Technical and Bibliographic Notes / Notes techniques et bibliographiques

The Institute has attempted to obtain the best original copy available for filming. Features of this copy which may be bibliographically unique, which may alter any of the images in the reproduction, or which may significantly change the usual method of filming are checked below.

- Coloured covers / Couverture de couleur
- Covers damaged / Couverture endommagée
- Covers restored and/or laminated / Couverture restaurée et/ou pelliculée
- Cover title missing / Le titre de couverture manque
- Coloured maps / Cartes géographiques en couleur
- Coloured ink (i.e. other than blue or black) / Encre de couleur (i.e. autre que bleue ou noire)
- Coloured plates and/or illustrations / Planches et/ou illustrations en couleur
- Bound with other material / Relié avec d'autres documents
- Only edition available / Seule édition disponible
- Tight binding may cause shadows or distortion along interior margin / La reliure serrée peut causer de l'ombre ou de la distorsion le long de la marge intérieure.
- Blank leaves added during restorations may appear within the text. Whenever possible, these have been omitted from filming / Il se peut que certaines pages blanches ajoutées lors d'une restauration apparaissent dans le texte, mais, lorsque cela était possible, ces pages n'ont pas été filmées.
- Additional comments / Commentaires supplémentaires:

L'Institut a microfilmé le meilleur exemplaire qu'il lui a été possible de se procurer. Les détails de cet exemplaire qui sont peut-être uniques du point de vue bibliographique, qui peuvent modifier une image reproduite, ou qui peuvent exiger une modification dans la méthode normale de filmage sont indiqués ci-dessous.

- Coloured pages / Pages de couleur
- Pages damaged / Pages endommagées
- Pages restored and/or laminated / Pages restaurées et/ou pelliculées
- Pages discoloured, stained or foxed / Pages décolorées, tachetées ou piquées
- Pages detached / Pages détachées
- Showthrough / Transparence
- Quality of print varies / Qualité inégale de l'impression
- Includes supplementary material / Comprend du matériel supplémentaire
- Pages wholly or partially obscured by errata slips, tissues, etc., have been refilmed to ensure the best possible image / Les pages totalement ou partiellement obscurcies par un feuillet d'errata, une pelure, etc., ont été filmées à nouveau de façon à obtenir la meilleure image possible.
- Opposing pages with varying colouration or discolourations are filmed twice to ensure the best possible image / Les pages s'opposant ayant des colorations variables ou des décolorations sont filmées deux fois afin d'obtenir la meilleure image possible.

This item is filmed at the reduction ratio checked below / Ce document est filmé au taux de réduction indiqué ci-dessous.

10x	14x	18x	22x	26x	30x
12x	16x	20x	/	24x	28x

The copy filmed here has been reproduced thanks to the generosity of:

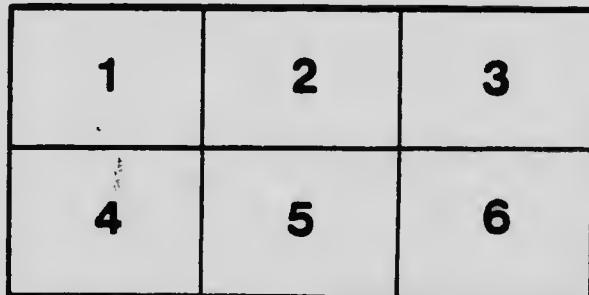

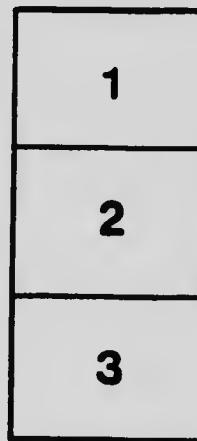

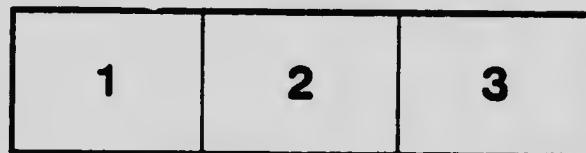

National Library of Canada

The images appearing here are the best quality possible considering the condition and legibility of the original copy and in keeping with the filming contract specifications.

Original copies in printed paper covers are filmed beginning with the front cover and ending on the last page with a printed or illustrated impression, or the back cover when appropriate. All other original copies are filmed beginning on the first page with a printed or illustrated impression, and ending on the last page with a printed or illustrated impression.

The last recorded frame on each microfiche shall contain the symbol → (meaning "CONTINUED"), or the symbol ▽ (meaning "END"), whichever applies.

Maps, plates, charts, etc., may be filmed at different reduction ratios. Those too large to be entirely included in one exposure are filmed beginning in the upper left hand corner, left to right and top to bottom, as many frames as required. The following diagrams illustrate the method:

L'exemplaire filmé fut reproduit grâce à la générosité de:

Bibliothèque nationale du Canada

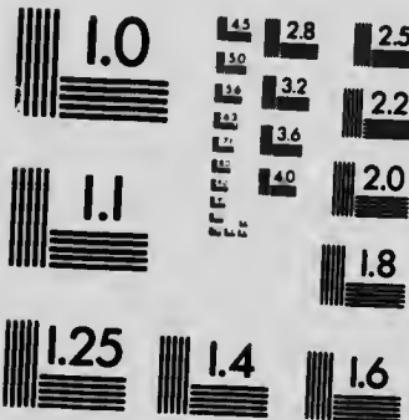

Les images suivantes ont été reproduites avec le plus grand soin, compte tenu de la condition et de la netteté de l'exemplaire filmé, et en conformité avec les conditions du contrat de filmage.

Les exemplaires originaux dont la couverture en papier est imprimée sont filmés en commençant par le premier plié et en terminant soit par la dernière page qui comporte une empreinte d'impression ou d'illustration, soit par le second plié, selon le cas. Tous les autres exemplaires originaux sont filmés en commençant par la première page qui comporte une empreinte d'impression ou d'illustration et en terminant par la dernière page qui comporte une telle empreinte.

Un des symboles suivants apparaîtra sur la dernière image de chaque microfiche, selon le cas: le symbole → signifie "A SUIVRE", le symbole ▽ signifie "FIN".

Les cartes, planches, tableaux, etc., peuvent être filmés à des taux de réduction différents. Lorsque le document est trop grand pour être reproduit en un seul cliché, il est filmé à partir de l'angle supérieur gauche, de gauche à droite, et de haut en bas, en prenant le nombre d'images nécessaire. Les diagrammes suivants illustrent la méthode.

THE PRODUCTION OF COPPER, GOLD, LEAD, NICKEL, SILVER, ZINC, AND OTHER METALS IN CANADA DURING THE CALENDAR YEAR 1911.

(Published as an advance chapter of the Annual Report on the Mineral Production of Canada during the Calendar Year 1911.)

COPPER.

The total production of copper in Canada in 1911, estimated on the basis of smelter recovery from ores treated, was 5,048,011 pounds, which at the average price of copper for the year in New York, 12.376 cents per pound, would be worth \$6,886,998.

The copper production in 1910, compiled on a similar basis, was estimated at 55,692,369 pounds, showing a slight decrease in production in 1911. The average New York price for copper in 1910 was 12.738 cents, the decrease in price being 0.362 cents or 2.8 per cent.

In the Province of British Columbia the copper production is mainly derived from ores carrying a very low content of copper metal. In the smelting of these ores the copper losses in slag are quite considerable, reaching as high, in some cases, as 25 per cent or more, of the copper content of the ore. With ores of this character there is, therefore, a wide difference between the copper content of ore shipped from the mine and the copper metal recovered by the smelters.

The statistics of copper production for the years previous to 1909 as given in Tables 1 and 2 include for British Columbia a record of the copper production in that Province as collected by the Provincial Bureau of Mines. These are compiled on the basis of the total metal content of the ores sent to smelters for which smelter returns were received during the year, and these show a relatively higher copper production than the figures published by the Province of Ontario, which are based on copper content of matte produced.

The independent collection of statistics on smelter production by the Mines Branch—through the courtesy of the smelter operators—has made possible the compilation and publication of statistics of production based on smelter recoveries as given above; thus providing for a more equitable comparison of the production of the several provinces, and the production of Canada generally, with other countries.

COPPER. TABLE I.
Production by Provinces 1909, 1910, and 1911.

Provinces	1909.		1910.		1911.	
	Lbs.	Value	Lbs.	Value	Lbs.	Value

Total.....	52,808,862	6,814,754	55,692,360	7,094,001	55,648,011	6,880,908

* Includes Nova Scotia and Yukon.

† The apparently large decrease in British Columbia copper production in 1909 as compared with 1908 is mainly due to the different basis of compilation adopted in 1909, for explanation of which see the text. The British Columbia copper production in 1909 based on copper content of ores sent to smelters was 45,507,245 pounds. (See Tables 8 and 9).

‡ A shipment is reported from New Brunswick.

With the exception of a small output of copper sulphate at Trail, B.C., the copper production of Canada is practically all exported. The exports of copper in ore, matte, regulus, etc., from Canada during the calendar year, 1911, are reported by the Customs Department as 55,208,054 pounds, of which 49,202,456 pounds were exported to the United States, and 6,006,818 pounds to Great Britain.

The exports in 1910 were recorded as 56,964,127 pounds. These figures agree fairly closely with the statistics of smelter recovery.

Prices.—The average monthly prices in cents per pound of electrolytic copper in New York are shown for a period of five years in the accompanying table.

Monthly Average Prices of Electrolytic Copper in New York.

The price of copper in New York varied between 13½ cents per pound in December and a minimum of 11 cents in May.

Statistics showing the annual copper production in Canada since 1886 are given in Table 2, which shows the yearly increase or decrease, as the case may be, and also the yearly price per pound in New York.

1910	55,692,360	3,198,506	6.09	7,094,094	279,340	4.10	12.738
1911	55,648,011	(d) 44,358	0.79	6,886,998	(d) 207,066	2.92	12.376

* The decrease is not as large as the figures would indicate because of the calculation of part of the 1909 production on a different basis from previous years. (See explanation in text).

Statistics of the exports of copper as collected by the Customs Department are shown in Table 3, and statistics of imports in Tables 4 and 5. The total imports of copper in so far as weights are given, amounted during the fiscal year ending March, 1911, to 30,586,768 pounds. During the calendar year, 1911, the total imports were valued at \$4,936,769, and included crude and manufactured copper to the extent of 37,352,237 pounds, valued at \$1,721,480, together with other copper manufactures valued at \$215,289, of which the quantity is not stated. In detail these imports comprise crude copper (pigs, ingots, scrap, blocks, etc.), 8,112,387 pounds, valued at \$823,374; copper in bars, rods, coils, etc., 25,495,400 pounds, valued at \$3,272,478; copper in strips, sheets or plates, 2,826,100 pounds, valued at \$434,574; copper tubing, etc., 562,826 pounds, valued at \$113,949; and copper wire, 353,524 pounds, valued at \$77,105.

Nova Scotia.

No copper was produced during the year, development work only being done.

New Brunswick.

A small shipment is reported from this Province.

Quebec.

The copper production of Quebec was as usual from the pyritic ores of the Eastern Townships. There was a large increase over 1910, the copper production for 1911 being 2,436,190 pounds, valued at \$301,503, representing the estimated recovery from 39,122 tons of ore and concentrates shipped containing some 3,123,189 pounds of copper.

Statistics of the copper production in this Province since 1886 are shown in Table 6.

Ontario.

There is as yet comparatively little copper production in this Province besides that obtained from the nickel-copper ores of the Sudbury district. In 1911, productive operations were carried on by the Canadian Copper Company at the Creighton and Crean Hill mines, and by the Mond Nickel Company at Victoria mines.

The Ontario Government pays a bounty on copper over 95 per cent pure metal and on copper sulphate, produced from ore mined and refined in the Province. The text of the Act will be found in the chapter on cobalt under the heading 'Metal Refining Bounty Act.'

The total production of nickel-copper ore in 1911 was 610,834 tons. There were produced during the year 32,607 tons of Bessemer matte, containing 8,966 tons of copper and 17,049 tons of nickel, the shipping value of the matte being approximately \$4,945,592.

Details of the production from these ores are given more completely, and in tabular form in the article on nickel, and also under smelter production. Statistics of the copper production of Ontario since 1886 are given in Table 7.

British Columbia.

According to the returns received from smelters, the total quantity of copper contained in matte, blister, and copper sulphate produced in British Columbia smelters during 1911, and including an estimate of smelter recovery for the copper ores exported, was 35,279,558 pounds, after deducting the amount of copper produced from foreign ores. The production in 1910 on a similar basis was 35,270,006 pounds, and in 1909, 35,658,952 pounds. Returns of smelter pro-

duction in this Province were not collected by this Department previous to 1908, and a complete record of statistics of production on this basis is not available.

The production of copper in this Province according to statistics collected and published by the Provincial Department of Mines, reached a total of 36,927,656 pounds in 1911, as compared with 38,243,934 pounds in 1910. Statistics of the annual production since 1894, as ascertained by the Provincial Department of Mines, are shown in Table 8, and by districts since 1906, in Table 9.

According to direct returns in 1911, the ores of the Boundary district produced about 58.2 per cent of the total, the Rossland mines about 10.4 per cent, and the Coast district 31.4 per cent.

* Copper content of ores shipped. † After deducting five pounds of copper per ton of ore for slag losses.

The low grade ores of the Boundary district, in addition to being self-fluxing, are remarkably uniform in character, ranging from 1 to 2 per cent in copper, and from \$1 to \$2 in gold and silver. In this district the greater part of the production has been obtained from the properties of the four principal companies: The Granby Consolidated Mining, Smelting, and Power Company, Limited; The British Columbia Copper Company, Limited; The Consolidated Mining and Smelting Company of Canada, Limited, and the New Dominion Copper Company, Limited. The last named is controlled by the British Columbia Copper Company. The first three Companies operated their own smelters, and the first two convert their matte into blister copper.

The approximate ore shipments during 1911, and the total shipments of the chief producers to the end of 1911, were as follows:—

	1911.	Total.
Granby Consolidated Mining, Smelting & Power Co., Ltd.	605,880	7,415,880
British Columbia Copper Co., Ltd.	366,485	2,751,485
Dominion Copper Co., Ltd.	182,637	831,637
Consolidated Mining and Smelting Co. of Canada, Ltd.	30,000	613,000

The Granby Company's mines at Phoenix are equipped for a daily output of about 5,000 tons. At the Company's smelter at Grand Forks, about 630,000 tons of ore were treated during the year 1911, producing about 11,400,000 pounds of copper.

The large falling off was due to the strike among the miners of the Crowsnest Pass coal district, causing a cessation of fuel supply, and though an attempt was made to secure eastern coke, it was found too costly and the Granby smelter was, therefore, closed for nearly five months of the year. The other smelters were

also adversely affected. The chief mines shipping were; the Granby mines; the Mother Lode, Emma, and Wellington of the British Columbia Copper Co.; the Rawhide and Athelstan of the New Dominion Copper Co., and the Snowshoe of the Consolidated Mining and Smelting Co.

Next to the Boundary, the Coast district was the most important copper producer of the year, due mainly to the greatly increased output of the Britannia and Marble Bay mines, especially of the former.

Rossland's gold-copper ores, though most valuable for their gold content, form another important source of the copper supply of the Province. Some shipments were also made from Kamloops. On the Coast a considerable amount of development is being carried on, the most important being on Alice arm, Observatory inlet, where the Granby Consolidated Mining, Smelting & Power Co. are doing extensive work on their Hidden Creek property, near which on Granby bay they are also erecting a smelter for their own and customs ores.

Yukon District.

No shipments of copper ores are reported from this district during 1911.

GOLD.

Refined Metal.—Gold bullion is received, assayed, and purchased at the Assay Office in Vancouver, operated in connexion with this Department, the bullion being resold. The total quantity of bullion thus received during the twelve months ending December 31, 1911, was 39,009.31 ounces, being the weight after melting, valued at \$647,416.38, after deducting assay charges.

A refinery has been erected at the Royal Mint at Ottawa, and small shipments of gold have been received from different provinces, but at present the greater part of the Canadian gold finds its way to the United States refineries or to the United States Mint.

There is but one other refinery in Canada producing fine gold; that at Trail, established in 1904, operated by the Consolidated Mining and Smelting Company of Canada, Limited, the annual output of which in ounces of fine gold for the years 1904-1911 is shown below. The gold is recovered from the ores treated in the lead furnaces.

Production of Refined Gold at Trail, B.C.

1909.	18,241
1910.	13,298
1911.	15,270

Mine Production.—The production of gold in Canada—made up of gold derived from alluvial workings, gold obtained from the crushing of free milling quartz ores, and the gold obtained from other metalliferous ores sent to copper and lead smelters, etc.—reached a total, in 1911, of 473,159 fine ounces, valued at \$9,781,077, as compared with 493,707 fine ounces, valued at \$10,205,835, produced in 1910, a decrease of 20,548 ounces in quantity and \$424,758 in value, or 4.16 per cent.

The production by provinces in 1909, 1910, and 1911 is shown in Table 1 as follows:—

GOLD. TABLE 1.
Production by Provinces, 1909, 1910, and 1911.

‡ Calculated from the value: one dollar = 0.018375 ozs.

(a) Placer gold.

(b) Gold from vein mining.

	1909.	1910.	1911.
	\$	\$	\$
(c) As follows: Gold from placer mining	477,000	540,000	426,000
Gold from vein mining	4,697,579	4,863,318	4,504,145
	5,174,579	5,403,318	4,930,145

The exact value of fine gold is $\frac{2}{3} \frac{1}{3}$ dollars per ounce equivalent to \$20.671834. (United States Standard.)

In most cases, statistics of gold production are stated as crude bullion with value thereof. The fine ounces given in the tables in this report are calculated from the values by multiplying these by $\frac{2}{3} \frac{1}{3}$ or 0.048375.

Of the total production in 1911, about \$5,014,207 or 51.3 per cent is to be attributed to alluvial workings, \$513,991 or 5.2 per cent derived from stamp milling, and \$4,252,879 or 43.5 per cent obtained from ores sent to the smelters. There was a general decrease in all the provinces except Quebec and Yukon, which show a gain.

Statistics of the annual gold production of Canada are shown in Table 2.

				14,398,624	297,646,065

(Calculated from the value: One dollar=0 048375.

It will be observed that previous to 1897 the production only twice exceeded \$4,000,000, the maximum during the period being, in 1863, when the output reached \$4,186,011. The discovery in 1896 of the rich placer deposits of the Yukon, however, caused a rapid increase in the production for the next four years, a record maximum being reached in 1900, when the total was only a little less than \$28,000,000. The following year showed a falling off in the Yukon output, as did each succeeding year until 1908. The Yukon production in 1909, 1910, and 1911 has shown an increase, and the total for Canada seems to have an upward tendency, though there is a decrease in the year 1911.

Nova Scotia.

The gold production of Nova Scotia, which is derived almost entirely from quartz ores, was 7,781 fine ounces, valued at \$160,554.

The principal operators in 1911 were:—

United Finmee Co., Carleton.

Caribou Gold Mines, Caribou.

* From 1869. † From 1866. ‡ From 1883. § From 1887. \$ From 1882. * From 1887.
From 1883.

The following notes with respect to operations during 1911, are taken from the report of the Provincial Department of Mines:—

"I regret to report that the amount of gold produced is the smallest since the production of the year 1862 and that the tonnage crushed is the smallest tonnage crushed since the year 1882. The direct causes of the small production of the year 1911 may be attributed to the closing down of the Richardson mine at Goldboro and the Oldham-Stirling mine at Oldham. These two mines have been in recent years the largest producers of bullion in the Province."

"Gold in this Province occurs in ore shoots or specially enriched zones in quartz veins both of the interbedded and fissure type, varying in width from one inch to several feet but usually from 2 inches to 24 inches. Carefully organized prospecting and developing operations carried on underground with strong financial backing are needed and for the individual or company that is prepared to undertake gold mining along these lines, Nova Scotia offers a promising field of operations."

Quebec.

The production of gold reported from this Province since 1903 has been almost entirely from the pyritic ores mined at Capelton and Eustis in the Eastern Townships. Very little gold has been obtained from the alluvial deposits of the St. Francis, Chaudière, and Gilbert rivers since 1894, when the output was returned as \$29,106. However, renewed activity in the installation of hydraulic plants has raised the alluvial gold production to an amount in excess of that from lode mining.

Ontario.

The producing properties, in 1911, were:

Cordova Mines, Ltd., Cordova mine, Peterborough Co.

Sturgeon Lake Development Co., St. Anthony mine, Sturgeon Lake.

Great Goleonda Mines, Ltd., Laurentian mine, Gold Rock.

Kenora Mines, Ltd., Mikado mine, Kenora.

The Dome Mines Co., Ltd., Dome mine, Porcupine district.

The Hollinger Gold Mines, Ltd., Hollinger mine, Porcupine district.

American Eagle Mining Co., American Eagle, Porcupine district.

Swastika Mining Co., Ltd., Swastika mine, Porcupine district.

The past year has witnessed considerable activity in the Rainy River district. The Porcupine output would have been much greater had it not been for the fire causing such a lamentable loss of life and property. Statistics of production of gold in Ontario since 1887 are shown in Table 7, following:—

British Columbia.

The gold production of British Columbia in 1911, as reported to the Department, amounted to \$4,930,145, comprising placer gold \$126,000, bullion from milling ores \$310,512, smelter recoveries \$4,193,633.

The placer production is as published by the Provincial Mining Bureau. The statistics for lode gold represent as closely as can be ascertained the actual gold recovery based on smelter recoveries and bullion shipments. This production is less than that published by the Provincial Bureau of Mines, which for lode gold is based on the gold content of ores shipped to smelters, etc. According to this authority the production for 1911 was \$5,151,513, as compared with \$6,073,380 in 1910, a decrease of \$921,867.

In lode mining, there were decreases in the Nelson, Trail Creek, and Boundary districts, while there was a large increase in the Coast gold production.

In alluvial gold recovery a general decrease was shown.

Of the 1911 production, 9 per cent was from alluvial workings; 6 per cent from free milling ores, and 85 per cent from ores sent to the smelters.

Statistics of the production by districts in 1911, as published by the Provincial Department of Mines, are shown in Table 9, while the total annual production since 1858 is given in Table 10.

[†] Calculated from the value: one dollar = 0.048375 ozs.

The placer and hydraulic mining situation shows little change from 1910. There appears to have been a slight decrease, many of the larger companies being still engaged in constructive work. A shortage of water also interfered with the clean up.

Among the camps of the Province producing gold from lode mines Rossland ranks first. The principal companies carrying on active operations during 1911 were as follows:—

The Consolidated Mining and Smelting Company of Canada, Limited, with total shipments of 190,676 tons.

The Le Roi Mining Company, Limited, shipping 6,915 tons in the early part of the year. This Company having gone into voluntary liquidation, sold the Le Roi mine to the Consolidated Mining and Smelting Co. who are now operating it.

The Le Roi No. 2 Mining Company, Limited, shipping 24,800 tons of first class ore and 1,595 tons of concentrates, which were produced from the milling of 18,778 tons of second class ore.

Several of the smaller properties of the camp were actively operated during the year.

The Boundary district comes next in gold production. The output is largely due to the large tonnage of copper ores mined in this district. These ores will average in gold only from 0.01 to 0.05 ounces per ton. Included with this district is the Osoyoos Mining Division, in which is situated the Nickel Plate mine at Hedley, operated by the Hedley Gold Mining Company. In this Company's report for 1911, the following details of interest are given: "Total lineal feet of development in 1911, 1,315; total diamond drilling, 3,150 feet; tons milled, 57,815; assay value, \$10.55 to \$14.36 per ton; receipts, \$679,646.17; expenditures, \$370,814.29; profit, \$309,802.18."

Nelson Mining Division was rather inactive and may be said to have undergone a period of reorganization. The ore is in most cases free-milling, and several of the mines treat the ore in stamp mills producing bullion and concentrates. Others ship direct to the smelter.

There was an increase of production in the Coast district,

Yukon.

The production of the Yukon in 1911 was \$4,634,574, as compared with \$4,570,362 in 1910, an increase of \$64,212 or 1.4 per cent. In this is included \$54,574 produced by lode mines in the district. The statistics of the production of gold in the Yukon district during the years between 1898 and 1906, as given in Table 11, are based primarily on the receipts of gold at the United States mints and receiving offices and credited to the Canadian Yukon. Although a royalty was exacted on the gold output, it seems certain that particularly during the years of high production, considerable amounts of gold were produced which escaped royalty payment. During the past six years, however, the gold production of the Yukon, as ascertained by the Interior Department, and on which royalty of 2½ per cent is imposed, has agreed fairly closely with the quantities reported at the United States receiving offices as having been derived from the Canadian Yukon. For the purpose of collecting the royalty, a fixed value of \$15 per ounce is placed upon the crude gold. The actual value of the gold will average somewhat higher than this, however. The average value of the deposits for a number of years as shown by the experience of the United States assay office has been about \$16.50 per ounce. At the Canadian assay office at Vancouver, B.C., there were deposited during the twelve months ending December 31, 1911, 2,073.61 ounces from the Yukon, valued, after all charges had been deducted, at \$34,994.39, showing an average value of about \$16.88 per ounce.

The production of crude placer gold in the Yukon, during the past six years, as ascertained by the Department of the Interior, and upon which a royalty of 2½ per cent has been collected, is shown in the accompanying table.

Production of Crude Gold in the Yukon District.

In 1911 the placer production is estimated as \$1,580,000 in gold, representing 221,557 fine ounces of metal, and 50,300 fine ounces of silver, valued at \$26,812, being at the average price of fine silver for the year, making a total valuation of the Yukon placer output of \$4,606,812. In 1910 the placer production was estimated at \$4,550,000, representing 220,106 fine ounces of gold, and 50,000 fine ounces of silver, valued at \$26,743, making a total valuation of \$4,576,743.

Statistics of the annual production of gold in the district since 1885 are shown in Table 11.

				6,818,670	140,954,436

[‡] Calculated from the value; one dollar = 0.048375 ozs.

* Including a small production from lode mines.

Since 1898, a royalty to the extent of \$3,889,907 has been collected on the gold production of this district. The yearly amounts collected, as well as the annual production of gold as ascertained by the Interior Department, are shown

in the accompanying table. The difference between these figures and those shown in Table 11, which are based on the mint receipts of Yukon gold, has already been mentioned and is probably due to two main factors: (1) the fixing of the value of the gold for royalty purposes at \$15 per ounce, a figure from \$1 to \$2 less than the actual value of the gold, and (2) the probability that in the earlier years of royalty collection considerable quantities of gold dust left the camp unrecorded and escaped royalty payment.

LEAD.

The following statistics of the production of lead in Canada in 1911 are based on direct smelter returns and represent the amount of lead refined in Canada and shipped as pig lead or manufactured products.

The 1911 output was almost entirely from the mines of British Columbia, and a considerable decrease is shown, the production being 23,784,969 pounds in that year, against 32,987,508 for 1910. A small shipment was made from Quebec, but in regard to this figures are not obtainable.

In valuing the lead production for 1911, the average price per pound at Montreal has been used. The New York market is practically closed to Canadian lead by high tariff, and to the London market price must be added the freight, etc., to reach the Canadian market. The price at Montreal or Toronto is lower than that at New York, and higher than that at London, and is probably a more equitable valuation to place upon the Canadian production.

Statistics showing the lead production since 1887 are given in the following table:—

LEAD. TABLE I.

* In 1909 and 1910, average prices at Toronto as quoted by *Hardware and Metal*; in previous years average prices at New York, as quoted by *Engineering and Mining Journal*.

+ 1911 average price at Montreal. Quotations furnished by Messrs. Thos. Robertson & Co., Montreal, Que.

Previous to 1904, lead ores mined in Canada were either exported as ore, or smelted in Canadian furnaces and exported in the form of base bullion to be refined abroad. A lead refinery employing the Bett's Electrolytic Process is now operated at Trail, B.C., in connexion with the smelter there, and has witnessed frequent enlargements until it is now treating the base bullion pro-

duced from the smelting of practically all the British Columbia lead ore at the Trail smelter.

Pig lead, fine gold, fine silver, refined antimony, copper sulphate, and babbitt metal are produced at the refinery, and lead pipe is also manufactured there. The refined lead finds a market in Canada, the United States, and the Orient. Of that used in Canada a great part is consumed in the manufacture of white lead, for which the Trail product is especially valuable on account of its purity.

The production of refined lead, including pig lead and lead pipe, etc., has been as follows:—

Year	Refined lead produced.	Year	Refined lead produced.
1904	7,519,440	1908	36,549,274
1905	15,804,609	1909	41,883,114
1906	26,471,314	1910	32,987,508
1907	26,607,461	1911	24,784,963

The price of lead in London averages from 1 to 2 cents per pound lower than in New York.

The average price for soft lead in 1911, on the London market, was £13 19s. 3d. per long ton (equivalent to 2.992 cents per pound), as compared with £13 19s. (2.775 cents per pound) in 1910, and £13 1s. 8d. (2.803 cents per pound) in 1909.

The price of lead on the Canadian market at Montreal is intermediate between the New York and London values. Montreal is the main Canadian market. The Toronto price in winter is about the same as that at Montreal but the latter falls during the period of summer freight rates about 10 cents per 100 pounds below the former.

The average price of lead in Montreal in 1911 was 3.480 cents per pound against 2.992 in London and 4.420 in New York.

The monthly and yearly average prices of lead in Montreal for the past five years are given in the following table:—

Bounties.—In 1901, and again in 1903, the Dominion Government, encouraged the lead industry, authorized the payment of a bounty on the production of lead. The Act of 1903 provided for the payment under certain restrictions of 75 cents per hundred pounds on lead contained in ore mined and smelted in Canada, provided that when the standard price of pig lead in London, England, exceeded £12 10s. per ton of 2,240 pounds, such bounty should be reduced proportionately by the amount of such excess. Thus, when the price of lead in London rose to £16 or over per long ton, the bounty ceased. As the price of lead exceeded £16 sterling on the London market for a considerable period during 1903 and 1907 the bounty paid during those years was comparatively small.

The Act of 1903 provided that payment of bounty should cease on June 30, 1908, and as only a portion of the funds provided had been used, a new Act was passed in the latter year providing for further bounty payments at the rate of 75 cents per hundred pounds, or approximately £3 10s. per ton of 2,240 lbs., subject to the restriction that when the price of lead in London exceeds £14 10s. the bounty shall be reduced by such excess.

The Act, together with the regulation based upon it, is reproduced herewith in full.

ACT 7 & EDWARD VII, CHAPTER 43.

AN ACT RESPECTING THE PAYMENT OF BOUNTIES ON LEAD CONTAINED IN LEAD-BEARING ORES MINED IN CANADA.

Assented to July 9th, 1908.

Whereas under the provisions of an Act passed on the 21th day of October, 1903, being chapter 31 of the Acts of 1903, payment of a bounty on lead contained in lead-bearing ores mined in Canada, not to exceed five hundred thousand dollars in any fiscal year, was authorized to be paid until the thirtieth day of June, 1908, and whereas the total amount of bounty paid thereunder up to the thirty-first day of March, 1908, was six hundred and sixty-seven thousand four hundred and four dollars, and it is estimated that a further amount of forty-five thousand dollars will be payable on or before the thirtieth day of June, 1908, leaving unexpended about one million seven hundred and eighty-eight thousand and seventy-eight dollars of the total amount authorized to be paid under the provisions of the said chapter 31; Therefore, His Majesty, by and with the advice and consent of the Senate and House of Commons of Canada, enacts as follows:—

1. The Governor in Council may authorize the payment of a bounty of seventy-five cents per one hundred pounds on lead contained in lead-bearing ores mined in Canada, on and after the first day of July, 1908, such bounty to be paid to the producer or vendor of such ores: Provided that the sum to be paid as such bounty shall not exceed five hundred thousand dollars in any year ending on the thirtieth day of June: Provided also that when it appears to the satisfaction of the Minister charged with the administration of this Act that the standard price of pig lead in London, England, exceeds fourteen pounds ten shillings sterling per ton of two thousand two hundred and forty pounds, such bounty shall be reduced by the amount of such excess.

The total amount of bounty payable under the provisions of chapter 31 of the Acts of 1903, and of this Act, shall not exceed two million five hundred thousand dollars.

2. Payment of the said bounty may be made from time to time to the extent of sixty per cent upon smelter returns showing that the ore has been delivered for smelting at a smelter in Canada. The remaining forty per cent may be

paid at the close of the fiscal year, upon evidence that all such ore has been smelted in Canada.

If at the close of any year it appears that during the year the quantity of lead produced, on which the bounty is authorized, exceeds thirty-three thousand three hundred and thirty-three tons of two thousand pounds, the rate of bounty shall be reduced to such sum as will bring the payments for the year within the limit mentioned in section 1.

3. If at any time it appears to the satisfaction of the Governor in Council that the charges for transportation and treatment of lead ores in Canada are excessive, or that there is any discrimination which prevents the smelting of such ores in Canada on fair and reasonable terms, the Governor in Council may authorize the payment of bounty at such reduced rates as he deems just on the lead contained in such ores mined in Canada and exported for treatment abroad.

4. If at any time it appears to the satisfaction of the Governor in Council that products of lead are manufactured in Canada direct from lead ores mined in Canada without the intervention of the smelting process, the Governor in Council may make such provision as he deems equitable to extend the benefits of this Act to the producers of such ores.

5. The bounties payable under the provisions of this Act shall cease and determine on the thirtieth day of June, one thousand nine hundred and thirteen.

6. The Governor in Council may make regulations for carrying out the intention of this Act.

REGULATIONS under the provisions of the Act 7-8, Edward VII, Chapter 10, intituled: "An Act to provide for the payment of Bounty on Lead contained in the lead-bearing ores mined in Canada."

(As authorized by Order in Council on the 3rd August, 1908.)

1. The Minister of Trade and Commerce is charged with the administration of this Act.

2. All producers or vendors of lead-bearing ores who desire to avail themselves of the provisions of the Act above quoted, and to be paid bounty, shall before making claim for such bounty, notify the Minister of their intention to claim under the provisions of the Act, and shall declare the name of the mine producing such ore, its situation, the names of the President, Secretary, and Manager, as well as the name of the official authorized to make claim. Notice shall be given the Minister of changes in ownership and management. When the bounty is claimed by Lessees, the consent of the owner shall be shown.

3. All claims for the payment of bounty shall be made and substantiated under the oath of the Manager of the mine, or of the official authorized to make the claim.

4. Claims may be made monthly, that is immediately after the close of each calendar month, and be in such form, and contain such evidence, as may seem to the Minister from time to time necessary.

5. No claims made otherwise than in conformity with these regulations, and in form required by the Minister, shall be recognized, allowed or paid by the Minister.

6. The smelting of all such ores shall at all times be under the supervision of the officer of the Department of Trade and Commerce, appointed or detailed for the purpose.

7. The supervising officer may at any time demand and receive a portion of the floor sample of any ore delivered at the smelter for smelting purposes.

8. The rate of bounty shall be computed according to the London quotation upon the day the ore is taken into stock at the smelter, such day not to be later than the last day of the calendar month during which the ore was unloaded from cars at smelter grounds.

9. The lead contents of ores shall for the purpose of this Act be ascertained by fire assay, as used in ordinary commercial assaying.

10. The books of the claimants, and those of the smelting works at which the ore is smelted, shall be at all times open to the inspection of such supervising officer, and of any officer of the Department of Trade and Commerce who may be detailed by the Minister for the purpose.

11. All claims shall be substantiated by the oath of the Manager of the Smelting Works at which the ores are smelted, and shall be verified and certified to by the officer of the Department of Trade and Commerce appointed to supervise the smelting at the works where it has been carried on.

12. The cost of the supervision shall be paid by the claimants and may be deducted *pro rata* according to the quantity smelted during the fiscal year from the amount payable to such claimants at the close of each fiscal year."

Statement of Bounties paid on Lead during the fiscal years 1899 to 1912.

Exports and Imports.—According to Trade and Navigation reports, the total quantity of lead contained in ore and concentrates, and pig lead, exported, during the calendar year 1911, was 137,061 pounds, valued at \$4,632, as compared with 7,759,053 pounds, valued at \$249,482, in 1910.

Details of exports, 1908 to 1911, are as follows:—

The imports of white and red lead and orange mineral, in 1911, amounted to 4,072,433 pounds, valued at \$169,501. In 1903, the imports were 19,208,786 pounds, the falling off being due to the establishment of corroding works at Montreal.

Detailed statistics of imports of lead pigments during the calendar years 1909, 1910, and 1911, are as follows; the statistics of imports since 1885 being shown in Table 6:—

Imports of White and Red Lead in 1909, 1910, and 1911.

1898	12,082,808	448,659			

The production of refined lead as already shown was, in 1911, 11,892 tons while the exports of lead were 69 tons, leaving 11,823 tons as the consumption of Canadian lead.

The imports of lead during the calendar year 1911 are shown above to have been 15,631 tons, not including certain manufactures of lead valued at \$108,019 so that the total consumption of lead in 1911 probably exceeded 27,500 tons.

Nova Scotia.

There was no production from this Province during the year. Some prospecting and development were done near Musquodoboit.

Quebec.

A small shipment is reported from Calumet island, but no details are obtainable.

* From the Report of the Minister of Mines, B. C.

The falling off in the output of this Province is the result of a number of causes.

The Slocan forest fires of 1910 by their interruption of traffic caused a cessation or decrease of shipments from several important properties. Then, too, the heavy decrease caused by the working out of the St. Eugene has not been entirely counteracted by the tonnage from the Sullivan. There are, however, several features of promise: the approaching completion of the Bear Lake Branch of the Canadian Pacific railway and its extension to Kaslo; the increased activity in the Slocan among the larger properties and the reopening of many of the older mines; the activity of the Consolidated Mining and Smelting Co. in Ainsworth and Sheep Creek camps, and the renewal of work at the Blue Bell mine, all pointing to increase in the lead production in the near future.

The mining and metallurgical treatment of the nickel-copper ores of the Sudbury district of Ontario has become one of the most important of Canada's metal mining industries, and special interest is attached to this industry because of the fact that these deposits at the present time supply a very large portion of the world's demand for nickel, and also because the present known available supplies of ore in the district appear to be sufficient for many years' operations. Additional interest is now lent to these ores by the discovery of the valuable properties possessed by the new alloy of nickel and copper recently introduced to commerce under the name of monel metal, of which some particulars were given in the report for 1908.

These nickel-copper ore deposits have already been the subject of special reports¹ by the Geological Survey at Ottawa, and the Ontario Bureau of Mines at Toronto, to which reference may be made for comprehensive descriptions of the geology of the district.

The production of ore and its reduction to a bessemer matte, was carried on during 1911 to a less extent than in the previous year. There were mined during the year 612,511 tons of ore, much of which is subjected to open air heap roasting before being smelted. There were smelted 610,834 tons, from which were produced 32,607 tons of Bessemer matte, carrying approximately 17,049 tons of nickel and 8,966 tons of copper. The net value of the matte was returned as \$4,945,592. The matte, which is shipped to the United States and Great Britain for refining, carries from 77 to 82 per cent of the combined metals, having averaged for the past year 52.3 per cent of nickel and 27.5 per cent in copper.

For the production of monel metal a special matte is produced with contents of 22 per cent copper and 58 per cent nickel, which is included in the total given above. Monel metal is produced from this special matte without the intermediate refining of either the nickel or copper.

Compared with 1910, there was a decrease in matte production, in 1911, of 2,426, or 6.9 per cent, and the decrease in total nickel content of matte was 1,587 tons, or 8.5 per cent. The total copper content of the matte was 8,966 tons, a decrease of 664 tons, or 6.9 per cent from the previous year.

The following were the aggregate results of the operations on the nickel-copper deposits of Ontario during the past four years:—

¹ No. 873. Report on nickel and copper deposits of Sudbury, Ont., by A. E. Barlow, Geological Survey, Canada, 1901.

The Sudbury Nickel Region, by A. P. Coleman, Bureau of Mines, Vol. XIV, part III, 1904.

	1908. Tons of 2,000 Lbs.	1909. Tons of 2,000 Lbs.	1910. Tons of 2,000 Lbs.	1911. Tons of 2,000 Lbs.

According to Customs returns exports of nickel in matte, etc., were for twelve months ending December 31, as follows:—

	1907. Lbs.	1908. Lbs.	1909. Lbs.	1910. Lbs.	1911. Lbs.
To Great Britain.....	2,518,338	2,554,486	3,843,763	5,335,331	5,023,393
To United States.....	16,857,997	16,865,407	21,772,635	30,679,451	27,596,578
	19,376,335	19,419,893	25,616,398	36,014,782	32,619,971

The above figures of production do not include the nickel content of the silver-cobalt ores from the Cobalt district, of which it is difficult to obtain complete statistics. The shippers of silver-cobalt ores receive no return for the nickel content, although this metal forms an important constituent of the ore and is possibly, to some extent, saved by the refiners. Plants have been established by the Comigas Reduction Company at Thorold, and the Deloro Mining and Reduction Company at Deloro, for the recovery of nickel and cobalt oxides.

During 1911, there were shipped from the cobalt-silver smelting works of Ontario, 154,174 pounds of cobalt oxide and nickel oxide, and 1,260,832 pounds of mixed cobalt and nickel oxides and cobalt material having a total value of \$221,90.

Bounty on Refined Nickel and Nickel Oxide.—Under the terms of "The Metal Refining Bounty Act," 1907¹ of the Province of Ontario (7 Edward VII, Chap. XIV), a bounty is authorized to be paid on nickel-cobalt, copper, and arsenic under certain conditions and restrictions during a period of five years following the passing of the Act (April, 1907).

The sections affecting nickel are as follows:—

"The treasurer of the province may, under the authority of such regulations as may from time to time be made in that behalf by the Lieutenant-

¹ The full text of the Act and Amendment will be found in the chapter on Cobalt.

Governor in Council, pay in each year to the refiners of the metals or metal compounds hereinafter specified, when refined in the province from ores raised and mined in the province, a bounty upon each pound of such metal or compound so refined as follows:—

"Class 1.—On refined metallic nickel or on refined oxide of nickel, 6 cents per pound on the free metallic nickel or on the nickel contained in the nickel oxide; but nickel upon which a bounty has already been paid in one form of product shall not be entitled to any further bounty in any other form; and the amount to be paid as bounty on the nickel products herein mentioned is not to exceed in all \$60,000 in any one year."

In March 1912, the Act was amended to cover a further period of five years.

The price of refined nickel in New York during 1911 was quoted at from 40 to 45 cents per pound. The quotations at the end of December being "large lots contract basis 40 to 45 cents a lb. Retail spot from 50 cents for 500 lb. lots up to 55 cents for 200 lb. lots. The price of electrolytic is 5 cents higher." During 1910 the price of refined nickel was quoted in New York at from 40 to 45 cents per pound according to size and terms of order.

Statistics of the quantities of nickel contained in matte produced are shown in the following table, the values being based on the final value of the metal, either as refined or monel metal.

Statistics of the quantities of ore mined and smelted, matte produced, etc., will be found in the chapter on smelter production.

1900.	7,080,227	47	3,327,707				

* Calculated from shipments made by rail.

The companies engaged in mining and smelting nickel ores are:—

The Canadian Copper Company (The International Nickel Company) of Copper Cliff, Ont., and New York.

The Mond Nickel Company, Victoria Mines, Ont., and London, England.

Reference has already been made to the occurrence of nickel as one of the minor constituents of the silver ores of the Cobalt district. The quantity of nickel contained in the ores shipped from this district has been estimated by the Ontario Bureau of Mines as follows:—

	Year.	Ore shipped. Nickel content	
		Tons.	Tons.
1904.		158	14
1905.		2,144	75
1906.		5,335	160
1907.		14,788	370
1908.		25,624	612
1909.		30,677	766
1910.		34,282	901
1911.		26,653	392

A large portion of these ores, particularly the high grade, is now being reduced at Copper Cliff, Thorold, and Deloro, and as already mentioned cobalt and nickel oxides are being recovered in addition to silver bullion and white arsenic.

Statistics of the exports of nickel as compiled from the Customs Department's reports are shown in Table 2, and the imports in Table 3.

1902	129,653	1907	120,103		

¹ Statistique de l'Industrie Minérale en France et en Algérie, Paris.

The nickel ore of New Caledonia carries about 6½ per cent of nickel.

Practically all of the above ore is smelted in France, Germany, and England.

The production of raw nickel at smelting works (partly estimated), is given by the 'Metallgasellschaft' as follows, in metric tons:—

Production of Raw Nickel at Smelting Works, in Metric Tons.

Producing country.	1903	1904	1905	1906	1907	1908	1909	1910	1911
United States of North America and Canada	5,100	6,000	4,500	6,500	6,500	7,000	9,000	10,000	12,000
England	1,700	2,200	3,100	3,200	3,200	3,000	3,200	3,500	4,500
Germany	1,500	2,000	2,700	2,800	2,600	3,000	3,500	4,500	5,000
France	1,500	1,800	2,200	1,800	1,800	1,400	1,200	1,500	2,000
Other countries						200	400	600	1,000
Total production	9,900	12,000	12,500	14,300	14,100	14,600	17,300	20,100	21,500

¹ The figures of production stated for Germany only cover the output in the Kingdom of Prussia; nickel is also produced in the Kingdom of Saxony, but no data are obtainable of this production, which is, however, not important.

² The entire production of nickel, apart from quite insignificant quantities obtained in Germany, Norway, and the United States of America, comes from New Caledonian and Canadian ores.

Statistics of the average yearly prices of nickel in Europe are also given by the same authority as follows:—

Yearly Average Prices of Nickel in Europe in Cents per Pound, and Marks per Kilogram.

SILVER.

Owing to the rapid development of the Cobalt silver camp in Ontario during the past five years, the production of silver in Canada has, in point of value, taken second place in the list of our mineral productions, being exceeded only by coal.

The total production of silver in 1911, including that produced as bullion and the metal estimated as recovered from ores sent to smelters or otherwise treated, was reported as 32,559,044 fine ounces, which, compared with a production of 32,869,264 ounces in 1910, shows a decrease of 1.04 per cent.

The average value of fine silver in 1911, according to New York quotations, was 53.304 cents per ounce, as compared with an average value of 53.486 cents in 1910, a decrease of about 0.31 per cent.

The total value of the silver production in 1911 was \$17,355,272, a decrease of \$225,183, or 1.28 per cent over the value, \$17,580,455, in 1910.

A comparison of the production of 1910 and 1909, shows an increase for 1910 of 5,339,791 ounces, or 19.4 per cent in quantity, and \$1,401,951, or 21 per cent in value, the average price in 1910 having increased about 3.85 per cent from 1909.

Statistics of the annual production of silver since 1887 are shown in Table 1.

1899	3,411,644	2,032,658	59.58				

From 1887 to 1893, the production ranged in value between \$300,000 and \$100,000, and was derived chiefly from the Provinces of Ontario and Quebec. The next three years saw a rapid increase in the production due to the development of the silver-lead ore deposits in British Columbia, and in 1896 a production of over \$2,000,000 is recorded. From that year until 1905 the production

varied from \$2,000,000 to \$3,500,000, rising rapidly during the next six years to \$17,355,272 in 1911, as a result of the discovery of the rich ores of the Cobalt district. Ontario, in 1905, produced 40.9 per cent of the total output. In 1911 the production obtained from Ontario was 93.8 per cent, and was practically all from the Cobalt district, the contribution of British Columbia being almost 5.8 per cent.

Statistics of the annual production in each province are separately shown in Table 2.

The average price of fine silver in New York during 1911 varied between a maximum of 55.7 cents per ounce in November, and a minimum of 52.1 cents per ounce in August, the average being 53.304 cents per ounce.

In London the average price of silver in 1911 was 24.592 pence per standard ounce of a fineness of 0.925. For the year 1910, the average price per fine ounce in New York was 53.486 cents, the highest being 55.6 cents in November, and the lowest 51.4 in March of that year.

The average monthly prices of silver in New York from 1906 to 1911, and in London during 1911, are shown in tabulated form following.

Average Monthly Prices of Silver.

(a) 925 parts fine.

Important quantities of silver are now being produced in Canada, both as fine metal and as silver bullion, ranging in fineness from 850 to 998·2. Fine silver is produced at Trail, B.C., by the Consolidated Mining and Smelting Company of Canada, Limited, chiefly from the silver-lead ores of that Province, and is shipped to China, the United States, and to the Ottawa mint.

The annual production of fine silver at Trail since 1904 has been as follows:—

Year.	Fine ozs.	Year.	Fine ozs.
1904.....	551,450	1909.....	2,003,063
1905.....	1,088,328	1910.....	1,798,960
1906.....	1,263,809	1911.....	1,325,601
1907.....	1,631,122		
1908.....	1,956,039	Total	11,018,614

In Ontario ores from the Cobalt district are treated by the following companies:—

The Canadian Copper Company at Copper Cliff, Ont.

The Deloro Mining and Reduction Company, Deloro, Ont.

The Coniagas Reduction Company, St. Catharines, Ont.

Canada Refining and Smelting Company, Orillia, Ont.

Silver bullion of a fineness varying from 850 to 998·2 is produced at the works, other products being white arsenic and more recently nickel and cobalt oxides or mixed oxides. The silver bullion, as a rule, finds a market in the

United States and in England. The bullion shipped in 1907 contained 4,449,722 fine ounces of silver; in 1908, 11,168,689 ounces; in 1909, 14,385,985 ounces; and in 1910, 17,365,165 fine ounces. In 1911 these smelters produced 17,753,167 fine ounces, or 53.9 per cent of the total production of Ontario.

Quebec.

The small quantity of silver credited to the Province of Quebec for a number of years, represents a small silver content of the pyritic ores mined at Capelton and Eustis in the Eastern Townships.

Ontario.

From a production valued at only \$118,376 in 1904, the silver output of the Province has grown to a value of over \$16,200,000 in 1911. Not only does it contribute almost 94 per cent of the total silver production of Canada, but it now forms a very appreciable part (estimated at over 13 per cent), of the world's production. According to returns received by this department, there were shipped during 1911, 15,417 tons of ore, and 9,329 tons of concentrates, or a total tonnage of 24,746 tons, having a value of \$14,271,964, besides silver bullion produced at the mines, carrying 3,766,022 fine ounces of silver.

The silver content of ore shipped was estimated as 20,065,621 ounces, or an average of 1,302 ounces per ton, and of the concentrates shipped 8,118,231 ounces, or an average of 870 ounces per ton; the total silver content of ore, concentrates, and bullion shipped from the mines being 32,949,874 ounces. The mine owners receive payment for only 93 to 98 per cent of the silver content, and in estimating and valuing the production a deduction of five per cent is made from silver contained in ore and concentrates to cover losses in smelting and refining. On this basis the silver recovery is estimated at 30,540,754 ounces, and valued at \$16,279,443. No payments for cobalt content were reported.

In the following table a record of shipments since 1904 is given, the figures for the first three years being those published by the Ontario Bureau of Mines.

Silver Ore and Bullion Shipments from Cobalt Mines, 1904-1911.

Year.	SHIPMENTS.		SILVER CONTENT.		SILVER IN OUNCES, PER TON.		Silver bullion ship- ments, Fine ounces	Total value of silver.

* Included with ore.

As the camp has developed, the average grade of the ore shipped has gradually diminished, although the introduction of concentration plants in 1908, and their increased use has tended to keep the ore shipped up to a high standard.

With respect to the nickel-cobalt and arsenic contents of these ores, the mining companies have been paid for only a small portion of the cobalt content, and nothing for the nickel and arsenic; in fact in certain cases the last two are penalized, and in 1911 payment for even cobalt ceased.

The total metal content of these ores, as estimated by the Ontario Bureau of Mines, is shown in the next table. The figures for ore shipments and silver content, while not identical, agree very closely with those given in the previous table.

Total Production Cobalt Mines, 1904-1911.*

Year.	ORE AND CONTRATE SHIPPED. Tons.	METALLIC CONTENT.			
		Nickel. Tons.	Cobalt. Tons.	Arsenic. Tons.	Silver. Ozs.

1911.	26,653	392	852	3,806	31,507,791

* As per Ontario Bureau of Mines.
† Bullion shipments from mines included.

Nearly 30 per cent of the ore shipped from Cobalt was treated in metallurgical works in Canada, and white arsenic is being produced therefrom, of which record will be found under smelter production.

While the greater number of the operating companies hold unrestricted titles to their properties, several are operated on a royalty basis on mining lands owned and leased by the Timiskaming and Northern Ontario Railway Commission. Mr. Arthur A. Cole, Mining Engineer to the Commission, has in his annual report compiled some very interesting statistics covering the whole district with respect to ore shipments, concentration, power and labour, prices paid for ore, etc., from which the following tables and extracts have been freely drawn:—

Ore Shipments from the Cobalt District for the Years 1904 to 1911.

With respect to concentration Mr. Cole reports: "Fifteen mills operated during the year, milling a total of 381,870 tons. The Hudson Bay mill started operations in March but the Silver Cliff, King Edward, and Cobalt Central mills were closed down most of the year. The King Edward mill has recently been rented by the City of Cobalt Mining Company for the treatment of their own ores.

" Mills are under construction for the Beaver and Nipissing Companies. Cyanidation is used in conjunction with regular water concentration in the O'Brien and Buffalo mills and in the case of the Nova Scotia it is a combination method of cyanidation and amalgamation. The latter combination is also to be adopted in the new Nipissing mill.

" The following is a list of the mills of the district showing their daily rated capacity:—

Mill.	District.	Capacity per day.	Remarks.
Buffalo	Cobalt	Tons.	
Cobalt Central	"	150	
Cobalt Lake	"	100	Closed down.
Colonial	"	70

Total tons milled 381,870.97					

"From small beginnings and a comparatively insignificant position in the early history of Cobalt, concentration has developed till it is at present one of the dominating features of the situation. In fact, it is hardly too much to say that half the mines now shipping would be closed down if they had to depend on their high grade ore without their mills for their profits."

Sampling.

"The ore sampling works of Campbell and Deyell were in continuous operation throughout 1911 and during that time treated 5,653 tons of high grade ore. This represents about 70% of the capacity of the plant. The plant was designed to sample the high grade silver ores of the Cobalt district and details have been worked out with the greatest care. Machines are being installed which cut out the objectionable feature of floor sampling so that now the plant is practically automatic throughout. The work performed in this plant is equal to the best on the continent and having it located in Cobalt is a decided boon to the camp."

Power.

"The spring break up of 1911 was late in arriving and was not preceded by any considerable temporary thaws.

"So pronounced was the shortage of water that the production of power was materially affected.

"This noticeably cut down the volume of ore shipment during the first three months of the year.

"Towards the end of the year a consolidation took place of the two Montreal River Power Companies, viz.: The Cobalt Power Company and The Cobalt Hydraulic Power Company, under the name of the Northern Ontario Light and Power Company, Limited."

Smelting of Cobalt Ores.

"The following is a list of the smelting companies that received ore from the Cobalt district during 1911 accompanied by some of the schedules on which the purchases were made. As far as possible the tariffs given are those that were in force on January 1, 1912.

"The following is the list:—

- Canadian Copper Company, Copper Cliff, Ont.
- Canada Refining and Smelting Company, Orillia, Ont.
- Coniagas Reduction Company, St. Catharines, Ont.
- Deloro Mining and Reduction Company, Deloro, Ont.
- American Smelting and Refining Company, New York, N.Y., U.S.A.
- Balbach Smelting and Refining Company, Newark, N.J., U.S.A.
- Beer, Sontheimer and Company, Frankfort-on-Main, Germany, and New York, N.Y., U.S.A.
- Pennsylvania Smelting Company, Pittsburgh, Pa., U.S.A.
- Government of Saxony, Saxony, Germany.
- United States Metals Refining Company, New York, N.Y., U.S.A.

1. Canadian Copper Company, Copper Cliff, Ont.

"Recent changes have increased the capacity of the plant from 800 to 1,000 tons per month, giving a monthly output of silver of from 1,000,000 to 1,500,000 ounces. Another result of the enlargement and the changes that have been made is the quicker returns to shippers. Formerly the Company paid for 70 per cent of the silver in 35 days, and 30 per cent in 90 days from sampling date. Since December 1, 1910, payments are made 70 per cent in 30 days and 30 per cent in 60 days.

All purchases are made by the Oxford Copper Company of New York, and the following is the curtailed schedule for arsenical-cobalt-silver ores.

Purchaser to make payment for:—

84 per cent of silver per ton of ore (2,000 lbs.) when same assays	200-500 ounces silver.
85 "	500-600 "
87 "	600-800 "
90 "	800-1,000 "
92 "	1,000-1,300 "
93 "	1,300-1,600 "
93½ "	1,600-2,000 "
94½ "	2,000-2,500 "
95 "	2,500-3,000 "
95½ "	3,000-4,000 "
96 "	4,000-5,000 "
96½ "	5,000 and over "

Ore to be delivered to the Canadian Copper Company f.o.b. cars, Copper Cliff, Ont. Ore to be at shipper's risk until sampling is undertaken, as purchaser can assume no responsibility for the ore until same has been taken into its sampler.

Purchaser to sample at its expense, purchaser's and seller's representatives to be present. Assays to be made by Ledoux and Company of New York, at seller's expense, which assays are to govern in settlement.

Payment of 70 per cent of the silver returnable to the seller, as per the above scale, to be made at the New York official price for silver on the first settlement date, which shall be 30 days after the date on which sampling of the ore is completed, and the balance, 30 per cent, on the second settlement date, on the New York official price of silver on that day, which shall be 60 days after sampling of the ore is completed. The purchaser, however, reserves the right to deliver upon either or both of the settlement dates above specified, in lieu of cash, at his option, such silver bullion (commercial bar silver) as is due the seller in settlement upon these dates, such delivery to be made in New York city.

2. Coniagas Reduction Company, Limited, St. Catharines, Ont.

The plant of the Coniagas Reduction Company treated about 6,000,000 ounces of silver during 1911, most of the resulting bullion being shipped to London, England.

The following is in condensed form the smelting schedule that went into effect on November 1, 1911.

Percentage of silver to be paid for on commercial assay of silver content per tons of 2,000 pounds as follows:—

55 per cent for 50 ounces and proportionate increase up to.
73 " 200 "
75 " 300 "
84 " 300 "
91.5 " 1,000 "
92.5 " 1,500 "
93.5 " 2,000 "
95 " 3,000 ounces and over.

Sampling to be at vendor's expense.

All ore purchased to be at a refining charge of $\frac{1}{4}$ cent per ounce of silver content.

Seventy-five per cent of the amount 30 days after date of weighing and sampling report.

Twenty-five per cent of amount 90 days after date of said report. Price of silver to be determined by New York quotation, as given by Messrs. Handy and Harman to Western Union Telegraph Company on dates of settlement.

3. Deloro Mining and Reduction Company, Limited, Deloro, Ont.

"The smelting schedule of this Company published at the beginning of 1911 was still in force on the 1st of January, 1912, and is as follows:—

Treatment charge, \$25 per ton of ore.

Refining charge, three-quarters of a cent per ounce of silver contents on ore assaying 3,000 ounces and over per ton. One cent per ounce of silver contents on ore assaying 2,000 to 3,000 ounces per ton. One and a half cents per ounce of silver contents on ore assaying less than 2,000 ounces per ton.

Terms of payment, 75 per cent of net proceeds at Handy and Harman's New York quotation, 30 days after completion of sampling; 25 per cent of net proceeds at Handy and Harman's New York quotation, 90 days after completion of sampling. Ore to be delivered in carload lots f.o.b., Marmora station, C. O. railway, and to be at shipper's risk until sampling is undertaken.

4. Canada Refining and Smelting Co., Limited, Orillia, Ont.

"This Company blew in its furnace on February 20, 1911, but was closed down later on while the plant was being enlarged. Its present capacity is from 15 to 20 cars monthly or double what it was when operations started.

The smelting schedule remains unchanged and is as follows:—

84 per cent of silver contents by commercial assay 200 ozs. and over per ton, 2,000 lbs.					
86			300	"	"
89	"	"	500	"	"
91	"	"	750	"	"
93	"	"	1,000	"	"
93½	"	"	1,500	"	"
94	"	"	2,000	"	"
95	"	"	2,500	"	"

Ores containing less than 3,000 ounces per ton are subject to a refining charge of $\frac{1}{2}$ cent per ounce, and ores containing less than 1,500 ounces per ton are subject to a refining charge of $\frac{3}{4}$ cent per ounce. Ores containing less than 1,000 ounces per ton are subject to a treatment charge of \$10 per ton in addition to above.

Terms of payment for silver, 75 per cent of amount 30 days after date of weighing and sampling report, 25 per cent of amount 90 days after date of said report.

Price of silver to be New York official quotation.

Ore to be delivered f.o.b., Orillia, carload lots at owner's risk.

Weights to be taken after milling and moisture determination.

When so desired, Campbell and Deyell's sampling and weights will be accepted as final, and in case of dispute on assays, settlement will be made on

assays of Campbell and Deyell as umpire, or such other umpire as may be mutually agreed upon by parties.

5. American Smelting and Refining Company, New York, U.S.A.

"Of the foreign companies receiving silver ores from Cobalt, the American Smelting and Refining Company received the largest tonnage. The ore was consigned to both Perth Amboy, N.J., and Denver, Colo., and consisted of both high and low grades.

The prices offered by this Company vary according to the grade and analysis of the different ores submitted and also as to whether or not occasional shipments are involved or time contracts for entire outputs. Prices are also contingent to some extent upon length of contract and upon operating conditions at the smelter at the time any definite tonnage is offered. An idea of the prices ruling may, however, be gathered from the following contract rates which are now in effect:—

Tarif.—For ores assaying 1,000 ounces or over per ton.

Silver.—Pay for 95 per cent of the silver contents at New York quotation.

Treatment Charge.—\$7 per ton of 2,000 pounds, dry weight.

Arsenic.—An addition to the working charge will be made at the rate of 25 cents per dry ton for each per cent of arsenic in excess of five per cent. Sampling free.

Payment.—Thirty days after agreement of assays.

For ores under 1,000 ounces and over 60 ounces per ton.

Silver.—Payment for 95 per cent of the silver contents at the New York quotation.

Treatment Charge.—\$7 per ton of 2,000 pounds, dry weight.

Arsenic.—An addition to the working charge will be made at the rate of 25 cents per dry ton for each per cent of arsenic in excess of 15 per cent.

Payment.—Cash settlement on agreement of assays.

6. Balbach Smelting and Refining Company, Newark, N.J., U.S.A.

This smelting company has not been offering a regular schedule for silver ores from the Cobalt district. It did, however, make some purchases during the year, returning 93 per cent of the silver contents in ores assaying about 2,000 ounces silver per ton.

7. Beer, Sondheimer and Company, Frankfort-on-Main, Germany.

"At the beginning of 1911, a few purchases of silver ores from Cobalt were made by the New York agency of Beer, Sondheimer and Company, but now the Company is out of the market for these ores.

8. Pennsylvania Smelting Company, Pittsburgh, Pa., U.S.A.

"The smelting schedule of the Pennsylvania Smelting Company, on the 1st of January, 1912, was the same as that which ruled throughout 1911, except that

on ores running over 2,800 ounces of silver per ton a sliding scale is offered which gives a better percentage recovery to the shipper in proportion as the ore increases in silver contents. It is now as follows:—

Schedule for ores below 2,800 ounces.

For ores containing less than 200 ounces of silver to the ton, we will pay the New York silver price, less $\frac{1}{2}$ cent per ounce for 95 per cent of the silver contents, less treatment charge of \$8 per ton.

For ores containing 200 to 400 ounces silver per ton, we will pay the New York silver price, less $\frac{1}{2}$ cent per ounce for 95 per cent of the silver contents, less treatment charge of \$8 per ton.

For ore containing 400 to 2,000 ounces silver to the ton, we will pay the New York silver price, less $\frac{1}{2}$ cent per ounce for 95 per cent of the silver contents, less a treatment charge of \$8 per ton.

For ores and coarse concentrates containing 2,000 ounces and upwards of silver per ton, we will pay the full New York silver price, for 95 per cent of the silver contents, no treatment charge.

For Vanier or Wilfley products, we will pay the New York silver price, less one cent per ounce for 94 per cent of the silver contents, less \$8 per ton treatment charge.

For jig concentrates containing from 400 to 2,000 ounces silver per ton, we will pay the New York silver price, less $\frac{1}{2}$ cent per ounce for 95 per cent of the silver contents, less treatment charge of \$8 per ton.

Low grade 'ores' are expected to run less than 10 per cent arsenic.

All the above f.o.b. ours our works, Carnegie, Pa., P.C.C. and St. Louis railway.

Schedule for ores above 2,800 ounces:—

No treatment or refining charge.

For ores between 2,800 and 3,000 ounces, 95 $\frac{1}{2}$ per cent of the silver contents is paid for, and increase in the percentage of silver paid for by $\frac{1}{2}$ of 1 per cent for every 200 ounces up to 4,800 ounces per ton. For ores assaying over 4,800 ounces the percentage of silver paid for is constant at 96 $\frac{1}{2}$ per cent. All other conditions are the same as for ores below 2,800 ounces.

Settlement assays to be the average of our results and shippers or shippers' representatives, if within splitting limits, otherwise reserve sample to be sent to umpire.

Splitting limits on ores of less than 150 ounces per ton to be 1 $\frac{1}{2}$ ounces, on ores of 150 ounces and less than 500 ounces, 1 per cent of contents, on ores of more than 500 ounces 5-10ths of 1 per cent of contents.

9. Government Smelter, Saxony.

"The Government Smelter of Saxony has been receiving some high grade ore from Cobalt on the following contract basis:—

Pay for 96 per cent silver contents on Hamburg quotation of silver.

Payment, 30 days after arrival in Hamburg.

Ore must assay at least 4,500 ounces silver per ton.

Above contract is made on a minimum of six cars.

10. United States Metals Refining Company, New York—Works at Chrome, N.J., U.S.A.

"The silver ores from Cobalt that are being purchased by this Company are comparatively low grade, the richest containing 400 ounces silver per ton. No regular schedule is published, but the prices vary with the character of the ore purchased."

A number of the shipping companies at Cobalt have published, in annual reports, some details of their operations, from which the following extracts have been taken:—

Coniagas Mines, Limited, Year Ending October 31, 1911.

TOTALS OF SHIPMENTS FROM THE MINE.

The mill for the treatment of first class ore was started February 1, 1911, and is now successfully treating the entire product of the mine.

The process, which is a new one as far as its application to Cobalt ores is concerned, was devised by Charles Butters and his assistant, G. H. Clevenger;

James Johnston erected the plant and has had charge of it since. The process consists essentially of amalgamation in cyanide solution in a tube mill where more than 97 per cent of the silver in the ore is recovered as amalgam. The residue then undergoes regular cyanide treatment whereby an additional extraction is made. During the summer a refinery was erected, since which time the whole product of the mill has been shipped as fine bullion.

Trenching was confined to the section south and east of Peterson lake.

A force of 25 men completed 13.7 miles of trenches 2.7 feet deep at a cost of \$8,831.58.

Summary of underground work in 1911:—

Drifting, 3,675 feet; cross-cutting, 3,602; raising, 1,208; sinking, 296; total, 8,781 feet. Stoping, 13,841 cubic yards.

McKinley-Darragh Mines of Cobalt, Ltd., Calendar Year, 1911.

“Extent of mining operations:—

McKinley-Darragh to January 1, 1912, 20,066 feet drifts, cross-cuts, raises, winzes, and shafts; Savage, to January 1, 5,955 feet.

“Mill report:—

Total ore treated, 1911, 46,497 tons.

Number stamp days run, 318.66.

Average tons per day, 145.91.

Mill heads, 39.685.

Mill tails, 4.122.

Per cent of extraction, 89.614.

Ounces of silver recovered, 1,653,595.”

Timiskaming Mining Company, Limited, Calendar Year, 1911.

" No payment was made this year on any of the by-products, cobalt, nickel, or arsenic. On the other hand we were penalized on an excess arsenic content by some of the smelters.

" The 34,720 tons treated in the mill produced 770 tons of shipping product which gives a ratio of concentration of about 45 into 1.

" The stamp duty was about 3.13 tons per 24 hours which is somewhat better than that of last year.

" The milling cost per ton covering all charges..... was \$3.00 per ton as compared with \$3.86 of last year, an improvement of 86 cents per ton."

British Columbia.

The chief sources of the silver production in this Province are the silver-lead ores of East and West Kootenay, supplemented by the silver contained in the gold-copper-silver ores of Rossland, Boundary, and Coast districts. The production in 1911, based on smelter recoveries, was 1,887,147 ounces, valued at \$1,005,924.

The leading silver producers among the mines of the Province in order of importance are the Van Reo, Sullivan, Rambler-Cariboo, St. Eugene, Ruth, and Standard.

The Granby mines at Phoenix on account of their large tonnage of copper ores come fourth as silver producers, with the others maintaining their relative positions.

Considerable attention is being paid to the silver-lead properties of the Slocan district, with probabilities of increased production, from the Sandon, Silverton, and Ainsworth camps. The following table is taken from the annual report of the Minister of Mines for British Columbia, 1911:—

SILVER.—TABLE 3.

* From the Minister of Mines Reports, British Columbia.

Yukon.

The figures of silver production of the Yukon, given in Table 2, represent the silver alloyed with the placer gold, together with a small amount from the lode mines of the district. On an average, about one ounce of silver is contained in each five ounces of crude bullion from the alluvial workings. In 1909, the production was 45,000 ounces of silver, all from the placer mines. In 1910, the placer production was 50,000 ounces, valued at \$26,743, and the lode production 37,418 ounces, valued at \$20,013, or a total of 87,418 fine ounces valued at \$46,756. In 1911 the placer production was 50,300 ounces, valued at \$26,812, and the lode production 62,408 ounces, valued at \$33,266, a total of 112,708 fine ounces with a value of \$60,078.

Exports.

The following table shows the statistics of silver contained in ore, matte, or other form exported from Canada since 1886, as compiled from the reports of Trade and Navigation published by the Customs Department. The exports during 1911 were 31,216,725 ounces, valued at \$15,807,360, as against exports of 30,699,270 ounces, valued at \$15,649,537, in 1910.

SILVER.—TABLE 4.

ZINC.

The production of zinc ore in Canada in 1911, as obtained by direct returns from the producers, was 2,590 tons valued at \$101,072, the greater part being from British Columbia. The zinc content of these shipments was returned as 2,346,849 pounds, which if valued at the average New York price of spelter during the year would be worth \$135,132.

The ore shipped from British Columbia contains also a varying silver content, for which payment is made by the smelters and without which on account of the import duty to the United States and the long rail haul, it would not pay to ship. The Richardson, or Long Lake mine, in Olden township, Frontenac county, Ontario, did not ship during 1911.

The British Columbia shipments were seriously reduced as a result of the destruction of mills, mine buildings, and railway facilities by the forest fires of 1910, there being only two shippers in 1911.

The British Columbia zinc ore is exported for treatment to Kansas and Oklahoma smelters, and since the smelters demand over 80 per cent zinc, the maximum rate of the United States customs tariff affects Canadian ores.

The present schedule of the tariff on zinc is as follows:—

Ores containing less than 10 per cent, free of duty.

Ores containing 10 per cent or more, and less than 20 per cent, 4 cent per pound.

Ores containing 20 per cent or more, and less than 25 per cent, $\frac{1}{2}$ cent per pound.

Ores containing 25 per cent or more, 1 cent per pound.

All rates being based on the metallic contents of the zinc.

The United States smelters usually pay on a basis of 45 per cent zinc content. The base price varies with the price of spelter at St. Louis, and a stated amount is added or deducted for every unit of zinc in excess of or less than the base. The silver is settled for at the New York price after making deductions for losses in treatment. Limits are frequently set which lead or iron contents may not exceed.

A typical example may be given. A certain mine was paid \$28.50 per short ton for zinc concentrates carrying 45 per cent zinc, when spelter was quoted at 5 cents per pound at St. Louis. For every unit above or below 45 per cent zinc 85 cents was added or deducted. For every increase or decrease of one cent per pound in the price of spelter at St. Louis, an increase or decrease was allowed of \$7 per ton of 2,000 pounds, and proportionately for fractions thereof. In the case of the silver content, six ounces per ton were deducted and 75 per cent of the remainder paid for at the New York price.

The sellers paid freight, customs duty, and collection charges.

The imports of zinc taken as an index of consumption, show a fairly steady increase. The total imports of zinc in blocks and pigs and spelter were, in 1880, some 744 tons. In 1889 they had risen to 1,427 tons, and remained fairly stationary until about 1899, in which year the imports were 1,213 tons. In the fiscal year ending March, 1909, they had risen to 4,610 tons, and for the calendar year, 1910, they totalled 7,037 tons, in addition to which there were 4,248 tons of zinc white, and zinc manufactures, to the value of \$21,829.

For the calendar year 1911, the total imports were 7,534 tons, in addition to which there were 4,269 tons of zinc white, and zinc manufactures to the value of \$30,862.

Statistics of the production and imports of zinc and the average monthly prices of spelter on the New York and London markets for two years are given in the accompanying tables:—

ZINC.—TABLE I.

MISCELLANEOUS METALLIC MINERALS.

ALUMINIUM.

No commercial ores of aluminium have as yet been found in Canada. Aluminium is, however, made in extensive works at Shawinigan Falls, Que., from bauxite ores imported from France, Germany, and the United States, by the Northern Aluminium Company. A wire mill for the manufacture of aluminium wire and cables is also operated by the same firm.

There being but one firm engaged in the manufacture of aluminium, we are precluded from publishing statistics of production.

Imports of alumina, which probably includes bauxite, and exports of aluminium, are, however, published in the reports of the Department of Customs.

During the twelve months ending December 31, 1911, the imports of alumina were 18,607,200 pounds, or 8,304 tons, while the exports of aluminium in ingots, bars, etc., during the same period, were 4,930,100 pounds, or 2,495 tons, besides manufactures of aluminium, valued at \$1,555. The imported alumina was valued at 2.00 cents per pound, and the exported aluminium at 14.98 cents.

The imports of alumina and exports of aluminium during the past eight years are shown in tabular form as follows:—

Annual Imports of 'Alumina' and Exports of Aluminium.

Calendar Year.	Imports of alumina.			EXPORTS OF ALUMINIUM.		
			Lbs.	Value	Manufactures,	
	Lbs.	Value			Lbs.	Value
1905	5,360,800	138,765	2,535,386	508,213	1,588	
1906	8,975,400	239,136	4,521,486	899,113	2,244	
1907	12,705,300	268,502	5,478,203	1,100,353	1,499	
1908	1,485,500	29,752	1,715,800	399,785	1,727	
1909	11,794,100	231,541	6,134,500	918,195	3,453	
1910	19,464,400	403,283	7,722,400	1,160,242	3,741	
1911	18,607,200	372,009	4,930,100	747,587	1,555	

Prices.—The price of aluminium (No. 1 ingots), in New York, during 1911, varied between the limits of 18½ and 22 cents per pound; during 1910, the price varied between 20 and 24 cents per pound, while practically the same prices ruled during 1909.

In Europe, prices for aluminium for several years have been considerably lower than in the United States.

In 1909, the prices per pound at works in Europe are reported by the 'Metallgesellschaft' as having ranged from 13½ cents to 16 cents; in 1910, from 14 cents to 17½ cents, and in 1911 from 11 to 13½ cents.

ANTIMONY.

A few pounds of refined antimony were produced at Trail, British Columbia, in 1911, but beyond that there was no production from Canada. The West Gore Antimony Company did not operate during the year.

The total production of antimony in 1910, as reported to this Branch, consisted of 364 tons of antimony concentrates, valued at \$13,906, shipped from West Gore, Nova Scotia. In 1909, in addition to the shipment of 35 tons of concentrates, there were produced about 61,200 pounds of antimony metal chiefly at the works of the Canadian Antimony Company, Limited, at Lake George, New Brunswick, a small recovery being also reported from the Consolidated Mining and Smelting Company's refinery at Trail, B.C.

In 1908, customs returns showed an export of 118 tons of antimony ore valued at \$5,443.

In 1907 the production was 2,016 tons of antimony ore shipped, valued at \$65,000, and 63,850 pounds of refined antimony, valued at \$5,108.

In British Columbia, some of the lead ores contain a small percentage of antimony—about one-third of one per cent—and some refined antimony was recovered at Trail in 1907 and 1909, the recovery being somewhat irregular.

The auriferous antimony property at West Gore, Hants county, Nova Scotia, formerly operated by the Dominion Antimony Company, Limited, was taken over in July, 1909, by the West Gore Antimony Company.

The mine and works of the Canadian Antimony Company, Ltd., at Lake George, New Brunswick, have not been in operation since 1909.

COBALT.

Cobalt is an important constituent of the silver-cobalt-nickel-arsenides of Coleman and adjacent townships, more familiarly known as the Cobalt district, Province of Ontario, and these ores are now said to be the principal source of the world's consumption of cobalt.

With respect to the greater part of the ore shipped in which silver is the chief constituent of value, the purchasing smelters make no allowance for the cobalt content, and the mine owners, therefore, receive nothing for the cobalt.

The recovery of cobalt in Canada so far has been confined to the production of cobalt oxide and mixed cobalt and nickel oxides, by the Coniagas Reduction Company and the Deloro Mining and Reduction Company. During 1911, according to direct returns, there were produced 154,174 pounds of cobalt and nickel oxides and 1,260,832 pounds of cobalt material and mixed oxides of cobalt and nickel, the total value of all these products being \$221,690.

No information is available as to the quantities recovered from ores shipped to smelters outside of Canada.

It is also estimated that the total ore shipments from Cobalt during the past eight years have contained upwards of 5,901 tons of metallic cobalt.

The following table shows the ore shipments, estimated cobalt content, and value received by the shippers for cobalt, as published by the Ontario Bureau of Mines:-

Year.	Ores shipped.	Estimated total cobalt content.	Per cent.	Value received by shippers for cobalt. \$
	Tons.	Tons.		
1904.....	158	16	10.1	19,960
1905.....	2,143	118	5.5	100,000
1906.....	5,335	321	6.0	80,704
1907.....	14,788	739	5.0	104,426
1908.....	25,624	1,224	4.7	111,418
1909.....	30,677	1,533	5.0	94,905
1910.....	34,282	1,098	3.2	54,089
1911.....	25,653	852	3.2	170,890

The production of cobalt has so largely exceeded the demand as to cause a very great fall in the price.

The price of cobalt oxide (58.6 per cent Co) in New York, during 1907, remained uniformly at \$2.50 per pound. In 1908, the price fell to \$1.45 in April, and \$1.40 in November. During the first three months of 1909, from \$1.45 to \$2.60 was quoted, after which the price again fell, quotations ranging from \$1.10 to \$1.75 until December. In the latter part of December there was a further falling off to prices ranging from 80 to 85 cents per pound.

During 1910 the price remained fairly constant at from 80 to 85 cents per pound, while in December, 1911, it fell to from 75 to 80 cents per pound.

In the "Statistique de l'Industrie Minérale en France et en Algérie" for 1910, the following statement is of interest: "The production of cobalt ores which was more than 2,360 metric tons in 1908 and which fell to 548 tons in 1909, was only 51 tons in 1910 with a value of 4,860 francs or an average of 90 francs per ton.

"Thus New Caledonia, which for a long time enjoyed a veritable monopoly of the cobalt ore market, was suddenly supplanted in these markets by Canada as a result of the exploitation of the argentiferous-cobalt ores of the Cobalt district."

In 1907 an Act was passed by the Ontario Legislature, authorizing the payment of bounties on certain nickel, cobalt, copper, and arsenic products mined and refined in the Province. The Act and Amendment are quoted following:—

AN ACT TO ENCOURAGE THE REFINING OF METALS IN ONTARIO.

Whereas it is desirable to encourage the refining of nickel, cobalt, copper and arsenic ores within the Province;

Therefore His Majesty, by and with the advice and consent of the Legislative Assembly of the Province of Ontario, enacts as follows:—

1. This Act may be cited as "The Metal Refining Bounty Act."
2. The treasurer of the Province may, under the authority of such regulations as may from time to time be made in that behalf by the Lieutenant-Governor in Council, pay in each year to the refiners of the metals or metal compounds hereinafter specified, when refined in the Province from ores raised and mined in the Province, a bounty upon each pound of such metal or compound so refined as follows:—

Class 1.—On refined metallic nickel or on refined oxide of nickel, 6 cents per pound on the free metallic nickel or on the nickel contained in the nickel oxide; but nickel upon which a bounty has already been paid in one form of product shall not be entitled to any further bounty in any other form; and the amount to be paid as bounty on the nickel products herein mentioned is not to exceed in all \$60,000 in any one year.

Class 2.—On refined metallic cobalt or on refined oxide of cobalt, 6 cents per pound on the free metallic cobalt or on the cobalt contained in the oxide of cobalt; but cobalt upon which a bounty has already been paid in one form of product shall not be entitled to any further bounty in any other form; and the amount to be paid as bounty on the cobalt products herein mentioned is not to exceed in all \$30,000 in any one year.

Class 3.—On refined metallic copper or on refined sulphate of copper, 1½ cents per pound on the free metallic copper or on the copper contained in the sulphate of copper; or on any copper product carrying at least 95 per cent of metallic copper, one-half cent per pound; but copper upon which a bounty has

already been paid in one form of product shall not be entitled to any further bounty in any other form; and the amount to be paid as bounty on the copper products herein mentioned is not to exceed in all \$60,000 in any one year.

Class 4.—On white arsenic, otherwise known as arsenious acid, produced from mispickel ores and not from ores carrying smaltite or niceolite or cobaltite, one-half cent per pound; but the amount to be paid as bounty on the arsenic compound herein mentioned is not to exceed in all \$15,000 in any one year.

(1) Provided, however, that if so much of any of the above-mentioned classes of refined products is refined in the Province in any one year that the amount hereby set apart in respect of the said class would be insufficient to pay the bounties herein provided therefor, then the bounty payable to the refiners of such class of refined products shall abate and be payable upon a *pro rata* basis so that not more than the maximum amount herein specified for any of the said classes shall be paid in respect of said class in any one year.

(2) Provided, also, that the bounties herein provided for shall cease and determine with the payment of any sum or sums which shall have been earned during the period of five years from the passing of this Act.

(3) No person, firm or company shall be entitled to claim or receive any of the bounties in this Act provided for unless such person, firm or company shall have been at all times prepared and ready and willing during the period for which the bounty is claimed, to melt, treat and refine ores from which the same product as that on which the bounty is claimed can be produced, belonging to any other person, firm or company, at rates and on terms and conditions approved by the Lieutenant-Governor in Council, or shall have been ready to purchase such ores at rates approved by the Lieutenant-Governor in Council as current market rates.

AN ACT TO AMEND THE ACT TO ENCOURAGE THE REFINING OF METALS IN ONTARIO.

His Majesty, by and with the advice and consent of the Legislative Assembly of the Province of Ontario, enacts as follows:—

1. Subsection 2 of Section 2 of The Metal Refining Bounty Act is amended by striking out the word "five" where the same appears in the last line of the said Subsection, and substituting therefor the word "ten".

MERCURY.

There has been no production of mercury since 1897. The small production reported in 1895 and 1897 was derived from the deposits at the western end of Kamloops lake, B.C. These deposits consist of quartz veins containing pockets of cinnabar. These veins are in a zone of decomposed volcanic rock of Tertiary age.

During 1911 some development work was done by the Mercury Mines, Ltd., at Sechart, Vancouver island. Some ore was taken out but was piled on the dump for future treatment.

MOLYBDENUM.

Although there are numerous occurrences of molybdenite in Canada of more or less undetermined value, there has been very little production of the mineral.

In 1902, about 6,500 pounds of molybdenum, valued at \$400, were reported as having been taken from a deposit in the township of Laxton, county of Victoria, by John Webber, of Toronto.

In 1903, Mr. A. W. Chisholm, of Kingston, reported the shipment to the United States and elsewhere of 85 tons of molybdenum ore, valued at \$1,275, culled from about 500 or 600 tons of rock taken from the east half of lot 5, concession XIV, Sheffield township, Addington county.

According to "The Mineral Industry," published in New York: "The market for molybdenum ores is very narrow. The price fluctuates widely, and is generally subject to special negotiations at each particular sale. American buyers require concentrates to contain 90 to 95 per cent molybdenite, for which they will pay \$400 to \$450 per ton. The principal purchasers in the U.S. are Electrometallurgical Co. of America, New York; Primos Chemical Company, Primos, Penn.; DeGolia & Atkins, San Francisco, Cal. In Germany, Friederich Krupp, of Essen, is a large user of molybdenum."

During the year a report on the molybdenum ores of Canada was issued by the Mines Branch.¹

¹ No. 93, Report on the Molybdenum Ores of Canada, by T. L. Walker, Ph.D., Mines Branch, Dept. of Mines, Ottawa, 1911.

PLATINUM AND PALLADIUM.

Although no production of platinum or palladium is reported for 1910, it seems probable that some recovery of platinum may have been made from placer mining on the Tulameen river, B.C.

In the former years the chief source of the platinum production in Canada was the placer gravels of British Columbia, principally in the Similkameen district.

The nickel-copper ores of the Sudbury district also carry small quantities of the metals of the platinum group, and from 1902 to 1906 considerable quantities of these metals were recovered from accumulated residues resulting from the treatment of the mattes from Sudbury. This recovery, however, has apparently ceased.

The Tulameen district of British Columbia was visited in 1910 by Mr. Charles Caussell of the Geological Survey, who reports that "A few Chinese miners were again placer mining on a part of the bed of the Tulameen river between the mouths of Engle and Champion creeks. This particular portion of the stream bed has been worked over a great many times since the first discovery of gold on it. Within the last twelve years it has been mined at least eight times, and the old cabins, gravel dumps, and abandoned machinery, show that it had already been worked over years before. Gold and platinum are obtained here in about equal proportions. The evidence suggests that the gold and platinum on the stream bed are replenished annually from some nearby source. What this source is, has not yet been determined. There are no prominent gravel deposits directly above this point, but it is significant that it lies immediately below a sheared and broken zone formed in the bed-rock, on the contact of pyroxenite with green schists. The method of working is to divert the water by wing dams to one side of the stream bed, and mine the other by sluicing. The amount of gold and platinum actually recovered was not ascertained, but it appears to have been satisfactory to the miners."

TIN.

Tin ores have not yet been found in sufficient quantities in Canada to be of economic importance.

The occurrence of tin ore has been reported from several localities, the most important, perhaps, being the recent discovery of cassiterite, near New Ross, Lunenburg county, Nova Scotia. This occurrence has not yet been found of economic value. It has been visited by several officers of the Geological Survey, and reports upon it may be found in the Summary Report of the Geological Survey Branch, of the Department of Mines, for 1907, pages 77, and 80 to 83, and in the report for 1908, page 154.

In further reference to the New Ross occurrences, Mr. Faribault, in his summary report for 1910, states that: "At New Ross, Lunenburg county, some distance east of the district surveyed last summer, two important veins, one bearing manganese and the other tin and copper, were opened last summer.

"A tin-bearing vein, also recently discovered by Ernest Turner, at Mill Road, four miles north of New Ross, has been prospected under the management of A. L. McCallum. It has been proved to a depth of 20 feet, and for a length of 250 feet, while the float has been traced half a mile towards the north. The vein is 24 inches wide, mostly made up of quartz, merging with granite at the sides, and carries at the middle a streak of rich ore from three to five inches wide. Several assays of the ore made by Mr. McCallum have given from 10 to 30 per cent tin, and 5 per cent copper, present in the form of cassiterite and chalcopyrite, with association of tungsten-bearing zinc minerals."

The imports of tin and manufactures thereof into Canada are shown in the following table:—

TUNGSTEN.

Reference was made in the report for 1908 to the discovery of scheelite in Halifax county, Nova Scotia. Mr. Faribault of the Geological Survey visited this deposit again in 1909, and a preliminary report thereon will be found in the Summary Report of the Geological Survey for 1909, pages 228-234. During 1910 these deposits were being developed by the Scheelite Mines Company, who are reported to have obtained very satisfactory results. In his summary report for 1910, Mr. Faribault refers to a new discovery in Queens county, as follows: "A new discovery of tungsten ore, in the form of scheelite has been made by A. N. Prest, at Middlefield, Queens county, near the Fifteen-mile Brook gold mine, and prospecting was started last fall in order to trace the float to the parent vein."

During 1911, the Scheelite Mines, Ltd., continued development work and erected a mill.

The occurrence of wolframite has also been noted in association with molybdenite by Dr. Walker in New Brunswick, near the confluence of Burnt Hill brook and the Southwest Miramichi. The property is being tested by Mr. Freeze of Doaktown, N.B., and Mr. Matthew Lodge of Moncton, who are interested therein.
