence of the blows given him by the Moors, to force him to walk beyond his strength.

There was in the same place a sailor of Provence, belonging to their ship, who was claimed by no master; he lived sometimes with one, sometimes with another, nobody giving him the least molestation. Bentahar was in hopes that he would set off with them, and thought he should have him without a ransom; but the very day of their departure he was removed up the country, without their knowing what became of him. He lost his liberty by his own fault, in keeping for ever with the Moors. No doubt he found himself obliged to remain, at the very moment it would have been the most easy for him to obtain his liberty.

M. Saugnier learned from his fellow-slaves, that they had all been uneasy as to his fate; that several persons insisted they had seen him killed; that this general persuasion of the crew had induced them to acquaint the French consul with his death; that they had as yet no information respecting those who had followed their masters to the south of Africa; that as to themselves, they had met with horrible treatment; that they had been forced by hard blows to unload the ship; that they had been obliged to grind corn, fetch wood, and attend the cattle; and that they were cruelly beat for the smallest fault, without even knowing they had done amiss. The wounds with which they were covered, but too well confirmed the truth of their recital.

While they congratulated M. Saugnier on having escaped such rigorous treatment, they told him that the Moors, after fighting to know who should be their masters, had at length set fire to the wreck; that several Arabs had been killed by splinters from the ship, from whence they had not taken out the powder; that many of their people had been wounded; and that the captain, after having lived twelve days with no sustenance but a little brandy, had been knocked on the head upon the beach. Perhaps the report of his fate was as ill-founded as that of M. Saugnier's, for M. Follie was the only one of all the crew who certified his death.

The city of Glimi was the first place where they met with Jews; they were very numerous there, as well as in all the towns between that place and St. Croix, almost all the trade that is carried on passing through their hands. The Mahometans of these

cantons treat them like slaves. Cruel as was the Arab, M. Follie's master, and however determined in his enmity to the Christians, he told that gentleman to suffer nothing from the Jews, who had gone his halves in the purchase.

When M. Follie lived with the Jew, M. Saugnier used to go and see him without any reserve, accompanied, it is true, by Moors attached to the interests of his master; nor did the Jew ever dare to refuse M. Follie leave to go out and walk with him. The Moors that accompanied him were surprised they should ask it, and gave him to understand that he might go out when he pleased, and that they would bear the Jew, if he dared to offer him the smallest affront.

The Jew of Glimi, whose name was Good Jacob, had received orders from Mess. Cabaner and Depra to assist these unfortunate people; the letter imported that he might spend 200 ounces of silver to supply their wants. They did not know that by the word ounce is understood in Barbary a little piece of money of about the value of ten *seus*; and as the letter was written in French and Arabic, M. Saugnier persuaded his master that 200 dollars were the sum the Jew was ordered to spend on their account. He put a musket-ball in one scale, and in the other small pieces of money till they amounted to the same weight. Induced by this representation, the Arabs obliged the Jew to dress them in the most elegant manner.

Their mistake was of the greatest use to them, and guarded them against the excessive cold on the summit of Mount Atlas, which they were obliged to cross, and which is at all times covered with snow.

M. Saugnier's share of the expence amounted to about 15 dollars and a half. M. Follie, M. Lanaspze, and himself, were the only three who had Moorish cloaks.

It being out of the power of M. Lanaspze to accompany M. Saugnier and his party; at the time of parting Lanaspze gave Saugnier nine Louis d'ors in gold, his watch-chain, and a seal, which he had fortunately concealed from his master's knowledge, by holding the little parcel in his hands when he was stripped, and then concealing it in the sand. Afterwards, when permitted to put on an old pair of breeches, he put the parcel into his pocket, where he still kept it.

CHAPTER III.

Saugnier and five of his Companions at liberty—They set off for Mogadore—Dread of being surpris'd—Go to the House of some Jews—Roads very bad—Journey severe—They meet with an uninhabited House—Ruins of a Town—Arrival at St. Croix—Meet a good Reception—Conducted to the House of Mess. Cabanes and Depras—Description of the City of Mogadore, St. Croix, &c.—Of the Governor of Mogadore—A remarkable Instance of Jealousy—The Emperor in a Rage—Bentahar takes to flight—His Anger appeas'd—M. Saugnier, &c. reduced to Slavery again, but more tranquil than before—Orders to set off for Morocco—Arrival—Prior's contumely—Their Appearance before the Emperor—His Kindness—Gives them their Liberty—Remarks thereupon—Further Kindness of the Emperor—They set off, and pass through Cities of Barbary—A strange Punishment—Pass the River of Lions—See several Places—Set off for Cadix—Embark on board the St. Francois de Sales—Arrive at Osend—Set off for Dunkirk—Delay at Li,je—Arrive at St. Quintin.

M. SAUGNIER, and five of his companions, having been now redeemed, by the great care of Bentahar the Arab, they set off for Mogadore, with no little satisfaction. They proceeded as far as St. Croix, (which the Arabs call Agader) having travelled by night for fear of being surpris'd by the Arabs, and becoming their slaves again.

When about half a league from Glimi they crossed a small rivulet of clear water, and now leaving the road which was the greatest thoroughfare, they repaired to a large house on the plain, from whence they proceeded (still by night) to a very thick wood. They were five days on the road between Glimi and St. Croix.

The following day they went to the house of some

Jews, which was situated on an eminence; here they passed the night, and from thence entered defiles, running parallel to the sea. As the roads were very bad, obstructed by mountains and thick woods, this day's journey was exceedingly severe.

They forded a small river about eight leagues from St. Croix, near which they found an house built in the French manner, which was then uninhabited. Half a league from this are the ruins of a town, which seems by its situation and extent to have been once a place of consequence. They could not learn the name thereof. They now descended to well cultivated plains, which brought them to the seaside. They then cross'd the river which waters the walls of St. Croix on their camels.

As soon as they had reached St. Croix, each Christian was obliged to pay about five sours. That town contains nothing remarkable. It was formerly one of the most commercial of all Barbary; but it is now almost in ruins, and only defended by a miserable fort, with twelve pieces of cannon, and even these are of no service.

They slept near a fountain, the work of the Portuguese, who was once in possession of the country. From thence they continued their journey without accident, notwithstanding the difficulty of roads cut through the rocks, and the precipices and forests of the Atlas mountains, the chain of which begins at St. Croix de Barbarie.

They met with a very good reception from the English merchants to whom they were addressed, and who conducted them to the French house of Messrs. Cabanes and Depras. They found on their arrival there the most satisfactory letters from M. Mure, the French vice-consul, residing at Salle, who, having nothing so much at heart as their deliverance, had employed every means to redeem them from slavery without making known his intentions.

The city of Mogadore, so called by the Christians, from the name of a small island, which is situated to the south of it, and in which consists the goodness of the harbour, is only known to the Arabs by that of Souera. It is a new town, and the only place where the Christians have full liberty of trade. It runs out into the sea on a rock, and is surrounded by sand on every side; towards the harbour it has three strong batteries for its defence, the principal one of twenty-four pounders of the same number.

There are about two hundred and fifty French renegades, all in the pay of the Emperor, who have the care of these batteries. The town is inhabited by Christians of every nation, by Jews, to whom the Emperor advances a capital, and by Moors, engaged in trade. It is the best fortified and most commercial of the whole empire of Morocco. The Christians have two priests there of the Spanish mission, and enjoy their religion without any molestation.

A great trade was formerly carried on at St. Croix de Barbarie, but the reigning Emperor, the founder of Mogadore, ordered the merchants to remove to the latter town, and St. Croix is now a wilderness.

M. Saugnier cannot conceive the motive that prevents the French from giving their real names to the towns of this country. Every thing in that regard is totally changed. St. Croix is only known to the Arabs by the name of Agader, Mogadore by that of Souera, and so on. The name given to those cities in France not being known in the country, the French travellers who visit Barbary are frequently perplexed.

When the governor of Mogadore was informed of their arrival, he sent for them to his house. The governor is a man of a mild and affable disposition, can neither write nor read, and owes his elevation to the post he holds to the signal marks of bravery he shewed in the presence of the Emperor. He had their names taken down by the Mahometan priests, and sent off a courier immediately, to inform the Emperor of their arrival.

The Emperor, on receiving the news, fell into a dreadful fit of rage. Two months before he had given the most positive orders to the governors of the provinces in the vicinity of the desert, to use their utmost endeavours to extricate them from the hands of the wandering Arabs.

Being remarkably jealous of his authority, he looked upon this affair as an attack upon it; nor could he bear the idea of Christians being more readily obeyed, in his own dominions, than himself. He broke out into threats, condemned to death the Arab, whom the English had sent to their assistance, wrote to the merchants in the severest terms, threatening to burn alive the first person who, from that time, should dare to interfere in the redemption of

a captive of any nation whatever. In consequence of this the captains of all the ships in the road were forbid to receive M. Saugnier and his companions; a strict watch was kept over them, nor were they suffered to go to any distance from the city.

The Arab, Bentahar, having received timely information of the Emperor's designs, and of the sentence of death pronounced against him, saved his life and his fortune by a hasty retreat to the people who had kept M. Saugnier and the rest in slavery.

However, a few presents, ingeniously administered to the favourite sultanas, soon dispelled the anger of the prince. He was made to understand that the French had not been bought by the merchants, but that their relations, informed of their misfortunes, had sent them the necessary sums of money; and that, ignorant of his laws and will, they might themselves, without meaning to offend him, have entered into treaty for their ransom.

These arguments had due weight, but he was determined to have them in his power; therefore, on the 15th of May, the governor of Mogadore sent for them to the public square. There, by order of his master, he repaid the French merchants the money they advanced for their deliverance. He told them that the Emperor pardoned them, as well as the Arab, whom they had employed to put an end to their distress; he then delivered them into their hands, after having made known to the people that they belonged to the Emperor.

Though a while ago they were free, they were now again reduced to slavery; they were not, however, required to work. The manner in which they were received by the governor, the respect shewn them by the Moors, the liberty they were left at to go where they pleased, the accounts they heard of the rest of the crew, every thing in short contributed to restore tranquillity to their minds, and make them easy.

This was the first time they received French dresses. A coat, waistcoat, and breeches of blue cloth, three shirts, two handkerchiefs, a silk cravat, a hat, a night-cap, and two pair of shoes, were given to each of them; an expence that might amount to thirty-six dollars a-piece.

They had been told that the Emperor's son, the governor of Teroudan, had advanced towards Cape Non, at the head of an army of eight thousand men. His orders were to get the French, either by money or by force. They conceived hopes that this enterprise would be attended with success; but the French merchants were of a different opinion. They told them that the delay in the execution of the Emperor's orders is solely occasioned by the avarice of that prince. He generally employs the Jews to advance the necessary money, and does not reimburse them. He thinks them but too happy to have an opportunity of obeying him at the expence of their fortune, and from thence arises the tardiness with which the individuals of that nation are sure to proceed.

On the 15th of June they received orders to set off for Morocco. A numerous caravan serving as an escort to the royal treasure, arising from the customs paid by foreign ships that put in at Mogadore, insured the safety of their arrival.

The English and French merchants were the only persons that came to take leave of them; they left them with tears in their eyes, and promised them all the assistance in their power, in case they should not be able to obtain their freedom from the Emperor.

This journey from Mogadore to Morocco, was neither tedious nor laborious; in quality of the Emperor's slaves, a mule was given to each of them, not without great displeasure on the part of the Moors to whom they belonged. The sovereign never pays; and these people instead of selling their commodities at Mogadore, were obliged to follow them to Morocco.

The Jew, the Emperor's principal scribe, had orders to supply their wants. In the evening of their arrival this wretch wanted to oblige them to unload the camels, fetch wood, &c. but the Alcaide, who commanded the caravan, perceiving it, ordered the Moors to take care of the French, ill treated the Jews, and forbid them to follow the caravan (of which they availed themselves for the safety of their merchandize) at less than half a league distance.

On the 20th of June they arrived at Morocco, much fatigued by the heat, that had killed three Jews, and four camels. The Alcaide wished, on their arrival, to conduct them to the Emperor; but that prince had set off in the morning, at the head of an army of 12000 men, to punish the rebels, who had beat his lieutenant, and taken refuge on Mount Atlas. The Emperor not being at Morocco, M. Saugnier and his party were entrusted to the care of the priests of the Spanish mission, who had a convent in the quarter of the Jews.

The prior, according to that pride so peculiar to his nation, treated them with insupportable haughtiness. He highly extolled their good fortune, in experiencing the kindness of his *community*; treated them rather like slaves than Christians, and refused them even the things of the first necessity, although M. Mure, their vice-consul, had sent him a sufficient sum to defray their expenses.

Happily indeed the Emperor's absence was not long. His presence had reduced the rebels to a sense of their duty; he heard of the people's arrival, wished to see them immediately, and on the 28th of June they had the happiness of appearing in his presence.

The Emperor was now employed in exercising his troops. He immediately put a stop to the evolutions, ordered the French to approach his person, spoke to them with a kindness they little expected, questioned them concerning the names of the places in which they had been separated from their fellows in misfortune, and about those of the masters to whom they belonged, and promised to send them in a short time to France. He enquired into the manner in which they were treated at the convent; and, on hearing their complaints, entrusted them to the care of the Kailebes Basha, making his head responsible for any complaint that might be made. They remained about eight days in the city of Morocco, all the inhabitants shewing them the greatest marks of kindness.

This town is large and populous, but ill-built; the houses are very low, and the streets very narrow. There are a number of squares, in which all bargains are made.

M. Saugnier and his companions being the Emperor's slaves, their persons were held sacred by the Moors; and accordingly they saw, without difficulty, every curiosity in the capital. Among the things they remarked was a very lofty tower, to the top of which a man can ascend on horseback; and though Morocco is situated in a plain, it is to be seen at the distance of ten leagues.

On the 5th of July, the Basha having received orders to prepare his troops, they appeared again before the Emperor, who gave them their liberty, which being unexpected afforded them no little joy.

At this time there was a talk of war with France: the commercial house at Mogadore no longer hoisted the white flag. It was said that the French were determined to have satisfaction for the insult offered to M. Chenier, consul at Sallee, whom the Emperor had driven from his presence in the rudest manner. Mess. Cabanes and Depras, of Mogadore, were remitting all the money they could to France; and M. Royer, of Marfeilles, having abandoned his house, had just taken shipping for Europe.

The very reasons that seemed likely to prolong their servitude were, no doubt, those that hastened their liberty. The Emperor, wishing to make amends for his fault, was therefore induced to set

this people free: perhaps they might owe their deliverance to gratitude, for news had just been brought to Morocco that 200 Moors had been assisted by a vessel from Marfeilles, after having tried all the Italian and Mahometan ports in vain; that the assistance of which they stood in need had been every where refused them; that they would have died of want but for the assistance of the Marfeilles ship, and that they were then performing quarantine in that port, from whence they would set off to return to their own country when an opportunity arrived.

Be this as it may, the Emperor having ordered them a gratification of three dollars each, they set off on the 5th, well mounted, and with an escort of 800 foot and 200 horse.

The Moorish soldiers took care to pitch their tent every day near that of the general. With this escort they passed through the greatest part of the cities of Barbary, their little army being every where augmented by fresh reinforcements, and received with honour in every town.

In the town they found a Marfeilles captain, who had turned renegade, to avoid, according to the Emperor's law, a punishment of 500 stripes, for being shipwrecked near this place, as the Emperor pretends it must be done on purpose, it being impossible, he thinks, that vessels can run ashore on his coast. Those captains who are on their way to Barbary are exempt from this punishment.

They encamped before Azemor, where they made some stay. The Basha hired 300 men, and having given them 10 ounces each, they joined their line of march. They now passed the river of Lions, and encamped on the opposition bank: then proceeding along the coast, they saw Darzabadda, Mowforia, Fadal, and several other towns, which were in ruins, and only known for the trade they carry on in corn.

As soon as they had reached Rabate, they were delivered up to the governor of that place, by the Basha. Account of their arrival was now sent to M. Mure, the French vice-consul, who came immediately to see them. He was very much surpris'd when he was told all the honours they had received in the towns of Barbary. For fear any disagreeable change might take place in the Emperor's sentiments, every due arrangement was made to expedite their journey, and they were dispatched for Tangier without delay.

The two towns Rabate and Sallee, which are generally confus'd with each other, are divided by the river. The former, which is the residence of the French consul and the governor, is the most extensive and considerable: both these towns are paved. There is a tower in Rabate, similar to that of Morocco, whereby the inhabitants may see the vessels in the offing. There is also a supply of fresh water, by means of an aqueduct, erected by an English engineer, which conveys it two leagues from the town. Sallee is a King's port.

Fresh troops having been now levied, on the 25th of July they set off with a new escort. Three of the mules (which were provided by M. Mure) were left behind in a small town in ruins about 20 leagues from Sallee, as they were rendered useless through fatigue. In consequence thereof they were frequently obliged to travel on foot to Tangier, where they arrived on the 31st, and received a much better reception from the Spanish consul (to whom they were address'd) than from the monks of the mission. The consul immediately reported the Emperor's wishes to the governor of that place; who thereupon issued orders that every expedition should be made for their setting off for Cadiz.

The captain of the Spanish vessel, who came to Tangier to procure corn and poultry, departed in the evening, and the next morning they arrived at Cadiz, where they hoisted their flag.

They were now visited by the physicians, who sent them to perform quarantine on board the *Lazarretto*,

retto, about two leagues distant from the town.

They were three days in this hulk, without being able to set a foot on shore. At last they were landed, and placed in a kind of barn, where they were but barely sheltered from the rain.

They were revisited by the physicians on the 11th of August. Their health being now ascertained, they departed from the barn.

M. Boirel, the French vice-consul of Cadiz, received them very kindly, and having supplied them with every necessary, facilitated their return to their native places.

M. Saignier embarked the 28th of August on board the St. Francois de Sales, a vessel of 200 tons burthen, commanded by Capt. Sinical, of Dunkirk. After a tedious, disagreeable passage, and having been beating five days off the harbour, they arrived at Ostend on the 11th of October. The next day the captain conducted M. Saignier to Dunkirk. His passport being now examined, he left Dunkirk on the 14th; and having delayed at Lille, on account of his indisposition, he did not arrive at St. Quentin till the 21st of October, 1784.

CHAPTER IV.

M. Saignier's ill Reception at Home—His Resolution—An unexpected Letter—Encouraged to pursue his former Projects—Measures taken—Repairs to Paris—Stays two Months to no Purpose—Embarks on board the Gustavus Adolphus—An agreeable short Voyage—Makes Cape Blanco—A dangerous Bar crossed—Proceed to Senegal—Description of the Island—M. Saignier resolves to undertake a Voyage to Galam—He embarks on board the Furet—The Ship baptized, according to Custom—Ceremony thereof—A Canoe of Negroes discovered—Disagreeable Intelligence—They anchor—Stranded on the Moorish Coast—Proceed on their Way—See the Village of Berne—Ditto of Blas—Arrive at Pudur—Arrogance of the King of the Trepars—The Vessel put in a State of Defence—M. Saignier's Project, and Success—Curfory Remarks—Arrive at Saldec—At Galam—Departure.

M. SAUGNIER now restored to his family, was in hopes of enjoying domestic ease and happiness; but the story of his sufferings being disbelieved, his relations treated him with coolness and indifference. Having received 300 livres from one of his uncles, and a few articles from his mother, who was rather in humble circumstances, he was resolved upon returning to Paris, and though contrary to his inclination, engage himself in his original line of business. He remained at his mother's house till he had recovered his health, having, in the interim, made applications in writing to several shop-keepers in the capital. Encouraged, however, by an unexpected letter from the elier of his two former companions, who had at first suggested a settlement in Senegal, and had been now apprised of M. Saignier's arrival in France, he became resolved on refusing his former projects. He made every effort therefore of obtaining additional supplies from his family, and on his mother's becoming security, obtained 300 livres more.

With this he repaired to Paris, where he staid two months with his partner, to no purpose, in hopes of being made head of a company who were seeking an exclusive privilege for the gum-trade in Senegal. After being amused with fair promises, which ended in nothing, they set off for Bourdeaux, where they expected to meet with vessels taking in freight, which happened according to their expectations.

After remaining in Bourdeaux about a fortnight M. Saignier embarked on board the Gustavus Adolphus, which belonged to M. Lamalathie, merchant of Bourdeaux, and was under the command of Capt. Mare of Havre. This vessel was to trade along the coast, and thence to set sail for India, when the provisions for the garrison of Senegal were delivered. M. Saignier was allowed by M. Lamalathie a commission upon such negroes as he might purchase in union with the captain. This offer, though by no means profitable, was however accepted by M. Saignier, and matters accordingly adjusted.

M. Saignier's partner remained at Bourdeaux to fit out the brig Furet, of about 70 tons burthen, which set sail about six weeks after M. Saignier's departure.

The Gustavus Adolphus being an excellent sailer they had a very agreeable short voyage. They had some violent gales on leaving the Canary Islands, which having sprung their main-mast, deterred the captain from prosecuting his voyage to India, as it was totally impossible to repair it in a proper manner. He staid at Goree for about a twelve-month, where having finished his business he proceeded to America. Warned by the late misfor-

tunes of M. Saignier, the captain wisely resolved upon keeping well out to sea.

Having the next day made Cape Blanco, they saw two wrecks; one seemed a frigate, and the other a vessel of about 150 tons.

On the 12th of June 1785, they were in sight of Senegal. They now crossed a bar, which being the effect of several successive furls that continually follow, and break upon each other with uncommon violence, is reckoned by the seamen exceedingly dangerous: this surf is occasioned by the current of the river, which is thrown back upon itself by the sea, into which it flows. There is also a flat formed by the sand, which is carried down by the stream, and cast back by the sea, which renders the passage inaccessible to large vessels. M. Saignier went over it in the pilot's boat: at this time there was only 13 feet water. Having now crossed the bar, they went on shore, and notwithstanding the extreme heat of the sun, proceeded to Senegal along the Barbary Point, which is a piece of sandy ground that separates the Niger from the sea.

The island of Senegal is a bank of sand in the middle of the river. It is a thousand geometrical paces long, and about sixty in its greatest width; is almost on a level with the river, and with the sea, being defended from the latter by Barbary Point, which is of greater elevation than the colony. The eastern branch of the river is the more considerable of the two, being about four hundred toises across; the western branch is only from fifty to two hundred toises wide. The ile consists entirely of burning sands, on the barren surface of which are scattered flints, thrown out among their ballast by vessels coming from Goree, or with the ruins of buildings formerly erected by Europeans. There is scarcely such a thing as a garden upon the island; for the European seeds do not thrive here. It is not surprising that the soil is so unproductive; for the air is strongly impregnated with sea salt, which pervades every thing, and consumes even iron in a very short space of time. The heats are excessive, and rendered still more insupportable by the reflection of the sand, so that from ten in the morning until four in the afternoon it is almost impossible to do any work. During the months of January, February, March, and April, the heats are moderated; but in August, and in the following ones, they become so oppressive as to affect even the natives themselves. The nights are a little less sultry; not always, however, but only when the sea-breeze sets in. It is then, that the inhabitants of the colony breathe a fresher air; yet this air in our climate would seem a burning vapour. The nights are nevertheless

nevertheless troublesome, notwithstanding the comforts of the sea-breeze. The instant the sun is set, the inhabitants are assailed by an infinity of gnats, which are called musquitos; their stings are very painful, and their multitude incredible. The inhabitants find but a poor defence in their gauze curtains. They generally bescream themselves with butter, which defends them from their stings.

There is no good water in the country; the most agreeable is brought forty leagues down the river, and through the most infectious swamps. Wells are dug in the sand to the depth of five or six feet, by this means they obtain water; but notwithstanding all the trouble they are at to freshen it, it still retains a brackish taste. There is a spring of good water four leagues above Gendiole, upon the way from Senegal to Goree; but which is not large enough to be of general utility. The meat is in general very bad, and the fish has a peculiar ill taste: it not dressed the day it is caught, it must be thrown away. In respect to the negroes food, the females pound millet in wooden mortars upon the sand, but then it is to be prepared, that it grates between the teeth.

The trade at this time was chiefly monopolized by three European houses. The first was the company's house, which, besides the exclusive privilege of the gum-trade, dealt also in slaves. This house was certainly the most considerable, but without the worst regulated; the persons who had been sent by the company having no knowledge whatever of this commerce. It was therefore the least formidable. The second of M. Aubry de la Poste, of Nantz, was better conducted. With a smaller stock they carried on a more considerable trade; the superintendance of the house was committed to M. Vigneux, formerly captain of a ship from Nantz. He was the person, who taking the advantage of M. Saugnier's unhappy shipwreck, which happened in the year 1784, had made one of those surprisingly lucrative bargains, which allure so many of his countrymen to their ruin. He made also, in the years 1785 and 1786, several highly advantageous speculations without going from Senegal; the last, however, cost him his life.

The third house was conducted by M. Paul Benis, who traded solely on his own bottom. He had been formerly cooper to the company at Goree, and when that island fell into the hands of the English, took refuge in Senegal. He was the man the best acquainted with the colony. He spoke the negro language as well as the negroes themselves, lived after their manner, and always found means to lay hold of the best bargains. This man, who could neither write nor read, had, by a long residence in the country, obtained a thorough knowledge of trade; but though he could rival the company, he found himself unable to stand the competition of M. Vigneux; who, ignorant as he was of the country, had nevertheless a great advantage in the better assortment of his articles, and the friendly advice of the natives, who detest whatever bears the name of company.

In respect to inhabitants, Senegal contains more than six thousand negroes, including the captives of the Tapades, or negroes born of the black inhabitants of the country. They are never put up to sale, unless convicted of some crime. Their huts, constructed in the form of bee-hives, and supported upon four stakes, surround the habitations of the negro inhabitants. The entire height of those huts may rise to about twelve feet; the width, in every direction, is commonly from ten to twelve. The beds are composed of hurdles laid upon cross-bars, supported by forked stakes at the height of about a foot from the ground. Here the slaves sleep promiscuously, men, women, girls, and boys. A fire is made in the middle of the hut, which is filled with smoke, and very offensive.

The men are tall, and the women are accounted

the handsomest negroes of all Africa. The Senegalians may be considered as the most courageous people of that part of the world, without even excepting the Moors. Their courage, however, is more nearly allied to temerity than bravery. In the course of the voyage to Galam, they meet the greatest dangers with gaiety and song; they dread neither musquet nor cannon, and are equally fearless of the cayman or crocodile. Should any of their companions be killed, and devoured by these animals before their face, they are not deterred from plunging into the water, if the working of the ship require it. These excellent qualifications, which distinguish them, and on which they value themselves so much, do not however preserve them from the common contagion of the country, which inclines them all to rapine. They are emulous to surpass one another in all the arts of over-reaching and fraud. The conduct of the Europeans has, no doubt, encouraged these vices, as much as the lessons of the marabouts, who inculcate the duty of plundering the christians whenever they can.

The Yolof negroes of Senegal are a compound of christianity and mahometanism. Those on the continent are of the same way of thinking, and their religious practices are kept up only for the sake of form. A bar of iron, or a few beads, will make them change their opinion at will. By such means are they acted upon; a sufficient proof of their want of all religious principle. The marabouts, or priests, and the men of their law, are no better than the rest.

The colony of Senegal is surrounded with islands, which, on account of the proximity of the sea, are all more unhealthy than that on which the town is built. They are full of standing pools, that, when dried up by the sun, exhale a putrid vapour that carries mortality with it, and desolates these islands. It is doubtless the same cause that takes off so many of the French at Senegal, during the dangerous season of the year. This also may be in part occasioned by the bad quality of the water which flows from the ponds in the neighbourhood of the colony, and though incorporated with that of the river, comes down little agitated by the current, and is easily distinguished by a rapidness of taste.

None of the French at Senegal, belonging to the several houses of commerce, being inclined to make the voyage to Galam, (a place of considerable trade) because none of them had ever been in that part of the country, M. Saugnier resolved to undertake it himself. He saw how much superior the other houses were in point of funds and resources, and sought therefore to obtain, some how, an advantageous foundation for his. This point could be gained only by acquiring an accurate knowledge of the country. He hoped, by that means, that though unable to stand a competition in the colony, he should at least in the trade on the river have a decided advantage over every other house. He determined then to set off for Galam.

While they were waiting the arrival of the Furet, they were employed in collecting salt for themselves, and for the king's ship which was bound up the river. This traffic of salt is carried on at the bar of Senegal; the articles of exchange are, swords, gunpowder, balls, flints, and glass ware.

On the 26th of July the fleet got under way, and sailed up the river. It consisted of 27 vessels, freighted by the inhabitants; together with a vessel of 50 tons, called the Moor, belonging to Paul Benis; the great bark of M. Vigneux, superintendant of the house of Aubry, of Nantz, burthen 180 tons, and a king's ship, called the Bienfaisant, Capt. Thevenor, an inhabitant of Senegal, carrying the customs or dues for the several princes of the country.

The company, ever slow in their operations, had not yet any vessels ready, when the Furet brig appeared in view. The same day that she came before the fort she entered the river. They proceeded immediately

mediately to unload her. She was then repaired, and loaded for the slave trade.

On the 16th of August M. Saugnier embarked on board the vessel, and sailed from Fort Louis. This vessel was of 70 tons burthen, light and an excellent sailer; she had a crew composed of 24 laptots, (that is negro sailors) four gourmets, (i. e. officers) a linguist, a carpenter, a mate, six pileuses, (i. e. women cooks) and a dozen of repasses, (i. e. negro children who serve aboard ship like cabin boys).

The governor of Senegal, Count de Repintigny, had engaged M. Saugnier to collect together all the straggling vessels, in order to escort them to the rendezvous of the convoy. In the evening of the same day he met with a vessel belonging to one Soliman, who had left the colony three days before him. He had only three laptots aboard, and M. Saugnier did not think himself obliged to delay his voyage, on account of a person so imprudent as not to supply himself with a number of hands sufficient to work his ship. M. Saugnier's negroes, however, who knew the orders which their master had received from the governor, endeavoured to persuade him to give him some assistance; he ordered him to return to Senegal, which was only eight leagues distant; he thought proper to comply with his desire.

They handed their sails about eight o'clock in the evening; being then at the great Merigots, which extend to Portandic. The ship was afterwards baptized according to the custom of the negroes, and all those who had not before passed that place were obliged to submit to the same ceremony. At the same time they made M. Saugnier fire a salute with his small train of artillery, consisting of six swivels, with six French and some English wall-pieces. In order to perform this ceremony with due pomp, the linguist, accompanied by two gourmets, cast anchor and assembled the crew. He caused all the artillery to be charged, filled a vase with water from the river, and threw it at three several times upon different parts of the ship. At each operation, in order to render the ceremony as august as possible, a salute was fired; and after the baptismal rites were performed upon the vessel, the same linguist proceeded to baptize those who had not yet made the voyage: these are commonly the whites and the repasses. He sprinkled water of the river on my chin and forehead; a ceremony which was announced by a general discharge of the artillery. In short, to close this festivity with becoming cheer, M. Saugnier gave the crew a present of good liquor. Their sloop now joined them, and the evening was spent in good cheer and hilarity.

They had scarcely got down to the cabin, in order to take a little rest, when the laptots of the watch gave them notice, that they heard a noise of oars on the river. They instantly were on the look-out, and soon saw that it was a canoe rowed by negroes, who used every effort to come up with them. As soon as they got on board, they informed them that the boat la Malcine, belonging to Scipio, the master of his vessel, had run aground and sunk, ten leagues beyond Podor; that Admet Moctar, king of the Traffarts, a Moorish tribe, claimed half the goods saved from the wreck, giving no better reason than that such was the will of God, since he had suffered the vessel to be wrecked on the coast. M. Saugnier immediately wrote to the Count de Repintigny, governor of Senegal, requesting he would give him his instructions how to act on the occasion, and having given the negroes something to eat, instantly ordered them away for the colony. As M. Saugnier was desirous to wait at Podor for the governor's answer, before he should come to any decisive agreement with Admet Moctar, he declined proceeding, but anchored opposite the village of Reims. During the evening they had good game. At five in the morning, the wind freshening considerably, the vessel drove at her anchors, and stranded on the Moorish coast. In consequence thereof they lost an anchor,

and notwithstanding all the pains they took they could never lay hold of it with the drag. This river is full of sand-banks, and it is only off Doumons that there is cause for real apprehensions. These small trading vessels are hauled ashore every night; and when it is necessary to proceed, the negroes soon set them afloat, by plunging into the water and pushing them off. It often happens that in this operation some are drowned; but this is the only method they know, and they consider it as the readiest and least laborious.

They proceeded on their way, and saw on an extensive plain a Moorish camp, consisting of 80 or 100 tents: these people seemed desirous to dispose of some cattle and captives, but there was no time to treat with them.

On the 19th they saw the village of Berne, situated on the Moorish coast, near the desert of Zaara, which extends to this part of the river. On leaving the desert, on the opposite shore they saw the village of Brac, belonging to the king of the Walon negroes. The present prince had been minister to the former king, whom he caused to be assassinated by the Moors of Halicory, king of the Bracnars. It was under the specious pretence of public good that he seized upon the throne: but his treachery cost him his life; for having some disputes with Halicory, the latter caused him to be strangled a few months after the departure of M. Saugnier.

On the 20th they arrived at Podor, and found the sheriff's boat there, which put to sea as soon as they were in sight. M. Saugnier went in the evening on shore to the fort, where he was received by Admet Moctar, king of the Traffarts. This haughty prince, departing from his original demand, insisted that the whole of shipwrecks belonged to him: not content with a share, he would have all, and even alleged that the very laptots were his captives, and wanted to compel M. Saugnier to pay their ransom, whom he thought to intimidate with menaces, hoping to become master of all the merchandize which Scipio's laptots had saved from the wreck, and which the commandant at Podor had been weak enough to deliver to him. He was deaf to all reason, and threatened to attack M. Saugnier, if his wishes were not complied with: but M. Saugnier, before he had left the vessel to go to the fort, had put her in a state of defence, the fire-arms having been all prepared for an engagement. M. Saugnier now secretly commanded the mate to allure as many Moors on board the vessel as he could, then to disarm and secure them. In the mean time Admet Moctar, enraged at the inflexibility of M. Saugnier, sent one of his officers to his brother, with orders to seize the vessel; which orders he supposed M. Saugnier was ignorant of, supposing him unacquainted with his language; but M. Saugnier, framing some pretence, withdrew from the assembly, and dispatched a truly negro to apprise the mate of the prince's villainy; and still to allure as many more of the Moors as he could, and when he had disarmed to secure them. Scipio well understanding the Arabic language, immediately comprehended the prince's design; and having not only reproached, but even threatened him, made an abrupt departure: but as soon as he had reached the vessel, he perceived the prince's brother both disarmed and in chains; and finding that the crew were in perfect safety by these precautions, he returned to the fort. Mean time M. Duchozel, commandant of Podor, being informed of this prince's manoeuvres by M. Saugnier, put a detachment under arms, and repairing to the prince, assured him, that if he did not immediately make up matters with M. Saugnier, fatal consequences must ensue, as he would never permit a vessel of his nation to be attacked under the cannon of the fort he commanded. This alarmed Admet Moctar, particularly as he understood that all the negroes of the village had taken up arms in defence of the crew, and that all his soldiers were disarmed. M. Saugnier, surrounded

surrounded by the bravest of his men, with his pistols primed and loaded, now upbraided him in his own language, for his villainous designs. This confounded him more, and he began to cringe and make promises. M. Saugnier insisted upon a restitution of the effects which he had seized, which the prince having made use of, said that he could not comply with this demand, but that he would willingly return Scipio the full value of whatever was seized; to do which, an engagement was now signed by himself and ministers; also by his brother, who was in consequence thereof liberated. M. Saugnier then invited the prince on board; but apprehensive of being detained as his brother was, he never ventured to pay him a visit. His brother, however, Sydy Heli went on board, to whom M. Saugnier shewed the force of his fire-arms. In the evening, after partaking of some refreshments, he departed.

The next day as they were making sail, they perceived Scipio's boat, which was just returned with the governor's orders from Senegal. M. Saugnier now landed and went to admit Moctar, who signed a second engagement similar to the first: the prince, as atonement for the past, made M. Saugnier a present of two oxen, ten sheep, and some ostrich feathers. He also hoped to see him again, when he returned from Galam, which M. Saugnier promising, they took leave of each other with mutual good-humour.

On the 24th, Scipio (with M. Saugnier's permission) directed his course towards the wreck of his vessel, in hopes of saving something: the crew were employed for the chief part of the day in weighing her, but finding it impossible to get her aloft, they were content with taking out the main-mast, bowsprit, rudder, and anchor. The next day they lost an excellent diver, of the name of Bacary, who having plunged into the water on some trifling occasion, was never seen more. It was supposed he was carried off by one of the alligators, or crocodiles, of which the river is full.

In the evening they anchored off the village of Donguelle, where three elephants teeth were purchased for a small quantity of gunpowder. They then cleared the Devil's Mouth, a rock about a league distant from the village.

On the 31st of August they arrived at Saldec. The next day M. Saugnier while escaping a violent squall, stumbled over the chests, and struck his head against a table, which occasioned a fever: the next day, after being blooded, he became delirious, nor recovered his reason till he arrived at Galam, on the 4th of October.

Some presents having been made to Sirman, king of Galam, M. Saugnier went on shore to his house. It is built of clay, thatched with reeds in some parts, terraced in others, and upon the whole commodiously constructed. Here he was treated with such attention, that he quickly began to recover his health. He took an airing every day on the banks of the river: two negroes carried him; and when the heat became too troublesome, he returned to his abode, and was put under a kind of shed, which sheltered him from the rays of the sun.

The price of slaves being now fixed at 70 bars, part of which consisted of four pieces of guinea-blues, they sailed immediately to Tamboucanee, a principal mart for the traffic of negroes and ivory. This village is situated 15 leagues from Galam. The lords of the neighbouring villages, exasperated against the Senegalians, for making Galam the place of their general rendezvous, united their forces to make an attack upon the convoy, which was detained at Saldec on account of the shallowness of the river. The king's ship, and that belonging to M. Vigneux had not yet reached Galam. The one had stopped at Baquelle, and the other at Cotterat. The Furet alone, which drew but six feet water, was sufficiently well armed to command respect. She immediately

hoisted sail and advanced to the assistance of the convoy. The courage of Scipio, M. Saugnier's captain, was well known among the negro princes, they were afraid of contending with him, his presence put an end to the faction and imposed peace upon the negroes.

The delay occasioned by the payment of customs at Saldec, had proved very prejudicial to them. M. Saugnier was under the necessity of embarking the 25th of October to go down to Senegal. He had made but little progress in the slave-trade; however, he procured six negroes with some damaged guinea-blues, all of which he should have got rid of, had he been able to protract his departure; but being unwilling to risk his ship, he left Scipio with the long-boat to trade in the customary manner at Tamboucanee. The king of Galam, who had shewn him every kind of attention, accompanied him on board. As he had been a slave in Morocco, he looked on him with admiration. The respect in which all these people hold the Emperor, extended even to his person: this petty monarch had given up his chamber and a good bed to M. Saugnier, while the whites employed in the convoy on the king's account, were only lodged under sheds. M. Molinard, who was one of them, was an engineer, and was sent out to take a plan of the river, and to explore the gold mines. He fell ill at Saldec, and died on his return from Galam to Senegal.

The king of Galam was very fond of wine, and M. Saugnier regaled him with that liquor every day during his residence in his house. He took care, however, not to give him any but at night; and in order to obtain it, he laid him under the necessity of returning the bottles, on which account he ordered his people to take the greatest care of them. Having attended him on board, he was obliged to be carried back to his village, for he had drank to excess, to prove how much he regretted his departure. This prince had purchased of M. Saugnier thirteen beads of coral, half a string of amber, twenty-eight silver bells, and three pair of bracelets for his women. He was to have paid him in gold or ivory, but having neither of those articles, he gave him a fine negro, although the things M. Saugnier had sold him amounted to no more than sixty-three bars. In acknowledgment of his liberality, M. Saugnier made him a present of a sabre, with a pistol in the hilt, of a little wool for his wives, and to his favourite, who alone had borne him sons, also some rows of glass beads, and about four ounces of scarlet wool. This favourite pretended to be a christian: She had formerly been mistress to one Labrue, an agent for the factory of Senegal.

The village of Galam is small, and known only as the place of meeting of the inhabitants of Senegal, for the purpose of settling their mercantile concerns, and on account of a wretched fort built by the French in the time of the former African company, the late king of Galam was a freeman among the Saracolets, and formerly a laptot at Senegal. Considered by the negroes as a man of bravery, and speaking good French, he was placed in the fort by the company in quality of broker. The grand souquet of Tuago, chieftain of the country, gave him the absolute property of the village of Galam, on condition of his charging himself with the receipt of the customs paid by European vessels. His son, the present king of Galam, was brought up at Senegal, and understood French and English perfectly. When the company abandoned the fort, he took possession of the cannon, put himself at the head of a party in the country, became formidable to his sovereign, and lastly, entirely independent. He has several villages subject to his authority. The laptots of Senegal are received by him in the most cordial manner, and every voyage he detains some of them by his kindness, particularly those belonging to the Saracolet nation, being willing to give several slaves in exchange for one of these.

The

The tribes, which in this part of Africa occupy the lands situated between the rivers of Senegal and Gambia, are all of the Saracolet nation. The Saracolets acknowledge as sovereign the grand fouquet of Tuago. They are a laborious people, cultivate their lands with care, are plentifully supplied with all the necessaries of life, and inhabit handsome and well-built villages; their houses, of a circular form, are for the most part terraced; the others are covered with reeds, as at Senegal; they are enclosed with a mud wall a foot thick, and the villages are surrounded with one of stone and earth of double that solidity. There are several gates, which are guarded at night for fear of a surprise. This nation is remarkably brave, and it is very uncommon to find a Saracolet slave. They always defend themselves with advantage against their assailants. Such Saracolets as are exposed to sale may be safely purchased, for none are to be met with but such as have been condemned by the laws for some misdemeanor; in such case these wretches could not escape slavery, even by taking refuge in their own country; for they would be restored to their masters, or would be put to death, if the convoy should have failed.

The religious principles of this people is nearly allied to Mahometanism, and still more to natural religion. They acknowledge one God; and believe that those who steal, or are guilty of any crime, are eternally punished. They admit a plurality of wives, and believe their souls to be immortal, like their own. They think lightly of adultery; for as they allow themselves several wives, they are not so unjust as to punish women who distribute their favours among several gallants; a mutual exchange is then permitted, one woman may be bartered for another, unless she be free, or a native of the country.

On the 24th of October M. Saugnier received a message from Scipio, who perceived the water lowering at Tambouance, advising him to quit Galam. The next morning M. Saugnier embarked: however the mate and boatwain insisted upon staying longer, as the laptots had not as yet sold their salt: this obliged M. Saugnier to assume his authority, particularly as the laptots, who adhered to him, were inclined to murder these men for disobedience: however the mate and boatwain, for fear of being put into irons, became quiet, and having now weighed anchor they set sail.

Saugnier recovers apace—Their slow Progress impeded by different Obstacles—Anxiety for the rest of the Convoy—They get clear of many Sand-Banks—Strike on that of Haliburum—Vessel lightened—Scipio's Arrival at Donnous—The Manner he saved the Vessel that was wrecked—Deceives and defies the grand Fouquet—The Poulos attacked—Scipio's Success and good Management—Apprehensions about the Convoy—Their safe Arrival—M. Saugnier sails for France—Description of Goree—A Sailor seized—M. Saugnier sets off by Land, and arrives at Dacar—His Relapse—Recovery—Arrival at L'Orient.

ON the 25th of October, the water having lowered a foot, they struck upon a sand bank. They now threw their salt overboard, in order to lighten the vessel, but it had no effect. M. Saugnier therefore dispatched a saracolet to inform Scipio of the accident, who arrived the following day in the afternoon to his assistance. Previous to this they had worked hard for 24 hours to liberate the vessel, but in vain. Scipio, however, being well acquainted with the river, and having examined all the passes, consoled them with hopes of soon disengaging them from their distressing situation. In order to refresh the men, he gave orders that they should rest for two hours and repose themselves, which he likewise did himself: he then gave the necessary directions, and in less than half an hour the vessel was got into deep water. He remained on board a whole day, in order to steer them clear of other dangerous shoals, which they passed without any trouble. He then pointed to the mate and boatwain some other parts of the river which were equally dangerous, and having traced the course which they should make, took his leave, in order to continue his traffic at Tambouance.

They found the Furet about 10 leagues from Galam: she lay at anchor off Corterat, nor being able to make her way to Galam for want of water.

On the 2d of November they passed the village of Baquelle, and entered into the canal of that island. The boatwain being incapable of stemming the current, the vessel through his imprudence lost her head-way, and about nine in the morning they foundered upon the rocks. At this time there was a Senegal captain, one Peter Mambao, who arrived at Baquelle with a cargo of salt. Upon seeing their distress, he immediately sent out his boat to their assistance, on board of which M. Saugnier put the

most valuable of his articles; one of his chests, however, was lost. The rest of the goods were now throwing overboard, as the hold of the vessel was full of water; while the natives had assembled on the bank, in order to plunder whatever they could find. The very laptots began to pillage the people, being anxious to indemnify themselves for the toils they endured, and their wages, which would consequently be lost with the vessel. M. Saugnier went on board Mambao's vessel, which was about half a league distant from his own.

Amadi Tlioncoli, lord of Baquelle, of infamous character, now determined to take advantage of their unfortunate situation. He came to M. Saugnier on board Mambao's ship, and made him a tender of his house, and a good warehouse to store the goods he had saved. All the Senegalians assured him he might rely upon his word, to which he was indeed compelled by necessity. Every thing preserved from the wreck was carried to the house of this prince. The next day M. Saugnier went on shore, and repaired to the village of Baquelle, being pressed by Amadi's solicitations, and perceiving that Mambao was unwilling to expose himself any longer on his account. He was accommodated with a kind of a tent, that while it screened him from the heat of the sun, admitted the fresh air; and on the first day he was treated with the greatest respect and attention.

The grand fouquet of Tuago, being informed by his son, who had been some days on board the vessel, of M. Saugnier's misfortune, came to Baquelle with a numerous escort of cavalry to share the plunder. This king pretended, according to the custom of the Moors, that the vessel, freight, crew, with M. Saugnier himself, were all become his property. He would have taken immediate possession of the principal

cipal articles, had not the lord of Baquelle, dreading the return of Scipio, prevented him.

M. Saugnier had taken two Moors on board at Calam, to deliver to Admet Moctar: they informed these princes that he was a slave to the Emperor of Morocco, and that they would infallibly draw down upon them the resentment of the Moors, if they ventured to offer him any violence.

On account of this the grand fouquet thought proper to desist; yet a close watch was kept over his laptots; they were not allowed to pass the second court-yard, and they considered themselves all as prisoners. M. Saugnier was at full liberty, but being very ill was obliged to be supported by two negroes.

There were but 17 laptots remaining of M. Saugnier's crew, four of whom were disabled; for when the vessel was wrecked, and the men endeavouring to save the powder, a barrel containing four pounds blew up upon deck. The man who had it in his hands was so desperately wounded that he died the next day, and the bodies of the three others who were near him were so miserably scorched that only one of them recovered. The rest were with Scipio, to carry on the slave-trade. A courier was dispatched to Scipio; likewise to M. Vigneux's captain, and the commandant of the King's ship called the Bienfaisant, by M. Saugnier's orders, to apprise them of his situation, for having but 13 laptots that were able to work, he could not make any attempt to weigh his vessel; besides, the Saracolets, who had cut the rigging and taken away the cordage, would not have suffered them to make such an attempt. M. Saugnier was therefore obliged to wait for a reinforcement, to extricate himself from his embarrassment. Six or seven resolute laptots arrived in Balca's long-boat; who, being well acquainted with their courage, had sent them, with orders to attempt every thing for their assistance: they came at eleven o'clock in the morning, having travelled the whole night. They told M. Saugnier that they had seen his vessel; that the Saracolets having entirely plundered her and taken away all her rigging, there was now no remedy for his misfortune; that it now behoved him to look to his personal safety, since he was still left at liberty; their sloop, they desired him to observe, was well armed; they were going, they added, to take the merchandize which M. Saugnier had left on board Mambao, and they advised him to endeavour by all means to embark with them. Having acquiesced, in about two hours he reached Mambao's vessel. The guard, who saw him going out, did not oppose his passage, either through a supposition that he was too weak to attempt an escape, or owing perhaps to the consideration and respect which they pay the Emperor of Morocco, and which might deter them from offering violence to a man who had belonged to him. Be the reason as it may, M. Saugnier reached the banks of the river without meeting any molestation, and from thence got aboard Mambao. In the evening he embarked with his merchandize. They kept on during the whole night; and on the 7th, about nine o'clock in the morning, reached the vessel which was under the command of Balca.

The village of Baquelle is exceedingly strong and beautiful. The streets are wide and straight; the huts are all of earth, surrounded with great courts, and are almost all terraced. The gardens are delightful, and well situated: they offer to the view along the river the most agreeable of prospects. This village contains about 3000 inhabitants; and if one may give the name of town to the habitations of these countries, Baquelle will certainly stand in the foremost rank. It is the best fortified of all that are situated along the banks of the Niger.

When M. Saugnier had taken a little rest, he was informed of the arrival of Maffe, a mulatto of Senegal, who was one of his gourmets. He had run away from Baquelle with his boat, carrying with

him at the same time about 800 pounds of ivory, forty pieces of guiney-blues, a few muskets, and a barrel, containing about 100 pound weight of gunpowder. Three resolute laptots (among whom was Sagot) had been the companions of his flight. Two of these laptots were Saracolets. They had concealed the cloth in their knapfacks, and Maffe, who was a dextrous fellow, had obtained from the lord of Baquelle permission to follow M. Saugnier, by insinuating to that prince, that since M. Saugnier was no longer in his power, he would do well to permit him to join him; that this action on the part of the prince would appease his resentment, and that as he was ignorant of the negro language, and that as he (Maffe) served him as interpreter, the prince could not adopt a better instrument to make him forgive and forget the past. Maffe did not lose his pains; and scarcely had he obtained this permission, than without mentioning to any person his intended departure, he repaired to M. Saugnier's boat, which the people of the country imagined belonged to Mambao, and with all possible diligence embarked with the merchandize above mentioned. Scarcely had he set sail, when he was pursued from the village of Baquelle by a body of men, who fired upon him, but were too late to prevent his escape. He reached the middle of the river, and sailed the whole night without meeting any accident.

Maffe, on his arrival on board the vessel of Balca, made enquiry after the King's ship; and having learnt that it was at no great distance, he proposed to M. Saugnier to embark on board the boat, in order to overtake her. This M. Saugnier immediately did, as his present situation was exceedingly disagreeable.

He embarked with him in the night, having no more than the three laptots above mentioned. His twivels were in order, mounted upon the gunwale of the boat, and charged, in case of an attack. His people were all armed, each with a double-barrelled mulquet, and he proceeded, confiding entirely in their care. They were 37 hours under sail. They arrived on the 14th, at seven in the morning, and went on board the Bienfaisant, commanded by Thevenot, a wealthy inhabitant of Senegal.

Capt. Thevenot endeavoured, by his kind attentions to M. Saugnier, to mitigate his distress. His vessel, fitted out solely for the purpose of paying the duties, was well armed and commodious. M. Saugnier was well lodged; had a good table, and being longer exposed to the dew, nor to the ardour of the sun, his fever, which was solely the consequence of a weakness, arising from the continual fatigue he had so long undergone, visibly abated. After having been eight days on board, it left him entirely. The river gradually lowering, and the vessel drawing nine feet water, Thevenot determined to use the greatest speed to return and avoid the shoals, which are frequent in the river. Notwithstanding his incessant care, together with the experience of the boatwain, who was then on his 45th voyage, and the uninterrupted labour of the laptots, they made but little way: different obstacles impeded their progress. To complete their misfortunes, when they arrived at Saldee they were informed that a party of the Poules were determined to stop the convoy. This intelligence induced the captain to depart immediately, without staying to take any millet on board. They touched the ground at the passage of the grand canal, ten leagues below Saldee. The Poules, who had seen them, came to wait for them near the Devil's-mouth: they hoped to surprise them here; but when they founded the two channels which run through this rock, every one set to work, and they soon disengaged themselves. The captain had taken care to put the cargo and trunks on a point of the rock which rises in the middle of the river, nor could the Poules get at it to plunder. They lost, however, the small quantity of millet, which, according to custom, is generally

left on the Moorish coast, to lighten the vessel when near this dangerous passage. The Bienfaïtant was the first vessel which returned; but they were not without fears for the rest: they dispatched an express by land, to inform the remainder of the convoy of the measures which had been taken to attack and surprize them; but this messenger, who was one of the tribe of the Poules, was better pleased to stop near the rock, and share in the plunder of the convoy, than to warn the vessels of the danger. They received no news from their companions, nor did they see any of the convoy, which made them fear that the whole had been stopped.

After having got clear of many sand-banks, they struck again on that of Haliburum. It then became necessary to lighten the vessel, and they employed half the day in that business. At night they saw the boat of the Paul, Captain St. Jean. He had been attacked at the rock, but as his vessel drew but little water, and his crew was numerous, he passed without loss. He informed M. Saugnier that his partner Scipio, the day after his departure, had arrived at Baquelle; that he had weighed his vessel, saved the cargo, and would be with them soon. On the 11th of December he arrived at Doumons, the general rendezvous of the convoy on their return from Galam.

On the arrival of M. Saugnier's courier at Tamboucanee, Scipio deposited his merchandize on board the different Senegalian vessels, and putting a stop to his traffic, came off with his laptots in the boat. Scipio instead of landing at Baquelle, went with his men to examine the vessel which was left upon the rocks; from thence he repaired to Tuago, and presented himself before the grand fouquet, made him a tender of his services, and promised to spend his whole life with him. The prince, glad to engage a man of such courage and reputation, received him with the greatest politeness.

Scipio, finding him disposed as he could wish, represented that he could not do him any essential service, unless M. Saugnier's ship was first cleared from the rocks; that, by means of repairing the vessel, he might expeditiously transport his troops where the war required them; that his neighbours, and the governors of the different provinces, would by this means be taught to hold him in greater fear, and learn to respect his authority; that Sirman himself would soon return to his duty, particularly when he should perceive that the Senegalian laptots were united against him to bring him to submission. These measures were approved of by the prince; and Scipio, in order to bring about his designs, recovered the cordage which the Saracolets had taken away; and with their assistance succeeded, after much labour, in heaving down the vessel upon the sand. He then requested the grand fouquet to restore him his laptots, who being more expert in naval matters than the Saracolets, would facilitate the repairs of the vessel while the convoy remained; a thing impossible to effect after their departure for Senegal. The lord of Baquelle received an order, and let the laptots go. With their assistance, Scipio turned the ship keel upwards; and several Senegalian vessels, among the rest the Moor, coming by, he borrowed a sufficient number of laptots, got her up again, after having repaired the damage her keel had suffered, dismissed the Saracolets, who had been very useful to him, and made towards Baquelle. Being called upon to fulfil his engagements by the grand fouquet, he replied, that if the fouquet was king on land, he was monarch on the river, and now ready for battle: he disdained, he said, to be a slave to a negro king! The vessel no longer leaked; Scipio, with none but his own laptots on board, moored her across the principal passages of the river, and waited for the returned vessels. He felt himself too much obliged to St. Jean to detain his laptots, and as soon as the vessel had undergone

her repairs sent them back to him. He then forced the laptots belonging to the convoy to come on board him, and summoned the lord of Baquelle to restore him all the merchandize that he had purchased by trick, or taken by force. Amadi, at first, hesitated; but contented the moment he saw Scipio was about to make a descent in order to set his village on fire, and to carry off whatever should come in his way. He gave back the goods, of which M. Saugnier had taken an account in writing; and restored besides two barrels of gunpowder, of 100 lb. weight each, which was forgot in the catalogue.

The Senegal captains were not inclined to expose their sailors in M. Saugnier's behalf; but those brave fellows, accustomed to fight under the command of Scipio, and acknowledging no other leader but him, could not reconcile to themselves the idea of abandoning him. Besides they had hopes of plunder in attacking the village of Baquelle, and they believed themselves to be invincible under his orders. Every thing being in readiness for the onset, Scipio began to proceed down the river. The army of Tuago was already drawn out upon the bank. The grand fouquet wanted to take vengeance on Scipio, and hoped that with small arms alone he should be able to prevent his passage; but the balls only grazed the ship, the barricado kept Scipio's men in safety; and his swivels, from which several discharges were made, soon scattered the undisciplined troops that tremblingly advanced against him. Without loss of time, he continued his way as far as Yanne, the residence of the principal minister of the almayy of the Poules. This man informed him, that the Tamplirs, dissatisfied with the distribution of the duties made by the almayy, were assembled together; that forming a numerous body, they waited at the rock for the return of the vessels. Scipio determined anew either to conquer or die. He dispatched several expresses to the other ships of the convoy, to prevail on them not to sail but in a body, in order to repel the attacks of the Poules. As his vessel drew too much water to wait for the convoy, he determined to sail prepared for every event. His design was to make himself master of the passage; to resist at that post every attempt of the enemy, and to wait there the arrival of the convoy. He hoped, with the assistance of the sailors from Senegal, to repel the combined force of the Poules, and to indemnify himself for the losses of the voyage by the captures made on this people; but circumstances changed his resolution. His crew were considerably diminished, having lost five men; and M. Saugnier taken with him three, together with a gourmet: there now remained only 22 on board, the greater part of whom were so reduced by the fatigue attendant on such a dangerous voyage, that little dependence could be placed on their assistance. In this dilemma he armed the negroes he had retaken on board of Mambau; and as they were his countrymen, being from Baabarn, he found no difficulty in determining them to fight, in case of an attack on the part of the Poules. Having thus resolved, he advanced with confidence to that part of the river where he knew the negroes were waiting to plunder the ship. Four leagues before he arrived at the rock he cast anchor, and took post in a wood with twelve resolute laptots, in order to reconnoitre the motions of the enemy. Here he surprized two princes, who were going to join the forces of the Poules; carried them on board his vessel, and put them in irons. He then weighed anchor, and appeared at seven in the morning in that part of the channel where the water was most deep.

As soon as he had reached the rock, he saw both sides of the river lined with an innumerable multitude of Poules, shouting with joy, and preparing to oppose his passage. He remained, according to his first intention, the whole day inactive on board;

at night he found a foot less water than he retired into the the exultations and now undetermined urged him to the to enable him to enemies. He had succeeded. At that spot where the towers were stationed, he in his girdle, he accompanied by twelve Poules, who inflamed princes, who were he then obliged they were put in

The next morning several of their crew aboard; Scipio then and desired him to continued to attack he was determined that as for him, he wait for the convoy his vessel, he would Senegalans, massacre him. When this chiefs, they thought messenger to Scipio, would restore the further molestation mere promises, rest He assured them, would liberate the rock; which satisfied dare to interrupt it of two days the water hour, and the passage. In order to pass the vessel; but as merchandize, the with enemies, Scipio agreed to give the 14 double-barrel powder, and to supply surety for the performance required that the troops should instantly complied assisted him to get

They remained the convoy; while to obtain intelligence concluded that their course to Sen. Scarcely had they received intelligence, tered into a capitulation would soon appear their arrival at Podor.

In addition, however, the vessel and merchandize at Tuago which contained his

at night he founded the channel, found there was a foot less water than the vessel drew. At day-light he retired into the ward-room, from whence he heard the exultations and threats of the Poules. He was now undetermined what part to act. His courage urged him to the battle, but he had not men enough to enable him to go on shore and repel his numerous enemies. He had recourse then to stratagem, and succeeded. At sun-set, after having observed the spot where the tamprirs that commanded the Poules were stationed, he swam on shore with a sabre stuck in his girdle, and his musquet on his head, accompanied by twelve of his crew. He attacked the Poules, who instantly fled, and took prisoners six princes, who were not able to make their escape. He then obliged them to swim to the vessel, where they were put in irons.

The next morning the Poules, perceiving that several of their chiefs were wanting, sent a man aboard: Scipio shewed the princes to their messenger, and desired him to inform the tamprirs, that if they continued to attack and molest him in his business, he was determined to cut off the heads of the captives; that as for him, he did not fear them; that he would wait for the convoy, and that then, setting fire to his vessel, he would open the pass, and, aided by the Senegalians, massacre all the Poules that opposed him. When this resolution was reported to the chiefs, they thought proper to send a second messenger to Scipio, in order to tell him, that if he would restore the princes, he should meet with no further molestation. But Scipio, not trusting to mere promises, refused to hearken to their request. He assured them, that if he was not molested, he would liberate the prisoners as soon as he passed the rock; which satisfied the Poules, who now did not dare to interrupt his progress. During the course of two days the water lowered more and more every hour, and the passage became less and less practicable. In order to succeed, it was necessary to lighten the vessel; but as there was no place to deposit the merchandize, the banks of the river being covered with enemies, Scipio, in order to save the ship, agreed to give the tamprirs 30 pieces of guiney-blues, 14 double-barrelled musquets, 14 barrels of gunpowder, and 10 fustils of the better kind. As a surety for the performance of the capitulation, he required that the son of the tamprir who commanded the troops should be put into his hands: this was instantly complied with; and the Poules themselves assisted him to get through this dangerous passage.

They remained six days at Doumons, waiting for the convoy; while several couriers were dispatched to obtain intelligence, but to no purpose. Having concluded that the convoy was lost, they continued their course to Senegal, being six vessels in company. Scarcely had they arrived at Podor, when they received intelligence that the whole convoy had entered into a capitulation at the rock, and that they would soon appear in sight; which three days after their arrival at Podor they found to be true.

In addition, however, to M. Saugnier's misfortunes, the vessel aboard of which Scipio had left his merchandize at Tamboucanee was lost, and that which contained his ivory pillaged at the rock.

The governor had appointed the marquis of Becaria commandant of the fort Podor, in the room of M. Duchozel. He arrived the day on which M. Saugnier appeared before that place. M. Duchozel embarked with M. Saugnier; and also the company's agent at Podor. The latter would not proceed in the company's vessels; and M. Saugnier received him on account of his situation, notwithstanding the injuries he had received from the directors of Senegal. They set sail from Podor with a fair and a strong current, which soon brought them to the colony, where they arrived the 24th of December, 1786, after a tedious and disagreeable voyage.

It is thought that Podor, on account of the air, is the most dangerous spot in all this part of Africa. The village, and the fort, are situated on the banks of the river, in the territory belonging to the Poules. The fort, which forms a circle, with four towers, was constructed by the English: It has no ditch, and being at the distance of 200 toises from the river, may, in case of hostilities with the Poules, easily be cut off from the water. It is consequently of no utility, since it can neither protect the vessels that pass the river, nor be relieved by them. The unwholeness of the air is occasioned by the surrounding swamps, which are scarcely ever dried up.

M. Saugnier finding a return of his complaint, determined to return to France for the recovery of his health: accordingly he waited an opportunity, and Capt. Clouët Dubuisson, of Havre, commander of the Furet, which had been repaired, (and which, after remaining a month at Goree, and the Cape de Verd Islands, was to proceed directly for Havre) having offered him a passage, he accepted it.

About eleven o'clock they got out to sea, and the next day at eight in the morning anchored in the harbour of Goree. This island is only a desert rock, and totally unproductive. There are, however, a few gardens, which furnish a little fallad. It is destitute of water, although indeed there are three small springs on the mountain, which are guarded with great care, reserved for the commandant, and furnish water only for his use. The commandants are often so inhuman as to refuse water to their countrymen, even when they have more than they have occasion for themselves.

Scarcely had the Furet set sail before M. Saugnier observed on shore a sailor of a very suspicious appearance. Having him seized by the negroes, and brought before the commandant, he acknowledged that he had concealed himself, in order to avoid being an accomplice in the depredations committed by a Bermudian vessel, that, under pretext of taking in provisions, had put in for a few days to Goree. The deposition of this man alarmed M. Saugnier exceedingly; he apprehended that this ship (which in fact was a pirate, but which could not be detected, as all her credentials were in due form,) intended to attack the Furet. This was really the case; but that vessel being an excellent sailer, would not let the pirate come up with her; she ran under the cannon of the fort, and they perceived the Bermudian steer off.

M. Saugnier set off by land from Goree the 9th of April in the evening, and arrived at Dacar, where he put up for the night at the house of the marabout of the village: next morning he set out upon his journey, escorted by his son, and a negro of Senegal named Wally. He had an Arabian horse, that he seldom rode, being accompanied by the elder Floquet, who had been to Goree in the Bayonnaise. They arrived on the 14th about nine o'clock in the evening, after a journey of five days, constantly sleeping in the open air, walking along the sea shore, and broiling under a burning sun. It was too late to enter the colony; nevertheless Saerguy, one of their gourmets in the Galam voyage, carried him thither in his canoe, unperceived by the centinels.

At this time M. Saugnier's health was visibly mending, and this journey, far from weakening, had re-established his strength. Being, however, perplexed with crosses, another relapse was the consequence, and when the ship set sail on the 30th of June, 1786, he was carried on board in a state of insensibility. Two hours after they weighed anchor. The voyage, though long, was prosperous; and M. Saugnier entirely recovered his health on the passage, and on the 23d of August, 1786, they arrived safe at L'Orient.

CHAPTER I.

Narrative of M. de Brisson—He embarks for Senegal, on board the St. Catherine—The Captain and his Mate pay no Attention to his Cautions—They strike—Masts cut away—Water comes into the Cabin—Captain dismayed—Brisson strives to raise his Spirits—Long-Boat hoisted out—Overset—Thrown upon the Beach—Brisson swims to the Captain, &c.—Get the Boat afloat—All landed—Their Adventures—Meet Inhabitants—Some of Brisson's Companions wounded—Stripped, &c.—Brisson's Behaviour to a Priest—Jealousy and Discord of the Savages—Brisson, &c. assassinated—Seized—A Contention—An Arab offers to stab Brisson—The strange Manner by which he is prevented—Meets the Companions he had lost—Cruelty of the Women.

IN the month of June, 1785, M. de Brisson received orders from the Marshal De Castries, minister and secretary of state for the department of the marine, to embark on board the St. Catherine for Senegal, under the command of Capt. le Turc.

Having proceeded from the coast of France to the Canaries, on the 10th of July they passed between those islands and that of Palma.

Brisson, apprehensive of the danger to which vessels are exposed in those latitudes from the strength of the current, frequently warned the captain; but neither he nor his mate paid proper attention to those necessary precautions; in consequence of which the vessel struck, and they found themselves involved in a kind of basin formed by rocks: the masts were immediately cut away to lighten the vessel, but in vain, for the water had already found its way into the cabin.

Captain le Turc was exceedingly dismayed, and Brisson did every thing in his power to raise his drooping spirits, but his despondency still continued: however M. Yan, the second mate, M. Suret, a passenger, with three English sailors and others, animated by the example of Brisson, hoisted out the long-boat, and during a tedious night they struggled against a violent sea, in hopes when the morning appeared they might be able to land in safety on the beach.

The captain, mate, and 3-4ths of the crew, who wanted courage to try the only chance which remained to save them, staid in the vessel, and threw a tow rope into the boat, in order to haul her back again, in case the adventurers succeeded: but they had scarce touched the water with their oars, when, on account of the eddy of the sea, they were obliged to drop them: the boat now overset, the waves dispersed, and they were all thrown upon the beach, except one M. Devuize, whom Brisson saved from being drowned.

Brisson and Yan leaped into the water, and swam to their wretched companions who remained on board the wreck, and whom they soon prevailed upon to get the boat afloat, but which they did not effect without a great deal of trouble; an ample compensation, however, attended their labour, as all the crew were presently got on shore.

As soon as they had landed, they climbed up the rocks, in order to see whereabouts they were; for none of them could tell what distance the land might be from Senegal. On the top of these rocks they perceived an immense plain, covered with white sand; over which there were some creeping plants, resembling the branches of coral. There were also some hills at a distance, covered with a kind of wild heath, and which appeared like a wood of some extent: advancing towards these hills, they saw some camels dung upon the ground, and soon after perceived several grazing in different places. They were then sure that this district was inhabited, and felt themselves more at ease after the discovery; for not knowing among what people their fate had conducted them, they were the happier on approaching human habitations, as hunger and thirst, which began to be importunate, might have driven them to direful extremities.

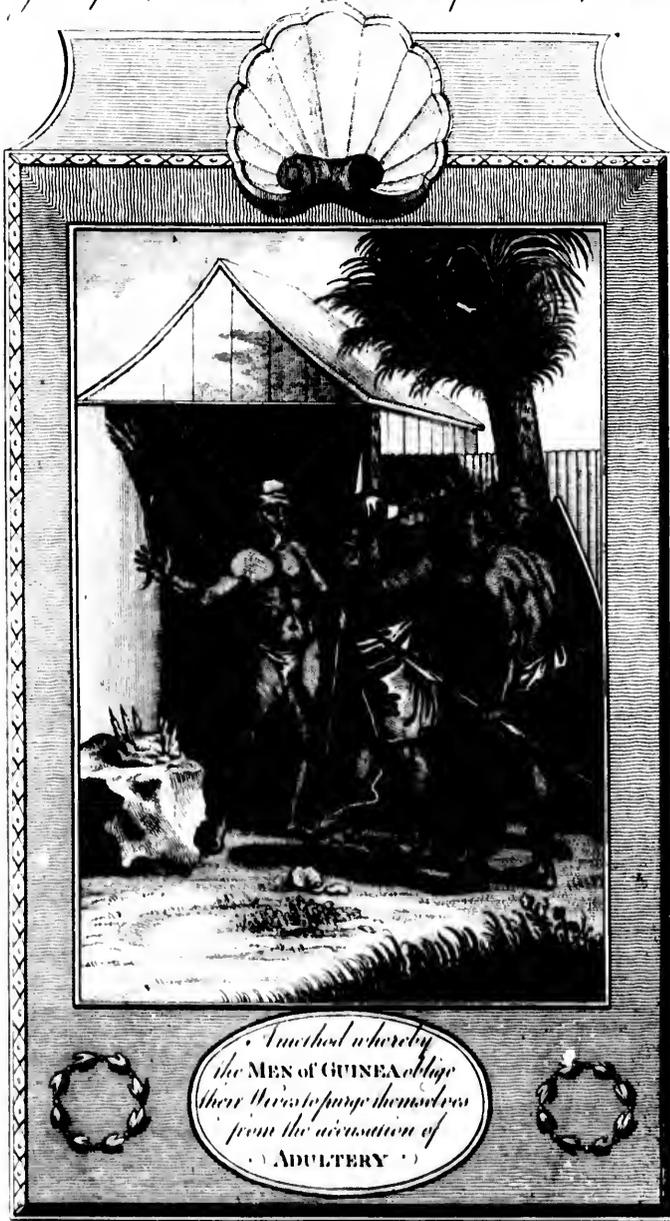

They now discovered some children at a distance, halting to collect their herds of goats, and drive

them away. Brisson immediately concluded that they had been desecrated, and that their appearance had excited some apprehension. The cries of the children spread the alarm through the neighbouring camps, and they soon saw the inhabitants advancing to meet them. No sooner did they make out what they were, than they separated, began to skip and dance upon the sand, covered their faces with their hands, and howled and cried in the most dreadful manner; this was enough to convince Brisson and his party that they were little acquainted with European faces. Their gestures, and the measures they took to surround the crew, did not afford a favourable presage: Brisson, however, cautioned his friends not to separate, but to walk on in an orderly manner, until he should be near enough to make himself heard. Having in former voyages to Senegal learnt a few words of Arabic, from which he hoped to derive much advantage on the present occasion; accordingly, he began by tying a white handkerchief to the end of his cane, in the form of a flag, in hopes that they might have some knowledge of this signal, especially if any of them had ever been at Senegal, or seen shipping on their coast.

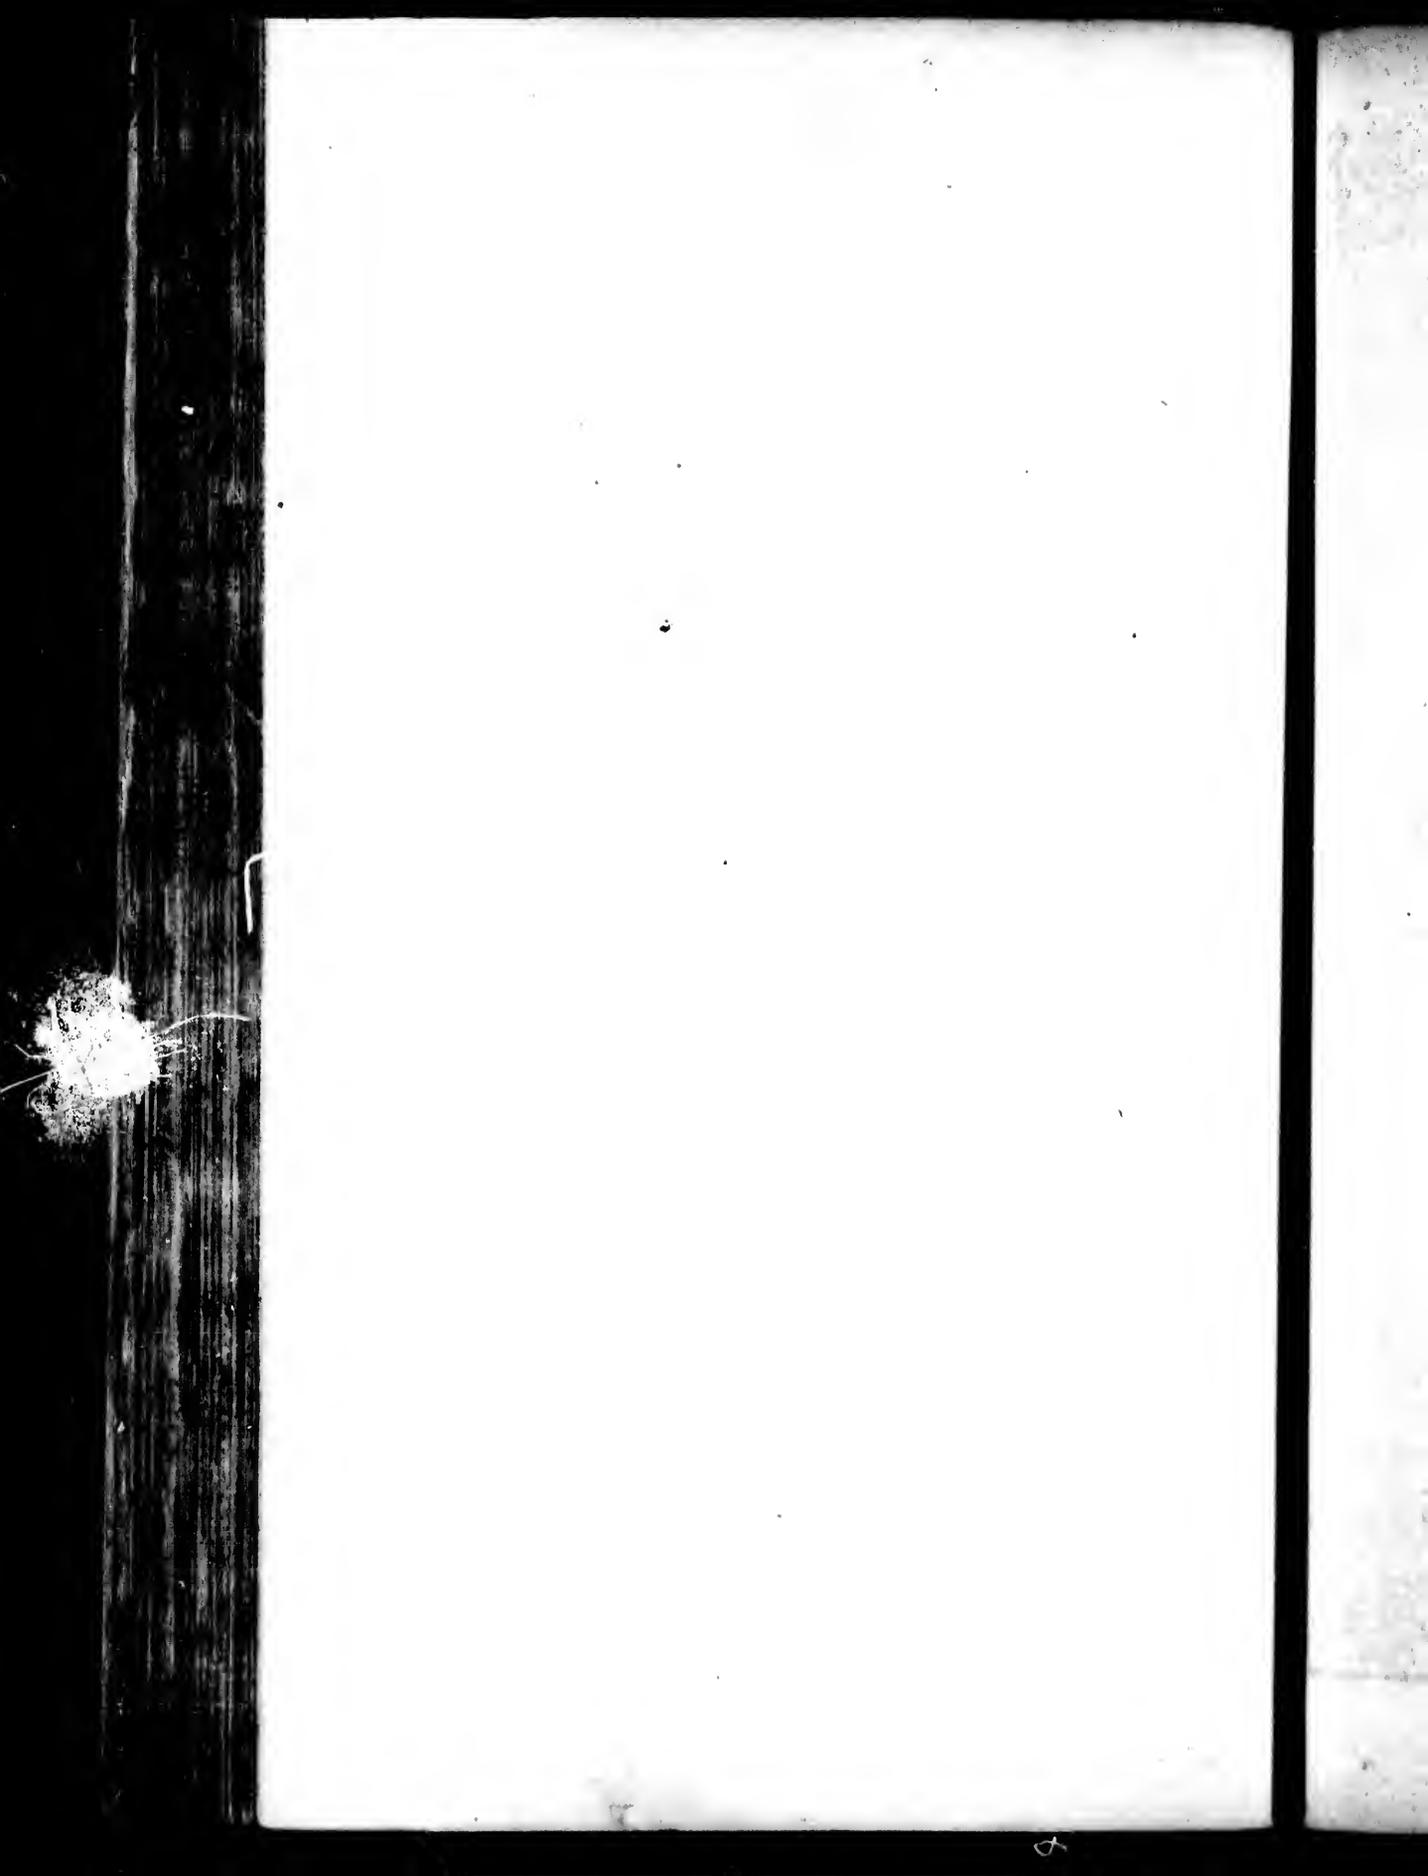

As soon as they approached the savages, some of Brisson's companions, among whom were the first and second mates, dispersed; but they were immediately surrounded, and seized by the collar. It was not till that moment, when the rays of the sun were reflected from the polished steel of their daggers, that they discovered them to be armed; which not having perceived before, Brisson had advanced without fear. The two unfortunate men, who had been carried off, not making their appearance again, all his efforts to stop the others became fruitless: fear took possession of their minds; they uttered unanimous cries of despair, and ran off in various directions. The Arabs, armed with weighty cutlasses, and little maces, rushed on them with incredible ferocity; and Brisson had soon the misfortune to see some of them wounded, and others stripped naked, and stretched out almost breathless on the sand.

Brisson, in the midst of this horrible massacre, perceiving an unarmed Arab, and from his dress taking him for one of those who had accompanied Prince Allicoury, in a visit he had formerly made on the island of St. Louis, immediately ran to throw himself into his arms; but the disdain with which he viewed Brisson and his party soon convinced them that they were not less unfortunate than the rest: having taken Brisson by the hand, he looked at it with attention, counted his fingers, and then put his hand into the hollow of his, making at the same time several motions with his head. He then asked him who he was, what he came to do there, and how he had found his way thither. Brisson traced the form of a ship upon the sand, and by the means of a few Arabic words he was acquainted with, assisted with signs, made him understand that he solicited his assistance to conduct them to the place of their destination: he added, that he had about him wherewith to recompense his trouble; and this last article he seemed to understand better than the preceding ones; for immediately after he locked his fingers in Brisson's, as an assurance that from that moment they were closely connected; and told him, with equal haste, to deliver to him the effects of which he

he had just spoken. Brisson gave him two very handsome watches, with the chains belonging to them, a gold stock-buckle, two pair of silver buckles, a ring set with brilliants, a silver cup, fork, and spoon, and two hundred livres in specie. With great care, and still greater mystery, he hid his treasure in his blue shirt, promising Brisson not to abandon him.

As soon as the Arab's booty was secure, he asked on what part of the coast they had been shipwrecked. Brisson pointed it out to him; and he immediately called several of his people, and told them to follow him. From the manner in which they addressed him, Brisson perceived that his protector was a man of consequence; which afterwards proved to be the case, as he was their *talbe* or priest.

As soon as they arrived at the sea-side, they began to utter loud cries of joy; but the jealousy, visible in their faces soon prompted them to a spirit of discord. They determined on making Brisson and his companions swim on board, and get out of the ship every thing it was possible to save; but they all declined it, on the pretence of not swimming, and they were obliged to go aboard themselves: while those who remained ashore expressed the most jealous apprehensions of their success, particularly the women.

In the mean time the news of the wreck was already spread over the country; and the greedy savages, whose numbers could not fail to excite still further jealousy, were seen running down from every quarter: they soon came to blows, and several lost their lives. The women, enraged at not being able to plunder the vessel, fell upon the suffering crew, and tore off the small remains of clothes they had upon their backs: they were particularly attentive to Brisson's; which he had preserved till then, and which they thought deserved a preference.

Brisson's master, perceiving the number of Arabs was every moment increasing, called two of his friends, whom he very wisely admitted to the partnership of twelve shipwrecked men that had put themselves under his protection. This was the best means of acquiring partizans; and of preserving the portion he had reserved for himself. After having made the necessary stipulations, as well for sharing what had already been got out of the ship, as for the division of the slaves that had been made, he withdrew from the crowd by way of securing Brisson and his party against any insult. The hut wherein they were lodged, or rather heaped upon one another, was miserably infected, and covered with mofs.

Their master's first care was to search them scrupulously, for fear they should still have any thing concealed. He took away even their shirts and handkerchiefs, giving them to understand that if he did not, some other would. However, upon Brisson's declaring that he had given him enough already, he desisted from stripping him.

The name of their master was Sidy Mahamet del Zouza; his tribe that of Labdesseba; he avoided the Ouadelims because they did not live with them on friendly terms. Brisson was very much grieved to find that they had fallen into the hands of the most ferocious among the inhabitants of the Deserts of Arabia. He foresaw that they should have nothing but hardships and trouble to undergo, till happily delivered.

Brisson's master having now buried with great caution and care the treasure he had received, returned to the beach to see if there was aught coming to him from the plunder of the wreck. In the mean time a band of Ouadelims came and besieged their hut: when they had examined and plundered every thing, they laid violent hands upon Brisson and his companions. Brisson was seized by two, who took him by the arms and dragged him first one way and then another: the little of his dress which remained was now an object of jealousy and

fury. Others however advancing, surrounded and carried him off: when they had stripped him of his shirt and neck-kerchief, they drove him behind a heap of sand, and indulged their utmost cruelty: the wretched Brisson concluded himself utterly lost, especially as they were now preparing cords to tie him. During this mournful dilemma, one of his master's associates hastened up, charged them with having committed unheard-of outrages in the hut of Sidy Mahamet, and conjured them to stop. This emissary further declared, that the priest being incensed at their having trod down the holy-books of their religion, were immediately to be brought to trial for such sacrilegious conduct: the only way to appease his anger and prevent any fatal consequences, was to restore him his slave. This menace had the desired effect, and Brisson having been separated from his wretched companions, was now delivered up to the emissary, whose name was Nouegen: he conducted him immediately to the place where the council was assembled. As soon as he introduced Brisson, he requested that for the trouble he was at in carrying him off, he should be one of his slaves; adding, that he had the greatest right to him, for that he saw him deliver to Sidy Mahamet, a quantity of valuable effects. Brisson was now surrounded by a multitude of women and children; who continued gazing at him with the greatest attention.

The priest enraged at his emissary's claim, and particularly at his having discovered the effects, evinced the greatest anger and indignation, uttering the severest menaces if Brisson was not restored to him. Upon this Nouegen swelled with pride and vexation, and drawing his dagger, offered to kill Brisson, since he could not be his. The priest now covered Brisson with his long string of 115 small black balls, somewhat resembling the rosaries which the catholics use, and then took out a little book which hung to his girdle, while the women assisted in recovering Brisson from the hands of Nouegen, and delivering him up to the priest, for fear he should pronounce an anathema against Nouegen, of which the common people are in great awe of.

Some little distance Brisson perceived his companions whom he despaired of ever seeing again. They had ate nothing for two days; nor was Brisson less exhausted than they; but the critical circumstances in which he had found himself, had so agitated his spirits, that he had in a manner lost the faculty of feeling the want by which he was so hardly pressed.

As soon as he recovered himself, he reflected on the danger from which he had so fortunately escaped; and his emotion was so great, that he could not refrain from weeping. He endeavoured to conceal from every eye this testimony of his sensibility and grief: but some women perceiving it, instead of being moved to compassion, threw sand in his eyes, as they said, to wipe away his tears.

During three days of their slavery, they had as yet had nothing to eat but a little meal, spoiled by the salt water, and rendered still more detestable by a mixture of barley-meal, that had been long kept in goat-skins; and even this wretched repast was interrupted by cries of alarm, which they heard at some distance.

One of Sidy Mahamet's friends ran up to him, to advise him to hide himself as fast as possible, as the Ouadelims were pouring in from all quarters, with the intention of carrying off what his horde had captured.

A place of rendezvous was agreed upon, after which they went and hid themselves behind some hillocks of sand, where they remained till some Arabs of a different tribe, but equally interested in the preservation of their plunder, came to join them, and reinforce their band. A guide, who had gone before them, had placed small pyramids of stones

from distance to distance, to point out the road they were to follow, and to prevent their falling into the midst of some hostile horde, particularly that of the Ouadelims. These people, indeed, are universally so greedy and rapacious, that friends or enemies, they are almost equally to be feared. At break of day, all those that had Christian slaves, having joined them, they set off on their march for the inland country, where the families of their respective masters resided.

All this while Briffon suffered much, especially from thirst. It became so painful to them to move their tongues, that they did not dare to ask one another any questions. They were obliged to go the same pace as the camels, which were hurried on at a rapid rate; and their masters, from the fear of their being taken from them, marched and counter-marched them in many different ways, that it was fifteen days before they reached their habitation, while, by following the direct road, they should have arrived there in five at most.

After having climbed up mountains of a prodigious height, and entirely covered with small grey stones as sharp as flints, they descended into a sandy bottom, thickly sown with prickly thistles. There they slackened their pace: the soles of their feet were by this time all over blood, and it became impossible for them to get on any further: Briffon's master was obliged to take him up behind him on his camel; but this attention on his part, so far from being a relief to him, was the cause of his suffering unheard-of torments. The camel's pace is naturally very heavy, and his trot exceedingly hard. As he was naked, he had nothing between him and the animal's bare back, so that in a short time he was dreadfully galled. His blood streamed down the flanks of the camel: but this spectacle, instead of exciting the sensibility and compassion of these barbarians, served them as matter of amusement. They made a sport of his sufferings; and that they might enjoy it the better, urged on the beasts upon which they were mounted. His fores would, no doubt, have become incurable, if he had not come to a violent, though necessary resolution, of letting himself fall upon the sand. All the hurt he met with in falling, was the being pricked from head to foot by the thistles.

When night was approaching, they perceived a very thick smoke, and Briffon thought they were arrived at some hamlet where they should find something to eat, and above all something to drink; but he soon saw that it was nothing but underwood, behind which their guide had taken up his lodging. Briffon went and stretched himself out behind a bush, and there waited for death; but scarcely had he laid down, when an Arab of his company came to make him get up and unload his camel. Briffon was so incensed at the manner in which this man gave him orders, that he answered him without any ceremony. Immediately he snatched off his head an old sailor's hat, that had been given to Briffon instead of his own, spit upon it as a mark of contempt, and seized him very roughly by the arm to drag him towards the camel. As soon as he laid his hand upon Briffon, he was no longer master of his resentment: he gave him a blow in the face with his fist; and disengaging himself from his hands, took up a stick with a lance at the end, ran up to strike him, but he took to his heels, and

thus escaped the effects of Briffon's anger.

At the same time he perceived his master advancing towards him. Not knowing his design, Briffon called out to him, that if his intention was to avenge his countryman, he would find him prepared to go any length, rather can suffer himself to be struck. This resolution and threats made him laugh; however, he dispelled his slave's apprehensions, by telling him he had nothing to fear. This adventure made him imagine that with firmness he might avoid a great deal of ill-treatment, to which he could not fail of being exposed if he shewed any signs of fear, and he often experienced afterwards, that this idea was well-founded.

He now saw preparations made which gave him a great deal of uneasiness. Flints were heated in a large kind of furnace: he saw a great stone, which was lying under a bush, taken up; a hole was dug in the earth, and the Arabs frequently repeating his name, burst into violent fits of laughter. At length they called him, and made him draw near the hole they had just dug. He whom Briffon had beat made him a number of signs with his hand, passing it backwards and forwards along his neck, as if he was going to cut off his head, or meant to make him understand that he should lose his. Determined as Briffon was to make a stout resistance, all these gestures excited very unpleasant feelings: however, on approaching the cavity, he saw a leathern bottle, a little bag containing barley-meal, and a goat that had been lately killed, taken out of it. The sight of these provisions restored him to his tranquillity, although he was ignorant of the use to which the heated flints were to be applied. At length he saw a wooden vessel, in which some barley-meal had been thrown, filled with water; and the heated pebbles, thrown into it, served to make it boil. It was thus that their masters made a kind of paste, which they kneaded in their hands, and swallowed without chewing. As to the slaves, their repast consisted of the same meal, mixed up with water: it was thrown upon a carpet, which served their master to put under his feet during the prayer, and as a mattress at night. After having for a long time kneaded this paste, he delivered it to Briffon to divide it with his fellow slaves. It is impossible to conceive how nauseous it was to the taste. The water with which it was made had been procured upon the sea-side, and then inclosed in a raw goat's-skin: to prevent it from corrupting, a kind of tar had been put into it, and had given it a most horrid smell. The same water was given them for their drink, and bad as it was, in very small quantities.

The Arab whom Briffon struck hearing that he complained, gave him the remains of his paste, and told him that the next day they should eat the goat, which had been killed on purpose for them, as he had given him to understand by his signs. Briffon testified to him, half by words and half by gestures, his great surprise at the finding of these provisions; and he employed the same language to tell him that the guide, who had gone on before them, had procured them in a neighbouring hamlet, and had hid them under ground, to conceal them from the sight of the Moors, in case any should pass that way. When their repast was over, each of them retired behind a bush, and lay down to repose.

EARLY the next day Brissou, and the rest of the unhappy slaves, were commanded by their masters to assemble and load their camels. This being done, they continued their journey, having but a scanty stock of provision with them. About noon they halted in a plain, where they did not find a single tree to shade them from the rays of the sun, which came down perpendicularly upon their heads. They were now employed in unloading the camels, and in tearing up roots to make a fire; a piece of business the more disagreeable, as in this country all the trees, roots, and shrubs are covered with thorns. As soon as the fire had heated the sand, the goat was entirely covered with it, and they continued to feed the flames, while their masters regaled themselves with the raw grease, which they considered as a great dainty. As soon as the meat was dressed, it was taken up; and the Arabs, without giving themselves the time to take off the sand that was sticking to it, devoured it with incredible voracity. After having well gnawed the bones, they made use of their nails, the better to tear away the little remaining flesh; they then threw them to their slaves, enjoining them to eat with dispatch, and reload the camels, that they might renew their march without loss of time.

When the sun was near setting, by the light of its fiery rays (for in this country the sun almost always sets in a red horizon) they discovered tents scattered here and there upon a rising ground, and flocks and herds returning from pasture. The inhabitants of the camp they were approaching came out in crowds to meet them; but, far from practising the kind laws of hospitality in their regard, they loaded them with abuse, and made them suffer the most inhuman treatment; two of Brissou's companions were reduced to a most dreadful state: the women especially, far more ferocious than the men, took a pleasure in tormenting them.

Brissou, having removed to a little distance from his camel, perceived all on a sudden a man level a double-barrelled gun at him; upon which he presented his breast to him, and bid him fire. This act of firmness, to which he was no doubt little accustomed, astonished him, and his surprise contributed to strengthen Brissou's idea, that an appearance of not fearing these people keeps them in awe. He now approached the man, when a stone, thrown by an unknown hand, but which he suspected to be that of a woman, struck him on the head: he was stunned for a moment; as soon as he recovered his senses, he fell into a violent rage, and called out for vengeance. This was enough to spread fright and terror among the children; and even the savages, who were come out to meet them, not knowing what might be the matter, took flight. One of them, however, before he retired, struck Brissou on the breast with the butt-end of a musquet, and made him vomit blood.

They staid but one day in this canton, the inhabitants of which, however ill-disposed in the beginning, were good enough to give them provisions for three or four days. The plains they traversed, in advancing towards the east, were covered with little pebbles, as white as snow, and as round and flat as a lentil. While walking, they heard a hollow sound beneath their feet, as if the ground had been excavated. These regions afford no variety, the country being entirely flat, and not producing any plant whatever. The horizon is there obscured by a reddish vapour. It looks as if there were burning volcanoes on every side. The little pebbles sting the feet like sparks of fire: neither bird, nor insect, is seen in the air: a profound silence, that has something dreadful in it, prevails. If now and then a small breeze arise, the traveller immediately feels extreme lassitude; his lips crack, his skin is parched up, and little pimples, that occasion a very painful smarting, cover his body. The rays of the sun are

likewise so fierce, that the sight is thereby exceedingly endangered.

They proceeded from this immense plain into a second, which the wind had furrowed from distance to distance with a firm sand of a reddish colour. Some odoriferous plants, which reared their heads above the ridges of the furrows, were instantly devoured by the camels, who were as hungry as their masters. They had the good fortune, in quitting this sandy plain, to find a bottom surrounded with mountains, the soil of which was white, and of a marly nature. It was in this kind of valley, at the foot of some broom, forming a kind of bower with its interwoven branches, that they met with water to quench their raging thirst. They drank it with the greatest gút, although very bitter, covered with green moss, and in smell very offensive.

In the evening they reached a horde that was encamped at the distance of a few leagues. Here they met a very good reception; the road to other habitations was pointed out to them, and they were told that they should meet with all the necessary assistance to enable them to reach the residence of their masters. This happened very lucky, as their conductors had gone astray.

The brother-in-law of Brissou's master, who was one of the chiefs of the horde, took particular care of all the slaves. He ordered camel's milk, and ostrich's flesh dried in the sun, and chopped up small, to be given them. He was particularly kind to Brissou, and proposed purchasing him of his brother, who had been long his debtor; but this proposal made Brissou tremble, for it seemed to threaten him with a long captivity. He therefore ran in haste to acquaint his master with the intentions of his brother-in-law, and begged him not to consent to any such arrangement. Brissou also gave him to understand that his ransom would amount to more than his brother would give him, who assured him that he should not leave him, except to go to Morocco or Senegal, which should be ere long. This hope filled Brissou with inexpressible joy: however, notwithstanding his grateful sense of Sidy Salem's kind behaviour, his proposal left unpleasant apprehensions on his mind. This Sidy Salem perceived, and told Brissou that he might one day repent the not having accepted his offers.

They rested three days among the Arabs of the horde called Laroussie, and then set off on their march, to advance further up the country, where they were to meet the families of their leaders. After sixteen days fatigue, and the most dreadful want, they arrived quite exhausted and worn out.

Early in the morning they perceived a hamlet that promised at first sight a delightful residence. Several tents spread under tufted trees, and innumerable flocks and herds feeding upon the hills, made this place look like the retreat of happiness and peace; but, on a nearer approach, it had a different appearance. The trees which they admired at a distance, were old gum trees; and their boughs, thick-set with thorns, rendered the shade they diffused about them inaccessible.

They were now met by several black slaves, who are generally employed to tend the camels, these men kissed their feet, and enquired about their welfare; while the children, at a greater distance, made the air re-echo with their joyful cries, and the women standing respectfully at the entrance of their tents, waited for their husbands. As they approached, their wives advanced with a submissive air, laid their right hand upon their husbands' heads, kissed it, and threw themselves prostrate on the ground. When this ceremony was over, they cast on Brissou and his companions a look of curiosity, and began immediately to load them with abuse. The children, following their example, pinched them, pulled out their hair, and tore their flesh with their nails.

The

The masters now divided their slaves. When Sidy Mahamet had received the carefles of all his family, Briffon asked him which of the women that surrounded him was his favourite: he shewed her to him; and Briffon approached to give her two handfuls of cloves, that his master had carefully preserved, on purpose that by offering them to her Briffon might attract a more favourable notice. Briffon knew that the Moorish women were passionately fond of odours, particularly of that of cloves. However, she received his present with insulting haughtiness, and drove him from her tent with contempt. A short time after this woman came to order Mess. Devoife, Baudré, and Briffon, who had fallen to her husband's lot, to unload the camels, to clean a kind of kettle, and to go and tear up roots to make a fire. While she was come to make known her will to them, her husband had placed himself on the knees of one of his concubines, where he had fallen fast asleep.

Briffon having returned from making faggots saw two of his companions cruelly beaten, and stretched out upon the sand. They had been treated thus, because, their strength being entirely exhausted, they had not been able to fulfil the task assigned them. Briffon awaked his master with redoubled cries, reminded him of the promise he made him, and begged him to conduct him without delay to Senegal or to Morocco; otherwise he declared that, though it cost him his life, he would have him robbed of all the valuable effects he delivered to him.

His master now became very uneasy on account of the approach of several of his neighbours, who were witnesses to the vehemence of his anger, for fear Briffon should recount the number of the effects he delivered to him. His master therefore came to him, took him by the arm, and pushed him hastily into his tent, desiring him not to make so much noise, and promising him a porringer of milk; upon Briffon's desiring him to carry it to his companions, he answered he was going to give them some, and therefore begged him to be quiet. Sidy now, in the presence of Briffon, forbade his wife to require him to do the least hard work, and also forbade Briffon to obey her. He likewise ordered some barley to be boiled for the slaves.

It was now the end of August and there was no sign of any travelling preparations. Briffon had already asked Sidy Mahamet what he was waiting for to conduct him to Sehegal. He answered that he was looking out for two stout and vigorous camels, that might be able to bear the fatigue of the journey, and that they should set off as soon as he could procure them. Briffon was the more desirous of expedition, as the nights began to be very cool; and the abundant dew wetted them even behind the bushes, which served for a retreat.

Briffon applied again to his master, who answered in such a way, as to persuade him of every thing thought proper.

The flocks, which were now famished, could no longer find pasture; and in the evening on their return, the ewes and goats brought back their udders almost empty. It was their milk, however, and that of the camels, that was to serve as the support of a numerous family. Of course the portion of the slaves was diminished, and they received their scanty allowances after the dogs were served, and in their very distress.

While Briffon one evening was coming back with his flock, one of his ewes brought forth a lamb upon the declivity of a hill. He took it in his arms, and carried it with equal haste and care to his master's favourite. He presented it to her, as soon as he perceived her, thinking she would receive it with the same pleasure she had always testified on similar occasions. He asked her at the same time if she would give him the first of the mother's milk, according to their custom of giving it to him who

has the care of the flock. By way of answer, she threw a knife at his legs, drove him out of her tent with contempt, and loaded him with abuse. Her husband, witness to this brutality, came and told him, that he would make him amends, by giving him a larger quantity of milk. He always believed his master; but how great was his astonishment, in passing behind the tent, to hear the villain laughing with his wife at the blow she had just given him.

The month of October had now nearly expired, and not a drop of water as yet fallen. Briffon's situation became more wretched every day: he had nothing but a sorry bit of packing cloth round his waist. The plains, vallies, every thing was parched up, and nothing remained for the nourishment of the cattle: the season was far advanced. For three years, the heavens had refused its rain to the inhabitants of the deserts. A universal desolation prevailed; when an Arab from a distant country came to tell them, that abundant rains had fallen in several cantons. Joy immediately succeeded to fear and grief; every one rolled up his tent, and all set off together for the newly-watered country. This was the thirtieth time that they changed their abode. Briffon was always employed to set up and spread the tents, and load the baggage: often he was obliged to carry heavy burthens, to relieve the camels; and he thought himself happy, if the flocks followed in good order, and did not give him the trouble of collecting them.

His companions were so exhausted, that they could do nothing; all the work consequently fell upon him, and he was obliged to divide with them the surplus of food that he procured by endeavouring to make himself useful; for as they were useless, the Arabs gave them little or nothing to eat.

At length they arrived at the place so much desired, from whence Briffon hoped soon to set off to enjoy his liberty; but his master, who till then had combined the most persuasive language with the blackest deceit, now ceased his dissimulation, and openly acted the tyrant.

They were encamped on sand so wet, that the mere pressure of their bodies made the water spring up in considerable quantities. The hour of milking the camels being come, Briffon was called to receive his portion, and that of his companions: the latter seemed to be larger than usual; but on tasting it, they perceived that the augmentation was nothing but rain water, of which the dose was every day to much increased, that they had soon nothing but water a little whitened with milk, which weakened them to an incredible degree, and reduced them to the hard necessity of seeking their food with the cattle. The wild plants that they trod under foot, and raw snails, were from that time almost their only aliment till the moment of their deliverance. They were now put to new fatigues: Briffon was charged to yoke the camels to the plough, to till the ground, and to sow the seed; and his master, not content with employing him in his own service, hired him out to other Arabs for a portion of milk. Sidy, being often upbraided by Briffon, and like wife by other Arabs more compassionate than he, and ever jealous of his possessing Briffon's jewels, which they considered as inestimable, now sent for Briffon, and asked if at Mogadore a good ransom would be given for each of them: Briffon told him he should be satisfied; upon this he was told a Jewish merchant was to call to-morrow to give him some paper, and he should be permitted to write to those from whom he expected assistance. The Hebrew merchant called, and Briffon wrote a letter, which he addressed to the consul at Soira, on if there should not be one there to the person who might represent him, begging him to commiserate their ills, and to afford them the speediest relief.

There was a Moorish girl, who constantly fed her flocks in company with Briffon's, who perceiving him a dupe to his master, soon convinced him of

his error, and the she assured him, brothers, who had him, he would not also added, that his was only to amuse serious intention of removed he might perhaps murdered.

THEY now quitted search of one th encamped in the neigh where Briffon met with who was a slave as well that six of his compan after their shipwreck, who was gone back to

his error, and the real character of Sidy Mahammed. She assured him, that had it not been for his two brothers, who had taken such a strong liking to him, he would not care how he used him. She also added, that his promise of giving him his liberty was only to amuse him, as he never entertained any serious intention of so doing, for fear if Briffon was removed he might be taken, seized, robbed, and perhaps murdered, by Moulem Adaram.

Moulem Adaram was son to the Emperor. Having heard a vague account of the effects which Briffon had brought with him, he imagined that he was a very rich Christian, and came in consequence more than 100 leagues to purchase him. He was fortunate enough however never to belong to this cruel prince, who had revolted against his father.

This conversation with the Moorish girl made Briffon despair of ever seeing his country again. He fell into the deepest despondency; and from that day experienced nothing but new subjects of vexation.

He now no longer met his companions in the fields. One evening, when the coolness of the weather had invited his camels to stray further than usual, he was obliged to follow them to a neighbouring hamlet. He now perceived the wretched captain, scarcely to be known but by the colour of his body, stretched out upon the sand. He had in his mouth one of his hands, which his extreme weakness had doubtless prevented him from gnawing. Hunger had so disfigured him, that his corpse was frightful to behold; all his features were absolutely obliterated.

Some short time after the second captain, unable any longer to support his excessive weakness, fell senseless under a gum-tree, where he lay exposed to the attacks of an enormous serpent. The famished ravens, hovering over their prey, frightened away the venomous animal with the noise of their cries, and darting on the body of the defenceless victim, immediately began their voracious repast. Four of these savages, still more cruel than these ferocious birds of prey, witnessed this horrid scene with indifference, and without making the least effort to afford assistance to the unhappy sufferer. Briffon returned to his tent impressed, and reproached his master for inhumanly refusing his unhappy associate the small quantity of milk necessary for subsistence, because his emaciated condition and ill state of health rendered him incapable of working any longer.

Briffon's health, which had hitherto miraculously sustained him under the severest pressures of difficulty and disease, now yielded to their painful inflictions, and every day announced fresh symptoms of its rapid decline. Already, like the poisonous reptiles of this inhospitable climate, he had twice cast his skin; but the pungency of his grief was increased by the third change, finding his body covered with a kind of scurf or scale, resembling the natural coating of the Arabs. His feet, miserably wounded by thorns, afforded but

a tottering support to his exhausted body; and the wanton cruelty of their savage diversion, in frequently setting dogs to pursue him, from whose jaws he could never extricate himself before he had felt the severity of their fangs, all contributed to his incapacity of longer tending the camels. But, to complete his misfortune, towards the end of February and beginning of March, the excessive heats had dried up the water they found in the canton, and not a drop of rain had fallen to nourish the ground which he had tilled and sown. As pasture for their cattle could no longer be found, they were on the point of perishing, when the two tribes of the Labdesieba and Ouadelims, after having held separate deliberations, resolved to go in search of more promising lands.

The tribe of the Ouadelims carried their ravages as far as Goudnum, 300 leagues distant from the place of our encampment. Several herds of the Labdesieba, of a less roving disposition, staid behind; and as their numbers were inconsiderable, they found subsistence for their flocks in the neighbouring cantons. They killed and eat several sheep, and continued living in this manner till the end of the following month, the period destined for their departure from the deserts, where the most frightful misery menaced the distressed inhabitants.

Happily for Briffon, an Arab, who had a Christian slave in his suite, who belonged to their vessel, offered to sell him to Briffon's master at a very low price; and the latter, who concerned himself very little as to the means of their support, readily offered a camel for this new slave. The bargain being concluded, he was charged with the work of Briffon's usual employment. The interval of leisure derived from this relief, contributed in some measure to restore Briffon to his usual strength.

When they had eaten up all the snails which were found in their circuit, they came to the resolution of smothering several young kids in the night-time, knowing that their masters would reject their carcasses, as their law does not permit them to eat the flesh of any animal that has not expired under the knife. They were at length discovered in the commission of the fact: however, they escaped punishment, though not without great abuse, and the intimidating menaces of death, should they be again found guilty of similar offences. It was therefore necessary for them to concert new means for their support. Briffon soon recovered strength enough to make faggots, which he had not the least difficulty in disposing of, it being the custom of this country not to extinguish the fire during the night, and the women, to whom the care of the family is consigned, being too idle to cut wood for themselves. By this little traffic, he was not only enabled to alleviate his own misery, but likewise that of M. Devoise, whose sufferings at length terminated with his death.

CHAPTER III.

Briffon meets a Sailor—His lamentable Account—Briffon's Despondency—Misses the Keeper of the Camels—Enquires about him—Not satisfied—Is informed the next Day of his Fate—Briffon's Behaviour on the Occasion—His Master reproached—Benevolence of Sidy Sellem—His Prediction verified—Briffon's Resolution—Good Effects thereof—The Arabs driven to great Distress—Their Manner of getting Water—Briffon becomes desperate—Fights with the Arabs—His Success—Forms a Project to escape—Robs his Master—Sidy Mahammed's Uneasiness—His Promises—Briffon restores the Treasure, on certain Conditions—Briffon agreeably surpris'd with News of his Delivery—His Hopes almost extinguish'd.

THEY now quitted their present situation, in search of one that was more fertile. They encamped in the neighbourhood of different tribes, where Briffon met with Denoux, one of their failors, who was a slave as well as himself. He told Briffon that six of his companions were carried away soon after their shipwreck, by the son of the Emperor, who was gone back to France; that M. Taffaro,

their head surgeon, died in consequence of some blows he received on the head; also their second lieutenant, Sieur Reboin, and that the rest, in order to preserve themselves from perishing through want, had changed their religion.

This sailor's account added much to Briffon's despondency. While lost in thought and contemplation, he perceived behind a bush his master's

U u camels

camels returning without their keeper. Briffon enquired what was become of him; but receiving no satisfactory answer, he was resolved the next morning to inform himself.

On the following day Briffon learned from a young herdsmen that Sidy Mahammed having for some time past suspected the baker to be guilty of sucking milk from the camels, had watched, and detecting him in the fact, immediately seized him by the throat and strangled him. It seems, if a Christian only touch the paps of their cattle, they are deemed impure, and the proprietor, or any other Arab, is at liberty to punish the offender with death.

Briffon scarce believing the existence of such cruelty, even among these monsters, ran to the tent, and asked for an explanation of what the youth had just imparted to him. A general silence confirmed the truth, and filled him with rage and indignation. The brother-in-law of his master, (the only person who on this occasion expressed even a sentiment of compassion) reproached Sidy Mahammed for not having sold these slaves to him, when he proposed to purchase them from him, instead of treating them so cruelly, especially Briffon, as the riches he obtained from Sim should have induced him to treat him with more gentleness and respect.

This latter reproach awakened the jealousy of all present, who unanimously undertook Briffon's defence. Sidy Sellem was the sole person who spoke through benevolence, the rest not chusing to deliver their sentiments after him, in compliment to his age and his riches. This was the same Sidy Sellem, of the tribe of La Rouffy, who had behaved so kindly to them after their shipwreck, and predicted that Briffon should one day repent the rejection of a proposal he had made to purchase him.

Briffon was now the only slave in the hamlet, nor had he any person to whom he could disclose his griefs; his situation daily became more deplorable, notwithstanding he resolved to bear it with fortitude. This resolution and the behaviour he adopted towards those who would have humiliated him, gained him a sort of consideration among the savages, so that they permitted him at times to remain in the back part of their tents, and often to drink out of their vessels. His master no longer employed him to keep his camels: it is true he ceased to speak of liberty; but if he had, his perfidy was so well known to Briffon, that he could not have believed him.

Briffon still found it necessary to continue making up faggots, in order to procure himself a subsistence, but thirst frequently threw him into the most inconceivable agonies. The Arabs themselves were driven to the greatest distress, several dying from hunger and thirst; nor did the present season promise any succour, being the fourth in which the drought had destroyed the harvest. This calamity so embittered the minds of the different tribes, that they were at perpetual variance, stealing each other's cattle, in order to dry the flesh; milk was very scarce, and water more so, as it is rarely to be found in the desert, except in the vicinity of the sea, where it is black, salt, corrupt and noisome; which disagreeable drink, and the want of pasturage, cause the Arab ever to keep at a distance from the coast. Though in want of every kind of provision, yet no one dared to seek it at a distance. In this calamitous situation, Briffon was a melancholy witness of the straits to which necessity can reduce the human race: the camels that were killed supplied water to those Arabs who had not the means of procuring milk, they preserving with the utmost care the liquid they found in the stomach of the slaughtered animal, pressing it from the dung. The water they thus preserved was of a greenish colour, and in which they frequently dressed their meat; that drawn from the stomach of the goats had the taste of fennel and a sweet smell, nor did the broth made therewith taste disagreeable; but that procured from the camel was much less pleasing to the appetite. What ap-

peared really astonishing was, that those beasts, particularly the camel, who drank but two or three times in the year, and lived on very dry food, contained a prodigious quantity of water in their stomachs.

Briffon now becoming desperate, asked leave of his master to repair to the spot where his flocks were feeding, that joining with the inhabitants he might assist in detaching them from pillage. His offer was accepted; his master gave him the camel on which he rode and a pistol, being the only one he possessed, praying Heaven for the safety of his beast and the success of his party. Briffon departed, accompanied by a relation of his master's, and arrived with his conductor into the midst of the warriors, who appeared to him in the greatest disorder. Briffon knew not whether they were flying, or were encountered hand to hand, as he could distinguish nothing but a confused heap of men enveloped in a cloud of dust, nor could he conceive how they recognized friends from foes. The camel, which doubtless was not accustomed to such expeditions, marched slowly towards the enemies fire. Briffon soon lost his conductor—he saw him almost instantly drop, from a shot which pierced his brain. The camel being scared, plunged with the greatest violence, and at length threw Briffon at a distance from him, on an hillock of sand; an Arab immediately attacked him, fired, but missed him, when suddenly receiving a wound himself, he fell at his feet. A second instantly took his place, advancing towards Briffon with his poignard, ready to pierce his heart, when by a miracle, as he raised his arm to strike the blow, his weapon entangled in his turban, which floated loose on his shoulders: Briffon profited by this accident, striking him with the butt end of his pistol, so that he fell senseless before him. This was the only use he could make of his weapon, having no ammunition but what it contained, and already twice missing fire. These accidents are very common, as the arms and powder are equally bad; a circumstance which causes the Arabs battle. He soon decided, the greatest injury they do being the tearing each other's faces with their nails, and some wounds given with their poignards. The camels, accustomed to these combats, mingle in the confusion, loving, biting, and dispersing the enemies with greater effect than even the men can with their arms.

As soon as the battle was over, several of the Arabs came to Briffon, and commended his valor, having thought that Briffon had killed three men, when in reality he had only wounded one; however he left them in their error, and unloaded his pistol to favour the deceit.

Briffon having thus far succeeded, now formed the project to escape, first taking from his master all the jewels he had before given him. With these he purposed to go over to another tribe, as he thought any Arab whom he might chance to meet would be glad to accompany him to Morocco for the reward he could then offer. This project appeared to him excellently devised, though he neither knew the road nor the dangers he might have to encounter; he therefore hastened to put it in execution, concealing the whole of the property in a hole till the next day, when he intended to endeavour to procure himself some covering to defend him from the cold.

It was not long before Sidy Mahammed discovered the loss of his treasure; he ran immediately to the thicket where Briffon was, employing prayers, threats, and caresses, to obtain restitution of his wealth, and yet more particularly to entreat him not to divulge his possessing it to any person. His entreaties, however, would have been of little effect, had Briffon not reflected, that during the night, if he attempted to escape, it was very possible that he might fall into the hands of some wretch too poor to undertake so long a journey, and who willing to possess his property might dispose of him with his dagger. These ideas determined him to relinquish it; and he pretended to be affected by his entreaties,

AMAN of the ISLAND of TANNA.

AWOMAN of the ISLAND of TANNA.

though he resolved to give him over to the natives, he formed him, that he would a second time now returned. Sidy promising to give him a portion of his goods, or rather of his labour, or part of his time, he had achieved, he was deprived of his cover it again.

Sidy Mouhammed having one day at Tanna, was, and was soon after, had possessed at Sidy's instigation he filled at the being answered, he had a great affection for the situation. This man gave orders for the King's magazine, The brother-in-law, this information, giving five camels was made unknown to him, was struck with turning with his mistress commanding her tent a leather. Sidy Sellem told him he must be ready for Monday morning.

He entered with frequently disappointed himself he spoke to present, assured his old man protesting himself at his feet, laughing, unmindful of the joy he felt at the instant. Sidy Mahammed no longer apprehended he kept his promise, and his native country. all his former resentment expectation when they informed him, whom he had taken from them. great surprise, was told him, by what he had heard. The baker instantly upon his throat, and giving him a dose of bell senseless at his on his recovery, to be bathed in blood: he could into the aperture heard echo several times his master, who now called him loud had become of him necessarily imagine he determined not to arrive die of hunger, or go to discover he was ten days, having died but snails, nor any sight of a small fish in the water near land, redoubtfully towards the shore engage the captain but he had hardly advanced rocks which surrounded the island, he was suddenly seized by two young men to some distance from

though he resolved to keep the ascendance his fears gave him over him; accordingly he therefore informed him, that if he did not keep his word, he would a second time deprive him of all which he now returned. Sidy Mahammed renewed his oaths, promising to give him in future, evening and morning, a portion of milk. He kept his word, but was careful of quitting Briffon, fearful that his neighbours, or particularly his relations, with whom Briffon frequently was, should be informed of what he had achieved, and that he should a second time be deprived of his treasure, and never be able to recover it again.

Sidy Mouhammet, sheriff of the tribe of Tragea, having one day after this seen Briffon, asked who he was, and was soon informed, as well also of what he had possessed at Senegal, in powder, guns, &c. The sheriff instantly called, and asked Briffon what situation he filled at the Isle of St. Louis? which question being answered, he observed him nearly, and expressed great astonishment at finding him in such a situation. This man, having seen Briffon at Senegal, give orders for the delivery of goods out of the King's magazine, imagined they belonged to him. The brother-in-law of his master, encouraged by this information, immediately purchased Briffon, giving five camels for his bargain. This agreement was unknown to Briffon, who, when he heard it, was struck with astonishment and joy. On returning with his master from watering the camels, his mistress commanded him to carry into a neighbouring tent a leathern bucket which had been lent her. Sidy Sellem was present; he called to Briffon, and told him he must prepare to depart with him on morrow for Mogadore. Briffon had been so entered with this hope, and his expectation so frequently disappointed, that he could not persuade himself he spoke truth. Several Arabs, who were present, assured him it was really intended, and the old man protesting it still more firmly, Briffon threw himself at his feet, weeping, sobbing, and alternately laughing, unmindful of every consideration but the joy he felt at the information he had received.

Sidy Mahammed now informed Briffon that he no longer appertained to him, observing that he had kept his promise, and that Briffon should again see his native country. At this moment Briffon forgot all his former resentment, in the rapture of the present expectation; a pleasure which was doubled, when they informed him he should have a travelling companion, whom they added was but a short distance from them. This companion, to Briffon's great surprise, was the unfortunate baker. He asked him, by what means he was risen from the dead? The baker told him, that one day Sidy Mahammed found him walking the she camel; he ran instantly upon him, giving him so hard by the throat, and giving him such severe blows, that he fell senseless at his feet. He was much astonished, on his recovery, to find himself alone, with his throat bathed in blood: he dragged himself as well as he could into the aperture of a rock, from whence he heard echo several times repeat the voice of his barbarous master, who had returned to seek him, and now called him loudly; doubtless curiosity of what had become of him was a strong motive, as he must necessarily imagine he left him expiring. The baker determined not to answer, being resolved either to die of hunger, or gain the sea-coast, hoping there to discover some vessel. In effect he reached it in ten days, having during that time no nourishment but swallows, nor any drink but his own urine. The sight of a small fishing vessel, which lay at an anchor near land, redoubled his strength, and he ran hastily towards the shore, hoping by his signals to engage the captain to send his boat to his relief; but he had hardly advanced a few steps between the rocks which surround the coast, when he was suddenly seized by two young Arabs, who dragged him to some distance from the shore. The distress he

felt at finding himself in their power, the grief he sustained from failing in his enterprise, added to the extreme hunger he experienced, had doubtless overcome him, had they not immediately afforded him some succour. From that day they became his masters, and employed him to keep their goats, they having no other flocks, nor any other means of existence, except fishing; yet are much more gentle and laborious than the Arabs who live in the interior parts. About fifteen days ago, they informed him they were going to conduct him to the Sultan, and as they had brought him hither, he supposed this was the rendezvous agreed on with Briffon's master, when they informed him they had taken him.

Briffon having heard the information of the baker, informed him that they were really going to depart for Morocco, and that they had a long journey to undertake. The next day the inhabitants of the tribe of Tragea assembled round Sidy Sellem, making a long prayer; after which they brought a large pot of broth, composed of the farinuous part of some wild grain; they joined to this provision a large quantity of milk, and numberless wishes for a prosperous journey.

Sidy Mahammed bid Briffon a most affectionate adieu. He sincerely wished he might arrive in safety, and that his next voyage might be happier than the last. He requested he would not forget to send his wife some scarlet cloth; which he was to give to Sidy Sellem. Briffon promised to send what he asked for. Sidy Mahammed now assisted him to get on a large camel, which the baker and Briffon were allowed to travel on, but which they were necessitated to quit some few days after; nor were they alone in this misfortune, for from want of pasture these animals were unable to proceed with any luggage. In this country they are not equal to much fatigue; besides, the want of saddles would have prevented their making use of those beasts for any length of time. They were therefore obliged to walk during the remainder of their journey.

One day, having reached a valley, which the rain lately fallen had covered with verdure, Sidy Sellem was determined to stop, that his almost famished beasts might graze; himself ascending a high mountain which bounded the valley, and from whence he could see the beasts feed that he was taking to the city for sale. Briffon followed, and at length passed him, firmly believing it was the road they were to pursue. What confirmed him in this opinion was, that the old man let him continue his walk without opposition, and that he also discovered a beaten path before him. When he arrived at the summit, he went a little aside from the path to clean his long beard, which, notwithstanding his utmost care, was full of vermin. He had passed near an hour in the thicket, when finding none of their travellers approach, he returned to the top of the mountain: but how great was his surprise, when he discovered no one, nor knew what road they had taken, or what path to pursue; for as a number of hordes had encamped on this spot, for the purpose of feeding their cattle, an infinity of paths led to it. Thus situated he could devise no means but calling loudly on Sidy Sellem: at length he discovered at a distance four or five Arabs, who advanced towards him. Briffon hastened to meet them, firmly believing them to be his own people, but soon recognized his error, for one of the most powerful of these barbarians, accompanied by a great dog, seized him, the Arab instantly knocking him down by a blow which he struck him on the head with the flat of his sabre, and the others immediately joining him, dragged him into a desile of the rock, which led to their asylum.

Thus his hopes of liberty were again extinguished by the prospect of a more cruel slavery than he had yet experienced! He was lost in these melancholy reflections, when the barbarians gained a slope which led to a cavity, where doubtless they intended concealing

cealing him; but coming to a sudden opening, Briffon discovered in a valley below the mountain their flock and little caravan, which contained about twenty persons; despair gave him strength, and making a sudden effort, he escaped from these wretches, running precipitately towards his old man, Sidy Sellem, for refuge, while the vagabonds, alarmed at their superior number, ran away.

Briffon was severely reprimanded by his master, who desired that in future he would be careful not to quit them: Briffon, in return, complained that he had not informed him that the path which he saw him take was not that himself intended to pursue; and that also he had continued his journey without calling or causing him to be sought after. He replied, that he intended to have taken the same path, but had been obliged to descend into the valley to collect the camels, who having been so long deprived of herbage had strayed from each other in grazing.

During the space of the six following hours they redoubled their speed, taking also a contrary road, that they might deceive their enemies should they pursue them; neither had they any food until the evening of the second day, being 48 hours without any nourishment but some handfuls of wild endive, which Briffon gathered in the valley.

At day-break they continued their journey, crossing some mountains, which led them to a plain covered with calcined stones, greatly resembling the coal that had been burnt in their forges; these stones in some places were overspread with a whitish earth, on which lay the trunks of large trees, apparently torn up by the roots, and entirely stripped of their bark, the branches being brittle as glass, and twisted like cordage. The wood was of a yellow colour, resembling the liquorice, and the interior part of the trunks full of a coarse powder. The wood, stones and dust, which latter was enclosed in the trunks of the trees, possessed neither taste nor smell.

CHAPTER IV.

They proceed on their Journey—Pass several high Mountains—Meet two Springs of Water—Briffon seized—Rescued by his Master's means—They approach the City of Goudanum—Description thereof—Their Habitations, Traffic, &c.—Briffon's Departure—His Strength exhausted, &c.—His Inexpressible Joy—Occasional Inquietude—Meets two Europeans—Kindness of Dupras and Cabanes—Arrival at Morocco—Account of the King of Morocco's Troops—The rough Manner in which he is introduced to the King—The King's strange Behaviour—Briffon and the Baker sent to the Royal Kitchen—Briffon returns to his new Dwelling—Description of the Palace, Town, Inhabitants, &c.—Briffon released from Slavery—Curjory Remarks.

AS they proceeded, they reached mountains, which were so prodigiously high, that they appeared piled on each other, and which formed several tremendous precipices, on account of their divisions. There were likewise some surrounding vallies, environed by rocks, which were dreadful to behold. They met with two springs, one of which was black, muddy, and of a sulphureous smell; the other was exceedingly clear, being separated from the first by a sand-bank about 15 feet broad. Both waters were exceedingly pleasant to the taste. After two days journey, they were on the sea-shore; and a few days after they advanced towards Morocco, having crossed some high mountains, covered with pebbles of different colours.

They were three days and four nights passing these forests, during which time they met no alarm from the wild beasts who resort in the deserts of Africa. The farther they advanced the more their miseries decreased, as they frequently met with fields of barley fit to be cut, among which Briffon could sit and eat with a pleasure difficult to express. Water was no longer scarce, and they often met with hamlets where they were well received; even in some of those which might have been dangerous to other travellers, Sidy Sellem was respected, because he had been to Mecca. Notwithstanding, the Arabs of the tribe of Telkoennes are held in the greatest consideration for hospitality.

After having received him with the customary honours due to a stranger, at their usual hour they brought him barley, flour, and milk. What he left appertained to Briffon; and which, retiring to a distance, he shared with his new companion, the baker; for, in travelling, a Christian (more particularly than at another time) must neither eat, drink, nor sleep near his master. One evening, after supper, Briffon dug a hollow in the sand, to lay him down in shelter from the cold, wrapping the cloth he wore about his body on his head, to defend his eyes from the sand. He had hardly attempted to fall asleep, when he heard the report of two guns very near him, and found himself instantly seized. He tore the covering off his head; it was on fire, doubtless from the wadding of the gun. One of those who held him asked if he was wounded, and upon his answering in the negative ordered him to

follow them. Sidy Sellem, who had awoke at the report of the guns, ran to the place where he heard Briffon's voice, complaining of his behaviour to his slave, and their want of hospitality to a person like himself. The Arab mountaineer replied with great arrogance, he was ignorant that he belonged to him; that as he watched his flocks, seeing a man concealed in the sand, he took him for one of those nightly thieves who steal their young goats. Sidy Sellem feigned to believe him, praised his zeal, and rescued Briffon from his hands. As soon as he thought all still in the hamlet, he hastened to depart from a spot which might prove dangerous to himself as to his slave.

These Arabs of the tribe of Telkoennes are the worst situated of any in the deserts, living in the midst of mountains of sand which have been formed by the wind. They may be truly said to wish to deprive themselves even of the light of day, so difficult is it to penetrate into their retreats, or to explore the way from them. The neighbouring plains are infested with enormous serpents.

They now approached the famous city of Goudanum, which was discovered through the points of rock built on an elevation, and whose environs announced a formidable fortification; but, on a nearer view, the walls were found made of earth, and broken in several places; some inhabitants shewed themselves at the little windows on the house-tops, and were doubtless meditating whether they could do them any injury. The chief of the town, informed that Sidy Sellem was at the head of their little caravan, came to meet them, followed by four negro slaves, who carried an umbrella made of palm leaves, which he presented to him.

This city is the refuge of all the rebellious Arabs of the different tribes, and is divided into two parts, the lower being governed by Sidy Adella, and the higher, which is not unlike fort Eabat, by another commander. The houses are all constructed alike, being four large walls surrounding a prodigious space of ground, those of the same party living together; these walls are very high, have but one entrance, nor any light but what comes from the roof, which is left uncovered. The door, which serves for the whole circumference, is guarded by large dogs; every inhabitant also of the dwelling keeps one for

his own security; for without that caution, though enclosed in their own habitation, they would be pillaged by all their inmates, who might be bolder or more dextrous than themselves.

They have two markets; and though they circulate specie, the exchange of merchandize is their principal object. They have very good woollen cloths, and particularly some of a mixture of crimson and white, which they use as cloathing. The dealers, who purchase to sell again in the interior parts, give camels in exchange, their ordinary profit being about four hundred for one, and yet their gains on this article is much less than on wheat, dates, horses, sheep, oxen, asses, gunpowder, tobacco, combs, looking-glasses, and many other small articles, which are difficult to procure in the interior parts, the consumption being in the little towns, where there are days fixed for the sale of them.

What is most surprizing is, that scarce any but Jews trade; they are, notwithstanding, exposed to the most outrageous affronts. An Arab will snatch the bread from the hand of a Jew, enter his hut, and insist on his giving him a handful of tobacco, frequently accompanying the demand with a blow, and always with insolence, which the poor Jew suffers with patience: it is true he recompenses himself, by his skill in disposing of his merchandize, and the art with which he deceives the Arabs, who are in general very ignorant.

The two chiefs who command at Gouadnum have no superiority, except they exceed each other in point of property.

Briffon left Gouadnum, after a stay of eight days; and on his way to Regaden was perpetually meeting with hamlets and caillies, for the most part built on very high mountains, and which at a distance might have been taken for very elegant dwellings, but on a nearer view bore a very different appearance. They were no longer so well fed, and the nearer they approached the city they met the less hospitality.

They had now been 66 days on their journey; Briffon's strength was exhausted; his feet swelled almost to suppuration, and he must infallibly have sunk under his calamities, had not his master been perpetually re-animating his courage with comfortable assurances. With joy inexpressible he now beheld the French flag unshrouded, as well as those of other nations appertaining to the vessels lying at anchor in the bay of Mogadore, which he yet only knew by the name of Soira.

At length they arrived at the city; but still Briffon was not free from inquietude, as he had heard before he quitted France that the Emperor had very ill treated M. de Chenier on his embassy, and that he had been necessitated to complain to his own court. He knew not whether he had been redressed, and if a fresh consul supplied his place; at all events he had cause for fear. His suspicions soon vanished on entering the city, and meeting two Europeans, who, after considering him attentively, went and informed Mess. Dupras and Cabanes of his situation. These gentlemen, who made it their study to relieve those whom misfortune had thrown into this country, came immediately to seek him, and, without seeming shocked at his revolting appearance, embraced him, shedding tears of joy to have it in their power to assist an unfortunate sufferer. They took him with them immediately, engaging his master to follow them, desiring him to be perfectly easy on account of any agreement Briffon might have contracted with him. Briffon likewise entreated them to permit him to conduct Sidy Sellem and his son with them; they consented, desiring him to use their dwelling as his own, treating him with the greatest care, attention, and friendship, and cloathing him entirely in their own habiliments, until they had some made for him.

Briffon was soon after visited by all the Europeans

No. 15.

at Mogadore, congratulating him on the change in his situation, and also on his arrival in the city on the most fortunate time it could have happened, being the entrance of the new consul, who brought considerable presents from France for the Emperor. Briffon was presented the same day to the governor, who informed them of the order to repair to Morocco, the Emperor having declared that henceforward he would see all the slaves, and that they should receive from himself the tidings of liberty.

Briffon, Sidy Sellem, and the baker, in eight days departed. They were furnished with mules, a tent, provisions, and proper attendants, and after four days journey arrived at Morocco.

The guard who had the care of Briffon presented him to the consul and vice-consul; they offered him a table and habitation, until he could return to France. A second guard came to inform him, that the Emperor knew of his arrival, and had commanded him to be brought instantly before him. Briffon immediately obeyed, following the guard, who took him through several spacious courts, with high walls and sand floors, almost insufferable from the sun lying on them the whole day.

They arrived at last into one where the King's guard were assembled: those employed about his person are armed with guns; their cloathing consists of different coloured tunics, and cloaks with hoods not unlike a friar's. On their heads they wear a small red cap, ornamented on the top with a blue tassel. Their feet are almost naked, going but half into their slippers, which obliges them to trail as they walk. They sling their guns across them, and wear a girdle, to which they attach their pouches. Those who appeared out of service had no weapon but a white stick.

The horsemen are dressed the same, except that they wear half-boots without feet, and spurs of the enormous length of nine or ten inches, which have much the appearance of large iron spikes. Their horses have almost always their flanks cut to the quick, as they take particular pleasure in spurring them.

While Briffon waited for an audience, he saw a captain review his company, who was seated on the ground with his elbows on his knees, which were bent upwards, and his chin supported with his hands. The soldiers advanced two by two, and received his orders, prostrating themselves before him; after which they retired.

Five or six of those who were only armed with white sticks seized Briffon by the collar, as though he had been a thief, and opening a large folding-door, resembling those of barns, they pushed him rudely forward into an inner court, where he in vain sought for something that might announce the grandeur of Majesty. After advancing fifteen or twenty paces towards a kind of wheel-barrow, they commanded him (pushing him roughly at the same time) to prostrate himself before this wheel-barrow, which contained the Emperor, who, supporting one foot on his knee, was amusing himself in playing with his toes. He looked at him during some minutes; then asked him, whether he was not one of those Christian slaves whose vessel had been wrecked on his coast about a year before, and what business called him to Senegal. He then remarked that he was wrecked through his misconduct; asked why he did not keep sea-room, enquired if he was rich and married, giving him scarce time to answer his questions. He then called for ink and paper, and taking a small reed, which he used as a pen, he traced the four winds, shewing Briffon that Paris was in the north.

Briffon's master was immediately introduced with the same ceremonies as he had been himself. The Emperor asked him, if he had paid a large purchase

X x for

for Briffon, and what were his intentions in coming to Morocco. He immediately replied, that his first incentive in travelling through immense countries was to prostrate at the feet of his sovereign the most humble of his slaves. After some short conversation, the Emperor ordered the guards to take charge of Briffon and the baker until further orders, and to give them food from the royal kitchen. The guard expressed great surprize to Briffon, that his Majesty had deigned to converse so long with a slave.

The next day the consul asked the guard to permit Briffon to be with him, saying, that should the Emperor ask for him, they could fetch him immediately. Briffon now went to his new dwelling, which was a kind of cave that had before been inhabited by the Spanish ambassador, the Emperor, willing to use equal attention to the French consul, having ordered him the same lodging. This palace, which is one of the finest the King has at his disposal, is nothing more than a long cave built in the earth, the roof being supported by two rows of pillars, and the entrance to it a gradual slope; nor is there any air but what enters through the little openings in the roof. The Emperor keeps his tents and warlike stores in it, nor is there any thing else to be seen there, except bats, rats, and spiders. This dwelling is in one of the King's most delightful gardens, being decorated with olive, quince, pomegranate, and apple-trees; yet the high walls which surround it might easily furnish the idea to those that walk in it that they were state prisoners. Though the Emperor provides the Ambassadors with a dwelling, he supplies them with no furniture whatever, but gives orders for them to be daily served with a certain quantity of mutton, beef, poultry, water, bread, &c.

The King's palace consists of six vast courts, surrounded with walls. The exterior of the seraglio resembles a barn, and the mosque is built in the same taste. The town is separated from the palace by heaps of mud, offal, and bones of slaughtered beasts, piled on each other, and which may be said to form the circumference of the city. These pyramids of filth reach even into the interior parts of the town, in many places being so much higher than the houses, that they exclude the light of day: the sun shining on these mountains of nastiness, increases the putrefaction, and renders the sight doubly loathsome. The houses are so ill constructed, that they bear more resemblance to pig-sties than human dwellings; neither are the streets airy, being very narrow, and in many places covered with straw.

One day that the ambassador from New-England, the consul, and Briffon, were on horseback, wishing to take an airing, they were obliged to relinquish their intention, and return home as speedily as possible; the people surrounded them, and prevented their advancing, although they were protected by the Emperor's guard, and without which they had doubtless fallen a sacrifice to their brutality; nor did even their presence restrain them sufficiently, for Briffon received a violent blow on the head with a stone.

The dispositions of the people in the city are but little different from those in the desert; they are rather more polished, and much fairer; accustomed to meet with Europeans, they express less astonishment at their manners, though they treat them with the utmost insolence.

The withed-for time now came when Briffon's slavery was to cease. One day the King on quitting the mosque ordered the consul to attend, with the Christian slaves, in the place of public audience. Briffon, the baker, and five others who belonged to a vessel called the Two Friends, which was wrecked previous to theirs, received their liberty, and had permission to embark from which of the King's ports was most convenient; while proper officers were ordered to accompany them to the residence appointed the consul.

The Emperor was mounted on a beautiful horse, caparisoned in scarlet and blue cloth, with his crupper ornamented with nob's of gold: by the side of the Sovereign walked an equeiry, who carried an umbrella to defend his Majesty from the sun. The guard follow on foot in the greatest silence, all announcing fear, a glance from the King spreading universal consternation; for giving command, he sees fall without the least emotion the head of one or more of his subjects; nor is the last word of the condemnation hardly articulated before the unhappy victim is lifeless on the ground. Yet the rich, if they chuse to buy his favour, may live in safety, and commit every crime with impunity.

Before Briffon's departure Sidy Selem retired, having been very well satisfied with the consul's generosity.

It is now necessary to add some cursory observations, in order to furnish the reader with a just idea of the manners and customs of the people already spoken of.

The Moors occupy the three kingdoms of Surr, Fez, and Morocco. That part of Boudigera that is washed by the Atlantic Ocean is inhabited by the native Arabs, and by the fugitive Moors from the empire of Morocco, too enlightened to remain under the dominion of a master who rules over his people with absolute sway, and who makes his safety and happiness consist in the misery of his subjects. This mixture forms one and the same nation, known indiscriminately by the appellation of Mouslemeines.

Zaara, as far as the Niger, contains a variety of wandering nations, all proceeding from Arabs, Moors, and fugitive Portuguese, who took refuge there when the family of the Sherifs made themselves masters of the three kingdoms of Barbary. All these people bear indiscriminately the names of Nars, Moors, or Arabs. They are subdivided into various nations, of which the most considerable are the Mongearts, Trafars, and Bracnars.

The first of these three denominations is a term of contempt among the people who surround them; no doubt because those who bear it, less versed than their neighbours in the use of arms, are in general occupied by the care and the feeding of their cattle; while the Mouslemeines, on the contrary, though shepherds also, are warriors to a man.

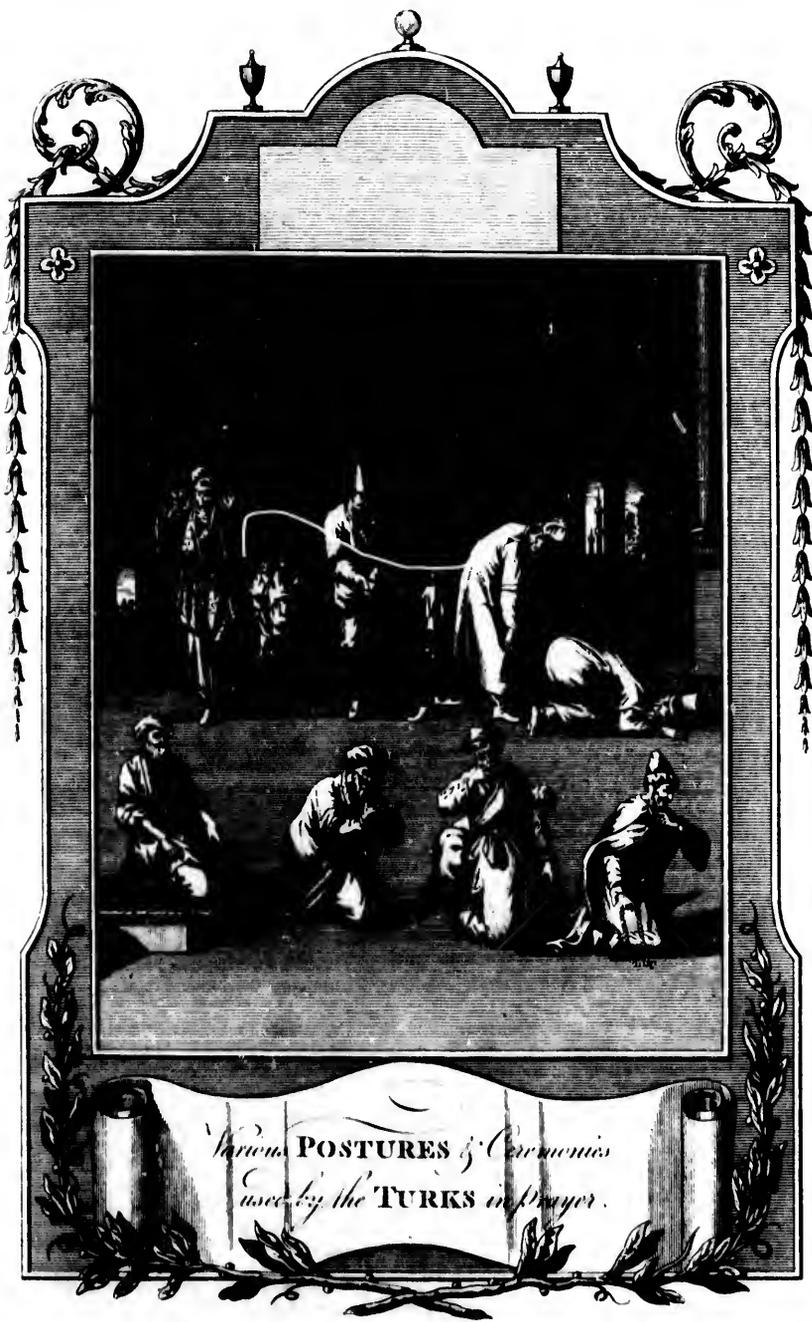

The Trafars and the Bracnars are no more than other nations scattered about on the northern banks of the Niger.

Religion, according to these people, is mahometanism in all its purity. They offer up prayers three times a day, sometimes oftener; but they are never pronounced in public, unless when a mahometan priest is with the horde, who seldom comes but on account of the children's education. Then all the Arabs assemble at the hour of prayer, place themselves in a line, turn to the east, and, wanting water in the desert, rub their face and arms with sand, while the priest recites aloud the general prayer, which is the same as that rehearsed by the public crier on the mosques in the civilized countries.

The priests are employed in travelling about the country to instruct the children. There is nothing like force in their education. The Arabs of the desert are even ignorant of the custom of constraining wills. The little boys meet in the morning of their own accord, at the place of instruction, which is to them a place of recreation. They go there with a small board inscribed with the Arabic characters, and a few maxims of the Koran. The biggest, and the best informed, receive their lessons directly from the priests, and afterwards communicate them to their fellows. The children themselves teach one another to read; nor are they ever corrected. It would be a crime to beat a child, who, according to the received ideas, has not sufficient reason to distinguish good from evil.

Various POSTURES of Ceremonies
used by the TURKS in Prayer.

Those who are made priests before the least public consideration of the nation, are every

It is generally children under fifteen. Their number is left but four, lost in a meeting of action performed.

If, at the age of a year, or other time, his flock, he loses a page of a river, stream, and he attacks, another is a warrior of a attack, he is completely shaved.

Seldom does a without having, are ashamed of before themselves.

Infinite respect be their family.

as the priests, and the Arabs who visit the tomb of are distinguished by signifies matter, we bear the distinction.

War is not the afflicts this nation split in their batt made by their thieves; for theft the laws. All that impunity, is to avoid not to be caught is severely punished.

own horde; but respected at the very

When an Arab return from thence care to keep his jacketed. Neighbouring by his inclusion in the country appear hope of booty (upon they may have not when the night is to pillage.

Their intention is to endeavour to surprise, matters of every thing. But it sometimes happens to plunder, being his country, keeps guard, fires upon him he observes, and the dagger. The report brings out the neighbourhood of the laws of help weaker side. They rally kill the aggressors by a speedy flight.

In these cases it is not rods there; the dead, nor do the family even content themselves with they were killed, turn and heaping up all the tomb.

The chiefs of lord families. The difference; the chief often

Those who persevere in the study of the Koran are made priests, after having past an examination before the learned elders, and enjoy the greatest public consideration. They have no need of cattle, those of the nation being their's, they find their subsistence every where.

It is generally at seven or eight years of age that children undergo the painful operation of circumcision. Their head is also shaved, nothing being left but four locks of hair, one of which is cut off in a meeting of the family, at each remarkable action performed by the child.

If, at the age of twelve or thirteen, he kill a wild boar, or other beast of prey, that should fall upon his flock, he loses one of his locks. If, in the passage of a river, a camel be carried away by the stream, and he save it by swimming to its assistance, another is cut off. If he kill a lion, a tiger, or a warrior of an hostile nation, in a surprize or an attack, he is considered as a man, and his head is entirely shaved.

Seldom does an Arab reach the age of twenty, without having deserved this honour, for as they are ashamed of being treated like children, they expose themselves to the greatest dangers to obtain it.

Infinite respect is paid to all old men, whatever be their family. They enjoy the same prerogatives as the priests, and equal consideration with them and the Arabs who have had the good fortune to visit the tomb of Mahomet at Mecca. The latter are distinguished by the appellation of *Sidi*, which signifies master, while the rest of the nation only bear the distinctive names they received at their birth.

War is not the most formidable scourge that afflicts this nation; for there is always little blood spilt in their battles. Much greater ravages are made by their private quarrels. They are all thieves; for theft is in a manner authorized by the laws. All that is necessary to practise it with impunity, is to avoid prosecution, by taking care not to be caught in the fact. It is true that theft is severely punished, if an Arab rob another of his own horde; but to be punished, he must be detected at the very moment.

When an Arab is going to market, or on his return from thence, if he do not take the greatest care to keep his journey a secret, he is often attacked. Neighbouring Arabs are desirous of profiting by his indolence, and as there are no persons in the country appointed to apprehend robbers, the hope of booty spurs them on to the attack. That they may have nothing to fear, they lay in wait, when the night is coming on, for him they mean to pillage.

Their intention is never to kill; they only endeavour to surprize, disarm, and make themselves masters of every thing that comes in their way. But it sometimes happens that the man they intend to plunder, being acquainted with the customs of his country, keeps an attentive ear, stands on his guard, fires upon his assailants at the first motion he observes, and then fights desperately with his dagger. The report of the musquet frequently brings out the neighbouring Arabs, who, in virtue of the laws of hospitality, take the defence of the weaker side. They run up well armed, and generally kill the aggressors, if they do not save themselves by a speedy flight.

In these cases it little matters who falls; the affair ends there; the dead man passes for the aggressor; nor do the family ever seek for vengeance. They content themselves with burying the dead where they were killed, turning their heads to the east, and heaping up all the stones at hand upon their tomb.

The chiefs of hordes are always the eldest of their families. The difference of wealth is not considered; the chief often having several individuals at

his house richer than himself, who nevertheless obey him in every particular; he is, properly speaking, their king; examines their difference with the old men, and judges without appeal. As to himself, he cannot be tried, but by the chiefs of several hordes assembled.

Whatever losses an Arab may meet with, he is never heard to complain; he rises superior to poverty, supports hunger, thirst, and fatigue, with patience, and his courage is proof against every event. He employs, however, every means in his power to avert misfortune; and often exposes himself to the greatest dangers to procure matters of no real utility.

When the father of a family dies, all the effects in his tent are seized upon by the eldest son present at his decease. Gold, silver, trinkets, every thing disappears, and the absent children have only an equal share in the division of the cattle and the slaves. The girls are entirely excluded from all participation, and take up their residence with their eldest brother. If the deceased leave children in helpless infancy, the mother takes them with her to her sister's, if she have a sister married; if not, to her own maternal roof.

The women are much more respected among the Mongearts than among the neighbouring nations; they are nevertheless in a state of subjection that nearly approaches slavery. All the freemen and slaves of the same religion eat together, the remains serving for the women. Although polygamy be authorized by their religion, few Arabs however take more than one wife. They repudiate her, it is true, at will, when she does not bear them boys, but then she is free to live with another man; but if, on the contrary, she have the good fortune to have one or more male children, her husband's regard for her is inconceivable.

When a woman is not agreeable to her husband, or when he is disagreeable to her, they have it in their power to part. The formality in this case consists in the wife's retiring to her parents. If the husband be attached to her he goes thither in quest of her; but if she persist in refusing to return she is free, and at liberty to marry another. If however she have had a child, especially a boy, she has not the same privilege; in that case, if her retreat should last more than eight days, it might be punished with death.

When a man beats his wife, it is a sure sign that he is sincerely attached to her, and that he does not mean to part with her; if he content himself with reproaches, the wife thinks herself despised, and infallibly retires to her parents. Hence it is that in the most trifling disputes the women are cruelly beaten: they prefer it to the complaints that the husband might make to their parents; this proof being the most certain one of a man's fondness for his wife. When a girl marries, she makes up her mind to such treatment, deeming it much more supportable than the humiliations she would otherwise experience from her family, in consequence of her husband's complaints. The wife brings no portion to her husband: the fidelity of the women is incorruptible.

Such have been the Adventures, Captivity, Misfortunes, &c. of SAUGNIER and BRISSON, accurately and fully translated from their own Works.—It is true we have expunged some unnecessary repetitions and extraneous remarks, which abound in the original, for the sake of preserving that unity and connection which render History the more agreeable.—We shall now, for the further entertainment of our NUMEROUS READERS, proceed with the celebrated ABBE ROCHON's relation of his Voyage to Madagascar and the East Indies; while the same care and attention which have been paid to the former, translation shall likewise be obvious in this.

A NEW, COMPLETE, AND GENUINE
HISTORY OF
A VOYAGE to MADAGASCAR
AND THE
EAST-INDIES;

UNDERTAKEN AND PERFORMED

By the Celebrated *ABBE ROCHON*,

Member of the Academies of Sciences of *Paris* and *Petersburgh*; Astronomer of the Marine; Keeper of the King's Philosophical Cabinet; Inspector of Machines, Money, &c.

With Full and Circumstantial ACCOUNTS of the different ISLANDS, &c.
and their POSITIONS according to his ASTRONOMICAL OBSERVATIONS.

Including *M. BRUNEL's* REMARKS on the CHINESE TRADE, Fully and Accurately
Translated from the FRENCH by *W. H. PORTLOCK, Esq.*

Which, with the several other VOYAGES and TRAVELS to be included in this Collection, will be Embellished
with a Variety of Elegant COPPER-PLATES, Drawn upon the Spots, and Engraved by Eminent Artists.

INTRODUCTION.

THE Moorish vessels were the first which navigated the Gulphs of Persia and Bengal; they set out from the ports of the Red Sea, and for the chief part directed their course to the Gulph of Persia. They frequently proceeded along the coasts of Abyssinia, and without losing sight of land entered the Channel of Mozambique, where they traded with the natives both of the coast of Africa and Madagascar. The ports which they generally visited on the African coast were Querimbe and Mozambique; in Madagascar, Vingara and Bombetoe.

Notwithstanding the ignorance of pilots and imperfection of charts the Asiatics frequently engaged in hazardous attempts. They have often ventured into the open ocean; and when they had traversed the Gulph of Bengal proceeded to the Moluccas and the Philippines, through the Straits of Sunda and Molucca, for the sake of a lucrative commerce, as a reciprocal exchange of Persian and Indian merchandise, with the merchandise of China and Japan, was productive of a trade mutually advantageous.

The Portuguese next, having found a passage to the seas of Asia, by the Cape of Good Hope, endeavoured to exclude every other nation, and enrich themselves by the great commerce of that vast continent. Vasco de Gama having opened to the Europeans a passage to the seas of Africa, the Europeans and Portuguese consequently became rivals.

The trade which the Moors carried on in the Asiatic seas, though not to be compared with the extensive commerce since carried on by the European nations, was by no means despicable. The design of Abbe Rochon in this undertaking is not to give a history of the progress and decline of the European establishments in India, which would be both tedious and unnecessary, seeing so many celebrated historians have already expatiated upon the subject; but to set forth, in a faithful account of the Island of Madagascar, the several advantages which might be derived from settlements there, were they formed on such an eligible plan as would promote both the happiness and instruction of the natives.

In order to render this work in every respect advantageous to the navigator, who is inclined to go to India, the last chapter is devoted entirely to some necessary remarks on the Chinese Trade, extracted from the works of *M. Brunel*. There are other extracts likewise borrowed from the same elegant writer, in order to illustrate the following history of Rochon.

The principal settlements which the French had in the Indian seas were the Isles of France and Bourbon; these were discovered by the Portuguese, who called the former *Cimi*, and the latter *Mascotenas*. The port of the former is the arsenal of the French forces and the center of their commerce. The Isle of Bourbon has no port capable of receiving vessels of magnitude. The principal place in this isle is called *St. Dennis*. It is in this town that the governors of the colony reside. Since the Isle of Bourbon was inhabited, the volcano there has never occasioned any devastation, though its eruptions are very common. The access to the volcano is difficult; the country is burnt up and a desert for more than six miles round, while precipices, heaps of ashes, &c. render its ascent very dangerous and troublesome. For the satisfaction of our readers we shall extract from *M. Brunel's* Memoirs an account of this volcano:

"It is situated almost at the summit of a hollow truncated mountain, the base of which, gently inclining, rests on a bed of calcined earth, at the distance of a full league from the sea. Though the matter it contains in its bowels boils up continually, it does not always swell so much as to rise through the crater. When an eruption takes place, the melted lava may be seen flowing down the sides of the mountain in undulations, which follow each other in succession, and exhibit the appearance of a flaming cascade. The light which it diffuses to a great distance, whether at land or at sea, is equal to that of the moon when she shines with full splendour. It is even a tradition, believed in the country, that this natural pharos first drew hither those Europeans who visited these coasts.

"The

" The environs covered with sal-pumice-stone, and which distinguish the frequency attended with earthquakes of the inhabitants is a phenomenon, which is dangerous. It may be remarked, that water from this volcano, are found in the island.

" In the month of August, 1782, was observed in one of the summits of the mountain, a dense vapour, of a white colour, which from the ancient crater, the 24th lava ran into the sea, had been thrown up, in a breadth of some paces. A month after, the lava, in abundance, formed a current, sixty fathoms in breadth, and six feet in depth. The lava fell into the sea, of more than thirty fathoms, and of a greenish yellow, and of the same colour as the former. This current, parallel to the coast, in the like manner of a projection, formed a projection, and was found mixed with a crust, which a few days after the arrival of the lava, was formed at the summit. It was possible to ascend to the place from which it fell, but it became insupportable, and the tragical fate of P. One however may venture to walk on a torrent, and to examine its progress.

At the superficial part, it is like thick ice, which will not pass through the crevices, but will seek freedom below; but when it meets obstacles, it flows back, and covers it with fresh lava. Therefore, and in consequence of a durable degree of solidity, it is not ought to observe with surprise.

" On the first of August, 1782, but it still emitted smoke, and red at the bottom. The sea, or mouth was thought to be at the distance of a league from the island. Clouds proceeded from a ravine, and in approach during the day, at the end of that time it became dark, and smoke issued from the mountain, to be the retreat of cer-

Observations on the Isle of St. Vincent, The Danger of Hurricanes, and the Ruins of the Churches of Rebon's and Peivre's about, and the Crew missing—Consequent Ruins—principal Objects of Ruin of the Islands—F. Remarks.

WHEN the island of St. Vincent was first discovered, the ground was a plain, and the hills which hang over it, were the result of the rage of winds, which blew from the very tops. Torrents of rain, and

No. 15.

" The environs of the volcano are parched and covered with sal-ammoniac, native sulphur, alom, pumice-stone, and scorria. A remarkable peculiarity which distinguishes his from all other volcanoes is, the frequency of eruptions, which are never attended with earthquakes: the security, therefore, of the inhabitants is not disturbed by the vicinity of a phenomenon, which every where else is highly dangerous. It may not, perhaps, be improper to remark, that water has never been seen to spout up from this volcano, and that no hot mineral springs are found in the island.

" In the month of June, 1787, this volcano was observed in one of its greatest eruptions. The summit of the mountain was covered with condensed vapours, of a blackish colour, which rose from the ancient crater in spiral clouds. On the 24th lava ran into the sea. Nine days after it had been thrown up, it extended eighty fathoms in breadth in some places, and in others forty. A month after, the matter, which flowed then in abundance, formed a current to the sea of about sixty fathoms in breadth, and from fifteen to sixteen feet in depth. The waves smoked at the distance of more than thirty fathoms from the place where the lava fell into the water, appearing around of a greenish yellow, and forming a band to the leeward of the same colour, nearly a league in length. This current, parallel to one older, and consisting in the like manner of several strata of melted matter, formed a projection, the basis of which was volcanic sand mixed with a kind of iron dross. Eleven days after the arrival of the lava at the sea, a solid crust was formed at its surface, upon which it was possible to ascend to within fifteen paces of the place from which it issued; but, as the heat then became insupportable, the observer called to mind the tragical fate of Pliny, and repressed his curiosity. One however may venture, without any danger, to walk on a torrent of flowing lava, if care be taken to examine its effects. In flat places it soon cracks on the superficies, which then becomes hard like thick ice, whilst the liquid matter may be seen through the crevices, continuing its course in perfect freedom below; but, sometimes, meeting with obstacles, it flows back, breaks the crust, and covers it with fresh boiling lava. In declivities, therefore, and sinuosities, it is long in acquiring a durable degree of solidity; and this the curious ought to observe with attention.

" On the first of August the lava ceased to flow; but it still emitted smoke, and appeared extremely red at the bottom. Some time after another crater or mouth was thought to have been discovered at the distance of a league from St. Denis, the capital of the island. Clouds of smoke and a strong heat proceeded from a ravine, which it was impossible to approach during the space of a month; but at the end of that time it was perceived that the heat and smoke issued from a cavern, which was found to be the retreat of certain Maroon negroes. Fire

having been kindled in this place, either by accident, or on purpose, it had been nourished by a quantity of leaves, stalks of maize, and other combustible substances, lodged in it for a long time, which burned very slowly, because the cavern received little air. The remains of birds nests found here plainly shewed that this cavern had not always been exposed to the like degree of heat; and this, added to other observations, quieted those alarms which had been excited by this new appearance. The isle of France, in the neighbourhood, is considered as a country which has been exposed to violent convulsions of nature. It abounds with caverns, cascades, precipices, subterranean arches, iron mines, calcined stones, vitrifications, torrefied sand, and pyrites, which are striking vestiges of ancient volcanoes; but, on account of their antiquity, their situation cannot now be ascertained, nor their craters distinguished. The most elevated mountains in this island are not above five hundred fathoms high, whereas in the isle of Bourbon there are peaks which rise more than fifteen hundred fathoms. These two islands, which are distant from each other only thirty leagues, were, doubtless, formerly united, and have been detached by some prodigious effort of nature. We have every reason to believe that they are still connected at the bottom of the sea, and that there are subterranean passages which form a communication between them.

" The earthquake, which happened at the isle of France, on the 4th of August 1786, seems to support this conjecture. That morning, at thirty-five minutes after six, a calm succeeded a strong breeze from the E. and E. S. E. which had prevailed for four days. A hollow noise, which terminated in a sudden explosion, like the report of a cannon, was heard in the S. W. quarter; and at the same instant two smart shocks were felt, one vertical and the other horizontal. At that time the barometer did not indicate the smallest change in the atmosphere; and the E. S. E. breeze commenced a quarter of an hour after, and continued till eleven the night following. This strange phenomenon was not attended with any accident fatal to the isle of France; and, by accounts from the isle of Bourbon, it appeared, that the volcano there had thrown up much larger quantities of lava than for some days preceding.

" We have reason therefore to suppose that the combustible substances in the caverns of the isle of France, after fermenting, caught fire, and that having then endeavoured to force a passage, they experienced a resistance proportional to their force, which must have produced those shocks above mentioned; and that making an effort afterwards in every direction, they found a passage through subterranean galleries to the isle of Bourbon, where, meeting with less resistance, they issued through the crater of the volcano, which prevented that island from experiencing any shocks, though there might be the same commotion in both places."

CHAPTER I.

Observations on the Isle of France—The Ingenuity and Labour of M. De Tromelin in clearing the Harbour, &c.—The Danger of Hurricanes—Their Evil and irresistible Consequences—Account of the Hurricane in 1771—Rochon's and Poivre's Warnings, which were disregarded—The Le Verd Geland lost—The Ambulante Flute tossed about, and the Crew miraculously saved—A second Hurricane—M. Brunel's Account of another—Various Disasters—Consequent Ruins—Want of Provisions, &c. &c.—The French Colonies indebted to M. Poivre—One of the principal Objects of Rochon's Voyage—Position of the Shoals, &c. with which the Archipelago abounds—Accounts of Secheyles Islands—Flat of Cargados—Salba de Maba—Island of Diego Garcia, and the Adu Isles—Curjory Remarks.

WHEN the isle of France was first inhabited, the ground was all cleared by means of fire. The hills which hang over the harbour, and defend it from the rage of winds, have been cultivated to the very tops. Torrents having been formed in

consequence of the trees being either burnt, or cut down, the harbour was choked up by the gravel; of course the anchoring ground is exposed to the violence of the sea and wind.

M. de Tromelin, a very eminent captain in the navy.

navy, became anxious to remedy this evil. M. Poivre was now Intendant of France and Bourbon. M. de Tromelin having obtained permission, in the name of the colony, of the Duke de Praslin, then minister of the marine, proceeded now to change the course of the torrents, by dykes and channels; this cleared the harbour, and prevented it from being choked up in future: by means of gunpowder he likewise broke to pieces under the water that part of the bank which opposed the passage of ships.

The hurricanes here are irresistible: they are always accompanied with rain, thunder, and an earthquake. The atmosphere seems to be all fire, and the wind rages equally tremendous from every quarter of the horizon. If the celerity of the wind exceed 50 feet per second, it is impossible to resist its force: the strongest built houses are thereby thrown down, and the largest trees torn up by the roots. There is no dependence on the weight of anchors or the strength of cables, nor can even a good bottom avail a vessel in her mooring.

At the time of the hurricane both Abbe Rochon and M. Poivre were exceedingly uneasy at the sudden falling of the mercury. It was then four in the afternoon, and M. Poivre invited the port captain to his house: but that officer, who had been an eye-witness of the hurricane in the year 1761, was not struck, as they were, with the variation of the barometer. He said, that there were more certain means of foretelling hurricanes. Twenty-four hours, said he, before the hurricane commences, the blacks come down from the mountain, and announce its approach. Besides, the setting of the sun will determine what measures should be taken, in order to prevent, as much as possible, those accidents which are inseparable from these dreadful phenomena. M. Poivre's entreaties and Rochon's observations not being capable of persuading the captain, they were obliged to wait till sun-set. The sky was then pure and serene; but the mercury still continued to fall in the tube of the barometer. The sun set very beautifully, and the port captain, who had been a long time in the service of the East India company, left them in high spirits, and perfectly secure respecting the misfortunes with which the island was threatened. He seemed to pity them, for considering the variation of the barometer as a matter of so much importance.

The hurricane, however, commenced at seven in the evening, that is to say an hour after sun-set. Before nine all the vessels were driven on shore, except the Ambulante flute, and a small corvette, called le Verd Galand. By a sudden gust the flute was forced out to sea, and the corvette being made fast to her by a cable, was entirely lost. The Ambulante, without sails, without rudder, and without provisions for the sailors, and a detachment of the Irish regiment of O'Clare, who did duty on board, was tossed about by the winds for more than twelve hours. By their frequent shifting she was driven quite round the island, and at length cast, in a most miraculous manner, upon the only part of the coast where man in such a violent storm could save their lives. What renders these disasters more distressing is, the impossibility of their mutually assisting each other. They must remain motionless amidst the ruins by which they are surrounded; they must patiently wait for their fate, without being able to foresee or avoid it. The violence and fury of the wind prevent them from quitting whatever place they have chosen for shelter.

This hurricane continued eighteen hours without intermission, and with equal violence. Neither the large quantities of rain which fell, nor the thunder and lightning, were able to allay the fury of the winds: but at three o'clock the next day the mercury, which had fallen 25 lines, remained for some minutes stationary. A little time after it again rose, the sudden gusts then ceased, the wind became more

steady, and at six in the evening it was possible to give some assistance to the unfortunate people who had been shipwrecked. During this hurricane, the communications in different parts of the island were interrupted by the falling of trees, and the overflowing of waters. They were three weeks without any news of the Ambulante, which had been cast on shore at a place distant only six leagues from Port Louis in the Isle of France. All the crops which they had brought for the use of the island were destroyed. On that account it was requisite that every effort should be made to repair those vessels which had suffered least by the storm: accordingly M. de Tromelin set about this important service to the colony and to commerce. It was necessary to dispatch instantly the greater part of these vessels to Madagascar, in search of stores and provisions of every kind. M. Poivre had taken the salutary precaution to make several vessels winter at the Cape of Good Hope. These vessels, when informed of the disaster which had befallen the Isle of France, brought it supplies in abundance, and these supplies saved the colony; for they arrived soon after the second hurricane, which happened the succeeding month, the new ravages of which had depressed the courage and hopes of the unfortunate inhabitants. The damage which the ships sustained in the harbour by the violence of the waves and the impetuosity of the wind, in the second hurricane, was much inferior to what they had sustained by the first. The variation of the barometer informed them of their danger, and they each used the utmost expedition to provide for their safety.

We shall here deviate awhile, in order to take notice of a hurricane which happened at the Isle of France on the night between the 9th and 10th of April, 1773, and which according to M. Brunel's account was attended with the most dismal effects.

The storm began about nine in the evening, when the moon appeared above the horizon; but its greatest violence was between eleven and one in the morning. The fury of the wind, and the noise of the thunder, were dreadful; while the lightning, which made the earth and the heavens appear as if on fire, still added to the horror of the scene. The fear of the inhabitants did not cease till towards five in the morning; but when day appeared the spectacle was dreadful beyond description. More than 300 houses were destroyed in the town of Port Louis; all the roofs were carried away, and the principal church was reduced to a heap of ruins. Many of the people were buried under the rubbish; others, bruised and mutilated, solicited assistance from their neighbours, who were not in a situation to afford them relief; and the streets were strewn with nails, splinters of wood, and fragments of every kind. All the vessels in the harbour, in number 32, were driven on shore, and greatly damaged. Of several small barks, nothing was to be seen but the keels; and one had entirely disappeared, without leaving the smallest trace that could lead to a discovery of its fate. Dead bodies were seen floating amidst the wreck of the ships; and such of the sailors as had escaped death, struggling against the irritated waves, were making useless efforts to reach the shore. In short, nothing presented itself to the sight but consternation, misery, and distress. The desolation in the country was no less afflicting; the maize, rice, and corn, were cut and dispersed; the coffee and cotton plants, nutmeg, sugar-canes, and cinnamon trees, were torn up by the roots; the oldest trees were overturned or twisted by the violence of the wind; manufactories and work-shops were destroyed, and the grass appeared dry and withered, as if burnt. In one of the windward quarters of the island the sea, hurried along by the tempest beyond its usual boundaries, rose more than 40 feet, drove the inhabitants to the neighbouring eminences, in order to avoid being overwhelmed in their houses, and extended to the adjacent plains

and woods, when various kinds. want of provision fous pe, bound, colony; but a few wards procured in del, the Cape of gascar, and the Po

and woods, where it left, when it retired, fish of various kinds. This misfortune occasioned such a want of provisions, that bread was sold at eighteen sous per pound, according to the currency of the colony; but a supply of corn and rice was afterwards procured from Bengal, the coast of Coromandel, the Cape of Good Hope, the island of Madagascar, and the Persian Gulph.

The French colonies are much indebted to M. Poivre for some valuable plants, as he was very attentive in entrusting the colony entrusted to his care with every necessary production that could be purchased from the old East India Company.

One of the principal objects of Abbe Rochon's voyage was to determine the situation of the shoals and quicksands, with which the archipelago abounds, which divides the mountains of Bourbon from the Indian Ocean.

In order to avoid this archipelago of small islands and shoals, situated to the north, the vessels which set out from the Ile of France for India were obliged, during the two monsoons, to pursue a tedious and indirect route; for as navigators were ignorant of the true position of those dangerous shoals, it was unsafe for any squadron to attempt a more direct course. Abbe Rochon was the first, who, by astronomical observation, determined the position of the most dangerous of these small islands. Those to which Rochon particularly attended were the Sechelyes Islands, the flat of Cargados, Salha de Maha, the Island of Diego-Garcia, and the Adu Isles.

The Island of Sechelyes is situated in the latitude of 4 deg. 38 min. S. and in the longitude of 53 deg. 15 min. E. from Paris. It is an exceeding good harbour, and covered with wood to the very top of the mountains. It abounds with land and sea tortoises, some of which weigh three hundred pounds. In 1769 Rochon spent a month here in order to determine its position with the utmost exactness: Sechelyes and the adjacent isles were inhabited then only by monstrous crocodiles; but a small establishment has been since formed in it for the cultivation of nutmegs and cloves. In one of these islands, called the Ile of Palms, there is found a tree which bears that celebrated fruit, known by the name of the cocoa of the Maldives, or sea cocoa.

Among the number of the most remarkable objects is the port of Diego Garcia. That island, which Rochon judged to be twelve leagues in circumference, has a very pleasing aspect. Its form is like that of a horse-shoe. Its greatest breadth is not above a quarter of a league; yet the land is high enough to inclose and shelter a vast basin, capable of containing the largest fleet. This basin is about four leagues in length, and its mean breadth is about one. It forms an excellent harbour, and has two entrances on the northern side. These passages are exceedingly beautiful. It is situated in latitude 7 deg. 14 min. S. and in longitude 68 deg. E. from Paris. With regard to the shoals which abound in this archipelago, they are as yet not all known.

Cayados and St. Brandon have been confounded by M. d'Apres: the former has the form of a crescent, and the latter that of an equilateral triangle. The Adu Islands, which are twelve in number, are connected by a reef of rocks, which at low water afford a passage from the one to the other. They form a bay about six miles in circumference. The passage which affords an entrance to it lies on the eastern side; the water is about 30 fathoms deep. This bay, which is of a circular form, has in its middle a sand bank nearly square, and almost a quarter of a league in circumference. There is a great quantity of shell-fish in it and other different kinds of fish. The isles are flat and covered with cocoa-trees.

The Isle of Sable (which was discovered in 1722) is flat and about a quarter of a mile in circumference. At its northern and southern extremities

fresh water fit for drinking may be found at 15 feet depth. The most elevated part of this flat is only fifteen feet above the level of the sea; it is six hundred fathoms long and three hundred broad. The island is very barren and destitute of shelter.

The Island of Madagascar was discovered by Laurence Almyda in 1506; but it was long before known to the Persians and Arab.

The Portuguese when they discovered this island gave it the name of St. Lawrence. The French called it Ile Dauphine in the reign of Henry IV. Its real name is Madecasse, which has been since corrupted into Madagascar.

This island is divided into twenty-eight provinces, which are, Anosy, Manapani, the valley of Amboule, Vohitzan, Watte-Manahore, Ycondre, Etomampo, Adchimevilly, Erengdranes, Vohizy-Angombes, Manacarongha, Mantatane, Antaveres, Ghalemboule, Tamatave, Sahavah, Voulou-Voulou, Andafoutchy, Mangahaby, Adcimoutchy, Mandrarey, Ampatre, Caremboule, Mahafalley, Houlovey, Sivah, Yvandrou, and Machicores.

This large island extends almost N. N. E. and S. S. W. and lies between the twelfth and twenty-sixth degrees of southern latitude.

We may reckon that the superficies of this island, so celebrated for the fertility of its soil, and the variety of its productions, contains two hundred millions of acres of excellent land. It is watered on all sides by streams and large rivers; and above all by a great number of small rivulets, which have their sources at the bottom of that long chain of mountains which separates the eastern from the western coast. The two highest mountains in the island are Vigagora in the north, and Botismene in the south. These mountains contain in their bowels, abundance of fossils and valuable minerals.

This wild and romantic country, intersected by ridges and valleys, are full of precipices which must strike the traveller with awe and surprise; the summits thereof are covered with old venerable trees. The noise of the cascades, which are inaccessible, is likewise awful and immense; the eye, however, is delighted with beautiful hills, which are covered with vegetation throughout the year. Here herds of cattle and flocks of sheep find ample nourishment; for such is the flourishing state of agriculture, that the fields always abound in rice, potatoes, &c. notwithstanding the severity and vicissitudes of the seasons.

The fortunate inhabitants of Madagascar never moisten the earth with their sweat; they turn it up slightly with a pick-axe; and this labour alone is sufficient. They make small holes in the ground at a little distance from each other, and throw into them a few grains of rice, over which they spread a little mould with their feet. What proves the great fertility of the soil is, that a field sown in this manner produces an hundred fold.

The forests contain a prodigious variety of beautiful trees, palms of every kind, ebony, wood for dying, bamboos of an enormous size, orange and lemon trees, &c. &c. excellent timber fit for masts, and for building houses or ships, may also be had.

These numerous trees and shrubs are surrounded by a multitude of parasite plants and vines. In these forests may be found agaric and mushrooms, the colours of which are lively and agreeable, and which have an exquisite flavour. All the forests of Madagascar abound with plants unknown to botanists, some of which are aromatic and medicinal, and others fit for dying: also flax, a kind of hemp, which, in length and strength, surpasses that of Europe, the sugar-cane, wax, different kinds of honey, tobacco, indigo, black-pepper, gum lac, amber, ambergrease, several silky and cottony substances, &c. &c.

We shall in our next chapter give a full account of the natives, their manners, &c.

CHAPTER II.

Account of the Islanders—Their Persons, Sentiments, &c.—Their Industry, Ingenuity, and Taste for Mechanical Arts—Dexterity of the Women—A remarkable Instance of the Happiness they enjoy in their own Manners, &c.—The Natives divided into a Number of Tribes—Customs of each—Manner of Living—Their Food—Ways of dressing it—Account of the Southern Part of Madagascar—Residence and Manners of the Chiefs—Language—Religion—Different Provinces, &c.

THE inhabitants of Madagascar are called *Malegaches*, or *Madecasses*. They are portly in their persons, and rise above the middle stature. The colour of their skin is different: among one tribe it is of a deep black, and among another tawny: some have a copper-coloured tint; but the colour of the greater part is olive. All those who are black have woolly hair, like the negroes on the coast of Africa. Those who are of a complexion similar to that of the Indians and Mulattoes, have as lank hair as the Europeans. Their nose is not flat; they have a broad open forehead; their lips are thin; and their features are regular and agreeable. These people generally display in their countenance a peculiar character of frankness and good-nature. They never shew any desire of learning but things which relate to the simplest wants of mankind; and this desire is always extremely moderate: they are very indifferent respecting knowledge which cannot be obtained without reflection. A natural want of care, and a general apathy render every thing insupportable to them that requires attention. Sober, light, and active, they spend the greater part of their lives in sleeping, and amusing themselves in innocent recreations.

The Malegache, like the savage, is destitute both of virtue and vice. To him the present is every thing; he is susceptible of no kind of foresight; and he does not even conceive that there are men on the earth who give themselves uneasiness respecting futurity. He is a free being who enjoys peace of mind, and health of body; being absolute master of himself, his freedom is confined by no check or restraint; he goes wherever he thinks proper, acts as he chooses, and does what he pleases, except what may hurt a fellow-creature. It never entered the mind of a Malegache to attempt to domineer over the thoughts or actions of any one: each individual has his own peculiar manner of living; and his neighbour never disturbs him, nor even thinks of attempting it.

The industry of these people, in forging iron and other metals, is very remarkable. They are also very clever in twisting small cables, which are employed in fishing for whales, and mooring their piraguas. Indeed their natural ingenuity and taste for mechanical arts, would render it a very easy task to introduce into Madagascar several branches of commerce. The women are very dexterous and notable, in weaving beautiful pieces of stuff, which serve them for clothing: some of them are made of the filaments of the leaves of a plant called *raven*; others, which are in greater estimation with the natives, are manufactured of silk and cotton. The population of Madagascar is very extensive, and labour and raw materials exceedingly cheap.

The following is a remarkable instance of the happiness which these people enjoy, in following their own manners; and how devoted they are to their own laws and customs.

"Vander Stel, governor of the Cape of Good Hope, having procured a Hottentot child, caused him to be educated according to the manners and customs of Europe. Fine clothes were given to him; he was taught several languages, and his progress fully corresponded with the care taken of his education. Vander Stel, entertaining great hopes of his talents, sent him to India under the protection of a commissary-general, who employed him with advantage in the company's affairs. After the death of the commissary, this Hottentot

"returned to the Cape. A few days after, while on a visit to some Hottentots, his relations, he formed a resolution of pulling off his European dress, in order to clothe himself with a sheep's-skin. He then repaired to Vander Stel, in this new attire, carrying a bundle containing his old clothes, and presenting them to the governor; addressed him as follows: 'Be so kind, Sir, as to observe, that I for ever renounce these clothes; I am determined to live and to die in the religion, manners, and customs of my ancestors.' The only favour I have to beg of you is, that you will suffer me to keep the necklace and curtains which I now wear.' Having delivered this speech, he immediately betook himself to flight, without waiting for the governor's answer, and was never afterwards seen at the Cape."

The natives of Madagascar are divided into a great number of tribes. It is supposed that the population of this island may amount to four millions. This calculation is by far too great; however, it is impossible to ascertain the truth, as the island, which is divided into a great number of societies, are all distinct one from the other: each society inhabits that canton which it finds most convenient, and governs itself according to its own usages. A tribe is composed of several villages, who have all a particular chief: this chief is sometimes elected, but for the most part succeeds by hereditary right. The lands are not divided: they belong to those who take the trouble to cultivate them. These people are not acquainted either with locks or bolts, and live in a very frugal manner. Hunger regulates their hours of repast. It is, however, common to see them dine at ten in the morning, and sup at four in the afternoon. Their food consists of very white rice, exceedingly light, and well boiled, which they besprinkle with a succulent kind of soup, made from fish or flesh, and seasoned with ginger, pimento, saffron, and a few aromatic herbs. This simple dish is served up in the leaves of the raven, which are used for plates, dishes, and spoons. These vessels are always clean, and are changed at every meal. They have only two ways of dressing their food: they either broil it upon coals, or boil it in earthen vessels, which are curiously made.

It is in the eastern coast of Madagascar which the French have frequented. The province of Carnali, in which Fort Dauphine stands, is very populous. Almost all the villages are built upon eminences; they are surrounded by two rows of strong palisades; and within these there is a parapet of earth four feet in height. Large bamboos, placed at the distance of five feet from each other, and sunk to a considerable depth in the ground, serve to strengthen the palisades: but some of these villages are fortified also by a ditch six feet deep and ten broad.

The residence of the chief is called *Donac*: it contains two or three buildings, surrounded by a peculiar kind of enclosure, where the chief lives with his women and his children.

The chiefs always go armed with a susee, and a stick headed with iron, to the other extremity of which is affixed a small bunch of cow's hair: they cover their heads with a cap made of red woollen cloth. It is by their caps, above all, that they can be distinguished by their subjects. The authority of these chiefs is very much limited; yet in the province of Carcanoli they are supposed to be the proprietors of all the land, which they distribute among their

their subjects, in order to be tilled and cultivated.

The people of the province of Carcanoffi are not entirely ignorant of the art of writing. They have even some historical books in the Madecasse language; but their learned men use only the Arabic characters. They have among them treatises on medicine, geomancy, and judicial astrology. Their authors are both forerchers and physicians. The most celebrated come from the province of Matatane, in which country magic is preserved in its full glory. The Matatanes are dreaded by the other natives of the island, because they excel in this art of deception. The art of writing has, doubtless, been brought into this island by the Arabs, who made a conquest of it about 300 years ago. Their paper is made in the valley of Amboule: it is manufactured from the papyrus *nitatica*, which the Madecasses name *Jangajanga*. They pull off with great dexterity the inner bark of this tree; divide it into very thin filaments, which they moisten with water; and having laid them across each other, in various directions, press them well down. They are then boiled in a strong lye of ashes, and afterwards pounded in a large wooden mortar till they are reduced to a paste. This paste is washed and drenched with water, upon a frame made of bamboos, in the form of a grate. When this operation is finished, the leaves are spread out to dry in the sun, and are glazed with a decoction of rice water. This paper is of a yellowish colour; but when it is well glazed, it does not imbibe the ink. Their pens are made of the bamboo. Their ink from a decoction in boiling water of the bark of a tree, which they call *arandrato*. It is more shining than black.

The Arabic language has made some progress in the N. W. part of the island of Madagascar. It is well known that the Arab princes formed large establishments along the African coast, which, according to geographers, correspond with the kingdoms of Monomotapa and Mono-Emugi. They took possession also of the island of Comora; and these princes, when they emigrated to Africa and the adjacent isles, did not forget their ancient country. They still indeed carry on an inconsiderable trade with Aden, Mascate, and the coasts of Abyssinia. They have also, on the small river of Bombetoc in Madagascar, a kind of settlement, which enables them to visit different parts of that island, for the purposes of commerce. By these means they have introduced their language, and left some traces of Mahometanism among the Malegaches. Formerly, there subsisted between the Arabs and the Portuguese of India a hatred and animosity, which were founded solely on the zeal these two nations entertained for their religion. The Arabs of Comora and Madagascar made frequent attacks upon the Portuguese establishments on the coast of Africa, which did them great injury: they even destroyed some of their settlements; but this hatred became gradually extinguished, when the decline of the Portuguese power rendered them less the objects of jealousy. An attempt was made at Goa; about 20 years ago, to take advantage of this suspension of hostilities, in order to form a Portuguese settlement at Cape St. Sebastian, in Madagascar. The intention of this establishment was merely religious. The Portuguese thought of forming a mission, rather than a factory; but this project was not attended with success. M. Bolle, an inhabitant of the isle of Bourbon, saw the melancholy remains of this establishment.

Notwithstanding this island is frequented by the Arabs, Mahometanism has not made any great progress in it; indeed, if we except circumcision, abstinence from pork, and some few trifling practices, which have very little influence over the conduct of these people, the descendants of the Arabs themselves have lost sight of the fundamental parts of their religious opinions. They do not believe in a future existence; like the Manichees, they admit of

two principles, one supremely good, and the other extremely wicked. They never address their prayers to the former; but they entertain a great dread of the latter, to whom their sacrifices are continually offered.

The whites, who inhabit the province of Anossi and Carcanoffi, pretend to be descended from Imina, the mother of Mahomet. They have assumed the name of Zafferahimini. The whites, who inhabit Foulepointe, Nossi-Hibrahim, and the bay of Antongil, are sprung some from the pirates, and others from the Jews: for this reason, they call themselves Zaffe-Hibrahim, that is to say, the descendants of Abraham. Besides these, there is a third kind of whites, who say they were sent to Madagascar by the caliph of Mecca, to instruct the Malegaches in the secrets of nature, and the religion of Mahomet. These impostors seized upon the province of Matatane, after they had expelled and massacred the Zafferahimini, who governed that district. They are called Zaffi-Cafimanbou. Their complexion is darker than that of the other whites, and their profession is, to teach to read and write the Arabic language.

The Zafferahimini, in the province of Anossi and Carcanoffi, believe that they came originally from the sandy plains on the borders of Mecca. On this account they are called Ontampassemaca, and are divided into three classes, the Rhoandrians, the Anacandrians, and the Ontzatsi. The first, and most honourable class, is that of the Rhoandrians. People of this class have assumed to themselves the privilege of killing animals. Among savages, and people who subsist by hunting, the trade of a butcher is almost always held in great distinction. The Rhoandrians are the nobility of the country; and it is always from this class that the sovereign is chosen. The Anacandrians are descended from the Rhoandrians, and a woman of an inferior class: for this reason, they share with the Rhoandrians the honour and advantage of killing, for the other islanders, such animals as are necessary to their subsistence. The Ontzatsi are the last class of the Ontampassemaca; but they enjoy no particular marks of distinction. They are generally brave soldiers, skilled in the art of war, who can throw a stone with great dexterity, and spend their time in dancing, sleeping, and amusing themselves.

The blacks are divided into four classes: the Voadziri, the Lohavohits, the Ontzoa, and the Endeves. The Voadziri are the descendants of the ancient sovereigns of the island. They are generally pretty rich in slaves and flocks; and they are allowed to possess several villages. These people must be held in great consideration among the islanders of Madagascar, for they have preserved, notwithstanding the despotism of the Arabs, who conquered the province of Anossi, the right of killing, when they are not in the presence of a Rhoandrian or an Anacandrian, such animals as belong to their subjects. The Lohavohits are much less powerful than the Voadziri. They can never possess more than one village; and, however rich they may be in flocks, they must always send for a Rhoandrian, or an Anacandrian, to kill whatever animals they want to eat.

The people of Ontzoa have no power whatever; and the Endeves are looked upon as slaves from their birth.

It is the belief of those islanders who possess any kind of erudition, that God created from the body of the first man seven women; these are supposed to be the mothers of the different castes. That of the Rhoandrians is believed to be the offspring of the first man and woman, formed from the brain. The Anacandrians from the neck, and the Ontzatsi from the left shoulder: the Voadziri from the right side; the Lohavohits and the Ontzoa from the thigh and calf of the leg, and the Endeves from the soles of the feet: these last are looked upon as the meanest extraction.

CHAPTER III.

Further Account of the Malegaches—The Attention of the Men to the Women—Their Happiness when in their Company—Description of the Women—Their Customs in time of War—Joyful Assemblies—Skill of their Physicians—Efficacious Remedy for the Venereal Disease—M. de Modave takes possession of the Government of Fort Dauphin in the Name of the King of France—His Account of the Dwarfs in the interior Parts of Madagascar—Of a Kimoa Woman—Further Remarks—Of the N. E. part of Madagascar—Destruction of a small French Establishment at Foulpointe—Of the Northern Part—Lands, &c. belonging to Foulpointe.

THE natives of the province of Anossi are exceedingly intelligent. They are possessed of sense, vivacity, and good-nature. They are so very fond of women, that they are never sad in their company: they are particularly attentive to them, it being their greatest delight to contribute towards their happiness. The woman is never obliged to obey like a slave, nor does the husband command like a tyrant. These women are genteel and pleasing; have good features, fine eyes, white teeth, and a smooth skin.

The chiefs here, especially those that are rich, enjoy a plurality of wives, though they never espouse more than one legally; the rest being considered as concubines. This custom is not attended with disagreeable consequences in Madagascar, as all these women live very happy together: besides, a divorce may take place as often as the conjugal union displeases either the husband or the wife. When they part, however, by mutual consent, they restore to each other the property they possessed before marriage. In Madagascar adultery is looked upon as a robbery, and punished as such. These people; therefore, pay the utmost respect to marriage; they forewarn strangers to behave with decency to their wives; but they offer them their daughters, and think themselves much honoured when they have children by them. Wives may be known by their hair, which is separated into tresses, and bound up in the form of a nosegay on the top of the head: The virgins suffer it to fall carelessly over their shoulders. Husbands are always in high spirits when with their wives; their presence inspires them with joy; as soon as they perceive them, they begin to dance and sing, and make use of several amorous expressions. The Malegache women appear to be happy, and are generally in good humour. Even Europeans are delighted with their agreeable behaviour.

When the men are at war, the women sing and dance incessantly, throughout the whole day, and even during a part of the night. They imagine that these continual dances animate their husbands, and increase their vigour and courage. They scarcely allow themselves time to enjoy their meals. When the war is ended, they assemble at sun-set, and renew their singing and dancing, which always begin with much noise, and the sound of various instruments. Their songs are either panegyrics or satires, and are to all appearance very interesting. Whenever a woman finds that her health betrays any signs of having had familiar intercourse with the Europeans, she absents herself from those joyful assemblies, in order to avoid the wit and reproaches of her companions, and to put herself under the care of the physicians. This custom prevents the venereal disease from spreading so much in this island as it has in Europe. Besides, their physicians have found out a very happy remedy for this disorder, which is said to be extremely efficacious. They order the patient to chew and swallow some particular leaves, lying alternately on the back and belly, in a horizontal position. The patient must not be loaded with clothes; and in order that perspiration may not be impeded, she must be surrounded on all sides with a strong brisk fire during the whole time that the remedy acts. The virus of the disease generally accumulates in the soles of the feet; and the effects there formed is seldom attended with disagreeable consequences. Great care is taken that the patient may not be incommoded by the heat of the fire.

By the cruelty of the Europeans, the Malegaches have been forced to employ much treachery; and how can they be blamed, seeing that every advantage was taken of their weakness; and, in return for their hospitality, they have met with every unkind treatment! We have several instances of this, particularly in 1642, when Captain Picault obtained an exclusive privilege, for himself and associates, to trade in Madagascar; and Promis was authorised by the Crown to take possession of Madagascar in the name of the King, with orders to choose the most eligible spot for their intended establishment. The village of Manghefia appeared the most convenient and promising, as it abounded in rich fields of rice and potatoes, and a quantity of horned cattle: The meadows hereof were watered by a navigable river, which springs from the bottom of Mount Sliava. The docks were exceedingly commodious, abounding in timber of all kinds, and the harbour conveniently sheltered by the island of St. Lucia from the sea winds. The unwholesomeness of the climate, however, made great destruction among Pronis's small colony, which obliged him to leave this place immediately, and retire to the peninsula of Thalangar, remarkable for its salubrity and situation of defence. Here there is excellent anchoring ground; and the fort, which is called Port Dauphin, is surrounded with substantial walls, constructed of lime and sand. Vessels; however, in this port are much exposed to N. E. winds. The lake of Amboul is supplied with water by the river of Fanthere. This lake is 50,000 fathoms in circumference, and 40 feet in depth. The river Fanthere is navigable for boats to the distance of 15 to 20 leagues from its mouth. The great bay of Loucan encloses on the southern side the point of Itapera, which lies to the north of Fort Dauphin, and which is likewise sheltered from the sea winds by the island of St. Clair, which prevents the small river thereof from being choked up with sand. Pronis found this place more favourable to the establishment than the village of Manghefia; but being destitute of abilities to conduct it properly, the people under his command revolted, and put him in chains. He was released from his imprisonment by a vessel which arrived from France; and he was sold to the governor of the Isle of France all the wretched Malegaches who belonged to the establishment. This created much indignation from the islanders, particularly as there were sixteen women among these slaves. His successor, Flacourt, likewise violated the hospitality which had been shown him. The islanders were also ill treated by others.

M. Poivre having gone to Madagascar in the year 1769, when M. de Modave was governor of Fort Dauphin, made it his study to examine all the plants, &c. The loss of this eminent naturalist is very much regretted by Rochon, who had been spectator of his indefatigable industry.

The following extraordinary account of a race of pigmies is recorded by M. de Modave:

"The dwarfs in the interior parts of the large island of Madagascar form a considerable nation called in the Madecasse language, *Quimo* or *Kimoa*. The distinguishing characteristics of these small people are, that they are whiter or at least paler in colour than all the negroes hitherto known; that their arms are so long that they can stretch their hands below their knees without stooping; and that the women have scarcely any breasts, except when they suckle; and even then the greater part of them

are obliged to nourish their young; these inhabitants of Madagascar are very lively and themselves to the as they are much warlike: they have neighbours, who purpose. Though and weapons, for use of gunpowder they have always liberty amidst the remedy difficult to much to their various kinds of rear a great number tails, which form: They hold no cattle by whom the sake of commerce they procure all which they possess, was between them island is to carry slaves, the diminution from the latter injury they are so fond of it to a certain degree from the tops of the advancing; with even plains below: The their stocks to the they leave them, and them to the indigence at the same time denounce to attack them: without to penetrate far proof that it is neither that they purchase weapons are sufficient a the utmost dexterity.

"Some short distance inhabitants of that part of small barrows of graves, which, as in great massacre of the field by their ancestors. M. de Modave, in about the end of the year of seeing a Kimoa woman three feet seven inches in the tallest among them as well as the tallest of us from being ill-proportioned; and the body as far as the woolly; her features projected nearly to those of an inhabitant of Madagascar; she looked, and was good-looking; as far as could be seen.

"A short time before her death, she made her escape, and being carried away from the island.

"Diminution of stature in Madagascar, is almost general under the Kingdom. Both the highest mountains of Madagascar, where the Kingdom is high above the level of the sea, the productions which appear to be stunted, and a great many of the trees depend on that cause they have become stunted of the highest mountains of the highest mountains of the Kingdom, and that of the

are obliged to make use of cow's milk in order to nourish their young. With regard to intellectual faculties, these Kimos are not inferior to the other inhabitants of Madagascar; who are known to be very lively and ingenious; though they abandon themselves to the utmost indolence; but the Kintios, as they are much more active, are also much more warlike: they have never yet been overcome by their neighbours, who have often made attempts for that purpose. Though attacked with superior strength and weapons, for they are not acquainted with the use of gunpowder and fire-arms, like their enemies, they have always fought with courage, and retained liberty amidst their rocks; which, as they are extremely difficult of access, certainly contribute very much to their safety. They live there upon rice, various kinds of fruits, roots and vegetables, and rear a great number of oxen and sheep with large tails, which form also a part of their subsistence. They hold no communication with the different castles by whom they are surrounded, either for the sake of commerce or on any account whatever, as they procure all their necessities from the lands which they possess. As the object of all the petty wars between them and the other inhabitants of the island is to carry away on either side a few cattle or slaves, the diminutive size of the Kintios saves them from the latter injury. With regard to the former, they are so fond of peace, that they resolve to endure it to a certain degree; that is to say, till they see from the tops of their mountains a formidable body advancing; with every hostile preparation, in the plains below. They then carry the superfluity of their flocks to the entrance of the defiles, where they leave them, and make a voluntary sacrifice of them to the indigence of their elder brethren; but at the same time denouncing with the severest threats to attack them without mercy, should they endeavour to penetrate farther into their territories; a proof that it is neither from weakness nor cowardice that they purchase tranquility by presents. Their weapons are assegays and darts, which they use with the utmost dexterity.

Some short distance from Fort Dauphin, the inhabitants of that part of the country shew a number of small barrows or earthen hillocks, in the form of graves, which, as is said, owe their origin to a great massacre of the Kimos, who were defeated in the field by their ancestors.

M. de Modave, in his voyage to Fort Dauphin, about the end of the year 1770, had the satisfaction of seeing a Kintios woman, aged about thirty, and three feet seven inches in height. Her complexion was the fairest among the inhabitants of the island; she was well formed though low of stature, and far from being ill-proportioned; her arms were exceedingly long, and could reach without bending the body as far as the knee; her hair was short and woolly; her features, which were agreeable, approached nearer to those of an European than to an inhabitant of Madagascar; she had naturally a pleasant look; and was good-humoured, sensible, and obliging, as far as could be judged from her behaviour.

A short time before their departure from Madagascar, she made her escape into the woods, for fear of being carried away from her native country.

Diminution of stature, in respect to that of the Europeans, is almost graduated as from the Laplander to the Kintios. Both inhabit the coldest regions and the highest mountains in the world. Those of Madagascar, where the Kimos live, are 16 or 1800 tomes high above the level of the sea. The vegetable productions which grow on these elevated places appear to be stunted; such as the pine, the oak, and a great many others, which from the class of trees descend to that of humble shrubs, merely because they have become alpicôles, signifying inhabitants of the highest mountains.

The ordinary height of the men is three feet six inches, and that of the women a few inches less.

The men wear their beards long, and cut in a round form. The Kimos are thick and squat; the colour of their skin is lighter than that of the other islanders, and their hair is short and woolly. They manufacture iron and steel, of which they make their lances and assegays. When they perceive bands of travellers preparing to traverse their country, they tie their oxen to trees on the frontiers, and leave other provisions, in order that these strangers may find the means of subsisting. When the strangers, however, are so imprudent as to molest them, by behaving in a hostile manner, and are not contented with the presents usual in the like circumstances, the dwarfish Kimos know how to defend themselves bravely, and repel by force those who have the temerity to attempt to penetrate into the valley where they reside, and which is almost inaccessible.

Remouzai, who, in quality of captain, followed the father of the chief Maimbou, in the two unfortunate expeditions which he undertook against these people, in order to carry away a part of their flocks, and afterwards sell them at Fort Dauphin, owed his safety merely to the knowledge he had of the high and steep mountains by which their valley is surrounded. Remouzai had been several times among the Kimos, and was employed as a guide by Maimbou's father when he ventured to attack them. The first incursion had no success; but the second was much more fatal: Maimbou's brother was killed; his small army was put to flight, and the number of those who escaped these pignies was very inconsiderable.

Maimbou was not old enough to accompany his father in this expedition; but he had conceived such an aversion to the Kimos, that he fell into a violent passion whenever they were mentioned in his presence; he wished much to exterminate that race of apes, for by such injurious appellation, he distinguished those dwarfs.

A chief of the Mahaffalles, a people residing near the Bay of St. Augustine, who came from a chief in the neighbourhood of the fort, with a view of exchanging silk and other merchandize for oxen, said, in the hearing of one of M. de Modave's officers, that he had been several times in the country of the Kimos, and that he had even carried on war against them. This chief added, that for some years these people had been harassed by their neighbours, who had burnt several of their villages. He boasted also of having in his possession a man and a woman of that race, who he said were about the age of 20 or 25.

From the accounts of this chief and Remouzai, it is apparent that the valley of the Kimos is abundant in cattle and provisions of every kind. These little people are industrious, and apply with much skill and labour to the cultivation of the earth. Their chief enjoys a much more absolute authority, and is more respected, than any of the other chiefs in the different districts of Madagascar. The extent of their valley is unknown: it is surrounded by very high mountains, and situated at the distance of 60 leagues to the N. W. of Fort Dauphin; it is also bounded on the W. by the country of the Maratanes. Their villages are built on the summits of small steep mounts, which are so much the more difficult to be ascended, as they have multiplied those obstacles that render approach to them almost impracticable. The chief of the Mahaffalles and Remouzai did not agree respecting two points which are particularly worthy of being ascertained. The general opinion of the people of Madagascar is, that the Kimos women have no breasts, and that they nourish their children with cow's milk. It is asserted also, that they have no menstrual flux; but that at those periods, when other women are subject to this evacuation, the skin of their body becomes of a blood-red colour. Remouzai declared this opinion was well founded; but the chief of the Mahaffalles contradicted it.

The most frequented parts of the N. E. part of the island of Madagascar are Foulpointe, St. Mary, and the Bay of Antongil. It is in these three places that the French have attempted to form all their establishments. The inhabitants of this coast are still better, and more humane, than those of the province of Carcanoffi. They are ignorant of the use of locks or bolts, and shut the doors of their houses with nothing else than thorns, or the branches of trees. They expose all their treasures, as they entertain no suspicions of their neighbours. Their houses might easily be thrown down, as they are built of nothing else but mats and leaves.

The pirates, who carried on their depredations in the Indian seas, alarmed at the great preparations which were making to put an end to their robbery, took refuge on the N. E. coast of Madagascar. It appears that they formed their establishment at the Isle of Nossy-Hibrahim, named by the French St. Mary. One of the extremities of this island reaches within eleven leagues of Foulpointe, and the other extends to the Bay of Antongil. By contracting alliances with the islanders, the pirates gained their confidence and friendship. This foreign land became to them and their children a new country: they imitated its manners, and adopted its customs. In fertile and rich regions, abounding in every thing necessary for subsistence, it is almost impossible to find any advantage by attacking the property of another; since the only riches of the inhabitants are those of the soil, and the soil belongs in common to all. It is not to be wondered at then that pirates, returning continually to this place of shelter to repair and re-victual their ships, should be favourably received by the Malegaches, since they shared in their opulence, without knowing how they acquired it.

In 1722, several nations, alarmed by the enormous losses which their commerce sustained, by the continual depredations of these pirates, united together to deliver the Indian seas from the oppression of these formidable tyrants, who had seized a large Portuguese vessel, in which were Count de Reccira and the archbishop of Goa; and the same day another vessel, which carried 32 guns. The pirates, elate with success, made a long and desperate resistance. Before they were extirpated, it was necessary to bring a considerable force against them; to terrify them by the severest punishment, and to pursue them through the most imminent dangers, even to the place of their retreat, where they were obliged to set fire to their vessels. Such were the severe means employed to clear the Indian seas of these plunderers, who had infested them from the time that Vasco de Gama opened a passage to India by the Cape of Good Hope.

When these banditti first established themselves in the island, cattle and sheep were of no value. Rice, and various kinds of provisions, had no other price than that which was affixed on them by navigators; and it even appears, that during the time of their piracy they spent the fruits of their long voyages in drunkenness and debauchery, on their return from every expedition.

It was these profligates who first introduced the slave-trade into the N. E. part of Madagascar. It was not, however, without causing much trouble and disorder that they were able to overcome the aversion which the Malegaches had for that horrid traffic. Before this epoch several European ships had made vain efforts to induce them to sell their prisoners and malefactors. Their negotiations for this purpose, instead of being attended with success, were rejected with indignation, and sometimes punished in an exemplary manner, when they ventured to employ stratagem or force. The pirates were too well acquainted with the intrepid spirit of the Malegaches to use these means; and they were sensible that they were too few in number to subdue them, or to dictate to them concerning a trade which

they detested. The least violence, in this respect, would have occasioned their destruction; and with still more certainty that of their wives and children. The surest way of accomplishing their end, therefore, was to kindle up among these people the flames of discord; and, taking advantage of their intestine wars, to prevail on them to dispose of their prisoners, who, on account of their number, could not fail of being a burthen to them.

Rochon was witness to the entire destruction of a small French establishment at Foulpointe, about the end of the year 1768. Though assistance of every kind was speedily given to the unfortunate people who belonged to it, not one of them could be saved. The robust as well as the weak, all fell victims to disease, in the course of a very short time. On account of the salubrious sea air, with which their vessel was surrounded, and which corrected, in some degree, the fatal effects of the putrid exhalations, Rochon happily escaped this calamity. Besides, as soon as the first symptoms of the disease appeared in the village, all communication with the land, except what was indispensibly necessary, was rigorously forbidden. The crew were no longer allowed to have any intercourse with the islanders; nor were their piraguays suffered to approach the vessel. Without this precaution, the infection might have been introduced into the ship; and no means could have been devised to check its progress.

No part in the northern quarter of Madagascar is free from putrid and malignant fevers; but these cruel diseases do not every year occasion the same ravages. Their violence and duration seem to depend more particularly on the direction of the wind. When it blows long from the N. the evil is at its height. There are few men robust and strong enough to resist the influence of this dangerous wind, which prevails only from the end of October till the beginning of May.

The northern part of Madagascar being more fertile in productions of every kind than the southern part, is consequently more frequented by European vessels; but the interior part of the country has never yet been visited. When Rochon was at the Isle of France, he in vain endeavoured to procure such information as might enable him to write a description of it: however, the ideas with which he was furnished were, in a great measure, vague and uncertain. The high mountains of Vigagora, which must be traversed, present, at every step, obstacles capable of stopping men the most accustomed to brave dangers of every kind. When Rochon found himself surrounded by rocks, a small cord held by his guides revived his courage, and facilitated an access to the highest precipices: silk cords are preferable to those of hemp, because they are stronger and much lighter.

The place most frequented by the Europeans in the northern part of Madagascar, is called Foulpointe; but the natives give it the name of *Voulou-Voulou*. The harbour is surrounded by a reef of rocks, which break the force of the waves, and shelter ships from heavy seas. The shores of it are very bold, and the least depth of the water is twenty-three feet at low tides. The reef, which consists of coral rocks, is joined to the main land and stretches N. N. E. whilst the coast stretches N. N. W. The entrance of the harbour, which is on the north side, is about fifty fathoms in breadth. The depth of the basin is about fifty fathoms: it is capable of containing ten large vessels, which may anchor along-side of each other in from thirty to thirty-five feet of water. The ground is sure; but in the winter season, the entrance is shut by a thinning sand-bank, which is dissipated when the south-east succeed the north winds or calm weather. The sea never rises or falls more than four or five feet the time of spring or neap-tides. During the late part of the year, the reef of rocks appears above the water; and abundance of natural productions may be there

found on them, black coral, insects and shells, which the brilliancy of the cabinets of the rivers here are loaded with oysters adhere to of the most singular little distance from there are found vessels from that of the sea experienced a femi mixed with stones spered with an int of natural glass. deg. 40 min. 20 min.

THE kingdom of Tonquin; on the west by the kingdom of the name the Kemouys. length, and extends to twenty-seventh degree greatest breadth does not it is divided into eleven Diabac, Quambing, Dwards the north. The use Cham, Quanghia, pharang, Nanlang, an contains the royal city, which reside, is the most of the river. This capital is a beautiful river, which is capable of bearing ships of a dreadful inundation. The banks have been for small vessels only can enter. This city is intersected in this manner, in order to the No. 16.

found on them, such as marine plants, mosses, black coral, insects, valuable madreporae, sea stars, and shells, which by the variety of their form, and the brilliancy of their colours, serve to ornament the cabinets of the curious. The mouths of the rivers here are bordered with mangles which are loaded with oysters of an excellent taste. These oysters adhere to the branches, and form clusters of the most singular and remarkable figures. At a little distance from those parts which the sea covers, there are found veins of a kind of sand different from that of the shore, and which appears to have experienced a semivitrification. This sand is intermixed with stones of a soft friable nature, interspersed with an infinite number of small fragments of natural glass. Foulepointe lies in latitude 17 deg. 40 min. 20 sec. and longitude 47 deg. 30 min.

Vessels can procure at Foulepointe provisions of every kind in abundance, and at a low price. The markets are well supplied when commerce experiences no check or restraint on the part of the Europeans. Some years ago the people of Foulepointe refused to sell hogs and pigs, because an old man who lived at the distance of four leagues from the port, and who was accounted a sorcerer, had forbidden them. This Omblaïe pretended that they would be threatened with great misfortunes if they did not endeavour to destroy the race of these filthy animals: but this prohibition does not prevent the Europeans from procuring them in the mountains, where they may be found in large herds. The villages in the neighbourhood of Foulepointe are not numerous; they are dispersed here and there on the declivities of little hills, and are defended only by palisades. They are agreeably shaded by a multitude of useful trees, such as the cocoa-nut tree, bamboos, orange and lemon trees, wild vines, and bananas, the fruit of which are so much esteemed by the Europeans: but the most remarkable is the *raven*, a kind of palm-tree known in

Madagascar only, and which is prepared and eaten in the same manner as that of the cabbage-palm. This tree rises to a great height: it is covered with a hard bark, and its wood, which is fibrous and hard, is employed for constructing houses. The walls and partitions of these houses are formed of the ribs of its leaves, which have the solidity of wood and the pliability of leather, and which are fastened together in a very ingenious manner. The leaves serve to roof them, and makes an excellent covering: also of these leaves the Madecasses make their plates, dishes, cups, &c.

The lands belonging to Foulepointe abound with rich pastures and cattle. The river Ongleby, which is deep in some places and in others broad and shallow, produces plenty of fish, and is covered with water-fowl. Piraguas fall up it for more than twenty leagues: however, this river, like all the rest in Madagascar, is filled with monstrous crocodiles. Rochon one day saw an ox dragged away and devoured by one of these monsters, which are a terror even to the islanders.

About a few leagues from Foulepointe, towards the high mountains of *Ambolifimene*, the land begins to rise, and the plains and the valleys are sheltered from the winds by little hills. The heat here is not incommodious, because the country is high and covered with wood: the low lands, which are less cultivated, are more wild and rural. The islanders in this part do not keep their cattle, but suffer them to wander about without a guide, and without shackles. The meadows, which are situated at the bottom of the valleys, are watered by a multitude of streams and rivulets, the windings of which are exceedingly romantic and agreeable. There are yams and rice of different kinds, various sorts of roots, peculiar to this place, with turnips, beans, &c. &c. Towards the close of the year 1768, Rochon brought home a variety of trees, plants, shrubs, &c. from this place.

CHAPTER IV.

Description of Cochinchina—Divided into eleven Provinces—Hue the most beautiful of all—Government of the Place—King's Household—His Wealth—Mode of acquiring it—A strange Tax—The manner of imposing it—Revolutions in consequence thereof—The Activity, Industry, &c. of the Cochinchinese—Their Poverty and Ignorance—Hospitality—Partiality for the Chinese—For Women—Polygamy allowable—Manners of the Women—Punishment for Infidelity—Their Religion, &c.—Mountains of Cochinchina inhabited by Wild Beasts—Value of their Timber—Various Productions of Mountains and Land—Their Trade—Traffic with the Chinese—Fifo the place of greatest Trade—Principal Articles in exchange—Remarks on the Chinese Trade by M. Brunel—The Chinese not allowed to open their Mines—Pretended Motive of the Prohibition.

THE kingdom of Cochinchina is bounded by Tonquin; on the south by Ciampa and Cambodia; on the east by the Indian ocean; and on the west by the kingdom of Laos, and a savage people named the Kemouys. It is about 150 leagues in length, and extends from the eleventh to the twenty-seventh degree of northern latitude. Its greatest breadth does not exceed 12 or 15 leagues. It is divided into eleven provinces, four of which, Dinbat, Quambing, Dinhnoe, and Hus, lie towards the north. The seven southern provinces are Cham, Quangzha, Quinhin, Fouyen, Fanriplanrang, Nanlang, and Bounay. Hue, which contains the royal city, where the kings of Cochinchina reside, is the most beautiful of all these provinces. This capital is situated near a large and beautiful river, which was formerly so deep as to be capable of bearing ships of great burthen; but since a dreadful inundation which lately happened, sand-banks have been formed at its mouth, so that small vessels only can enter it.

This city is intersected by canals after the Chinese manner, in order to facilitate the transportation of merchandize, and for the convenience of

the inhabitants, who are pretty numerous, and who could not endure the great heats of summer without bathing two or three times a day. The king maintains about twelve or fifteen thousand soldiers around his palace, to protect his person as well as to defend his states; and near three hundred neat galleys, which, in time of war, serve to convey troops from one place to another, and in the time of peace to carry the monarch when he travels: for he never quits his palace but in that manner. Those which he uses are extremely beautiful, and even richly gilt: especially those of his women, part of whom always accompany him wherever he goes. His prince also keeps four hundred elephants trained to war; indeed the strength of his kingdom consists in the number of these animals.

In respect to the government of Cochinchina, it is monarchical. The sovereign is absolute master of the whole kingdom, which he governs with the assistance of his four principal ministers, two of whom are called his right hand, and two his left hand. These ministers have the power of appointing to all employments, both civil and military. Each province

vince is under the management of a governor, who both commands the militia and administers justice. The whole militia are divided into two distinct bodies, sea and land soldiers, and both of these are divided into regiments. In the province of Phan-riphanrang the governor has the title of viceroi.

The finest men that can be found in the kingdom compose the king's household. The most beautiful company of these is that which is distinguished by the title of *golden fabres*. The men of this company are picked from all the other companies. They are the strongest, as well as the bravest, and their authority, consequently, greater than the others.

The king of Cochinchina is rich in gold and money, of which he has always several edifices full. His great wealth arises from a tax paid by all his subjects, from the age of 19 to that of 60. This tax is greater or less, according to the strength and situation of each individual. Every three years the governor of each province causes a new list to be made out of all those who, according to law, have attained to the proper age of taxation. To enable him to do this, the chief of every village forms a list with great care, and carries a copy of it to the governor, who orders all those whose names are inserted in it to appear before him on the day appointed. They all strip themselves from head to foot: the mandarin then causes his officers to examine them; and those who are robust and well-proportioned, and who seem to have most strength to labour, are taxed at a higher rate than those who, being feeble and weak, or in a bad state of health, can with difficulty gain a livelihood. This tax, which goes into the king's treasury, is paid according to the strength or situation of each individual, either in gold, money, or rice. Every year, in the seventh month, the taxes of all the provinces are transported to court with great pomp and magnificence. On this occasion there are great rejoicings in the capital for a month, during which the people are employed in feasting, seeing plays, artificial fireworks, and various other entertainments.

The Cochinchinese, compared with the Indians, are brave, active, and industrious. They are fond of truth, and closely adhere to it when they know it. They are, however, poor and ignorant; but extremely polite to each other, and to strangers. They have a great esteem for the Chinese, on account of their learning. The king, above all, is very fond of them; and encourages them to frequent his ports, for the sake of carrying on commerce with them. The Cochinchinese are much addicted to women; and polygamy is allowed amongst them. A man generally has as many wives as he can maintain; and the law gives him great authority over them, as well as over his children. Women convicted of infidelity to their husbands, are condemned to be exposed to the fury of elephants. The women, who are not remarkable for their modesty, go quite naked to the middle; and they publicly bathe, without any ceremony, in the view of every body. In their persons, the Cochinchinese have a great resemblance to the Chinese, except that they are more tawny: their women are beautiful, and very fair. Their dress is the same as that which was used in China before the irruption of the Tartars. The mandarins of letters in Cochinchina have adopted the Japanese dress. They preserve their hair, particularly the women, some of whom have it so long that it reaches to the ground: this they esteem a great beauty.

The religion of this country is similar to that of China. The Christian religion has been lately tolerated, and makes no little progress. Some princes and mandarins of the first rank are Christians. Their learning consists in being able to read Chinese books, and acquiring a knowledge of the morality which they contain. This knowledge qualifies them for becoming mandarins.

Cochinchina is chiefly composed of mountains;

the valleys and plains between are well cultivated. The hills are inhabited only by tygers, elephants, and various other animals. The mountains, though uncultivated, are covered with woods and forests, the timber of which is of great utility, and by which means the Cochinchinese procure rose-wood, ebony, iron-wood, sapan, the cinnamon-tree, calambour, sandal wood, and in general all those kinds of woods which are used in India for constructing houses, barks, and furniture; or from which gum, balm, and perfumes, are extracted.

The mountains also produce honey, wax, rattan, and gamboge: likewise ivory, and even gold, in pretty large quantities. Mines of this metal are very abundant. The land, when cultivated, is extremely fertile, and the people reap every year two crops of rice, which is sold almost for nothing. They abound with all the fruits of India, such as ananas, mangoes, citrons, oranges, and with many others peculiar to itself. They have likewise plenty of pepper; together with arec and betel. They have also abundance of cotton; but they are not acquainted with the art of making it into fine cloth. They cultivate mulberry-trees, upon which they feed silk-worms, and manufacture a kind of coarse silk stuffs. Besides these, they have excellent sugar; but are very ill supplied with vegetable productions. They have a quantity of oxen, but no sheep; however, they are rich in poultry. They have also very good fish, but they never eat it.

The Cochinchinese being rather poor, are but little acquainted with the nature of trade, and are totally ignorant of foreign trade, except with the Chinese, and some time ago with the inhabitants of Japan. The articles they get from China are, stannan, copper, white, red and yellow porcelain, tea, medicines, embroidered silk stuffs, paint, paper gilt and coloured, which is used for sacrifices, and many more. In return for these, they give gold, ivory, sugar-candy, arec, eagle-wood, timber, nutt, pepper, salt-fish, birds' nests, horns of the rhinoceros, gamboge, &c. &c. All business, and contracts of every kind, begin and terminate with presents. Merchandise is paid for in gold, silver, and a kind of coin much used in this country called *caches*. Faifo is the place of greatest trade in Cochinchina, there being about 6000 Chinese, (all rich merchants) who married in the country, and pay tribute to the king. This place contains two churches, one of which belongs to the Portuguese Jesuits, and the other to the Spanish Frans. Cochinchina has several ports, some of which are very convenient.

In respect to the Chinese trade, M. Brunel remarks, that China, of all the Asiatic countries, abounds most in superfluities. A very profitable and extensive trade might be carried on, if the commodities which the place produces were justly considered. There are several rich mines of gold and silver in China; but they are not allowed to be opened, for fear they might occasion too great a circulation of money. The pretended motive for prohibition is, for fear any lives may be lost exploring the mines: of course, brass and copper are the only metals that are current in this place. There are some bankers who carry on a traffic with them, but in business of this kind the Europeans never have any concern. In China, there is no current money, except these *caches* and halfpence; payments are made by weight, and the Chinese are frequently obliged to cut their gold and silver pieces in order to give or receive due weight when they are settling their accounts. They weigh their gold and silver in scales; but for the payment of trifling sums a small steelyard is employed. Seeing that money is not received in China, but by weight, specie of every kind is taken; however, they carefully examine the quality before.

The Chinese weights are the *pic*, the *caty*, and the *tael*. A *pic* is one hundred weight; a *caty* one pound, and a *tael* one ounce.

The name of contains one foot. The Chinese foot ten inches.

Instead of a board, having a at certain distance and five at the top is equal to five. When they have the board: where immediately added to error. This operation most facility.

Green teas do not bohea tea. They are of Nankin, and are The first is known but oftener under the name called *bin tea*, and

The name of the Chinese measure is a *cob*, which contains one foot, eight inches, and three lines. The Chinese foot is called *tebi*, and is divided into ten inches.

Instead of a pen the Chinese calculate with a board, having small wooden balls string upon it, at certain distances, two of which are at the top, and five at the bottom. Each of these balls at the top is equal to five, and those at the bottom to one. When they have cast up a sum, they mark it on the board: when a second is cast up, it is immediately added to it, and generally without any error. This operation is performed with the utmost facility.

Tea grows on a small shrub, the leaves of which are collected twice or thrice every year. Those who collect the leaves three times a-year, begin at the new moon which precedes the vernal equinox, whether it falls in the end of February, or the beginning of March. At that period most of the leaves are perfectly green, and hardly fully expanded; but these small and tender leaves are accounted the best of all; they are scarce, and exceedingly dear. The second crop, or the first for those who collect the leaves only twice a-year, is gathered about the end of March, or the beginning of April. Part of the leaves have then attained to maturity; and though the other part have acquired only half their size, they are both collected without any distinction. The third, or the second for some, and last crop, is more abundant, and is collected about the end of April, or the beginning of May, when the leaves have attained to their full growth, either in size or number. There are some people who neglect the two first crops, and who confine themselves entirely to this; the leaves of which are selected with great care, and distributed into classes according to their size and goodness.

The leaves of the tea shrub are oblong, sharp-pointed, indented on the edges, and of a very beautiful green colour. The flower is composed of five white petals disposed in the form of a rose, and is succeeded by a pod of the size of a silberd, containing two or three small green seeds, which are wrinkled, and have a disagreeable taste. Its root is fibrous, and spreads itself out near the superficies of the ground. This shrub grows equally well in a rich as in a poor soil. It is to be found all over China; but there are certain places where the tea is of a better quality than in other.

The manner of preparing tea is very simple: when the leaves are collected, they are exposed to the steam of boiling water, in order to soften them; and they are then spread out upon metal plates, placed over a moderate fire, where they acquire that shrivelled appearance which they have when brought to Europe. In China there are only two kinds of the tea-shrub; but the Chinese, by their industry, have considerably multiplied each of them.

There are three kinds of bohea tea; the first of which, called common bohea, grows at the bottom of the mountain; the second, called congo, grows at the top; and the third, named fouchong, grows in the middle.

The congo is bohea tea better prepared. The fouchong grows on the middle of the mountain, and being sheltered from the injuries of the weather, acquires a greater degree of fineness than the rest.

Green teas do not grow in the same places as the bohea tea. They are brought from the province of Nankin, and are distinguished into three sorts. The first is known under the name of *songlo tea*, but oftener under that of *green toukay*; the second is called *bin tea*, and the third *hayssuen tea*. There

are also some other kinds; but the greater part of them are unknown, or of little importance to foreigners.

There is another kind of tea in China called *poncul-teba*, to which the Europeans give the name of *tea in balls*. It is procured from the province of *Fle-tebien*, or *Tunnan*, and is a composition or mixture of different teas formed into balls. When it is used, a small quantity of it is cut off, and suffered to infuse a much longer time than common tea. It is not agreeable to the taste, but it has a peculiar virtue of curing disorders of the breast, and facilitating digestion.

China ink is a composition of fish-glue, ox-gall, and lamp-black. When in a liquid state, it is poured into small wooden moulds, where it is suffered to harden. The Chinese consider it as an excellent remedy for spitting of blood.

There are two kinds of Galega. One is a thick plant, that is covered with a hard reddish bark: it is whitish in the inside, and has a bitter taste. The other, which is smaller, is reddish both within and without, and has a stronger and more aromatic taste.

They have two kinds of gum, gumbage and gum-lac. Gumbage is a resinous, gummy juice, of a yellow colour, and is used in medicine: the other, gum-lac, is employed in the composition of Spanish wax.

There is a plant called *cuscuma*, very like ginger. This bears a purple flower; the fruit is like an Indian chestnut, and the seeds, which resemble peas, are fit for eating. They are boiled with meat, and mixed also with rice, &c. This is likewise used in medicine.

Quicksilver is the natural production of several parts of China and the East-Indies. It is found in mountains, white as chalk, and covered with flexible stones. There are two kinds of cinnabar, one natural and the other artificial.

China likewise produces rhubarb: also borax, which is a kind of salt proper for accelerating the effluxion of metals. There is a China root, called *Smilax China*, as large as a child's hand. It is frequently used by the natives instead of rice, and contributes not a little to make them lusty. In the province of Onansi it is used with great success as a medicine. There is a kind of bilious, fermented, and nearly corrupted blood, which is taken from a bag under the belly of a species of roe-buck, and which is distinguished by the appellation of *musk*. *Toutanag* is a white metallic alloy, made of tin and bismuth, hard, compact, and heavy. The mother of pearl comes from Cochinchina and Campaja: they are at first large thick oyster-shells, smooth and silvery within, and of a grey colour on the outside. The Chinese varnish is a composition of a viscous liquor, extracted from different shrubs and small reddish worms.

The above being a COMPLETE History of all the REMARKS, PARTICULARS, &c. relative to Madagascar and the Chinese Trade, as made by ABBE ROCHON and M. BRUNEL, faithfully and accurately translated from their Works, we shall now proceed to give the interesting Journal of LIEUTENANT BIGH'S Voyage in his Majesty's Ship the BOUNTY, for the purpose of conveying the Bread-fruit to the West-Indies; with also the important Narrative of the Mutiny on board the vessel, and the subsequent Voyage of the Captain and the remaining crew in the Ship's boat from TOROA to TIMOR: the whole being united, and written in a more uniform and correct manner than the Public have hitherto witnessed.

A NEW, COMPLETE, AND AUTHENTIC
HISTORY OF
A VOYAGE to the SOUTH-SEAS,

Undertaken by Command of his Majesty, and Performed in 1787, 1788, and 1789,

In His Majesty's Ship the BOUNTY,

UNDER THE COMMAND OF

Lieutenant WILLIAM BLIGH,

For the Purpose of conveying the BREAD-FRUIT-TREE from the SOUTH-SEA-ISLANDS to the WEST-INDIES.

Including the subsequent VOYAGE of Part of the CREW in the SULL'S BOAT, from *Tofoa*, one of the *Friendly Islands*, to *Temor*, a Dutch Settlement in the *East-Indies*.

With a Full and Circumstantial Narrative of the MUTINY on Board the said Ship, and several other Interesting Particulars contained in the JOURNALS and COMMUNICATIONS of Captain BLIGH, Surgeon LEDWARD, Messrs. FRYER, NELSON, &c. &c. more Accurate and Full than any hitherto published.

Which, with the several other VOYAGES and TRAVELS to be included in this Collection, will be Embellished with a Variety of Elegant CHARTS, MAPS, and other COPPER-PLATES, Engraved by Eminent Artists.

INTRODUCTION.

AGREEABLE to the request of several merchants and planters of his majesty's West-India possessions, who were desirous of introducing the bread-fruit-tree into those islands, his majesty was graciously pleased to give his consent, and accordingly a vessel (which was called the *Bounty*) the most fit for the undertaking, was purchased and taken into dock at Deptford, for the purpose of being properly equipped for the intended voyage.

August 16, 1787, the command of the *Bounty* was given to Lieutenant William Bligh. Her burthen was about 215 tons: her length on deck 90 feet 10 inches, and her breadth 24 feet 3 inches. The preparations and fixtures were formed in a manner very commodious, according to a plan proposed by Sir Joseph Banks; however, her masts, being according to the proportion of the navy, they were afterwards shortened at the desire of the captain, who, considering the nature of the voyage, thought them too much for her. Among other alterations the quantity of ballast was lessened; instead of the usual weight (which is 45 tons of iron) the captain ordered only 19 tons to be taken on board; being of opinion that in violent storms of wind vessels are more subject to misfortunes when heavy in their bottom. The captain was also willing to allow for the weight of the stores and provisions.

The ship did not come out of dock till the 3d of September. After this it was found necessary to employ the carpenters and joiners for the ample completion of their business.

The men and officers consisted of one lieutenant, to command, one master, one surgeon, one boatswain and mate, one gunner and mate, one carpenter, mate and crew, two master's mates, two midshipmen, two quarter-master's mates, one sail-maker, one armourer, one corporal, one clerk and steward, and twenty-three seamen; the whole amounting to the number of forty-four. Besides these there were two skilful men appointed to have the management of the plants which were intended to be brought home.

We may look upon this voyage as the first which was designed to reap advantage from the discoveries which had been recently made. The introduction of Bread-fruit into the West-Indies, it was naturally expected, would be of essential benefit to the inhabitants in constituting an article of food; it was therefore intended that the two gardeners, who accompanied them, one of whom, David Nelson, had been employed in a similar manner by Captain Cook in his last voyage, should select as many trees and plants as appeared to them of a proper species and size, to be taken on board the *Bounty*.

Though there have been several accounts of the Bread-fruit, and we shall have occasion to mention it in other succeeding voyages, particularly Cook's and Anson's, yet for the immediate satisfaction and convenience of our readers we shall give an extract from Dampier's account thereof in his Voyage Round the World, performed in 1688.

"The Bread-fruit (as we call it) grows on a large tree as big and high as our largest apple-trees. It has a spreading head, full of branches, and dark leaves. The fruit grows on the boughs like apples: it is as big as a penny-loaf when wheat is at five shillings the bushel: it is of a round shape, and hath a thick tough rind; when the fruit is ripe it is yellow and soft, and the taste is sweet and pleasant. The natives of Guiana use it for bread. They gather it when full grown, while it is green and hard; then they bake it in an oven, which scorches the rind and makes it black; but they scrape off the outward black crust, and there remains a tender thin crust, and the inside is soft, tender, and white, like the crumb of a penny-loaf. There is neither feed nor stone in the inside, but all is of a pure substance like bread. It must be eaten new, for if it is kept above twenty-four hours it grows harsh and choaky; but it is very pleasant before it is too stale. This fruit lasts in season eight months in the year, during which the natives eat no other sort of food of bread kind. There is plenty of this fruit growing on the rest of the Ladrone Islands."

THEY intended to proceed to the Society Islands round Cape Horn, and the season being far advanced, every expedition was used; notwithstanding which, the shipwrights being unable to finish their work before, their sailing was unavoidably postponed.

On the 4th of October, 1787, the pilots came on board, and conducted them down the river. On the 9th they proceeded to Long-Reach, where they took in their stores, arms, &c. also provisions for eighteen months, with several articles for the sake of traffic with the natives of the South-Seas. Several antiseptics were likewise provided.

On the 15th they made for Spithead, but did not arrive there till the 4th of November, on account of the bad weather and cross winds. Having been obliged to anchor at St. Helen's, they worked out of it on the 28th: they failed from Spithead on the 23d of December, and with a fresh easterly wind passed through the Needles, and directed their course down the Channel. A seaman, while furling the maintop-gallant-sail in the afternoon, fell off the yard, but catching hold of the maintop-mast-stay, very providentially saved his life.

They had now a very violent wind, and a heavy sea, which continued till the 29th, except on Christmas-day, when it was moderate. During this severe storm they lost several casks of beer; the spare yards and spars out of the starboard main-chains: the boats were likewise staved, and were with great difficulty secured. The cabin being also filled with water, a great quantity of their bread was damaged, and rendered useless.

On the 5th of January they saw the Island of Teneriffe, bearing W. S. W. half W. about twelve leagues distant. The next day they anchored in 25 fathoms of water, on a coast which inclines towards the W. to the road of Santa-Cruz.

An officer was immediately dispatched to wait on the governor, to inform him of the necessity of putting in to repair the damages which were occasioned by the late storm, and likewise to obtain some refreshments. The governor returned a polite answer, that every thing which the island afforded they should have.

The captain was now visited by the port-master and several officers, whom the governor sent to welcome him on his arrival. When the vessel was moored, Captain Bligh went on shore and paid his personal respects to his excellency.

This being an unfavourable season for refreshments, the captain could only procure wine at any reasonable price. Every thing that was purchased was brought off by the shore-boats, (there being a great surf on the shore) and five shillings a ton was given for water. They had moderate weather during their stay: the winds were N. E. with frequent calms and small rain.

Every thing being now completed, they weighed anchor on the 10th, with a S. E. wind. It being the captain's opinion that unbroken rest contributes

No. 16.

much towards the health and spirits of the crew, he divided his people into three watches, and as it was his intention to proceed to Otaheite without further delay, every body was put upon two-thirds allowance, and the water was ordered to be filtered through drip-stones.

All night they proceeded towards the S. S. W. having the wind at S. E. In the morning they lost sight of land.

The captain now informed his people of the intent of his voyage, and, by way of encouraging them in their duty, promised to promote every one immediately that deserved it.

They had mostly a southerly wind, till the 17th, when it came to the N. E. and continued so till the 25th. The weather now became very wet, and having prepared awnings with hoses, they saved some water. The winds were light and variable, with frequent calms, and the air close and sultry.

The beginning of February brought very heavy rain, by which means all the empty water-casks were nearly filled. The vessel was now aired with fires, and sprinkled with vinegar, and every opportunity taken of washing and drying the people's wet things, and cleaning the ship.

On the 7th the weather became fine, and continued so for some time. They had also a fine S. E. trade-wind. On the 23d the rain returned; by which means they saved about a ton of good water. On the 24th they caught five dolphins, and a shark.

The 2d of March being Sunday, divine service was performed as usual, in the afternoon. Mr. Fletcher Christian, who had the charge of the third watch, was likewise promoted as lieutenant. Nothing material happened for the remainder of the week.

On the 8th they tried for soundings, but could find no bottom with 240 fathoms of line. The boat was sent after a turtle, that was seen floating; when examined, it was found in a putrid state, and several crabs feeding on it. The people were now ordered to put on warm clothes, in order to encounter the cold climate.

On the 10th they had bottom at 23 fathoms; afterwards they could find none with 160 fathoms of line. They stood toward the W. S. W. at night, with a southerly wind, and got into soundings again.

On the 11th a number of large whales were seen, with two spout-holes on the back of the head. One Matthew Quintel, a seaman, received 24 lathes this day, in consequence of a complaint made against him by the waiter, for mutinous and insolent behaviour.

On the 15th they caught a porpoise; on which they made a hearty dinner.

On the 15th their latitude was 43 deg. 6 min. S. and their longitude 58 deg. 42 min. W. They had soundings at 75 fathoms, over a fine greenish sandy bottom. They continued running to the southward, and on the 19th were within 20 leagues of

3 B

Port

Port Desire; however they did not attempt to make for land, as the wind was blowing treth from the N. W. and the weather thick and foggy.

On the 20th the wind suddenly changed to W. S. W. and blew very hard. They now steered to the S. S. E. and discovered the coast of Terra del Fuego, bearing S. E. on the 23d in the morning early. In the forenoon they were off Cape St. Diego. The captain now deemed it prudent, on account of the wind being unfavourable, to go round to the eastward of Staten Land rather than attempt passing through the Straits le Maire. In order to have the wind more regular, and avoid being exposed to the heavy squalls that come off from the land, they did not sail within less than six leagues of the coast.

The captain was almost tempted to put in at New Year's Harbour, which is a very convenient port, as the access thereto is both easy and safe; however the season being far advanced, and the people all in good health, the captain retained his former resolution of proceeding to Otaheite without stopping.

Towards sunset they perceived Cape St. John bearing S. S. E. about six leagues distant: they stood to the southward all night, with W. S. W. and S. W. winds. In the morning Cape St. John bore N. W. about 10 leagues distant.

They had now very unfavourable winds, and disagreeable weather till the 31st, when they were flattered with a N. N. E. wind, which became variable at night, and the next day settled again in the W. and N. W. with the same bad weather as before.

On the 2d of April the wind came round to the S. W. and increased to a very violent gale. The storm was exceedingly great in the morning, and the sea remarkably heavy, attended with severe squalls of hail and sleet, both this and the succeeding day. The vessel, however, lay-to very well under a main and fore-stay-sail.

On the 4th the weather became moderate. A constant fire was now kept in night and day, and one of the watch always attended to dry the people's cloaths. The weather continued favourable till the 9th, when it became almost as bad as before. On the 12th they were obliged to pump the vessel every hour, and the decks being leaky the captain thought it necessary to allot the great cabin (of which little use had been made before) to those people who had uncomfortable births; by such removal the between-decks were less crowded. The hammocks were taken every morning and put in the cabin when the weather was too wet to keep them on deck. The between-decks were continually aired with fires and cleaned. In addition to these misfortunes they found, notwithstanding they exerted their utmost, and kept the most advantageous tacks, they were losing ground.

The next day (13th) the motion of the vessel was so violent that the cook broke one of his ribs by a fall, and another man dislocated his shoulder. The gunner, who had the charge of the watch, was also laid up with the rheumatism; this being the first upon their sick-list since they commenced their voyage.

Birds were exceedingly plenty about the ship, several of which they caught; but as they were all lean, and had a fishy taste, they kept them cooped up, and crammed them with ground corn, which improved them in such a wonderful manner as to render them exceedingly agreeable.

This unexpected supply was very seasonable, as the sheep and poultry were all destroyed by the late storms, and none of the live stock remained except the hogs.

On the 20th they were flattered again with a temporary change in the weather. In the evening the westerly wind returned, and it became as stormy as before.

The captain being now thirty days attempting a

passage to the Society Islands, perceived how vain and impracticable it was to obtain it this way. It was in vain to expect any favourable winds or weather now, as the season was so far advanced; being determined, therefore, to bear away for the Cape of Good Hope, in order to proceed from thence to the eastward round New Holland, on the 22d he ordered the helm to be put a-weather, there being now a strong westerly wind. Seven, besides the gunner, were now confined, chiefly with the rheumatism; the rest of the crew, though much fatigued, were in good health.

The stormy weather still continued, with westerly winds, which convinced the captain of the propriety of his determination.

On the 25th the nearest of the Falkland Islands was about twenty-three leagues, bearing N. 13 deg. W. It was deemed unnecessary and but loss of time to stop at these islands, as their stock of water was sufficient to serve them till they reached the Cape of Good Hope.

On the 9th of May they approached the situation of Tristen da Cunha, their latitude being 37 deg. 7 min. S. and longitude 15 deg. 26 min. W. As it was the captain's wish to make this island, they kept their wind on different tacks during night, that they might be nearly in the same place at daylight in the morning. No land being seen however in the morning, they continued to steer to the eastward, and ran all day, but could not discover the least appearance of land, though the weather was remarkably clear. The captain now changed his course to the northward, and steered N. E. At night the weather became very bad, and Captain Bligh determined to give over his search for Tristen da Cunha (being at this time eastward of the situation ascribed thereto), and resume his course towards the Cape of Good Hope. The weather still continued foul and cloudy.

On the 22d, in the afternoon, they saw Table Mountain, of the Cape of Good Hope. They now steered for False Bay, as at this time of the year it is not deemed safe to ride in Table Bay.

On the 23d they anchored in the outer part, and the next day the vessel was secured in Simon's Bay, which is the inner part of False Bay. When moored, Noah's Ark bore S. 35 deg. E. about three quarters of a mile distant, and the Hospital S. 72 deg. W.

They now saluted the fort, which was returned with an equal complement of guns. Captain Bligh having sent a message to the governor, to apprise him of their arrival, went on shore, and visited a Dutch vessel that was now lying in Table Bay bound for Europe, by whom he sent letters to the Admiralty.

The captain issued immediate directions in order to have their wants supplied. As the vessel was so leaky that they were obliged to pump every hour in their passage from Cape Horn, they proceeded instantly to caulk her; likewise to repair her sails and rigging. They examined also the state of their stores and provisions: the latter, particularly their bread, was very much damaged.

As long as they tarried here, the ship's company were treated with fresh meat, new bread, and vegetables.

Captain Bligh, a short time after his arrival, went over to Cape Town, to wait upon his excellency, M. Vander Graaf, who was so exceedingly polite as to make matters as comfortable and commodious as possible.

Cape Town is very respectable, and well fortified: the greatest attention is paid to military order and discipline. The captain however found provisions much dearer than when he was here before, which was eight years ago.

The captain during his stay, carefully procured what seeds and plants would be of value at Otaheite, and the adjoining islands.

DURING the first week after they left False Bay the winds were variable, attended with much rain, thunder, and lightning. For the most part, the winds were between the S. and W. blowing very strong. During the southerly wind, they saw a great number of oceanic birds, which immediately disappeared when the wind came from the northward.

On the 30th of July they had a strong westerly wind, and were therefore leudding under the fore-sail and close-reefed maintop-sail. A little after noon the wind blew with so much violence, that before they could get the sails clewed up the vessel was almost driven fore-castle under. When they had taken the sails in, they got the vessel to the wind, and eased her very much by lowering the lower yards, and getting the topgallant-masts upon deck. They now lay to till eight the next morning, and then under a reefed fore-sail they bore away; but the sea ran so very high in the afternoon, that it was very unsafe to stand on: accordingly, they brought to the wind again, and remained lying-to all night. A seaman at the steerage was thrown over the wheel, and very much hurt. About noon the weather became moderate, and they bore away again under the reefed fore-sail; running to the eastward, in order to make the Island of St. Paul.

On the 28th, early in the morning, St. Paul was seen, bearing E. by N. about 15 leagues distant. They ran along the S. side, about a league distant from the shore.

The higher parts of this land were apparently covered with verdure; however, it was supposed to be nothing more than moss, which is very common on the tops of rocky islands. The extent of this island is about five miles from E. to W. and three ditto from N. to S. Towards the E. end there was a very remarkable sugar-loaf rock, which was exceedingly high: it is said that there is good anchorage, in 23 fathoms, abreast of this: the E. point bore S. W. by S. It is also reported that there is good fresh water on this island, and a spring which is so hot as to be capable of boiling fish as well as if there was a fire underneath. The latitude is 38 deg. 39 min. S. There were several whales about the shore.

During the forenoon the weather was tolerably fair, but afterwards they had an unfavourable squall.

The center of St. Paul was in latitude 38 deg. 47 min. S. In longitude 77 deg. 39 min. E.

When about three leagues beyond the island, they proceeded towards E. S. E. and for several days saw a great deal of rock-wood.

The month of August commenced with very bad weather, attended with snow and hail. On the 13th they approached Van Dieman's land: when about 30 leagues distance, there was nothing except a seal seen to indicate the nearness of the coast.

On the 19th, in the afternoon, they saw the

rock of Mewstone. This lies near the S. W. Cape of Van Dieman's Land, bearing N. E. about six leagues distant. They had now a strong wind from the N. W. After they had passed this rock, they were sheltered from a very heavy sea, which ran from the westward. They were abreast the S. cape at night, and saw several fires. They had now a light variable wind.

The rock of Mewstone is very high and flatly. It lies five leagues to the S. E. of the S. W. cape; and in Captain Bligh's opinion all vessels bound this way should endeavour to make this rock. In latitude it is 43 deg. 47 min. To the northward, between this and the main, are several islands; among these is another high rock, resembling the Mewstone, bearing N. by W. from the latter: there is also a high mountain on the main land, N. N. E. from the Mewstone; which, in this direction, appeared notched like a cock's comb, but when seen from the eastward, is then quite round, to all appearance.

On the 20th they attempted to put into Adventure Bay, but found it impracticable, owing to the baffling winds. On the 21st, early in the morning, they anchored in the outer port, and weighed anchor at sun-rise: at noon they anchored again, in a more comfortable situation in the bay, and moored the vessel. Penguin Island bore N. 57 deg. and half E. about two miles distant. Cape Frederick Henry N. 23 deg. E. and the mouth of the Lagoon S. 16 deg. E.

They had for the most part westerly winds, attended with very heavy weather, in their passage from the Cape of Good Hope. They were not, however, molested with fogs, which are very common here in the summer months, as may be seen in our former voyages. It was Capt. Bligh's opinion, after he had passed St. Paul's Island, that there was a westerly current, the vessel being every day to the westward of the reckoning.

As soon as the ship was moored, the captain went in a boat to examine the place, and seek the most convenient spot to wood and water at: this he found to be at the west end of the beach, the surf being less there than at any other part of the bay, though it was very considerable every where. The water, which was a collection from the rains, and in a gully about 60 yards from the beach, was very good. They hauled the seine with very little success, having only taken a few small flounders and some flat-headed fish, which are called foxes. There was no appearance of the place being lately inhabited.

The captain returned on board in the evening, and the next morning dispatched a party on shore to procure wood and water. On account of the surf they were obliged to raft off the wood in bundles to the boat.

On the 23d their wooding and watering business was

was very much impeded by the increase of the surf. Mr. Nelson, the botanist, went to explore the place; he saw a tree, in a very good condition, which was thirty three feet and a half broad and proportionably high. He also picked up a male opossum, which had died, or been recently killed, though there was no appearance of a wound. The tail was fourteen inches, and from that to the ears fourteen inches more. The forest trees were now shedding their bark; several of them were one hundred and fifty feet high. Those which were cut down were quite decayed. There are several other kinds of firm good wood, but neither these nor the forest trees fit for masts.

They had greater success with their hooks and lines than by hauling the seine, having caught several good rock cod on board the vessel. A quantity of eagles were seen, and some herons with beautiful plumages; also a number of parroquets. There were some wild ducks in the lake, and a few oyster-catchers, gulls, &c. about the beach.

The captain now sent a party to dig a saw-pit, and to saw trees into planks, which they were in great want of. During this week the winds were very moderate, but the weather unsettled. On the 29th there was a strong breeze from the S. W. with thunder, lightning and rain. They had now very great success in fishing.

Several of the crew were taken ill by eating mussels; it was the captain's opinion that they had eat too many. They found some spider-crabs, the males of which were good, but the females, which abounded, very bad. They discovered on the trunk of a tree, which was decayed, the signatures of "A. D. 1773." Some of the fruit-trees which the captain brought from the Cape of Good Hope were planted on the east-side of the bay, as Mr. Nelson deemed that the more eligible spot, being freer from wood than any other spot, clear of underwood, and less liable to be consumed by the fires which are made by the natives. They planted three fine young apple-trees, nine vines, six plantain-trees, a number of orange and lemon seed, cherry-stones, plumb, peach, pumpkins, apricot-stones, apple and pear kernels, with two kinds of Indian corn. They likewise planted on a flat near the watering-place, which seemed a promising situation, four potatoes, cabbage-roots, onions, &c.

On the 1st of September they discovered, for the first time, signs of the place being inhabited. On the low land near Cape Frederick Henry they saw some fires, and by the assistance of glasses they discovered the natives at day-light.

Captain Bligh now remained with those parties who were employed in preparing the wood and water, in expectation of a visit from the natives; but, disappointed in his hopes, he was determined on visiting them. They accordingly set out in a boat towards Cape Frederick Henry, where they arrived about eleven o'clock. As it was impossible to land, the boat came to a grapple, where they waited near an hour in hopes of seeing the natives, as they had passed several fires. To the captain's great astonishment, Mr. Nelson's assistant (Brown) came out of the wood. This man had been wandering in search of plants, and told the captain that he had seen some of the natives.

He had met, he said, an old man, a young woman, and about three children. On their first interview, the old man was very much alarmed; but upon Brown's giving him a pen-knife, he became quite easy and familiar. The young woman, however, he sent away, though apparently against her inclination. Brown also saw some wretched wigwams, in which were nothing but a few kangaroo skins spread on the ground, and a basket composed of rushes.

A short time after this they heard the natives voices, and about twenty persons appeared from

the wood. The men went round to some rocks, where the boat could get nearer to the shore: the women remained behind. The captain endeavoured to approach these rocks, but could not come nearer to them than about twenty yards; he was consequently obliged to make a bundle of what presents he intended for them, and throw it to shore. In the mean time these people made a great noise, holding their arms over their heads: they spoke in such a quick manner, that not a word they uttered could be distinguished. The captain showed them the presents before he tied them up, but they would not untie the bundle till they thought the captain was going away. When, therefore, the boat made a motion of departure, they opened the parcel, and taking out the different articles, distributed them about, and placed them on their heads. The captain now returned to them, upon which they instantly dropped the things, not seeming to take any notice of what was given them. Some more beads and nails were thrown on shore in the same manner: the captain made signs to them to come to his vessel, while they were making signs to him to land: but as this was impracticable, the captain left them, entertaining hopes of seeing them again at the watering-place.

The colour of these natives was a dull black, and the skin of their shoulders and breast was scarified. They were rather short, and painted black, so that they appeared all alike footy. One among them was painted with red ocher: they had a very quick sight, and their agility was surprising. When the presents were thrown to them, they caught them with wonderful dexterity: they ran with great facility over the rocks. They were quite naked, and while they were discoursing at their heels, with their knees close into their arm-pits.

The captain, in his return to the vessel, landed at the point of the harbour, near Penguin Island.

Several scorpions, centipedes, and a number of black ants, (about an inch long) were found among the wood that they had cut.

On the 2d they were making preparations for sailing the next day; but were prevented on the 3d by a calm. The captain was in great hopes of seeing some of the natives again, as they behaved so friendly and familiar on their first interview: but they never repeated their visit, though they still continued to keep fires upon the low land to the northward during night.

On the 4th they weighed anchor, and sailed out of Adventure Bay with a pleasant breeze at N. W. At 12 o'clock the southernmost parts of Main's Isles bore N. 52 deg. E. about five leagues distant. Penguin Island S. 86 deg. W. and Cape Frederick Henry N. 65 deg. W. They had now soundings at 57 fathoms, over a fine sandy bottom.

Adventure Bay is a very safe and convenient place for any number of vessels to take in wood and water during the summer months; but as the southerly winds are very strong in winter, it is exceedingly troublesome to land, particularly on account of the surf which is in all parts of the shore. The soundings are very regular: there are some patches of weed near the W. shore; but there being depths from five to nine fathoms, there is not the least danger.

As soon as they were clear of the land they steered towards E. S. E. in order to pass to the southward of New Zealand, where the captain was in hopes of meeting with constant westerly winds; contrary, however, to his expectations the winds were variable, in general blowing strongly from the eastward. The weather was likewise foul and misty.

On the 14th they altered their course and steered to the northward of east. They frequently saw rockweed, which, it was supposed, was drifted from New Zealand. Being exposed to a long swell which

which came from rougher.

which came from the N. E. they found the sea much rougher.

On the 19th, about break of day, they saw a cluster of small rocky islands, bearing E. by N. about four leagues distant. There was not the least indication of the nearness of land. As the wind was at N. E. they could not possibly approach these islands nearer than three leagues, while passing to the southward of them. The weather was likewise so foul, that they had not a distinct view. Their extent appeared to be about three miles and a half, from E. to W. and about half a league from N. to S.

Their number, great and small, were thirteen: there were some white spots like patches of snow, but no verdure to be seen. The westernmost of these is the largest: they are high enough to be discovered at seven leagues distance. When the captain was ten miles distant from the nearest of them, and the easternmost bore N. he found bottom at 75 fathoms, over a fine white sand. When they had run six leagues further to the E. S. E. they found bottom 104 fathoms, over a fine brimstone-coloured sand. These islands are in latitude 47 deg. 44 min. S. In longitude 179 deg. 7 min. E. They saw some penguins, and a white kind of gull with a forked tail, when in sight of these islands.

On the 21st they saw a seal, a quantity of albatrosses, and some rock-weed. They could find no bottom with 230 fathoms of line.

On the 2d of October it was quite calm. A number of small blubbers were seen about the vessel; some of them were taken up in a bucket and examined, but no difference could be seen between these and the common blubbers in the West-Indies. In the night the sea frequently appeared to be covered over with luminous spots, occasioned by the quantities of these blubbers.

On the 3d they steered more to the northward. Being now well to the eastward of the Society Islands, they saw some whales, a seal, and a number of oceanic birds. Several albatrosses were caught, which the crew fattened in the manner they had done before.

On the 9th James Valentine, a very able seaman, of a seeming good constitution, died in the night of an asthmatic complaint. He was taken slightly ill on his arrival at Adventure Bay, where he was bled and thought out of all danger: the arm in which he was bled afterwards became inflamed, a hollow cough ensued, and continued till his death.

On the 13th they saw several birds, and the next day some fish. From this to the 19th they had light variable winds, with intervening calms. This day they had a good trade wind.

From this to the 25th nothing material occurred. Early in the morning they saw the island Mairea, bearing S. W. by W. quarter W. about six miles distant, in latitude 17 deg. 50 min. S. longitude 112 deg. 24 min. E. This island is round and high, and its greatest extent is about three miles. The natives chiefly inhabit the S. side, as they find but little support in the north side, which is quite steep from the top down to the sea. While steering close in to the northward of the E. end, they perceived a few habitations, particularly a house remarkably neat, on a small eminence, delightfully situated in a grove of cocoa-nut trees.

They were followed by about a dozen natives

along shore, who were holding up to view large pieces of cloth; but the surf on the shore being very high, it was impossible to have any communication with them. There are two very remarkable rocks near the E. end, and a reef which runs about half a league off to the eastward.

They now proceeded to the westward, and about six in the evening they saw Otaheite, bearing W. quarter S. The captain desired the surgeon to examine all the men previous to their arrival at Otaheite, where, as they intended to stay some time, it was naturally expected that the sailors would at intervals be connected with the female natives. The surgeon reported them to be all unblemished, and free from any venereal complaint.

Having run about 25 leagues from Maitea, they brought-to till day-light on the 26th; when they discovered Point Venus, bearing S. W. by W. about four leagues distant. On their approach they were visited by a great number of canoes. As soon as they were satisfied in some enquiries which they thought proper to make, they assembled in vast numbers, notwithstanding every effort was used to prevent it, for they not only incommoded the men, but were working the vessel in, and the deck was so full in about a quarter of an hour that the captain could scarcely find his own people. As they were prevented, by light variable winds, from finding a commodious berth for the vessel, they were obliged in the forenoon to anchor in the outer part of Matavai Bay, in 13 fathoms.

As soon as they were anchored the number of visitors increased, but no person of any consequence as yet appeared. There were several inferior chiefs, who made the captain a present of some hogs, and received some presents in return. Bread-fruit was now very scarce, but they were supplied with great abundance of cocoa-nuts.

Among the several enquiries which these natives made relative to their former acquaintance, they were particularly curious about the death of Capt. Cook. They likewise asked after Sir Joseph Banks. They understood that Capt. Cook was dead, but were ignorant by what means; and the ship's company were particularly commanded by Capt. Bligh not to mention, nor even hint at the circumstances. It seems they were informed of Capt. Cook's death by a vessel which had been there, some said about four months ago, and others three months; and which remained at Otaheite for about one month. They said that Lieut. Watts, who had been there before in the Resolution with Capt. Cook, was in this vessel.

Capt. Bligh was informed by these people, that Omai, and both the New Zealand boys that had been left with him, were dead. They all agreed they had a natural death. Otoo, the chief of Matavai, was absent at another part of the island. A message was dispatched to him, to inform him of the Bounty's arrival. The natives appeared exceedingly good-humoured and friendly, nor did they betray the least inclination to dishonesty.

The captain was so exceedingly crowded, that he was obliged to postpone the removal of the ship till the next day, being unwilling to affront his visitors by compelling them to retire before they were inclined. They continued all day with the captain on board.

CHAPTER III.

EARLY in the morning, on the 27th, before the natives had time to repeat their visit, they weighed anchor and worked further into the bay, having found a more commodious birth within a mile's distance from the shore: they re-anchored in seven fathoms water; Point Venus bearing N. 16 deg. E. the W. point of Onetree Hill, S. W. by S. and the point of the reef, N. 37 deg. W.

They were this day visited by several chiefs of consequence, who expressed great happiness on seeing Captain Bligh, particularly Otow, the father of Otow, and his brother Oreepyah; likewise another chief of Matavai, whose name was Poeno. The captain gave presents to all these chiefs.

Two messengers now arrived from Otow to acquaint the captain that this chief was making the utmost expedition to pay him a visit. He also sent the captain, by these messengers, a present of a small pig and a young plantain-tree. By means of all these presents, and what was otherwise procured, the vessel was so well stocked that every person had as much as he could possibly make use of.

When the vessel was moored the captain went on shore with Poeno, the chief of Matavai, followed by several of the natives. The chief conducted Captain Bligh to the place where they had fixed their tents in 1777, requesting he would now make the same use of the ground. They now crossed over the beach and entered a most delightful walk shaded with bread fruit-trees, which led to the chief's house. Here was Poeno's wife and his sister-in-law, who were at work staining a piece of cloth red. They behaved very polite to the captain, requesting he would sit down on a mat (which was immediately spread for that purpose) and partake of some refreshments, which were accordingly prepared. Several strangers also attended, to congratulate the captain on his arrival; they behaved with the greatest politeness and good-nature. The multitude of natives which assembled round the house was so great that the captain shortly became exceedingly incommoded by the consequent heat: this being perceived they accordingly drew back and pressed as little as possible. Among the throng the captain perceived a man who had lost his arm, just above the elbow; this amputation appeared to have been performed with great skill, as the stump seemed admirably covered, and the cure quite perfect.

The captain during his stay in the chief's house made several enquiries, but received very unsatisfactory answers to all his questions. After staying about an hour the captain rose in order to take his leave, but was detained by the women, who very politely came to him with a mat and a fine piece of cloth, in which they dressed him after their own fashion. Thus attired, the mistress of the house and her sister took him each by the hand, and accompanied him as far as the water-side; here they took an affectionate leave of him, promising they would shortly return his visit.

This island was very much improved since the captain was here before. It was now enriched with shaddocks, which fruit he introduced in it: they had also young goats, capsicoms, pumpkins, &c. which, with other articles, they offered for sale.

On the captain's return to the vessel there was an altercation on board, occasioned by one of the natives attempting to steal a tin pot. Oreepyah, when informed of the cause, was exceedingly enraged, and so provoked with the thief, that doubtless he would have killed him had he not fortunately made his escape. He obliged all the natives to leave the vessel, and begged the captain, when another thief was detected, that he would instantly order him to be tied up and give him a due quantity of lashes.

The picture of Captain Cook had been brought on board by a man in the forenoon to have it repaired, the frame thereof being broken, and the picture damaged in the back ground. This picture

had been left with Otow in 1777, who was desired, whenever any English came, to show it to the captain, and it would be acknowledged as a token of great friendship and respect.

In the afternoon the captain was visited by Whydooah, who was Otow's youngest brother. This man, notwithstanding his youth, seemed quite stupified by his immoderate use of the yava. All the male visitors left the vessel about sun-set.

Early on the 28th the captain received word that Otow was arrived; upon this he immediately dispatched a boat, with Mr. Christian, to conduct him to the vessel. He came, attended by great numbers, and was very happy at seeing the captain; Otow now introduced his wife to the captain, and, as their kissing consists of joining noses instead of lips, Captain Bligh saluted her after the Otaheite fashion. Otow had changed his name to Tinah, as the name of Otow, with the title of Earee Rahe, had, according to the custom of their country, devolved to his eldest son, who as yet was not of age. At the request of Tinah, the captain and he exchanged names; this being a token of friendship among the chiefs.

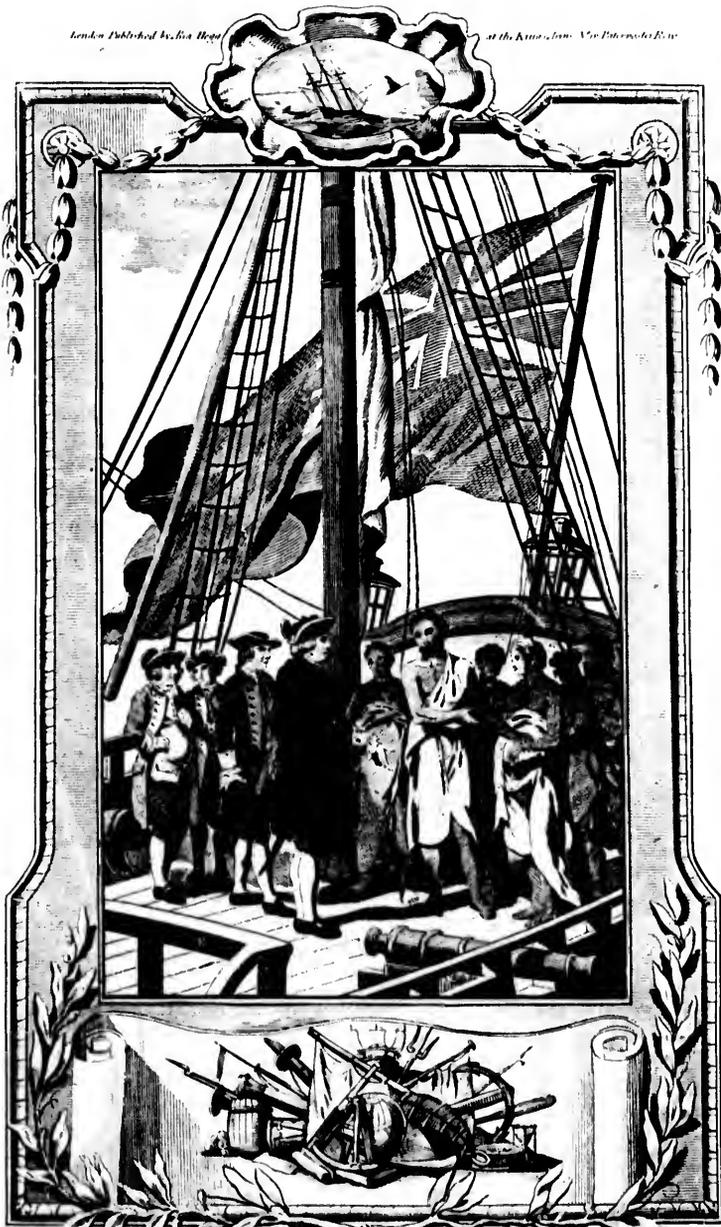

Tinah's wife was called Iddeah; she had a companion, who was dressed with a large quantity of cloth in the form of a hoop. Upon their introduction to the captain, this was taken off and presented to him, with some bread-fruit, a large hog, &c.

Captain Bligh now took his visitors into the cabin, and in return for their kindness gave them some hatchets, files, small adzes, gimblets, saws, looking-glasses, two shirts, red feathers, &c. &c. He gave Iddeah some ear-rings, necklaces, beads, &c. and as she expressed an inclination for iron, two quantities thereof were made out for her and her husband. They seemed extremely well satisfied with their present, and much conversation passed with one another concerning them. In order to prove their high satisfaction with the reception they met, they were determined on spending the whole day with the captain, requesting he would show them the vessel, and the cabin wherein he slept. The captain immediately indulged them in their wishes, though contrary to his own inclination; for, according to his apprehensions, they took a fancy to so many things that they got nearly double the presents that were intended them. Some of the great guns were also fired at the request of Tinah; the natives were very much surprised at the great distance which the shot fell at, and expressed their admiration with loud shouts.

Besides Tinah and Iddeah his wife, several other chiefs dined with the captain, particularly Otow, Tinah's father, and two of his brothers, Oreepyah and Whydooah, &c. &c. Tinah is about thirty-five years of age, near if not more than six feet four inches in height, and proportionably stout. His wife, Iddeah, is likewise taller than the generality of women at Otaheite; she was exceedingly pleasant, and possessed of a fine animated countenance. Tinah, during dinner, had one of his attendants with him in order to feed him; this being customary among superior chiefs. The women are not allowed to eat in the presence of the men; Iddeah therefore dined with some of her companions in private. They all eat very hearty, and seemed to relish their English entertainment.

In order to prevent any kind of disturbance while procuring the provisions necessary for the vessel, Mr. Peckover, the gunner, was appointed by the captain to make whatever bargains seemed the best with the natives. Matters being thus arranged, provisions were procured in great plenty. Some hogs were bought which weighed 200lb. several were purchased for salting. They likewise purchased several goats at a very easy rate.

As the English and natives were very intimate, there was scarce a man on board the vessel that was not chosen by some one or other as a friend. Several

of the chiefs were very much disappointed that there was no portrait-painter among the ship's crew, particularly Tinah, who was very anxious for the likeness of some of his family. Tinah continued with the captain all the afternoon; during which he eat four times of roast pork, though he had made a very hearty dinner. Being at a great loss how to secure the presents which the captain had given him, and on which he had placed no little value, he requested Captain Bligh would put them up safe for him; but the captain giving him a key of a locker in his cabin, which he resigned to him for his own use, Tinah was perfectly easy.

The captain had sent Meil, Nelson and Brown to seek for plants; previous to this strict orders were given to all the company to keep the object of this voyage a secret from the natives, for fear they might be tempted to enhance the value of the bread-fruit plants, and occasion other difficulties. Nelson and his assistant, on their return, reported that they had the greatest hopes of being successful in their mission. They met with two fine maddock trees, which were planted by Nelson in 1777: they were full of fruit, which were not as yet ripe.

The next day, being the 29th, the captain returned Tinah's visit, which was expected. He found him with his wife, and three children who were related to him, in a small shed about a quarter of a mile to the eastward of Matawai Point. The captain had a numerous train, for every one he met followed him: these people, however, were as polite as possible; for though anxious to satisfy their curiosity, still they carefully avoided pressing, and were exceedingly good-natured.

The captain made Tinah another present, and distributed various little articles among the other chiefs. He likewise gave beads to several little children who were in arms: this, however, occasioned much droll artifice, as several boys and girls of near 12 years of age were brought to the captain in arms, in order to receive his favours, which created much diversion, and the captain soon got rid of all the things he brought on shore.

The captain likewise visited Poeno, and a relation of his, Moannah; these being men of great consequence in the island, and with whom the captain thought it his interest to be on good terms. The captain made them some valuable presents, and denominated the situation a very good one for a garden, planted some cucumber, fennel, melon seeds, &c. These chiefs were informed, that several other seeds should be sown there, for their future service; with which they seemed very much pleased, especially as they were made to understand that these seeds would grow into trees, and produce them fruit.

The captain returned to the vessel to dinner, accompanied by Moannah. In the afternoon they went back to Poeno's, and planted some more seeds. While the captain was thus employed, an invitation came from Tinah to him, requesting he would meet him at his brother Oreepyah's house, which was near the beach. The captain immediately complied with his request, and found a great concourse of people here, who, on his entrance, made way for him to sit down by Tinah. The crowd, which was now pressing forward, was desired to retire, and a fine piece of cloth, about two yards wide, and forty ditto long, was spread upon the ground, while Oreepyah brought out another piece of cloth, which he put over the captain's shoulders and round his waist, according to the manner in which the chiefs are dressed. There were now two large hogs, upwards of 200 lb. each, and a quantity of baked bread-fruit and cocoa-nuts, placed before the captain as a present: after this he was requested to walk from one end to the other of the cloth, which was spread on the ground; during which they hailed him a friend with loud shouts of joy. When this ceremony was over, Tinah requested the captain would send the things that were given him on board, and which

completely filled the boat. Capt. Bligh, therefore, waited till she came back from the vessel, in order to bring the chiefs on board with him, and make them a return for their politeness. As soon, therefore, as they entered the ship, the captain presented Tinah with gifts superior to any that were yet made, and which Tinah distributed among the other chiefs, not being himself sole proprietor of what had been given to the captain, several having joined in furnishing those articles which composed their present, particularly Oreepyah, Moannah, and Poeno. Tinah, who undertook the division of the things, took good care of himself; notwithstanding, every one was so well pleased with his distribution, that there was not the least murmur heard.

On the 30th Tinah, and his lady Iddeah, visited the captain again on board. The captain knowing that they preferred pork to tea, ordered large dishes of roast and boiled pork for their breakfast; and large dishes were indeed necessary, as their attendants were very numerous.

The arrival of the Bounty being now publicly known, the captain had more visitors to-day than ever. Several strangers from the most remote parts of the country came to pay their respects. It being therefore necessary, for the sake of furnishing additional presents, to cut some hooks and thimbles out of the blocks, the captain thought proper during this operation to clear the vessel of all but the chiefs and their attendants. A presumptuous fellow, however, in opposition to these orders, attacked the centinel: upon which the captain pretended to be very angry, that they might see the dangerous consequence of opposing a man on his duty. The offender made his escape, while the rest appeared very sorry for the cause, and alarmed at the captain's assumed rage.

The captain was visited to-day by two chiefs of great consequence, Earees of the districts of Iteeah and Atahhooroo, and whose names were Marremarre and Poohaitah Otee his son. Tinah appeared very jealous during the captain's attention to these Earees. They took their leave about sunset, and were conveyed to shore by one of the ship's boats, which is looked upon as a peculiar favour, and always preferred to any of their own canoes. There was a race rowed between their five-oared cutter and one of their double canoes with four paddles, at the request of these chiefs. The exertions on both sides were very great, but the cutter was the winner. While she was returning to the vessel, Oreepyah stopped and detained her till a large piece of cloth which he sent for was brought, and which he himself fastened to the boat-hook, to be borne as a trophy of their victory.

On the 31st Tinah sent Moannah on board the Bounty, to inform the captain that he was afraid to see him, as he knew there were some things stolen from the vessel, which he had sent his people in search of, in hopes to recover them. The captain, however, sent a boat with a kind invitation to Tinah and his friends to come on board, being unwilling that any misdemeanor of others should cause a coolness between them. Before this the captain apprehended that there was something wrong, for they were not visited as before by any canoes; and on diligently examining the vessel, they discovered that the buoy of the best bower anchor was stolen. Tinah accepted the captain's invitation, and returned in the boat with several of his friends. They were as free as ever with the captain, and under no kind of apprehensions. Oreepyah had gone in search of the buoy, which prevented him from going with the captain to Oparre this morning, as they had previously agreed upon. At noon, however, the captain resolved upon repairing to Oparre, under pretence of visiting Oroo, son of Tinah, who was the Earee Rahie, and lived with the rest of Tinah's children at Oparre; but, in fact, the captain was induced to this excursion for the sake of exploring the

the place, and seeing if Nelson could possibly procure any plants there. The captain took with him a very handsome present for young Otoo, as he understood him to be a person of the highest rank in the island. Moannah was to have been of the party, but he thought it advisable to stay behind and prevent his countrymen from doing any more mischief. The captain was only accompanied by Tinah, Iddeah, and Poeno.

When they had sailed about half an hour they arrived at Oparre, which is a district next to the westward of Matavai. During this time Tinah entertained the captain with an account of the different circumstances since he was with them before. He told him that about five years after Captain Cook's departure, the inhabitants of the island Eimes, joined with those of Attahooras (a district of Otaheite), made a descent on Oparre: that he and several of his people, having made a fruitless resistance, were obliged to take refuge in the mountains, while the enemy secured their property, destroying that which they could not take away. At this time some of the cattle and sheep which had been left them by Captain Cook were killed and eaten, and the rest removed to Eimes. The cows, he added, had by this time produced eight calves, and the ewes ten young ones. The ducks and geese had likewise increased, but the turkeys and peacocks did not breed at all. The enemy had likewise destroyed some very fine habitations, and slight sheds which were in this part of Otaheite, in 1777,* and plundered them of several large canoes.

In the course of this conversation, Tinah understanding that the captain intended to visit some of the neighbouring islands, endeavoured to dissuade him from his purpose, assuring him, that if he went further, every thing would be stolen from him, but if he remained in Matavai, he should be supplied plentifully with every thing that he wanted, declaring that they were all his friends, and friends to King George. Captain Bligh then told him that the valuable presents which he had delivered to him were from the King; upon which Tinah declared that he would send something in return, and while enumerating the different articles which he intended to collect for his Majesty, he happened to mention the bread-fruit: the captain took this favourable opportunity of slightly hinting that bread-fruit, he knew, would be the most acceptable. Tinah expressed great joy in being able to send what would be acceptable, and promised that a quantity of bread-fruit trees should be put on board for King George.

When they arrived at Oparre they were surrounded by a great throng of natives. The captain expecting to have met Oreepyah there, enquired for him, but was informed that he had not as yet returned from seeking the things which were stolen. The party, however, went under a shed belonging to Oreepyah, to wait for him, and in a short time he arrived, having brought with him one of the hoops of the bouy, and an iron scraper. The captain returned him his sincere thanks for the great trouble he had taken, assuring him he was perfectly satisfied, for it was still understood that Captain Bligh was offended at the theft. Some short time after, they took leave of Oreepyah, and proceeded on their visit to young Otoo.

After they had walked a few minutes, the captain was abruptly stopped by Tinah, who informed him

* As this subject will be repeated more fully in Captain Cook's voyage, we have therefore only slightly touched upon the considerable changes which have happened since that time. Our readers will have a more copious and entertaining account of the several districts of Otaheite in the interesting narration of Captain Cook's, which, as it must be occasionally referred to, will be found very necessary to compare with this.

that no person could be admitted into the presence of his son who was covered above the shoulders; as an example, he took off his own upper garments, requesting the captain to acquiesce with the ceremony. Captain Bligh readily complied, assuring him he had no objection to pay him as much homage as he would his own king; taking therefore off his hat, Tinah threw a piece of cloth round his shoulders, and they proceeded. Having now gone a mile further towards the hills, through an agreeable shade of bread-fruit trees, they stopped at the side of a small serpentine river, where they were within view of a house, on the opposite side, about fifty yards distance. The captain was now desired by Tinah to address his son by the title of Too Earee Rahie. Notice being given of their arrival, the young king was brought out on an inan's shoulders from the house, clothed in a fine piece of cloth, and two of Tinah's children were brought in the same manner. The captain, according to his instructions, addressed him by his title, declaring that he was his friend, that he hated thieves, and that he was from Britannia. The presents which had been brought by the captain was divided into three parts, one of which was delivered to a messenger who attended for that purpose, for the Earee Rahie, with the ceremonious declaration mentioned above. The two other parts were in the same manner presented to the two children.

Captain Bligh wanted to go over the river to the young king, (as in his present station he could not see him distinctly), but this was contrary to their custom. He returned therefore with Tinah to Oreepyah's house.

The Too Earee Rahie that thus maintained so much state, was only six years old. Tinah had four children by his wife. The two others which were brought out with the Earee Rahie, were a girl and a boy, their names Terrance Oroah and Terrecapanooia. The fourth, which was an infant girl, called Tahanydooah, the captain did not see.

As soon as they had reached the place where Tinah had first stopped the captain to apprise him of the manner in which it was necessary he should appear before his son, he now stopped him again, and taking off the cloth which he had thrown over his shoulders, requested he would put on his hat and be covered as before.

The captain having expressed a desire to see more of the country, Tinah conducted him back by another way. Having entered the boundary of the king's land, which was signified by the trunk of a tree, carved in a very rude manner, Tinah desired the captain again to take off his hat, while the rest of the company uncovered their shoulders, this being a mark of respect due to the king, rigidly observed by all who walk on this path.

Having reached a house which belonged to Tinah, they stopped here to rest themselves, during which time they were entertained by a concert of one drum and three flutes, and singing by four men. After the entertainment, the captain gave some presents to the performers, and they now repaired to a house belonging to Oreepyah, to whom the captain paid his compliments, as it was expected, these people being very punctilious in returning visits.

Tinah now made the captain a present of a fine large hog, and some cocoa nuts, after which he introduced an uncle of his to him, who was almost blind with age, and much tattooed; his name was Mowworoah: the captain made this chief a present, and then Tinah, Poeno, Oreepyah and their wives repaired to his boat, while a great number of people assembled on the beach to see them go off. By the desire of Tinah, the captain fired a pocket pistol, which threw the gazing crowd into a great fright; but when they saw no harm was done, they began to shout and make a great noise.

Among the captain's own people who attended him in this expedition was Nelson, whom he brought

with him on purpose could. He had no seek after plants, natives who were still he was convinced this place abounded at Matavai.

They returned to the place which time moored again in sight of Matavai. Tinah and the captain, with several English vessels, a large ship, and a small boat, wished might be seen.

Having fixed a vessel nearer the shore, the captain moored again in sight of Matavai.

This day Captain Bligh returned to the place where he had made near the shore, and the captain, with several English vessels, a large ship, and a small boat, wished might be seen.

A grand entertainment was given by Tinah, dancing by three called Heiva. The captain, with several English vessels, a large ship, and a small boat, wished might be seen.

On the 2d of November, the captain, with several English vessels, a large ship, and a small boat, wished might be seen.

The captain, with several English vessels, a large ship, and a small boat, wished might be seen.

* The ceremony of the presentation of the presents was explained in our future voyage.

with him on purpose of making what discoveries he could. He had not however much opportunity to seek after plants, on account of the multitude of natives who were continually pressing forwards, but still he was convinced by the little he had seen, that this place abounded equally as much in plants as at Matavai.

They returned to the ship in about an hour, during which time much conversation passed between Tinah and the captain respecting the magnitude of English vessels, and the various articles which Tinah wished might be sent to Otaheite in one of these large ships.

Having fixed a tent on Point Venus, they moored the vessel nearer thereto on the 1st of November, and moored again in six fathoms, the point bearing N. N. E.

This day Captain Bligh had Tinah and several chiefs to dinner: after which he went on shore with his company, and made a visit to Tinah's father and son. The captain likewise visited the garden which he had made near Poeno's house, and found every thing had been taken care of according to his directions.

A grand entertainment was now prepared for the captain by Tinah, which consisted of singing and dancing by three men and a young girl: it was called Heiva. When the performance was over, Capt. Bligh returned to his vessel.

On the 2d of November, as soon as it was daylight, the captain dispatched Mr. Christian with a party to erect a tent. Afterwards, attended by Tinah, Moannah, and Poeno, he went himself and fixed a boundary, within which none of the natives were to enter without permission, due notice thereof having been given to them by the chiefs. These tents were entirely devoted for the reception of the plants which were to be lodged therein. The captain had acted with so much prudence and caution throughout, that the chiefs, instead of thinking they were conferring a favour, by carrying the plants to the party herein appointed to receive them, (which were nine persons, including Messrs. Nelson and Brown) thought, on the contrary, that they were under an obligation by having them accepted.

This day the captain had no visitors, except Tinah, who dined with him, and whom he was occasionally obliged to feed, and lift the wine to his mouth, as the attendants whose occupation it was had been dismissed, and the chief was so accustomed to this indulgence, that he was absolutely incapable of feeding himself. The wives of the Earees are sometimes subject to this duty after the birth of a child, but when they perform a ceremony which is called Oammo, they are then exempt from it for a limited time.

The captain was invited by Tinah after dinner to accompany him with a present of provisions to a party of the Arrecoys, in which ceremony he was made the principal person. This offering was made by the side of a river, near the banks of which the captain had frequently walked before: on the present occasion, however, a canoe was provided for him, which was dragged by eight men. As soon as they arrived at the landing-place, they saw a large quantity of bread-fruit, likewise a number of hogs ready dressed, and a quantity of cloth. There was a man who sat at some distance, that was called a principal Arreoy: he was addressed by one of those who attended Tinah, standing on his canoe, in an oration composed of some short sentences, which continued for the space of a quarter of an hour, a huc being previously made by the crowd. The captain was now desired to hold one end of the cloth, while five men, one of whom had a sucking pig, and the rest a basket of bread-fruit, were desired

to follow him. Thus they proceeded to the Arreoy, before whom they laid down their offering. Tinah dictated to the captain several words, which he repeated; the meaning of which he did not understand. The imperfect manner in which the captain repeated those words was the occasion of no little mirth. This ceremony being over, the captain was introduced to another Arreoy, who had come from Ulietea; upon which the same business commenced again; and Tinah understanding that the captain had children in his own country, directed him to make another offering on their account. Accordingly the captain presented three baskets of bread-fruit, a small pig, and another piece of cloth, which were remaining, to the Arreoy; whom he first addressed, and who attended to all his orations, as dictated by Tinah, with profound attention and the utmost gravity, receiving the articles presented more as his right than as a gift.

The Arrecoys, it seems, are highly respected, being, as the captain judges, a society of men who have been distinguished for their merit. They are permitted to carry on their amours to a great length, but all their children are destroyed. They are generally warriors, and therefore in times of danger they are restricted in their amours, for fear of debilitating themselves. The natives declare that the society of Arrecoys is absolutely necessary, in order to prevent too great a multiplication of people: notwithstanding which, none of the lower class of the inhabitants are admitted into this society. As an instance of the cruelty of this institution, Teppahoo, of the district of Tetaha, and Tettechowdeah his wife, and Otoo's sister, were obliged to sacrifice their children, to the number of eight, as soon as born.

Mr. Peckover, the gunner, according to the captain's orders, now carried on a trade for provisions in the tent; and Moannah resided there, in order to prevent his countrymen from committing any further depredations or occasioning disturbances.

Tinah, Oreepyah, Poeno, and Moannah, continually dined with the captain, who had frequently other guests from the adjoining districts.

Much perplexity is occasioned by the variety of names which one chief lays claim to. The captain was very often embarrassed in knowing by what title he should address his guests: indeed it often happens that a person is unacquainted with the subject of conversation by the name which he is mentioned, though he is well known to him by person.

The captain showed Tinah the preparations which were making for conveying the bread-fruit plants which he promised King George on board. Tinah was exceedingly happy, and told the captain that he expected King George would send him in return the different articles which he enumerated.

In the afternoon of the 3d of November the gudgeon of the rudder belonging to the large cutter was stolen, in such a sly and dexterous manner as to escape the notice of the man who was appointed to take care of her. Previous to this several petty thefts were committed, owing to the carelessness and inattention of the captain's people; and as these kind of accidents are very often likely to interrupt harmony and peace, the captain thought it proper to punish the boat-keeper, in the presence of the natives, for his negligence; accordingly, he was ordered a dozen lashes. Tinah, and several chiefs who were present, supplicated very hard for his forgiveness. The women appeared exceedingly sorry. His punishment, no doubt, had the desired effect among the natives.

The captain this day received from the natives two different kinds of roots, which grow like yams: one of them is a sweet root, called Etee; it abounds very much in the Friendly Islands, and is eaten as a sweetmeat: the other is like the Tyah in the West-Indies, and is called Appah. He likewise got a fruit, very juicy and refreshing, called Ayyah, which

* The ceremony of this offering will be more fully explained in our future voyages.

is the jambo of Batavia; these are eaten in large quantities, and are as large as middle sized apples. There were also some avocs, a very high flavoured delicious fruit, but which as yet were not ripe.

On the 4th, Tinah introduced to the captain a particular acquaintance of his, who was a chief from the island Ulitea, whose name was Tootaha. The captain understanding that he was a priest, and possessed of great knowledge, desired Tinah to take whatever articles he thought worthy his acceptance, and such was the modesty of Tinah, that he was not near as generous as the captain would have been. The captain was likewise visited to day by Oedidee, who had been at sea with Captain Cook, in 1773 and 1774. The little English, which this man had learned during that expedition, he had almost forgot.

On the 5th, they began to take up plants, which they were enabled to do with greater satisfaction to themselves, by the assistance of the natives, who understood better how to prune and take them up. The weather was now variable, there were frequent showers of rain, attended with lightning.

As the curiosity of the natives was now in a great measure satisfied, the captain and his people were not so much incommoded by numbers as before; besides, the badness of the weather obliged them for the most part to be at home. The chiefs of Matavai, Oparre, and some other islands, were the captain's present visitors. The natives dropped following them whenever they went out to walk, so that they now enjoyed their excursions, and whatever house they visited, met therein a warm reception, without any kind of officiousness which their curiosity at first occasioned. The people of Otahite are the most easy in their manners, they are exceedingly hospitable and well behaved, devoid of both formality and forwardness. They have no notion of that ceremonious politeness of pressing their guests to partake of more refreshment; when they say they are satisfied, or prolong their visits when they have an inclination to depart; they expect that their visitors will eat as much, and stay as long as they like, therefore they despise that teasing kind of ceremony which is so common in our civilized countries.

The most polite are chiefly the most rude,
Whose boundless hospitality is such,
They make their friends to eat and drink too much,
And then so over-good, so very kind,
Will force our stay, when to depart inclin'd:
But here a different picture let us view,
The test of friendship!—friendship the most true!
'Tis from the heart that they their friends invite,
Without formality they are polite;
Their native friendship, which they cannot feign,
Is always open, unofficious, plain,
And how much better than good manners seem,
When every guest, whate'er he wills, may do.

As the chiefs were frequently expressing a wish to see some of the English ladies, the captain disposed for mirth, permitted the ship's barber, who suggested the joke, to dress up a painted head, which he brought from London, like those exhibited in hair-dressers shops, and to which he added a body, which he skillfully contrived of a stick and a quantity of cloth. The deception being complete, and the feature of the face very regularly made, the captain reported that there was an English lady on board. All the chiefs and their attendants were very curious, and the quarter-deck was immediately cleared, in order that the might make her appearance. The figure being handed up the ladder, and conducted to the after part of the deck with great ceremony, the natives all shouted for joy at seeing the beautiful English woman; several requested to know of the captain if she was his wife. An old female native approached the sham lady with great reverence, and laid a present of cloth and bread-fruit at her feet; but, when she discovered the trick, she was exceed-

ingly mortified, and ran away with her presents; to the great diversion of Tinah and the rest of his countrymen, who enjoyed the joke. These people were very curious about the English ladies, and having made many enquiries respecting their colour, features, &c. strictly enjoined the captain, whenever he came again, to bring his vessel full of them.

Among the several articles which the natives brought the captain, there was some very fine sugar cane, of about six inches round. Tinah having understood that they made their sugar thereof, was very desirous to know by what method; the natives were particularly partial to the sugar loaf, a piece of which always constituted part of the English presents.

Nelson had now completed a large garden near the tents; wherein the different kinds of seeds which they collected at the Cape of Good Hope were sown. There were likewise some fruit stones and almonds dispersed among the chiefs, with rose seed, as they particularly delight in the odour of roses, and the women were fond of ornamenting themselves therewith; instructions were also given them how to manage them.

The weather was still variable, and on the 6th, they had westerly winds, with much rain. The captain was very much hurt to find his garden-ground had been greatly abused, and what added not a little to his mortification, was the indifference of the chiefs, who did not seem concerned about it. The captain gave Poeno (as the place of his residence was very favourable for agriculture) two orange plants, a fig tree, two pine-apple plants, and some vines, which were all in a flourishing state.

About a hundred plants were got in pots at the tents, and all promised well; the cabin was likewise prepared for their reception.

The captain having received from Oreepyah, Tinah's brother, a present of a large hog, and a quantity of bread-fruit, which presents, by the bye, were of greater expense than when they were purchased. Tinah, in a whisper, begged the captain to return them, and not to accept any more of his presents. This request proceeded from his selfish disposition, as he grudged Oreepyah the gifts, which of course he would receive from the captain in return. However, Oreepyah being a man of very great consequence and spirit, the captain did not pay any attention to this advice.

On the 8th they had collected about 252 plants in their tents, where, for their further security, the guard was increased, though without any immediate cause, as the natives still behaved with the greatest decorum.

The captain, during his meals, was always obliged to keep a cominal at the hatchway, in order to prevent his being incommoded with too much company, nor was this by any means disagreeable to the chiefs, who, on the contrary, seemed pleased with the restriction, and esteemed it a high compliment whenever any one of their acquaintance was admitted. This day Tinah requested leave to introduce a priest as he called him; the captain immediately acquiesced, and his presence occasioned some religious conversation, during which it appeared that they believed in a great God, whom they called Oro, and others of less consequence.

This day the weather became fine again, and they were of course visited by both friends and strangers. Tinah acquainted the captain that some performers, who were strollers about the country, were now waiting for their attendance, as there was a writing match (or in their own phrase a *heiva*) to be performed for their entertainment on shore. Accordingly the captain, with several of his visitors, set off about a quarter of a mile from their tents, where they perceived a great number of people in a circle. As soon as the company had taken their seats, a dancing heiva began, which was performed by two girls and four men: this lasted half an hour, and consisted of those wanton gestures and motions

which we have described. When the dance ended, the cloth to be brought to the captain, were desired, and the remaining others, they carried off them. Several ment.

This being done, the place soon became a party of the natives from the women thought worth it; a little better than she was attacked, opposed and held fast her clothe along the ground took notice of her, and his assistance; upon and the young women party.

Soon after a ring were so numerous to restore order lay one hand upon the arm at they strike a very is kept hollow, created at a considerable frequently, and becomes exceeding breaking, bleeds found from so many of people in a wo general challenge; agree to a trial, ward, joining the fingers. They advantage; at length by the hair, and a fore either receives formed any thing and, as they were called longer than also were parted.

They likewise bull and a cow all be separated, the bull be and the cow at the dist therefore refused on Tottaha, which was bu able preserve the breed Having drank their v on shore: the captain v his tent, and continued during which time the

which we have described in our former voyages. When the dance ended, Tinah ordered a long piece of cloth to be brought; his wife Iddeah, and the captain, were desired to hold the two first corners, and the remaining part being supported by many others, they carried it to the performers, and gave it them. Several other chiefs made a like payment.

This being done, the wrestling began, and the place soon became a scene of confusion and noise. A party of the Arreos also began to exercise a privilege, which it seems they are allowed, of taking from the women such of their clothes as they thought worth it; so that some of them were left little better than naked. One young woman, who was attacked, opposed them with all her strength, and held fast her cloth, though they almost dragged her along the ground. Observing that the captain took notice of her, she held out her hand, and begged his assistance: upon this the captain interposed, and the young woman kept possession of her property.

Soon after a ring was again made, but the wrestlers were so numerous within it, that it was impossible to restore order. "In these challenges, they lay one hand upon their breast, and on the bending of the arm at the elbow, with the other hand, they strike a very smart blow, which, as the hand is kept hollow, creates a sound that may be heard at a considerable distance; and this they do so frequently, and with such force, that the flesh becomes exceedingly bruised, and, the skin breaking, bleeds considerably. At this time the sound from so many resembled that of a number of people in a wood felling trees. This is the general challenge; but when any two combatants agree to a trial, they present their hands towards, joining them only by the extremities of the fingers. They begin by watching to take an advantage; at length they close, seize each other by the hair, and are most commonly parted before either receives a fall. Only one couple performed any thing like the part of good wrestlers; and, as they were an equal match, this conflict lasted longer than any of the others; but they also were parted.

"Iddeah was the general umpire, and the managed with so much address as to prevent any quarrelling, and there was no murmuring at her decisions. As her person was large, she was very conspicuous in the circle. Tinah took no part in the management. Upon the whole, this performance exhibited greater strength than skill or dexterity."

Tinah had been for some time talking of visiting the island of Tethuroa, which lies eight or ten leagues N. from Otaheite, to fetch his mother; and on the 11th proposed to the captain to sail there in his vessel: however he seemed to feel no great disappointment at the captain's not complying with his desire. Tethuroa, he said, was the property of his family. He likewise mentioned an island called Roo-opow, the situation of which he described to be to the eastward of Otaheite four or five days sail, and that there were large animals upon it with eight legs. The truth of this account he very strenuously insisted upon, and wished the captain to go thither with him. Captain Bligh was at a loss to know whether or not Tinah himself gave credit to this whimsical and fabulous account; for they are so frequently inclined to be merry, that sometimes it is hard to tell whether they are in jest or earnest.

Their ideas of geography are very simple: they believe the world to be a fixed plane, of great extent; and that the sun, moon, and stars, are all in motion round it. As they think the English great travellers, and capable of doing any thing, the captain has frequently been asked if he had not been as far as the sun and moon.

Tinah mentioned another island, called Tappuhoi, situated likewise to the eastward, the inhabitants of which were said to be all warriors, and that the people of Otaheite did not dare to go there. He likewise added, that very lately a canoe from Tappuhoi was at the island of Maitea; that as soon as they landed they began to fight with the people of Maitea, who killed them all, except a young lad, and a woman, who have since been at Otaheite. The captain saw the boy Tinah alluded to, but who was incapable of giving any satisfactory account of the business.

CHAPTER IV.

Further Anecdotes of the Natives—The Captain taken ill—His Expedition to Tettaha—Sees a beautiful Heifer—Remarks—He leaves the Place—Bread-Fruit Plants increase—A scandalous Report—The Heifer that was at Tettaha purchased—A Visit from Tinah's Mother—Her Nephew—Tinah and Oreepyah at variance—A Theft—Tempestuous Weather—Preparations for sailing—Death of the Surgeon—Mr. Ledward succeeds him—Two Harbours explored—An Excursion—Remarks—Vessel removed to Toorah Harbour—Three Men belonging to the Captain desert—Recovered—Various anecdotes.

ON the 13th the captain had a large company to dinner. It being always customary to drink his Majesty's health as soon as the cloth was removed, the captain's guests became so fond both of the wine and the toast, that they would frequently insist upon its being drank in the middle of their dinner, in an overthrowing bumper. This day they were remarkably cheerful, and entertained the captain with various anecdotes; among which they gave an account of the vines which were planted on the island Hucheine, and elsewhere, by Captain Cook. They likewise remarked, that there was a bull and a cow alive at Otaheite, but that they were separated, the bull being at a place called Itteah, and the cow at the district of Tettaha. The captain therefore refused on the first opportunity to go to Tettaha, which was but a little way off, and if possible preserve the breed of these useful animals.

Having drank their wine after dinner, they went on shore: the captain was taken exceedingly ill at his tent, and continued in much pain near an hour, during which time the natives appeared very much

concerned, and administered all the relief that they possibly could. He found himself quite recovered on his return to the vessel.

The next morning (the 14th) several of the natives, and even strangers, were enquiring after his health. This day, the weather being remarkably fine, the captain determined on going to Tettaha, and looking for the cow which had been mentioned the preceding day: accordingly, he invited Tinah, Oreepyah, and Voceno, to accompany him, who all complied, and they set off together after sun-rise in the launch. This place is about four leagues from Point Venus. When they had arrived, a messenger was dispatched by Tinah to the chief of the district, whose name was Teppahoo, to inform him of Capt. Bligh's arrival. This chief did not make his appearance, but sent to know whether the captain came to see the cow or take it away. In answer to this a message was returned, that he came only to see it. The captain was now desired to proceed further along shore to the westward, in the boat. Mean while Tinah purchased some fish of the fish-

ing canoes, which he eats raw with salt water for sauce. As soon as they were landed, they were surrounded by a great number of people, and presently after Tippahoo the chief appeared. The captain and Oreepyah accompanied him about a quarter of a mile, when he was shown a most beautiful heifer; the captain was exceedingly hurt that this fine animal and the bull should be separated, especially as he had flared in the toil and trouble of bringing them over. There being nothing of further consequence to attract the notice of the captain, he departed from this place, which is very inferior to Matavai in point of luxuriance and cultivation. The captain previous to his departure made the chief a present, and invited him on board the *Bounty*. All the time Tinah remained in the boat, there was no kind of respect paid him, nor even a cocoa-nut or a bread-fruit given him, without purchasing it. Being obliged to row against the wind, on their return they stopped to refresh at Oparre, and about eight o'clock they arrived to the vessel; the captain's company ended with him to supper.

On the 17th the captain went on shore to examine the state of the bread-fruit plant. During his absence Tippahoo, the chief of Teataha come on board, and left a hog as a present for the captain. Their collection of bread-fruit plants still continued increasing.

Tinah still continued the captain's constant visiter, and this day having left the table sooner than usual, his brother Oreepyah and Oedidee informed the captain that Tinah's wife Iddeah was gracious with her husband's servant, being the very person who always fed Tinah at dinner. They also hinted, that instead of its being without Tinah's knowledge it was by his desire. The captain was unwilling to believe this scandalous report, but not only these, but the rest of the company agreed in the story.

The captain had lately remarked that the place in his cabin which he had resigned to Tinah in order to keep his presents secure, instead of being increased with the additional favours which were daily bestowed, seemed on the contrary to be diminishing; at length he discovered, that Iddeah kept another hoard in the cabin, which she was by degrees filling with the articles which belonged to her husband; apprehending, that if Tinah's locker was once full, the captain would give no more presents. At Tinah's request the carpenters were ordered by the captain to make a chest large enough for himself and wife to sleep on.

On the 21st a message came from Tippahoo to the captain to inform him, that the heifer was brought to Matavai; the captain went immediately on shore and purchased it, with a quantity of sugar-loaf, pair of scullars, shirt, hatchet, spike nail, gimblet, file, knife, &c. The chief seemed highly pleased with his bargain; and the captain sent the heifer to Pocono's residence where there was plenty of grass.

The captain was invited in the afternoon to another entertainment, which he describes in the following manner:

"Twelve men were divided into four ranks with two women in the front, behind them all stood a priest, who delivered a speech which lasted about ten minutes, and which was listened to with the utmost attention. During this, the picture of Captain Cook (which had been brought for that purpose) was placed by Captain Bligh's side. As soon as the priest had finished his oration, a piece of white cloth was wrapt round the picture, and another piece round the captain. The priest then began another speech, but of a shorter duration, and an old man placed a piece of plaited cocoa-nut leaf at Captain Bligh's feet, another piece at Tinah's, and another under the picture. After this the dancing began, which was carried on in the same stile as before."

In order to please the natives, the captain ordered the head of the ship which bore the figure of a woman, well carved, to be painted in sprightly colours. The natives admired the figure prodigiously, which did not a little increase their curiosity to see English ladies.

Elder brothers, it appeared, are allowed to be connected with the wives of their younger brothers; however, if any person, who does not belong to the family, aims at such intimacy, it is immediately refuted.

Tinah, at the request of the captain, had a light shed, which was supported by posts erected this day on shore at Point Venus, where the captain designed to make his observations.

On the 24th Tinah being about to leave the captain for a few days, he treated him with a turtle for his dinner, which he caught upon the reefs. Tinah requested the captain would send for his mother in the morning, who was just arrived from the Island of Tethuoa, and take care of her till he returned. This the captain readily promised to do, and the next day the boat was dispatched to Oparre, which returned in the afternoon with Oberree-roah (the name of Tinah's mother) and two female attendants. This woman being very old and corpulent, it was with the greatest difficulty they could assist her into the vessel. As soon as she was on board she sat down, and clasping the captain's knees in her arms, expressed great satisfaction at this interview by a large flood of tears. Her attendants now produced three pieces of cloth, a large hog, some cocoa nuts, plantains, bread-fruit, &c. as a present. This poor woman being fatigued with her journey was desirous of remaining on board all night. The captain immediately gave orders that every necessary accommodation should be prepared. This woman had with her a favourite cat, that was the kitten of one which was given to her by Captain Cook. She entertained the captain with all the different occurrences, which happened to her since Captain Cook's departure from Otaheite.

On the 25th this old lady being desirous to go on shore, the captain made her a present of several articles, which she declined accepting at present, as it was not then convenient to take them with her.

Only Moosnah and Pocono dined with the captain to-day. They hinted, that Tinah and his brother Oreepyah were at variance, and it was suspected that when the vessel was gone they would have a battle. The captain for some time perceived that they were cool to each other. They had disagreed, it seems, about their wives, and though Captain Bligh frequently endeavoured to reconcile them, still they retained their anger and animosity.

The chief of Uheeta, nephew of the old lady, arrived this afternoon in a canoe, and brought with him an ewe, but which was in a very bad condition. The captain having purchased it at a very easy rate, sent it to Pocono's residence to be kept with the heifer.

On the 28th Tinah and his wife returned to Matavai, and were very glad to see the captain. They brought a present of a hog, and some bread-fruit.

On the 29th the captain was very sorry to find that most of the melons, cucumbers, &c. in the gardens, near the tents were destroyed by insects; this soil, being for the greatest part sandy, was very unfavourable to the rest of the seeds. The captain therefore fixed upon another spot, at a greater distance from the sea side, where several kinds of seed were sown according to his desire.

In the night the rudder of one of the boats was stolen from the tents. Tinah hearing of the theft, was afraid to see the captain, who came on shore the 31st of December; however, as the loss was not very great, Captain Bligh sent to inform him, that he was angry with no one, but the person who committed

committed the theft. Accordingly, the chief with several others came to the captain's tents, and promised to use their utmost exertions, in order to discover the thief, and get the rudder restored. Indeed, as the natives had behaved hitherto remarkably honest, the captain suspected that some of those who had arrived from the neighbouring islands were guilty of the present crime.

The youngest brother of Tinah, Whydooh, who was esteemed a very great warrior, was constantly a visitor of the captain's. Tinah was now about building for himself a house, and the captain had promised that his carpenters should assist him.

On the 5th about the afternoon they had a fierce breeze from the N. W. which occasioned the sea to break very high across the Dolphin Bank. The weather had been very unsettled for some time, but at night it turned out remarkably bad. Such a heavy broken sea now came into the bay, that they were compelled to batten all the hatchways down, and every man was obliged to stay upon deck, though he was wet to the skin with the violent rain: the vessel rolled in a terrible manner.

On the 6th, the wind increased in such a manner, that it was impossible to put to sea; accordingly they struck yards and top-masts, and depended entirely on their anchors. The torrents of rain felled the river to such a degree, that the ground on which their tents stood became an island; they were forced to cut a passage for the river through a part of the beach, at a distance from the tents, for the sake of preserving their bread-fruit plants.

Notwithstanding the sea broke very high on the beach, Tinah, his wife, and Moannah, ventured out in a canoe to see the captain, and very fortunately made their way good through the surf. They had each a paddle, which they managed with most surprising skill. As soon as they got on board they embraced the captain, and seemed very apprehensive for the safety of the vessel. At noon the sea became more moderate, though the wind still continued the same. Iddeah departed at sun-set, but her husband remained with the captain all night.

On the 7th the wind began to shift, between the N. and N. W. and was abated so considerably, that the captain was no longer alarmed at their situation. This day, about noon, Iddeah returned to the vessel, and brought with her a very fine hog, with a quantity of bread-fruit and cocoa-nuts. Some short time she and her husband left the vessel, having made the captain promise, that he would be on shore in the morning, if the weather cleared up to visit their relations, who, they assured them, were exceedingly uneasy on their account.

The captain was likewise visited by Poeno and his wife; this woman was so exceedingly rejoiced at seeing the captain, that before he could prevent her, her face was instantaneously covered with blood, by the severe manner in which she beat herself with a shark's tooth, which is always their custom on occasions of either joy or grief. The captain, as soon as possible, checked her fury, and her agitation seemed to subside with the drying up of her blood. Poeno declared that the captain should live with him if any thing happened the vessel, and that they would hourly employ themselves in cutting down trees to enable him to build another.

The captain perceiving it unsafe to stay much longer in Matavai Bay, ordered immediate preparations to be made for sailing.

On the 8th the weather having cleared up, the captain went on shore, and met with a very warm reception from Oberree-roah, and his other friends.

The captain was very happy to find that the plants which had been covered from the spray, off the sea, sustained not the least damage during this bad weather; some were striking out young shoots, others were not as yet budding; by Nelson's advice, the captain refrained some days from having them taken on board, this botanist imagining that the

No

plants might be produced from their roots; there were some boxes accordingly filled with them.

On the 9th they were assisted by several natives in hauling the launch on shore to be repaired, during which, a fine youth, about ten years of age, was thrown down, and unfortunately a roller that was placed under the boat went over him. At this time the surgeon was very ill, Captain Bligh therefore dispatched a messenger for Mr. Ledward, his assistant, who, on his arrival, examined the boy, and gave no little satisfaction by pronouncing his limbs all perfectly secure, and that he had suffered no material injury.

The surgeon, who had been for some time confined to his cabin, became now so very bad, that Mr. Ledward recommended he should be moved to some place, where he might have more air; this however was productive of no good effect, as he died in about an hour after. Mr. Ledward, the assistant, was now appointed surgeon by the captain.

The next day, it being the captain's will to have the deceased interred on shore, Tinah, to whom it was mentioned, immediately repaired to inform his father of the captain's desire, it being necessary, he said, to ask his consent. Having returned in a short time, he told the captain it was perfectly agreeable, and the spot of ground which he requested, should also be granted for the burial-place. Accordingly the captain, accompanied with Tinah, went on shore, taking two men with him to dig a grave. When they had reached the place, they found that the natives had already begun it. The grave was marked out very exactly at East and West. In the afternoon, about four o'clock, the body was conveyed to the place of interment. Several of the natives, with all the chiefs attended, and behaved with most profound decorum during the funeral service.

On the twelfth the captain went in his boat to examine the harbours about Oparre: he found two formed by the reefs, the westernmost, which is called by the natives Taowne Harbour, though it seems the most convenient for sailing in and out, does not appear sufficiently sheltered from a N. W. wind or sea. There is a remarkable mountain, which the natives called Wowry, and which bears S. S. E. from the entrance, by which this harbour may be distinguished. It is about a league and a half distant from Point Venus. The easternmost is called Toahroah Harbour. This is small but secure: the chief objection to this harbour is the difficulty of getting out with the common trade-wind. The entrance, which is on the east side, being no more than about a hundred yards wide, and the depth without, inconvenient for warping. On the south side of the entrance is a Morai, the reef side is to be kept on board, and a look-out to be kept from aloft, it being a much better place than the deck to perceive the shoal water. This harbour is about three miles distant from Point Venus.

On the 14th, it being Sunday, several of the principal natives attended divine service: they all behaved exceedingly well except one, when the women began to laugh at their general responses; however, upon the captain's looking seriously, they were ashamed, and did it no more. They seemed surprised after the service, that there was *no offering* to be made.

As the weather, which had been for some days fair, appeared now quite settled, the captain still continued in *Matavai Bay*, there being no apprehension of danger.

On the 17th, the captain, accompanied by Nelson, and his old friend Moannah, took an excursion into the country. This journey, which was on the low land, was exceedingly pleasant; the land was covered with bread-fruit and cocoa-nuts, and there were several rows of neat houses, where there was a multitude of children. They proceeded along the valley, where they also found a number of houses, and several bread-fruit trees, which were much smaller than those they had seen before. They

• 3 E

likewise

likewise met with other plantations of yams, taro, cloth plant, yava, &c. They were frequently interrupted in their walk by a river, which had several crofs windings, and over which they were obliged frequently to be carried on men's shoulders. When they arrived at a Morai, they perceived a great assembly of natives. The priests, it seems, were performing their devotions. During the ceremony sixteen men were sitting on their heels, and there was a pole in the front, covered with a plaited cocoa-nut branch. A number of small pieces of the same leaf plaited, and which they call habyree, were placed before each of these men, who had likewise a piece thereof round their wrists.

The chief priest repeated a prayer with a loud voice, while all the rest joined in the response. This being done, they arose, and carried each a habyree, which they placed at the foot of the pole, and then returned to prayer, which continued till all the habyree were disposed of in the same manner; upon which the ceremony concluded. There was likewise an offering of plantains and bread-fruit placed near the pole, which was left for the Eatua.

While thus employed in prayer a roasted hog had been prepared for them, of which the captain and his company were invited to partake; but Captain Bligh, willing to make the most of his time before the sun became too warm, declined this invitation, and Moannah gave directions to have some refreshments ready for them when they returned.

They proceeded up the valley, which became gradually narrow, and had advanced a considerable way beyond all the houses and plantations, when they were suddenly stopped by a cascade, that fell into the river from a height of above two hundred feet: at this time the fall was not great, but during the heavy rains it must be considerable. The natives look upon this as one of their curiosities. The fall of water is the least wonderful part; the cliff, over which it comes, is perpendicular, forming an appearance as if supported by square pillars of stone, and with a regularity that is surprising. Underneath is a pool eight or nine feet deep, into which the water falls; and in this place all the natives, from some religious idea, make it a rule to bathe once in their lives.

There is a close connection between the hills here, which are exceedingly well covered with wood. From the craggy appearance of the road, the Captain avoided the mountain, which is called Peeah Roah, and about seven miles from the road by which they went.

They dined in the house of an old acquaintance of Nelson's, where a young pig was provided for them, on which they made a very hearty meal. It was for this man that they had, in 1777, planted the two shaddock plants, which they had brought from the Friendly Islands, and which were now very fine trees, and full of fruit.

They do not take much pains in their plantations, except with the yava and the cloth-plant, both of which they are careful to keep clear of weeds. Many of the plantations of the cloth-plant were fenced with stone, and surrounded with a ditch. The yams and plantains are mostly on the higher grounds.

When dinner was over they returned to the ship. The captain was much delighted, in this walk, with the number of children that he saw in every part of the country: they are very handsome, sprightly, and full of antic tricks. They have many diversions that are common with the boys in England; such as flying kites, swinging, cats cradle, dancing or jumping in a rope, wrestling, and walking upon stilts.

On the 19th they had much rain, and a long swell set into the bay. They had a fierce breeze from the E. and E. S. E. The captain had not yet

determined, whether, on leaving Matavai Bay, he would go to the Island Eimeo, or to the harbour of Toahroah near Oparre: this uncertainty made Tinah, and the rest of his friends, very uneasy; and they appeared much distressed on his desiring them, this afternoon, to send on board all the things which they wished to have repaired by the forge, as soon as possible, that what they wanted might be done before the vessel left Matavai, which he told them would be in a few days. They very earnestly intreated him to stay one month longer. This the captain said was impossible, and asked Tinah if he would not go with him to Eimeo; but he said, that, notwithstanding his protection, he was certain the Eimeo people would watch for an opportunity to kill him. Tinah remained on board with the captain all night, but Iddeah his wife went on shore, and returned early in the morning, bringing with her some axes, and other things, which by her desire were immediately repaired by the forge.

On the 20th the captain went on shore, and found Otow, Oberree-roah, Moannah, and several others, in great tribulation at the thoughts that they were to soon to leave them. All the people of Matavai were much concerned at his intention of going to Eimeo, and took every opportunity to prejudice him against the people of that island: but as their motive was obvious, the captain did not attend to their dissuasions; however, their apparent affection for him, and regret for his departure, made so great an impression, that the next day he sent the master in the launch to re-examine the depth of water between this bay and Toahroah Harbour. The master returned in the evening, and acquainted the captain, that he found a good bottom, with not less than sixteen fathoms depth all the way. The harbour of Toahroah appeared every way safe, Captain Bligh determined to go the vessel there as speedily as possible, and having published his intention, the natives were full of joy and happiness on the occasion.

The plants, which were 774 pots, all in a healthy state, were taken on board. Whenever any plant had an unfavourable appearance, it was replaced by another. The number of those rejected was 320 of which not one in ten but was found to be growing at the root.

"The natives," according to Captain Bligh's information, "reckon eight kinds of the bread-fruit tree, each of which they distinguish by a different name: Patceah, Eroroo, Awanna, Mi-re, Ompowerro, Appeere, Rowdeeah. The leaf of the Patceah, Mi-re, and Rowdeeah, differs from the rest; the Mi-re is more sinuated; the Rowdeeah has a large broad leaf, not at all sinuated. The difference of the fruit is principally in the Patceah and Rowdeeah. In the first, the fruit is rather larger and more of an oblong form; in the last, it is round and not above half the size of the others. The captain enquired if plants could be produced from the seed, and was told they could not, but that they must be taken from the root. The plants are best collected after wet weather, at which time the earth balls round the roots, and they are not liable to suffer by being moved. About the end of February they do not bear the bread-fruit, as the fruit is not then in perfection; but there is no part of the year in which the trees are entirely bare."

Early on the 25th they unmoored, and the vessel went in the launch to Oparre, with directions that after landing them, the launch should meet the vessel in the entrance of Toahroah Harbour, show the safest part of the channel. They got the ship under sail about half past ten, and ran under top-sails: when they were near the house it fell calm, and the ship shot past her. They immediately let the anchor go, but, to their great surprise, found the ship going on and forwards. She

run on for a day, the time. This as they were obliged to get the ship about cables swept a row without much delay.

On the 26th the captain congratulated the natives, and Tinah conducted the vessel to the beach, and made use of, and his purposes. Tinah desired the captain to address and presenting readily assented to the proposition. They then spent a short time in the company of the natives, who all made the chief a short pig, which he made reply. Tinah then sent three several tin small pigs, and the captain told him was next for King George Moannah then got to, made an oration, which was, that the natives received their goods were good people and invited them to come with their pigs, and they would receive them; they took nothing finally, that every night while they occupied my visit in the dark, this oration the ceremony.

Their present situation and convenient. They by the reefs in smooth beach without the least very good water, run of the harbour. The plants to be landed with them as at Mat according to his desire.

On the 29th, the first of the natives seized the cleaver. This being by the natives, the captain's restoration; however, who were then on board their utmost endeavours to bring Tinah, contentions, brought the cleaver up with great reluctance to Attahooroo's present for his trouble it was by way of a compliment, he could not do.

The captain was accompanied, and relations of children on board, or though so near them, were occupied on shore by a fever, and the captain's fence or alarm to men from approaching. The vessel was still the natives, who brought plenty, that scarcely a day on board the scarcity of bread-fruit was much trouble a consumption. There was approaching, which the die in five or six weeks. The natives also were become they call Vayhee were in

run on so early, that they had not perceived it at the time. This accident occasioned much trouble, as they were obliged to send anchors out altern to get the ship afloat: in doing which, one of the cables swept a rock, and was not got clear again without much difficulty.

On the 26th the chiefs, and indeed all the natives, congratulated the captain on the safety of his vessel. Tinah conducted him to a house near the water-side, abreast the ship, which he desired the captain to make use of, and which was large enough for all his purposes. Tinah and his brother Oreepyah then desired the captain would stay and receive a formal address and present, which they called Otee. Having readily assented, a stool was brought for him to sit on. They then left him with Moannah, and in a short time Tinah returned with about twenty men, who all made a stop at some distance, and a priest said a short prayer to the Eatua, to which the rest made reply. A man was then sent to the captain three several times, bringing him each time a small pig, and the stem of a plantain leaf. The first they told him was for the God of Brittanee, the next for King George, and the last for himself. Moannah then got up, and without being dictated to, made an oration for the captain; the purport of which was, that the captain through his representative received their offering with thanks; that they were good people and friends; and therefore he exhorted them to commit no thefts: he told them to bring their pigs, cocoa-nuts, and bread-fruit, and they would receive good things in return; that they took nothing without their consent; and finally, that every man was to quit the place (the house they occupied) at night; for if they made any visit in the dark, they would be killed. After this oration the ceremony concluded.

Their present situation was exceedingly pleasant and convenient. This ship was perfectly sheltered by the reefs in smooth water, and close to a fine beach without the least surf. A small river, with very good water, runs into the sea about the middle of the harbour. The captain gave directions for the plants to be landed, and the same party to be with them as at Matavai. Tinah's dwelling was according to his desire adjoining the captain's.

On the 29th, the butcher being rather careless, some of the natives seized an opportunity of stealing his cleaver. This being an article highly esteemed by the natives, the captain had no great hopes of its restoration; however he complained to the chiefs, who were then on board, and they promised to use their utmost endeavours to recover it. Some short time after Tinah, contrary to the captain's expectations, brought the cleaver on board. It was given up with great reluctance by the thief, who had conveyed it to Attahoooo. The captain offered Tinah a present for his trouble; but, understanding that it was by way of a compensation for recovering the cleaver, he could not be prevailed upon to accept it.

The captain was constantly visited by Tinah, his wife, and relations; but he never had the royal children on board, or even in sight of the vessel, though so near them. The ship's company, who were occupied on shore, were divided from them by a river, and the captain, unwilling to give them any cause of alarm, strictly prohibited the men from approaching the place where they were.

The vessel was still supplied with provisions by the natives, who brought them cocoa-nuts in such plenty, that scarcely a pint of water was drank during the day on board the vessel. Though there was a scarcity of bread-fruit, they still purchased without much trouble a sufficiency for their present consumption. There was, however, another harvest approaching, which they expected would be fit for use in five or six weeks. The better kind of plantains also were become scarce; but a kind which they call Vayhee were in great plenty. This fruit

does not hang on the trees like the other kinds, but grows upon an upright stalk of considerable strength and substance. Though this plantain is inferior in quality to most of the others, it affords great subsistence to the natives.

They likewise received continually on board presents of fish, chiefly dolphin and albacore, and a few small rock fish. Their fishing is mostly in the night, when they make strong lights on the reefs, which attract the fish to them. Sometimes, in fine weather, the canoes are out in such numbers, that the whole sea appears illuminated. In the canoes they fish with hook and line, and on the reefs they strike the fish with a spear. Some likewise carry out small nets, which are managed by two men. In the daytime their fishing canoes go without the reefs, sometimes to a considerable distance, where they fish with rods and lines, and catch bonetas, and other fish. Whenever there is a show of fish, a fleet of canoes immediately proceed to sea. Their hooks being bright, are used without bait, in the manner of artificial flies. Their rods are made of bamboo; but when there are any very large fish, they make use of an out-rigger over the fore part of the canoe, about 25 feet in length, which has two prongs at the extremity, to each of which is fastened a hook and line; and when a fish takes the hook, there are two men in the stern of the canoe who raise it up immediately with ropes.

On the 5th, when the watch was relieved at four o'clock in the morning, they missed the small cutter. Capt. Bligh, upon this information, immediately mustered his crew, and found upon an examination that three of his men were wanting, viz. Charles Churchill, who was the ship's corporal; William Mutpar, a seaman, and John Millward, ditto, who had been centinel from twelve to two in the morning.

Upon a further scrutiny, it was discovered that these men had taken away eight stand of arms and ammunition; but nobody on board appeared the least acquainted with their design, or had the smallest knowledge of the place of their rendezvous. Capt. Bligh went on shore, to inform the chiefs of his loss, and solicit their assistance in recovering those deserters. He understood that the boat which they had taken was at Matavai, and that they had made for the island Tethuroa in a sailing canoe. Capt. Bligh now dispatched the master to Matavai for the boat, while one of the chiefs voluntarily accompanied him: however, they met the boat about half way, with five of the natives, who at their own accord were bringing her back to the vessel.

Tinah and some others chiefs, who were solicited to seek the deserters, assured the captain that they would exert their utmost endeavours in recovering them. Oreepyah and Moannah agreed to go to Tethuroa the next morning, in search of them. Oreepyah, however, enquired of the captain if he thought that they had pocket pistols, for he was apprehensive that they might do mischief with these, even when they were surpris'd and seized. The captain removed all those fears, by assuring them that they had none.

On the 6th these chiefs, according to promise, set off at day-light, in two canoes, for Tethuroa; but the weather became so boisterous, that they were obliged to return in the forenoon, and the captain was exceedingly happy to see them get safe in, as the sea ran very high without the harbour. Oreepyah and Moannah both promised the captain, that they would sail again as soon as the weather should be fine. From the first of this month, the weather and winds had been much unsettled, with a great deal of rain. Their former station at Matavai appeared not at all safe, the sea at times breaking high over the Dolphin bank, and making a great swell in the bay.

On the 9th they had a strong wind at sea, though in the harbour they had only light breezes. Poeno visited the captain to-day: he was apprehensive that he was displeas'd with him, on account of his deserters having been carried to Tethuroa, by a canoe from Matavai. He declared, that the business had been done before he heard of it; and that the only service in his power he had not neglected to do for him, which was the sending their boat back. As this was really an act of friendship, the captain expressed many obligations. Poeno said, that there was no doubt, from the directions Tinah had given, that as soon as the weather would admit the canoes to go out, the deserters would be recovered.

On the 10th, unfortunately, one of the officers on shore plucked a branch from a tree called Tutuce, that bears the oil nut, which was growing at a Morai. As soon as he entered the house with it, where the captain's people were busy, all the natives, both men and women, immediately went away. After this Capt. Bligh found the branch tied to one of the posts of the house, and being exceedingly displeas'd at such a piece of wantonness ordered it to be taken away; but the natives, notwithstanding, would not come near the place. They said the house was taboned, and none of them could approach it till the taboo was taken off, which could only be done by Tinah. To take any thing away from a Morai is regarded as a kind of sacrilege, and, they believe, gives great offence to the Eatua. Tinah, at the captain's request, took off the taboo, but not before the afternoon. This was performed by an offering of a plantain leaf at the Morai, and a prayer made to the Eatua. This ceremony being over, the natives became as familiar in the house as ever.

The captain had frequently hinted to Tinah his wish of obtaining the bull from Itceah, in hopes of keeping up this useful breed, but finding this chief indifferent about the matter, he commissioned Poeno to bargain for it, who readily undertook the business, and after dinner departed about it.

On the 13th the weather being finer than usual, Orepeyah sailed with two canoes for Tethuroa. Some business prevented Moannah from accompanying him, but he followed the next day with two other canoes.

On the 14th, the wood on board the vessel being expended, they received a supply from Tinah.

On the 16th, the captain accompanied Tinah near a Tupapou, where he was surpris'd by a sudden outcry of grief. Having expressed a desire to see the distressed person, Tinah took him to the place, where they found a number of women, one of whom was the mother of a young female child that lay dead. On seeing their unexpected visitors their mourning not only ceased immediately, but to the captain's astonishment, they all burst into an immoderate fit of laughter, and, while they remained, appeared much diverted with their visit. This strange behaviour can only be attributed to their extreme levity of disposition, and not the want of maternal affection, which has been so remarkably conspicuous upon other occasions.

On the 18th a message came from Poeno, to acquaint the captain that he had been successful in his negotiation for the bull, which he had driven part of the way by land, but could not get farther on account of the rivers, and therefore desired a boat should be sent for him. Upon this the launch was ordered to be got ready, and at two o'clock the next morning, Mr. Fryer, the master, set off in her, and returned with Poeno, and the bull in the afternoon. The bull remained at Oparee during the night, and the next day he was taken to Matavai, and left with the cow.

On the 21st the person from whom Poeno had the bull, came to receive the stipulated payment, which was one of every article of traffic the captain had in his possession. This man, whose name was

Oveevee, said, he was inspired by a divine spirit; and that in all matters of consequence he was consulted, for that he conversed with the Eatua. It was, he said, the Eatua that ordered him to demand the bull from Tinah, which not to have complied with, would have been the height of impiety. The captain endeavoured to convince the chiefs of the roguery of this man, thinking he had a fair argument to prove it by his selling that which the Eatua had ordered him to keep; but here he was easily defeated, for the Eatua, as this man afterwards asserted, told him to sell the captain the beast. This being the case, Captain Bligh said he would not give the animals to any person; that they were now legally his, and that he would leave them under the protection of Poeno and Tinah, who he hoped would take care of them for him till he returned. Understanding the captain's views, they both promised the animals should be attended to, and declared, that while they were considered as his property, they would not part with them on any consideration.

On the 22d the captain received a message from Teppahoo, letting forth that the deserters had passed this harbour, and were at Tetaha, about five miles distant. The cutter was ordered to be got ready, and a little before sun-set the captain left the ship, taking Oedidee with him. By his advice he landed at some distance from the place where the deserters were; but thinking it necessary to have the boat within call, and Oedidee assuring him that there was safe landing farther on, he directed the boat to proceed along-shore, whilst Oedidee and he walked along the beach. The night was very dark and windy, and the shore being rocky, the captain soon lost sight of the boat. A few of the natives had joined them in their walk; and, from their manner, the captain had reason to suspect them of a design to close upon them, with an intention, no doubt, to plunder: he was provided with pocket-pistols, and on producing one, they left them. Oedidee was so much alarmed that he could scarce be prevailed upon to proceed. When they arrived at Teppahoo's house, they were very kindly received by him and his wife. The cutter was arrived, but, there being a very high surf, the could not come within a hundred yards of the shore.

The deserters, as they were informed, were in a house close to them, and the captain imagined there would be no great difficulty in securing them, with the assistance of the natives. They were, however, apprised of the captain's arrival; and when he was near the house, they came out, without their arms, and delivered themselves up. The captain now sent directions off to the boat for one of his people to come on shore, and for the boat to return to the place where he had landed. He likewise secured the arms, which he delivered to Teppahoo to take care of for the night. One musket and two bayonets were missing, which the men said were lost, by the overturning of the canoe in which they came from Tethuroa.

These deserters also added, that at Tethuroa they had seen Orepeyah and Moannah, who had made an attempt to secure them. They said it was their intention to have returned to the ship; and it is probable that they were so harassed by the natives, watching for an opportunity to surprize them, that they might wish to have the merit of returning of their own accord, to avoid the disgrace of being seized and brought back. At the time they delivered themselves up, it was not in their power to have made resistance, their ammunition being spoiled by the wet.

The captain now took leave of Teppahoo, who presented them with a plentiful supply of provisions, and they proceeded with the deserters towards the boat; but as the wind had increased, and it rained hard, Captain Bligh determined to remain on shore all the morning; and having found shelter for the people they passed the remainder of the night without accident. The next day he sent for the arms, and they returned safe to the vessel.

This day, at captain on having some concern that Orepeyah and Moannah they had not done captain, however, satisfied of their that he already corrections to them for his account. He actually seized and prevailed upon, by peaceably to the others, however, finding of their arms again revoked their promise.

On the 30th I sailed with nineteen lashed with a transgression a direct violation of would on no account though several of them for him.

As yet Orepeyah and from Tethuroa. The principal people of several seasons, when it was described to small keys, surrounding cocoa-nuts and plantain fruit, and other produce from Otateite. When less than 100 fail of crop.

The captain was cured and his wife: he had and had made Oparee benefit of the surgeon; this time he complained throat. Mr. Ledward said there had been a moeth, which, though of having been large; found, yet the surgeon cancerous, and would lesion.

On the 31st, agreeably the inside of the vessel water, in order to destroy better doing of which shore. They were much cock-roaches, as these

This day, at dinner, Tinah congratulated the captain on having recovered his men, but expressed some concern that they had not been brought by Oreepyah and Moannah; lest he should imagine they had not done every thing in their power. The captain, however, assured him, that he was perfectly satisfied of their good intentions to serve him, and that he already considered himself under many obligations to them for the trouble they had been at on his account. He learnt afterwards that they had actually seized and bound the deserters, but had been prevailed upon, by fair promises of their returning peaceably to the ship, to let them loose: the deserters, however, finding an opportunity to get possession of their arms again, setting the natives at defiance, revoked their promise.

On the 30th Isaac Martin, a seaman, was punished with nineteen lashes, for striking an Indian. This was a transgression of so serious a nature, and such a direct violation of the captain's orders, that he would on no account be prevailed on to forgive it, though several of the chiefs made great intercession for him.

As yet Oreepyah and Moannah were not returned from Tethuroa. This place is resorted to by the principal people of this part of Otaheite, at particular seasons, when fish are in great plenty there. It was described to the captain to be a group of small keys, surrounded by a reef: their produce is cocoa-nuts and plantains. During the season, bread-fruit, and other provisions, are daily carried over from Otaheite. When the deserters were there, not less than 100 sail of canoes were at Tethuroa.

The captain was constantly visited by Teppahoo and his wife: he had for some time past been ill, and had made Oparre his place of residence, for the benefit of the surgeon's advice and assistance. At this time he complained of a hoarseness and sore-throat. Mr. Ledward, on examining him, discovered there had been two holes in the roof of his mouth, which, though healed, had the appearance of having been large: the adjacent parts appeared found, yet the surgeon was of opinion that they were cancerous, and would no doubt bring on his dissolution.

On the 31st, agreeable to the captain's directions, the inside of the vessel was washed with boiling water, in order to destroy the cock-roaches; for the better doing of which the chests were removed on shore. They were more particular in killing the cock-roaches, as these vermin are very destructive

to plants. At this time there were no rats at Otaheite, though, when Capt. Cook was there, they were so plenty, that every house abounded with them: they were likewise so tame, that they never ran away from any one, but would flock round the people while at meals, and eat whatever was given to them. It is supposed that these rats were entirely destroyed by the breed of cats which were at that time left in Otaheite.

This day the captain, Tinah and his wife, after breakfast, went to Matavai. Tinah having made too free with the yava, was quite unfocible; but Iddeah, who was exceedingly cheerful, made ample amends for him. When they arrived at Poeno's house, the captain was very well pleased to find the bull and cow together, in a very fine pasture, and likely to increase. Some of the things which were sown in the garden had failed; others were in a very thriving state, particularly the Indian corn, two vines, a pine-apple plant, fig-tree, and some slips of a shaddock tree.

From this they proceeded to the garden at Point Venus. Here the hogs had almost destroyed every thing. Some Indian corn under ground, pease, and the Jamaica callico, green and oca, had escaped.

They now returned to the vessel, where there was a comfortable dinner prepared; by which Tinah was somewhat recovered from his intoxication. As soon as the cloth was removed, Tinah very seriously proposed to the captain to take him, his wife, and two attendants, to England. He said he was very desirous to see King George, who he was sure would be very glad to see him. The captain was not a little surpris'd at Tinah's proposal; but not willing absolutely to refuse his request, amused him with a promise that he would previously ask King George's permission to carry them to England, which when he obtained he would come in a larger vessel, and have such accommodations provided as would be necessary for their voyage.

It seems Tinah was very much in dread that his enemies would attack him, as soon as the vessel departed from Otaheite; and as his particular friend Teppahoo was indisposed, he naturally apprehended that his adversaries would be too powerful for him. The captain, however, to remove those fears, and prevent any future altercation, declared, that if any injury was offered to the people of Matavai and Oparre during his absence, he would revenge it on his return, and shew the transgressors no mercy.

CHAPTER V.

ON the 3d of February the captain was present at another wrestling match; when a young man put his arm out of joint at the elbow, by an unfortunate fall. The captain immediately sent for Surgeon Ledward; but, before he arrived, three boat men took hold of the youth, and two of them clung their feet against his ribs, his arm was immediately replaced. When Mr. Ledward came, he expressed much surpris'e at their considerable skill in surgery, as they shewed by a number of sticks which they placed round a man's arm, and bound with a cord, what they would have done if the bone had been broken. The young man's arm was quite recovered, there being only a small swelling of the muscles, which proceeded from the strain.

A little before sun-set the inhabitants met at the end of the beach nearest the vessel, where they amused themselves with dancing, exercising the

lance, and other entertainments, till it was dark. This kind of merriment was quite common, every fine evening, and afforded no small diversion to the ship's company, who were constant spectators thereof.

The wind having now blown fresh in the night, they discovered on the 6th, at day-light, that the cable by which the ship rode was cut in such a manner near the water's edge, that only one strand remained whole. This gave the captain much concern, as the vessel was not only thereby endangered, but it might likewise occasion a coolness between the English and natives, who had been hitherto on such good terms. Tinah came on board while they were securing the vessel, and though the captain had no reason to suspect his fidelity, yet he thought it proper to insist upon a discovery, and that the offender should be immediately brought to him. The captain's anger on this occasion created universal alarm,

alarm, and Teppahoo and his family, with Tinah's father and mother, were so dismayed, that, notwithstanding there was violent rain, they immediately left Oparre, and retired to the mountains. However, Tinah and his wife remained, declaring their innocence, and upbraiding the captain for his unjust anger with them. Tinah promised to use his utmost endeavours in bringing the culprit to justice, but then he was apprehensive, as he, (and indeed the captain himself) suspected that it was one or more of the strangers who had come from other parts of the island, that if the offender was of the islands Eimeo, Tierraboo, or Attahooroo, he could not get him delivered up. The captain likewise imagined that this outrage might have been committed by some of the jealous strangers, more out of enmity to the people of Matavai and Oparre, than to him, in order perhaps to diminish that confidence and regard which were so long maintained on both sides, particularly too, as the captain had declared he would revenge any injury that was offered to them during his absence. However, the captain still retained his anger, in order to stimulate Tinah to a discovery. Afterwards indeed, the captain had very good reason to suspect that some of his own people were the offenders.

A stage was now erected, by order of the captain, on the fore-castle, that the sentinel might have a better view of the cables; the watch was likewise increased.

Oreepyah returned in the afternoon from Tethuroa. He and Moannah were very near being lost in the bad weather; Moannah took shelter at Eimeo. Several of the canoes at this time were overfet.

On the 8th, Tinah and Iddeah, after being absent the whole preceding day, visited the captain, who assured him, that notwithstanding they had made a most diligent search, they were not able as yet to discover the offender; the captain not being satisfied, expressed great coolness, which hurt the feelings of Iddeah so much, that she burst into a flood of tears; upon this, the captain, melted with pity, resumed his former good humour, but strongly recommended to them, if ever they wished to see King George, or had any regard for him, to renew their search, and discover, if possible, the offender; this being promised, a reconciliation took place, of which word was sent to Otow and Teppahoo, whose return was now importuned.

In the afternoon the captain received an invitation from the Earec of Tierraboo, the S. E. division of Otahete, which, however, he declined, but sent him a handsome present by the messenger. This present indeed was sent at the instigation of Tinah, and it was observed, by Captain Bligh, with pleasure, that Tinah had given away the major part of the things he had given him, some he had bestowed through political views, and others out of friendship.

There being a grand heiva to be performed at Teitaha, where the presence of Teppahoo and his family were, consequently they took their leave of the captain on the tenth, and the next day some of the performers, stopping on their way, sent the captain a polite message, that if he pleased, they would stay a while and perform a short heiva for his entertainment. Captain Bligh having acquiesced, this heiva commenced with a dance by two young girls, while the drums and flutes were playing. After this they suddenly dropped all their dress, which was intended as a present for the captain, and made an abrupt departure. The men now began to dance, while the natives appeared more delighted than usual with this entertainment, it being in fact more indecent than the rest.

The captain now accompanied Tinah and his wife on a visit to an old widow lady, whose name was Wanow-ooro. There was great ceremony used upon their meeting; having just landed she was sitting on the beach by the head of her canoe. There was a priest and three men with Tinah, who had for an offering a young dog, a fowl, and two young plantain boughs. The old lady addressed herself in some

short sentences to Tinah, and his party, who were seated at a respectful distance, upon which they exchanged their offerings, her's being exactly the same of his. This curious ceremony being over, Tinah, no longer restrained, ran and embraced her in a most affectionate manner: she was conducted to a shed, where they staid for some time, Tinah having delivered orders that she and her attendants should be supplied with every thing they wanted. When the captain was preparing for his departure, he invited Wanow-ooro on board, but she declined his invitation on account of her age and weakness.

On the 13th a grand heiva was prepared, in compliment to the captain, by Tinah, and several strangers were arrived from all parts to be present at it. The captain went on shore, and a great multitude of people had already collected together, to behold the sight.

Tinah and several other chiefs came to meet the captain, while a ring was made at a little distance from their post. As soon as they were seated, the heiva began by a dance of women, and the several other ceremonies which are customary on this occasion: after this, the men proceeded to wrestle, and there being no longer any order, the captain was entreated by Otow to put a stop to the entertainment, as he suspected that some strangers, who were present, delighted to do them harm. The tumult and confusion became general, every one took to his arms, and the captain finding that his own power was insufficient to quell the riot, repaired to his post, and ordered all his men under arms. Tinah and Iddeah were exceedingly concerned about the captain for fear he should meet with some harm. Iddeah came to see him safe at his post, but declined staying under his protection; she promised, however, to return as soon as peace was restored; she had a double covering of cloth round her waist, which was girded with a large rope.

Two guns were fired from the vessel without any shot, by order of the captain. This had the desired effect, and the tumult in a short time ceased. Tinah and Iddeah now returned to the captain to let him know that all was quiet: these, and several of the chiefs went on board with the captain, and dined with him.

The captain went on shore again with Tinah and his friends. Tinah had ordered three large hogs to be dressed, and a quantity of bread-fruit provided before he went on board with the captain; these he now requested might be presented to the different parties, who had come to see the entertainment. Agreeable to Tinah's instructions, the captain presented one part thereof to the chief people of Attahooro, another to the Arreoyos, and another to the performers of the heiva. They were received by the different parties with great thankfulness.

The hospitality of Tinah was always remarkable; he never let an opportunity slip of displaying his liberality when any of the principal people came either to visit him or see the vessel. He was more ready in giving than receiving presents, nor was there the least appearance of ostentation in his good nature; in short this amiable disposition made amends for his failings.

On the 16th the captain was invited to a wrestling match by women. Their mode of challenging, and method of attack, were just the same as practised by the men; the only difference was, that the women appeared rather more violent. Though there was no instance at present, nor during the captain's stay at Otahete, yet it was alleged that the women sometimes would wrestle with the men, and Iddeah was reported to be very famous in this exercise.

On the 17th the captain took a walk with Tinah to see his country residence, which lay towards the hills. The house was exceedingly neat, in a pleasant situation, surrounded by plantations.

On the 18th, the captain went to Matavai to look after the Indian corn, which he expected to be now full ripe for gathering. However on his arrival, he

found that the whole was taken away by some of the natives.

Nothing material occurred till the 23d, when the captain received a present of a very fine taro pudding from Iddeah for their dinner to-day. Tinah also brought a bunch of bananas, that weighed 81 lb. on which were about 186 fine fruit. Some were lost in the carriage.

On the 25th Iddeah's youngest child was taken ill, which gave her great uneasiness. The captain offered to send his surgeon to look at him, but she declined his assistance, as she expected a man from Tettaha to come and inform her what to do.

On the 2d of March, the inhabitants who had lived near the tents, had now quitted their houses, and retired towards the mountains. The captain, when he landed, was informed that a water cask, bedding, and part of an azimuth compass, were stolen in the night from the post on shore. A complaint was immediately sent to Tinah, who in consequence thereof was afraid to visit the captain. A general alarm took place among the natives. Some short time after, the captain having returned from the vessel, where he breakfasted, he perceived Tinah, Oreepyah, and a number of people, at a distant house, whence they all marched, proceeding to the eastward. At this time Oedidee was with Captain Bligh, who said that they had just gained information of the thief, and were now gone in pursuit of him. In about an hour after word was brought that the criminal was seized. The whole party soon after appeared, with the articles which had been stolen, except the bedding; while Tinah had hold of the thief, whom he delivered up to the captain. The captain, after thanking Tinah and his party for the trouble they had taken, expatiated on the injustice of stealing from those who were so particular in dealing fair with them; for the captain assured them, that if any of his people offered them the least offence, they should be immediately punished. Tinah embraced the captain after his speech, and went immediately in search for the bedding, while Captain Bligh, thinking it prudent to make an example of the offender, who belonged to a distant island, ordered him a severe flogging.

They were now making preparations for sailing, and were supplied with a quantity of wood, by order of Tinah, who had directed trees to be brought down from the country on purpose. Tinah, apprehensive of being attacked after the vessel sailed, requested the captain to leave him some fire-arms and ammunition, which were accordingly promised; they presented pistols to muskets, and as the captain said he would leave them a pair, Tinah remarked that Iddeah could fight with one, and Oedidee with the other. Oedidee was an excellent marksman, and Iddeah a bold resolute woman, who was already capable of loading and firing a musket as well as the most experienced fowler.

On the 6th the master, Mr. Fryer, was sent to found Taowne harbour. The news of the captain's intended departure having been spread, several natives came from all parts of the islands, to have some iron tools repaired at the forge. Several pieces of Spanish iron were likewise sent by Waheatua, the Earee of Tearraboo, in order to be made into small axes, which was accordingly done.

They had now a long continuance of westerly winds, with a great deal of rain. On the 13th several canoes arrived from Tethuroa, with a large tribe of the Arreoyo, and the wife of Oreepyah, who is an Arreoyo woman, named Huheine Moyere. She stayed at Tethuroa after Oreepyah departed from that place.

On the arrival of Huheine Moyere, a ceremony called Hoocpippee was performed, which chiefly consisted of visiting several friends in a public manner. A present was made by Iddeah to the Arreoyo woman; and Tinah being absent, Iddeah received a present, which was made up by all the principal

people for young Otoo, the Earee Rahie. It was carried by 24 men on their shoulders, in baskets decorated with slips of cloth, which they had on each end of a pole.

On the 14th the captain was visited by an old man upwards of 70 years of age, who was held in great respect by all the natives. His nephew, Tupia, departed from these islands in 1769, in the Endeavour, and died at Batavia. He requested the captain, if ever he came again to Otaheite, to bring him a lock of his hair.

Teppahoo, the Earee of Tettaha, now published a prohibition against killing or selling hogs, there being very few in that district, so that it was deemed necessary they should have time to breed. As the captain was promised to be still supplied by his friends at Matavai and Oparre, notwithstanding the great consumption he had already occasioned, he did not think it prudent to solicit the favour at Tettaha, when contrary to the will of the Earee. The same prohibition was to take place at Matavai and Oparre, when the captain was gone; but, in compliment to him, it was generously postponed.

On the 19th, in the evening, the captain's clerk, Mr. Samuel, who had been two days absent on an excursion to the mountains, returned, and reported the tops of the high mountains were barren, but the rest were well covered with wood. He met with nothing remarkable.

On the 27th two parais, (or mourning dresses) which were long in preparation, were exhibited in Tinah's house. This was intended as a present to King George, and a long prayer in behalf of mutual friendship was made use of on the occasion. Tinah could not refrain from tears, when delivering it to the captain to take on board: indeed all the natives seemed affected with his departure.

The plants were now removed to the vessel: the roots had made their appearance through the bottom of the pots, and would doubtless have made their way into the ground, had it not been timely prevented. They were all in very good order, being in 74 pots, 39 tubs, and 24 boxes. The number of bread-fruit plants alone were 1015.

The weather became very fine, and there appeared a settled trade-wind. Hitherto they were constantly visited by several strangers, who came to take their leave. Some petty thefts were committed, chiefly owing to the negligence of the watch. Capt. Bligh now made his last presents to Teppahoo and other friends, several of whom, particularly Oedidee, earnestly requested to accompany him to England.

As the captain intended to sail early on the 4th of April, Tinah, Iddeah, and all their relations, came the preceding day and dined with him. The vessel was exceedingly crowded with natives, who brought great quantities of plantains, cocoa nuts, bread-fruit, hogs, goats, &c. This evening there was no entertainment, as before. Tinah, and his party, remained on board all night.

Early on the 4th they unmoored: the stock of the best bower anchor broken in stowing the anchor, it having been eaten very much by worms. Having weighed, they were obliged to tow the ship out of harbour with their boats and two sweeps, there being no wind. As this harbour was very narrow, only a few of the natives were permitted to stay on board: several, however, attended in their canoes, till the wind became strong, when they were obliged to take their leave. They stood off and on for the remainder of the day. The captain gave Tinah two muskets, a pair of pistols, and a good stock of ammunition: these, and the other presents, were, by the captain's orders, put into one of the ship's boats; upon which they took an affectionate leave of each other.

Having got sight of the Island Huheine on the 5th, they brought to near the entrance of Owharre Harbour, where they had a full view of the harbour. The natives imagined the vessel was coming into

into the harbour, but the captain did not choofe to anchor: it was therefore some time before they were visited by any. At last three men approached them in a canoe, who brought with them some cocoa-nuts: one of these diverted the captain exceedingly, by pretending, with great solemnity, that he was the Earec Rahic. The captain gave him some nails. Afterwards they were visited by a double canoe, which had ten men, one of whom, being a youth, recollecte the captain, and called him by his name. A number of canoes succeeded, of whom various articles were purchased.

While they were making sail, they perceived an Indian swimming towards the shore, which would have been a miracle if he had reached. They took him up and put him in a canoe which was very fortunately along-side. The captain understood that this man was insane, but could not learn by what means he came so far from land.

On the 6th they steered more to the westward, in hopes of reaching the Friendly Islands.

On the 9th they had very squally weather, and thick black clouds in the E. They saw a waterspout at a short distance, which derived no small advantage from the darkness of the clouds.

On the 11th they saw land to the S. S. W. about five leagues distant: it seemed an island of some height. They now stood to the N. W. In the evening they tacked to the southward, and perceived about nine keys, which were covered with trees. All this day they endeavoured to get near land, but could not, the wind being light and unfavourable. They had a heavy squall at night, which compelled them to clew up all their sails. A calm succeeded this.

They had variable winds with intervening calms on the 12th. About the afternoon they were within three miles of the southernmost key, where they were able to discern some inhabitants: they were soon visited by a canoe with four men, who did not betray any surprize on their meeting. The captain gave them some beads, and they came into the vessel: the leader, who was a man of greater consequence than any of the rest, and an Earec, examined the vessel with some curiosity, none of them however would venture into the cabin. Seeing one of the seamen with some broiled fresh pork in a bowl, they all partook thereof, with some boiled plantains. When the leader understood the captain was the chief of the vessel, he approached him and joined noses. After this he presented to him a large mother of pearl shell which hung round his neck: he was highly delighted at seeing the captain fasten it round his in the same manner.

The language was almost the same as at Otaheite. The name of the large island was Wytootackee, and the Earec was called Lomakkayah. They said that there were no hogs, dogs, or goats upon the island, nor had they yams or taro; but that plantains, cocoa-nuts, fowls, bread-fruit, and avces were there in great abundance. Notwithstanding they said that no hogs were on the island, it was evident they had seen such animals: for they called them by the same name as is given to them at Otaheite, which made the captain suspect that they were deceiving him. However, he ordered a young boar and sow to be put into their canoe, with some yams and taro, which articles being plenty, they could well spare. He also gave each of them a small adze, a knife, some beads, nails, a looking-glass, &c. The latter they examined with great curiosity; but with the iron-work they appeared to be well acquainted.

When preparing for their departure, the chief of the canoe took possession of every thing the captain had given to the others. One of them shewed some signs of dissatisfaction; but, after a little altercation, they joined noses, and were reconciled. It was thought they were all going to leave the ship; but only two of them went into the canoe, the other two purposing to stay on board all night, and to

have the canoe return for them in the morning. However it being explained to them that the ship might be driven from the island in the night, they reluctantly consented to leave them. They were very solicitous that somebody from the ship should go on shore with them; and just before they went, they gave the captain a wooden spear, which was a common long staff, pointed with the *toa* wood, and the only thing, except the paddles, that they had with them.

These people were tawowed across the arms and legs, but not on the loins or posteriors, like the people of Otaheite. From their knowledge of iron, they have doubtless communication with Hervey's Islands, which are not more than eighteen leagues distant from them. They seemed very friendly and inoffensive.

They proceeded to the westward with a breeze from the S. and on the 18th saw Savage Island, also, on the 21st the Island Caow, bearing from the mast-head N. W. by W. 3-4ths W. At noon it was about 19 leagues distant. This island, which is high, has a sharp-pointed top, and is the northernmost of the Friendly Islands.

They were not able to reach Annamooka till the 23d, where they anchored in 23 fathoms. They were soon visited by several canoes, who brought yams and cocoa-nuts, but none of the natives would come on board without first asking the captain's permission. They were also visited by a canoe from the Island Mango, wherein was a chief, called Latoomy lange, who dined with the captain.

This station not being convenient for watering, they moved more to the eastward on the 29th, and anchored in 21 fathoms. They were about half a league distant from shore.

They were now visited by several large sailing-canoes, which arrived from different islands in the neighbourhood of Annamooka; in these were two chiefs, whose names were Kunacappo and Noocahoo: there was an old lame man with them, called Tapa, whom the captain had been acquainted with in 1777, and with whom the captain was capable of conversing. From his information Captain Bligh understood that some of his old friends were at Tongataboo, and that all the cattle he had left there were still alive, and had bred. Tapa and the chiefs now examined the vessel, and expressed much surprize at seeing the bread-fruit and other plants. The captain made them each a present, and afterwards invited them to go on shore with him in his boat, which they readily complied with, and the captain took with him Nelson, in order to make his observation, and procure, if possible, some more bread-fruit plants.

As soon as they were landed, they were surrounded by two hundred people on the beach, the greater part of whom were women and children. Tapa supposing the captain would have a party on shore, as he had when he was there before, gave him the use of a large boat-house. During this excursion, the captain was very happy to find that the plants and seeds, which had been formerly sown here, were not thrown away. On the captain's return to the landing-place, an humble present of cocoa-nuts was brought him, with which he appeared perfectly satisfied, and gave the women and children beads and trinkets.

The captain invited the chiefs to dinner, and on his return to the vessel, he was happy to find that a brisk trade had been carried on. Several plantains and some bread-fruit were brought on board, but no hogs. Afterwards they purchased hogs with dogs, fowls, shaddocks, &c. of other canoes, which contained about a hundred people. They had very fine large yams in great abundance, some of which weighed about forty-five pounds. In the afternoon they were visited by two of the name of Tubow, a family of great rank in the Friendly Islands, one of whom was a chief of the island Lafooga.

The captain chief and Tapa, in They found a nurse captain having ob his people to cut v to the vessel.

fooga. The captain took a walk on shore with this chief and Tapa, in order to explore a wooding-place. They found a number of very good trees; and the captain having obtained Tapa's permission to send his people to cut wood, took his leave and returned to the vessel.

The natives here were disfigured by numerous marks of mourning, such as bloody temples, the loss of hair, and likewise the loss of fingers, which was common to several. Some men wanted the middle finger of their right hand, and a number of boys about six years old had lost both their little fingers.

On the 25th parties were dispatched on shore, to get wood and water. They had scarce been an hour employed, when one of them lost an axe, another an adze. This was made known to Tapa, who immediately enquired into the business: however, they could only recover the axe.

On the 26th Nelson went on shore to get some plants, but he was insulted by the natives, who took his spade from him. Tapa recovered this. A boat's grapnel was also stolen from the watering party: in short, the natives were so numerous, that the captain's people could do nothing, except they had a principal chief among them, who could keep the inhabitants in awe. The captain, therefore, ordered all his men on board, and prepared to sail. At noon they unmoored, and were under sail at one o'clock. At this time all the chiefs were on board, and the

captain informed them that unless the grapnel was restored, he was determined to detain them in the vessel: at this they were greatly surprised and alarmed. Canoes were dispatched in order to recover it; but as the chief was gone off to another island, there was no possibility of getting it till the next day. The captain, however, detained the chiefs till sun-set, when they began to be so very uneasy, that they cried bitterly, and beat their faces in a terrible manner. Capt. Bligh seeing their distress, and being now assured that they were innocent of the theft, gave them not only their liberty, but several presents of no small value to them. Their joy was now as great as their sorrow had been before, and they departed in their canoes with no little satisfaction, having taken leave of Capt. Bligh in a most cordial and affectionate manner.

They had now light and variable winds, with which they stood to the northward all night.

On the 27th they were between the islands of Tofoa and Kotoo.

Hitherto they had a prosperous and pleasant voyage, and the captain was solacing himself with the pleasing hopes of having completed an undertaking adequate to the wishes of all the proprietors. But an unexpected change ensued, which totally destroyed those wishes, and exposed Capt. Bligh to imminent danger.—This we have reserved for our second book.

BOOK II.

CHAPTER I.

Treachery and Villainy of some of the Captain's People, who mutiny—The cruel Manner in which they treat him—The Resolution and Attention of the Clerk—Capt. Bligh, and eighteen of his People, sent adrift in the Boat—Make for the Island Tofoa—Their Intentions—Supplies procured with great Difficulty—Treachery of the Natives—Captain's Suspicions—An Attack meditated—Their Escape—They proceed to New Holland—Agree to live upon a small Allowance till their Arrival.

NOTWITHSTANDING they kept near the island Kotoo, with expectations of being visited by some of the natives, yet to their very great surprise no canoes came off to the vessel. They now steered to the westward, intending to keep this course all night, in order to pass to the S. of Tofoa, the wind being then northerly.

On the 28th of April, early in the morning, before day-light, Christian, who had the morning watch, with the master at arms, gunner's mate, and Thobekett, a seaman, came into the captain's cabin, while he was yet asleep, and having seized him, secured him with cords, and threatened to destroy him if he made the least noise. Besides these four who thus attacked the captain, there were three others at his cabin door. Christian was armed with cut-throats; the rest had muskets and bayonets. The captain, upon enquiring the motives for proceeding thus, was insulted and abused, and his hands being tied in a very cruel manner, he was forced on deck in his shirt. In the interim, the other party of mutineers had secured the master, master's mate, gunner, surgeon, Mess. Elphinstone and Nelson, were kept in confinement below, and the fore hatchway was secured by centinels. They now ordered the carpenter, boatwain, and Mr. Samuel, (the captain's clerk) on deck. The boatwain was commanded by Christian, who was at the head of these rebels, to cast the launch out, and threatened to be instantly destroyed if he did not immediately obey. This being done, Mr. Samuel and two midshipmen, Mess. Hayward and Hallet, were ordered into the launch.

The master, one of those confined below, now requested permission to come on deck; though he obtained leave, yet he was ordered back again to his cabin in a very short time.

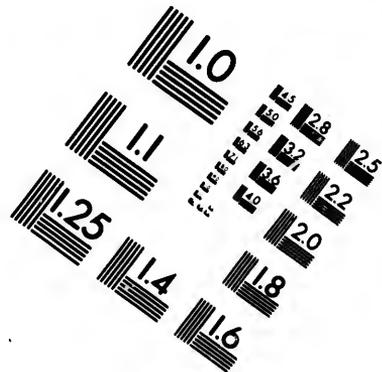

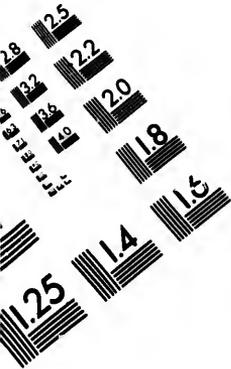

The captain endeavoured, by the most gentle means, to dissuade these infatuated men from those

base acts of violence: but all his solicitations were ineffectual. Christian, having changed his cut-throats for a bayonet, took a strong hold of the cord which tied the captain's hands, and threatened most violently to kill him on the spot, if he did not be quiet. The rest of the villains who guarded the captain had their pieces cocked and bayonets fixed. Several were now hurried into the boat, while the boatwain and some of the seamen who were to join them were permitted to stay on board awhile, in order to collect lines, canvas, twine, sails, &c. These men got a 28 gallon cask of water, about 150 lb. of bread, a little wine and rum, a quadrant and compass. The captain's map, ephemeris, book of observations, sextant, time-keeper, with all his drawings, surveys, &c. they would not let out of the ship. Mr. Samuel exerted his utmost to get them, but in vain; happily, however, he had secured the captain's journals, commission, and some material ship papers, which he did with surprising resolution, though strictly watched and guarded. The carpenter, after much dispute, was permitted to take his tool chest. Christian was for a long time determining within himself, whether he should detain the carpenter or his mates: however, upon giving the preference to the latter, the carpenter was ordered to join the rest in the boat.

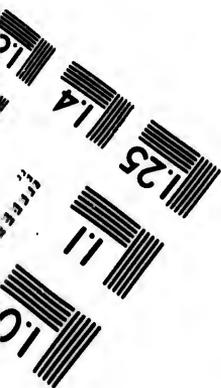

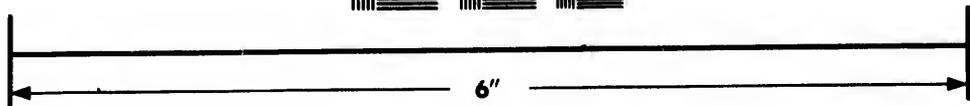

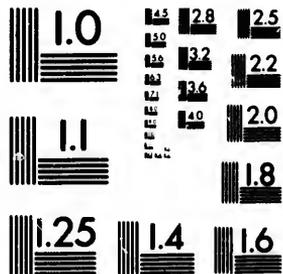

During the whole business, there was a great altercation among the mutineers. After they had forced those of the seamen into the boat whom they did not choose to keep, Christian ordered a dram to be served to every one of his own people. After this the officers were called upon deck, and forced over the side into the boat, while the captain was kept apart from every one abaft the mizen-mast, still held by Christian, who was armed with a bayonet: the guard round him had uncocked their pieces, on the captain's daring them to fire.

The captain was exceedingly thirsty, and one of

the guard, Isaac Merlin, who was inclined to serve him, fed him with shaddock. This man's partiality being observed, he was immediately removed from the captain. Afterwards he attempted to leave the vessel; and get into the boat; he was, however, by compulsion, obliged to join the mutineers: likewise Joseph Coleman, the armourer, and McIntosh and Norman, two carpenters, were detained against their will. This they declared to the captain, upon their separation. One Michael Byrne, also, wanted to get into the boat.

Neither persuasions nor remonstrances had any effect. The captain was not only thus abused, but they made a laughing-stock of his helpless situation. He asked for arms, but they told him he was so well acquainted with the people to whom he was going, that he could not want for any. Christian, being informed by the master at arms that the officers and men were in the boat, informed Captain Bligh that he must go with him, declaring that if he shewed the least reluctance, he should be put to death. Accordingly, he was forced by a tribe of armed russians over the side, where they untied his hands. Upon this the boat was veered astern by a rope. The mutineers threw them some pieces of pork, clothes, &c. likewise four cutlasses, notwithstanding their previous denial of arms. Thus, after being insulted and ridiculed, the captain and eighteen of his people were cast adrift in the wide ocean, while Christian and 24 others, the most able men of the ship's company, kept possession of the vessel, and steered in sight of the boat to the W. N. W. This the captain believed to be done in disguise, for after they were all put into the boat he heard some of the mutineers cry "huzza for Otaheite."

Notwithstanding the villainy and ingratitude of Christian, yet the recollection of the many kindnesses which the captain had shewn him produced some signs of remorse. When the captain remonstrated with him, and reminded him of the many instances of friendship which he had received from him, he appeared greatly disturbed, stopped him from proceeding, and frequently exclaimed that he was in hell!

After some little reflection, the captain endeavoured to recover his spirits, from a consideration that one day or other he should be able to account to his king and country for the present unexpected misfortune. Having very little wind, they rowed pretty fast towards Tofoa, bearing N. E. about 10 leagues distant.

It is wonderful how secretly the mutineers had planned their intentions. About thirteen of those who were with the captain in the boat had lived forward among the seamen, and never observed the smallest circumstance that could lead to any suspicion; even the captain himself was on the most friendly terms with Christian. On the very day he put his villainy into execution, he was engaged to dine with the captain: he was likewise invited the preceding night to sup with him, but evaded the invitation by pretending he was very ill, which being believed, for his honour and integrity were never suspected, gave the captain much uneasiness.

The captain's motive for going to Tofoa was to get a supply of bread-fruit and water, and afterwards to proceed to Tongataboo, and solicit the King Poulaho for leave to equip a boat, and furnish themselves with a necessary stock of provisions, in order to enable them to make for the East-Indies: what they had at present in the boat was very insufficient for their subsistence, there being only 1 solb. of bread, 16 pieces of pork, each piece weighing upon an average two pounds, six quarts of rum, six bottles of wine, 28 gallons of water, and four empty barricoes.

There being a moderate easterly breeze, they were able to sail, but did not reach Tofoa till it was dark. After some fruitless efforts, they were obliged to

give up all thoughts of landing, the shore exceedingly steep and rocky, and there being no anchorage, they were forced to keep the boat to the lee with two oars. Thus determined for the night, they took their repose as well as the fortunate circumstances would permit, each having been allowed half a pint of grog for the support of his spirits.

On the 29th, as soon as day appeared, they proceeded along shore, to find, if possible, a landing place. They discovered a cove with a rocky point at the N. W. part of the island, after some search they found a place where the rocks were not so high: here, within twenty yards of the shore, they dropped the grapnel. A great surf ran on the beach, however, as their unhappy situation could not admit of much delay, they were resolved on attempting to land, and let the attempt be ever so hazardous. Accordingly, Mr. Samuel, and some others, landed, who climbed the cliffs, and by their example got into the country, where they began to search about for supplies. The rest, who were in the boat, still kept their situation, there being no other landing place as yet discovered into the country. Mr. Samuel and his party returned about noon: they had discovered no natives, but there were signs that the place was inhabited. They likewise despaired of getting a sufficient supply of water, there being no fresh water, however they brought with them a little, but they had found in holes. Seeing that there was no certainty of obtaining a speedy supply, they deemed it expedient to be very sparing of what they had: there was their allowance, therefore, for this dinner, was, a small bit of bread, and a glass of rum. Notwithstanding this calamitous condition, they kept up their spirits, and behaved with uncommon resolution, which afforded no small comfort to the captain.

Though the weather was very fair, yet as there was a smart breeze from the E. S. E. they did not venture to sea. The captain being determined to keep their first stock entire as long as possible, was likewise resolved to take advantage of the calm, and make further endeavours to get relief from this island: accordingly, they went ashore and rowed along shore. After a long look they discovered at last some cocoa-nut trees, growing on the top of high precipices; and, notwithstanding it was very dangerous landing, on account of the surf, yet their necessities enabled them to counter their difficulties, and having climbed the cliffs, some of them got about 20 cocoa-nuts, others slung them to ropes, by which they were hauled into the boat through the surf. They returned to their former situation, as they find none more commodious than this cove, and now partook of a cocoa-nut each for their dinner and went to rest.

On the 30th both wind and weather were such that having made a fruitless attempt to sail they were obliged to return and remain in the boat. They were now determined to get into the country by climbing the cliffs, as Mr. Samuel and his party had done before; previous to which each was allowed a spoonful of rum, and a bit of bread. The natives, for the purpose of ascending the precipices, had thereto fixed long vines, by means of which the captain, Mess. Samuel, Nelson, and others, landed. They found some deserted huts, and a plantain walk, but in such an uncultivated manner that three small bunches of plantains could only be collected from it. In advancing further, they descended a deep gully, that led towards a mountain volcano. In hopes of finding some water they made diligent search; but could only find about nine gallons from the place. After searching further on without any success, this being exceedingly barren and dreary, they were much fatigued to the boat. The captain being faint, that had it not been for the assistance

people, he would never have been able to have defended the precipice. Being now all assembled about noon, each man partook of an ounce of pork, two plantains, and half a glass of wine. Those who remained in the boat during the captain's excursion, had been employed in looking for fish, but without any success.

It being determined that another party should take a different route in the afternoon, in hopes of meeting with some natives who might assist them, they accordingly set out, but returned in the evening, as unsuccessful as those who had gone before, and equally fatigued.

There was a cave about 150 yards from the water-side, at the head of the cove: the distance across the stony beach was about an hundred yards. As there was no danger of being surprised in this situation, the captain was determined to remain on shore this night with a part of his people, that the rest might have more room in the boat, and consequently enjoy a more comfortable night's repose. The master, in the boat, was directed to lie at a grapple, and be very vigilant in case of any attack. After some other necessary directions, the captain and his party repaired to the cave; and having kindled a good fire, which they kept up all night, they boiled a few plantains, and after a scanty supper upon one plantain and a pint of grög each, they fixed the watches, and settled themselves for the night.

Early the next day (May 1st) they took a different road again, in hopes of making some discovery: during this journey they suffered greatly for want of water: however, they met with four natives, two men, a woman, and a child. The captain used every means of procuring the friendship of these two men, who accompanied him and his people to the cave, having brought with them two cocoa-nut shells of water. After this they went, by the captain's desire, for more water; also some bread-fruit, plantains, &c. They were visited shortly after this by other natives, and about noon there were no less than thirty assembled, from whom they obtained some small relief. The captain, being still determined not to use any of the bread or water in the boat, issued about one ounce of pork, and a quarter of a bread-fruit, with half a pint of water to each man for dinner.

The natives with whom they had seen, were very kind and honest. They fold the provisions which they brought, for a few buttons and beads: there was no particular chief among them. It having been planned among the captain and his people, that they should conceal the unfortunate circumstance of the mutiny, for fear of creating evil designs among the natives; accordingly when these people enquired about the vessel, they pretended that she had overfeted and sunk, and that the rest of the crew had perished. The natives believed this story, though they neither expressed joy or sorrow on the occasion, only some little surprize. It was the captain's intention to stay here as long as there could be any thing got, and then put to sea as soon as ever the wind and weather were favourable. Several of the natives were coming and going the whole afternoon; they brought a very small quantity of water, but a sufficiency of cocoa-nuts, plantains, and bread-fruit for another day. They enquired very much after nails, but as this article was too valuable at present to be parted with, the captain pretended that they had none. Some cocoa-nuts and bread-fruit were likewise purchased of a canoe which came in with four men.

The natives having evidently very little to spare, by the small quantities they brought, the captain no longer flattered himself with hopes of procuring a sufficiency here to stock them for their voyage: notwithstanding, he was very happy to find that their stock of provisions was somewhat increased.

At sunset the natives left them in quiet possession of the cove, which led them to expect another visit the next day, and a further supply of water and food, with which they were determined to fail as soon as possible.

At night they kindled a fire as before, and fixed the watch, then, after their scanty allowance, went to repose.

The captain's people now became more cheerful than before, and being unanimously determined to exert their utmost, in hopes of surmounting their present difficulties, they bore all their distresses with remarkable fortitude and resignation.

On the 2d, early in the morning, the captain dispatched a party of his people with empty shells, to see if they could possibly get some water among the gullies in the mountains. During their absence the captain was visited by a greater number of natives than he had seen the preceding day, two canoes likewise came in from round the N. side of the island: in one of which was an old chief, whose name was Macca-ackavow. Another good-looking chief, called Eefow, accompanied the party, who had been in search of water. These chiefs had a knowledge of the captain, having known that he was with Captain Cook, and likewise heard of his being at Annamooka: the captain made each of these chiefs a present. There was likewise a youth (whose name was Negeete) who recollected Captain Bligh immediately, having seen him at Annamooka. This young man expressed much happiness at their meeting. Eefow promised to accompany the captain to Tongataboo, as soon as the weather was fine, to see Poulaho and Tecnow, who were there.

Notwithstanding the natives were now so kind and affable, yet the captain soon after discovered their secret intentions to plunder him. At this time they were very numerous, and attempted to haul the boat on shore; upon which the captain brandished his cutlafs, and desired Eefow, the chief, to command them to be quiet. This he did, and immediately they desisted.

A party of the captain's people had now procured about three gallons of water in the mountains. While they were absent, the captain bought up all the bread-fruit that was brought to them, and likewise some spears to arm his men with, as he was unwilling to trust to the four cutlasses, two of which were in the boat. They now employed their time in getting off to the boat the articles which they had purchased, while they heard a continual knocking of stones among the natives, which is the certain sign of an intended attack. However, the captain still appeared on the most friendly terms with the chiefs, with whom he shared his scanty allowance. They were very anxious for the captain to sit down, but this he declined, being aware of their evil intentions, for both Nelson and the captain himself suspected that their design was to catch hold of him whenever they had an opportunity; to avoid which, he sat his dinner standing, keeping a vigilant eye over all their motions: after dinner they got their things into the boat by degrees, the natives still continuing to encrease, and making preparations for their stay in the cove all night. They kindled fires and held consultations among themselves, which rendered their intentions more apparent. The captain immediately dispatched orders to the master to keep the boat as near the shore as possible, that they might the more easily embark, when they were ready for their departure. While the captain was sending his journal down to the boat, which he had on shore, in order to write down the occurrences, one of the natives attempted to snatch it, but was prevented by the gunner. Their hostile intentions were now palpable, and every one on shore with the captain, as soon as he gave the word, which was about sunset, immediately secured what-

water, without the least indication thereof, to give
any warning. It seemed to extend about a mile on
each side of them. This night they proceeded W.
by N. and each person had for supper an ounce of
damaged bread and a quarter of a pint of water.

They were now put on watch and watch, in
order to afford more room to those whose turn it
was to lie down, which they did on the boats
bottom or the chest, without any covering; by
which means they were so constantly wet and cold
that they could scarcely move when they got up.

On the 7th, it being a very raw disagreeable
morning, they had a spoonful of rum and a bit of
bread for breakfast.

On approaching the land, which lay in the W.
they perceived some curious rocks, which had a
variety of forms. The land, being high and low
in different places, and a great deal covered with
wood, was exceedingly pleasant to the view. There
being some small rocky islands off the N. E. part,
they proceeded between these and an island about
four leagues to the N. E. They were suddenly set
very near to the rocky islands, by an unexpected
lee current, which, by the dint of good rowing,
they got clear of, having passed close to the reef
that surrounded them. Being now followed by
two large sailing canoes, which appeared very eager
in their pursuit, they rowed with the utmost expedi-
tion, as they were apprehensive of some bad designs.

They had now a great deal of rain, thunder, and
lightning, with light winds at N. N. E. Only one
of the canoes gained upon them, but gave over
chase in the afternoon, when within two miles dis-
tance of them.

It could not be ascertained whether the inten-
tions of these people were friendly or hostile; how-
ever, though they might have benefited by their
intercourse, yet, as they were in a defenceless
situation, it would not have been at all prudent to
have run a risk of their enmity.

By means of the rain, which became very heavy
at four o'clock, they increased their stock of water
considerably, having, besides, fully quenched their
thirst for the first time since they had been at sea.
However they suffered by the rain as well as be-
nefited, being so extremely wet all night as to bring
on severe fits of cold and shivering. As soon as
the weather became fine they stripped and dried
their clothes.

On the 8th they had for dinner an ounce and a
half of pork, a tea-spoonful of rum, half a pint of
coconut milk, and an ounce of bread. They
were never able to catch any fish, though they saw
great numbers of them.

They cleaned the boat in the afternoon, and got
every thing as dry as possible. At night they had
their usual allowance for supper.

On the 9th, in the afternoon, they fitted a pair
of shrouds for each mast, and contrived a canvas
weather-cloth round the boat, and raised the quar-
ters about nine inches, by nailing on the seats of
the stera-sheets, which they found of great benefit.

They had very fine weather now, and a mode-
rate wind in the S. E. quarter, till evening, when
the weather suddenly changed, and they had very
heavy rain, with thunder and lightning. As they
were exceedingly wet and cold each person had a
tea-spoonful of rum. The wind increasing, and
the weather still continuing bad, they got no sleep
this night; however, at midnight, they caught
about twenty gallons of water. The succeeding
day was equally disagreeable. They were now
obliged to steer where they could, and to keep be-
fore the waves, for fear the boat should fill: they
were likewise obliged to keep two men constantly
bailing the water, the sea broke so very high. This
day each person had half an ounce of pork for
dinner. The allowance regularly served to each
person was 1-2 3/4th of a pound of bread and a quar-

No. 18.

ter of a pint of water, three times, for breakfast,
dinner, and supper.

The rain abated somewhat at noon; the wind,
however, still continued strong from S. S. E. to
S. E. The weather was very squally, and the sea
broke very high.

On the 11th, having suffered greatly from the
cold and rain of the preceding night, each person
had a tea-spoonful of rum. They were now obliged
to bale with all their strength, as the sea frequently
ran over their stern. The sun having appeared
about noon gave them much consolation, and they
partook of their scanty allowance with as much
satisfaction as possible; this night, however, was
equally dreadful as the preceding, and they ex-
perienced the same toil, danger, and uneasiness,
which rendered them full of complaints the next
day. They had their usual quantity of rum with
their daily allowance. About noon it was calm,
and no sun to be seen. They now steered for the
northward of the New Hebrides. The rain still
continued, and they had heavy squalls in the after-
noon, the wind blowing from the southward.
They were so exceedingly wet and cold that they were
all obliged to strip, and wring their clothes through
the salt water, which afforded them some little
warmth. They were obliged constantly to bale,
and the rum being nearly expended, their allow-
ance thereof was denied. The succeeding day
being equally disagreeable, added still more to their
troubles.

On the 14th the rain still continued, with gloomy
weather. They had some smart breezes at S. E.
Early this morning they discovered four islands
from S. W. by S. about eight leagues distant, to
N. W. by W. three-quarters W. six ditto. All these
islands were high, but one remarkably so. They
saw another small island, and some rocks, about
noon, bearing N. W. by N. about four leagues;
also another W. eight ditto. They passed the
westernmost island about four in the afternoon.

On the 15th before day-break, they discovered
another island bearing N. N. W. about five leagues
distant. They also saw a number of oceanic birds.

These islands were at first imagined to be a part
of the New Hebrides, but the captain afterwards
believed them to be a new discovery. They were
inhabited, as smoke was seen in several places, and
appeared exceedingly fertile.

The rainy weather still continued, the wind at
S. E. The night was so very dark that they could
scarcely see to steer, while the sea broke exceedingly
high.

On the 16th, in addition to their scanty allowance
for dinner, each person was indulged with an ounce
of salt pork. There being some little sunshine;
they were in hopes of being able to dry their wet
cloaths, but the rain soon returned, with strong
breezes at S. E. by S. The night was very dread-
ful, so dark that they did not know where they
were steering, while they had repeated storms of
thunder and lightning.

Every one complained the next day, having suf-
fered greatly from the exercise and fatigue of the
preceding night. The captain was frequently solli-
cited for an extra-allowance, but knowing the
great necessity of being economical in this their
unhappy situation, he peremptorily refused. How-
ever when they suffered more than usual from the
severity of the nights, they had each a tea-spoonful,
and sometimes two, of what little rum there was
remaining. They had also this day, in addition to
their allowance, an ounce of pork. At noon a
water-spout was very near on board them. This
night was also dark and dismal, and the sea very
high.

On the 18th the rain abated, but the night was
equally dreadful.

They had now very severe weather till the 23d,
during

ever belonged to him, and carried it to the boat. The chief stopped the captain, and enquired if he would not stay with them all night. The captain excused himself, by saying his presence was wanting in the boat; but, in hopes to amuse him, promised to trade with them the next day, if the weather permitted; likewise to go along with them to Tongataboo, according to agreement. Macca-ackavow, being offended that the captain would not sleep on shore, declared openly that they would kill him, and immediately departed. Eefow likewise left the captain, and they were now making preparations to commence the attack, by knocking stones together as before. The captain (while he and his people were walking down the beach full of apprehensions) took Nageete by the hand, who said would have detained the captain, under pretence of speaking to Eefow; but his treacherous intention of promoting the attack was apparent, and Capt. Bligh was determined to kill him on the spot, if they had begun at that time. The carpenter had orders not to quit Capt. Bligh till all his people were in the boat. When Nageete found that the captain was absolutely determined upon departing, he broke loose and left him.

They were now all got into the boat except one man, who obstinately quitted the boat while the captain was getting on board, and ran up the beach to cast the stern-fast off: notwithstanding the master and others repeatedly called to him, while assisting the captain into the boat, yet he did not return. Upwards of 200 men began the attack, which was instantaneous, and the unfortunate wretch who had quitted the boat fell a sacrifice to their rage. A furious shower of stones took place, and several of the Indians got hold of the stern, and would undoubtedly have dragged the boat on shore, had not the captain very fortunately a knife in his pocket, with which he immediately cut the rope. They now hauled off to the grapnel, the stones still flying about, with which they were all more or less hurt. They now filled their canoes with stones, in which twelve daring fellows set off in pursuit of the boat to renew the attack. The captain and his people were very near being defeated; their grapnel was foul, but the fluke broke, and having got to the oars, they fortunately pulled to sea. However, those men who were in the canoes paddled round them, and continued the attack, which those in the boat were obliged to sustain, having no method of returning it, except by the stones which entered the boat, but which were very insufficient for their defence: the boat being likewise very heavy, they could not clofe, of which the assassins took every advantage: however, the captain threw overboard some clothes, which, according to his expectation, they stopped to take up, during which the boat made as rapid advances as possible, and it being now almost dark, the men in the canoe gave over the attack, and returned to shore.

The captain began to think, by the wanton behaviour of these natives, how very unavailing his visit would be to Poulabo, and withal how dangerous, seeing that for the want of fire-arms, which always kept these people in terror, he should probably be exposed to further insults. Having set their sails, they steered along shore by the W. side of the island Tofoa, with a fresh easterly wind. After much rumination on their unhappy condition, they had but little hopes of relief, except at New Holland, till their arrival at Timor, which was 1200 leagues, where there was a Dutch settlement. Their stock of provisions was now examined, and it was agreed upon by all to live each day upon one ounce of bread, and a quarter of a pint of water. Provisions, which were but scanty at first, were now considerably decreas'd by the confusion of the attack: however, they bore their loss with the greatest patience, and having got the boat, which was small

and deep laden, into some order, the people were divided into watches. Early the next day (May 3) there was a strong indication of a storm, by the fiery redness of the sun, which began in a short time after, while the sea ran very high. Their distress and danger were at present very great, particularly as their bread (which was in bags) was very near being spoiled. The captain, therefore, ordered all the clothes which could be spared to be thrown overboard, with some rope and spare sails, by which means the boat was considerably lightened, and they were thereby better enabled to balt the water out. As soon as they had an opportunity, they put the bread into a chest which the carpenter very fortunately had on board; his tool-chest was likewise appropriated to the same purpose.

The people were now exceedingly wet and cold, so that the captain gave each person a spoonful of rum, with a quarter of a bread-fruit, (which at other times they would not have deemed eatable) for dinner: the captain was resolved to make the provisions last for eight weeks, and therefore seriously exhorted his men to continue to their agreement.

The wind was now from N. E. to E. S. E. and the weather tempestuous. They were still obliged to keep baling the water, for fear the boat would fill; which was very fatiguing: the night was so very cold, that they could scarcely make use of their limbs the next day: however, they derived great benefit from a tea-spoonful of rum, which the captain at this time allowed each person.

On the 4th they discovered a small flat island of a tolerable height, bearing W. S. W. about five leagues distant. This day each person had his share of five small cocoa-nuts, which was the allowance for all their dinners.

About two o'clock they saw other islands, and between three and four reckoned about eight, bearing from S. round by the W. to N. W. by N. the nearest being about four leagues distant. At this time the wind was moderate, and they proceeded to the N. W. by W. between the islands. In the evening they discovered three more; to the southward of which, under a reefed-sail, they steered. They had this night for supper a few broken pieces of bread-fruit; after which they had a comfortable repose, this night being very fair.

On the 5th they had a few pieces of yams, which were found in the boat, for breakfast. After this they examined their bread, a great part of which, being damaged, they found rotten, but which notwithstanding they were very glad to keep for use, having dined that day on some of it, and a quarter of a pint of water.

In the evening they discovered two islands, one bearing W. by S. about six leagues distant, and the other N. W. by N. about eight ditto. They steered to windward of the northernmost, and having past it, resumed their course for the night to the N. W. and W. N. W.

On the 6th the wind was very moderate from the E. N. E. and the weather remarkably fine. They saw a number of islands early in the morning from S. S. E. to the W. and round to N. E. by E. They were resolved to pass those in the N. W. At twelve they saw a small sandy island, about two miles distant, bearing from E. to S. 3-4ths W.

This day each person had for his dinner a quarter of a pint of cocoa-nut milk, and the meat, which was about two ounces. They were very happy in having hooked a fish; but terribly disappointed afterwards in losing it, while endeavouring to take it into the boat.

In the evening the islands, between which they steered to the N. W. appeared very extensive and fruitful, and of a good height: towards night they were very near mid-way between them, about five leagues distant from each shore. They now fell in with a coral bank, where there was only four feet

water, without the any warning. It is each side of them.

during which time they were occasionally allowed two tea-spoonfuls of rum. The rain was at times so very heavy, that they were apprehensive it would fill the boat, and were constantly obliged to keep baling, and by the frequent breaking of the sea, they were frequently prevented from taking advantage of the rain, by adding somewhat to their stock of fresh water. They were frequently filled with horror and dismay, and the captain became apprehensive that some of his people would perish.

Though the weather became fair about noon on the 23d, still it blew very hard, and the sea was very high: however the wind moderated towards evening, and they eat their scanty supper with more cheer than usual. This night was very fair.

On the 24th, for the first time this fortnight, they enjoyed the comfortable warmth of the sun. They stripped, and hung their clothes up to dry. They took this opportunity of examining the state of their bread, and, according to the consumption that was made, found a sufficiency for one month longer, by which time the captain hoped to reach Timor: notwithstanding which, he thought it necessary to lessen the allowance, for fear after all they might be obliged to go to Java, which would occasion a delay. Having, therefore, repented to his people the propriety of guarding against disappointment, and promising to increase the allowance if they made any rapid advances, they all cheerfully acquiesced with the proposal.

On the 25th a noddy, which is about the size of a small pigeon, was caught with the hand, and being divided into 18 portions, was distributed with the usual allowance of bread and water for dinner. The bones and all were eaten, with salt water for sauce. They caught in the same manner a booby in the evening, which is as large as a duck. This bird was killed for supper, and the blood thereof given to three of the men who were the most indisposed. This was divided in the same manner that the noddy was, and entrails, beak, &c. all devoured.

The weather still continued fine, and they had fresh breezes from the S. E. This day another booby was caught; the blood of which was given in the same manner to those who were most in need of nourishment, and the rest distributed as before for dinner.

They now began to feel a different inconvenience from the change of weather, several being exceed-

ingly languid and faint on account of the powerful heat of the sun. This evening they were doubly fortunate, having caught two boobies, the stomachs of which contained several small cuttle-fish and flying-fish. These were all saved for dinner the next day.

On the 27th, having passed much drift wood, they deemed themselves near the reefs of New Holland. The weather was still fair, and they had a fresh breeze at E. S. E. This day every person thought he had feasted, having a better dinner than they had for some time, by the distribution of the two boobies and the entrails. From the clouds being now fixed in the W. they were positive of being near land.

On the 28th, at one in the morning, the person at the helm heard the sound of breakers: the captain saw them close under their lee, being scarcely a quarter of a mile distant from them. They immediately veered on a wind to the N. N. E. and in a short time were clear of them.

On the 29th, about nine o'clock, they saw the reefs of New Holland. On approaching them the wind came at E: while the sea broke furiously over every part. They were obliged to lie along the line of the breakers. They presently found themselves embayed, and in a critical situation: for want of strength they could do nothing with their oars, so that they began to think they should be under the necessity of attempting to push over the reef: however, they happily discovered a break therein, about a mile's distance, within which was an island of a moderate height, about the same direction, bearing W. half N. By means of a strong stream running to the westward, they entered this passage, which was about a quarter of a mile broad, with deep water. Being now in smooth water, within the reefs, they endeavoured to keep near them, to try for fish; but the tide set them to the N. W. therefore they bore away in that direction, being determined to land whenever an opportunity offered.

The island which was first seen Capt. Bligh called Direction Island, bearing W. S. W. five leagues, in latitude 12 deg. 51 min. S.

Being now within the reefs, and in view of the coast of New Holland, they returned thanks to God for having enabled them to surmount so many difficulties, and began to comfort themselves with the hopes of being soon able to accomplish their wishes.

CHAPTER II.

Temporary Reliefs discovered—Description of the Island called Restoration—Some Natives seen—The Captain and his People put to Sea—Embayed—Another Party of Natives seen—Their Token of Friendship—Captain lands—Parties receive Orders—Some of the People dissatisfied—One becomes disobedient—Captain's Behaviour—Peace restored—Cursory Remarks—Several Islands passed—They proceed from the Coast of New Holland to the Island of Timor—The People taken ill—Their Joy at seeing Timor—Arrive at Coupang—Attention of the Governor, &c. &c.

SEVERAL parts of the land which they saw were covered with wood. In proceeding towards the shore, having fallen in with a point of a reef connected with that towards the sea, they came to a grapnel, in order to look for fish; but were unsuccessful. Having seen two islands about four miles to the W. by N. they made for the nearest; but finding it only a heap of stones, proceeded to the next, which lay close to the other, and towards the main. They found a bay on the N. W. side, and a fine sandy point to land at. They looked if there were any signs of natives: they saw some old fire-places, but nothing to create any apprehensions during their stay. One half of the company were now ordered to sleep on shore, and the other half in the boat. They looked for some oysters in the rocks, but it being dark could gather only a few. The night was calm, and those on shore had a very comfortable rest, though without fire, having no means to kindle one.

During the night, one of the gudgeons of the rudder came out, and was lost. The captain dreaded this misfortune when at sea, and for fear of the world had grumets fixed on each quarter of the boat for oars: this, however, would have been a dangerous experiment; it was lucky, therefore, that the accident happened when they were able to remedy the defect, which happily they did, having found a large staple in the boat which answered the purpose completely.

They made a fire the next day, by the help of a magnifying-glass, and fortunately found a piece of brimstone and a tinder-box, which had been thrown into the boat, and were now of essential service. Parties having been out in search of oysters, returned with a large quantity, and some fresh water with these, some bread, and a little pork, they made a stew in a copper-pot, which they had fortunately brought from the vessel. Each person had a full pint of this, and it was highly acceptable.

Thoug

Though all the company had some complaint, yet considering the difficulties they had undergone, they were very frivolous. The captain had a severe pain in his stomach, the rest were afflicted with a weakness in their joints, a violent tenesmus, dizziness in the head, &c. &c.

Fortunately in the place where they found the oysters, they discovered a well, which produced a sufficiency of water during their stay: there was likewise a small run of excellent water on the S. side of the island.

During their excursions they found two huts which were miserably built: also a pointed stick, about three feet long, with a slit in the end of it, which the natives use to sling stones with. These were sure indications of the place being lately inhabited. They likewise perceived the track of the kangaroo.

This island is about a league in circumference. It consists chiefly of high rocks and stones covered with wood: the soil is very bad, consequently the trees few and small. There were several parrots, wild pigeons, &c. which made the captain regret the want of fire-arms. Except the place where they landed, the shore of this island is very rocky. The captain called this island Restoration Island, both on account of being here the day of the anniversary of King Charles II. and because the title was so applicable to their present situation, being restored to fresh life and vigour.

A quantity of oysters were brought in for supper, which were dressed as before, and each person had a full pint and a half of stew. After supper they divided again, and the party who were to sleep on shore had a good fire all night.

The pork, which had not been secured like the bread, having been made away with by some unknown person, the remainder, which was about two pounds, was divided at once. On the 30th they had this and some oysters for dinner, and while some of the people were out gathering oysters, and filling their water vessels, the captain staid in the boat, to get it in readiness for sea.

Having procured about sixty gallons of water and some oysters, they prepared to embark, when they saw about twenty natives on the opposite shore, armed with spears, entirely naked, and apparently black, who began to halloo, and make signs for them to come to them; they saw the heads of several more on the top of the hills. The captain now deemed it prudent to be off as soon as possible, for fear they might be pursued by their canoes. Accordingly they directed their course within two small islands, that lie to the N. of Restoration Island, passing between them and the main land, towards Fair Cape, which they were abreast of by eight o'clock, having a strong tide in their favour. At night having steered more towards the W. they met with low land towards the N. E.

On the 31st, before day-break, they found themselves embayed, they were therefore obliged to stand back for a short time to the southward. They had now a low sandy coast in view, which was apparently barren and destitute of inhabitants. They saw several small islands towards the N. E. about six miles distant: the E. part of the main being N. four miles, and Fair Cape S. S. E. about six leagues. They made for the channel between the nearest island and the main land, which were about one mile asunder: they saw large shoals of fish, but could not catch any.

While they were passing this strait, they perceived another party of natives, who were armed with spears, and apparently of the same form and colour as those they had seen before. The captain beckoned to them to approach, having laid the boat close to the rocks, but none of them would venture within two hundred yards of them. Notwithstanding, they shouted, and made signs for the captain and his people to land, waving green

branches of the bushes which were near them, as a token of friendship; a little further off they perceived a larger party, who joined the rest; and behaved in the same manner; however, as they were exceedingly numerous, the captain was resolved not to land.

Perceiving an island of a good height, bearing N. half W. about four miles distant, they were resolved to land there, and from thence take a survey of the coast: they arrived about eight o'clock in the morning, at this island; the shore was rocky, but as the water was smooth, they landed without any difficulty. The captain now ordered two parties to go out, one to the Northward, and the other to the Southward, in search of supplies, while some were likewise appointed to take care of the boats. The men being oppressed with weakness and fatigue, began to appear dissatisfied; some who were desired to seek supplies, declared they would rather go without any dinner than be obliged to seek it, imagining their employment was more fatiguing than that allotted to their companions: one of these was presumptuous enough to insult the captain, declaring that he was every bit as good a man. Captain Bligh perceiving the danger of tolerating such insolence, was determined to check it in time, and either preserve his authority or die in the attempt; seizing therefore a cutlass, he ordered the offender to take hold of another, and defend himself; finding the captain thus desperate, he called out that he was going to kill him, and beginning to recollect himself, immediately made concessions: the captain, in order to retain their former peace and harmony, was satisfied to overlook it.

Those who had been in search of supplies, returned with some clams and oysters, and a few small dog-fish that they found in the holes of the rocks; they were likewise so fortunate as to obtain a full supply of water in the hollow of the rocks, on the North part of the island.

During their examination of the island, they found in a sandy bay, an old canoe, about 33 feet long, turned topsyturvy, and half buried in the beach; it was capable of carrying about twenty men. Not deeming this place sufficiently secure from the Indians, they were determined to make for a small key, which was N. W. by N. and which they deemed the safest resting-place for the night.

This day being Sunday, when they came to this island, the captain accordingly named it Sunday Island. It lies N. by W. 3-4ths W. from Restoration Island, in latitude 11 deg. 58 min. S.

Each person had this day a full pint and half of stewed oysters and clams, thickened with small beans. After dinner they completed their water; the weather was now very fair, with a fresh breeze at S. E. by S. They steered, according to their determination, for the small key, N. W. by N. which they did not reach until it was dark, but finding it impossible to land, without running the hazard of staving the boat, on account of a reef of rocks which surrounded, they came to a grapnel for the night.

On the 1st of June, at day-break, they got on shore, and tracked the boat into shelter: they were now about four leagues distant from the main.

The captain dispatched some of his men to seek supplies, but they could only get a few clams and some dolichos; they made a mess of these and some oysters, which they brought from Sunday Island for dinner.

Another party who had been sent to the easternmost key, returned about noon; one of them, Nelson, the botanist, was taken so ill, that he was carried by two men to the boat. He was afflicted with a violent heat in his bowels, the loss of his feet and sight, and a great thirst; this was occasioned with over exercise during the excessive heat of the sun. The captain gave him some wine, with pieces of bread soaked in it, by which means he began to recover. The boatswain and carpenter were likewise very

very ill with sickness of the stomach and a head-ach. occasioned in a great measure by eating some of the dolicos raw. Several others were exceedingly distressed with the tenesmus; in short, there was no one free from complaint.

This island was for the most part sandy, and consequently barren, notwithstanding it produced some small toa trees and others. The captain, in his walk round the island, found several cocoa-nut shells, the remains of an old wigwam, and the backs of two turtle. Some of his people also found three sea-fowls' eggs; but there was not the least sign of any quadruped. There were fish in the lagoon, but they could not catch any.

The captain directed the fire to be made in the thicket, for fear if there were any natives near hand they might be discovered by its light: however, they did not entertain much apprehension, as they intended to make but a short stay. Several took a comfortable sleep, while those who were not disposed to rest employed themselves in dressing clams for to-morrow's dinner, and likewise in cutting up some in slices to bring with them.

Particular orders were given that they should not make a large fire, or suffer it to blaze up after it was dark. The captain now took a walk about the beach, in order to observe if the fire could be seen at a distance; and while he was consoling himself with the idea that it could not, suddenly the whole island appeared in a blaze. The captain immediately returned to learn the cause, and understood that one of his men obstinately determined, in spite of Mess. Samuel and Peckover, whom the captain had appointed superintendants, to have a fire to himself, in kindling which the flames rapidly spread among the neighbouring grass. The captain expressed much displeasure at such misconduct, for had there been any natives near hand, it might have been attended with fatal consequences.

About eight o'clock Mess. Samuel and Peckover went out to watch for turtle, while three others went to the E. key to endeavour to catch birds. The rest being indisposed took their rest, except Mess. Hayward and Elphinstone, who were appointed to keep watch. Those who had been seeking birds returned at midnight, having got only 12 noddies: one of them (Robert Lamb) having separated from his companions, disturbed the birds, otherwise they might have caught a great number. The captain was exceedingly provoked with this man for such imprudence: afterwards, when they came to Java, he acknowledged that while he was by himself he had eaten nine birds raw. Mess. Samuel and Peckover had watched for turtle till three o'clock, without any success.

They half dressed the noddies, that they might keep the better; these and a few clams being all the supply that they could procure here. The captain fastened some pieces of iron, and a few brass buttons, to a tree, for the natives; and, having enjoyed a comfortable night's rest, prepared for their departure at dawn of day.

On the 2d they proceeded to the N. by W. with a S. E. wind: the sea became exceedingly rough, after they had proceeded two leagues to the northward. In the morning they met with a large shoal, on which were two sandy keys: they passed on to the northward, between these and two others which were four miles to the W. the roughness of the sea still continuing. At twelve o'clock they fell in with six other keys, which produced some brush-wood and small trees. The country appeared exceedingly hilly, while the northernmost land was sloping towards the sea. There was a flat-topped hill nearly abreast them, which the captain called Pudding Pan Hill, on account of its singular shape: two others, which lay a little to the northward, he named the Paps.

It was impossible for the captain to make minute observations, or ascertain the depth of water, being

deprived of the necessary means: indeed, if they had been in possession of their fathom lines, &c. it could not have been expected that they would have made any delay in such a critical situation.

This day each person had for dinner his fair division of six birds, with the allotted allowance of bread and water: Nelson, who was recovering apace, was allowed half a glass of wine. At first their allowance was issued by guess; but the captain, willing to be both exact and impartial, had lately contrived a pair of scales with two cocoa-nut shells, and having accidentally some pistol balls in the boat, one of which weighed 27½ grains, this was adopted as the proportion of weight which each person was to receive of bread, &c.

Hitherto they had regulated their time by the gunner's watch, which this day unfortunately stopped, so that they could only judge of time by noon, sun-rise and sun-set.

The weather was now very fair, and they had fresh breezes from the S. S. E. and S. E. while they stood to the N. by W. they had more sea, being less sheltered by the reefs which lay to the eastward. At noon they steered to the N. W. and passed a large and seemingly commodious inlet, which lay in latitude 11 deg. S. About sun-set they arrived to an island about three leagues northward of this: they could only land at a sandy point, under which they took shelter; which being a dreary situation, they preferred sleeping this night in the boat. Those whom the captain had sent to see if this place produced any thing, reported that they had only seen some turtle, bones and shells; so that it appeared the island had been lately inhabited. It consisted chiefly of rocks, which were rudely connected, though here and there it was covered with wood. This place the captain called Turtle Island; its latitude 10 deg. 52 min. S. about 42 miles W. from Restoration Island. They lay at grape-nut till daylight. This day (the 3d) the weather was very cloudy, and they had a smart breeze. Abreast of Turtle Island the coast seemed a sandy desert; but having proceeded to the northward, it ended in a point, where there were several small islands adjoining. They sailed between these. There was a high mountainous island with a flat top, and four rocks to the S. E. of it, which they called the Brothers. Having discovered after this a number of high islands in an extensive opening which appeared in the main land, they called them the Bay of Islands. They perceived several other small islands and keys to the northward; the most northerly of which being mountainous, was remarkable for having a very high round hill on it: the smaler was distinguished by a single peaked one.

To the northward and westward of the Bay of Islands the coast is high and woody, with a broken appearance. There were apparently several commodious places for shipping, and fine bays. The captain called the northernmost of these islands Wednesday Island, (this day being Wednesday). They fell in with a large reef to the N. W. of the island: this the captain supposes joined a number of keys, which they had in view from the N. W. to the E. N. E. They stood to the S. W. half a league; their latitude 10 deg. 31 min. S. Wednesday Island bearing E. by S. five miles; the westernmost land in sight, about three leagues distant: the islands to the northward from N. W. by W. to N. E. and the reef from W. to N. E. about one mile distant.

This day each person had six oysters, in addition to his share of bread and water for dinner.

While steering to the S. W. towards the westernmost part of the island, in sight, in the afternoon they fell in with some large sand banks, that ran off from the coast. The captain called this Shoal Cape. In order to get round these shoals, they were obliged to steer to the northward again; after which they proceeded to the W.

Before it was dark they arrived to a rock, which they had mistaken for a small island that appeared bearing W. It abounded with boobies, and was therefore called Booby Island, both by Capt. Bligh, who at this time was ignorant that it had been seen before, and also by Capt. Cook, who took the same notice of its being thus resorted to by these birds. Capt. Bligh afterwards imagined that the opening, which he called the Bay of Islands, was Endeavour Straits, and that their track had been to the northward of Prince of Wales's Isles.

In the evening they were again in the open ocean: the captain endeavouring to comfort his men with hopes of being in safety in a few days time; indeed, notwithstanding their dangerous situation, his people still enjoyed uncommon spirits and fortitude. After supper (which was no better than usual) they directed their course to the W. S. W. in order to counteract the southerly winds, should they become violent.

On the 4th they saw a number of water snakes, that were ringed yellow and black. This day they had each six oysters, in addition to their usual dinner. Scanty as their allowance was, each person seemed satisfied therewith. As for the captain, he never felt himself very hungry or thirsty, but was content with his allowance. Notwithstanding the weather was both mild and fair, yet they were obliged to employ two men constantly in baling water. About noon they passed a great deal of rock-weed.

On the 5th they had each six oysters again, as before. A few boobies came about them in the evening, and they caught one of them. The blood was divided among three of the weakest men, and the bird reserved for the next day's dinner. For supper some had a quarter of a pint of water, and others (who were more in need) half a pint. They suffered very much by the cold during night, being constantly wet with the sea.

On the 6th the captain perceived that some one had stolen a few of the clams which had been hung up for sea-store, but every one declared himself innocent. This day the booby, which was reserved, was distributed for dinner. In order to prevent any grumbling about the several parts, as some would no doubt prefer one to another, the captain adopted the following method, which is commonly used at sea: one person turns his back on the object that is to be divided, while another points separately to the portions, asking each time of the other, who shall have this? which he determines by mentioning whatever person's name he chuses. This impartial method of division certainly gives every man an equal chance of the best share.

Their store of bread was examined in the afternoon, and according to their present consumption a month's allowance was still remaining: there being now every prospect of a quick passage, the captain, agreeable to his promise, granted the former allowance.

On the 7th every one was complaining of some ailment, having been miserably wet and cold during the night. They had now a very high sea. An ounce of dried clams, being all that was remaining, was served to each person for dinner. They changed their course about noon to W. N. W. keeping more from the sea, as the wind was very fierce: they had likewise heavy rain. Surgeon Ledward, and Lieutenant Lebogue, were exceedingly ill: they had now and then a tea spoonful or two of wine, which was reserved on purpose for the indisposed.

On the 8th the weather became moderate: the wind at S. E. They saw a few gamets, and in the afternoon caught a small dolphin, which was the first they got. Each person had two ounces of this with the oil for dinner, and the remainder was reserved for the next day. In the evening they had a very smart gale, which continued all night, during which they were obliged constantly to bale. On the next day they complained very much of different

pains and aches, which the severity of the night had occasioned. Surgeon Ledward, and Lebogue, had each a little wine. The captain still encouraged his people to keep up their spirits, assuring them they would soon be at Timor, as they were now advancing at a fine rate. The remains of the dolphin, which was about an ounce for each person, was distributed this day for dinner. The captain having eat some of the stomach of the fish, which came to his share, was for some time exceedingly ill.

On the 10th they all appeared very ill, having endured great toil and uneasiness the preceding night. They had ghastly countenances, with an apparent debility of understanding; while some complained of weakness and swelled legs, and others of a lethargy. The surgeon and Lebogue were visibly hastening to their end: out of the little wine which remained, they had occasionally some tea spoonfuls, from which they derived much benefit. Having met with a quantity of birds and rock-weed, they knew they were not far from land: the captain, however, was aware that there were several islands between the E. part of Timor and New Guiney. They experienced more ease and comfort this night than before, the wind having abated considerably.

On the 11th an extra allowance of water was given to those who most required it. The people were exceedingly cheerful this day, having passed the eastern part of Timor. They saw several birds, and being upon the watch caught a booby in the evening, which they kept for dinner the next day.

On the 12th they saw Timor, the sight of which created universal joy. It then bore from W. S. W. to W. N. W. Having hauled on a wind to the N. N. E. till day-light, the land bore from S. W. by S. to N. E. by N. about two leagues distant from shore.

They now began to consider the great goodness of Providence, in being able with such poor allowance to reach this coast in 41 days in an open boat, a distance of 3618 miles from Tofoa, and that not one of them during such distress and danger had perished. They could hardly believe their success, and with grateful hearts attributed this miraculous deliverance to divine grace.

Not being able to proceed N. E. with the wind, they bore away after day-light along shore to the S. S. W. The country, which exhibited several beautiful situations, was exceedingly delightful: as there were only a few small huts to be seen, it was therefore supposed that no European inhabited this part of the island. It was impossible to land, as there was much sea running on the shore. The booby which had been caught the preceding day was now divided for dinner.

The weather became very hazy, and the wind blew fresh at E. and E. S. E. They proceeded during the afternoon along a low shore, where there were no signs of cultivation, though covered with a quantity of palm trees. The country, however, improved by sun-set, and they perceived several great smokes.

Captain Bligh deemed it most prudent to keep this situation till the next morning, for fear they might run past any settlement during the night: they therefore brought-to under a close-reefed foresail. They were about half a league distant from shore, in shoal water. After their usual allowance for supper, they enjoyed a little sleep, as the boat lay-to very well.

On the 13th, very early in the morning, they wore and stood in shore till day-light, having drifted during night about three leagues to the W. S. W.

They now examined the coast, but there being no appearance of a settlement, they bore away to the westward, with a strong breeze against a weather current, which occasioned much sea. The weather was now foul and hazy. Awhile the shore was high, and covered with wood; but afterwards they had low land. In the forenoon they perceived the

coast, inclining towards the S. part thereof bearing W. S. W. half W. high land appeared at the same time in the S. W. They stood towards the outer land, which they discovered to be the Island Roti.

Having returned to the shore they had left, they brought to a grapnel in a sandy bay, for the sake of making more minute observations on their present situation. During their stay here, they perceived several great smokes, and the carpenter and mauler being very solicitous to go in search of supplies, the captain at last gave his permission: however they soon altered their mind, as they found no other in the boat inclined to join them.

Having made as exact a calculation as they could, they continued steering along shore. The country now appeared exceedingly beautiful, covered with wood and a quantity of fan palm trees, which appeared like cocoa-nut walks.

During the afternoon the weather was dark and hazy, and they had a strong breeze at E. S. E. They now ran through a very dangerous breaking sea, occasioned by a strong tide setting to windward, and shoal water; after which, they saw a fine bay, with a good entrance, about three miles wide. As this promised well, they came to a grapnel near the E. side of the entrance, in a small sandy bay, where they perceived a hut, some cattle, and a dog. In order to discover the inhabitants, the boatswain and gunner were immediately sent to the hut. They returned in a short time with five of the natives, and reported that they had found two families, and were received by the women with European politeness. The natives informed the captain that the governor resided at a place called Coupang, some distance to the N. E. These people brought them a few pieces of dried turtle, and some ears of Indian corn, which was the more valuable gift, as the turtle was so hard that it required to be well soaked in hot water before it could be eaten. They offered to bring other refreshments, but the captain was unwilling to make any delay, and having signified to one of these men, that if he would enter the boat and shew them the way to Coupang, he should be amply rewarded for the trouble, the native to whom the proposal was made with the greatest good-nature complied, and about half past four they sailed, keeping close to the E. shore, under all their sail, by the direction of their pilot.

On the approach of night, the wind dying away, they had recourse to their oars, which, notwithstanding their weakness, they were able to make some use of: however, as their progress was slow, they came to a grapnel about ten o'clock, and, for the first time, each person had a double allowance of bread, with a little wine, for supper.

The natives whom they had seen were of a dark tawny colour, with long black hair. Their dresses consisted of a square piece of cloth round the hips, in the folds of which a large knife was stuck, and another hanging by the four corners from the shoulders, which served as a pocket for their beetle equipage, which they were continually chewing.

On the 14th, after a comfortable repose, they weighed early in the morning, and continued to keep the E. shore on board, in very smooth water. Having passed an island to the westward, which the pilot called Pulo Samon, they were again to sea. The northern entrance of this channel is near two miles wide, with apparently deep water.

It is impossible to describe the pleasure which was felt in hearing two cannon which were fired. Some short time after they perceived two square-rigged vessels and a cutter at anchor to the eastward. They endeavoured to work to windward, but losing ground on each tack, they were obliged to take to their oars again. Keeping close to the shore, they rowed till about four o'clock, when they brought to a grapnel, and had another allowance of bread and wine. When they had rested, they weighed, and rowed till it was day-light, when they came to a grapnel off a small fort and town, which their pilot informed them was Coupang.

In the course of their passage they had made a small jack of some signal flags used by boats to shew the depth of water in sounding, which the boatswain had secured out of the Bounty. These were hoisted in the main-shrouds, as a signal of distress, the captain being unwilling to land without previous permission.

They were hailed to land a little after day-break, by a soldier. Accordingly they did; when they found themselves surrounded by a number of Indians. Captain Bligh was exceedingly happy to find an English sailor, who belonged to one of the vessels in the road, and whose captain was the second person in the town; to whom he requested to be conducted, being informed that the governor was so ill that no one could speak to him.

This captain's name was Spikerman, who, upon hearing Capt. Bligh's misfortunes, behaved with the greatest humanity, and gave immediate orders that the people in the boat should be taken to his own house, where, for they were scarcely able to walk, they were assisted, and a comfortable breakfast of bread, butter, and tea, provided.

Capt. Spikerman went himself to the governor, Mr. William Adrian Van Elle, to know what time would be the most convenient for Capt. Bligh to see him. The governor appointed eleven o'clock; but, notwithstanding his extreme ill health, he was so anxious about Capt. Bligh, that he saw him before that time, and received him in a manner truly polite and affectionate, declaring, that though his ill state of health would not permit him to *assist* the captain himself, yet he would issue such directions that neither Capt. Bligh nor his people should want for assistance. For the captain, he ordered a house to be immediately prepared, and said that his people should be either accommodated at the hospital, or on board Capt. Spikerman's vessel, whichever was more agreeable. He likewise gave directions that victuals should be dressed for them at his own house, and regretted that Coupang could not afford them better accommodations.

The captain, on his return to Capt. Spikerman's house, found that every attention had been paid to his people, particularly in respect to apparel. Being then conducted to the house intended for him, where servants were in readiness to attend him, finding it spacious and convenient, he desired his own people to be lodged with him, appropriating one apartment to his own use, another to the master, surgeon, Nelson, and the gunner; the left to the other officers, and the outer apartment to the men: the hall was free for the officers, and a piazza, by which the house was furrounded, to the men. When the governor was apprized of the captain's intention, he immediately sent furniture, and every necessary which was required, having desired the captain to let him know whatever he wanted, by communicating his wishes to his son-in-law, Mr. Timotheo Wanjon, who was equally assiduous in rendering every thing as comfortable and agreeable as possible.

Capt. Bligh dined with Mr. Wanjon, having first seen his own people enjoy a hearty meal on a good dinner which was sent to them by the governor. The captain retired very soon to his chamber, (which was furnished with every convenience) in order to partake of that rest and quietness which were so essential towards the re-establishment of his health.

As soon as an opportunity offered, Capt. Bligh presented to the governor a formal account of the loss of the Bounty, with a complete descriptive of the mutineers, requesting that instructions might be sent to all the Dutch settlements to stop the vessel in his Majesty's name if she made her appearance. Nelson obtained leave of the governor to explore the plants of the country, as the place was so full of abundance with many curious and medicinal plants; however he was prevented by severe indisposition from availing himself of this indulgence. He, and all the rest who were ill, were constantly attended by Mr. Max, the town surgeon, whose kindness and attention were remarkable.

Description of Coupang—Customs, &c. of Mr. Wanjon—They embark—A polite Reception

THE settlement of the Dutch here formed in the year 1771, in different parts of the island. The settlement on the N. E. produce of the place the latter is in great part situated in a road for shipping, to deg. 12 min. S. CHAPTER III.

Description of Coupang—The Settlement—King of the Island—Capt. Bligh introduced to him—His Reception, &c.—Customs, &c. of the Place—The Captain's Intention of hiring a Vessel—Purchases a Schooner by the Assistance of Mr. Wanjon—This Gentleman's Attention—Death and Burial of David Nelson—The Schooner ready for Sea—They embark—Leave Coupang—An affectionate Leave—Several Islands seen, &c.—Anchor off Passourwang—A polite Reception from Van Rie—Description of the Place—Conducted to Sourabaya—Arrival at Batavia.

THE settlement at Coupang, being the only one the Dutch have on the island of Timor, was formed in the year 1630. They have residents in different parts of the country. There is a Portuguese settlement on the N. side of the island. The chief produce of the place is sandal wood and bees-wax: the latter is in greater plenty. The town of Coupang is situated in a great bay, which is an excellent road for shipping. The town lies in latitude 10 deg. 12 min. S. The natives, or those who inhabit the neighbourhood of Coupang, are of a very indolent disposition, which the Chinese have taken no little advantage of. Their trade is chiefly carried on in small Chinese vessels, from 10 to 30 tons burthen. There is a small market at Coupang for country people, but very little business is done in it. The inland people are strong and active, but extremely dirty, which consequently subjects them to many diseases. They live at a distance from the Europeans.

The king of the island, or chief of the natives, is by the Dutch called Keyser, signifying an emperor. The place of his residence is called Backennoffy, which is about four miles distance from Coupang. He does not bear an entire sway over the natives, owing, as the Dutch report, to the intrigues of the Portuguese on the N. side of the island. In 1786 a civil war broke out between the king and one of his nephews, which did not terminate till 1788, when it was settled rather in favour of the king. These disturbances were exceedingly disadvantageous to the island, having occasioned a scarcity of provisions, which, through the indolence of the people, is not likely to be soon remedied.

Capt. Bligh, during his stay at Coupang, was introduced to the king of the island, and received with the greatest civility. Refreshments of tea, rice cakes, roasted Indian corn, dried buffalo flesh, arrack, &c. were ordered to be laid before him. The king was an elderly man; he had a cheque wrapper girded round his waist, with a silk and gold belt, a loose linen jacket, and a coarse handkerchief about his neck: his dwelling was a large house, divided into three apartments, and surrounded by a piazza. The situation was more agreeable than the house itself, which, together with the furniture, was very dirty. He was attended by a few chiefs, who partook of the refreshments with them; after which the king retired, and having made but a short stay, returned with a present of a round plate of metal about four inches diameter, whereon the figure of a star was stamped, which he presented to the captain, who in return made him a present of some arrack, which being acceptable, was well received. They never put water into their liquor, and being thereto accustomed, are capable of drinking a large quantity at one time, without being overcome.

Christianity has been introduced by the Dutch, who have taken much pains in establishing it: however it has not gained much ground, except in the neighbourhood of Coupang. The king of the island was christened by the name of Barnardus; his Indian name is Bachee Baunock. There is a church at Coupang for the natives, and a Malay clergyman appointed to perform divine service there, the scriptures being translated into the Malay language.

Fruit is in great plenty at Timor, particularly the bread-fruit tree, which is as common here as in the island of Otaheite; but it is not used as bread, being eaten with sugar and milk. It is exactly the same kind as that at Otaheite, but not so good. A bread-fruit of Timor weighs half as much more as one of

the same size at the other place. There is also another kind of bread-fruit tree, which produces seeds like the windor beans, and which are equally the same to the taste.

There is a resemblance of language between the natives of this place and those of the South-Sea islands. The captain also saw some offerings of baskets of beetle and tobacco placed on their graves. When a king dies, there is a large feast prepared, to which all the people are invited: then, after a few days, the corpse is put into a coffin, wherein it is closed up, and kept three years before it is buried.

Capt. Bligh, in order to secure his arrival at Batavia before the October fleet sailed for Europe, gave public notice of his intention to hire a vessel to convey them there. Several proposals were therefore made, but the demands were exorbitant; the captain therefore deemed it better to purchase a small schooner in the road, which was 34 feet long, for which he gave 1000 rix-dollars. Mr. Wanjon cheerfully took upon himself to answer this demand, the captain finding it somewhat difficult to raise money. This gentleman also provided him with proper means of defence, the coast of Java being frequently infested with small piratical vessels. The captain, therefore, received of Mr. Wanjon, as a loan, to be returned at Batavia, four brass twivel guns, and 14 stand of small arms, with sufficient ammunition.

This schooner, which received the name of his Majesty's schooner Resource, was immediately fitted for sea. In the mean time the governor sent the captain a present of some fine plants, which, for want of sufficient room in the packet by which he returned to Europe, the captain was unfortunately obliged to leave at Batavia. Mr. Wanjon likewise delivered him some seeds, for his Majesty's garden at Kew; which were accordingly delivered: also some of the mountain rice, cultivated at Timor on the dry land, which was forwarded to his Majesty's botanic garden at St. Vincent, and other parts in the West-Indies.

On the 20th of July Mr. David Nelson, the boatman, died of an inflammatory fever. The captain sincerely regretted the loss of this valuable and good man. He was interred the next day, behind the chapel, in the burying-ground appropriated to the Europeans of the town. The body was carried by twelve soldiers dressed in black, preceded by the minister; Capt. Bligh followed next, and Mr. Wanjon, the second governor; then ten gentlemen of the town, and the officers of the harbour; after whom Capt. Bligh's officers and people.

On the 19th of August, the schooner being re-victualled and ready for sea, notice thereof was given. Capt. Bligh took an affectionate leave of the hospital, and friendly inhabitants of Coupang; and having embarked on the 20th, in the afternoon, they sailed. While running out of the harbour, they exchanged salutes with the fort and shipping, having the launch by which they were so miraculously preserved in tow. The weather was fair, and they had a moderate breeze at S. E. they steered N. W. by N.

On the 22d they saw the island Flores the northward, distant about ten leagues. There are two high peaked mountains, bearing N. half E. and N. N. W. which resemble each other in shape, the westernmost being a volcano. The country near the sea-coast is fine and open, but the interior parts of this place are woody and mountainous.

On the 25th, at noon, they were off Toorn's island,

Island, which bore N. W. by N. about four leagues distant. This island is about four leagues in circumference, and appears very irregular and craggy. The land near the shore is low and woody, and on the S. W. part of the island there is a curious high peak.

On the 27th they were near the Straits of Mengaryn: they then steered for the Straits of Sapi, intending to pass through, but there being strong currents setting to the S. E. for want of sufficient wind to enable them to stem, they were obliged to decline their intention. Accordingly, they steered again for the Straits of Mengaryn, and on the 29th, being favoured with a fresh breeze from the S. S. E. they ran through them in the afternoon. After which they kept to the westward, and ran along the N. side of the island Sumbawa, near the coast of which is a very high mountain, and at the foot many runs of good water, by which vessels may be readily supplied.

On the night of the 31st they kept diligently under arms, as several proas were seen rowing about them.

On the 3d, 4th, and 5th, they continued sailing along the N. side of the Island Lombock, on which there is a very high mountain: indeed the islands hereabouts are generally distinguished by high mountains. This island appears to be exceedingly well covered with wood. During the nights of these three days they perceived fires upon the high lands, at a distance from the coast.

The high land of Cape Sandana was seen in the afternoon of the 6th, which is the N. E. part of Java. This is a low cape, projecting from the high land already noticed: it appeared in latitude 7 deg. 46 min. S. in longitude from Coupang 11 deg. 33 min. W. They were off this cape the next day, and steered to the westward along the coast of Java.

On the 10th, at noon, they anchored off Passourwang, which is a Dutch settlement on the coast of Java, in two fathoms, about half a league distant from shore; the entrance of the river bearing S. W. This coast is so exceedingly shoal, that large vessels are obliged to anchor about four miles distant from land.

As soon as the vessel was secured, the captain went in his boat on shore. A few mangrove bushes were growing on the banks of the river, near the entrance, which were muddy. They saw some hogs running among these, and others which were dead, and in such a putrid state as to render the place exceedingly offensive, and make the captain heartily sorry of having approached it. When they had gone about a mile up the river, (the course of which was serpentine) they discovered a very pleasant country. Having landed at a small but well-constructed fort, they met with a very cordial reception from the commandant, M. Adrian Van Ryc. The captain now took a pilot to conduct them to Sourabaya, having sent on board a small bullock, and other provisions, by the return of the boat.

The country of Passourwang is very well cultivated, and the houses neatly built. Rice is the chief produce of this settlement, of which large quantities are exported. It appears to be a well-regulated busy settlement. They have good roads, and ports are established along the coast. There are but few Dutch here, but a great number of the Javanese: their chief maintains great splendor and magnificence.

Passourwang lies in latitude 7 deg. 36 min. S. in longitude 1 deg. 44 min. W. of Cape Sandana.

On the 11th, about noon, they sailed, and in the evening of the next day anchored in about seven fathoms in Sourabaya road, where they found seven square-rigged and several smaller vessels riding: the flag-staff bore S. 1-4th W. about one mile distant from shore. It was now too late to send a boat on shore.

On the 13th, before it was day-light, three guard-boats, agreeable to the general orders which are issued here concerning the first arrival of all strange vessels, stationed themselves near the Resource, and informed the captain that he must neither land nor send a boat on shore till permission was sent, which was not till nine in the evening; whereupon the guard-boats immediately left them.

The governor, M. Ant. Barkay, and M. de Bose, commandant of the troops, received the captain with great civility. These gentlemen behaved exceedingly kind and hospitably, and advised the captain to remain till the 16th, when he would be in less danger of pirates, as some armed vessels were to sail at that time, with whom he might keep company.

This place being situated on the banks of a river, about a mile and a half distant from the shore, only the flag-staff can be seen from the road. Vessels of 100 tons hurthen can navigate the river with ease up to the town. On one side the bank is very commodious for tracking. There is a considerable trade carried on here by the Chinese, who have a town on the side of the river opposite to Sourabaya.

The country is exceedingly pleasant near the town: it is flat, and the soil light, so that they plow with a single bullock. They have a fine breed of horses, which are very handsome, and remarkably strong, though small. A number of fierce tigers infest the interior parts of the country near the mountains, on which account travelling inland is very dangerous.

Capt. Bligh was introduced by M. Barkay and M. de Bose to two of the principal Javanese. They were attended with several men, who were armed with pikes, and arranged in great military order. There was a concert of music here for their entertainment, which consisted of songs, drums, and a fiddle with two strings. Capt. Bligh hired a pilot here to conduct them to Batavia.

They left Sourabaya on the 17th, in company with three proas. About noon they anchored at Crefley, a town belonging to the Dutch, with a small fort. Having staid about two hours here, they weighed anchor. This place was in latitude 7 deg. 9 min. S. in longitude from Cape Sandana 1 deg. 55 min. W.

On the 18th they passed the Straits of Medura along the coast of Java. Their soundings were regular all the way to Samarang, off which place they anchored in the afternoon of the 22d.

The shoalness of the coast renders the road to Samarang exceedingly inconvenient, both on account of the landing, which is in a river that cannot be entered before half flood, and on account of the great distance that large vessels (whereof there were a great number) are obliged to lie from the shore.

Capt. Bligh was met at the landing-place by the equipage master, who provided him with a carriage to the governor's house, which was about two miles from the town of Samarang. The captain requested leave to recruit their provisions, and get a new main-mast, having sprung theirs in the passage from Sourabaya: permission was accordingly granted.

The town of Samarang is well fortified: it is surrounded by a wall and a ditch, and next to Batavia is the most considerable settlement that the Dutch enjoy in Java. Provisions are exceedingly cheap here. Their buildings are good. They have an excellent hospital; and a public school, intended chiefly for mathematical instruction. They had also a good theatre.

Samarang lies in latitude 6 deg. 57 min. S. longitude from Cape Sandana 40 deg. 7 min. W.

The governor having directed a galley mounted with six twivels to accompany the Resource, they left Samarang together on the 26th, and on the 1st of October anchored in Batavia road.

CHAPTER IV.

Captain Bligh's Introduction to the Sabander and Governor-General of Batavia—Meets with a polite Reception—His Requests granted—The Captain taken ill—Removed to a Country-House—Somewhat better—Obliged to separate from his People—Death of Thomas Hall—Examination &c. of the Officers and People—Captain Bligh, his Clerk, and a Seaman embark on Board the Vlyde Packet—Passage to England—Conclusion.

THE Captain having landed at a house near the river, where it is customary for strangers to go and give an account of themselves, went on shore in the afternoon. He was introduced to Mr. Englehard, the sabander, by a Malay gentleman, whose residence was in the environs of the city, on the side nearest the shipping.

The sabander conducted the captain to the governor-general, from whom he met with a very polite reception. The captain informed him of all the circumstances relating to the mutiny, &c. and requested his excellency's permission to embark in the first vessel that sailed for England: previous to which he also requested that his people might be taken care of, and that he should have leave to dispose of the schooner and launch. The governor-general cheerfully complied with these requests. Captain Bligh then took his leave, and having returned with the sabander, all the articles he wanted were committed to paper in due form, in order to be laid before the council the succeeding day.

Captain Bligh had brought from the governor of Coupang, addressed to the governor-general at Batavia, a full account of his voyage and distresses, which had been translated into Dutch, according to the captain's information.

The captain, during his stay at Batavia, lodged in a large hotel, which is entirely appropriated to the use of strangers: strangers not being allowed to reside at any other place. Notwithstanding it is situated near the great river, in the most wholesome and airy part of the city, yet owing to its extreme heat, the captain was taken very ill in the night, with a violent pain in his head.

On the 2d the sabander and Captain Bligh attended the council, who sat at nine o'clock in the morning, and complied with every thing the captain desired.

The captain's indisposition increased very much on his return to the hotel, and a violent fever ensued. The sabander, apprised of his situation, immediately brought Mr. Aanforp, the head-surgeon of the town-hospital, to see him: in the course of the day the fever abated, but the head-ach still continued. The captain was invited this day to dine with the governor-general, but was prevented by his indisposition.

The captain solicited permission to hire a house in the country, as he still retained a severe head-ach, owing to the closeness and heat of his lodging in the hotel. His excellency not only complied with his request, but immediately issued orders that he should be accommodated at the house of Mr. Sparling, the physician or surgeon-general, which was about four miles from the city.

Thomas Hall, one of the captain's men, being very ill of a flux, was likewise sent with permission to the country-hospital, which building is very airy and convenient.

On the 6th the captain was conveyed at sun-rise to Mr. Sparling's house, where every accommodation was prepared. He was so benefited by the change of air, that in the evening he was able to visit to the governor-general, with Mr. Sparling, at one of his country-seats, where he found a numerous company; all the ladies being attired in the Malay fashion, and richly ornamented. Several of the company invited the captain to their country-houses, and some very kindly pressed him to make their residence his abode till his health re-

covered. Captain Bligh still continued very ill, and Mr. Sparling, thinking it necessary, towards the re-esta-

blishment of his health, that he should leave Batavia as soon as possible, represented his situation to the governor-general, who was of opinion that the homeward-bound vessels were so much crowded, that it would be impossible for all the captain's people to be accommodated in one ship, therefore he deemed it the most commodious and best way, to send them home in different vessels. A separation being thus unavoidable, the captain resolved upon following the advice of Mr. Sparling, and accordingly notified to his excellency, a wish to embark in a packet that was to sail for England in a week's time, and to take with him, by his permission, as many of his people as was convenient. He was informed that according to his desire, he should be accommodated with a passage for himself and two of his people (the vessel being too small to admit of more) and that the rest of his men should be conveyed to England as soon as possible.

On the 10th the Resource was sold by auction for 295 six-dollars: she was purchased by a Captain John Eddie, an Englishman, who commanded an English vessel from Bengal.

The launch was likewise sold by auction, which the captain would not have parted with, but found it inconvenient to take her to Europe. Thomas Hall died at the hospital this day.

On the 16th Captain Bligh, his clerk John Samuel, and John Smith a seaman, embarked on board the Vlyde packet, commanded by Captain Peter Couvret, bound for Middleburgh. They weighed anchor and sailed out of the road about seven o'clock.

On the 18th they passed the straits of Sunda, and steered to the N. of the Coco's Isles.

No material occurrence took place during their passage to the Cape of Good Hope. On the 16th of December they anchored in Table Bay.

Early on the 17th the captain went on shore and paid his respects to his excellency, M. Vander Graaf, who received him very cordially, and having settled all necessary business, they departed from the cape the 2d of January 1790, and lost sight of land the next day. On the 15th the island St. Helena was in sight, and on the 21st the island Ascension. On the 10th of February they had a N. E. wind, which blowing fresh, covered their sails with a fine orange-coloured dust.

On the 13th of March they discovered the hill of Portland, and on the 14th in the evening Capt. Bligh left the packet, and was landed at Portsmouth by an Isle of Wight boat.

About a fortnight after Captain Bligh's departure, Mr. Elphinstone, the master's mate, and Peter Linkletter, a seaman, died. The remainder of his people were provided with passages in the earliest ships. One Robert Lamb died on his passage; also Surgeon Ledward: the rest arrived safe.

Having now laid before the Public a full and circumstantial account of Captain Bligh's voyage, loss of the Bounty, and consequent distresses; curiously, no doubt, being excited to know what became of Christian, the mutineer, and his vile accomplices, we shall, for the further satisfaction of our numerous Readers, proceed next with Captain EDWARDS's Voyage in his Majesty's Frigate PANDORA, which for its several Discoveries, and the various Misfortunes that beset the Crew during their narrow escape from Shipwreck and Famine, will be found as interesting and entertaining as this already related; and, seeing the same exactness and accuracy shall still be preserved, equally worthy of the Public's patronage.

A NEW, COMPLETE, AND GENUINE
HISTORY OF
A VOYAGE ROUND the WORLD,

I N

His Majesty's Frigate PANDORA,

UNDER THE COMMAND OF

Captain EDWARD EDWARDS,

Undertaken and Performed in 1790, 1791, and 1792.

WITH SEVERAL INTERESTING ANECDOTES OF THE

MUTINEERS, CHRISTIAN, CHURCHILL, &c. &c. who piratically carried
off the BOUNTY.

Including all the DISCOVERIES, ADVENTURES, INFORMATION, &c. contained in the
JOURNALS and COMMUNICATIONS of

Captain EDWARDS, Surgeon HAMILTON, Lieutenants HAYWARD, CORNER,
Mess. CUNNINGHAM, INNES, and several of the other Officers and Gentlemen.

Being an Entire New HISTORY of all those Interesting OCCURRENCES, DISCOVERIES, &c.
made in the SOUTH SEA; with a Full and Circumstantial Account of the several
DISTRESSES which were endured through SHIPWRECK and FAMINE, in a VOYAGE between
ENDEAVOUR STRAITS and the ISLANDS of TIMOR, in four open Boats—the
Pinnace, Red Yawl, Launch, and Blue Yawl; being the Distance of eleven Hundred Miles.

Which, with the several other VOYAGES and TRAVELS to be included in this Collection, will be Embellished
with a Variety of Elegant CHARTS, MAPS, and other COPPER-PLATES, Engraved by Excellent Artists.

INTRODUCTION.

TWO very urgent reasons were the occasion of the following voyage: first, it was thought necessary that the straits of Endeavour should be minutely surveyed, in order that the passage to Botany Bay might be accomplished with greater ease and facility; and secondly, it being judged highly essential, that every possible means should be immediately taken, of bringing to exemplary punishment the audacious mutineers of his Majesty's late ship the *Bounty*, it being of the most serious consequence to government, for if such villainy was not checked and exposed in time, every future project of navigation might not only be frustrated, but great expences incurred for nothing.

Captain Bligh, during his short stay at the Cape of Good Hope, Batavia, &c. let no opportunity slip of giving every necessary information relative to this unfortunate business, for the sake of speedily detecting and bringing to judgment the authors of his distress. He left a letter at the Cape of Good Hope, to be forwarded to Governor Phillips at Port Jackson, by the first opportunity. He also wrote to Lord Cornwallis from Batavia, and every letter contained a short account of his voyage, with a descriptive list of the pirates, so that all India was apprized of the mutiny, and consequently prepared for seizing the offenders.

On the 10th of August 1790, Captain Edwards was appointed by government to put in commission at Chatham, and take command of the *Pandora* frigate, of twenty-four guns, and a hundred and sixty men.

Their progress was however retarded by a great naval armament, which was then equipping. This prevented that necessary care and attention which were absolutely essential, in respect to the men chosen for this voyage: consequently from some

infected clothes, a contagious distemper took place which from its severity and malignant nature, occasioned much distress during the beginning of their voyage; particularly as the vessel afforded proper accommodations for sick people, owing to its confined state.

A great quantity of provisions and stores was prepared; every officer's cabin, and even the captain's, were filled therewith, it being deemed proper to take an additional complement of new stores, for the purpose of refitting the *Bounty*, they should have the good fortune to recover her.

Every article that promised to be of the least utility was now carefully provided and put on board; antiscorbutics especially to guard against the scurvy; also a time-keeper, and a quantity of iron, to be made into knives, &c. for the purpose of trading with the natives. It was also their intention to bring home some plants of the bread-fruit-tree, that the laudable intentions of government should not be entirely frustrated by the piratical seizure of his Majesty's ship the *Bounty*. Though it was impossible to provide all the accommodations necessary, as the vessel could not contain them, yet the officers most generously agreed among themselves to give up their cabins, and, in short, to sacrifice every comfort and convenience for the purpose of making room for whatever booty of plants fortune might put into their way. So many and philanthropic resolutions were certainly worthy the highest commendation.

Having dropped down to Sheerness, they sailed under Admiral Dalrymple and Sir Richard King, passing the Downs, arrived at Portsmouth, where the officers and men received six months pay in advance, and their final directions.

HAVING passed the white cliffs of Albion, they proceeded with a favourable breeze. It was about this time that several of the crew were taken ill: Mr. Innes, the surgeon's only mate, happened to be the first, and in a few days after 25 were confined to their beds. The crowded state of the vessel rendered their situation still more distressing; however, every relief that could be suggested was humanely offered by Capt. Edwards.

While approaching the latitude of Madeira, a sail was perceived bearing down upon them. Having before their departure from England heard some talk of a Spanish war, they immediately conjectured by her mistaken appearance that this was a ship of war, and accordingly prepared for action: however, as soon as their guns were run out, and all hands at quarters got along-side, they discovered their mistake, and found her to be his Majesty's ship the *Shark*, which had been dispatched with orders of recall to Admiral Cornish, who a little before their departure from Spithead had failed for the West-Indies.

The weather was now exceedingly bad, and they had several squalls with thunder, lightning, rain, &c. Having passed the peak of Teneriffe, they came to anchor two days after in the road of Santa Cruz, and were immediately boarded by the port master, who said that a difference with the English was expected, but matters were now happily settled between the Courts of St. James's and Madrid.

The malignant fever which had taken place on their leaving England began now to rage very violently: almost every man was laid up in his turn, and several of the convalescents had a relapse upon approaching the line: happily they had on board every article which was essential towards the preservation of health, and which had been considerately provided by the Lords of the Admiralty previous to their sailing: in consequence of which timely relief there is little doubt but several lives were preserved.

White's ventilator was made use of for the purpose of evacuating the foul air from below, the air being at this time intolerably hot; but, on account of the confined state of the vessel, the machine had not the desired effect.

During their stay at Santa Cruz, they met with much civility from the inhabitants, who notwithstanding were somewhat reserved, it being their disposition. Having completed their water from an aqueduct, which is constructed with great skill, and exceedingly commodious for watering vessels, they received a plentiful quantity of lemons, oranges, pomegranates, bananas, &c. &c. and immediately departed from the island.

There were several water-spouts about the vessel, at which they fired several guns. Nothing material occurred till the 28th of December, when they saw the land of the Brazils; and on the 30th they sailed for the fort at Rio Janeiro with 15 guns, which was returned with an equal number.

As soon as they anchored, an officer acquainted the captain, that according to their custom they must send a party of soldiers on board; but this Captain Edwards would not agree to, and therefore refused to go on shore to visit the viceroy till this ceremony was countermanded.

Capt. Edwards having thus supported the dignity of the British flag, now paid his respects to the viceroy. They met with a very kind reception. The

viceroy's suit of carriages were ordered to attend the British officers, and M. le Font, the surgeon-general, who spoke English with ease and fluency, shewed them every mark of politeness and attention on the occasion: he carried them through the principal streets, and introduced them to the public gardens, built by the late viceroy, and which were laid out with great taste and expence.

"All the extremity of the garden is a fine terrace, which commands a view of the water, and is frequented by people of fashion as their grand mall: at each end of the terrace there is an octagonal built room, superbly furnished, where afternoon entertainments are sometimes given. On the pannels are painted the various productions and commerce of South America, representing the diamond fishery, and the process of the indigo trade; the rice grounds and harvest, sugar plantation, South-Sea whale fishery, &c. these were interspersed with views of the country, and the quadrupeds that inhabit those parts. The ceilings contained all the variety, the one of the fish, the other of the fowl of that continent. The compartments of the ceiling of the one room was enriched in shell-work with all the variegated shells of that country, and in the compartments are delineated all the variety of fish that the coast of South-America produces. The other compartment is enriched with feathers, and so imitatively blended as to produce the happiest effect. In this ceiling are painted all the birds and fowls of the country, in all their splendid elegance of plumage. The sofas and furniture are rich in the extreme; and in this elegant recess an idle traveller may have an agreeable lounge, and at one view comprehend the whole natural history of this vast continent. In the centre of the terrace there is a jet d'eau, in form of a large palm-tree, made of copper, which at pleasure may be made to spout water from the extremity of all the leaves. This tree stands on a well-disposed grotto, which rises from the gravel-walk below to the level of the terrace, and terminates the view of the principal walk. Near the foot of the grotto two large alligators, made of copper, are continually discharging water into a handsome basin of white marble, filled with gold and silver fishes.

"There are fine orangeries, and lofty covered arbours, in different parts of the garden, capable of containing a thousand people. Here the Egyptian nymphs hold their nocturnal revels; but intrigue is attended with great danger, as the stiletto is in general use, and assassination frequent, the men being of a jealous sanguinary turn, and the women fond of gallantry, who never appear in public unveiled. When Bouganville, the French circumnavigator, called here, his chaplain was assassinated in an affray of that kind; but, since that accident, orders were given that a commissioned officer should attend all foreign officers, and a soldier the privates; and all strangers, on landing, are conducted to the main-guard for their escort. This answers a double purpose, as they are much afraid of strangers smuggling, or carrying money out of the country, under the mask of personal protection, every motion is watched and scrutinized, nor can any thing be purchased of a merchant till he has settled with the officer of the police how much he shall exact for his goods."

They

They likewise met with great civility from the officers of the army, who gave them some presents of red bird skins, in order to procure the friendship of those natives whom they expected to meet.

Lieutenants Hayward and Corner were particularly assiduous in procuring those plants, &c. which they thought might be of use to cultivate at Otaheite, and which they nursed with peculiar care for that purpose.

During their stay here a conspiracy was detected, as the spirit of revolt is very prevalent among the people, to the great injury of their trade. In consequence of this, several people of distinction were thrown into dungeons, while a strong guard were placed over them, to prevent all intercourse: since, in order to check this rebellious disposition, a regiment of black slaves, willing enough to bear arms against their oppressive masters, is embodied.

Their slaves, whom they keep in chains, execute all their public works, during which they perform a kind of melancholy dirge in recitative, which being accompanied with the clanking of their chains, renders the music exceedingly mournful.

Having in our preceding voyages given a description of the town, buildings, &c. we shall with Capt. Edwards take leave of the place, who on the 8th of January, early in the morning, proceeded on his voyage.

While running down the coast of the Brazils, they perceived several spermæcti whales. Having passed by the Straits of Magellan, on the 31st they saw Cape St. Juan, Staten and New Year's Islands.

The weather now became exceedingly cold, while those who had been so dangerously indisposed experienced a speedy recovery. As they advanced, having fortunately encountered the tempestuous regions of Cape Horn, the weather became exceedingly pleasant, and the health of the people quite established.

We shall here, for the benefit of navigators in general, make mention of those things to which Surgeon Hamilton imputes the recovery of the men.

The four crout kept during the voyage in the highest perfection, and was often eat as a salad with vinegar, in preference to recent cut vegetables from the shore. A cask of this grand antiscorbutic was kept open for the crew to eat as much of as they pleased; from which they derived much salutary benefit.

Likewise the essence of malt afforded a delightful beverage, and, with the addition of a little hops, in the warmest climates, made as good strong beer as could be procured in England. They were likewise supplied with malt in grain, but preferred the essence, it being less liable to decay, and takes up but little room, which is a very valuable consideration in long voyages.

They also found great benefit from cocoa, which was much relished by the men, takes up little room, and affords great nourishment. Indeed, it is the only article of nourishment in sea victualling; for what can in reason be expected from beef or pork, after it has been salted a year or two?

They found much advantage from wheat, which they rough ground in a mill occasionally as they wanted it, and with the addition of a little brown sugar, made it a pleasant nourishing diet, of which the men were extremely fond. Another great advantage attending it, is, that it does not require half the quantity of water which pease do.

They likewise found new bread extremely beneficial to the sick and convalescent, and availed themselves of every opportunity of baking for half the complement at a time. As the flour keeps so much longer found than biscuit, it may be needless to remark its superior advantages; besides, it is not liable to be damaged by water, or otherwise, so much as bread, as a crust forms outside, which protects the rest. It likewise is preferable in point of stowage.

The dividing the people into three watches had a double good effect, as it gave them longer time to sleep, and dry themselves before they turned in, and as the majority of the crew consisted of landmen, the fewer there were on deck the more necessary they found their exertions in acquiring a due knowledge of the service.

They unfortunately sprung a leak in the after-part of the vessel, which reached the bread-room, and damaged a great quantity thereof: 1515 lb. they were obliged to throw overboard, besides which there remained a great quantity still injured, which was kept for the use of the cattle.

On the 4th of March they saw Easter Island. They now set the forge to work, and the armourers were employed in making knives, and other small articles, for the sake of trading with the natives.

On the 16th they discovered a lagoon island, of about four miles extent, which they called Ducie's Island, in honour of Lord Ducie. It seemed to be well covered with wood, but there was no appearance of inhabitants.

On the 17th they discovered another, which they called Lord Hood's Island. This was about six miles long. They saw a great many trees, but no sign of inhabitants.

On the 19th they discovered another, which they called Carysfort Island, in honour of Lord Carysfort. This was much the same of Ducie's Island.

On the 22d they passed Maitea, and on the 23d anchored in Matavy bay in the island of Otaheite.

Early in the morning they were visited by a canoe with one native, who, by embraces and salutes, assured them as he came on board, expressed great joy on seeing them. When Lieut. Hayward was introduced to him, who had been purposely concealed from him on his first coming, it is impossible to describe his astonishment.

From this man it was understood that the mutineers had been on the island, and had deceived the natives, by informing them that Capt. Bligh had gone to settle at Whyteetakee, and that Capt. Cook was living there: however, the truth of this being suspected, and Christian apprehensive of some evil designs, left Otaheite with nine of his party in the Bounty.

Lieutenants Corner and Hayward were now dispatched in the launch and pinnace, with 26 men to the N. W. part of the island, to make what further discoveries they could respecting the mutineers. Joseph Coleman, who was armourer of the Bounty, came on board the Pandora; and, in short time after, two of the Bounty's midshipmen and afterwards Richard Skinner.

On the 25th the launch and pinnace returned having chased the mutineers on shore, and taken possession of their boat. The lieutenants reported that the mutineers had taken refuge in the heights and claimed the protection of Tamatrah, a chief of Papara, who was the legal king of Otaheite, as the family of Otoo were deemed usurpers.

On the 27th the captain sent his boat with present of some rum to the king Otoo, with an invitation, which he accepted, and the next day by majesty; with his family and attendants, among whom was Oedidee, a chief, visited the Pandora.

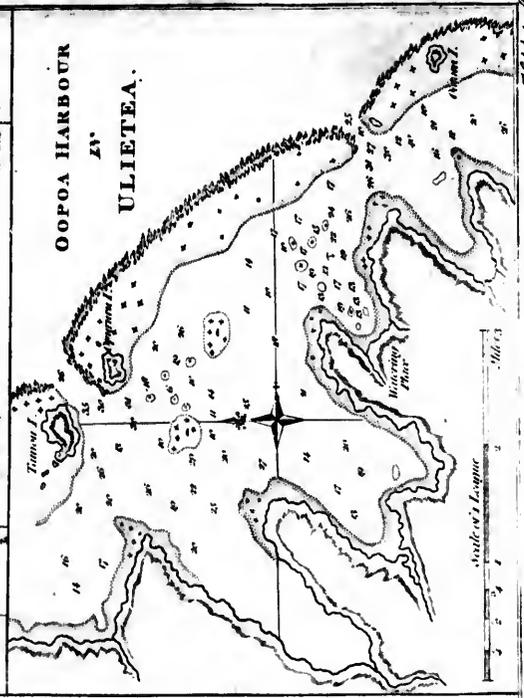

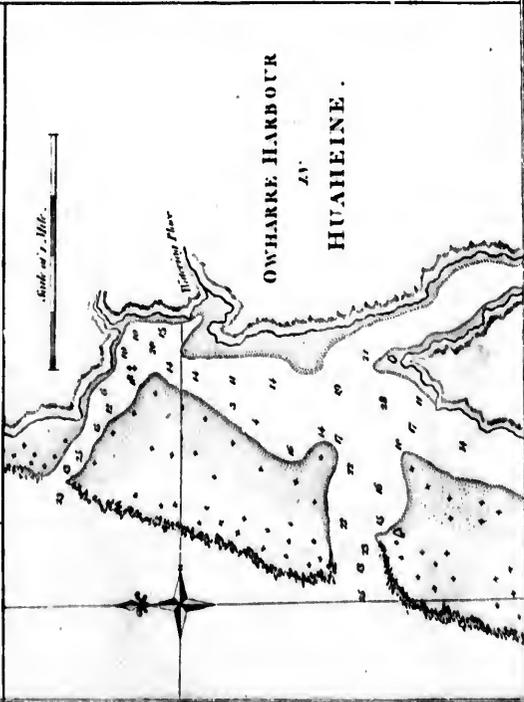

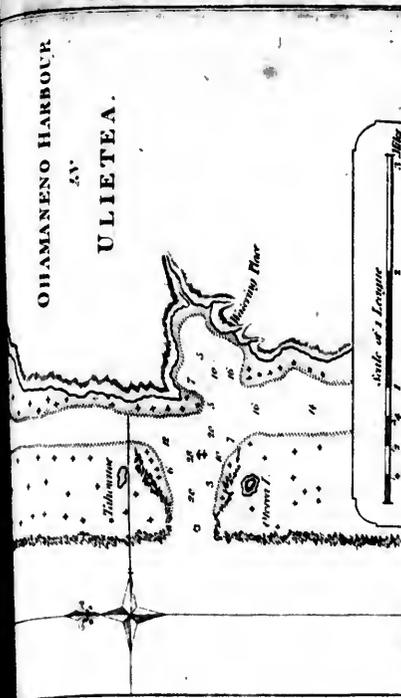

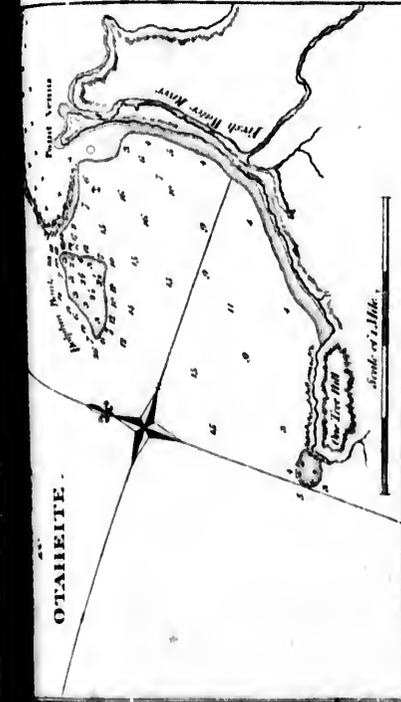

King Otoo has two queens at Tiarahoo. The all three sleep together, and live in the most perfect harmony, though of different ages, for his principal queen, who is a robust coarse-looking woman, about thirty, and the other, a handsome delicate creature, whose name is Alredey, scarcely fifteen.

Lieut. Corner was now appointed to march across the country with a detachment of men, and if possible get between the mountains and mutineers. This gentleman was deemed exceedingly capable of the task, having during his youth bore a commission in the land service.

Lieut. Hayward was likewise appointed to

View of Matavia Bay, in OTAHEITE, taken from One Tree Hill, which Tree is a new Species of the Erythrina.

London: Published by the Admiralty, at the Admiralty Office, Whitehall.

bark by water, with another party, and several of the chiefs, particularly Oedidee, accompanied him. The lieutenant likewise took one Brown, an Englishman, who had been left on shore by an American vessel that had visited the place, on account of his being unruly and troublesome on board. This man was, however, exceedingly cunning and active, and of great utility on those occasions. He had now been among the natives upwards of twelve months, during which he became accustomed to all their manners, and had acquired sufficient knowledge of their language.

On the 28th Lieutenant Corner landed on Point Venus with his party. The chiefs who accompanied him, acted as conductors, and a number of the common people assisted in carrying the ammunition over the heights: and indeed their assistance was absolutely necessary, having to cross a rapid cataract, or river, which came down from the mountains, and formed so many curves. They had to ford it sixteen times in the course of their journey, which gave evident proofs of the superior strength of the natives over the English seamen. The former went over with ease, where the sailors could not stem the rapidity of the torrent without their help. They were, however, forced to send to the ship for ropes and tackles to gain some heights, which otherwise they could not ascend.

Having halted awhile, the lieutenant expressed a wish to one of the natives for something to eat, who told him he might be supplied with plenty of victuals ready dressed; upon this he immediately ran to a temple, where meat had been regularly served to their god, and came running with a roasted pig, that had been presented that day. This striking instance of impiety startled the Lieutenant; but the native assured him that the god had more than he could possibly make use of.

During this expedition they could scarcely restrain the natives from committing depredations on the Cava grounds of the upper districts, as they were on the eve of a war with them, respecting the hereditary right of the crown.

Having now arrived at the residence of a great chief, they met with a very kind and hospitable reception; after being refreshed with plenty of meat and drink, the officer was conducted by the chief to visit the morai of the dead chief his father. Mr. Corner judging it necessary, by every mark of attention, to gain the good graces of this great man, ordered his party to draw up, and fire three volleys over the deceased, who was brought out in his best new cloaths on the occasion; but the burning cartridge from one of the muskets unfortunately set fire to the paper cloaths of the dead chief. This unlucky disaster threw the son into the greatest perplexity; for, agreeable to their laws, his title and estate would be forfeited to the next heir if the corpse of his father be either stolen or otherwise injured.

In the mean time Lieutenant Hayward and his party were busy. Tamarrah, the prince of the upper district, and of great consequence, became now a very sincere friend to the captain, on account of his liberal presents, by which means they were considerably assisted in their endeavours.

The mutineers having been cut off from every hope of resource, the natives harassed them behind, while Lieutenant Hayward and his party advanced in front; under cover of night they had taken shelter in a hut in the woods, but were discovered by Brown, who creeping up to the place where they were asleep, distinguished from the natives by feeling their toes; as people unaccustomed to wear shoes are easily discovered from the spread of their toes. Next day Lieut. Hayward attacked them, but they grounded their arms without opposition, and were sent down to the boat under a strong guard, with their hands tied behind their backs.

No. 19.

Previous to this there were two natives killed; one was shot in the dusk of the evening by one of the centinels, who had his musket twice beat out of his hand, from the natives pelting our party with large stones; but, the instant he was shot, some of his friends rushed in and carried off the body.

The other native was shot by the mutineers: when attacked by the natives, they took to a river. A stone being thrown by one of the natives at the wife, or woman, of one of the mutineers, enraged him so much, that he immediately shot the offender.

There was a prison built, for their accommodation, on the quarter deck, that they might be secure, and apart from the ship's company; and that it might have every advantage of a free circulation of air, which rendered it the most desirable place in the ship. Orders were likewise given that they should be victualled, in every respect, the same as the ship's company, both in meat, liquor, and all the extra indulgencies, notwithstanding the established laws of the service, which restricts prisoners to two-thirds allowance; but Capt. Edwards, considering how long they must needs be confined, behaved with the greatest humanity.

A conspiracy was formed among the natives on shore, to cut their cables, should there happen to be a fierce gale from the sea, which would admit of an opportunity. This however was timely discovered by Oripai, the king's brother, who was a chief of much sense and penetration. The captain was not a little alarmed at this discovery, as several of the prisoners had been married to the daughters of the most respectable chiefs in the district, opposite to where they lay at anchor.

The captain experienced the greatest civility from the king, his two brothers, and all the principal chiefs. These expressed the greatest anxiety for both his and his people's safety. While the prisoners were on board they kept watch during the night, and were remarkably vigilant for fear of the cables being injured, continually reminding the centinels of their duty, and spurring them on to keep a careful look-out.

The prisoners were daily visited by their wives, who were permitted to bring their children; and the poor captive fathers lamenting over their tender offspring, rendered the scene truly distressing. These unhappy men were supplied with all the delicacies that the country afforded, by their faithful wives, who on this occasion demonstrated the greatest affection and tenderness.

On the 30th they received a formal visit from the king, his two queens, and the chiefs, who on this occasion had a band of music. The ladies had so much cloth wrapt round them, by which they were rendered so unwieldy and bulky, that it was with the greatest difficulty they were got on board. The king brought a present of some hogs, bananas, cocoa-nuts, &c. Also a quantity of ready-dressed puddings.

The next day a grand heiva was ordered, for the entertainment of the captain and his officers, on Point Venus. A band of music was ordered to attend them as soon as they had landed, and they were conducted to the place where the king and his retinue were waiting to receive them. A ring was immediately made, and the entertainment began, which was similar to those already described.

The following circumstance respecting Churchill, the principal ringleader of the mutineers, was related to the captain, which is a striking instance of that real friendship which prevails among the natives. Churchill having become the friend of a great chief in the upper districts, became on his death (as he died without issue) heir to his estate and title, agreeable to the law of Tyoship. Thompson, however, of the Bounty, having fallen out with Churchill, shot him, which enraged the natives so much that to revenge the death of Churchill, their chief, they immediately

went in the cutter, and took a strict survey of the island.

Lieutenants Hayward and Corner landed on the different isles with cork-jackets; but the surf running very high all round, rendered it exceedingly dangerous, and in many places impracticable. Had they not been expert swimmers, in duty of this kind, they must have certainly been drowned, as they had not only themselves and the party to take care of, but also the arms and ammunition to preserve from the wet.

In the afternoon, about four o'clock, Mr. Sival, the midshipman, came on board in the jolly-boat, and brought with him several very curious stained canoes, representing the figures of men, fishes, and boats. He had committed some mistake in the orders he was sent to execute, and was ordered to return immediately to rectify it; but the boat did not come back again. A few minutes after she left the ship, the weather became thick and hazy, and began to blow fresh; so that, even with the assistance of glasses, they could not see whether she made the shore or not. It continued to blow during the night, so as to prevent the party on shore from coming on board. They had been employed during the day in searching all the islands with particular attention, having every reason to suspect the mutineers were there, from finding the Bounty's yard and spars. But at last, wore out with fatigue in marching, and swimming through so many reefs, and having no victuals the whole day, in the evening they began to forage for something to eat. The gigantic cockle was the only thing that presented. Of the shell of one they made a kettle, to boil some junks of it in. Some of these cockles are larger than three men can carry. Of this coarse fare and some cocoa-nuts, by the assistance of a good appetite, they made a tolerable hearty supper; they then set the watch, and went to sleep. They had thrown a large nut on the fire before they lay down, and forgot it; but in the middle of the night the milk of the cocoa-nut became so expanded with the heat, that it burst with a great explosion. Their minds had been so much engaged in the course of the day with the enterprise they were employed in, expecting muskets to be fired at them from every bush, that they all jumped up, seized their arms, and were some time before they were convinced of their error.

On the 23d the boats returned; but there was no intelligence of the jolly-boat. The tender received a fresh supply of provisions and ammunition; at the same time they had orders to cruise in a certain direction, to look for the jolly-boat; and Palmerston's Isles was appointed as a rendezvous to meet again.

Lieutenant Corner now came on board, in a canoe not much bigger than a butcher's tray. The cutter was sent a second time to search the reefs, but returned without success. They then run down with the ship in the direction the wind had blown the preceding day, in hopes of finding the boat; but after a whole day's run to leeward, and breaking up again by traverses to the isles, saw nothing of her. The tender hoisted in sight in the evening, and they again searched the isles without success. All further hopes of seeing her were given up, and they proceeded on their voyage.

The fate of the unfortunate men who were in the jolly-boat could never be ascertained. On leaving the vessel there was a piece of salt beef thrown to them, and no doubt they were able the next day to satiate their thirst, as there were heavy showers of rain.

On the 6th of June an island was discovered: the captain called it the Duke of York's Island.

Captain Edwards now dispatched the two yauls, covered by the tender, with Lieutenants Hayward and Corner, to examine this island. A short time after their departure there were some huts seen

from the vessel; a signal was accordingly made to apprise the lieutenants of the danger, that they might proceed on shore with the utmost caution.

On their return Lieutenants Hayward and Corner reported, that they had seen a ship's wooden buoy; they had also found nets of different sizes hanging up in the huts, with a variety of fishing utensils. They had also discovered in several parts of the creek stages and wharfs, which led them to believe that this was an island only inhabited in the fishing season by some of the neighbouring nations. They found near the beach the skeleton of a very large fish, which they imagined to be a whale. They were likewise struck with the venerable appearance of a place which resembled a druidical temple, and was exceedingly curious. The falling of a very large old tree, formed an arch, through which the interior part of the temple was seen, which heightened the perspective, and gave a romantic solemn dignity to the scene. At the extreme end of the temple, three altars were placed, the center one higher than the other two, on which some white shells were regularly piled.

When they had thus examined the island, they re-visited the huts, and hung up a few knives, looking-glasses, and some other trifles, that the natives, on their return, might know the place had been frequented during their absence.

On the 12th we discovered another island, which the Captain called the Duke of Clarence's Island. In running along the land they perceived several canoes crossing the lagoons. The tender's signal was made to cover the boats in landing, and Lieutenants Hayward and Corner sent to reconnoitre the beach, to discover a landing-place. In performing this they approached the natives in their canoes, who made signs of peace to them; however, on account of some diffidence on their side, they had no intercourse with them. They found several burying-places here, which indicated it to be a principal residence; also some old cocoa trees, &c.

On the 18th, we discovered an island of greater extent than any hitherto seen in the south. This was called, in honour of the first lord of the admiralty, Chatham's Island. It is beautifully diversified with hills and dales, of twice the extent of Orahete, and a hardy warlike race of people: the natives described a large river. The natives with whom they traded seemed very fair and honourable. Some were in mourning for their king Fenow. Having made an unsuccessful search for the mutineers, they continued their voyage.

On the 21st another island, of about forty miles long, was discovered, the natives called it Otutuc-lah. It is well wooded with immense large trees, whose foliage spreads like the oak; and there is a deal of shrubbery on it, bearing a yellow flower.

The natives here are remarkably handsome: some of them had their skins tinged with yellow, as a mark of distinction, but which at first led the English to imagine they were diseased. Neither sex wear any clothing, but a girdle of leaves round their middle, stained with different colours. The women adorn their hair with chaplets of sweet-smelling flowers, and bracelets, and necklaces of flowers round their wrists and neck. They were exceedingly timid on their first coming on board; also perfectly ignorant of fire-arms, never having seen a European ship before. They made many gestures of submission, and were struck with wonder and surprise at every thing they saw. Amongst other things, they brought some most remarkable fine puddings, which abounded with aromatic spices, that excelled in taste and flavour the most delicate seed-cake.

The captain and his people traded with them the whole day, and got many curiosities. Birds and fowls, of the most splendid plumage, some resembling the peacock, and a great variety of the parrot kind, were brought on board.

Before

Before evening the women went all on shore, and the men began to be troublesome and pilfering. The third lieutenant had a new coat stole out of his cabin; and they were making off with every bit of iron, &c. which lay in their way.

A fierce breeze coming on, they were obliged to make off from the land. Those who were engaged in trade on board were so anxious, that the captain had got almost out of sight of their canoes, before they perceived the ship's motion, whereupon they all jumped into the water instantaneously; but one of them, more earnest than the rest, hung by the rudder-chains for a mile or two, thinking to detain the vessel.

In the evening they unfortunately parted company, and the captain lost sight of the tender. False fires were burnt, and great guns and small arms were fired without success: the weather became very thick and disagreeable.

On the 23d and 24th they continued to cruise for her, near where they parted company, which was off a piece of remarkable high land. What was most unfortunate, water and provisions were then on deck for her, which were intended to have been put on board of her in the morning. She had the day before received orders, in case of separation, to rendezvous at Annamooka, and to wait there for the vessel. A small cag of salt, and another of nails and iron-ware, were likewise put on board of her, to traffic with the Indians, and the latitudes and longitudes of the places the captain would touch at, in his intended rout. She had a boarding netting fixed, to prevent her being boarded, and several seven-barrelled pieces and blunderbusses likewise aboard.

The Pandora proceeded to the eastward, and they saw that island which was discovered by Monf. Bouganville.

On the 28th they saw the Happai Islands, discovered by Capt. Cook, and before noon the group of islands to the eastward of Annamooka, and sailed down between Little Annamooka and the Falafagee Island. The next day they anchored in the road of Annamooka.

A large sailing canoe was now hired, and Lieut. Hayward and one private sent to the Happai and Feegee Islands, to make enquiry after the Bounty and the tender; but no intelligence was received. Here they found an axe, which had been left by Capt. Cook. Several hogs, yams, &c. were likewise purchased of the natives.

The inhabitants of Annamooka are the most audacious robbers in the South Seas; while two or three of the officers were taking a walk on shore one evening, who had the precaution to take their pistols with them, they were surrounded by several of the natives, with apparent intention to pilfer; however on their presenting the pistols to them, they sheered off. The captain having joined the officers, and brought his servant with him, carrying a bag of nails, and some trifling presents, which he meant to distribute amongst these natives, took the bag from him, and dispatched him with a message to the boat, on which the inhabitants followed him. As soon as he got out of sight of his master, they stripped him naked, and robbed him of his cloaths, and every article he had, but one shoe, which he used for concealing his nakedness. At this juncture Lieutenant Hayward arrived from his expedition, and called the assistance of the guard in searching for the robbers. They saw the natives all running, and lurking behind the trees, which led them to suspect there was some mischief brewing; but they soon discovered the poor servant, with a bayonet in his hand, naked and vowing vengeance against the natives, for the treatment he had received. Night coming on, they went on board, but the poor fellow's cloaths were never recovered.

On the 30th the king of Annamooka, whose name is Tatafee, paid the captain a visit.

The people here seem to be somewhat civilized, and have notions of private property, as every one's land is ascertained by a fence, agreeable to the plan of the Chinese railing. They likewise shew an inclination to industry, having all their highways and roads leading to public places in great order. Nor are they less inclined to cultivation, as shrubbery is planted with great taste on each side of the gravel-walk leading to their houses: several have rows of pine-apples on each side of their avenue. Lieutenants Corner and Hayward took great pains in instructing them how to transplant their pine-apples, and they paid no little attention to his advice.

The women are more masculine than those at Otaheite, but they have very animated countenances, which render them exceedingly agreeable. They have a toy, with which they amuse themselves, similar to a cup and ball. They are very fond of displaying their charms, which they do in a very successful manner.

Several very handsome girls were brought by their own mothers on board to be disposed of. At first their demands were exorbitant, as no less than broad axes would content them: from this, however, they fell to old razors, and at last to scissars and nails. This trade became at last so common, that many of the poor girls were purchased; and in such case it is customary to hold a council of matrons, who distinguish the unfortunate girl by making a gash in her fore-finger. In this manner the razors were used, and had there been more aboard, there is no doubt but all the girls would have suffered in the same manner.

A brisk trade was carried on: they had purchased an abundance of hogs, and found the pork much superior to that at Otaheite. They had also procured several ton weight of excellent yams.

The captain sent a party on shore to cut wood for fuel, and grafs for the sheep. The natives, however, would not suffer any of the grafs to be touched. They became exceedingly troublesome; and though this party was attended with a guard of armed men, the inhabitants still intruded, and committed whatever thefts they could. One of them made a blow at Lieut. Corner with his club, which fortunately missed his head, and only stunned him in the back of his neck. Mean time the offender stole his handkerchief, and was making off; but the lieutenant having recovered himself in time, levelled his musket at him, and shot him dead. Another party was dispatched to get water, and these were equally harassed and interrupted.

King Tatafee was now about collecting tribute from the islands under his jurisdiction; and accordingly went in the Pandora to Tofoa. The captain, previous to his sailing, left a letter with a principal chief of the island for Mr. Oliver, the commander of the tender, in case he should arrive before the captain's return.

During the night they admired the burning mounting on Tofoa; and early the next day two canoes were dispatched on shore, to announce the arrival of Tatafee and Tabou, who intended to have gone on shore in the Pandora's barge, which the thought would add to their consequence. They were, however, met on the way by the tributary princes in their canoes.

These princes, in doing homage, came along-side the barge; bowed their heads over the side of the canoe; while Tatafee, agreeable to custom, put his foot upon their heads. This king distributed all the presents he received from the English, when he landed, amongst his subjects.

They met here with some of the people who insulted Capt. Bligh's men in the boat at Murderer's Cave. Upon seeing Lieut. Hayward, (whom the recollected) they seemed somewhat apprehensive of his anger. Capt. Edwards endeavoured to convince the king, Tatafee, of his disapprobation of that business; but fearful the tender might likewise be

CAPTA

tacked on her arrival,

displeasure too far. It was the captain's booby, but herein he was in the wrong. The consequence of an unfavourable wind, proceeded to Catooa and likewise intended to have been in hopes of finding it would have poured to fall in your islands.

On the 12th of July they sailed in the N. W. wind, and upon their examination of the Friendly Isles, a favourable wind was

On the 14th they saw the Navigator's Isles; the natives called Tumalua. They were at a little distance, and did not come to land; however, they were seen on their voyage.

On the 15th they reached some of the Boughies, which circumstance they were murdered by them.

On the 18th they discovered the next day ran

number of houses. It is 10 miles in length. The captain, in honour of Lord by the natives Rotumah.

They were met by several in them rested on the war-hoop at stated periods with clubs, and meant to the magnitude and novel man of war, struck them and fear; besides, being arms, they were so started that they made off with what they had come with hostile as women with them.

These natives wore bracelets of white shells. They were variously marked with tattoos, birds, &c. They were a thieving, and uncomely fellow was making

tacked on her arrival, he was careful not to carry his displeasure too far.

It was the captain's intention to visit Tongataboo, but herein he was prevented by the continuance of an unfavourable wind. He therefore proceeded to Catooa and Navigator's Isles, which he likewise intended to have done before, but delayed in hopes of finding the tender. They now endeavoured to fall in with the easternmost of these islands.

On the 12th of July they discovered a cluster of islands in the N. W. quarter; however they postponed their examination of these till their return to the Friendly Isles, as they were unwilling to lose the favourable wind which they now had.

On the 14th they saw three isles, supposed to be the Navigator's Isles; the largest of which the natives called Tumaluah. The inhabitants, whom they saw at a little distance, made several signs for them to land; however, they thought proper to proceed on their voyage.

On the 15th they reached Oteetuelah, where they found some of Bougainville's cloaths, &c. from which circumstances there is little doubt but what he was murdered by the natives.

On the 18th they discovered a cluster of islands, and the next day ran down the N. side till they

came to an opening, where they perceived the sea on the other side. They were informed by the natives, that there were excellent watering-places in different parts within a sound; which is formed by some of the islands to the S. E. and N. W. They were visited by several of the inferior chiefs, and the natives seemed very kind and honest. Their religion, customs, language, &c. are similar to those at Annamooka, but their behaviour is far better.

The country is well covered with wood; there are several beautiful paroquets, a number of which were brought to the frigate by the natives.

The captain distinguished these islands by the names of Earrington's, Sawyer's, Hotham's, and Jarvis's. The sound was called Curtis's; and the whole group of islands had the general denomination of Howe's Islands.

On the 23d they passed another island, supposed to be Pylellaart island.

On the 26th they perceived Middleburgh Island, between which and Euah they ran down. They examined this island, but met with no success; after this they passed Tongataboo, where they procured refreshments, and on the 29th they anchored again in Annamooka, and lamented very much that during their absence the tender had not been heard of.

CHAPTER III.

They proceed on their Voyage—Several Islands discovered—Description of the different Inhabitants—Hostile Intentions of some—A wonderful Escape—Lieut. Corner sent in the Boat to look for a Passage—Anxiety for her return—Pandora prizes on a Reef—Her Wreck—Great Distress—Crew leap overboard—Several drowned—One Conceived of Insanity—Four Boats fitted out—They embark in them for Timor.

EVERY thing being now ready for sailing, they proceeded on their voyage the 5th of August, and discovered an extensive island, which the captain called Proby's Island, in honour of Commissioner Proby. The land was hilly, and the houses much more large and commodious than any they had yet seen. The natives call the island Onooafow. A brisk trade was carried on with these people, of whom they purchased several articles.

They now made for Wallis's Island, which they reached on the 7th. They were visited by a canoe, to whom they gave some presents; but the natives having committed a theft, made an abrupt departure, and did not appear again.

These people had their little fingers cut off, and their cheek bones much bruised and flattened.

They now steered between Santa Cruz and Sperito Santo, and on the 8th discovered land to the westward. They founded, but could find no bottom. They ran down the island, which was remarkably hilly, and well covered with wood. The mountains were cultivated to the very top, which indicated a number of inhabitants. There appeared a great number of houses. It seemed to be about seven miles in length. The captain called this Grenville's Island, in honour of Lord Grenville. It is called by the natives Rotumah.

They were met by several canoes; the men who were in them rested on their paddles, and gave the war-hoop at stated periods. They were all armed with clubs, and meant to attack the English; but the magnitude and novelty of such an object as a man of war, struck them with a mixture of wonder and fear; besides, being perfectly ignorant of firearms, they were so started at the report of a musket, that they made off with the utmost expedition. As they had come with hostile intentions, they brought no women with them.

These natives wore bracelets, necklaces, and girdles of white shells. Their bodies were every where curiously marked with the figures of men, dogs, fishes, birds, &c. They were exceedingly expert in thieving, and uncommonly athletic and strong. One fellow was making off with some booty, but

No. 20.

was detected; and although five of the stoutest men in the ship were hanging upon him, and had fast hold of his long flowing black hair, he overpowered them all, and jumped overboard with his prize. There is a high promontory on this island, which was called Mount Temple by the captain.

On the 11th they run over a reef of coral, in 11 fathom water, which was called Pandora's reef: they were exceedingly alarmed, but passed it in five minutes, and on sounding immediately afterwards, found no bottom.

Early on the 12th they discovered an island, well wooded, but not inhabited. It had two remarkable promontories on it, one resembling a mitre, and the other a steeple; for which reason they called it Mitre Island. They passed it, and stood to the westward; and at ten the same morning discovered another island to the N. W. which they called Cherry's Island, in honour of — Cherry, Esq; commissioner of the victualling-office. This was entirely cultivated, and had a vast number of inhabitants, though only a mile in length. The beach from the E. round by the S. is a white sand, but too much surf for a boat to attempt to land.

On the 13th they discovered another island to the N. W. which they called Pitt's Island. It was very hilly, and covered with wood even to the top. No inhabitants were seen, but there being smoke in several parts of it, there is no doubt but it is inhabited.

On the 17th, at midnight, they discovered breakers on each bow. They had just room to wear ship, and as this wonderful escape was from the vigilance of one Wells, who was looking out a head, it was called Wells's Shoals. In the morning, at day-light, they put about, to examine the danger they were in, and found they had got embayed in a double reef, which will very soon be an island. They run round its N. W. end, and on the 23d saw land, which they supposed to be the Luifiade, a cape bearing N. E. and by E. This was called Cape Rodney; and another, contiguous thereto, Cape Hood. There was a mountain between them, which they named Mount Clarence.

• 3 M

They

They proceeded to the westward, keeping Endeavour Straits open, for their greater security.

On the 25th they saw breakers; upon which they hauled up, and passed to the westward of them: the sea broke very gently on them. These were called Look-out Shoals. Before noon they saw more breakers, the reef of which was composed of very large stones. This was called Stony-reef Island.

They now stood to the westward, where there appeared to be an opening. They perceived an island in that direction; and a reef extending a considerable way to the N. W. They now hauled upon the wind, seeing their passage obstructed, and stood off and on, under an easy sail in the night, till day-light; and on the 28th bore away, and discovered four islands, to which the name of Murray's Islands was given. On the top of the largest, there was something resembling a fortification. They discovered at the same three two-masted boats. They kept running along the reef, and in the forenoon thought they saw an opening.

The captain ordered Lieut. Corner to get ready, and discover if there was a passage for the ship: he went to the top-mast head, to look well round him before he went; after which he took with him in the boat an axe, some fuel, provisions, a little water, a compass, &c.

About five in the afternoon, a signal was made from the boat, that a passage through the reef was discovered for the ship; but wishing to be well informed in so intricate a business, and the day being far spent, waited the boats coming on board; they made a signal for the boat's return, which they repeated. Night closing fast upon them, and considering their former misfortunes of losing the tender and jolly boat, it was deemed necessary, both for the preservation of the boat, and the success of the voyage, to exert their utmost to recover her as soon as possible.

They now kindled false fires, and fired muskets from the ship, which were answered by the boat reciprocally; and as the flashes from their muskets in the boat were distinctly seen by those in the ship, she was reasonably expected soon on board. Having founded, they found bottom with 110 fathom line, and afterwards with 50 fathom. The boat was now seen close under the stern; they were at the same time lying-to, to prevent the ship fore-reaching. Immediately on founding this last time, the top-sails were filled; but before the tacks were hauled on board, and the sails trimmed, she struck on a reef of rocks, and at that instant the boat got on board. Every possible effort was attempted to get her off by the sails; but that failing, they were furl'd, and the boats hoisted out with a view to carry out an anchor. Previous to this, the carpenter reported she made eighteen inches water in five minutes; and in a quarter of an hour more she had nine feet water in the hold, which created no small apprehensions.

All the crew were now at the pumps, and to bale at the different hatchways. Some of the prisoners were let out of irons, and turned to the pumps. At this dreadful crisis, it blew very violently; and the boat so hard upon the rocks, that it was expected every minute she would go to pieces. About ten she beat over the reef; and they let go the anchor in fifteen fathom water. It was now a dark stormy night, which added not a little to their fears.

The captain ordered the guns to be thrown overboard; and what hands could be spared from the pumps were employed thrumming a top-sail, to haul under her bottom, to endeavour to fodder her. In addition to this distress, one of the chain-pumps gave way; and she gained fast upon them. The scheme of the top-sail was now laid aside, and every soul fell to baling and pumping. All the boats, excepting one, were obliged to keep a long distance off, on account of the broken water, and the very high surf that was running near them. They baled

with their utmost powers; for had she gone down before day-light, every soul must have perished. She now took a heel, and some of the guns they were endeavouring to throw overboard run down to leeward, which crushed one man to death: about the same time a spare top-mast came down from the booms, and killed another.

The crew being exceedingly faint and fatigued, were allowed some refreshment. Fortunately they had between decks a cask of excellent strong ale, brewed at Annamooka. This was tapped, and served regularly to all hands; which was much preferable to spirits, as it gave them spirits without intoxication. The men behaved with great resolution and intrepidity, and were remarkably obedient to their captain's orders.

As soon as day began to dawn, a council of war was held among the officers; and as she was then settling fast down in the water, it was their unanimous opinion, that nothing further could be done for the preservation of his Majesty's ship. It was therefore recommended to the crew to look to themselves, and take as much care as possible of their lives.

The prisoners were now restored to liberty, and permitted to shift for themselves. The booms, sparren-coops, and every thing buoyant, were cut loose in hopes when the ship sunk something might remain for them to catch hold of. The men were still remarkably obedient, and exercised themselves hard at the pumps; but the water came in so violently at the gun-ports, that the labour was ineffectual. The ship taking a very heavy heel, lay down quite on one side: whereupon one of the officers informed the captain that the anchor on their bow was under water, and that she was inevitably gone: he then jumped over the quarter into the water, bidding him to follow, which he did. All the crew did the same, while she took her last heel, and instantly went down. The boats, on account of the tide, were at some distance, but they did their best to take up some of the drowning men, whose cries were exceedingly piercing. When the sun rose, they discovered a sandy key, which seemed about 30 paces long, and about four miles distance. Here, as soon as the boats had arrived, they mustered their remains, having lost 35 men and four prisoners.

Very fortunately a small barrel of water, a cask of wine, some biscuit, and a few muskets and cartridge boxes, had been preserved. They now rested, in order to recover themselves, as they suffered exceedingly from the heat of the sun, and the quantity of salt-water which, while they were swimming, filled their stomachs, and caused a most intolerable thirst, which was still more painful, as no water was allowed to be served out the first day. A guard was placed over the prisoners, and the boats were hauled up in one of which having found a saw and a hammer they were the better enabled to make preparations for their voyage: accordingly they proceeded to cut up the floor boards of all the boats into uprights round which they stretched canvas, in order to keep the water from breaking into the boats at sea; likewise to repair another, which was in a very bad condition. Having made tents of the boats sails, and set the watch, they went to sleep as soon as it was dark. One of the crew, (Connell) having incautiously drank a quantity of salt water to ease his thirst, went mad in the night, and behaved so outrageously, that they thought the poor creature had stolen the wine and got drunk: in a very short time after he died.

Early the next morning the captain dispatched Mr. George Passmore in one of the boats to visit the wreck, in hopes that he might find something that might turn out of some use to them. In about two hours he returned with about 15 feet of the lightning chain, which they cut up, being coppered in order to make nails thereof for refitting their boats: he likewise brought a piece of the topgallant

mast, which had been clinging to it.

They had boiled which was cut into exceedingly thirsty, a man had a wine glass paper parcel of tea; heers joined their allies captain in his tent. Spoonful thereof was with which they moist and derived great be-

man, which had been brought away, and a cat that was clinging to it.

They had boiled some of the gigantic cockle, which was cut into junks; but the men were so exceedingly thirsty, that they could not eat. Each man had a wine glass of water in the evening. A paper parcel of tea having been preserved, the officers joined their allowance, and had tea with the captain in his tent. When it was made, a salt-cellar spoonful thereof was passed from one to another, with which they moistened their mouths by degrees, and derived great benefit from it.

Having now made an examination of their small stock, it was found that there was only an allowance of two small wine glasses for 16 days, for each man per day. They therefore made ready the little squadron without loss of time, while the captain appointed the following order of sailing:

In the Pinnace,

Capt. Edwards, Lieut. Hayward.

Mr. Richards, master's mate.

Mr. Packer, gunner.

Mr. Edmonds, captain's clerk.

Sixteen privates, and three prisoners.

In the Launch,

Lieut. Corner.

Mr. Gregory Bentham, purser.

Mr. Montgomery, carpenter.

Mr. Bovington, master's mate.

Mr. M'Kendrick, midshipman.

Twenty-four privates, and two prisoners.

In the Red Yawl,

Lieut. Larkan.

Mr. George Hamilton, surgeon.

Mr. Reynolds, master's mate.

Mr. Matson, midshipman.

Eighteen privates, and two prisoners.

In the Blue Yawl,

Mr. George Passmore, master.

Mr. Cunningham, boatswain.

Mr. James Innes, surgeon's mate.

Mess. Fenwick and Pycroft, midshipmen.

Fifteen privates, and three prisoners.

CHAPTER IV.

They proceed on their Voyage in the Boats—Curfery Remark:—Followed by two Canoes—They avoid the Natives, on account of their Savage Appearance, &c.—Approach an inhabited Island—Receive some Water from the Natives—Are attacked by some of them—Arrows let fly—Muskets discharged—None of either side killed—Refresh themselves with Sleep at Laforey's Island—Search for Water—Successful—Discoveries—Fill the Carpenter's Boats with Water, for want of Utensils—Proceed on their Voyage—Discover several Islands—Discover Land—Get on Shore—Visited by a Chinese Chief, and some of the Natives—His Humanity—They are supplied by the Natives with Refreshments—Occurrences—Embark for Coupang—Arrival—Transactions—Proceed to Batavia—Land in England.

EACH boat being supplied with the latitude and longitude of the island of Timor, the distance of 1100 miles from this place, about 12 o'clock on the 30th of August they embarked in their little squadron, having formed a platform by laying the masts upon the thwarts, whereby they stowed two tiers of men.

Previous to this there was made for each boat a pair of wooden scales, that a musket-ball weight of bread might be served to each man. For the sake of their better subsistence, they kept together, the chief part of their provisions being in the launch, under Lieut. Corner's care.

During night they towed each other, and cast off the low line about day-break.

After this the red and blue yawls proceeded a-head, to examine and found the coast of New South Wales, and seek a watering-place. Having entered a fine bay, they providentially found a spring of fine excellent water at the edge of the beach. After they had sufficiently quenched their thirst, they filled two quart bottles and a tea-kettle. They now made sail under the pinnace and launch, who by this time were so far distant as not to be able to observe any signal which the yawls made to them of their success.

The coast appeared very barren and dreary, and as far as they could judge of the soil and land the country seemed to abound in minerals.

When they had passed round the bay, they were surprised by two canoes, with three black men in each, who struggled very hard to come up to them. These men stood up in the canoes, waved, and made many signs to invite them over, but they judged it most prudent to avoid them, as they were entirely naked, and had very fierce looks, besides they had heard an indifferent account of these natives.

Two hours after this they joined the pinnace and launch, who were lying-to for them. At ten at night they were alarmed with the dreadful cry of the canoes a-head. They had got amongst a reef of rocks; and in their present condition, being already worn out and fatigued, it is difficult to say how they got out of them, as the place was fraught

with danger all round. Having run along, they came to an inhabited island, from which they promised themselves a supply of water. As soon as they approached the place, the natives flocked down to the beach in crowds. They were jet black, and neither sex had either covering or girdle. They made signals of distress to them for something to drink, which they understood, and, on receiving some trifling presents of knives, and some buttons cut off their coats, they brought them a cag of good water, which they emptied in a minute, and then sent it back to be filled again: however, they would not bring it the second time, but put it down on the beach, and made signs to them to come on shore for it. This they declined, as they observed the women and children running and supplying the men with bows and arrows. In a few minutes they let fly a shower of arrows amongst the boats, but luckily not a man was wounded: an arrow fell between the captain and third lieutenant, and went through the boat's thwart and stuck in it. It was an oak plank, inch thick. They immediately discharged a volley of muskets at them, which put them all to flight: there were, however, none of them killed.

They now made for other islands in sight, and sent some armed men on shore, with orders to keep near them, and run close along-shore in the boats: but they returned without success. They called this Plumb Island, from its bearing a kind of fruit resembling plumbs, but not fit for use.

They steered in the evening for the Prince of Wales's Islands; and about two o'clock in the morning came to an anchor, with a grapple, alongside of an island, which they called Laforey's Island.

As this was the last place from which they could expect any relief, every man had permission to refresh himself with sleep. Early in the morning they were roused by the howling of wolves, who retired as soon as they saw them. Lieut. Corner was dispatched with a party on shore to look for some water. As soon as they landed, they discovered a foot-path which led down into a hollow, where they were led to suspect that water might be found; and, on digging

The next day, being the 16th of Sept. they went up the creek in one of the boats about four miles off, in order to purchase some provisions for their sea stores at one of their towns. They met the king, who was both well mounted and attended as soon as they entered the town; but his majesty scarcely vouchsafed them a look. They left this place at noon, having procured some pigs, &c. and as it was dark while they were sailing along the coast, they put into a bay, for fear they might overshoot their port; and having halloed and made a noise upon seeing a light on shore, the natives came to them with torches, and assisted them on land. They then kindled fires, and dressed their victuals, in order to lose no time. Early the next day they proceeded on their voyage, and landed at Coupang in the afternoon.

They were very kindly received, and hospitably treated, both by the governor and lieutenant governor of this place. They remained here five weeks; during which time the governor endeavored to render the place as agreeable as possible: they were sumptuously entertained at his table every day, while cards or concerts were prepared for the evening's amusement.

Some short time before the captain's arrival, a boat came on shore here with eight men, a woman, and two children. These people pretended they were part of the crew of an English brig wrecked in those seas, and that the rest with their captain had separated from them at sea in another boat: as they drew on the British government, they were supplied with every thing they required, while the governor behaved to them with uncommon attention. A whimsical adventure, however, led to a discovery of these people: as soon as Capt. Edwards arrived the captain of a Dutch East-Indiaman (who spoke English) hastened to them with the supposed glad tidings of their captain having arrived. Their surprise and confusion now denominated that they were impostors; upon which they were ordered to be apprehended, and confined in the castle. The woman, and one of the men, fled into the woods, and were soon taken. They confessed they were English convicts, who had escaped from Botany Bay by the assistance of the governor's fisherman, who was a good seaman and navigator, and whose time of transportation was expired. The performance of this voyage displayed uncommon skill, and their journals afforded both interesting and curious anecdotes.

The Rembang Indiaman, under the command of Captain Dulleberg, was now sitting out for sea. In this vessel the captain and his people intended to embark for Batavia.

Belthazar's burial took place during the captain's stay here. This was the late king of Coupang; and the governor, lieutenant governor, and all the Europeans, were invited upon the solemn occasion: as soon as the body was interred, the company's troops fired three volleys, and about 4000 people were served with refreshments. A sumptuous dinner was likewise prepared for the Dutch and English officers, while the first toast that was drank was the dead king's health. There were several other curious details. The young king was now invested with the royal dignity; the ceremony of which consisted in his drinking a bumper of brandy and gunpowder, which was stirred round with the point of a sword. When installed he went to pay his respects to the governor, preceded by music and colours.

The armourer was now employed in forging bolts and fetters for the prisoners and convicts.

The Rembang Dutch Indiaman being now ready, they embarked on board of her the 6th of October, and took with them the prisoners and convicts. From this to the 12th they had frequent calms, and a cold weather. In passing the Straits of Alice they suffered much sickness.

A very dreadful storm arose while they were passing the Island of Flores. The sails of the vessel were in a short time broke to pieces: she made a quantity of water, while the pumps were so choaked that they were quite useless. During this there was dreadful thunder and lightning; and they were driving down with great impetuosity on a savage shore, about seven miles under their lee.

In this dilemma, the Dutch seamen were so terrified that they retired from deck, while the English sailors, with extraordinary exertions, combated with the tempest, and preserved the ship. There is no doubt but the Dutch are very resolute, and willing to labour, but they are always dismayed at thunder and lightning.

On the 21st they got through Alice, and perceived three proas; whereupon they made preparations to defend themselves, but met with no occasion.

On the 22d they discovered the islands of Kanga-junk and Ulk, and ran through the channel which lies between them.

On the 23d they saw the Island of Madeira. On the 26th the Island of Java; and anchored at Samarang on the 30th.

As soon as they came to anchor they discovered their tender here, which they imagined had been lost. Their surprise on this occasion could only be equalled by their pleasure. It is impossible to paint that excess of joy which naturally took place, or describe those noble emotions, the praise-worthy sympathy which marked every countenance, while imparting to each other their mutual sufferings.

The following is Mr. Oliver's account of the sufferings which his men endured during their separation:

"The night we parted company, the savages attacked us in a regular and powerful body, in their canoes; and as they never saw a European vessel before, nor were able to conceive any idea of fire-arms, the conflict, of course, lasted longer than it otherwise would; for, seeing no missile weapon made use of, when their companions were killed, they did not suspect any thing to be the matter with them, as they tumbled into the water. Our seven-barrelled pieces made great havoc amongst them. One fellow had agility enough to spring over their boarding-netting, and was levelling a blow with his war-club at me, but luckily I shot him dead before he effected his purpose.

"On not finding the ship next day, we gave up all further hopes of her, and steered for Annamooka, (the rendezvous Captain Edwards had appointed). Our distress for want of water was exceedingly great, and had so strong an effect on one of the young gentlemen, that the day following he became delirious, and continued so for some months after it.

"We at last made the island of Tofoa, near to Annamooka, which we mistook for it. After trading with the natives for provisions and water, they made an attempt to take the vessel from us, which they always will to a small vessel, when alone; but they were soon overpowered with the fire-arms. We were, however, obliged to be much on our guard afterwards, at those islands which were inhabited.

"After much diversity of distress, and similar encounters, we at last made the reef that runs between New Guiney and New Holland, where the Pandora met her unhappy fate; and after traversing from shore to shore, without finding an opening, we boldly gave it the stem, and beat over the reef. The alternative was dreadful, as famine presented itself on the one hand, and shipwreck on the other.

"We were soon landed at a small Dutch settlement; but the governor having a description of

"the Bounty's pirates from our court, and our vessel being built of foreign timber, served to confirm them in their suspicions; and as no officer in the British navy bears a commission or warrant under the rank of lieutenant, where, by seal of office, their person or quality may be identified, they had only their bare word to depend on. They, however, behaved to us with great precaution and humanity: although they kept a strict guard over us, nothing was withheld to render our situation agreeable; and we were sent, under a proper escort, to this place."

The town of Samarang is remarkable for its beauty and regularity; the houses (which are very handsome) built all in a very fanciful manner. Every street terminates with a public building, which gives it much consequence.

This settlement being exceedingly lucrative, the governor is changed every five years. It is reckoned next to Batavia.

Notwithstanding the beauty of the town, it is suffering much from the introduction of canals, which will no doubt render the place in time exceedingly unwholesome, by the putrid exhalations which must consequently arise from the stagnant water.

While Captain Edwards was here, a regiment of the Duke of Wurtemberg were doing duty: several persons of rank and fashion were among them, who behaved exceedingly polite to the captain and his people.

The Dutch here are continually at civil war, as many disagreements arise from their supplying the petty princes with ammunition and warlike stores. By means of these dissensions, the number of prisoners are considerable, and the slave trade, which is comprised of these, amply supplied thereby. Not long ago, however, these people rebelled, and forced the Dutch to retire within their trenches.

The people of this place make it a rule to bathe every morning and evening, in a fine river appropriate to that purpose, which runs in the centre of the town, and is exceedingly convenient. Captain Edwards and his men, during their stay, availed themselves occasionally of this custom, which proved a considerable benefit, by recovering their strength. Though this place abounds with many advantages, it is still attended with several evils: even in the enjoyment of the refreshing stream, the people are subject to the venomous bites of snakes, alligators, and other reptiles, with which this land overflows. There is one particular snake, which is exceedingly frightful, and which creeps upon the ground: it is called the Cowk Cowk, and makes a noise at particular times like a cuckoo clock. It is something between the toad and lizard, about a foot and a half long: its bite is reckoned mortal, and it is dreaded very much even by the inhabitants. The alligators, which are very numerous here, are equally daring and dangerous. It is said that several who have been bathing about the shallow parts of the river above the town have been devoured by these. The governor informed both Captain Edwards and Surgeon Hamilton, that one day while he was hunting, his black boy being obliged to cross a shallow part of the river, was instantly seized by an alligator; upon which he dismounted, and having slew the alligator, happily rescued the youth out of his mouth.

There is a disorder, something like the small-pox, which is very prevalent here. A person only experiences it once in his life, during his infancy, and seldom or ever dies of it; its duration, however, is much longer than that of the small-pox.

Having left Samarang they arrived in a few days at Batavia, while several of the crew were confined with sickness.

Immediately on their arrival the sick people were sent to the hospital. While proceeding down the canal, several dead bodies which were floating,

struck the boat, and afforded no agreeable spectacle, especially to sick people.

Having left Batavia in order to make for the cape, one of the convicts, before they had left Java, jumped overboard in the night, and swam to the Dutch arsenal at Honrooft.

They saw the relics of Lord Cathcart, while passing Banton. They passed the island of Sumatra without meeting any thing material.

During their passage through the straits of Sunda they suffered great sickness, in consequence of which several of the crew died.

Their passage to the Cape of Good Hope was exceedingly tedious and disagreeable. As soon as they arrived they met with many civilities, particularly from a Colonel Gordon, a gentleman of well known literary and military abilities.

During their stay they were very much delighted with the gaiety of the town, as the inhabitants partake much of the manners of Bath. They resemble the English more than the Dutch in their dress and customs.

An uncommon rage has lately taken place here for building. Their houses, however, are not so neat as those of Samarang, though they may be more pleasing to the generality of spectators, seeing that their style is gaudy, and consequently striking at first sight, whereas that of Samarang is chaste, and will bear scrutiny.

There are several gardens here, but they suffer exceedingly from the quantity of monkeys with which the place is infested. The curious mode practised by these antic creatures in making depredations on gardens, is thus described by Surgeon Hamilton:

"They place a proper picket, or advanced guard, as sentinels, when a party is drawn up in a line, who hand the fruit from one to another, and when the alarm is given by the picket guard, they all take flight, making sure that by that time the booty is conveyed to a considerable distance. But should the picket be negligent in their duty, and suffer the main body to be surprised, the delinquents are severely punished."

The town here is likewise intersected and consequently spoiled by canals, which are carried to the top of a mountain. Indeed the Dutch never think of studying wholesomefness; the very hospital is an example of their indifference towards health, for the windows are so very small, that the patients therein are deprived of the salutary effects of air.

They remained some short time at the cape for the purpose of recovering their sick, who were treated in a very kind manner, and received all the assistance which the place could afford. The captain and the rest of his people still experienced a continuance of favours and politeness, and shared much in the diversions of the place. After they had sufficiently refreshed themselves here, they took leave of their friends, and prepared for their departure.

Having left the cape they passed St. Helena, the island of Ascension, and arrived at Holland. In a short time after they had the inexpressible felicity of being landed again on their native shore.

Having thus laid before the Public a full and accurate account of Captain Edwards's Voyage, in the Pandora Frigate, the Launch, Pinnace, Red and Blue Yauls, we shall now proceed with the interesting Voyages of Captain Cook, which, for the sake of giving in the most copious and satisfactory manner, several descriptions and discoveries have been omitted in our preceding Voyages, for the sake of introducing them in these, in order to give the credit, where it is due, to their original discoverer. His first Voyage in his Majesty's Ship the Endeavour, shall be our first care, the rest shall be introduced in disorder, while the third and last Voyage shall contain the unfortunate death of this much lamented navigator, with curious anecdotes of his life.

A NEW, COMPLETE, AND GENUINE
HISTORY OF
A VOYAGE ROUND the WORLD,

I N
His MAJESTY'S SHIP the ENDEAVOUR,

UNDER THE COMMAND OF
Captain JAMES COOK,

Undertaken and Performed in 1768, 1769, 1770, and 1771:

BEING

The FIRST VOYAGE of that Celebrated NAVIGATOR.

Including all the ADVENTURES, DISCOVERIES, INFORMATION, &c. contained in the
JOURNALS and COMMUNICATIONS of

Captain COOK, Sir JOSEPH BANKS, Dr. SOLANDER, &c.

Being an Entire New HISTORY of all those Interesting OCCURRENCES and Important
DISCOVERIES which were made in the SOUTHERN HEMISPHERE, &c. during a Period
of nearly Three Years, in which Time the Circumnavigation of the Globe was completed.

Which, besides the several other VOYAGES as well as TRAVELS with which this valuable Collection
is to abound, will be Embellished with a Variety of Elegant COPPER-PLATES, Drawn upon the
Spot, and Engraved by Eminent Artists.

INTRODUCTION.

THE following Voyage, being the FIRST per-
formed by the celebrated Captain Cook, was
undertaken by order of his present Majesty,
principally for the purpose of making discoveries
in the Southern Hemisphere, which might tend to
the advantage of future navigators. Accordingly
the Endeavour, a bark of 320 tons, which had
been originally built for the coal trade, was by
royal authority devoted to the service of Captain
Cook, having on board ten carriage and twelve
swivel guns. Captain Cook was appointed com-
mander of this vessel, and while she was equipping
for the voyage several bold adventurers procured
the Captain's permission to accompany him: among
the most celebrated of the party was Mr. (now Sir
Joseph) Banks; this gentleman was possessed of
considerable landed property in Lincolnshire, and
upon his leaving the University of Oxford in 1763
he made a voyage to the coast of Newfoundland
and Labrador. Far from being discouraged with
all the difficulties and dangers which attended his
first expedition, he determined on accompanying the
captain in this voyage.

There was also Dr. Solander, a native of Sweden,
and a gentleman of acknowledged abilities, who
had studied under the famous Linnaeus, and was
justly celebrated for his natural philosophy. Mr.
Banks engaged the doctor to accompany him, who
was just established, having been then appointed to
a place in the British Museum, which he filled with
credit to himself, and in which he gave universal
satisfaction.

Besides the doctor, Mr. Banks took with him
two draughtsmen, with the intention of employing
one in painting subjects of natural history, and the
other in delineating figures and landscapes. He
likewise took four servants, two of whom were
negroes, and a secretary in his retinue.

Mr. Banks and the doctor were induced to un-
dertake this laudable voyage with Captain Cook,
not only for the sake of making new discoveries,
but likewise for attaining a sufficient knowledge
of particular plants, productions, &c. hitherto un-
known, which might be of general utility:

The Endeavour was esteemed a vessel of the best
construction for their design, particularly because
she was what the sailors call a good sea-boat: she
was exceedingly roomy, would take and lie on the
ground, and might also be managed by fewer hands
than other vessels of the same burthen.

Having been victualled for eighteen months, and
a good store of ammunition and other necessaries
provided, her complement of officers and men was
Captain Cook, the commander, two lieutenants
under him, a master and boatswain, each having
two mates, a surgeon and carpenter, each having
one mate, a gunner, a cook, a clerk and steward,
two quarter-masters, an armourer, a sail-maker,
three midshipmen, forty-one able seamen, twelve
marines, and nine servants, being in all eighty-five
persons.

Both Captain Cook and Mr. Banks kept journals
of this voyage, and were exceedingly attentive in
preserving accuracy and order. The former chiefly
confined himself to a minute account of all nautical
incidents, and a very particular description of the
figure and extent of the countries he had visited;
while the latter took notice of all the chief pro-
ductions, &c. Journals were likewise kept by several
of the other officers and crew. The following co-
pious and faithful history contains all their informa-
tions united, on which account the first person plural
is adopted, in order to render the narrative more
interesting.

The several advantages which have been derived
from the discoveries of Captain Cook, are too well
known

known to need any illustration. He answered in a most ample manner the intentions of his three voyages, by having afforded such information as was of the greatest utility to all future adventurers. He aimed at much, and he accomplished much, by fully demonstrating what a variety of useful purposes might be effected by occasionally repeating the voyages he had so happily made. The persevering endeavours of Captain Cook brought also to light the several idle stories of those speculative philosophers, who held out such false pictures of imagination, as to persuade men that there was a continent equal at least in extent to all the civilized countries in the known northern hemisphere; where new men, new animals, new productions of every kind might be brought forward to view, and discoveries effected which would open inexhaustible treasures of commerce; but these visionary prospects were soon confuted by the searches of Captain Cook, who, instead of this land of promise, this valuable paradise,

discovered nothing but barren rocks, mountains of ice, dreary seas, &c. Thus has this brave navigator, not only benefited the world by lessening the dangers and distresses formerly experienced in those seas which are within the line of commerce and navigation now actually subsisting, but likewise in discouraging future unprofitable searches.

A faithful and accurate relation of these voyages are the best tribute that can now be paid to his memory.

The Endeavour having been equipped with all possible expedition, due notice was given of the day appointed for her sailing; previous to which Capt. Cook, Mr. Banks, and Dr. Solander, received several visits from persons of the first distinction, who all joined in hearty wishes for their success, and contributed as much as possible to remove the pain of their present parting, by anticipating the pleasure they should feel on their future meeting.

BOOK I.

CHAPTER I.

Departure of the Endeavour from Plymouth—Her Passage to the Island of Madeira—A Description of its natural Curiosities, and Trade—A particular Account of Funchiale, the Capital of Madeira—The Passage from Madeira to Rio de Janeiro—Account of this Capital of the Portuguese Dominions in South America, and of the circumjacent Country—Incidents which happened while the Endeavour lay in the Harbour of Rio de Janeiro.

ON the 26th of August, 1768, we got under sail, and took our departure from Plymouth. Nothing of any material consequence occurred during this week, except that on the 31st we saw several of those birds which the seamen call Mother Carey's Chickens, and which are looked upon by them as a certain indication of a storm; however, we were very happy to find that the prognostication was on this occasion false.

On the 2d of Sept. we perceived land between Cape Finisterre and Cape Ortegal, on the coast of Galicia, in Spain.

Several marine animals were discovered in this course, hitherto unknown, at least unnoticed by our naturalists. One of these, described as a new species, is of an angular form, about three inches in length, and one in thickness: it had a hollow passage quite through it, and a brown spot at one end. Four of these animals appeared to adhere together by their sides, but as soon as they were put into the water they separated, and swam about, shining with a brightness that resembled the vivid colour of a gem. There was also another of these animals, which exceeded any that we had yet discovered in brightness and variety: it was equal in colour and splendor to those of an opal.

We also caught several birds among the rigging of the ship, when about ten leagues distance from Cape Finisterre, which Linnæus had not noticed.

On the 12th we discovered Puerto Santo and Madeira; and on the 13th moored with the stream anchor in the road of Funchiale. Mr. Weir, the master's mate, was unfortunately carried overboard and drowned, while heaving up the anchor.

The island of Madeira, upon being approached from the sea, appears exceeding beautiful, the sides of the hills being covered with plantations of vines, which are green when all kinds of herbage, except here and there, are burnt up, which at this time happened to be so.

As no one is suffered here to land from on board a ship, without previous permission, a boat came to us from the officers of health in the forenoon of the day we had anchored, and leave being granted, we landed accordingly at Funchiale, which is the chief

town in the island, and proceeded directly to the house of a Mr. Cheap, a considerable merchant, and at that time the English consul, who gave us a very warm reception, and treated us with uncommon politeness and civility.

We continued on the island only five days, during which time the season happened to be the worst in the year for searching after natural curiosities. Notwithstanding this unfavourable opportunity, Mr. Banks and Dr. Solander were determined on satisfying their curiosity as much as possible: these gentlemen, accordingly, by the kind assistance of Dr. Heberden, who is the chief physician of the island, and brother to Dr. Heberden, of London, after an excursion about three miles from the town, collected a few plants in flower. Mr. Banks enquired after and found the tree called *Laura Indica*; he supposes the wood of this to be what is called Madeira mahogany, there being no real mahogany in Madeira.

The people of Madeira are very deficient in trade, having no other article to export than wine. The Madeira wine is made by pressing out the juice in a square wooden vessel. The size of this is proportioned to the quantity of wine; and the servants, having taken off their stockings and jackets, get into it, and with their elbows and feet press out as much of the juice as they can. In like manner the stalks, being tied together, are pressed under a square piece of wood, by a lever with a stone fastened to the end of it.

While we remained upon this island there were no wheel-carriages to be seen, nor have the people any thing that resembles them, except a hollow board or sledge, upon which those wine vessels are drawn that are too big to be carried by hand. They have also horses and mules, very proper for their roads; but their wine is, notwithstanding, brought to town from the vineyards where it is made in vessels of goat-skins, which are carried by men on their heads.

The inhabitants of Madeira are ingenious, but far from industrious. The country is indebted to nature for many gifts. The soil is so very rich, and there is such a variety in the climate, that there is scarcely an article, either of the necessaries or luxuries of life

which cannot be had in any other part of the world. Walnuts, chestnuts, pineapples, &c. grow almost spontaneously in the soil, and are produced in plenty, all they can bear. Beef, mutton, and the captain's own use.

Funchiale (walled) is a town built on the bottom of a valley, and the streets and churches are full of images of saints, and wretchedly executed. The Franciscans, is united in most of the most considerable, a small chapel, and ceiling, is of bones; the thigh of a scull is placed in the middle, visited the good received us with said they, "to be compared, but if you fast-day, we will polite invitation.

There are many hills in particular is near the hills are covered with chestnuts, a whole forest of vines and Paobran, unknown in Europe, and would be useful, and would be. The number of iron to amount to iron house duties produced of 20,000, a year, balance of trade is very going to Lisbon, Spanish. This country is about a shilling; worth about three.

On the 19th of Sept. we sailed from Madeira, and on the 20th we arrived at Salvages, northward of these was about 20 leagues. On the 23d the Port of Funchiale was half south. Its appearance for when most part black, the mountain with a warth of profusion. There is no issue from the chimney of the hand of this mountain is dried and forty-eight.

On the 30th we arrived at the Verd Islands, in latitude 21 deg. 51 min. we observed numbers of very beautiful, the

On the 7th of Oct. we were in a boat, and caught a man of war; together with several taceous animals, water; and on the 10th a gull, not defective of a red colour, some showers of rain damage our utensils.

On the 25th we were in the bay of monies; and on the

which cannot probably be cultivated here. On the hills walnuts, chestnuts, and apples flourish, almost without culture. Pine-apples, mangoes, guavas, and bananas, grow almost spontaneously in the town. They have corn which is large grained and fine, and it might be produced in plenty; but for want of being attended to, all they consume is imported from other countries. Beef, mutton, and pork are remarkably good, and the captain took some of the former on board for his own use.

Funchale (which took its name from *Funcho*, signifying fennel in the Portuguese language) is situate at the bottom of a bay, and though it is extensive in proportion to the rest of the island, it is but poorly built, and the streets are narrow and badly paved. The churches are full of ornaments, with pictures and images of saints; the first arc, for the most part, wretchedly executed, and the latter are dressed in laced cloaths. The taste of the convents, especially of the Franciscans, is better; neatness and simplicity being united in most of the designs of the latter. The infirmary also is a piece of good architecture, and one of the most considerable in this place. In this convent is a small chapel, the whole lining of which, both sides and ceiling, is composed of human skulls and thigh bones; the thigh bones are laid across each other, and a skull is placed in each of the four angles. When we visited the good fathers, just before supper-time, they received us with great civility. "We will not ask you," said they, "to supper with us, because we are not prepared, but if you will come to-morrow, though it is a full-day, we will have a turkey roasted for you." This polite invitation it was not in our power to accept. There are many high hills in this island; Pico Ruivo in particular is near 5100 feet high. To a certain height these hills are covered with vines, above which are numbers of chestnuts and pine-trees; and above these again whole forests of various sorts of trees. The *Mirmulano* and *Paobranco* which are found among them, are unknown in Europe. The latter of these is very beautiful, and would be a great ornament to our gardens. The number of inhabitants in Madeira are computed to amount to about eighty thousand; and the custom-house duties produce to the king of Portugal a revenue of 20,000*l.* a year, clear of all expences. But the balance of trade is against the people; for all their money going to Lisbon, the currency of the island is in Spanish. This coin consisteth of pisterrens, worth about a shilling; bits about sixpence, and half bits worth about three-pence.

On the 19th of September the Endeavour sailed from Madeira, and on the 21st we saw the islands called the Salvages, northward of the Canaries. The principal of these was about five leagues to the south half west. On the 23d the Peak of Teneriffe bore west by south half south. Its appearance at sun-set was very striking; for when most part of the island appeared of a deep black, the mountain still reflected rays, and glowed with a warmth of colour which no painting can express. There is no eruption of visible fire, but a heat issues from the chinks near the top, too strong to be borne by the hand when held near them. The height of this mountain is 15,396 feet, which is but one hundred and forty-eight yards less than three miles.

On the 30th we saw Bona Vista, one of the Cape de Verd Islands, in latitude 16 deg. north, and longitude 21 deg. 51 min. west. In our course to Teneriffe, we observed numbers of flying fish, which appeared very beautiful, their sides resembling burnished silver.

On the 7th of October Mr. Banks went out in a boat, and caught what our sailors call a Portuguese man of war; together with several shell fishes, or testaceous animals, which are always found floating upon the water; and on the 26th this gentleman shot a black-tail gull, not described by Linnæus, and whose dung is of a red colour. We had now variable winds, with some showers of rain, and the air was so damp as to damage our utensils considerably.

On the 26th we crossed the line with the usual ceremonies; and on the 28th when the ship was in the la-

itude of Ferdinand Noronha, longitude 32 deg. 5 min. west, we began to look out for the island, and for the shoals which are laid down as lying between it and the main; but neither the island nor shoals could be discovered. On the 29th we perceived that luminous appearance of the sea mentioned by navigators, which emitted rays like those of lightning. As Mr. Banks and Dr. Solander were not thoroughly satisfied with any of the causes hitherto assigned for this phenomenon, and supposing it was occasioned by some luminous animals, they threw out a calling net, in order to try by experiment whether they were right in their conjectures. A species of the Medusa was taken, which bore some resemblance to metalline substance greatly heated, and emitted a whitish light; they caught also some crabs which glittered very much; animals which had not before been taken notice of by the curious researchers into the secrets of nature.

As provisions by this time began to grow short, we resolved to put into the harbour of Rio de Janeiro; and on the 8th of November we saw the coast of Brasil. Upon speaking with the crew of a Portuguese fishing boat, we were informed by them, that the land which we saw was to the south of Santo Espirito, Mr. Banks, having bought of these people some fish, was surprized, that they required English shillings: he gave them two which he happened to have about him; for he imagined Spanish silver to have been the only currency, and it was not without some dispute that they took the rest of the money in pisterrens. The fresh fish which was bought for about nineteen shillings, served the whole ship's company. We stood off and on along shore till the 12th, having in view successively Cape Thomas and an island just without Cape Frio, and then made sail for Rio de Janeiro on the 13th in the morning. Capt. Cook sent his first lieutenant in the pinnace before to the city, to inform the governor, that we had put into that port in order to procure refreshments, and a pilot to bring us into proper anchoring ground. The pinnace returned, but the lieutenant had been detained by the viceroy, till the captain should come on shore. When the ship had come to an anchor, a ten oared boat filled with soldiers approached, and rowed round her, but no conversation took place. Afterwards another boat appeared, which had several of the viceroy's officers on board. They enquired from whence the Endeavour came? what was her cargo? what number of men and guns she carried? and to what port she was bound? which questions having been punctually and truly answered, the Portuguese officers apologized for having detained the lieutenant, and pleaded the custom of the place in excuse for their behaviour.

On the 14th Captain Cook went on shore, and obtained leave to furnish the ship with provisions; but this permission was clogged with the conditions of employing an inhabitant as a factor, and of sending a soldier in the Endeavour's boat every time she came from shore to the vessel. To these uncivil terms the Captain made many objections; but the viceroy was determined to insist on them, neither would he permit Mr. Banks and Dr. Solander to remain on shore, nor suffer the former to go up the country to collect plants. Captain Cook conceiving from these and other marks of jealousy, that the viceroy thought they were come to trade, used all his endeavours to convince him of the contrary; and acquainted him, that they were bound to the South Seas, to observe the transit of Venus over the disk of the sun, an object of great consequence to the improvement of navigation; but the viceroy by his answer seemed to be entirely ignorant of this phenomenon. An officer was now appointed to attend the captain, which order he was desired to understand as an intended compliment: however, when he would have declined such a ceremony, the viceroy very politely forced it upon him.

Dr. Solander and Mr. Banks were not a little chagrined on hearing that they would not be permitted to reside on shore, and still more so when they understood, that they were not even allowed to quit the ship; for

the viceroy had ordered, that the captain only, with such sailors as were required by their duty, should come on shore. Whether this arose from his jealousy in regard to trade, or from the apprehensions he entertained of the extraordinary abilities of the two gentlemen in search of new discoveries, it is certain that they were highly disagreeable to Mr. Banks and the Doctor, who were resolved, if possible, to evade the order. With this view they attempted to go on shore, but were stopped by the guard-boat; yet several of the crew, without the knowledge of the centinel, let themselves down by a rope from the cabin window into the boat about midnight, and drove away with the tide till they were out of hearing. They afterwards lay on an unfrequented part of the country, and were treated by the inhabitants with great civility.

Capt. Cook, uneasy under the restrictions of the viceroy, remonstrated with him, but the latter would return no other answer, than that the king his master's orders must be obeyed. The Captain, thus repulsed, and much displeas'd, resolv'd to go no more on shore, rather than, whenever he did so, to be treated as a prisoner in his own boat; for the officer who was so polite as to accompany him, constantly attended him, both to and from the shore. Two memorials were now drawn up and presented to the viceroy, one written by the captain, and the other by Mr. Banks; but the answers returned were by no means satisfactory. Several papers pass'd between them and the viceroy to no good purpose, the prohibition still remaining as before; from whence the captain thought it necessary, in order to vindicate his own compliance, to urge the viceroy to an act of force in the execution of his orders. For this purpose he sent lieutenant Hicks with a packet, giving him his order not to admit of a guard in his boat. As this gentleman was resolv'd to obey his captain's commands, the officer of the guard-boat did not oppose him by force, but acquainted the viceroy with what had happen'd, on which the lieutenant was sent away with the packet unopened. When returned, he found a guard of soldiers placed in the boat, and insisted on their quitting it. Whereupon the officer seized the boat's crew and conducted them under an escort to prison, and the lieutenant was sent back to the ship guarded: When the captain was inform'd of this transaction, he wrote to the viceroy to demand his boat and her crew, inclosing the memorial which Mr. Hicks his lieutenant had brought back. These papers he sent by a petty officer to avoid continuing the dispute concerning the guard, which must have been kept up by a commissioned officer. An answer was now promis'd by the viceroy; but before this could arrive, the long-boat, which had four pipes of rum on board, was driven to windward, (the rope breaking that was thrown from the ship,) together with a small skiff that was fasten'd to the boat. Immediate orders were given for manning the yawl, which, being dispatched accordingly with proper directions, returned, and brought the people on board the next morning; from whom Captain Cook learned, that the long-boat having fill'd with water, they had brought her to a grappling and quitt'd her, and falling in with a reef of rocks on their return, they were forced to cut the fastening of Mr. Banks's little boat, and send her adrift. The captain now dispatch'd another letter to his excellency, wherein he inform'd him of the accident, desired he would assist him with a boat to recover his own, and, at the same time, renew'd his demand of the delivery of the pinnet and her crew. The viceroy granted the request, but in his answer to the captain's remonstrance, suggest'd some doubts that he entertain'd, whether the Endeavour was really a king's ship, and also accus'd the crew of smuggling. Capt. Cook, in his reply, said, that he was willing to shew his commission, adding, if any attempt should be made to carry on a contraband trade, he request'd his excellency would order the offender to be taken into custody. The dispute being thus terminated, Mr. Banks attempt'd to

elude the vigilance of the guard, which he found means to do, and got safe on shore on the 26th, in the morning. He took care to avoid the town, and pass'd the day in the fields, where he could best gratify his curiosity. Mr. Banks found the country people inclin'd to treat him with civility, and was invit'd to their habitations. But it was afterwards heard, that search had been making for this gentleman when absent. He and Dr. Solander, therefore, resolv'd to run no more risks in going on shore, while they remain'd at this place.

On the 1st of December, having taken in water and provisions, we got, with leave from the viceroy, a pilot on board, but the wind prevent'd us from putting to sea. A Spanish packet from Buenos Ayres, bound for Spain, arriving the next day, the captain of her with great politeness offer'd to take our letters to Europe. The favour was accepted, and Captain Cook deliver'd into his hands a packet for the secretary of the Admiralty, containing copies of all the papers that had pass'd between him and the viceroy, leaving the duplicates with his excellency. On the 5th we weigh'd anchor, and tow'd down the bay, but were stopp'd at Santa Cruz, the principal fortification, the order from the viceroy to let us pass, by an unaccountable negligence, not having been sent; so that it was not till the 7th that we got under sail. When we had pass'd the fort the guard-boat left us, and our pilot was discharged. It was observ'd, during our stay in this harbour, that the air was fill'd with butterflies, chiefly of one kind, and the greatest part above our mast-head. Of the town and neighbouring country we shall give the following description.

Rio de Janeiro was probably so call'd because discover'd on the festival of St. Januarius, from whence we may suppose the river Januarius took its name, and also the town, which is the capital of the Portuguese in America. This town is situat'd on the west side of the river, from which it is extend'd about three quarters of a mile. The ground whereon it stands is a level plain. It is defend'd on the north side by a hill, that extends from the river, having a small plain which contains the suburbs and king's dock. On the south is another hill running towards the mountains which are behind the town. This is neither ill design'd nor ill built; the houses in general are of stone, and two stories high; every house having, after the manner of the Portuguese, a small balcony before its windows, and a lattice of wood before the balcony; its circuit is about three miles; and it appears to be equal in size to the largest country towns in England. The streets are straight, and of a convenient breadth, intersecting each other at right angles; the greater part, however, lie in a line with the citadel, call'd St. Sebastian, which stands on the top of a hill that commands the town. The principal street is near 100 feet in width, and extends from St. Benedict to the foot of Castle-hill. The other streets are commonly twenty or thirty feet wide. The houses adjoining to the principal street are three stories high, but in other places they are very irregular, though built after the same manner as at Lisbon. Water is convey'd to a fountain in the great square, from an aqueduct, rais'd upon two stories of arches. The water at this fountain, however, is so bad, that we could not drink it with pleasure. The churches are richly ornamented, and there is more religious parade in this place than in any of the popish countries in Europe. Not a day pass'd without a procession of some parish, with various insignia, splendid and costly in the highest degree. But the inhabitants may pay their devotions at the shrine of any saint, without waiting for a procession; for a small cupboard, having a glass window, and in which is one of these tutelary gods, is plac'd before almost every house, and a lamp is kept constantly burning, lest the old proverb should be verified, "Out of sight, out of mind." Before these faints the people pray and sing with such vehemence, that in the night they were distinctly heard by our sailors on board the ship.

In this town are four convents, the first is that of the

Benedictines, the structure contains an elegant painting, which fronts the very elegant mother from Lisbon situated on the town; before it is brown granite, is employed in eastern extremity of the Jesuits convent hospital.

In the right of the palace, the composite one lane is 90 feet from the place, the first entrance to which there is the guard-room where are relieve nine; and adjoining prison being in the guard-room upper story, which half way, and for right and the other saloon, where the viceroy is in the anti-chamber.

The left wing building, which is a trading people fountain, of which supplied with water three miles, from the place is continued waiting to the street is an altar, north-east end of the nation is very convenient who bring vegetables market. Negroes at different commodities employ their leisure.

The form of government in fact very defective of the town from the, or transporting sure. In order to prisons into the country certain bounds are and sometimes at night and if a man is transgresses, where they are sent to prison.

The inhabitants numerous, and consists of many nations, which last winter. The township is a mixture of white people, and 6000, making together 10000.

The military is composed of regular troops, six being twelve regiments of soldiers, that if any of them taking off his hat, he is immediately known of the officers to whom they are oblig'd to wait or receive his commands. There is nothing new in Rio de Janeiro are drawn by mules No. 1.

Benedictines, situated near its northern extremity: the structure affords an agreeable prospect, and contains an elegant chapel, ornamented with several valuable paintings. The second is that of the Carmelites, which forms the centre angle of the royal square, and fronts the harbour; its church was rebuilding in a very elegant manner, with fine free stone, brought thither from Lisbon. The third is that of St. Anthony, situated on the top of a hill, on the south side of the town; before this convent stands a large basin of brown granite, in the form of a parallelogram, which is employed in washing. The fourth is situated at the eastern extremity of the town, and was formerly the Jesuits convent, but is now converted into a military hospital.

In the right angle of the royal square stands the viceroy's palace; this, with the mint, stables, goal, &c. compose one large building, which has two stories, and is 90 feet from the water. In passing through the palace, the first entrance is to a large hall or guard-room, to which there is an ascent of three or four steps. In the guard-room are stationed the viceroy's body-guards, who are relieved every morning between eight and nine; and adjoining to the hall are the stables, the prison being in the back part of the building. Within the guard-room is a flight of stairs for ascending to the upper story, which divides at a landing-place about half way, and forms two branches, one leading to the right and the other to the left. The former leads to a saloon, where there are two officers in constant attendance; the viceroy's aid-de-camp at the same time waiting in the anti-chamber to receive messages and deliver orders.

The left wing of the royal square is an irregular building, which consists chiefly of shops, occupied by trading people. In the centre of this square is the fountain, of which we have made mention, as being supplied with water from a spring at the distance of three miles, from which it is brought by an aqueduct. The place is continually crowded with negroes of both sexes waiting to fill their jars. At the corner of every street is an altar. The market-place extends from the north-east end of the square along the shore, and this situation is very convenient for the fishing-boats, and those who bring vegetables from the other side of the river to market. Negroes are almost the only people who sell the different commodities exposed in the market, and they employ their leisure time in spinning cotton.

The form of government is in its constitution mixed, but in fact very despotic; the viceroy and civil magistrate of the town frequently committing persons to prison, or transporting them to Lisbon, at their own pleasure. In order to prevent the people from making excursions into the country, in search after gold and diamonds, certain bounds are prescribed them, sometimes at a few, and sometimes at many miles distance from the town; and if a man is taken up by the guard without the bounds, where they constantly patrol, he is immediately sent to prison.

The inhabitants of Rio de Janeiro are exceeding numerous, and consist of Portuguese, Negroes, and Indians, which last were the original natives of the country. The township of Rio is but a small part of the Capitanea or province; yet is said to contain 37,000 white people, and 629,000 blacks, many of whom are free, making together 666,000, in the proportion of 17 to 1.

The military is composed of twelve regiments of regular troops, six being Portuguese, and six Creoles, and twelve regiments of provincial militia. The inhabitants are servilely submissive to the regulars, and it has been said, that if any of them should omit the compliment of taking off his hat, when he meets an officer, he would be immediately knocked down. But the subordination of the officers to the viceroy is equally mortifying, for they are obliged to wait three times every day to know, or receive his commands: the answer frequently is, "there is nothing new."

In Rio de Janeiro the gentry keep their chaises, which are drawn by mules; the ladies however use a sedan

chair, boarded before and behind, with curtains on each side, which is carried by two negroes on a pole connected with the top of the chair by two rods, coming from under its bottom, one on each side, and resting to the top. The apothecaries shops commonly serve the purposes of coffee-houses, as the people meet in them to drink capillaire, and play at back-gammon. When the gentry are seen abroad, they are well dressed, though at home but loosely covered. The shopkeepers have generally short hair, and wear linen jackets with sleeves. The women in general, as in most of the Portuguese and Spanish settlements in South America, are more ready to grant amorous favours than those of any other civilized parts of the world. As soon as the evening began, females appeared at the windows on every side, who distinguished such of the men as best pleased their fancies, by throwing down nosegays: and Dr. Solander and two other gentlemen received so many of these love tokens, that they threw them away by handfuls.

Without the Jesuits college on the shore, is a village called Neutra Senhora del Gloria, which is joined to the town by a very few intervening houses. Three or four hundred yards within the Jesuits college, stands a very high castle, but it is falling to decay. The bishop's palace is about three hundred yards behind the Benedictine convent, and contiguous to it is a magazine of arms, surrounded by a rampart.

The inhabitants of Rio de Janeiro maintain a whale-fishery, which supplies them with lamp oil. They import brandy from the Azores, and their slaves and East India goods from their settlements in Africa, their wine from Madeira, and their European goods from Lisbon. The current coin is Portuguese, which is struck here; the silver pieces are called patacks, of different value; and the copper are five and ten ree pieces: This place is very useful for ships that are in want of refreshment. They water, as we have before observed, at the fountain in the great square, but the water is not good. We landed our casks on a smooth sandy beach, which is not more than a hundred yards distant from the fountain, and, upon application to the viceroy, a sentinel is appointed to look after them. The harbour is safe and commodious, and distinguished by a remarkable hill, in the shape of a cone, at the west point of the bay. The entrance is not wide, but it is easy, from the sea-breeze which prevails from noon to sun-set, for any ship to enter before the wind. The entrance of the narrow part is defended by two forts, La Cruz, and Lozia; they are about three quarters of a mile from each other. The bottom being rocky, renders it dangerous to anchor there, but to avoid it ships must keep in the mid-channel. The coast abounds with a variety of fish, among which are dolphins and mackarel. Provisions, except wheaten bread and flour, are easily procured. Yams and cassada are in plenty. Beef, both fresh and jerked, may be bought at two-pence farthing a pound, but it is very lean. The people jerk their beef, by taking out the bones, and cutting it into large but thin slices. They then cure it with salt, and dry it in the shade. It eats very well, and, if kept dry, will remain good a long time at sea. Mutton is scarcely to be procured. Hogs and poultry are dear. Garden-stuff and fruit are in abundance, but the pumpkin only can be preserved at sea. Tobacco also is cheap, though not good. Rum, sugar, and molasses are all excellent, and to be had at reasonable prices.

The climate of Rio de Janeiro is healthy, and free from most of those inconveniencies incident to tropical countries. The air is seldom immoderately hot, as the sea breeze is generally succeeded by a land wind. The seasons are divided into dry and rainy, though their commencement of late has been irregular and uncertain, for the latter had failed for near four years preceding our arrival; but at this time the rain had just began, and fell in heavy showers during our stay: formerly the streets have been overflowed by the rain, and rendered impassable with canoes.

The adjacent country is mountainous, and chiefly covered with wood, a small part of it only being cultivated. Near the town the soil is loose and sandy, but farther from the river it is a fine black mould. It produces all the tropical fruits in great plenty, and without much cultivation; a circumstance exceeding agreeable to the inhabitants, who are very indolent. The mines, which lie far up in the country, are very rich. Their situation is carefully concealed, and no one can view them, except those concerned in working and guarding them. About twelve months before our

arrival, the government had detected several jewellers in carrying on an illicit trade for diamonds, with slaves in the mines; and immediately afterwards a law passed, making it felony to work at the trade, or to have any tools fit for it in possession, the civil officers having indiscriminately seized on all that could be found. Near 40,000 negroes are annually imported to dig in the mines, so pernicious to the human frame are those works. In 1776, 20,000 more were draughted from the town to supply the deficiency of the former number.

C H A P. II.

The departure of the Endeavour from Rio de Janeiro—Her passage to the entrance of the Streight of Le Maire—The inhabitants of Terra del Fuego described—Mr. Banks and Dr. Solander ascend a mountain in search of plants—An account of what happened to them in this excursion—The Endeavour passes through the Streight Le Maire—An account of her passage, and a further description of the inhabitants of Terra del Fuego, and its productions—Remarks respecting the south east part of Terra del Fuego, and the Streight of Le Maire—Directions for the passage westward round this part of America, into the South Seas—The passage of the Endeavour from Cape Horn to the newly discovered islands—An account of their figure and appearance—The inhabitants described, with a narrative of the various incidents during the course, and on the Endeavour's arrival among them.

ON the 8th of December, having procured all necessary supplies, we took our departure from Rio de Janeiro; and on the 9th an amazing number of atoms were taken out of the sea. These were of a yellowish colour, and few of them were more than the fifth part of an inch long; nor could the best microscope on board the Endeavour discover whether they belonged to the vegetable or animal creation. The sea was tinged in such a manner with these equivocal substances, as to exhibit broad streaks of a similar colour, for near the space of a mile in length, and for several hundred yards in breadth. Whence they came, or for what designed, neither Mr. Banks nor Dr. Solander could determine. Perhaps they might be the spawn of some marine animal, unknown to either antient or modern philosophers.

On the 11th we hooked a shark. It proved to be a female. When opened we took six young ones out of it, five of which were alive, and swam briskly in a tub of water, but the sixth appeared to have been dead some time. From this time we met with no material occurrence till the 22d, when we discovered numerous birds of the procellaria kind, in latitude 39 deg. 37 min. south, and longitude 49 deg. 16 min. west; we also discovered great numbers of porpoises of a singular species, about 15 feet in length, and of an ash colour. On the 23d we observed an eclipse of the moon; and about seven o'clock in the morning, a small white cloud appeared in the west, from which a train of fire issued, extending itself westerly: about two minutes after we heard two distinct loud explosions, immediately succeeding each other, like those of cannon, after which the cloud disappeared. On the 24th we caught a large loggerhead tortoise, weighing one hundred and fifty pounds. We likewise shot several birds, one an albatross, which measured between the tips of its wings nine feet and an inch, and from its beak to the tail two feet one inch and an half. On the 30th we ran upwards of fifty leagues, through vast numbers of land insects, some in the air, and others upon the water; they appeared to resemble exactly the flies that are seen in Greenland, though they were thirty leagues from land, and some of these insects are known not to quit it beyond three yards. At this time we judged ourselves to be nearly opposite to the bay called Sans Fond (without bottom) where it is supposed by some writers, that the continent of America is divided by a passage: but it was the opinion of our circumnavigators, that there might be a large river, which probably had occasioned an inundation. On the 31st we had much thunder, lightning and rain. This day and the three following, we saw several whales; likewise a number of birds

about the size of a pigeon, with white bellies and grey beaks.

On the 3d of January we saw the appearance of land, in latitude 47 deg. 17 min. south, and longitude 61 deg. 29 min. 45 sec. A. D. 1769; west, which we mistook for Pepy's island. In appearance it so much resembled land, that we bore away for it; and it was near two hours and an half before we were convinced, that it was one of those deceptions which sailors call a Fog-bank. At this time our teamsters beginning to complain of cold, they were furnished with a pair of trowsers, and a Magellanic jacket, made of a thick woollen stuff called Fearnought. On the 11th, after having passed Faulkland's Island, we saw the coast of Terra del Fuego, at the distance of about four leagues from the west to south-east by south. As we ranged along the shore to the south-east, smoke was perceived, made probably, by the natives as a signal, for it was not to be seen after we had passed by.

On the 14th we entered the streight of Le Maire, but were afterwards driven out again with such violence (the tide being against us) that the ship's bow-sprit was frequently under water. At length, however, we got anchorage in a small cove, on the east of Cape St. Vincent, the entrance to which our captain named St. Vincent's Bay. The weeds which grow here upon rocky ground are very remarkable, they appear above the surface in eight and nine fathoms water. The leaves are four feet in length, and many of the stalks, though not more than an inch and a half in circumference, above one hundred.

Dr. Solander and Mr. Banks went on shore, where having continued four hours, they returned about nine in the evening, with upwards of an hundred different plants and flowers, of which none of the European botanists had taken any notice near this bay. The country in general was flat, and the bottom, in particular, was a grassy plain. Here was plenty of wood, water, and fowl, and winter bark was found in great plenty. The trees appeared to be a species of the birch, but neither large nor lofty. The wood was white, and they bore a small leaf. White and red cranberries were found in these parts.

On the 18th we came to an anchor in twelve fathom water, upon coral rocks, before a small cove, at the distance of about a mile from the shore. At this time two of the natives came down upon the beach, as if they expected that the strangers would land; but as there was no shelter here, the ship was got under sail again, and the Indians retired disappointed. The same afternoon about two o'clock, we came into the bay of Good Success, and the vessel coming to an anchor, the captain

went on shore, and Solander, in order discourse with the proceeded above or when two of the Indians up, and threw away in their hands, and returned to their some distance behind to advance, though uncouth. Thus a sort of mutual the rest of the English conversing with them. Capt. Cook as to the ship, dressed bread and other provisions on shore with them; brandy, making sign their proper drink made several long an them was intelligible covering of a globe garment that was maintained on board above, Mr. Banks acceded them to their company to know what their were as little disposed enquire. None of the inches in height, but robust, though their faces, high cheeks nostrils, small black eyes different teeth, and after their ears and forehead were with brown original natives of America garments were the skin they wrapped round their foreheads, and were generally painted on with red, white, and blue or four perpendicular lines and noses. The women each ankle, and each was the middle. They carried axes, and were generally and drudgery.

Mr. Banks and Dr. Solander, set out from the bay, and returning in the wood, they ascended a hill till the afternoon they took for a plain, to find it a swamp, covered with moss, and so inflexible: however, as the high, they stepped over a boggy ground. They, but now the weather; the blasts of wind blow fell thick; nevertheless, the hope of finding a better over this swamp, an accident concerned them: Mr. Banks, whom Mr. Banks had seen, it was absolutely necessary, and such as were necessary; but Mr. Banks, who proceeded, and a where they found satisfied their curiosity in coming to the company in great abundance, covered. They had p

went on shore, accompanied by Mr. Banks and Dr. Solander, in order to search for a watering place, and discourse with the Indians. These gentlemen had not proceeded above one hundred yards before the captain, when two of the Indians that had feated themselves, rose up, and threw away the small sticks which they held in their hands, as a token of amity. They afterwards returned to their companions, who had remained at some distance behind them and made signs to their guests to advance, whom they received in a friendly though uncourteous manner. In return for their civility, some ribbons and beads were distributed among them. Thus a sort of mutual confidence was established, and the rest of the English joined the party, the Indians conversing with them in their way, in an amicable manner. Capt. Cook and his friends took three of them to the ship, dressed them in jackets, and gave them bread and other provisions, part of which they carried on shore with them; but they refused to drink rum or brandy, making signs that it burned their throats, as their proper drink was water. One of these people made several long and loud speeches, but no part of them was intelligible to any of us. Another stole the covering of a globe, which he concealed under his garment that was made of skin. After having remained on board about two hours, they returned on shore, Mr. Banks accompanying them. He conducted them to their companions, who seemed no way curious to know what their friends had seen, and the latter were as little disposed to relate as the former were to enquire. None of these people exceeded five feet ten inches in height, but their bodies appeared large and robust, though their limbs were small. They had broad flat faces, high cheeks, noses inclining to flatness, wide nostrils, small black eyes, large mouths, small, but indifferently teeth, and straight black hair, falling down over their ears and foreheads, the latter being generally smeared with brown and red paints, and like all the original natives of America, they were beardless. Their garments were the skins of seals and guanoes, which they wrapped round their shoulders. The men likewise wore on their heads, a bunch of yarn which fell over their foreheads, and was tied behind with the leashes or tendons of some animals. Many of both sexes were painted on different parts of their bodies with red, white, and brown colours, and had also three or four perpendicular lines pricked across their cheeks and noses. The women had a small string tied round each ankle, and each wore a flap of skin fastened round the middle. They carried their children upon their backs, and were generally employed in domestic labour and drudgery.

Mr. Banks and Dr. Solander, attended by their servants, set out from the ship on the 16th, with a design of going into the country as far as they could that day, and returning in the evening. Having entered a wood, they ascended a hill, through a pathless wilderness till the afternoon. After they had reached what they took for a plain, they were greatly disappointed to find it a swamp, covered with birch, the bushes interwoven, and so inflexible that they could not be divided; however, as they were not above three feet high, they stepped over them, but were up to the ankles in boggy ground. The morning had been very fine, but now the weather became cold and disagreeable; the blasts of wind were very piercing, and the snow fell thick; nevertheless they pursued their route in hope of finding a better road. Before they had got over this swamp, an accident happened that greatly disconcerted them: Mr. Buchan, one of the draughtsmen, whom Mr. Banks had taken with him, fell into a hole. It was absolutely necessary to stop and kindle a fire, and such as were most fatigued remained to assist him; but Mr. Banks, Dr. Solander, and Mr. Monkhouse proceeded, and attained the spot they had in view, where they found a great variety of plants that gratified their curiosity and repaid their toil. On returning to the company amidst the snow which now fell in great abundance, they found Mr. Buchan much recovered. They had previously sent Mr. Monkhouse

and Mr. Green back to him and those that remained with him, in order to bring them to a hill which was conjectured to lie in a better track for returning to the wood, and which was accordingly fixed on as a place of rendezvous. They resolved from this hill to pass through the swamp, which this way did not appear to be more than half a mile in extent, into the covert of the wood, in which they proposed building a hut, and kindling a fire, to defend themselves from the severity of the weather. Accordingly, the whole party met at the place appointed, about eight in the evening, whilst it was still day-light, and proceeded towards the next valley.

Dr. Solander, having often passed over mountains in cold countries, was sensible, that extreme cold when joined with fatigue, occasions a drowsiness that is not easily resisted; he therefore intreated his friends to keep in motion, however disagreeable it might be to them. His words were—Whoever sits down will sleep, and whoever sleeps will wake no more.—Every one seemed accordingly armed with resolution; but, on a sudden, the cold became so very intense as to threaten the most dreadful effects. It was now very remarkable, that the Doctor himself, who had so forcibly admonished and alarmed his party, was the first that insisted to be suffered to repose. In spite of the most earnest intreaties of his friends, he lay down amidst the snow, and it was with difficulty that they kept him awake. One of the black servants also became weak and faint, and was on the point of following this bad example. Mr. Buchan was therefore detached with a party to make a fire at the first commodious spot they could find. Mr. Banks and four more remained with the Doctor and Richmond the black, who with the utmost difficulty were persuaded to come on; and, when they had traversed the greatest part of the swamp, they expressed their inability of going any farther. When the black was told that if he remained there he would soon be frozen to death, his reply was, That he was so much exhausted with fatigue, that death would be a relief to him. Doctor Solander said he was not unwilling to go, but that he must first take some sleep, still persisting in acting contrary to the opinion which he himself had delivered to the company. Thus resolved, they both sat down, supported by some bushes, and in a short time fell asleep. Intelligence now came from the advanced party, that a fire was kindled about a quarter of a mile farther on the way. Mr. Banks then awakened the Doctor who had already almost lost the use of his limbs, though it was but a few minutes since he sat down; nevertheless, he consented to go on, but every measure taken to relieve the black proved ineffectual. He remained motionless, and they were obliged to leave him to the care of a sailor, and the other black servant, who appeared to be the least hurt by the cold, and they were to be relieved as soon as two others were sufficiently warmed to fill their places. The Doctor, with much difficulty, was got to the fire; and as to those who were sent to relieve the companions of Richmond, they returned without having been able to find them. What rendered the mortification still greater was, that a bottle of rum (the whole stock of the party) could not be found, and was judged to have been left with one of the three that were missing.

A fall of snow continuing for near two hours, there now remained no hopes of seeing the three absent persons again. At twelve o'clock, however, a great shouting was heard at a distance, which gave inexpressible satisfaction to every one present. Mr. Banks and four others went forward and met the sailor, who had just strength enough left to walk. He was immediately sent to the fire, and they proceeded to seek for the other two. They found Richmond upon his legs, but incapable of moving them; the other black was lying senseless upon the ground. All endeavours to bring them to the fire were fruitless; nor was it possible to kindle one upon the spot, on account of the snow that had fallen, and was falling, so that there remained no alternative, and they were compelled to leave the two unfortunate negroes to their fate, after they had made them

them a bed of the boughs of some trees, and covered them over thick with the same. As all hands had been employed in endeavouring to move these poor blacks to the fire, and had been exposed to the cold for near an hour and a half in the attempt, some of them began to be afflicted in the same manner as those whom they were to relieve. Briscoe, another servant of Mr. Banks, in particular, began to lose his sensibility. At last they reached the fire, and passed the night in a very disagreeable manner.

The party that set out from the ship had consisted of twelve; two of these were already judged to be dead, it was doubtful whether the third would be able to return on board, and Mr. Buchan, a fourth, seemed to be threatened with a return of his fits. The ship they reckoned to be at the distance of a long day's journey, through an unfrequented wood, in which they might probably be bewildered till night, and, having been equipped only for a journey of a few hours, they had not a sufficiency of provisions left to afford the company a single meal.

At day-break on the 17th nothing presented itself to the view all around but snow, which covered alike the trees and the ground; and the blasts of wind were so frequent and violent, that their journey seemed to be rendered impracticable, and they had reason to dread perishing with cold and famine. However, about six in the morning, they were flattered with a dawn of hope of being delivered, by discovering the sun through the clouds, which gradually diminished. Before their setting out, messengers were dispatched to the unhappy negroes; but these returned with the melancholy news of their death. Though the sky had flattered the hopes of the survivors, the snow continued falling very fast, a circumstance which impeded their journey, but a breeze springing up about eight o'clock, added to the influence of the sun, began to clear the air, and the snow falling in large flakes, from the trees, gave tokens of a thaw. Hunger prevailing over every other consideration, induced our travellers to divide the small remainder of their provisions, and to set forward on their journey about ten in the morning. To their great astonishment and satisfaction, in about three hours they found themselves on the shore, and much nearer to the ship than their most sanguine expectations could have suggested. When they looked back upon their former route from the sea, they found that instead of ascending the hill in a direct line, they had made a circle almost round the country. On their return, these wanderers received such congratulations from those on board, as can more easily be imagined than expressed.

Mr. Banks and Dr. Solander went on shore again on the 20th of this month, landing in the bottom of the bay, where they collected a number of shells and plants, hitherto unknown. After having returned to dinner, they went to visit an Indian town, about two miles up the country, the access to which, on account of the mud, was difficult. When they approached the town, two of the natives came out to meet them, who began to shout in their usual manner. They afterwards conducted Mr. Banks and the Doctor to their town. It was situate on a small hill, over-shaded with wood, and consisted of about a dozen huts, constructed without art or regularity. They were composed of a few poles, inclining to each other in the shape of a sugar-loaf, which were covered on the weather side with grass and boughs, and on the other side a space was left open, which served at once for a fire-place and a door. They were of the same nature of the huts that had been seen at St. Vincent's Bay. A little grass served for beds and chairs, and their utensils were a basket for the hand, a satchel to hang upon the back, and a bladder for water, out of which they drank through a hole near the top. This town was inhabited by a tribe of about fifty men, women and children. Their bows and arrows were constructed with neatness and ingenuity, being made of wood highly polished, and the point, which was either glass or flint, very skilfully fitted. These latter substances were observed among them unwrought,

as also cloth, rings, buttons, &c. from whence it was concluded that they sometimes travelled to the northward, as no ship, for years past, had touched at this part of Terra del Fuego. The natives here did not shew any surprize at the sight of fire-arms, but appeared to be well acquainted with their use. It is likely that the spot on which the Doctor and Mr. Banks met them, was not a fixed habitation, as their houses did not seem as if they were erected to stand for any long time, and they had no boats or canoes among them. They did not appear to have any form of government, or any ideas of subordination. They seemed to be the very outcasts of men; and a people that passed their lives in wandering in a forlorn manner over dreary wastes; their dwelling being a detached hovel, and their clothing scarcely sufficient to keep them from perishing with cold, even in those climates. Their only food was shell-fish, which on any one spot must soon be exhausted; nor had they the rudest implement of art, not even so much as was necessary to dress their food, yet amidst all this, we are told, that they appear to enjoy that content which is seldom found in great and populous cities; a species of content, which, if they really enjoyed it, must have arisen from stupidity, a satisfaction the offspring of the greatest ignorance. Such is the state of uncultivated nature; such the rude form which uncivilized man puts on. The wants of these people seemed to be few; but some wants all mankind must have, and even the most simple of them, these poor savages appeared scarcely in a condition to gratify. The calls of hunger and thirst must be obeyed, or man must perish, yet the people in question seemed to depend on chance for the means of answering them. Those who can be happy in such a situation, can only be so, because they have not a due feeling of their misery. We know that there have been admirers of simple nature amongst the philosophers of all ages and nations; and certainly simple nature has her beauties. In regard to the vegetative and brute creation, she operates with resistless energy; her power is prevalent as her pencil is inimitable; but when we ascend in the scale of beings, and come to examine the human race, what shall we find *them*, without cultivation? It is here that instinct ends and reason begins; and without entering into the question, Whether a state of nature is a state of war? when we observe the innumerable inconveniences to which those are subject on whom the light of science never dawned, we may easily determine in the favour of those arts which have civilized mankind, formed them into societies, refined their manners, and taught the nations where they have prevailed, to protect those rights which the untutored savages have ever been obliged to yield to the superior abilities of their better instructed invaders, and have thus fallen a prey to European tyranny.

We observed in this place seals, sea-lions, and dogs, and no other quadrupeds; nevertheless it is probable there are other kinds of animals in the country; for Mr. Banks remarked from a hill, "an impression of the foot-steps of a large animal on the surface of a bog, but of what kind it was he could not determine. No any land-birds were seen larger than an English black-bird, hawks and vultures excepted. Ducks and other water-fowls we saw in abundance; also shell-fish, clams, and limpets. The country, though uncleared, had neither gnat, musquito, nor any other noxious or troublesome animals. A great variety of plants were found by the Doctor and Mr. Banks. The wild celery and scurvy-grass are supposed to contain antiscorbutic qualities, which will therefore be of service to the crews of such ships as hereafter may touch at this place, after a long voyage. The latter is found in abundance near springs and in damp places, particularly at the watering place in the bay of Good Success, and it resembles the English cuckow flower, or lady's-smock. The wild celery is like what grows in our gardens in England, but the leaves are of a deeper green. This plant may be found in plenty near the beach, and upon the land above the spring tides. In taste it is between that of celery and parley. The grateful seaman, long con-

 different food and nourishment, suitable to his nature,
 wants and necessities.

On Sunday, Jan. 22, having got in our wood and
 water, we sailed out of the bay, and continued our
 course through the Strait; and in passing this, our
 withstanding the description which some voyagers have
 given of Terra del Fuego, we did not find that it had,
 agreeable to their representations, such a forbidding
 aspect. On the contrary, we found the sea coasts and
 the sides of the hills clothed with verdure. Indeed
 the summits of the hills were barren, but the valleys
 appeared rich, and a brook was generally found at the
 foot of almost every hill; and though the water had a
 reddish tinge, yet it was far from being ill tasted. Upon
 the whole, it was the best we took on board during our
 voyage. Nine miles westward of cape St. Diego, the
 low point that forms the north entrance of the Strait
 of Le Maire, are three hills, called the Three Bro-
 thers; and on Terra del Fuego is another hill, in the
 form of a sugar-loaf, which stands on the west side, not
 far from the sea. We had not that difficulty mentioned
 in the history of Lord Anson's voyage, in finding where
 the strait of Le Maire lies. No ship can well miss
 the strait that keeps Terra del Fuego in sight, for it
 will then be easily discovered; and Staten island, which
 lies on the east side, will be still more plainly perceived,
 for there is no land on Terra del Fuego like it. And
 let it be further particularly observed, that the entrance
 of the strait should be attempted only with a fair
 wind, when the weather too is moderate, and likewise,
 upon the beginning of the tide of flood, which here
 falls out upon the full and change of the moon, about
 one or two o'clock; let it also be remembered, to keep
 as near the shore of Terra del Fuego as the winds will
 permit.

The strait of Le Maire is bounded on the west by
 Terra del Fuego, and on the east by the west end of
 Staten island, and is nearly five leagues in length, nor
 less in breadth. The bay of Good Success is seated
 about the middle of it, on the side of Terra del Fuego,
 which presents itself at the entrance of the strait
 from the northward; and the south end of it may be
 distinguished by a land-mark, resembling a road from
 the sea to the country. It affords good anchorage, and
 plenty of wood and water. Staten land did not ap-
 pear to Captain Cook in the same manner as it did to
 Commodore Anson. That horror and wildness, men-
 tioned by the Commodore, were not observed by our
 gentlemen; on the contrary, the land appeared to be
 neither destitute of wood nor verdure, nor was it co-
 vered with snow; and on the north side we saw the
 appearances of bays and harbours. It is probable, that
 the season of the year and other circumstances might
 concur to occasion such different representations of a
 land, which all our circumnavigators must own to be
 unfriendly and agreeably situated. On the west side
 of the cape of Good Success, whereby is formed the
 south-west entrance of the strait, we saw the mouth
 of Valentine's bay; from whence the land lies in a di-
 rection west-south-west for more than twenty leagues,
 appearing high and mountainous, with several inlets
 and bays. Fourteen leagues from the bay of Good
 Success, south-west half west, and nearly three leagues
 from the shore, is New Island; terminating to the
 north-east, in a remarkable hillock; and seven leagues
 from hence, south-west, lies Evout's isle; a little to the
 west of the south of which are two small low islands,
 near to each other, called Barnevelt's. These are partly
 surrounded with rocks, which rise to different heights
 above the water, and are twenty-four leagues from the
 strait of Le Maire. Three leagues south-west by
 south, from Barnevelt's islands, is the south-east point
 of Hermit's islands, which lie south-east and north-
 west. They appeared to us in different points of view,
 sometimes as one island, and at others as part of the
 main. From the south-east point of these islands to
 Cape Horn, the course is south-west by south, distant
 No. 2.

three leagues. Hermit, who commanded the Dutch
 squadron in 1624, certainly put into some of them, and
 Chapenham, vice admiral of this squadron, first dis-
 covered that Cape Horn was formed by a cluster of
 islands. Between the freight Le Maire and Cape Horn
 we found, when near the shore, the current setting ge-
 nerally strong to the north-east; but we lost it at the
 distance of fifteen or twenty leagues from land.

January the 26th, we took our departure from Cape
 Horn, and the farthest southern latitude we made was
 60 deg. 10 min. and our longitude was then 74 deg.
 30 min. west. Cape Horn is situated in 55 deg. 53
 min. south latitude, and 68 deg. 13 min. west longi-
 tude. The weather being very calm, Mr. Banks failed
 in a small boat to shoot birds, when he killed some
 sheer-waters, and albatrosses. The latter were larger
 than those which had been taken to the northward of
 the freight, and proved to be very good food. At
 this time we found ourselves to be 12 deg. to the west-
 ward, and three and a half to the northward of the
 freight of Maghellan, having, from the east entrance
 of the freight, been three and thirty days in sailing
 round Cape Horn. Notwithstanding the doubling of
 Cape Horn is represented as a very dangerous course,
 and that it is generally thought passing through the
 freight of Magellan is less perilous, yet the Endeavour
 doubled it with as little danger as she would the
 north Foreland on the Kentish coast; the heavens were
 serenely fair, the wind temperate, the weather plea-
 sant, and, being near shore, we had a very distinct
 view of the coast. The Dolphin, in her last voyage,
 which was performed at the same season with ours,
 was not less than three months in passing through the
 freight of Magellan, not including the time that she
 lay in Port Famine; and it was the opinion of Captain
 Cook, that if we had come through the freight, we
 should not at this time have been in these seas; and
 should have suffered many inconveniences which we
 have not experienced. It is a question, Whether it
 is better to go through the freight of Le Maire, or
 to stand to the eastward, and go round Staten land?
 This can only be determined according to particular
 circumstances, which may make one or the other more
 eligible. The freight may be passed with safety by
 attending to the directions already given; but if the
 land is fallen in with to the eastward of the freight,
 and the wind should prove tempestuous, it would be
 best, in our opinion, to go round Staten land. In any
 case, however, we cannot approve of running into
 the latitude of 61 or 62, before any attempt is made
 to stand to the westward.

March the 1st, we found ourselves both by observa-
 tion and the log, in latitude 38 deg. 44 min. south,
 and 110 deg. 33 min. west longitude, a concurrence
 very singular in a run of 660 leagues; and which
 proved, that no current had effected the ship in her
 course, and it was likewise concluded, that we had
 not come near land of any considerable extent; for
 currents are always found at no great distance from
 the shore. Mr. Banks killed above sixty birds in one
 day; also two forest flies, such as had never yet been
 described; he also found a cuttle-fish, of a species dif-
 ferent from those generally known in Europe. This
 fish had a double row of talons, resembling those of a
 cat, which it could put forth or withdraw at pleasure.
 When dressed it made excellent soup. On the 24th,
 our latitude was 22 deg. 11 min. south, and 127 deg.
 55 min. west longitude. On the 25th, a young marine
 about twenty, threw himself overboard, on account of
 a quarrel about a piece of seal skin, which he took by
 way of frolic; but being charged with it as a theft, he
 took the accusation so much to heart, that in the dusk
 of the evening he threw himself into the sea, and was
 drowned.

On the 4th of April, about 10 o'clock, A. M. Peter
 Briscoe, servant to Mr. Banks, discovered land to the
 south, at the distance of about three or four leagues.
 Captain Cook immediately gave orders to haul for it,
 when we found an island of an oval form, having a
 lagoon or lake in the center, that extended over the

On the 4th of April, about 10 o'clock, A. M. Peter Briscoe, servant to Mr. Banks, discovered land to the south, at the distance of about three or four leagues. Captain Cook immediately gave orders to haul for it, when we found an island of an oval form, having a lagoon or lake in the center, that extended over the greater

greater part of it. The surrounding border of land was low and narrow in many places, especially towards the south, where the beach consisted of a reef of rocks. Three places on the north side had the same appearance, so that on the whole the land seemed to resemble several woody islands. To the west was a large clump of trees, and in the center two cocoa-nut trees. When within a mile of the north side, though we cast out a line, no bottom could be found at 130 fathom, nor any good anchorage. This island was covered with trees, but we could discern no other species than the palm and the cocoa-nut. Several of the natives were discovered on shore; they appeared to be tall, with heads remarkably large, which probably some bandage might have increased. Their complexion was of the copper colour, and their hair was black. Some of these people were seen abreast of the ship, holding poles or pikes of twice their own height. They appeared also naked, but when they retired, on the ship's passing by the islands, they put on a light-coloured covering. Some clumps of palm-trees served them for habitations, which at a distance appeared like hilly ground, and the view of the groves was a very agreeable one. Our captain called this place Lagoon Island. It lay in 18 degrees south latitude, and 139 west longitude. In the afternoon we again saw land to the north-west, by sun-set we reached it, when it appeared to be a low island of a circular form, and about a mile in circumference. The land was covered with verdure of various kinds, but no inhabitants were visible, nor any cocoa-nut trees. This island is distant from that of Lagoon about seven leagues north, and 6a west, which our gentlemen on board named Thumb Cap.

On the 5th, we continued our course with a favourable wind, and about three o'clock discovered land to the westward. It was low, in form resembling a bow, and in circumference seemed to be ten or twelve leagues. Its length is about three or four leagues, and its width about two hundred yards. The beach was flat, and seemed to have no other herbage upon it than sea-weeds. The resemblance of a bow was preserved in the arch and cord forming the land, while the intermediate space was taken up by water. The arch, in general, was covered with trees of various verdure and different heights. This island, from the smoke that was discovered, appeared to be inhabited, and we gave it the name of Bow Island.

On the 6th, about noon, we again saw land to the west, and at three o'clock we came up with it. This land seemed to be divided into two parts, or rather a collection of islands, (to which we gave the name of the Groups) to the extent of about nine leagues. The two largest were divided from the others by a strait, the

breadth of which was about half a mile. Some of these islands were ten miles or more in length, but appeared like long narrow strings of land, not above a quarter of a mile in breadth; but they produced trees, however, of different kinds, among which was the cocoa-nut tree. Several of the inhabitants came out in their canoes, and two of them shewed an intention of coming on board; but these, like the rest, stopped at the reef. From the observations made, these people appeared to be about our size, and well made. Their complexion was brown, and they were naked. In general, they had two weapons, one was a long pole, spear-pointed, and the other resembled a paddle. Several of their canoes were constructed in such a manner as not to carry more than three persons; others were fitted up for six or seven; and one of these boats hoisted a sail, which was converted into an awning when a shower of rain fell. Captain Cook would not stay for any of them, neither could we determine, whether the signals made were meant for defiance, or for invitations; one party waving their hats, and another answering by shouting: In this respect it was not judged prudent to try the experiment, in order to be convinced, as the island appeared of no importance, and the crew not being in want of any thing it could produce. This curiosity was therefore laid aside, in expectation of soon discovering the island, where we had been directed to make our astronomical observations, the natives of which, it was reasonable to conjecture, would make no resistance, having already experienced the danger of opposing an European force.

On the 7th, we discovered another island, judged to be in compass about five miles, being very low, and having a piece of water in the center. It appeared to abound in wood, and to be covered with verdure, but we saw no inhabitants upon it. It was named Bird Island, from the number of birds that were seen flying about. This lies in latitude 17 deg. 48 min. south, and 143 deg. 35 min. west longitude; distant ten leagues, in the direction west, half north from the west end of the Groups.

On the 8th, in the afternoon, we saw land to the northward, and came abreast of it in the evening, at about five miles distance. This land seemed to be a chain of low islands, of an oval figure, and consisted of coral and sand, with a few clumps of small trees, and in the middle of it was a lagoon. On account of its appearance, it was called Chain Island.

On the 10th, after a tempestuous night, we came in sight of Onaburgh Island, called by the natives Maitea. This island is circular, about four miles in circumference, partly rocky, and partly covered with trees.

C H A P. III.

The ENDEAVOUR arrives at OTAHETE, or George the Third's Island—Rules established by Captain COOK for conducting a TRADE with the Natives—An Account of several Incidents during his Stay in this Island—An OBSERVATORY and FORT erected—Excursions into the WOODS—Visits from several of the Chiefs—The MUSIC of the Natives, and their Manner of BURYING their Dead described—Other Excursions and Incidents both on Board and on Shore—First Interview with OBEREA, the supposed QUEEN of the ISLAND—The Fort described—The Quadrant stolen, and the Consequences—A Visit to TOOTAHAI, an Indian Chief—A WRESTLING MATCH described—European Seeds are sown—The INDIANS give our People Names.

ON the 11th we made Otahete, or as Captain Wallis had named it, King George the Third's Island. The calms prevented our approaching it till the morning of the 12th, when a breeze sprung up, and several canoes were seen making towards the ship. Few of them, however, would come near, and those who did could not be persuaded to come on board. They had brought with them young plantains and branches of trees, which were handed up the slips side, and, by their desire, were stuck in conspicuous parts of the rigging, as tokens of peace and friendship. We then purchased their commodities, consisting of cocoa-nuts, bananas, bread-fruit, apples and figs, which

were very acceptable to the crew. On the evening of the same day we opened the north-west point of the isle, to which the Dolphin's people had given the name of York Island. We lay off and on all night, and in the morning of the 13th we entered Port Royal Harbour, in the island of Otahete, and anchored within half a mile of the shore. Many of the natives came off immediately in their canoes, and brought with them bread-fruit, cocoa-nuts, apples, and some hogs, which they bartered for beads and other trinkets with the ship's company. The tree which bears the bread-fruit, is about the size of a horse-chestnut: its leaves are near a foot and a half in length, in shape oblong, and very

much resemble those of the fig-tree, unlike the cantaloupe melon: it is like the apple, and its core is as large as a nut. The substance of this fruit is somewhat green, and as white as the oianc-... roasted, and when eaten it has a sweetness.

Among those who came on board was an elderly man, named Owah Gore and others who had visited the island Wallis. Owah being considered as a very useful man, they studied to gratify all his wishes. As George's Island was not likely to be visited, the natives were drawn up to be observed by the ship's board his majesty's bark the Endeavour, establishing a regular trade with the natives. The rules of these rules were, "That in quarrels and confusion, every one should endeavour to treat the inhabitants with humanity, and by all fair means to establish friendship with them. That no other person, belonging to the ship, should be appointed to barter, or to trade, or offer to trade, for any goods, fruit, or other produce of the island, except leave so to do. That no person should trade, or offer to trade with the ship's stores: and, that no sort of iron, or steel, or any sort of cloth, or any articles in the ship, should be given in exchange for provision." These necessary rules, by Capt. Cook, and, being his orders, the observance of them were annexed certain penalties the punishment according to the rules of the navy.

When the bark was properly secured, Mr. Banks, and Dr. Solander, went on shore under arms, and their friends followed. They were received by some hundred natives with awe and reverence, who exchanged peace, and offered to conduct them to a place which would be more convenient for them than that where they had landed. Our English made the Indians some presents, which were very thankfully received. They went out about four miles through groves of bread-fruit and cocoa-trees. Intermingled with the dwellings of the natives, which were without walls. In the course of the day we found but few fowls or hogs, and under the conductors, nor any of the people who were seen, were persons of rank. Those of our crew, who had before been in the Dolphin, were likewise of opinion, that the residence had been removed, as no traces of it could be discovered.

Next day, in the morning, before the ship, several canoes came about her side, whose crews denoted them to be chiefs. Two of these came on board, and were introduced to a friend: one of them chose to be introduced to the other Captain Cook. The ceremony of taking off their cloaths in great part was performed upon their adopted friends. They were returned by our gentlemen presents of some trinkets. They then made signs for their friends to go with them to the place of the latter being desirous of being acquainted with the people, and finding out a more convenient place to accept the invitation, and went with them to a place named by Mr. Banks, Dr. Solander, and others. We all landed in two boats, about three miles, among a great number of natives, who conducted us to a large house, where we were introduced to a middle-aged man, named Tootahah. When we were seated, Mr. Banks a cock, a hen, and a piece of pork, which compliment was returned

unlike the cantaloupe melon: it is inclosed in a thin
skin, and its core is as large as a man's thumb. The
substance of this fruit is somewhat like that of new
bread, and as white as the oiancre almond. It must
be roasted, and when eaten it has the taste of a slight
suetness.

Among those who came on board the Endeavour,
was an elderly man, named Owhaw, known to Mr.
Gore and others who had visited this island with Cap-
tain Wallis. Owhaw being considered by our gentle-
men as a very useful man, they studied to please him,
and to gratify all his wishes. As our continuance in
George's Island was not likely to be very short, certain
rules were drawn up to be observed by every person on
board his majesty's bark the Endeavour, for the better
establishing a regular trade with the natives. The sub-
stance of these rules were, "That in order to prevent
quarrels and confusion, every one of the ship's crew
should endeavour to treat the inhabitants of Otaheite
with humanity, and by all fair means to cultivate a
friendship with them. That no officer, seaman, or
other person, belonging to the ship, excepting such
only who were appointed to barter with the natives,
should trade, or offer to trade, for any kind of provi-
sion, fruit, or other produce of the island, without hav-
ing express leave so to do. That no person should
barter, trade, or offer to trade with any part of the
ship's stores: and, that no sort of iron, or any thing
made of iron, nor any sort of cloth, or other useful ar-
ticles in the ship, should be given in exchange for any
thing but provision." These necessary rules were signed
by Capt. Cook, and, being his orders, to the non-ob-
servance of them were annexed certain penalties, be-
sides the punishment according to the usual custom of
the navy.

When the bark was properly secured, Capt. Cook,
Mr. Banks, and Dr. Solander, went on shore, with a
party under arms, and their friend the old Indian.
They were received by some hundreds of the natives
with awe and reverence, who exchanged the tokens of
peace, and offered to conduct them to a spot of ground,
which would be more convenient for them to occupy,
than that where they had landed. On their way, the
English made the Indians some presents, which the
latter very thankfully received. They now took a cir-
cuit of about four miles through groves of the bread-
fruit and cocca-trees. Intermingled with these were
the dwellings of the natives, which consisted of huts
without walls. In the course of their journey they
found but few fowls or hogs, and understood that none
of their conductors, nor any of the people they had
hitherto seen, were persons of rank in the island.
Those of our crew, who had before been at Otaheite in
the Dolphin, were likewise of opinion, that the queen's
residence had been removed, as no traces of it were now
to be discovered.

Next day, in the morning, before they could leave
the ship, several canoes came about her filled with peo-
ple, whose dress denoted them to be of the superior
class. Two of these came on board, and each of them
brought upon a friend: one of them chose Mr. Banks,
and the other Captain Cook: The ceremonials consisted
of taking off their cloaths in great part, and putting
them upon their adopted friends. This compliment
was returned by our gentlemen presenting them with
some trinkets. They then made signs for their new
friends to go with them to the place of their abode; and
the latter being desirous of being acquainted with the
people, and finding out a more convenient harbour,
accepted the invitation, and went with them, accom-
panied by Mr. Banks, Dr. Solander, Captain Cook,
and others. We all landed in two boats at the distance
of about three miles, among a great number of the na-
tives, who conducted us to a large habitation, where
we were introduced to a middle-aged man, named
Tootahah. When we were seated, he presented to
Mr. Banks a cock, a hen, and a piece of perfumed
bread, which compliment was returned by a present

from Mr. Banks. We were then conducted to several
other large dwellings, wherein we walked about with
great freedom. The ladies so far from shunning,
invited, and even pressed us to be seated. By fre-
quently pointing to the mats upon the ground, and
sometimes drawing us down upon them, we had no
doubt of their being less jealous of observation than
we were; but the huts that are all open, except a roof,
afforded no place of requisite retirement. Walking
afterwards along the shore, we met, accompanied by
a great number of natives, another chief named Tu-
bourai Tamaide, with whom we settled a treaty of
peace, in the manner before described. This chief
gave us to understand, that he had provisions at our
service, if we chose to eat, which he produced, and
we dined heartily upon bread-fruit, plantains, and
fish. During this visit, Tomio, the chief's wife, placed
herself upon the same mat with Mr. Banks, close by
him; but as she was not young, nor appeared ever
to have possessed many charms, this gentleman paid
little attention to her; and Tomio received an addi-
tional mortification, when Mr. Banks beckoned to a
pretty girl, who, with some reluctance, came and
placed herself by him. The princess was somewhat
chagrined at this preference given to her rival; never-
theless she continued her assiduities to her guest. This
whimsical scene was interrupted by an event of a more
serious nature; Dr. Solander having missed his opera
glass, a complaint was made to the chief, which inter-
rupted the convivial party. The complaint was enforced
by Mr. Banks's starting up and striking the but-end of
his musquet against the ground, which struck the In-
dians with such a panic that all of them run precipi-
tately out of the house, except the chief and a few
others of the superior class. That no disadvantageous
notions might be entertained of them on account of
this circumstance, the chief observed, with an air of
great probity, that the place which the Doctor had
mentioned on this occasion, was not within his district,
but that he would send to the chief of it, and endea-
vour to recover it, adding, that if this could not be
done, he would make the Doctor compensation, by
giving him as much new cloth, (of which he produced
large quantities) as should be thought equal to the va-
lue. The case however was brought in a little time,
and the glass itself soon after, which deprived us of
the merit we should otherwise have had in refusing
the cloth which had been offered us. But it afforded
an opportunity of convincing the natives of our gene-
rosity, by lavishing rewards upon them for an action,
to which self-interest had been the motive, rather than
any sentiment of probity; to which, from numerous
transactions, they appeared to be absolutely strangers.
After this adventure was amicably terminated, we re-
turned to the ship about six o'clock in the evening. On
Saturday the 15th, in the morning, several of the
chiefs, one of whom was very corpulent, came on
board from the other point, bringing with them hogs,
bread-fruit, and other refreshments, in exchange for
which they received linen, beads, and other trinkets;
but some of them took the liberty of stealing the
lightening chain. This day the captain, attended by
Mr. Banks, and some of the other gentlemen, went on
shore to fix on a proper spot to erect a fort for their de-
fence, during their stay on the island, and the ground
was accordingly marked out for that purpose; a great
number of the natives looking on all the while, and be-
having in the most peaceable and friendly manner.

Mr. Banks and his friends having seen few hogs and
poultry in their walks, they suspected that they had
been driven up the country; for which reason they
determined to penetrate into the woods, the tent be-
ing guarded by a petty officer and a party of marines.
On this excursion several of the natives accompanied
the English. While the party were on their march
they were alarmed by the discharge of two pieces fired
by the guard of the tent. Owhaw having now called
together the captain's party, dispersed all the Indians,
except three, who in token of their fidelity broke
branches

der had infringed one of the rules enjoined by the Captain for trading with the natives, he was flogged on board in their sight. When the first stroke had been given, they were humane enough to interfere, and intreated earnestly that the culprit might be untied; but when this favour was denied them, they shewed strong signs of concern, and burst into tears.

On the 28th, Terapo, one of Tubourai Tamaide's female attendants, came down to the fort in the greatest affliction, the tears gushing down her eyes. Mr. Banks seeing her full of lamentation and sorrow, inquired upon knowing the cause, but instead of answering, she struck herself several times with a flark's tooth upon her forehead, till an effusion of blood followed, while her distress was disregarded by several other Indians, who continued laughing and talking with the utmost unconcern. After this, she gathered up some pieces of cloth, which she had thrown down to catch the blood, and threw them into the sea, as if she wished to prevent the least trace and mark of her absurd behaviour. She then bathed in the river, and with remarkable cheerfulness returned to the tent, as if nothing extraordinary had happened. During the forenoon of this day, the Indian canoes were continually coming in, and people of both sexes filled the tents of the fort. Mr. Malineux, master of the Endeavour, seeing a woman whose name was Oberea, he declared she was the same person, whom he judged to be the queen of the island, when he was there with Captain Wallis. The eyes of every one were now fixed on her, of whom so much had been said by the crew of the Dolphin, and in the account given of her by the captain. With regard to her person, she was tall, and rather large made; she was about forty years of age, her skin white, and her eyes had great expression in them: she had been handsome, but her beauty was now upon the decline. It was not long before an offer was made to conduct her on board the ship, which she accepted. Many presents were made her, particularly a child's doll, which she viewed very attentively. Captain Cook accompanied her on shore, and when we landed, he presented him with a hog and some plantains, in return for his presents, which were carried to the fort in procession, Oberea and the Captain bringing up the rear. In the way they met Tootahah, who, though not king, seemed to be at this time invested with sovereign authority. Envy is found among those who are supposed to be the children of a simple nature. Her influence was plainly visible in a manner which to us was rather a subject of laughter than of serious consideration. Tootahah no sooner saw the doll, than he discovered strong symptoms of jealousy, nor could any method be found of conciliating his friendship, but that of complimenting him with a baby also. A doll was now preferable to a hatchet; but a very short time taught the Indians the superior value of iron, which, on account of its usefulness, prevailed over every other consideration. To such of the men who came from time to time on board, the ships provisions seemed to be very acceptable, but the women did not chuse to taste them; and though they were invited to dine with our gentlemen, yet, for reasons known only to themselves, they preferred the eating of plantains with the servants.

On the 29th, near noon, Mr. Banks paid a visit to Oberea, but was informed that she was asleep under the awning of her canoe; and, going to call her up, was surprised at finding her in bed with a young fellow of about twenty-five years of age, a discovery which caused him to retire rather disconcerted; but he soon understood that a commerce of this kind was by no means considered as scandalous, the ladies frequently turning the men to amorous dalliance, of which they made no secret; and as to young Obadee, found in bed with the queen, he was well known by every one to be the object of her lascivious hours. The queen got up, and dressed herself to wait upon Mr. Banks, and after having, as a token of her particular regard, put on him a suit of fine cloth, they proceeded together to the tents. In the evening Mr. Banks visited Tubourai Tamaide. He was astonished

to find this chief and his family in tears, and not being able to discover the cause, he soon took leave of them. Upon his return the officers told him, that Owahad had foretold, that the guns should be fired within four days, and as this was the eve of the third day, they were alarmed at the situation they judged themselves to be in. As we were apprehensive of ill consequences from this prepossession, the centinels were doubled at the fort, and we thought it necessary to keep under arms; but Mr. Banks walking round the point, at two in the morning, and finding nothing that might tend to encourage his suspicions, he dropped them, and rested secure in the fort. This our little fortification was now complete. A bank of earth four feet and an half high on the inside, and a ditch without ten feet broad and six deep, formed the north and south sides. On the west, opposite the bay, was another bank (with palisadoes upon it) four feet high; but a ditch was unnecessary, the works being at high-water mark. Upon the river's bank, on the east side, was a range of water-casks, filled with water. This being thought the weakest side, we planted two four pounders, and mounted six swivel guns, which commanded the only two avenues from the woods. We had about forty-five men in this fort, including the officers, and other gentlemen who resided on shore.

On the 30th, Tomio came in great haste to our tents, and taking Mr. Banks by the arm, told him, that Tubourai Tamaide was dying, owing to somewhat that had been given him by our people, and intreated him instantly to go to him. Accordingly Mr. Banks went, and found the Indian very sick. He had been vomiting, and had thrown up a leaf, which they said contained some of the poison. Mr. Banks having examined the leaf, found it was nothing but tobacco, which the Indian had begged of some of the ship's company.

The matter, however, appeared in a very serious light to Tubourai Tamaide, who really concluded from the violent sickness he suffered, that he had swallowed some deadly drug, the terror of which no doubt contributed to make him yet more sick. While Mr. Banks was examining the leaf, he looked up to him, as if he had been jull on the point of death. But when the nature of this deadly poison was found out, he only ordered him to drink of cocoa-nut milk, which soon restored him to health, and he was as cheerful as before the accident happened. These people seemed in particular instances to be sometimes strangely afflicted from slight causes.

On the 1st of May, Captain Cook having produced an iron adze, which was made in imitation of the stone ones used by the natives, shewed it to Tootahah, as a curiosity. The latter snatched it up and insisted on having it; and though he was offered the choice of any of the articles in the chests which were opened before him, yet he would not accept of any thing in its stead. A chief dined with us that day, who had been on board some time before, accompanied by some of his women that used to feed him. He now came alone; and when all things were set ready for dinner, the Captain helped him to some victuals, supposing that he would have dispensed with the ceremony of being fed; but he was deceived; for the chief never attempted to eat, and would have gone without his dinner, if one of the servants had not fed him. The next morning, May 2, we took the astronomical quadrant and some of the instruments on shore that afternoon; and to our great surprise, when we wanted to make use of the quadrant, the next day, it was not to be found; a matter which was looked upon as the more extraordinary, as a centinel had been placed for the whole night within a few yards of the place where it was deposited. Our own people, at first, were suspected of being concerned in this theft, and, as the instrument had never been taken out of the case, it was suspected that some person might have carried it off, under the supposition that its contents were articles used in traffic. A strict search was made in and about the fort, and a considerable reward offered in order to

obtain it again. But all this proving fruitless, Mr. Banks, accompanied by Mr. Green and some other gentlemen, set out for the woods, where they thought they might probably get some tidings of what was stolen. In their way, they met with Tubourai Tamaide and some of the natives. This chief was made to understand by signs, that they had lost the quadrant, and that as some of his countrymen must have taken it, they insisted upon being shewn the place where it was concealed. Having proceeded a few miles together, after some enquiry, Tubourai Tamaide was informed who the thief was, and it was found that he was then at a place about four miles distant. As they had no arms but a brace of pistols, not caring to trust themselves so far from the fort, a message was dispatched to Capt. Cook, requesting him to send out a party to support them. The captain accordingly set out with a party properly armed, after having laid an embargo upon all the canoes in the bay.

In the mean time, Mr. Banks and Mr. Green proceeded on their way, and at the place which had been mentioned, were met by one of Tubourai Tamaide's own people, bringing with him part of the quadrant; the case and the other parts of the instrument were recovered soon afterwards, when it was found that it had received no real injury, though it had been taken to pieces.

When they returned in the evening, they were much surprised to find Tootahah under confinement in the fort, while a crowd of the natives surrounded the gate, discovering marks of the greatest anxiety for the fate of their chief. The occasion of his detention originated from the conduct of the Indians: alarmed at Capt. Cook's having gone up the country with an armed party, most of the natives left the fort that evening, and one of the canoes attempted to quit the bay. The lieutenant who commanded on board the ship, having it in charge not to suffer any canoe to depart, sent a boat to detain her, but she no sooner approached than the Indians jumped into the sea. Tootahah being of the number, was taken up, and sent by the lieutenant to the officer that commanded at the fort, who concluded he should do right to detain him prisoner, while the poor chief thought of nothing but being put to death, till Capt. Cook caused him to be returned, to the great joy of his countrymen. But the natives were still inclined to bear this affair in their minds, and as a proof of it, they neglected to supply the market with provisions. Mr. Banks walking into the woods, heard great murmurings concerning the treatment of Tootahah, who, as they said, had been ill used and beaten, though Mr. Banks declared he was quite ignorant of his having received such treatment.

The chief now sent for such hogs to be restored as he had left behind him, at first intending them as a present, which by this time, perhaps, he did not think the English had merited; but they refused to send them unless he would come himself, thinking by an interview to promote a reconciliation; and this they were the more desirous of, as they were told it would be a fortnight before he would pay them a visit.

On the 3d provisions were extremely scarce, as the markets continued to be ill supplied on the account already mentioned; and it was not without some difficulty, that Mr. Banks got a few baskets of bread-fruit from Tubourai Tamaide. Tootahah on the 4th sent for an axe and a shirt in return for the hogs, which were accordingly promised to be brought him the next day. He sent again early in the morning of the 5th, and Mr. Banks and the Doctor set out in the pinnace, taking with them one of Tootahah's people and soon reached Eparre, where he resided, which was a few miles to the westward. When they arrived there, they found a great number of the natives waiting for them on the shore, and were conducted directly to the chief, the people, notwithstanding the offence they had so lately taken, shouting out in their language, "Tootahah is your friend." He was sitting under a tree, and some old men were standing about him. Having made signs for them to be seated, he asked for the axe,

which was then given him by Capt. Cook, as also the shirt that he had demanded, and a broad-cloth garment, which latter he put on, and was well pleased with the present. They ate a mouthful together in the boat, and were afterwards conducted to a large court-yard on one side of the chief's house, where they were to be entertained with wrestling after the manner of the country. He himself sat at the upper end of the area, having several of his principal men on each side of him, who appeared as judges of the sport, which was as follows:

Ten or twelve combatants entered the area, and after many simple ceremonies of challenging, they engaged, and each endeavoured to throw his antagonist by mere strength: thus they seized each other by the hand, or other parts of the body, grappling, without the least art, till one, by having a greater hold, or stronger muscular force, threw his antagonist on his back. The conquest was applauded by the old men with a few words repeated in a kind of tune, and with three huzzas. After one engagement another succeeded; but if the combatants could not throw each other in the space of a minute, they parted, either by consent, or the intervention of their friends. Several women of rank in the country were present, but it was thought they only attended this amusement in compliment to the English gentlemen. A man with a stick who made way for us when we landed, officiated as master of the ceremonies, keeping order among the people, and those of them who pressed forward struck with his stick very smartly. During these athletic sports, another party of men performed a dance for the space of a minute, but neither of these parties took the least notice of each other, their attention being wholly fixed on their own endeavours to please and conquer. At the conclusion of this entertainment, not unlike the wrestling matches of remote antiquity, we were told, that some hogs, and a large quantity of bread-fruit were preparing for our dinner, very agreeable intelligence to those whose appetites were sharpened by their journey; but our host, instead of setting his two hogs before us, ordered one of them to be carried into our boat. Here we thought to have enjoyed our good cheer, and yet we neither dined on shore, nor in the boat, but at the desire of Tubourai Tamaide proceeded as far as the ship: no small mortification this, as we had to row four miles, while our dinner was growing cold: however we were at last gratified with our promised repast, of which our chief and his friends had a liberal share. This friendly reconciliation between them and us, operated on the natives like a charm: for it was no sooner known that Tubourai Tamaide was on board, than provisions of all kinds were brought to the fort in great plenty.

On the 8th, early in the morning, Mr. Molineux the Master, and Mr. Green set out in the pinnace to the eastward, in order to procure some poultry or hogs. They saw many of the latter, and one turtle, yet could not purchase either because they belonged to Tootahah, and without his permission the people could not be prevailed upon to sell them. Hence we concluded that Tootahah was indeed a prince; and we afterwards learnt, that, in this part of the island, he acted as regent for a minor, whom we never saw all the time of our stay here. However, some time afterwards, having produced some nails to barter for provisions, we obtained near twenty cocoa-nuts, and some bread-fruit for one of the smallest size, so that we soon had plenty of these articles, though no hogs. In this excursion Mr. Green imagined he had discovered a tree six yards in circumference; but, on his return, he was informed by our two gentlemen, that it was a species of the fig, whose branches bending down to the earth take fresh root, and thus form a mass of trunks, which being all united by a common vegetation, might easily be mistaken for one trunk or body.

On the 9th in the forenoon, Oberea paid us a visit accompanied by her favourite Obadee, presenting with a hog and some bread-fruit. This was the first visit we had received from this lady, since the loss

our quadrant, and that this time our forge was ordered a new subject by Capt. Cook an additional obligations on them, to spare hours, to contribute to have produced different kinds of tools, upon as would have been requested to have done gratified in this particular broken axe, desiring it was mended, and to be returned home. On their return home, a case which had lain on the 10th we saw few seeds of melons and came up except melons were spoiled by

An extraordinary Visit—TAMAIDE found an extraordinary Amusement making to observe the Description of an Indian Cookery—A Burying Expedition—A Burial—Preparations made Departure of the EN

On the 12th of the ceremony was performed. As Mr. Banks was with them as usual, for advanced in procession Indians on each side of the visitors to pass, who presented him with some kinds of plants. Tupia, in his master of the ceremonies, which were had them down in bundles of cloth were pieces, which being divided the women, called Oora principal, stepping upon Obadiah as high as her unassisted simplicity, to ceremony she requested, the other two were presented. She presented him; but she could not make them like, or please them. In the morning were visited by Obadiah's female attendant, and whom we were told it had been reported.

On the 13th Tubourai was finishing his gun on the air, an action which he was, as he imagined, to do. And as the ignorant natives were afraid to see him, he was afraid to see them, a serious matter of what only as a joke, and, not understanding, that for him to insult. The offence was immediately, with his familiarity being approached, he determined to follow him from the fort, and found him in the mid

our quadrant, and the confinement of Tootahah. By this time our forge was set up and at work, which afforded a new subject of admiration to the Indians, and our Capt. Cook an additional opportunity of conferring obligations on them, by permitting the smith, in his leisure hours, to convert the old iron, which they were supposed to have procured from the Dolphin, into different kinds of tools. Oberca produced as much old iron as would have made for her another axe; this she requested to have done; however the lady could not be gratified in this particular, upon which she brought a broken axe, desiring it might be mended. The axe was mended, and to all appearance she was content. On their return home, the Indians took with them the canoe which had lain some time at the point.

On the 10th we sowed, in ground properly prepared, seeds of melons and other plants, but none of them came up except mustard. Mr. Banks thought the seeds were spoiled by a total exclusion of fresh air, they

having all been put into small bottles, and sealed up with rosin. We learnt this day, that the Indians called the island Otaheite, the name by which we have distinguished it; but we were not so fortunate in our endeavours to teach them our names; and, after repeated attempts to pronounce them, which proved fruitless, they had recourse to new ones, the productions of their own invention. Capt. Cook they named Tootie; Mr. Hicks, Hete. The master they called Boba, from his christian name Robert; Mr. Gore, Toarro; Dr. Solander, Torano; Mr. Banks, Tapane; Mr. Green, Eterce; Mr. Parkinson, Patani; Mr. Sporing, Polini; and so on for the greatest part of the ship's crew. These perhaps were significant words in their own language; and we are inclined to this opinion, because Mr. Monkhouse, who commanded the party that shot the man for stealing a musket, they named Matte, which was not merely an arbitrary sound, but in their language it signified dead.

An extraordinary Visit—Divine Service attended by the natives of OTAHEITE—An uncommon Sight—TUBOURAI TAMAIDE found guilty of Theft—A VISIT paid to TOOTAHAIH—Various Adventures at that Time, and an extraordinary Amusement of the INDIANS—A Relation of what happened at the Fort, while Preparations were making to observe the TRANSIT of VENUS—The Observations made with great Success—A particular Account and Description of an Indian Funeral—An unusual Character among the INDIANS—A Robbery at the Fort—Specimen of Indian Cookery—A Narrative of various Incidents—A Circumnavigation of the Island, and Occurrences during this Expedition—A Burying-place, and a Morai or Place of Worship described—An Inland Expedition of Mr. BANKS—Preparations made by the Crew of the ENDEAVOUR to leave the Island of OTAHEITE—An Account of the Departure of the ENDEAVOUR, and the Behaviour of the Natives, particularly of TUPIA, on this Occasion.

On the 12th of this month (May) an uncommon ceremony was performed by some of the natives.

As Mr. Banks was sitting in his boat, trading with them as usual, some ladies, who were strangers, advanced in procession towards him. The rest of the Indians on each side gave way and formed a lane for the visitors to pass, who coming up to Mr. Banks, presented him with some parrots feathers, and various kinds of plants. Tupia, who Rood by Mr. Banks, acted as his master of the ceremonies, and receiving the branches, which were brought at six different times, laid them down in the boat. After this some large bundles of cloth were brought, consisting of nine pieces, which being divided into three parcels, one of the women, called Oorattooa, who appeared to be the principal, stepping upon one of them, pulled up her cloaths as high as her waist, and then, with an air of unaffected simplicity, turned round three times. This ceremony she repeated, with similar circumstances, on the other two parcels of cloth; and the whole being then presented to Mr. Banks, the ladies went and fastened him; but for which extraordinary favours, she made them fix a present as he thought would best please them. In the evening the gentlemen of the ship were visited by Oberca, and Otheorea, her favourite female attendant, who was a very agreeable girl, and whom we were the more pleased to see, because it had been reported that she was either sick or dead.

On the 13th Tubourai Tamaide offended Mr. Banks by snatching his gun out of his hand, and firing it in the air; an action which also much surprised that gentleman, as he imagined him totally ignorant of the use of it. And as the ignorance of the people of those countries with regard to this particular, must always cause them to fear their guests, Mr. Banks therefore made a serious matter of what, probably, the other meant only as a joke, and, not without threats, gave him to understand, that for him but to touch the piece was a high insult. The offender made no reply, but set out immediately, with his family, for Eparre. Great inconvenience being apprehended from this man, and as in many instances he had been particularly useful, Mr. Banks determined to follow him. He set out the same evening from the fort, accompanied by Mr. Molineux, and found him in the middle of a large circle of people,

the picture of extreme grief, which was also visible in the countenances of his attendants. One of the women expressed her trouble in the same manner as Terapo had done, upon another occasion. Mr. Banks lost no time in endeavouring to put an end to all animosity. The chief was soothed into confidence, and, a double canoe being got ready, they all returned together to the fort before supper: and as a pledge of sincere reconciliation, both he and his wife passed the night in the tent of Mr. Banks. That very night, notwithstanding their presence, one of the natives attempted to scale the barricadoes of the fort; but, being discovered by one of our sentinels, he ran away much faster than any of our people could follow him. The temptation which caused him to attempt what might have cost him his life was, doubtless, the iron and iron tools which were in use at the armourer's forge; incitements to theft which none of the Indians could resist.

On Sunday the 14th, in the morning divine service was performed at the fort. We hoped to have had the presence of some of the Indians, but before the time fixed on for beginning the service, most of them were gone home. Tubourai Tamaide and his wife were present, but though they behaved with much decency, they made no enquiries with respect to the ceremonies, and their brethren were as little inquisitive upon their return. The day thus begun with acts of devotion, was concluded with those of lewdness exhibited among the natives by way of entertainment. Among the rest a young fellow lay publicly with a girl about twelve years of age, in the presence of many of our people, and a great number of the Indians, without the least sense of impropriety or indecency. Oberca, and some women of the first rank in the country were spectators, who even gave instructions to the girl how to perform her part, which, young as she was, seemed unnecessary.

On Monday the 15th, Tubourai Tamaide was detected in having committed a theft. Mr. Banks had a good opinion of this chief, but, when his honesty was put to the test, a basket of nails, left in the corner of the tent, proved irresistible. He confessed the fact of having stolen four nails, but when restitution was demanded, Tamaide said the nails were at Eparre. High words passed on the occasion, and, in the end, the Indian produced one of the nails, and was to be forgiven on restoring the rest; but his virtue was not equal

to the talk, and he withdrew himself, as usual, when he had committed any offence. At this time our long-boat was so much eaten with worms, that it was found necessary to give her a new bottom. On examining the pinnace, thinking she might be in the same state, we had the satisfaction to perceive, that not a worm had touched her. This difference in the condition of the two boats we attributed to the different ingredients with which their bottoms were paid; the long-boat had been paid with varnish of pine, and the pinnace painted with white lead and oil; which last coating we think to be the most eligible for the bottoms of all boats intended for this part of the world.

On the 24th, Mr. Hicks was sent to Tootahah, who had removed from Eparre to a place called Tettahah. The chief having sent several times to request a visit from the captain, promising at the same time, that he would acknowledge the favour by a present of some hogs, the business of Mr. Hicks was, to obtain, if possible, the hogs, upon easier terms than the required visit. He was received in a friendly manner by Tootahah, who, upon his arrival, produced one hog only but promised three more that were at a distance the next morning. Mr. Hicks waited patiently till the appointed time; but when the morning came, he was obliged to depart with the single hog that had been presented to him.

On the 25th, Mr. Banks seeing Tubourai Tamaide and his wife Tomio at the tent for the first time since the former had been detected in stealing the nails, he endeavoured to persuade him to restore them, but in vain. As our gentlemen treated him with reserve and coolness which he could not but perceive, he was short, and he departed in a very abrupt manner. Mr. Banks could not the next morning persuade him to effect a reconciliation by bringing down the nails.

On the 27th, Mr. Banks, Dr. Solander, Captain Cook, and some others, set out in the pinnace to visit Tootahah, who had again removed to a place called Atahourou, six miles from his last abode; and not being able to go half way thither in a boat, it was almost evening before we arrived. We found the chief, as usual, sitting under a tree with a great crowd about him. Having made our presents in due form, consisting of a yellow stuff petticoat, and other trifling articles, we were invited to supper, and to pass the night there. Our party consisted of six only; but the place was crowded with a greater number than the houses and canoes could contain. Among other guests were Oberea with her train of attendants. Mr. Banks having accepted of a lodging in Oberea's canoe, left his companions in order to retire to rest. Oberea had the charge of his cloaths; but notwithstanding her care, they were stolen, as were also his pistols, his powder-horn, and several other things out of his waistcoat pockets. An alarm was given to Tootahah, in the next canoe, who went with Oberea in search of the thief, leaving Mr. Banks with only his breeches and waistcoat on, and his musket uncharged. They soon returned, but without success. Mr. Banks thought proper to put up with the loss at present, and retired a second time to rest; just as he had composed himself to sleep, he was roused by some music, and observed lights at a little distance from the shore. He then rose to go and find his companions. As soon as he approached the lights, he found the hut where Captain Cook and three others of the gentlemen lay, when he began to relate his misadventure to them; they told him in return, that they had lost their stockings and jackets. In effect Dr. Solander, who joined them the next morning, was the only one that escaped being robbed, and he had slept at a house that was a mile distant. This accident, however, did not prevent Captain Cook, Mr. Banks, and the rest that were at the hut, from attending to the music which was a sort of concert called Heiva, and consisted of drums, flutes, and several voices. They retired again to their repose, after this entertainment was over.

Their cloaths, and the other things which had been stolen, were never heard of afterwards, but Mr. Banks

got some cloaths from Oberea, in which he made a whimsical appearance.

On the 28th, we set out for the boat, having obtained only one hog which had been intended for our supper the preceding night; so that, all things considered, we had little reason to be satisfied with our excursion. On our return to the boat, we had a specimen of the agility of the Indian swimmers, some of whom, merely for diversion, swam in a surf where no European boat could have lived, and where our best swimmers must have perished, had they accidentally fallen in with it.

At this time the preparations were made for viewing the transit of Venus, and two parties were sent out to make observations from different spots, that in case of failing on one place, they might succeed in another. They employed themselves for some time in preparing their instruments, and instructing those gentlemen who were to go out, in the use of them; and on Thursday, the first of June, they sent the long-boat with Mr. Gore, Mr. Monkhouse (the two observers) and Mr. Sporing, the latter of whom was a friend of Mr. Banks, with proper instruments to Emayo. Others were sent to find out a spot that might answer the purpose, at a convenient distance from their principal station.

The party that went towards Emayo, after rowing the greater part of the night, having hailed a canoe were informed of a place by the Indians on board which was judged proper for their observatory, where they accordingly fixed their tents. It was a rock that rose out of the water about 140 yards from the shore.
