errata I to

e pelure, on à The copy filmed here has been reproduced thanks to the generosity of:

Library Division Provincial Archives of British Columbia

The images appearing here are the best quality possible considering the condition and legibility of the original copy and in keeping with the filming contract specifications.

Original copies in printed paper covers are filmed beginning with the front cover and ending on the last page with a printed or illustrated impression, or the back cover when appropriate. All other original copies are filmed beginning on the first page with a printed or illustrated impression, and ending on the last page with a printed or illustrated impression.

The last recorded frame on each microfiche shall contain the symbol \longrightarrow (meaning "CON-TINUED"), or the symbol ∇ (meaning "END"), whichever applies.

Meps, plates, charts, etc., may be filmed at different reduction ratios. Those too large to be entirely included in one exposure are filmed beginning in the upper left hand corner, left to right and top to bottom, as many frames as required. The following diagrams illustrate the method:

L'exemplaire filmé fut reproduit grâce à la générosité de:

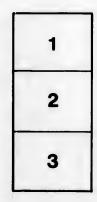

Library Division Provincial Archives of British Columbia

Les images suivantes ont été reproduites avec le pius grand soln, compte tenu de le condition et de la netteté de l'exemplaire filmé, et en conformité avec les conditions du contrat de filmage.

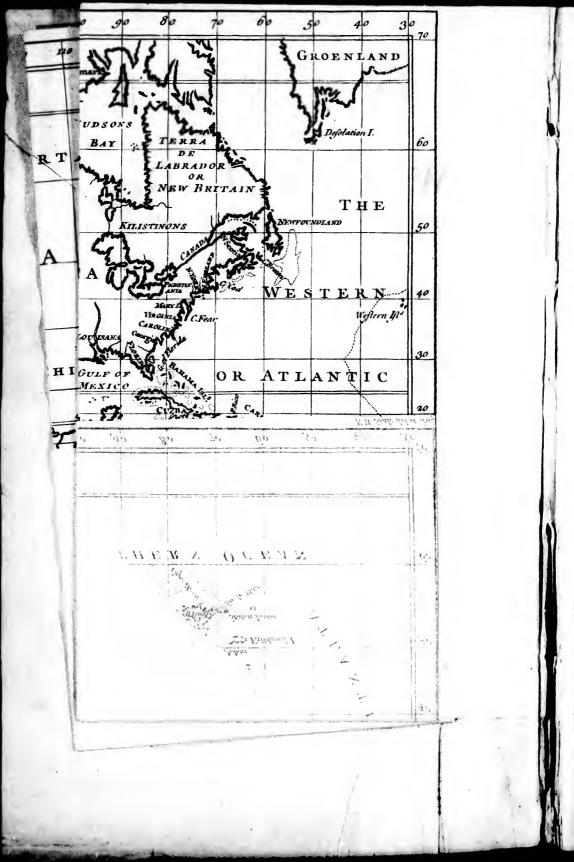

Les exemplaires originaux dont la couverture en pepier est imprimée sont filmés en commençant per le premier plat et en terminant soit per la dernière page qui comporte une empreinte d'impression ou d'illustration, soit per le second plet, selon le cas. Tous les autres exemplaires originaux sont filmés en commençant par la première page qui comporte une empreinte d'impression ou d'illustration et en terminant per la dernière page qui comporte une telle empreinte.

Un des symboles suivants apparaîtra sur la dernière image de chaque microfiche, selon le cas: le symbole → signifie "A SUIVRE", le symbole ♥ signifie "FIN".

Les cartes, planches, tableaux, etc., peuvent être filmés à des taux de réduction différents. Lorsque le document est trop grand pour être reproduit en un seul cliché, il est filmé à partir de l'angle supérieur gauche, de gauche à droite, et de haut en bas, en prenant le nombre d'images nécesseire. Les diagrammes suivants illustrent la méthode.

INTRO-

Otwithstanding the great improvement of navigation within the last two Centuries, a Voyage round the World is ftill confidered as an enterprize of a very fingular nature; and the Public have never failed to be extremely inquifitive about the various accidents and turns of fortune, with which this uncommon attempt is generally attended : And though the amufement expected in a narration of this kind, is doubtlefs one great fource of this curiofity, and a ftrong incitement with the bulk of readers, yet the more intelligent part of mankind have always agreed, that from these relations, if faithfully executed, the more important purposes of navigation, commerce, and national intereft may be greatly promoted : For every authentic account of foreign coafts and countries will contribute to one or more of thefe great ends, in proportion to the wealth, wants, or commodities of those countries, and our ignorance of those coasts; and therefore a Voyage round the World promifes a species of information, of all others the most defirable and interesting; fince great part of it is performed in feas, and on coafts. with which we are as y, t but very imperfectly acquainted, and in the neighbourhood of a country renowned for the abundance of its wealth, though it is at the fame time fligmatifed for its poverty, in the necessaries and conveniencies of a civilized white all is fighting . life.

Thefe

These confiderations have occasioned the publication of the enfuing work; which, in gratitying the inquisitive turn of mankind, and contributing to the fafety and fuccefs of future navigators, and to the extension of our commerce and power, may doubtless vie with any narration of this kind hitherto made public: Since the circumstances of this undertaking already known to the world, may be fuppofed to have ftrongly excited the general curiofity; for whether we confider the force of the fquadron fent on this fervice, or the diversified diftreffes that each fingle ship was separately involved in, or the uncommon inftances of various fortune, which attended the whole enterprize; each part, I conceive, muft, from its rude well-known outlines, appear worthy of a compleater and more finished delineation : And if this be allowed with refpect to the narrative part of the work, there can be no doubt about the more useful and instructive parts, which are almost every where interwoven with it; for I can venture to affirm, without fear of being contradicted on a comparison, that no voyage I have yet feen, furnishes such a number of views of land, foundings, draughts of roads and ports, charts, and other materials, for the improvement of geography and navigation, as are referred to in the enfuing volume; which are of the more importance too, as the greatest part of them relate to fuch Islands or Coafts, as have been hitherto not at all or erroneoully defcribed, and where the want of fufficient and authentic information might occa- fion future enterprizes to prove abortive, perhaps with the destruction of the men and vessels employed therein.

And befides the number and choice of thefe marine drawings and descriptions, there is another very effential circumftance belonging to them, which much enhances their value; and that is, the great accuracy they were drawn with. I shall exprefs my opinion of them in this particular very imperfectly; when I fay, that they are not exceeded, and parhaps not equalled by any thing of this nature hitherto made public: For they were not copied from the works of others, or composed at home from imperfect accounts, given by incurious and unfkilful obfervers, as hath been frequently the cafe in these matters; but the greatest part of them were drawn on the fpot with the utmost exactnefs, by the direction, and under the eye of Mr. Anfon himfelf; and where (as is the cafe in three or four of them) they have been done by lefs skilful hands, or were found in possession of the enemy, and confequently their juftnefs could be lefs relied on, I have always taken care to apprize the reader of it, and to put him on his guard against giving entire credit to them; although I doubt not, but these less authentic draughts, thus cautiously inferted, are to the full as correct as those, which are ufually published on these occasions. For as actual furveys of roads and harbours, and nice and critical delineations of views of land, take up much time and attention, and require a good degree of fkill both in planning and drawing; those who are defective in industry and ability, fupply these wants by bold conjectures, and fictitious defcriptions; and as they can be no otherwife confuted than by going on the fpot, and running the rifque of fuffering by their milinformation, they have no apprehenfions of being detected; and therefore, when they

they intrude their fuppolititious productions on the Public, they make no conficience of boafting at the fame time, with how much fkill and care they are performed. And let not those who are unacquainted with naval affairs imagine, that impolitions of this kind are of an innocent nature; for as exact views of land are the fureft guide to a feaman, on a coaft where he has never been before, all fictions in fo interesting a matter must be attended with numerous dangers, and fometimes with the deftruction of those who are thus unhappily deceived.

Befides these draughts of such places as Mr. Anfon or the ships under his command have touched at in the courfe of this expedition, and the defcriptions and directions relating thereto, there is inferted, in the enfuing work, an ample defcription, with a chart annexed to it, of a particular navigation, of which hitherto little more than the name has been known, except to those immediately employed in it: I mean the track defcribed by the Manila fhip, in her passage to Acapulco, through the northern part of the Pacific Ocean. This material part is collected from the draughts and journals met with on board the Manila galeon, founded on the experience of more than a hundred and fifty years practice, and corroborated in its principal circumstances by the concurrent evidence of all the Spanifb prifoners taken in that veffel. And as many of their journals, which I have examined, appear to have been not ill kept; I prefume, the chart of that northern Ocean, and the particulars of their route through it, may be very fafely relied on by future Navigators. The advantages, which may be drawn from an exact knowledge of this naviga, ant) in star is a star in the tion,

tion, and the beneficial projects that may be formed thereon, both in war and peace, are by no means proper to be difcuffed in this place : But they will eafily offer themfelves to the skilful in maritime affairs. However, as the Manila ships are the only ones which have ever traverfed this vaft ocean, except a French straggler or two, which have been afterwards feized on the coaft of Mexico, and as during near two ages, in which this trade has been carried on; the Spaniards have, with the greatest care, fecreted all accounts of their voyages from the reft of the world; these reasons alone would authorize the infertion of those papers, and would recommend them to the inquifitive, as a very great improvement in geography, and worthy of attention from the fingularity of many circumftances recited therein. I must add too, (what in my opinion is far from being the leaft recommendation of these materials) that the observations of the variation of the compais in that Ocean, which are inferted in the chart from these Spanish journals, tend greatly to compleat the general fystem of the magnetic variation, of infinite import to the commercial and fea-faring part of mankind. These observations were, though in vain, often publickly called for by our learned countryman the late Dr. Halley, and to his immortal reputation they confirm, as far as they extend, the wonderful hypothesis he had entertained on this head, and very nearly correspond in their quantity, to the predictions he published above fifty years fince, long before he was acquainted with any one observation made in those scars. The ascertaining the variation in that part of the world is just now too of more than ordinary confequence, as the Edisors of

a new

a new variation-chart lately published, have, for want of obfervations in those parts, been milled by an erroneous analogy, and have miftaken the very fpecies of variation in those northern feas; for they make it wefterly where it is eafterly, and have laid it down 12° or 12° fhort of its real quantity.

Thus much it has been thought neceffary to premife with regard to the hydrographical and geographical part of the enfuing work; which it is hoped the reader will, on perufal, find much ampler and more important than this flight fketch can well indicate. But as there are hereafter occasionally interfperfed fome accounts of Spanifs tranfactions, and many obfervations on the difpolition of the American Spaniards, and on the the condition of the countries bordering on the South-Seas, and as herein I may appear to differ greatly from the opinions generally established, I think it incumbent on me particularly to recite the authorities I have been guided by on this occasion, that I may not be cenfured, as having given way either to a thoughtlefs credulity on one hand, or, what would be a much more criminal imputation, to a wilful and deliberate mifrépresentation on the other.

Mr. Anfon, before he fet fail upon this expedition, besides the printed journals to those parts, took care to furnish himself with the best manufcript accounts he could procure of all the Spanifb fettlements upon the coafts of Chili, Peru and Mexico: These he carefully compared with the examinations of his prifoners, and the informations of feveral intelligent perfons, who fell into his hands in the South-Seas. He had likewife the good fortune, in fome of his captures, to poffefs himfelf of a great number of letters and papers of a public nature, many

many of them written by the Viceroy of Peru to the Viceroy of Santa Fee, to the Prefidents of Panama and Chili, to Don Blass de Lezo, Admiral of the galeons, and to divers other perfons in public employments; and in thefe letters there was ufually inferted a recital of those they were intended to anfwer; fo that they contained a confiderable Part of the correspondence between these officers for some time previous to our arrival on that coaft : We took belides many letter fent from perfons employed by the Government to their friends and correspondents, which were frequently filled with narrations of public business, and sometimes contained undifguifed animadverfions on the views and conduct of their fuperiors. From these materials those accounts of the Spanifb affairs are taken, which may at first fight appear the most exceptionable. In particular, the hiftory of the various cafualties which befel Pizarro's fquadron, is for the most part composed from intercepted letters: Though indeed the relation of the infurrection of Orellana and his followers, is founded on rather a lefs difputable authority: For it was taken from the mouth of an English Gentleman then on board Pizarro, who often conversed with Orellana; and it was on enquiry, confirmed in its principal circumstances by others who were in the fhip at the fame time : So that the fact, however extraordinary, is, I conceive, not to be contested.

50

And on this occasion I cannot but mention, that though I have endeavoured, with my utmost care, to adhere ftrictly to truth in every article of the enfuing narration; yet I am apprehenfive, that in fo complicated a work, fome overfights mult have been committed, by the inattention to which a: times

(a)

times all mankind are liable. However, I know of none but literal miftakes : And if there are other errors which have efcaped me, I flatter myfelf they are not of moment enough to affect any material transaction, and therefore I hope they may juftly claim the reader's indulgence.

After this general account of the contents of the enfuing work, it might be expected, perhaps, that I would proceed to the work itfelf; but I cannot finish this Introduction, without adding a few reflexions on a matter very nearly connected with the prefent fubject, and, as I conceive, neither deftitute of utility, nor unworthy the attention of the Public; I mean, the animating my countrymen both in their public and private stations, to the encouragement and purfuit of all kinds of geographical and nautical observations, and of every species of mechanical and commerical information. It is by a fettled attachment to these feemingly minute particulars, that our ambitious neighbours have established some part of that power, with which we are now ftruggling : And as we have the means in our hands of purfuing these fubjects more effectually, than they can, it wou'd be a difhononr to us longer to neglect fo eafy and beneficial a practice: For, as we have a Navy much more numerous than theirs, great part of which is always employed in very diftant. stations, either in the protection of our colonies and commerce, or in affifting our allies against the common enemy, this gives us frequent opportunities of furnishing ourfelves with fuch kind of materials, as are here recommended, and fuch as might turn greatly to our advantage, either in war

ba estate tigen at a success.

or peace : For, not to mention what might be expected from the officers of the Navy, if their application to thefe fubjects were properly encouraged, it would create no new expence to the Government to establish a particular regulation for this purpofe; fince all that would be requilite, would be conftantly to embark on board fome of our men of war, which are fent on these distant cruifes, a perfon, who with the character of an engineer, and the skill and talents necessary to that profession, should be employed in drawing such coafts, and planning fuch harbours, as the ship fhould touch at, and in making fuch other obfervations of all kinds, as might either prove of advantage to future Navigators, or might any ways tend to promote the Public fervice. Befides, perfons habituated to this employment (which could not fail at the fame time of improving them in their proper bufinefs) would be extremely ufeful in many other lights, and might ferve to fecure our Fleets from those difgraces, with which their attempts against places on shore have been often attended : And, in a Nation like ours, where all fciences are more eagerly and univerfally purfued, and better understood than in any other part of the world, proper fubjects for fuch employments could not long be wanting, if due incouragement were given to them. This method here recommended is known to have been frequently practifed by the French, particularly in the inftance of Monfieur Frezier, an Engineer, who has published a celebrated voyage to the South-Seas : For this perfon, in the year 1711, was purpofely fent by the French King into that country on board a merchantman, that he might examine and de-(a 2)fcribe

-

and the second s

fcribe the coaft, and take plans of all the fortified places, the better to enable the French to profecute their illicit trade, or, in cale of a rupture with the court of Spain, to form their enterprizes in those feas with more readinefs and certainty. Should we purfue this method, we might hope, that the emulation amongst those who were thus employed, and the experience, which even in time of peace, they would hereby acquire, might at length procure us a proper number of able Engineers, and might efface the national fcandal, which our deficiency in that fpecies of men has fome times exposed us to : And furcly, every step to encourage and improve this profession is of great moment to the Public; as no perfons, when they are properly inftructed, make better returns in war, for the encouragement and emoluments beftowed on them in time of peace. Of which the advantages the French have reaped from their dexterity (too numerous and recent to be foon forgot) are an ample confirmation.

And having mentioned Engineers, or fuch as are fkilled in drawing, and the other ufual practices of that profeffion, as the propereft perfons to be employed in these foreign enquiries, I cannot (as it offers itself fo naturally to the fubject in hand) but lament, how very impertect many of our accounts of distant countries are rendered by the relators being unfkilled in drawing, and in the general principles of furveying; even where other abilities have not been wanting. Had more of our travellers been initiated in these acquirements, and had there been added thereto fome little fkill in the common astronomical observations, (all which a perfon of ordinary talents might attain, with

with a very moderate share of application) we should by this time have seen the geography of the globe much correcter, than we now find it; the dangers of navigation would have been confiderably leffened, and the manners, arts and produce of foreign countries would have been much better known to us, than they are. Indeed, when I confider, the ftrong incitements that all travellers have to acquire fome part at leaft of thefe qualifications, effectially drawing; when I confider how much it would facilitate their obfervations, afilft and ftrengthen their memories, and of how tedious, and often unintelligible, a load of defcription it would rid them, I cannot but wonder that any perfon, that intends to vifit diftant countries, with a view of informing either himfelf or others, should be unfurnished with so useful a piece of skill. And to inforce this argument still further, I must add, that besides these uses of drawing, which are already mentioned, there is one, which, though not fo obvious, is yet perhaps of more confequence than all that has been hitherto urged; and that is, that those who are accustomed to draw objects, obferve them with more diffinctnefs, than others who are not habituated to this practice. For we may eafily find, by a little experience, that in viewing any object, however fimple, our attention or memory is fcarcely at any time fo ftrong, as to enable us, when we have turned our eyes away from it, to recollect exactly every part it confifted of, and to recal all the circumstances of its appearance; fince, on examination, it will be difcovered, that in fome we are mistaken, and others we had totally overlooked : But he that is employed in drawing what he fees, is

15

the ofe uld the oyof gth ers, our mes ounoare war, wed adlexzot) as racs to not in of by the her of its, kill all in,

ith

ied

ute

is at the fame time employed in rectifying this inattention; for by confronting his ideas copied on the paper, with the object he intends to reprefent, he finds in what manner he has been deceived in its appearance, and hence he in time acquires the habit of obferving much more at one view, and retains what he fees with more correctnefs than he could ever have done, without his practice and proficiency in drawing.

If what has been faid merits the attention of Travellers of all forts, it is, I think, more particularly applicable to the Gentlemen of the Navy; fince, without drawing and planning, neither charts nor views of lands can be taken; and without these it is fufficiently evident, that navigation is at a full stand. It is doubtless from a persuasion of the utility of these qualifications, that his Majesty has eftablished a drawing Master at Portsmouth, for the inftruction of those, who are prefumed to be hereafter intrusted with the command of his Royal Navy : And though fome have been to far milled. as to suppose that the perfection of Sea-officers confifted in a turn of mind and temper refembling the boifterous element they had to deal with, and have condemned all literature and fcience as effeminate, and derogatory to that ferocity, which, they would falfely perfuade us, was the most unerring characteristic of courage : Yet it is to be hoped, that fuch abfurdities as thefe have at no time been authorifed by the Public opinion, and that the belief of them daily diminishes. If those who adhere to these mischievous positions were capable of being influenced by reafon, or fwayed by example, I should think it fufficient for their conviction to observe, that the most valuable drawings

ings referred to in the following work, though done with fuch a degree of fkill, that even profeffed artifts can with difficulty imitate them, were taken by Mr. Peircy Brett, one of Mr. An/on's Lieutenants, and fince Captain of the Lion man of war; who, in his memorable engagement with the Elizabeth (for the importance of the fervice, or the refolution with which it was conducted, inferiour to none this age has feen) has given ample proof, that a proficiency in the arts I have been here recommending is extremely confiftent with the most exemplary bravery, and the most diftinguifhed skill in every function belonging to the duty of a Sea-officer. Indeed, when the many branches of fcience are confidered, of which even the common practice of navigation is composed, and the many improvements, which men of skill have added to this practice within thefe few years, it would induce one to believe, that the advantages of reflection and fpeculative knowledge were in no profession more eminent than in that of a fea-officer : For, not to mention fome expertnels in geography, geometry and aftronomy, which it would be difhonourable for him to be without, (as his journal and his effimate of the daily pofition of the ship are no more than the practice of particular branches of thefe arts) it may be well supposed, that the management and working of a fhip, the difcovery of her most eligible position in the water, (ufually fliled her Trim) and the difpolition of her fails in the most advantageous manner, are articles, wherein the knowledge of mechanics cannot but be greatly affiftant : And perhaps the application of this kind of knowledge to naval fubjects may produce as great improve-

1

men 5

ments in failing and working a fhip, as it has already done in many other matters conducive to the eafe and convenience of human life : For when the fabric of a thip, and the variety of her fails are confidered, together with the artificial contrivances of adapting them to her different motions, as it cannot be doubted, but these things have been brought about by more than ordinary fagacity and invention, fo neither can it be doubted but that a speculative and scientific turn of mind may find out the means of directing and difpofing this complicated mechanifm much more advantageoufly than can be done by mere habit, or by a fervile copying of what others may perhaps have erroneoully practifed in the like emergency : But it is time to finish this digreffion, and to leave the reader to the perusal of the enfuing work; which, with how little art foever it may be executed, will yet, from the importance of the fubject, and the utility and excellence of the materials, merit fome share of the Public attention.

VOYAGE

ROUND THE

WORLD,

BY

GEORGE ANSON, Efq;

Commander in Chief of a Squadron of his MAJESTY's Ships.

BOOK L

CHAP. I.

Of the equipment of the fquadron: The incidents relating thereto, from its first appointment to its fetting fail from St. Helens.

H E fquadron under the Command of Mr. Anfon (of which I here propose to recite the most material proceedings) having undergone many changes in its destination, its force and its equipment, in the ten B months

has re to vhen fails ntrions, been and that find mafly vile rot is each, vill :he ne

E

months between its first appointment and its final failing from St. Helens; I conceive the hiftory of these alterations is a detail neceffary to be made public, both for the honour of those who first planned and promoted this enterprize, and for the justification of those who have been entrusted with its execution. Since it will from hence appear, that the accidents the expedition was afterwards exposed to, and which prevented it from producing all the national advantages the firength of the fquadron, and the expectation of the public, feemed to prefage, were principally owing to a feries of interruptions, which delayed the Commander in the courfe of his preparations, and which it exceeded his utmost industry either to avoid or to get removed.

When in the latter end of the fummer of the year 1739, it was forefeen that a war with Spain was inevitable, it was the opinion of feveral confiderable perfons then trufted with the Administration of affairs, that the most prudent step the Nation could take, on the breaking out of the war, was attacking that Crown in her distant settlements; for by this means (as at that time there was the greatest probability of fuccess) it was supposed that we should cut off the principal refources of the enemy, and reduce them to the necessity of fincerely defiring a peace, as they would hereby be deprived of the returns of that treasure by which alone they could be enabled to carry on a war.

In purfuance of these sentiments, several projects were examined, and feveral refolutions taken in Council. And in all these deliberations it was from the first determined, that George Anson, Esq, then Captain of the Centurion, should be ruployed as Commander in Chief of an expedition of this kind : And he then being abfent on a cruize, a veffel was difpatched to his flation fo early as the beginning of September, to order him to return with his fhip to Portfmouth. And foon after he came there, that is on the 10th of November following, he received a letter from Sir Charles Wager, ordering him to repair to London, and to attend the board of Admiralty: Where, when he arrived, he was informed by Sir Charles, that two Squadrons would be immediately fitted out for two fecret expeditions, which however would have fome connexion with each other : That he, Mr. Anfon, was intended to command one of them, and Mr. Cornwall (who hath fince loft his life glorioully in the defence of his Country's honour) the other : That the fquadron under Mr. Anfon was to take on board three Independent Companies of a hundred men each, and Bland's regiment of Foot : That Colonel Bland was likewife to imbark with his regiment, and to command the land-forces : And that, as foon as this fquadron could be fitted for the fea, they were to fet fail, with express orders to touch at no place till they came to Java-Head in the East-Indies : That there they were

B 2

only

only to ftop to take in water, and thence to proceed directly to the city of Manila, fituated on Luconia, one of the Philippine Iflands: That the other fquadron was to be of equal force with this commanded by Mr. Anfon, and was intended to pafs round Cape Horn into the South-Seas, and there to range along that coaft; and after cruizing upon the enemy in those parts, and attempting their fettlements, this fquadron in its return was to rendezvous at Manila, and there to join the fquadron under Mr. Anfon, where they were to refresh their men, and refit their ships, and perhaps receive further orders.

This fcheme was doubtlefs extremely well projected, and could not but greatly advance the Public Service, and at the fame time the reputation and fortune of those concerned in its execution; for had Mr. Anfon proceeded for Manila at the time and in the manner propofed by Sir Charles Wager, he would, in all probability, have arrived there before they had received any advice of the war between us and Spain, and confequently before they had been in the least prepared for the reception of an enemy, or had any apprehensions of their danger. The city of Manila might be well supposed to have been at that time in the fame defencelefs condition with all the other Spanish fettlements, just at the breaking out of the war : That is to fay, their fortifications neglected, and in many places decayed; their cannon difmounted, or ufeless by the

the mouldring of their carriages; their magazines, whether of military ftores or provision, all empty; their garrifons unpaid, and confequently thin, ill-affected, and dispirited; and the royal chefts in Peru, whence alone all thefe diforders could receive their redrefs, drained to the very bottom : This, from the intercepted letters of their Viceroys and Governors, is well known to have been the defenceleis state of Panama, and the other Spanish places on the coast of the South-Seas, for near a twelvemonth after our declaration of war. And it cannot be fuppofed that the city of Manila, removed still farther by almost half the circumference of the globe, should have experienced from the Spanish Government, a greater fhare of attention and concern for its fecurity, than Panama, and the other important ports in Peru and Chili, on which their possession of that immense Empire depends. Indeed, it is well known, that Manila was at that time incapable of making any confiderable defence, and in all probability would have furrendered only on the appearance of our fquadron before it. The confequence of this city, and the island it stands on, may be in fome measure estimated, from the healthiness of its air, the excellency of its port and bay, the number and wealth of its inhabitants, and the very extensive and beneficial commerce which it carries on to the principal Ports in the East-Indies, and China, and its exclusive trade to Acapulco, the returns for which, being made in fil-

B 3

ver,

ver, are, upon the lowest valuation, not lefs than three millions of Dollars per annum.

And on this Scheme Sir Charles Wager was fo intent, that in a few days after this first conference, that is, on November 18, Mr. Anfon received an order to take under his command the Argyle, Severn, Pearl, Wager, and the Tryal Sloop; and other orders were iffued to him in the fame month, and in the December following, relating to the victualling of this fquadron. But Mr. Anfon attending the Admiralty the beginning of January, he was informed by Sir Charles Wager, that for reafons with which he, Sir Charles, was not acquainted, the expedition to Manila was laid aside. It may be conceived, that Mr. Anfon was extremely chagrined at the lofing the command of fo infallible, fo honourable, and in every respect, fo desirable an enterprize, especially too as he had already, at a very great expence, made the neceffary provifion for his own accommodation in this voyage, which he had reafon to expect would prove a very long one. However, Sir Charles, to render this difappointment in fome degree more tolerable, informed him that the expedition to the South-Seas was still intended, and that he, Mr. Anfon, and his fquadron, as their first deftination was now countermanded, should be employed in that fervice. And on the 10th of January he received his commission, appointing him Commander in Chief of the forementioned' fquadron, which (the Argyle being in the

-

the course of their preparation changed for the Gloucester) was the fame he failed with above eight months after from St. Helens. On this change of deftination, the equipment of the fquadron was still profecuted with as much vigour as ever, and the victualling, and whatever depended on the Commodore, was fo far advanced, that he conceived the fhips might be capable of putting to fea the inftant he should receive his final orders, of which he was in daily expectation. And at last, on the 28th of June 1740, the Duke of Newcastle, Principal Secretary of State, delivered to him his Majefty's instructions, dated January 31, 1739, with an additional inftruction from the Lords Juffices, dated June 19, 1740. On the receipt of these, Mr. Anfon immediately repaired to Spithead, with a refolution to fail with the first fair wind, flattering himfelf that all his delays were now at an end. For though he knew by the mufters that his fquadron wanted three hundred feamen of their complement, (a deficiency which, with all his affiduity, he had not been able to get fupplied) yet, as Sir Charles Wager informed him, that an order from the board of Admiralty was difpatched to Sir John Norris to fpare him the numbers which he wanted, he doubted not of his complying therewith. But on his arrival at Portfmouth, he found himfelf, greatly miftaken, and difappointed in this perfuasion : for on his application, Sir John Norris told him, he could spare him none, for he wanted men for his own

flect.

This occafioned an inevitable and a very fleet. confiderable delay; for it was the end of July before this deficiency was by any means supplied, and all that was then done was extremely fhort of his neceffities and expectation. For Admiral Balchen, who fucceeded to the command at Spithead, after Sir John Norris had failed to the westward, instead of three hundred able failors, which Mr. Anfon wanted of his complement, ordered on board the fquadron a hundred and feventy men only; of which thirtytwo were from the hospital and fick quarters, thirty-feven from the Salifbury, with three officers of Colonel Lowther's regiment, and ninetyeight marines, and thefe were all that were ever granted to make up the forementioned deficiency.

But the Commodore's mortification did not end here. It has been already observed, that it was at fir? intended that Colonel Bland's regiment, and three independent companies of a hundred men each, fhould embark as land-forces on board the fquadron. But this difpolition was now changed, and all the land-forces that were to be allowed, were five hundred invalids to be collected from the out-penfioners of Chelfea college. As these out-pensioners confist of foldiers, who free their age, wounds, or other infirmities, are incapable of fervice in marching regiments, Mr. Anfon was greatly chagrined at having fuch a decrepid detachment allotted him ; for he was fully perfuaded that the greatest part of them would perifh long before they arrived .

at

at the scene of action, fince the delays he had already encountered, neceffarily confined his paffage round Cape Horn to the most rigorous feafon of the year. Sir Charles Wager too joined in opinion with the Commodore, that invalids were no ways proper for this fervice, and follicited ftrenuoully to have them exchanged; but he was told that perfons, who were fuppofed to be bets ter judges of foldiers than he or Mr. Anfon, thought them the propereft men that could be And upon this deemployed on this occasion. termination they were ordered on board the fquadron on the 5th of August: But instead of five hundred, there came on board no more than two hundred and fifty-nine; for all those who had limbs and ftrength to walk out of Portsmouth deferted, leaving behind them only fuch as were literally invalids, most of them being fixty years of age, and fome of them upwards of feventy. Indeed it is difficult to conceive a more moving fcene than the imbarkation of these unhappy veterans : They were themselves extremely averfe to the fervice they were engaged in, and fully apprized of all the difafters they were afterwards exposed to; the apprehenfions of which were ftrongly mark'd by the concern that appeared in their countenances, which was mixed with no fmall degree of indignation, to be thus hurried from their repose into a fatiguing employ, to which neither the ftrength of their bodies, nor the vigor of their minds, were any ways proportioned, and where, without feeing the face of an enemy, or in the leaft

ry uly lily or n-1ed 1-1-1s, r__ r t t

least promoting the fuccess of the enterprize they were engaged in, they would in all probability uselessly perish by lingring and painful diseases; and this too, after they had spent the activity and strength of their youth in their Country's service.

And I cannot but observe, on this melancholy incident, how extremely unfortunate is was, both to this aged and difeafed detachment, and to the expedition they were employed in; that amongst all the out-pensioners of Chelsea Hofpital, which were supposed to amount to two thousand men, the most crazy and infirm only fhould be culled out for fo fatiguing and perilous an undertaking. For it was well known, that however unfit, invalids in general might be for this fervice, yet by a prudent choice, there might have been found amongst them five hundred men who had fome remains of vigour left : And Mr. Anfon fully expected, that the best of them would have been allotted him; whereas the whole detachment that was fent to him. feemed to be made up of the most decrepid and miferable objects, that could be collected out of the whole body; and by the defertion abovementioned, thefe were a fecond time cleared of that little health and ftrength which were to be found amongst them, and he was to take up with fuch as were much fitter for an infirmary, than for any military duty.

And here it is neceffary to mention another material particular in the equipment of this fquadron. It was proposed to Mr. Anfon, after it cy

it was refolved that he should be fent to the South-Seas, to take with him two perfons under the denomination of Agent Victuallers. Those who were mentioned for this employment had formerly been in the Spanish West-Indies, in the South-Sea Company's fervice, and it was fuppofed that by their knowledge and intelligence on that coaft, they might often procure provifions for him by compact with the inhabitants, when it was not to be got by force of arms: These Agent Victuallers were, for this purpose, to be allowed to carry to the value of 15,000 l. in merchandize on board the fquadron; for they had reprefented, that it would be much eafier for them to procure provisions with goods, than with the value of the fame goods in money. Whatever colours were given to this fcheme, it was difficult to perfuade the generality of mankind, that it was not principally intended for the enrichment of the Agents, by the beneficial commerce they proposed to carry on upon that coaft. Mr. Anfon, from the beginning, objected both to the appointment of Agent Victuallers, and the allowing them to carry a cargo on bcard the fquadron: For he conceived, that in those few amicable ports where the fquadron might touch, he needed not their affiftance to contract for any provisions the place afforded ; and on the enemy's coaft, he did not imagine that they could ever procure him the neceffaries he fhould want, unlefs (which he was refolved not to comply with) the military operations of his fquadron were to be regulated by the ridiculous

culous views of their trading projects. All that he thought the Government ought to have done on this occasion, was to put on board to the value of 2 or 3000 *l*. only of fuch goods, as the *Indians*, or the *Spanifb* Planters in the lefs cultivated part of the coast, might be tempted with; fince it was in such places only that he imagined it would be worth while to truck with the enemy for provisions: And in these places it was fufficiently evident, a very small cargo would fuffice.

But though the Commodore objected both to the appointment of these officers, and to their project; yet, as they had infinuated that their scheme, besides victualling the squadron, might contribute to fettling a trade upon that coaft, which might be afterwards carried on without difficulty, and might thereby prove a very confiderable national advantage, they were much listened to by fome confiderable perfons : And of the 15,000 l. which was to be the amount of their cargo, the Government agreed to advance them 10,000 upon imprest, and the remaining 5000 they raifed on bottomry bonds; and the goods purchased with this fum, were all that were taken to fea by the fquadron, how much foever the amount of them might be afterwards magnified by common report,

This cargo was at first shipped on board the Wager Store Ship, and one of the Victuallers ; no part of it being admitted on board the men of war. But when the Commodore was at St. Catherine's, he considered, that in case the squadron should at

he

a -

ne i-

d

y id

0

ir

r

t

,

t

1

ł

F

should be separated, it might be pretended that fome of the ships were disappointed of provisions for want of a cargo to truck with, and therefore he distributed fome of the least bulky commodities on board the men of war, leaving the remainder principally on board the Wager, where it was loft : And more of the goods perifhing by various accidents to be recited hereafter, and no part of them being difpofed of upon the coaft, the few that came home to England, did not produce, when fold, above a fourth part of the original price. So true was the Commodore's prediction about the event of this project, which had been by many confidered as infallibly productive of immense gains. But to return to the transactions at Portsmouth.

To fupply the place of the two hundred and forty invalids which had deferted, as is mentioned above, there were ordered on board two hundred and ten marines detached from different regiments: Thele were raw and undifciplined men, for they were just raifed, and had fcarcely any thing more of the foldier than their regimentals, none of them having been fo far trained, as to be permitted to fire. The last detachment of these marines came on board the 8th of August, and on the 10th the squadron failed from Spithead to St. Helens, there to wait for a wind to proceed on the expedition.

But the delays we had already fuffered had not yet fpent all their influence, for we were now advanced into a feafon of the year, when the wefterly winds are ufually, very, constant, and very

very violent; and it was thought proper that we should put to fea in company with the fleet commanded by Admiral Balchen, and the expedition under Lord Cathcart. And as we made up in all twenty-one men of war, and a hundred and twenty-four fail of merchantmen and tranfports, we had no hopes of getting out of the Channel with fo large a number of fhips, without the continuance of a fair wind, for fome confiderable time. This was what we had every day lefs and lefs reafon to expect, as the time of the equinox drew near; fo that our golden dreams, and our ideal possession of the Peruvian treafures, grew each day more faint, and the difficulties and dangers of the passage round Cape Horn in the winter feafon filled our imaginations in their room. For it was forty days from our arrival at St. Helens, to our final departure from thence: And even then (having orders to proceed without Lord Cathcart) we tided it down the Channel with a contrary wind. But this interval of forty days was not free from the difpleafing fatigue of often fetting fail, and being as often obliged to return; nor exempt from dangers, greater than have been fometimes experienced in furrounding the globe. For the wind coming fair for the first time, on the 23d of August; we got under fail, and Mr. Balchen fhewe't himfelf truly folicitous to have proceeded to fea, but the wind foon returning to its old quarter, obliged us to put back to St. Helens, not without confiderable hazard, and fome damage received by two of the transports, who; in

VE

et

2-

le

d

e

e

in tacking, ran foul of each other: Befides this, we made two or three more attempts to fail, but without any better fuccefs. And, on the 6th of September, being returned to an anchor at St. Helens, after one of these fruitless efforts, the wind blew fo fresh, that the whole fleet struck their yards and topmafts to prevent their driving : And, notwithstanding this precaution, the Centurion drove the next evening, and brought both cables a-head, and we were in no fmall danger of driving foul of the Prince Frederick, a feventy-gun ship, moored at a small distance under our ftern; which we happily escaped, by. her driving at the fame time, and fo preferving her diftance : Nor did we think ourfelves fecure, till we at last let go the sheet anchor, which fortunately brought us up.

However, on the 9th of September, we were in fome degree relieved from this lingering vexa-. tious fituation, by an Order which Mr. Anfon. received from the Lords Juffices, to put to fea the first opportunity with his own fquadron only, if Lord Cathcart should not be ready. Being. thus freed from the troublefome company of fo large a fleet, our Commodore refolved to weigh and tide it down the Channel, affoon as the wea-. ther should become fufficiently moderate; and this might eafily have been done with our own fquadron alone full two months fooner, had the orders of the Admiralty, for fupplying us with feamen, been punctually complied with, and had we met with none of those other delays mentioned in this narration. It is true, our hopes of

of a fpeedy departure were even now fomewhat damped, by a fubfequent order which Mr. Anfon received on the 12th of September; for by that he was required to take under his convoy the St. Albans with the Turkey fleet, and to join the Dragon, and the Winchefter, with the Streights and the American trade at Torbay or Plymouth, and to proceed with them to fea as far as their way and ours lay together : This incumbrance of a convoy gave us fome uneafinefs, as we feared it might prove the means of lengthening. our paffage to the Maderas. However, Mr. Anfon, now havin the command himfelf, refolved to adhere to his former determination. and to tide it down the Channel with the first moderate weather; and that the junction of his Convoy might occasion as little a loss of time as poffible, he immediately fent directions to Torbay, that the fleets he was there to take under his care, might be in a readinefs to join him instantly on his approach. And at last, on the 18th of September, he weighed from St. Helens; and though the wind was at first contrary, had the good fortune to get clear of the Channel in four days, as will be more particularly related in the enfuing chapter.

Having thus gone through the refpective fteps taken in the equipment of this fquadron, it is fufficiently obvious how different an afpect this expedition bore at its first appointment in the beginning of *January*, from what it had in the latter end of *September*, when it left the Channel; and how much its numbers, its ftrength,

1 :

ftrength, and the probability of its fuccels were diminished, by the various incidents which took place in that interval. For inftead of having all our old and ordinary feamen exchanged for fuch / as were young and able, (which the Commodore was at first promised) and having our numbers compleated to their full complement, we were obliged to retain our first crews, which were very indifferent; and a deficiency of three hundred men in our numbers was no otherwife made up to us, than by fending us on board a hundred and feventy men, the greatest part compofed of fuch as were difcharged from hospitals, or new-raifed marines who had never been at fea before. And in the land-forces allotted us, the change was fill more difadvantageous; for there, inftead of three independent companies of a hundred men each, and Bland's regiment of foot, which was an old one, we had only four hundred and feventy invalids and marines, one part of them incapable for action by age and infirmities, and the other part useless by their ignorance of their duty. But the diminishing the ftrength of the fquadron was not the greateft inconveniency which attended thefe alterations: for the contefts, reprefentations, and difficulties which they continually produced, (as we have above feen, that in these cases the authority of the Admiralty was not always fubmitted to) occasioned a delay and waste of time, which in its confequences was the fource of all the difasters to which this enterprize was afterwards exposed : For by this means we were obliged to make our paffage

.

s

paffage round Cape Horn in the most tempestuous feafon of the year; whence proceeded the: feparation of our iquadron, the lofs of numbers of our men, and the imminent hazard of our total destruction : And by this delay too, the enemy had been fo well informed of our defigns, that a perfon who had been employed in the South-Sea Company's fervice, and arrived from Panama three or four days before we left Portfmouth, was able to relate to Mr. Anfon most of the particulars of the deftination and ftrength of our squadron, from what he had learnt amongst the Spaniards before he left them. And this was afterwards confirmed by a more extraordinary circumstance: For we shall find, that when the Spaniards (fully fatisfied that our expedition. was intended for the South-Seas) had fitted out a fquadron to oppose us, which had to far got the ftart of us, as to arrive before us off the illand of Madera, the Commander of this fquadron was fo well inftructed in the form and make of Mr. Anfan's broad pennant, and had imitated it for exactly, that he thereby decoyed the Pearl. one of bur fquadron, within gun-fhot of him, before the Captain of the Pearl was able to difcovershis miltake, and many and wormand rwenty-even we are see hundred and fixty men. Dans's Kiest Cornancier, and the Tryal Sloop of eight guns, o . nurdred men, the Honourabie "fabre Marray Constander ; the two Victualian were Pinks, the largeft about four hundred, and the other about two hundred tons burthen, the PerAty tod as, till the provisions we had tak ...

P.

The paffage from St. Helens to the Island of Madera; with a short account of that Island, and of our flay there.

N the 18th of September, 1740, the squadron, as we have observed in the preceding chapter, weighed from St. Helens with a contrary wind, the Commodore proposing to tice it down the Channel, as he dreaded lefs the inconveniencies he fhould thereby have to ftruggle with," than the rifk he should run of ruining the enterprize, by an uncertain, and in all probability, a tedious attendance for a fair wind.

The fquadron allotted to this fervice confifted of five men of war, a floop of war, and two victualling thips. They were the Centurion of fixty guns, four hundred men, George Anfon, Elq; Commander; the Gloucester of fifty guns, three hundred men, Richard Norris Commander ; the Severn of fifty guns, three hundred men, the Honourable Edward Legg Commander, the Pearl of forty guns, two hundred and fifty men, Matthew Mitchel Commander; the Wager of twenty-eight guns, one hundred and fixty men, Dandy Kidd Commander; and the Tryal Sloop of eight guns, one hundred men, the Honourable John Murray Commander; the two Victuallers were Pinks, the largest about four hundred, and the other about two hundred tons burthen, these were to attend us, till the provisions we had taken ON.

C 2

(.20)

on board were so far confumed, as to make room for the additional quantity they carried with them, which, when we had taken into our fhips, they were to be difcharged. Befides the complement of men born by the abovementioned ships as their crews, there were embarked on board the fquadron about four hundred and feventy invalids and marines, under the denomination of landforces, as has been particularly mentioned in the preceding chapter, which were commanded by Lieutenant Colonel Cracherode. With this fquadron, together with the St. Albans and the Lark, and the trade under their convoy, Mr. Anfon, after weighing from St. Helens, tided it down the Channel for the first forty-eight hours; and, on the 20th, in the morning, we discovered off the Ram-Head the Dragon, Winchefter, South-Sea Castle, and Rye, with a number of merchantmen. under their Convoy: These we joined about noon the fame day, our Commodore having orders to fee them (together with the St. Albans and Lark). as far into the fea as their course and ours lay together. When we came in fight of this last mentioned fleet, Mr. Anfon first hoisted his broad pennant, and was faluted by all the men of war, in company.

When we had joined this laft Convoy, we made up eleven men of war, and about one hundred and fifty fail of merchantmen, confifting of the Turky, the Streights, and the Imericantrade. Mr. Anfon the fame day, mad: a fignal for all the Captains of the men of war to come on board him, where he delivered them their, fighting and failing inftructions, and then, with a fair 1

a fair wind, we all ftood towards the South-Weft: and the next day at noon, being the 21ft, we had run forty leagues from the Ram-Head, and being now clear of the land, our Commodore, to render our view more extensive, ordered Captain Mitchel, in the Pearl, to make fail two leagues a-head of the fleet every morning, and to repair to his flation every evening. Thus we proceeded till the 25th, when the Winchester and the American Convoy made the concerted fignal for leave to feparate, which being answered by the Commodore, they left us: As the St. Albans and the Dragon, with the Turkey and Streights Convoy, did on the 29th. After which separation, there remained in company cnly our own fquadron and our two victuallers, with which we kept on our course for the Island of Madera. But the winds were fo contrary, that we had the mortification to be forty days in our passage thither from St. Helens, though it is known to be often done in ten or twelve. This delay was a most unpleafing circumstance, productive of much difcontent and ill-humour amongst our people, of which those only can have a tolerable idea, who have had the experience of a like fituation. And befides the peevifhnefs and defpondency which foul and contrary winds, and a lingring voyage never fail to create on all occasions, we, in particular, had very fubftantial reafons to be greatly alarmed at this unexpected impediment. For as we had departed from England much later than we ought to have done, we had placed almost all our hopes of fuccels in the chance of retrieving in

C 3 in fome measure at fea, the time we had fo unhappily wasted at Spithead and St. Helens. However, at last, on Monday, Ostober the 25th, at five in the morning, we, to our great joy, made the land, and in the afternoon came to an anchor in Madera Road, in forty fathom water; the Brazen-bead bearing from us E by S, the Loo N N W, and the great Church N N E. We had hardly lot go our anchor, when an English privateer floop ran under our stern, and faluted the Commodore with nine guns, which we returned with five. And, the next day, the Conful of the Island coming to visit the Commodore, we faluted him with nine guns on his coming on board.

This Island of Madera, where we are now arrived, is famous through all our American fettlements for its excellent wines, which feem to be defigned by Providence for the refreshment of the inhabitants of the Torrid Zone. It is fituated in a fine climate, in the latitude of 32: 27 North ; and in the longitude from London of, by our different reckonings, from 18° 1 to 10° 1 Weft, though laid down in the charts in 17? It is composed of one continued hill, of a confiderable height, extending itself from East to West: The declivity of which, on the Southfide, is cultivated and intersperfed with vineyards; and in the midfe of this flope the Merchants have fixed their country feats, which help to form an agreeable profpect. There is but one confiderable town in the whole Mand, it is named Fonchiales and is feated on the South part of the Island,

Island, at the bottom of a large bay. This is the only place of trade, and indeed the only one where it is possible for a boat to land. Fonchiale, towards the fea, is defended by a high wall, with a battery of cannon, befides a caftle on the Loo, which is a rock standing in the water at a fmall diffance from the fhore. Even here the beach is covered with large ftones, and a violent furf continually beats upon it; fo that the Commodore did not care to venture the fhips long boats to fetch the water off, as there was fo much danger of their being loft; and therefore ordered the Captains of the fquadron to employ Portuguese boats on that fervice.

We continued about a week at this Ifland, watering our fhips, and providing the fquadron with wine and other refreshments. And, on the 3d of November, Captain Richard Norris having fignified by a letter to the Commodore, his defire to quit his command on board the Gloucester, in order to return to England for the recovery of his health, the Commodore complied with his request; and thereupon was pleased to appoint Captain Matthew Mitchel to command the Gloucefter in his room, and to remove Captain Kidd from the Wager to the Pearl, and Captain Murray from the Tryal Sloop to the Wager, giving the command of the Tryal to Lieutenant Cheap. Thefe promotions being fettled, niwith other changes in the Lieutenancies, thex Commodore. on the following day, gave to the Captains their orders, appointing St. VJago, one of the Cape de Verd Mands, to be the forft place of wendezvous Ag: Mi 4 in

in case of separation; and directing them, if they did not meet the *Centurion* there, to make the best of their way to the Island of St. *Catherine's* on the coast of *Brazil*. The water for the squadron being the same day compleated, and each ship supplied with as much wine and other refreshments as they could take in, we weighed anchor in the asternoon, and took our leave of the Island of *Madera*. But before I go on with the narration of our own transactions, I think it necessary to give some account of the proceedings of the enemy, and of the measures they had taken to render all our designs abortive.

When Mr. Anfon visited the Governor of Madera, he received information from him, that for three or four days, in the latter end of Oltober, there had appeared, to the westward of that Island, feven or eight ships of the line, and a Patache, which laft was fent every day close in to make the land. The Governor affured the Commodore, upon his honour, that none upon the Island had either given them intelligence, or had in any fort communicated with them, but that he believed them to be either) French or Spanish, but was rather inclined to think them Spanifb. On this intelligence, Mr. Anfon fent an Officer in a clean floop, eight leagues to the weftward, to reconnoitre them, and, if possible, to difcover what they were: But the Officer returned without being able to get a fight of them, fo that we still remained in uncertainty. However, we could not but conjecture, that this fleet was intended to put a flop to

Y

ie 's

h,

in d

Ş

f

to our expedition, which, had they cruifed to the eastward of the Island instead of the westward, they could not but have executed with great facility. For as, in that cafe, they must have certainly fallen in with us, we should have been obliged to throw overboard vaft quantities of provision to clear our ships for an engagement, and this alone, without any regard to the event of the action, would have effectually prevented our progrefs. This was fo obvious a meafure, that we could not help imagining reafons which might have prevented them from purfuing And we therefore fupposed, that this French it. or Spanish squadron was sent out, upon advice of our failing in company with Admiral Balchen and Lord Cathcart's expedition : And thence, from an apprehension of being over-matched, they might not think it adviseable to meet with us, till we had parted company, which they might judge would not happen, before our ar-These were our speculations rival at this Island. at that time; and from hence we had reason to fuppofe, that we might still fall in with them, in our way to the Cape de Verd Islands. And afterwards, in the course of our expedition, we were many of us perfuaded, that this was the Spanifb fquadron commanded by Don Joseph Pizarro, which was fent out purpofely to traverfe the views and enterprizes of our fquadron, to which, in strength, they were greatly superior. As this Spanish armament then was fo nearly connected with our expedition, and as the cataftrophe it underwent, though not effected by our force,

force, was yet a confiderable advantage to this Nation, produced in confequence of our equipment, I have, in the following chapter, given a fummary account of their proceedings, from their first fetting out from Spain in the year 1740, till the Afia, the only ship which returned to Europe of the whole squadron, arrived at the Groyne in the beginning of the year 1746.

CHÂP. III.

The history of the squadron commanded by Don Joseph Pizarro.

HE squadron fitted out by the Court of Spain to attend our motions, and traverfe our projects, we supposed to have been the ships feen off Madera, as mentioned in the preceding chapter. And as this force was fent out particularly against our expedition, I cannot but imagine, that the following history of the cafualties it met with, as far as by intercepted letters and other information the fame has come to my knowledge, is a very effential part of the prefent work: For by this it will appear we were the occasion, that a confiderable part of the naval power of Spain was diverted from the profecution of the ambitious Views of that Court in Europe; and the men and fhips, loft by the enemy in this undertaking, were loft in confequence of the precautions they took to fecure themfelves against our enterprizes. This squadron (besides two ships intended for the West-Indies, which did not part company till after they had left the Maderas) was composed of the following men of war, commanded by Don Joseph Pizarro:

The Afia of fixty-fix guns, and feven hundred men; this was the Admiral's fhip, The Gupufcoa of feventy-four guns, and feven hundred men.

The

The Hermiona of fifty-four guns, and five hundred men.

The Esperanza of fifty guns, and four hundred and fifty men.

The St. Estevan of forty guns, and three hundred and fifty men.

And a Patache of twenty guns.

These ships, over and above their complement of failors and marines, had on board an old Spanib regiment of foot, intended to reinforce the garrifons on the coast of the South-Seas. When this fleet had cruifed for fome days to the leeward of the Maderas, as is mentioned in the preceding chapter, they left that flation in the beginning of November, and steered for the river of Plate, where they arrived the 5th of January. O.S. and coming to an anchor in the bay of Maldonado, at the mouth of that river, there Admiral Pizarro fent immediately to Buenos Ayres for a fupply of provisions; for they had departed from Spain with only four months provisions on board. While they lay here expecting this fupply, they received intelligence, by the Treachery of the Portuguele Governor of St. Catherine's, of Mr. Anfon's having arrived. at that Island on the 21st of December, preceding, and of his preparing to put to fea again with the utmost expedition. Pizarro, notwithstanding his fuperior force, had his reasons (and as some fay his orders likewife) for avoiding our fquadron any where fhort of the South-Seas. He was befides extremely defirous of getting round Cape

Cape Horn before us, as he imagined that ften alone would effectually baffle all our defigns; and therefore, on hearing that we were in his neighbourhood, and that we should foon be ready to proceed for Cape Horn, he weighed anchor with the five large fhips, (the Patache being difabled and condemned, and the men taken out of her) after a ftay of seventeen days only, and got under fail without his provisions, which arrived at Maldonado within a day or two after his departure. But notwithstanding the precipitation, with which he departed, we put to feat from St. Catherine's four days before him, and infome part of our passage to Cape Horn, the twofquadrons were fo near together, that the Pearl, one of our fhips, being feparated from the reft, fell in with the Spanish Fleet, and mistaking the Afia for the Centurion, had got within gun-fhot of Pizarro, before the difcovered her error, and narrowly efcaped being taken.

St KE

It being the 22d of January when the Spaniards weighed from Maldonado, (as has been already mentioned) they could not expect to get into the latitude of Cape Horn before the equinox; and as they had reafon to apprehend very tempeftuous weather in doubling it at that feafon, and as the Spanifs failors, being for the most part accustomed to a fair weather country, might be expected to be very averse to fo dangerous and fatiguing a navigation, the better to encourage them, fome part of their pay was advanced to them in European goods, which they were to be permitted to dispose of in the Soutb-Seas,

(30)

Seas, that fo the hopes of the great profit, each man was to make on his fmall venture, might animate him in his duty, and render him lefs difpofed to repine at the labour, the hardfhips and the perils he would in all probability meet with before his arrival on the coaft of Perus 2010 at the before his arrival on the coaft of

Pizarro with his fquadron having, towards the latter end of February, run the length of Cape Horn, he then flood to the westward in order to double it; but in the night of the last day of February, O. S. while with this view they were turning to windward, the Guipuscoa, the Hermiona, and the Esperanza, were separated from the Admiral ; and, on the 6th of March following, the Guipuscoa was separated from the other two: and, on the 7th (being the day after we had paffed Streights le Maire) there came on a most furious storm at N. W, which, in despight of all their efforts, drove the whole fquadron to the caftward, and obliged them, after feveral fruitless attempts, to bear away for the river of Plate, where Pizarro in the Afia arrived about the middle of May, and a few days after him the Elberanza and the Estevan. The Hermiona was fuppoled to founder at lea, for the was never heard of more; and the Guipu (coa) was run a-fhire, and funk on the coaft of Brazilit The calamities of all kinds, which this fquadron sunderweht in this unfuccetsful navigation, can only be paralleled by what we ourfelves experienced in the fame climate, when buffeted by the fame formis There was indeed fome diversity in our distress.

diftreffes, which rendered it difficult to decide, whose fituation was most worthy of commiseration. For to all the misfortunes we had in common with each other, as shattered rigging, leaky ships, and the fatigues and despondency, which necessarily attend these difasters, there was superadded on board our squadron the ravage of a most destructive and incurable difaster, and on board the Spanis squadron the devastation of famine.

- For this foundron, either from the hurry of their outfet, their prefumption of a fupply at Buenos Ayres, or from other lefs obvious motives, departed from Spain, as has been already observed, with no more than four months provision, and even that, as it is faid, at short allowance only; fo that, when by the ftorms they met with off Cape Horn, their continuance at fea, was prolonged a month or more beyond their expectation, they were thereby reduced to fuch infinite diffres, that rats, when they could be caught, were fold for four dollars a-piece; and a failor, who died on board, had his death. concealed for fome days by his brother, who, during that time, lay in the fame hammock with the corpfe, only to receive the dead man's allowance of provisions. In this dreadful fituation they were alarmed (if their horrors were capable of usigmentation) by the difference of a confpiracy among the marines, on board the Afra, the Admiral's fhip. This had taken its rife chiefly from the mileries they endured : For though no lefs was proposed by the conspirators than diffrullesthan the maffacring the officers and the whole. erew, yet their motive for this bloody refolution feemed to be no more than their defire of relieving their hunger, by appropriating the whole fhips provisions to themselves. But their defigns were prevented, when just upon the point of execution, by means of one of their confessors, and three of their ringleaders were immediately put to death. However, though the confpiracy was fuppreffed, their other calamities admitted of no alleviation, but grew each day more and more destructive. So that by the complicated diffres of fatigue, fickness and hunger, the three thips which escaped loft the greatest part of their men. The Afia, their Admiral's fhip, arrived at Monte Vedio in the river of Plate, with half her crew only; the St. Eftevan had loft in like manner half her hands, when the anchored in the bay of Barragan ; the Efperanza, a fifty gun fhip, was still more unfortunate, for of four hundred and fifty hands which the brought from Spain, only fifty-eight remained alive, and the whole regiment of foot perifhed except fixty men." But to: give the reader a more diffinct and particular idea of what they underwent upon this occasion, I shall lay before him a short account of the fate of the Guipuscoa, from a letter written by Don Joseph Mindinuetta her Captain, to a perfon of distinction at Lima; a copy of which fell into our hands afterwards in the South Seasy Mon (1)

He mentions that the separated from the Hermiona and the Esperanza in a fog, on the 6th of March, being then, as I suppose, to the S.E. le.

of Staten-Land, and plying to the westward; that in the night after, it blew a furious ftorm at N. W. which, at half an hour after ten, fplit his mainfail, and obliged him to bear away with his forefail; that the ship went ten knots an hour with a prodigious fea, and often ran her gangway under water; that he likewife fprung his main-mast; and the ship made fo much water, that with four pumps and bailing he could not free her. That on the 19th it was calm, but the fea continued fo high, that the fhip in rolling opened all her upper works and feams, and ftarted the butt ends of her planking and the greatest part of her top timbers, the bolts being drawn by the violence of her roll : That in this condition, with other additional difasters to the hull and rigging, they continued beating to the westward till the 12th : That they were then in fixty degrees of fouth latitude, in great want of provisions, numbers every day perishing by the fatigue of pumping, and those who furvived, being quite dispirited by labour, hunger, and the feverity of the weather, they having two, fpans of fnow upon the decks : That then finding the wind fixed in the western quarter, and blowing ftrong, and confequently their paffage to the weltward impossible, they refolved to bear away for the river of Plate : That on the 22d, they were obliged to throw overboard all the upper deck guns, and an anchor, and to take fix turns of the cable round the thip to prevent her opening : That on the 4th of April, it being calm but a very high fea, the fhip rolled fo much.

much, that the main-maît came by the board, and in a few hours after the loft, in like manner. her fore-maft and her mizen-maft; and that, to accumulate their misfortunes, they were foon obliged to cut away their bowfprit, to diminish, if poffible, the leakage at her head : That by this time he had loft two hundred and fifty men. by hunger and fatigues; for those who were capable of working at the pumps, (at which every. officer, without exception, took his turn) were allowed only an punce and half of bifcuit per diene; and those who were to fick for to weak, that they could not affiit in this neceffary labour, had no more than an ounce of wheat; fo. that it was common for the men to fall down dead at the pumps : That, including the Officers, they could only muster from eighty to a hundred perfons capable of duty :. That the South West winds, blew so fresh, after they had loft their mafins, that they could not immediately fet up jury mails, but were obliged to drive like a wreck, between the latitudes of 22 and 28, till the 24th of April, when they made the coaft of Brazil at Rio de Patas, ten leagues to the fouthward of the Island of St. Catherine's : that here they came to an anchor, and that the Cap+ rain was very defirous of proceeding to St. Catherine's if poffible, in order to fave the hull of the fhip, and the guns and ftores on board her/; but the crew infantly left off pumping, and being enraged at the hardships they had fuffered. and the numbers they had loft, (there being at that time no lefs than thirty dead bodies lying *). . . . t

on the deck) they all with one voice cried out on *fhore*, on *fhore*, and obliged the Captain to run the faip in directly for the land, where, the 5th day after, fhe funk with her ftores, and all her furniture on board her, but the remainder of the crew, whom hunger and fatigue had fpared, to the number of four hundred, got fafe on fhore.

From this account of the adventures and catastrophe of the Guipuscoa, we may form forme conjecture of the manner, in which the Hermiona was loft, and of the diffrest endured by the three remaining fhips of the fquadron, which got into the river of Plate. These last being in great want of mafts, yards, rigging, and all kind of naval ftores, and having no fupply at Buccos Ayres, nor in any other of their fettlements, Pizarro difpatched an advice boat with a letter of credit to Rio Janeiro, to purchase what was wanting from the Portugneles He, at the fame time, fent an express across the continent to San Jago in Chili, to be thence forwarded to the Viceroy of Peru, informing him of the difafters that had befallen his fquadron, and defiring a remittance of 200,000 dollars from the royal chefts at Lima, to enable him to victual and refit his remaining fhips, that he might be again in a condition to attempt the pallage to the South-Seas, as foon as the featon of the year fhould be more favourable. It is mentioned by the Spaniards as a most extraordinary circumstance, that the Indian charged with this express (though it was then the depth of whiter, when the Cordilleras are effectied impaffable on account 111 D 2 of

of the fnow) was only thirteen days in his journey from Buenos Ayres to St. Jago in Chili; though these places are distant three hundred Spanish leagues, near forty of which are amongst the shows and precipices of the Cordilleras.

The return to this dispatch of *Pizarro's* from the Viceroy of *Peru* was no ways favourable; inftead of 200,000 dollars, the furn demanded, the Viceroy remitted him only 100,000, telling him, that it was with great difficulty he was able to procure him even that : Though the inhabitants at *Lima*, who confidered the presence of *Pizarro* as absolutely necessary to their fecurity, were much discontented at this procedure, and did not fail to affert, that it way not the want of money, but the interested views of some of the Viceroy's confidents, that prevented *Pizarro* from having the whole some had asked for.

The advice-boat fent to Rio Janeiro alfo executed her commission, but imperfectly; for though the brought back a confiderable quantity of pitch, tar and cordage, yet the could not procure either masts or yards : And, as an additional misfortune, Pizarro was difappointed of fome mafts he expected from Paraguay; for a carpenter, whom he entrusted with a large fum of money, and had fent there to cut mafts, inflead of profecuting the bulinefs he was employed in, had married in the country, and refuted to return. "However, by removing the mafts of the Efperanza into the Afra, and making use of what spare masts and yards they had on board, they made a thift to refit the Afia and the .

the St. Eftevan. And in the October following, Pizarro was preparing to put to fea with these two fhips, in order to attempt the paffage round Cape Horn a fecond time ; but the St. Estevan, in coming, down the river Plate, ran on a fhoal, and beat off her rudder, on which, and other damages fhe received, fhe was condemned and broke up, and Pizarro in the Afia proceeded to fea without her. Having now the fummer before him, and the winds favourable, no doubt was made of his having a fortunate and fpeedy paffage; but being off Cape Horn, and going right before the wind in very moderate weather, though in a fwelling fea, by fome mifconduct of the officer of the watch the fhip rolled away her masts, and was a second time obliged to put back to the river of Plate in great diffrefs.

The Afia having confiderably fuffered in this second unfortunate expedition, the Esperanza, which had been left behind at Monte Vedio, was ordered to be refitted, the command of her being given to Mindinuetta, who was Captain of the Guipuscoa, when she was lost. He, in the November of the fucceeding year, that is, in November 1742, failed from the river of Plate for the South-Seas, and arrived fafe on the coaft of Chili; where his Commodore Pizarro paffing over land from Buenos Ayres met him. There were great animolities and contests between these two Gentlemen at their meeting, oceasioned principally by the claim of Pizarro, to command the Esperanza, which Mindinuetta had brought round : For Mindinuetta refused to deliver

D 3

liver her up to him; infifting, that as he came into the South-Seas alone, and under no fuperior, it was not now in the power of Pizarro to refume that authority, which he had once parted with. However, the Prefident of Chili interpofing, and declaring for Pizarro, Mindinuetta, after a long and obfinate ftruggle, was obliged to fubmit.

But Pizarro had not yet compleated the feries of his adventures; for when he and Mindinuetta came back by land from Chili to Buenos Ayres, in the year 1745, they found at Monte Vedio the Afia, which near three years before they had left there. This ship they resolved, if posfible, to carry to Europe, and with this view they refitted her in the belt manner they could : But their great difficulty was to procure a fufficient number of hands to navigate her, for all the remaining failors of the fquadron to be met with in the neighbourhood of Buenos Ayres, did not amount to a hundred men. They endeavoured to supply this defect by preffing many of the inhabitants of Buenos Ayres, and putting on board belides all the English prisoners then in their cuftody, together with a number of Portuguese imugglers, which they had taken at different times, and fome of the Indians of the country. Among these last there was a Chief and ten of his followers, which had been furprized by a party of Spanifb foldiers about three months before. The name of this Chief was Orellana, he belonged to a very powerful Tribe, which had committed great ravages in the neighbourhood

ırod hood of Buenas Arres. With this motly crew (all of them, except the European Spaniards, extremely averie to the voyage) Bizarro fer fail from Monte Vedia in the river of Plate, about the beginning of November 1745, and the nativo Spaniards being no ftrangers to the diffatisfaction of their forced men, treated both thofe, the English prisoners and the Indians, with great infolence and barbarity; but more particularly the Indians, for it was common for the meaneft officers in the ship to beat them most cruelly on the flighteft pretences, and oftentimes only to exert their fuperiority. Orellana and his followers, though in appearance fufficiently patient. and fubmiffive, meditated a feyere revenge for all these inhumanities. As he conversed very well in Spanish, (these Indians having in time of peace a good intercourse with Buenos Ayres) he affected to talk with fuch of the English as underftood that language, and feemed very defirous of being informed how many Englishmen there were on board, and which they were. As he knew that the English were as much enemies to the Spaniards as himfelf, he had doubtlefs an incention of difclofing his purpose to them, and making them partners in the feheme he had projected for revenging his wrongs, and recovering. his liberty; but having founded them at a diftance, and not finding them fo precipitate and vindictive as he expected; he proceeded no further with them, but refeived to trust alone to the refolution of his ten faithful followers. Thefe, it should feem, readily engaged to ob-D 4 ferve

ferve his directions, and to execute whatever commands he gave them; and having agreed on the measures necessary to be taken, they first furnished themselves with Dutch knives sharp at the point, which being the common knives used in the fhip, they found no difficulty in procuring : Befides this, they employed their leifure in fecretly cutting out thongs from raw hides, of which there were great numbers on board, and in fixing to each end of these thongs the doubleheaded that of the fmall quarter-deck guns; this, when fwung round their heads, according to the practice of their country, was a most mifchievous weapon, in the use of which the Indians about Buenos Avres are trained from their infancy. and confequently are extremely expert. Thefe: particulars being in good forwardness, the execution of their scheme was perhaps precipitated by a particular outrage committed on Orellana himfelf. For one of the Officers, who was a very brutal fellow, ordered Orellana aloft, which being what he was incapable of performing, the Officer, under pretence of his difobedience, beat him with fuch violence, that he left him bleed ing on the deck, and flupified for fome time with his bruifes and wounds. This ulage undoubtedly heightened his thirst for revenge, and made him eager and impatient, till the means of executing it were in his power; fo that within a day or two after this incident, he and his followers opened their defperate refolves in the enfuing manner bedlug dur ... at to an our Abb.r. where in I put out the lights, and . . It was about nine in the evening, when many. of the principal Officers were on the quarterdeck, indulging in the freshness of the night. air; the wafte of the thip was filled with live. cattle, and the forecastle was manned with its. customary watch. Orellana and his companions. under cover of the night, having prepared their weapons, and thrown off their trouzers and the more cumbrous part of their drefs, came all together on the quarter-deck, and drew towards the door of the great cabbin. The Boatfwain immediately reprimanded them, and ordered them to be gone. On this Orellana fpoke to his followers in his native language, when four of them drew off, two towards each gangway, and the Chief and the fix remaining Indians feemed. to be flowly quitting the quarter-deck. When the detached Indians had taken poffession of the gangway, Orellana placed his hands hollow to his mouth, and bellowed out the war-cry used by those favages, which is faid to be the harshest and most terrifying found known in nature. This hideous yell was the fignal for beginning the maffacre For on this they all drew their knives, and brandifhed their prepared double-headed fhot, and the fix with their Chief, which remained on the quarter-deck, immediately fell on the Spaniards, who were intermingled with them, and laid near forty of them at their feet, of which above twenty were killed on the fpot, and the reft difabled. Many of the Officers, in the beginning of the tumult, pushed into the great cabbin, where they put out the lights, and barricadoed

ricadoed the door. And of the others, who had avoided the first fury of the Indians, fome endeavoured to escape along the gangways into the forecastle, but the Indians, placed there on purpose, stabbed the greatest part of them, as they attempted to pais by, or forced them off the gangways into the walte. Others threw themfelves voluntary over the barricadoes into the wafte, and thought themfelves happy to lie concealed amongst the cattles, but the greatest part escaped up the main shrouds, and sheltered themfelves either in the tops or rigging. And tho' the Indians attacked only the quarter-deck. yet the watch in the forecaftle finding their communication cut off, and being terrified by the wounds of the few, who not being killed on the fpot, had ftrength fufficient to force their passage along the gangways, and not knowing either who their enemies were, or what were their numbers. they likewife gave all over for loft, and in great confusion ran up into the rigging of the foremaft and bowfprit. ... hand one and so line

Thus these eleven Indians, with a resolution perhaps without example, possessed themselves almost in an instant of the quarter-deck of a ship mounting fixty-fix guns, with a crew of near five hundred men, and continued in peaceable possessed the possessed of this post a confiderable time. For the Officers in the great cabbin, (amongst whom were *Pizarro* and *Mindinuetta*) the crew between decks, and those who had escaped into the tops and rigging, were only anxious for their own fafety, and were for a long time incapable

sapable of forming any project for fupprelling the infurrection, and recovering the possession of the fhip. It is true, the yells of the Indians, the groans of the wounded, and the confused clamours of the crew, all heightened by the obfcurity of the night, had at first greatly magnified their danger, and had filled them with the imaginary terrors, which darknefs, diforder, and an ignorance of the real ftrength of an enemy never fail to produce. For as the Spaniards were fenfible of the difaffection of their preit hands. and were also confcious of their barbarity to their prifoners, they imagined, the confpiracy was general, and confidered their own deftruction as infallible; fo that, it is faid; fome of them had once taken the refolution of leaping into the fea, but were prevented by their companions. I and the second of the second

However, when the Indians had entirely cleared the quarter-deck, the tumult in a great meafure fublided; for thofe, who had efcaped, were kept filent by their fears, and the Indians were incapable of purfuing them to renew the diforder. Orellana, when he faw himfelf mafter of the quarter-deck, broke open the erm-cheft, which, on a flight fufpicion of mutiny, had been ordered there a few days before, as to a place of the greateft fecurity. Here he took it for granted, he fhould find cutlafles fufficient for himfelf and his companions, in the ufe of which weapon they were all extremely fkilful, and with thefe, it was imagined, they propofed to have forced the great cabbin : But on opening

opening the cheft, there appeared nothing but fire-arms, which to them were of no use. There were indeed cutlaffes in the cheft, but they were hid by the fire-arms being laid over them. This was a fenfible difappointment to them, and by this time Pizarro and his companions in the great cabbin were capable of conversing aloud, through the cabbin windows and port-holes, with those in the gun-room and between decks, and from hence they learnt, that the English (whom they principally fufpected) were all fafe below, and had not-intermeddled in this mutiny; and by other particulars they at last discovered; that none were concerned in it but Orellana and his people. On this Pizarro and the Officers refolved to attack them on the quarter-deck, before any of the difcontented on board fhould for far recover their fift furprize, as to reflect on the facility and certainty of feizing the fhip by a junction with the Indians in the prefent emergency. With this view Pizarro got together what arms were in the cabbin and distributed them to those who were with him : But there were no other fire-arms to be met with but piftols, and for these they had neither powder nor ball. However, having now fettled a correspondence with the gun-room, they lowered down a bucket out of the cabbin-window, into which the gunner, out of one of the gun-room ports, put a quantity of piftol cartridges. When they had thus procurechammunition, and had loaded their piftols, they fet the cabbin-door partly open, and fired fome that amongst the Indians on the quar-10 terut

ter-deck, at first without effect. But at last Mindinuetta, whom we have often mentioned, had the good fortune to shoot Orellana dead on the spots on which his faithful companions abandoning all thoughts of farther resistance, instantly leaped into the sea, where they every man perished. Thus was this insurrection quelled, and the possession of the quarter-deck regained, after it had been full two hours in the power of this great and daring Chief, and his gallant and unhappy countrymen.

Pizarro having escaped this imminent peril steered for Europe, and arrived lafe on the coast of Galicia in the beginning of the year 1746, after having been abfent between four and five years, and having, by his attendance on our expedition, diminished the naval power of Spain by above three thousand hands, (the flower of their failors) and by four confiderable thips of war and a Patache. For we have feen, that the Hermiona foundred at fea; the Guipuscoa was stranded, and funk on the coast of Brazil; the St. Eftevan was condemned, and broke up in the river of Plate; and the Esperanza being left in the South-Seas, is doubtlefs by this time incapable of returning to Spain! So that the Afia only, with lefs than one hundred hands, may be confidered as all the remains of that fquadron, with which Pizzaro first put to fea! And whoever attends to the very large proportion, which this fquadron bore to the whole navy of Spain, will, I believe, confeis, that had our undertaking been attended with no other advantages than that of ruin-

(46.))

raining fo great a part of the fea-force of fo dangerous an enemy, this alone would be a fufficient equivalent for our equipment, and an incontestible proof of the fervice, which the Nation has thence received. Having thus concluded this fummary of *Pizarro's* adventures, I shall now return again to the narration of our own tranfactions.

From Madera to St. Catherine's.

I HAVE already mentioned, that on the 3d of November we weighed from Madera, after orders had been given to the Captains to rendezvous at St. Jago, one of the Cape de Verd Islands, in cafe the fquadron was feparated. But the next day, when we were got to fea, the Commodore confidering that the feafon was far advanced, and that touching at St. Jago would create a new delay, he for this reafon thought proper to alter his rendezvous, and to appoint the island of St. Catherine's, on the coast of Brazil, to be the first place to which the ships of the fquadron were to repair in cafe of feparation.

In our paffage to the Ifland of St. Catherine's. we found the direction of the trade-winds to differ confiderably from what we had reason to expect, both from the general histories given of thefe winds, and the experience of former Navigators. For the learned Dr. Halley, in his account of the trade winds, which take place in the Ethiopic and Atlantic Ocean, tells us, that from the latitude of 28° N, to the latitude of 10° N, there is generally a fresh gale of N. E. wind, which towards the African fide rarely comes to the eaftward of E. N. E, or paffes to the northward of N. N. E : But on the American fide, the wind is fomewhat more easterly, though most commonly even there it is a point or two to the northward of the East : That

That from 10° N. to 4° N, the calms and tornadoes take place; and from 4? N. to 30° S, the winds are generally and perpetually between the South and the Eaft. This account we expected to have verified by our own experience; but we found confiderable variations from it, both in respect to the steadiness of the winds, and the quarter from whence they blew. For though we met with a N. E. wind about the latitude of 28° N. yet from the latitude of 25° to the latitude of 18° N, the wind was never once to the northward of the East, but on the contrary, almost conftantly to the fouthward of it. However, from thence to the latitude of 6° : 20' N, we had it ufually to the northward of the Eaft, though not entirely, it having for a fhort time changed to E. S. E. From hence, to about 4° 46' N, the weather was very unfettled; fometimes the wind was N. E. then changed to S. E, and fometimes we had a dead calm, attended with fmall rain and lightning. After this, the wind continued almost inavariably between the S. and E. to the latitude of 7° : 30' S; and then again as invariably between the N. and E, to the latitude of 15°: 30 S; then E. and S. E, to 21°: 37 S. But after this, even to the latitude of 27° : 44'S, the wind was never once between the S. and the E, though we had it at times in all the other quarters of the compais. But this last circum-stance may be in fome measure accounted for, from our approach to the main continent of the Brazils. I mention not these particulars with a view of cavilling at the received accounts of these trade-winds, which I doubt not are in general

f

neral fufficiently accurate; but I thought it a matter worthy of public notice, that fuch deviations from the eftablished rules do sometimes take place. This observation may not only be of fervice to Navigators, by putting them on their guard against these hitherto unexpected irregularities, but may perhaps contribute to the folution of that great question about the causes of trade-winds, and monsons, a question, which, in my opinion, has not been hitherto discussed with that clearness and accuracy, which its importance (whether it be considered as a naval or philosophical inquiry) seems to demand.

On the 16th of November, one of our Victuallers made a fignal to fpeak with the Commodore, and we shortened fail for her to come up with its. The Mafter came on board, and acquainted Mr. Anfon, that he had complied with the terms of his charter-party, and defired to be unloaded and difmiffed. Mr. Anfon, on confulting the Captains of the fquadron, found all the fhips had still fuch quantities of provision between their decks, and were withal fo deep, that they could not without great difficulty take in their feveral proportions of brandy from the Industry Pink, one of the Victuallers only : And confequently he was obliged to continue the other of them, the Anna Pink, in the fervice of attending the Iqua-And the next day the Commodore made dron. a fignal for the ships to bring to, and to take on board their fhares of the brandy from the Industry Pink; and in this, the long-boats of the fquadron were employed the three following days, that is, till the 19th in the evening, when the

the *Pink* being unloaded, fhe parted company with us, being bound for *Barbadoes*, there to take in a freight for *England*. Most of the Officers of the fquadron took the opportunity of writing to their friends at home by this fhip; but fhe was afterwards, as I have been fince informed, unhappily taken by the *Spaniards*.

On the 20th of November, the Captains of the fquadron reprefented to the Commodore, that their fhips companies were very fickly, and that it was their own opinion as well as their furgeons, that it would tend to the prefervation of the mento let in more air between decks; but that their fhips were fo deep, they could not poffibly open their lower ports. On this reprefentation, the Commodore ordered fix air fcuttles to be cut in each fhip, in fuch places where they would leaft weaken it.

And on this occasion I cannot but observe, how much it is the duty of all those, who either by office or authority, have any influence in the direction of our naval affairs, to attend to this important article, the prefervation of the lives and health of our feamen. If it could be fuppofed, that the motives of humanity were infufficient for this purpose, yet policy; and a regard to the fuccels of our arms, and the intereft and honour of each particular Commander, should naturally lead us to a careful and impartial examination of every probable method proposed for maintaining a ship's crew in health and vigour. But hath this been always done ? Have the late invented plain and obvious methods of keeping our fhips fweet and clean;

clean, by a constant supply of fresh air, been confidered with that candour and temper, which the great benefits promifed hereby ought naturally to have infpired ? On the contrary, have not these falutary schemes been often treated with neglect and contempt ? And have not fome of those who have been entrusted with experimenting their effects, been guilty of the most indefenfible partiality, in the accounts they have given of these trials ? Indeed, it must be confeffed, that many diftinguished perfons, both in the direction and command of our fleets, have exerted themfelves on these occasions with a judicious and difpaffionate examination, becoming the interesting nature of the inquiry; but the wonder is, that any could be found irrational enough to act a contrary part, in defpight of the ftrongest dictates of prudence and humanity. must however own, that I do not believe this conduct to have arifen from motives fo favage, as the first reflection thereon does naturally fuggeft: But I rather impute it to an obftinate, and in fome degree, fuperflitious attachment to fuch practices as have been long established, and to a fettled contempt and hatred of all kinds of innovations, efpecially fuch as are projected by landmen and perfons refiding on fhore. But let us return from this, I hope not, impertinent digreffion.

We croffed the equinoctial with a fine fresh gale at S. E. on Friday the 28th of November, at four in the morning, being then in the longitude of 27° :: 59 W. from London. And on the 2d of December, in the morning, we faw a fail in the N. W.

E 2

N. W. quarter, and made the Gloucefter's and Tryal's fignals to chafe; and half an hour after, we let our reefs and chafed with the fquadron ; and about noon a fignal was made for the Wager to take our remaining Victualler, the Anna Pink, in tow. But at feven in the evening, finding we did not near the chace, and that the Wager was very far a-stern, we shortened fail, and made a fignal for the cruifers to join the foundron. The next day but one we again difcovered a fail. which, on a nearer approach, we judged to be the fame veffel. We chafed her the whole day, and though we rather gained upon her, yet night came on before we could overtake her, and obliged us to give over the chace, to collect our fcattered fquadron. We were much chagrined at the elcape of this veffel, as we then apprehended ther to be an advice-boat fent from Old Spain to Buenos Ayres, with notice of our expedition. But we have fince learnt, that we were deceived, in, this conjecture, and that it was our East-India Company's Packet bound to St. Helengenst partauona t. TT alt

On the 10th of December, being by our accounts in the latitude of 20° S, and 36° : 30 longitude Weft from London, the Tryal fired a gun to denote foundings. We immediately founded, and found fixty fathom water, the bottom coarfe ground with broken shells. The Tryal being a head of us, had at one time thirtyfeven sathom, which alterwards increased to 90: And then the found no bottom, which happened to us too at our second trial, though we founded with

with a hundred and fifty fathom of line. This is the fhoal which is laid down in most charts by the name of the Abrollos; and it appeared we were upon the very edge of it; perhaps farther in, it may be extremely dangerous. We were then, by our different accounts, from ninety to fixty leagues East of the coast of Brazil. The next day but one we fpoke with a Portugueze Brigantine from Rio Janeiro, bound to Babia det todos Santos, who informed us, that we were thirty-four leagues from Cape St. Thomas, and forty leagues from Cape Frio, which last bore from us W. S. W. By our accounts we were near eighty leagues from Cape Frie; and tho', on the information of this Brigantine, we altered our courfe, and stood more to the fouthward, yet by our coming in with the land afterwards, we were fully convinced that our reckohing was much correcter than our Portugueze intelligence. We found a confiderable current ferring to the fouthward, "after we had paffed the latitude of 16° S. And the fame took place all along the coalt of Brazil, and even to the fourhward of the river of Plate, it amounting fometimes to thirty miles in twenty four hours, and once to above forty miles. " Is shouthi and ni zamo

If this current is occasioned (as it is most probable) by the running off of the water, accuriulated on the coast of Brazil by the constant sweeping of the eastern trade wind tover the *Ethiopic* Ocean, then it is most natural for suppole, that its general course is determined by the bearings of the adjacent more. Perhaps too, in bearings of the adjacent more. Perhaps too, in almost almost every other instance of currents, the same may hold true, as I believe no examples occur of confiderable currents being observed at any great distance from land. If this then could be laid down for a general principle, it would be always easy to correct the reckoning by the observed latitude. But it were much to be wished, for the general interests of navigation, that the actual fettings of the different currents which are known to take place in various parts of the world, were examined more frequently and accurately than hitherto appears to have been done.

We now began to grow impatient for a fight of land, both for the recovery of our fick, and for the refreshment and security of those who as yet continued healthier. When we departed from St. Helens, we were in fo good a condition, that we loft but two men on board the Centurion, in our long paffage to Madera. But in this prefent run between Madera and St. Catherine's we have been very fickly, fo that many died, and great numbers were confined to their hammocks, both in our own ship and in the rest of the squadron, and feveral of these past all hopes of recovery. The diforders they in general labour under are fuch as are common to the hot climates, and what most ships bound to the fouthward experience in a greater or lefs degree. Thefe are those kind of fevers, which they usually call Calentures : A difeafe, which was not only terrible in its first instance, but even the remains of it often proved fatal to those who confidered themfelves as recovered from it. For it always left

left them in a very weak and helplefs condition, and ufually afflicted with fluxes and tenafmus's. And by our continuance at fea all our complaints were every day increasing, fo that it was with great joy that we discovered the coast of *Brazil* on the 18th of *December*, at seven in the morning.

The coaft of Brazil appeared high and mountainous land, extending from the W. to W.S.W, and when we first faw it, it was about feventeen leagues diftant. At noon we perceived a low double land, bearing W.S.W. about ten leagues distant, which we took to be the Island of St. Catherine's. That afternoon and the next morning, the wind being N. N. W, we gained very little to windward, and were apprehenfive of being driven to the leeward of the Island : but a little before noon, the next day, the wind came about to the fouthward, and enabled us to fteer in between the North point of St. Catherine's, and the neighbouring Island of Alvoredo. As we food in for the land, we had regular foundings gradually decreasing, from thirty-fix to twelve fathom, all muddy ground. In this laft depth of water we let go our anchor at five o'clock in the evening of the 18th, the North West point of the Island of St, Catherine's bearing S. S. W., diftant three miles; and the Island Alvoredo N. N. E., diftant two leagues. Here we found the tide to fet S. S. E. and N. N. W, at the rate of two knots, the tide of flood coming from the fouthward. We could from our E 4 fhips Je up +

fhips observe two fortifications at a confiderable diftance within us, which feemed defigned to prevent the paffage of an enemy between the Island of St. Catherine's and the main. And we could foon perceive that our foundron had alarmed the coast, for we faw the two forts hoift their colours, and fire feveral guns, which we fuppofed to be intended for affembling the inhabitants." To prevent any confusion, the Commodore immediately fent a boat with an Officer on fhore, to compliment the Governor, and to defire a Pilot to carry us into the road. The Governor returned a very civil answer, and ordered us a Pilot. On the morning of the 20th we weighed and ftood in, and towards noon the Pilot came on board us, who, the fame afternoon, brought us to an anchor in five fathom and an half, in a large commodious bay on the continent fide, called by the French, Bon Port. In ftanding from our laft anchorage to this place, we every where found an ouzy bottom, with a depth of water first regularly decreasing to five fathom, and then increasing to seven, after which we had fix and five fathom alternately. The next morning we weighed again with the fquadron, in order to run above the two fortifications we have mentioned, which are called the caftles of Santa Cruiz and St. Juan. And now the foundings between the Island and the Main were four, five and fix fathom, with muddy ground. As we paffed by the caftle of Santa Cruiz we faluted it with eleven guns, and were answered by an A F ... equal

equal number; and at one in the afternoon, the fquadron came to an anchor in five fathom and a half, the Governor's Island bearing N.N.W. St. Juan's Caftle N. E. J. E, and the Island of St. Antonio South. In this polition we moored at the Island of St. Catherine's on Sunday the 21st of December, the whole fquadron being, as I have already mentioned, fickly, and in great want of refreshments : Both which inconveniencies we hoped to have foon removed at this fettlement, celebrated by former Navigators for its healthinefs and its provisions, and for the freedom, indulgence, and friendly affiftance there given to the fhips of all European Nations, in amity with the Crown of Portugal. · ht - c . (58)

CHAP. V.

Proceedings at St. Catherine's, and a description of the place, with a short account of Brazil.

UR first care, after having moored our fhips, was to fend our fick men on fhore, each ship being ordered by the Commodore to erect two tents for that purpole : One of them for the reception of the difeafed, and the other for the accommodation of the furgeon and his affiftants. We fent about eighty fick from the Centurion, and the other ships I believe fent nearly as many, in proportion to the number of their hands. As foon as we had performed this neceffary duty, we foraped our decks, and gave our ship a thorough cleansing; then smoked it between decks, and after all washed every part well with vinegar. These operations were extremely neceffary for correcting the noifom ftench on board, and deftroying the vermin; for from the number of our men, and the heat of the climate, both these nuisances had increased upon us to a very loathfome degree, and befides being most intolerably offensive, they were doubtlefs in fome fort productive of the fickness we had laboured under for a confiderable time, before our arrival at this Ifland.

Our next employment was wooding and watering our fquadron, caulking our fhips fides and and decks, overhaling our rigging, and fecuring our mafts against the tempefuous weather we were, in all probability, to meet with in our paffage round Cape Horn, in fo advanced and inconvenient a feafon. But before I engage in the particulars of these transactions, it will not be improper to give fome account of the prefent state of this Island of St. Catherine's, and of the neighbouring country; both as the circumstances of this place are now greatly changed from what they were in the time of former writers, and as these changes laid us under many more difficulties and perplexities than we had reafon to expect, or than other Britif fhips, hereafter bound to the South-Seas, may perhaps think it prudent to struggle with.

5. S

ł

This Island is effected by the natives to be no where above two leagues in breadth, though about nine in length ; it lies in 49° : 45' of Weft longitude from London, and extends from the South latitude of 27°: 35', to that of 28°. Although it be of a confiderable height, yet it is fcarce difcernible at the diftance of ten leagues. being then obscured under the continent of Brazil, whofe mountains are exceeding high but on a nearer approach it is eafy to be difti guifhed, and may be readily known by a number of fmall Islands lying at each end, and fcattered along the East fide of it. In the late marked (Plate 1.) there is exhibited a very exact view of the N. E. end of the Island, where (a) is its N. E. point, as it appears when it bears N. W.

N. W. And (b) is the finall Island of Alvoredo; bearing N. N. W, at the diftance of 7 leagues. The best entrance to the harbour is between the point (a) and the Island of Alvoredo, where ships may pass under the guidance of their lead, without the leaft apprehensions of danger. The view of this North entrance of the harbour is reprefented in the fecond plate, where (a) is the N. W. end of St. Catherine's Ifland, (b) Parret Island, (c) a battery on St. Catherine's, and (d) a battery on a fmall Island near the continent. Frezier has given a draught of this Mand of St. Catherine's, and of the neighbouring coaft, and the minuter illes adjacent; but he has by miftake called the Island of Alvoredo the Isle de Gal, whereas the true Isle de Gal lies feven or eight miles to the North-weftward of it," and is much smaller. He has also called an Island, to the jouthward of St. Catherine's, Avoredo, and has omitted the Island Masagura; in other refpects his plan is fufficiently exact.

The North entrance of the harbour is in breadth about five miles, and the diffance from thence to the Island of St. Antonio is eight miles, and the course from the entrance to St. Antonio is S. S. W. \pm W. About the middle of the Island the harbour is contracted by two points of land the harbour is contracted by two points of land to a narrow channel, no more than a quarter of a mile broad; and to defend this paffage, a battery was erecting on the point of land on the Island field. But this feems to be a very utclefs work, as the channel has no more than two fathom

thom water, and confequently is navigable only for barks and boats, and therefore feems to be a paffage that an enemy could have no inducement to attempt, especially as the common paffage at the North end of the Island is fo broad and fafe, that no fquadron can be prevented from coming in by any of their fortifications, when the fea-breeze is made. However, the Brigadier Don Jole Sylva de Paz, the Governor of this fettlement, is efteemed an expert Engineer, and he doubtless understands one branch of his bufinefs very well, which is the advantages which new works bring to those who are entrusted with the care of creeting them : For, befides the battery mentioned above, there are three other forts carrying on for the defence of the harbour, none of which are yet complexed. The first of these, called St. Juan, is built on a point of St. Catherine's near Parrot Island; the fecond, in form of a half moon, is on the Illand of St. Antonio; and the third, which feems to be the chief, and has fome appearance of a regular fortification, is on an Island near, the continent, where the Governor refides.

The foil of the Island is truly luxuriant, producing fruits of most kinds spontaneously; and the ground is covered over with one continued forest of trees of a perpetual verdure, which from the exuberance of the foil, are to entangled with briars, thorns, and underwood, gas to form a thicket absolutely impenetrable, except by some narrow pathways which the inhabitants have made

made for their own convenience. Thefe, with a few fpots cleared for plantations along the shore facing the continent, are the only uncovered parts of the Island. The woods are extremely fragrant, from the many aromatic trees and fhrubs with which they abound; and the fruits and vegetables of all climates thrive here, almost without culture, and are to be procured in great plenty; fo that here is no want of pine-apples, peaches, grapes, oranges, lemons, citrons, melons, apricots, nor plantains. There are belides great abundance of two other productions of no fmall confideration for a feaftore, I mean onions and potatoes. The provifions of other kinds are however inferior to their vegetables : There are fmall wild cattle to be purchased, somewhat like buffaloes, but these are very indifferent food, their flefh being of a loofe contexture, and generally of a difagreeable flavour, which is probably owing to the wild calabash on which they feed. There are likewife great plenty of pheafants, but they are much inferior in tafte to those we have in England. The other provisions of the place are monkeys, parrots, and fish of various forts, which abound in the harbour, and are all exceeding good, and are eafily catched, for there are a great number of fmall fandy bays very convenient for haling the Seyne.

The water both on the Island and the oppofite continent is excellent, and preferves at fea as well as that of the *Thames*. For after it has been ith

as

p,

been in the cafk a day or two it begins to purge itfelf, and ftinks most intolerably, and is foon covered over with a green fcum : But this, in a few days, fublides to the bottom, and leaves the water as clear as chrystal, and perfectly fweet. The French (who, during their South-Sea trade in Queen Anne's reign first brought this place into repute) usually wooded and watered in Bon Port, on the continent fide, where they likewife anchored with great fafety in fix fathom water ; and this is doubtlefs the most commodious road for fuch ships as intend to make only a short ftay. But we watered on the St. Catherine's fide, at a plantation opposite to the Island of St. Antonio.

These are the advantages of this Island of St. Catherine's; but there are many inconveniencies attending it, partly from its climate, but more from its new regulations, and the late form of government established there. With regard to the climate, it must be remembred; that the woods and hills which furround the harbour. prevent a free circulation of the air. And the vigorous vegetation which constantly takes place there, furnishes such a prodigious quantity of vapour, that all the night and a great part of the morning a thick fog covers the whole country, and continues till either the fun gathers ftrength to diffipate it, or it is difperfed by a brifk feabreeze. This renders the place close and humid, and probably occasioned the many fevers and fluxes we were there afflicted with. To -15 .10 thefe

these exceptions I must not omit to add, that all the day we were pestered with great numbers of muscatos, which are not much unlike the gnats in *England*, but more venemous in their stings. And at sun-set, when the muscatos retired, they were succeeded by an infinity of fandflies, which, though scarce differnible to the naked eye, make a mighty buzzing, and wherever they bite raise a small bump in the flesh, which is soon attended with a painful itching, like that arising from the bite of an *English* harvest bug.

But as the only light in which this place deferves our confideration, is its favourable fituation for fupplying and refreshing our cruifers intended for the *South-Seas*: In this view its greateft inconveniencies remain still to be related; and to do this more distinctly, it will not be amifs to confider the changes which it has lately undergone, both in its inhabitants, its police, and its governor.

In the time of *Frezier* and *Shelvocke*, this place ferved only as a retreat to vagabonds and outlaws, who fled thither from all parts of *Brazil*. They didindeed acknowledge a fubjection to the Crown of *Portugal*, and had a perfon among them whom they called their Captain, who was confidered in fome fort as their Governor : But both their allegiance to their King, and their obedience to their Captain, feemed to be little more than verbal. For as they had plenty of provisions but no money, they were in a condition to fupport themfelves without the affiftance of any neighbouring fettlements, and had not amongft them the means of tempthat

le-

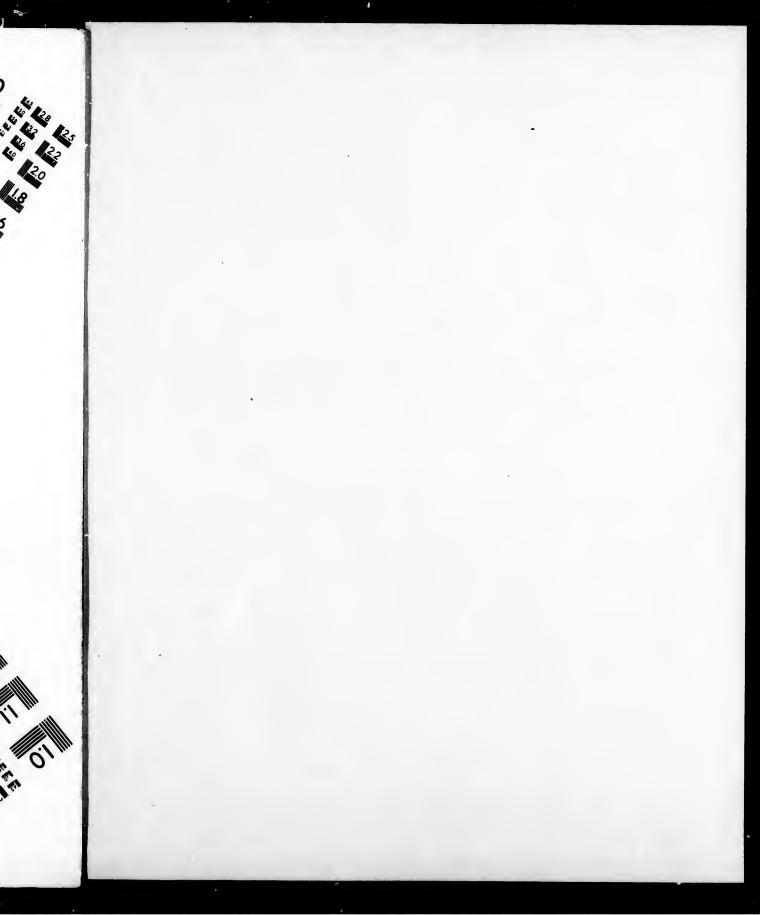

of

t-

ing any adjacent Governor to bufy his authority about them. In this fituation they were extremely hospitable and friendly to fuch foreign fhips as came amongst them. For these ships wanted only provisions, of which the natives had great ftore; and the natives wanting clothes, (for they often defpifed money, and refused to take it) which the flips furnished them with in exchange for their provisions, both fides found their account in this traffic; and their Captain or Governor had neither power nor interest to restrain it or to tax it. But of late (for reasons which fhall be hereafter mentioned) these honest vagabonds have been obliged to receive amongst them a new colony, and to fubmit to new laws and government. Inftead of their former ragged bare legged Captain (whom however they took care to keepinnocent) they have now the honour to be governed by Don Jole Sylva de Paz, a Brigadier of the armies of Portugal. This Gentleman has with him a garrifon of folders, and has confequently a more extensive and better supported power than any of his predeceffors, and as he wears better clothes, and lives more fplendidly, and has befides a much better, knowledge of the importance of money than they could ever pretend to; So he puts in practice certain methods of procuring, it, with which they were utterly unacquainted. But it may be much doubted, if then inhabitants confider, there methods as tending to promote either their interests, or that of their Sovereign the King of Portugal. This is certain, that his behaviour cannot but be extremely 12, 1

tremely embarrassing to fuch British thips as touch there in their way to the South-Seas. For one of his practices was placing centinels at all the avenues, to prevent the people from felling us any refreshments, except at such exorbitant rates as we could not afford to give. His pretence for this extraordinary ftretch of power was, that he was obliged to preferve their provisions for upwards of an hundred families, which they daily expected to reinforce their colony. Hence he appears to be no novice in his profession, by his readinefs at inventing a plaufible pretence for his interested management. However, this, though fufficiently provoking, was far from being the most exceptionable part of his conduct. For by the neighbourhood of the river Plate, a confiderable fmuggling traffic is carried on between the Portuguese and the Spaniards, especially in the exchanging gold for filver, by which both Princes are defrauded of their fifths, and in this prohibited commerce Don Jole was fo deeply engaged, that in order to ingratiate himfelf with his Spanifs correspondents (for no other reason can be given for his procedure) he treacherously dispatched an express to Buenos Ayres in the river of Plate. where Pizarro then lay, with an account of our arrival,' and of the ftrength of our fquadron; particularly the number of ships, guns and men, and every circumftance which he could fuppofe our enemy defirous of being acquainted with. And the fame perfidy every British cruizer may expect, who touches at St. Catherine's, while it is under the Government of Don Jole Sylva de Paz. Thus

touch or one ll the ng us t rates etence , that is for daily ce he by his or his lough ig the or by nsideen the n the rinces orohiaged, panis given tched Plate. f our ron; men, ppofe with. may eit is Paz. Thus

Thus much, with what we shall be necessitiated to relate in the course of our own proceedings may suffice as to the present state of St. Catherine's, and the character of its Governor. But as the reader may be defirous of knowing to what causes the late new modelling of this settlement is owing; to fatisfy him in this particular, it will be necessary to give a short account of the adjacent continent of *Brazil*, and of the wonderful difcoveries which have been made there within this last forty years, which, from a country of but mean estimation, has rendered it now perhaps the most tonsiderable colony on the face of the globe.

This country was first discovered by Americus Vesputio a Florentine, who had the good fortune to be honoured with giving his name to the immenfe continent, fome time before found out by Columbus : He being in the fervice of the Portuguese, it was fettled and planted by that Nation, and with the other dominions of *Portugal*, devolved to the Crown of Spain, when that Kingdom became fubject to it. During the long war between Spain and the State of Holland, the Dutch poffeffed themfelves of the northermost part of Brazil, and were masters of it for some years. But when the Portuguese revolted from the Spanish Government, this country took part in the revolt, and foon repossed themselves of the places the Dutch had taken; fince which time it has continued without interruption under the Crown of Portugal, being, till the beginning of the prefent century, only productive of fugar, and tobacco, and a few other commodities of very little account. F 2 But

But this country, which for many years was only confidered for the produce of its plantations. has been lately difcovered to abound with the two minerals, which mankind hold in the greatest efteem, and which they exert their utmost art and industry in acquiring, I mean, gold and diamonds. Gold was first found in the mountains, which lie adjacent to the city of Rio 7aneiro. The occasion of its discovery is variously related, but the most common account is, that the Indians, lying on the back of the Portuguese fettlements, were observed by the foldiers emp'oyed in an expedition against them to make use of this metal for their fish hooks; and their manner of procuring it being enquired into, it appeared that great quantities of it were annually washed from the hills, and left amongst the fand and gravel, which remained in the vallies after the running off, or evaporation of the water. It is now little more than forty years fince any quantities of gold worth notice have been imported to Europe from Brazil; but fince that time the annual imports from thence have been continually augmented by the difcovery of places in other provinces, where it is to be met with as plentifully as at first about Rio Janeiro. And it is now faid, that there is a finall flender vein of it fpread through all the country, at about twenty-four feet from the furface, but that this vein is too thin and poor to answer the expence of digging; whowever where the rivers or rains have had any courfe for a confiderable time, there gold is always to be collected, the water having leparated the me-

d

at ...

tal from the earth, and deposited it in the fands, thereby faving the expences of digging: So that it is efteemed an infallible gain to be able to divert a stream from its channel, and to ranfack its bed. From this account of gathering this metal, it fhould follow, that there are properly no gold mines in Brazil; and this the Governor of Rio Grande (who being at St. Catherine's, frequently vifited Mr. Anfon) did most confidently affirm, affuring us, that the gold was all collected either from rivers, or from the beds of torrents after floods. It is indeed afferted, that in the mountains, large rocks are found abounding with this metal; and I myfelf have feen the fragment of one of these rocks with a confiderable lump of gold intangled in it; but even in this cafe, the workmen break off the rocks, and do not properly mine into them; and the great expence in fubfifting among these mountains, and afterwards in feparating the metal from the ftone, makes this method of procuring gold to be but rarely put in practice.

The examining the bottoms of rivers, and the gullies of torrents, and the washing the gold found therein from the fand and dirt, with which it is always mixed, are works performed by flaves, who are principally Negroes, kept in great numbers by the *Portuguese* for these purposes. The regulation of the duty of these flaves is fingular : For they are each of them obliged to furnish their master with the eighth part of an ounce of gold *per diem*, and if they are either fo fortunate **qr** industrious as to collect a greater quantity, the

F 3

fur-

furplus is confidered as their own property, and they have the liberty of difpofing of it as they think fit. So that it is faid fome Negroes who have accidentally fallen upon rich washing places have themfelves purchased flaves, and have lived afterwards in great splendor, their original master having no other demand on them than the daily supply of the forementioned eighth; which as the *Portuguese* ounce is somewhat lighter than our troy ounce, may amount to about nine shillings fterling.

The quantity of gold thus collected in the Brazils, and returned annually to Libon, may be in some degree estimated from the amount of the King's fifth. This hath of late been efteemed one year with another to be one hundred and fifty arroves of 221. Portuguese weight, each of which, at 41, the troy ounce, makes very near 300,0001. fterling and confequently the capital, of which this is the fifth, is about a million and a half fterling. And the annual return of gold to Lifbon cannot be lefs than this, though it be difficult to determine how much it exceeds it; perhaps we may not be very much miftaken in our conjecture, if we fuppole, the gold exchanged for filver with the Spaniards at Buenos Ayres, and what is brought privily to Europe, and efcapes the duty, amounts to near half a million more, which will make the whole annual produce of the Brafilian gold near two millions fterling; a prodigious fum to be found in a country, which a few years fince was not known to furnish a single grain.

I havo

I have already mentioned, that befides gold, this country does likewife produce diamonds. The discovery of these valuable stones is much more recent than that of gold, it being as yet fcarce twenty years fince the first were brought to Europe. They are found in the fame manner as the gold, in the gullies of torrents and beds of rivers, but only in particular places, and not fo univerfally fpread through the country. They were often found in washing the gold before they were known to be diamonds, and were confequently thrown away with the fand and gravel feparated from it. And it is very well remembered, that numbers of very large ftones, which would have made the fortunes of the poffeffors, have paffed unregarded through the hands of thofe, who now with impatience fupport the mortifying reflection. However, about twenty years fince, a perfon acquainted with the appearance of rough diamonds, conceived that thefe pebbles, as they were then efteemed, were of the fame kind: But it is faid, that there was a confiderable interval between the first starting of this opinion, and the confirmation of it by proper trials and examination, it proving difficult to perfuade the inhabitants, that what they had been long accustomed to despise, could be of the importance represented by the difcovery; and I have been informed, that in this interval, a Governor of one of their places procured a good number of these stones, which he pretended to make use of at cards to mark with, in-F 4 ftead

(71)

and ney vho ces red lter ily as our ngs the nay t of ned ifty ich, ol.this ng. : be ine t'be upthe ght ints ake old ita

nce

avo

(72)

ftead of counters. But to proceed: It was at laft confirmed by fkilful Jewellers in Europe, confulted on this occafion, that the ftones thus found in Brazil were truly diamonds, many of which were not inferiour either in luftre, or any other quality to those of the East-Indies. On this determination the Portuguese, in the neighbourhood of those places where they had first been observed, set themselves to search for them with great affiduity. And they were not without great hopes of discovering confiderable masses of them, as they found large rocks of chrystal in many of the mountains, from whence the streams came which washed down the diamonds.

But it was foon reprefented to the King of Portugal, that if fuch plenty of diamonds should be met with as their fanguine conjectures feemed to indicate, this would fo debafe their value, and diminish their estimation, that besides ruining all the Europeans, who had any quantity of Indian diamonds in their poffession, it would render the difcovery itself of no importance, and would prevent his Majefty from receiving any advantages from it. And on these confiderations his Majefty has thought proper to reftrain the general fearch of diamonds, and has erected a Diamond Company for that purpole, with an exclusive charter. This Company, in confideration of a fum paid by them to the King, have the property of all diamonds found in Brazil: But to hinder, their collecting too large quanti-" ties, and thereby debafing their value, they are : 4 pros at

prohibited from employing above eight hundred flaves in fearching after them. And to prevent any of his other fubjects from acting the fame part, and likewife to fecure the Company from being defrauded by the interfering of interlopers in their trade, he has depopulated a large town, and a confiderable diffrict round it, and has obliged the inhabitants, who are faid to amount to fix thoufand, to remove to another part of the country; for this town being in the neighbourhood of the diamonds, it was thought impoffible to prevent fuch a number of people, who were on the fpot, from frequently finuggling.

In confequence of these important discoveries in Brazil, new laws, new governments, and new regulations have been established in many parts of the country. For not long fince, a confiderable tract, possessed by a fet of inhabitants, who from their principal fettlement were called Paulists, was almost independent of the Crown of Portugal, to which they fcarcely acknowledged more than a nominal allegiance. These are faid to be descendants of those Portuguele, who retired from the northern part of Brazil, when it was invaded and poffeffed by the Dutch. And being for a long time neglected and obliged to provide for their own fecurity and defence, the necessity of their affairs produced a kind of government amongit them, which they found fufficient for the confined manner of life to which they were inured. And + theretherefore rejecting and defpifing the authority and mandate of the Court of Lifbon, they were often engaged in a state of downright rebellion : And the mountains furrounding their country; and the difficulty of clearing the few passages that open into it, generally put it in their power to make their own terms before they fubmitted. But as gold was found to abound in this country of the Paulists, the prefent King of Portugal (during whole reign almost the whole difcoveries I have mentioned were begun and compleated) thought it incumbent on him to reduce this province, which now became of great confequence, to the fame dependency and obedience with the reft of the country, which, I am told, he has at last, though with great difficulty, happily effected. And the fame motives which induced his Majesty to undertake the reduction of the Paulists, has also occasioned the changes I have mentioned, to have taken place at the Island of St. Catherine's. For the Governor of Rio Grande, of whom I have already fooken, affured us, that in the neighbourhood of this Ifland there were confiderable rivers which were found to be extremely rich, and that this was the reafon that a garrifon, a military Governor, and a new colony was fettled there. And as the harbour at this Island is by much the fecureft and the most capacious of any on the coaft, it is not improbable, if the riches of the neighbourhood answer their expectation, but it may become in time the principal fettlement in Brazil.

(75)

Brazil, and the most confiderable port in all South America.

Thus much I have thought necessary to infert, in relation to the prefent state of Brazil, and of the Island of St. Catherine's. For as this last. place has been generally recommended as the. most eligible port for our cruisers to refresh at, which are bound to the South-Seas, I believed it. to be my duty to instruct my countrymen, in the hitherto unfuspected inconveniencies which. attend that place. And as the Brazilian gold and diamonds are fubjects, about which, from their novelty, very few particulars have been hitherto. published, I conceived this account I had collected of them, would appear to the reader to be neither a trifling nor a useless digression. These subjects being thus dispatched, I shall now return to the feries of our own proceedings.

When we first arrived at St. Catherine's, we were employed in refreshing our fick on shore, in wooding and watering the fquadron, cleanfing our fhips, and examining and fecuring our masts and rigging, as I have already observed in At the fame time the foregoing chapter. Mr. Anfon gave directions, that the ships companies should be supplied with fresh meat, and that they fhould be victualled with whole allowance of all the kinds of provision. In confequence of these orders, we had fresh beef sent on, board us continually for our daily expence, and what was wanting to make up our allowance we received from our Victualler the Anna Pink, in order

ority were lion : ntry; Tages their they ound King t the egun him he of and hich, t difmortake ioned aken r the ready hood ivers that itary here. h the the fthe ata it it-in azil.

order to preferve the provisions on board our squadron entire for our future fervice. The feafon of the year growing each day lefs favourable for our paffage round Cape Horn, Mr. Anfon was very defirous of leaving this place affoon as poffible; and we were at first in hopes that our whole bufinefs would be done, and we fhould be in a readinefs to fail in about a fortnight from our arrival : But, on examining the Tryal's mafts, we, to our no fmall vexation, found inevitable employment for twice that time. For, on a furvey, it was found that the main-maft was fprung at the upper woulding, though it was thought capable of being fecured by a couple of fishes; but the fore-mast was reported to be unfit for fervice, and thereupon the Carpenters were fent into the woods, to endeavour to find a flick proper for a fore-maft. But after a fearch of four days, they returned without having been able to meet with any tree fit for the purpofe. This obliged them to come to a fecond confultation about the old fore-mast, when it was agreed to endeavour to fecure it by cafing it with three fifnes: And in this work the Carpenters were employed, till within a day or two of our failing. In the mean time, the Commodore thinking it neceffary to have a clean veffel on our arrival in the South-Seas, ordered the Tryal to be hove down, as this would not occasion any lofs of time, but might be compleated while the Carpenters were refitting her mafts, which was done on fhore. 1

(77)

On the 27th of December we discovered a fail in the offing, and not knowing but fhe might be a Spaniard, the eighteen oared-boat was manned and armed, and fent under the command of our fecond Lieutenant, to examine her, before the arrived within the protection of the She proved to be a Portuguese Brigantine forts. from Rio Grande. And though our Officer, as it appeared on inquiry, had behaved with the utmost civility to the Master, and had refused to accept a calf, which the Master would have forced on him as a prefent: Yet the Governor took great offence at our fending our boat; and talked of it in a high ftrain, as a violation of the peace fublifting between the Crowns of Great-Britain and Portugal. We at first imputed this ridiculous bluftering to no deeper a caufe, than Don Jose's infolence; but as we found he proceeded fo far as to charge our Officer with behaving rudely, and opening letters, and particularly with an attempt to take out of the veffel. by violence, the very calf which we knew he had refused to receive as a prefent, (a circumstance which we were fatisfied the Governor was well acquainted with) we had hence reafon to fuspect, that he purposely fought this quarrel, and had more important motives for engaging in it, than the mere captious bials of his temper. What these motives were, it was not to easy for us to determine at that time; but as we afterwards found by letters, which fell into our hands in the South-Seas, that he had difpatched an exprefs

our feaable nson 1 as ' our l be om fts. ible n a was was of uners d a rch een fe. ulvas ith ers ur re ur to hy he as

n

prefs to Buenos Ayres, where Pizarro then lay, with an account of our fquadron's arrival at St. Catherine's, together with the moft ample and circumftantial intelligence of our force and condition, we thence conjectured that Don Jofe had raifed this groundlefs clamour, only to prevent our vifiting the Brigantine when the thould put to fea again, leaft we might there find proofs of his perfidious behaviour, and perhaps at the fame time difcover the fecret of his finuggling correspondence with his neighbouring Governors, and the Spaniards at Buenos Ayres. But to proceed,

It was near a month before the Tryal was refitted; for not only her lower mafts were defective, as hath been already mentioned, but her main top-mast and fore-yard were likewife decayed and rotten. While this work was carrying on, the other ships of the fquadron fixed new standing rigging, and fet up a sufficient number of preventer shrouds to each mast, to fecure them in the most effectual manner. And in order to render the ships stiffer, and to enable them to carry more fail abroad, and to prevent their labouring in hard gales of wind, each Captain had orders given him to ftrike down fome of their great guns into the hold. These precautions being complied with, and each thip having taken in as much wood and water as there was room for, the Tryal was at last compleated, and the whole fquadron was ready for the fea: On which the tents on fhore were ftruck, and all the n lay, val at ample te and n *fofe* o prefhould proofs at the ggling Gover-But

as redefec= ut her ife decarry-1 fixed fficient aft, to And enable revent h Caph fome brecauhaving re was d, and a: On ind all the the fick were received on board. And here we had a melancholy proof how much the healthinefs of this place had been over-rated by former writers, for we found that though the Centurion alone had buried no lefs than twenty-eight men fince our arrival, yet the number of her fick was in the fame interval increased from eighty to ninety-fix. And now our crews being embarked, and every thing prepared for our departure, the Commodore made a fignal for all Captains, and delivered them their orders, containing the fucceffive places of rendezvous from hence to the coaft of China. And then, on the next day, being the 18th of January, the fignal was made for weighing, and the fquadron put to fea, leaving without regret this Island of St. Catherine's; where we had been fo extremely difappointed in our refreshments, in our accommodations, and in the humane and friendly offices which we had been taught to expect in a place, which hath been fo much celebrated for its hofpitality, freedom, and conveniency.

1.193 Link and Link bellin - on A and aken is a strate of the work of the states of com to: " This while a first it complete a set a in doute will be and a children CHAP.

CHAP. VI.

The run from St. Catherine's to port St. Julian, with fome account of that port, and of the country to the fouthward of the river of *Plate*.

T N leaving St. Catherine's, we left the laft ami-L cable port we proposed to touch at, and were now proceeding to an hoftile, or at beft, a defart and inhospitable coaft. And as we were to expect a more boifterous climate to the fouthward than any we had yet experienced, not only our danger of feparation would by this means be much greater than it had been hitherto, but other accidents of a more pernicious nature were likewife to be apprehended, and as much as poffible to be provided againft. And therefore Mr. Anfon, in appointing the various stations at which the fhips of the fquadron were to rendezyous, had confidered, that it was poffible his own fhip might be difabled from getting round Cape Horn, or might be loft, and had given proper directions, that even in that cafe the expedition should not be abandoned. For the orders delivered to the Captains, the day before we failed from St. Catherine's, were, that in cafe of feparation, which they were with the utmost care to endeavour to avoid, the first place of rendezvous should be the bay of port St. Julian; defcribing the place from Sir John Narborough's

borough's account of it : There they were to fupply themfelves with as much falt as they could take in, both for their own use, and for the use of the squadron; and is, after a stay there of ten days, they were not joined by the Commodore, they were then to proceed through Streights le Maire round Cape Horn, into the South-Seas, where the next place of rendezvous was to be the Island of Nostra Senora del Socoro, in the latitude of 45° South, and longitude from the Lizard 71°: 12' West. They were to bring this Island to bear E. N. E, and to cruife from five to twelve leagues diftance from it, as long as their ftore of wood and water would permit, both which they were to expend with the utmoit frugality. And when they were under an abfolute neceffity of a fresh fupply; they were to ftand in, and endeavour to find out an anchoring place; and in cafe they could not, and the weather made it dangerous to fupply their fhips by ftanding off and on, they were then to make the best of their way to the Island of Juan Fernandes, in the latitude of 33°: 37' South. And as foon as they had there recruited their wood and water, they were to continue cruiling off the anchoring place of that Island for fifty-fix days; in which time, if they were not joined by the Commodore, they might conclude that fome accident had befallen him, and they were forthwith to put themfelves under the command of the fenior Officer, who was to use his utmost endeavours to annoy the enemy both by fea and That with these views their new Comland. modore 3.

modore was to continue in those feas as long as his provisions lasted, or as long as they were recruited by what he should take from the enemy, referving only a sufficient quantity to carry him and the ships under his command to Macao, at the entrance of the river Tigris near Canton on the coast of China, where having supplied himfelf with a new stock of provisions, he was thence, without delay, to make the best of his way to England. And as it was found impossible as yet to unload our Victueller the Anna Pink, the Commodore gave the Master of her the fame rendezvous, and the fame orders to put-himself under the command of the remaining senior Officer.

Under these orders the squadron failed from St. Catherine's, on Sunday the 18th of January, as hath been already mentioned in the preceding chapter. The next day we had very foually weather, attended with rain, lightning and thunder, but it foon became fair again with light breezes, and continued thus till Wednefday evening, when it blew fresh again; and encreafing all night, by eight the next morning it became a most violent ftorm, and we had with it fo thick a fog, that it was impossible to fee at the diftance of two ships length; fo that the whole fquadron difappeared. On this, a fignal was made, by firing guns, to bring to with the larboard tacks, the wind being then due Eaft. We ourfelves immediately handed the topfails, bunted the main-fail, and lay to under a reefed mizen till noon, when the fog difperfed, and we we foon difcovered all the fhips of the fquadron except the *Pearl*, who did not join us till near a month afterwards. The *Tryal* Sloop was a great way to neeward, having loft her main-maft in this fquall, and having been obliged, for fear of bilging, to cut away the raft. We bore down with the fquadron to her relief, and the *Gloucefter* was ordered to take her in tow, for the weather did not entirely abate till the day after, and even then, a great fwell continued from the eaftward, in confequence of the preceding ftorm.

After this accident we ftood to the fouthward with little interruption, and here we experienced the fame fetting of the current, which we had obferved before our arrival at St. Catherine's; that is, we generally found ourfelves to the fouthward of our reckoning, by about twenty miles each day. This error continued, with a little variation, till we had paffed the latitude of the river of *Plate*; and even then, we found that the fame current, however difficult to be accounted for, did yet undoubtedly take place; for we were not fatisfied in deducing it from the error in our reckoning, but we actually tried it more than once, when a calm made it practicable.

When we had paffed the latitude of the river of *Plate*, we had foundings all along the coaft of *Patagonia*. Thele foundings, when well afcertained, being of great use in determining the position of the ship, and we having tried them more frequently, in greater depths, and with more attention, than I believe had been done G_2 before

z as reny, nim , at on imwas his offiink, ame nfelf nior rom y, as ding ually and with efday reaft beth it e at t the gnal h the Eaft. fails, efed

and

we

before us. I shall recite our observations as fuccinctly as I can, referring to the chart hereafter inferted in the ninth chapter of this book, for a general view of the whole. In the latitude of 36°: 52' we had fixty fathom of water, with a bottom of fine black and grey fand; from thence, to 20°: 55', we varied our depths from fifty to eighty fathom, though we had conftantly the fame bottom as before; between the laft mentioned latitude, and 43°: 16', we had only fine grey fand, with the fame variation of depths, except that we once or twice leffened our water to forty fathom. After this, we continued in forty fathom for about half a degree, having a bottom of coarfe fand and broken shells, at which time we were, in fight of land, and not above feven leagues from it : As we edged from the land we met with variety of foundings; firft black fand, then muddy, and foon after rough ground with stones; but then encreasing our water to forty-eight fathom, we had a muddy bottom to the latitude of 46° : 10'. We then returned again in thirty-fix fathom, and kept fhoaling our water, till at length we came into twelve fathom, having conftantly fmall ftones and pebbles at the bottom. Part of this time we had a view of Cape Blanco, which lies in about the latitude of 46° : 52', and longitude Weft from London 66° : 43'. This is the most remarkable land upon the coaft : Two very exact views of it are exhibited in the third plate, where (b) represents the Cape itself; these draughts will fully enable future Voyagers to diffinguish īt.

fucfter or a : of with rom rom antlaft only oths, rater d in 1g 2 , at - not rom firft ough our iddy then kept into ones e we bout Weft t rexact here ghts uifh ït.

(85)

it. Steering from hence S. by E. nearly, we, in a run of about thirty leagues, deepened our water to fifty fathom, without once altering the bottom; and then drawing towards the shore with a S. W. courfe, varying rather to the westward, we had every where a fandy bottom, till our coming into thirty fathom, where we had again a fight of land diffant from us, about eight leagues, lying in the latitude of 48° : 31'. We made this land on the 17th of February, and at five in the afternoon we came to an anchor upon the fame bottom, in the latitude of 48° : 58', the fouthermost land "then in view bearing S.S.W, the northermost N. 2 E, a fmall Island N. W. and the weftermost hummock W. S. W. In this station we found the tide to fet S. by W; and weighing again at five the next morning, we, an hour afterwards, discovered a fail, upon which the Severn and Gloucester were both directed to give chace; but we foon perceived it to be the Pearl; which feparated from us a few days after we left St. Catherine's, and on this we made a fignal for the Severn to rejoin the foundron, leaving the Gloucester alone in the pursuit. And now we were furprized to fee, that on the Gloucefter's approach, the people on board the Pearl increased their fail, and ftood from her. However, the Gloucester came up with them, but found them with their hammocks in their nettings, and every thing ready for an engagement. At two in the afternoon the Pearl joined us, and running up under our stern, Lieutenant Salt hailed the Commodore, and acquainted him G 3 that

that Captain Kidd died on the 21st of January. He likewise informed him, that he had seen five large fhips the 10th inftant, which he for fome time imagined to be our fquadron : That he fuffered the commanding fhip, which wore a red. broad pennant, exactly refembling that of the Commodore, at the main top-maft head, to come within gun-fhot of him before he difcovered his mistake; but then finding it not to be the Centurion, he haled close upon the wind, and crowded from them with all his fail, and ftanding crofs a ripling, where they hefitated to follow him, he happily efcaped. He made them to be five Spanifs men of war, one of them exceedingly like the Gloucofter, which was the occafion of his apprehentions when the Gloucester chafed him. By their appearance he thought they confifted of two thips of feventy guns, two of fifty, and one of forty guns. The whole fquadron continued in chace of him all that day; but at night finding they could not get near him, they gave over the chace, and directed their courfe to the fouthward.

And now had it not been for the neceffity we were under of refitting the *Tryal*, this piece of intelligence would have prevented our making any ftay at St. *Julian's*; but as it was impoffible for that floop to proceed round the Cape in her prefent condition, fome ftay there was inevitable, and therefore the fame evening we came to an anchor again in twenty-five fathom water, the bottom a mixture of mud and fand, and the high hummock baring S. W. by W. And weighing ing at nine in the morning, we foon after fent the two Cutters belonging to the Centurion and Severn in shore, to discover the harbour of St. Julian, while the ships kept standing along the coaft, at about the diftance of a league from the land. At fix o'clock we anchored in the bay of St. Julian, in nineteen fathom, the bottom muddy ground with fand, the northermost land in fight bearing N. and by E., the fouthermost $\mathbf{S}, \mathbf{f} \mathbf{E}$, and the high hummock, to which Sir John Narborough formerly gave the name of Wood's Mount, W. S. Ward Soon after, the Cutter returned on board, having discovered the harbour, which did not appear to us in our fituation, the northermost point shutting in upon the fouthermost, and in appearance closing the entrance. To facilitate the knowledge of this coaft to future Navigators, there are two views in the 4th and 5th plates; one of the land of Patagonia, to the northward of port St. Julian, where (w) is Wood's Mount, and the bay of St. Julian lies round the point (c). The other view is of the bay itfelf; and here again (w) is Wood's Mount, (a) is Cape St. Julian, and (b) the port or river's mouth.

Being come to an anchor in this bay of St. Julian, principally with a view of refitting the Tryal, the Carpenters were immediately employed in that bufinefs, and continued fo during our whole ftay at the place. The Tryal's main-maft having been carried away about twelve feet below the cap, they contrived to make the remaining part-o: the mast ferve again; and the Wager was ordered τÇ

to fupply her with a spare main top-mast, which the Carpenters converted into a new fore-mast. And I cannot help observing, that this accident to the Tryal's maft, which gave us fo much uneafinefs at that time, on account of the delay it occafioned, was, in all probability, the meansof preferving the floop, and all her crew. For before this, her mafts, how well foever proportioned to a better climate, were much too lofty for these high southern latitudes : So that had they weathered the preceding ftorm, it would have been impossible for them to have flood against those feas and tempests we afterwards encountered in paffing round Cape Horn, and the lofs of mafts in that boifterous climate, would fcarcely have been attended with lefs than the lofs of the veffel, and of every man on board her; fince it would have been impracticable for the other thips to have given them any relief, during the continuance of those impetuous ftorms. A we be at sol

Whilft we ftayed at this place, the Commodore appointed the Honourable Captain Murray to fucceed to the Pearl, and Captain Cheap to the Wager, and he promoted Mr. Charles Saunders, his firft Lieutenant, to the command of the Tryal Sloop. But Captain Saunders lying dangeroufly ill of a fever on board the Centurion, and it being the opinion of the furgeons, that the removing him on board his own fhip, in his prefent condition, might tend to the hazard of his life; Mr. Anfon gave an order to Mr. Saumarez, firft Lieutenant of the Centurion, to aft as Mafter and Commander

(89)

mander of the Tryal, during the illness of Captain Saunders.

Here the Commodore too, in order to eafe the expedition of all unneceffary expence, held a farther confultation with his Captains about unloading and discharging the Anna Pink; but they. reprefented to him, that they were fo far from being in a condition of taking any part of her loading on board, that they had ftill great quantities of provisions in the way of their guns between decks, and that their fhips were withal fo very deep, that they were not fit for action without being cleared. This put the Commodore under a necessity of retaining the Pink in the fervice ; and as it was apprehended we should certainly meet with the Spanish foundron, in paffing the Cape, Mr. Anfon thought it adviseable to give orders to the Captains, to put all their provisions, which were in the way of their guns, on board the Anna Pink, and to remount fuch of their guns as had formerly, for the eafe of their ships, been ordered into the hold in the part of the in the

This bay of St. Julian, where we are now at anchor, being a convenient rendezvous, in cafe of feparation, for all cruifers bound to the fouthward, and the whole coaft of *Patagonia*, from the river of *Plate* to the Streights of *Magellan*, lying nearly parallel to their ulual route, a thort account of the fingularity of this country, with a particular defcription of port St. Julian, may perhaps be neither unacceptable to the curious; nor unworthy the attention of future Navigator;

some stay on this coast, in which case the knowledge of the country, its produce and inhabitants, cannot but be of the utmost confequenceto them:

To begin then with the tract of country ufually stiled Patagonia. This is the name often given to the fouthermost part of South America, which is unpoffeffed by the Spaniards, extending from their fettlements' to the Streights of Magellan. On the east fide, this country is extremely remarkable, for a peculiarity not to be paralleled in any other known part of the globe; for though the whole territory to the northward of the river of Plate is full of wood, and ftored with immenfe quantities of large timber trees, yet to the fouthward of the river no trees of any kind are to be met with, except a few peachtrees, first planted and cultivated by the Spaniards in the neighbourhood of Buenos Ayres: So that on the whole eastern coast of Patagonia, extending near four hundred leagues in length, and reaching as far back as any difcoveries have yet been made, no other wood has been found than a few infignificant fhrubs. Sir John Narborough in particular, who was fent out, by King Charles: the Second, expressly to examine this country, and the Streights of Magellan, and who, in purfuance of his orders, wintered upon this coaft in port St. Julian and port Defire, in the year 1670; Sir John Narborough, I fay, tells us, that he never faw a flick of wood in the country,

he v. country, large enough to make the handle of an hatchet.

But though this country be fo defititute of wood, it abounds with pasture. For the land appears in general to be made up of downs of a light dry gravelly foil, and produces great quantities of long coarle grafs, which grows in tufts interfperfed with large barren fpots of gravel between them. This grafs, in many places, feeds immense herds of cattle : For the Spaniards at Buenos Aynes, having brought over a few black cattle from Europe at their first settlement, they have thriven prodigiously by the plenty of herbage which they found here, and are now encreafed, to that degree, and are extended to far into the country, that they are not confidered as private property; but many thousands at a time are flaughtered every year by the Hunters, only, for their hides and tallow. The manner of killing these cattle, being a practice peculiar to that. part of the world, merits a more circumstantial. The Hunters employed on this defcription. occasion being all of them mounted on horfeback, (and both the Spaniards and Indians in that part of the world are usually most mexcellent horfemen) they arm themfelves with a kind of a fpear, which, at its end, instead of a blade fixed in the fame line with the wood in the ufual manner, has its blade fixed across; with this inftrument they ride at a beaft, and furround him. The Hunter that comes behind him hamftrings him; and as after this operation the beaft foon tumbles, without being able to raife himfelf again, they

18

they leave him on the ground, and purfue others." whom they ferve in the fame manner. Sometimes there is a fecond party, who attend the Hunters, to fkin the cattle as they fall : But it is faid, that at other times the Hunters chufe to let them languish in torment till the next day, from an opinion that the anguish, which the animal in the mean time endures, may burft the lymphaticks, and thereby facilitate the feparation of the fkin from the carcafs : And though their Priefts have loudly condemned this most barbarous practice, and have gone fo far, if my memory does not fail me, as to excommunicate those who follow it, yet all their efforts to putan entire ftop to it have hitherto proved in1 المرور في قدم المن الم الم الما الم الما الم effectual.

Befides the numbers of cattle which are every year flaughtered for their hides and tallow, in the manner already described, it is often neceffary for the purposes of agriculture, and likewife with other views, to take them alive, and without wounding them : This is performed with a most wonderful and almost incredible dexterity, and principally by the use of a machine, which the English, who have refided at Buenos Ayres, generally denominate a lash. It is made of a thong of feveral fathoms in length, and very ftrong, with a running noofe at one end of it: This the Hunters (who in this cafe are alfo mounted on horfeback) take in their right hands, it being first properly coiled up, and having its end opposite to the noole fastened to the faddle; and thus prepared they ride at a herd

herd of cattle. When they arrive within a certain diftance of a beaft, they throw their thong at him with fuch exactness, that they never fail of fixing the noofe about his horns. The beaft, when he finds himfelf entangled, generally runs, but the horfe, being fwifter, attends him, and prevents the thong from being too much ftrained, till a fecond Hunter, who follows the game, throws another noole about one of its hind legs; and this being done, both horfes (they being trained for this purpose) instantly turn different ways, in order to ftrain the two thongs in contrary directions, on which the beaft, by their oppofite pulls, is prefently overthrown, and then he hor'es ftop, keeping the thongs ftill upon the ftretch : Being thus on the ground, and incapable of refiftance, (for he is extended between the two horfes) the Hunters alight, and fecure him in fuch a manner, that they afterwards eafily convey him to whatever place they pleafe. In the fame manner they noofe horfes, and, as it is faid, even tygers; and however ftrange this laft circumftance may appear, there are not wanting perfons of credit who affert it. Indeed, it must be owned, that the address both of the Spaniards and Indians in that part of the world, in the use of this lash or noofe, and the certainty with which they throw it, and fix it on any intended part of the beaft at a confiderable diftance, are matters only to be believed, from the repeated and concurrent teftimony of all who have frequented that country, and might reafonably be queftioned, did it rely on a fingle report, or had

ers. nethe tit to ay, mithe ion ieir army' ate' put. in1 1 14 ery in nekeind néd ble naat It th, end are zht ind to : a

erd

(94)

had it been ever contradicted or denied by any one who had refided at Buenos Ayres.

The cattle which are killed in the manner I have already observed, are flaughtered only for their hides and tallow, to which fometimes are added their tongues, and the reft of their flefh is left to putrify, or to be devoured by the birds and wild beafts; but the greatest part of this carion falls to the fhare of the wild dogs, of which there are immense numbers to be found in that country. They are supposed to have been originally produced by Spanish dogs from Buenos Ayres, who, allured by the great quantity of carion, and the facility they had by that means of fublifting, left their Mafters, and rane wild amongst the cattle; for they are plainly of the breed of the European dogs, an animal not originally found in America. But though thefe dogs are faid to be fome thousands in a company, they hitherto neither diminish nor prevent the increase of the cattle, not daring to attack them, by reason of the numbers which constantly feed together, but contenting themfelves with the carion left them by the Hunters, and perhaps now and then with a few ftragglers, who, by accidents, are feparated from the herd they belong to.

Befides, the wild cattle which have fpread themfelves in fuch vaft herds from Buenos Ayres towards the fouthward, the fame country is in like manner furnifhed with horfes. These too were first brought from Spain, and are also prodigiously increased, and run wild to a much greater distance than the black cattle : And though

(95)

any

er I for are flefh oirds this ; of und ave rom tity eans wild the orihefe ny, the em, eed the aps acong ead vres in too roich Ind \mathbf{gh}

though many of them are excellent, yet their number makes them of very little value; the best of them being often fold, in a country where money is plenty and commodities very dear, for not more than a dollar a-piece. It is not as yet certain how far to the fouthward thefe herds of wild cattle and hories have extended themfelves; but there is fome reafon to conjecture, that ftragglers of both kinds are to be met with very near the Streights of Magellan; and they will in time doubtless fill the fouthern part of this Continent with their breed, which cannot fail of proving of confiderable advantages to fuch fhips as may touch upon the coaft; for the horfes themfelves are faid to be very good eating, and as fuch, to be preferred by fome of the Indians even before the black cattle. But whatever plenty of this kind may be hereafter found here, there is one material refreshment which this eastern fide of Patagonia feems to be very defective in, and that is fresh water; for the land being generally of a nitrous and faline nature, the ponds and streams are frequently brackish. However, as good water has been found there, though in fmall quantities, it is not improbable, but on a further fearch, this inconvenience may be removed.

Befides the cattle and horfes which I have mentioned, there are in all parts of this country a good number of Vicunnas or Peruvian fheep; but thefe, by reafon of their flyness and swiftness, are killed with difficulty. On the eastern coast too, there abounds immense quantities of feals, feals, and a vaft variety of fea-fowl, amongft which the most remarkable are the *Penguins*; they are in fize and shape like a goofe, but inftead of wings they have short stumps like fins, which are of no use to them except in the water; their bills are narrow, like that of an *Albitrofs*, and they stand and walk in an erect posture. From this, and their white bellies, Sir John *Narborougb* has whimfically likened them to little children standing up in white aprons.

The inhabitants of this eaftern coaft (to which I have all along hitherto confined my relation) appear to be but few, and have rarely been feen more than two or three at a time, by any ships that have touched here. We, during our ftay at the port of St. Julian, faw none. However, towards Buenos Ayres they are fufficiently numerous, and oftentimes very troublefome to the Spaniards; but there the greater breadth and variety of the country, and a milder climate, yield them a better protection; for in that place the Continent is between three and four hundred leagues in breadth, whereas at port St. Julian it is little more than a hundred : So that I conceive the fame Indians, that frequent the western coast of Patagonia and the Streights of Magellan, often ramble to this fide. As the In lians near Buenos Ayres exceed these southern Indians in number. fo they greatly furpais them in activity and fpirit, and feem in their manners to be nearly allied to those gallant Chilian Indians, who have long fet the whole Spanifb power at defiance, have often ravaged their country, and remain

main to this hour independent. For the Indians about Buenos Ayres have learnt to be excellent horfemen, and are extremely expert in the management of all cutting weapons, though ignorant of the ufe of fire arms, which the Spaniards are very folicitous to keep out of their hands. And of the vigour and refolution of thefe Indians, the behaviour of Orellana and his followers, whom we have formerly mentioned, is a memorable inftance. Indeed were we disposed to aim at the utter subversion of the Spanish power in America, no means seem more produce to effect it, than due encouragement and affistance given to these Indians and those of Chili.

Thus much may fuffice in relation to the eastern coalt of Patagonia. The western coast is of lefs extent; and by reafon of the Andes which fkirt it, and fretch quite down to the water, is a very rocky and dangerous fhore. However, I shall be hereafter necessitated to make further mention of it, and therefore thall not enlarge thereon at this time, but shall conclude this account with a fhort description of the harbour of St. Julian, the general form of which may be conceived from the fketch in the 6th plate. But it must be remembered, that the bar which is there marked at the entrance, is often shifting and has many holes in it. The tide flows here N. and S, and at full and change, rifes four fathom.

We, on our first arrival here, fent an Officer on shore to the falt-pond, marked (D) in the plan, in order to procure a quantity of falt for H the

the use of the squadron, Sir John Narborough having observed, when he was here, that the falt produced in that place was very white and good, and that in Feburary there was enough of it to fill a thousand ships; but our Officer returned with a fample which was very bad, and he told us, that even of this there was but little to be got; I suppose the weather had been more rainy than ordinary, and had destroyed it. To give the reader a better idea of this port, and of the adjacent country, to which the whole coast I have described bears a great resemblance, I have inferted two very accurate views, (which may be feen in the 7th and Sth. Plates) one of them reprefenting the appearance of the country, when looking up the river the other, being a view taken from the fame fpot, but the observer is now supposed to turn round opposite to his formetfiniation, and confequently this is a repre--feotation of the appearance of the country down the river betwixt the flation of the observer. and the river's month. unit to the and the state

, tog od of sine Lo saw systems. To and se HE Tryal being hearly refitted, which was our principal occupation at this bay of St. Julian, and the fole occasion of our stay, the Commodore thought it necessary, as we were now directly bound for the South-Seas and the enemy's coafts, to regulate the plan of his future operations: And therefore, on the 24th of February, a fignal was made for all Captains, and a Council of war was field on board the Centurion, at which were opresent the Honourable Edward Legg, Captain Matthew Mitchel, the Honourable George Murray, Captain David Cheap. together with Colonel Mordaunt Cracherode, Commander of the land forces. MAt this Council Mr. Anfon proposed, that their first attempt after their arrival in the South-Seas, should be the attack of the town and harbour of Baldivia, the principal frontier of the district of Chili; Mr. Anfon informing them, at the fame time, that it was an article contained in his Majefty's inftruc tions to him, to endeavour to fecure fome port in the South-Seas, where the fhips of the fquadron might be careened and refitted. To this proposition made by the Commodore, the Council unanimoully and readily agreed ; and in confequence of this refolution, new instructions were H 2 given

given to the Captains of the fquadron, by which, though they were still directed, in cafe of feparation, to make the best of their way to the Mand of Nuestra Senora del Socoro, yet (notwithftanding the orders they had formerly given them at St. Catherine's) they were to cruize off that Island only ten days; from whence, if not joined by the Commodore; they were to proceed, and cruize off the harbour of Baldivia; making the land between the latitudes of 40%, and 40° : 30% and taking care to keep to the fouthward of the port 3 and, if in fourteen days they were not joined by the reft of the fquadron, they were then to quit this station, and to direct their course to the Island of Juan Fernandes, after which they were to regulate their further proceedings by their former orders. The fame directions were allo given to the Mafter of the Anna Pink, and he was particularly instructed to be very careful in anfwering the fignals made by any thip of the fquadron, and likewife to deftroy his papers and orders, if he fhould be fo unfortunate, as to fall into the hands of the enemy. And as the feparation of the fquadron might prove of the utmost prejudice to his Majesty's fervice, each Captain was ordered to give it in charge to the refpective Officers of the watch, not to keep their thip at a greater distance from the Centurion than two miles, as they would answer it at their peril ; and if any Captain fhould find his thip beyond the diftance specified, he was to acquaint the Commodore with the name of the Officer. who had thus neglected his duty. and he to comp . These necessary regulations being established; and the Tryal Sloop compleated, the foundron weighed on Friday the 27th of February, at feven in the morning, and flood to the fea; the Gloscefter indeed found a difficulty in purchasing her anchor, and was left a confiderable way a-ftern, fo that in the night we fired feveral guns as a fignal to her Captain to make fail, but he did not come up to us till the next morning, when we found that they had been obliged to cut their cable, and leave their best bower behind them. At ten in the morning, the day after our departure, Wood's Mount, the highland over St. Fulian, bore from us N. by W. diftant ten leagues, and we had fifty two fathom of water. And now standing to the fouthward, we had great expectation of falling in with Pizarro's fquadron; for, during our flay at port St. Julian, there had generally been hard gales between the W. N. W. and S. W; fo that we had reafon to conclude the Spaniards had gained no ground upon us in that interval. And it was the profpect of meeting with them, that had occasioned our Commodore to be fo very folicitous to prevent the feparation of our fhips: For had we been 'folely intent on getting round Cape Horn in the fhorteft time, the propered method for this purpole would have been, to have ordered each thip to have made the beft of her way to the rendezvous, without waiting for the reft of rooth O at dordw From our departure from St. Julian to the 4th of March, we had little wind, with thick hazy weather, and fome rain; and our foundings 6.5 H 3 were

132669

were generally from forty to fifty fathom, with a bottom of black and grey fand, fometimes intermixed with pebble frones. On the 4th of March we were in fight of Cape Virgin Mary, and not more than fix or feven leagues diftant from it This is the northern cape of the Streights of Magellan, it lies in the latitude of 52º : 21' South, and longitude from London 719: 44 West, and feems to be a low flat land ending in a point. And for a direction to fuch fhips as may, by particular reafons, be induced hereafter to pais through those Streights into the South-Seas, there is in the oth plate a very accurate draught of its appearance, where (a) reprefents the Cape itfelfyd Off this Cape our depth of water was from thirty five to forty-eight fa-bright and clear, with fmall breezes of wind, inclinable to a calm, and most of the Captains took the opportunity of this favourable weather to pay a wifit to the Commodore; but while they were in company together, they were all greatly-alarmed by a fudden flame, which burft out on board the Gloucester, and which was fucceeded by a cloud of moak. However, they were foon relieved from their apprehenfions, by receiving information, that the blaft was occafioned by a fpark of fire from the forge, lighting on fome gunpowder and other combustibles. which an Officer on board was preparing for ule, in cafe we should fall in with the Spanifb fleet; and that it had been extinguished, without any damage to the fhip.

We

"We here found what was colltantly verified by all our observations in these high latitudes, that fair weather was always of an exceeding fort duration, and that when it was remarkably fine, it was a certain prefage of a fucceeding ftorm, for the calm and funfhine of our afternoon ended in a most turbulent night, the wind frefaning from the S. W. as the night came on, and encreasing its violence continually till nine in the morning the next day, when it blew to hard, that we were obliged to bring to with the fquadron, and to continue under a reefed mizen till eleven as night, having in that time from fortythree) to fifty-feven fathom water, with black fand and gravel; and by an observation we had at incongi we concluded at current had fet us twelve miles to the fouthward of our reckoning. Towards midnight, the wind abating, we made fail again ; and fleering South, we discovered in the morning for the first time the land, called Terra del Fuego, firetching from the S. by W, to the S. E. E. This indeed afforded us but a very uncomfortable prospect, it appearing of a ftupendous height, eovered every where with fnow. And though the dreariness of this fcene can be but imperfectly reprefented by any Drawing, yet the tenth plate contains for exact a delineation of the form of the country, that it may greatly affift the reader in framing fome ide of this uncouth and rugged coaft. In this Drawing (a) is the opening of Streights Le Maire, (b) Cape St. Diego, (1) (2) (3) the three hills, H A als os als called

called the three brothers, and (4) Montegorda. an highland which, lies up in the country, and appears, over the three brothers. We fleered along this thore all day, having foundings from forty to fifty fathom, with ftones and gravel. And as we intended to pais through Streights Le Maire next day, we lay to at night, that we might not overfhoot them, and took this oppor. tunity to prepare ourfelves for the rempestuous climate we were foon to be engaged in ; with which view, we employed ourfelves good part of the night in bending an entire new fuit of fails to the yards. At four the next morning, being the 7th of March, we made fail, and at eight faw the land; and foon after, we began to open the Streights, at which time Cape St. James bore from us E. S. E. Cape St. Vincent S. E. E. the middlemost of the three brothers S. and by W, Montegorda South, and Cape St. Bartholomew, which is the fouthermost point of Statenland, E. S. E. The appearance of the Streights in this fituation, is represented in the eleventh plate, where (a) is part of Staten-land, (b) Cape St. Bartbolomew, (c) part of Terra del Fuego, (d) port Maurice, and (e) supposed to be Valentine's bay, or the bay of good fuccefs. And here I must observe, that Frezier has given us a very correct prospect of the part of Terra del Fuego, which borders on the Streights but has omitted that of Staten-land, which forms the oppolite shore : Hence we found it difficult to determine exactly where the Streights lay, till they . 11 . 1 1 4

they began to open to our view; and for want of this, if we had not happened to have coafted a confiderable way along thore, we might have miffed the Streights, and have got to the eaftward of Staten-land before we knew it. This is an accident that has happened to many fhips, particularly, as Frezier mentions, to the Incarnation and Concord; who intending to pass through Streights Le Maire, were deceived by three hills on Staten land like the three brothers, and fome creeks refembling those of Terra del Fuego, and thereby over-fhot the Streights. To prevent thefe accidents for the future, there is added, in the 12th Plate, the West prospect of Staten-land, where (a) is Cape St. Diego, on Terra del Fuego, (b) Cape St. Bartbolomew, on Staten land. This Drawing will hereafter render it impossible for any ships to be deceived in the manner abovementioned, or to find any difficulty in diffinguishing the points of land by which the Streights are formed.

And on occasion of this prospect of Statenland here inferted, I cannot but remark, that though Terra del Fuego had an aspect extremely barren and defolate, syst this Island of Statenland far surpassion in the wildness and horror of its aprearance: It seeming to be entirely composed of inaccessible rocks, without the least mixture of earth or mould between them. These rocks terminate in a vast number of ragged points, which spire up to a prodigious height, and are all of them covered with everlasting fnow; the points themselves are on every fide surrounded with frightful precipices, and often overhang in a most most altonishing manner; and the hills which bear them, are generally separated from each other by narrow clefts, which appear as if the country had been rent by carthquakes is for thefe chafmsnare nearly perpendicular, wand extend through the fubftance of the main rocksy almost to their very bottoms So that nothing ean be imagin'd more favage and gloomy, than the whole afpect of this coaft. o But to proceed at out nedw. and have above mentioned, that on the 7th of March, oin the morning, we opened Streights Le Maire, and foon after, or about ten o'clock, the Pearl and the Tryal being ordered to keep a-head of the fquadron, we entered them with fair weather and a brifk gale, and were hurried through by the rapidity of the tide in about two hours, through they are between feven and eight leagues in length. As these Streights are often confidered as the boundary between the Atlantick and Pacifick Oceans, and as we prefumed we had nothing now before us but an open fea, till we arrived on those opulent coasts where all our hopes and wifnes centered, we could not help flattering ourfelves, that the greatest difficulty of our passage was now at an end, and that our most fanguine dreams were upon the point of being realifed; and hence we indulged our imaginations in those romantick schemes, which the fancied possession of the Chilian gold and Peruvian, filver might be conceived to infpire. These joyous ideas were heightened by the brightnels of the fley, and the ferenity of the weather, which was indeed most remarkably pleasing; for tho"

bas you find C H A Pad VHI to com edr From Streights Le Maire to Cape Noir. - have an angle of many of a star is , that and TTTE had fcarcely reached the fouthern V V extremity of the Streights of Le Maire, when our flattering hopes were inftantly loft in the apprehensions of immediate destruction : For before the sternmost ships of the squadron were clear of the Streights, the ferenity of the fky was fuddenly changed, and gave us all the prefages of an impending form; and immediately the wind fhifted to the fouthward, and blew in fuch violent fqualls, that we were obliged to hand our top-fails, and reef out main-fail : The tide too, which hitherto favoured us, now turned against us, and drove us to the eastward with prodigious rapidity, fo that we were in great anxiety for the Wager and the Anna Pink, the two fternmost vessels, fearing they would be dashed to pieces against the shore of Staten-land; nor were our apprehensions without foundation, for it was with the utmost difficulty they escaped. And now the whole fquadron, instead of purfuing their intended course to the S.W, were driven to the eaftward by the united force of the ftorm, and of the currents; fo that next day in the morning we found ourfelves near feven leagues to the eastward of Staten-land, which then bore from us N. W. The violence of the current, which had fer us with fo much precipitation to the caltward, together with the force and constancy of the

(109)

the westerly winds, foon taught us to confider the doubling of Cape Horn as an enterprize that might prove too mighty for our efforts, though fome amongst us had lately treated the difficulties which former voyagers were faid to have met with in this undertaking, as little better than chimerical, and had supposed them to arife rather from timidity and unskilfulness, than from the real embarraffments of the winds and feas; but we were feverely convinced, that these cenfures were rafh and ill-grounded : For the diftreffes with which we ftruggled, during the three fucceeding months, will not eafily be paralleled in the relation of any former naval expedition. This will, I doubt not, be readily allowed by those who shall carefully peruse the enfuing narration.

From the ftorm which came on before we had well got clear of Streights Le Maire, we had a continual fucceffion of fuch tempeftuous weather, as furprized the oldeft and moli experienced Mariners on board, and obliged them to confefs, that what they had hitherto called ftorms were inconfiderable gales, compared with the violence of thefe winds, which raifed fuch fhort, and at the fame time fuch mountainous waves, as greatly furpaffed in danger all feas known in any other part of the globe : And it was not without great reafon, that this unufual appearance filled us with continual terror; for had any one of thefe waves broke fairly over us, it must, in all probability, have fent us to the bottom. Nor did we escape with terror only; 1 × 1 for

112 r ont 1.1551 17. 1910 17 913 thern faire, oftin -For were v was fages y the fuch hand tide: irned with great two: ashed nor , for aped. purwere the h the gues then rent, b the y of the

(110)

for the fhip rolling inceffantly gunwale to, gave us fuch quick and violent motions, that the men were in perpetual danger of being dashed to pieces against the decks, or fides of the ship. And though we were extremely careful to fecure ourfelves from thefe thocks, by grafping fome fixed body, yet many of our people were forced from their hold; forme of whom were killed, and others greatly injured ; in particular, one of our best feamen was canted over-board and dro ned another diflocated his neck a third was thrown into the main-hold and broke his thigh, and one of our Boatfwain's Mates broke his collar-bone twice; not to mention many other accidents of the fame kind of Thefe tempefts: for dreadful in thenitelves, though unattentled by any othernunfavourable circumstance. were verirendered more michievous to us by their inequality, and the deceitful intervals which they at fometimes afforded; for though we were oftentimes abliged to die to for days together under a reefed mizen; and were fometimes reduced to lie at the mercy of the waves under our bare poles, yet now and then we ventured to make fail with our courfes double reefed and the weather proxing more tolerable, would perhaps encourage us to fet our top-fails; after which, the wind, without any previous notice, would return upon us with redoubled force, and would in an inftant tear our fails from the yards. And that no circumstance might be wanting which could aggrandize our distress, these blasts generally brought with them a great quantity of fnow and fleet, which cafed April and A set of the state

(111)

cafed our rigging, and froze our fails, thereby rendring them and our cordage brittle, and apt to fnap upon the flighteft ftrain, adding great difficulty and labour to the working of the fhip. benumbing the limbs of our people, and making them incapable of exerting themfelves with their ufual activity, and even difabling many of them. by mortifying their toes and fingers. It were indeed endless to enumerate the various difacters of different kinds which befel us grand I shall conly mention the most material, which will fifficiently evince the calamitous condition of the whole fquadron, during the course of this inavigation. It was on the 7th of March, as hath been already observed, that we passed Streights Le Maire, and were immediately afterwards driven to the eaflward by a violent from, and the force of the current which fet that way :: For the four or five fucceeding days we had hard gales of wind from the fame quarter, with a moft prodigious fwell; fo that though we ftood, during all that time, towards the S.W, yet we had no reafon to imagine. we had made any way to the weftward. In this interval we had frequent fqualls of rain and fnow. and fhipped great quantities of water; after which, for three or four days, though the feastran mountains high, yet the weather was rather more moderate : But, on the 18th, we had again frong gales of wind with extreme cold, and at midnight the main top-fail fplit, and one of the itraps of the main dead eyes broke. From hence, to the 23d, the weather was more favourable, though often intermixed with rain and fleer, and fome hard gales; but as the waves did not fubfide.

ave the hed nip. ifeing fere led, one and aird his oke any emnatnce. by hich vere uniced bare fail ther ouind, pon tant ımlize vith hich ifed

fide, the ship, by labouring in this lofty fea, was now grown fo loofe in her upper works, that the let in the water at every feam, fo that every part within board was constantly exposed to the fea-water, and fearcely any of the Officers ever lay in dry beds. Indeed it was very rare. that two nights ever parled without many of them being driven from their beds, by the delage of On the 23d, we had a most violent fterm of wind, hail, and rain, with a very great fea, and though we handed the main top-fail before the height of the foundl, yet we found the yard fprung; and foon after the foot-rope of the main-fail breaking, the main-fail itfelf folit mftantly to rags, and, in fpite of our endeavours to lave it? much the greater part of it was blown over-Board? On this, the Commodore made the fignal for the fquadron to bring to; and the ftorm at length flattening to a calm, we had an opportunity of getting down our main top-fail yard to put the Carpenters at work upon it, and of repairing our rigging; after which, having bent a new mainfail, we got under fail again with a moderate breeze; but in lefs than twenty-four hours we were attacked by another ftorm ftill more furious than the former; for it proved a perfect hurricane, and reduced us to the necessity of lying to under our bare poles. As our fhip kept the wind better than any of the reft, we were obliged, in the afternoon, to wear fhip, in order to join the Iquadron to the leeward, which otherwife we should have been in danger of lofing in the night . And as we dared not venture

any

(113)

any fail abroad, we were obliged to make use of an expedient, which answered our purpose; this was putting the helm a weather, and manning the fore-fhrouds : But tho' this method proved fuccessful for the end intended, yet in the execution of it, one of our ableft feaman was canted over-board; and notwithftanding the prodigious agitation of the waves, we perceived that he fwam very ftrong, and it was with the utmost concern that we found ourfelves incapable of affifting him; and we were the more grieved at his unhappy fate, fince we loft fight of him ftruggling with the waves, and conceived from the manner in which he fwam, that he might continue sensible, for a confiderable time longer. of the horror attending his irretrievable fituation.

Before this last mentioned storm was quite abated, we found two of our main-fhrouds and one mizen-fhroud broke, all which we knotted. and fet up immediately; and from hence we had an interval of three or four days lefs tempeftuous than ufual, but accompanied with a thick fog, in which we were obliged to fire guns almost every half hour, to keep our fquadron together. On the 21st, we were alarmed by a gun fired from the Glucester, and a fignal made by her to fpeak with the Commodore; we immediately bore down to her, and were prepared to hear of fome terrible difaster; but we were apprized of it before we joined her, for we faw that her mainyard was broke in the flings. This was a grievous misfortune to us all at this juncture ; as it was obvious

fea. rks; that ofed cers are. iem e of dece 1 of and the ng; akigs, uch On the gth of the ing hew deurs fufect lýept ere orich of-

ure

(114)

obvious it would prove an hindrance to our failing, and would detain us the longer in thefe inhospitable latitudes. But our future success and fafety was not to be promoted by repining, but by refolution and activity; and therefore, that this unlucky incident might delay us as little as poffible, the Commodore ordered feveral Carpenters to be put on board the Gloucester from the other fhips of the fquadron, in order to repair her damage with the utmost expedition. And the Captain of the Tryal complaining at the fame time, that his pumps were fo bad, and the floop made fo great a quantity of water, that he was fcarcely able to keep her free, the Commodore ordered him a pump ready fitted from his own fhip. It was very fortunate for the Glourester and the Tryal, that the weather proved more favourable this day than for many days, both before and after; fince by this means they were enabled to receive the affiftance which feemed effential to their prefervation, and which they could fcarcely have had at any other time, as it would have been extremely hazardous to have ventured a boat on board.

The next day, that is, on the 1ft of April, the weather returned again to its cuftomary biafs, the fky looked dark and gloomy, and the wind began to freshen and to blow in squalls; however, it was not yee to boisterous, as to prevent our carrying our top-fails close reefed; but its appearance was such, as plainly prognosticated that a still severer tempest was at hand: And accordingly,

(115)

cordingly, on the 3d of April, there came on a ftorm, which both in its violence and continuation (for it lasted three days) exceeded all that we had hitherto encountered. In its first onset we received a furious shock from a fea which broke upon our larboard quarter, where it flove in the quarter gallery, and rushed into the ship like a deluge; our rigging too fuffered extremely, for one of the ftraps of the main deadeyes was broke, as was also a main shroud and puttock-fhroud, fo that to eafe the ftrefs upon the mafts and fhrouds, we lowered both our main and fore-yards, and furled all our fails, and in this posture we lay to for three days, when the form fomewhat abating, we ventured to make fail under our courfes only; but even this we could not do long, for, the next day, which was the 7th, we had another gale of wind, with lightning and rain, which obliged us to lie to again all night. It was wonderful, that notwithstanding the hard weather we had endured, no extraordinary accident had happened to any of the fquadron fince the breaking of the Glone cefter's main-yard : But this wonder foon ceafed ; for at three the next morning, feveral guns were fired to leeward as fignals of diffrefs. And the Commodore making a fignal for the fquadron to bring to, we, at day-break, faw the Wager a confiderable way to leeward of any of the other ships; and we foon perceived that the had loft her mizen-mast, and main top-fail yard. We inimediately bore down to her, and found this difafter 1 2

۱ ۲

ailinand but :hat e as Carrom reion. the the t he mohis Flouoved lays, they hich hich ime, s to pril;

vind nowvent it its cated d acngly,

(116)

difaster had arifen from the badness of her iron work ; for all the chain-plates to windward had given way, upon the ship's fetching a deep roll. This proved the more unfortunate to the Wager, as her Carpenter had been on board the Gloucester ever fince the 31st of March, and the weather was now too fevere to permit him to return : Nor was the Wager the only fhip of the fquadron that had fuffered in the late tempeft; for, the next day, a fignal of diftrefs was made by the Anna Pink, and, upon speaking with the Mafter, we learnt that they had broke their fore-ftay and the gammon of the bow-fprit, and were in no fmall danger of having all the mafts come by the board; fo that we were obliged to bear away until they had made all faft, after which we haled upon a wind again.

And now, after all our folicitude, and the numerous ills of every kind, to which we had been inceffantly exposed for near forty days, we had great confolation in the flattering hopes we entertained, that our fatigues were drawing to a period, and that we should foon arrive in a more hospitable climate, where we should be amply repayed for all our past fufferings. For. towards the latter end of March, we were advanced, by our reckoning, near 10° to the weftward of the westermost point of Terra del Fuego, and this allowance being double what former Navigators have thought necessary to be taken, in order to compensate the drift of the eastern current, we efteemed ourfelves to be well advanced within the limits of the fouthern Ocean. and

(117)

and had therefore been ever fince standing to the northward with as much expedition, as the turbulence of the weather, and our frequent difassessment as a start of Ap. il, we were but a degree in latitude to the streights of Magellan; fo that we fully expected, in a very few days, to have experienced the celebrated tranquility of the Pacifick Ocean.

But these were delusions which only ferved to render our difappointment more terrible; for the next morning, between one and two, as we were flanding to the northward, and the weather, which had till then been hazy, accidentally cleared up, the Pink made a fignal for feeing land right a-head; and it being but two miles diftant, we were all under the most dreadful apprehensions of running on shore; which, had either the wind blown from its usual quarter with its wonted vigour, or had not the mcon fuddenly shone out, not a ship amongst us could poffibly have avoided : But the wind, which fome few hours before blew in fqualls from the S. W. having fortunately fhifted to W. N. W. we were enabled to ftand to the fouthward, and to clear ourfelves of this unexpected danger; fo that by noon we had gained an offing of near twenty leagues.

By the latitude of this land we fell in with, it was agreed to be a part of *Terra del Fuego*, near the fouthern outlet deferibed in *Frezier*'s Chart of the Streights of *Magellan*, and was fuppofed to be that point called by him Cape *Noir*. It was indeed most wonderful, that the

cur-

currents should have driven us to the castwardwith fuch ftrength; for the whole fquadron efteemed themfelves upwards of ten degrees more wefterly than this land, fo that in running down, by our account, about nineteen degrees of longitude, we had not really advanced above half that diftance. And now, inftead of having our labours and anxieties relieved by approaching a warmer climate and more tranquil feas, we were to fteer again to the fouthward, and were again to combat those western blasts, which had fo often terrified us; and this too, when we were weakned by our men falling fick, and dying apace, and when our fpirits, "dejected by a long" continuance at fea, and by our late difappointment, were much lefs capable of fupporting us in the various difficulties, which we could not but expect in this new undertaking. Add to all this too, the difcouragement we received by the diminution of the ftrength of the fquadron; for three days before this, we loft fight of the Severn and the Pearl in the morning; and though we fpread our fhips, and beat about for fome time, yet we never faw them more; whence we had apprehensions that they too might have fallen in with this land in the night, and by being lefs favoured by the wind and the moon than we were, might have run on fhore and have perished. Full of these dejected thoughts and gloomy prefages, we ftood away to the S. W, prepared by our late difaster to fuspect, that how large foever an allowance we made in our wefting for the drift of the eaftern current, we might ftill, upon a fecond trial, perhaps find it infufficient. Observations and directions for facilitating the passage of our future Cruisers round Cape *Horn*.

THE improper feason of the year in which L we attempted to double Cape Horn, and to which is to be imputed the difappointment (recited in the foregoing chapter) in falling in with Terra del Fuego, when we reckoned ourfelves at leaft a hundred leagues to the weftward of that whole coaft, and confequently well advanced into the Pacifick Ocean; this unfeafonable navigation, I fay, to which we were neceffitated by our too late departure from England, was the fatal fource of all the misfortunes we afterwards encountered. For from hence proceeded the feparation of our fhips, the deftruction of our people, the ruin of our project on Baldivia, and of all our other views on the Spanish places, and the reduction of our fquadron from the formidable condition in which it paffed Streights Le Maire. to a couple of fhattered half-manned cruifers and a floop, fo far difabled, that in many climates they fcarcely durft have put to fea. To prevent therefore, as much as in me lies, all fhips hereafter bound to the South-Seas from fuffering the fame calamities, I think it my duty to infert in this place, fuch directions and observations, as either my own experience and reflection, or the converse of the most skilful Navigators on board I 4 the the fquadron could furnish me with, in relation to the most eligible manner of doubling Cape *Horn*, whether in regard to the feason of the year, the course proper to be steered, or the places of refreshment both on the East and Weststide of *South-America*.

And first with regard to the proper place for refreshment on the East-fide of South-America. For this purpose the Island of St. Catherine's has been ufually recommended by former writers, and on their faith we put in there, as has been formerly mentioned : But the treatment we met with, and the fmall ftore of refreshments we could procure there, are fuff ient reasons to render all ships for the future cautious, they they truft themselves in the government of Don Jose Silva de Paz; for they may certainly depend on having their ftrength, condition and defigns betrayed to the Spaniards, as far as the knowledge, the Governor can procure of these particulars, will give leave. And as this treacherous conduct is infpired by the views of private gain, in the illicit commerce carried on to the river of Plate, rather than by any national affection which the Portuguele bear the Spaniards, the fame perfidy may perhaps be expected from most of the Governors of the Brazil coaft; fince thefe fmuggling engagements are doubtlefs very extensive and general. And though the Governors should themselves detest so faithless a procedure, yet as fhips are perpetually paffing from fome or other of the Brazil ports to the river of Plate, the Spaniards could fcarcely fail of receiving, by this

(121)

this means, cafual intelligence of any British ships upon the coast; which, however imperfect fuch intelligence might be, would prove of dangerous import to the views and interests of those cruisers who were thus discovered.

For the Spanish trade in the South-Seas running all in one track from North to South, with very little deviation to the eastward or westward, it is in the power of two or three cruifers, properly stationed in different parts of this track, to posfes themfelves of every thip that puts to fea: But this is only fo long as they can continue concealed from the neighbouring coaft; for the inftant an enemy is known to be in those feas, all navigation is ftopped, and confequently all captures are at an end; fince the Spaniards, well apprized of thefe advantages of the enemy, fend expresses along the coaft, and lay a general embargo on all their trade; a measure which they prudentially forefee, will not only prevent their veffels being taken, but will foon lay any cruifers, who have not ftrength fufficient to attempt their places, under a necessity of returning home. Hence then appears the great importance of concealing all expeditions of this kind; and hence too it follows, how extremely prejudicial that intelligence may prove, which is given by the Portuguese Governors to the Spaniards, in relation to the defigns of ships touching at the ports of Brazil.

However, notwithstanding the inconveniencies we have mentioned of touching on the coast of *Brazil*, it will oftentimes happen, that ships bound

tion ape the the eft-

for

ica has rs. en net we eney ofe on ee, s, nin bf h r-C -e d

s

bound round Cape Horn will be obliged to call there for a fupply of wood and water, and other refreshments." In this case St. Catherine's is the laft place I would recommend, both as the proper animals for a live flock at fea, as hogs, fheep and fowls cannot be procured there, (for want of which we found ourfelves greatly diftreffed, by being reduced to live almost entirely on falt. provisions) but also because from its being nearer the river of Plate than many of their other fettlements, the inducements and conveniencies of betraying us are much ftronger. The place I would recommend is Rio Janeiro, where two of our fquadron put in after they were feparated from us in paffing Cape Horn; for here, as I have been informed by one of the Gentlemen on board those ships, any quantity of hogs and poultry may be procured, and this place being more diftant from the river of Plate, the difficulty of intelligence is fomewhat inhanced, and confequently the chance of continuing there undifcovered, in fome degree augmented. Other measures, which may effectually obviate all these embarraffments, will be confidered more at large hereafter.

And now I proceed to the confideration of the proper courfe to be steered for doubling Cape *Horn.* And here, I think, I am sufficiently authorised by our own fatal experience, and by a careful comparison and examination of the journals of former Navigators, to give this piece of advice, which in prudence I think ought never

2

to be departed from : That is, that all fhips bound to the *South-Seas*, inftead of paffing through Streights *Le Maire*, fhould conftantly pafs to the eaftward of *Staten-land*, and fhould be invariably bent on running to the fouthward as far as the latitude of 61 or 62 degrees, before they endeavour to ftand to the weftward; and that when they are got into that latitude, they fhould then make fure of fufficient wefting, before they once think of fteering to the northward.

But as directions diametrically opposite to these have been formerly given by other writers, it is incumbent on me to produce my reasons for each part of this maxim. And first, as to the passing to the eastward of Staten-land. Those who have attended to the rifque we ran in passing Streights Le Maire, the danger we were in of being driven upon Staten-land by the current, when, though we happily efcaped being put on fhore, we were yet carried to the caftward of that Island ; Those who reflect on this, and on the like accidents which have happened to other fhips, will furely not effeem it prudent to pass through Streights Le Maire, and run the rifque of fhipwreck, and after all find themfelves no farther to the weftward (the only reafon hitherto given for this practice) than they might have been in the fame time, by a fecure navigation in an open fea,

And next, as to the directions I have given for running into the latitude of 61 or 62 South, before any endeavour is made to ftand to the weftward. The reafons for this precept are, that in all probability the violence of the currents will be

be hereby avoided, and the weather will prove lefs tempestuous and uncertain. This last circumftance we ourfelves experienced moft remarkably; for after we had unexpectedly fallen in with the land, as has been mentioned in the preceding chapter, we flood away to the fouthward to run clear of it, and were no fooner advanced into fixty degrees or upwards, but we met with much better weather, and intoother water than in any other part of the whole passage : The air indeed was very cold and fharp, and we had ftrong gales, but they were fleady and uniform, and we had at the fame time funfhine and a clear fky : whereas in the lower latitudes, the winds every now and then intermitted, as it were, to recover. new ftrength, and then returned fuddenly in the most violent gusts, threatening at each blast the lofs of our maîts, which must have ended in our certain destruction. And that the currents in this high latitude would be of much lefs efficacy than nearer the land, feems to be evinced from these confiderations, that all currents run with greater violence near the fhore than at fea. and at greater diftances from fhore they are fcarcely perceptible : Indeed the reafon of this feems fufficiently obvious, if we confider, that conftant currents are, in all probability, produced by conftant winds, the wind driving before it. though with a flow and imperceptible motion. a large body of water, which being accumulated upon any coaft that it meets with, this fuperfluous water must escape along the shore by the endeavours of its furface, to reduce itself to the fame

fame level with the reft of the Ocean. And it is reasonable to suppose, that those violent gusts of wind which we experienced near the fhore, fo very different from what we found in the latitude of fixty degrees and upwards, may be owing to a fimilar caufe; for a westerly wind almost perpetually prevails in the fouthern part of the Pacifick Ocean: And this current of air being interrupted by those immense hills called the Andes, and by the mountains on Terra del Fuego, which together bar up the whole country to the fouthward as far as Cape Horn, a part of it only can escape over the tops of those prodigious precipices, and the reft must naturally follow the direction of the coaft, and must range down the land to the fouthward, and fweep with an impetuous and irregular blaft round Cape Horn, and the fouthermost part of Terra del Fuego. However, not to rely on these speculations, we may, I believe, eftablish, as incontestable, these matters of fact, that both the rapidity of the currents. and the violence of the western gales, are less fenfible in the latitude of 61 or 62 degrees, than nearer the shore of Terra del Fuego.

But though I am fatisfied both from our own experience, and the relations of other Navigators, of the importance of the precept I here infift on, that of running into the latitude of 61 or 62 degrees, before any endeavours are made to ftand to the weftward; yet I would advife no fhips hereafter to truft fo far to this management, as to neglect another most effential maxim, which is the making this passage in the height of fummer,

(126)

mer, that is, in the months of December and January; and the more diftant the time of paffing is taken from this feafon, the more difaftrous it may be reafonably expected to prove. Indeed, if the mere violence of the western winds be confidered, the time of our paffage, which was about the Equinox, was perhaps the most unfavourable feafon; but then it must be confidered, that in the depth of winter there are many other inconveniencies to be apprehended in this navigation, which are almost infuperable : For the feverity of the cold, and the flortness of the days would render it impracticable at that feafon to run fo far to the fouthward as is here recommended ; and the fame reafons would greatly augment the alarms of failing in the neighbourhood of an unknown fhore, dreadful in its appearance in the midft of fummer, and would make a winter navigation on this coaft to be, of all others, the most difmaying and terrible. As I would therefore advife all thips to make their paffage in December and Fanuary, if possible, fo I would warn them never to attempt the fea to the fouthward of Cape Horn, after the month of March.

And now as to the remaining confideration, that is, the propereft port for cruifers to refreft at on their first arrival in the South-Seas. On this head there is fcarcely any choice, the Island of Juan Fernandes being the only place that can be prudently recommended for this purpofe. For though there are many ports on the western fide of Patagonia, between the Streights of Magellan and the Spanifb fettlements (a plan of one of which will nd

ch illi will be referred to in the courfe of this work) where fhips might ride in great fafety, might recruit their wood and water, and might procure fome few refreshments; yet that coast is in itself fo terrible, from the rocks and breakers it abounds with, and from the violence of the western winds, which blow constantly full upon it, that it is by no means adviseable to fall in with that land, at least till the roads, channels and anchorage in each part of it are accurately furveyed, and both the dangers and shelter it abounds with are more distinctly known.

Thus having given the beft directions in my power for the fuccefs of future cruifers bound to the South-Seas, it might be expected that I should again refume the thread of my narration. But as both in the preceding and fubfequent parts of this work, I have thought it my duty not only to recite all fuch facts, and to inculcate fuch maxims as had the leaft appearance of proving beneficial to future Navigators, but alfo occafionally to recommend fuch measures to the Public. as I conceive are adapted to promote the fame laudable purpose, I cannot defift from the prefent fubject, without befeeching those to whom the conduct of our naval affairs is committed, to endeavour to remove the many perplexities and embarraffments with which the navigation to the South-Seas is, at prefent, neceffarily encumbered. An effort of this kind could not fail of proving. highly honourable to themfelves, and extremely beneficial to their country. For it is to me fufficiently evident, that whatever advantages navigavigation shall receive, either by the invention of methods that shall render its practice less hazardous, or by the more accurate delineation of the coasts, roads and ports already known, or by the discovery of new nations, or new species of commerce; it is evident, I fay, to me, that by whatever means navigation is promoted, the conveniencies hence arising must ultimately redound to the emolument of *Great-Britain*. Since as our set are at present superior to those of the whole world united, it must be a matchless degree of supineness or mean-spiritedness, if we permitted any of the advantages which new difcoveries, or a more extended navigation may produce to mankind, to be ravished from us.

As therefore it appears that all our future expeditions to the South-Seas must run a confiderable rifque of proving abortive, whilit we are under the necessity of touching at Brazil in our paffage thither, an expedient that might relieve us from this difficulty, would furely be a fubject worthy of the attention of the Public; and this feems capable of being effected, by the difcovery of fome place more to the fouthward, where ships might refresh and supply themselves with the neceffary fea-flock for their voyage round Cape Horn. And we have in reality the imperfect knowledge of two places, which might perhaps, on examination, prove extremely convenient for this purpofe; the first of them is Pepys's Island, in the latitude of 47° South, and laid down by Dr. Halley, about eighty leagues to the eastward of Cape Blanco, on the coast of Patagonia;

;

gonia; the fecond, is Falkland's Ifles, in the latitude of 519 1 nearly South of Pepys's Island. The first of these was discovered by Captain Cowley, in his Voyage round the World in the year 1686; who reprefents it as a commodious place for thips to wood and water at, and fays, it is provided with a very good and capacious harbour. where a thousand fail of ships might ride at anchor in great fafety; that it abounds with fowls, and as the fhore is either rocks or fands, it feems to promife great plenty of fish. The fecond place, or Falkland's Ifles, have been feen by many thips both French and English, being the land laid. down by Frezier, in his Chart of the extremity of South America, under the title of the New Islands. Woods Rogers, who run along the N. E. coaft of these in the year 1708, tells us, that they extended about two degrees in length, and appeared with gentle defcents from hill to hill, and feemed to be good ground, with woods and harbours. Either of these places, as they are Islands at a confiderable diffance from the Continent, may be supposed, from their latitude. to lie in a climate fufficiently temperate. It is true, they are too little known to be at prefent recommended for proper places of refreshment for ships bound to the southward : But if the Admiralty should think it adviseable to order them to be furveyed, which may be done at a very fmall expence, by a veffel fitted out on purpofe; and if, on this examination, one or both of thefe places should appear proper for the purpole intended, it is fcarcely to be conceived, of what prodi-. 12 K

prodigious import a convenient station might prove, situated so far to the southward, and so near Cape Horn. The Duke and Duchess of Bristol were but thirty-five days from their losing sight of Falkland's Isles to their arrival at Juan Pernandes in the South-Seas And as the returning back is much facilitated by the western winds, I doubt not but a voyage might be made from Falkland's Isles to Juan Fernandes and back again, in little more than two months. This, even in time of peace, might be of great confequence to this Nation; and, in time of war, would make us masters of those feas.

And as all difcoveries of this kind, though extremely honourable to those who direct and promote them, may yet be carried on at an inconfiderable expence, fince fmall veffels are much the propereft to be employed in this fervice, it were to be wished, that the whole coast of Patagonia, Terra del Fuego, and Staten-land, were carefully furveyed, and the numerous channels. roads and harbours with which they abound, accurately examined; this might open to us facilities of paffing into the Pacific Ocean, which as yet we may be unacquainted with, and would render all that fouthern navigation infinitely fecurer than at prefent; and particularly; an exact draught of the Weft coaft of Patagonia, from the Streights of Magellan to the Spanifb fettle-. ments, might perhaps furnish us with better and more convenient ports for refreshment, and better fituated for the purpofes either of war or commerce, and above a fortnight's fail nearer to FalkFalkland's Mands, than the Mand of Juan Fernandes. The discovery of this coast bath formerly been thought of fuch confequence, by reason of its neighbourhood to the Araucos and other Chilian Indians; who are generally at war, or at least on ill terms with their Spanish neighbours, that Sir John Narborough was purpofely fitted out in the reign of King Charles II, to furvey the Streights of Magellan, the neighbouring coast of Patagonia, and the Spanish ports on that frontier, with directions, if possible, to procure fome intercourfe with the Chilian Indians, and to eftablish a commerce and a lafting correspondence with them. His Majefty's views in employing Sir John Narborough in this expedition, were not folely the advantage he might hope to receive from the alliance of those favages, in reftraining and intimidating the Crown of Spain; but he conceived, that independent of those motives, the immediate traffick with these Indians might prove extremely advantagious to the English Nation. For it is well known, that at the first discovery of Chili by the Spaniards, it abounded with vaft quantities of gold, much beyond what it has at any time produced, fince it has been in their poffeffion. And hence it has been generally believed, that the richest mines are prudently concealed by the Indians, as well knowing that the difcovery of them to the Spaniards would only excite in them a greater thirst for conquest and tyranny, and render their own independence, precarious.- But with refpect to their commerce With - . P

ht fo of 1g an n-. ls. m in. in to ke. 6. A. gh nd inich it Daere els. acfaich uld fe+ act om le-: ind etmto lk-

(132)

with the Englifb, thefe reasons would no longer influence them; fince it would be in our power to furnish them with arms and ammunition of all kinds, of which they are extremely defirous, together with many other conveniencies, which their intercourfe with the Spaniards has taught them to relifh. They would then, in all probability, open their mines, and gladly embrace a traffick of fuch mutual convenience to both Nations; for then their gold, inftead of proving the means of enflaving them, would procure. them weapons to affert their liberty, to chaftife their tyrants, and to fecure themfelves for ever from the Spanifb yoke; whilft with our affiftance, and under our protection, they might become a confiderable people, and might fecure to us that wealth, which formerly by the Houfe of Auftria, and lately by the Houfe of Bourbon, has been most mischievously lavished in the pursuit of univerfal Monarchy.

It is true, that Sir John Narborough did not fucceed in opening this commerce, which in appearance promifed fo many advantages to this Nation. However, his difappointment was merely accidental, and his transactions upon that coaft (befides the many valuable improvements he furnished to geography and navigation) are rather an encouragement for future trials of this kind, than any objection against them; his principal misfortune being the losing company of a simall bark which attended him, and having some of his people trapanned at *Baldivia*. However, it appeared, by the precautions and fears of the Spa-

(133)

Spaniards, that they were fully convinced of the practicability of the fcheme he was fent to execute, and extremely alarmed with the apprehenfion of its confequences.

It is faid, that his Majefty King Charles the Second was fo far prepoffeffed with the hopes of the advantages redounding from this expedition, and fo eager to be informed of the event of it, that having intelligence of Sir John Narborough's paffing through the Downs, on his return, he had not patience to attend his arrival at Court, but went himfelf in his barge to Gravefend to meet him.

To facilitate as much as possible any attempts of this kind, which may be hereafter undertaken, I have here 'annexed' the 'thirteenth plate, containing a chart of that part of the world, as far as it is hitherto known, which I flatter myfelf is in fome refpects much correcter than any hitherto published. To evince which, it may be neceffary to mention what materials I have principally made use of, and what changes I have introduced different from other authors.

The two most celebrated charts hitherto published of the fouthermost part of South America, are those of Dr. Halley, in his general chart of the magnetic variation, and of Frezier in his voyage to the South-Seas. But befides thefe. there is a chart of the Streights of Magellan, and of some part of the adjacent coast, by Sir John Narborough above-mentioned, which is doubtlefs infinitely exacter in that part than Frezier, and in fome refpects fuperior to Halley, particularly in K 3 what

(134)

what relates to the longitudes of the different parts of those Streights. The coast from Cape Blanco to Terra del Fuego, and thence to Streights Le Maire, we were in some measure capable of correcting by our own observations, as we ranged that fhore generally in fight of land. The pofition of the land, to the northward of the Streights of Magellan, on the Weft fide, is doubtlefs laid down in our chart but very imperfectly; and yet I believe it to be much nearer the truth than what has hitherto been done : As it is drawn from the information of fome of the Wager's crew, who were fhipwrecked on that fhore, and afterwards coafted it down; and as it agrees pretty nearly with the defcription of fome Spanish manufcripts I have feen.

The Channel dividing Terra del Fuego is drawn from Frezier; but in the Spanifs manufcripts there are feveral Channels delineated, and I have reafon to fuppole, that whenever this country is thoroughly examined, this circumftance will prove true, and Terra del Fuego will be found to confift of feveral Iflands.

And having mentioned Frezier fo often, I must not omit warning all future Navigators, against relying on the longitude of Streights Le Maire, or of any part of that coast, laid down in his chart; the whole being from 8 to 10 degrees too far to the eastward, if any faith can be given to the concurrent evidences of a great number of journals, verified in some particulars by astronomical observation. For instance, Sir John Narborough lays down Cape Virgin Mary in 65°:

42'

42' of West longitude from the Lizard, that is in 71°: 20 from London. And the ships of our fquadron, who took their departure from St. Catherine's (where the longitude was rectified by an observation of the eclipse of the moon) found Cape Virgin Mary to be from 70° : 46', to 71°: 30' from London, according to their different reckonings: And there were no circumftances in our run that could render it confiderably erroneous, fo that it cannot be effected in lefs than 71 degrees of Weft longitude; whereas Frezier lays it down in lefs than 66 degrees from Paris, that is little more than 63 degrees from London, which is doubtlefs 8 degrees fhort of its true quantity. Again, our iquadron found Cape Virgin Mary and Cape St. Bartholomew on the eastern fide of Streights Le Maire to be only 2°: 8' different in longitude, which in Frezier are diftant near 4 degrees; fo that not only the longitude of Cape St. Bartholomeco is laid down in him near 10 degrees too little, but the whole coaft, from the Streights of Magellan to Streights Le Maire, is enlarged to near double its real extent.

But to have done with *Frezier*, whofe errors, the importance of the fubject and not a fondnefs for cavilling, has obliged me to remark, (though his treatment of Dr. *Halley* might, on the prefent occafion, authorife much feverer ufage) I muft, in the next place, particularize wherein the chart I have here mentioned differs from that of our learned countryman.

K .4

, Ir

(136)

It is well known that this Gentleman was fent abroad by the Public, to make fuch geographical and aftronomical obfervations, as might facilitate the future practice of navigation, and particularly to determine the variation of the compass in fuch places as he should touch ar, and if possible, to afcertain its general laws and affections.

Thefe things Dr. Halley, to his immortal reputation and the honour of our Nation, in good measure accomplished, particularly with regard to the variation of the compais, a fubject, of all others, the most interesting to those employed in the art of navigation. He likewife corrected the polition of the coast of Brazil, which had been very erroneously laid down by all former Hydrographers; and by a judicious comparifon of the observations of others, has happily fucceeded in fettling the geography of many parts of the globe, where he had not himfelf been. So that the chart he published, with the variation of the needle marked thereon, being the refult of his labours on this fubject, was allowed by all Europe to be far compleater in its geography than any that had then appeared, and at the fame time most surprizingly exact in the quantity of variation affigned to the different parts of the globe; a fubject fo very intricate and perplexing, that all general determinations about it had till then appeared impoffible,

But as the only means he had of correcting those coasts where he did not touch himself was the observations of others; where those observations (137)

It

t 1

n

11 . .

tions were wanting, or were inaccurate, it was no imputation on his skill, that his determinations were defective. And this, upon the beft comparison I have been able to make, is the cafe with regard to that part of his chart, which contains the South part of South America. For sthough the coaft of Brazil, and the opposite coaft of Peru on the South-Seas are laid down, I prefume, with the greatest accuracy, yet from about the river of Plate on the East fide, and its oppofite point on the Weft, the coaft gradually declines too much to the westward, fo as at the Streights of Magellan to be, as I conceive, about fifty leagues removed from its true polition : At leaft, this is the refult of the observations of our squadron, which agree extremely well with those of Sir John Narborough. I must add, that Dr. Halley has, in the Philosophical Transactions, given the foundation on which he has proceeded, in fixing Port St. Julian in 76° 1 of West longitude: (which the concurrent journals of our Iquadron place from 70° 4 to 71° 1) This, he tells us, was an observation of the eclipse of the moon, made at that place by Mr. Wood, then Sir John Narborough's Lieutenant, and which is faid to have happened there at eight in the evening, on the 18th of September, 1670. But Capt. Wood's journal of this whole voyage under Sir John Narborough is fince published, together with this obfervation, in which he determines the longitude of Port St. Julian to be 73 degrees from London, and the time of the eclipfe to have been different from Dr. Halley's account. But the num-

(138)

numbers he has given are fo faultily printed, that nothing can be determined from them.

To what I have already mentioned with regard to the chart hereunto annexed, I shall only add, that to render it more compleat, I have inferted therein the route of our fquadron, and have delineated, in the paffage round Cape Horn, both the real track which we defcribed, and the imaginary track exhibited by our reckoning; whence the violence of the currents in that part of the world, and the enormous deviations which they produce, will appear by infpection. And that no material article might be omitted in this important affair, the foundings on the coaft of Patagonia, and the variation of the magnetic needle, are annexed to those parts of this track, where, by our obfervations, we found them to be of the quantity there specified.

(139)

CHAP. X.

From Cape Noir to the Island of Juan Fernandes.

F T E R the mortifying difappointment of falling in with the coaft of Terra del Fuego, when we efteemed ourfelves ten degrees to the westward of it ; after this disappointment, I say, recited in the eighth chapter, we flood away to the S.W. till the 22d of April, when we were upwards of 60° of South latitude, and by our account near 6° to the weftward of Cape Noir; and in this run, we had a feries of as favourable weather, as could well be expected in that part of the world, even in a better feason: So that this interval, fetting the inquietude of our thoughts alide, was by far the most eligible of any we enjoyed from Streights Le Maire to the West coast of America. This moderate weather continued, with little variation, till the 24th; but on the 24th, in the evening, the wind began to blow fresh, and soon encreased to a prodigious ftorm; and the weather being extremely thick, about midnight we loft fight of the other four ships of the squadron, which, notwithstanding the violence of the preceding ftorms, had hitherto kept in company with us. Nor was this our fole misfortune; for, the next morning, endeavouring to hand the top-fails, the clewlines and bunt-lines broke, and the fheets being half flown, every feam in the top fails was foon fplit

that

P.

(140)

fplit from top to bottom, and the main top-fail fhook fo ftrongly in the wind, that it carried away the top lanthorn, and endangered the head of the maft; however, at length, fome of the most daring of our men ventured upon the yard, and cut the fail away clofe to the reefs, though with the utmost hazard of their lives. At the fame time, the foretop fail beat about the vard withfo much fury, that it was foon blown to pieces; and that we might have full employment, the main-fail blew loofe, which obliged us to lower down the yard to fecure the fail, and the forevard being likewife lowered, we lay to under a mizen : And besides the loss of our top-fails, we had much of our other rigging broke, and loft a main fludding-fail-boom out of the chains.

On the 25th, about noon, the weather became more moderate, which enabled us to fway up our yards, and to repair, in the best manner we could, our fhattered rigging; but ftill we had no fight of the reft of our fquadron, nor indeed were we joined by any of them again, till after our arrival at Juan Fernandes, nor did any two of them, as we have fince learned, continue in company together: And this total feparation was the more wonderful, as we had hitherto kept together for feven weeks, through all the reiterated tempefts of this turbulent climate. It must indeed be owned, that this separation gave us room to expect, that we might make our paffage in a fhorter time, than if we had continued together, becaufe we could now make the beft

of

of our way without being retarded by the miffortunes of other ships; but then we had the melancholy reflection, that we ourfelves were hereby deprived of the affiftance of others, and our fafety would depend upon our fingle ship; fo that if a plank started, or any other accident of the fame nature should take place, we must all irrecoverably perifh; or fhould we be driven on shore, we had the uncomfortable prospect of ending our days on fome defolate coaft, without any reasonable hope of ever getting away ; whereas with another fhip in company, all thefe, calamities are much less formidable, fince in every kind of danger, there would be fome probability that one fhip at leaft might efcape, and might be capable of preferving or relieving the crew of the other.

The remaining part of this month of April we had generally hard gales, although we had been every day, fince the 22d, edging to the northward; however, on the laft day of the month, we flattered ourfelves with the hopes of foon terminating all our fufferings, for we that day found ourselves in the latitude of 528: 13', which being to the northward of the Streights of Magellan, we were affured that we had compleated our paffage, and had arrived in the confines of the fouthern Ocean; and this Ocean being nominated Pacific, from the equability of the feafons which are faid to prevail there, and the facility and fecurity with which navigation is there. carried on, we doubted not but we should be speedily cheared with the moderate gales, the fmooth

-fail way the noft and vith me vithes; the wer oreer a we ft a 1 222 beway ner we intill any hue ion rto the It ave bafled eft of

fmooth water, and the temperate air, for which that tract of the globe has been to renowned: And under the influence of these pleasing circumftances, we hoped to experience fome kind of compensation; for the complicated miseries which had fo conftantly attended us for the laft eight weeks. But here we were again difappointed; for in the fucceeding month of May, our fufferings role to a much higher pitch than they had ever yet done, whether we confider the violence of the ftorms, the fhattering of our fails and rigging, or the diminishing and weakening of our crew by deaths and fickness, and the probable profpect of our total destruction. All this will be fufficiently evident, from the following circumftantial account of our diverlified miffortunes.

Soon after our paifing Streights Le Maire; the fcurvy began to make its appearance amongft us; and our long continuance at fea, the fatigue we underwent, and the various difappointments we met with, had occafioned its fpreading to fuch a degree, that at the latter end of April there were but few on board, who were not in fome degree afflicted with it, and in that month no lefs than forty-three died of it on board the Centurion. But though we thought that the diftemper had then rifen to an extraordinary height, and were willing to hope, that as we advanced to the northward its malignity would abate; yet, we found, on the contrary, that in the month of May we loft near double that number: And as

as we we did not get to land till the middle of June, the mortality went on increasing, and the difease extended itself to prodigiously, that after the loss of above two hundred men, we could not at last muster more than fix fore-mast men in a watch capable of duty.

This difease fo frequently attending all long voyages, and fo particularly deftructive to us, is: furely the most fingular and unaccountable of any that affects the human body. For its fymptoms are inconftant and innumerable, and its progrefs and effects extremely irregular; for fcarcely any two perfons have the fame complaints, and where there hath been found fome conformity in the fymptoms, the order of their appearance has been totally different. However. though it frequently puts on the form of many other difeafes, and is therefore not to be defcribed by any exclusive and infallible criterions; yet there are fome fymptoms which are more general than the reft; and therefore, occurring the oftneft, deferve a more particular enumeration. Thefe common appearances are large difcoloured fpots difperfed over the whole furface of the body, fwelled legs, putrid gums, and above all, an extraordinary lassitude of the whole body, especially after any exercise, however inconfiderable; and this laffitude at last degenerates into a: pronenels to fwoon on the leaft exertion of . ftrength, 'or even on the leaft motion. when the

This difeafe is likewife ufually, attended with a ftrange dejection of the fpirits, and with first verings, tremblings, and a difposition to be feized with with the moit dreadful terrors on the flighteft accilent. Indeed it was most remarkable, in allour reiterated experience of this malady, that what see diffeouraged our people, of at any time damped their hopes, liever falled to add new ingoar to the differmer; for it ufually killed thole who were in the last stages of it, and confined thole to their hammocks, who were before capable of tome kind of duty; fo that it feelned as it claurity of mind; and fanguine thoughts, were no contemptible prefervatives from its fatal malignity.

- But ip's not eafy to compleat the long roll of the various concomitants of this dileafe : for it often sproduced putitily foreis; pletifics, the ramindice dand violene theumatick pains, and fornerimes in occasioned an obstinate collivenes. which was generally attended with a difficulty of breathing pranderhis was efteenied the molt deadly of all the forbutick fymptons : At other times the whole body, but more effectally the degre weter fullect to ulcers of the worft kindi accended with forten bones and fuch a Immrianicy boff fungous shell as vielded to no remedyaiBurla inoft extraordinary circumftance, and buhates would be fearcely credible upon any findenevidence, is that the fcars of woundswhich had doesn for many years healed, werefonied mpen again by this virulent diffemper : Of this, there was a remarkable instance in one of the invalids on voord the Centurion, who had been wounded above fifty years before at the Case battle

battle of the Boyne; for though he was cured foon after, and had continued well for a great number of years past, yet on his being attacked by the fcurvy, his wounds, in the progress of his difeafe, broke out afresh, and appeared as if they had never been healed : Nay, what is still more aftonishing, the callous of a broken bone. which had been compleatly formed for a long time, was found to be hereby diffolved, and the fracture seemed as if it had never been consolidated. Indeed, the effects of this difease were in almost every instance wonderful; for many of our people, though confined to their hammocks, appeared to have no inconfiderable fhare of health, for they eat and drank heartily. were chearful, and talked with much feeming vigour, and with a loud ftrong tone of voice a and yet on their being the least moved, though it was only from one part of the thip to the other, and that in their hammocks, they have immediately expired; and others, who have confided in their feeming ftrength, and have refolved to get out of their hammocks, have died before they could well reach the deck ; and it was no uncommon thing for those who were able to walk the deck, and to do fome kind of duty, to drop down dead in an inftant, on any endeavours to act with their utmost vigour, many of our people having perifhed in this manner during the course of this voyage.

With this terrible discase we struggled the greatest part of the time of our beating round

Cape Horn ; and though :- did not then rage with its utmost violence, yet we buried no lefs than forty-three men on board the Centurion, in the month of April, as hath been already obferved, but we still entertained hopes, that when we should have once secured our passage round the Cape, we should put a period to this, and all the other evils which had to constantly purfued us. But it was our misfortune to find, that the Pacific Ocean was to us lefs hofpitable than the turbulent neighbourhood of Terra del Fuego and Cape Horn : For being arrived, on the 8th of May, off the Island of Socoro, which was the first rendezvous appointed for the squadron, and where we hoped to have met with fome of our companions, we cruized for them in that station feveral days. And here we were not only disappointed in our hopes of being joined by our friends, and were thereby induced to favour the gloomy fuggestions of their having all perified ; but we were likewife perpetually alarmed with the fears of being driven on fhore upon this coaft, which appeared too craggy and irregular to give us the leaft hopes, that in fuch a cafe any of us could pollibly escape immedrate destruction. For the land bad indeed a most tremendous aspect : The most distant part of it. and which appeared far within the counfry: being the mountains ufually called the Andes or Cordilleras, was extremely high, and covered with fnow ; and the coast itself feemed quite tocky and barren, and the water's edge fkirted ega.J with

with precipices. In forhe places indeed there appeared feveral deep bays running into the land, but the entrance into them was generally blocked up by numbers of little Iflands; and though it was not improbable but there might be convenient fhelter in forme of those bays, and proper channels leading thereto; yet as we were utterly ignorant of the coaft, had we been driven afhore by the western winds which blew almost constantly there, we did not expect to have avoided the loss of our ships and of our lives.

And this continued peril, which lasted for above a fortnight, was greatly aggravated by the difficultie, we found in working the thip ; as the fourvy had by this time deftroyed fo great a part of our hands, and had in fome degree affected almost the whole crew. Nor did we, as we hoped, find the winds lefs violent, as we advanced to the northward; for we had often prodigious fqualls which split our fails, greatly damaged our rigging, and endangered our masts. Indeed, during the greatest part of the time we were upon this coaft, the wind blew to hard, that in another fituation, where we had fufficient fea-room, we fhould certainly have lain to; but in the prefent exigency we were neceffitated to carry both our courfes and top-fails, in order to keep clear of this lee-shore. In one of these squalls, which was attended by feveral violent chaps of thunder, a fudden flash of fire darted along our decks, which, dividing, exploded with a report like L 2 that

(148)

that of feveral piftols; and wounded many of our men and officers as it paffed, marking them in different parts of the body : This flame was accended with a ftrong fulphurous ftench, and was doubtlefs of the fame nature with the larger and more wielent blafts of lightning which then filled the air. the was not in diff. ne from we It were endlefs to recite minutely the various difafters, fatigues and serrors which we, encountered on this coafte; all these went on increasing till the 22d of May, at which times the fury of all the florms which we had hitherto encountered, fremed to be combined, and to have confpired our deffinition. 21 In this hurricane almost all our fails were filitorand great part of our fanding rigging broken a and, about eight in the evening, a mountainous overgrown fea took is upon our farboard quarter, and gave us fo prodigious a flock, that feveral of our fhrouds broke with the jerk, by which our mafts were greatly endangered; our ballaft and ftores too were fo fingely hifted, that the hip heeled afterwards two streaks to port. Indeed it was - a most tremendous blow, and we were thrown vinto the sitmost confernation from the apprehenfron of inftantly foundering; and though the awindiabated in a few hours; yet, as we had no timore fails deft in a condition to bend to our wards, the thip laboured very much in a hollow featurolling gunwale to, for want of fail to teady her - So that we expected our masts, which were now very flenderly fupported, to · 855 come 5 .A.

come by the board every moment. However, we exerted ourfelves the best we could to furrup our firouds, to reeve new lanyards, and to mend our fails; but while thefe necessary operations were carrying on, we ran great rifque of being driven on there on the kland of Childe, which was not far diftant from us; but in the midft of our peril the wind happily fhifted to the fourhward, and we Reered off the land with the main-Tail only, the Mafter and myfelf undertaking the management of the helmod while every one elle on board was bulied in fecuring the mafts, and bending the fails as faft as they could be repaired." This was the last effort of that ftormy climate sofor in a day or two after, we got clear of the land, and found the weather more moderate than we had yet experienced fince our paffing Sweights Le Maire, And now having cruized in valn for more than a fortnight in quest of the other thips of the fquadron, it was reloved to take the advantage of the prefent favourable Reafon vand the offing we had made from this terrible coaft; and to make the best of our way for the island of Juan Fernandes. For though our next rendezvous was appointed off the harbour of Baldivido yet as we had hitherto feen none of our companions at this first rendezvous, "it was not to be supposed that any of them would be found at the fecond : Indeed we had the greatest reason to suspect. that all but ourselves had perished Belides, we were by this time reduced to fo tow a condition. L 2

dition, that inftead of attempting to attack the places of the enemy, our utmost hopes could only suggest to us the possibility of faving the ship, and some part of the remaining enseebled crew, by our speedy arrival at *Juan Fernandes*; for this was the only road in that part of the world where there was any probability of our recovering our sick, or resitting our vessel, and confequently our getting thither was the only chance we had left to avoid perishing at fea.

Our deplorable fituation then allowing no room for deliberation, we flood for the Island of Juan Fernandes; and to fave time, which was now extremely precious, (our men dying, four, five and fix in a day) and likewife to avoid being engaged again with a lee-fhore, we refolved, if possible, to hit the Island upon a meridian. And, on the 28th of May, being nearly in the parallel upon which it is laid down, we had great expectations of feeing it : But not finding it in the polition in which the charts had taught us to expect it, we began to fear that we had got too far to the westward ; and therefore, though the Commodore himfelf was ftrongly perfuaded, that he faw it on the morning of the 28th, yet his Officers believing it to be only a cloud, to which opinion the hazinefs of the weather gave fome kind of countenance, it was, on a confultation, refolved to ftand to the eastward, in the parallel of the Island; as it was certain, that by this course we fhould either fall in with the Island, if we were already vi licin

(151)

already to the weftward of it; or thould at leaft make the main land of *Chili*, from whence we might take a new departure, and affure ourfelves, by running to the weftward afterwards, of not miffing the Island a fecond time,

i c r t y

2

1 31

On the 20th of May we had a view of the Continent of Chili, diftant about twelve or thirteen leagues; the land made exceeding high and uneven, and appeared guite white; what we faw being doubtlefs a part of the Cordilleras, which are always covered with fnow. Though by this view of the land we afcertained our pofition, yet it gave us great uneafinefs to find that we had fo needlefsly altered our courfe, when we were, in all probability, just upon the point. of making the Island ; for the mortality amongst us was now increased to a most dreadful de-. gree, and those who remained alive were utterly. difpirited by this new difappointment, and the profpect of their longer continuance at fea: Our water too began to grow fcarce; fo that a general dejection prevailed amongst us, which added much to the virulence of the difeafe, and deftroyed numbers of our beft men; and to all thefe calamities there was added this vexatious circumstance, that when, after having got a fight of the Main, we tacked and flood to the westward in quest of the Island, we were fo much delayed by calms and contrary winds, that it coft us nine days to regain the wefting, which, when we flood to the eaftward, we ran down in two. In this defponding condition, with a crazy ship, a great fcarcity of fresh water, and L 4 a crew

(152)

a crew fo univerfally difeafed, that there were not above ten fore-mast men in a watch capable of doing duty, and even fome of these lame, and unable to go aloft : Under these difheartning circumstances, I fay, we stood to the westward; and, on the oth of June, at daybreak, we at last discovered the long-wished-for Island of Juan Fernandes. And with this difcovery I shall close this chapter, and the first book, after observing (which will furnish a very strong image of our unparalleled distrais) that by our fuspecting ourfelves to be to the westward of the Island on the 28th of May, and, in confequence of this, ftanding in for the Main, we lost between seventy and eighty of our men, whom we should doubtless have laved, had we made the Island that day, which, had we kept on our course for a few hours longer, we could not have failed to have done.

The arrival of the Gentarion at the Mand of faan Firmanis, with a defeription of that ft and.

The arrival of the Centurion at the Island of Juan Fernandes, with a description of that Ifland.

END of BOOKS

N the oth of June, a day-break, as is mentioned in the preceding chapter, we first descried the Island of Juan Fernandes, bearing N, by E & E, at eleven or twelve leagues diftance, and though, on this view, it appeared to be a mountainous place, extremely ragged and irregular; yet, as it was land, and the land we fought for, it was to us a most agreeable fight : For at this place only we could hope to put a period to those terrible calamitics

(154)

lamities we had fo long ftruggled with, which had already fwept away above half our crew, and which, had we continued a few days longer at fea, would inevitably have compleated our deftruction. For we were by this time reduced to fo helples a condition, that out of two hundred and odd men which remained alive, we could not, taking all our watches together, muster hands enough to work the ship on an emergency, though we included the officers, their fervants, and the boys.

The wind being northerly when we first made the Island, we kept plying all that day, and the next night, in order to get in with the land; and wearing the fhip in the middle watch, we had a melancholy inftance of the almost incredible debility of our people; for the Lieutenant could muster no more than two Quarter-masters, and fix Fore-maft men capable of working; fo that without the affiftance of the officers, fervants and the boys, it might have proved impoffible for us to have reached the Island, after we had got fight of it; and even with this affiftance they were two hours in trimming the fails : To so wretched a condition was a fixty gun thip reduced, which had passed Streights Le Maire but three months before, with between four and five hundred men, almost all of them in health and vigour hand there a stor , program the weiv However, on the roth in the afternoon, we got under the lee of the Island, and kept ranging along it, at about two miles diffance, in order to look out for the proper anchorage, which 23131113.1 was

ich was was described to be in a bay on the North fide. And now being nearer in with the fhore, we could difcover that the broken craggy precipices, which had appeared fo unpromifing at a diftance, were far from barren, being in most places covered with woods; and that between them there were every where interfperfed the fineft vallies, clothedwith a most beautiful verdure, and watered with numerous ftreams and cafcades, no valley of any extent, being unprovided of its proper rill. The water too, as we afterwards found, was not inferior to any we had ever tafted, and was conftantly clear : So that the afpect of this country would, at all times, have been extremely delightful, but in our diffreffed fituation, languishing as we were for the land and its vegetable productions, (an inclination constantly attending every ftage of the fea-fcurvy), it is fcarcely. credible with what eagerness and transport we viewed the shore, and with how much impatience we longed for the greens and other refreshments which were then in fight, and particularly for the water, for of this we had been confined. to a very fparing allowance for a confiderable time, and had then but five ton remaining on Those only who have endured a long board. feries of thirst, and who can readily recal the defire and agitation which the ideas alone of fpringsand brooks have at that time raifed in them, can, judge of the emotion with which we eyed a large cafcade of the most transparent water, which poured itself from a rock near, a hundred feet high.

high into the fea, at a small distance from the ship. Even those amongst the difeated, who were not in the very last stages of the distemper, though they had been long confined to their ham-, mocks, exerted the small remains of strength that was left them, and crawled up to the deck to feast themselves with this reviving prospect: Thus we coafted the thore, fully employed in the contemplation of this diversified landskip, which still improved upon us the farther we advanced. But at last the night closed upon us, before we had fatisfied ourfelves which was the proper bay to anchor in; and therefore we refolved to keep in foundings all night, (we having then from fixty-four to feventy fathom) and to fend our boat next morning to difcover the road : However, the current inifted in the night, and fet us to near the land, that we were obliged to let go the belt bower in fifty-fix fathom, not half a mile from the fhore. At four in the morning," the Cutter was difpatched with our third Lieutenant to find out the bay we were in fearch of, who returned again at noon with the boat laden with feals and grais; for though the Island abounded with Better vegetables, yet the boat s-crew, in their fliort ftay, had not met with them, and they well knew that even grafs would prove a dainty, and indeed it was all foon. and eagerly devoured. The feals too were confidered as fresh provision; but as yet were not much admired, tho' they grew afterwards into more repute : For what rendered them lefs valuable at this juncture, was the prodigious quantity

a the

tity of excellent fish, which the people on board had taken, during the absence of the boat.

The Cutter, in this expedition, had difeovered the bay where we intended to anchor. which we found was to the weltward of our prefent flation ; and, the next morning, the weather. proving favourable, we endeavoured to weigh. in order to proceed thither : But though, on this occasion, we mustered all the strength we could, obliging even the fick, who were fcarce able to keep on their legs, to affift us; yet the capftan was to weakly manned, that it was near four hours before we have the cable right up and down : After which, with our utmost efforts, and with many furges and fome purchases we made use of to increase our power, we found ourfelves incapable of flarting the anchor from the ground. However, at noon, as a fresh gale blew towards the bay, we were induced to fet the fails, which fortunately, tripped the anchor; on which we fteered along fhore, till we came a-break of the point that forms the eastern part of the bay. On the opening of the bay, the wind, that had befriended us thus, far, fhifted and blew from thence in fqualls; but by means of the head-way we had got, we loofed close in, till the anchor brought us up in fifty-fix fathom. Soon after we had thus got to our new birth, we discovered a fail, which we made no doubt was one of our fquadrom; and on its nearer approach, we found it to be the Tryal Slopping We immediately fent fome of our hands on board her, by whole affiltance the was brought to an anchor 1.2anchor between us and the land. We foon found that the Sloop had not been exempted from those calamities which we had to feverely felt; for her Commander, Captain Saunders, waiting on the Commodore, informed him, that out of his small complement, he had buried thirtyfour of his men; and those that remained were fo univerfally afflicted with the fcurvy, that only himfelf; his Lieutenant, and three of his men. were able to ftand by the fails. The Tryal came to an anchor within us, on the 12th, about noon, and we carried our hawfers on board her, in order to moor ourfelves nearer in fhore; but the wind coming off the land in violent gufts, prevented our mooring in the birth we intended. efpecially as our principal attention was now employed on business rather of more importance; for we were now extremely occupied in fending of fhere materials to raife tents for the reception of the fick, who died apace on board, and doubtlefs the diffemper was confiderably augmeated, by the ftench and filthinels in which they lay; for the number of the difeafed was fo great, and fo few could be fpared from the neceffary duty of the fails to look after them, that it was impossible to avoid a great relaxation in the article of cleanlinefs, which had rendered the thip extremely loathfome between decks. But notwithstanding our defire of freeing the fick from their hateful fituation, and their own extreme impatience to get on fhore, we had not hands enough to prepare the tents for their feception before the 16th; but on that and the

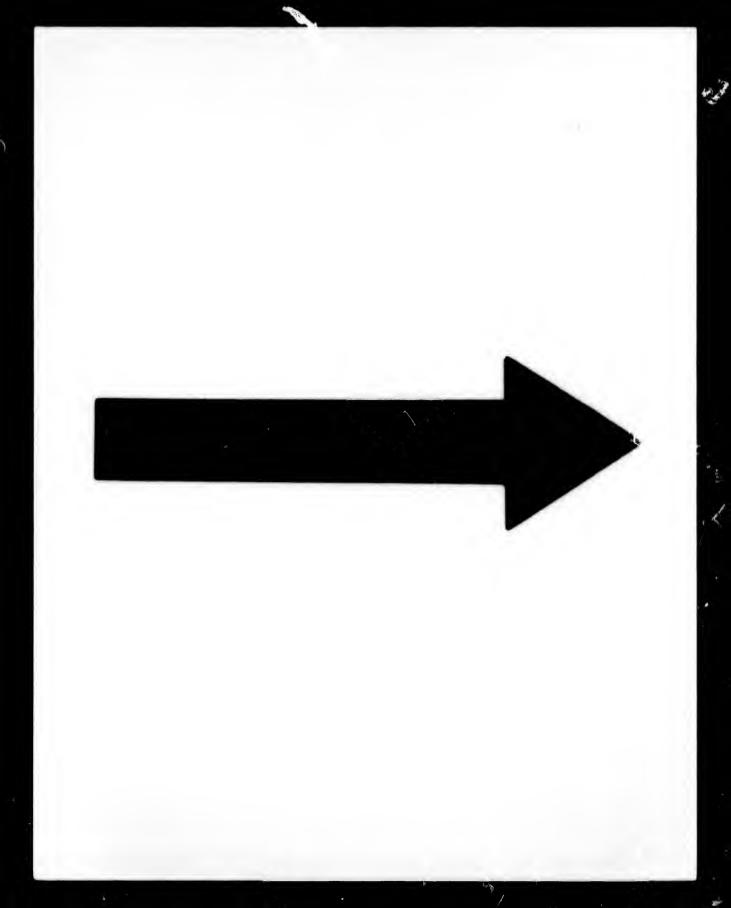

d

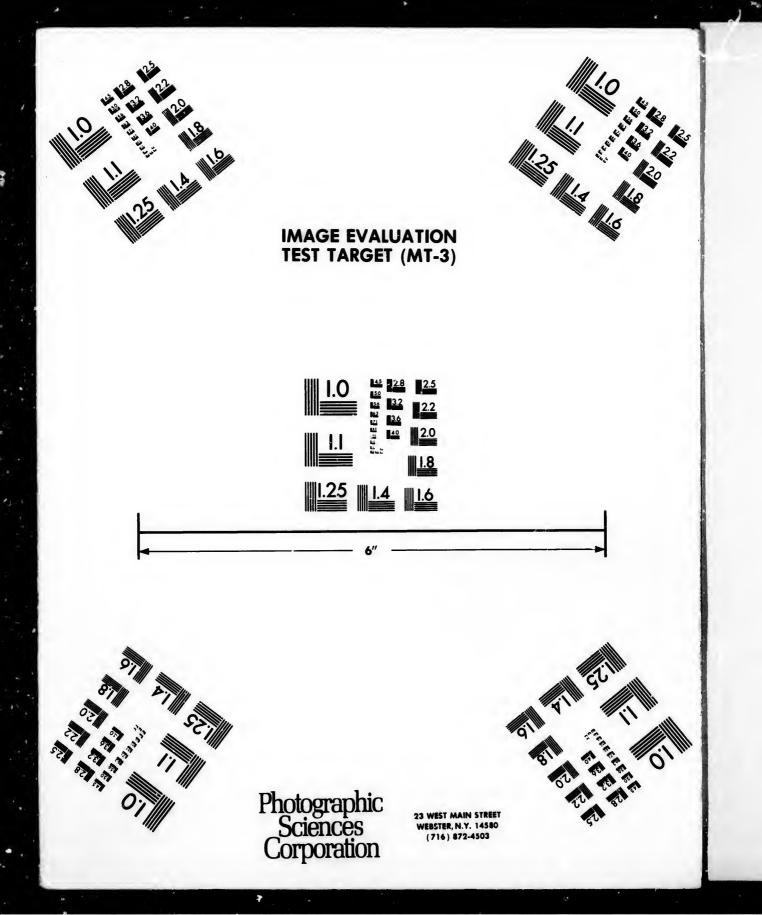

ly

s,

it

the two following days we lent them all on shore, amounting to a hundred and fixty-feven perfons, belides at leaft a dozen who died in the boats, on their being exposed to the fresh air. The greatest part of our fick were to infirm, that we were obliged to carry them out of the thip in their hammocks, and convey them afterwards in the fame manner from the water-fide to their tents, over a ftony beach. This was a work of confiderable fatigue to the few who were healthy, and therefore the Commodore; with his accustomed humanity, not only affisted herein with his own labour, but obliged his Officers, without distinction, to give their helping The extreme weakness of our fick may hand. in some measure be collected from the numbers who died after they had got on fhore; for it had generally been found, that the land, and the refreshments it produces; very foon recover most ftages of the fea-fcurvy; and we flattered ourfelves, that those who had not perished on this first exposure to the open air, but had lived to be placed in their tents, would have been fpeedily reftored to their health and vigour : But, to our great mortification, it was near twenty days after their landing, before the mortality was tolerably ceased; and for the first ten or twelve days, we buried rarely lefs than fix each day, and many of thofe, who furvived; recovered by very flow and infenfible degrees. Indeed, those who were well enough at their first getting on shore, to creep out of their tents, and crawl about, were foon relieved, and recovered their health and ftrength in

(160)

in a very fhort time, but in the reft, the difeafe feemed to have acquired a degree of inveteracy which was altogether without example.

Having proceeded thus far, and got our fick on shore, I think it necessary, before I enter into any longer detail of our transactions, to give a distinct account of this Island of Juan Fernandes. its fituation, productions, and all its conveniencies. These particulars we were well enabled to be minutely instructed in, during our three months flay there; and as it is the only commodious place in those seas, where Briti/b cruifers can refresh and recover their men after their passage round Cape Horn, and where they may remain for fome time without alarming the Spani/b coaft, these its advantages well merit a circumstantial description. And indeed Mr. Anson was particularly industrious in directing the roads and coafts to be furveyed, and other observations to be made, knowing, from his own experience. of how great confequence, thefe materials might prove to any Britif veffels hereafter employed in those feas. For the uncertainty we were in of its polition, and our standing in for the Main on the 28th of May, in order to fecure a fufficient eafting, when we were indeed extremely near it. cost us the lives of between seventy and eighty. of our men, by our longer continuance at fea: From which fatal accident we might have been exempted, had we been furnished with such an account of its fituation, as we could fully have depended on.

The

a set and the set of 16 1) ... the site and year a The Inand of Juan Ferrundes lies in the latitude of 33° : 40' South; and is a hundred and ten leagues-diftant from the Continent of Chili. It is faid to have received its name from a Spaniard, who formerly procured a grant of it, land refided there fome time with a view of fettling it, but afterwards abandoned it. On approaching it on its east fide, its appears, as represented in, the fourteenth plate, bothere (a) is a fmall Illand, called Geat Mandanto, the, S. Wi of it; (b) a rock alled Monkey Key; almost contigue ous to ists (chis the Balt Bay, (d) Cumberland Baymwhere weimoored, and which, as will be obferved, isthe beft road for thippings and (e). the East bay, II The Mand vitfelf, is of an irregular figures as may be deen by the very exact plan of it in the fifteenth plate in Its greateft extentbeing between four and five leagues, and its greateft breadth fomewhat thort of twoheagues: " The only fafe anchoring at this Bland is conothe : North fide, where are the three bays mentioned above, but the middlemoftaknown by the stame of Cumberland Bay, is the widef and deepeft, and in all respects much the best suthe deber two : bays, denominated the East and West baysy are fcarcely more than good landing places where boats may conveniently put their cafk on thore. There is a plan of the No Eoofide of the Mand; containing these three bays drawn by a large fcale, ... in plate the fixteenth; where it appears, that Gumberland Bay is pretty well fecured to the fouthward, lying only exposed from the N. by W. to the E. by S; and as the northerly winds feldom M blow

blow in that climate, and never with any violence, the dange, from that quarter is not worth attending to. To diftinguish this bay the better at fea, I have added a very exact view of it, in the 17th plate, which will enable all future Navigators readily to find it.

As the bay laft defcribed, or *Cumberland Bay*, is by far the moft commodious road in the Ifland, fo it is advifeable for all fhips to anchor on the weftern fide of this bay, within little more than two cables length of the beach. Here they may ride in forty fathom of water, and be, in a great meafure, fheltered from a large heavy fea, which comes rolling in whenever an eaftern or a weftern wind blows. It is however expedient, in this cafe, to cackle or arm the cables with an iron chain, or good rounding, for five or fix fathom from the anchor, to fecure them from being rubbed by the foulnefs of the ground.

I have before obferved, that a northerly wind, to which alone this bay is expofed, very rarely blew during our ftay here; and as it was then winter, it may be fuppofed, in other feafons, to be lefs frequent. Indeed, in those few inftances, when it was in that quarter, it did not blow with any great force : But this perhaps might be owing to the highlands on the fouthward of the bay, which checked its current, and thereby abated its violence; for we had reafon to fuppofe, that a few leagues off, it blew with confiderable force, fince it fometimes drove before it a prodigious fea, in which we rode fore-caftle in. But though the northern winds are never to be appreapprehended, yet the fouthern winds, which generally prevail here, frequently blow off the land in violent gufts and fqualls, which however rarely laft longer than two or three minutes. This feems to be owing to the obftruction of the fouthern gale, by the hills in the neighbourhood of the bay; for the wind being collected by this means, at laft forces its paffage through the narrow vallies, which, like fo many funnels, both facilitate its efcape, and increase its violence. These frequent and fudden gufts make it difficult for fhips to work in with the wind off fhore, or to keep a clear hawfe when anchored.

The northern part of this Island is composed of high craggy hills, many of them inacceffible, though generally covered with trees. The foil of this part is loofe and shallow, fo that very large trees on the hills foon perifh for want of root, and are eafily overturned; which occafioned the unfortunate death of one of our failors, who being upon the hills in fearch of goats, caught hold of a tree upon a declivity to affift him in his afcent, and this giving way, he immediately rolled down the hill, and tho' in his fall he fastened on another tree of considerable bulk, yet that too gave way, and he fell amongst the rocks, and was dashed to pieces. Mr. Brett too met with an accident only by refting his back against a tree, near as large about as himfelf, which flood on a flope; for the tree giving way, he fell to a confiderable diftance, though without receiving any harm.

The fouthern, or rather the S.W. part of the Island, as diffinguished in the plan, is widely different from the reft, being dry, ftony, and deftitute of trees, but very flat and low, compared with the hills on the northern part. This part of the Island is never frequented by ships, being furrounded by a fteep fhore, and having little or no fresh water; and besides, it is expofed to the foutherly wind, which generally blows here the whole year round, and in the winter folftice very hard. The trees of which the woods on the northern fide of the Island are composed, are most of them aromaticks, and of many different forts : There are none of them of a fize to yield any confiderable timber, except the myrtle-trees, which are the largest on the Island, and supplied us with all the timber we made use of; but even these would not work to a greater length than forty feet. The top of the myrtle-tree is circular, and appears as uniform and regular, as if it had been clipped by art; it bears on its bark an excrefcence like mofs, which in tafte and fmell refembles garlick, and was used by our people instead of it. We found here too the piementotree, and likewife the cabbage-tree, though in no great plenty.

Our prifoners observed, that the appearance of the hills in fome part of the Island refembled that of the mountains in *Chili*, where the gold is found: So that it is not impossible but mines might be difcovered here. We observed, in fome tome places, feveral hills of a peculiar fort of red earth, exceeding vermilion in colour, which perhaps, on examination, might prove ufeful for many purpofes.

Belides a great number of plants of various kinds which are to be met with upon the Island, but which we were not botanifts enough either to defcribe, or attend to, we found there almost all the vegetables, which are usually effected to be particularly adapted to the cure of those fcorbutick diforders, which are contracted by falt diet and long voyages. For here we had great quantities of water-creffes and purflain, with excellent wild-forrel, and a vaft profusion of turnips and Sicilian radifhes : Thefe two laft, having fome refemblance to each other, were confounded by our people under the general name of turnips. We ufually preferred the tops of the turnips to the roots, which were often ftringy; though fome of them were free from that exception, and remarkably good. Thefe vegetables, with the fifh and flefh we found here, and which I shall more particularly defcribe hereafter, were not only extremely grateful to our palates, after the long course of falt diet which we had been confined to, but were likewife of the most falutary confequence to our fick in recovering and invigorating them, and of no mean fervice to us who were well, in deftroying the lurking feeds of the fcurvy, from which perhaps none of us were totally exempt, and in refreshing and reftoring us to our wonted ftrength and activity.

Befides

(166)

Befides the vegetables I have mentioned, of which we made perpetual ufe, we found many acres of ground covered with oats and clover. There were alfo fome few cabbage-trees upon the Ifland, as obferved before; but as they generally grew on the precipices, and in dangerous fituations, and as it was neceffary to cut down a large tree for every fingle cabbage, this was a dainty that we were able but rarely to indulge in.

The excellence of the climate and the loofenefs of the foil render this place extremely proper for all kinds of vegetation; for if the ground be any where accidentally turned up, it is immediately overgrown with turnips and Sicilian radifhes; and therefore Mr. Anfon having with him garden-feeds of all kinds, and ftones of different forts of fruits, he, for the better accommodation of his countrymen who should hereafter touch here, fowed both lettices, carrots, and other garden plants, and fet in the woods a great variety of plumb, apricock, and peach stones: And these last he has been informed have fince thriven to a very remarkable degree; for fome Gentlemen, who in their paffage from Lima to Old Spain were taken and brought to England, having procured leave to wait upon Mr. Anfon, to thank him for his generofity and humanity to his prifoners, fome of whom were their relations, they, in cafual difcourfe with him about his transactions in the South-Seas, particularly afked him, if he had not planted a great number of fruit-ftones on the

(167)

the Island of Juan Fernandes, for they told him, their late Navigators had difcovered there numbers of peach-trees and apricock-trees, which being fruits before unobferved in that place, they concluded them to be produced from kernels fet by him.

And this may in general fuffice as to the foil and vegetable productions of this place: But the face of the country, at least of the North part of the Island, is fo extremely fingular, that I cannot avoid giving it a particular confideration. I have already taken notice of the wild, inhofpitable air with which it first appeared to us, and the gradual improvement of this uncouth landskip as we drew nearer, till we were at last captivated by the numerous beauties we difcovered on the fhore. And I must now add, that we found, during the time of our refidence there, that the inland parts of the Island did no ways fall fhort of the fanguine prepofieffions which we first entertained in their favour.

For the woods which covered moft of the fteepeft hills, were free from all bufhes and underwood, and afforded an eafy paffage through every part of them; and the irregularities of the hills and precipices, in the northern part of the Ifland, neceffarily traced out by their various combinations a great number of romantic vallies; moft of which had a ftream of the cleareft water running through them, that tumbled in cafcades from rock to rock, as the M 4

, of any ver. the rali fin a is a in. ofeprothe , it Siing nes tter uld arthe ind inble afnd to neof ifhe ad bn he

bottom of the valley, by the course of the neighbouring hills, was at any time broken into a fudden sharp descent: Some particular spots occurred in thefe vallies, where the shade and fragrance of the contiguous woods, the loftinefs of the overhanging rocks, and the transparency and frequent falls of the neighbouring streams, prefented scenes of fuch elegance and dignity, as would perhaps with difficulty be rivalled in any other part of the globe. It is in this place, perhaps, that the fimple productions of unaffifted nature may be faid to excel all the fictitious defcriptions of the most animated imagination. I shall finish this article with a short account of that fpot where the Commodore pitched his tent, and which he made choice of for his own refidence, though I'defpair of conveying an adequate idea of its beauty. This piece of ground which he chofe was a fmall lawn, that lay on a little afcent, at the diftance of about half a mile from the fea. In the front of his tent there was a large avenue cut through the woods to the fea-fide, which floping to the water, with a gentle defcent, opened a profpect of the bay and the ships at anchor. This lawn was fcreened behind by a tall wood of myrtle fweeping round it, in the form of a theatre, the ground on which the wood ftood, rifing with a much fharper afcent than the lawn itfelf, though not fo much, but that the hills and precipices within land towered up confiderably above the tops of the trees, and added to the grandeur of the

the view. The: were, befides, two ftreams of chryftal water, which ran on the right and left of the tent, within an hundred yards diftance, and were fhaded by the trees which fkirted the lawn on either fide, and compleated the fymmetry of the whole. Some faint conceptions of the elegance of this fituation may perhaps be better deduced from the draught of it, to be feen in the 18th plate.

It remains now only that we fpeak of the animals and provisions which we met with at this place. Former writers have related, that this Island abounded with vast numbers of goats. and their accounts are not to be queftioned, this place being the ufual haunt of the buccaneers, and privateers, who forme ly frequented those feas. And there are two inftances; one of a Musquito Indian, and the other of Alexander Selkirk, a Scotchman, who were left by their refpective ships, and lived alone upon this Island for fome years, and confequently were no ftrangers to its produce. Selkirk, who was the laft, after a ftay of between four and five years, was taken off the place by the Duke and Duchefs Privateers of Briftol, 'as may be feen at large in the journal of their voyage : His manner of life, during his folitude, was in most particulars very remarkable; but there is one circumstance he relates, which was fo ftrangely verified by our own obfervation, that I cannot help reciting it. He tells us, among other things, as he often caught more goats than he wanted, he *fometimes* fometimes marked their ears and let them go. This was about thirty-two years before our arrival at the Island. Now it happened, that the first goat that was killed by our people at their landing had his ears slit, whence we concluded, that he had doubtless been formerly under the power of *Selkirk*. This was indeed an animal of a most venerable aspect, dignified with an exceeding majestic beard, and with many other symptoms of antiquity. During our stay on the Island, we met with others marked in the fame manner, all the males being diftinguished by an exuberance of beard, and every other characteristick of extreme age.

But the great numbers of goats, which former writers defcribed to have been found upon this Island, are at prefent very much diminished : For the Spaniards being informed of the advantages which the buccaneers and privateers drew from the provisions which goats-flesh here furnished them with, they have endeavoured to extirpate the breed, thereby to deprive their enemies of this relief. For this purpofe, they have put on fhore great numbers of large dogs, who have encreased apace and have destroyed all the goats in the acceffible part of the country; fo that there now remain only a few amongst the craggs and precipices, where the dogs cannot follow them. These are divided into separate herds of twenty or thirty each, which inhabit diftinct fastnesses, and never mingle with each other: By this means we found it extremely difficult

ю.

r-

he

ir

d,

he

al

In

F

n

e

d

r

n

difficult to kill them; and yet we were to defirous of their flesh, which we all agreed much refembled venifon, that we got knowledge, I believe, of all their herds, and it was conceived, by comparing their numbers together, that they fcarcely exceeded two hundred upon the whole Island. I remember we had once an opportunity of obferving a remarkable difpute betwixt a herd of thefe animals and a number of dogs; for going in our boat into the eaftern bay, we faw fome dogs running very eagerly upon the foot, and being willing to difcover what game they were after, we lay upon our oars fome time to view them, and at last we faw them take to a hill, and looking a little further, we observed upon the ridge of it an herd of goats, which feemed drawn up for their reception; there was a very narrow path fkirted on each fide by precipices, on which the Mafter of the herd posted himself fronting the enemy, the reft of the goats being all behind him, where the ground was more open: As this fpot was inacceffible by any other path, excepting where this champion had placed himfelf, the dogs, though they ran up-hill with great alacrity, yet when they came within about twenty yards of him, durft not encounter him, (for he would infallibly have driven them down the precipice) but gave over the chace, and quietly laid themfelves down, panting at a great rate.

The dogs, who, as I have mentioned, are mafters of all the acceffible parts of the Island,

are

(172)

are of various kinds, but fome of them very large, and are multiplied to a prodigious degree. They fometimes came down to our habitations at night, and ftole our provision; and once or twice they fet upon fingle perfons, but affiftance being at hand, they were driven off without doing any mifchief. As at prefent it is rare for goars to fall in their way, we conceived that they lived principally upon young feals; and indeed fome of our people had the curiofity to kill dogs fometimes and drefs them, and they feemed to agree that they had a fifty tafte.

Goats-flesh, as I have mentioned, being fcarce, we rarely being able to kill above one a day. and our people growing tired of fifh, (which, as I shall hereafter observe, abounds at this place) they at last condescended to eat feals, which by degrees they came to relifh, and called it lamb. The feal, numbers of which haunt this Island. hath been fo often described by former writers, that it is unneceffary to fay any thing particular about them in this place. But there is another amphibious creature to be met with here, called a fea lion, that bears fome refemblance to a feal. though it is much larger. This too we eat under the denomination of beef; and as it is fo extraordinary an animal, I conceive, it well merits a particular annotation. They are in fize, when arrived at their full growth, from twelve to twenty feet in length, and from eight to fifteen in circumference: They are extremely fat, fo that after having cut thro' the fkin, which is about an inch in thickness, there is at least a foot of

of fat before you can come at either lean or bones; and we experienced more than once, that the fat of fome of the largest afforded us a butt of oil. They are likewife very full of blood, for if they are deeply wounded in a dozen places, there will instantly gush out as many fountains of blood, fpouting to a confiderable diftance; and to try what quantity of blood they contained, we fhot one first, and then cut its throat, and meafuring the blood that came from him, we found, that befides what remained in the veffels, which to be fure was confiderable, we got at least two Their skins are covered with short hogsheads. hair of a light dun colour, but their tails and their fins, which ferve them for feet on fhore, are almost black; their fins or feet are divided at the ends like fingers, the web which joins them not reaching to the extremities, and each of these extremities is furnished with a nail. They have a diftant refemblance to an overgrown feal, though in fome particulars there is a manifest difference, especially in the males, who have a large fnout or trunk hanging down five or fix inches below the end of the upper jaw; this particular the females have not, and this renders the countenance of the male and female eafy to be diftinguished from each other, and befides, the males are of a much larger fize. The form and appearance both of male and female are very exactly reprefented in the 19th plate, only the disproportion of their fize is not usually fo great as is there exhibited, for the male was drawn from the life, after the largeft of these animals, which

of

(174)

which was found upon the Island : He was the mafter of the flock, and from his driving off the other males, and keeping a great number of females to himfelf, he was by the feamen ludicroufly stiled the Bashaw. These animals divide their time equally between the land and fea. continuing at fea all the fummer, and coming on fhore at the fetting in of the winter, where they refide during that whole feafon. In this interval they engender and bring forth their young, and have generally two at a birth ; thefe they fuckle with their milk, they being at first about the fize of a full-grown feal. During the time of these animals continuance on fhore, they feed on the grafs and verdure which grows near the bank of the fresh-water streams; and, when not employed in feeding, fleep in herds in the most miry places they can find out. As they feem to be of a very lethargic difpolition, and not eafily awakened, each herd was observed to place some of their males at a diffance in the nature of fentinels, who never failed to alarm them, whenever our men attempted to moleft, or even to approach them; and they were very capable of alarming, even at a confiderable diftance, for the noife they make is very loud and of different kinds, fometimes grunting like hogs, and at other times fnorting like horfes in full vigour. They often, especially the males, have furious battles which each other, principally about their females; and we were one day extremely furprized by the fight of two animals, which at first appeared different from all we had ever obferved :

c

e

n

e

è

e

f

-

ł

0

y

e

f

ferved; but, on a nearer approach, they proved to be two fea-lions, who had been goring each other with their teeth, and were covered over with blood : And the Bashaw before-mentioned, who generally lay furrounded with a feraglio of females, which no other male dared to approach, had not acquired that envied pre-eminence without many bloody contefts, of which the marks still remained in the numerous scars which were visible in every part of his body. We killed many of them for food, particularly for their hearts and tongues, which we effected exceeding good eating, and preferable even to those of bullocks: And in general there was no difficulty in killing them, for they were incapable either of escaping or refifting, their motion being the most unweildy that can be conceived, their blubber, all the time they are moving, being agitated in large waves under their fkins. However, a failor one day being carelefsly employed in fkinning a young fea-lion, the female, from whence he had taken it, came upon him unperceived, and getting his head in her mouth, fhe with her teeth fcored his fkull in notches in many places, and thereby wounded him fo defperately, that though all possible care was taken of him, he died in a few days.

Thefe are the principal animals which we found upon the Ifland : For we faw but few birds, and thofe chiefly hawks, blackbirds, owls, and humming birds. We faw not the Pardela, which burrows in the ground, and which former writers have mentioned to be found here; but as

1

we

we met with their holes, we fuppofed that the dogs had deftroyed them, as they have almost done the cats, which were very numerous in Selkirk's time, but we faw not above one or two during our whole ftay. However, the rats ftill keep their ground, and continue here in great numbers, and were very troubless to us, by infefting our tents nightly.

But that which furnished us with the most delicious reparts at this Island, remains still to be defcribed. This was the fifh, with which the whole bay was most plentifully stored, and with the greatest variety : For we found here cod of a prodigious fize; and by the report of fome of our crew, who had been formerly employed in the Newfoundland fifthery, not in lefs plenty than is to be met with on the banks of that Island. We caught alfo cavallies, gropers, large breams maids, filver fifh, congers of a peculiar kind, and above all, a black fifh which we most efteemed, called by fome a Chimney fweeper, in fhape refembling a carp. Indeed the beach is every where fo full of rocks and loofe ftones, that there is no poffibility of haling the Seyne; but with hooks and lines we caught what numbers we pleafed, fo that a boat with two or three lines would return loaded with fifth in about two or three hours time. The only interruption we ever met with, arofe from great quantities of dog-fifh and large fharks, which fometimes attended our boats and prevented our fport. Befides the fish we have already mentioned, we found here one delicacy in greater perfection, both

n, th both as to fize, flavour and quantity, than is perhaps to be met with in any other part of the world : This was fea cra-fifh; they generally weighed eight or nine pounds apiece, were of a molt excellent tafte, and lay in fuch abundance near the water's edge, that the boat-hooks often ftruck into them, in putting the boat to and from the fhore.

Thefe are the most material articles relating to the accommodations, foil, vegetables, animals, and other productions of the Island of Juan Fernandes : By which it must appear, how properly that place was adapted for recovering us from the deplorable fituation to which our tedious and unfortunate navigation round Cape Horn had reduced us. And having thus given the reader lome idea of the fite and circumstances of this place, which was to be our refidence for three months, I shall now proceed, in the next chapter, to relate all that occurred to us in that interval, refuming my narration from the 18th day of June, being the day in which the Tryal Sloop, having by a fquall been driven out to fea three days before, came again to her moorings, the day in which we finished the fending our fick on shore, and about eight days after our first anchoring at this Island.

A CARLES TO BOARD

CHAP.

(178)

CHAP. II.

The arrival of the Gloucester and the Anne Pink at the Island of Juan Fernandes, and the transactions at that place during this interval.

HE arrival of the Tryal Sloop at this Island, fo foon after we came there ourfelves, gave us great hopes of being fpeedily joined by the reft of the fquadron; and we were for fome days continually looking out, in expectation of their coming in fight. But near a fortnight being elapfed, without any of them having appeared, we began to defpair of ever meeting them again; as we knew that, had our fhip continued fo much longer at fea, we fhould every man of us have perifhed, and the veffel, occupied by dead bodies only, would have been left to the caprice of the winds and waves : And this we had great reafon to fear was the fate of our conforts, as each hour added to the probability of these desponding suggestions.

But on the 21ft of *June*, fome of our people, from an eminence on fhore, difcerned a fhip to leeward, with her courfes even with the horizon : and they, at the fame time, particularly obferved, that fhe had no fail abroad except her courfes and her main top-fail. This circumftance made them conclude that it was one of our fquadron, which had probably fuffered in her her fals and rigging as feverely as we had done : But they were prevented from forming more definit ; conjectures about her; for, after viewing her for a fhort time, the weather grew thick and hazy, and they loft fight of her. On this report, and no fhip appearing for fome days, we were all under the greatest concern, fuspecting that her people were in the utmost diftrefs for want of water, and fo diminished and weakened by ficknefs, as not to be able to ply up to windward; fo that we feared that, after having been in fight of the Island, her whole crew would notwithstanding perish at fea. However, on the 26th, towards noon, we difcerned a fail in the North-East quarter, which we conceived to be the very fame thip that had been feen before, and our conjectures proved true; and about one o'clock fhe approached for near, that we could diffinguish her to be the Gloucester. As we had no doubt of her being in great diffrefs, the Commodore immediately ordered his boat to her affiftance, laden with fresh water, fish and vegetables, which was a very feafonable relief to them; for our apprehenfions of their calamities appeared to be but too well grounded, as perhaps there 'never was' a crew in a more diffressed situation. They had already thrown over-board two thirds of their complement, and of those that remained alive, fcarcely any were capable of doing duty, except the officers and their fervants. They had been a confiderable time at the fmall allowance, N 2

of.

his urily ere -Xear em /er ur ıld el. en s: :he he le, to n : ber

nof

in

er

of a pint of fresh water to each man for twentyfour hours, and yet they had fo little left, that, had it not been for the fupply we fent them, they must foon have died of thirst. The ship plied in within three miles of the bay; but, the winds and currents being contrary, fhe could not reach the road. However, fhe continued in the offing the next day, but had no chance of coming to an anchor, unlefs the wind and currents shifted; and therefore the Commodore repeated his affiftance, fending to her the Tryal's boat manned with the Centurion's people, and a farther fupply of water and other refreshments. Captain Mitchel, the Captain of the Gloucester, was under a neceffity of detaining both this boat and that fent the preceding day; for without the help of their crews he had no longer ftrength enough to navigate the fhip. In this tantalizing fituation the Gloucester continued for near a fortnight, without being able to fetch the road, though frequently attempting it, and at fome times bidding very fair for it. On the oth of July, we observed her stretching away to the eaftward at a confiderable diftance, which we fuppofed was with a defign to get to the fouthward of the Island; but as we foon loft fight of her, and she did not appear for near a week, we were prodigiously concerned, knowing that the must be again in extreme distress for want. of water. After great impatience about her, we discovered her again on the 16th, endeavouring to come round the eaftern point of the Island; but the wind, still blowing directly from the

the bay, prevented her getting nearer than within four leagues of the land. On this, Captain Mitchel made fignals of diftrefs, and our longboat was fent to him with a ftore of water, and plenty of fifh, and other refreshments. And the long-boat being not to be fpared, the Cockfwain had politive orders from the Commodore to return again immediately; but the weather proving ftormy the next day, and the boat not appearing, we much feared fhe was loft, which would have proved an irretrievable misfortune to us all : But, the third day after, we were relieved from this anxiety, by the joyful fight of the long-boat's fails upon the water; and we fent the Cutter immediately to her affiftance, who towed her along-fide in a few hours. The crew of our long-boat had taken in fix of the Gloucester's fick men to bring them on shore, two of which had died in the boat. And now we learnt that the Gloucester was in a most dreadful condition, having fcarcely a man in health on board, except those they received from us; and, numbers of their fick dying daily, we found that, had it not been for the last fupply fent by our long-boat, both the healthy and difeafed must have all perished together for want of water. And these calamities were the more terrifying, as they appeared to be without remedy : For the Gloucester had already spent a month in her endeavours to fetch the bay, and the was now no farther advanced than at the first moment she made the Island; on the con- N_3 trary,

ntvhat, em, **fhip** the not l in e of curlore val's nd a nts. fter, ooat the igth ing ortbad, me of the Ve thof ek, hat ant. er, eathe bm the

trary, the people on board her had worn out all their hopes of ever fucceeding in it, by the many experiments they had made of its difficulty. Indeed, the fame day her fituation grew more defperate than ever, for after fhe had received our last fupply of refreshments, we again lost fight of her; fo that we in general defpaired of her ever coming to an anchor.

Thus was this unhappy veffel bandied about within a few leagues of her intended harbour, whilft the neighbourhood of that place and of those circumstances, which could alone put an end to the calamities they laboured under, ferved only to aggravate their diffrefs, by torturing them with a view of the relief it was not in their power to reach. But the was at last delivered from this dreadful fituation, at a time when we least expected it; for after having loft fight of her for feveral days, we were pleafingly furprized, on the morning of the 23d of July, to fee her open the N.W. point of the bay with a flowing fail; when we immediately difpatched what boats we had to her affiftance, and in an hour's time from our first perceiving her, she anchored fafe within us in the bay. And now we were more particularly convinced of the importance of the affiftance and refreshments we fo often fent them, and how impoffible it would have been for a man of them to have furvived, had we given lefs attention to their wants; for notwithstanding the water, the greens, and fresh provisions which we supplied them with.

with, and the hands we fent them to navigate the ship, by which the fatigue of their own people was diminished, their fick relieved, and the mortality abated; notwithstanding this indulgent care of the Commodore, they yet buried three fourths of their crew, and a very fmall proportion of the remainder were capable of affifting in the duty of the ship. On their coming to an anchor, our first care was to affist them in mooring, and our next to fend the fick on fhore : Thefe were now reduced by deaths to lefs than fourfcore, of which we expected to lofe the greatest part; but whether it was, that those farthest advanced in the distemper were all dead, or that the greens and fresh provisions we had fent on board had prepared those which remained for a more fpeedy recovery, it happened contrary to our expectations, that their fick were in general relieved and reftored to their strength, in a much shorter time than our own had been when we first came to the Island, and very few of them died on fhore.

I have thus given an account of the principal events relating to the arrival of the Gloucester, in one continued narration : I shall only add, that we never were joined by any other of our ships, except our Victualler, the Anna Pink, who came in about the middle of August, and whose history I shall more particularly relate hereafter. And I shall now return to the account of our own transactions on board and on shore, during the interval of the Gloucester's N 4 frequent

t all the culrew had we ieral 10 bout our. d of t an rved ring heir ered hen ight furto vith hed an fhe 10W the nts e it ave ieir ins,

ith,

21

frequent and ineffectual attempts to reach the Island.

Our next employment, after sending our fick on fhore from the Centurion, was cleanfing our thip and filling our water. The first of these measures was indispensibly necessary to our future health, as the numbers of fick, and the unavoidable negligence arifing from our deplorable fituation at fea, had rendered the decks most intolerably loathfome. And the filling our water was a caution that appeared not lefs effential to our future fecurity, as we had reafon to apprehend that accidents might oblige us to quit the Island at a very fhort warning; for fome Appearances, which we had difcovered on fhore upon our first landing, gave us grounds to believe, that there were Spanish cruisers in these feas, which had left the Island but a short time before our arrival, and might poffibly return there again, either for a recruit of water, or in fearch of us; for as we could not doubt, but that the fole business they had at fea was to intercept us, and we knew that this Island was the likelieft place, in their own opinion, to meet with us. The circumstances, which gave rife to these reflections (in part of which we were not mistaken, as shall be observed more at large hereafter) were our finding on fhore feveral pieces of earthen jars, made use of in those feas for water and other liquids, which appeared to be fresh broken : We faw too many heaps of ashes, and near them fish-bones and pieces of fifh,

fifh. befides whole fifh fcattered here and there, which plainly appeared to have been but a fhore time out of the water, as they were but just These appearances were beginning to decay. certain indications that there had been ships at this place but a fhort time before we came there; and as all Spanib Merchant-men are inftructed to avoid the Island, on account of its being the common rendezvous of their enemies, we concluded those who had touched here to be ships of force; and not knowing that Pizarro was returned to Buenos Ayres, and ignorant what ftrength might have been fitted out at Callao, we were under some concern for our fafety. being in fo wretched and enfeebled a condition, that notwithstanding the rank of our ship, and the fixty guns fhe carried on board, which would only have aggravated our difhonour, there was fcarcely a privateer fent to fea, that was not an over-match for us. However, our fears on this head proved imaginary, and we were not exposed to the difgrace, which might have been expected to have befallen us, had we been neceffitated (as we must have been, had the enemy appeared) to fight our fixty-gun ship with no more than thirty hands.

Whilft the cleaning our fhip and the filling our water went on, we fet up a large copperoven on fhore near the fick tents, in which we baked bread every day for the fhip's company, being extremely defirous of recovering our fick as foon as poffible, and conceiving that new bread

bread added to their greens and fresh fish, might prove a powerful article in their relief. Indeed we had all imaginable reafon to endeavour at the augmenting our prefent ftrength, as every little accident, which to a full crew would be infignificant, was extremely alarming in our prefent helpless fituation : Of this, we had a troublesome instance on the 30th of June; for at five in the morning, we were aftonished by a violent guft of wind directly off shore, which inftantly parted our fmall bower cable about ten fathom from the ring of the anchor : The ship at once fwung off to the best bower, which happily ftood the violence of the jerk, and brought us up with two cables an end in eight fathom. At this time we had not above a dozen feamen in the ship, and we were apprehensive, if the squall continued, that we should be driven to fea in this wretched condition. However, we fent the boat on fhore, to bring off all that were capable of acting; and the wind, foon abating of its fury, gave us an opportunity of receiving the boat back again with a reinforcement. With this additional ftrength we immediately went to work, to heave in what remained of the cable, which we fufpected had received fome damage from the foulness of the ground before it parted; and agreeable to our conjecture, we found that feven fathom and a half of the outer end had been rubbed, and rendered unferviceable. In the afternoon, we bent the cable to the fpare anchor, and got it over the ship's fide; and the next

next morning, *July* 1, being favoured with the wind in gentle breezes, we warped the fhip in again, and let go the anchor in forty-one fathom; the eaftermost point now bearing from us E. $\frac{1}{2}$ S; the westermost N. W. by W; and the bay as before, S. S. W; a situation, in which we remained fecure for the future. But we were much concerned for the loss of our anchor, and fwept frequently for it, in hopes to have recovered it; but the buoy having funk at the very instant that the cable parted, we were never able to find it.

And now as we advanced in July, fome of our men being tc'erably recovered, the ftrongeft of them were employed in cutting down trees, and fplitting them into billets; while others, who were too weak for this employ, undertook to carry the billets by one at a time to the waterfide : This they performed, fome of them with the help of crutches, and others fupported by a fingle flick. We next fent the forge on fhore, and employed our fmiths, who were but just capable of working, in mending our chain-plates, and our other broken and decayed iron work. We began too the repairs of our rigging; but as we had not a fufficient quantity of junk to make fpun-yarn, we deferred the general overhale, in hopes of the daily arrival of the Gloucester, who we knew had a great quantity of junk on board. However, that we might make as great difpatch as poffible in our refitting, we fet up a large tent on the beach for the fail-makers; and and they were immediately employed in repairing our old fails, and making us new ones.

. Thefe occupations, with our cleanfing and watering the ship, (which was by this time pretty well compleated) the attendance on our fick, and the frequent relief fent to the Gloucester, were the principal transactions of our infirm crew, till the arrival of the Gloucester at an anchor in the And then Captain Mitchel waiting on the bay. Commodore, informed him, that he had been forced by the winds, in his last absence, as far as the fmall Island called Mafa-Fuero, lying about twenty-two leagues to the weftward of Juan Fernandes; and that he endeavoured to fend his boat on shore at this place for water, of which he could observe feveral streams, but the wind blew fo ftrong upon the fhore, and occafioned fuch a furf, that it was impossible for the boat to land; though the attempt was not altogether, ufelefs, as they returned with a boat load of fish. This Island had been represented by former Navigators as a barren rock ; but Captain Mitchel affured the Commodore, that it was almost every where covered with trees and verdure, and was near four miles in length; and added, that it appeared to him far from impossible, but fome small bay might be found on it, which might afford fufficient shelter for any ship defirous of refreshing there.

As four ships of our squadron were missing, this description of the Island of *Masa-Fuero* gave rife to a conjecture, that some of them might possibly have sallen in with that Island, and have mission

ł

mistaken it for the true place of our rendezvous; and this fufpicion was the more plaufible, as we had no draught of either Island that could be relied on. In confequence of this reasoning, Mr. Anson determined to fend the Tryal Sloop thither, as foon as fhe could be fitted for the fea, in order to examine all its bays and creeks, that we might be fatisfied whether any of our miffing fhips were there or not. For this purpofe, fome of our best hands were fent on board the Tryal the next morning, to overhale and fix her rigging; and our long boat was employed in compleating her water; and whatever ftores and neceffaries fhe wanted, were immediately fupplied, either from the Centurion or the Gloucester. But it was the 4th of August before the Tryal was in readiness to fail, when having weighed, it foon after fell calm, and the tide fet her very near the eaftern fhore : Captain Saunders hung out lights, and fired feveral guns to acquaint us with his danger; upon which all the boats were fent to his relief, who towed the Sloop into the bay; where the anchored until the next 'morning, and then' weighed again, proceeded on her cruize with a fair breeze.

And now after the *Gloucefter*'s arrival, we were employed in earneft in examining and repairing our rigging; but in the ftripping our foremaft, we were alarmed by difcovering it was fprung just above the partners of the upper deck. The fpring was two inches in depth, and twelve in circumference; but the Carpenters infpecting it, gave it as their opinion, that fifting it with two leaves leaves of an anchor ftock, would render it as fecure as ever. But our greateft difficulty in refitting was the want of cordage and canvas; for though we had taken to fea much greater quantities of both, than had ever been done before, yet the continued bad weather we met with, had occafioned fuch a confumption of thefe ftores, that we were driven to great ftraits : For after working up all our junk and old fhrouds, to make twice-laid cordage, we were at laft obliged to unlay a cable to work into running rigging. And with all the canvas, and remnants of old fails that could be muftered, we could only make up one compleat fuit.

Towards the middle of August our men being indifferently recovered, they were permitted to. quit their fick tents, and to build feparate huts for themfelves, as it was imagined, that by living apart, they would be much cleanlier, and confequently like to recover their ftrength the fooner; but at the fame time particular orders were given, that on the firing of a gun from the fhip, they should instantly repair to the water-Their employment on fhore was now fide. either the procuring of refreshments, the cutting of wood, or the making of oil from the blubber of the fea-lions. This oil ferved us for fever. ufes, as burning in lamps, or mixing with pitch to pay the ships fides, or, when mixed with wood-afhes, to fupply the ufe of tallow, of which we had none left, to give the ship boot-hole tops. Some of the men too were occupied in falting of cod; for there being two Newfoundland fishermen

(191)

5

, d

r

men in the *Centurion*, the Commodore made use of them in laying in a confiderable quantity of falted cod for a fea-ftore; but very little of it was made use of, as it was afterwards thought to be as productive of the fcurvy, as any other kind of falt provisions.

I have before-mentioned, that we had a copper-oven on fhore to bake bread for the fick; but it happened that the greatest part of the flower, for the use of the squadron, was embarked on board our Victualler the Anna Pink : And I should have mentioned, that the Tryal Sloop, at her arrival, had informed us, that on the oth of May fhe had fallen in with our Victualler, not far diftant from the Continent of Chili; and had kept company with her for four days, when they were parted in a hard gale of wind. This gave us fome room to hope that fhe was fafe, and that the might foon join us; but all June and July being past without any news of her, we fufpected fhe was loft; and at the end of July the Commodore ordered all the ships to a fhort allowance of bread. And it was not in our bread only, that we feared a deficiency ; for fince our arrival at this Island, we discovered that our former Purfer had neglected to take on board large quantities of feveral kinds of provifions, which the Commodore had expressly ordered him to receive; fo that the fuppofed lofs of our Victualler, was on all accounts a mortifying confideration. However, on Sunday, the 16th of August, about noon, we espied a fail in the northern quarter, and a gun was immediately

(192)

ly fired from the Centurion, to call off the people from fhore; who readily obeyed the fummons, and repaired to the beach, where the boats waited to carry them on board. And now being prepared for the reception of this fhip in view, whether friend or enemy, we had various fpeculations about her ; at first, many imagined it to be the Iryal Sloop returned from her cruize; but as fhe drew nearer this opinion was confuted, by obferving fhe was a veffel with three mafts; and then other conjectures were eagerly canvaffed, fome judging it to be the Severn, others the Pearl, and feveral affirming that it did not belong to our fquadron : But about three in the afternoon our disputes were ended, by an unanimous perfuafion that it was our Victualler the Anna Pink. This thip, though, like the Gloucester, she had fallen in to the northward of the Island, had yet the good fortune to come to an' anchor in the bay, at five in the afternoon. Her arrival gave us all the fincereft joy; for each ship's company was now restored to their full allowance of bread, and we were now freed from the apprehensions of our provisions falling short, before we could reach fome amicable port; a calamity, which in these feas is of all others the most irretrievable. This was the last ship that joined us; and the dangers fhe encountered, and the good fortune which the afterwards met with, being matters worthy of a feparate narration, I shall refer them, together with a short account of the other flips of the fquadron, to the enfuing chapter.

CHAP. III.

A fhort narrative of what befel the Anna Pink before the joined us, with an account of the lofs of the Wager, and of the putting back of the Severn and Pearl, the two remaining thips of the fquadron.

N the first appearance of the Anna Pink, it feemed wonderful to us how the crew of a veffel, which came to this rendezvous two months after us, should be capable of working their ship in the manner they did, with so little appearance of debility and diffrefs : But this difficulty was foon folved when the came to an anchor; for we then found that they had been in harbour fince the middle of May, which was near a month before we arrived at Juan Fernandes : So that their fufferings (the rifque they had run of shipwreck only excepted) were greatly short of what had been undergone by the reft of the fquadron. It feems, on the 16th of May, they fell in with the land, which was then but four leagues diftart, in the latitude of 45°: 15' South. On the first fight of it they wore ship and stood to the fouthward, but their fore-topfail fplitting, and the wind being W. S.W, they drove towards the fhore; and the Captain at laft, either unable to clear the land, or as others fay, refolved to keep the fea no longer, fteered for the coaft, with a view of difcovering fome shelter amongft

(194)

amongst the many Islands which then appeared in fight : And about four hours after the first view of the land, the Pink had the good fortune to come to an anchor, to the eaftward of the Island of Inchin; but as they did not run fufficiently near to the East-shore of that Island, and had not hands to veer away the cable brifkly, they were foon driven to the eaftward, deepning their water from twenty-five fathom to thirty-five, and ftill continuing to drive, they, the next day, the 17th of May, let go their fheet anchor; which, though it brought them up for a fhort time, yet, on the 18th, they drove again, till they came into fixty-five fathom water, and were now within a mile of the land, and expected to be forced on fhore every moment, in a place where the coaft was very high and fteep to, that there was not the leaft profpect of faving the fhip or cargo; and their boats being very leaky, and there being no appearance of a landing-place, the whole crew, confifting of fixteen men and boys, gave themfelves over for loft, for they apprehended, that if any of them by fome extraordinary chance should get on shore, they would, in all probability, be maffacred by the Savages on the coaft : For thefe, knowing no other Europeans but Spaniards, it might be expected they would treat all ftrangers with the fame cruelty which they had fo often and fo fignally exerted against their Spanish neighbours. Under these terrifying circumftances the Pink drove nearer and nearer to the rocks which formed the fhore : but at laft, when the crew expected each inftant to

(195)

to strike, they perceived a small opening in the land, which raifed their hopes; and immediately cutting away their two anchors, they fteeted for it, and found it to be a small channel betwixt an Island and the Main, which led them into a most excellent harbour, which, for its fecurity against all winds and fwells, and the fmoothness of its waters, may perhaps compare with any in the known world. And this place being fcarcely two miles diftant from the fpot where they deemed their destruction inevitable, the horrors of shipwreck and of immediate death, which had fo long, and fo ftrongly poffefied them, vanished almost instantaneously, and gave place to the more joyous ideas of fecurity, repole, and refreshment.

In this harbour, discovered in this almost miraculous manner, the Pink came to an anchor in twenty-five fathom water, with only a hawfer; and a finall anchor of about three hundred weight. And here the continued for hear two months, refreshing her people, who were many of them ill of the fcurvy, but were foon reftored to perfect health by the fresh provisions, of which they procured good ftore, and the excellent water with which the adjacent fhore abounded. But as this place may prove of the greatest importance to future Navigators, who may be forced upon this coaft by the westerly winds, which are almost perpetual in that part of the world; I shall, before I enter into any farther particulars of the adventures of the Pink, give the beft account

to and htly not rere waand the ich, yet, me юw be iere iere or or and the ys, rediin on erohey lty ted lefe irer re; ant to

l in

iew

count I could collect of this Port, its lituation, conveniencies and productions.

To facilitate the knowledge of this place to those who may hereafter be defirous of making use of it, there is, in the 20th Plate, a plan both of the harbour itfelf, and of the large bay before it, through which the Pink drove. This plan is not perhaps in all respects fo accurate as might be wifhed, it being composed from the memorandums and rude sketches of the Master and Surgeon; who were not, I prefume, the ableft draughts-men. But as the principal parts were laid down by their effimated diftances from each other, in which kind of effimations it is well known the greatest part of failors are very dextrous, I suppose the errors are not very confider-Its latitude, which is indeed an important able. point, is not well afcertained, the Pink having no obfervation either the day before fhe came here, or within a day of her leaving it : But it is fuppofed that it is not very diftant from 45°: 30' South, and the large extent of the bay before the harbour renders this uncertainty the lefs material. The Island of Inchin lying before the bay is supposed to be one of the Islands of Chonos, which are mentioned in the Spanish accounts, as fpreading all along that coaft; and are faid by them to be inhabited by a barbarous people, famous for their hatred of the Spaniards. and for their cruelties to fuch of that Nation as have fallen into their hands: And it is possible too that the land, near which the harbour itfelf lies, may be another of those Islands, and that the

the Continent may be confiderably farther to the eastward. The depths of water in the different parts of the Port, and the channels by which it communicates with the bay, are fufficiently marked in the plan. But it must be remembred, that there are two coves in it where ships may conveniently heave down, the water being constantly smooth : And there are several fine runs of excellent fresh water, which fall into the harbour, and fome of them fo luckily fituated, that the cafks may be filled in the long-boat with an hofe: The most remarkable of these runs is the ftream marked in the N.E. part of the Port. This is a fresh water river, and here the Pink's people got some few mullets of an excellent flavour; and they were perfuaded that, in a proper feafon (it being winter when they were there) it abounded with fish. The principal refreshments they met with in this port were greens, as wild celery, nettle-tops, &c. (which after fo long a continuance at fea they devoured with great eagernefs); fhell-fifh, as cockles and mufcles of an extraordinary fize, and extremely delicious; and good ftore of geele, shags, and penguins. The climate, though it was the depth of winter. was not remarkably rigorous; nor the trees, and the face of the country deftitute of verdure ; and doubtlefs in the fummer many other fpecies of fresh provision, besides these here enumerated, might be found there. And notwithstanding the tales of the Spanish Historians, in relation to the violence and barbarity of the inhabitants, it doth not appear that their numbers are fuffi-03

cient

cient to give the least jealousy to any ship of ordinary force, or their difpolition is by any means fo mischievous or merciless as hath hitherto been represented : And besides all these advantages, it is fo far removed from the Spanifs frontier, and fo little known to the Spaniards themfelves, that there is reafon to fuppole, that with proper precautions a fhip might continue here undifcovered for a long time. It is alfo a place of great defence; for by poffeffing the Island that closes up the harbour, and which is acceffible in very few places, a fmall force might defend this Port against all the strength the Spaniards could mufter in that part of the world; for this Island towards the harbour is fteep too, and has fix fathom water close to the shore, fo that the Pink anchored within forty yards of it: Whence it is obvious how impoffible it would prove, either to board or to cut out any veffel protected by a force posted on fhore within piftol-fhot, and wher those who were thus posted could not themselves be attacked. All these circumstances feem to render this place worthy of a more accurate examination; and it is to be hoped, that the important uses which this rude account of it feems to fuggest, may hereafter recommend it to the confideration of the Public, and to the attention of those who are more immediately intrusted with the conduct of our naval affairs.

After this description of the place where the Pink lay for two months, it may be expected that I should relate the discoveries made by the crew

(199)

v

erew on the adjacent coaft, and the principal incidents during their ftay here : But here I must observe, that, being only a few in number, they did not dare to detach any of their people on diftant discoveries; for they were perpetually terrified with the apprehension that they should be attacked either by the Spaniards or the Indians; fo that their excursions were generally confined to that tract of land which furrounded the Port, and where they were never out of view of the ship. But even had they at first known how little foundation there was for those fears, yet the country in the neighbourhood was fo grown up with wood, and traverfed with mountains, that it appeared impracticable to penetrate it : So that no account of the inland parts could be expected from them. Indeed they were able to difprove the relations given by Spanifb writers, who had reprefented this coaft as inhabited by a fierce and powerful people: For they were certain that no fuch inhabitants were there to be found, at leaft during the winter feafon; fince all the time they continued there, they faw no more than one Indian family, which came into the harbour in a perigua, about a month after the arrival of the Pink, and confifted of an Indian near forty years old, his wife, and two children, one three years of age, and the other still at the breast. They feemed to have with them all their property, which was a dog, and a cat, a fifting-ner, a hatchet, a knife, a cradle, some bark of trees intended for the covering a hut, a reed, fome 04 worfted,

_

٠à.,

worsted, a flint and steel, and a few roots of a yellow hue and a very difagreeable tafte, which ferved them for bread. The Master of the Pink, as foon as he perceived them, fent his yawl, who brought them on board; and fearing, left they might difcover him if they were to mitted to go away, he took, as he conceived, proper precautions for fecuring them, but without any mixture of ill usage or violence: For in the day-time they were permitted to go where they pleafed about the ship, but at night were locked up in the fore-caftle. As they were fed in the fame manner with the reft of the crew, and were often indulged with brandy, which they feemed greatly to relifh, it, did not at first appear that they were much diffatisfied with their fituation, especially as the Mafter took the Indian on those when he went a fhooting, (who always feemed extremely delighted when the Master killed his game) and as all the crew treated them with great humanity : But it was foon perceived, that though the woman continued eafy and chearful, yet the man grew penfive and reftlefs at his confinement. He feemed to be a perfon of good natural parts, and though not capable of conversing with the Pink's people, otherwife than by figns, was yet very curious and inquisitive, and showed great dexterity in the manner of making himfelf understood. In particular, feeing fo few people on board fuch a large fhip, he let them know, that he fuppofed they were once more numerous: And to represent to them what he imagined

-

gined was become of their companions, he laid himfelf down on the deck, clofing his eyes, and stretching himself out motionless, to imitate the appearance of a dead body. But the ftrongest proof of his fagacity was the manner of his getting away; for after being in cuftody on board the Pink eight days, the fcuttle of the fore-caftle, where he and his family were locked up every night, happened to be unnailed, and the following night being extremely dark and ftormy, he contrived to convey his wife and children through the unnailed fcuttle, and then over the ship's fide in the yawl; and to prevent being purfued, he cut away the long-boat and his own periagua, which were towing a-ftern. and immediately rowed ashore. All this he conducted with fo much diligence and fecrecy. that though there was a watch on the quarterdeck with loaded-arms, yet he was not difcovered by them, till the noife of his oars in the water, after he had put off from the fhip, gave them notice of his escape; and then it was too late either to prevent him or to purfue him; for, their boats being all a-drift, it was a confiderable time before they could contrive the means of getting on shore themselves to search for their The Indian too by this effort, belides boats. the recovery of his liberty, was in fome fort revenged on those who had confined him, both by the perplexity they were involved in from the lofs of their boats, and by the terror he threw them into at his departure; for on the first alarm of the watch, who cried out, The Indians

Indians, the whole ship was in the utmost confusion, believing themfelves to be boarded by a fleet of armed periagua's.

The refolution and fagacity with which the Indian behaved upon this occasion, had it been exerted on a more extensive object than the retrieving the freedom of a fingle family, might perhaps have immortalized the exploit, and have given him a rank amongst the illustrious names of antiquity. Indeed his late Masters did fo much justice to his merit, as to own that it was a most gallant enterprize, and that they were grieved they had ever been neceffitated, by their attention to their own fafety, to abridge the liberty of a perfond of whole prudence and. courage they had now fuch a diffinguished proof. And as it was supposed by fome of them that he still continued in the woods in the neighbourhood of the port, where it was feared he might fuffer for want of provisions, they eafily prevailed upon the Mafter to leave a quantity of fuch food, as they thought would be most agreeable to him, in a particular part where they imagined he would be likely to find it : And there was reason to conjecture, that this piece of humanity was not altogether ufelefs to him; for, on visiting the place sometime after, it was found that the provision was gone, and in a manner that made them conclude it had fallen into his hands.

But however, though many of them were fatisfied that this Indian still continued near them; yet others would needs conclude, that

he

(202)

he was gone to the Island of Childe, where they. feared he would alarm the Spaniards, and would foon return with a force fufficient to furprize the Pink : And on this occasion the Master of the Pink was prevailed on to omit firing the evening-gun; for it muft be remembered, (and there is a particular reafon hereafter for attending to this circumstance) that the Master, from an oftentatious imitation of the practice of Men of War, had hitherto fired a gun every evening at the fetting of the watch. This he pretended was to awe the enemy, if there was any within hearing, and to convince them that the Pink was always on her guard; but it being now reprefented to him, 'that' his' great fecurity was his concealment, and that the evening-gun might poffibly difcover him, and ferve to guide the enemy to him, he was prevailed on, as has been mentioned, to omit it for the future : And his crew being now well refreshed," and their wood and water fufficiently replenished, he, in a few days after the escape of the Indian, put to fea, and had a fortunate paffage to the rendezvous at the Island" of Juan Fernandes, where he arrived on the 16th of August, as hath been already mentioned in the preceding chapter. case .

This veffel, the Anna Pink, was, as I have obferved, the last that joined the Commodore at Juan Fernandes. The remaining thips of the fouadron were the Severn and Pearl, and the Wager store-ship : The Severn and Pearl parted company with the fquadron off Cape Noir, and, as we afterwards learnt, put back to the Brazils :

So

(204)

So that of all the fhips which came into the South-Seas, the Wager, Captain Cheap, was the only one that was miffing. This fhip had on board fome field-pieces mounted for land fervice, together with fome coehorn mortars, and feveral kinds of artillery, ftores and tools, intended for the operations on thore : And therefore, as the enterprize on Baldivia had been refolved on for the first undertaking of the fouadron, Captain Cheap was extremely folicitous that these mater is, which were in his custody. might be read before Baldivia : that if the foundron should possibly rendezvous there; (as he knew not the condition they were then reduced to) no delay nor difappointment might be imputed to him. got all and a low

But whilft the Wager, with these views, was making the beft of her way to her first rendezyous off the Island of Socoro, whence (as there was little probability of meeting any of the fquadron there) the proposed to fleer directly for Baldivia, she made the land on the 14th of May, about the latitude of 47°, South ; and, the Captain exerting himfelf on this occasion. in order to get clear of it, he had the misfortune to fall down the after-ladder, and thereby diflocated his shoulder, which rendered him incapable of acting. This accident, together with the crazy condition of the ship, which was little better than a wreck, prevented her from getting off to fea, and entanlged her more and more with the land, fo that the next morning, at daybreak, the ftruck on a funken rock, and foon after

(205)

after bilged, and grounded between two small Islands, at about a musquet-shot from the shore.

In this fituation the ship continued entire a long time, fo that all the crew had it in their power to get fafe on fhore; but a general confusion taking place, numbers of them, instead of confulting their fafety, or reflecting on their calamitous condition, fell to pillaging the ship, arming themfelves with the first weapons that came to hand, and threatening to murder all who fhould oppose them. This frenzy was greatly heightned by the liquors they found on board, with which they got fo extremely drunk, that fome of them tumbling down between decks, were drowned, as the water flowed in, being incapable of getting up and retreating to other places where the water had not yet entered : And the Captain, having done his utmost to get the whole crew on fhore, was at last obliged to leave these mutineers, behind him, and to follow his officers, and fuch as he had been able to preyail on; but he did not fail to fend back the boats, to perfuade those who remained, to have fome regard for their prefervation ; though all his efforts were for fome time without fuccefs. However, the weather next day proving ftormy, and there being great danger of the fhip's parting, they began to be alarmed with the fears of perifhing, and were defirous of getting to land; but it feems their madnefs had not yet left them, for the boat not appearing to fetch them off to foon as they expected, they at last pointed a four pounder, which was on the the quarter-deck, against the hut, where they knew the Captain refided on shore, and fired two shot, which passed but just over it.

From this specimen of the behaviour of part of the crew, it will not be difficult to frame fome conjecture of the diforder and anarchy which took place, when they at last got all on fhore. For the men conceived, that by the lofs of the ship, the authority of the officers was at an end; and, they being now on a defolate coaft, where fcarcely any other provisions could be got, except what should be faved out of the wreck, this was another infurmountable fource of difcord : For as the working upon the wreck, and the fecuring the provisions, fo that they might be preferved for future exigencies as much as possible, and the taking care that what was neceffary for immediate fubfiftance might be fparingly and equally diffributed, were matters not to be brought about but by discipline and fubordination; the mutinous disposition of the people, ftimulated by the impulses of immediate hunger, rendered every regulation made for this purpole ineffectual : So that there were continual concealments, frauds and thefts, which animated each man against his fellow, and produced infinite feuds and contefts. And hence there was conftantly kept on foot a perverse and malevolent turn of temper, which rendered them utterly ungovernable.

But befides these heart-burnings occasioned by petulance and hunger, there was another important point, which set the greatest part of the

(207)

the people at variance with the Captain. This was their differing with him in opinion, on the measures to be purfued in the prefent exigency : For the Captain was determined, if possible, to fit up the boats in the best manner he could, and to proceed with them to the northward. For having with him above an hundred men in health, and having gotten fome fire-arms and ammunition from the wreck, he did not doubt but they could mafter any Spanifb veffel they fhould meet with in those feas : And he thought he could not fail of meeting with one in the neighbourhood of Chiloe or Baldivia, in which, when he had taken her, he intended to proceed to the rendezvous at Juan Fernandes; and he farther infifted, that fhould they meet with no prize by the way, yet the boats alone would eafily carry them there. But this was a scheme that, however prudent, was no ways relified by the generality of his people; for, being quite jaded with the diffreffes and dangers they had already run through, they could not think of profecuting an enterprize farther, which had hitherto proved fo difastrous : And therefore the common refolution was to lengthen the long-boat, and with that and the reft of the boats to fleer to the fouthward, to pass through the Streights of Magellan, and to range along the East fide of South America, till they fhould arrive at Brazil, where they doubted not to be well received, and to procure a paffage to Great-Britain. This project was at first fight infinitely more hazardous and tedious than what was proposed by the Captain ; but as it had the air air of returning home, and flattered them with the hopes of bringing them once more to their native country, this circumstance alone rendered them inattentive to all its inconveniencies, and made them adhere to it with infurmountable obftinacy; fo that the Captain himfelf, though he never changed his opinion, was yet obliged to? give way to the torrent, and in appearance to acquiesce in this resolution, whilst he endeavoured under-hand to give it all the obstruction he could; particularly in the lengthening of the long-boat, which he contrived fhould be of fuch' a fize, that though it might ferve to carry them to Juan Fernandes, would yet, he hoped, appear incapable of fo long a navigation, as that to the coaft of Brazil.

But the Captain, by his fleady opposition at first to this favourable project, had much embittered the people against him; to which likewife the following unhappy accident greatly contributed. There was a Midshipman whose name was Cozens, who had appeared the foremost in all the refractory proceedings of the crew. He had involved himfelf in brawls with most of the officers who had adhered to the Captain's authority, and had even treated the Captain himfelf with great abufe and infolence. As his turbulence and brutality grew every day more and more intolerable, it was not in the least doubted, but ther were fome violent measures in agitation, in which Cozens was engaged as the ring-leader : For which reafon the Captain, and those about him, constantly kept themfelves on their guard. But at last the Purfer,

Purfer, having, by the Captain's order, ftopped the allowance of a fellow who would not work i Cozens, though the man did not complain to him, intermeddled in the affair with great eagernels; and grofsly infulting the Purfer, who was then delivering out provisions just by the Captain's tent, and was himfelf fufficiently violent, the Purfer, enraged by his fourrility, and perhaps piqued by former quarrels; cried out a mutiny, adding, that the dog had pistols, and then himfelf fired a piftol at Cozens, which however mift him : But the Captain, on this outcry and the report of the pifto1, rushed out of his tent ; and, not doubting but it had been fired by Cosens as the commencement of a mutiny, he immediately fhot him in the head without farther deliberation, and though he did not kill him on the fpot; yet the wound proved mortal, and he died about fourteen days after attain

This incident, however difpleading to the people, did yet, for a confiderable time, awe them to their duty, and rendered them more fubmiflive to the Captain's authority; but at laft, when towards the middle of October the long-boat was nearly compleated, and they were preparing to put to fea, the additional provocation he gave them by covertly traversing their project of proceeding through the Streights of Magellan, and their fears that he might at length engage a party fufficient to overturn this favourite measure, made them resolve to make use of the death of Cozens as alreason for depriving him of his command, under pretence of carrying him a prifoner

(210)

ner to England, to be tried for murder; and he was accordingly confined under a guard. But they never intended to carry him with them, as they too well knew what they had to apprehend on their return to England, if their Commander fhould be prefent to confront them : And therefore, when they were just ready to put to fea, they fet him at liberty, leaving him and the few who chose to take their fortunes with him, no other embarkation but the yawl, to which the barge was afterwards added, by the people on board her being prevailed on to return back.

When the ship was wreckt, there remained alive on board the Wager near an hundred and thirty perfons; of these above thirty died during their flay upon the place, and near eighty went off in the long-boat, and the Cutter to the fouthward .: So that there remained with the Captain, after their departure, r.o. more than nineteen perfons, which however was as many as the barge and the vawl, the only embarkations left them. could well carry offer It was the 1 2th of O Hober, five months after the hipwreck, that the longboats converted into failchooner, weighed; and food to the fouthward, giving the Captain, who with Lieutenant Hamilton of the landforces and the furgeon, was then on the beach, three cheers at their departure. It was the 29th of January following before they arrived at Rio Grande, on the coast of Brazil : And having, by various accidents, left about twenty of their people on fhore at the different places they touched at, and a greater number having perifhed by hunger San Corners

(2117)

hunger during the courfe of their navigation, there were no more than thirty of them left, when they arrived in that Port. Indeed, the undertaking of itfelf was a most extraordinary one; for, not to mention the length of the run, the wessel was fearcely able to contain the number that first put to feat in her; and their flock of provisions (being only what they had faved out of the ship) was extremely flender, and the Cutter, the only boat they had with them, foon broke away from the stern, and was staved to pieces; for that when their provision and their water failed them, they had frequently no means of getting on shore to stearch for a fresh supply.

When the long-boat and Cutter were gone. the Captain, and those who were left with him, proposed to pass to the northward in the barge and vawl : But the weather was to bad, and the difficulty of fublifting fo great, that it was two months after the departure of the long-boat before he was able to put toufeast It feems, the place, where the Wager was caft away, was not a part of the Continent, las was first imagined. but an Island at fome diffance from the Main. which afforded no other forts of provision but Thell-fifti, and a few herbs; and as the greatest part of what they had gotten from the thip was carried off in the long-boat, the Captain and his people were often in great necessity, especially as they chofe to preferve, what little fea provisions remained, for their flore when they flould go to the northward. During their refidence at this Island, which was by the feamen denominated - -P Wager's

(212)

Wager's Illand, they had now and then a straggling cance or two of Indians, which came and bartered their fish and other provisions with our people. This was indeed fome little fuccours and at another feason might perhaps have been greater; for as there were feveral Indian huts on the shore, it was supposed that in some years, during the height of summer, many of these favages might refort thither to fish.: And from what has been related in the account of the Anne Pink, it should seem to be the general practice of those Indians to frequent this coast in the fummer-time for the benefit of fishing, and to retire in the winter into a better climate, more to the northward, ad monos luther to be the set of the set of

And on this mention of the Anna Pink, I cannot but observe, how much it is to be lamented, that the Wager's people had no knowledge of her being to near them on the coaft; for as the was not above thirty leagues diftant from them. and came into their neighbourhood about the fame time the Wager was loft, and was a fine roomy thip, the could eafily have taken them all on board, and have carried them to Juan Fernandes. Indeed, I suspect the was still nearer to them. than what is here estimated; for several of the Wager's people, at different times, heard the report of a cannon, which I conceive could be no other than the evening gun fired from the Anna, Pink, especially as what was heard at Wager's Mand was about the fame time of the day. But to return to Captain Cheap.

n al directer pretabation a de chel same i Toris

"Upon the 14th of December, the Captain and his people embarked in the barge and the yawl, in order to proceed to the northward, taking on board with them all the provisions they could amais from the wreck of the fhip; but they had fcarcely been an hour at fea, when the wind began to blow hard, and the fea ran fo high, that they were obliged to throw the greatest part of their provisions over-board, to avoid immediate destruction. This was a terrible misfortune, in a part of the world where food is fo difficult to be got : However, they still persisted in their defign, putting on fhore as often as they could to feck subsistance." But about a fortnight after, another dreadful accident befel them, for the yawl funk at an anchor, and one of the men in her was drowned; and a the barge was incapable of carrying the whole company, they were now reduced to the hard necessity of leaving four marines behind them on that defolate fhore. But they still kept on their course to the northward. ftruggling with their difafters, and greatly delayed by the perveriencis of the winds, and the frequent interruptions which their fearch after food occafioned : Till at laft, about the end of January, having made three unfucceisful attempts to double a head-land, which they fupposed to be what the Spaniards called Cape Tres Montes, it was unanimoully refolved to give over this expedition, the difficulties of which appeared infuperable, and to return again to Wager Mand, where they got back about the middle of Pebruary, quite disheartned and dejected with their P 3 reiterated

reiterated difappointments, and almost perifiting with hunger and fatigue.

However, on their return they had the good luck to meet with feveral pieces of beef, which had been washed out of the ship, and were fwimming in the fea. This was a most feafonable relief to them, after the hardfhips they had endured : And to compleat their good fortune, there came, in a thort time, two canoes of Indians, amongst which was a native of Childe, who fpoke a little Spanifo; and the Surgeon, who was with Captain Cheap, understanding that language, he made a bargain with the Indian, that if he would carry the Captain and his people to Chilog in the barge, he should have her, and all that belonged to her for his pains." Accordingly, on the 6th of March, the eleven perfons to which the company was now reduced, embarked in the barge on this new expedition; but after having proceeded for a few days, the Captain and four of his principal Officers being on fhore; the fix, who together with an Indian remained in the barge, put off with her to fea, and did not return: litt of the for se

By this means there were left on fhore Captain *Cheap*, Mr. Hamilton Lieutenant of Marines, the Honourable Mr. Byron, and Mr. Campbel, Midfhipmen, and Mr. Elliot, the Surgeon. One would have thought their diftreffes had long before this time been incapable of augmentation; but they found, on reflection, that their prefent fituation was much more difmaying than any thing they had yet gone through, being left on a de-

a defolate coaft, without any provision, or the means of procuring any; for their arms, am, munition, and every conveniency they were mafters of, except the tattered habits they had on, were all carried away in the barge.

But when they had fufficiently revolved in their own minds the various circumstances of this unexpected calamity, and were perfuaded that they had no relief to hope for, they perceived a canoe at a distance, which proved to be that of the Indian, who had undertaken to carry them to Childe, he and his family being then on board it. He made no difficulty of coming to them; for it feems he had left Captain Cheap and his People, a little before to go a fishing, and had in the mean time committed them to the care of the other Indian, whom the failors had carried to fea in the barge. But when he came on shore, and found the barge gone and his companion miffing, he was extremely concerned, and could with difficulty be perfuaded that the other Indian was not murdered; but, being at last fatisfied with the account that was given him, he still undertook to carry them to the Spanish settlements, and (as the Indians are well skilled, in fishing and fowling) to. procure them provisions by the way.

About the middle of March, Captain Gheap and the four who were left with him, fet out for Chiloe, the Indian having procured a number of canoes, and gotten many of his neighbours together for that purpole. Soon after they embarked, Mr. Elliot the Surgeon died, fo. 2 P 4 that

(216)

that there now remained only four of the whole company At laft, after a very complicated passage by land and water, Captain Cheap, Mr. Byron and Mr. Campbel arti-ed in the beginning of June at the Mand of Childe, where they were received by the Spaniards with great humaniry; but, on account of fome quarrel among the Indians, Mr. Hamilton did nor set thither till two months after. Thus, above a twelvemonth after the lois of the Wagers ended this fatiguing peregrination, which by a variety of misfortunes had diminished the company from twenty to no more than four, and those too brought fo low, had their diffreffes, continued but a few days longer, in all probability none of them would have furyivedur For the Captain himfelf was with difficulty recovered ; and the reft were fo reduced by the feverity of the weather, their labour, and their want of all kinds of necessaries, that it was wonderful how they supported themselves to long. After fome ftay at Childe, the Captain and the three who were with him were fent to Valparaife, and thence to St. Jago, the Capitol of Chili, where they continued above a year: But on the advice of a cartel being fettled betwixt Great-Britain and Spain, Captain Cheap, Mr. Byron, and Mr. Hamilton, were permitted to return to Europe on board a French ship. The other Midshipman, Mr. Campbel, having changed his religion, whilft at St. Jaga, chose to go back to Buenos Ayres with Pizarro and his Officers, with whom he went alterwards to Spain on board the Afia ; and there

(217)

there having failed in his endeavours to procure a commission from the Court of Spain, he returned to England, and attempted to get reinstated in the British Navy; and has fince published a narration of his adventures, in which he complains of the injustice that had been done him and ftrongly difavows his ever being in the Spanifb fervice : But as the change of his religion, and his offering himfelf to the Court of Spain, (though not accepted) are matters which, he is confcious, are capable of being incontestably proved; on these two heads, he has been entirely filent." And now, after this account of the accidents which befel the Anna Pink, and the cataftrophe of the Wager, I shall again refume the thread of our own ftory.

Japotred CHAP A CHAP A

70

Conclusion of our proceedings at Juan Fernandes, from the arrival of the Anna Pink, to our final departure from thence.

A BOUT a week after the arrival of our Victualles, the Tryal Sloop, that had been fent to the Island of Masa+Faero, returned to an anchor at Juan Fernandes, after having been round that Island, without meeting any part of our squadron. As, upon this occasion, the Island of Masa-Fuero was more particularly examined, than I dare say it had ever been before,

(218)

or perhaps ever will be again ; and as the know. ledge of it may, in certain circumstances, be of great confequence hereafter, I think it incumbent on me to infert the accounts given of this place, by the officers of the Tryal Sloop. The Spaniards have generally mentioned two Mands, under the name of Juan Fernandes, ftiling them the greater and the lefs: The greater being. that Island where we anchored, and the, lefs being the Island we are now describing, which, because it is more distant from the Continent, they have diftinguished by the name of Mafa Fuero. The Tryel Sloop found that it bore from the greater. Juan Fernandes W. by S, and was about twenty-two leagues diftant. It is much larger than has been generally reported ; for former writers have represented it as a barren rock, deftitute of wood and water, and altogether inacceffible ; whereas our people found it was covered with trees, and that there were feveral fine falls of water pouring down its fides into the fea: They found too, that there was a place where a thip might come to an anchor on the North fide of it, though indeed the anchorage is inconvenient; for the bank extends but a little way, is fleep to, and has very deep water upon it, fo that you must come to an anchor very near the thore, dand there lie exposed to all the winds but a foutherly one : And belides the inconvenience of the anchorage, there is also a reef of rocks running off the eastern point of the Island. about two miles in length : but there is little danger to be feared from them, becaufe they are always 41.17

(219)

always to be feen by the feas breaking over them. This place has at prefent one advantage beyond the Island of Juan Fernandes; for it abounds with goats, who, not being accustomed to be difturbed, were no ways thy or apprehensive of danger, till they had been frequently fired at. Thefe animals refide here in great tranquillity, the Spamards having not thought the Island confiderable enough to be frequented by their enemies, and therefore they have not been folicitous in deftroying the provisions upon it; fo that no dogs have been hitherto fet on shore there. And besides the goats, our people found there wast numbers of feals and fea-lions : And upon the whole, they feemed to imagine, that though it was not the most eligible place for a hip to refresh at, yet in cafe of necessity it might afford fome fort of fhelier, and prove of confiderable we efpecially to a fingle fhip, who might apprehend meeting with a fuperior force at Fernander." The appearance of its N. E. fide, and alfor of its Weft fide, may be feend in the zift and zad plates. This may fuffice in relation to the Island of Mafa-Fuero, a class add boshar aguodt at he

The latter part of the month of August was spent in unloading the provisions from the Anne Pink; and here we had the mortification to find that great quantities of our provisions, as bread, rice, groats, &c. were decayed, and unfit for use. This was owing to the water the Pink had made by her working and straining in bad weather; for hereby several of her cashs had rotted, and her bags were soaked through. And now, as we

we had no farther occasion for her fervice. the Commodore, "purfuant" to his orders' from the board of Admiralty, fent notice to Mr. Gerard her Mafter, that he discharged the Anna Pink. from the fervice of attending the fquadron; and gave him, at the fame time, a certificate, specifying how long the had been employed. In confequence of this difmillion, her Mafter was at liberty, either to feturn directly to England, or to make the belt of his way to any Port, where he thought he could take in fuch a cargoe, as would answer the interest of his Owners." But the Malter, being fentible of the bad condition of the flip and of her unfitnels for any fuch voyage, wrote the next day an answer to the Commodore's mellage acquainting Mr. Anfon, that from the great quantity of water the Pink had made in her pallage round Cape Horn, and fince that, in the tempeftuous weather he had met with on the coaft of Chili, he had reafon to apprehend that her bottom was very much decayed; and that belides, her upper works were rotten abaft; that fire was extremely leaky; that her fore-beam was broke; and that, in his opimon. it was impossible to proceed to fea with her, before the had been thoroughly refitted : He therefore requeited the Commodore, that the Carpenters of the fquadron might be directed to furvey her, that their judgment of her condition "might be known. In compliance with this defire, Mf. Hn/on immediately ordered the Carpenters to take a careful and ftrict furvey of the Anna Fink, and to give him a faithful report under resta their

their hands of the condition in which they found her, directing them at the fame time to proceed herein, with fuch circumspection, that, if they should be hereafter called upon, they might be able to make oath of the veracity of their proceedings. Purfuant to these orders, the Carpenters immediately fet about the examination, and the next day made their report ; which was, that the Pink had no lefs than fourteen knees and twelve beams broken and decayed ; that one breaft-hook was broken; and another rotten; that her water-ways were open and decayed ; that two standards, were broken, as alfo feveral clamps, befides others which were rotten ; that all her iron-work was greatly decayed; that her fpirkiting and timbers were very rotten ; and that, having ripped off part of her theathing, they found her wales and outfide planks extremely defective, and her bows and decks very leaky; and in consequence of these defects and decays they certified, that in their opinion the could not depart from the Island without great, hazard, unless the was firft of all thoroughly refitted in the

The thorough refitting of the Anna Pink, propofed by the Carpenters, was, in our prefent fituation, impossible to be complied with, as all the plank and iron in the squadron was insufficient for that purpose. And now the Master finding his own sentiments confirmed by the opinion of all the Carpenters, he offered a petition to the Commodore in behalf of his Owners, defiring that, fince it appeared he was incapable of learing the Island, Mr. Anjon would please to purchase

(222)

chafe the hull and furniture of the Pink for the use of the squadron. Hereupon the Commodore ordered an inventory to be taken of every particular belonging to the Pink, with its just value: And as by this inventory it appeared, that there were many ftores which would be ufeful in refitting the other ships, and which were at prefeat very fcarce in the foundron, by reason of the great quantities that had been already expended, he agreed with Mr. Gerard to purchase the whole together for 2001. The Pink being thus broken up, Mr. Gerard, with the hands belonging to the Pink, were fent on board the Glaucester ; as that thip had buried the greateft number of men in proportion to her complement. But afterwards, one or two of them, were received on board the Centurion on their own petition, they being extremely averfe to failing in the fame fhip with their old Mafter, on account of fome particular ill ufage they conceived they had fuffered " and is a men on hoard, of mid mort

This transaction brought us down to the beginning of September, and our people by this time were to far recovered of the fourvy, that there was little danger of burying any more at prefent; and therefore I shall now sum up the total of our loss since our departure from England, the better to convey some idea of our past sufferings, and of our present strength. We had buried on board the Centurion, since our leaving St. Helens, two hundred and ninety-two, and had now remaining on board two hundred and fourteen. This will doubtles appear a most extraordinary ١Č

ł

traordinary mortality: But yet on board the Gloucester it had been much greater ; for out of a much fmaller crew than ours they had buried the fame number, and had only eighty-two remaining alive. It might be expected that on board the Tryal, the flaughter would have been the most terrible, as her decks were almost conftantly knee-deep in water; but it happened otherwile, for the elcaped more favourably than the reft, fince the only buried forty-two, and had now thirty-nine remaining alive. The havock of this difease had fallen still severer on the invalids and marines than on the failors; for on board the Centurion, out of fifty invalids and feventynine marines, there remained only four invalids, including officers, and eleven marines; and on board the Gloucefter every invalid perifhed; and out of forty eight marines, only two escaped. From this account it appears, that the three thips together departed from England with nine hundred and fixty one men on board, of whom fix hundred and twenty-fix were dead before this time; fo that the whole of our remaining crews, which were now to be diffributed amongft three fhips, amounted to no more than three hundred and thirty-five men and boys; a number, greatly infufficient for the manning the Centurion alone, and barely capable of navigating all the three, with the utmost exertion of their strength and vigour. This prodigious reduction of our men was still the more terrifying, as we were hitherto uncertain of the fate of Pizarro's iquadron, and had reason to suppose, that some part 4 4 5 of

of it at least had got round into these fers: Indeed. we were fatisfied from out own experiences that they must have fuffered greatly in their paffage; but then every port in the South Seas was open to them, and the whole power of Chili and Peru would doubtlefs be united in refreshing and refitting them, and recruiting the numbers they had loft. Belides, we had fome obfcure knowledge of a force to be fitted out from Callao : and, however contemptible the fhips and failors of this part of the world may have been generally effectined, it was fcarcely poffible for any thing, bearing the name of a fhip of force, to. be feebler or lefs confiderable than ourfelves. And had there been nothing to be apprehended from the naval power of the Spanis ds in this part of the world, yet our enfeebled condition would nevertheless give us the greatest uncafiness, as we were, incapable, of attempting any of their confiderable places; for the rifquing of twenty men. weak as we then were, was rilquing the fafety of the whole: So that we conceived we fhould be necellitated to content ourfelves with what few prizes we could pick up at fea, before we were difcovered; after which, we should in all probability be obliged to depart with precipitation, and efferm ourfelves fortunate to regain our native country, leaving our enemies to triumph or the inconfiderable mifchief they had received from a fquadron, whole equipment had filled them with fuch dreadful apprehensions. This was a fubject, on which we had reafon to imagine the Spanis oftentation would remarkably exert itfelf

(225.)

itfelf; though the caules of our difappointment and their fecurity were neither to be fought for in their valour nor our mifconduct.

Such were the defponding reflections which at that time arole on the review and comparison of our remaining ftrength with our original numbers: Indeed our fears were far from being groundlefs, or difproportioned to our feeble and almost defperate fituation. It is true, the final event proved more honourable than we had foreboded; but the intermediate calamities did likewife greatly furpals our most gloomy apprehenfions, and could they have been predicted to us at this Illand of *Juan Fernandes*, they would doubtlefs have appeared infurmountable. But to return from this digreffion.

In the beginning of September, as hath been already mentioned, our men were tolerably well recovered ; and now, the time of navigation in this climate drawing near, we exerted our felves in getting our thips in readiness for the fea. We converted the fore-mail of the Victualler into a main-maft for the Tryal Sloop grand ftill flattering ourfelves with the polibility of the arrival of fome other thips of our fquadron, we intended to leave the main-maft of the Victualler, to make a mizen-malt for the Wager Thus all hands being employed in forwarding our departure, we, on the 8th, about eleven in the morning, efpied a fail to the N. E, which continued to approach us, till her courfe appeared. even with the horizon. In this interval we all had hopes the might prove one of our own fquadron ;

dron; but at length finding the fleered away to the eastward, without haling in for the Island, we concluded the must be a Spaniard. And now great difputes were fet on foot about the possibility of her having difcovered our tents on fhore, fome of us ftrongly infifting, that the had doubtlefs been near enough to have perceived fomething that had given her a jealoufy of an enemy, which had occasioned her standing to the eastward without haling in ; but leaving these contests to be fettled afterwards, it was refolved to purfue her, and, the Centurion being in the greatest forwardnefs, we immediately got all our hands on board, fet up our rigging, bent our fails, and by five in the afternoon got under fail. We had at this time very little wind, fo that all the boats were employed to tow us out of the bay; and even what wind there was lafted only long enough to give us an offing of two or three leagues, when it flatted to a calm. The night coming on we loft fight of the chace, and were extremely impatient for the return of day-light, in hopes to find that fhe had been becalmed as well as we; though I must confess, that her greater distance from the land was a reasonable ground for suspecting the contrary, as we indeed found in the morning to our great mortification; for though the weather continued perfectly clear, we had no fight of the thip from the maft-head. But as we were now fatisfied that it was an enemy, and the first we had feen in these feas, we resolved not to give over the fearch lightly; and, a fmall breeze fpringing up from the W. N. W, we got up our top1.02 6.

top-gallant mafts and yards, fet all the fails, and freered at the S. E, in hopes of retrieving our chace, which we imagined to be bound to Valparaifo. We continued on this courfe all that day and the next; and then not getting light of our chace we gave over the purfuit, conceiving that by that time fhe must, in all probability, have reached her Port. And now we prepared to return to Juan Fernandes; and haled up to the S. W, with that view, having but very little wind till the 12th, when, at three in the morning, there fprung up a fresh gale from the W.S. W, and we tacked and ftood to the N.W : And at day-break we were agreeably furprized with the fight of a fail on our weather-bow, between four and five leagues diftant: On this we crouded all the fail we could, and flood after her, and foon perceived it not to be the fame ship we originally gave chace to. She at first bore down upon us thowing Spanif colours; and making a fignal, as to her confort; but observing that we did not answer her fignal, the instantly loofedclofe to the wind, and flood to the fouthward. Our people were now all in fpirits, and put the fhip about with great alacrity; and as the chace appeared to be a large fhip, and had miftaken us for her confort, we conceived that the was a man of war, and probably one of Pizarro's fquadron : This induced the Commodore to order all the officers cabins to be knocked down and thrown over-board, with feveral cafks of water and provisions which stood between the guns; to that we had foon a clear fhip; ready for an engage-Q 2 ment.

About nine o'clock we had thick hazy ment. weather and a shower of rain, during which we loft fight of the chace; and we were apprehenfive, if the weather should continue, that by going upon the other tack, or by fome other artifice, the might efcape us; but it clearing up in lefs than an hour, we found that we had both weathered and fore-reached upon her confiderably, and now we were near enough to difcover that. the was only a Merchantman, without fo much as a fingle tire of guns. About half an hour after twelve, being then within a reafonable diftance of her we fired four fhot amongst her rigging ; on which, they lowered their top fails, and bore down to us, but, in very great confusion, their top-gallant fails and ftay-fails all fluttering in the wind : This was owing to their having let run their sheets and halvards just as we fired at them; after which, pot a man amongst them had courage enough to venture aloft (for there the fhot had passed but just before) to take them in. As foon as the veffel came within hail of us, the Commodore ordered them to bring to under his lee-quarter, and then hoifted out the boat, and fent Mr. Saumarez, his first Lieutenant, to take possession of the prize, with directions to fend all the prifoners on board the Centurion, but first the officers and passengers. When Mr. Saumarez came on board them, they received him at the fide with the ftrongest tokens of the most abject. fubmiffion; for they were all of them (efpecially the paffengers, who were twenty-five in number) extremely terrified, and under the greatest apprehenfions 2.2. . 7

prehenfions of meeting with very fevere and cruel usage ; but the Lieutenant' endeavoured, with great courtefy, to diffipate their fright, affuring them, that their fears were altogether groundlefs, and that they would find a generous enemy in the Commodore, who was not lefs remarkable for his lenity and humanity, than for his refolution and courage. The prifoners, who were first fent on board the Centurion, informed us, that our prize was called Nuestra Senora del Monte Carmelo, and was commanded by Don Manuel Zamorra. Her cargoe confifted chiefly of lugar, and great quantities of blue cloth made in the province of Quito, fomewhat refembling the English coarle broad-cloths, but inferiour to them. They had befides feveral bales of a coarfer fort cloth, of different colours, fomewhat like Colchefter bays, called by them Pannia da Tierra, with a few bales of cotton and tobacco; which, though ftrong, was not ill flavoured. Thefe were the principal goods on board her; but we found befides, what was to us much more valuable than the reft of the cargoe : This was fome trunks of wrought plate, and twentythree ferons of dollars, each weighing upwards of 2001. averdupois. The fhip's burthen was about four hundred and fifty guns ; the had fifty-three failors on board, both whites and blacks; The came from Callao, and had been twenty-feven days at fea, before the fell into our hands. She was bound to the port of Valparaifo in the kingdom of Chili, and proposed to have returned from thence loaded with corn and Chili wine, fome gold, Q_3

gold, dried beef, and fmall cordage, which at Callao they convert into larger rope. Our prize had been built upwards of thirty years; yet as they lie in harbour all the winter months, and the climate is favourable, they effected it no very great age. Her rigging was very indifferent, as were likewife her fails, which were made of Cotton. She had only three four pounders, which were altogether unferviceable, their carriages being fcarcely able to fupport them: And there were no fmall arms on board, except a few piftols belonging to the paffengers. The prifoners informed us, that they left Callaa in company with two other ships, whom they had parted with fome days before, and that at first they conceived us to be one of their company; and by the description we gave them of the thip we had chased from Juan Fernandes, they affured us, the was of their number, but that the coming in fight of that Island was directly repugnant to the Merchant's instructions, who had expreisly forbid it, as knowing that if any English foundron was in those feas, the Island of Fernandes was most probably the place of their rendezvous.

And now, after this fhort account of the fhip and her cargoe, it is neceffary that I fhould relate the important intelligence which we met with on board her, partly from the information of the prifoners, and partly from the letters and papers which fell into our hands. We here first learnt with certainty the force and defination of that fquadron, which cruifed off the Maderas at our our arrival there, and alterwards chafed the Pearl in our passage to port St. Julian. This we now knew was a fquadron composed of five large Spanifs ships, commanded by Admiral Pizarro, and purposely fitted out to traverse our defigns, as hath been already more amply. related in the 3d chapter of the 1ft book. And we had, at the fame time, the fatisfaction to find, that Pizarro, after his utmost endeavours to gain his paffage into these feas, had been

forced back again into the river of Plate, with the loss of two of his largest ships : And befides this difappointment of Pizarro, which, confidering our great debility, was no unacceptable intelligence, we farther learnt, that an embargo had been laid upon all fhipping in thefe feas, by the Viceroy of Peru, in the month of May preceding, on a supposition that about that time we might arrive upon the coaft. But on the account fent over-land by Pizarro of his own diftreffes, part of which they knew we must have encountered, as we were at fea during the fame time, and on their having no news of us in eight months after we were known to fet fail from St. Catherine's, they were fully perfuaded that we were either fhip-wreck'd, or had perished at fea, or at least had been obliged to put back again; for it was conceived impossible for any ships to continue at fea during fo long an interval : And therefore, on the application of the Merchants, and the firm perfuasion of our having mifcarried, the embargo had been lately taken off. (232)

This last article made us flatter ourselves. that, as the enemy was still a stranger to our having got round Cape Horn, and the navigation of these seas was restored, we might meet with fome confiderable captures, and might thereby indemnify ourfelves for the incapacity we were now under of attempting any of their confiderable fettlements on fhore. And thus much we were certain of, from the information of our prifoners," that," whatever our fuccels might be as to the prizes we might light on, we had nothing to fear, weak as we were, from the Spanif force in this part of the world; the' we discovered that we had been in most imminent peril from the enemy, when we leaft apprehended it, and when our other diffres were at the greateft height; for we learnt, from the letters on board, that Pizarro, in the exprefs he difpatched to the Viceroy of Peru, after his return to the river of Plate, had intimated to him, that it was possible fome part at least of the English fquadron might get round; but that, as he was certain from his own experience, that if they did arrive in those feas, it must be in a very weak and defenceless condition, he adviled the Viceroy, in order to be fecure at all events, to fit out what fhips of force he had, and fend them to the fouthward, where, in all probability, they would intercept us fingly, and before we had an opportunity of touching any where for refreshment; in which case, he doubted not but we should prove an easy conquest. The Viceroy of Peru approved of this advice, and

(233)

and immediately fitted out four fhips of force from Callao; one of fifty guns, two of forty guns, and one of twenty-four guns : Three of them were stationed off the Port of Conception. and one of them at the Island of Fernandes; and in these stations they continued cruiking for us, till the 6th of June, when, not feeing any thing. of us, and conceiving it to be impossible that we could have kept the feas fo long, they quitted their cruife and returned to Callao, fully fatisfied that we had either perifhed, or at leaft had been driven back. As the time of their quitting their station was but a few days before our arrival at the Island of Fernandes, it is evident, that had we made that Island on our first fearch for it, without haling in for the main to fecure our reafting, (a circumstance, which at that time we confidered, as very unfortunate to us, on account of the numbers which we loft by our longer continuance at fea) had we, I fay, made the Island on the 28th of May, when we first expected to fee, it, and were in reality very near it, we had doubtless fallen in with fome part of the Spanifs fquadron; and in the diftreffed condition we were then in, the meeting with a healthy well provided enemy, was an incident that could not but have been perplexing, and might perhaps have proved fatal, not only to us, but to the Tryal, the Gloucester, and the Anna Pink, who feparately joined us, and who were each of them lefs capable than we were of making any confiderable refiftance. I shall only add, that these Spanish ships fent out to

to intercept us, had been greatly fhattened by a ftorm during their cruife; and that, after their arrival at *Callao*, they had been laid up. And our prifoners affured us, that whenever intelligence was received at *Lima*, of our being in thefe feas, it would be at leaft two months before this armament could be again fitted out.

The whole of this intelligence was as favourable, as we in our reduced circumftances could with for. And now we were fully fatisfied as to the broken jars, aftes, and fift-bones, which we had obferved at our first landing at Juan Fervandes, these things being doubtless the relists of the cruifers stationed off that Port. Having thus fatisfied ourfelves in the material articles, and having gotten on board the Centurion most of the prifoners, and all the filver, we, at eight in the fame evening, made fail to the northward, in company with our prize, and at fix the next morning discovered the Island of Fernandes, where, the next day, both we and our prize came to an anchor.

And here I cannot omit one remarkable incident which occurred, when the prize and her crew came into the bay, where the reft of the fquadron lay. The Spaniards in the Carmelo had been fufficiently informed of the diftreffes we had gone through, and were greatly furprized that we had ever furmounted them : But when they faw the Tryal Sloop at anchor, they were still more altonished, that after all our fatigues, we had the industry (besides refitting our other ships) to compleat such a vessel in so short a time, YC

time, they taking it for granted that fhe had been built upon the fpot. And it was with great difficulty they were prevailed on to believe, that fhe came from *England* with the reft of the fquadron; they at first infisted, that it was impossible fuch a bawble as that could pass round Cape *Horn*, when the best ships of *Spain* were obliged to put back.

By the time we arrived at Juan Fernandes, the letters found on board our prize were more minutely examined : And, it appearing from them, and from the accounts of our prifoners, that feveral other Merchantmen were bound from Callao to Valparaifo, Mr. Anfon difpatched the Tryal Sloop the very next morning to cruife off the last-mentioned Port, reinforcing him with ten hands from on board his own ship. Mr. Anfon likewife refolved, on the intelligence recited above, to feparate the thips under his command, and employ them in diffinct cruifes, as he thought that by this means we fhould not only encrease our chance for prizes, but that we fhould likewife run a lefs rifque of alarming the coaft, and of being difcovered. And now the fpirits of our people being greatly raifed, and their defpondency diffipated by this earnest of fuccefs, they forgot all their paft diffreffes, and refumed their wonted alacrity, and laboured indefatigably in compleating our water, receiving our lumber, and in preparing to take our farewel of the Island : But as thefe occupations took us up four or five days with all our industry, the Commodore, in that interval, directed that the 4

the guns belonging to the Anna Pink, being four fix pounders, four four-pounders, and two fwivels, should be mounted on board the Carmelo, our prize : And having fent on board the Gloucefter fix paffengers, and twenty-three leamen to affift in navigating the fhip, he directed Captain Mitchel to leave the Island as foon as poffible, the fervice requiring the utmost difpatch, ordering him to proceed to the latitude of five degrees South, and there to cruife off. the highland of Paira, at fuch a diftance from fhore, as fhould prevent his being difcovered. On this station he was to continue till he should be joined by the Commodore, which would be whenever it should be known that the Viceroy had fitted out the thips at Callao, or on Mr. Aufon's receiving any other intelligence, that fould make it neceffary to unite our ftrength. Thefe orders being delivered to the Captain of the Gloucester, and all our business compleated, we on the Saturday following, being the 10th of September, weighed our anchor, in company with our prize, and got out of the bay, taking, our last leave of the Island of Juan Fernandes. and feering to the eaftward, with an intention . of joining the Tryal Sloop in her flation off Valparaiso.

(237)

C H A P. V. Our cruile from the time of our leaving Juan Fernandes, to the taking the town of Paita.

A LTHOUGH the Centurion, with her In prize, the Carmelo, weighed from the bay of Fuan Fernandes on the 19th of September, leaving the Gloucester at anchor behind her; yet by the irregularity and fluctuation of the winds in the offing, it was the 22d of the fame north in the evening, before we loft fight of the Island : After which, we continued our courfe. to the eastward, in order to reach our station, and to join the Tryal off Valparaifo. The next night, the weather proved fqually, and we fplit our maintop-fail, which we handed for the prefent, but got it repaired, and fet it again the next morning. And now, on the 24th, a little before fun-fet, we faw two fail to the eaftward : on which, our prize flood directly from us, to avoid giving any fufpicion of our being cruifers: whilft we, in the mean time, made ourfelves ready for an engagement, and steered towards the two ships we had discovered with all our canvas. We foon perceived that one of thefe, which had the appearance of being a very ftout fhip, made directly for us, whilft the other kept at a very great diftance. By feven o'clock we were within piftol-fhot of the neareft, and had a broad-1 . .

a broad-fide ready to pour into her, the Gunhers having their matches in their hands, and only waiting for orders to fire; but as we knew it was now impossible for her to efcape us, Mr. Aulon, before he permitted them to fire, ordered the Master to hail the ship in Spanish; on which the commanding officer on board her, who proved to be Mr. Hughs, Lieutenant of the Tryal; answered us in English, and informed us. that the was a prize taken by the Tryal a few days before, and that the other fail at a diftance was the Tryal herfelf, difabled in her mafts. We were foon after joined by the Tryal; and Captain Saunders, her Commander, came on board the Genturion. PHe informed the Commodore, that he had taken this thip the 18th inftant; that the was a prime failor, and had coft him thirty-fix hours chace, before he could come up with her; that for fome time he gained fo little upon her, that he began to defpair of taking her; and the Spaniards, though alarmed at first with seeing nothing but a cloud of fail in purfuit of them, the Tryal's hull being fo low in the water that no part of it appeared, yet knowing the goodness of their ship, and finding how little the Tryal neared them, they at length laid alide their fears, and, recommending themfelves to the bleffed Virgin for protection, began to think themfelves fecure. And indeed their fuccefs was very near doing honour to their Ave Maria's; for, altering their courfe in the right, and fhutting up their windows to prevent any of their lights from being feen, they

they had fome chance of efcaping; but a finally crevice in one of the flutters rendered all their invocations ineffectual ; for through this crevice the people on board the Tryal perceived a light which they chafed, till they arrived within gun21 fhot ; and then Captain Saunders alarmed them? unexpectedly with a broadfide, when they flat tered themselves they were got out of his reach : However, for fome time after they ftill kept the fame fail abroad, and it was not observed that this first falute had made any impression on them; but just as the Tryal was preparing to repeat her broadfide, the Spaniards crept from their holes, lowered their fails, and fubmitted without any opposition. She was one of the largeft Merchantmen employed in those feast being about fix hundred tuns burthen, and was called the Arranzazu. She was bound from Callao to Valparaifo, and had much the fame cargoe with the Garmelo we had taken before except that her filver amounted only to about 5000 /: fterling. Jud gundton 2. ost now Jul :

But to balance this fuccefs, we had the miffortune to find that the Tryal had fpring her main-maft, and that her maintop-maft had come by the board; and as we were all of us ftanding to the eaftward the next morning, with a frefh gale at South, fhe had the additional ill luck to fpring her fore-maft : So that now fhe had not a maft left, on which the could carry fail. Thefer unhappy incidents were ftill aggravated by the impoffibility we were just then under of affifting her; for the wind blew to hard, and raifed fuch a hol-

(240)

a hollow fea, that we could not venture so holft. out our boat, and confequently could have no communication with her ; fo that we were obliged to lie to for the greatest part of forty-eight hours to attend her, as we could have no thought of leaving her to herfelf in her prefent unhappy. fituation : And as an accumulation to our miffortunes, we were all the while driving to the leeward of our station, at the very time when, by our intelligence, we had reafon to expect feveral of the enemy's ships would appear upon the coaft, who would now gain the port of Valparaifo without obstruction. And I am verily perfuaded, that the embarafment we received. from the difinafting of the Tryal, and our absence from our intended station occasioned thereby, deprived us of fome very confiderable captures.

The weather proving fomewhat more moderate on the 27th, we fent our boat for the Captain of the *Tryal*, who, when he came on board us, produced an inftrument, figned by himfelf and all his officers, reprefenting that the Sloop, befides being difmafted, was to very leaky in her hull, that even in moderate weather it was neceffary to keep the pumps conftantly at work, and that they were then fcarcely fufficient to keep her free; fo that in the late gale, though they had all been engaged at the pumps by turns, yet the water had increased upon them; and, upon the whole, they apprehended her to be at prefent fo very defective, that if they met with much bad

Woa-

weather, they must all inevitably perish; and therefore they petitioned the Commodore to take fome measures for their future fafety. But the refitting of the Tryal, and the repairing of her defects, was an undertaking that in the prefent conjuncture greatly exceeded his power; for we had no mafts to fpare her, we had no ftores to compleat her rigging, hor had we any port where the might be hove down, and her bottom examined : Befides, had a port and proper requifites for this purpole been in our poffession, yet it would have been extreme imprudence, in fo critical a conjuncture, to have loitered away fo much time, as would have been necessary for thefe operations. The Commodore therefore had no choice left him, but that of taking out her people, and deftroying her : But, at the fame time, as he conceived it neceffary for his Majefty's fervice to keep up the appearance of our force, he appointed the Tryal's prize (which had been often employed by the Viceroy of Peru as a man of war) to be a frigate in his Majefty's fervice, manning her with the Tryal's crew, and giving new commissions to the Captain and all the inferior officers accordingly. This new frigate, when in the Spanish fervice, had mounted thirty-two guns ; but fhe was now to have only twenty, which were the twelve that were on board the Tryal, and eight that had belonged to the Anna Pink. When this affair was thus fat regulated, Mr. Anson gave orders to Captain Saunders to put it in execution, directing him to take out of the Sloop'the arms, ftores, ammu-R nition.

nition, and every thing that could be of any ufe to the other ships, and then to scuttle her and fink her. And after Captain Saunders had feen her deftroyed, he was to proceed with his new frigate (to be called the Tryal's prize) and to cruife off the highland of Valparaile, keeping it from him N.N. W, at the diffance of twelve or fourteen leagues : For as all thips bound from Valparaife to the northward fleer that course ;? Mr. Anfon proposed by this means to ftop any intelligence, that might be difpatched to Callao. of two of their thips being milling, which might: give them apprehentions of the English Squadron : being in their neighbourhood. The Tryal's prize was to continue on this flation twenty. four days, and, if not joined by the Gommodore at the expiration of that term, the was then to proceed down the coaft to Pifco or Nafca, where the would be certain to meet with Mr. Anfon. The Commodore, likewife ordered Lieutenant Saumarez, who commanded the Centurion's prize, to keep company with Captain Saunders, both to affift him in unloading, the Sloop, and alfo that by fpreading in their cruife, there might be lefs danger of any of the enemy's thips flipping by unobserved. These orders being dispatched, the Centurion parted from them at eleven in the evening, on the 27th of September, directing her courfe to the fouthward, with a view of cruifing for fome days to the windward of Valparailo.

And now by this difpolition of our ships we flattered outfelves, that we had taken all the advantages of the enemy that we possibly could with

th

with our finall force, fince our disposition was doubtlefs the most prudent that could be projected. For, as we might suppose the Gloucester by this time to be drawing near her flation off the highland of Paita, we were enabled, by our feparate flations, to intercept all vefiels employed either betwist Peru and Gbili to the fouthward, or betwixt Panama and Perl to the northward : Since the principal trade from Peru to Chili being carried on to the port of Falparailo; the Centurion cruiking to the willdward of Valparailo, would, in all probability, meet with them, as it is the conftant practice of those thips to fall in with the toalt, to the whileward 'of that' port : And the Glouceffer would, in like mainer, be in the way of the trade bound from Panama or the northward, to any part of Peru; fince the high." land off which the was stationed is constantly made by all thips in that voyage. And whilft the Centurion and Gloucefter were thus fituated for interrupting the enemy's trade, 'the Tryas's prize and Centurion's prize were as conveniently stationed for preventing all intelligence, by intercepting all fhips bound from Valparaifo to the northward i for it was on board these veffels that it was to be feared fome account of us might poffibly be fent to Peru. The in the

But the most prudent dispositions carry with them only a probability of fuccess, and can never enfure its certainty :' Since those chances, which it was reafonable to overlook in deliberations. are fometimes of most powerful influence in exe-1. 1111 cution.

R 2

. .

(244)

cution. Thus in the present case, the distress of the Tryal, and the quitting our flation to affift her (events which no degree of prudence could either forefee or obviate) gave an opportunity to all the fhips, bound to Valparaifo, to reach that port without molestation, during this unlucky So that though, after leaving Captain interval. Saunders, we were very expeditious in regaining our ftation, where we got the 29th at noon, yet in plying on and off till the 6th of OEtober, we had not the good fortune to difcover a fail of any fort: And then having loft all hopes of making any advantage by a longer ftay, we made fail to the leeward of the port, in order to join our prizes; but when we arrived on the ftation appointed for them, we did not meet with them, though we continued there four or five days. We fuppofed that fome chace had occafioned their leaving their station, and therefore we proceeded down the coaft to the highland of Nasca, where Captain Saunders was directed to join us. Here we arrived on the 21st, and were in great expectation of meeting with fome of the enemy's thips on the coaft, as both the accounts of former voyages, and the information of our prifoners affured us, that all fhips bound to Callao conftantly make this land, to prevent the danger of running to the leeward of the port. But notwithftanding the advantages of this ftation, we faw no fail till the 2d of November, when two fhips appeared in fight together; we immediately gave them chace, but foon perceived that they were the Tryal's and Centurion's prizes : As they had the

the wind of us, we brought to and waited their coming up; when Captain' Saunders came on board us, and acquainted the Commodore, that he had cleared the Tryal purfuant to his orders, and having fcuttled her, he remained by her till she funk, but that it was the 4th of October before this was effected; for there ran fo large and hollow a fea, that the Sloop, having neither mafts nor fails to fteady her, rolled and pitched fo violently, that it was impossible for a boat to lay along-fide of her, for the greatest part of the time : And during this attendance on the Sloop, they were all driven fo far to the Northweft, that they were afterwards obliged to ftretch a long way to the weftward to regain the ground they had loft; which was the reason that we had not met with them on their station as we expected. We found they had not been more fortunate in their cruife than we were, for they had feen no veifel fince they feparated from us. The little fuccefs we all had, and our certainty, that had any fhips been ftirring in these feas for fome time past we must have met with them, made us believe, that the enemy at Valparais, on the missing of the two ships we had taken, had fufpected us to be in the neighbourhood, and had confequently laid an embargo on all the trade inthe fouthern parts. We likewife apprehended, that they might by this time be fitting out the men of war at Callao; for we knew that it was no uncommon thing for an express from Valparaifo to reach Lima in twenty-nine or thirty days,

(246)

and it was now more than fifty, fince we had taken our first prize. These apprehensions of an embargo along the coaft, and of the equipment of the Spanish Iquadron at Callao, determined the Commodore to haften down to the leeward of Callad, and to join Captain Mitchel (who was ftationed off Paita) as foon as poffible, that our ftrength being united, we might be prepared to give the thips from Callag a warm reception, if they dated to put to fea. With this view we bore away the fame afternoon, taking particular care to keep at fuch a diftance from the fhore, that there might be no danger of our being difcovered from thence a for we knew that all the country thips were commanded, under the fevereft penalty, not to fail by the port of Callao without ftopping and as this order was confantly complied with; we flould undoubtedly be known for enemiesuif we were feen to act contrary to in orlin this new navigation, not being certain whether we night not meet the Spanile fourthin site our route, the Commodore took on board the Centurion part of his every with which he had formerly manned the Cormelo. And now flanding to the northward, we, before night came on, had a view of the fmall Mand called Stations which bore from us No NoE. WE about leven leagues diftant. This Mand dies in the lathade of about fourteen degrees South, and about five miles to the northward of a highland, called Morro veijo, or the old man's head. Fraction this Island, and the bighland near it, more particularly, becaufe be-1. tween

(247)

tween them is the most eligible station on that coaft for cruifing upon the enemy; as all thips bound to Callao, whether from the northward or the fouthward, run well in with the land in this part. 10 By the 5th of November, at three in the afternoon, we were advanced within view of the highlantl of Barranea, dying in the latitude of tobargo South, bearing from us N. E. by E. distant cight or nine leagues ; and an hour and an half vafterwards we had the fatisfaction we had for long withed for of feeing a fail. She first appeared to deeward, and we all immediately give her chace ; but the Centurion fo much outfailed the two prizes that we foon ran them out of fight, and gained confiderably on the chace : However, night coming on before we came up with her, we, babout feven o'clock, loft fight of her, and were in fome perplexity what course to iteer; but at last Mr. Anfon refolved, as we were then before the wind, to keep all his fails fet, and not to change his courfe : For though we had no doubt but the chace would alter her courfe in the night ; yet, as it was uncertain what tack the would go upon, i was thought more prudent to keep on our sou le, as we must by this means unavoidably near her. than to change it on conjecture; when, if we fhould miftake, we muft infallibly of her: Thus then we continued the chace about an hour and half in the dark, fome one or other on board us constantly imagining they difcerned her fails right a head of us; but, at last Mr. Brett, then our fecond Lieutenant, did really difcover her R 4 about

about four points on the larboard-bow, fteering off to the feaward: We immediately clapped the helm a weather, and ftood for her; and in lefs than an hour came up with her, and having fired fourteen shot at her, she struck. Our third Lieutenant, Mr. Dennis, was sent in the boat with fixteen men, to take poffeffion of the prize, and to return the prifoners to our fhip. This ship was named the Santa Terefa de Jesus, built at Guaiaquil, of about three hundred tuns burthen, and was commanded by Bartolome Urrunaga, a Biscayer : She was bound from Guaiaguil to Callao; her loading confifted of timber, cacao, coco-nuts, tobacco, hides, Pito thread (which is very ftrong, and is made of a fpecies, of grafs) Quito cloth, wax, &c. The fpecies on board her was inconfiderable, being principally fmall filver money, and not amounting to more than 170 l. sterling. It is true, her cargoe was of great value, could we have difposed of it; but, the Spaniards having ftrict orders never to ranfom their fhips, all the goods that we took in these feas, except what little we had occasion for ourfelves, were of no advantage to us. Indeed, though we could make no profit thereby ourfelves, it was fome fatisfaction to us to confitler, that it was fo much really loft to the enemy, and that the defpoiling them was no contemptible branch of that fervice, in which we were now employed by our country.

Befides our prize's crew, which amounted to forty-five hands, there were on board her ten paffengers, confifting of four men and three wcwomen, who were natives of the country, born of Spanish parents, and three black female flaves that attended them. The women were a mother and her two daughters, the eldest about twenty-one, and the youngeft about fourteen. It is not to be wondered at, that women of these years should be excessively alarmed at the falling into the hands of an enemy, whom, from the former outrages of the Buccaneers, and by the artful infinuations of their Priefts, they had been taught to confider as the most terrible and brutal of all mankind. These apprehensions too were in the prefent inftance exaggerated by the fingular beauty of the youngest of the women, and the riotous difposition which they might well expect to find in a fet of failors, that had not feen a woman for near a twelvemonth. Full of these terrors, the women all hid themfelves when our officer went on board, and when they were found out, it was with great difficulty that he could perfuade them to approach the light : However, he foon fatisfied them, by the humanity of his conduct and his affurances of their future fecurity and honourable treatment, that they had nothing to fear. And the Commodore being informed of the matter fent directions that they fhould be continued on board their own fhip, with the use of the fame apartments, and with all the other conveniencies they had enjoyed before, giving strict orders that they should receive no kind of inquietude or moleftation whatever : And that they might be the more certain of having these orders complied with, or of complaining 4

ng he efs ed. rđ at e. us ilt, 57.24 11= y 2r, ıd es. 25 1-0 e bf r k n -

plaining if they were not, the Commodore permitted the Pilot, who in Spanish thips is generally the fecond perfon on board, to ftay with them, as their guardian and protector. He was particularly chosen for this purpose by Mr. Anfon, as he feemed to be extremely interefted in all that concerned the women, and had at first declared that he was married to the youngeft of them ; though it alterwards appeared, both from the information of the reft of the prifoners, and other circumstances, that he had afferted this with a view, the better to fecure them from the infults they expected on their first falling into our hands. By this compaffionate and indulgent behaviour of the Commodore, the confteration of our female prifoners entirely fublided, and they continued eafy and chearful during the whole time they were with us, as I shall have. occasion to mention more particularly hereafter.

I have before observed, that at the beginning. of this chace the Centurion ran her two conforts out of fight, for which reafon we lay by all the night, after we had taken the prize, for Captain Saunders and Lieutenant Saumarez to join us, firing guns, and making falle fires every half hour, to prevent their paffing us unobferved st but they were to far a ftern, that they neither heard nor faw any of our fignals, and were not able to come up with us till broad day-light. When they had joined us we proceeded together to the northward, being now four fail in company. We here found the fea, for many miles round us, of a beautiful red colour : This, upon cxamifill to

e.

examination, we imputed to an immenfe quantity of fpawn fpread upon its furface; and taking up fome of the water in a wine-glafs, it foon changed from a dirty afpect to a clear chryftal, with only fome red globules of a flimy nature floating on the top. And now having a fupply of timber on boar our new prize, the Commodore ordered our boats to be repaired, and a fwivel gun-flock to be fixed in the bow both of the barge and pinnace, in order to increase their force, in case we should be obliged to have recourse to them for boarding ships, or for any attempts on shore.

As we flood from hence to the northward. nothing remarkable occurred for two or three days, though we forcad our thips in fuch a manner, that it was not probable any veffel of the enemy could escape us. In our run along this coaft we generally observed, that there was a current which fet us to the northward, at the rate of ten or tewlye miles each day. And now being in about eight degrees of South latitude, we began to be attended with valt numbers of flying fish and bonitos, which were the first we faw after our departure from the coaft of Brazil. But it is remarkable, that on the East fide of South America they extended to a much higher latitude than they do on the Welt fide ; for we did not lofe them on the coaft of Brazil, till we approached the fouthern trople. The reafon for this diversity is doubtless the different degrees of heat obtaining in the fame latitude on different fides of that Continent. And on this occasion. I muft

I must beg leave to make a short digression on the heat and cold of different climates, and on the varieties which occur in the same place in different parts of the year, and in different places lying in the same degree of latitude.

The Ancients, as appears in many places, conceived that of five zones, into which they divided the furface of the globe, two only were habitable, fuppoling that all between the tropics was too hot, and all within the polar circle too cold to be supported by mankind. The falsehood of this reasoning has been long evinced; but the particular comparisons of the heat and cold of these various climates, has as yet been very imperfectly confidered. However, enough is known fafely to determine this polition, that all places between the tropics are far from being the hotteft on the globe, as many of those within the polar circles are far from enduring, that, extreme degree of cold, to which their fituation. should feem to subject them: That is to fay, in other words, that the temperature of a place depends much more upon other circumstances, than upon its diftance from the pole, or its proximity to the equinoctial.

This proposition relates to the general temperature of places, taking the whole year round; and in this fense it cannot be denied, but that the City of London, for instance, enjoys much warmer featons than the bottom of Hudson's Bay, which is nearly in the fame latitude with it; for there the feverity of the winter is fo great, that it will fearcely permit the hardiest of our garden. garden plants to live. And if the comparison be made between the coast of Brazil and the western shore of South America, as, for example, betwixt Babia and Lima, the difference will be still more remarkable; for though the coast of Brazil is extremely fultry, yet the coast of the South-Seas in the same latitude is perhaps as temperate and tolerable as any part of the globe; fince in ranging along it, we did not once meet with so warm weather, as is frequent in a summer's day in England: And this was the more remarkable, as there never fell any rains to refresh and cool the air.

2

The causes of this temperature in the South-Seas are not difficult to be affigned, and shall be hereafter mentioned. I am now only folicitous to establish the truth of this affertion, that the latitude of a place alone is no rule whereby to judge of the degree of heat and cold which obtains there. Perhaps this position might be more briefly confirmed, by observing, that on the tops of the Andes, though under the eqinoctial, the snow never melts the whole year round; a criterion of cold, stronger than what is known to take place in many parts far removed within the polar circle.

I have hitherto confidered the temperature of the air all the year through, and the grofs effimations of heat and cold which every one makes from his own fenfation. If this matter be examined by means of Thermometers, which in refpect to the abfolute degree of heat and cold are doubtlefs the most unerring evidences; if this

(2.54)

this be done, the refult will be indeed most : wonderful : For it will appear that the heat in very high latitudes, as at Peterfburgh for in- ; flance, is at particuliar times much greater than ; any that has been hitherto observed between the tropics; and that even at London, in the year : 1746, there was the part of one day confiderably hotter than what was at any time felt by a fhip of Mr. Anfon's fquadron, in running from hence to Cape Horn and back again, and paffing twice under the fun; for in the fummer of that year, the thermometer in London (being one of those graduated according to the method of Farenbeit) flood once at 78%; and the greateft height at which a thermometer of the fame kind flood in the foregoing thips Is find to be 76° : This was at St. Catherine's vin the latter end of December, when the fun was within about three degrees of the vertex. And as to Peter burgh. I find, by the acts of the academy eftablished there, that in the year 1784, on the 20th and 25th of, July, the thermometer role to 98% in the fade that is it was twenty two divisions higher than it was found to be at St. Catherine's : which is a degree of heat, that, were it not authorifed by the regularity and circumfpection with which the observations feem to have been made, would appear altogether incredible and

If it hould be alked how it comes to pals then, that the heat in many places between the tropics is effected to violent; and infufferable, when it oppears by these instances, that it is fomenimeaticivalled or exceeded in very high laterior titudes,

(255)

citudes not far from the polar circle? I should answer, that the estimation of heat in any parcicular place, ought not to be founded upon that degree of heat which may now and then obtain there, but is rather to be deduced from the medium observed in a whole seafon, or perhaps in a whole year : And in this light it will eafily appear, how much more intense the fame degree of heat may prove, by being long continued without remarkable variation. For inftance, in comparing together St. Catherine's and Peterburgh, we will suppose the fummer heat at St. Catherine's to be 76°, and the winter hear so be twenty divisions short of it? I do normake use of this daft conjecture upon fufficient observation ; but I am apt to fuspect, that the allowance is full large. Upon this fuppolition then, the medium heat all the year round will be 66°, and this perhaps by night as well as day, with no great variation in Now those who have attended to thermometers will readily own, that a continuation of this degree of heat for a length of time would by the generality of mankind be stilled violent and suffocating. But now at Peterfburgh, though a few times in the year the heat, by the thermometer. may be confiderably greater than at St. Catherine's, yet, as at other times the cold is immenfely sharper, the medium for a year, or even for one feafon only, would be far fhort of 66°. For I find, that the variation of the thermometer at Peterfburgh is at least five times greater, from its highest to its lowest point, than what es is .

what I have supposed to take place at St. Catherine's.

But belides this estimation of the heat of a place, by taking the medium for a confiderable time together, there is another circumftance which will still augment the apparent heat of the warmer climates, and diminish that of the colder, though I do not remember to have feen it remarked in any author. To explain myfelf more diffinctly upon this head, I must obferve, that the measure of absolute heat, marked by the thermometer, is not the certain criterion of the fenfation of heat, with which human bodies are affected ; For as the prefence and perpetual fuccession of fresh airis necessary to our respiration, fo thete is a fpecies of tainted or flagnated air, which is often produced by the continuance of great heats, which never fails to excite in us, an idea of fultriness and fuffocating warmth, much beyond what the mere heat of the air alone, supposing it pure and agitated. would occasion. Hence it follows, that the mere infpection of the thermometer will never determine the heat which the human body feels from this cause; and hence it follows too. that the heat in most places between the tropics must be much more troublefome and uneafy, than the fame degree of abfolute heat in a high latitaide : For the equability and duration of the tropical heat contributento impregnate the air with a multitude of fteams and vapours from the foil and water, and thefe being, many of them, of an impure and noxious kind, and being 201 4

1 . . .

ing not eafily removed, by reason of the regalarity of the winds in those parts, which only shift the exhalations from place to place, without difperfing them, the atmosphere is by this means rendered lefs proper for refpiration, and mankind are confequently affected with what they stile a most intense and stifling heat : Whereas in the higher latitudes these vapours are probably raifed in fmaller quantities, and the irregularity and violence of the winds frequently difperfe them; fo that, the air being in general pure and lefs stagnant, the same degree of absolute heat is not attended with that uneafy and fuffocating fenfation. This may fuffice in general with respect to the present speculation; but I cannot help withing, as it is a fubject in which mankind, efpecially travellers of all forts, are very much interested, that it were more thoroughly and accurately examined, and that all ships bound to the warmer climates would furnish themselves with thermometers of a known fabric, and would observe them daily, and register their observations; for confidering the turn to philosophical subjects, which has obtained in Europe for the last fourfcore years, it is incredible how very rarely any thing of this kind hath been attended to. For my own part, I do not recollect that I have ever feen any observations of the heat and cold, either in the East or West-Indies, which were made by mariners or officers of veffels, except those made by Mr. Anfon's order, on board the Centurion, and by Captain Leg on board the Severn, which was another ship of our squadron.

This

(258)

This digression I have been in some measure drawn into, by the confideration of the fine weather we met with on the coaft of Perueven under the equinoctial itfelf, but the particularities of this weather I have not yet defcribed : I shall now therefore add, that in this climate every circumstance concurred, that could render the open air and the day-light defirable. For in other countries the fcorching hear of the fun in fummer renders the greater part of the day unapt either for labour or amufement; and the frequent rains are not lefs troublefome in the more temperate parts of the year. But in this happy climate the fun rarely appears : Not that the heavens have at any time a dark and gloomy look; but there is constantly a chearful grey fky, just fufficient to freen the fun, and to mitigate the violence of its perpendicular rays, without obscuring the air, or tinging the day-light with an unpleafant or melancholy hue. By this means all parts of the day are proper for labour or exercife abroad, nor is there wanting that refreshment and pleasing refrigeration of the air, which is fometimes produced in other climates by rains; for here the fame effect is brought about, by the fresh breezes from the cooler regions to the fouthward. It is reafonable to suppose, that this fortunate complexion of the heavens is principally owing to the neighbourhood of those vast hills, called the Andes, which running nearly parallel to the fhore, and at a finall diffance from it, and extending themfelves immenfely higher than any other mounrains 3. 1.42

tains upon the globe, form upon their fides and declivities a prodigious tract of country, where, according to the different approaches to the fummit, all kinds of climates may at all feafons of the year be found. These mountains; by intercepting great part of the eaftern winds which generally blow over the Continent of South America; and by cooling that part of the air which forces its way over their tops, and by keeping befides a prodigious extent of the atmosphere perpetually cool, by its contiguity to the fnows with which they are covered ; thefe hills, I fay, by thus extending the influence of their frozen crefts to the neighbouring coafts and feas of Peru, are doubtlefs the caufe of the temperature and equability which conftantly prevail there. For when we were advanced beyond the equinoctial, where these mountains left use and had nothing to fcreen us to the eaftward. but the high lands on the Ifthmus of Panama: which are but mole-hills to the Andes, we then foon found that in a fhort run we had totally changed our climate; paffing in two or three days from the temperate air of Peru, to the fultry butning atmosphere of the West-Indies. But it is time to return to our narration

On the 10th of November we were three leagues South of the fouthermost Island of Lóbos, lying in the latitude 6° : 27' South : There are two Islands of this name; this, called Lobos de la Mar; and another, which lies to the northward of it, very much refembling it in shape and appearance, and often mistaken for it, called S 2 Lebos

(260)

Lobos de tierra. We were now drawing near to the station appointed to the Gloucester, for which reason, fearing to mifs her, we made an easy fail all night. The next morning, at day-break, we faw a fhip in fhore, and to windward, plying up to the coaft ! She had paffed by us with the favour of the night, and we foon perceiving her not to be the Gloucefler, got our tacks on board, and gave, her chace; but it proving very little wind, fo that neither of us could make much way, the Commodore ordered the barge, his pinnace and the Tryal's pinnace to be manned and armed, and to purfue the chace and board her. Lieutenant Brett, who commanded the barge, came up with her first, about nine o'clock, hand, running, along-afide of her, he fired a volley of fmall fhot between the mafts, just over the heads of the people on board, and then infantly entered with the greatest part of his men; but the enemy made no refiftance, being fufficiently frightened by the dazzling of the cutlaffes, and the volley they had just received. Lieutenant Brett ordered the fails to he trimmed, and bore down to the Commodore, taking up in his way the two pinnaces. When he was arrived within about four miles of us he put off in the barge, bringing with him a number of the priloners, who had given him some material intelligence, which he was defirous the Commodore fhould be acquainted with as foon as possible. On his arrival we learnt, that the prize was called Nuestra Senora del Carmin, of about two hundred and feventy tuns burthen :

burthen; the was commanded by Marcos Morena, a native of Venice, and had on board fortythree mariners: She was deep laden with fteel, iron, wax, pepper, cedar, plank, fnuff, rolarios, European bale goods, powder-blue, cinnamon, Romifs indulgencies, and other species of merchandize: And though this cargoe, in our prefent circumstances, was but of little value to us, yet with respect to the Spaniards, it was the most confiderable capture that fell into our hands in this part of the world; for it amounted to upwards of 400,000 dollars prime coft at Panama. This thip was bound to Callao, and had ftopped at Paita in her passage, to take in a recruit of water and provisions, and had not left that place above twenty-four hours, before the fell into our hands.

I have mentioned that Mr. Brett had received fome important intelligence from the prifoners which he endeavoured to acquaint the Commodore with immediately. The first perfor he received it from (though upon further examination it was confirmed by the other prifoners) was one Jobn Williams, an Irifoman, whom he found on board the Spanish veffel. "Williams was a Papift, who worked his paffage from Cadiz, and had travelled over all the kingdom of Mexico as a Pedlar : He pretended, that by this Bufiness he had got 4 or 5000 dollars, but that he was embarraffed by the Priefts, who knew he had money, and was at last stript of all he had. He was indeed at prefent all in rags, being but just got out of Paita goal, where he had been T Datt Mcon-1 - ile

confined for fome mildemeanor : he expressed great joy upon feeing his countrymen, and immediately informed them, that a few days before, a veffel came into Paita, where the Mafterof her informed the Governor, that he had been chafed in the offing by a very large fhip, which from her fize, and the colour of her fails, he was perfuaded must be one of the English squadron: This we then conjectured to have been the Gloucester, as we afterwards found it was. The Governor, upon examining the Master, was fully fatisfied of his relation, and immediately fent away an express to Lima to acquaint the Viceroy therewith : And the Royal Officer refiding at Paita, being apprehensive of a visit from the English, was builty employed in removing the King's treasure and his own to Piura, a town within land, about fourteen leagues distant. We further learnt from our prisoners, that there was a very confiderable fum of money belonging to fome Merchants at Lima, that was now lodged at the Cuftom-house at Paita; and that this was intended to be fhipped on board a veffel, which was then in the port of Paita, and was preparing to fail with the utmost expedition, being bound for the bay of Sonfonnate, on the coaft of Mexico, in order to purchase a part of the cargoe of the Manila fhip. This vefiel at Paita was efteemed a prime failor, and had just received a new coat of tallow on her bottom; and, in the opinion of the prifoners, the might be able to fail the fucceeding morning. The character they gave us of this

this veffel, on which the money was to be shipped, left us little reafon to believe that our fhip, which had been in the water near two years. could have any chance of coming up with her, if we once suffered her to escape out of the And therefore, as we were now dif-Port. covered, and the coaft would be foon alarmed. and as our cruifing in these parts any longer would answer no purpose, the Commodore refolved to furprize the place, having first minutely informed himfelf of its ftrength and condition, and being fully fatisfied, that there was little danger of lofing many of our men in the attempt. This furprize of Paita, befides the treasure it promised us, and its being the only enterprize it was in our power to undertake, had these other advantages attending it. that we should in all probability supply ourfelves with great quantities of live provision, of which we were at this time in want : And we should likewife have an opportunity of fetting our prifoners on shore, who were now very numerous, and made a greater confumption of our food than our ftock that remained was capable of furnishing long. In all these lights the attempt was a most eligible one, and what our neceffities, our fituation, and every prudential confideration, prompted us to. How it fucceeded, and how far it answered our expectations, shall be the subject of the following chapter.

ŠA

3

CHAP.

CHAP. VI.

(264)

n i nores (nie s

The taking of *Paita*, and our proceedings till we left the coast of *Peru*.

HE town of Paira is fituated in the latitude of 5°: 12 South, in a molt barren foil, composed only of fand and flate : The extent of it (as may be feen in the plan of it) is but small, containing in all lefs than two hundred families. The houses are only groundfloors; the walls built of fplit cane and mud, and the roofs thatched with leaves : These edi-fices, though extremely flight, are abundantly fufficient for a climate, where rain is confidered as a prodigy, and is not leen in many years : So that it is faid, that a fmall quantity of rain falling in this country in the year 1728, it ruined a great number of buildings, which mouldered away, and as it were melted before it. The inhabitants of Paita are principally Indians and black flaves, or at least a mixed breed, the whites being very few. The port of Paita, though in reality little more than a bay, is effected the best on that part of the coast; and is indeed a very fecure and commodious anchorage. It is greatly frequented by all veffels comingfrom the North; fince it is here only that the thips from Acapulco, Sonfonnate, Realeijo and Panama, can touch and refresh in their passage to Callao: And the length of these voyages (the wind for the greatest part of the year being full against them)

them) renders it impossible to perform them without calling upon the coaft for a recruit of fresh water. It is true, Paita is fituated on fo parched a fpot, that it does not itfelf furnish a drop of fresh water, or my kind of greens or provisions, except fish and a few goats: But there is an Indian town called Colan, about two or three leagues distant to the northward, from whence water, maize, greens, fowls, Ec. are brought to Paita on balfas or floats, for the conveniency of the thirs that touch here; and cartle are fornetimes brought from Piura, a town which lies about fourteen leagues up in the coun-The water brought from Colan is whitifh. try. and of a difagreeable appearance, but is faid to be very wholfome: For it is pretended by the inhabitants, that it runs through large woods of larfaparilla, and that it is fenfibly impregnated therewith. This port of Paita, belides furnilhing the northern trade bound to Callac, with water and neceffaries, is the ufual place where passengers from Acapulco or Panama, bound to Lima, difembark; for, as it is two hundred leagues from hence to Callgo, the port of Lima; and as the wind is generally contrary, the paffage by fea is very tedious and fatiguing; but by . land there is a tolerable good road parallel to the coaft, with many flations and villages for the accommodation of travellers. direit edt morten

It appears by the plan, that the town of *Paita* is itfelf an open place; fo that its fole protection and defence is the fort marked (B) in the plan, plate the twenty-third. It was of confequence

((: 266))

quence to us to be well informed of the fabrick and ftrength of this fort; and by the examination of our prifoners we found, that there were eight pieces of cannon mounted in it, but that it had neither ditch nor outwork, being only furrounded by a plain brick wall; and that the garrifon confifted of only one weak company, but the town itfelf might poffibly arm three hundred men more:

Mr. Anfon having informed himfelf of the strength of the place, refolved (as hath been faid in the preceding chapter) to attempt it that very night. We were then about twelve leagues distant from the fhore, far enough to prevent our being discovered; yet not fo far, but that by making all the fail we could, we might arrive in the bay with our thips in the night. However, the Commodore prudently confidered, that this would be an improper method of proceeding, as our thips, being fuch large bodies, might be eafily difcovered at a diftance even in the night, and might thereby alarm the inhabitants, and give them an opportunity of removing their valuable effects. He therefore, as the ftrength of the place did not require our whole force, refolved to attempt it with our boats only, ordering the eighteen oared barge, and our own and the Tryal's pinnaces on that fervice; and having picked out fifty-eight men to man them, well provided with arms and ammunition, he gave the command of the expedition to Lieutenant Brett, and gave him his necessary orders. And the better to prevent the disappointment and

br

and confusion which might arise from the darknefs of the night, and the ignorance of the ftreets and paffages of the place, two of the Spanifs Pilots were ordered to attend the Lieutenant, and to conduct him to the most convenient landingplace, and were afterwards to be his guides on fhore; and that we might have the greater fecurity for their faithful behaviour on this occafion : the Commodore took care to affure all our prifoners, that, if the Pilots acted properly, they should all of them be released, and set on fhore at this place; but in cafe of any mifconduct or treachery, he threatened them that the Pilots should be instantly shot, and that he would carry all the reft of the Spaniards, who were on board him, prifoners to England. So that the prifoners themfelves were interested in our fuccess. and therefore we had no reason to suspect our Conductors either of negligence or perfidy.

And on this occafion I cannot but remark a fingular circumstance of one of the Pilots employed by us in this busines. It seems (as we afterwards learnt) he had been taken by Captain *Clipperton* above twenty years before, and had been forced to lead *Clipperton* and his people to the furprise of *Truxillo*, a town within land to the fouthward of *Paita*, where however he contrived to alarm his countrymen, and to fave them, though the place was taken. Now that the only two attempts on shore, which were made at fo long an interval from each other, should be guided by the same person, and he too a prisoner both times, and forced upon the employ contrary

trary to his inclination, is an incident fo very extraordinary, that I could not help taking notice of it. "But to return to the matter in hand. During our preparations, the fhips themfelves flood towards the Port with all the fail they could make, being fecure that we were yet at too great a diftance to be feen. But about ten o'clock at night, the thips being then within five leagues of the place,"Lieutenant Brett, with the boats under his command, put off, and arrived at the mouth of the bay without being difcovered ; but no fooner had he entered it, than fome of the people, on board a veffel riding at anchor there, perceived him, who mitantly put off in their boat, rowing towards the fort, thouting and crying, the English the English dogs, &cc. by which the whole town was fundenly alarmed, and our people foon observed feveral lights hurrying backwards and forwards in the fort, and other marks of the infiabitants being in great motion. Lieutenant Brett, on this, encouraged his men to pull brikly up to the fhore, that they might give the enemy as little time as poffible to prepare for their defence However. before our boats could reach the fhore, the people in the fort had got ready fome of their cannon, and pointed them towards the landingplace, and though in the darkness of the night it might be well supposed that chance had a greater Thare than Ikill in their direction, yet the first that passed extremely near one of the boats. whiftling just over the heads of the crew. This made our people redouble their efforts ; fo that they

(269)

they had reached the fhore, and were in part difembarked by the time the fecond gun fired. As foon as our men landed, they were conducted by one of the Spanib Pilots to the entrance of a narrow street, not above fifty yards distant from the beach, where they were covered from the fire of the fort; and being formed in the beft manner the mortness of the time would allow, they immediately marched for the parade, which was a large fquare at the end of this ffreet, the fort being one fide of the fquare, and the Governor's house another, as may be feen more diflinctly in the plan, where likewife the road they took from their landing to the fort is marked out by la prickt line. In this march (though performed with tolerable regularity), the flours and clamours of threefcore failors, who had been confined to long on thip-board, and were now for the first time on shore in an enemy's country, joyous, as they always are, , when they land, , and animated befides in the prefent cafe with the hopes of an immense pillage , the huzza's, I fay, of this fpirited detachment, joined with the noife of their drums, and favoured by the night, had augmented their numbers, in the opinion of the enemy, to at least, hree hundred; by which perfuation the inhabitants were fo greatly intimidated, that they were much more folicitous about the means of their flight than of their refultance : So that though upon entering the parade, our people received a volley from the Merchants who owned the treasure then in the town; and who, with a few others, had ranged themfelves in

(270)

in a gallery that ran round the Governor's houfe, yet that post was immediately abandoned upon the first fire made by our people, who were thereby left in quiet possession of the parade. On this fuccefs Lieutenant Brett divided his men into two parties, ordering one of them to furround the Governor's house; and if possible to fecure the Governor, whilf he himfelf with the other marched to the fort, with an intent to force it. But, contrary to his expectation, the entered it without opposition y for the enemy, on his approach, abandoned it, and made their efcape over the walls. By this means the whole place was maltered in lefs than a quarter of an hour's time from the first landing, with no other Tois than that of one man killed on the fpot, and two wounded; one of which was the Spanifs Pilot of the Terefa, who received a flight bruife by a ball which grazed on his wrift : Indeed another of the company, the Honourable Mr. Kepple. fon to the Earl of Albemarle, had a very narrow efcape, for having on a jocky cap, one fide of the peak was shaved off close to his temple by a ball, which however did him no other injury. And now Lieutenant Brett, after this fuccefs.

And now Latentenant brent, after this fuccels, placed a guard at the fort, and another at the Governor's houle, and appointed centinels at all the avenues of the town, both to prevent any furprize from the enemy, and to fecure the effects in the place from being embezzled. And this being done, his next care was to feize on the Cultom-houfe where the treasure lay, and to examine if any of the inhabitants remained in the town, rown, that he might know what farther precard tions it was necessary to take ; but he foon found that the numbers les behind were no ways formidable : For the greatest part of them (being in bed when the place was furprized) had run away with to much precipitation, that they had not given themfelves time to put on their cloaths. And in this precipitate rout the Governor was not the last to fecure himfelf, for he fled betimes half naked, leaving his wife, a young Lady of about feventeen years of age, to whom he had been married but three of four days, behind him, though the too was afterwards carried off in her shift by a couple of centinels, just as the detachment, ordered to invest the house, arrived before it. This escape of the Governor was an unpleafing circumstance, as Mr. Anfon had particularly recommended it to Lieutenant Brett to fecure his perfon, if poffible, in hopes that by that means we might be able to treat for the ranfom of the place : But it feems his alertness rendered it impossible to feize him. The few inhabitants who remained were confined in one of the churches under a guard, except fome ftout Negroes which were found in the place ; thefe, instead of being shut up, were employed the remaining part of the night to affift in carrying. the treasure from the Custom-house and other places to the fort : However, there was care taken that they should be always attended by a file of musqueteers.

The transporting the treasure from the Cuftom-house to the fort, was the principal occupation

(272)

tion of Mr. Brett's people, after he had got poffession of the place. But the failors, while they were thus employed, could not be prevented from entring the houses which lay near them, in fearch of private pillage. And the first things which occurred to them, being the cloaths which the Spaniards in their flight had left behind them, and which, according to the cuftom of the country, were most of them either embroidered or laced, our people eagerly feized thefe glittering habits, and put them on over their own dirty trowfers and jackets; not forgetting, at the fame time, the tye or bag-wig and laced hat. which were generally found with the cloaths; and when this practice was once begun, there was no preventing the whole detachment from imitating it : And thofe, who came lateft into the fashion, not finding mens cloaths sufficient to equip themfelves, they were obliged to take up with womens gowns and petticoats, which (provided there was finery enough) they made no fcruple of putting on, and blending with their own greafy drefs. So that when a party of them thus ridiculoufly metamorphifed first appeared before Mr. Brett, he was extreamly furpized at their appearance, and could not immediately be fatisfied they were his own people.

These were the transactions of our detachment on shore at *Paita* the first night. And now to return to what was done on board the *Centurion* in that interval. I must observe, that after the boats were gone off, we lay by till one o'clock in the morning, and then supposing our datachment

ment to be near landing, we made an easy fail for the bay. About feven in the morning we began to open the bay, and foon after we had a view of the town; and though we had no reafon to doubt of the fuccels of the enterprize, yet it was with great joy that we first difcovered an infallible fignal of the certainty of our hopes ; this was by means of our perspectives, for thro' them we faw an English flag hoifted on the flagstaff of the fort, which to us was an incontestable proof that our people had got poffeffion of the town. We plied into the bay with as much expedition as the wind, which then blew off shore; would permit us: And at eleven, the Tryal's boat came on board us, loaden with dollars and church place; and the officer who commanded her informed us of the preceding night's transactions, fuch as we have already related them. About two in the afternoon we came to an anchor in ten fathom and a half, at a mile and a half diftance from the town, and were confequently near enough to have a more immediate intercourfe with those on thore. And now we found that Mr. Brett had hitherto gone on in collecting and removing the treasure without interruption; but that the enemy had rendezvouled from all parts of the country on a hill. at the back of the town, where they made no inconfiderable appearance : For amongst the reft. of their force, there were two hundred horfe feemingly very well armed, and mounted, and, as we conceived, properly trained and regimented, being furnished with trumpets, drums 2113 .. and

(274)

and standards. These troops paraded about the hill with great oftentation, founding their military mulick, and practifing every art to intimidate us, fas our numbers on fhore were by this time not unknown to them) in hopes that we might be induced by our fears to abandon the place before the pillage was compleated. But we were not to ignorant as to believe, that this body of horfe, which feemed to be what the enemy principally depended on, would dare to venture in freets and among houfes, even had their numbers been three times as great; and therefore, notwithstanding their menaces, we went on, as long as the day-light lafted, calmly, in fending off the treasure, and in employing the boats to carry on board the refreshments, fuch as hogs, fowls, &c. which we found here in great abundance. But at night, to prevent any furprize, the Commodore fent on fhore a reinforcement, who posted themselves in all the ftreets, leading to the parade; and for their greater fecurity, they traverfed the ftreets with barricadoes fix feet high : And the enemy continuing quiet all night, we, at day-breal:, returned again to our labour of loading the boats. and fending them off.

By this time we were convinced of what confequence it would have been to us, had fortune feconded the prudent views of the Commodore, by permitting us to have fecured the Governor. For we found in the place many flore-houfes full of valuable effects, which were ufelefs to us at prefent, and fuch as we could not find room for on

(275)

on board. But had the Governor been in our power, he would, in all probability, have treated for a ranfom, which would have been extremely advantageous both to him and us: Whereas, he being now at liberty, and having collected all the force of the country for many leagues round, and having even got a body of militia from Piura, which was fourteen leagues distant, he was fo elated with his numbers, and fo fond of his new military command, that he feemed not to trouble himfelf about the fate of his Government. So that though Mr. Anfon fent feveral meffages to him by the inhabitants. who were in our power, defiring him to enter into a treaty for the ranfom of the town and goods, giving him, at the fame time, an intimation that he flould be far from infifting on a rigorous equivalent, but perhaps might be fatiffied with fome live cattle, and a few necessaries for the use of the squadron, and affuring him too, that if he would not condefcend at leaft to treat, he would fet fire to the town, and all the warehouses; yet the Governor was fo imprudent and airogant, that he defpifed all these reiterated applications, and did not deign even to return the leaft answer to them.

On the fecond day of our being in poffession of the place, feveral Negroe flaves deferted from the enemy on the hill, and coming into the town, voluntarily entered into our fervice : One of these was well known to a Gentleman on board, who remembered him formerly at *Panama*. And the *Spaniards* without the town

T 2

being

being in extreme want of water, many of their flaves crept into the place by ftealth, and carried away feveral jars of water to their mafters on the hill; and though fome of them were feized by our men in the attempt, yet the thirst amongst the enemy was fo preffing, that they continued this practice till we left the place. And now, on this fecond day we were affured, both by the deferters and by these prisoners we took, that the Spaniards on the hill, who were by this time encreased to a formidable number, had refolved to ftorm the town and fort the fucceeding night; and that one Gordon, a Scotch Papift, and Captain of a thip in those feas, was to have the command of this enterprize. But we, notwithstanding, continued fending off. our boats, and profecuted our work without the least hurry or precipitation till the evening; and then a reinforcement was again fent on fhore by the Commodore, and Lieutenant Brett doubled his guards at each of the barricadoes ; and our pofts being connected by the means of centinels placed within call of each other, and the whole being vifited by frequent rounds, attended with a drum, thefe marks of our vigilance which the enemy could not be ignorant of. as they could doubtlefs hear the drum, if not the calls of the centinels; thefe marks, I fay, of our vigilance, and of our readiness to receive them, cooled their refolution, and made them forget the vaunts of the preceding day; fo that we paffed this fecond night with as little moleftation as we had done the first.

1 2 4

Wg

1

We had finished fending the treasure on board the Centurion the evening before; fo that the third morning, being the 15th of November, the boats were employed in carrying off the moft valuable part of the effects that remained in the town. And the Commodore intending to fail this day, he, about ten o'clock, purfuant to his promife, fent all his prifoners, amounting to eighty-eight, on fhore, giving orders to Lieutenant Brett to fecure them in one of the churches, under a ftrict guard, till he was ready to embark his men. Mr. Brett was at the fame time ordered to fet the whole town on fire, except the two churches (which by good fortune flood at fome diftance from the other houses) and then he was to abandon the place, and to come on board. These orders were punctually complied with ; for Mr. Brett immediately fet his men to work, to diffribute pitch, tar, and other combuftibles (of which great quantities were found here) into houfes fituated in different streets of the town, fo that, the place being fired in many quarters at the fame time, the deftruction might be more violent and fudden, and the enemy, after our departure, might not be able to extinguish it. These preparations being made, he, in the next place, ordered the cannon, which he found in the fort, to be nailed up; and then fetting fire to those houses which were most windward, he collected his men, and marched towards the beach, where the boats waited to carry them off. And the part of the beach where he ina state T 3 tended .

0

tended to embark being an open place withour the town, near where the churches are marked in the forementioned plan, the Spaniards on the hill perceiving he was retreating, refolved to try if they could not precipitate his departure, and thereby lay fome foundation for their future boafting. And for this purpose a fmall fquadron of their horfe, confifting of about fixty, picked out, as I fuppofe, for this fervice, marched down the hill with much feeming refolution; fo that, had we not been prepollefied with a juster opinion of their prowels, we might have fuspected, that now we were on the open beach with no advantage of fituation," they would certainly have charged us : But we prefumed (and we were not miftaken) that this was mere oftentation. For, notwithstanding the pomp and parade they advanced with, Mr. Brett had no fooner ordered his men to halt and face about, but the enemy flopped their career, and never dared to advance a ftep further.

When our people were arrived at their boats, and were ready to go on board, they were for fome time delayed, by miffing one of their number; but being unable, by their mutual enquiries amongft each other, to inform themfelves where he was left, or by what accident he was detained, they, after a confiderable delay, refolved to get into their boats, and to put off without him. And the laft man was actually embarked, and the boats just putting off, when they heard him calling to them to take him in. The town was by this time fo thoroughly on fire,

fire. and the fmoke covered the beach fo effectually, that they could fcarcely fee him, though they heard his voice. The Lieutenant inftantly ordered one of the boats to his relief, who found him up to the chin in water, for he had waded as far as he durft, being extremely frightned with the apprehenfions of falling into the hands of an enemy, enraged, as they doubtlefs were, with the pillage and deftruction of their town. On enquiring into the caufe of his ftaving behind, it was found that he had taken that morning too large a dole of brandy, which had thrown him into, fo found a fleep, that he did not awake till the fire came, near, enough to forch him. He was strangely amazed on first opening his eyes, to fee the place all in a blaze on one fide, and feveral Spaniards and Indians not far from him on the other. The greatness and fuddenness of his fright instantly reduced him to a ftate of fobriety, and gave him fufficient prefence of mind to push through the thickeft of the finoke, as the likelieft means to escape the enemy; and making the best of his way to the beach, he ran as far into the water as he durft. (for he could not fwim) before he ventured to look back. 71 11 51

And here I cannot but observe, to the honour of our people, that though there were great quantities of wine and spirituous liquors found in the place, yet this man was the only one who was known to have so far neglected his duty, as to get drunk. Indeed, their whole behaviour, while they were on shore, was much T_4 more

13

more regular than could well have been expected from failors, who had been fo long confined to a fhip: And though part of this prudent demeanor muft doubtlefs be imputed to the diligence of their Officers, and to the excellent difcipline to which they had been long inured on board the Commodore, yet it was doubtlefs no fmall reputation to the men, that they fhould in general refrain from indulging themfelves in those intoxicating liquors, which they found ready to their hands in almost every warehouse.

And having mentioned this fingle inftance of drunkennefs, I cannot pais by another overfight, which was likewife the only one of its kind, and which was attended with very particular circumstances. There was an Englishman, who had formerly wrought as a fhip-carpenter in the yard at Portfmouth, but leaving his country, had afterwards entered into the Spanif fervice, and was employed by them at the port of Guaiaquil; and it being well known to his friends in England that he was then in that part of the world, they put letters on board the Centurion, directed to him. This man being then by accident amongst the Spaniards, who were retired to the hill at Paita, he was defirous (as it should seem) of acquiring some reputation amongst his new Masters. With this view he came down unarmed to a centinel of ours, who was placed at fome diftance from the fort towards the enemy, and pretending to be defirous of furrendring himfelf, and of entering into our fervice. Our centinel had a cock'd piftol, but

d.

1

but being deceived by the other's fair fpeeches, he was fo imprudent as to let him approach much nearer than he ought; to that the Shipwright, watching his opportunity, rufhed on the centinel, and feizing his piftol, wrenched it out of his hand, and inftantly ran away with it up the hill. By this time, two of our people, who feeing the fellow advance, had fufpected his intention, were making towards him, and were thereby prepared to purfue him; but he got to the top of the hill before they could reach him, and then turning about, fired the piftol; at which inftant his purfuers fired at him, and though he was at a great diftance, and the creft on the hill hid him as foon as they had fired, fo that they took it for granted they had miffed him, yet we afterwards learnt that he was fhot through the body, and had fallen down dead the very next ftep he took after he was out of fight. The centinel too, who had been thus grofsly imposed upon, did not efcape unpunished; for he was ordered to be feverely whipt for being thus fhamefully furprized upon his peft, and for having given an example of careleffness, which, if followed in other inftances, might prove fatal to us all. But to return :

By the time our people had taken their comrade out of the water, and were making the beft of their way for the fquadron, the flames had taken pofferfion of every part of the town, and had got fuch hold, both by means of combuftibles that had been diffributed for that purpofe, and and by the flightness of the materials of which the houses were composed, and their aptitude to take fire, that it was fufficiently apparent, no efforts of the enemy (though they flocked down in great numbers) could possibly put a ftop to it, or prevent the entire destruction of the place, and calle the merchandize contained therein. A whole town on fire at once, especially a place that burnt with fuch facility and violence, being a very fingular spectacle, Mr. Brett had the curiofity to delineate its appearance, together with that of the ships in the harbour, which may be seen in the twenty-fourth plate. Out 2000 yiering I ended won buch

Our detachment under Lieutenant Brett having fately joined the fquadron, the Commodore prepared to leave the place the fame evening. He found, when he first came into the bay, fix veffels of the enemy at anchor; one of which was the fhip, which, according to our intelligence, was to have failed with the treafure to the coaft of Mexico, and which, as we were perfuaded fhe was a good failor, we refolved to take with us : The others were two Snows, a Bark, and two Row-gallies of thirty-fix oars a-piece ... Thefe laft, as we were afterwards informed, with many others of the fame kind built at different ports, were intended to prevent our landing in the neighbourhood of Callao: For the Spaniards, on the first intelligence of our foundron and its force, expected that we would attempt the city of Lima. The Commodore, having no occasion for these other vessels, had ordered

ordered the mafts of all five of them to be cut away on his first arrival; and now, at his leaving the place, they were towed out of the harbour, and fouttled and funk; and the command of the remaining fhip, called the Solidad, being given to Mr. Hugbs, the Lieutenant of the Tryal, who had with him a crew of ten men to navigate her, the fquadron, towards midnight, weighed anchor, and failed out of the bay, being now augmented to fix fail, that is the Centurian and the Tryal Prize, together with the Carmelo, the Terefa, the Carmin, and our last acquired vessel

ł

And now, before I entirely quit the account of our transactions at this place, it may not perhaps be improper to give a fuccinct relation of the booty we made here, and of the loss the Spaniards fuftained. I have before observed, that there were great quantities of valuable effects in the town; but as the greatest part of them were what we could neither difpofe of nor carry away, the total amount of this merchandize can only be rudely gueffed at. But the Spaniards. in the reprefentations they made to the Court of Madrid, (as we were afterwards affured.) effimated their whole lofs at a million and a half of dollars: And when it is confidered, that no fmall part of the goods we burnt there were of the richeft and most expensive species, as broadcloaths, filks, cambrics, velvets, &c. Incannot but think their valuation fufficiently moderate. As to our parts, our acquisition, though inconfiderable in comparison of what we destroyed, was

5 h

€

ť

was yet in itfelf far from defpicable; for the wrought plate, dollars and other coin which fell into our hands amounted to upwards of 30,000 l. fterling, befides feveral rings, bracelets, and jewels, whofe intrinfic value we could not then determine; and over and above all this, the plunder, which became the property of the immediate captors, was very great; fo that upon the whole it was by much the moft important booty we made upon that coaft.

There remains, before I take leave of this place, another particularity to be mentioned, which, on account of the great honour which our national character in those parts has thence received, and the reputation which our Commodore in particular has thereby acquired, merits a diftinct and circumstantial discussion. It has been already related, that all the prifoners taken by us in our preceding prizes were put on fhore. and difcharged at this place ; amongit which, there were fome perfons of confiderable diftinction, particularly a youth of about feventeen years of age, fon of the Vice-Prefident of the Council of Chili. As the barbarity of the Buccaneers, and the artful use the Ecclesiaftics had made of it, had filled the natives of those countries with the most terrible ideas of th English cruelty, we always found our prifoners, at their first coming on board us, to be extremely dejected, and under great hornor and anxiety. In particular this youth, whom I last mentioned, having never been from home before, lamented his captivity in the most moving manner, regretting,

h

f

-

d

1

ÿ

o t gretting, in very plaintive terms, his parents his brothers, his fifters, and his native country; of all which he was fully perfuaded he had taken his last farewel, believing that he was now devoted, for the remaining part of his life, to an abject and cruel fervitude ; nor was he fingular in his fears, for his companions on board, and indeed all the Spaniards that came into our power, had the fame defponding opinion of their fituation. Mr. Anfon constantly exerted his utmost endeavours to efface these inhuman impreffions they had received of "; always taking care, that is many of the principal people among them as there was room for, fhould dine at his table by turns; and giving the strictest orders too, that they should at all times, and in every circumstance, be treated with the utmost decency and humanity. But notwithstanding this precaution, it was generally observed, that for the first day or two they did not quit their fears, but suspected the gentleness of their ufage to be only preparatory to fome unthought-of calamity. However, being confirmed by time, they grew p rfectly easy in their fituation, and remarkably chearful, fo that it was often difputable, "whether or no they confidered their being detained by us as, a misfortune. For the youth I have above-mentioned, who was near two months on board us, had at laft fo far conquered his melancholy furmifes, and had taken fuch an affection to Mr. Anfon, and feemed fo much pleafed with the manner of life, totally different from all he had ever feen before,

before, that it is doubtful to me, whether, if his own opinion had been taken, he would not have preferred a voyage to England in the Centurion, to the being fet on fhore at Paita, where he was at liberty to return to his country and his friends.

This conduct of the Commodore to his prifoners, which was continued without interruption or deviation, gave them all the highest idea of his humanity and benevolence, and induced them likewife (as mankind are fond of forming general opinions) to entertain very favourable thoughts of the whole English Nation. But whatever they might be disposed to think of Mr. Anfon before the taking of the Terefa, their veneration for him was prodigioully increased by his conduct towards those women, whom (as I have already mentioned) he took in that veffel : For the leaving them in the poffeffion of their apartments, the first orders given to prevent all his people on board from approaching them, and the permitting the pilot to flay with them as their guardian, were measures that feemed to different from what might be expected from an enemy and an heretic, that the Spaniards on board, though they had themfelves experienced his beneficence, were furprized at this new inftance of it, and the more fo, as all this was done without his ever having feen the women, though the two daughters were both efteemed handsome, and the youngest was celebrated for her uncommon beauty. The women themfelves too were fo fenfible of the obligations they

, if not enere and 1.1 oriup+ dea ced ing ble But of heir fed om :hat îon to ing rith hat exthe ves at all the oth elehen bns hey

(287)

they owed him, for the care and attention with which he had protected them, that they abfolutely refused to go on shore at Paita, till they had been permitted to wait on him on board the Centurion, to return him thanks in perfon. Indeed, all the prifoners left us with the ftrongeft affurances of their grateful remembrance of his uncommon treatment. A Jefuit in particular, whom the Commodore had taken, and who was an Ecclefiastic of fome distinction, could not help expressing himfelf with great thankfulness for the civilities he and his countrymen had found on board, declaring, that he should confider it as his duty to da Mr. Anfon justice at all times; adding, that his usage of the menprifoners was fuch as could never be forgot, and fuch as he could never fail to acknowledge and recite upon all occasions: But that his behaviour to the women was fo extraordinary, and fo extremely honourable, that he doubted all the regard due to his own ecclefiaftical character, would be fcarcely fufficient to render it credible. And indeed we were afterwards informed, that both he and the reft of our prifoners had not been filent on this head, but had, both at Lima and at other places, given the greateft encomium to our Commodore; the Jefuit in particular, as we were told, having, on his account, interpreted in a lax and hypothetical fense that article of his Church, which afferts the impoffibility of hereticks being faved.

And

(288)

And let it not be imagined, that the infpreffions which the Spaniards hence received to our advantage, is a matter of fmall import ; for, not to mention feveral of our countryment who have already felt the good effects of thefe prepoffeffions, the Spaniards are a Nation, whofe good opinion of us is doubtless of more consequence than that of all the world befides: Not only as the commence we have formerly carried on with them; and perhaps may again hereafter; is fo extremely valuable; but also as the transacting it does to immediately depend on the honour and good faith of those who are entrusted with its management. But however, had no national conveniencies attended it. the Commodore's equity and good temper would not lefs have deterred him from all tyranny and cruelty to those, whom the fortune of war had, put into his hands. I fhall only add that by his conftant attachment to these humane and prudent maxims, he has acquired a diftinguished reputation amongst the Creolian Spaniards, which is not confined merely to the coaft of the South-Seas, but is extended through all the Spanis fettlements in America; fo that his name is frequently to be met with in the mouths of most of the Spanish inhabitants of that prodigious empire.

P

From our departure from Paita, to our arrival at Quibo.

WHEN we got under fail from the road of Paita (which, as I have already obferved, was about midnight, on the 16th of November) we ftood to the weftward, and in the morning the Commodore gave orders, that the whole fquadron fhould fpread themfelves, in order to look out for the Gloucester. For we now drew near to the ftation where Captain Mitchel had been directed to cruife, and 'hourly expected to get fight of him; but the whole day paffed without feeing him.

And now a jealoufy, which had taken its rife at Paita, between those who had been ordered on fhore for the attack, and those who had continued on board, grew to fuch a height, that the Commodore, being made acquainted with it, thought it neceffary to interpofe his authority to appeafe it. The ground of this animolity was the plunder gotten at Paita, which those who had acted on fhore had appropriated to themfelves, and confidered it as a reward for the rifques they had run, and the refolution they had shown in that fervice. But those, who had remained on board, confidered this as a very partial and unjust procedure, urging, that had it been left to their choice, they should have preferred the

(290)

the acting on fhore to the continuing on board : that their duty, while their comrades were on shore, was extremely fatiguing; for belides the labour of the day, they were constantly under arms all night to fecure the prifoners, whole numbers exceeded their own, and of whom it was then neceffary to be extremely watchful, to prevent any attempts they might have formed in that critical conjuncture : That upon the whole it could not be denied, but that the prefence of a fufficient force on board was as necessary to the fuccels of the enterprize, as the action of the others on fhore, and therefore those who had continued on board infifted, that they could not be deprived of their share of the plunder, without manifest injustice. These were the contests amongst our men, which were carried on with great heat on both fides : And though the plunder in queftion was a very trifle, in comparison of the treasure taken in the place, (in which there was no doubt but those on board had an equal right) yet as the obftinacy of failors is not always regulated by the importance of the matter in difpute, the Commodore thought it neceffary to put a ftop to this ferment betimes. And accordingly, the morning after our leaving of Paita, he ordered all hands upon the quarterdeck; where, addreffing himfelf to those who had been detached on fhore, he commended their behaviour, and thanked them for their fervices on that occasion : But then reprefenting to them the reafons urged, by those who had continued on board, for an equal distribution of the plunder. 4

(291)

plunder, he told them, that he thought these reafons very conclusive, and that the expectations of their comrades were justly founded; and therefore he ordered, that not only the men, but all the officers likewife, who had been employed in taking the place, fhould produce the whole of their plunder immediately upon the quarter-deck ; and that it fhould be impartially divided amongft the whole crew, in proportion to each man's rank and commiffion: And to prevent those who had been in possession of the plunder from murmuring at this diminution of their share, the Commodore added, that as an encouragement to others who might be hereafter employed on like fervices, he would give his entire share to be distributed amongft those who had been detached for the attack of the place. Thus this troublefome affair, which if permitted to have gone on, might perhaps have been attended with mifchievous confequences, was by the Commodore's prudence foon appealed, to the general fatisfaction of the fhip's company : Not but there were fome few, whofe felfish dispositions were uninfluenced by the justice of this procedure, and who were incapable of difcerning the force of equity, however glaring, when it tended to deprive them of any part of what they had once got into their hands.

This important business employed the best part of the day, after we came from *Paita*. And now, at night, having no fight of the *Gloucester*, the Commodore ordered the fquadron to bring to, that we might not pass her in the dark. The U_2 next

next morning we again looked out for her, and at ten we faw a fail, to which we gave chace; and at two in the afternoon we came near enough to her to difcover her to be the Gloucester, with a imall vessel in tow. About an hour after, we were joined by them; and then we learnt that Captain Mitchel, in the whole time of his cruife, had only taken two prizes; one of them being a small Snow, whose cargoe consisted chiefly of wine, brandy, and olives in jars, with about 70001 in fpecie; and the other a large boat or launch, which the Gloucester's barge came up with near the fhore. The prifoners on board this veffel alledged, that they were very poor, and that their loading confifted only of cotton; tho' the circumftances in which the barge furprized them, feemed to infinuate that they were more opulent than they pretended to be; for the Gloucefter's people found them at dinner upon pidgeon-pye, ferved up in filver dishes. However, the Officer who commanded the barge having opened feveral of the jars on board, to fatisfy his curiofity, and finding nothing in them but cotton, he was inclined to believe the account the prisoners gave him : But the cargoe being taken into the Gloncefter, and there examined more strictly, they were agreeably furprized to find. that the whole was a very extraordinary piece of fille package; and that there was concealed amongst the cotton, in every jar, a confiderable quantity of double doubloons and dollars, to the amount in the whole of near 12,000%. This treafure was going to Paita, and belonged to the - at a series fame

fame Merchants who were the proprietors of the greatest part of the money we had taken there; fo that had this boat escaped the Gloucester, it is probable her cargoe would have fallen into our hands. Befides these two prizes which we have mentioned, the Gloucester's people told us, that they had been in fight of two or three other fhips of the enemy which had escaped them; and one of them we had reafon to believe, from fome of our intelligence, was of an immense value.

Being now joined by the Gloucester and her prize, it was refolved that we should stand to the northward, and make the beft of our way either to Cape St. Lucas on California, or to Cape Corientes on the coast of Mexico. Indeed the Commodore, when at Juan Fernandes, had determined with himfelf to touch in the neighbourhood of Panama, and to endeavour to get fome correspondence over land with the fleet under the command of Admiral Vernon. For when we departed from England, we left a large force at Portfmouth, which was intended to be fent to the West-Indies, there to be employed in an expedition against fome of the Spanish settlements. And Mr. Anfon taking it for granted, that this enterprize had fucceeded, and that Porto Bello perhaps might be then garrifoned by British troops, he hoped that on his arrival at the Istomus, he should easily procure an intercourfe with our country-men on the other fide, either by the Indians, who were greatly difposed in our favour, or even by the Spaniards themielves, fome of whom, for proper rewards, might be induced to carry on this intelli-

intelligence, which, after it was once begun, might be continued with very little difficulty; fo that Mr. Anfon flattered himfelf, that he might by this means have received a reinforcement of men from the other fide, and that by fettling a prudent plan of operations with our Commanders in the West-Indies, he might have taken even Panama itfelf; which would have given to the British Nation the possession of that Istomus, whereby we should have been in effect masters of all the treasures of Peru, and should have had in our hands an equivalent for any demands, however extraordinary, which we might have been induced to have made on either of the branches of the House of Bourbon.

Such were the projects which the Commodore revolved in his thoughts at the Island of Juan Fernandes, notwithstanding the feeble condition, to which he was then reduced. And indeed, had the fuccefs of our force in the West-Indies been answerable to the general expectation, it cannot be denied but thefe views would have been the most prudent that could have been thought of. But in examining the papers which were found on board the Carmelo, the first prize we took. we learnt (though I then omitted to mention it) that our attempt against Carthagena had failed. and that there was no probability that our fleet, in that part of the world, would engage in any new enterprize, that would at all facilitate this plan. And therefore Mr. Anfon gave over all hopes of being reinforced a-crofs the Ifthmus, and confequently had no inducement at prefent to pro-

(295)

proceed to *Panama*, as he was incapable of attacking the place; and there was great reafon to believe, that by this time there was a general embargo on all the coaft.

The only feafible measure then which was left us, was to get as foon as poffible to the fouthern parts of California, or to the adjacent coast of Mexico, there to cruife for the Manila Galeon, which we knew was now at fea, bound to the port of Acapulco. And we doubted not to get on that station, time enough to intercept her; for this fhip does not actually arrive at Acapulco till towards the middle of January, and we were now but in the middle of November, and did not conceive that our paffage thither would coft us above a month or five weeks; fo that we imagined, we had near twice as much time as was neceffary for our purpofe. Indeed there was a bufinefs which we forefaw would occafion fome delay, but we flattered ourfelves that it would be difpatched in four or five days, and therefore could not interrupt our project. This was the recruiting of our water; for the number of prifoners we had entertained on board, fince our leaving the Island of Fernandes, had fo far exhaufted our ftock, that it was impossible to think of venturing upon this paffage to the coaft of Mexico, till we had procured a fresh supply; efpecially as at Paita, where we had fome hopes of getting a quantity, we did not find enough for our confumption during the time we ftayed there. It was for fome time a matter of deliberation, where we fhould take in this necessary article : UA

(296)

ticle; but by confulting the accounts of former Navigators, and examining our prifoners, we at last refolved for the Island of Quibo, fituated at the mouth of the bay of Panama: Nor was it but on good grounds that the Commodore conceived this to be the propereft place for watering the fquadron. Indeed, there was a small Island called Cocos, which was lefs out of our way than Quibo, where fome of the Buccaneers have pretended they found water ; but none of our prifoners knew any thing of it, and it was thought too hazardous to rifque the fafety of the fquadron, and expose ourselves to the hazard of not meeting with water when we came there, on the mere authority of these legendary, writers, of whole milrepresentations and fallities we had almost daily experience. Befides, by going to Quibo we were not without hopes that fome of the enemies ships bound to or from Panama might fall into our hands, particularly fuch of them as were put to lea, before they had any intelligence of our fquadron nutrog to and sloos

Having determined therefore to go to Quibo, we directed our courfe to the northward, being eight fail in company, and confequently having the appearance of a very formidable fleet, and on the 19th, at day-break, we difcovered Cape Blanco, bearing S. S. E. \pm E, feven miles diftant. This Cape lies in the latitude of 4° : 15' South, and is always made by fhips bound either to windward or to leeward; fo that off this Cape is a most excellent station to cruife upon the enemy. By this time we found that our last prize, the Solidad

(297)

Solidad was far from an fwering the character given her of a good failor; and the and the Santa Terefa delaying us confiderably, the Commodore ordered them both to be cleared of every thing that might prove useful to the reft of the ships, and then to be burnt; and having given proper initructions, and a rendezvous to the Gloucester and the other prizes, we proceeded in our courfe for Quibo; and, on the 22d in the morning, faw the Mand of Plata, bearing Eaft, diftant four leagues. Here one of our prizes was ordered to stand close in with it, both to discover if there were any thips between that Ifland and the Continent, and likewife to look out for a fream of fresh water, which was reported to be there, and which would have faved us the trouble of going to Quibo; But the returned without having feen any fhip, or finding any water. At three in the afternoon point Manta bore S. E. by E. feven miles diftant; and there being a town of the fame name in the neighbourhood, Captain Mitchel took this opportunity of fending away feveral of his prifoners from the Gloucester in the Spanifb launch. The boats were now daily employed in distributing provisions on board the Tryal and other prizes, to compleat their flock for fix months: And that the Centurion might be the better prepared to give the Ma: ila ship (one of which we were told was of an immense fize) a warm reception, the Carpenters were ordered to fix eight ftocks in the main and fore-tops, which were properly fitted for the mounting of fwivel guns.

1

(298)

On the 25th we had a fight of the Mand of Gallo, bearing E. S. E. 1/2 E, four leagues diftant; and from hence we croffed the bay of Panama with a N.W. courfe, hoping that this would have carried us in a direct line to the Island of Quibo. But we afterwards found that we ought to have flood more to the westward ; for the winds in a fhort time began to incline to that quarter, and made it difficult for us to gain the Island. And now, after passing the equinoctial, (which we did on the 22d) and leaving the neighbourhood of the Cordilleras, and standing more and more towal is the Isthmus, where the communication of the atmosphere to the eastward and the westward was no longer interrupted, we found in very few days an extraordinary alteration in the climate. For inftead of that uniform temperature, where neither the excels of heat or cold was to be complained of, we had now for feveral days together close and fultry weather, refembling what we had before met with on the coast of Brazil, and in other parts between the tropics on the eastern fide of America. We had befides frequent calms and heavy rains; which we at first ascribed to the neighbourhood of the line, where this kind of weather is generally found to prevail at all feafons of the year; but obferving that it attended us to the latitude of feven degrees North, we were at length induced to believe, that the ftormy feason, or, as the Spaniards call it, the Vandevals, was not yet over ; though many writers, particularly Captain Shelvocke, politively affert, that this feafon begins in

(299)

In *June*, and is ended in *November*; and our prifoners all affirmed the fame thing. But perhaps its end may not be always conftant, and it might laft this year longer than ufual.

On the 27th, Captain Mitchel having finished the clearing of his largest prize, she was scuttled, and set on fire; but we still consisted of five ships and were fortunate enough to find them all good failors; so that we never occasioned any delay to each other. Being now in a rainy climate, which we had been long difused to, we found it necessary to caulk the decks and fides of the *Centurion*, to prevent the rain-water from running into her.

On the 3d of December we had a view of the Island of Quibo; the East end of which then bore from us N. N. W. four leagues diftant, and the Island of Quicara W. N. W, at about the fame diftance. Here we ftruck ground with fixty-five fathom of line, and found the bottom to confift of grey fand, with black fpecks. There is inferted, in the 28th plate, (being contained in the fame plate with a view of the hill of Petaplan) a view of these two Islands, where (a) represents the S. E. end of Quibo, bearing N. by W. four leagues distant : And (b) the Island of Quicara. which bears from the point (a) W. S. W. $\frac{1}{2}$ S, and is diftant from it four leagues, the point (a) being itself in the latitude of 7°: 20' North. When we had thus got fight of the land, we found the wind to hang wefterly; and therefore, night coming on, we thought it advifeable to ftand off till morning, as there are faid to be fome

(300)

fome fhoals in the entrance of the channel. At fix the next morning point Mariato bore N. E. 2 N, three or four leagues diftant. In weathering this point all the fquadron, except the Centurion, were very near it; and the Gloucefter being the leewardmost ship, was forced to tack and stand to the fouthward, fo that we lost fight of At nine, the Island Sebaco bore N. W. by her. N, four leagues diftant; but the wind ftill proving unfavourable, we were obliged to ply on and off for the fucceeding twenty-four hours, and were frequently taken aback. However, at eleven the next morning the wind happily fettled in the S.S. W, and we bore away for the S. S. E, end of the Island, and about three in the afternoon entered Canal Bueno, paffing round a fhoal which ftretches off about two miles from the South point of the Island. This Canal Bueno, or Good Channel, is at leaft fix miles in breadth; and as we had the wind large, we kept in a good depth of water, generally from twenty-eight to thirty-three fathom, and came not within a mile and a half distance of the breakers; though, in all probability, if it had been neceffary, we might have ventured much nearer, without incurring the leaft danger. At feven in the evening we came to an anchor in thirty-three fathom muddy ground; the South point of the Island bearing S. E. by S. a remarkable high part of the Island W. by N. and the Island Sebaco E. by N. Being thus arrived at this Island of Quibo, the account of the place, and of our transactions there, shall be referred to the enfuing chapter,

CHAP.

orde orde C H A P. VIII. Large de la

Our proceedings at Quibo, with an account of the place.

HE next morning, after our coming to an anchor, an officer was difpatched on fhore to difcover the watering place, who having found it, returned before noon; and then we fent the long-boat for a load of water, and at the fame time we weighed and ftood, farther in with our fhips. At two we came again to an anchor in twenty-two fathom, with a bottom of rough gravel intermixed with broken fhells, the watering place now bearing from us N. W. 1 N. only three quarters of a mile diftant. A plan of the road where we lay and of the East-end of the Island is to be feen in the 20th plate, where the foundings are laid down, fuch as we found them, the latitude of the S. E. point of the Island, being, as hath been already mentioned, 7°: 20' North.

This Island of Quibo is extremely convenient for wooding and watering; for the trees grow close to the high-water mark, and a large rapid stream of fresh water runs over the fandy beach into the fea: So that we were little more than two days in laying in all the wood and water we wanted. The whole Island is of a very moderate height, excepting one part. It consists of a continued wood spread over the whole surface of the

the country, which preferves its verdure all the year round. Amongst the other wood, we found there abundance of caffia, and a few lime-It appeared fingular to us, that confitrees. dering the climate and the fhelter, we fhould fee no other birds there than parrots, parroquets, and mackaws; indeed of these last there were prodigious flights. Next to thefe birds, the animals we found there in most plenty were monkeys and guanos, and thefe we frequently killed for food; for though there were many herds of deer upon the place, yet the difficulty of penetrating the woods prevented our coming near them, fo that though we faw them often, we killed only two during our ftay. Our prifoners affured us, that this Island abounded with tygers; and we did once difcover the print of a tyger's paw upon the beach, but the tygers themfelves we never faw. The Spaniards too informed us, that there was often found in the woods a most mischievous ferpent, called the flying inake, which they faid darted itfelf from the boughs of trees on either man or beaft that came within its reach; and whole fting, they believed, to be inevitable death. Befides these mischievous landanimals, the fea hereabouts is infefted with great numbers of alligators of an extraordinary fize; and we often obferved a large kind of flat-fifh, jumping a confiderable height out of the water, which we fuppofed to be the nifh that is faid frequently to deftroy the pearl divers, by clafping them in its fins as they rife from the bottom; and we were told that the divers, for their fecurity:

curity, are now always armed with a fharp knife, which, when they are entangled, they flick into the belly of the fifh, and thereby difengage themfelves from its embraces.

Whilft the fhip continued here at anchor, the Commodore, attended by fome of his officers, went in a boat to examine a bay which lay to the northward; and they afterwards ranged all along the eaftern fide of the Island. And in the places where they put on fhore in the courfe of his expedition, they generally found the foil to be extremely rich, and met with great plenty of excellent water. In particular, near the N. E. point of the Island, they difcovered a natural cafcade, which furpaffed, as they conceived, every thing of this kind, which human art or induftry hath hitherto produced. It was a river of tranfparent water, about forty yards wide, which ran down a declivity of near a hundred and fifty yards in length. The channel it ran in was very irregular; for it was entirely formed of rock. both its fides and bottom being made up of large detached blocks; and by thefe the courfe of the water was frequently interrupted : For in fome places it ran floping with a rapid but uniform motion, while in other parts it tumbled over the ledges of rocks with a perpendicular defcent. All the neighbourhood of this ftream was a fine wood; and even the huge maffes of rocks which overhung the water, and which, by their various projections, formed the inequalities of the channel, were covered with lofty foreft trees. Whilst the Commodore, and those who were with

with him, attentively viewing this place, and were remarking the different blendings of the water, the rocks and the wood, there came in fight (as it were with an intent ftill to heighten and animate the profpect) a prodigious flight of mackaws, which hovering over this fpot, and often wheeling and playing on the wing about it, affording a most brilliant appearance, by the glittering of the fun on their variegated plumage; fo that fome of the fpectators cannot refrain from a kind of transport, when they recount the complicated beauties which occurred in this extraordinary water-fall.

In this expedition, which the boat made along the eastern fide of the Island, though they met with no inhabitants, yet they faw many huts upon the fhore, and great heaps of fhells of fine mother of pearl fcattered up and down in different places : These were the remains left by the pearl-fishers from Panama, who often frequent this place in the fummer feafon; for the pearl oysters, which are to be met with every where in the bay of Panama, are fo plenty at Quibo, that by advancing a very little way into the fea, you might ftoop down and reach them from the bottom. They are usually very large, and out of curiofity we opened fome of them with a view of tafting them, but we found them extremely tough and unpalatable. And having mentioned these oysters and the pearl-fishery, I must beg leave to recite a few particulars relaing thereto.

The

The oyfters most productive of pearls are those found in confiderable depths; for though what are taken up by wading near shore are of the same species, yet the pearls found in them are very rare and very small. It is faid too, that the pearl partakes in some degree of the quality of the bottom on which the oyster is sound; so that if the bottom be muddy, the pearl is dark and ill-coloured.

The taking up oysters from great depths for the fake of the pearls they contain, is a work performed by Negro flaves, of which the inhabitants of Panama and the neighbouring coaft formerly kept. great numbers, which were carefully trained to this business. And these are faid not to be effected compleat divers, till they have by degrees been able to protract their ftay under water fo long, that the blood gushes out from their nose, mouth and ears, And it is the tradition of the country, that when this accident has once befallen them, they dive for the future with much greater facility than before; and they have no apprehension either that any inconvenience can attend it, the bleeding generally stopping of itself, or that there is any probability of their being ever fubject to it a fecond time. But to return from this digreffion.

Though the pearl oyfter, as hath been faid, was incapable of being eaten, yet the fea at this place furnished us with another dainty, in the greatest plenty and perfection: This was the turtle, of which we took here what quantity we pleased. There are generally reckoned four species of turtle; that is, the trunk turtle, the loggerhead, the hawksbill, and the green turtle. The two first are rank and unwholesome; the hawksbill (which furnishes the tortois-shell) is but indifferent food, X though

(306)

though better than the other two; but the green turtle is generally efteemed, by the greatest part of those who are acquainted with its taste, to be the most delicious of all eatables; and that it is a most wholfome food, we are amply convinced by our own experience: For we fed on this last species, or the green turtle, for near four months, and confequently had it been in any degree noxious, its ill effects could not poffibly have escaped us. At this Island we took what quantity we pleafed with great facility; for as they are an amphibious animal, and get on fhore to lay their eggs, which they generally deposit in a large hole in the fand, just above the high-water mark, covering them up, and leaving them to be hatched by the heat of the fun, we ufually difperfed feveral of our men along the beach, whofe bufinefs it was to turn them on their backs when they came to land; and the turtle being thereby prevented from getting away, we carried them off at our leifure : By this means we not only fecured a fufficient flock for the time we flayed on the Island, but we took a number of them with us to fea, which proved of great fervice both in lengthning out our ftore of provision, and in heartning the whole crew with an almost constant supply of fresh and palatable food; for the turtle being large, they generally weighing about 200 lb. weight each. those we took with us lasted us near a month, and by that time we met with a fresh recruit on the coaft of Mexico, where we often faw them in the heat of the day floating in great numbers on the furface of the water fast asleep; when we discovered them, we usually fent out our boat with a man in the bow, who was a dextrous diver, and when the boat came within a few yards of the turtle, the diver diver plunged into the water, and took care to rife close upon it; and feizing the shell near the tail, and prefling down the hinder parts, the turtle, when awakened, began to ftrike with its claws, which motion supported both it and the diver, till the boat came up and took them in. By this management we never wanted turtle for the fucceeding four months in which we continued at fea; and though, when at Quibo, we had already been three months on board, without otherwife putting our foot on shore, than in the few days we slaved at this Island of Quibo, (except those employed in the attack of Paita) yet in the whole feven months, from our leaving Juan Fernandes to our anchoring in the harbour of Chequetan, we buried no more in the whole fquadron than two nien; a most inconteltable proof, that the turtle, on which we fed for the last four months of this term, was at least innocent, if not fomething more.

Confidering the fcarcity of provisions on fome part of the coaft of these feas, it appears wonderful, that a species of food so very palatable and falubrious as turtle, and fo much abounding in those parts, should be prefcribed by the Spaniards as unwholefome, and little lefs than poifonous. Perhaps the strange appearance of this animal may have been the foundation of this ridiculous and fuperftitious averfion, which is ftrongly rooted in all the inhabitants of that coaft, and of which we had many inftances in the courfe of this navigation. I have already observed, that we put our Spanifo prifoners on fhore at Paita, and that the Gloucester fent theirs to Mantua; but as we had taken in our prizes fome Indian and Negro flaves, we did not fet thefe. on shore with their masters, but continued them - 1. 6. M OR

X 2

on board, as our crews were thin, to affift in navigating our fhips. These poor people being poffeffed with the prejudices of the country they came from, were aftonished at our feeding on turtle, and feemed fully perfuaded that it would foon deftroy us; but finding that none of us died, nor even fuffered in our health by a continuation of this diet, they at last got so far the better of their aversion, as to be perfuaded to tafte it, to which the abfence of all other kinds of fresh provisions might not a little contribute. However, it was with great reluctance, and very sparingly, that they first began to eat of it : But the relish improving upon them by degrees, they at last grew extremely fond of it, and preferred it to every other kind of food, and often felicitated each other on the happy experience they had acquired, and the delicious and plentiful repafts it would be always in their power to procure, when they should again return back to their country. Those who are acquainted with the manner of life of these unhappy wretches, need not be told, that next to large draughts of fpirituous liquors, plenty of tolerable food is the greatest joy they know, and confequently the difcovering a method which would always fupply them with what quantity they pleafed, of a food more luxurious to the palate than any their haughty Lords and Masters could indulge in, was doubtless a circumstance, which they confidered as the most fortunate that could befal them.

After this digreffion, which the prodigious quantity of turtle on this Island of Quibo, and the flore of it we thence took to fea, in fome measure led me into, I shall now return to our own proceedings.

In

(309)

In three days time we had compleated our bufinefs at this place, and were extremely impatient to put to fea, that we might arrive time enough on the coaft of Mexico to intercept the Manila galeon. But the wind being contrary detained us a night, and the next day, when we got into the offing, (which we did through the fame channel by which we entered) we were obliged to keep hovering about the Island, in hopes of getting fight of the Gloucester; who, as I have in the last chapter mentioned, was feparated from us on our first arrival. It was the oth of December, in the morning, when we put to fea, and continuing to the fouthward of the Island, looking out for the Gloucester, we, on the 10th, at five in the afternoon, difcerned a small fail to the northward of us, to which we gave chace, and coming up with her took her. She proved to be a bark from Panama, bound to Cheripe, an inconfiderable village on the Continent, and was called the Jesu Nazareno. She had nothing on board but some oakum, about a tun of rock falt, and between 30 and 40 l. in specie, most of it confifting of fmall filver money, intended for purchafing a cargo of provisions at Cheripe.

And on occasion of this prize I cannot but obferve, for the use of future cruisers, that had we been in want of provisions, we had by this capture an obvious method of fupplying ourfelves. For at Cheripe, whither she was bound, there is a constant ftore of provisions prepared for the veffels who go thither every week from Panama, the market of Panama being chiefly fupplied from thence: So that by putting a few of our hands on board our prize, we might eafily have feized a large ftore without any hazard, fince Cheripe is a place of no ftrength

(310)

ftrength. And as provisions are the staple commodity of that place and of its neighbourhood, the knowledge of this circumstance may be of great use to such cruisers, as find their provisions grow scant, and yet are defirous of continuing on that coast as long as possible. But to return :

On the 12th of December we were at last relieved from the perplexity we had fuffered, by the feparation of the Gloucester; for on that day the joined us, and informed us, that in tacking to the fouthward, on our first arrival, she had sprung her foretop-mass, which had disabled her from working to windward, and prevented her from joining us sooner. And now we scuttled and such the Jesu Nazareno, the prize we took last; and having the greatest impatience to get into a proper station for the galeon, we stood all together to the westward, leaving the Island of Quibo (notwithstanding all the impediments we met with) in about nine days after our first coming in fight of it.

and a start of the second but the sale that it

OF WITH EN. (11) SHI PARAY, MIN & VE

with control man we date to show a which and and

From Quibo to the coast of Mexico.

O N the 12th of December we ftood from Quibo to the weftward, and the fame day the Commodore delivered fresh instructions to the Captains of the men of war, and the commanders of our prizes, appointing them the rendezvouses they were to make and the courses they were to steer in case of a separation. And first, they were directed to use all possible dispatch in getting to the north-

northward of the harbour of Acapulco, where they were to endeavour to fall in with the land, between the latitudes of 18 and 19 degrees; from thence, they were to beat up the coaft at eight or ten leagues distance from the shore, till they came a-breast of Cape Corientes, in the latitude of 20°: 20'. When they arrived there, they were to continue cruifing on that station till the 14th of February ; and then they were to proceed to the middle Island of the Tres Marias, in the latitude of 21°: 25', bearing from Cape Corientes N. W. by N, twenty-five leagues diftant. And if at this Island they did not meet the Commodore, they were there to recruit their wood and water, and then to make the beft of their way to the Island of Macao, on the coast of China. These orders being distributed to all the fhips, we had little doubt of arriving foon upon our intended station, as we expected, upon the increasing our offing from Quibo, to fall in with the regular trade-wind. But, to our extreme vexation, we were baffled for near a month, either with tempeftuous weather from the western quarter, or with dead calms and heavy rains, attended with a fultry air; fo that it was the 25th of December before we got a fight of the Island of Cocos, which by our reckoning was only a hundred leagues from the Continent; and we had the mortification to make fo little way, that we did not lofe fight of it again in five days. This Island we found to be in the latitude of 5°: 20' North. It is a high hummock towards the western part, which descends gradually, and at last terminates in a low point to the eaftward. From the Island of Cocos we stood W. by N, and were till the 9th of January in run-ning an hundred leagues more. We had at first XA flat-

flattered ourselves, that the uncertain weather and western gales we met with were owing to the neighbourhood of the Continent, from which, as we got more diftant, we expected every day to be relieved, by falling in with the eastern tradewind : But as our hopes were fo long baffled, and our patience quite exhaufted, we began at length to defpair of fucceeding in the great purpole we had in view, that of intercepting the Manila galeon; and this produced a general dejection amongft us, as we had at first confidered this project as almost infallible, and had indulged ourselves in the most boundless hopes of the advantages we fhould thence receive. However, our defpondency was at last formewhat alleviated, by a favourable change of the wind; for, on the 9th of January, a gale for the first time forung up from the N.E, and on this we took the Carmelo in tow, as the Gloucester did the Carmin, making all the fail we could to improve the advantage, for we still suspected that it was only a temporary gale, which would not last long; but the next day we had the fatisfaction to find, that the wind did not only continue in the fame quarter, but blew with fo much brifknefs and fteadinefs, that we now no longer doubted of its being the true trade-wind. And as we advanced a-pace towards our ftation, our hopes began to revive, and our former defpair by degrees gave place to more fanguine prejudices : For though the cuftomary feafon of the arrival of the galeon at Acapulco was already elapied, yet we were by this time unreasonable enough to flatter ourielves, that fome accidental delay might, for our advantage, lengthen out her passage beyond its ufual limits.

When

21

t

(313)

When we got into the trade-wind, we found no alteration in it till the 17th of January, when we were advanced to the latitude of 12º: 50', but on that day it shifted to the westward of the North: This change we imputed to our having haled up too foon, though we then efteemed ourfelves full feventy leagues from the coaft, which plainly flows, that the trade-wind doth not take place, but at a confiderable diftance from the Continent. After this, the wind was not fo favourable to us as it had been : However, we still continued to advance, and, on the 26th of January, being then to the northward of Acapulco, we tacked and ftood to the eaftward, with a view of making the land.

In the preceding fortnight we caught fome turtle on the furface of the water, and feveral dolphins bonito's, and albicores. One day, as one of the fail-maker's mates was fishing from the end of the gib-boom, he loft his hold, and dropped into the fea; and the ship, which was then going at the rate of fix or feven knots, went directly over him: But as we had the Carmelo in tow, we inftantly called out to the people on board her, who threw him over feveral ends of ropes, one of which he fortunately caught hold of, and twifting it round his arm, they haled him into the fhip, without his having received any other injury than a wrench in his arm, of which he foon recovered.

When, on the 26th of January, we flood to the eastward, we expected, by our reckonings, to have fallen in with the land on the 28th; but though the weather was perfectly clear, we had no fight of it at fun-fet, and therefore we continued on our courfe, not doubting but we fhould fee it by the next morning. About ten at night we difcovered 4

计输

(314)

covered a light on the larboard-bow, bearing from us N. N. E. The Tryal's prize too, who was about a mile a head of us, made a fignal at the fame time for feeing a fail; and as we had none of us any doubt but what we faw was a thip's light, we were all extremely animated with a firm perfuasion, that it was the Manila galeon, which had been to long the fubject of our wifnes : And what added to our alacrity, was our expectation of meeting with two of them instead of one, for we took it-for granted, that the light in view was carried in the top of one ship for a direction to her confort. We immediately caft off the Carmelo and preffed forward with all our canvals, making a fignal for the Gloucester to do the fame. Thus we chafed the light, keeping all our hands to their refpective quarters, under an expectation of engaging in the next half hour, as we fometimes conceived the chace to be about a mile diftant, and at other times to be within reach of our guns; and fome on board us politively averred, that befide the light, they could plainly difcern her fails. The Commodore himfelf was to fully perfuaded that we should be foon along-fide of her, that he fent d'for whis first Lieutenant, who commanded between decks, and directed him to fee all the great guns loaded with two round-fhot for the first broadfide, and after that with one round-fhot, and one grape, ftrictly charging him, at the fame time, not to fuffer a gun to be fired, till he, the Commodore, should give orders, which he informed the Lieutenant would not be till we arrived within piftol-fhot of the enemy. In this constant and eager attention we continued all night, always prefuming that another quarter of an hour would bring

us

us up with this Manila fhip, whole wealth, with that of her supposed confort, we now estimated by round millions. But when the morning broke, and day-light came on, we were most strangely and vexatiously disappointed, by finding that the light which had occalioned all this buftle and expectancy, was only a fire on the fhore. Indeed the circumstances of this deception are fo extraordinary as to be fcarcely credible; for, by our run during the night, and the diftance of the land in the morning, there was no doubt to be made but this fire, when we first discovered it, was above twenty-five leagues from us : And yet I believe there was no perfon on board, who doubted of its being a ship's light, or of its being near at hand. It was indeed upon a very high mountain, and continued burning for feveral days afterwards; it was not a vulcano, but rather, as I fuppofe, flubble or heath fet on fire for fome purpofe of agriculture. The main ad or and i to

At fun-rifing, after this mortifying delution we found ourfelves about nine leagues off the land, which extended from the N. W. to E. I N. On this land we observed two remarkable hummocks, fuch as are usually called paps, which bore North from us: Thefe, a Spanish Pilot and two Indians, who were the only perfons amongst us that pretended to have traded in this part of the world, affirmed to be over the harbour of Acapulco. Indeed, we very much doubted their knowledge of the coaft ; for we found these paps to be in the latitude of 17^e: 56', whereas those over Acapulco are faid to be in 17 degrees only; and we afterwards found our fuspicions of their skill to be well grounded: However, they were very confident.

dent, and affured us, that the height of the mountains was itfelf an infallible mark of the harbour; the coaft, as they pretended (though falfly) being generally low to the eaftward and weftward of it.

And now being in the track of the Manila galeon, it was a great doubt with us (as it was near the end of January) whether the was or was not arrived : But examining our prifoners about it, they affured us, that the was fometimes known to come in after the middle of February; and they endeavoured to perfuade us, that the fire we had feen on shore was a proof that she was as yet at fea, it being cultomary, as they faid, to make use of these fires as fignals for her direction, when she continued longer out than ordinary. On this information, ftrengthened by our propenfity to believe them in a matter which fo pleafingly flattered our wifnes, we refolved to cruife for her for fome days; and we accordingly fpread our fhips at the diftance of twelve leagues from the coaft, in fuch a manner, that it was impossible the should pass us unobferved : However, not feeing her foon, we were at intervals inclined to fufpect that the had gained her port already; and as we now began to want a harbour to refresh our people, the uncertainty of our prefent fituation gave us great uncalinels, and we were very folicitous to get fome positive intelligence, which might either fet us at liberty to confult our neceffities, if the galeon was arrived, or might animate us to continue on our prefent cruife with chearfulnefs, if she was not. With this view the Commodore, after examining our prifoners very particularly, refolved to fend a boat, under colour of the night, into the harbour of Acapulco, to fee if the Manila ship was there or nor,

ounour:; eing t. ganear not it. n to hev had t at uſe fhe inbered me the uch bafs WC had to erınne at vas ur bt. ng nd ur or r,

(317)

not, one of the Indians being very politive that this might be done without the boat itself being difcovered. To execute this project, the barge was difpatched the 6th of February, with a fufficient crew and two officers, who took with them a Spani/b Pilot, and the Indian who had infifted on the practicability of this measure, and had undertaken to conduct it. Our barge did not return to us again till the eleventh, when the officers acquainted Mr. Anfon, that, agreeable to our fufpicion, there was nothing like a harbour in the place where the Spanish Pilots had at first afferted Acapulco to lie; that when they had fatisfied themfelves in this particular, they fteered to the eastward, in hopes of discovering it and had coasted along fhore thirty-two leagues; that in this whole range they met chiefly with fandy beaches of a great length, over which the fea broke with fo much violence, that it was impoffible for a boat to land; that at the end of their run they could just discover two paps at a very great distance to the eastward, which from their appearance and their latitude; they concluded to be those in the neighbourhood of Acapulco; but that not having a fufficient quantity of fresh water and provision for their paffage thither and back again, they were obliged to return to the Commodore, to acquaint him with their difappointment. On this intelligence we all made fail to the eaftward, in order. to get into the neighbourhood of that port, the Commodore refolving to fend the barge a fecond time upon the fame enterprize, when we were arrived within a moderate diftance. And the next day, which was the 12th of February, we being by that time confiderably advanced, the barge was again

(318)

again difpatched, and particular inftructions given to the officers to preferve themselves from being feen from the shore. On the 13th we espied a high land to the caftward, which we first imagined to be that over the harbour of Acapulco; but we afterwards found that it was the high land of Seguateneo, where there is a small harbour, of which we shall have occasion to make more ample mention hereafter. And now, having waited fix days without any news of our barge, we began to be uneafy for her fafety; but, on the 7th day, that is, on the 19th of February, the returned. The officers informed the Commodore, that they had discovered the harbour of Acapulco, which they efteemed to bear from us E.S.E. at least fifty leagues diftant : That on the 17th, about two in the morning, they were got within the Island that lies at the mouth of the harbour, and yet neither the Spanifs Pilot, nor the Indian who were with them, could give them any information where they then were; but that while they were lying. upon their oars in fuspence what to do, being ignorant that they were then at the very place they fought for, they difcerned a fmall light upon the furface of the water, on which they inftantly plied their paddles, and moving as filently as poffible towards it, they found it to be in a fishing canoe. which they furprized, with three Negroes that belonged to it. It feems the Negroes at first attempted to jump overboard; and being fo near the land, they would eafily have fwam on fhore; but they were prevented by prefenting a piece at them, on which they readily fubmitted, and were taken into the barge. The officers further added, that they had immediately turned the canoe adrift againft

against the face of a rock, where it would inevirably be dashed to pieces by the fury of the fea : This they did to deceive those who perhaps might be fent from the town to fearch after the cance; for upon feeing feveral pieces of a wreck, they would immediately conclude that the people on board her had been drowned, and would have no fuspicion of their having fallen into our hands. When the crew of the barge had taken this precaution, they exerted their utmost strength in pulling out to fea, and by dawn of day had gained fuch an offing, as rendered it impossible for them to be feen from the coast.

And now having gotten the three Negroes in our poffession, who were not ignorant of the transactions at Acapulco, we were foon fatisfied about the most material points which had long kept us in fuspence : And on examination we found, that we were indeed difappointed in our expectation of intercepting the galeon before her arrival at Acapulco; but we learnt other circumstances which still revived our hopes, and which, we then conceived, would more than balance the opportunity we had already loft : For though our Negroe prifoners informed us that the galeon arrived at Acapulco on our oth of January, which was about twenty days before we fell in with this coaft, yet they at the fame time told us, that the galeon had delivered her cargoe, and was taking in water and provisions for her return, and that the Viceroy of Mexico had by proclamation, fixed her departure from Acapulco to the 14th of March, N.S. This last news was most joyfully received by us, as we had no doubt but the must certainly fall into our hands, and as it was much more eligible to feize her on her Par 1 1 10

her return, than it would have been to have taken her before her arrival, as the species for which she had fold her cargoe, and which she would now have on board, would be prodigiously more to be esteemed by us than the cargoe itself; great part of which would have perissed on our hands, and no part of it could have been disposed of by us at fo advantageous a mart as Acapulco.

Thus we were a fecond time engaged in an eager expectation of meeting with this Manila fhip. which, by the fame of its wealth, we had been taught to confider as the most defirable prize that was to be met with in any part of the globe. As all our future projects will be in fome fort regulated with a view to the poffession of this celebrated galeon, and as the commerce which is carried on by means of these veffels between the city of Manila and the port of Acapulco is perhaps the most valuable, in proportion to its quantity, of any in the known world, I shall endeavour, in the enfuing chapter, to give as diffinct an account as I can of all the particulars relating thereto, both as it is a matter in which I conceive the public to be in fome degree interested, and as I flatter myfelf, that from the materials which have fallen into my hands, I am enabled to defcribe it with more diftinctness than has hitherto been done, at least in our language.

A BOUT the end of the 15th Century and A the beginning of the 16th, the difcovery of new countries and of new branches of commerce was the reigning passion of feveral of the European Princes. But those who engaged most deeply and fortunately in these pursuits were the Kings of Spain and Portugal; the first of these having difcovered the immenfe and opulent Continent of America and its adjacent Islands, whilst the other, by doubling the Cape of Good Hope, had opened to his fleets a paffage to the fouthern coaft of Afia, usually called the East-Indies, and by his fettlements in that part of the globe, became poffeffed of many of the manufactures, and natural productions with which it abounded, and which, for fome ages, had been the wonder and delight of the more polifhed and luxurious part of mankind.

In the mean time, these two Nations of Spain and Portugal, who were thus profecuting the fame views, though in different quarters of the world, grew extremely jealous of each other, and became apprehensive of mutual encroachments. And therefore to quiet their jealousies, and to enable them with more tranquillity to purfue the propagation of the Catholic Faith in these distant countries, (they having both of them given diftinguished marks

marks of their zeal for their mother church, by their butchery of innocent Pagans) Pope Alexander VI. granted to the Spanish Crown the property and dominion of all places, either already difcovered, or that fhould be difcovered an hundred leagues to the weftward of the Islands of Azores, leaving all the unknown countries to the eaftward of this limit, to the industry and future difquisition of the Portuguese: And this boundary being afterwards removed two hundred and fifty leagues more to the weftward, by the agreement of both Nations, it was imagined that by this regulation all the feeds of future contefts were fuppreffed. For the Spaniards prefumed, that the Portuguese would be hereby prevented from meddling with their colonies in America : And the Portuguese supposed that their East-Indian fettlements, and particularly the fpice Islands, which they had then newly difcovered, were fecured from any future attempts of the Spani/b Nation.

But it feems the infallibility of the Holy Father had, on this occasion, deferted him, and for want of being more conversant in geography, he had not forefeen that the Spaniards, by pufhing their difcoveries to the West, and the Portuguese to the East, might at last meet with each other, and be again embroiled; as it actually happened within a few years afterwards. For Frederick Magellan, who was an officer in the King of Portugal's fervice; having received fome difgust from that Court, either by the defalcation of his pay, or by having his parts, as he conceived, too cheaply confidered, he entered into the fervice of the King of Spain; and being, as it appears, a man of ability, he was very defirous of fignalizing his talents by fome enterprize, which might prove extremely vexatious to his former 4

mer Masters, and might teach them to estimate his worth by the greatness of the mitchief he brought upon them, this being the most obvious and natural turn of all fugitives, and more efpecially of thofe; who, being really men of capacity, have quitted their country by reafon of the fmall account that has been made of them. Magellan, in purfuance of thefe vindictive views, knowing that the Portuguese Court confidered their poffeffion of the fpice Islands as their most important acquisition in the East-Indies, refolved with himfelf to inftigate the Court of Spain to an enterprize, which, by ftill pushing their difcoveries, would give them a right to interfere both in the property and commerce of those renowned Portuguese settlements; and the King of Spain approving of this project, Magellan, in the year 1519, fet fail from the port of Sevil; in order to carry this enterprize into execution. He had with him a confiderable force; confifting of five Thips and two hundred and thirty-four men, with which he flood for the coaft of South America; and ranging along thore, he at laft, towards the end of Oftober; 1520; had the good fortune to difcover those Streights, which have fince been denominated from him, and which opened him a paffage into the Pacific Ocean. And this first part of his fcheme being thus happily accomplished; he, after fome ftay on the coaft of Peru, fet fail again to the weftward, with a view of falling in with the fpice Islands. In this extensive run he first discovered the Ladrones or Marian Iflands; and continuing on his courfe, he at length reached the Philippine Islands, which are the most eastern part of Afia, where, venturing on fhore in an hoftile manner, and fkirmishing with the Indians, he was flain.

Y z

By the death of Magellan, the original project of fecuring fome of the fpice islands was defeated; for those who were left in command contented themselves with ranging through them, and purchasing fome spices from the natives; after which they returned home round the Cape of Good Hope, being the first ships which had ever surrounded this terraqueous globe; and thereby demonstrated, by a palpable experiment obvious to the grossest and most vulgar capacity, the reality of its long difputed spherical figure.

But though Spain did not hereby acquire the property of any of the spice Islands, yet the discovery made in this expedition of the Philippine Islands, was thought too confiderable to be neglected; for these were not far distant from those places which produced fpices, and were very well fituated for the Chinese trade, and for the commerce of other parts of India; and therefore a communication was foon eftablished, and carefully supported between these Islands and the Spanish colonies on the coast of Peru: So that the city of Manila, (which was built on the Island of Luconia, the chief of the Philippines) foon become the mart for all Indian commodities, which were brought up by the inhabitants, and were annually fent to the South-Seas to be there vended on their account; and the returns of this commerce to Manila being principally made in filver, the place by degrees grew extremely opulent and confiderable, and its trade fo far encreafed, as to engage the attention of the Court of Spain, and to be frequently controlled and regulated by royal edicts.

an

In the infancy of this trade, it was carried on from the port of *Callao* to the city of *Manila*, in **x** which

which voyage the trade-wind continually favoured them; fo that notwithstanding these places were diftant between three and four thousand leagues, yet the voyage was often made in little more than two months : But then the return from Manila was extremely troublefome and tedious, and is faid to have fometimes taken them up above a twelve month, which, if they pretended to ply up within the limits of the trade-wind, is not at all to be wondered at; and it is afferted, that in their first voyages they were fo imprudent and unfkilful as to attempt this courfe. However, that rout was foon laid aside, by the advice, as it is faid, of a Jesuit, who perfuaded them to fteer to the northward till they got clear of the trade-winds, and then by the favour of the westerly winds, which generally prevail in high latitudes, to ftretch away for the coaft of California. This has been the practice for at leaft a hundred and fixty years paft : For Sir Thomas Cavendifb, in the year 1586, engaged off the South end of California a veffel bound from Manila to the American coaft. And it was in compliance with this new plan of navigation, and to fhorten the run both backwards and forwards, that the staple of this commerce to and from Manila was removed from Callao on the coast of Peru, to the port of Acapulco on the coast of Mexico, where it continues fixed at this time.

Such was the commencement, and fuch were the early regulations of this commerce; but its prefent condition being a much more interesting subject, I must beg leave to dwell longer on this head and to be indulged in a more particular narration, beginning with a description of the Island of Luconia, and of the port and bay of Manila.

The

The Island of Luconia, though fituated in the latitude of 15° North, is effeemed to be in general extremely healthy, and the water, that is found upon it, is faid to be the beft in the world : It produces all the fruits of the warm climates, and abounds in a most excellent breed of horses, suppofed to be carried thither first from Spain : It is very well fituated for the Indian and Chinefe trade; and the bay and port of Manila, which lies on its western fide, is perhaps the most remakable on the whole globe, the bay being a large circular bafon, 'near ten leagues in diameter, and great part of it entirely land-locked. On the east fide of this bay ftands the city of Manila, which is very large and populous; and which, at the beginning of this war, was only an open place, its principal defence confifting in a fmall fort, which was in great measure furrounded on every fide by houfes; but they have lately made confiderable additions to its fortifications, though I have not yet learnt in what manner. The port, peculiar to the city, is called Cabite, and lies near two leagues to the fouthward; and in this port all the fhips employed in the Acapulco trade are usually stationed. As I have never feen but one engraven plan of this bay, and that in a very fcarce book, I have added in the thirty-third plate, a plan which fell into my hands, and which differs confiderably from that already published : But I cannot pretend to decide which of the two is most to be relied on.

The city of *Manila* itfelf is in a very healthy fituation, is well watered, and is in the neighbourhood of a very fruitful and plentiful country; but as the principal bufinefs of this place is its trade to *Acapulco*, it lies under fome difadvantage, from the ð

lę

n e the difficulty there is in getting to fea to the eastward : For the paffage is among islands and through channels where the Spaniards, by reafon of their unskilfulness in marine affairs, waste much time, and are often in great danger. These difficulties will be better apprehended by the reader by the draught of the Island of Luconia, and of its neighbouring ifles, (Plate XXVIth,) which was taken from the enemy, and had been newly drawn and corrected but a fhort time before.

The trade carried on from this place to China and different parts of India, is principally for fuch commodities as are intended to fupply the Kingdoms of Mexico and Peru. Thefe are fpices, all forts of Chinese filks and manufactures; particularly filk stockings, of which I have heard that no lefs than fifty thousand pair were the usual number shipped on board the annual ship; vast quantities of Indian stuffs, as callicoes and chints, which are much worn in America, together with other minuter articles, as goldfmiths work, &c. which is principally done at the city of Manila itself by the Chinese; for it is faid there are at least twenty thousand Chinese who constantly refide there, either as fervants, manufacturers, or brokers. All these different commodities are collected at Manila, thence to be transported annually in one or more ships, to the port of Acapulco, in the Kingdom of Mexico.

But this trade to Acapulco is not laid open to all the inhabitants of Manila, but is confined by very particular regulations, fomewhat analagous to those by which the trade of the register-ships from Cadiz to the West-Indies is restrained. The ships employed herein are found by the King of Spain, who Y 4 pays

pays the officers and crew; and the tunnage is divided into a certain number of bales, all of the fame fize: Thefe are diffributed amongft the Convents at *Manila*, but principally to the Jefuits, as a donation for the fupport of their miffion for the propagation of the Catholic Faith; and thefe Convents have hereby a right to embark fuch a quantity of goods on board the *Manila* fhip, as the tunnage of their bales amounts to; or if they chufenot to be concerned in trade themfelves, they have the power of felling this privilege to others; and as the Merchants to whom they grant their fhares are often unprovided of a flock, it is ufual for the Convents to lend them confiderable fums of money on bottomry.

The trade is by the royal edicts limited to a certain value, which the annual cargoe ought not to exceed. Some *Spanifb* manufcripts, I have feen, mention this limitation to be 600,000 dollars; but the annual cargoe does certainly furpafs this fum; and though it may be difficult to fix its exact value; yet from many comparifons I conclude, that the return cannot be greatly flort of three millions of dollars.

It is fufficiently obvious, that the greatest part of the treasure, returned from Acapulco to Manila, does not remain in that place, but is again difperfed into different parts of India. And as all European Nations have generally efteemed it good policy to keep their American fettlements in an immediate dependence on their mother-country, without permitting them to carry on directly any gainful traffic with other Powers, these confiderations have occasioned many remonstrances to be presented to the Court of Spain against the Indian trade, hereby allowed

C

t

a

a

9

a

p

allowed to the Kingdom of Peru and Mexico; it having been urged, that the filk manufactures of Valencia and other parts of Spain are hereby greatly. prejudiced, and the linnens carried from Cadiz are much injured in their fale : Since the Chinese filks coming almost directly to Acapulco, can be afforded much cheaper there than any European manufactures of equal goodnefs; and the cottons from the Coromondel coaft, make the European linnens almost useless. So that the Manila trade renders both Mexico and Peru lefs dependent upon Spain for a fupply of their necessities than they ought to be; and exhausts those countries of a confiderable quantity of filver, the greatest part of which, were this trade prohibited, would center in Spain, either in payment for Spanis commodities, or in gains to the Spanish Merchant; whereas now the only advantage which arifes from it is, the enriching the Jefuits and a few particular perfons belides, at the other extremity of the world. These arguments did fo far influence Don Joseph Patinho. who was then Prime Minister, but an enemy to the Jefuits, that about the year 1725, he had refolved to abolish this trade, and to have permitted no. Indian commodities to be introduced into any of the Spanish ports of the West-Indies, but what were carried there in the register ships from Europe. But the powerful intrigues of the Jefuits prevented this regulation from taking place.

This trade from Manila to Acapulco and back again, is ufually carried on in one or at most two annual ships, which set fail from Manila about July, and arrive at Acapulco in the December, January, or February following, and having there disposed of their effects, return for Manila sometime in

in March, where they generally arrive in June; fo that the whole voyage takes up very near an entire year: For this reafon, though there is often no more than one fhip employed at a time, yet, there is always one ready for the fea when the other arrives; and therefore the commerce at Manila are provided with three or four ftout fhips, that, in cafe of any accident, the trade may not be fufpended. The largest of thefe fhips, whofe name I have not le int, is defcribed as little lefs than one of our fare rate men of war, and indeed the muft be of an enormy is fize; for it is known, that when the was employed with other thips from the fame port, to cruife for our China trade, the had no lefs than twelve hundred men on board. Their other fhips, though far inferior in bulk to this, are yet ftout large veffels, of the burthen of twelve ' hundred tun and upwards, and ufually carry from three hundred and fifty to fix hundred hands. passengers included, with fifty odd guns. As thefe are all King's fhips, commissioned and paid by him, there is ufually one of the Captains, who is stiled the General, and who carries the royal ftandard of Spain at the main-top gallant mafthead, as we shall more particularly observe hereafter.

And now, having defcribed the port of Manila and the fhipping they employ, it is neceffary to give a more circumftantial detail of their navigation. The fhip having received her cargoe on board, and being fitted for the fea, generally weighs from the mole of *Cabite* about the middle of *July*, taking the advantage of the wefterly monfoon, which then fets in, to carry them to fea. It appears by the chart already referred to, that the getting

(331)

getting through the Boccadero to the eaftward muft be a troublefome navigation, and in fact, it is fometimes the end of August before they get clear of the land. When they have got through this passage, and are clear of the Islands, they stand to the northward of the east, in order to get into the latitude of 30 odd degrees, where they expect to meet with westerly winds, before which they run away for the coaft of California. To give a better idea of the track which they hold in this navigation, I have inferted, towards the latter end of the third book, the copy of a manufcript chart, which was taken on board one of thefefhips, containing all that Ocean between the Philippine Islands and the coast of Merrice, in which I have laid down the particular route of this veffel, both in her paffage from Manile to Acapulco, and from Acapulco back again. In this chart (as it was drawn for the use of the Spanish General) there are contained all the difcoveries which the Manila ships have at any time made in traversing this vast Ocean; whence it appears what minute and inconfiderable fragments of land are difperfed in that prodigious fea; and it is most remarkable, that by the concurrent testimony of all the Spanish Navigators, there is not one port, nor even a tolerable road as yet found out betwixt the Philippine Islands and the coaft of California, and Mexico; fo that from the time the Manila ship first loses sight of land, fhe never lets go her anchor till fhe arrives on the coaft of California, and very often not till the gets to its fourhermost extremity : And therefore as this voyage is rarely of lefs than fix months continuance, and the fhip is deep laden with merchandize and crowded with people, it may appear won-

n

s d all

þ

þ

h,

s

wonderful how they can be fupplied with a ftock of fresh water for so long a time; and indeed their method of procuring it is extremely fingular, and deferves a very particular recital.

It is well known to those who are acquainted with the Spanifs customs in the South-Seas, that. their water is preferved on fhip-board, not in cafks, but in earthen jars, which in fome fort refemble the large oil jars we often fee in Europe. When the Manila ship first puts to sea, they take on board a much greater quantity of water than can be flowed between decks, and the jars which contain it are hung all about the fhrouds and ftays, fo as to exhibit at a distance a very odd appearance. And though it is one convenience of their jars that they are much more manageable than cafks, and are liable to no leakage, unless they are broken vet it is fufficiently obvious, that a fixth, or even a three months ftore of water could never be ftowed in a fhip fo loaded, by any management whatfoever; and therefore, without fome other fupply, this navigation could not be performed : A fupply indeed they have, but the reliance upon it feems at first fight fo extremely precarious, that it is wonderful fuch numbers should rifque the perishing by the most dreadful of all deaths, on the expectation of fo cafual a circumstance. In short, their only method of recruiting their water is by the rains, which they meet with between the latitudes of 30 and 40° North, and which they are always prepared to catch: For this purpofe they take to fea with them a great number of mats, which they place flopingly against the gunwale, whenever the rain descends; these mats extend from one end of the ship to the other, and their lower edges reft 01

on a large fplit bamboe, fo that all the water which falls on the mats drain into the bamboe, and by this, as a trough, is conveyed into a jar; and this method of fupplying their water, however accidental and extraordinary it may at first fight appear, hath never been known to fail them, fo that it is common for them, when their voyage is a hittle longer than ufual, to fall all their water jars feveral times over.

However, though their diffreffes for fresh water are much short of what might be expected in so tedious a navigation, yet there are other inconveniencies generally attendant upon a long continuance atsea, from which they are not exempted. The principal of these is the scurvy, which sometimes rages with extreme violence; and destroys great numbers of the people; but at other times their passage to Acapulco (of which alone I would be here understood to speak) is performed with little loss.

The length of time employed in this paffage, fo much beyond what ufually occurs in any other navigation, is perhaps in part to be imputed to the indolence and unskilfulness of the Spanish failors, and to an unneceffary degree of caution and concern for fo rich a veffel: For it is faid, that they never fet their main fail in the night, and often lie by unneceffarily. And indeed the inftructions given to their Captains (which I have feen) feem to have been drawn up by fuch as were more apprehenfive of too ftrong a gale, though favourable, than of the inconveniencies and mortality attending a lingring and tedious voyage; for the Captain is particularly ordered to make his paffage in the latude of 30 degrees if poffible, and to be extremely Carc-

(334)

careful to ftand no farther to the i .thward than is abfolutely neceffary for the getting a westerly wind: This, according to our conceptions, appears to be a very abfurd reftriction; fince it can fearcely be doubted; but that in the higher latitudes the wefterly winds are much steadier and brisker than in the latitude of 20 degrees : So that the whole conduct of this navigation feems liable to very great cenfure. For if instead of steering E. N. E. into the latitude of 30 odd degrees, they at first stood N: E. or even still more northerly, into the latitude of 40 or 45 degrees, in part of which course the trade-winds would greatly affift them, I doubt not but by this management they might confiderably contract their voyage, and perhaps perform it in half the time, which is now allotted for it; for in the journals I have feen of these voyages it appears, that they are often a month or fix weeks after their laying the land, before they get into the latitude of 30 degrees; whereas, with a more northerly courfe, it might eafily be done in a fourth part of the time; and when they were once well advanced to the northward, the westerly winds would foon blow them over to the coaft of California, and they would be thereby freed from the other embarasments, to which they are now fubjected, only at the expence of a rough fea and a fliff gale. And this is not merely matter of fpeculation; for I am credibly informed, that about the year 1721, a French ship, by pursuing this courfe, ran from the coast of China to the valley of Vanderas on the coast of Mexico, in lefs than fifty days : But it was faid that this fhip, notwithftanding the fhortness of her passage, fuffered prodigioufly

(335)

gioufly by the fcurvy, fo that fhe had only four or five of her crew left when fhe arrived in America.

However, I shall descant no longer on the probability of performing this voyage in a much fhorter time, but shall content myself with reciting the actual occurrences of the prefent navigation. The Manila ship having stood fo far to the northward as to meet with a wefterly wind, ftretches away nearly in the fame latitude for the coaft of California: And when the has run into the longitude of 96 degrees from Cape Espiritu Santo, she generally meets with a plant floating on the fea, which, being called Porra by the Spaniards, is, I prefume, a fpecies of fea leek. On the fight of this plant they efteem themfelves fufficiently near the Californian fhore, and inmediately ftand to the fouthward ; and they rely fo much on this circumstance, that on the first discovery of the plant the whole ship's company chaunt a solemn Te Deum, esteeming the difficulties and hazards of their paffage to be now at an end; and they conftantly correct their longitude thereby, without ever coming within fight of land. After falling in with these SIGNS, as they denominate them, they fteer to the fouthward, without endeavouring to fall in with the coaft, till they have run into a lower latitude; for as there are many islands, and fome shoals adjacent to California, the extreme caution of the Spanish Navigators makes them very apprehensive of being engaged with the land; however, when they draw near its fouthern extremity, they venture to hale in, both for the fake of making Cape St. Lucas to afcertain their reckoning, and allo to receive intelligence from the Indian inhabitants, whether or no there are any enemies on the coaft; and this laft circum-1 1 1

circumstance, which is a particular article in the Captain's instructions, makes it necessary to mention the late proceedings of the Jesuits amongst the *Californian Indians*.

Since the first discovery of California, there have been various wandring Miffionaries who have vifited it at different times, though to little purpofe; but of late years the Jeluits, encouraged and fupported by a large donation from the Marquis de Valero, a most munificent bigot, have fixed themfelves upon the place, and have established a very Their principal fettlement confiderable miffion. lies just within Cape St. Lucas, where they have collected a great number of favages, and have endeavoured to inure them to agriculture and other mechanic arts : And their efforts have not been altogether ineffectual; for they have planted vines at their fettlements with very good fuccefs, fo that they already make a confiderable quantity of wine. refembling in flavour the inferior fort of Madera. which begins to be efteemed in the neighbouring kingdom of Mexico.

The Jesuits then being thus firmly rooted on *California*, they have already extended their jurifdiction quite across the country from fea to fea, and are endeavouring to spread their influence farther to the northward; with which view they have made feveral expeditions up the gulf between *Ca-lifornia* and *Mexico*, in order to discover the nature of the adjacent countries, all which they hope hereafter to bring under their power. And being thus occupied in advancing the interests of their fociety, it is no wonder if fome share of attention is engaged about the fecurity of the *Manila* ship, in which their Convents at *Manila* are so deeply concernect.

cerned. For this purpole there are refreshments, as fruits, wine, water, &c. constantly kept in readinefs for her; and there is befides care taken at Cape St. Lucas, to look out for any ship of the enemy, which might be cruifing there to intercept her; this being a flation where fhe is conftantly expected, and where the has been often waited for and fought with, though generally with little fuccefs. In confequence then of the measures mutually settled between the Jesuits of Manila and their brethren at California, the Captain of the galeon is ordered to fall in with the land to the northward of Cape St. Lucas, where the inhabitants are directed, on fight of the veffel, to make the proper fignals with fires; and on difcovering these fires, the Captain is to fend his launch on fhore with twenty men, well armed, who are to carry with them the letters from the Convents at Manila to the Californian Miffionaries, and are to bring back the refreshments which will be prepared for them, and likewife intelligence whether or no there are any ene-And if the Captain finds, from mies on the coaft. the account which is fent him, that he has nothing to fear, he is directed to proceed for Cape St. Lucas, and thence to Cape Corientes, after which he is to coaft it along for the port of Acepulco.

The moft usual time of the arrival of the galeon at Acapulco is towards the middle of January: But this navigation is fo uncertain, that fhe fometimes gets in a month fooner, and at other times has been detained at fea above a month longer. The port of Acapulco is by much the fecureft and finest in all the northern parts of the Pacific Ocean; being, as it were, a bason furrounded by very high mountains: But the town is a most wretched place, and Z extremely

the nenthe

ave

ifitofe; lups de emvery nent have : cnother been vines that vine, dera. iring d on uriffea, farhave Caature herethus iety, en-, in

con-

(338)

extremely unhealthy, for the air about it is fo pent up by the hills, that it has fearcely any circulation. The place is befides defitute of fresh water, except what is brought from a confiderable diffance; and is in all refpects fo inconvenient, that except at the time of the mart, whilft the Manila galeon is in the port, it is almost deferted. To compensate in fome measure for the shortness of this description, I have inferted, in the fame plate with the bay of Manila above-mentioned, a plan of this place and of its port and citadel, in which are likewife drawn the new works which were added on their first intelligence of the equipment of our fquadron. As this plan was taken from the Spaniards, I cannot answer for its accuracy; but having feen two or three other Spanifb draughts of the place; I conceive, by comparing them together, that this I have here referred to is not very diftant from the truth.

When the galeon arrives in this port, fhe is generally moored on its weftern fide to the two trees marked in the plan, and her cargoe is delivered with all poffible expedition. And now the town of *Acapulco*, from almoft a folitude, is immediately thronged with Merchants from all parts of the kingdom of *Mexico*. The cargoe being landed and difpofed of, the filver and the goods intended for *Manila* are taken on board, together with provifions and water, and the fhip prepares to put to fea with the utmoft expedition. There is indeed no time to be loft; for it is an express order to the Captain to be out of the port of *Acapulco* on his return, before the first day of *April*, N. S.

And having mentioned the goods intended for Manila, I must observe, that the principal return is always always made in filver, and confequently the reft of the cargoe is but of little account; the other articles, befides the filver, being fome cochineal and a few fweet-meats, the produce of the American fettlements, together with European millinery ware for the women at Manila, and fome Spanish wines, fuch as tent and fherry, which are intended for the use of their Priest in the administration of the Sacrament.

And this difference in the cargoe of the ship to and from Manila, occasions a very remarkable variety in the manner of equipping the fhip for these two different voyages. For the galeon, when the fets fail from Manila, being deep laden with a variety of bulky goods, the has not the conveniency of mounting her lower tire of guns, but carries them in her hold, till fhe draws near Cape St. Lucas, and is apprehensive of an enemy. Her hands too are as few as is confiftent with the fafety of the ship, that fhe may be lefs peftered with the ftowage of provisions. But on her return from Acapulco, as her cargoe lies in lefs room, her lower tire is (or ought to be) always mounted before fhe leaves the port, and her crew is augmented with a fupply of failors, and with one or two companies of foot, which are intended to reinforce the garrifon at Manila. And there being befides many Merchants who take their paffage to Manila on board the galeon, her whole number of hands on her return is ufually little flort of fix hundred, all which are eafily provided for, by reafon of the finall ftowage neceffary for the filver.

The galeon being thus fitted for her return, the Captain, on leaving the port of *Acapulce*, fteers for the latitude of 13° or 14° , and runs on that pa-Z 2 rallel.

urn is lways rallel, till he gets fight of the Ifland of Guam, one of the Ladrones. In this run the Captain is particularly directed to be careful of the fhoals of St. Bartholomew, and of the Ifland of Gasparico. He is also told in his inftructions, that to prevent his pasfing the Ladrones in the dark, there are orders given that, through all the month of June, fires shall be lighted every night on the highest part of Guam and Rota, and kept in till the morning.

At Guam there is a finall Spanish garrifon, (as will be more particularly mentioned hereafter) purpofely intended to fecure that place for the refreshment of the galeon, and to yield her all the affiftance in their power. However, the danger of the road at Guam is fo great, that though the galeon is erdered to call there, yet fhe rarely ftays above a day or two, but getting her water and refreshments on board as foon as poffible, fhe fteers away directly for Cape Espiritu Santo, on the Island of Samal. Here the Captain is again ordered to look out for fignals; and he is told, that centinels will be pofted not only on that Cape, but likewife in Catanduanas, Butusan, Birriborongo, and on the Island of Batan. These centinels are instructed to make a fire when they difcover the fhip, which the Captain is carefully to obferve : For if, after this first fire is extinguished, he perceives that four or more are lighted up again, he is then to conclude that there are enemies on the coaft; and on this he is immediately to endeavour to fpeak with the centinel on thore, and to procure from him more particular intelligence of their force, and of the ftation they cruife in; purfuant to which, he is to regulate his conduct, and to endeavour to gain fome fecure port amongft those Islands, without coming in fight of the

the enemy; and in cafe he fhould be differenced when in port, and fhould be apprehensive of an attack, he is then to land his treasfure, and to take fome of his artillery on fhore for its defence, not neglecting to fend frequent and particular accounts to the city of *Manila* of all that passes. But if, after the first fire on shore, the Captain observes that two others only are made by the centinels, he is then to conclude, that there is nothing to fear: And he is to pursue his course without interruption, and to make the best of his way to the port of *Cabite*, which is the port to the city of *Manila*, and the constant station for all the state of the state of the state this commerce to *Acapulco*.

CHAP. XI.

Our cruise off the port of Acapulco for the Manila ship.

I HAVE already mentioned, in t¹ ninth chapter, that the return of our barge rom the port of *Acapulco*, where the had furprized three Negro fifthermen, gave us inexpreffible fatisfaction, as we learnt from our prifoners, that the galeon was then preparing to put to fea, and that her departure was fixed, by an edict of the Viceroy of *Mexico*, to the 14th of *March*, N. S. that is, to the 3d of *March*, according to our reckoning.

What related to this *Manila* fhip by ing the matter to which we were most attentive, it was neceffarily the first article of our examination; but Z_3 having

one cti-St. e is pafven l be mam

(as purefh-Aiftthe n is ve a ients rectmal. t for ofted anas, atan. when careexare here meel on r inthey e his port it of

the

(342)

having fatisfied ourfelves upon this head, we then indulged our curiofity in enquiring after other news; when the prifoners informed us, that they had received intelligence at Acapulco, of our having plundered and burnt the town of Paita; and that, on this occasion, the Governor of Acapulco had augmented the fortifications of the place, and had taken feveral precautions to prevent us from forcing our way into the harbour; that in particular, he had placed a guard on the Island which lies at the harbour's mouth, and that this guard had been withdrawn but two nights before the arrival of our barge : So that had the barge fucceeded in her first attempt, or had she arrived at the port the fecond time two days fooner, fhe could fcarcely have avoided being feized on, or if fhe had ofcaped, it must have been with the loss of the greatest part of her crew, as the would have been under the fire of the guard, before the had known her danger.

The withdrawing of this guard was a circumftance that greatly encouraged us, as it feemed to demonstrate, not only that the enemy had not as yet discovered us, but likewife that they had now no farther apprehensions of our visiting their coast. Indeed the prifoners affured us, that they had no knowledge of our being in those feas, and that they had therefore flattered themfelves, that, in the long interval fince our taking of Paita, we had fteered another courfe. But we did not confider the opinion of these Negro prisoners as so authentick a proof of our being hitherto concealed, as the withdrawing of the guard from the harbour's mouth; for this being the action of the Governor, was of all arguments the most convincing, as he might be fupupposed to have intelligence, with which the reft of the inhabitants were unacquainted.

Satisfied therefore that we were undifcovered, and that the time was fixed for the departure of the galeon from Acapulco, we made all neceffary preparations, and waited with the utmost impatience for the important day. As this was the 3d of March, and it was the 19th of February when the barge returned and brought us our intelligence, the Commodore refolved to continue the greatest part of the intermediate time on his prefent station, to the weitward of Acapulco, conceiving that in this fituation there would be lefs danger of his being feen from the flore, which was the only circumfance that could deprive us of the immenfe treafure, on which we had at prefent fo eagerly fixed our thoughts. During this interval, we were employed in fcrubbing and cleanfing our fhips bottoms, in bringing them into their most advantageous trim, and in regulating the orders, fignals and ftations to be observed, when we should arrive off Acapulco, and the time of the departure of the galeon fhould draw nigh.

And now, on the first of *March*, we made the high lands, usually called the paps over *Acapulco*, and got with all possible expedition into the fituation preferibed by the Commodore's orders. The distribution of our fquadron on this occasion, both for the intercepting the galeon, and for the avoiding a discovery from the shore, was so very judicious, that it well merits to be distinctly described. The order of it was thus:

The Centurion brought the paps over the harbour to bear N. N. E, at fifteen leagues diftance, which was a fufficient offing to prevent our being feen by

Z 4

the

then other they havand pulco and from ticuh lies had rival ed in t the rcely aped, part e fire er. cumed to ot as now coaft. d no they long eered opiick a withuth; as of ht be fup.

(344)

the enemy. To the westward of the Centurion there was stationed the Carmelo, and to the eastward were the Tryal Prize, the Gloucester, and the Carmin: Thefe were all ranged in a circular line, and each fhip was three leagues diftant from the next; fo that the Carmelo and the Carmin, which were the two extremes, were twelve leagues diftant from each other: And as the galeon could, without doubt, be difcerned at fix leagues diftance from either extremity, the whole fweep of our fquadron, within which nothing could pafs undifcovered, was at leaft twenty-four leagues in extent; and yet we were fo connected by our fignals, as to be eafily and fpeedily informed of what was feen in any part of the line: And to render this difpolition still more compleat, and to prevent even the poffibility of the galeon's efcaping us in the night, the two Cutters belonging to the Centurion and the Gloucester were both manned and fent in shore, and were ordered to lie all day at the diftance of four or five leagues from the entrance of the port, where, by reafon of their fmallnefs, they could not poffibly be difcovered; but in the night they were directed to ftand nearer to the harbour's mouth, and as the light of the morning came on, they were to return back again to their day-pofts. When the Cutters fhould first discover the Manila fhip, one of them was ordered to return to the fquadron, and to make a fignal, whether the galeon flood to the eastward or to the westward: whilft the other was to follow the galeon at a difrance, and if it grew dark, was to direct the fquadron in their chace, by thewing falle fires. The particular fituation of each fhip and of the Cutters, and the bearings from each other, which they were

to

to obferve in order to keep their flations, will be better underflood by the delineation exhibited in the twenty-feventh plate; a draught of which was delivered to each of the Commanders at the fame time with their orders.

Befides the care we had taken to prevent the galeon from paffing by us unobferved, we had not been inattentive to the means of engaging her to advantage, when we came up with her: For confidering the thinnefs of our hands; and the vaunting accounts given by the Spaniards of her fize, her guns, and her strength, this was a confideration not to be neglected. As we supposed that none of our ships but the Centurion and the Gloucester were capable of lying along fide of her, we took on board the Centurion all the hands belonging to the Carmelo and the Carmin, except what were just fufficient to navigate those fhips; and Captain Saunders was ordered to fend from the Tryal Prize ten Englishmen, and as many Negroes, to reinforce the crew of the Gloucester : And for the encouragement of our Negroes, of which we had a confiderable number on board, we promifed them, that on their good behaviour they fhould all have their freedom; and as they had been almost every day trained to the management of the great guns for the two preceding months, they were very well qualified to be of fervice to us; and from their hopes of liberty, and in return for the usage they had met with amongft us, they feemed difpofed to exert themselves to the utmost of their power.

And now being thus prepared for the reception of the galeon, we expected, with the utmost impatience, the fo often mentioned third of *March*, the day fixed for her departure. And on that day

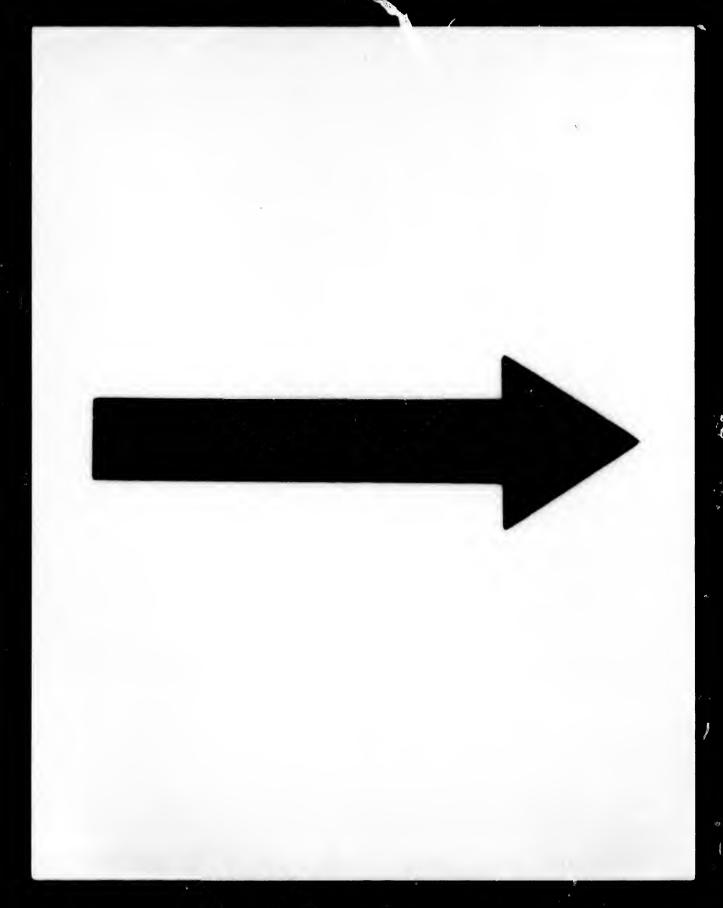

we

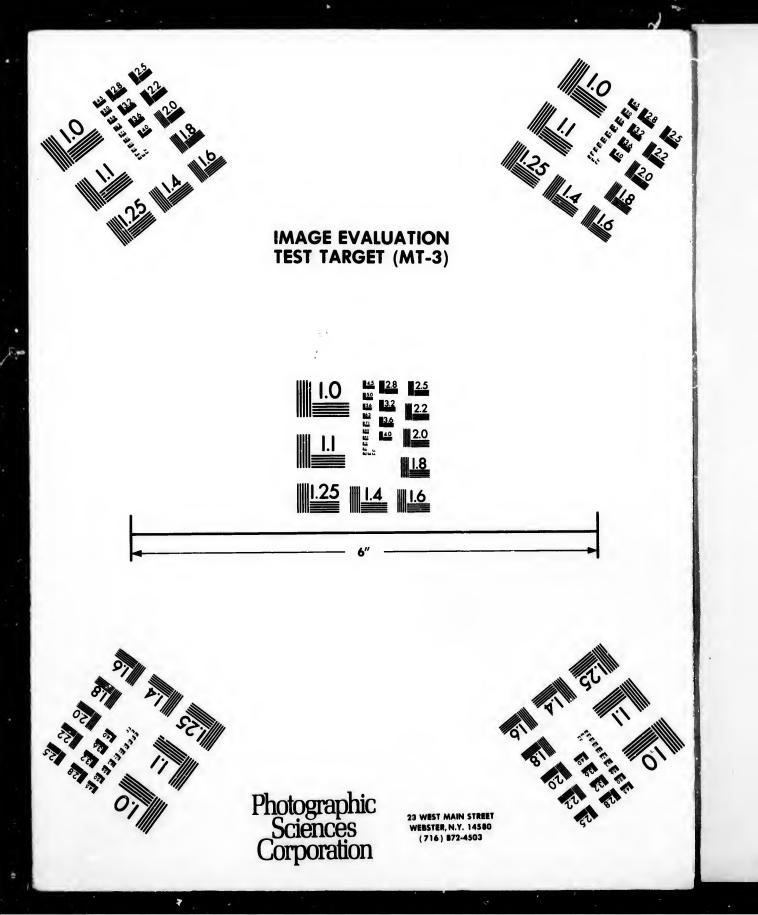

we were all of us most eagerly engaged in looking out towards Acapulco; and we were fo ftrangely prepoffetfed with the certainty of our intelligence, and with an affurance of her coming out of port, that fome or other on board us were constantly imagining that they difcovered one of our Cutters returning with a fignal. But to our extreme vexation, both this day and the fucceeding night paffed over, without any news of the galeon: However, we did not yet defpair, but were all heartily difpofed to flatter ourfelves, that fome unforefeen accident had intervened, which might have put off her departure for a few days; and fuggestions of this kind occurred in plenty, as we knew that the time fixed by the Viceroy for her failing, was often prolonged on the petition of the Merchants of Mexico. Thus we kept up our hopes, and did not abate of our vigilance; and as the 7th of March was Sunday the beginning of Paffion week, which is observed by the Papifts with great strictness, and a total ceffation from all kinds of labour, fo that no ship is permitted to stir our of port during the whole week, this guieted our apprehensions for fome days, and disposed us not to expect the galeon till the week following. On the Friday in this week our Cutters returned to us, and the officers on board them were very confident that the galeon was still in port, for that she could not possibly have come out but they must have feen her. On the Monday morning fucceeding paffion week, that is, on the 15th of March, the Cutters were again dispatched to their old station, and our hopes were once more indulged in as fanguine prepoffeffions as, before; but in a week's time our eagerness was greatly abated, and a general dejection and defpondency

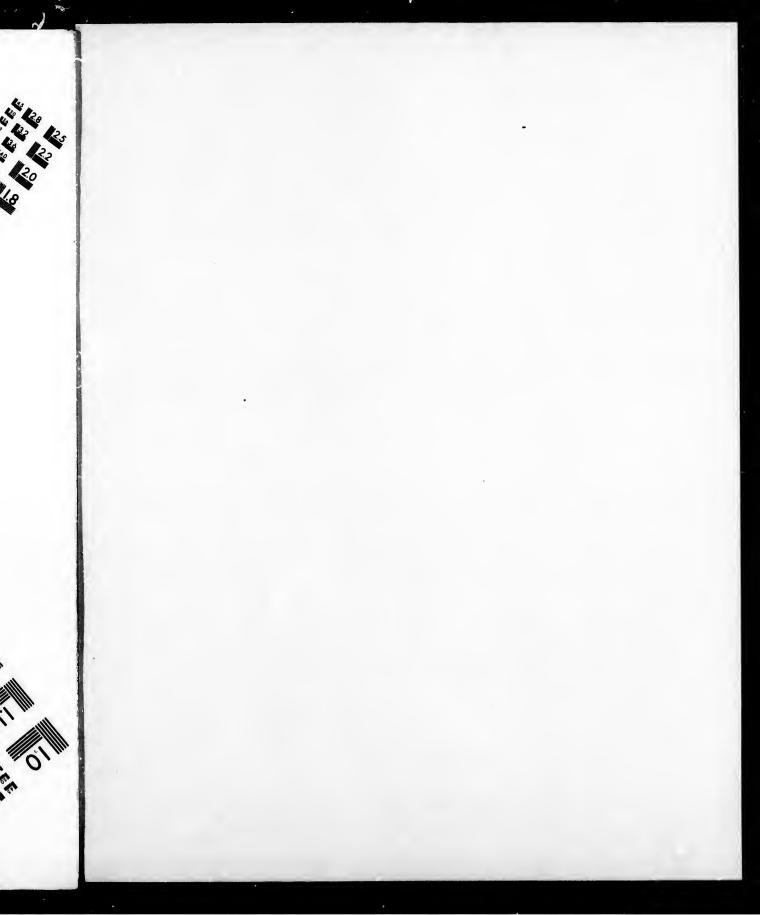

(347)

dency took place in its room. It is true, there were fome few amongft us who ftill kept up their fpirits, and were very ingenious in finding out reafons to fatisfy themfelves, that the difappointment we had hitherto met with had only been occafioned by a cafual delay of the galeon, which a few days would remove, and not by a total fufpenfion of her departure for the whole feafon : But these speculations were not relified by the generality of our people; for they were perfuaded that the enemy had, by fome accident, difcovered our being upon the coaft, and had therefore laid an embargo on the galeon till the next year. And indeed this perfuafion was but too well founded ; for we afterwards learnt, that our barge, when fent on the difcovery of the port of Acapulco, had been feen from the fhore; and that this circumstance (no embarkations but canoes ever frequenting that coaft) was to them a fufficient proof of the neighbourhood of our fquadron; on which, they stopped the galeon till the fucceeding year.

The Commodore himfelf, though he declared not his opinion, was yet in his own thoughts very apprehensive that we were discovered, and that the departure of the galeon was put off; and he had, in confequence of this opinion, formed a plan for poffeffing himfelf of Acapulco; for he had no doubt but the treasure as yet remained in the town, even though the orders for the dispatching of the galeon Indeed the place was too were countermanded. well defended to be carried by an open attempt; for befides the garrifon and the crew of the galeon, there were in it at leaft a thousand men well armed, who had marched thither as guards to the treasure, when it was brought down from the city of Mexico :

(348)

co: For the roads thereabouts are fo much infefted either by independent *Indians* or fugitives, that the Spaniards never truft the filver without an armed force to protect it. And befides, had the ftrength of the place been lefs confiderable, and fuch as might have appeared not fuperior to the efforts of our fquadron, yet a declared attack would have prevented us from receiving any advantages from its fuccefs; fince upon the first difcovery of our fquadron, all the treature would have been ordered into the country, and in a few hours would have been out of our reach; fo that our conquest would have been only a defolate town, where we should have found nothing that could have been of the least confequence to us.

For these reasons, the surprisal of the place was the only method that could at all answer our purpofe; and therefore the manner in which Mr. Anfon proposed to conduct this enterprize was, by fetting fail with the fquadron in the evening, time enough to arrive at the port in the night; and as there is no danger on that coast, he would have ftood boldly for the harbour's mouth, where he expected to arrive, and might perhaps have entered it, before the Spaniards were acquainted with his defigns: Affoon as he had run into the harbour, he intended to have pusht two hundred of his men on fhore in his boats, who were immediately to attempt the fort markt (C) in the plan mentioned in the preceding chapter; whilf he, the Commodore, with his fhips, was employed in firing upon the town, and the other batteries. And thefe different operations which would have been executed with great regularity, could hardly have failed of furceeding against an enemy, who would have been pre-191

prevented by the fuddennefs of the attack, and by the want of day-light, from concerting any meafures for their defence; fo that it was extremely probable that we should have carried the fort by ftorm; and then the other batteries, being open behind, must have been foon abandoned : after which, the town, and its inhabitants, and all the treasure, must necessarily have fallen into our hands; for the place is fo cooped up with mountains, that it is fcarcely poffible to efcape out of it, but by the great road, markt (H.H.) in the plan, which paffes under the fort. This was the project which the Commodore had fettled in general in his thoughts; but when he began to inquire into fuch circumftances as were neceffary to be confidered in order to regulate the particulars of its execution, he found there was a difficulty, which, being infuperable, occasioned the enterprize to be laid aside : For on examining the prifoners about the winds which prevail near the fhore, he learnt (and it was afterwards confirmed by the officers of our cutters) that nearer in shore there was always a dead calm for the greatest part of the night, and that towards morning, when a gale fprung up, it conftantly blew off the land; fo that the fetting fail from our prefent station in the evening, and arriving at Acapulco before day-light, was impossible.

This fcheme, as hath been faid, was formed by the Commodore, upon a fuppolition that the galeon was detained till the next year: But as this was a matter of opinion only, and not founded on intelligence, and there was a poffibility that fhe might ftill put to fea in a fhort time, the Commodore thought it prudent to continue his cruife upon this ftation, as long as the neeffary attention to his ftores

fores of wood and water, and to the convenient featin for his future passage to China, would give him leave; and therefore, as the cutters had been ordered to remain before Acapulco till the 23d of March, the foundron did not change its polition till that day; when the cutters not appearing, we were in fome pain for them, apprehending they might have fuffered either from the enemy or the weather ; be we were relieved from our concern the next morning, when we difcovered them, though at a great diftance and to the leeward of the fouadron: We bore down to them and took them up, and were informed by them, that, conformable to their orders, they had left their flation the day before, without having feen any thing of the galeon ; and we found, that the reafon of their being fo far to the leeward of us was a ftrong current, which had driven the whole fquadron to windward.

And here it is neceffary to mention, that, by information which was afterwards received, it appeared that this prolongation of our cruife was a very prudent measure, and afforded us no contemptible chance of feizing the treasure, or which we had fo long fixed our thoughts. For it feems, after the embargo was laid on the galeon, as is before-mentioned, the perfons principally interefted in the cargoe fent feveral expresses to Mexico, to beg that fhe might still be permitted to depart: For as they knew, by the accounts fent from Paita, that we had not more than three hundred men in all, they infifted that there was nothing to be feared from us; for that the galeon (carrying above twice as many hands as our whole fquadron) would be greatly an overmatch for us. And though the Viceroy was inflexible; yet, on the account of their

their representation, she was kept ready for the sea for near three weeks after the first order came to detain her.

When we had taken up the Cutters, all the ships being joned, the Commodore made a fignal to fpeak with their Commanders; and upon enquiry into the flock of fresh water remaining on board the squadron, it was found to be fo very flender, that we were under a neceffity of quitting our flation to procure a fresh supply : And confulting what place was the propereft for this purpofe, it was agreed, that the harbour of Seguataneo or Chequetan being the nearest to us, was, on that account, the most eligible; and it was therefore immediately refolved to make the best of our way thither: And that, even while we were recruiting our water, we might not totally abandon our views upon the galeon, which perhaps, upon certain intelligence of our being employed at Chequetan, might venture to flip out to fea, our Cutter, under the command of Mr. Hughes, the Lieutenant of the Tryal Prize, was ordered to cruife off the port of Acapulco for twenty-four days; that if the galeon fhould fet fail in that interval, we might be speedily informed of it. In purfuance of these resolutions we endeavoured to ply to the weftward, to gain our intended port, but were often interrupted in our progrefs by calms and adverfe currents: In these intervals we employed ourselves in taking out the most valuable part of the cargoes of the Carmelo and Carmin prizes, which two fhips we intended to deftroy as foon as we had tolerably cleared them. By the first of April we were fo far advanced towards Seguataneo, that we thought it expedient to fend out two boats that they might range

range along the coaft, and discover the watering. place; they were gone fome days, and our water being now very fhort, it was a particular felicity to us that we met with daily supplies of turtle, for had we been entirely confined to falt provisions, we must have suffered extremely in so warm a climate. Indeed our present circumstances were fufficiently alarming, and gave the most confiderate amongst us as much concern as any of the numerous perils we had hitherto encountered; for our boats, as we conceived by their not returning, had not as yet difcovered a place proper to water at, and by the leakage of our cafk and other accidents, we had not ten days water on board the whole fouadron : So that from the known difficulty of procuring water on this coaft, and the little reliance we had on the Buccaneer writers (the only guides we had to t. aft to) we were apprehenfive of being foon exposed to a calamity, the most terrible of any in the long difheartning catalogue of the diffrestes of a fea-faring life.

But these gloomy suggestions were soon happily ended; for our boats returned on the 5th of April, having discovered a place proper for our purpose, about seven miles to the westward of the rocks of Seguataneo, which, by the description they gave of it, appeared to be the port, called by Dampier the harbour of Chequetan. The success of our boats was highly agreeable to us, and they were ordered out again the next day, to sound the harbour and its entrance, which they had represented as very narrow. At their return they reported the place to be free from any danger; so that on the 7th we stood in, and that evening came to an anchor in eleven fathom. The Gloucester came to

Thus, after a four months continuance at fea, from the leaving of Quibo, and having but fix days water on board, we arrived in the harbour of *Chequetan*, the defcription of which, and of the adjacent coaft, shall be the business of the ensuing chapter.

CHAP. XII.

Description of the harbour of Chequetan, and of the adjacent coast and country.

THE harbour of *Chequetan*, which we here propose to describe, lies in the latitude of 17°: 36' North, and is about thirty leagues to the westward of *Acapulco*. It is easy to be discovered by any ship that will keep well in with the land, especially by such as range down coast from *Acapulco*, and will attend to the following particulars.

There is a beach of fand, which extends eighteen leagues from the harbour of Acapulco to the weftward, against which the sea breaks with fuch violence, that it is impossible to land in any part of it: But yet the ground is so clean, that ships, in the fair season, may anchor in great safety, at the distance of a mile or two from the shore. The land adjacent to this beach is generally low, full

of

(354)

of villages, and planted with a great Number of trees; and on the tops of fome fmall eminencies there are feveral look out towers; fo that the face of the country affords a very agreeable profpect : For the cultivated part, which is the part here defcribed, extends fome leagues back from the shore, and there appears to be bounded by the chain of mountains, which stretch to a confiderable diftance on either fide of Acapulco. It is a most remarkable particularity, that in this whole extent, being, as hath been mentioned, eighteen leagues, and containing, in appearance, the most populous and best planted district of the whole coaft, there should be neither canoes, boats, nor any other embarkations either for fifting, coafting, or for pleasure.

The beach here described is the furest guide for finding the harbour of Chequetan; for five miles to the weftward of the extremity of this beach there appears a hummock, which at first makes like an island, and is in shape not very unlike the hill of Petaplan, hereafter mentioned, though much fmaller. Three miles to the westward of this hummock is a white rock lying near the fhore, which cannot eafily be paffed by unobferved : It is about two cables length from the land, and lies in a large bay about nine leagues The westward point of this bay is the hill over. of Petaplan, which is represented in the twentyeighth plate, with the view of the Islands of Quicara and Quibo. This hill too, like the forementioned hummock, may be at first mistaken for an Island, though it be, in reality, a peninfula, which is joined to the Continent by a low and narrow Hithmus, covered over with fhrubs and fmall trees. The (355)

The bay of Seguataneo extends from this hill a great way to the weftward; and it appears, by a plan of the bay of Petaplan, which is part of that of Seguataneo, and is to be feen in the twenty-ninth plate, that at a fmall diftance from the hill, and opposite to the entrance of the bay, there is an affemblage of rocks, which are white from the excrements of boobies and tropical birds. Four of these rocks are high and large, and, together with feveral other fmaller ones, are, by the help of a little imagination, pretended to refemble the form of a cross, and are called the White Friars. These rocks, as appears by the plan, bear W. by N. from Petaplan; and about feven miles to the westward of them lies the harbour of Chequetan, which is ftill more minutely diftinguished by a large and fingle rock, that rifes out of the water a mile and an half diftant from its entrance, and bears S. W. from the middle of it. The appearance of the entrance of this harbour is very accurately represented in the thirtieth plate, where (e) is the East point of the harbour, and (d) the Weit, the forementioned rock being marked (f). In the fame view (a) is a large fandy bay, but where there is no landing; (b) are four remarkable white rocks; and from the island (c) there runs a large bay to the weftward.

These are the infallible marks by which the harbour of *Chequetan* may be known to those who keep well in with the land; and I must add, that the coast is no ways to be dreaded from the middle of *Osteber* to the beginning of *May*, nor is there then any danger from the winds: Though in the remaining part of the year there are frequent and violent tornadoes, heavy rains, and hard gales

in all directions of the compass. But as to those who keep at any confiderable distance from the coast, there is no other method to be taken by them for finding this harbour, than that of making it by its latitude : For there are so many ranges of mountains rising one upon the back of another within land, that no drawings of the appearance of the coast can be at all depended on, when off at sea ; for every little change of distance or variation of position brings new mountains in view, and produces an infinity of different prospects, which would render all attempts of delineating the aspect of the coast impossible.

This may fuffice as to the methods of discovering the harbour of Chequetan. A plan of the harbour itself is represented in the thirty-first plate; where it appears, that its entrance is but about half a mile broad; the two points which form it, and which are faced with rocks that are almost perpendicular, bear from each other S. E. and N. The harbour is invironed on all fides, ex-W. cept to the weftward, with high mountains overfpread with trees. The paffage into it is very fafe on either fide of the rock that lies off the mouth. of it, though we, both in coming in and going, out, left it to the eaftward. The ground without the harbour is gravel mixed with ftones, but within it is a foft mud: And it must be remembred. that in coming to an anchor a good allowance fhould be made for a large fwell, which frequently causes a great fend of the fea; as likewife, for the ebbing and flowing of the tide, which we obferved to be about five feet, and that it fet nearly E. and W.

The

The watering-place is fituated in that part of the harbour, which is taken notice of in the plan for fresh water. This, during the whole 'time of our ftay, had the appearance of a large flanding lake, without any visible outlet into the sea, from which it is feparated by a part of the ftrand. The origin of this lake is a fpring, that bubbles out of the ground near half a mile within the country. We found the water a little brackifh; but more confiderably fo towards the fea-fide; for the nearer we advanced towards the fpring-head, the fofter and fresher it proved : This laid us under a necesfity of filling all our cafks from the furthest part of the lake, and occasioned us fome trouble; and would have proved fill more difficult, had it not been for our particular management, which for the conveniency of it deferves to be recommended to all who shall hereafter water at this place. Our method confifted in making ufe of canoes which drew but little water; for, loading them with a number of fmall cafks, they eafily got up the lake to the fpring-head, and the fmall cafks being there filled, were in the fame manner transported back again to the beach, where fome of our hands always attended to ftart them into other cafks of a larger lize.

Though this lake, during our continuance there, appeared to have no outlet into the fea, yet there is reason to suppose that in the wet season it overflows the ftrand, and communicates with the ocean; for Dampier, who was formerly here, fpeaks of it as a large river. Indeed there muft be a very great body of water amaffed before the lake can rife high enough to overflow the Strand ; for the neighbouring country is fo low, that great part

(358)

part of it must be covered with water, before it can run out over the beach.

As the country in the neighbourhood, particularly the tract which we have already defcribed, appeared to be well peopled, and cultivated, we hoped thence to have procured fresh provision and other refreshments which we stood in need of. With this view, the morning after we came to an anchor, the Commodore ordered a party of forty men, well armed, to march into the country, and to endeavour to difcover fome town or village, where they were to attempt to fet on foot a correspondence with the inhabitants; for we doubted not, if we could have any intercourse with them, but that by prefents of fome of the coarfe merchandise, with which our prizes 2bounded, (which, though of little confequence to us, would to them be extremely valuable) we fhould allure them to furaish us with whatever fruits or fresh provisions were in their power. Our people were directed on this occasion to proceed with the greatest circumspection, and to make as little oftentation of hostility as possible; for we were fenfible, that we could meet with no wealth here worth our notice, and that what necessaries we really wanted, we fhould in all probability be better fupplied with by an open amicable traffic, than by violence and force of arms. But this endeavour of opening an intercourfe with the inhabitants proved ineffectual; for towards evening, the party which had been ordered to march into the country, returned greatly fatigued with their unulual exercife, and fome of them fo far fpent as to have fainted by the way, and to be obliged to be brought back upon the fhoulders of their companions.

ł b EW ot th fu lo la th pi th fta ing wa he lol on ho wh Val of ba for the wa ob as Jar an no wi po

P

They had marched in all, as they conpanions. ceived, about ten miles, in a beaten road, where they often faw the fresh dung of horses or mules. When they had got about five miles from the harbour, the road divided between the mountains into two branches, one running to the East, and the other to the Weft : After fome deliberation about the course they should take, they agreed to purfue the eastern road, which, when they had followed for fome time, led them at once into a large plain or Savannah; on one fide of which they discovered a centinel on horseback with a piftol in his hand: It was supposed that when they first faw him he was asleep, but his horse startled at the glittering of their arms, and turning round fuddenly rode off with his Master, who was very near being unhorfed in the furprize, but he recovered his feat, and escaped only with the loss of his hat and his piftol, which he dropped on the ground. Our people ran after him, in hopes of discovering some village or habitation which he would retreat to; but, as he had the advantage of being on horfeback, he foon loft fight of them. However, they were unwilling to come back without making fome diffeovery, and therefore still followed the track they were in; but the heat of the day encreasing, and finding no water to quench their thirst, they were at first obliged to halt, and then refolved to return; for as they faw no figns of plantations or cultivated land, they had no reason to believe that there was any village or fettlement near them : But to leave no means untried of procuring fome intercourfe with the people, the officers fluck up feveral poles in the road, to which were affixed declara-Aa 4 tions

ticu-

bed.

we and of. e to y of ounn or foot we with coarfe nded, vould allure fresh were the little were here es we better an by avour itants parb the r unnt as ed to comions. tions, written in Spanish, encouraging the inhabitants to come down to the harbour, and to traffick with us, giving the ftrongest assures of a kind reception, and faithful payment for any provisions they should bring us. This was doubtless a very prudent measure, but yet it produced no effect ; for we never faw any of them during the whole time of our continuance at this port of Chequetan. But had our men, upon the division of the path, taken the western road instead of the eastern, it would foon have led them to a village or town, which in fome Spanish manufcripts is mentioned as being in the neighbourhood of this port, and which we asterwards learnt was not above two miles from that turning.

And on this occasion I cannot help mentioning another adventure, which happened to fome of our people in the bay of Petaplan, as it may help to give the Reader a just idea of the temper of the inhabitants of this part of the world. Some time after our arrival at Chequetan, Lieutenant Brett was fent by the Commodore, with two of our boats under his command, to examine the coaft to the caftward, particularly to make observations on the bay and watering-place of *Petaplan*, a plan of which has been already referred to in this chapter. As Mr. Brett with one of the boats was preparing to go on fhore towards the hill of Petaplan, he, accidentally looking across the bay, perceived, on the opposite strand, three small squadrons of horse parading upon the beach, and feeming to advance towards the place where he proposed to land. On fight of this he immediately put off the boat, though he had but fixteen men with him, and ftood over the bay towards them : And he foon came

a fl

С

F

C

came near enough to perceive that they were mounted on very fightly horfes, and were armed with carbines and lances. On feeing him make towards them, they formed upon the beach, and feemed refolved to difpute his landing, firing feveral diftant shot at him as he drew near ; till at last the boat being arrived within a reafonable diffance of the most advanced squadron, Mr. Brett ordered his people to fire, upon which this refolute cavalry inftantly ran in great confusion into the wood, through a fmall opening, which appears in the plan. In this precipitate flight one of their horfes fell down and threw his rider; but, whether he was wounded or not, we could not learn, for both man and horfe foon got up again, and followed the reft into the wood.' In the mean time the other two fquadrons, who were drawn up at a great diftance behind, out of the reach of our thot, were calm spectators of the rout of their comrades; for they had halted on our first approach, and never advanced afterwards. It was doubless fortunate for our people that the enemy acted with fo little prudence, and exerted fo little foirit; for had they concealed themfelves till our men had landed, it is fcarcely possible but the whole boat's crew must have fallen into their hands; fince the Spaniards were not much fhort of two hundred, and the whole number with Mr. Brett, as hath been already mentioned, only amounted to fixteen. However, the difcovery of fo confiderable a force, collected in this bay of Petaplan, obliged us constantly to keep a boat or two before it : For we were apprehensive that the Cutter, which we had left to cruife off Acapulco, might, on her return, be furprized by the enemy, if

ıbiick ind ONS ery æ; ole lan: ith, ı, it wn, d as and niles ning our o to the time was boats the the hich As g to ac-* on orfe ince On oat, and oon

ame

(362)

if the did not receive timely information of her danger. But now to proceed with the account of the harbour of *Chequetan*.

After our unfuccessful attempt to engage the people of the country, to furnish us with the neceffaries we wanted, we defifted from any more endeavours of the fame nature, and were obliged to be contented with what we could procure for ourfelves in the neighbourhood of the port. We caught fifh here in tolerable quantities, especially when the fmoothness of the Water permitted us to hale the Seyne. Amongst the reft, we got here cavallies, breams, mullets, foles, fiddle-fifh, fea-eggs, and lobsters: And we here, and in no other place, met with that exraordinary fish called the Torpedo, or numbing fifh, which is in fhape very like the fiddle fifh, and is not to be known from it but by a brown circular spot of about the bigness of a crown piece near the center of its back; perhaps its figure will be better understood, when I fay it is a flat fish, much refembling the thorn-back. This fifh, the Torpedo, is indeed of a most fingular Nature, productive of the ftrangest effects on the human body : For whoever handles it, or happens even to fet his foot upon it, is prefently feized with a numbnefs all over him; but which is more diffinguishable. in that limb which was in immediate contact with it. The fame effect too will be in fome degree produced by touching the fifh with any thing held in the hand; for I myfelf had a confiderable degree of numbnefs conveyed to my right arm, through a walking cane which I refted on the body of the fish for fome time; and I make no doubt I should have been much more fenfibly affected, had not the fifh been near expiring when I made the experiment ; For

For it is obfermible that this influence acts with moft megour when the Fifh is first taken out of the water, and entirely ceases when 'tis dead, fo that it may be then handled or even eaten without any inconvenience. I shall only add that the numbres of my arm on this occasion did not go off on a sudden, as the account of some Naturalists gave me reason to expect, but diminiss of it remaining till the next day.

To the account given of the fifh we met with here, I must add, that though turtle now grew fcarce, and we met with none in this harbour of *Chequetan*, yet our boats, which as I have mentioned, were stationed off *Petaplan*, often supplied us therewith; and though this was a Food that we had now been so long as it were confined to, (for it was the only fresh provisions which we had tasted for near fix months) yet we were far from being cloyed with it, or from finding that the reliss we had of it at all diminiss.

The animals we met with on fhore were principally guanos, with which the country abounds, and which are by fome reckon'd delicious food. We faw no beafts of prey here, except we fhould efteem that amphibious animal, the alligator, as fuch, feveral of which our people difcovered, but none of them very large. However, we were fatisfied that there were great numbers of tygers in the woods, though none of them came in fight; for we every morning found the beach near the watering place imprinted very thick with their footfteps: But we never apprehended any mifchief from them; for they are by no means fo fierce as the Afiatic or African tyger, and are rarely, if ever known,

(563)

known, to attack mankind. Birds were here in fufficient plenty; for we had abundance of pheafants of different kinds, fome of them of an uncommon fize, but they were very dry and tafteles food. And besides these we had a variety of smaller birds, particularly parrots, which we often killed for food.

The fruits and vegetable refrefhments at this place were neither plentiful, nor of the beft kinds: There were, it is true, a few bufhes feattered about the words, which fupplied us with limes, but we fearcely could procure enough for our prefent ufe; and thefe, with a finall plumb of an agreeable acid, called in *Jamaica* the Hog-plumb, together with another fruit called a Papab, were the only fruits to be found in the woods. Nor is there any other ufeful vegetable here worth mentioning, except brooklime: This indeed grew in great quantities near the frefh-water banks; and, as it was efteemed an antifeorbutic, we fed upon it frequently, though its extreme bitternefs made it very unpalatable.

These are the articles most worthy of notice in this harbour of *Chequetan*. I shall only mention a particular of the coast lying to the westward of it, that to the eastward having been already described. As Mr. Anfon was always attentive to whatever might be of confequence to those who might frequent these seases hereaster; and, as we had observed, that there was no double land to the westward of *Chequetan*, which stretched out to a considerable distance, with a kind of opening, which appeared not unlike the inlet to some harbour, the Commodore, foon aster we came to an anchor, sent a boat to discover it more accurately; and it was found, on a nearer examination, that the two hills, which formed CC in fu it kr cr ex ha fro as ir i wi the but int a v nia acc it, ing formed the double land, were joined together by a valley, and that there was no harbour nor shelter between them.

By all that hath been faid it will appear, that the conveniencies of this port of Chequetan, particularly in the articles of refreshment, are not altogether fuch as might be defired : But yet, upon the whole. it is a place of confiderable confequence, and the knowledge of it may be of great import to future cruifers. For it is the only fecure harbour in a vaft extent of coaft, except Acapulco, which is in the hands of the enemy. It lies at a proper diftance from Acapulco for the convenience of fuch thips as may have any defigns on the Manila galeon; and it is a place, where wood and water may be taken in with great fecurity, in defpight of the efforts of the inhabitants of the adjacent diftrict : For there isbut one narrow path which leads through the woods into the country, and this is eafily to be fecured by a very fmall party, against all the strength the Spaniards in that neighbourhood can muster. After this account of Chequetan, and the coast contiguous to it, we shall return to the recital of our own proceedings.

(366)

CHAP. XIII.

Our proceedings at Chequetan and on the adjacent coast, till our fetting fail for Asia.

THE next morning, after our coming to an anchor in the harbour of *Chequetan*, we fent about ninety of our men well armed on fhore, forty of whom were ordered to march into the country, as hath been mentioned, and the remaining fifty were employed to cover the watering place, and to prevent any interruption from the natives.

Here we compleated the unloading of the Carmelo and Carmin, which we had begun at fea; at leaft, we took out of them the indico, cacao, and cochineal, with fome iron for ballaft, which were all the goods we intended to preferve, though they did not amount to a tenth of their cargoes. Here too it was agreed, after a mature confultation, to destroy the Tryal's Prize, as well as the Carmelo and Carmin, whole fate had been before refolved on. Indeed the ship was in good repair and fit for the fea; but as the whole numbers on board our foua. dron did not amount to the complement of a fourth rate man of war, we found it was impossible to divide them into three fhips, without rendring them incapable of navigating in fafety in the tempeftuous weather, we had reafon to expect on the coaft of China, where we supposed we should arrive about the time of the change of the monfoons. These confiderations determined the Commodore to deftroy the Tryal Prize, and to reinforce the Gloucester with the greatest part of her crew. And in confequence of

0 P P p W W be гy cu fue en the wh frie tim abo ob har wh we tha pal by fon ral acr kep plo in c An our my was our of this refolve, all the ftores on board the Tryal Prize were removed into the other fhips, and the Prize herfelf, with the Carmelo and Carmin, were prepared for fcuttling with all the expedition we were mafters of; but the greateft difficuties we were under in laying in a ftore of water (which have been already touched on) together with the neceffary repairs of our rigging and other unavoidable occupations, took us up fo much time, and found us fuch unexpected employment, that it was near the end of April before we were in a condition to leave the place.

During our stay here, there happened an incident, which, as it proved the means of convincing our friends in England of our fafety, which for fome time they had defpaired of, and were then in doubt about, I shall beg leave particularly to recite. I have observed, in the preceding chapter, that from this harbour of Chequetan there was but one path-way which led through the woods into the country. This we found much beaten, and were thence convinced. that it was well known to the inhabitants. As it passed by the spring-head, and was the only avenue by which the Spaniards could approach us, we, at fome diftance beyond the fpring-head, felled feveral large trees, and laid them one upon the other across the path; and at this barricadoe we constantly kept a guard : And we befides ordered our men employed in watering to have their arms ready, and, in case of any alarm, to march instantly to this post. And though our principal intention was to prevent our being diffurbed by any fudden attack of the enemy's horfe, yet it anfwered another purpole, which was not in itfelf lefs important; this was to hinder our own people from ftraggling fingly into the country,

(368)

country, where we had reafon to believe they would be furprized by the Spaniards, who would doubtlefs be extremely folicitous to pick up fome of them, in hopes of getting intelligence of our future To avoid this inconvenience, the ftricteft defigns. orders were given to the centinels, to let no perfon whatever pass beyond their post : But notwithstanding this precaution, we miffed one Lewis Leger. who was the Commodore's Cook; and as he was a Frenchman, and suspected to be a Papist, it was by fome imagined that he had deferted, with a view of betraying all that he knew to the enemy; but this appeared, by the event, to be an ill-grounded furmise; for it was afterwards known, that he had been taken by fome Indians, who carried him prifoner to Acapulco, from whence he was transferred to Mexico, and then to Vera Cruz, where he was fhipped on board a veffel bound to Old Spain : And the veffel being obliged by fome accident to put into Lisbon, Leger escaped on shore, and was by the British Conful fent from thence to England; where he brought the first authentick account of the fafety of the Commodore, and of what he had done in the South-Seas. The relation he gave of his own feizure was, that he had rambled into the woods at fome distance from the barricadoe, where he had first attempted to pass, but had been stopped and threatned to be punished; that his principal view was to get a quantity of limes for his Master's ftore; and that in this occupation he was furprized unawares by four Indians, who ftripped him naked, and carried him in that condition to Acapulco, exposed to the fcorching heat of the fun, which at that time of the year shone with its greatest violence: And afterwards at Mexico his treatment in prifon was

W ca wl to CO wa the dro COL afte tho An him duc their nigh difco A neve bour of th could that us at they ceive To of ou and. harbo on th melo a destro quant in the

was fufficiently fevere, and the whole courie of his captivity was a continued inftance of the hatred. which the Spaniards bear to all those who endeavour to diffurb them in the peaceable poffellion of the coafts of the South-Seas. Indeed Leger's fortune was, upon the whole, extremely fingular; for after the hazards he had run in the Commodore's fquadron, and the feverities he had fuffered in his long confinement amongst the enemy, a more fatal difafter attended him on his return to England : For though, when he arrived in London, fome of Mr. Anfon's friends interested themselves in relieving him from the poverty to which his captivity had reduced him; yet he did not long enjoy the benefit of their humanity, for he was killed in an infignificant night brawl, the caufe of which could fcarcely be difcovered.

And here I muft obferve, that though the enemy never appeared in fight during our ftay in this harbour, yet we perceived that there were large parties of them incamped in the woods about us; for we could fee their fmokes, and could thence determine that they were posted in a circular line furrounding us at a distance; and just before our coming away they feemed, by the increase of their fires, to have received a confiderable reinforcement. But to return :

Towards the latter end of April, the unloading of our three Prizes, our wooding and watering; and, in fhort, all our proposed employments at the harbour of *Chequetan*, were compleated: So that, on the 27th of April, the Tryal's Prize, the Carmelo and the Carmin, all which we here intended to destroy, were towed on shore and scuttled, and a quantity of combustible materials were distributed in their upper works; and the next morning the B b Centurion

(370)

Centurion and the Gloucester weighed anchor; but as there was but little wind, and that not in their favour, they were obliged to warp out of the har-When they had reached the offing, one of bour. the boats was dispatched back again to fet fire to our prize, which was accordingly executed. And a canoe was left fixed to a grapnel in the middle of the harbour, with a bottle in it well corked, inclofing a letter to Mr. Hughes, who commanded the Cutter, which was ordered to cruife before the port of Acapulco, when we came off that station. And on this occasion I must mention more particularly than I have yet done, the views of the Commodore in leaving the Cutter before that port.

When we were neceffitated to make the Chequetan to take in our water, Mr. An/on confidered that our being in that harbour would foon be known at Acapulco; and therefore he hoped, that on the intelligence of our being employed in port, the galeon might put to fea, especially as Chequetan is fo very remote from the courfe generally fteered by the galeon: He therefore ordered the Cutter to cruife twenty-four days off the port of Acapulco, and her Commander was directed, on perceiving the galeon under fail, to make the beft of his way to the Commodore at Chequetan. As the Centurion was doubtless a much better failor than the galeon, Mr. Anfon, in this cafe, refolved to have got to fea as foon as possible, and to have purfued the galeon acrofs the Pacific Ocean : And fuppoling he should not have met with her in his passage, (which confidering that he would have kept nearly the fame parallel, was not very improbable) yet he was certain of arriving off Cape Espiritu Santo, on the Island of Samal, before her; and that being th:

the lipp WIE But kee yea Con turn go Aca folve of d mod reft to de the c could that any] Be the v were ble; pace rican preve mom And neceff longe ther the fta deed, for no the first land she makes on her return to the *Pbi-lippines*, we could not have failed to have fallen in with her, by cruifing a few days in that Station. But the Viceroy of *Mexico* ruined this project, by keeping the galeon in the port of *Acapulco* all that year.

The letter left in the canoe for Mr. Hughes, the Commander of the Cutter, (the time of whole return was now confiderably elapfed) directed him to go back immediately to his former flation before Acapulco, where he would find Mr. Anfon, who refolved to cruife for him there for a certain number of days; after which it was added, that the Commodore would return to the fouthward to join the reft of the fquadron. This laft article was inferted to deceive the Spaniards, if they got poffeffion of the canoe, (as we afterwards learnt they did) but could not impofe on Mr. Hughes, who well knew that the Commodore had no fquadron to join, nor any Intention of fteering back to Peru.

Being new in the offing of Chequetan, bound crofs the vast Pacific Ocean in our way to China, we were impatient to run off the coaft as foon as poffible; for as the ftormy feafon was approaching apace; and, as we had no further views of the American feas, we had hoped that nothing would have prevented us from standing to the westward, the moment we got out of the harbour of Chequetan : And it was no fmall mortification to us, that our neceffary employment there had detained us fo much longer than we expected; and now we were farther detained by the absence of the Cutter, and the flanding towards Acapulco in fearch of her. deed, as the time of her cruife had been expired for near a fortnight, we fulpected that she had Bb 2 been

been difcovered from the fhore; and that the governor of Acapulco had thereupon fent out a force to feize her, which, as the carried but fix hands, was no very difficult enterprize. However, this being only conjecture, the Commodore, as foon as he was got clear of the harbour of Chequetan, flood along the coaft to the eaftward in fearch of her: And to prevent her from paffing by us in the dark, we brought to every night; and the Gloucester, whose station was a league within us towards the fhore, carried a light, which the Cutter could not but perceive, if the kept along thore, as we supposed the would do; and as a farther iecurity, the Centurion and the Gloucester alternately shewed two false fires every half hour. Indeed, had the efcaped us, the would have found orders in the canoe to have returned immediately before Acapulco, where Mr. Anfon proposed to cruife for her fome days.

By Sunday, the 2d of May, we were advanced within three leagues of Acapulco, and having feen nothing of our boat, we gave her over for loft, which, befides the compaffionate concern for our fhipmates, and for what it was apprehended they might have fuffered, was in itfelf a misfortune, which, in our prefent fcarcity of hands, we were all greatly interested in : For the crew of the Cutter, confisting of fix men and the Lieutenant, were the very flower of our people, purpofely pickt out for this fervice, and known to be every one of them of tried and approved refolution, and as skilful feamen as ever trod a deck. However, as it was the general belief among us that they were taken and carried into Acapulco, the Commodore's prudence fuggested a project which we hoped would recover them.

(373)

This was founded on our having many them. Spanish and Indian prisoners in our possession, and a number of fick Negroes, who could be of no fervice to us in the navigating of the ship. The Commodore therefore wrote a letter the fame day to the Governor of Acapulco, telling him that he would release them all, provided the Governor returned the Cutter's crew; and the letter was difpatched the fame afternoon by a Spanish officer, of whole honour we had a good opinion, and who was furnished with a launce belonging to one of our prizes, and a crew of fix other prifoners who all gave their parole for their return. The officer too, befides the Commodore's letter, carried with him a joint petition figned by all the reft of the prifoners, befeeching his Excellence to acquiesce in the terms proposed for their liberty. From a confideration of the number of our prifoners, and the quality of fome" them, we did not doubt but the Governor would readily comply with Mr. Anfon's propofal, and therefore kept plying on and off the whole night, intending to keep well in with the land, that we might receive an answer at the limited time, which was the next day, being Monday: But both on the Monday and Tue/day we were driven fo far off shore, that we could not hope to receive any anfwer; and on the Wednesday morning we found ourselves fourteen leagues from the harbour of Acapulco; but as the wind was now favourable, we preffed forwards with all our fail, and did not doubt of getting in with the land in a few hours. Whilft we were thus standing in, the man at the mast-head called out that he faw a boat under fail at a confiderable diftance to the South eaftward : This we took for

Bb 3

granted

15

(374)

granted was the answer of the Governor to the Commodore's meffage, and we inftantly edged towards it; but when we drew nearer, we found to our unspeakable joy that it was our own Cutter. While the was still at a diffance we imagined that fhe had been discharged out of the port of Acapulco by the Governor; but when the drew nearer, the wan and meager countenances of the crew, the length of their beards, and the feeble and hollow tone of their voices, convinced us that they had fuffered much greater hardfhips than could be expected from even the feverities of a Spanish prison. They were obliged to be helped into the fhip, and were immediately put to bed, and with reft, and nourifhing diet, which they were plentifully fupplied with from the Commodore's table, they recovered their health and vigour apace: And now we learnt that they had kept the fea the whole time of their absence, which was above fix weeks. that when they finished their cruife before Acapulco, and had just begun to ply to the westward in order to join the squadron, a strong adverse current had forced them down the coaft to the eaftward in fpight of all their efforts; that at length their water being all expended, they were obliged to fearch the coaft farther on to the eaftward, in queft of fome convenient landing-place, where they might get a fresh supply; that in this distress they ran upwards of eighty leagues to leeward, and found every-where to large a furf, that there was not the leaft poffibility of their landing; that they paffed fome days in this dreadful fituation, without water, and having no other means left them to allay their thirst than sucking the blood of the turtle, which they caught; and at laft, giving up all

all hopes of relief, the heat of the climate too augmenting their neceffities, and rendring their fufferings infupportable, they abandoned themfelves to defpair, fully perfuaded that they should perifh by the most terrible of all deaths; but that they were foon after happily relieved by a most unexpected incident, for there fell fo heavy a rain, that by fpreading their fails horizontally, and by putting bullets in the centers of them to draw them to a point, they caught as much water as filled all their cafk; that immediately upon this fortunate fupply they flood to the westward in queft of the Commodore; and being now luckily fav ured by a ftrong current, they joined us in lefs than fifty hours, from the time they flood to the weftward, after having been abfent from us full forty-three days. Those who have an idea of the inconfiderable fize of a Cutter belonging to a fixty gun ship, (being only an open boat about twenty-two feet in length) and who will attend to the various accidents to which the was exposed during a fix weeks continuance alone, in the open ocean, on fo impracticable and dangerous a coaft, will readily own, that her return to us at laft, after all the difficulties which fhe actually experienced. and the hazards to which the was each hour exposed, may be confidered as little short of miraculous.

I cannot finish the article of this Cutter, without remarking how little reliance Navigators ought to have on the accounts of the Buccaneer writers: For though in this run of hers, eighty leagues to the eastward of *Acapulco*, she found no place where it was possible for a boat to land, yet those writers have not been assured

tO

(376)

to feign harbours and convenient watering-places within these limits, thereby exposing such as should confide in their relations, to the risque of being destroyed by thirst.

I must farther add on this occasion, that when we stood near the port of *Acapulco*, in order to fend our message to the Governor, and to receive his answer, Mr. *Brett* took that opportunity of delineating a view of the entrance of the port, and of the neighbouring coast, which added to the plan of the place formerly mentioned, may be of considerable use hereaster, and is therefore exhibited in the thirty-second plate. In this plate (a) is the west point of the harbour called the *Griffo*, being in the latitude of 16° : 45'; (bc) is the Is the use form the observer N. by E, three leagues distant; (d) is the east point of the harbour; (e) port Marquis; (f) Sierra di Brea; (b) a white rock in the harbour, and (g) watch-towers.

And now having received our Cutter, the fole object of our coming a fecond time before Acapulco, the Commodore refolved not to lofe a moment's time longer, but to run off the coaft with the utmost expedition, both as the stormy feafon on the coaft of Mexico was now approaching apace, and as we were apprehenfive of having the wefterly monfoon to ftruggle with when we came upon the coaft of China; and therefore he no longer flood towards Acapulco, as he now wanted no answer from the Governor; but yet he refolved not todeprive his prifoners of the liberty, which he had promifed them; fo that they were all immediately embarked in two launches which belonged to our prizes, those from the Centurion in one launcin, and those from the Gloucester in the other. The launches

o d y r launches were well equipped with mafts, fails and oars; and, left the wind might prove unfavourable, they had a flock of water and provisions put on board them fufficient for fourteen days. There were discharged thirty-nine perfons from on board the Centurion, and eighteen from the Gloucester, the greateft part of them Spaniards, the reft Indians and fick Negroes : But as our crews were very weak, we kept the Mulattoes and fome of the ftouteft of the Negroes, with a few Indians, to affift us; but we difmiffed every Spanish prifoner whatever. We have fince learnt, that thefe two launches arrived fafe at Acapulco, where the prifoners could not enough extol the humanity with which they had been treated; and that the Governor, before their arrival, had returned a very obliging answer to the Commodore's letter, and had attended it with a prefent of two boats laden with the choicest refreshments and provisions which were to be got at Acapulco; but that these boats not having found our fhips, were at length obliged to put back again, after having thrown all their provisions over-board in a ftorm which threatened their deftruction.

The fending away our prifoners was our laft transaction on the American coast; for no sooner had we parted with them, than we and the Gloucester made fail to the S. W. proposing to get a good offing from the land, where we hoped, in a few days, to meet with the regular trade-wind, which the accounts of former Navigators had represented as much brisker and steadier in this ocean, than in any other part of the globe: For it has been esteemed no uncommon passage, to run from hence to the eastermost parts of Asia in two months; and

(378)

and we flattered ourfelves that we were as capable of making an expeditious paffage, as any ships that had ever run this course before us : So that we hoped foon to gain the coaft of China, for which we were now bound. And conformable to the general idea of this navigation given by former Voyagers, we confidered it as free from all kinds of embarrasment of bad weather, fatigue, or ficknefs; and confequently we undertook it with alacrity, efpecially as it was no contemptible ftep towards our arrival at our native country, for which many of us by this time began to have great longings. Thus, on the 6th of May, we, for the last time, lost fight of the mountains of Mexico, perfuaded, that in a few weeks we fhould arrive at the river of Canton in China, where we expected to meet with many English thips, and numbers of our countrymen; and hoped to enjoy the advantages of an amicable, well-frequented port, inhabited by a polifhed people, and abounding with the conveniencies and indulgencies of a civilized life; bleffings, which now for near twenty months had never been once in our power. But there yet remains (before we take our leave of America) the confideration of a matter well worthy of attention, the difcuffion of which shall be referred to the enfuing chapter.

A brief account of what might have been expected from our fquadron, had it arrived in the South-Seas in good time.

FTER the recital of the transactions of **1** the Commodore, and the fhips under his command, on the coafts of Peru and Mexico, as contained in the preceding part of this book, it will be no useless digreffion to examine what the whole fquadron rhight have been capable of atchieving, had it arrived in those feas in fo good a plight, as it would probably have done, had the passage round Cape Horn been attempted in a more feasonable time of the year. This difquisition may be ferviceable to those who shall hereafter form projects of the like nature for that part of the world, or may be entrusted with their execution. And therefore I propofe, in this chapter, to confider as fuccinctly as I can, the numerous advantages which the Public might have received from the operations of the fquadron, had it fet fail from England a few months fooner.

And first, I must suppose, that in the summertime we might have got round Cape Horn with an inconfiderable lofs, and without any damage to our fhips or rigging. For the Duke and Duchefs of Briftol, who between them had above three hundred men, buried no more than two, from the coast of Brazil to Juan Fernandes; and out of an hundred and eighty-three hands which were on board the Duke, there were only twenty-one fick of

of the fcurvy, when they arrived at that Island : Whence, as men of war are much better provided with all conveniencies than privateers, we might doubtless have appeared before Baldivia in full ftrength, and in a condition of entering immediately on action; and therefore, as that place was in a very defenceless state, its cannon incapable of fervice, and its garrifon in great measure unarmed, it was impossible that it could have opposed our force, or that its half-ftarved inhabitants, most of whom are convicts banifhed thither from other parts, could have had any other thoughts than that of fubmitting; and Baldivia, which is a moft excellent port, being once taken, we should immediately have been terrible to the whole kingdom of Chili, and fhould doubtlefs have awed the most distant parts of the Spanish Empire. Indeed, it is far from improbable that, by a prudent use of our advantages, we might have given a violent flock to the authority of Spain on that whole Continent; and might have render'd fome, at least, of her provinces independent. This would doubtlefs have turned the whole attention of the Spanish Ministry to that part of the world, where the danger would have been fo preffing : And thence Great Britain, and her Allies, might have been rid of the numerous embarraiments, which the wealth of the Spanilb Indies, operating in conjunction with the Gallick intrigues, have conftantly thrown in her way.

And that I may not be thought to over-rate the force of this fquadron, by afcribing to it a power of overturning the Spanish Government in America, it is neceffary to premise a few observations on the condition of the provinces bordering on the South-Seas,

Seas both it w топ Creo ftor mili to tl fally imp mig they fo t the e ticul took I re her T ly at dron lieve was tinu in c Thu Chil Gov folic with thei fenc anfv the diffi Seas, and on the disposition of the inhabitants, both Spaniards and Indians, at that time; by which it will appear, that there was great diffention amongft the Governors, and difaffection among the Creolians; that they were in want of arms and ftores, and had fallen into a total neglect of all military regulations in their garrifons; and that as, to the Indians on their frontier, they were univerfally difcontented, and feemed to be watching with impatience for the favourable moment, when they might take a fevere revenge for the barbarities they had groaned under for more than two ages; fo that every circumstance concurred to facilitate the enterprizes of our fquadron. Of all their particulars we were amply informed by the letters we took on board our prizes, none of these veffels, as I remember, having had the precaution to throw her papers over-board. WOLTH ET IN

The ill blood amongst the Governors was greatly augmented by their apprehenfions of our fquadron; for every one being willing to have it believed, that the bad condition of his Government was not the effect of negligence, there were continual demands and remonstrances amongst them. in order to throw the blame upon each other. Thus, for inftance, the Prefident of St. Jago in Chili, the Prefident of Panama, and many other Governors, and military officers, were perpetually foliciting the Viceroy of Peru to furnish them with the neceffary fupplies of money for putting their provinces and places in a proper state of defence to oppose our defigns : But the customary answer of the Viceroy to these representations was the emptiness of the royal cheft at Lima, and the difficulties he was under to fupport the expences of

d : led zht ull nevas of ed, our of her na'n oft mom oft t is our ck it; ner ve ry ild n, e-2-I-J 11 he er 7, 1e 2-5,

of his own Government; and in one of his letters, (which we intercepted,) he mentioned his apprehenfions that he might even be neceffitated to ftop the pay of the troops and of the garrifon of *Callao*, the key of the whole kingdom of *Peru*. Indeed he did at times remit to these Governors some part of their demands; but as what he fent them was greatly short of their wants, it rather tended to the raising jealousies and heart-burnings amongst them, than contributed to the purposes for which it was intended.

And belides these mutual janglings amongst the Governors, the whole body of the people were extremely diffatisfied; for they were fully perfuaded that the affairs of Spain for many years before had been managed by the influence of a particular foreign interest, which was altogether detached from the advantages of the Spanish Nation: So that the inhabitants of these distant provinces believed themfelves to be facrificed to an ambition, which never confidered their convenience or interests, or paid any regard to the reputation of their name, or the honour of their coun-That this was the temper of the Creolian try. Spaniards at that time, might be evinced from a hundred inftances; but I shall content myself with one, which is indeed conclusive : This is the teftimony of the French Mathematicians fent into America, to measure the magnitude of an equatorial degree of latitude. For in the relation of the murther of a furgeon belonging to their company in one of the cities of Peru, and of the popular tumult occasioned thereby, written by one of those aftronomers, the author confesses, that the inhabitants, during the uproar, all joined in imprecations

imp the ing beld Spa fort A fatis that for : fligh in tl rauc pow that betw pene had force the e ed th worl tors. them For coaft that deftr belo ligio perp Chili from temp Trib 3.

imprecations on their bad Governors, and bestowed the most abusive language upon the French, detesting them, in all probability, more particularly as belonging to a nation, to whose influence in the Spanish Counsels the Spaniards imputed all their misfortunes.

And whilft the Creolian Spaniards were thus diffatisfied, it appears by the letters we intercepted, that the Indians, on almost every frontier, were ripe for a revolt, and would have taken up arms on the flightest encouragement; in particular, the Indians in the fouthern parts of Peru; as likewife the Arraucos, and the reft of the Chilian Indians, the most powerful and terrible to the Spanish name of any on that Continent. For it feems, that in the difputes between the Spaniards and the Indians, which happened fome time before our arrival; the Spaniards had infulted the Indians with an account of the force, which they expected from Old Spain under the command of Admiral Pizarro, and had vaunted that he was coming thither to compleat the great work, which had been left unfinished by his anceftors. These threats alarmed the Indians, and made them believe that their extirpation was refolved on : For the Pizarro's being the first conquerors of that coaft, the Peruvian Indians held the name, and all that bore it, in execration; not having forgot the destruction of their Monarchy, the massacre of their beloved Inca, Atapalipa, the extinction of their religion, and the flaughter of their anceftors; all perpetrated by the family of the Pizarro's. The Chilian Indians too abhorred a Chief descended from those, who, by their lieutenants, had first attempted to inflave them, and had neceffitated their Tribes, for more than a Century, to be continually

(384)

ally wafting their blood in defence of their independency.

And let it not be fuppofed, that among those barbarous nations the traditions of fuch diftant transactions could not be continued till the prefent times; for all who have been acquainted with that part of the world agree, that the Indians, in their public feafts, and annual folemnities, conftantly revive the memory of these tragic incidents; and those who have been present at these spectacles, have observed, that all the recitals and representations of this kind were received with an enthuliaftic rage, and with fuch vehement emotions, as plainly evinced how ftrongly the memory of their former wrongs was implanted in them, and how acceptable the means of revenge would at all times prove. To this account I must add too, that the Spanish Governors themfelves were fo fully informed of the disposition of the Indians, and were fo apprehenfive of a general defection among them, that they employed all their industry to reconcile the most dangerous tribes, and to prevent them, from immediately taking up arms: Among the reft, the President of Chili in particular made large conceffions to the Arraucos, and the other Chilian Indians. by which, and by diffributing confiderable prefents to their leading men, he at last got them to confent to a prolongation of the truce between the two na-But these negotiations were not concluded tions. at the time when we might have been in the South-Seas; and had they been compleated, yet the hatred of these Indians to the Spaniards was fo great, that it would have been impossible for their chiefs to have prevented their joining us.

Thus

So pr Fo ger of all Ind nia rag at the thou gou who not finift of te midf who the t comr ing h the a too, Publi to air with times where ers, v moft by Br It muft de-

hus

(385)

Thus then it appears, that on our arrival in the South-fea we might have found the whole coaft unprovided with troops, and defitute even of arms : For we well knew from every particular intelligence, that there were not three hundred fire-arms, of which too the greatest part were matchlocks, in all the province of Chili. At the fame time, the Indians would have been ready to revolt, the Spamards disposed to mutiny, and the Governors enraged with each other, and each prepared to rejoice at the difgrace of his antagonist; whilst we, on the other hand, might have confifted of near two thousand men, the greatest part in health and vigour, all well-armed, and united under a Chief, whole enterprising genius (as we have feen) could not be depressed by a continued feries of the most finister events, and whose equable and prudent turn of temper would have remained unvaried, in the midift of the greateft degree of good fuccess; and who befides possessed, in a diffinguished manner, the two qualities, the most necessary in these uncommon undertakings; I mean, that of maintaining his authority, and preferving, at the fame time, the affections of his people. Our other officers too, of every rank, appear, by the experience the Public hath fince had of them, to have been equal to any enterprize they might have been charged with by their Commander: And our men, (at all times brave, if well conducted) in fuch a caufe, where treasure was the object, and under fuch leaders, would doubtless have been prepared to rival the most celebrated atchievements hitherto performed by Britifb Mariners.

It cannot then be contested, but that Baldivia must have furrendered on the appearance of our fqua-

(386)

fquadron: After which, it may be prefumed, that the Arrancos, the Pulches and Penguinches, inhabiting the banks of the river Imperial, about twentyfive leagues to the northward of this place, would have immediately taken up arms, being difpoled, as hath been already related, and encouraged by the arrival of fo confiderable a force in their neighbourhood. As these Indians can bring into the field near thirty thousand men, the greatest part of them horse, their first step would doubtless have been the invading the province of Chili, which they would have found totally unprovided of ammunition and weapons; and as its inhabitants are a luxurious and effeminate race, they would have been incapable, on fuch an emergency, of giving any opposition to this rugged enemy : So that it is no ftrained conjecture to imagine, that the Indians would have been foon mafters of the whole country. And the other Indians on the frontiers of Peru being equally difpofed with the Arraucos to fhake off the Spanils voke ; it is highly probable, that they likewife would have embraced the occasion, and that a general infurrection would have taken place through all the Spanib territories in South America; in which cafe, the only refource left to the Greolians (diffatisfied as they were with the Spanish Government) would have been to have made the beft terms they could with their Indian neighbours, and to have withdrawn themfelves from the obedience of a Mafter, who had shown to little regard to their fecurity.... This laft fuppolition may perhaps appear chimerical to those, who measure the possibility of all events by the fcanty ftandard of their own experience; but the temper of the times, and the ftrong diflike of the natives to the measures then purfued

purfued by the Spanish Court, fufficiently evince at leaft its poffibility. But not to infift on the prefumption of a general revolt, it is fufficient for our purpose to conclude, that the Arraucos - would fcarcely have failed of taking arms on our appearance: For this alone would fo, far have embarraffed the enemy, that they would no longer have thought of oppoling us; but would have turned all their care to the Indian affairs ; as they ftill remember, with the utmost horror, the facking of their cities, the rifling of their convents, the captivity of their wives and daughters, and the defolation of their country by these resolute favages, in the last war between the two nations. For it must be remembered, that this tribe of Indians have been frequently fuccefsful against the Spaniards, and poffefs at this time a large tract of country, which was formerly full of Spanife towns and villages, whole inhabitants were all either deftroyed, or carried into captivity by the Arraucos and the neighbouring Indians, who, in a war against the Spaniards, never fail to join their forces.

But even, independent of an Indian revolt, there were but two places on all the coaft of the South-Sea, which could be fuppofed capable of refifting our fquadron; these were the cities of Panama and Callao: As to the first of these, its fortifications were fo decayed, and it was fo much in want of powder, that the Governor himfelf, in an intercepted letter, acknowledged it was incapable of being defended; fo that I take it for granted, it would have given us but little trouble, efpecially if we had opened a communication across the Ifthmus with our fleet on the other fide : And for the city and port of Callag, its condition was not much better

better than that of Panama; for its walls are built upon the plain ground, without either out-work or ditch before them, and confift only of very flender feeble mafonry, without any earth behind them; fo that a battery of five or fix pieces of cannon, raifed any where within four or five hundred paces of the place, would have had a full view of the whole rampart, and would have opened it in a fhort time; and the breach hereby formed, as the walls are fo extremely thin, could not have been difficult of afcent; for the ruins would have been but little higher than the furface of the ground; and it would have yielded this particular advantage to the affailants, that the bullets, which grazed upon it, would have driven before them fuch shivers of brick and ftone, as would have prevented the garrifon from forming behind it, fuppoling that the troops employed in the defence of the place, should have fo far furpassed the usual limits of Creolian bravery, as to refolve to ftand a general affault: Indeed, fuch a refolution cannot be imputed to them; for the garrifon and people were in general diffatisfied with the Viceroy's behaviour, and were never expected to act a vigorous part. The Viceroy himfelf greatly apprehended that the Commodore would make him a vifit at Lima, the capitol of the kingdom of Peru; to prevent which, if poffible, he had ordered twelve gallies to be built at Guaiaquil and other places, which were intended to oppose the landing of our boats, and to hinder us from pushing our men on shore. But this was an impracticable project, and proceeded on the fupposition that our ships, when we should land our men, would keep at fuch a diftance, that thefe gallies, by drawing little water, would have been out

out mo WOL fhip run befi one whe dept fhor have from prev land had leag migl we f. The Sout head Mor thom fhore preh they ter; they. fore guar be fu their conce nimo

out of the reach of their guns ; whereas the Commodore, before he had made fuch an attempt, would doubtlefs have been poffeffed of feveral prize ships, which he would not have hefitated to have run on fhore for the protection of his boats; and befides there were many places on that coaft, and one in particular in the neighbourhood of Callao, where there was good anchoring, though a great depth of water, within a cable's length of the fhore; fo that the cannon of the men of war would have fwept all the coaft to above a mile's diftance from the water's edge, and would have effectually prevented any force from affembling, to oppofe the landing and forming of our men : And the place had this additional advantage, that it was but two leagues diftant from the city of Lima; fo that we might have been at that city within four hours after we should have been first discovered from the shore. The place I have here in view is about two leagues South of Callao, and just to the northward of the head-land called, in Frezier's draught of that coaft, Morro Solar. Here there is feventy or eighty fathom of water, within two cables length of the fhore; and the Spaniards themfelves were fo apprehenfive of our attempting to land there, that they had projected to build a fort close to the water; but there being no money in the royal chefts, they could not go on with that work, and therefore they contented themfelves with keeping a guard of an hundred horfe there, that they might be fure to receive early notice of our appearance on their coaft. Indeed fome of them (as we are told) conceiving our management at fea to be as pufillanimous as their own, pretended that the Commo-Cc3 dore

uilt or der m; on, aces the iort alls cult ittle d it the it, s of garthe ould olian ult: em; difwere licemobitol n, if built nded nder was the land hefe been out

And here let it not be imagined, that I am proceeding upon groundlefs and extravagant prefumptions, 'when' I conclude, that fifteen hundred or a thoufand of our people, well conducted, fhould have been an over-match for any numbers the Spamiards could muster in South-America. For. not to mention the experience we had of them at Paita and Petaplan, 'it' must be remembered, that our Commodore was extremely folicitous to have all his men trained to the dexterous use of their firearms; whereas the Spaniards, in this part of the world, were in great want of arms, and were very awkward in the management of the few they had : And though, on their repeated reprefentations, the Court of Spain had ordered feveral thousand firelocks to be put on board Pizarro's fquadron, yet thofe, it is evident, could not have been in America time enough to have been employed against us; fo that by our arms, and our readiness in the use of them (not to infift on the timidity and forners of our enemy) we should in some degree have had the fame advantages, which the Spaniards themfelves had, in the first discovery of this country, against its naked and unarmed inhabitants.

And now let it be confidered what were the events which we had to fear, or what were the circumftances which could have prevented us from giving law to all the coaft of South America, and thereby cutting off from Spain the refources which the drew from those immense provinces. By sea there was no force capable of oppoling us; for how foon foever we had failed, Pizarro's squadron could not have

have failed fooner than it did, and therefore could not have avoided the fate it met with : As we should have been mafters of the ports of Chili, we could there have fupplied ourfelves with the provisions we wanted in the greatest plenty; and from Baldivia to the equinoctial we ran no rifque of lofing our men by ficknefs, (that being of all climates the most temperate and healthy) nor of having our fhips difabled by bad weather; and had we wanted hands to affift in the navigating our fquadron, whilft a confiderable part of our men were employ'd on shore, we could not have failed of getting whatever numbers we pleafed in the posts we fhould have taken, and the prizes which would have fallen into our hands; and I must observe that the Indians, who are the principal failors in that part of the world, are extremely docile, and dexterous, and though they are not fit to ftruggle with the inclemencies of a cold climate, yet in temperate feas they are most useful and laborious feamen.

Thus then it appears, what important revolutions might have been brought about by our fquadron, had it departed from England as early as it ought to have done : And from hence it is eafy to conclude, what immense advantages might have thence accrued to the public. For, as on our fuccefs it would have been impossible for the kingdom of Spain to have received any treasure from the provinces bordering on the South-Seas, or even to have had any communication with them, it is certain that the whole attention of that Monarchy must have been immediately employed in regaining the possession of these ineftimable territories, either by force or compact. By the first of these methods it was fcarcely possible they could fucceed; for it muft

must have been at least a twelve-month from our arrival, before any ships from Spain could get into the South-Seas, and those perhaps separated, difabled, and sickly; and by that time they would have had no port in their possession, either to rendezvous at, or to refit; whils we might have been supplied across the Isthmus with whatever necessaries, stores, or even men we wanted, and might thereby have maintained our squadron in as good a plight, as when it first fet fail from St. Helens. In short, it required but little prudence in the conduct

f this business to have rendered all the efforts of pain, feconded by the power of France, ineffectual, and to have maintained our conquests in defiance of them both : So that they muft either have refolved to have left Great-Britain mafters of the wealth of South-America, (the principal support of all their destructive projects) or they must have fubmitted to her terms, and have been contented to receive those provinces back again, as an equivalent for these restrictions to their future ambition, which her prudence should have dictated to them. Having thus discussed the prodigious weight which the operations of our fquadron might have added to the national influence of this kingdom. I shall here end this fecond book, referring to the next, the passage of the shattered remains of our force across the Pacific Ocean; and all their future transactions till the Commodore's arrival in England.

ROUND THE

WORLD, &c.

BOOK III.

CHAP. I.

The run from the coast of Mexico to the Ladrones or Marian Islands.

W HEN, on the 6th of May 1742, we left the coaft of America, we ftood to the S. W. with a view of meeting with the N. E. trade-wind, which the accounts of former writers made us expect at feventy or eighty leagues diftance from the land : We had befides another reafon for ftanding to the fouthward, which was the getting into the latitude of 13 or 14° North 3 that being the parallel where the *Pacific* Ocean is most usually crossed, and consequently where the navigation is esteemed the fasses: This lass purpose we had foon answered, being in a day or two sufficiently advanced to the South. At the fame time

time we were also farther from the shore, than we had prefumed was neceffary for the falling in with the trade-wind : But in this particular we were most grievoully difappointed; for the wind ftill continued to the westward, or at best variable. As the getting into the N. E. trade, was to us a matter of the last confequence, we stood more to the fouthward, and made many experiments to meet with it; but all our efforts were for a long time unfuccelsful : So, that it was feven weeks; from our leaving the coaft, before we got into the true tradewind. This was an interval, in which we believed we should well nigh have reached the eastermost parts of Aga: But we were to baffled with the contrary and variable winds, which for all that time perplexed us, that we were not as yet advanced above a fourth part of the way. The delay alone would have been a fufficient mortification; but there were other circumstances attending it, which rendered this fituation not lefs terrible, and our apprehensions perhaps still greater than in any of our past distresses. For our two ships were by this time extremely crazy; and many days had not paffed, before we discovered a spring in the foremaft of the Centurion, which rounded about twentyfix inches of its circumference, and which was judged to be at least four inches deep': And no fooner had our Carpenters fecured this with fifting it, but the Gloucester made a fignal of diffrefs; and we learnt that she had a dangerous spring in ther main-maft, twelve feet below the truffel-trees; fo that fhe could not carry any fail upon it. Our Carpenters, on a ftrict examination of this maft, found it fo very rotten and decayed, that they judged it neceffary to cut it down as low as it appeared

pear duc as a men abo coal app our enjo t00 form but of o bein reafc trade no g prov peet prof ing y Inde belie what lence fome to fu fage of th in ou the f plode curre FG of fre

(395)

peared to have been injured ; and by this it was reduced to nothing but a flump, which ferved only as a ftep to the top-maft. These accidents augmented our delay, and occafioned us great anxiety about our future fecurity : For on our leaving the coaft of Mexico, the fcurvy had begun to make its appearance again amongst our people; though from our departure from Juan Fernandes we had till then enjoyed a most uninterrupted state of health. We too well knew the effects of this difeafe, from our former fatal experience, to fuppole that any thing but a fpeedy paffage could fecure the greater part of our crew from perifhing by it : And as, after being feven weeks at fea, there did not appear any reafons that could perfuade us, we were nearer the trade-wind, than when we first set out; there was no ground for us to suppose, but our paffage would prove at leaft three times as long as we at first expected; and confequently we had the melancholy prospect, either of dying by the fcurvy, or perifhing with the fhip for want of hands to navigate her. Indeed, fome amongst us were at first willing to believe, that in this warm climate, fo different from what we felt in paffing round Cape Horn, the violence of this difease, and its fatality, might be in fome degree mitigated; as it had not been unufual to suppose that its particular virulence in that paffage was in a great measure owing to the feverity of the weather : But the havock of the diftemper, in our prefent circumstances, foon convinced us of the falfity of this fpeculation; as it likewife exploded fome other opinions, which ufually pafs current about the caufe and nature of this difeafe. For it has been generally prefumed, that plenty of fresh provisions, and of water are effectual preventives

ventives of this malady; but happened that in the prefent inftance we had a confiderable flock of fresh provisions on board, as hogs and fowls. which were taken at Paita; and we befides almost every day caught great abundance of bonito's. dolphins, and albicores; and the unfettled feafon. which deprived us of the benefit of the trade-wind. proved extremely rainy; fo that we were enabled to fill up our water cafk, almost as fast as they were empty; and each man had five pints of water allowed him every day, during the paffage. But notwithstanding this plenty of water, and that the fresh provisions were distributed amongst the fick, and the whole crew often fed upon fifth, yet neither were the fick hereby relieved, nor the progress and advancement of the difease retarded : Nor was it in these instances only that we found ourselves difappointed; for though it has been usually effected a neceffary piece of management to keep all fhips, where the crews are large, as clean and airy between decks as possible; and it hath been believed by many, that this particular, if well attended to. would prevent the appearance of the fcurvy, or at leaft, mitigate its effects; yet we observed, during the latter part of our run, that though we kept all our ports open, and took uncommon pains in cleanfing and fweetning the fhips, yet neither the progrefs, nor the virulence of the difeafe were thereby fenfibly abated.

However, I wouk not be underftood to affert, that fresh provisions, plenty of water, and a constant fresh supply of fweet air between decks, are matters of no moment : I am, on the contrary, well fatisfied, that they are all of them articles of great importance, and

1 4

and and ven taki have infta difea nage dies ám got natu on f bour knov be d tyi fresh air i eláft be r with ble (ftcar to re perly anim efflu land T difea our mor exer and

(397)

and are doubtless extremely conducive to the health and vigour of a crew, and may in many cafes prevent the fatal malady we are now fpeaking of from taking place. All I have aimed at, in what I have advanced, is only to fhew that in fome instances, both the cure, and prevention of this difeafe, is impossible to be effected by any management, or by the application of any remedies which can be made use of at fea. Indeed I am myfelf fully perfuaded, that when it has once got to a certain head, there are no other means in nature for relieving the difeafed, but carrying them on fhore, or at least bringing them into the neighbourhood of land. Perhaps a diffinct and adequate knowledge of the fource of this difeafe may never be difcovered; but in general, there is no difficulty in conceiving, that as a continued fupply of fresh air is necessary to all animal life; and as this air is fo particular a fluid, that without lofing its elafticity, or any of its obvious properties, it may be rendered unfit for this purpole, by the mixing with it fome very fubtle and otherwife imperceptible effluvia; it may be conceived, I fay, that the fteams arifing from the ocean may have a tendency to render the air they are fpread through lefs properly adapted to the support of the life of terrestrial animals, unlefs these steams are corrected by effluvia of another kind, and which perhaps the land alone can fupply.

To what hath been already faid in relation to this difeafe, I fhall add, that our furger n (who during our paffage round Cape Horn, had afcribed the mortality we fuffered to the feverity of the climate) exerted himfelf in the prefent run to the utmost, and at last declared, that all his measures were totally

in of ls. oft olon, nd, led hey ater But the ick, ther and it in laped a ips, beeved to, r at ring t all in the vere that refh Fno hat ice, and

(398)

tally ineffectual, and did not in the least avail his patients: On which it was refolved by the Commodore to try the effects of two medicines, which, just before his departure from England, were the fubject of much difcourse, I mean the pill and drop of Mr. Ward. For however violent the effects of these medicines are faid to have fometimes proved, yet in the prefent inftance, where deftruction feemed inevitable without fome remedy, the experiment at least was thought adviseable: And therefore. one or both of them, at different times, were given to perfons in every ftage of the diftemper. Out of the numbers that took them, one, foon after fwallowing the pill, was feized with a violent bleeding at the nofe: He was before given over by the furgeon, and lay almost at the point of death; but he immediately found himfelf much better, and continued to recover, though flowly, till we arrived on fhore, which was near a fortnight after. A few others too were relieved for fome days, but the difeafe returned again with as much violence as ever; though neither did thefe, nor the reft, who received no benefit, appear to be reduced to a worfe condition than they would have been if they had taken nothing. The most remarkable property of these medicines, and what was obvious in almost every one that took them, was, that they operated in proportion to the vigour of the patient; fo that those that were within two or three days of dying were fcarcely affected; and as the patient was differently advanced in the difeafe, the operation was either a gentle perspiration, an easy vomit, or a moderate purge: But if they were taken by one in full strength, they then produced all the beforementioned effects with confiderable violence, which fome-

fom ther pro , I our had wer mist ing weel the and ftren her fo th have reac ed peri mai feld . wer I.c thar fequ ed. wer grea the alor trac Spa of mo gre fometimes continued for fix or eight hours together, with little intermission. But to return to the prosecution of our voyage.

I have already observed, that, a few days after our running off the coast of Mexico, the Gloucester had her main mail cut down to a flump, and we were obliged to fifh our fore-maft; and that thefe misfortunes were greatly aggravated, by our meeting with contrary and variable winds for near feven weeks. I shall now add, that when we reached the trade-wind, and it fettled between the North and the East, yet it feldom blew with fo much ftrength, but the Centurion might have carried all her fmall fails abroad with the greatest fafety; fo that now, had we been a fingle fhip, we might have run down our longitude apace, and have reached the Ladrones foon enough to have recovered great numbers of our men, who afterwards perished. But the Gloucester, by the loss of her main-mast, failed to very heavily, that we had feldom any more than our top-fails fet, and yet were frequently obliged to lie too for her : And, 1 conceive, that in the whole we loft little lefs than a month by our attendance upon her, in confequence of the various mischances she encountered. In all this run it was remarkable, that we were rarely many days together, without feeing great numbers of birds; which is a proof that there are many iflands, or at leaft rocks, fcattered all along, at no very confiderable diftance from our Some indeed there are marked in the track. Spanish chart, hereafter inferted; but the frequency of the birds feem to evince, that there are many more than have been hitherto difcovered : For the greatest part of the birds, we observed, were such as .

his cmich, the lrop s: of ved, med nent ore, iven it of walling furt he conved few the as who b a hey rty floit ted hat ing lifvas - 2 in recheas ate known to rooft on fhore; and the manner of their appearance fufficiently made out, they they came from fome diftant haunt every morning, and returned thither again in the evening; for we never faw them early or late; and the hour of their arrival and departure gradually varied, which we fuppofed was occafioned by our running nearer their haunts, or getting farther from them.

The trade-wind continued to favour us without any fluctuation, from the end of June till towards the end of July. But on the 26th of July, being then, as we effected, about three hundred leagues distant from the Ladrones, we met with a westerly wind, which did not come about again to the eastward in four days time. This was a most dispiriting incident, as it at once damped all our hopes of fpeedy relief, especially too as it was attended with a vexatious accident to the Gloucester : For in one part of these four days the wind flatted to a calm, and the fhips rolled very deep; by which means the Gloucester's forecap fplit, and her top maft came by the board, and broke her fore-yard directly in the flings. As the was hereby rendered incapable of making any fail for fome time, we were obliged, as foon as a gale fprung up, to take her in tow; and near twenty of the healthieft and ableft of our feamen were taken from the business of our own ship, and were employed for eight or ten days together on board the Gloucester in repairing her damages : But these things, mortifying, as we thought them, were but the beginning of our difasters; for scarce had our people finished their business in the Gloucester, before we met with a most violent storm in the western board, which obliged us to lie to. the beginning of this ftorm our fhip fprung a leak. and let in fo much water, that all our people, officers included, were employed continually in working the pumps : And the next day we had the vexation to fee the Gloucester, with her topmaft once more by the board; and whilft we were viewing her with great concern for this new distress, we faw her main-top mast, which had hitherto ferved as a jury main-mast, share the fame fate. This compleated our misfortunes, and rendered them without refource; for we knew the Gloucester's crew were fo few and feeble, that without our affistance they could not be relieved : And our fick were now fo far encreased, and those that remained in health fo continually fatigued with the additional duty of our pumps, that it was impoffible for us to lend them any aid. Indeed we were not as yet fully apprized of the deplorable fituation of the Gloucester's crew; for when the ftorm abated, (which during its continuance prevented all communication with them) the Gloucester bore up under our stern; and Captain Michel informed the Commodore, that belides the loss of his masts, which was all that had appeared to us, the ship had then no less than feven feet of water in her hold, although his officers and men had been kept constantly at the pump for the last twenty-four hours.

This last circumstance was indeed a most terrible accumulation to the other extraordinary distreffes of the Gloucester, and required, if possible, the most speedy and vigorous affistance; which Captain Mitchel begged the Commodore to fend him: But the debility of our people, and our own immediate prefervation, rendered it impoffible

Dd

fible for the Commodore to comply with his requeft. All that could be done was to fend our boat on board for a more particular condition of the fhip; and it was foon fufpected that the taking her people on board us, and then deftroying her, was the only measure that could be profecuted in the prefent emergency, both for the fecurity of their lives and of our own.

Our boat foon returned with a representation of the state of the Gloucester, and of her feveral defects, figned by Captain Mitchel and all his officers; by which it appeared, that fhe had fprung a leak by the stern-post being loose, and working with every roll of the ship, and by two beams a midships being broken in the orlope; no part of which the Carpenters reported was poffible to be repaired at fea: That both officers and men had worked twenty-four hours at the pump without intermission, and were at length to fatigued, that they could continue their labour no longer; but had been forced to defift, with feven feet of water in the hold, which covered their cafk, fo that they could neither come at fresh water, nor provision: That they had no mast standing, except the fore-mast, the mizen-mast, and the mizen topmast, nor had they any spare masts to get up in the room of those they had lost: That the ship was belides extremely decayed in every part, for her knees and clamps were all worked quite loofe, and her upper works in general were fo loofe, that the quarter-deck was ready to drop down: And that her crew was greatly reduced, for there remained alive on board her no more than feventyfeven men, eighteen boys, and two prifoners, officers included; and that of this whole number, only

The Commodore, on the perufal of this melancholy reprefentation, prefently ordered them a fupply of water and provisions, of which they feemed to be in immediate want, and at the fame time fent his own Carpenter on board them, to examine into the truth of every particular; and it being found, on the strictest enquiry, that the preceding account was in no inftance exaggerated, it plainly appeared, that there was no poffibility of preferving the Gloucester any longer, as her leaks were irreparable, and the united hands on board both thips, capable of working, would not be able to free her, even if our own ship should not employ any part of them. What then could be refolved on, when it was the utmost we ourfelves could do to manage our own pumps? Indeed there was no room for deliberation ; the only ftep to be taken was, the faving the lives of the few that remained on board the Gloucester, and getting out of her as much as was poffible before fhe was deftroyed: And therefore the Commodore immediately fent an order to Captain Mitchel, as the weather was now calm and favourable, to fend his people on board the Centurion as expeditioufly as he could; and to take out fuch ftores as he could get at, whilft the fhip could be kept above And as our leak required lefs attention, water. whilft the prefent eafy weather continued, we fent our boats, with as many men as we could fpare, to Captain Michel's affiftance.

The removing the Gloucester's people on board us, and the getting out fuch ftores as could most eafily be

(404)

be come at, gave us full employment for two days. Mr. Anfon was extremely defirous to have gotten two of her cables and an anchor, but the ship rolled is much, and the Men were so exceffively fatigued, that they were incapable of effecting it; nay, it was even with the greatest difficulty that the prize-money, which the Gloucester had taken in the South-Seas, was fecured, and fent on board the Centurion : However, the prize-goods on board her, which amounted to feveral thoufand pounds in value, and were principally the Centurion's property, were entirely loft; nor could any more provision be got out than five cask of flower, three of which were fpoiled by the faltwater. Their fick men amounting to near feventy, were removed into boats with as much care as the circumftances of that time would permit; but three or four of them expired as they were holfting them into the Centurion.

It was the 15th of August, in the evening, before -1 the Gloucester was cleared of every thing that was proposed to be removed; and though the hold was now almost full of water, yet, as the Carpenters were of opinion that the might still fwim for fome time, if the calm should continue, and the water become fmooth, the was fet on fire; for we knew not how near we might be to the Island of Guam, which was in the poffeffion of our enemies, and the wreck of fuch a fhip would have been to them no contemptible acquisition. When fhe was fet on fire, Captain Mitchel and his officers left her, and came on board the Centurion : And we immediately flood from the wreck, not without fome apprehenfions (as we had now only a light breeze) that if fhe blew up foon, the concuffion

cuffion of the air might damage our rigging; but fhe fortunately burnt, though very fiercely, the whole night, her guns firing fucceflively, as the flames reached them. And it was fix in the morning, when we were about four leagues diftant, before fhe blew up; the report fhe made upon this occafion was but a fmall one, but there was an exceeding black pillar of fmoke, which fhot up into the air to a very confiderable height.

Thus perished his Majesty's ship the Gloucester. And now it might have been expected, that being freed from the embarrafments which her frequent difasters had involved us in, we might proceed on our way much brifker than we had hitherto done, especially as we had received fome fmall addition to our ftrength, by the taking on board the Gloucester's crew; but our anxieties were not yet to be relieved; for, notwithstanding all that we had hitherto fuffered, there remained much greater diffreffes, which we were ftill to ftruggle For the late ftorm, which had proved fo with. fatal to the Gloucester, had driven us to the northward of our intended courfe; and the current fetting the fame way, after the weather abated, had forced us still a degree or two farther, fo that we were now in 17² ¹/₇ of North latitude, inftead of being in 13² , which was the parallel we proposed to keep, in order to reach the Island of Guam: And as it had been a perfect calm for fome days fince the ceffation of the ftorm, and we were ignorant how near we were to the meridian of the Ladrones, and fuppoled ourfelves not to be far from it, we apprehended that we might be driven to the leeward of them by the current, without discovering them: In this case, the only Dd 3 land

land we could make would be fome of the eastern parts of Afia, where, if we could arrive, we should find the western monfoon in its full force. fo that it would be impossible for the stoutest best-manned fhip to get in. And this coaft being removed between four and five hundred leagues farther, we, in our languishing circumstances, could expect no other than to be deftroyed by the fcurvy, long before the most favourable gale could carry us to fuch a diftance: For our deaths were now extremely alarming, no day paffing in which we did not bury eight or ten, and fometimes twelve of our men; and those who had hitherto continued healthy, began to fall down apace. Indeed we made the best use we could of the prefent calm, by employing our Carpenters in fearching after the leak, which was now confiderable, notwithfanding the little wind we had : The Carpenters at length discovered it to be in the Gunner's fore ftore-room, where the water rushed in under the breaft-hook, on each fide of the ftem; but though they found where it was, they agreed that it was impossible to stop it, till we should get into port. and till they could come at it on the outfide: However, they did the best they could within board, and were fortunate enough to reduce it. which was a confiderable relief to us.

We had hitherto confidered the calm which fucceeded the ftorm, and which continued for fome days, as a very great misfortune; fince the currents were driving us to the northward of our parallel, and we thereby rifqued the miffing of the *Ladrones*, which we now conceived ourfelves to be very near. But when a gale fprung up, our condition was ftill worfe; for it blew from the S. W, and utern lould that inned d bewe, t no z beis to exe did re of nued we alm. after vithnters fore the bugh was ort. ide: thin e it. fucbme curour the

shifted; and had fet us to the Southward: And the 23d, at day-break, we were cheered with the difcovery of two islands in the western board : This gave us all great joy, and raifed our drooping fpirits; for before this an universal dejection had feized us, and we almost defpaired of ever feeing land again : The nearest of these Islands we afterwards found to be Anatacan; we judged it to be full fifteen leagues from us, and it feemed to be high land, though of an indifferent length : The other was the Island of Serigan; and had rather the appearance of a high rock, than a place we could hope to anchor at. The View of these Islands is inferted at the top of the thirty-third plate. We were extremely impatient to get in with the neareft Island, where we expected to meet with anchoring-ground, and an opportunity of refreshing our fick : But the wind proved fo variable all day, and there was fo little of it, that we advanced towards it but flowly; however, by the next morning we were got fo far to the weftward, that we were in view of a third Island, which was that of Paxaros, though marked in the chart only as a rock. This was fmall and very low land, and we had paffed within lefs than a mile of it, in the night, without feeing it : And now at noon, being within four miles of the Island of Anatacan, the boat was fent away to examine the anchoringground and the produce of the place; and we Dd4 were

(407)

and confequently was directly opposed to the course we wanted to steer: And though it soon veered

to the N. E, yet this ferved only to tantalize us,

for it returned back again in a very fhort time to its old quarter. However, on the 22d of August,

we had the fatisfaction to find that the current was

were not a little folicitous for her return, as we then conceived our fate to depend upon the report we should receive : For the other two Islands were obvioufly enough incapable of furnishing us with any affiftance, and we knew not then that there were any others which we could reach. In the evening the boat came back, and the crew informed us that there was no place for a ship to anchor, the bottom being every where foul ground, and all, except one small spot, not less than fifty fathom in depth; that on that fpot there was thirty fathom, though not above half a mile from the fhore; and that the bank was fleep too, and could not be depended on : They farther told us, that they had landed on the Island, but with fome difficulty, on account of the greatness of the fwell; that they found the ground was every where covered with a kind of cane, or rufh; but that they met with no water, and did not believe the place to be inhabited; though the foil was good, and abounded with groves of coco-nut-trees.

This account of the impoffibility of anchoring at this Ifland, occafioned a general melancholy on board; for we confidered it as little lefs than the prelude to our deftruction; and our defpondency was encreafed by a difappointment we met with the fucceeding night; for, as we were plying under top-fails, with an intention of getting nearer to the Ifland, and of fending our boat on fhore to load with coco-nuts, for the refreshment of our fick, the wind proved squally, and blew so ftrong off shore, that we were driven so far to the Southward, that we dared not to fend off our boat. And now the only possible circumstance that could fecure the few which remained alive from perishing, was the ve

the accidental falling in with fome other of the Ladrone Islands, better prepared for our accommodation; and as our knowledge of these Islands was extremely imperfect, we were to truft entirely to chance for our guidance; only as they are all of them usually laid down near the fame meridian, and we had conceived those we had already seen to be part of them, we concluded to stand to the fouthward, as the most probable means of falling in with the next. Thus, with the most gloomy perfuafion of our approaching destruction, we stood from the Island of Anatacan, having all of us the strongeft apprehensions (and those not ill founded) either of dying of the fcurvy, or of perifhing with the thip, which for want of hands to work her pumps, might in a fhort time be expected to founder.

CHAP. II.

Our arrival at *Tinian*, and an account of the Ifland, and of our proceedings there, till the *Centurion* drove out to fea.

I T was the 26th of August 1742, in the morning, when we lost fight of Anatacan. The next morning we discovered three other Islands to the eastward, which were from ten to fourteen leagues from us. These were, as we asterwards learnt, the Islands of Saypan, Tinian, and Aguigan. We immediately steered towards Tinian, which was the middlemost of the three, but had so much of calms and light airs, that though we were helped forwards by the currents, yet next day, at day-break, we

we were at least five leagues distant from it. However, we kept on our courfe, and about ten in the morning we perceived a proa under fail to the fouthward, between Tinian and Aguigan. As we imagined from hence that these Islands were inhabited, and knew that the Spaniards had always a force at Guam, we took the necessary precautions for our own fecurity, and for preventing the enenity from taking advantage of our prefent wretched circumstances, of which they would be sufficiently informed by the manner of our working the fhip : we therefore muftered all our hands, who were capable of ftanding to their arms, and loaded our upper and quarter-deck guns with grape-flot; and that we might the more readily procure fome inte. ligence of the state of these Islands, we showed Spanish colours, and hoisted a red flag at the fore top mast-head, to give our ship the appearance of the Manila galeon, hoping thereby to decoy fome of the inhabitants on board us. Thus preparing ourfelves, and standing towards the land, we were near enough; at three in the afternoon, to fend the Cutter on shore, to find out a proper birth for the fhip; and we foon perceived that a proa came off the fhore to meet the Cutter, fully perfuaded, as we afterwards found, that we were the Manila ship. As we faw the Cutter returning back with the proa in tow, we immediately fent the Pinnace to receive the proa and the prifoners, and to bring them on board, that the Cutter might proceed on her errand, The Pinnace came back with a Spaniard and four Indians, which were the people taken in the proa. The Spaniard was immediately examined as to the produce and circumstances of this Island of Tinian, and his account of it furpaffed even our most fanguine

gu ha tio ail COL for go ber the the len fru Bre of Gu rifo fon. jerk a fr cho 7 ble on to d in c any pear favo fities ed re whic felve num pect of al

(411)

guine hopes; for he informed us that it was uninhabited, which, in our prefent defencelefs condition, was an advantage not to be defpifed, efpecially as it wanted but few of the conveniencies that could be expected in the most cultivated country ; for he affured us, that there was great plenty of very good water, and that there were an incredible number of cattle, hogs, and poultry running wild on the Island, all of them excellent in their kind; that the woods produced fweet and four oranges, limes, lemons and coco-nuts in great plenty, belides a fruit peculiar to these Islands (called by Dampier. Bread-fruit); that from the quantity and goodnefs of the provisions produced here, the Spaniards at Guam made use of it as a store for supplying the garrifon; that he himfelf was a Serjeant of that garrifon, and was fent here with twenty-two Indians to jerk beef, which he was to load for Guam on board a small bark of about fifteen tun, which lay at anchor near the fhore.

This account was received by us with inexprefiible joy : Part of it we were ourfelves able to verify on the fpot, as we were by this time near enough to discover feveral numerous herds of cattle feeding in different places of the Island; and we did not any ways doubt the reft of his relation, as the appearance of the fhore prejudiced us greatly in its favour, and made us hope, that not only our neceffities might be there fully relieved, and our difeafed recovered, but that, amidit those pleasing scenes which were then in view, we might procure ourfelves fome amusement and relaxation, after the numerous fatigues we had undergone; For the profpect of the country did by no means refemble that of an uninhabited and uncultivated place, but had much

Wthe the we shays a ions eniy ched ently hip; were l our and inte. owed fore ice of fome aring were d the r the hé off d, as ship. proa ceive m on rand. four pròa. o the nian, fanguine

much more the air of a magnificent plantation, where large lawns and stately woods had been laid out together with great skill, and where the whole had been fo artfully combined, and fo judicioufly adapted to the flopes of the hills, and the inequalities of the ground, as to produce a most striking effect. and to do honour to the invention of the contriver. Thus, (an event not unlike what we had already feen) we were forced upon the most defirable and falutary measures by accidents, which at first fight we confidered as the greateft of misfortunes; for had we not been driven by the contrary winds and currents to the northward of our course, (a circumstance, which at that time gave us the most terrible apprehenfions) we fhould, in all probability, never have arrived at this delightful Island, and confequently, we fhould have miffed of that place, where alone all our wants could be most amply relieved, our fick recovered, and our enfeebled crew. once more refreshed, and enabled to put again to fea.

The Spanifb Serjeant, from whom we received the account of the Island, having informed us that there were fome Indians on shore under his command employed in jerking beef, and that there was a bark at anchor to take it on board, we were defirous, if possible, to prevent the Indians from escaping, who doubtles would have given the Governor of Guam intelligence of our arrival; and we therefore immediately dispatched the Pinnace to fecure the bark, which the Serjeant told us was the only imbarkation on the place; and then, about eight in the evening, we let go our anchor in twenty-two fathom; and though it was almoss to be found on board board was doubtlefs exerted to the utmost on this pleafing occasion, when, after having kept the fea for fome months, we were going to take possesion of this little paradife, yet we were full five hours in furlings our fails : It is true, we were fomewhat weakened by the crews of the Cutter and Pinnace which were fent on shore; but ir is not less true, that, including those absent with the boats and fome Negroe and Indian prifoners, all the hands we could mufter capable of ftanding at a gun 2mounted to no more than feventy-one, most of which number too were incapable of duty; but on the greatest emergencies this was all the force we could collect, in our prefent enfeebled condition, from the united crews of the Centurion, the Gloucefter, and the Tryal, which, when we departed from England, confifted all together of near a thoufand hands.

When we had furled our fails, the remaining part of the night was allowed to our people for their repole, to recover them from the fatigue they had undergone; and in the morning a party was fent on shore well armed, of which I myself was one, to make ourfelves mafters of the landing place. as we were not certain what oppolition might be made by the Indians on the Island: We landed without difficulty, for the Indians having perceived, by our feizure of the bark the night before, that we were enemies, they immediately fled into the woody parts of the Island. We found on shore many huts which they had inhabited, and which faved us both the time and trouble of erecting tents ; one of these huts which the Indians made use of for a store-house was very large, being twenty yards long, and fifteen broad ; this we immediately cleared

ere toad ptof et. er. idy ind ght for and imrriity, and ace, rerew. to ved that bmlere ere om the and to the out enm, on ard

(414)

ed of some bales of jerked beef, which we found in it, and converted it into an hospital for our fick. who affoon as the place was ready to receive them were brought on fhore, being in all a hundred and twenty-right : Numbers of these were to very helplefs, that we were obliged to carry them from the boats to the hospital upon our shoulders, in which humane employment (as before at Juan Fernandes) the Commodore himfelf, and every one of his officers, were engaged without diffinction ; and, notwithstanding the great debility and the dving afpects of the greatest part of our fick, it is almost incredible how foon they began to feel the falutary influence of the land; for, though we buried twenty-one men on this and the preceeding day, yet we did not lofe above ten men more during our whole two months ftay here; and in general, our difeafed received fo much benefit from the fruits of the Island, particularly the fruits of the acid kind, that, in a week's time, there were but few who were not fo far recovered, as to be able to move about without help.

And now being in fome fort established at this place, we were enabled more particularly to examine its qualities and productions; and that the reader may the better judge of our manner of life here, and future Navigators be better apprized of the conveniencies we met with, I shall, before I proceed any farther in the history of our own adventures, throw together the most interesting particulars that came to our knowledge, in relation to the fituation, foil, produce, and conveniencies of this Island of *Tinian*.

This Island lies in the latitude 50°; 8' North, and longitude from Acapulco 114°: 50' West. Its length leng half N. and othe occa WOO tom flope the I of it gent that thefe beau cove varie and ther lawn the s unde term brok pear. arofe taini WOO with ly th clivi nate year fom are Ind ck. em and -lpthe rich tes) his nd. ing noft tary renwe lole afed the hat. not iththis ine der ere, the r0encuthe his th, Its th

(415)

length is about twelve miles, and its breadth about half as much; it extending from the S. S. W. to N. N. E. The foil is every where dry and healthy, and fomewhat fandy, which being lefs difpofed than other foils to a rank and over luxuriant vegetation, occasions the meadows and the bottoms of the woods to be much neater and fmoother than is cuftomary in hot climates. The land rifes by eafy flopes, from the very beach where we watered to the middle of the Island; though the general course of its afcent is often interrupted and traverfed by gentle defcents and vallies; and the inequalities that are formed by the different combinations of these gradual fwellings of the ground, are most beautifully diversified with large lawns, which are covered with a very fine trefoil, intermixed with a variety of flowers, and are fkirted by woods of tall and well-foread trees, most of them celebrated either for their aspect or their fruit. The turf of the lawns is quite clean and even, and the bottoms of the woods in many places clear of all bushes and underwoods; and the woods themfelves ufually terminate on the lawns with a regular outline, not broken, nor confused with ftraggling trees, but appearing as uniform, as if laid out by art. Hence arole a great variety of the most elegant and entertaining prospects formed by the mixture of these woods and lawns, and their various interfections with each other, as they fpread themfelves differently through the vallies, and over the flopes and declivities with which the place abounds. The fortunate animals too, which for the greateft part of the year are the fole lords of this happy foil, partake in fome measure of the romantic cast of the Island, and are no fmall addition to its wonderful fcenary : For the

(416)

the cattle, of which it is not uncommon to fee herds of fome thousands feeding together in a large meadow, are certainly the most remarkable in the world; for they are all of them milk-white, except their ears, which are generally black. And though there are no inhabitants here, yet the clamour and frequent parading of domestic poultry, which range the woods in great numbers, perpetually excite the ideas of the neighbourhood of farms and villages, and greatly contribute to the chearfulnefs and beauty of the place. The cattle on the Island we computed were at least ten thousand; and we had no difficulty in getting near them, as they were not thy of us. Our first method of killing them was fhooting them; but at last, when, by accidents to be hereafter recited, we were obliged to hufband our ammunition, our men ran them down with eafe. Their flesh was extremely well tasted, and was believed by us to be much more eafily digefted. than any we had ever met with. The fowls too were exceeding good, and were likewife run down with little trouble; for they could fcarce fly further than an hundred yards at a flight, and even that fatigued them fo much, that they could not readily rife again; fo that, aided by the openne's of the woods, we could at all times furnish ourfelves with whatever number we wanted. Befides the cattle and the poultry, we found here abundance of wild hogs: These were most excellent food ; but as they were a very fierce animal, we were obliged either to fhoot them, or to hunt them with large dogs, which we found upon the place at our landing, and which belonged to the detachment which was then upon the Island amassing provisions for the garrison of Guam. As these dogs had been purposely trained

tc a fu w to pr fo m vy WC nu Th ora Ifla Bre ing fo was upc tow brai able are leng part than ufua grov to be in w to th not 1 ripen

to

to the killing of the wild hogs, they followed us very readily, and hunted for us; but tho' they were a large bold breed, the hogs fought with fo much fury, that they frequently deftroyed them, fo that we by degrees loft the greatest part of them.

But this place was not only extremely grateful to us from the plenty and excellency of its fresh provisions, but was as much perhaps to be admired. for its fruits and vegetable productions, which were most fortunately adapted to the cure of the fea fcurvy, which had fo terribly reduced us. For in the woods there were inconceivable quantities of coconuts, with the cabbages growing on the fame tree: There were befide, guavoes, limes, fweet and four oranges, and a kind of fruit, peculiar to thefe Islands, called by the Indians, Rima, but by us the Bread-Fruit, for it was conftantly eaten by us during our ftay upon the Island inftead of bread, and fo univerfally preferred to it, that no fhip's bread was expended during that whole interval. It grew upon a tree which is fomewhat lofty, and which." towards the top, divides into large and fpreading The leaves of this tree are of a remarkbranches. able deep green, are notched about the edges, and are generally from a foot to eighteen inches in The fruit itfelf grows indifferently on all length. parts of the branches; it is in fhape rather eliptical than round, is covered with a rough rind, and is. ufually feven or eight inches long; each of them grows fingly and not in clufters. This fruit is fitteft to be uled, when it is full grown, but is ftill green ; in which state, its taste has some distant refemblance to that of an artichoke bottom, and its texture is not very different, for it is foft and fpungy. As it ripens it grows fofter and of a yellow colour, and Ee then

then contracts a luscious tafte, and an agreeable Imell, not unlike a ripe peach; but then it is efteemed unwholefome, and is faid to produce fluxes. In the view of the watering place, (Plate XXXIV) there is drawn one of the trees bearing this fruit, it being that marked with the letter (c). Befides the fruits already enumerated, there were many other vegetables extremely conducive to the cure of the malady we had long laboured under, fuch as watermelons, dandelion, creeping purflain, mint, fcurvygrafs, and forrel; all which, together with the fresh meats of the place, we devoured with great eagernefs, prompted thereto by the ftrong inclination, which nature never fails of exciting in fcorbutic diforders for the powerful fpecifics.

It will eafily be conceived from what hath been already faid, that our cheer upon this Island was in fome degree luxurious, but I have not yet recited all the varieties of provision which we here indulged in. Indeed we thought it prudent totally to abitain from fifh, the few we caught at our first arrival having furfeited those who eat of them; but confidering how much we had been inured to that fpecies of food, we did not regard this circumstance as a difadvantage, especially as the defect was fo amply fupplied by the beef, pork and fowls already mentioned, and by great plenty of wild fowl; for I must observe, that near the center of the Island there were two confiderable pieces of fresh water, which abounded with duck, teal, and curlew : Not to mention the whiftling plover, which we found there in prodigious plenty.

And now perhaps it may be wondered at, that an Island, fo exquifitely furnished with the conveniencies of life, and fo well adapted, not only to the fublishence,

ful kir efp Iſla for mu Ifla our Ifla inh tho the peo Gua talit whe and part inde have brin alrea wor Ί pect they crue prop their Ihari worl difta It m inhal and

fubfistence, but likewife to the enjoyment of mankind, should be entirely destitute of inhabitants, efpecially as it is in the neighbourhood of other Islands, which in fome measure depend upon this for their fupport. To obviate this difficulty, I must observe, that it is not fifty years fince the Island was depopulated. The Indians we had in our cuftody affured us, that formerly the three Islands of Tinian, Rota and Guam, were all full of inhabitants; and that Tinian alone contained thirty thousand fouls: But a fickness raging amongst these Islands, which destroyed multitudes of the people, the Spaniards, to recruit their numbers at Guam, which were greatly diminished by this mortality, ordered all the inhabitants of Tinian thither ; where, languishing for their former habitations, and their cuftomary method of life, the greateft part of them in a few years died of grief. Indeed, independent of that attachment which all mankind have ever fhown to the places of their birth and bringing up, it fhould feem, from what has been already faid, that there were few countries more worthy to be regretted than this of Tinian.

These poor Indians might reasonably have expected, at the great distance from Spain, where they were placed, to have escaped the violence and cruelty of that haughty nation, so fatal to a large proportion of the whole human race: But it seems their remote situation could not protect them from sharing in the common destruction of the western world, all the advantage they received from their distance being only to periss an age or two later. It may perhaps be doubted, if the number of the inhabitants of Tinian, who were banished to Guam, and who died there pining for their native home,

1 e 2

was

was fo great, as what we have related above; but. not to mention the concurrent affertion of our prifoners, and the commodiousness of the Island, and its great fertility, there are still remains to be met with on the place, which evince it to have been once extremely populous: For there are, in all parts of the Island, a great number of ruins of a very particular kind; they usually confift of two rows of fquare pyramidal pillars, each pillar being about fix feet from the next, and the diftance between the rows being about twelve feet; the pillars themfelves are about five feet fquare at the bafe, and about thirteen feet high; and on the top of each of them there is a femi-globe, with the flat part upwards; the whole of the pillars and femiglobe is folid, being composed of fand and stone cemented together, and plaiftered over. This odd fabric will be better underftood, by infpecting the view of the watering place already referred to, where an affemblage of thefe pillars is drawn, and is denoted by the letter (a). If the account our prisoners gave us of these structures was true, the Island must indeed have been extremely populous ; for they affured us, that they were the foundations of particular buildings fet apart for those Indians only, who had engaged in fome religious vow; and monastic institutions are often to be met with in many Pagan nations. However, if these ruins were originally the bafis of the common dwellinghouses of the natives, their numbers must have been confiderable; for in many parts of the island they are extremely thick planted, and fufficiently evince the great plenty of former inhabitants. But to return to the prefent state of the Island.

Having

pla pro fre ine gan that the ftan que very tren one trao us, dige amo. fpare breal were tons were them ther vet keen order havin made we be very o An mium ceive,

Having mentioned the conveniencies of this place, the excellency and quantity of its fruits and provisions, the neatness of its lawns, the stateliness, frefhnefs, and fragrance of its woods, the happy inequality of its furface, and the variety and elegance of the views it afforded, I must now observe that all thefe advantages were greatly enhanced by the healthinefs of its climate, by the almost conftant breezes which prevail there, and by the frequent showers which fall, and which, though of a very fhort and almost momentary duration, are extremely grateful and refreshing, and are perhaps one caufe of the falubrity of the air, and of the extraordinary influence it was observed to have upon us, in increasing and invigorating our appetites and digestion. This was to remarkable, that those amongst our officers, who were at all other times fpare and stemperate eaters, who, befides a flight breakfast, made but one moderate repast a day, were here, in appearance, transformed into gluttons; for inftead of one reafonable flefh-meal, they were now fcarcely fatisfied with three, and each of them fo prodigious in quantity, as would at another time have produced a fever or a furfeit: And yet our digeftion fo well corresponded with the keeness of our appetites, that we were neither difordered nor even loaded by this repletion; for after having, according to the cuftom of the Island, made a large beef breakfast, it was not long before we began to confider the approach of dinner as a very defirable, though fomewhat tardy incident.

And now having been thus large in my encomiums on this Island, in which however, I conceive, I have not done it justice, it is necessary I E & 3 fhould

And first, with respect to its water, I must own, that before I had feen this fpot, I did not conceive that the absence of running water, of which it is entirely deftitute, could have been fo well replaced by any other means, as it is in this Island; for though there are no streams, yet the water of the wells and fprings, which are to be met with every where near the furface, is extremely good; and in the midft of the Island there are two or three confiderable pieces of excellent water, whofe edges are as neat and even, as if they had been basons purposely made for the decoration of the place. It must however be contessed, that with regard to the beauty of the profpects, the want of rills and ftreams is a very great defect, not to be compenfated either by large pieces of ftanding water, or by the neighbourhood of the fea, though that, by reafon of the finallness of the island, generally makes a part of every extensive view.

As to the refidence upon the Ifland, the principal inconvenience attending it is the vaft numbers of mufcatos, and various other fpecies of flies, together with an infect called a tick, which, though principally attached to the cattle, would yet frequently faften upon our limbs and bodies, and if not perceived and removed in time, would bury its head under the fkin, and raife a painful inflammation. We found here too centipeds and fcorpions, which we fuppofed were venemous, but none of us ever received any injury from them.

But the most important and formidable exception to this place remains still to be told. This is the inconvenience of the road, and the little fecurity there is at fome feafons for a fhip at anchor. The only proper anchoring place for fhips of burthen is at the S. W. end of the Island. As a direction for readily finding it, there is in the thirty-fifth plate a very accurate view of the S.W. fide of the Island, were (a) is the peak of Saypan, feen over the northern part of Tinian, and bearing N. N. E. And (b) is the anchoring place, diftant eight ÷Ε. miles from the obferver. And as an additional affistance, there is also added in the thirty-fixth plate a near view of the anchoring place itfelf, which reprefents it fo exactly, that none hereafter can polfibly miftake it. In this place the Centurion anchored in twenty and twenty-two fathom water, opposite to a fandy bay, and about a mile and an half diftant from the shore. The bottom of this road is full of sharp-pointed coral rocks, which, during four months of the year, that is, from the middle of June to the middle of October, renders it a very unfafe place to lie at. This is the feafon of the western monfoons, when near the full and change of the moon, but more particularly at the change, the wind is ufually variable all round the compass, and feldom fails to blow with fuch fury, that the floutest cables are not to be confided in : what adds to the danger at these times, is the exceffive rapidity of the tide of flood which fets to the S. E. between this island and that of Aguiguan, a fmall Island near the fouthern extremity of Tinian, which is reprefented in the general chart, hereafter inferted, only by a dot. This tide runs at first with a vaft head and overfall of water, and occafions fuch a hollow and overgrown fea, as is fcarcely to be conceived; fo that (as will be hereafter more particularly mentioned) we were under the Ee4 dread-

hone

dreadful apprehension of being pooped by it, though we were in a fixty gun ship. In the remaining eight months of the year, that is, from the middle of October to the middle of June, there is a constant feafon of fettled weather, when, if the cables are but well armed, there is fcarcely any danger of their being fo much as rubbed : So that during all that interval, it is as fecure a road as could be I shall only add, that the anchoring whiled for. bank is very fhelving, and ftretches along the S. W. end of the island, and that it is entirely free from shoals, except a reef of rocks which is visible, and lies about half a mile from the fhore, and affords a narrow paffage into a fmall fandy bay, which is the only place where boats can possibly land. After this account of the island, and its produce, it is nei ceffary to return to our own hiftory.

Our first undertaking, after our arrival, was the removal of our fick on fhore, as hath been mentioned. Whilft we were thus employed, four of the Indians on shore, being part of the Spanish ferjeant's detachment, came and furrendered themfelves to us, fo that with those we took in the proa, we had now eight of them in our cuftody. One of the four, who fubmitted, 'undertook to fhow us the most convenient place for killing cattle, and two of our men were ordered to attend him on that fervice; but one of them unwarily trufting the Indian with his firelock and piftol, the Indian escaped with them into the woods: His countrymen, who remained behind, were apprehenfive of fuffering for this perfidy of their comrade, and therefore begged leave to fend one of their own party into the country, who they engaged fhould both bring back the arms, and perfuade the whole detachment from Guam

Guam to fubmit to us. The Commodore granted their request; and one of them was dispatched on this errand, who returned next day, and brought back the firelock and pistol, but affured us, he had met with them in a path way in the wood, and protested that he had not been able to meet with any one of his countrymen: This report had so little the air of truth, that we suspected there was some treachery carrying on, and therefore to prevent any future communication among them, we immediately ordered all the *Indian* who were in our power on board the ship, and did not permit them to return any more on shore.

When our fick were well ferried on the Island, we employed all the hands that could be fpared from attending them, in arming the cables with a good rounding, feveral fathom from the anchor, to fecure them from being rubbed by the coral rocks, which here abounded : And this being compleated, our next attention was our leak, and in order to raise it out of water, we, on the first of September, began to get the guns aft to bring the ship by the ftern; and now the Carpenters, being able to come at it on the outfide, ripped off the old sheathing that was left, and caulked all the feams on both fides the cut-water, and leaded them over, and then new fheathed the bows to the furface of the water: By this means we conceived the defect was fufficiently fecured; but upon our beginning to bring the guns into their places, we had the mortification to perceive, that the water rushed into the ship in the old place, with as much violence as ever: Hereupon we were neceffitated to begin again; and that our fecond attempt might be more effectual, we cleared the fore store-room, and sent a hundred 1

hundred and thirty barrels of powder on board the fmall Spanish bark we had feized here, by which means we raifed the ship about three feet out of the water forwards, and the Carpenters ripped off the sheathing lower down, and new caulked all the feams, and afterwards laid on new fheathing; and then, fuppoling the leak to be effectually ftopped, we began to move the guns forwards; but the upper deck guns were fcarcely in their places, when, to our amazement, it burft out again; and now, as we durft not cut away the lining within board, leaft a but-end or a plank might ftart, and we might go down immediately, we had no other refource left than chincing and caulking within board: and indeed by this means the leak was ftopped for fome time; but when our guns were all in their places, and our stores were taken on board. the water again forced its way through a hole in the ftem, where one of the bolts were driven in; and on this we defifted from all farther efforts, being now well affured, that the defect was in the ftem itfelf, and that it was not to be remedied till we fhould have an opportunity of heaving down.

Towards the middle of September, feveral of our fick were tolerably recovered by their refidence on fhore; and, on the 12th of September, all those who were fo far relieved, fince their arrival, as to be capable of doing duty, were fent on board the fhip: And then the Commodore, who was himfelf ill of the fcurvy, had a tent erected for him on fhore, where he went with the view of ftaying a few days for the recovery of his health, being convinced by the general experience of his people, that no other method but living on the land was to be trufted to for the removal of this dreadful malady. hady. The place, where his tent was pitched on this occasion, was near the well, whence we got all our water, and was indeed a most elegant spot. A view of it hath been already referred to under the title of the watering place, where (b) is the Commodore's tent, and (d) the well where we watered.

As the crew on board were now reinforced by the recovered hands returned from the Island, we began to fend our cafk on fhore to be fitted up, which till now could not be done, for the Coopers were not well enough to work. We likewife weighed our anchors, that we might examine our cables, which we fufpected had by this time received confiderable damage. And as the new moon was now approaching, when we apprehended violent gales, the Commodore, for our greater fecurity, ordered that part of the cables next to the anchors to be armed with the chains of the firegrapnels; and they were befides cackled twenty fathom from the anchors, and feven fathom from the fervice, with a good rounding of a $4\frac{1}{2}$ inch hawfer; and to all thefe precautions we added that of lowering the main and fore-yard clofe down, that in cafe of blowing weather the wind might have lefs power upon the fhip, to make her ride a ftrain.

Thus effectually prepared, as we conceived, we expected the new moon, which was the 18th of September, and riding fafe that and the three fucceeding days, (though the weather proved very fqually and uncertain) we flattered ourfelves (for I was then on board) that the prudence of our measures, had fecured us from all accidents; but, on the 22d, the wind blew from the eastward with fuch fury, that

iich the the the and ed, the es, ind hin ind her hin was all rd_ the ind ing em we our on ofe to the ſelf on z a pnble, to naly∙

the

(428)

defpaired of riding out the ftorm : and the stremely glad that the Commodore and the reft of our people on fhore sybich were the greatest part of our hands, had beenison board with us, fince our only hopes of fafety Set nod soudepend on our putting immediately to fea; but all communication with the fhore was now effectually cut off, for there was no poffibility that a boat could live, fo that we were neceffitated to ride it out, till our cables parted. Indeed it was not long before this happened, for the finall bower parted at five in the afternoon, and the frip fwung off to the best bower; and as the night came on, the violence of the wind still increafed; but notwithstanding its inexpressible fury, the tide ran with fo much rapidity, as to prevail over it; for the tide having fet to the northward in the beginning of the ftorm, turned fuddenly to the fourthward about fix in the evening, and forced the thip before it in despight of the ftorm, which bleve upon the beam : And now the fea broke most in orzingly all round us, and a large tumbling indurreatened to poop us; the long boat, which is at this time moored a-ftern, was on a fudden canted to high, that it broke the tranfom of the Commodore's gallery, whofe cabin was on the quarter-deck, and would doubtlefs have rifen as high as the tafferel, had it not been for this ftroke which flove the boat all to pieces; but the poor boat-keeper, though extremely bruifed, was faved almost by miracle. About eight, the tide flackened, but the wind did not abate; fo that at eleven, the best bower cable, by which alone we rode, parted. Our fheet anchor, which was the only one we had left, was inftantly cut from the bow; but

but before it could reach the bottom, we were driven from twenty-two into thirty-five fathous, and after we had veered away one whole caple, and two thirds of another, we could not full routh with fixty fathom of line : This was a minimutation, that the anchor lay near the edge of the bank, and could not hold us. In this preffing danger, Mr. Saumarez, our first Lieutenant, who now commanded on board, ordered feveral guns to be fired, and lights to be flown, as a fignal to the Commodore of our diffress; and in a short time after, it being then about one o'clock, and the night exceffively dark, a ftrong guft, attended with rain and lightning, drove us off the bank, and forced us out to fea, leaving behind us, on the Island, Mr. Anfon, with many more of our officers. and great part of our crew, amounting in the whole to an hundred and thirteen perfons. Thus were we all, both at fea and on fhore, reduced to the utmost defpair by this catastrophe, those on shore conceiving they had no means left them ever to leave the Island, and we on board utterly unprepared to ftruggle with the fury of the feas and winds, we were now exposed to, and expecting each moment to be our last.

(430)

CHAP. III.

Transactions at *Tinian* after the departure of the *Centurion*.

THE form, which drove the Centurion to fea, blew with too much turbulence to permit either the Commodore or any of the people on fhore to hear the guns, which fhe fired as fignals of diftrefs; and the frequent glare of the lightning had prevented the explosions from being observed : So that, when at day-break, it was perceived from the fhore that the fhip was miffing, there was the utmost consternation amongst them : For much the greatest part of them immediately concluded that fhe was loft, and intreated the Commodore that the boat might be fent round the Island to look for the wreck; and those who believed her fafe, had fcarcely any expectation that fhe would ever be able to make the Island again : For the wind continued to blow ftrong at Eaft, and they knew how poorly fhe was manned and provided for ftruggling with fo tempeftuous a gale. And if the Centurion was loft, or should be incapable of returning, there appeared in either cafe no poffibility of their ever getting off the Island : For they were at leaft fix hundred leagues from Macao, which was their nearest port; and they were mafters of no other vessel than the small Spanish bark, of about fifteen tun, which they feized at their first arrival, and which would not even hold a fourth part of their number: And the chance of their being taken off the Island by the cafual arrival

val per bet inc age COL fpe thi COL dor the Gu tion the the hop life the rath onc war the and fam I An he nefs tric anx of 1 hav ther and

val of any other ship was altogether defperate; as perhaps no *European* ship had ever anchored here before, and it were madnefs to expect that like incidents should fend another here in an hundred ages to come: So that their desponding thoughts could only suggest to them the melancholy prospect of spending the remainder of their days on this Island, and bidding adieu for ever to their country, their friends, their families, and all their domestic endearments.

Nor was this the worft they had to fear : For they had reafon to expect, that the Governor of *Guam*, when he fhould be informed of their fituation, might fend a force fufficient to overpower them, and to remove them to that Ifland; and then, the most favourable treatment they could hope for would be to be detained prisoners for life; fince, from the known policy and cruelty of the *Spaniards* in their distant fettlements, it was rather to be expected, that the Governor, if he once had them in his power, would make their want of commissions (all of them being on board the *Centurion*) a pretext for treating them as pirates, and for depriving them of their lives with infamy.

In the midft of these gloomy reflections, Mr. Anfon had doubtless his thare of disquietude; but he always kept up his utual composure and steadiness: And having soon projected a scheme for extricating himself and his men from their present anxious situation, he first communicated it to some of the most intelligent persons about him; and having fatisfied himself that it was practicable, he then endeavoured to animate his people to a speedy and vigorous profecution of it. With this view he

10

a,

it on als 1tng erıg, n : ely **m-**:he behat n: nd role. pano For 20, afrk, eir a

of

ri-

val

he represented to them, how little foundation there was for their apprehenfions of the Centurion's being loft: That he should have hoped, they had been all of them better acquainted with fea-affairs, than to give way to the impression of so chimerical a fright; and that he doubted not, but if they would ferioufly confider what fuch a fhip was capable of enduring, they would confess that there was not the least probability of her having perished : That he was not without hopes that the might return in a a few days; but if the did not, the worst that could be supposed, was, that she was driven so far to the leeward of the Island that she could not regain it, and that fhe would confequently be obliged to bear away for Matao on the coaft of China : That as it was neceffary to be prepared aganft all events, he had, in this cafe, confidered of a method of carrying them off the Island, and joining their old fhip the Centurion again at Macao : That this method was to hale the Spanish bark on thore, to faw her afunder, and to lengthen her twelve feet, which would enlarge her to near forty tun burthen, and would enable her to carry them all to China : That he had confulted the Carpenters, and they had agreed that this propofal was very feazible, and that nothing was wanting to execute it, but the united refolution and industry of the whole body; He added, that for his own part, he would share the fatigue and labour with them, and would expect no more from any man than what he, the Commodore himfelf, was ready to fubmit to; and concluded with reprefenting to them the importance of faving time; and that, in order to be the better prepared for all events, it was necessary to fet to work immediately, and to take it for granted,

ed, bac opi onl fhe year fect Mr. thei thei **fpai** refo fitua flatte turn dore woul mean them being the fl the c duftr defire rende differ unulu An tranfa which cern t after t on the Joy, e

ed, that the *Centurion* would not be able to put back (which was indeed the Commodore's fecret opinion;) fince, if fhe did return, they fhould only throw away a few days application; but, if fhe did not, their fituation, and the feason of the year, required their utmost dispatch.

These remonstrances, though not without effect, did not immediately operate to powerfully as Mr. Anfon could have wished : He indeed raifed their fpirits by fhowing them the poffibility of their getting away, of which they had before despaired; but then, from their confidence of this refource, they grew lefs apprehenfive of their fituation, gave a greater fcope to their hopes, and flattered themfelves that the Centurion would return and prevent the execution of the Commodore's scheme, which they could easily forefee would be a work of confiderable labour : By this means, it was fome days before they were all of them heartily engaged in the project; but at last, being in general convinced of the impoffibility of the fhip's return, they fet themfelves zealoufly to the different talks allotted them, and were as industrious and as eager as their Commander could defire, punctually affembling at day-break at the rendezvous, whence they were distributed to their different employments, which they followed with unufual vigour 'till night came on.

And here I must interrupt the course of this transaction for a moment, to relate an incident which for fome time gave Mr. Anfon more concern than all the preceding difasters. A few days after the ship was driven off, fome of the people on shore cried out, a fail. This spread a general joy, every one supposing that it was the ship re-F f

ere ing een han la uld of not hat in'a that r to gain to 'hat nts, l of old mefaw hich and hat had and the dy; hare exthe and orthe to nted,

turning; but prefently, a fecond fail was defcried, which quite deftroyed their conjecture, and made it difficult to guess what they were. The Commodore eagerly turned his glafs towards them. and faw they were two boats; on which it immediately occurred to him, that the Centurion was gone to the botton, and that thefe were her two boats coming back with the remains of her people : And this fudden and unexpected fuggeftion wrought on him fo powerfully, that, to conceal his emotion, he was obliged (without fpeaking to any one) infantly to retire to his tent, where he past fome bitter moments, in the firm belief that the ship was loft, and that now all his views of farther diftreffing the enemy, and of ftill fignalizing his expedition by fome important exploit, were at an end.

But he was foon relieved from these disturbing thoughts, by difcovering that the two boats in the offing were Indian proas; and perceiving that they ftood towards the fhore, he directed every appearance that could give them any fufpicion to be removed, and concealed his people, in the adjacent thickets, prepared to fecure the Indians when they fhould land : But, after the proas had flood in within a quarter of a mile of the land, they fuddenly ftopt fhort, and remaining there motionlefs for near two hours, they then made fail again, and flood to the fouthward. But to return to the projected enlargement of the bark.

If we examine how they were prepared for going through with this undertaking, on which their fafety depended, we fhall find, that, independent of other matters which were of as much importance, the lengthning of the bark alone was at-. tended

ried, made lomhem, nmegone boats And ht on otion, e) infome e ship er difis exat an

urbing in the at they ppearbe redjacent in they bod in ey fudionlefs n, and he pro-

> for goh their endent inporvas at-. tended

tended with great difficulty. Indeed, in a proper place, where all the neceffary materials and tools were to be had, the embarrafment would have been much lefs; but fome of thefe tools were to be made, and many of the materials were wanting; and it required no fmall degree of invention to fupply all thefe deficiencies. And when the hull of the bark should be compleated, this was but one article; and there were many others of equal weight, which were to be well confidered : These were the rigging it, the victualling it, and laftly, the navigating it, for the fpace of fix or feven hundred leagues, through unknown feas, where no one of the company had ever passed before. In fome of these particulars such obstacles occurred, that, without the intervention of very extraordinary and unexpected accidents, the poffibility of the whole enterprize would have fallen to the ground, and their utmost industry and efforts must have been fruitless. Of all these circumflances I shall make a short recital.

It fortunately happened that the Carpenters, both of the Gloucester and of the Tryal, with their chefts of tools, were on shore when a ship drove out to fea; the Smith too was on fhore, and had with him his forge and fome tools, but unhappily his bellows had not been brought from on board; fo that he was incapable of working, and without his affiftance they could not hope to proceed with their defign. Their first attention therefore was to make him a pair of bellows, but in this they were for fome time puzzled, by their want of leather; however, as they had hides in fufficient plenty, and they had found a hogshead of lime, which the Indians or Spaniards had prepared for Ff2 their

their own use, they tanned fome hides with this lime; and though we may suppose the workmanship to be but indifferent, yet the leather they thus made ferved tolerably well, and the bellows (to which a gun-barrel ferved for a pipe) had no other inconvenience, than that of being somewhat strong scented from the impersection of the Tanner's work.

Whilft the Smith was preparing the neceffary iron-work, others were employed in cutting down trees, and fawing them into plank; and this being the most laborious task, the Commodore wrought at it himfelf for the encouragement of his people. As there were neither blocks nor cordage fufficient for tackles to hale the bark on fhore, it was proposed to get her up on rollers; and for these, the body of the coco-nut tree was extremely useful; for its fmoothnefs and circular turn prevented much labour, and fitted it for the purpofe with very little workmanship: A number of these trees were therefore felled, and the ends of them properly opened for the reception of hand-fpikes; and in the mean time a dry dock was dug for the bark, and ways laid from thence quite into the fea, to facilitate the bringing her up. And befides those who were thus occupied in preparing measures for the future enlargement of the bark, a party was constantly ordered for the killing and preparing of provisions for the rest : And though in these various employments, tome of which demanded confiderable dexterity, it might have been expected there would have been great confusion and delay; yet, good order being once eftablished, and all hands engaged, their preparations advanced apace. Indeed, the common

con able the juic and all i orde A the whe the Cent read her And pay lime that men The have her f forty of co woul all a woul but they ready fittin the how their lois

(437)

common men, I presume, were not the less tractable for their want of spirituous liquors: For, there being neither wine nor brandy on shore, the juice of the coco-nut was their constant drink, and this, though extremely pleafant, was not at all intoxicating, but kept them very cool and orderly.

And now the officers began to confider of all the articles neceffary for fitting out the bark; when it was found, that the tents on thore, and the fpare cordage accidentally left there by the Centurion, together with the fails and rigging already belonging to the bark, would ferve to rig her indifferently well, when she was lengthened : And as they had tallow in plenty, they proposed to pay her bottom with a mixture of tallow and lime, which it was known was well adapted to that purpose : So that with respect to her equipment, she would not have been very defective. There was, however, one exception, which would have proved extremely inconvenient, and that was her fize: For as they could not make her quite forty tun burthen, fhe would have been incapable of containing half the crew below the deck, and the would have been fo top-heavy, that if they were all at the fame time ordered upon deck, there would be no fmall hazard of her over-fetting ; but this was a difficulty not to be removed, as they could not augment her beyond the fize already propofed. After the manner of rigging and fitting up the bark was confidered and regulated. the next effential point to be thought on was, how to procure a fufficient ftock of provisions for their voyage; and here they were greatly at a lois what courfe to take; for they had neither Ff3 grain

this anthey lows 1 no what lan-

fary lown bedore t of nor k on lers : was cular r the numthe ption dock hence her upied ment d for the hents, erity, have order aged, the nnion

grain nor bread of any kind on fhore, their breadfruit, which would not keep at fea, having all all along fupplied its place : And though they had live cattle enough, vet they had no falt to cure beef for a fea ftore, nor would meat take falt in that climate. Indeed, they had preferved a fmall quantity of jerked beef, which they found upon the place at their landing; but this was greatly difproportioned to the run of near fix hundred leagues, which they were to engage in, and to the number of hands they fhould have on board. It was at last, however, refolved to take on board as many coco-nuts as they poffibly could ; to make the most of their jerked beef, by a very sparing distribution of it; and to endeavour to fupply their want of bread by rice; to furnish themselves with which, it was proposed, when the bark was fitted up, to make an expedition to the Island of Rota, where they were told, that the Spaniards had large plantations of rice under the care of the Indian inhabitants. But as this last measure was to be executed by force, it became neceffary to examine what ammunition had been left on fhore, and to preferve it carefully; and on this enquiry, they had the mortification to find, that the utmost that could be collected, by the ftricteft fearch, did not amount to more than ninety charges of powder for their firelocks, which was confiderably fhort of one a-piece for each of the Company, and was indeed a very flender flock of ammunition, for fuch as were to eat no grain or bread for a month, but what they were to procure by force of arms.

But the most alarming circumstance, and what, without the providential interposition of very improbable events, had rendered all their schemes abortive,

abort idea fettle was time was fider land them neith deed pals Brett the n to fei as to be fo there board partu degr At Span thou the inva fimil dran over the on e ther how mod riofi adall

S

abortive, remains yet to be related. The general idea of the fabric and equipment of the veffel was fettled in a few days; and when this was done, it was not difficult to make fome estimation of the time neceffary to compleat her. After this, it was natural to expect that the officers would confider on the courfe they were to fteer, and the land they were to make. These reflections led them to the difheartning difcovery, that there was neither compass nor quadrant on the island. Indeed the Commodore had brought a pocket-compais on shore for his own use; but Lieutenant Brett had borrowed it to determine the polition of the neighbouring Islands, and he had been driven to fea in the Centurion, without returning it : And as to a quadrant, that could not be expected to be found on shore, for as it was of no use at land, there could be no reafon for bringing it from on board the ship. It was eight days, from the departure of the Centurion, before they were in any degree relieved from this terrible perplexity: At last, in rumaging a cheft belonging to the Spanish bark, they found a small compass, which, though little better than the toys usually made for the amufement of school-boys, was to them an invaluable treasure. And a few days after, by a fimilar piece of good fortune, they found a quadrant on the fea-shore, which had been thrown over-board amongst other lumber belonging to the dead. The quadrant was eagerly feized, but on examination, it unluckily wanted vanes, and therefore in its prefent state was altogether useles; however, fortune ftill continuing in a favourable mood, it was not long before a perfon out of curiofity pulling out the drawer of an old table, which

which had been driven on fhore, found therein fome vanes, which fitted the quadrant very well; and it being thus compleated, it was examined by the known latitude of the place, and was found to anfwer to a fufficient degree of exactnefs.

And now, all these obstacles being in some degree removed, (which were always as much as poffible concealed from the vulgar, that they might not grow remifs with the apprehension of labouring to no purpole) the work proceeded very fuccefsfully and vigoroufly : The neceffary ironwork was in great forwardness; and the timbers and planks (which, though not the most exquisite performances of the Sawyer's art, were yet fufficient for the purpose) were all prepared; fo that, on the 6th of OEtcher, being the 14th day from the departure of the ship, they haled the bark on fhore, and, on the two fucceeding days fhe was fawn afunder, (though with great care not to cut her planks) and her two parts were feparated the proper diftance from each other, and, the materials being all ready before-hand, they, the next day, being the 9th of Ottober, went on with great difpatch in their proposed enlargement of her; and by this time they had all their future operations fo fairly in view, and were fo much mafters of them, that they were able to determine when the whole would be finished, and had accordingly fixed the 5th of November for the day of their putting to fea. But their projects and labours were now drawing to a fpeedier and happier conclusion ; for on the 11th of October, in the afternoon, one. of the Gloucester's men, being upon a hill in the middle of the Island, perceived the Centurion at a distance, and running down with his utmost speed towards

to for wi he wł his pla at ttri to and wh thr var the to the ed fide the and rein the noc who boa cere foll and nine eafi pole mat turn (441)

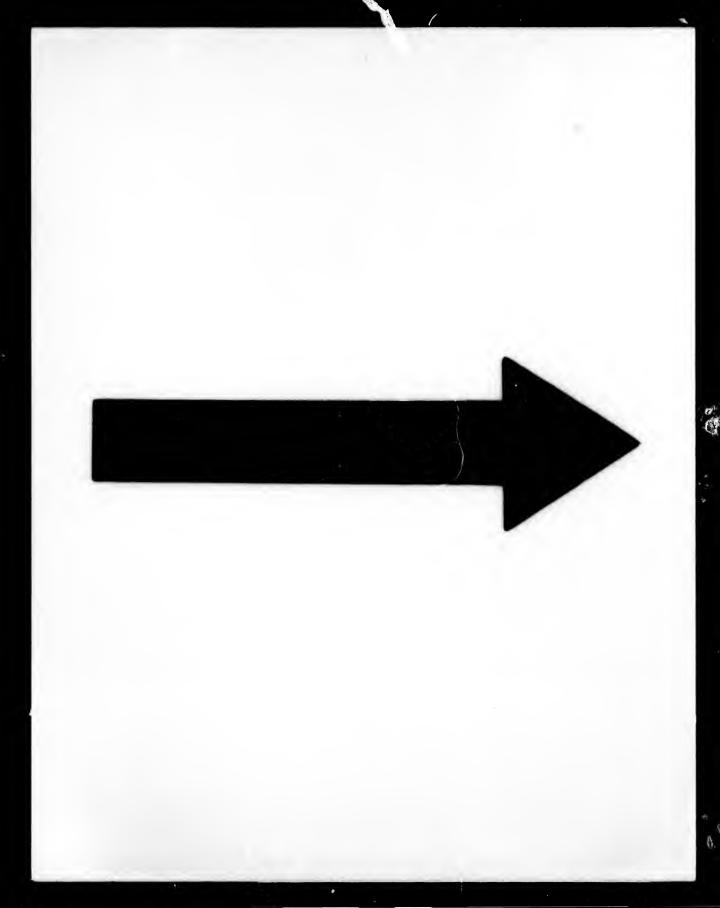

towards the landing-place, he, in the way, faw fome of his comrades, to whom he hollowed out with great extafy, The ship, the ship. This being heard by Mr. Gordon, a Lieutenant of marines, who was convinced by the fellow's transport that his report was true, Mr. Gordon ran towards the place where the Commodore and his people were at work, and being fresh and in breath, eafily outstripped the Gloucester's man, and got before him to the Commodore, who, on hearing this happy and unexpected news, threw down his axe with which he was then at work, and by his joy broke through, for the first time, the equable and unvaried character which he had hitherto preferved; the others, who were with him, inftantly ran down to the fea-fide in a kind of frenzy, eager to feaft themfelves with a fight they had fo ardently wifhed for, and of which they had now for a confiderable time defpaired. By five in the evening, the Centurion was visible in the offing to them all; and, a boat being fent off with eighteen men to reinforce her, and with fresh meat and fruits for the refreshment of her crew, she, the next afternoon, happily came to an anchor in the road, where the Commodore immediately came on board her, and was received by us with the fincereft and heartieft acclamations : For, from the following fhort recital of the fears, the dangers and fatigues we in the ship underwent, during our nineteen days absence from Tinian, it may be eafily conceived, that a harbour, refreshments, repofe, and the joining of our Commander and Shipmates, were not less pleafing to us, than our return was to them.

CHAP. IV.

Proceedings on board the Centurion, when driven out to fea.

THE Centurion being now once more fafely arrived at Tinian, to the mutual refpite of the labours of our divided crew, it is high time that the reader, after the relation already given of the projects and employment of those left on shore, should be apprized of the fatigues and distress to which we, who were driven off to sea, were exposed during the long interval of nineteen days that we were absent from the Island.

It has been already mentioned, that it was the 22d of September, about one o'clok, in an extreme dark night, when by the united violence of a prodigious form, and an exceeding rapid tide, we were driven from our anchors and forced to fea. Our condition then was truly deplorable; we were in a leaky fhip, with three cables in our hawfes, to one of which hung our only remaining anchor; we had not a gun on board lashed, nor a port barred in; our fhrowds were loofe, and our top mafts unrigged, and we had ftruck our fore and mainyards close down, before the ftorm came on, fo that there were no fails we could fet, except our In this dreadful extremity we could muster mizen. no more strength on board, to navigate the ship, than an hundred and eight hands, feveral Negroes and Indians included: This was fearcely the fourth part of our complement; and of thefe the greater number were either boys, or fuch as, being lately recovered

recov half fea, work water pers, leak, ployn being in our imper as a f gined bourin leagu and f could fuffici theref endea heave if we canva thereb wreck bour, jaded, and q ceived felves fhore, weex by ftri Aructi when

recovered from the fcurvy, had not yet arrived at half their former vigour. No fooner were we at fea, but by the violence of the ftorm, and the working of the fhip, we made a great quantity of water through our hawle-holes, ports and fcuppers, which, added to the conftant effect of our leak, rendered our pumps alone a fufficient employment for us all. But though this leakage, by being a fhort time neglected, would inevitably end in our destruction; yet we had other dangers then impending, which occafioned this to be regarded as a fecondary confideration only. For we all imagined, that we were driving directly on the neighbouring Island of Aguiguan, which was about two leagues diftant; and as we had lowered our main and fore-yards close down, we had no fails we could fet but the mizen, which was altogether infufficient to carry us clear of this inftant peril. We therefore immediately applied ourfelves to work, endeavouring, by the utmost of our efforts, to heave up the main and fore-yards, in hopes that, if we could but be enabled to make use of our lower canvafs, we might poffibly weather the Island, and thereby fave ourfelves from this impending thicwreck. But after full three hours ineffectual labour, the jeers broke, and the men being quite iaded, we were obliged, by mere debility, to defift, and quietly to expect our fate, which we then conceived to be unavoidable : For we imagined ourfelves by this time, to be driven just upon the shore, and the night was so extremely dark, that we expected to difcover the Island no otherwife than by ftriking upon it; fo that the belief of our deflruction, and the uncertainty of the point of time when it would take place, occasioned us to pass feveral

(444)

feveral hours, under the most ferious apprehensions, that each fucceeding moment would fend us to the bottom. Nor did these continued terrors, of inftantly striking and finking, end but with the daybreak; when we with great transport perceived, that the Island we had thus dreaded, was at a considerable distance, and that a strong northern current had been the cause of our prefervation.

The turbulent weather, which forced us from Tinian, did not begin to abate, 'till three days after; and then we fwayed up the fore-yard, and began to heave up the main-vard, but the jeers broke and killed one of our men, and prevented us at that time from proceeding. The next day, being the 26th of September, was a day of most fevere fatigue to us all; for it must be remembred, that in these exigencies no rank or office exempted any perfon from the manual application and bodily labour of a common failor. The business of this day was no less than an attempt to heave up the fheet-anchor, which we had hitherto dragged at our bows with two cables an end. This was a work of great importance to our future prefervation: For, not to mention the impediment to our navigation, and the hazard it would be to our fhip, if we attempted to make fail with the anchor in its prefent fituation, we had this most interesting confideration to animate us, that it was the only anchor we had left; and, without fecuring it, we should be under the utmost difficulties and hazards, when ever we made the land again; and therefore, being all of us fully apprized of the confequence of this enterprize, we laboured at it with the feverest application for full twelve hours, when we had indeed made a confiderable progrefs, having brought the anchor in fight; but,

it the tigue work the b hung It that i fecure our fome necef fea, a we fe the e Tinia For feven on th ftance our r ing it were us to how confe at fea water ful al many out. tainty Guan had d our a us of

it

it then growing dark, and we being exceffively fatigued, we were obliged to defift, and to leave our work unfinished, till the next morning, when, by the benefit of a night's rest, we compleated it, and hung the anchor at our bow.

It was the 27th of September in the morning, that is, five days after our departure, when we thus fecured our anchor; and the fame day, we got up our main-yard: And having now conquered in fome degree the diffrefs and diforder which we were neceffarily involved in at our first driving out to fea, and being enabled to make use of our canvas, we fet our courses, and for the first time stood to the eaftward in hopes of regaining the Island of Tinian, and joining our Commodore in a few days : For we were then by our accounts, only forty feven leagues to the South West of Tinian; fo that on the first day of October, having then run the diftance neceffary for making the Island according to our reckoning, we were in full expectation of feeing it; but we were unhappily difappointed, and were thereby convinced, that a current had driven us to the weftward. And as we could not judge how much we might hereby have deviated, and confequently how long we might ftill expect to be at fea, we had great apprehensions that our stock of water might prove deficient, for we were doubtful about the quantity we had on board, and found many of our cafks fo decayed, as to be half leaked However, we were delivered from our uncerout. tainty the next day by having a fight of the Island of Guam, by which we difcovered that the currents had driven us forty-four leagues to the weltward of our accounts. This fight of land having fatisfied us of our fituation, we kept plying to the eaftward, though

(446)

though with exceflive labour, for, the wind continuing fixed in the eaftern board, we were obliged to tack often, and our crew were fo weak, that, without the affiftance of every man on board, it was not in our power to put the fhip about. This fevere employment lafted till the 11th of OElober, being the nineteenth day from our departure; when arriving in the offing of *Tinian*, we were reinforced from the fhore, as hath been already mentioned; and on the evening of the fame day, we, to our inexpreffible joy, came to an anchor in the road, thereby procuring to our fhipmates on fhore, as well as to ourfelves, a ceffation from the fatigues and apprehenfions, which this difaftrous incident had given rife to.

CHAP. V.

Employment at *Tinian*, till the final departure of the *Centurion* from thence; with a defcription of the *Ladrones*.

WHEN the Commodore came on board the Centurion, on her return to Tinian, as already mentioned, he refolved to ftay no longer at the Ifland than was abfolutely neceffary to compleat our ftock of water, a work which we immediately fet ourfelves about. But the lofs of our long-boat, which was ftaved againft our poop, when we were driven out to fea, put us to great inconveniencies in getting our water on board; for we were obliged to raft off all our cafk, and the tide ran fo ftrong, that, that, occal Nor of O a fu force fea a and we h ploy The were we fe at the emba of m ploye ing t hind left drove their was than five of an, a their 0 the new fhore ing t pofe conf they that, befides the frequent delays and difficulties it occasioned, we more than once lost the whole raft. Nor was this our only misfortune; for, on the 14th of OEtober, being but the third day after our arrival. a fudden guft of wind brought home our anchor, forced us off the bank, and drove the fhip out to fea a fecond time. The Commodore, it is true. and the principal officers were now on board; but we had near feventy men on fhore, who had been employed in filling our water, and procuring provisions. These had with them our two Cutters; but as they were too many for the Cutters to bring off at once. we fent the eighteen oared barge to affift them ; and at the fame time made a fignal for all that could to embark. The two Cutters foon came off to us full of men; but forty of the company, who were employed in killing cattle in the wood, and in bringing them down to the landing-place, were left behind; and though the eighteen oared barge was left for their conveyance, yet, as the ship foon drove to a confiderable diftance, it was not in their power to join us. However, as the weather was favourable, and our crew was now ftronger than when we were first driven out, we, in about five days time, returned again to an anchor at Tinian, and relieved those we had left behind us from their fecond fears of being deferted by their ship:

On our arrival, we found that the Spanifb bark, the old object of their hopes, had undergone a new metamorpholis: For those we had left on shore began to despair of our return, and conceiving that the lengthening the bark, as formerly proposed, was both a toilfome and unneceffary measure, confidering the small number they consisted of, they had resolved to join her again, and to reftore her. her to her first state; and in this scheme they had made some progress; for they had brought the two parts together, and would have soon compleated her, had not our coming back put a period to their labours and disquietudes.

These people we had left behind informed us, that, just before we were seen in the offing, two proas had stood in very near the shore, and had continued there for some time; but on the appearance of our ship, they crowded away, and were presently out of sight. And, on this occasion, I must mention an incident, which, though it happened during the first absence of the ship, was then omitted, to avoid interrupting the course of the narration.

It hath been already observed, that a part of the detachment, fent to this Island under the command of the Spanish Serjeant, lay concealed in the woods; and we were the lefs folicitous to find them out. as our prifoners all affured us, that it was impoffible for them to get off, and confequently that it was impoffible for them to fend any intelligence about us to Guam. But when the Centurion drove out to fea, and left the Commodore on fhore, he one day, attended by fome of his officers, endeavoured to make the tour of the Island : In this expedition. being on a rifing ground, they perceived in the valley beneath them the appearance of a fmall thicket, which, by observing more nicely, they found had a progreffive motion : This at first furprized them; but they foon difcovered, that it was no more than feveral large coco bulhes, which were dragged along the ground, by perfons concealed beneath them. They immediately concluded that these were some of the Serjeant's party (which was indeed

b

indeed true:) and therefore the Commodore and his people made after them, in hopes of finding out their retreat. The Indians foon perceived they were discovered, and hurried away with precipitation; but Mr. Anfon was fo near them, that he did not lofe fight of them till they arrived at their cell, which he and his officers entering found to be abandoned, there being a passage from it down a precipice contrived for the conveniency of flight. They found here an old firelock or two, but no other arms. However, there was a great quantity of provisions, particularly falted sparibs of pork, which were excellent; and from what our people faw here, they concluded, that the extraordinary appetite, which they had found at this Ifland, was not confined to themfelves alone; for, it being about noon, the Indians had laid out a very plentiful repast confidering their numbers, and had their bread-fruit and coco-nuts prepared ready for eating, and in a manner which plainly evinced, that, with them too, a good meal was neither an uncommon nor an unheeded article. The Commodore having in vain endeavoured to difcover the path by which the Indians had efcaped, he and his officers contented themfelves with fitting down to the dinner, which was thus luckily fitted to their prefent appetites; after which, they returned back to their old habitation, difpleafed at miffing the Indians, as they hoped to have engaged them in our fervice, if they could have had any conference with them. But notwithftanding what our prifoners had afferted, we were afterwards affured, that these Indians were carried off to Guam long before we left the place. But to return to our hiftory.

On our coming to an anchor again, after our fecond driving off to fea, we laboured indefatigably in getting in our water; and having, by the 20th of Ottober, compleated it to fifty tun, which we fupposed would be fufficient for our paffage to Macao, we, on the next day, fent one of each mels on shore, to gather as large a quantity of oranges lemons, coco-nuts and other fruits of the Island, as they poffibly could, for the use of themseves and mess-mates, when at fea. And, these purveyers returning on board us on the evening of the fame day, we then fet fire to the bark and proa, hoifted in our boats, and got under fail, fteering away for the South-end of the Island of Formofa, and taking our leaves, for the third and last time, of the Island of Tinian : An Island, which, whether we confider the excellence of its productions, the beauty of its appearance, the elegance of its woods and lawns. the healthinefs of its air, or the adventures it gave rife to, may in all these views be truly styled romantic.

And now, postponing for a short time our run to Formosa, and thence to Canton, I shall interrupt the narration with a description of that range of Islands, usually called the Ladrones, or Marian Islands, of which this of Tinian is one.

These Islands were discovered by Magellan in the year 1521; and by the account given of the two he first fell in with, it should seem that they were the Islands of Saypan and Tinian; for they are described in his expedition as very beautiful Islands, and as lying between 15 and 16 degrees of North latitude. These characteristics are particularly applicable to the two above mentioned places; for the pleasing appearance of Tinian hath occasioned the

the S nafin 15°: when evinc ken a thirty Th Ifland Nort that | then twent inhab: princi ther, fand entire dred] rice for than (This ! Spanie and h frefhn lippine in cire counts thoufa de Age and w able, vered warm city, t the Spaniards to give it the additional name of Buenaftiva; and Saypan, which is in the latitude of 15° : 22 North, affords no contemptible prospect when feen from the fea, as may be fufficiently evinced from the view of its North Weft fide, taken at three leagues diffance, and exhibited in the thirty-feventh plate.

There are ufually reckoned twelve of thefe Islands; but it will appear, from the chart of the North part of the Pacific Ocean hereafter inferted, that if the finall iflets and rocks are counted in, then their whole number will amount to above twenty. They were formerly most of them well inhabited ; and, even not fixty years ago, the three principal Islands, Guam, Rota, and Tinian together, are faid to have contained above fifty thoufand people: But fince that time Tinian hath been entirely depopulated; and only two or three hundred Indians have been left at Rota, to cultivate rice for the Island of Guam; fo that now no more than Guam can properly be faid to be inhabited. This Island of Guam is the only fettlement of the Spaniards; here they keep a governor and garrifon, and here the Manila ship generally touches for refreshment, in her passage from Acapulco to the Pbilippines. It is effected to be about thirty leagues in circumference, and contains, by the Spanish accounts, near four thousand inhabitants, of which a thousand are faid to live in the city of San Ignatio de Agand, where the Governour generally refides. and where the houses are represented as confiderable, being built with stone and timber, and covered with tiles, a very uncommon fabric for these warm climates and favage countries : Befides this city, there are upon the Island thirteen or fourteen vil. Gg 2

(452)

villages. As this is a post of some confequence, on account of the refreshment it yields to the Manila ship, there are two castles on the sea-shore; one is the caftle of St. Angelo, which lies near the road, where the Manila fhip usually anchors, and is but an infignificant fortrefs, mounting only five guns eight pounders; the other is the caftle of St. Lewis, which is N. E. from St. Angels, and four leagues diftant, and is intended to protect a road where a finall veffel anchors, which arrives here every other year from Manila. This fort mounts the fame number of guns as the former : And 'befides these forts, there is a battery of five pieces of cannon on an eminence near the fea-fhore. The Spanish troops employed on this island, confift of three companies of foot, from forty to fifty men each; and this is the principal ftrength the Governor has to depend on; for he cannot rely on any affiftance from the Indian inhabitants, being generally upon ill terms with them, and fo apprehenfive of them, that he has debarred them the use of firearms or lances.

The reft of these Islands, though not inhabited, do yet abound with many kinds of refreshment and provision; but there is no good harbour or road to be met with amongst them all: Of that of *Tinian* we have treated largely already; nor is the road of *Guam* much better; for it is not unusual for the *Manila* ship, though she proposes to shay there but twenty-four hours, to be forced to sea, and to leave her boat behind her. This is an inconvenience fo fensibly felt by the commerce at *Manila*, that it is always recommended to the Governor at *Guam*, to use his best endeavours for the discovery of some fafe port in this part of the world. How industrious

From what has been faid, it appears, that the Spaniards, on the Island of Guam, are extremely few, compared to the Indian inhabitants; and formerly the difproportion was still greater, as may be eafily conceived from what hath been faid, in another chapter, of the numbers heretofore on Tinian alone. These Indians are a bold well-limbed people; and it fhould feem from fome of their practices, that they are no ways defective in understanding; for their flying proas in particular, which have been for ages the only veffels used by them, are fo fingular and extraordinary an invention, that it would do honour to any nation, however dexterous and acute. For if we confider the aptitude of this proa to the particular navigation of these Islands, which lying all of them nearly under the fame meridian, and within the limits of the tradewind, require the veffels made use of in paffing from one to the other, to be particularly fitted for failing with the wind upon the beam; or, if we examine the uncommon fimplicity and ingenuity of its fabric and contrivance, or the extraordinary velocity with which it moves, we shall, in each of thefe articles, find it worthy of our admiration, and meriting a place amongst the mechanical productions of the most civilized nations, where arts and fciences have most eminently flourished. As for G 3 3

former Navigators, though they have mentioned thefe veffels, have yet treated of them imperfectly; and as I conceive, that, befides their curiofity, may furnish both the shipwright and seaman with no contemptible observations, I shall here infert a very exact description of the built, rigging, and working of these vessels, which I am well enabled to do; for one of them, as I have mentioned, fell into our hands at our first arrival at Timian, and Mr. Brett took it to pieces, on purpose to delineate its fabric and dimensions with greater accuracy: So that the following account may be relied on.

The name of flying proa given to these veffels, is owing to the ftiffnefs with which they fail. Of this the Spaniards affert fuch ftories, as appear altogether incredible to those who have never feen these veffels move; nor are the Spaniards the only people who relate these extraordinary tales of their celerity. For those who shall have the curiofity to enquire at the dock at Port mouth, about a trial made there fome years fince, with a very imperfect one built at that place, will meet with accounts not lefs wonderful than any the Spaniards have given. However, from fome rude effimations made by our people, of the velocity with which they croffed the horizon at a diftance, whilf we lay at Tinian. I cannot help believing, that with a brifk tradewind they will run near twenty miles an hour; Which though, greatly short of what the Spaniards report of them, is yet a prodigious degree of fwiftnefs. But let us give a diftinct idea of its figure.

The construction of this proa is a direct contradiction to the practice of the rest of mankind. For as the rest of the world make the head of their vesfels

fels different from the stern, but the two sides alike; the proa on the contrary, has her head and stern exactly alike, but her two fides very different; the fide, intended to be always the lee-fide, being flat; and the windward-fide made rounding, in the manner of other veffels: And, to prevent her overfetting, which from her fmall breadth. and the straight run of her leeward-fide, would, without this precaution, infallibly happen, there is a frame laid out from her to windward, to the end of which is fastened a log, fashioned into the shape of a fmall boat, and made hollow: The weight of the frame is intended to ballance the proa, and the fmall boat is by its buyancy (as it is always in the water) to prevent her overfetting to windward ; and this frame is ufually called an outrigger : The body of the proa (at leaft of that we took) is made of two pieces joined end-ways, and fowed together with bark, for there is no iron used about her : She is about two inches thick at the bottom, which at the gunwale is reduced to lefs than one: The dimenfions of each part will be better known from the uprights and views contained in the thirtyeighth plate, which were drawn from an exact menfuration; these I shall endeavour to explain as minutely and diffinctly as I can.

ł

Fig. 1. Reprefents the proa with her fail fet, as fhe appears when viewed from the leeward.

Fig. 2. Is a view of her from the head, with the outrigger to the windward.

Fig. 3. Is the plan of the whole; where (AB) is the lee-fide of the proa; (CD) the windwardfide; (EFGH) the outrigger or frame laid out to windward; (KL) the boat at the end of it; (MNPQ) two braces from the head and ftern to fteady

Gg 4

(456)

fteady the frame; (RS) a thin plank placed to windward, to prevent the proa from fhipping of . water, and for a feat to the Indian who bales, and fometimes goods are carried upon it; (I) is the part of the middle outrigger, on which the mast is fixed: The mast itself is supported (Fig. 2.) by the fhore (CD), and by the hrowd (EF), and by two ftays, one of which may be feen, in Fig. 1, marked (CD), the other is hid by the fail: The fail (EFG), in Fig. 1, is made of matting, and the maft, yard, boom, and outriggers, are all made of bamboo: The heel of the yard is always lodged in one of the fockets (T) or (V), Fig. 2, according to the tack the proa goes on; and when the alters her tack, they bear away a little to bring her ftern up to the wind, then by eafing the halyard, and raifing the yard, and carrying the heel of it along the lee-fide of the proa, they fix it in the oppofite focket; whilft the boom at the fame time, by letting fly the fheet (M), and haling the fheet (N), Fig. 1, fhifts into a contrary fituation to what it had before, and that which was the ftern of the proa, now becomes the head, and the is trimmed on the other tack. When it is neceffary to reef or furl the fail, this is done by rolling it round the boom. The proa generally carries fix or feven Indians; two of which are placed in the head and ftern, who fteer the veffel alternately with a paddle according to the tack fhe goes on, he in the ftern being the steersinan; the other Indians are employed either in baling out the water which fhe accidentally fhips, or in fetting and trimming the fail. From the defcription of these veffels it is fufficiently obvious, how dexterously they are fitted for ranging this collection of Mands called the Ladrones : For

For other wind. wind. one o only bout their neare know veffel vanta nearly than t ever 1 in fim that t the w windr will b tion. of a v the fa move the w mills, air, a when Th nature that v thefe, Eaft-1 be co. their For as these Islands lie nearly N. and S. of each other, and are all within the limits of the tradewind, the proas, by failing most excellently on a wind, and with either end foremost, can run from one of these Islands to the other and back again, only by fhifting the fail, without ever putting about; and, by the flatness of their lee-fide, and their finall breadth, they are capable of lying much nearer the wind than any other vefiel hitherto known, and thereby have an advantage, which no veffels that go large can ever pretend to: The advantage I mean is that of running with a velocity nearly as great, and perhaps fometimes greater than that with which the winds blows. This, however paradoxical it may appear, is evident enough in fimilar inftances on fhore : For it is well known, that the fails of a windmill often move faster than the wind; and one great fuperiority of common windmills over all others, that ever were, or ever will be contrived to move with an horizontal motion, is analogous to the cafe we have mentioned of a veffel upon a wind and before the wind : For the fails of an horizontal windmill, the fafter they move, the more they detract from the impulse of the wind up on them; whereas the common windmills, by moving perpendicular to the torrent of air, are nearly as forcibly acted on by the wind, when they are in motion, as when they are at reft.

Thus much may fuffice as to the defcription and nature of these fingular embarkations. I must add, that vessels bearing some obscure resemblance to these, are to be met with in various parts of the *East-Indies*; but none of them, that I can learn, to be compared with those of the *Ladrones*, either in their construction or celerity; which should induce on:

(458)

one to believe, that this was originally the invention of fome genius of thefe Islands, and was afterwards imperfectly copied by the neighbouring nations : For though the Ladrones have no immediate intercourfe with any other people, yet there lie to the S. and S. W. of them a great number of Islands, which are supposed to extend to the coast of New Guinea. These Islands are fo near the Ladrones, that canoes from them have fometimes, by diftrefs. been drived to Guam; and the Spaniards did once difpatch a bark for their difcovery, which left two Jesuits amongst them, who were afterwards murthered : And the inhabitants of the Ladrones, with their proas, may, by like accident, have been driven amongst these Islands. Indeed I fhould conceive, that the fame range of Islands extends to the S. E. as well as the S. W, and that to a prodigious diftance : For Schouten, who traversed the South part of the Pacific Ocean in the year 1615, met with a large double canoe full of people, at above a thousand leagues distance from the Ladrones towards the S. E. If this double canoe was any diftant imitation of the flying proa, which is no very improbable conjecture, this can only be accounted for, by fuppofing that there is a range of Islands, near enough to each other to be capable of an accidental communication, which is extended from the Ladrones thither. And indeed all those who have croffed from America to the East-Indies in a fouthern latitude, have never failed of meeting with feveral very fmall Islands feattered over that immense ocean.

And as there may be hence fome reafon to fuppofe, that the Ladrones are only a part of an extenfive chain of Islands, spreading themselves to the fouthfouthy the 1 Spanif chain Ladro drones of Ifla unkno accour profec

fouthward, towards the unknown boundaries of the Pacific Ocean; fo it appears from the Spanifb chart, hereafter inferted, that the fame chain is extended from the northward of the Ladrones to Japan: So that in this light the Ladrones will be only one fmall portion of a range of Islands, reaching from Japan, perhaps to the unknown fouthern Continent. After this flort account of these places, I shall now return to the profecution of our voyage.

CHAP. VI.

From Tinian to Macao.

THAVE already mentioned, that, on the 21st I of Ottober, in the evening, we took our leave of the Island of Tinian, steering the proper course for Macao in China. The eaftern monfoon was now, we reckoned, fairly fettled; and we had a conftant gale blowing right upon our ftern : So that we generally run from forty to fifty leagues a day. But we had a large hollow fea purfuing us, which occafioned the fhip to labour much; whence we received great damage in our rigging, which was grown very rotten, and our leak was augmented: But happily for us, our people were now in full health; fo that there were no complaints of fatigue, but all went through their attendance on the pumps, and every other duty of the fhip, with ease and chearfulness.

Having now no other but our fheet-anchor left, except our prize-anchors, which were stowed in the

(460)

the hold, and were too light to be depended on, we were under great concern how we fhould manage on the coast of China, where we were all entire strangers, and where we should doubtless be frequently under the necessity of coming to an anchor. Our fheet-anchor being obvioufly much too heavy for a coafting anchor, it was at length refolved, to fix two of our largest prize anchors into one flock, and to place between their fhanks two guns, four pounders, which was accordingly executed, and it was to ferve as a best bower : And a third prize-anchor being in like manner joined with our ftream-anchor, with guns between them, we thereby made a fmall bower; fo that, besides our sheet-anchor, we had again two others at our bows, one of which weighed 3000, and the other 2900 pounds.

The 3d of November, about three in the afternoon, we faw an Inand, which at first we imagined to be the island of Botel Tobago Ximo : But on our nearer approach we found it to be much fmaller. than that is ufually reprefented; and about an hour after we faw another Island, five or fix miles farther to the westward. As no chart, nor any journal we had feen, took notice of any other Island to the eaftward of Formofa, than Botel Tobago Xima, and as we had no observation of our latitude at noon, we were in fome perplexity, being apprehenfive that an extraordinary current had driven us into the neighbourhood of the Bashee Islands; and therefore, when night came on, we broughtto, and continued in this posture till the next morning, which proving dark and cloudy, for fome time prolonged our uncertainty; but it cleared up about nine o'clock, when we again difcerncd

ed t preft a fig mofa. faw illand from our fears. W fteere and 1 Rete, noon. miles time diftan imme betwe to be as hig are en is a fh an ha truly Tobag the d And lie, is 23°: to out of our W Rete, caftle ed the two Islands above-mentioned; we then preft forwards to the westward, and by eleven got a sight of the southern part of the Island of Formosa. This satisfied us that the second Island we saw was Botel Tobago Xima, and the first a small island or rock, lying five or fix miles due East from it, which, not being mentioned by any of our books or charts, was the occasion of our fears.

When we got fight of the Island of Formofa, we fteered W. by S, in order to double its extremity, and kept a good look-out for the rocks of Vele Rete, which we did not fee till two in the afternoon. They then bore from us W. N. W. three miles diftant, the South end of Formofa at the fame time bearing N. by W, - W, about five leagues diftant. To give these rocks a good birth, we immediately haled up S. by W, and fo left them between us and the land. Indeed we had reafon to be careful of them; for though they appeared as high out of the water as a fhip's hull, yet they are environed with breakers on all fides, and there is a fhoal ftretching from them at leaft a mile and an half to the fouthward, whence they may be truly called dangerous. The course from Bote! Tobago Xima to thefe rocks, is S. W. by W, and the diftance about twelve or thirteen leagues : And the fouth end of Formola, off which they lie, is in the latitude of 21°: 50' North, and in 23°: 50' West longitude from Tinian, according to our most approved reckonings, though by some of our accounts above a degree more.

While we were passing by these rocks of Vele Rete, there was an outcry of fire on the forecastle; this occasioned a general alarm, and the whole

(462)

whole crew inftantly flocked together in the utmost confusion, fo that the officers found it difficult for fome time to appeale the uproar: But having at last reduced the people to order, it was perceived that the fire proceeded from the furnace; and pulling down the brick-work, it was extinguished with great facility, for it had taken its rife from the bricks, which, being over-heated, had begun to communicate the fire to the adjacent wood-work. In the evening we were furprized with a view of what we at first fight conceived to have been breakers, but, on a stricter examination, we found them to be only a great number of fires on the Island of Formofa. Thefe, we imagined, were intended by the Inhabitants of that Island as fignals for us to touch there, but that fuited not our views, we being impatient to reach the port of Macao as foon as possible. From Formola we steered W. N. W, and sometimes still more northerly, propoling to fall in with the coalt of China, to the eastward of Pedro Blanco; for the rock fo called is usually effeemed an excellent direction for fhips bound to Macao. We continued this courfe till the following night, and then frequently brought to, to try if we we were in foundings: but it was the 5th of November, at nine in the morning, before we ftruck ground, and then we had forty-two fathom, and a bottom of grey fand mixed with shells. When we had got about twenty miles farther W. N. W, we had thirty. five fathom, and the fame bottom, from whence our founding gradually decreafed from thirty-five to twenty-five fathom; but foon after, to our great furprize, they jumped back again to thirty fathom : This was an alteration we could not very well

well a regular of Pea very c N. N. directio ed to mid-ni. bearing brough propoli fun-rife midst e which far as t number the low thousan and no Nor wa this fpc found t coaft. procure but tho and we them a for Chin could n any dire the only what we no comr we ofter we had Itf-

well account for, fince all the charts laid down regular foundings every where to the northward of Pedre Blanco; and for this reason we kept a very careful look-out, and altered our courfe to N. N. W, and having run thirty-five miles in this direction, our foundings again gradually diminished to twenty two fathom, and we at last, about mid-night, got fight of the main land of China, bearing N. by W. four leagues diftant: We then brought the ship to, with her head to the fea, propoling to wait for the morning; and before fun-rife we were furprized to find ourfelves in the midft of an incredible number of fishing-boats. which feemed to cover the furface of the fea, as far as the eye could reach. I may well stile their number incredible, fince I cannot believe, upon the lowest estimate, that there were so few as fix thousand, most of them manned with five hands, and none of those we saw with less than three. Nor was this fwarm of fifhing-veffels peculiar to this fpot; for, as we ran on to the weftward, we found them as abundant on every part of the coaft. We at first doubted not but we should procure a Pilot from them to carry us to Macao; but though many of them came close to the ship, and we endeavoured to tempt them by showing them a number of dollars, a most alluring bair for Chinefe of all ranks and professions, yet we could not entice them on board us, nor procure any directions from them; though, I prefume, the only difficulty was their not comprehending what we wanted them to do, for we could have no communication with them but by figns : Indeed we often pronounced the word Macao; but this we had reason to suppose they understood in a different

(464)

different fenfe; for in return they fometimes held up fish to us, and we afterwards learnt, that the Chinele name for fish is of a somewhat similar found. But what furprifed us most, was the inattention and want of curiofity, which we observed in this herd of fishermen : A ship like ours had doubtless never been in those feas before ; perhaps, there might not be one, amongst all the Chinese employed in this fifhery, who had ever feen any European veffel; fo that we might reasonably have expected to have been confidered by them as a very uncommon and extraordinary object; but though many of their veffels came close to the fhip, yet they did not appear to be at all interested about us, nor did they deviate in the leaft from their courfe to regard us; which infenfibility, especially in maritime perfons, about a matter in their own profession, is scarcely to be credited. did not the general behaviour of the Chinefe, in other inftances, furnish us with continual proofs of a fimilar turn of mind: It may perhaps be doubted, whether this caft of temper be the effect of nature or education; but, in either cafe, it is an inconteftible fymptom of a mean and contemptible difposition, and is alone a fufficient confutation of the extravagant panegyrics, which many hypothetical writers have beftowed on the ingenuity and capacity of this Nation. But to return :"

Not being able to procure any information from the *Chinefe* fifthermen about our proper courfe to *Macao*, it was neceffary for us to rely entirely on our own judgment; and concluding from our latitude, which was 22°: 42' North, and from our foundings, which were only feventeen or eighteen fathoms, that we were yet to the eastward

ward And may 1 they latituc the de rock i is ano ance i is the thirty fandy foft a Ifland Pedro fpace : fand.' It v when next d to the and ft numbe of us w confide us of f fupply mediat their in of our Comm nalifie offfilh

them;

Jept of

ward of Pedro Blanco, we stood to the westward : And for the affiftance of future Navigators, who may hereafter doubt about the parts of the coaft they are upon, I must observe, that besides the latitude of Pedro Blanco, which is 22°: 18's and the depth of water, which to the westward of that rock is almost every where twenty fathoms, there is another circumftance which will give great affiftance in judging of the polition of the ship: This is the kind of ground; for, till we came within thirty miles of Pedro Blanco, we had constantly a fandy bottom; but there the bottom changed to foft and muddy, and continued fo quite to the Island of Macao; only while we were in fight of Pedro Blanco, and very near it, we had for a short fpace a bottom of greenifi mud, intermixed with fand.

It was on the 5th of November, at midnight; when we first made the coast of China; and the next day, about two o'clock, as we were flanding to the weftward within two leagues of the coaft, and still furrounded by fishing vessels in is great numbers as at first, we perceived that a boat a-head of us waved a red flag, and blew a horn. This we confidered as a fignal made to us, either to warn us of fome shoal, or to inform us that they would fupply us with a Pilot, and in this belief we immediately fent our Cutter to the boat, to know their intentions; but we were foon made fenfible of our mistake, and found that this boat was the Commodore of the whole fifthery, and that the fignal fhe had made, was to order them all to leave off fifting, and to return in fhore, which we faw them inftantly obey. On this difappointment we dept on our course, and soon after passed by two Hh very

ft

ird

(466)

very small rocks, which lay four or five miles distant from the shore; but night came on before we got fight of Pedro Blanco, and we therefore brought to till the morning, when we had the fatisfaction to difcover it. It is a rock of a fmall circumference, but of a moderate height, and, both in fhape and colour, refembles a fugar-loaf, and is about feven or eight miles from the shore. We paffed within a mile and an half of it, and left it between us and the land, still keeping on to the westward; and the next day, being the 7th, we were a-breaft of a chain of Iflands, which ftretched from East to West. These, as we afterwards found, were called the Islands of Lema; they are rocky and barren, and are in all, fmall and great, fifteen or fixteen; and there are, befides, a great number of other Islands between them and the main land of China. There is in the thirty-ninth Plate a view of these Islands, and likewife a view of the grand Ladrone, hereafter mentioned, as it appears when (R), the weftermost of the Islands of Lema, bears W. N. W. at the diffance of a mile and a half. These Islands we left on the starboard-fide, passing within four miles of them, where we had twenty-four fathom water. We were ftill furrounded by fifting-boats; and we once more fent the Cutter on board one of them, to endeavour to procure a Pilot, but could not prevail; however, one of the Chinese directed us by figns to fail round the westermost of the Islands or rocks of Lema, and then to hale up. We followed this direction, and in the evening came to an anchor in eighteen fathom; at which time, the rock (R) in the foregoing draught bore S. S. E. five miles diffant, and the grand La-- 3

Ladro rock comi 52' N W. d it on half a then y nel, t which Af on th Cutte to pa Chine/ broke for . th him, a foon a who, cates pilotte manag board. far diff river o cleven Our P and Ca board, us, we anchor. the tw in the of wat Ladrone W. by S. about two leagues diftant. The rock (R) is a most excellent direction for ships coming from the eastward: Its latitude is 21°: 52' North, and it bears from *Pedro Blanco* S. 64° W. distant twenty-one leagues. You are to leave it on the starboard-side, and you may come within half a mile of it in eighteen fathom water: And then you must steer N. by W. $\frac{1}{2}$ W. for the channel, between the Islands of *Cabouce* and *Bamboo*, which are to the northward of the grand *Ladrone*.

After having continued at anchor all night, we on the oth, at four in the morning, fent our Cutter to found the channel, where we proposed to pais; but before the return of the Cutter, a Chinese Pilot put on board us, and told us, in broken Portuguese, he would carry us to Macao for thirty dollars. These were immediately paid him, and we then weighed and made fail; and foon after, feveral other Pilots come on board us. who, to recommend themfelves, produced certificates from the Captains of feveral ships they had pilotted in, but we continued the ship under the management of the Chinefe who came first on. board. By this time we learnt, that we were not far distant from Macao, and that there were in the river of Canton, at the mouth of which Macao lies, cleven European ships, of which four were English. Our Pilot carried us between the Islands of Bamboo and Cabouce, but the winds hanging in the northern board, and the tides often fetting ftrongly against us, we were obliged to come frequently to an anchor, fo that we did not get through between the two Islands till the 12th of November, at two in the morning. In paffing through, our depth of water was from twelve to fourteen fathom; Hh 2 and

and as we still steered on N. W. W. between a number of other Islands, our foundings underwent little or no variation till towards the evening, when they encreafed to feventeen fathom; in which depth (the wind dying away) we anchored not far from the Island of Lantoon, which is the largest of all this range of Islands. At feven in the morning we weighed again, and fteering W. S. W. and S. W. by W. we at ten o'clock happily anchored in Macao road, in five fathom water, the city of Macao bearing W. by N. three leagues diftant; the peak of Lantoon E. by N. and the grand Ledrone S. by E. each of them about five leagues diftant. Thus, after a fatiguing cruife of above two years continuance, we once more arrived in an amicable port, in a civilized country; where the conveniencies of life were in great plentty; where the naval ftores, which we now extremely wanted, could be in fome degree procured; where we expected the inexpreffible fatiffaction of receiving letters from our relations and friends; and where our countrymen, who were lately arrived from England, would be capable of anfwering the numerous enquiries we were prepared to make, both about public and private occurrences, and to relate to us many particulars, which, whether of importance or not, would be liftned to by us with the utmost attention, after the long sufpension of our correspondence with our country, to which the nature of our undertaking had hitherto subjected us.

CHAP. VII.

Proceedings at Macao.

THE city of Macao, in the road of which we came to an anchor on the 12th of November. is a Portuguese settlement, situated in an Island at the mouth of the river of Canton. It was formerly. a very rich and populous city, and capable of defending itself against the power of the adjacent Chinefe Governors: But at prefent it is much fallen from its antient fplendor; for though it is inhabited by Po tuguese, and hath a Governor nominated by the King of Portugal, yet it fublifts merely by the fufferance of the Chinefe, who can starve the place, and disposses the Portuguese whenever they pleafe. This obliges the Governor of Macdo to behave with great circumfpection, and carefully to avoid every circumftance that may give offence to the Chinefe. The river of Canton, at the mouth of which this city lies, is the only Chinefe port, frequented by European thips; and this river is indeed a more commodious harbour, on many accounts, than Macao : But the peculiar customs of the Chinefe; only adapted to the entertainment of trading fhips, and the apprehenfions of the Commodore, left he should embroil the East-India Company with the Regency of Canton, if he fhould infift on being treated upon a different footing from the Merchantmen, made him refolve to go first to Macao, before he ventured into the port of Canton. Indeed, had not this reason prevailed with him, he himself had nothing "Hhg to

ľ P.

(470)

to fear: For it is certain that he might have entered the port of *Canton*, and might have continued there as long as he pleafed, and afterwards have left it again, although the whole power of the *Chinefe* Empire had been brought together to oppose him.

The Commodore, not to depart from his ufual prudence, no fooner came to an anchor in Macao road, than he difpatched an officer with his compliments to the Portuguese Governor of Macao, requefting his Excellency, by the fame officer, to advise him in what manner it would be proper to act, to avoid offending the Chinefe, which, as there were then four of our fhips in their power at Canton, was a matter worthy of attention. The difficulty, which the Commodore principally apprehended, related to the duty ufually paid by all ships in the river of Canton, according to their tunnage. For as men of war are exempted in every foreign harbour from all manner of port charges, the Commodore thought it would be derogatory to the honour of his country, to fubmit to this duty in China: And therefore he defired the advice of the Governor of Macao, who, being an European, could not be ignorant of the privileges claimed by a British man of war, and confequently might be expected to give us the best lights for avoiding this perplexity. Our boat returned in the evening with two officers fent by the Governor, who informed the Commodore, that it was the Governor's opinion, that if the Centurion ventured into the river of Canton, the duty would certainly be demanded ; and therefore, if the Commodore approved of it, he would fend him a Pilot, who should conduct us into another fafe harbour,

fe

r,

harbour, called the *Typa*, which was every way commodious for careening the fhip (an operation we were refolved to begin upon as foon as poffible) and where the above-mentioned duty would, in all probability, be never afked for.

This propofal the Commodore agreed to, and in the morning we weighed anchor, and, under the direction of the Portuguese Pilot, steered for the intended harbour. As we entered two Islands, which form the eaftern passage to it, we found our foundings decreafed to three fathom and a half: But the Pilot affuring us that this was the least depth we should meet with, we continued our courfe, till at length the ship stuck fast in the mud, with only eighteen foot water abaft; and, the tide of ebb making, the water fewed to fixteen feet, but the ship remained perfectly upright; we then founded all round us, and finding the water deepned to the northward, we carried out our small bower with two hawsers an end, and at the return of the tide of flood, hove the ship afloat; and a fmall breeze fpringing up at the fame instant, we set the fore-top-fail, and slipping the hawfer, ran into the harbour, where we moored in about five fathom water. This harbour of the Typa is formed by a number of Islands, and is about fix miles diftant from Macao. Here we faluted the caftle of Macao with eleven guns, which were returned by an equal number.

The next day the Commodore paid a vifit in perfon to the Governor, and was faluted at his landing by eleven guns; which were returned by the Centurion. Mr. Anfon's bufinefs in this vifit, was to folicit the Governor to grant us a fupply of provisions, and to furnish us with fuch stores Hth 4 as

(472)

as were necessary to refit the ship. The Governor feemed really inclined to do us all the fervice he could; and affured the Commodore, in a friendly manner, that he would privately give us all the affistance in his power; but he, at the fame time, frankly owned, that he dared not openly furnish us with any thing we demanded, unlefs we first procured an order for it from the Viceroy of Canton; for that he neither received provisions for his garrifon, nor any other neceffaries, but by permiffion from the Chinefe Government; and as they took care only to furnish him from day to day, he was indeed no other than their vaffal, whom they could at all times compel to fubmit to their own terms, only by laying an embargo on his provilions.

On this declaration of the Governor, Mr. Anfon refolved himfelf to go to Canton, to procure a licence from the Viceroy; and he accordingly hired a Chinele boat for himfelf, and his attendants; but just as he was ready to embark, the Hoppo, or Chinese Custom-house officer at Macao, refused to grant a permit to the boat, and ordered the watermen not to proceed, at their peril. The Commodore at first endeavoured to prevail with the Hoppo to withdraw his injunction, and to grant a permit; and the Governor of Macao employed his interest with the Hoppo to the fame purpose. Mr. Anfon, finding the officer inflexible, told him, the next day, that if he longer refused to grant the permit, he would man and arm his own boats, to carry him thither; asking the Hoppo, at the fame time, who he imagined would dare to oppofe him. This threat immediately brought about what his intreaties had laboured for in vain : The permit was granted,

grant arriva and o an or wante the a inten is the ply t diffic matte ation was a occafi were to en the C under anfwe delay. val tl comp fed, letter clared nor they And, grofly their vent regard in all ment. fary

granted, and Mr. Anfon went to Canton. On his arrival there, he confulted with the Supercargoes and officers of the English fhips, how to procure an order from the Viceroy for the neceffaries he wanted : But in this he had reafon to fuppofe, that the advice they gave him, though doubtlefs well intended, was yet not the most prudent : For as it is the cuftom with these Gentlemen, never to apply to the supreme Magistrate himself, whatever difficulties they labour under, but to transact all matters relating to the Government, by the mediation of the principal Chinefe merchants, Mr. Anfon was advifed to follow the fame method upon this occasion, the English promising (in which they were doubtlefs fincere) to exert all their intereff to engage the Merchants in his favour. And when the Chinese Merchants were applied to, they readily undertook the management of it, and promifed to answer for its success; but after near a month's delay, and reiterated excuses, during which interval they pretended to be often upon the point of compleating the bufinefs, they at laft (being preffed, and measures being taken for delivering a letter to the Viceroy) threw off the mafk, and declared they neither had applied to the Viceroy, nor could they; for he was too great a man, they faid, for them to approach on any occasion. And, not contented with having themfelves thus grofly deceived the Commodore, they now used all their perfualion with the English at Canton, to preyent them from intermeddling with any thing that regarded him, reprefenting to them, that it would in all probability embroil them with the Government, and occafion them a great deal of unneceffary trouble; which groundless infinuations had to the foll or indeed No I Sugar

indeed but too much weight with those they were applied to.

It must be difficult to affign a reason for this perfidious conduct of the Chinele Merchants: Interest indeed is known to exert a boundlefs influence over the inhabitants of that Empire; but how their interest could be affected in the present case, is not eafy to difcover; unlefs they apprehended that the presence of a ship of force might damp their Mamila trade, and therefore acted in this manner with a view of forcing the Commodore to Batavia: But it might be as natural in this light to fuppofe, that they would have been eager to have got him dispatched. I therefore rather impute their behaviour to the unparalleled pufillanimity of the Nation, and to the awe they are under of the Government : For as fuch a ship as the Centurion, fitted for war only, had never been feen in those parts before, she was the horror of these dastards, and the Merchants were in fome degree terrified even with the idea of her, and could not think of applying to the Viceroy (who is doubtlefs fond of all opportunities of fleecing them) without reprefenting to themfelves the pretences which a hungry and tyrannical Magistrate might possibly find, for cenfuring their intermeddling in fo unufual a transaction, in which he might pretend the interest of the State was immediately concerned. However, be this as it may, the Commodore was fatisfied that nothing was to be done by the interpolition of the Merchants, as it was on his prefling them to deliver a letter to the Viceroy, that they had declared they durft not intermeddle, and had confeffed, that, notwithstanding all their pretences of ferving him, they had not yet taken one ftep towards

tow he ther this plie paff pro was pofe putt vific read of t ceiv fent the turn top get E Bat that that upo he f it w out in h mol ftan folv he l he nòt the

towards it. Mr. Anfon therefore told them, that he would proceed to Batavia, and refit his ship there; but informed them, at the fame time, that this was impossible to be done, unless he was fupplied with a ftock of provisions fufficient for his The Merchants, on this, undertook to paffage. procure him provisions, but affured him, that it was what they durft not engage in openly, but proposed to manage it in a clandestine manner, by putting a quantity of bread, flour and other provision on board the English ships, which were now ready to fail; and thefe were to ftop at the mouth of the Typa, where the Centurion's boats were to receive it. This article, which the Merchants reprefented as a matter of great favour, being fettled, the Commodore, on the 16th of December, returned from Canton to the fhip, feemingly refolved to proceed to Batavia to refit, as foon as he should get his fupplies of provision on board.

ı

1 11 11

But Mr. Anfon (who never intended going to Batavia) found, on his return to the Centurion. that her main-maft was fprung in two places, and that the leak was confiderably increased; fo that, upon the whole, he was fully fatisfied, that though he should lay in a sufficient stock of provisions, yet it would be impossible for him to put to fea without refitting : For, if he left the port with his fhip in her prefent condition, she would be in the utmoft danger of foundring; and therefore notwithfanding the difficulties he had met with, he refolved at all events to have her hove down, before he left Macao. He was fully convinced, by what he had observed at Canton, that his great caution not to injure the East-India Company's affairs, and the regard he had shown to the advice of their officers,

(476)

ficers, had occafioned all his embarrafments. For he now faw clearly, that if he had at first carried his ship into the river of Canton, and had immediately applied himfelf to the Mandarines, who are the chief officers of State, inftead of employing the Merchants to apply for him; he would, in all probability, have had all his requefts granted, and would have been foon difpatched. He had already loft a month, by the wrong measures he had been put upon, but he refolved to lofe as little more time as poffible; and therefore, the 17th of December, being the next day after his return from Canton, he wrote a letter to the Viceroy of that place, acquainting him, that he was Commander in chief of a foundron of his Britannick Majefty's ships of war, which had been cruifing for two years paft in the South-Sea against the Spaniards, who were at war with the King his Mafter; that, in his way back to England, he had put into the port of Macao, having a confiderable leak in his fhip, and being in great want of provisions, fo that it was impoffible for him to proceed on his voyage, till his fhip was repaired, and he was supplied with the neceffaries he wanted ; that he had been at Canton, in hopes of being admitted to a perfonal audience of his Excellency; but being a ftranger to the cuftoms of the country, he had not been able to inform himfelf what steps were necessary to be taken to procure fuch an audience, and therefore was obliged to apply to him in this manner, to defire his Excellency to give orders, for his being permitted to employ Carpenters and proper workmen to refit his fhip, and to furnish himself with provisions and ftores, thereby to enable him to purfue his voyage to Great-Britain with this monfoon, hoping, at the

the wi fio ven gu the at of Th of Mr the gre im rine refe and wit hin fwe Co call inti and nov laft the of . on firf tog and wit gre

(477)

the fame time, that thefe orders would be iffued with as little delay as poffible, left it might occafion his lofs of the feafon, and he might be prevented from departing till the next winter.

This letter was translated into the Chinese language, and the Commodore delivered it himfelf to the Hoppo or chief officer of the Emperor's cuftoms at Macao, defiring him to forward it to the Viceroy of Canton, with as much expedition as he could. The officer at first feemed unwilling to take charge of it, and raifed many difficulties about it, fo that Mr. Anfon fuspected him of being in league with the Merchants of Canton, who had always fhown a great apprehenfion of the Commodore's having any immediate intercourfe with the Viceroy or Mandarines; and therefore the Commodore, with fome refentment, took back his letter from the Hoppo, and told him, he would immediately fend an officer with it to Canton in his own boat, and would give him politive orders not to return without an anfwer from the Viceroy. The Hoppo perceiving the Commodore to be in earnest, and fearing to be called to an account for his refufal, begged to be intrusted with the letter, and promifed to deliver it. and to procure an anfwer as foon as poffible. And now it was foon feen how juftly Mr. Anfon had at last judged of the proper manner of dealing with the Chinefe; for this letter was written but the 17th of December, as hath been already observed; and, on the 19th in the morning, a Mandarine of the first rank, who was Governor of the city of Janson, together with two Mandarines of an inferior clafs, and a great retinue of officers and fervants, having with them eighteen half gallies, decorated with a great number of ftreamers, and furnished with mufic.

(478)

fic. and full of men, came to grapnel a-head of the Centurion : whence the Mandarine fent a meffuage to the Commodore, telling him, that he (the Mandarine) was ordered, by the Viceroy of Canton, to examine the condition of the fhip, and defiring the ship's boat might be fent to fetch him on board. The Centurion's boat was immediately difpatched, and preparations were made for receiving him ; for a hundred of the most fightly of the crew were uniformly dreft in the regimentals of the marines, and were drawn up under arms on the main-deck, against his arrival. When he entered the ship he was faluted by the drums, and what other military mufic there was on board; and paffing by the newformed guard, he was met by the Commodore on the quarter-deck, who conducted him to the great cabbin. Here the Mandarine explained his commiffion, declaring, that his bufinefs was to examine all the particulars mentioned in the Commodore's letter to the Viceroy, and to confront them with the reprefentation that had been given of them; that he was particularly instructed to inspect the leak, and had for that purpose brought with him two Chinele Carpenters; and that for the greater regularity and difpatch of his bufinefs, he had every head of enquiry feparately wrote down on a fheet of paper, with a void fpace opposite to it, where he was to infert fuch information and remarks thereon, as he could procure by his own obfervation.

This Mandarine appeared to be a perfon of very confiderable parts, and endowed with more franknefs and honefty, than is to be found in the generality of the Chinefe. After the proper inquiries had been made, particularly about the leak, which the

the as i was wit him mo mo tion he r of ing decl The thou Chin and he t him nera the that on t vific beer fton by v mer heal age ther the. fatis him verr need

the Chinese Carpenters reported to be as dangerous as it had been reprefented, and confequently that it was impossible for the Centurion to proceed to fea. without being refitted, the Mandarine expressed himfelf fatisfied with the account given in the Commodore's letter. And this Magistrate, as he was more intelligent than any other perfon of his nation that came to our knowledge, fo likewife was he more curious and inquifitive, viewing each part of the ship with particular attention, and appearing greatly furprized at the largeness of the lower deck guns, and at the weight and fize of the fhot. The Commodore, observing his aftonishment, thought this a proper opportunity to convince the Chinese of the prudence of granting him a speedy and ample fupply of all he wanted. With this view he told the Mandarine, and those who were with him, that, belides the demands he made for a general fupply, he had a particular complaint against the proceedings of the Cuftom-house of Macao: that at his first arrival the Chinefe boats had brought on board plenty of greens, and variety of fresh provisions for daily use, for which they had always been paid to their full fatisfaction, but that the Cuftom-house officers at Macao had soon forbid them. by which means he was deprived of those refreshments which were of the utmost confequence to the health of his men, after their long and fickly voyage; that as they, the Mandarines, had informed themfelves of his wants, and were eye-witneffes of the force and ftrength of his fhip, they might be fatisfied it was not for want of power to fupply himfelf, that he defired the permiffion of the Government to purchase what provisions he stood in need of; that they must be convinced that the Centurion

turion alone was capable of deftroying the whole navigation of the port of Canton, or of any other port in China, without running the least rifque from all the force the Chinele could collect ; that it was true, this was not the manner of proceeding between nations in friendship with each other ; but it was likewife true, that it was not cuftomary for any nation to permit the fhips of their friends to ftarve and fink in their ports, when those friends had money to fupply their wants, and only defired liberty to lay it out; that they must confess, he and his people had hitherto behaved with great modefty and referve; but that, as his wants were each day increasing, hunger would at last prove too ftrong for any reftraint, and neceffity was acknowledged in all countries to be fuperior to every other law; and therefore it could not be expected that his crew would long continue to ftarve in the midft of that plenty to which their eyes were every day witneffes: To this the Commodore added, (though perhaps with a lefs ferious air) that if by the delay of fupplying him with fresh provisions his men should be reduced t . the necessity of turning cannibals, and preying upon their own fpecies, it was easy to be foreseen that, independent of their friendship to their comrades, they would, in point of luxury, prefer the plump well fed Chine/e to their own emaciated shipmates. The first Mandarine acquiesced in the justness of this reasoning, and told the Commodore, that he fhould that night proceed for Canton; that on his arrival, a Council of Mandarines would be fummoned, of which he himfelf was a Member; and that by being employed in the prefent Commission, he was of course the Commodore's Advocate; that, as he was fully convinced

vinc did cil v was ed : plain took rity quan the i deliv to fe ing; puné W gree his t them in ki pect, fined difhe Mr. derive feme How three. of for emba quite after which ants for the in con

ned vinced of the urgency of Mr. Anfon's neceffity, he did not doubt but, on his reprefentation, the Council would be of the fame opinion; and that all that was demanded would be amply and fpeedily granted: And with regard to the Commodore's complaint of the Cuftom-houfe of Macao, he undertook to rectify that immediately by his own authority; for defiring a lift to be given him of the quantity of provision neceffary for the expence of the fhip for a day, he wrote a permit under it, and delivered it to one of his attendants, directing him to fee that quantity fent on board early every morning; and this order, from that time forwards, was punctually complied with.

When this weighty affair was thus in fome degree regulated, the Commodore invited him and his two attendant Mandarines to dinner, telling them at the fame time, that if his provisions, either in kind or quantity, was not what they might expect, they must thank themselves for having confined him to fo hard an allowance. One of his dishes was beef, which the Chinese all dislike, tho? Mr. Anfon was not apprized of it; this feems to be derived from the Indian superstition, which for fome ages past has made a great progress in China. However, his guefts did not entirely faft; for the three Mandarines compleatly finished the white part of four large fowls. But they were extremely embarraffed with their knives and forks, and were quite incapable of making use of them : So that, after some fruitless attempts to help themselves, which were fufficiently awkward, one of the attendants was obliged to cut their meat in fmall pieces for them. But whatever difficulty they might have in complying with the European manner of eating,

Ιi

they

(482)

they feemed not to be novices in drinking. The Commodore excufed himfelf in this part of the entertainment, under the pretence of illnefs; but there being another Gentleman prefent, of a florid and jovial complexion, the chief Mandarine clapped him on the shoulder, and told him by the interpreter, that certainly he could not plead ficknefs. and therefore infifted on his bearing him company ; and that Gentleman perceiving, that, after they had difpatched four or five bottles of Frontiniac, the Mandarine still continued unruffled, he ordered a bottle of citron-water to be brought up, which the Chinese feemed much to relish; and this being near finished, they arose from table, in appearance cool. and uninfluenced by what they had drank, and the Commodore having, according to cuftom, made the Mandarine a prefent, they all departed in the fame veffels that brought them.

After their departure, the Commodore with great impatience expected the refolution of the Council, and the neceffary licences for his refitment. For it must be observed, as hath already appeared from the preceding narration, that he could neither purchase stores nor necessaries with his money, nor did any kind of workmen dare to engage themfelves to work for him, without the permiffion of the Government first obtained. And in the execution of these particular injunctions, the Magistrates never fail of exercising great feverity, they, notwithstanding the fustian elogiums bestowed upon them by the Catholic Millionaries and their European copiers, being composed of the fame fragile materials with the reft of mankind, and often making use of the authority of the law, not to suppress crimes, but to enrich themselves by the pillage

þi ni of dif he COL ons pro to fuc 5 his was dore Cap fel, Mr. our Com with it be were men, our f Noir coaft that, ed th which knew fickly of the age, marka his ft

pillage of those who commit them; for capital punishments are rare in *China*, the effeminate genius of the nation, and their strong attachment to lucre, disposing them rather to make use of fines; and hence arises no inconfiderable profit to those who compose their tribunals: Confequently prohibitions of all kinds, particularly such, as the alluring prospect of great profit may often tempt the subject to infringe, cannot but be favourite institutions in such a Government. But to return :

Some time before this, Captain Saunders took his paffage to England on board a Swedifb thip, and was charged with difpatches from the Commodore; and foon after, in the month of December, Captain Mitchel, Colonel Cracherode, and Mr. Taffel, one of the Agent-Victuallers, with his nephew Mr. Charles Harriot, embarked on board fome of our Company's fhips; and I, having obtained the Commodore's leave to return home, embarked with them. I must observe too, (having omitted it before) that whilft we lay here at Macao, we were informed by fome of the officers of our Indiamen, that the Severn and Pearl, the two thips of our fquadron, which had feparated from us off Cape Noir, were fafely arrived at Rio Janeiro on the coaft of Brazil. I have formerly taken notice, that, at the time of their feparation, we apprehended them to be loft. And there were many reafons which greatly favoured this fufpicion: For we knew that the Severn in particular was extremely fickly; and this was the more obvious to the reft of the ships, as, in the preceding part of the voyage, her Commander Captain Legg had been remarkable for his exemplary punctuality in keeping his station, till, for the last ten days before his fe-Ii2 paration,

(484)

paration, his crew was fo diminished and enfeebled. that with his utmost efforts it was not possible for him to maintain his proper polition with his wonted exactnefs. The extraordinary fickness on board him was by many imputed to the fhip, which was new, and on that account was believed to be the more unhealthy; but whatever was the caufe of it, the Severn was by much the most fickly of the fquadron : For before her departure from St. Catharine's fhe buried more men than any of them, infomuch that the Commodore was obliged to recruit her with a number of fuefh hands; and, the mortality ftill contining on board her, fhe was fupplied with men a fecond time at fea, after our fetting fail from St. Julians; and notwithstanding these different reinforcements, fhe was at last reduced to the distressed condition I have already mentioned : So that the Commodore himfelf was firmly perfuaded the was loft; and therefore it was with great joy we received the news of her and the Pearl's fafety, after the ftrong perfuafion, which had fo long prevailed amongst us, of their having both perished. But to proceed with the transactions between Mr. Anfon and the Chinefe.

Notwithstanding the favourable disposition of the Mandarine Governor of Janson, at his leaving Mr. Anson, several days were elapsed before he had any advice from him; and Mr. Anson was privately informed there were great debates in Council upon his affair; partly perhaps owing to its being so unusual a case, and in part to the influence, as I suppose, of the intrigues of the French at Canton: For they had a countryman and fast friend residing on the spot, who spoke the language very well, and was not unacquainted with the venalty of the Govern-

C

Government, nor with the perfons of feveral of the Magistrates, and confequently could not be at a lofs for means of traverling the affiltance defired by And this opposition of the French was Mr. Anson. not merely the effect of national prejudice or contrariety of political interefts, but was in good meafure owing to their vanity, a motive of much more weight with the generality of mankind, than any attachment to the public fervice of their community : For, the French pretending their Indiamen to be Men of War; their officers were apprehenfive, that any diffinction granted to Mr. An, on, on account of his bearing the King's Commission, would render them lefs confiderable in the eyes of the Chinefe, and would establish a prepossession at Canton in favour of thips of war, by which they, as trading veffels, would fuffer in their importance : And I wish the affectation of endeavouring to pass for men of war, and the fear of finking in the effimation of the Chinefe, if the Centurion was treated in a different manner from themselves, had been confined to the officers of the French ships only. However, notwithstanding all these obstacles, it should feem, that the representation of the Commodore to the Mandarines of the facility with which he could right himfelf, if justice were denied him, had at last its effect : For, on the 6th of January, in the morning, the Governor of "anfon, the Commodore's Advocate, fent down the Viceroy of Canton's warrant for the refitment of the Centurion, and for fupplying her people with all they wanted ; and, the next day, a number of Chinefe Smiths and Carpenters went on board, to agree for all the work by the great. They demanded at first, to the amount of a thousand pounds sterling for the ne-Ii 3 ceffary

ceffary repairs of the fnip, the boats, and the mafts: This the Commodore feemed to think an unreafonable fum, and endeavoured to perfuade them to work by the day; but that propofal they would not hearken to; fo it was at last agreed, that the Carpenters should have to the amount of about fix hundred pounds for their work; and that the Smiths should be paid for their iron-work by weight, allowing them at the rate of three pounds a hundred nearly for the small work, and forty fix shillings for the large.

This leing regulated, the Commodore exerted himfelf to get this most important business compleated; I mean, the heaving down the Centurion. and examining the flate of her bottom : For this purpose the first Lieutenant was dispatched to Canton to hire two country veffels, called in their language Junks, one of them being intended to heave down by, and the other to ferve as a magazine for the powder and ammunition. At the fame time the ground was fmoothed on one of the neighbouring Islands, and a large tent was pitched for lodging the lumber and provisions, and near a hundred Chinele Caulkers were foon fet to work on the decks and fides of the fhip. But all thefe preparations, and the getting ready the careening gear, took up a great deal of time; for the Chinefe Caulkers, though they worked very well, were far from being expeditious; and it was the 26th of January before the junks arrived ; and the neceffary materials, which were to be purchased at Canton, came down very flowly; partly from the diftance of the place, and partly from the delays and backwardnefs of the Chinese Merchants. And in this interval Mr. Anfon had the additional perplexity to difcoverg

ver. the ther upo of t coul ters care para four prin wor whe A 22d firft had pear ing the ane Th righ tack plea pro the for fide atta inca tog a Pl bee ver, that his fore-maft was broken afunder above the upper deck partners, and was only kept together by the fifthes which had been formerly clapt upon it.

However, the Centurion's people made the moft of their time, and exerted themfelves the beft they could; and as, by clearing the fhip, the Carpenters were enabled to come at the leak, they took care to fecure that effectually, whilft the other preparations were going forwards. The leak was found to be below the fifteen foot mark, and was principally occafioned by one of the bolts being wore away and loofe in the joining of the ftem where it was fcarfed.

At last, all things being prepared, they, on the 22d of February, in the morning, hove out the first course of the Centurion's star-board fide, and had the fatisfaction to find, that her bottom appeared found and good; and, the next day, (having by that time compleated the new fheathing of the first course) they righted her again, to set up anew the careening rigging which fretched much. Thus they continued heaving down, and often righting the fhip from a fufpicion of their careening tackle, till the 3d of March; when, having compleated the paying and fheathing the bottom, which proved to be every where very found; they, for the last time, righted the ship to their great joy; for not only the fatigue of careening had been confiderable, but they had been apprehenfive of being attacked by the Spaniards, whilft the ship was thus incapacitated for defence. Nor were their fears altogether groundless; for they learnt afterwards, by a Portugue /e veffel, that the Spaniards at Manila had been informed, that the Centurion was in the Typa, Ii z

and intended to careen there; and that thereupon the Governor had fummoned his Council, and had proposed to them to endeavour to burn her, whilft fhe was careening, which was an enterprize, which, if properly conducted, might have put them in great danger : They were farther told, that this scheme was not only proposed, but refolved on; and that a Captain of a veffel had actually undertaken to perform the bulinefs for forty thousand dollars, which he was not to receive unlefs he fucceeded; but the Governor pretending that there was no treasure in the royal cheft, and infifting that the Merchants should advance the money, and they refusing to comply with the demand, the affair was dropped : Perhaps the Merchants fufpected, that the whole was only a pretext to get forty thousand dollars from them; and indeed this was affirmed by fome who bore the Governor no good will, but with what truth it is difficult to accertain.

As foon as the Centurion was righted, they took in her powder, and gunners ftores, and proceeded in getting in their guns as fast as possible, and then ufed their utmost expedition in repairing the foremaft, and in compleating the other articles of her refitment. And being thus employed, they were alarmed, on the 10th of March, by a Chinefe Fisherman, who brought them intelligence that he had been on board a large Spanish ship off the grand Ladrone, and that there were two more in company with her: He added feveral particulars to his relation; as that he had brought one of their officers to Macao; and that, on this, boats went off early in the morning from Macao to them : And the better to establish the belief of his veracity, he faid he defired no money, if his information should not prove

true.

true. men mod arms havi who fel, advid out f they a fict reafo ordin 'It newwater befor extre not I this v on as Man his de fore, Mr. meffa firing woul On 1 their ately on b tions forwa what true. This was prefently believed to be the forementioned expedition from Manila; and the Commodore immediately fitted his cannon and fmall arms in the beft manner he could for defence; and having then his Pinnace and Cutter in the offing, who had been ordered to examine a Portuguefe veffel, which was getting under fail, he fent them the advice he had received, and directed them to look out ftrictly: But no fuch fhips ever appeared, and they were foon fatisfied, the whole of the ftory was a fiction; though it was difficult to conceive what reafon could induce the fellow to be at fuch extraordinary pains to impofe on them.

It was the beginning of April before they had new-rigged the ship, stowed their provisions and water on board, and had fitted her for the fea; and before this time the Chineje grew very uneasy, and extremely defirous that fhe fhould be gone; either not knowing, or pretending not to believe, that this was a point the Commodore was as eagerly fet on as they could be. On the 3d of April, two Mandarine boats came on board from Macao to urge his departure; and this having been often done before, though there had been no pretence to fufpect Mr. Anfon of any affected delays, he at this laft meffage answered them in a determined tone, defiring them to give him no further trouble, for he would go when he thought proper, and not before. On this rebuke the Chinese (though it was not in their power to compel him to be gone) immediately prohibited all provisions from being carried on board him, and took fuch care that their injunctions should be complied with, that from that time forwards nothing could be purchaied at any rate whatever. On

(490)

On the 6th of April, the Centurion weighed from the Typa, and warped to the fouthward; and, by the 15th, fhe was got into Macao road, compleating her water as fhe pail along, fo that there remained now very few articles more to attend to; and her whole bufinefs being finished by the 19th, she, at three in the afternoon of that day, weighed and made fail, and stood to sea.

CHAP. VIII.

From Macao to Cape Espiritu Santo: The taking of the Manila galeon, and returning back again.

THE Commodore was now got to fea, with his fhip very well refitted, his ftores replenifhed, and an additional flock of provisions on board : His crew too was fomewhat reinforced ; for he had entered twenty-three men during his ftay at Macao, the greatest part of which were Lascars or Indian failors, and fome few Dutch. He gave out at Maeao, that he was bound to Batavia, and thence to England; and though the westerly monsoon was now fet in, when that paffage is confidered as impracticable, yet, by the confidence he had expreffed in the ftrength of his fhir, and the dexterity of his people, he had perfuade .. not only his own crew but the people at Macao likewife, that he proposed to try this unufual experiment; fo that there were many letters put on board him by the inhabitants of Canton and Masao for their friends at Batavia.

· But his real defign was of a very different nature : For he knew, that, inftead of one annual fhip from Acapulco to Manila, there would be this year, in all probability, two; fince, by being before Acapulco, he had prevented one of them from putting to fea the preceding feafon. He therefore refolved to cruife for these returning vessels off Cape Espiritu Santo, on the Island of Samal, which is the first land they always make in the Philippine Islands. And as 'June is generally the month in which they arrive there, he doubted not but he should get to his intended station time enough to intercept them. It is true, they were faid to be flout veffels, mouning forty four guns apiece, and carrying above five hundred hands, and might be expected to return in company; and he himfelf had but two hundred and twenty-feven hands on board, of which near thirty were boys: But this difproportion of ftrength did not deter him, as he knew his fhip to be much better fitted for a fea-engagement than theirs, and as he had reafon to expect that his men would exert themfelves in the most extraordinary manner, when they had in view the immense wealth of these Manila galeons.

This project the Commodore had refolved on in his own thoughts, ever fince his leaving the coaft of *Mexico*. And the greateft mortification which he received, from the various delays he had met with in *China*, was his apprehenfion, left he might be thereby fo long retarded as to let the galeons efcape him. Indeed, at *Macao* it was incumbent on him to keep thefe views extremely fecret; for there being a great intercourfe and a mutual connexion of interefts between that port and *Manila*, he had reafon to fear, that, if his defigns were difcovered,

(492)

ed, intelligence would be immediately fent to Manila, and measures would be taken to prevent the galeons from falling into his hands : But being now at fea, and entirely clear of the coast, he fummoned all his people on the quarter deck, and informed them of his refolution to cruife for the two Manila ships, of whose wealth they were not ignorant. He told them he should chuse a station, where he could not fail of meeting with them ; and though they were ftout fhips, and full manned, yet, if his own people behaved with their accultomed spirit, he was certain he should prove too hard for them both, and that one of them at least could not fail of becoming his prize : He further added, that many ridiculous tales had been propagated about the strength of the sides of these ships, and their being impenetrable to cannon-fhot; that thefe fictions had been principally invented to palliate the cowardice of those who had formerly engaged them; but he hoped there were none of those prefent weak enough to give credit to fo abfurd a ftory : For his own part, he did affure them upon his word, that, whenever he met with them, he would fight them fo near, that they should find, his bullets, inftead of being flopped by one of their fides, fhould go through them both.

This fpeech of the Commodore's was received by his people with great joy: For no fooner had he ended, than they expressed their approbation, according to naval custom, by three strenuous cheers, and all declared their determination to succeed or periss, whenever the opportunity presented itself. And now their hopes, which fince their departure from the coast of *Mexico*, had entirely subsidied, were again revived; and they all persuaded

ed themfelves, that, notwithstanding the various cafualties and difappointments they had hitherto met with, they should yet be repaid the price of their fatigues, and should at last return home enriched with the spoils of the enemy: For firmly relying on the affurances of the Commodore, that they should certainly meet with the vessels, they were all of them too fanguine to doubt a moment of maftering them; fo that they confidered themfelves as having them already in their possession. And this confidence was fo univerfally fpread thro^{*} the whole thip's company, that, the Commodore having taken fome Chinefe sheep to fea with him for his own provision, and one day enquiring of his Butcher, why, for fome time paft, he had feen no mutton at his table, afking him if all the fheep were killed, the Butcher very ferioufly replied, that there were indeed two sheep left, but that if his Honour would give him leave, he proposed to keep those for the entertainment of the General of the galeons.

When the Centurion left the port of Macao, fhe flood for fome days to the weftward; and, on the first of May, they faw part of the Island of Formofa; and, standing thence to the fouthward, they, on the 4th of May, were in the latitude of the Bafbee Islands, as laid down by Dampier; but they fuspected his account of inaccuracy, as they found that he had been confiderably mistaken in the latitude of the South end of Formofa: For this reason they kept a good look out, and about feven in the evening discovered from the mass-head five small Islands, which were judged to be the Bafbees, and they had afterwards a fight of Botel Tobago Xima. By this means they had an opportunity of correcting the

(494)

the polition of the Bashee Islands, which had been hitherto laid down twenty five leagues too far to the weftward : For by their observations, they effecmed the middle of these Islands to be in 21° : 4' North, and to bear from Botel Tobago Xima S.S.E. twenty leagues diftant, that Island itself being in 21° : 57' North.

After getting a fight of the Bafbee Islands, they ftood between the S. and S. W. for Cape Espiritu Santo; and, the 20th of May at noon, they first discovered that Cape, which about four o'clock they brought to bear S. S. W. about eleven leagues diftant. It appeared to be of a moderate height, with feveral round hummocks on it; and is exactly represented in the fortieth plate. As it was known that there were centinels placed upon this Cape to make fignals to the Acapulco ship, when she first falls in with the land, the Commodore immediately tacked, and ordered the top gallant fails to be taken in, to prevent being difcovered; and, this being the flation in which it was refolved to cruife for the galleons, they kept the Cape between the South and the Weft, and endeavoured to confine themselves between the latitude of 12°: 50', and 13°: 5', the Cape itfelf lying, by their observations, in 12°: 40' North, and 4° of East longitude from Botel Tobago Xima.

It was the laft of *May*, by the foreign ftyle, when they arrived off this Cape; and, the month of *June*, by the fame ftyle, being that in which the *Manila* fhips are ufually expected, the *Centurion's* people were now waiting each hour with the utmost impatience for the happy crifis which was to ballance the account of all their past calamaties. As from this time there was but fmall employment for the crew,

crew, the Commodore ordered them almost every day to be exercised in the management of the great guns, and in the use of their small arms. This had been his practice, more or lefs, at all convenient feafons during the whole course of his voyage: and the advantages which he received from it, in his engagement with the galeon, were an ample recompence for all his care and attention. Indeed, it should feem that there are few particulars of a Commander's duty of more importance than this, how much foever it may have been fometimes overlooked or mifunderstood : For it will, I suppose, be confessed, that in two ships of war, equal in the number of their men and guns, the disproportion of ftrength, arifing from a greater or lefs dexterity in the use of their great guns and small arms; is what can fcarcely be ballanced by any other circumftances whatever. For, as thefe are the weapons with which they are to engage, what greater inequality can there be betwixt two contending parties, than that one fide fhould perfectly understand the ufe of their weapons, and fhould have the skill to employ them in the most effectual manner for the annoyance of their enemy, while the other fide should, by their awkward management of them, render them rather terrible to themfelves, than mifchievous to their antagonists? This feems fo plain and natural a conclusion, that a perfon unacquainted with these affairs would suppose the first care of a Commander to be the training his people to the ufe of their arms.

But human affairs are not always conducted by the plain dictates of common fence. There are many other principles which influence our transactions: And there is one in particular, which, though

(496)

of a very erroneous complexion, is fcarcely ever excluded from our most ferious deliberations; I mean custom, or the practice of those who have preceded us: This is ufually a power too mighty for reason to grapple with ; and is the most terrible to those who oppose it, as it has much of superstition in its nature, and purfues all those who question its authority with unrelenting vehemence. However, in these latter ages of the world, fome lucky encroachments have been made upon its prerogative; and it may reafonably be hoped, that the Gentlemen of the Navy. whofe particular profession hath of late been confiderably improved by a number of new inventions, will of all others be the readieft to give up tiple practices, which have nothing to plead but prefcription, and will not suppose that every branch of their bufinefs hath already received all the perfection of which it is capable. Indeed it must be owned, that if a dexterity in the use of small arms, for instance, hath been sometimes less attended to on board our ships of war, than might have been wished for, it hath been rather owing to unskilful methods of teaching it, than to negligence : For the common failors, how ftrongly foever attached to their own prejudices, are very quick fighted in finding out the defects of others, and have ever fhewn a great contempt for the formalities practifed in the training of land troops to the use of their arms; but when those who have undertaken to instruct the feamen have contented themfelves with inculcating only what was useful, and that in the simplest manner, they have constantly found their people sufficiently docile, and the fuccefs hath even exceeded their expectation. Thus on board Mr. Anfon's ship, where they were only taught the shortest method

thod of loading with cartridges, and were conftantly trained to fire at a mark, which was ufually hung at the yard-arm, and where fome little reward was given to the most expert, the whole crew, by this management, were rendered extremely skilful, quick in loading, all of them good marksimen, and fome of them most extraordinary ones; fo that I doubt not but, in the use of small arms, they were more than a match for double their number, who had not been habituated to the same kind of exercise. But to return.

It was the last of May, N.S. as hath been already faid, when the Centurion arrived off Cape Espiritu Santo; and confequently the next day began the month in which the galeons were to be expected. The Commodore therefore made all neceffary preparations for receiving them, having hoifted out his long boat, and lashed her along fide, that the fhip might be ready for engaging, if they fell in with the galeons in the night. All this time too he was very folicitous to keep at fuch a distance from the Cape, as not to be discovered : But it hath been fince learnt, that notwithstanding his care, he was feen from the land; and advice of him was fent to Manila, where it was at first difbelieved, but on reiterated intelligence (for it feems he was feen more than once) the Merchants were alarmed, and the Governor was applied to, who undertook (the Commerce fupplying the neceffary fums) to fit out a force confifting of two fhips of thirty-two guns, one of twenty guns, and two floops of ten guns each, to attack the Centurion on her ftation : And fome of these veffels did actually weigh with this view; but the principal ship not being ready, and the monfoon being against them, the

Com-

(498)

Commerce and the Governour difagreed, and the enterprize was laid afide. This frequent difcovery of the *Centurion* from the fhore was fomewhat extraordinary; for the pitch of the Cape is not high, and fhe ufually kept from ten to fifteen leagues diftant; though once indeed, by an indraught of the tide, as was fuppofed, they found themfelves in the morning within feven leagues of the land.

As the month of June advanced, the expectancy and impatience of the Commodore's people each day encreafed. And I think no better idea can be given of their great eagerness on this occasion, than by copying a few paragraphs from the journal of an officer, who was then or board; as it will, I prefume, be a more natural picture of the full attachment of their thoughts to the business of their cruife, than can be given by any other means. The paragraphs I have felected, as they occur in order of time, are as follow:

" May 31, Exercifing our men at their quarters, in great expectation of meeting with the galeons very foon; this being the eleventh of June their ftile."

"June 3, Keeping in our flations, and looking "out for the galeons."

"June 5, Begin now to be in great expectation, this being the middle of June their stile."

"June 11, Begin to grow impatient at not feeing the galeons."

"June 13, The wind having blown fresh eafterly for the forty-eight hours past, gives us great expectations of feeing the galeons soon."

"June 15, Cruizing on and off, and looking out "ftrictly."

" "June 19, This being the last day of June N.S. " the galeons, if they arrive at all must appear « foon."

From these famples it is fufficiently evident, how compleatly the treasure of the galleons had engroffed. their imagination, and how anxioully they paffed the latter part of their cruife, when the certainty of the arrival of these vessels was dwindled down to probability only, and that probability became each hour more and more doubtful. However, on the 20th of June O. S. being just a month from their arrival on their flation, they were relieved from this state of uncertainty; when, at fun-rife, they difcovered a fail from the maft-head, in the S.E. quarter. On this, a general joy fpread through the whole ship; for they had no doubt but this was one of the galeons, and they expected foon to fee the other. The Commodore inftantly flood towards her, and at half an hour after feven they were near enough to fee her from the Centurion's deck; at which time the galeon fired a gun, and took in her top gallant fails, which was fuppofed to be a fignal to her confort to haften her up; and therefore the Centurion fired a gun to leeward, to amufe her. The Commodore was furprized to find, that in all this time the galeon did not change her courfe, but continued to bear down upon him ; for he hardly believed, what afterwards appeared to be the cafe, that she knew his ship to be the Centurion, and refolved to fight him.

About noon the Commodore was little more than a league diftant from the galeon, and could fetch her wake, fo that fhe could not now efcape; and, no fecond fhip appearing, it was concluded that fhe had been separated from her confort. Soon after, the.

Kk2

(500)

the galeon haled up her fore-fail, and brought too under top-fails, with her head to the northward, hoifting Spanish colours, and having the standard of Spain flying at the top-gallant masthead. Mr. Anfon in the mean time had prepared all things for an engagement on board the Centurion, and had taken all possible care, both for the most effectual exertion of his small strength. and for the avoiding the confusion and tumult, too frequent in actions of this kind. He picked out about thirty of his choicest hands and best marksmen, whom he distributed into his tops, and who fully answered his expectation, by the fignal fervices they performed. As he had not hands enough remaining to quarter a fufficient number to each great gun, in the customary manner, he therefore, on his lower tire, fixed only two men to each gun, who were to be folely employed in loading it, while the reft of his people were divided into different gangs of ten or twelve men each, which were conftantly moving about the decks, to run out and fire fuch guns as were loaded. By this management he was enabled tomake use of all his guns; and, instead of firing. broad-fides with intervals between them, he kept up a conftant fire without intermission, whence he doubted not to procure very fignal advantages; for it is common with the Spaniards to fall down. upon the decks when they fee a broadfide preparing, and to continue in that posture till it is given ; after which they rife again, and, prefuming, the danger to be for fome time over, work their guns, and fire with great brifknefs, till another broad-fide is ready : But the firing gun by gun, ín

in t dere T the ' noor obfc ever ing hoift then Com lecter faw t he g guns vent ral d were fire v turio if ne Spani fore came keepi them the p feven begar Anfon bow; he co enemy of her ment

in the manner directed by the Commodore, rendered this practice of theirs impossible.

The Centurion being thus prepared, and nearing the galeon a-pace, there happened, a little after noon, feveral fqualls of wind and rain, which often obscured the galeon from their fight; but whenever it cleared up, they obferved her refolutely lying to; and, towards one o'clock, the Centurion hoifted her broad pendant and colours, fhe being then within gun-fhot of the enemy. And the Commodore observing the Spaniards to have neglected clearing their ship till that time, as he then faw them throwing over-board cattle and lumber, he gave orders to fire upon them with the chace. guns, to embaraís them in their work, and prevent them from compleating it, though his general directions had been not to engage till they were within piftol-fhot. The galeon returned the fire with two of her stern.chase, and, the Centurion getting her sprit-fail-yard fore and aft, that if neceffary the might be ready for boarding, the Spaniards in a bravado rigged their fprit-fail-yard fore and aft' likewife. Soon after, the Centurion came a-breaft of the enemy within piftol-fhot, keeping to the leeward with a view of preventing them from putting before the wind, and gaining the port of Jalapay, from which they were about feven leagues diftant. And now the engagement began in earneft, and for the first half hour, Mr. Anson over-reached the galeon, and lay on her bow; where, by the great wideness of his ports he could traverfe almost all his guns upon the enemy, whilft the galeon could only bring a part of hers to bear. Immediately, on the commencement of the action, the mats, with which the ga-Kk 3 leon

ĥt

h-

he

ſt-

leon had ftuffed her netting, took fire, and burnt violently, blazing up half as high as the mizentop. This accident (fuppofed to be caufed by the Centurion's wads) threw the enemy into great confusion, and at the fame time alarmed the Commodore, for he feared left the galeon should be burnt, and left he himfelf too might fuffer by her driving on board him: But the Spaniards at laft freed themfelves from the fire, by cutting away the netting, and tumbling the whole mafs which was in flames, into the fea. But still the Centurion kept her first advantageous position, firing her cannon with great regularity and brifknefs, whilft at the fame time the galeon's decks lay open to her top men, who, having at their first volley driven the Spaniards from their tops, made prodigious havock with their fmall arms, killing or wounding every officer but one that ever appeared on the quarter-deck, and wounding in particular the General of the galeon himfelf. And though the Centurion, after the first half hour, lost her original fituation, and was clofe along-fide the galeon, and the enemy continued to fire brifkly for near an hour longer, yet at last the Commodore's grapefhot fwept their decks fo effectually, and the number of their flain and wounded was fo confiderable, that they began to fall into great diforder, efpecially as the General, who was the life of the action, was no longer capable of exerting himfelf. Their embarrasment was visible from on board the Commodore. For the ships were fo near, that fome of the Spanish officers were feen running about with great affiduity, to prevent the defertion of their men from their quarters : But all their endeavours were in vain; for after having, as a laft

Thus was the Centurion posseffed of this rich prize, amounting in value to near a million and a half of dollars. She was called the Nostra Signora de Cabadonga, and was commanded by the General Don Jeronimo de Montero, a Portuguese by birth, and the most approved officer for skill and courage of any employed in that fervice. The galeon was much larger than the Centurion, had five hundred and fifty men and thirty-fix guns mounted for action, befides twenty-eight pidreroes in her gunwale, quarters and tops, each of which carried a four pound ball. She was very well furnished with fmall-arms, and was particularly provided against boarding, both by her close quarters, and by a ftrong net-work of two inch rope, which was laced over her waift, and was defended by half pikes. She had fixty-feven killed in the action, and eighty-four wounded, whilft the Centurion had only two killed, and a Lieutenant and fixteen wounded, all of whom, but one, recovered : Of fo little confequence are the most destructive arms in untutored and unpractifed hands,

The treasure thus taken by the Centurion having been for at least eighteen months the great object of their hopes, it is impossible to defcribe the K k 4 transport

transport on board, when, after all their reiterated difappointments, they at last faw their wishes accomplished. But their joy was near being fuddenly damped by a most tremendous incident: For no fooner had the galeon ftruck, than one of the Lieutenants coming to Mr. Anfon to congratulate him on his prize, whifpered him at the fame time, that the Centurion was dangeroully on fire near the powder-room. The Commodore received this dreadful news without any apparent emotion, and, taking care not to alarm his people, gave the neceffary orders for extinguishing it, which was happily done in a fhort time, though its appearance at first was extremely terrible. It feems fome cartridges had been blown up by accident between decks, whereby a quantity of oakum in the afterhatch way, near the after powder-room, was fet on fire; and the great fmother and fmoke of the oakum occasioned the apprehension of a more extended and mischievous fire. At the same instant too, the galeon fell on board the Centurion on the starboard quarter, but she was cleared without doing or receiving any confiderable damage.

The Commodore made his first Lieutenant, Mr. Saumarez, Captain of this prize, appointing her a post-fhip in his Majesty's fervice. Captain Saumarez, before night, sent on board the Centurion all the Spanish prisoners, but such as were thought the most proper to be retained to affist in navigating the galeon. And now the Commodore learnt, from some of these prisoners, that the other ship, which he had kept in the port of Acapulco the preceding year, instead of returning in company with the present prize as was expected, had set fail from Acapulco alone much soner than usual, ed

usual, and had, in all probability, got into the port of Manila long before the Centurion arrived off Espiritu Santo; fo that Mr. Anson, notwithstanding his present success, had great reason to regret his loss of time at Macao, which prevented him from taking two rich prizes instead of one.

The Commodore, when the action was ended. refolved to make the best of his way with his prize for the river of Canton, being in the mean time fully employed in fecuring his prifoners, and in removing the treasure from on board the galeon into the Centurion. The last of these operations was too important to be postponed; for as the navigation to Canton was through feas but little known, and where, from the feafon of the year, much bad weather might be expected, it was of great confequence that the treafure should be fent on board the Centurion, which fhip, by the prefence of the Commander in Chief, the greater number of her hands, and her other advantages, was doubtless much fafer against all the cafualties of winds and feas than the galeon; and the fecuring the prifoners was a matter of still more confequence, as not only the poffession of the treasure, but the lives of the captors depended thereon. This was indeed an article which gave the Commodore much trouble and difquietude; for they were above double the number of his own people; and fome of them, when they were brought on board the Centurion, and had observed how slenderly fhe was manned, and the large proportion which the ftriplings bore to the reft, could not help expressing themselves with great indignation to be thus beaten by a handful of boys. The method, which was taken to hinder them from rifing,

(506).

rifing, was by placing all but the officers and the wounded in the hold, where, to give them as much air as poffible, two hatch-ways were left open; but then (to avoid all danger, whilft the Centurion's people should be employed upon the deck) there was a square partition of thick planks, made in the shape of a funnel, which enclosed each hatch-way on the lower deck, and reached to that directly over it on the upper cleck; these funnels ferved to communicate the air to the hold better than could have been done without them; and, at the fame time, added greatly to the fecurity of the fhip; for they being feven or eight feet high, it would have been extreamly difficult for the Spaniards to have clambered up; and ftill to augment that difficulty, four fwivel-guns loaded with mufquet-bullets were planted at the mouth of each funnel, and a centinel with lighted match conftantly attended, prepared to fire into the hold amongst them, in case of any difturbance. Their officers, which amounted to feventeen or eighteen, were all lodged in the first Lieutenant's cabin, under a constant guard of fix men; and the General, as he was wounded, lay in the Commodore's cabbin with a centinel always with him; and they were all informed, that any violence or diffurbance would be punished with inftant death. And that the Centurion's people might be at all times prepared, if, notwithstanding these regulations, any tumult should arise, the fmall-arms were conflantly kept loaded in a proper place, whilft all the men went armed with cutlaffes and piftols; and no officer ever pulled off his cloaths, and when he flept had always his arms lying ready by him.

These measures were obviously necessary, confidering the hazards to which the Commodore and his people would have been expoled, had they been lefs careful. Indeed, the fufferings of the poor prifoners, though impossible to be alleviated, were much to be commiferated : for the weather was extremely hot, the ftench of the hold loathfome, beyond all conception, and their allowance of water but just fufficient to keep them alive, it not being practicable to fpare them more than at the rate of a pint a day for each, the crew themfelves having only an allowance of a pint and an half. All this confidered, it was wonderful that not a man of them died during their long confinement, except three of the wounded, who died the fame night they were taken; though it must be confessed, that the greatest part of them were ftrangely metamorphofed by the heat of the hold; for when they were first taken, they were fightly, robust fellows; but when, after above a month's imprisonment, they were discharged in the river of Canton, they were reduced to mere skeletons; and their air and looks corresponded much more to the conception formed of ghofts and spectres, than to the figure and appearance of real men.

Thus employed in fecuring the treafure and the prifoners, the Commodore, as hath been faid, ftood for the river of *Canton*; and, on the 30th of *June*, at fix in the evening, got fight of Cape *Delangano*, which then bore weft ten leagues diftant; and, the next day, he made the *Bafbee Iflands*, and the wind being fo far to the northward, that it was difficult to weather them, it was refolved to ftand thorough between *Graften* and *Monmouth Iflands*, where the paffage feemed to be

be clear; but in getting through, the fea had a very dangerous afpect, for it ripled and foamed. as if it had been full of breakers, which was still more terrible, as it was then night. But the fhips got through very fafe, (the prize always keeping a-head) and it was found that the appearance which had alarmed them had been occasioned only by by a ftrong tide. I must here observe, that tho' the Bashee Islands are usually reckoned to be no more than five, yet there are many more lying about them to the westward, which, as the channels amongst them are not at all known, makes it adviseable for ships, rather to pass to the northward or fouthward, than through them : and indeed the Commodore proposed to have gone to the northward between them and Formofa, had it been possible for him to have weathered them. From hence the Centurion steering the proper course for the river of Canton, fhe, on the 18th of July. discovered the Island of Supata, the westermost of the Lema Islands, being the double-peaked rock, particularly delineated in the view of the Islands of Lema, formerly referred to. This Island of Supata they made to be an hundred and thirty-nine leagues distant from Grafton's Island, and to bear from it North 82° 37 Weft : And, on the 11th, having taken on board two Chinefe Pilots, one for the Centurion, and the other for the prize, they came to an anchor off the city of Macao.

By this time the particulars of the cargoe of the galeon were well afcertained, and it was found that fhe had on board 1,313,843 pieces of eight, and 35,682 oz. of virgin filver, befides fome cochineal, and a few other commodities, which, however, were but of finall account, in comparison of the 2

the fpecie. And this being the Commodore's laft prize, it hence appears, that all the treasure taken by the Centurion was not much fhort of 400,000 l. independent of the thips and merchandize, which fhe either burnt or destroyed, and which, by the most reasonable estimation, could not amount to fc little as 600,000 l. more; fo that the whole loss of the enemy, by our fquadron, did doubtles exceed a million sterling. To which, if there be added the great expence of the Court of Spain, in fitting out Pizarro, and in paying the additional charges in America, incurred on our account, together with the loss of their men of war, the total of all these articles will be a most exorbitant fum, and is the ftrongest conviction of the utility of this expedition, which, with all its numerous difadvantages, did yet prove fo extremely prejudicial to the enemy. I shall only add, that there were taken on board the galeon feveral draughts and journals, from fome of which many of the particulars recited in the 10th chapter of the fecond book are collected. Among the reft there was found a chart of all the Ocean, between the Philippines and the coast of Mexico, which was what was made use of by the galeon in her own navigation. A copy of this draught, corrected in fome places by our own observation, is here annexed, together with the route of the galeon traced thereon from her own journals, and likewife the route of the Centurion, from Acapulco through the fame Ocean. This is the chart formerly referred to, in the account of the Manila trade : And, to render it still more compleat, the observed variation of the needle is annexed to feveral parts both of the Spanish and English track; which

(510)

which addition is of the greatest confequence, as no observations of this kind in the northern parts of the *Pacific* Ocean have yet to my knowledge been published, and as the quantity of the variation fo nearly corresponds to what Dr. *Halley* predicted from his Theory, above fifty years ago. And with this digression I shall end this chapter, leaving the *Centurion* with her prize at anchor off *Macao*, preparing to enter the river of *Canton*.

CHAP. IX.

Transactions in the river of Canton.

THE Commodore, having taken Pilots on board, proceeded with his prize for the river of Canton; and, on the 14th of July, came to an anchor short of the Bocca Tigris, which is a narrow paffage forming the mouth of that river : This entrance he proposed to stand through the next day, and to run up as far as Tiger Island, which is a very fafe road, fecured from all winds. But whilft the Centurion and her prize were thus at anchor, a boat with an officer came off from the Mandarine, commanding the forts at Bocca Tigris to examine what the fhips were, and whence they came. Mr. Anfon informed the officer, that his fhip was a fhip of war, belonging to the King of Great-Britain; and that the other in company with him was a prize he had taken; that he was going into Canton river to fhelter himfelf against the hurricanes which were then coming on; and that as foon as the monfoon shifted, he should proceed

pro acco on to t arti was dree dree ders reci Can he c it f had dep offic told prol with fatis of 1 the com ama ed f perc into occa the thro fary T than land ftart 1

proceed for England. The officer then defired an account of what men, guns, and ammunition were on board, a lift of all which he faid was to be fent to the Government of Canton. But when these articles were repeated to him, particularly when he was told that there were in the Centurion four hundred firelocks, and between three and four hundred barrels of powder, he fhrugged up his fhoulders, and feemed to be terrified with the bare recital, faying, that no fhips ever came into Canton river armed in that manner; adding, that he durft not fet down the whole of this force. left it should too much alarm the Regency. After he had finished his enquiries, and was preparing to depart, he defired to leave the two Cuftom-houfe officers behind him; on which the Commodore told him, that though as a man of war he was prohibited from trading, and had nothing to do with cuftoms or duties of any kind, yet, for the fatisfaction of the Chinele, he would permit of two of their people to be left on board, who might themfelves be witneffes how punctually he fhould comply with his inftructions. The officer feemed amazed when Mr. Anfon mentioned being exempted from all duties, and told him, that the Emperor's duty must be paid by all ships that came into his ports: And it is supposed, that on this occafion, private directions were given by him to the Chinese Pilot, not to carry the Commodore through the Bocca Tigris; which makes it neceffary, more particularly to defcribe that entrance.

The Bocca Tigris is a narrow passage, little more than mulquet-shot over, formed by two points of land, on each of which there is a fort, that on the starboard fide being a battery on the water's edge, w.th

1

with eighteen embrasures, but where there were no more than twelve iron canon mounted, seeming to be four or fix pounders; the fort on the larboard-fide is a large castle, refembling those old buildings which here in *England* we often find distinguiss which here in *England* we often find more than eight or ten cannon, none of which were supposed to exceed fix pounders. These are the defences which secure the river of *Canton*; and which the *Chinese* (extremely defective in all military skill) have imagined were sufficient to prevent any enemy from forcing his way through.

But it is obvious, from the defcription of thefe forts, that they could have given no obstruction to Mr. Anfon's passage, even if they had been well fupplied with gunners and ftores; and therefore, though the Pilot, after the Chinefe officer had been on board, refused at first to take charge of the fhip, till he had leave from the forts, yet as it was neceffary to get through without any delay, for fear of the bad weather which was hourly expected, the Commodore weighed on the 15th, and ordered the Pilot to carry him by the forts, threatening him that, if the fhip ran aground, he would inftantly hang him up at the yard arm. The Pilot, awed by these threats, carried the ship through fafely, the forts not attempting to difpute the paffage. Indeed the poor Pilot did not escape the refentment of his countrymen, for when he came on shore, he was seized and sent to prison, and was rigouroufly difciplined with the bamboo. However, he found means to get at Mr. Anfon afterwards, to defire of him fome recompence for the chastifement he had undergone, and of which he

g ti do or in to M bc Wa he tea the ina pla WC fiz in no the ing im the cei for fed Vi tur m to ve fw

ħ

a

(513)

he then carried very fignificant marks about him; and Mr. Anfon, in commiferation of his fufferings, gave him fuch a fum of money, as would at any time have enticed a *Chinefe* to have undergone a dozen baftinadings.

Nor was the Pilot the only perfon that fuffered on this occasion ; for the Commodore foon after feeing fome royal junks pafs by him from Bocca Tigris towards Canton, he learnt, on enquiry, that the Mandarine commanding the forts was a prifoner on board them; that he was already turned out, and was now carrying to Canton, where it was expected he would be feverely punished for having permitted the fhips to pafs; and the Commodore urging the unreafonableness of this procedure, from the inability of the forts to have done otherwife, explaining to the Chinefe the great fuperiority his fhips would have had over the forts, by the number and fize of their guns, the Chinese feemed to acquiesce in his reafoning, and allowed that their forts could not have stopped him; but they still asserted, that the Mandarine would infallibly fuffer, for not having done, what all his judges were convinced, was impoffible. To fuch indefenfible absurdities are those obliged to fubmit, who think themselves concerned to fupport their authority, when the neceffary force is wanting. But to return:

On the 16th of July the Commodore fent his fecond Lieutenant to Canton, with a letter to the Viceroy, informing him of the reafon of the Centurion's putting into that port; and that the Commodore himfelf foon proposed to repair to Canton, to pay a visit to the Viceroy. The Lieutenant was very civilly received, and was promised that an anfwer should be fent to the Commodore the next day.

In the mean time Mr. Anfon gave leave to feveral of the officers of the galeon to go to Canton, they engaging their parole to return in two days. When thefe prifoners got to Canton, the Regency fent for them, and examined them, enquiring particularly by what means they had fallen into Mr. Anfon's power. And on this occafion the prifoners were honeft enough to declare, that as the Kings of Great-Britain and of Spain were at war, they had proposed to themselves the taking of the Centurion, and had bore down upon her with that view, but that the event had been contrary to their hopes : However, they acknowledged that they had been treated by the Commodore, much better than they believed they fhould have treated him, had he fallen into their hands. This confession from an enemy had great weight with the Chinefe, who, till then, though they had revered the Commodore's power, had yet fufpected his morals, and had confidered him rather as a lawlefs freebooter, than as one commiffioned by the State for the revenge of public injuries. But they now changed their opinion, and regarded him as a more important perfon; to which perhaps the vaft treasure of his prize might not a little contribute; the acquifition of wealth being a matter greatly adapted to the effimation and reverence of the Chinele Nation.

In this examination of the Spanish prifoners, though the Chinese had no reason in the main to doubt of the account which was given them, yet there were two circumstances which appeared to them to fingular, as to deferve a more ample explanation; one of them was the great disproportion of men between the Centurion and the galeon; the other was the humanity, with which the people of the galeon

(515)

galeon were treated after they were taken. The Mandarines therefore asked the Spaniards, how they came to be overpowered by fo inferior a force; and how it happened, fince the two nations were at war, that they were not put to death when they came into the hands of the English. To the first of these enquiries the Spaniards replied, that tho' they had more hands than the Centurion, yet she being intended folely for war had a great fuperiority in the fize of her guns, and in many other articles, over the galeon, which was a veffel fitted out principally for traffic : And as to the fecond question, they told the Chinefe, that amongst the nations of Europe, it was not customary to put to death those who fubmitted; though they readily owned, that the Commodore, from the natural bias of his temper, had treated both them and their countrymen, who had formerly been in his power, with very unufual courtefy, much beyond what they could have expected, or than was required by the cuftoms eftablifhed between nations at war with each other. These replies fully fatisfied the Chinese, and at the fame time wrought very powerfully in the Commodore's favour.

On the 20th of July, in the morning, three Mandarines, with a great number of boats, and a vast retinue, came on board the Centurion, and delivered to the Commodore the Viceroy of Canton's order for a daily fupply of provisions, and for Pilots to carry the ships up the river as far as the fecond bar; and at the fame time they delivered him a meffage from the Viceroy, in answer to the letter fent to Canton. The fubstance of the meffage was, that the Viceroy defired to be excufed from receiving the Commodore's visit, during the then exceffive

five hot weather; becaufe the affembling the Mandarines and foldiers, neceffary to that ceremony, would prove extremely inconvenient and fatiguing; but that in September, when the weather would be more temperate, he fhould be glad to fee both the Commodore himfelf, and the English Captain of the other fhip, that was with him. As Mr. Anfon knew that an express had been dispatched to the Court at Pekin, with an account of the Centurion and her prize being arrived in the river of Canton, he had no doubt, but the principal motive for putting off this visit was, that the Regency at Canton might gain time to receive the Emperor's instructions, about their behaviour on this unufual affair.

When the *Mandarines* had delivered their meffage, they began to talk to the Commodore about the duties to be paid by his fhips; but he immediately told them, that he would never fubmit to any demand of that kind; that as he neither brought any merchandize thither, nor intended to carry any away, he could not be reafonably deemed to be within the meaning of the Emperor's orders, which were doubtlefs calculated for trading veffels only, adding, that no duties were ever demanded of men of war, by nations accuftomed to their reception, and that his Mafter's orders express for his fhips anchoring in any port whatever.

The Mandarines being thus cut fhort on the fubject of the duty, they faid they had another matter to mention, which was the only remaining one they had in charge; this was a request to the Commodore, that he would release the prisoners he had taken on board the galeon; for that the Viceroy of Canton apprehended the Emperor, his Master, might might be difpleafed, if he fhould be informed, that perfons, who were his allies, and carried on a great commerce with his fubjects, were under confinement in his dominions. Mr. Anfon was himfelf extremely defirous to get rid of the Spaniards, having, on his first arrival, fent about an hundered of them to Macao, and those who remained, which were near four hundred more, were on many accounts, a great incumbrance to him. However, to inhance the favour, he at first raifed some difficulties; put permitting himfelf to be prevailed on, he at last told the Mandarines, that to show his readinefs to oblige the Viceroy, he would releafe the prifoners, whenever they, the Chinefe, would fend boats to fetch them off. This matter being thus adjusted, the Mandarines departed; and, on the 28th of July, two Chinese junks were fent from Canton, to take on board the prifoners, and to carry them to Macao. And the Commodore, agreeable to his promife, difmiffed them all, and ordered his Purfer to fend with them eight days provision for their fubfiftance, during their failing down the river ; this being difpatched, the Centurion and her prize came to her moorings, above the fecond bar, where they proposed to continue till the monfoon fhifted.

Though the ships, in confequence of the Viceroy's permit, found no difficulty in purchasing provisions for their daily confumption, yet it was impoffible for the Commodore to proceed to England, without laying in a large quantity both of provisions and stores for his use, during the voyage : The procuring this fupply was attended with much embarafment; for there were people at Canton who had undertaken to furnish him with biscuit, and whatever

L13

whatever elfe he wanted; and his Linguist, towards the middle of September, had affured him, from day to day, that all was ready, and would be fent on board him immediately. But a fortnight being elapfed, and nothing being brought, the Commodore fent to Canton to enquire more particularly into the reasons of this disappointment : And he had foon the vertation to be informed, that the whole was an illution; that no order had been procured from the Wie roy, to furnish him with his fea-stores, as had been pretended; that there was no bifcuit baked, nor any one of the articles in readinefs, which had been promifed him; nor did it appear, that the Contractors had taken the least flep to comply with their agreement. This was most difagreeable news, and made it fuspected, that the furnishing the Centurion for her return to Great-Britain might prove a more troublesome matter than had been hitherto imagined; especially too, as the month of September was nearly elapfed, without Mr. Anfon's having received any meffage from the Viceroy of Canton.

And here perhaps it might be expected that fome fatisfactory account fhould be given of the motives of the *Chinefe* for this faithlefs procedure. But as I have already, in a former chapter, made fome kind of conjectures about a fimilar event, I fhall not repeat them again in this place, but fhall obferve, that after all, it may perhaps be impoffible for an *European*, ignorant of the cuftoms and manners of that nation, to be fully apprized of the real incitements to this behaviour. Indeed, thus much may undoubtedly be afferted, that in artifice, falfhood, and an attachment to all kinds of lucre, many of the *Chinefe* are difficult to be paralleled by

(519)

any other people; but then the combination of these talents and the manner in which they are applied in particular emergencies, are often beyond the reach of a Foreigner's penetration: So that tho' it may be fafely concluded, that the *Chinese* had fome interest in thus amusing the Commodore, yet it may not be easing to assume the individual views by which they were influenced. And that I may not be thought too fevere in ascribing to this Nation a fraudulent and felfish turn of temper, so contradictory to the character given of them in the legendary accounts of the *Roman* Mission ar two, which I hope will be fome kind of confirmation of what I have advanced.

When the Commodore lay first at Macao, one of his officers, who had been extremely ill; defired leave of him to go on fhore every day on a neighbouring Island, imagining that a walk upon the land would contribute greatly to the reftoring of his health: The Commodore would have diffuaded him, fuspecting the tricks of the Chinese, but the officer continuing importunate, in the end the boat was ordered to carry him. The first day he was put on fhore he took his exercife, and returned without receiving any moleftation, or even feeing any of the inhabitants; but the fecond day, he was affaulted, foon after his arrival, by a great number of Chinese who had been hoeing rice in the neighbourhood, and who beat him to violently with the handles of their hoes, that they foon laid him on the ground incapable of refiftance; after which they robbed him, taking from him his fword, the hilt of which was filver, his money, his watch, goldheaded cane, fnuff-box, fleeve-buttons, and hat, 1.14 with

with feveral other trinkets: In the mean time the boat's crew, who were at fome little diffance, and had no arms of any kind with them, were incapable of giving him any affiftance; till at last one of them flew on the fellow who had the fword in his poffeffion, and wrefting it out of his hands drew it, and with it was preparing to fall on the Chinefe, fome of whom he could not have failed of killing; but the officer, perceiving what he was about, immediately ordered him to defift, thinking it more prudent to fubmit to the prefent violence, than to embroil his Commodore in an inextricable fquabble with the Chinese Government, by the death of their fubjects; which calmness in this Gentleman was the more meritorious, as he was known to be a perfon of an uncommon fpirit, and of a fomewhat hafty temper: By this means the Chinele recovered the poffeffion of the fword, which they foon perceived was prohibited to be made use of against them, and carried off their whole booty unmolefted. No fooner were they gone, than a Chinese on horseback, very well dreffed, and who had the air and appearance of a Gentleman, came down to the fhore, and, as far as could be underftood by his figns, feemed to cenfure the conduct of his countrymen, and to commiferate the officer, being wonderfully officious to affift in getting him on board the boat: But notwithftanding this behaviour, it was fhrewdly fufpected that he was an accomplice in the theft, and time fully evince the justice of those fuspicions.

When the boat returned on board, and reported what had paffed to the Commodore, he immediately complained of it to the *Mandarine*, who attended to fee his fhip fupplied; but the *Mandarine* coolly replied, that the boat ought not to have gone on fhore,

C th an tr CC bd pe ca aſ in fic th We ac ftr pro wa M no he foo rol WC ore pu fir lea do lef bo tre off ty.

ſ

shore, promising, however, that if the thieves could be found out, they fhould be punished; though it appeared plain enough, by his manner of answering, that he would never give himself any trouble in fearching them out. However, a confiderable time afterwards, when some Chinese boats were felling provisions to the Centurion, the perion who had wrefted the fword from the Chinefe came with great eagerness to the Commodore, to affure him that one of the principal thieves was then in a provision-boat along-fide the fhip; and the officer, who had been robbed, viewing the fellow on this report, and well remembring his face, orders were immediately given to feize him; and he was accordingly fecured on board the ship, where strange discoveries were now made.

This thief, on his being first apprehended, expreffed fo much fright in his countenance, that it was feared he would have died upon the fpot ; the Mandarine too, who attended the fhip, had vifibly no fmall fhare of concern on the occafion. Indeed he had reafon enough to be alarmed, fince it was foon evinced, that he had been privy to the whole robbery; for the Commodore declaring that he would not deliver up the thief, but would himfelf order him to be fhot, the Mandarine immediately put off the magisterial air, with which he had at first pretended to demand him, and begged his releafe in the most abject manner : And the Commodore appearing inflexible, there came on board, in lefs than two hours time, five or fix of the neighbouring Mandarines, who all joined in the fame intreaty, and with a view of facilitating their fuit, offered a large fum of money for the fellow's liberty. Whilft they were thus folliciting, it was difcovered

covered that the Mandarine, who was the most active among them, and who feemed to be most interefted in the event, was the very Gentleman, who came to the officer, just after the robbery, and who pretended to be fo much difpleafed with the villany of his countrymen. And, on further inquiry it was tound, that he was the Mandarine of the Island: and that he had, by the authority of his office, ordered the Peafants to commit that infamous action. And it feemed, as far as could be collected from the broken hints which were cafually thrown out, that he and his brethren, who were all privy to the tranfaction, were terrified with the fear of being called before the tribunal at Canton, where the first article of their punifhment would be the ftripping them of all they were worth; though their judges (however fond of inflicting a chaftifement fo lucrative to themfelves) were perhaps of as tainted a complexion as the delinquents. Mr. Anfon was not difpleafed to have caught the Chinefe in this dilemma; and he entertained himfelf for fome time with their perplexity, rejecting their money with fcorn, appearing inexorable to their prayers, and giving out that the thief should certainly be shot: but as he then forefaw that he should be forced to take shelter in their ports a fecond time, when the influence he might hereby- acquire over the Magiftrates would be of great fervice to him, he at length permitted himfelf to be perfuaded, and as a favour releafed his prifoner, but not till the Mandarine had collected and returned all that had been ftolen from the officer, even to the minutest trifle.

But notwithstanding this instance of the good intelligence between the magistrates and criminals, the strong addiction of the *Chinefe* to lucre often prompts .

prompts them to break through this awful confederacy, and puts them on defrauding the authority that protects them of its proper quota of the pillage. For not long after the above-mentioned transaction, (the former Mandarine, attendant on the fhip; being, in the mean time, relieved by another) the Commodore loft a top-most from his ftern, which, after the most diligent inquiry, could not be traced : As it was not his own, but had been borrowed at Macao to heave down by, and was not to be replaced in that part of the world, he was extremely defirous to recover it, and published a confiderable reward to any who would bring it him again. There were fulpicions from the first of its being stolen, which made him conclude a reward was the likelieft method of getting it back : Accordingly, foon after, the Mandarine told him. that fome of his, the Mandarine's, people, had found the top-maft, defiring the Commodore to fend his boats to fetch it, which being done, the Mandarine's people received the promifed reward; but the Commodore told the Mandarine, that he would make him a prefent befides for the care he had taken in directing it to be fearched for; and accorrdingly, Mr. Anfon gave a fum of money to his Linguist, to be delivered to the Mandarine; but the Linguist knowing that the people had been paid, and ignorant that a further prefent had been promised, kept the money himself: However, the Mandarine fully confiding in Mr. Anfon's word, and fufpecting the Linguist, he took occasion, one morning, to admire the fize of the Centurion's mafts, and thence, on a pretended fudden recollection, he made a digreffion to the top-maft which had been loft, and asked Mr. Anfon if he had not got it again. Mr.

en la

Mr. Anfon prefently perceived the bent of this converfation, and enquired of him, if he had not received the money from the Linguist, and finding he had not, he offered to pay it him upon the fpot. But this the Mandarine refused, having now fomewhat more in view than the fum which had been detained : For the next day the Linguist was feized. and was doubtlefs mulcted of all he had gotten in the Commodore's fervice, which was fuppofed to be little lefs than two thousand dollars; he was belides fo feverely baftinadoed with the bamboo, that it was with difficulty he efcaped with his life; and when he was upbraided by the Commodore (to whom he afterwards came begging) with his folly, in rifquing all he had fuffered for fifty dollars, (the prefent intended for the Mandarine) he had no other excufe to make than the ftrong bias of his Nation to difhonefty, replying, in his broken jargon, Chinefe man very great rogue truly, but have fashion, no can belp.

It were endless to recount all the artifices, extortions, and frauds which were practifed on the Commodore and his people, by this interested race. The method of buying all things in China being by weight, the tricks made use of by the Chinese to increafe the weight of the provision they fold to the Centurion, were almost incredible. One time a large quantity of fowls and ducks being bought for the fhip's use, the greatest part of them presently died. This alarmed the people on board with the apprehenfions that they had been killed by poifon; but on examination it appeared, that it was only owing to their being crammed with flones and gravel to increafe their weight, the quantity thus forced into most of the ducks being found to amount to ten ounces

ten

ounces in each. The hogs too, which were bought ready killed of the Chinese Butchers, had water injected into them for the fame purpofe; fo that a carcafs, hung up all night for the water to drain from it, hath loft above a ftone of its weight; and when to avoid this cheat, the hogs were bought alive, it was found that the Chinefe gave them falt to increase their thirst, and having by this means excited them to drink great quantities of water, they then took measures to prevent them from difcharging it again by urine, and fold the tortured animal in this inflated ftate. When the Commodore first put to fea from Macao, they practifed an artifice of another kind; for as the Chinese never object to the eating of any food that dies of itfelf, they took care, by fome fecret practices, that great part of his live fea-ftore should die in a short time after it was put on board, hoping to make a fecond profit of the dead carcaffes which they expected would be thrown overboard; and two thirds of the hogs dying before the Centurion was out of fight of land, many of the Chinefe boats followed her, only to pick up the carrion. These instances may ferve as a specimen of the manners of this celebrated Nation, which is often recommended to the reft of the world as a pattern of all kinds of laudable qualities. But to return:

The Commodore, towards the end of September, having found out (as has been faid) that thofe, who had contracted to fupply him with fea-provifions and ftores, had deceived him, and that the Viceroy had not fent to him according to his promife, he faw it would be impossible for him to furmount the embarafment he was under, without going himfelf to *Canton*, and visiting the Viceroy; and

and therefore, on the 27th of September, he fent a meffage to the Mandarine, who attended the Centurion, to inform him that he, the Commodore, intended, on the first of Ostober, to proceed in his boat to Canton; adding, that the day after he got there, he should notify his arrival to the Viceroy, and should defire him to fix a time for his audience; to which the Mandarine returned no other anfwer, than that he would acquaint the Viceroy with the Commodore's intentions. In the mean time all things were prepared for this expedition : And the boat's crew in particular, which Mr. Anfon proposed to take with him, were cloathed in an uniform drefs, refembling that of the Watermen on the Thames; they were in number eighteen and a Coxfwain; they had fcarlet jackets and blue filk waiftcoats, the whole trimmed with filver buttons, and with filver badges on their jackets and caps. As it was apprehended, and even afferted, that the payment of the cuftomary duties for the Centurion and her prize, would be demanded by the Regency of Canton, and would be infifted on previous to the granting a permission for victualling the ship for her future voyage; the Commodore, who was refolved never to establish fo dishonourable a precedent, took all possible precaution to prevent the Chinele from facilitating the fuccels of their unreafonable pretenfions, by having him in their power at Canton : And therefore, for the fecurity of his ship, and the great treasure on board her, he appointed his first Lieutenant, Mr. Brett, to be Captain of the Centurion under him, giving him proper instructions for his conduct; directing him, particularly, if he, the Commodore, should be detained at Canton on account of the duties in difpute, to take

(527)

take out the men from the Centurion's prize, and to deftroy her; and then to proceed down the river through the Bocca Tigris, with the Centurion alone, and to remain without that entrance, till he received further orders from Mr. Anfon.

These necessary steps being taken, which were not unknown to the Chinese, it should seem as if their deliberations were in fome fort embaraffed thereby. It is reafonable to imagine, that they were in general very defirous of getting the duties to be paid them; not perhaps folely in confideration of the amount for those dues, but to keep up their reputation for addrefs and fubtlety, and to avoid the imputation of receding from claims, on which they had already fo frequently infifted. However, as they now forefaw that they had no other method of fucceeding than by violence, and that even against this the Commodore was prepared, they were at last disposed, I conceive, to let the affair drop, rather than entangle themfelves in an hoftile measure, which they found would only expose them to the rifque of having the whole navigation of their port destroyed, without any certain profpect of gaining their favourite point thereby.

However, though there is reafon to imagine that thefe were their thoughts at that time, yet they could not depart at once from the evalive conduct to which they had hitherto adhered. For when the Commodore, on the morning of the first of Ostober, was preparing to fet out for Canton, his Linguist came to him from the Mandarine, who attended his ship, to tell him that a letter had been received from the Viceroy of Canton, defiring the Commodore to put off his going thither for two or three

a

full

three days: But in the afternoon of the fame day, another Linguist came on board, who, with much feeming fright, told Mr. Anfon, that the Viceroy had expected him up that day, that the Council was affembled, and the troops had been under arms to receive him; and that the Viceroy was highly offended at the difappointment, and had fent the Commodore's Linguist to prifon chained, fuppofing that the whole had been owing to the Linguift's negligence. This plaufible tale gave the Commodore great concern, and made him apprehend that there was fome treachery defigned him, which he could not yet fathom; and though it afterwards appeared that the whole was a fiction, not one article of it having the leaft foundation, yet (for reafons beft known to themfelves) this falfhood was fo well fupported by the artifices of the Chinefe Merchants at Canton; that, three days afterwards. the Commodore received a letter figned by all the fupercargoes of the English fhips then at that place, expressing their great unealiness at what had happened, and intimating their fears that fome infult would be offered to his boat, .f he came thither before the Viceroy was fully fatisfied about the miftake. To this letter Mr. Anfon replied, that he did not believe there had been any miftake; but was perfuaded it was a forgery of the Chinefe to prevent his vifiting the Viceroy; that therefore he would certainly come up to Canton on the 13th of October, confident that the Chinefe would not dare to offer him an infult, as well knowing it would be properly returned.

On the 13th of Ostober, the Commodore continuing firm to his refolution, all the fupercargoes of the English, Danish, and Swedish ships came on board

board the Centurion, to accompany him to Cantfor which place he fet out in his barge the fame day, attended by his own boats, and by those of the trading ships, which on this occasion came to form his retinue; and as he paffed by Wampo, where the European veffels lay, he was faluted by all of them but the French, and in the evening he arrived fafely at Canton. His reception at that city, and the most material transactions from henceforward, till his arrival in Great-Britain, shall be the fubject of the enfuing chapter.

CHAP. X.

Proceedings at the city of Canton, and the return of the Centurion to England.

THEN the Commodore arrived at Canton, he was visited by the principal Chinese Merchants, who affected to appear very much pleafed that he had met with no obstruction in getting this ther, and who thence pretended to nclude; that the Viceroy was fatisfied about the former miltake, the reality of which they still infisted of; they ad, ded, that as foon as the Viceroy should be informed that Mr. Anfon was at Canton, which they promifed fhould be done the next morning) they were perfuaded a day would be immediately appointed for the vifit, which was the principal bufinels that had brought the Commodore thither.

The next day the Merchants returned to Mr. Anfon, and told him, that the Viceroy was then fo fully employed in preparing his difpatches for Pekin.

kin, that there was no getting admittance to him for fome days; but that they had engaged one of the officers of his Court to give them information, as foon as he fhould be at leifure, when they proposed to notify Mr. Anfon's arrival, and to endeavour to fix the day of audience. The Commodore was by this time too well acquainted with their artifices, not to perceive that this was a falfhood ; and had he confulted only his own judgment, he would have applied directly to the Viceroy by other hands: But the Chinese Merchant had fo far prepoffeffed the fupercargoes of our fhips with chimerical fears, that they (the fupercargoes) were extremely apprehensive of being embroiled with the Government, and of fuffering in their intereft, if those measure were taken, which appeared to Mr. Anson at that time to be the most prudential : And therefore, leaft the malice and double-dealing of the Chinefe might have given rife to fome finifter incident, which would be afterwards laid at his door, he refolved to continue paffive, as long as it fhould appear that he loft no time, by thus fufpending his own opinion. With this view, he promifed not to take any immediate ftep himfelf for getting admittance to the Viceroy, provided the Chinefe with whom he contracted for provisions, would let him fee that his bread was baked, his meat falted, and his ftores prepared with the utmoft difpatch : But if by the time when all was in readinefs to be fhipped off, (which it was fuppofed would be in about forty days) the Merchants fhould not have procured the Viceroy's permiffion, then the Commodore proposed to apply for it himself. These were the terms Mr. Anson thought proper to offer, to quiet' the theafiness of the fupercargoes; and and notwithstanding the apparent equity of the conditions, many difficulties and objections were urged; nor would the *Chinefe* agree to them, till the Commodore had confented to pay for every article he befpeke before it was put in hand. However, at last the contract being past, it was fome fatisfaction to the Commodore to be certain that his preparations were now going on, and being himself on the spot, he took care to hasten them as much as possible.

During this interval, in which the ftores and provisions were getting ready, the Merchants continually entertained Mr. Anfon with accounts of their various endeavours to get a licence from the Viceroy, and their frequent difappointments; which to him was now a matter of amufement, as he was fully fatisfied there was not one word of truth in any thing they faid. But when all was compleated, and wanted only to be fhipped, which was about the 24th of November, at which time too the N.E. monfoon was fet in, he then refolved to apply himfelf to the Viceroy to demand an audience, as he was perfuaded that, without this ceremony, the procuring a permission to fend his stores on board would meet with great difficulty. On the 24th of November, therefore, Mr. Anfon fent one of his officers to the Mandarine, who commanded the guard of the principal gate of the city of Canton, with a letter directed to the Viceroy. When this letter was delivered to the Mandarine, he received the officer who brought it very civilly, and took down the contents of it in Chinefe, and promifed that the Viceroy should be immediately acquainted with it; but told the officer, it was not M m. 2 necel-

him e of ion, prodeadore r arboc ; t, he other prenimee ex-1 the eft, if Mr. And ng of inifter at his g as it s fufw, he elf for d the isions, d, his he utwas in ppofed fhould , then imfelf. oper to rgoes ; and

(532)

neceffary for him to wait for an anfwer, becaule a meffage would be fent to the Commodore himfelf.

On this occasion Mr. Anfon had been under great difficulties about a proper interpreter to fend with his officer, as he was well aware that none of the Chinefe, ufually employed as Linguists, could be relied on : But he at last prevailed with Mr. Flint, an English Gentleman belonging to the factory, who spoke Chinele perfectly well, to accompany his officer. This perfon, who upon this occasion and many others was of fingular fervice to the Commodore, had been left at Canton when a youth, by the late Captain Rigby. The leaving him there to learn. the Chinese language was a step taken by that Captain, merely from his own perfualion of the great advantages which the East-India Company might one day receive from an English interpreter; and tho' the utility of this measure has greatly exceeded all that was expected from it, yet I have not heard that it has been to this day imitated : But we imprudently choose (except in this fingle instance) to carry on the vaft transactions of the port of Canton, either by the ridiculous jargon of broken Englifb; which fome few of the Chinefe have learnt, or by the fufpected interpretation of the Linguists of other Nations.

Two days after the fending the above-mentioned letter, a fire broke out in the fuburbs of *Canton*. On the first alarm, Mr. *Anfon* went thither with his officers, and his boat's crew, to affift the *Chinefe*. When he came there, he found that it had begun in a failor's shed, and that by the slightness of the buildings, and the awkwardness of the *Chinefe*, it was getting head apace: But he perceived, that by pulling down fome of the adjacent sheds it might easily be extin-

extinguished; and particularly observing that it was running along a wooden cornish, which would foon communicate it to a great diftance, he ordered his people to begin with tearing away that cornish; this was prefently attempted, and would have been foon executed; but, in the mean time, he was told, that, as there was no Mandarine there to direct what was to be done, the Chinese would make him, the Commodore, answerable for whatever should be pulled down by his orders. On this his people defifted; and he fent them to the English factory, to affift in fecuring the Company's treafure and effects, as it was eafy to forefee that no diftance was a protection against the rage of fuch a fire, where fo little was done to put a ftop to it; for all this time the Chinele contented themselves with viewing it, and now and then holding one of their idols near it, which they feemed to expect should check its progrefs: However, at last, a Mandarine came out of the city, attended by four or five hundred firemen : These made fome feeble efforts to pull down the neighbouring houfes; but by this time the fire had greatly extended itfelf, and was got amongst the Merchants warehouses; and the Chinele firemen, wanting both skill and spirit, were incapable of checking its violence; fo that its fury encreafed upon them, and it was feared the whole city would be deftroyed. In this general confusion the Viceroy himfelf came thither, and the Commodore was fent to, and was entreated to afford his affiftance, being told that he might take any measures he should think most prudent in the present emergency. And now he went thither a fecond time, carrying with him about forty of his people; who, upon this occasion, exerted themselves in fuch a manner, as Mm 3 in

in that country was altogether without example: For they were rather animated than deterred by the flames and falling buildings, amongit which they wrought; fo that it was not uncommon to fee the most forward of them tumble to the ground on the roofs, and amidit the ruins of houses, which their own efforts brought down with them. By their boldness and activity the fire was foon extinguished, to the amazement of the *Chinese*; and the building being all on one floor, and the materials flight, the feamen, notwithstanding their daring behaviour, happily escaped with no other injuries, than fome confiderable bruises.

The fire, though at last thus luckily extinguished, did great mischief during the time it continued; for it confumed an hundred fhops and eleven streets full of warehouses, fo that the damage amounted to an immenfe fum; and one of the Chinese Merchants, well known to the English, whofe name was Succoy, was supposed, for his own share, to have lost near two hundred thousand pound sterling. It raged indeed with unufual violence, for in many of the warehoufes, there were large quantities of camphire, which greatly added to its fury, and produced a column of exceeding white flame, which fhot up into the air to fuch a prodigious height, that the flame itfelf was plainly feen on board the Centurion, tho' fhe was thirty miles diftant.

Whillt the Commodore and his people were labouring at the fire, and the terror of its becoming general ftill poffeffed the whole city, feveral of the most confiderable *Chinese* Merchants came to Mr. *Anson*, to defire that he would let each of them have one of his foldiers (for fuch they flyled his boat's crew, from the uniformity of their drefs) to guard their warehouses and dwelling - houses, which, from the known difhonesty of the populace, they feared would be pillaged in the tumult. Mr. Anson granted them this request; and all the men that he thus furnished to the Cbinese behaved greatly to the fatisfaction of their employers, who afterwards highly applauded their great diligence and fidelity.

01

By this means, the refolution of the English at the fire, and their truftinefs and punctuality elfewhere, was the general fubject of conversation amongst the Chinese: And, the next morning. many of the principal inhabitants waited on the Commodore to thank him for his affiftance; frankly owning to him, that they could never have extinguished the fire of themselves, and that he had faved their city from being totally confumed. And foon after a meffage came to the Commodore from the Viceroy, appointing the 30th of November for his audience; which fudden refolution of the Viceroy, in a matter that had been fo long agitated in vain, was also owing to the fignal fervices performed by Mr. Anfon and his people at the fire, of which the Viceroy himfelf had been in fome meafure an eye-witnefs.

The fixing this bulinefs of the audience, was, on all accounts, a circumftance which Mr. Anfon was much pleafed with; as he was fatisfied that the *Chinefe* Government would not have determined this point, without having agreed among themfelves to give up their pretentions to the duties they claimed, and to grant him all he could reafonably afk; for as they well knew the Commodore's fentiments, it would have been a piece M m 4

of imprudence, not confiftent with the refined cunning of the *Chinefe*, to have admitted him to an audience, only to have contefted with him. And therefore, being himfelf perfectly eafy about the refult of his vifit, he made all neceffary preparations against the day; and engaged Mr. *Flint*, whom I have mentioned before, to act as interpreter in the conference: Who, in this affair, as in all others, acquitted himfelf much to the Commodore's fatisfaction; repeating with great boldnefs, and doubtlefs with exactnefs, all that was given in charge, a part which no *Chinefe* Linguist would ever have performed with any tolerable fidelity.

At ten o'clock in the morning, on the day appointed, a Mandarine came to the Commodore, to let him know that the Viceroy was ready to receive him; on which the Commodore and his retinue immediately fet out: And as foon as he entered the outer gate of the city, he found a guard of two hundred foldiers drawn up ready to attend him, these conducted him to the great parade before the Emperor's palace, where the Viceroy then refided. In this parade, a body of troops, to the number of ten thousand, were drawn up under arms, and made a very fine appearance, being all of them new cloathed for this ceremony: And Mr. Anfon and his retinue having paffed through the middle of them, he was then conducted to the great hall of audience, where he found the Viceroy feated under a rich canopy in the Emperor's chair of State, with all his Council of Mandarines attending : Here there was a vacant feat prepared for the Commodore, in which he was placed on his arrival : He was ranked the third in order from the

the Viceroy, there being above him only the Head of the Law, and of the Treasury, who in the Chinese Government take place of all military officers. When the Commodore was feated, he addreffed himfelf to the Viceroy by his interpreter, and began with reciting the various methods he had formerly taken to get an audience; adding, that he imputed the delays he had met with, to the infincerity of those he had employed, and that he had therefore no other means left, than to fend. as he had done, his own officer with a letter to the gate. On the mention of this the Vicerov flopped the interpreter, and bid him affure Mr. Anfon, that the first knowledge they had of his being at Canton. was from that letter. Mr. Anfon then proceeded. and told him, that the fubjects of the King of Great-Britain trading to China had complained to him, the Commodore, of the vexatious impositions both of the Merchants and inferior Cuftomhouse officers, to which they were frequently neceffitated to fubmit, by reason of the difficulty of getting access to the Mandarines, who alone could grant them redrefs: That it was his, Mr. Anfon's. duty, as an officer of the King of Great-Britain, to lay before the Viceroy these grievances of the Britiff fubjects, which he hoped the Vicerov would take into confideration, and would give orders, that for the future there should be no just reason for complaint. Here Mr. Anfon pauled, and waited some time in expectation of an answer; but nothing being faid, he asked his interpreter if he was certain the Viceroy underftood what he had urged; the interpreter told him, he was certain it was understood, but the believed no reply would be made to its Mits Anfonistion represented to the Viceroy

8

- s s 1 s

Viceroy the cafe of the fhip Haflingfield, which having been difinalted on the coaft of China, had arrived in the river of Canton but a few days before. The people on board this veffel had been great fufferers by the fire; the Captain in particular had all his goods burnt, and had loft befides. in the confusion, a cheft of treasure of four thoufand five hundred Takel, which was supposed to be ftolen by the Chinese boat-men. Mr. Anson therefore defired that the Captain might have the affiftance of the Government, as it was apprehended the money could never be recovered without the interpolition of the Mandarines. And to this requeft the Viceroy made answer, that in settling the Emperor's cuftoms for that thip, fome abatement fhould be made in confideration of her loffes.

And now the Commodore having difpatched the bufinefs with which the officers of the East-India Company had entrusted him, he entered on his own affairs; acquainting the Viceroy, that the proper feason was now fet in for returning to Europe, and that he waited only for a licence to thip off his provisions and ftores, which were all ready; and that as foon as this should be granted him, and he should have gotten his necessaries on board, he intended to leave the river of Canton, and to make the best of his way for England. The Vicerov replied to this, that the licence should be immediately iffued, and that every thing should be ordered on board the following day. And finding that Mr. Anfon had nothing farther to infift on, the Viceroy continued the conversation for some time, acknowledging in very civil terms how much the Chinese were obliged to him for his fignal fervices at the fire, and owning that he had faved

faved the city 'from being deflroyed: And then observing that the *Centurion* had been a good while on their coast, he closed his discourse, by wishing the Commodore a good voyage to *Europe*. After which, the Commodore, thanking him for his civility and affistance, took his leave.

As foon as the Commodore was out of the hall of audience, he was much preffed to go into a neighbouring apartment, where there was an entertainment provided; but finding, on enquiry, that the Viceroy himfelf was not to be prefent, he declined the invitation, and departed, attended in the fame manner as at his arrival; only at his leaving the city he was faluted by three guns, which are as many as in that country are ever fired on any ceremony. Thus the Commodore, to his great joy, at last finished this troublesome affair, which, for the preceding four months, had given him great difquietude. Indeed he was highly pleafed with procuring a licence for the fhipping of his stores and provisions; for thereby he was enabled to return to Great-Britain with the first of the monfoon, and to prevent all intelligence of his being expected : But this, though a very important point, was not the circumstance which gave him the greatest fatisfaction; for he was more particularly attentive to the authentic precedent established on this occasion, by which his Majefty's ships of war are for the future exempted from all demands of duty in any of the ports of China. boot

the provisions were begun to be fent on board the day after the audience; and, four days after, the Commodore embarked at Ganton for the Centurion; and, on the 7th of Draember; the Centurion and her prize

prize unmoored, and flood down the river, passing through the Bocca Tygris on the 10th. And on this occasion I must observe, that the Chinese had taken care to man the two forts, on each fide of that paffage, with as many men as they could well contain, the greatest part of them armed with pikes and match-lock mulquets. These garrifons affected to fhew themfelves as much as poffible to the fhips, and were doubtless intended to induce Mr. Anfon to think more reverently than he had hitherto done of the Chinese military power : For this purpose they were equipped with much parade, having a great number of colours exposed to view; and on the caftle in particular there were laid confiderable heaps of large ftones; and a foldier of unufual fize, dreffed in very fightly armour, stalkt about on the parapet with a battleax in his hand, endeavouring to put on as important and martial an air as poffible, though fome of the observers on board the Centurion shrewdly fuspected, from the appearance of his armour, that inftead of fteel, it was composed only of a particular kind of glittering paper.

The Centurion and her prize being now without the river of Canton, and confequently upon the point of leaving the Chinefe jurifdiction, I beg leave, before I quit all mention of the Chinefe affairs, to fubjoin a few remarks on the difpolition and genius of that extraordinary people. And though it may be fuppofed, that obfervations made at Canton only, a place fituated in the corner of the Empire, are very imperfect materials on which to found any general conclutions, yet as those who have had opportunities of examining the inner parts of the country, have been evidently influenced by very very ridiculous preposses and as the transactions of Mr. Anfon with the Regency of Canton were of an uncommon nature, in which many circumstances occurred, different perhaps from any which have happened before, I hope the following reflections, many of them drawn from these incidents, will not be altogether unacceptable to the reader.

That the Chinese are a very ingenious and industrious people, is fufficiently evinced, from the great number of curious manufactures which are established amongst them, and which are eagerly fought for by the most distant nations; but though skill in the handicraft arts feems to be the most important qualification of this people, yet their talents therein are but of a fecond-rate kind; for they are much out done by the Japanele in those manufactures, which are common to both countries; and they are in numerous inftances incapable of rivalling the mechanic dexterity of the Europeans. Indeed, their principal excellency feems to be imitation; and they accordingly labour under that poverty of genius, which constantly attends all fervile imitators. This is most confpicuous in works which require great truth and accuracy; as ' in clocks, watches, fire-arms, &c. for in all thefe, though they can copy the different parts, and can form fome refemblance of the whole, yet they never could arrive at fuch a justness in their fabric; as was neceffary to produce the defired effect. And if we pass from their manufacturers to artifts of a superiour class, as painters, statuaries, &c. in these matters they seem to be fill more defective, their painters, though very numerous and in great efteem, rarely fucceeding in the drawing or colouring

ing of human figures, or in the grouping of large compositions; and though in flowers and birds their performances are much more admired, yet even in these, some part of the merit is rather to be imputed to the native brightness and excellency of the colours, than to the skill of the painter; fince it is very unufual to fee the light and fhade juftly and naturally handled, or to find that ease and grace in the drawing, which are to be met with in the works of European artifts. In fhort, there is a stiffness and minuteness in most of the Chinese productions, which are extremely difpleafing: And it may perhaps be afferted with great truth, that these defects in their arts are entirely owing to the peculiar turn of the people, amogst whom nothing great or fpirited is to be met with.

If we next examine the Chine/e literature, (taking our accounts from the writers, who have endeavoured to represent it in the most favourable light) we shall find, that on this head their obstinacy and abfurdity are most wonderful: For though, for many ages, they have been furrounded by nations. to whom the use of letters was familiar, yet they, the Chinese alone, have hitherto neglected to avail themfelves of that almost divine invention, and have continued to adhere to the rude and inartificial method of reprefenting words by arbitrary marks; a method, which necessarily renders the number of their characters too great for human memory to manage, makes writing to be an art that requires prodigious application, and in which no"man can be otherwife than partially skilled; whilft all reading, and understanding of what is written, is attended with infinite obfcurity and confusion; for the connexion between these marks, and

and the words they reprefent, cannot be retained in books, but muft be delivered down from age to age by oral tradition: And how uncertain this muft prove in fuch a complicated fubject, is fufficiently obvious to those who have attended to the variation which all verbal relations undergo, when they are transmitted through three or four hands only. Hence it is eafy to conclude, that the history and inventions of past ages, recorded by these perplexed fymbols, muft i equently prove unintelligible; and confequently the learning and boasted antiquity of the Nation muft, in numerous inftances, be extremely problematical.

But we are told by fome of the Miffionaries, that though the skill of the Chinese in science is indeed much inferior to that of the Europeans, yet the morality and juffice taught and practifed by them are most exemplary. And from the description given by fome of these good fathers, one should be induced to believe, that the whole Empire was a well-governed affectionate family, where the only contests were, who should exert the most humanity and beneficence: But our preceding relation of the behaviour of the Magistrates, Merchants, and Tradefmen at Canton, fufficiently refutes these jesuitical fictions. And as to their theories of morality, if we may judge from the fpecimens exhibited in the works of the Miffionaries, we shall find them folely employed in recommending ridiculous attachments to certain immaterial points, inftead of difcuffing the proper criterion of human actions, and regulating the general conduct of mankind to one another, on reafonable and equitable principles. Indeed, the only pretention of the Chinefe to a more refined morality than their neighbours mesto

s,

(544)

bours is founded, not on their integrity or beneficence, but folely on the affected evennefs of their demeanor, and their conftant attention to suppress all fymptoms of paffion and violence. But it must be confidered, that hypocrify and fraud are often not lefs mifchievous to the general interefts of mankind, than impetuofity and vehemence of temper: Since thefe, though ufually liable to the imputation of imprudence, do not exclude fincerity, benevolence, refolution, nor many other laudable qualities. And perhaps, if this matter was examined to the bottom, it would appear, that the calm and patient turn of the Chinele, on which they fo much value themfelves, and which diftinguishes the Nation from all others, is in reality the fource of the most exceptionable part of their character; for it has been often observed by those who have attended to the nature of mankind, that it is difficult to curb the more robust and violent passions, without augmenting, at the fame time, the force of the felfish ones : So that the timidity, diffimulation, and difhonesty of the Chinese, may, in some fort, be owing to the composure, and external decency, fo univerfally prevailing in that Empire.

Thus much for the general disposition of the people: But I cannot dismiss this subject, without adding a few words about the *Chinese* Government, that too having been the subject of boundless panegyric. And on this head I must observe, that the favourable accounts often given of their prudent regulations for the administration of their prudent regulations for the administration of their domestic affairs, are sufficiently confuted by their transactions with Mr. Anfon: For we have seen that their Magistrates are corrupt, their people thievish, and their tribunals crafty and venal. Nor is the constitution of the

ſ

f

ſ

u

tl

n

the Empire, or the general orders of the State lefs liable to exception : Since that form of Government, which does not in the first place provide for the fecurity of the public against the enterprizes of foreign powers, is certainly a most defective inftitution : And yet this populous, this rich and extenfive country, fo pompoully celebrated for its refined wifdom and policy, was conquered about an age fince by an handful of Tartars; and even now, by the cowardice of the inhabitants, and the want of proper military regulations, it continues exposed not only to the attempts of any potent State, but to the ravages of every petty Invader. I have already observed, on occasion of the Commodore's disputes with the Chinese, that the Centurion alone was an overmatch for all the naval power of that Empire: This perhaps may appear an extraordinary polition ; but to render it unquestionable, there is exhibited in the forty-fecond plate the draught of two of the vessels made use of by the Chinese. The first of these marked (A), is a junk of about a hundred and twenty tuns burthen, and was what the Centurion hove down by; thefe are most used in the great rivers, though they fometimes ferve for fmall coafting voyages: The other junk marked (B) is about two hundred and eighty tuns burthen, and is of the fame form with those in which they trade to Cochinchina, Manila, Batavia and Japan, though fome of their trading veffels are of a much larger fize; its head, which is reprefented at (C) is perfectly flat; and when the veffel is deep laden, the fecond or third plank of this flat furface is oft-times under water. The masts, fails, and rigging of these vessels are ruder than their built; for their masts are made of trees, no otherwife fashioned " main and venal. n.M.-

than by barking them, and lopping off their branches. Each maft has only two shrowds made of twifted rattan, which are often both shifted to the weather-fide; and the halvard, when the yard is up, ferves instead of a third shroud. The fails are made of matt, ftrengthened every three feet by an horizontal rib of bamboo; they run upon the maft with hoops, as is represented in the figure, and when they are lowered down, they fold upon the deck. These merchantmen carry no cannon; and it appears, from this whole description, that they are utterly incapable of refifting any European armed veffel. Nor is the State provided with ships of confiderable force, or of a better fabric, to protect them : For at Canton, where doubtless their principal naval power is stationed, we faw no more than four men of war junks, of about tiree hundred tuns burthen, being of the make already defcribed, and mounted only with eight or ten guns, the largest of which did not exceed a four pounder. This may fuffice to give an idea of the defenceleis state of the Chinese Empire. But it is time to return to the Commodore, whom I left with his two thips without the Bocca Tigris; and who, on the 12th of December, anchored before the town of riv, have ttoris is with prodigious j Macao.

Whilft the thips lay here, the Merchants of Macao finished their agreement for the galeon, for which they had offered 6000 dollars? this was much thort of her value, but the impatience of the Commodore to get to fea, to which the merchants were no ftrangers, prompted them to infift on fo unequal a bargain. Mr. Anfon had learnt enough from the English at Canton to conjecture, that the war betwixt Great-Britain and Spain was · pilly ftill

still continued; and that probably the French might engage in the affiftance of Spain, is ore he could arrive in Great-Britain; and therefore, knowing that no intelligence could get to Europe of the prize he had taken, and the treasure he had on board, till the return of the merchantmen from Canton, he was refolved to make all poffible expedition in getting back, that he might be himfelf the first messenger of his own good fortune, and might thereby prevent the enemy from forming any projects to intercept him : For these reasons, he, to avoid all delay, accepted of the fum offered for the galeon; and the being delivered to the Merchants the 15th of December 1743, the Centurion, the fame 'day, got under fail, on her return to England. And, on the 3d of January, the came to an anchor at Prince's Island in the Streights of Sunda, and continued there wooding and watering till the 8th; when the weighed and ftood for The Cape of Good Hope, where, on the 11th of March, fhe anchored in Table-bay.

The Cape of Good Hope is fituated in a temperate climate, where the exceffes of heat and cold are rarely known; and the Dutch inhabitants, who are numerous, and who here retain their native induftry, have flock'd it with prodigious plenty of all fort of fruits and provisions; most of which, either from the equality of the feasons, or the peculiarity of the foil, are more delicious in their kind than can be met with elfewhere: So that by these, and by the excellent water which abounds there, this fettlement is the best provided of any in the known world, for the refreshment of seamen after long voyages. Here the Commodore continued till the beginning of April, highly delighted with the place

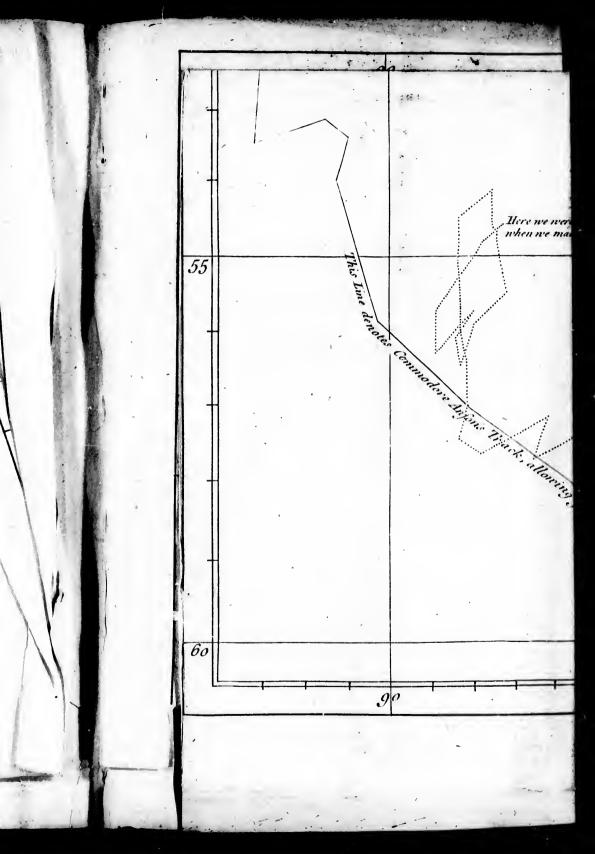

place, which by its extraordinary accommodations. the healthiness of its air, and the picturesque appearance of the country, all enlivened by the addition of a civilized colony, was not diferaced in an imaginary comparison with the vallies of Juan Fernander, and the lawns of Tinian. During his flav he entered about forty new men; and having, by the 3d of April 1744, compleated his water and provision, he, on that day, weighed and put to fea; and, the 19th of the fame month, they faw the Island of St. Helena, which however they did not touch at, but flood on their way; and, on the 10th of June, being then in foundings, they fpoke with an English ship from Amsterdam bound for Philadelphia, whence they received the first intelligence of a French war; the twelfth they got fight of the Lizard; and the fifteenth, in the evening. to their infinite joy, they came fafe to an anchor at Spithead. But that the fignal perils which had fo often threatened them in the preceding part of the enterprize, might purfue them to the very laft. Mr. Anfon learnt, on his arrival, that there was a French fleet of confiderable force cruifing in the chops of the Channel; which, by the account of their polition, he found the Centurion had run through, and had been all the time concealed by a fog. Thus was this expedition finished, when it had lasted three years and nine months; after having, by its event, ftrongly evinced this important truth, That though prudence, intrepidity, and perfeverance united, are not exempted from the blows of adverse fortune; yet in a long feries of transactions, they usually rife superior to its power, and in the end rarely fail of proving fuccefsful.
