THE CANADIAN POULTRY REVIEW

DEVOTED TO A

POULTRY, IN ALL ITS BRANCHES

FOR THE FANCIER, THE FARMER AND THE SMALL BREEDER.

VOL. XXIII.

124 VICTORIA STREET, TORONTO, OCTOBER, 1900.

No. 10

NOTES AND COMMENTS

MR. E. WALTON, of Medicine Hat, N.W.T., in renewing his own subscription to Review, kindly sends us another, and adds that quite an interest in poultry is now being taken in his vicinity, and he hopes to send us several more.

Mr. Frank C. Hare writes us that the interest in poultry fattening, both for home consumption as well as for export, is rapidly on the increase, and that information is being eagerly sought. Mr. Hare has kindly stated his willingness to answer any questions regarding fattening that any of our readers may desire to ask. We know one vital point is: How can cooped chickens be induced to eat sufficient to lay on flesh in hot weather? Another is: How can feather-eating be stopped?

Hamilton Poultry Association has chosen the first week in December for their next annual show. It has departed from the custom of not closing till Saturday night, and will now close on Friday night at ten o'clock. This is considered a good move, as it will enable the outsiders to receive their exhibits home on Saturday afternoon, in lots of time to prepare them for the Ontario Show at Guelph.

They have already secured a splendid building to hold the show in. It is 250 feet by 500, and lighted from the top, and is only one block from the centre of the city.

The judges have agreed to arrive early and devote plenty of time to the judging of the classes.

Hamilton has held a good many successful shows, and paid everybody in full the last day of the show, which should ensure them another most successful exhibition. Last year they had one of the finest exhibits of dressed poultry, and will try to outdo it this year. The pigeon list has been supplemented, and there is some talk of supplying coops in this class.

Mr. F. J. S. Chatterton, F.E.S., an English artist and writer on poultry subjects, whose work we have often admired, is visiting America, and purposes making extended trips to take in the principal yards.

The Eastern Ontario Show will be held in Almonte during the third week in January. Mr. A. P. Mutchmor, of Ottawa, is the secretary.

Mr. J. H. Warrington, Cornwall, was in Toronto, on August 20th, on his way back from a trip through the Eastern States, where he visited many prominent breeders' yards. He still sticks to the black Spanish.

Secretary Minshall tells us that Brantford is going to do big things this year at their show to be held January 8th to 11th, 1901. The list will be a full one, all varieties being looked after, and no less than four prominent Canadian judges will be appointed, so that all awards may be made on the first day. This is business. The city, county and township are all helping with liberal grants.

There is one danger that may attend the advent of the many fattening stations that are being inaugurated all over the Dominion, and that is, that in sellers' and fatteners' eagerness to make a good record, the best birds.

the birds of largest frame and roundest form may be sent for sale. This, if persisted in for some years, will deplete the country of its best stock, as it has done in the case of poultry in Ireland. That country has seen the danger, and has, for the past few years been making strenuous efforts to recuperate by the importation from England of large, thoroughbred sires. We should strive to breed up and not down, as the sale of our best birds each year will lead to. No breeder succeeds, who sells his best in any line. Retain for next year's use the strongest, largest, meat carrying pullets and a sufficient number of males of like character, and you will find your stock next season will show the effects of the care you have exercised.

While in London we had an opportunity of visiting Mr. Oke's new place where he has an ideal fancier's home. It consists of about nine acres, flat as a table, with a creek bounding it on one side. The whole place has been planted to fruit trees, except the front lawn and a clover field, and when these grow up, the location will leave little to be desired. The soil is light with a gravel subsoil and so is always dry. The main house is 180 ft. long, facing the south, with a passage along the south side. The pens open into extensive yards to the north and a row of cock pens open into the same yards. A four-roomed cottage in the centre affords room for feed bins, washing room, and the usual sundries of a well appointed plant. Mr. Oke devotes his whole time to "fancy" poultry and evidently makes it pay. He deserves to.

Mr. Mutchmor paid a flying visit to Toronto on the Saturday following

the fair in Ottawa. He told us they had a grand show of about 1,500 birds, and the attendance was particularly good on some days and poor on others.

Mr. W. McKenzie, of Concord, Mich., is to judge the Eastern Ontario show, to be held in Almonte, in January. Several additions of a practical kind, will be added to the list, such as dressed poultry, etc., and it is also proposed to add selling classes in which the entry will be pooled and the proceeds divided into three prizes.

We did not hear of many sales being made this year at the Industrial. Mr. Miller sold several barred Rocks. Mr. Ramsey bought the first prize white Leghorn cockerel, and we heard the second had been sold also. Mrs. Shales sold to Mr. N. Cosh the grand buff Wyandotte cock that won first, and he will head Mr. Cosh's breeding pen of this variety. Mrs. Shales bred the bird and hesitated to let him go, but as she has both the father and mother who produced him, she feels confident that another year she will have one equally as good. She retains several full brothers and sisters to him.

The committee appointed to confer about the Walker Cup met during the Industrial, and decided that Mr. McNeil is entitled to two wins on it. It was agreed that if Toronto holds no show next winter, that the cup will revert to the Ontario. Mr. Miller has been handed the barred Rock cup.

The Montreal Show will be held from the 16th to the 21st January, 1901, at which Mr. Butterfield and Mr. Rockenstyre will act as judges.

Peterboro' Show dates are November 27th, 28th and 29th, and entries close with the secretary, Mr. William Collins, on November 20th. All entries in single birds and open to the Province. A liberal list of cash and special prizes will be offered.

Mr. Bennett is wondering when the American B.P.R. Club Cup that he won at Toronto last year is coming on. Secretary Schwab might take a pointer.

Petrolea Show will be held during the third week in January, at which Mr. L. G. Jarvis is to judge.

The "big three," Butterfield, Jarvis and Smelt, judged the birds at the Western Fair. They say the genial and benevolent looking T. H. Smelt since his return from England, wears his trousers tucked up at the bottom and drops his H's in most approved "Lunnon" style. As he left before we arrived in London, we cannot personally verify this assertion.

Mr. A. P. Westervelt, the new "Ontario" secretary, makes his initial bow to Review readers in this issue, with the proclamation that the "Biggest show on earth" will be held in Guelph on December 11th to 14th, and that entries positively close on December 1st. There will be no variance from this. Intending exhibitors should send to Mr. Westervelt for a prize list. Further announcement will be made later.

PAN-AMERICAN EXPOSITION 1901.

NOTICE in your issue for September, a notice of the poultry show which we expect to hold next year at the Pan-American.

Permit me to thank you for your courtesy in bringing this matter to the attention of the several poultrymen in the Dominion through your columns, and allow me to say that I spent two days at the Exposition at Toronto, and met several of the principal exhibitors in poultry, and the great number of them assured me of their intention to make an exhibit at Buffalo next year, and while the government has not yet made any definite arrangements as to giving official recognition to these exhibits, I feel assured from the correspondence I am receiving from the various live stock breeders, particularly in the Province of Ontario, that the various exhibits in all of the classes will not only be large, but will be of such quality as will reflect great credit upon this work by the men most interested in it.

Very truly yours,
F. A. CONVERSE, Supt.
Buffalo, September 8, 1900.

Particulars as to prize money were given last issue; we now learn that

the proposed entry fee for single birds is \$1 each, and that for pens \$2. Entries will close August 15th, which seems unnecessarily early, as the show does not take place till the latter part of October.

The Canadian breeders, who met Mr. Converse, urged that the entry fees be cut in half and that but one entry in each class be allowed from any one breeder. With both these suggestions, the Review is fully in accord. The latter places the "little" breeder on an equality with the big chap. For those who desire to make a large display of any one breed, we would suggest their admission "not for competition."—Ed.

MINORCA JUDGING AT THE INDUSTRIAL.

Editor Review:

AT the late Industrial Fair, I endeavored to see you, but having only part of one day at my disposal, I failed to meet you. I wanted to call your attention to 1st hen and 1st pullet, black Minorcas, perhaps you noticed them, both birds should have been disqualified for feathers on shanks, and outside of the disqualification, they were far from being the best of birds. The hen was just a big black hen, good color, no comb, and gypsie lobe and face; the pullet had a fair comb, nothing else to recommend her. Now, as I was not an exhibitor this year at Toronto, I cannot be called a sore head. I examined the Minorcas through impartial eyes, and I fail to see why we should import judges who do not know the varieties they are given to pass upon, when we have plenty of home talent who are capable of doing the job right. There is talk of a Judges' Institute being opened, I think in New York State. I would strongly advise Mr. D. to take a course on black Minorcas. If nothing else, such judging will soon keep all the best exhibitors at home. The man who breeds a variety for years knows them best.

Respectfully yours,
S. M. CLEMO.
Welland, Ont., Sept. 20, 1900.

Lend this "Show Number" to a friend who does not subscribe for the Review, and tell him the price is only 50c. per year.

INCUBATORS and BROODERS.

We invite correspondence for this important department of commercial poultry raising, which is growing so rapidly in Canada.

FIRST EXPERIENCE WITH AN INCUBATOR.

NEVER SAW ONE BEFORE BUT MADE A SUCCESS FROM THE START. INCUBATOR-HATCHED CHICKS GROW FASTER AND BIGGER.

BY A. B. ARMSTRONG, CODRINGTON, ONT.

SINCE you wrote me asking for the details of my experience with an incubator, I have been very busy with harvest work, but now have time to give you in a rough way some of my experience.

About the last of March of this year, we bought an incubator with the intention of going into the poultry business in a small way, our object being to raise pullets for winter layers and try to work up a trade for fresh laid eggs, when the price is likely to be at its best, viz. in the winter season.

We concluded that pure bred fowls would not eat any more than non-descripts, and would probably give better returns in the egg basket, and so we chose barred Plymouth Rocks, white Wyandottes, S.C. and R.C. white and brown Leghorns, S.C. and R.C. black Minorcas and S.C. white Minorcas. As we can't hatch all pullets, we have a number of cockerels which will be sold at reasonable prices.

On April 2nd, we started the machine at its work. I may say at the outset, that we never saw an incubator until we saw ours, and so we were new at the business. Before the first batch came off, the eggs met with an accident, and hatched only thirteen chickens, twelve of which we put in the brooder and have succeeded in raising strong, well-developed fowls. Of this batch, we will say no more. The regulator on our machine, up to this time, did not seem to work freely and we were compelled to keep close watch of the machine to keep the temperature nearly right. About this

time, we discovered the trouble. The brass wire which connects the thermostat with the lever on top of the machine was placed a little to one side of the tube through which it passes and just touched the side, enough so that it could not play up and down freely. However, we fixed that and from that time forward the machine received no attention except night and morning. We had the machine in an unused room upstairs in the house, and found that it gave good satisfaction.

The next time we placed 150 eggs in machine, tested out forty-nine unfertile eggs and hatched seventy chickens, nine of which died in less than one week. The rest we raised

BLACK LANGSHAN COCK, BEAUTY, bred and owned by John F. Hill, Aqueduct Poultry Yards, Welland, Ont. Winner 1st in open class, special and diploma for best specimen on exhibition at Sherbrooke, Sept., 1900.

and they have done fairly well, some of the barred Plymouth Rock and white Wyandotte cockerels weighing four lbs. at three months and fourteen days old.

The next time we filled the machine, we placed it down cellar, (our cellar is well ventilated and quite dry) but we did not think it gave as good satisfaction down there, as it did upstairs. I suppose it is unreasonable to expect the germ in an egg to be as strong and healthy in a cellar as in a room that is meant for people to live in. Probably there are more or less impurities in most cellars that we would not expect to find in a room

upstairs. Perhaps there is too much moisture in the driest of cellars, as we found difficulty in getting eggs dried down enough, so that chick would not smother, if its head happened to be on the under side at hatching time. At any rate, upon examination of eggs after hatch was over, we found several eggs that were pipped and the moisture had filled the nostrils of the chick that was trying to get out, and which was probably strong enough had it not been smothered. And just here, in our opinion, is the point at which so many fail to hatch, the difficulty being in getting them dried down enough so as not to smother and still leave moisture enough, so that any chicken that happens to take a little longer than it should, (perhaps on account of its being on the weak side, or perhaps the shell is quite thick and tough) in getting out after the shell is pipped, would not dry fast to the shell, or rather the inside skin of the egg.

The results this time were not as satisfactory as when the machine was upstairs, as out of 120 fertile eggs, we got only 60 chicks. We thought the cause of the failure of some of them to hatch was too much moisture, together with more or less impure air that is generally found in a cellar.

The next time we did a little better. We placed 150 eggs in machine. On the seventh day we tested out thirty unfertile eggs and out of the 120 fertile eggs, we had 100 chicks. We still had the machine down cellar, but we kept the windows of cellar always open and the machine directly between them so as to get as much pure air as possible, and we left the ventilators of the machine wide open from the beginning of hatch to the end, and still some of the chicks were smothered by too much moisture, while one or two chicks when hatch was about half done, dried fast to the shell. To obviate the last named difficulty, we placed water in the machine on the twenty-first day and had no more of that trouble. Another thing we did during the last hatch, which we were not told in the directions with the machine to do, was to air the eggs longer than we had done before. Mr. Graham advised us to air them once each day, until they cooled down to about 85 degs. We used a hot thermometer in letting them cool down, and we believe the chicks were stronger because of the

JUDGES,

Sharp Butterfield,

C. F. Wagner.

E. G. Henderson,
President,

Norman D. McPhie,
Secretary-Treasurer.

longer airing they got. We believe it is better to keep two thermometers in the machine, especially after ninth or tenth day, as an unfertile egg, or one in which the germ has died is liable to get under the thermometer, and so lead one to think the machine is too cool, while if two thermometers are used, one of them is likely to be right anyway. We found two or three times when we would have been led astray, if we had not been using two thermometers.

We believe that incubators will be more generally used as people get more acquainted with them, as it does not take any longer to feed 60 or 80 chickens in one batch than it does to feed 8 or 12 usually found in one batch, when hatched under hens. We think they grow faster than hen-hatched chickens, on account of their freedom from lice, and when raised in large batches will attract more attention from a casual observer, and may, in that way, make sales which otherwise would not be made.

If our experience is of any use to anybody, they are welcome to it. We are in the business to stay, and we would like to learn as much about the hatching and raising of chickens as possible. We are giving our ideas in the hope of hearing from others with more regularity on the same lines. We do not pretend to know nearly all about working an incubator, and we would like to hear from others on the same business.

CHICKENS AND DUCKS.

QUESTION No 1 Is there any difference between an Incubator for hatching chickens, and an Incubator for hatching ducks, and

what Incubator is giving the best satisfaction in duck hatching?

2. Will you please explain, if you have space, the difference in the management of duck eggs while in hatching?

Yours truly,
H. E. HATCH.

Glendale, Man.

1. Any good Incubator that will hatch chickens successfully will also hatch ducks well.

2. There is practically no difference, the machine should be run almost identically the same in both cases. We have found it desirable to give a little more moisture on last days to duck eggs than is generally given to hen eggs.—ED.

PHEASANTS.

POULTRY AILMENTS.

DISEASES OF THE EGG
ORGANS.

SOME SICK ROCKS.

MAY be a little too late for September issue, but if I am October issue will do. What I wish to write you about is a disease that my hens are subject to and one that I cannot master. I have done nearly everything, and up to the present, I have not succeeded in accomplishing a cure. I wrote you re this matter some time ago, and did as you requested, but it does not seem to have the desired effect. They act in this way: Get dumpy, will not eat, will sit about, while in this position they will shut their eyes, working their mouth; comb turning pale.

I would like to hear from some of my Plymouth Rock friends if they are ever troubled in this way, if so, what's their cure. Thanking you, I remain,

Yours truly,
F. B. CARLING,

Exeter, Ont.

Will some of our Plymouth Rock breeders reply? It looks to us like a disease of the liver.—Ep.

BY W. M. FREEMAN, M. P. S.

VERY few persons who have tried their hand at poultry keeping have escaped without some experience of the ailments affecting the egg organs of hens; and there is probably no matter more difficult to deal with than a case of this kind as far as the average amateur is concerned. In this article I want to make as clear as I possibly can the principal ailments which are likely to occur, and how they can be distinguished, and how they should be dealt with.

Without resorting more than we are obliged to technical references, we may note that there are really three stages in the production of an egg. First of all the yolk commences to develop in what is known as the ovary. If a hen be killed and opened the ovary will be found to contain a large bunch of eggs in their first stage of development, looking very much like a bunch of grapes, except that some are much larger than others, being more fully developed. One by one these yolks, which it must be borne in mind are not encircled by any white or albumen, leave the ovary and enter what is called the oviduct. This is a long tube, and from the glands in its internal lining deposits the albumen, and further on also deposits the lime which forms the shell. So that the yolk being fully developed leaves the ovary, and passing through the oviduct receives its complement of albumen and its covering of shell, thus completing the egg. Thence it passes what is called the cloaca, where it remains until it is expelled by the action of the muscles.

Now it is obvious that so delicate

a thing as an egg might come to grief during several different stages. All may go well, for example, until it reaches the oviduct, when an accidental breaking of it would set up what is known as inflammation of the oviduct or egg passage, a very serious trouble indeed, and one which, as a rule, terminates fatally; or supposing the egg to be abnormally large, it may pass through the oviduct safely, but on account of the hardness of the shell, which it has received in passing through the oviduct, it may not be able to force its way to the outer air, having lost the elasticity which it possessed in some degree in the earlier stage. In that case the pressure of the muscles of the cloaca will probably cause it to burst and the contents will get away, the shell remaining undischarged.

Perhaps we can best classify the various troubles which arise in these matters under three headings—1, the laying of imperfect eggs (commonly called soft-shelled eggs); 2, inflammation of the oviduct; 3, inability to pass eggs (known commonly as egg-bound).

Soft-shelled Eggs.—In the first of these ailments which I have enumerated we have one of two causes at work. Either the bird is producing eggs too rapidly, a condition of things which may be due to over-stimulating food, or very often undoubtedly it is due to no other cause than the extreme fecundity of the bird affected, either of which two things may cause the eggs to be passed on too rapidly to admit of proper completion in the oviduct: or the laying of soft-shelled eggs may be due to the absence of a sufficient supply of lime-forming substance, such as often happens when birds are kept confined in small runs. The obvious remedies therefore for

Use Guest's Roup or Tonic and Condition Pills.

If your fowls or pigeons have Roup, even if almost dying, give one Pill every day, for four or five days. They are especially suited for Roup, Rousy diseases, Bad Moulting, Bad Fledging, Weak Young Pigeons, Chickens, Turkeys or Ducks, &c. For general Unhealthiness in Birds, either young or full grown. Skin diseases, Inflammatory diseases, Colds, with great difficulty of breathing, Indigestion, Cramps, Pip, when apoplexy is feared, and going Light if given before the vital organs are too much affected. As a tonic give an occasional dose when required. For pain and Inflammation in the Egg-producing organs. When used for Egg-bound, oil must also be applied in the usual way. From weakness and prostration from overlayering. For Scour or Diarrhoea in Chickens, young Pigeons, Turkeys, etc. Canker. Leg-weakness.

Since the introduction into Canada of these Pills, the Agent has received numerous letters from Fanciers all over the Dominion endorsing the Pills in the highest manner.

READ THIS—Dear Sir,—I can recommend them to be the best. I tried several other receipts, but no good. I had one hen nearly blind, I gave her three Pills. She is now in good trim. Send me another packet.—B. J. YORE.

WARDSVILLE, ONT., Jan., 1897.

Dear Sir,—Please find enclosed one dollar for your celebrated Roup Pills. A brother fancier met me in the street to-day, he wished to get the pills as he had some sick birds. He used them last winter and found them good. A good article always will recommend itself.—JOHN FINCH.

SEAFORTH, ONT., Oct., 6th., 1886.

Sold in Packets for 25 cents and one dollar. Address James H. Cayford, Box 1168, Montreal.

such a state of things are two. First of all reduce the food supply and give up altogether the use of stimulants if such have been supplied, and see that a sufficiency of oystershell is given, also some fresh grass frequently. Grass contains salts of lime, and I have known cases in which poultry have been cured of laying soft-shelled eggs by being let out of a garden pen into a field—the salts of lime found in grass being more rapidly assimilated than in the form of oystershell.

Inflammation of the Egg Passage.—This is not always easy to distinguish, but if a careful examination be made and the egg can be felt it is clearly a case of egg-bound—not of inflammation of the oviduct. On the other hand, if the egg cannot be detected, and the bird seems very unwell, hangs down her tail, and appears to be constantly trying to pass an egg, it is most likely that the more serious trouble is arising. Sometimes an egg will break in the oviduct, and in that case it begins to come away slowly, but not in the wholesale manner which is the case when an egg is broken in the cloaca. Comparatively little can be done, and the best thing perhaps is to anoint the parts with a feather dipped in sweet oil, and at the same time a small dose of castor oil can be administered to the bird. Keep her quiet and free from interference.

Egg-bound.—The best treatment to adopt when the egg can be plainly felt is to use first of all a hot fomentation. Hot water alone will answer all purposes, the object being simply to increase the elasticity of the passage. Failing this, gently insert a feather which has been dipped in the sweet oil, and in due course doubtless the trouble will be got over; if not, probably a breakage may occur, and then very careful manipulation will be needed to bring the shell safely away, after which a good strong dose of castor oil should be given, and the food reduced for a time, in order to check the production of more eggs.

It may be laid down as a general principle that whenever any trouble with the egg organs has taken place the safest thing to do is to have resort to an internal dose of castor oil, and to the local application of a little sweet oil. Sometimes after an abnormally large egg has been laid a portion of the egg passage protrudes, having been drawn down by the excessive strain. In such a case a very weak solution

of alum should be obtained, and should be used as an astringent lotion, the organ being very carefully replaced, and the bird being dieted for a time only on soft food, and being kept in a pen by herself until she has quite recovered.

It is necessary to point out that in treating with such ailments as have been described in this article we are dealing with matters of life and death. The greatest care and the most delicate fingers are necessary for proper treatment, no rough-handed and rapid

methods being at all desirable. The percentage of deaths among such cases ranks very high, and it will be obvious therefore, that this warning is not by any means unnecessary.—“Poultry.”

The new Standard of Perfection issued by the American Poultry Association IS NOW READY, and contains all changes made at Toronto. We propose with the help of our friends to give away 1,000 copies. How can it be done? Easily.

To any one sending us five new subscribers with \$2.50 we will send free by mail a copy of the new Standard, the regular price of which is one dollar, and they cannot be bought for less. You cannot earn a dollar more easily or pleasantly. All can avail themselves of this offer without further authority. We have said plainly what we are prepared to do. Samples of Review to show your friends will be sent free on application. Cash MUST accompany all orders, and we cannot accept renewals at this special rate. Address—

Canadian Poultry Review, Toronto.

PERSIATIC

Poultry Powder

Is a safe and sure remedy for all kinds of Lice on POULTRY.

It is harmless to hens and chickens. Dust your birds with PERSIATIC POULTRY POWDER and INSECTS CANNOT LIVE.

A leading poultry breeder says he tried everything and could not keep his Valuable Birds from being lousy, nor keep them clean, until he tried PERSIATIC POULTRY POWDER.

25 CENTS PER CAN.

Persiatic Poultry Spray

Is the only effective Spray for removing Insects in Poultry Buildings. SOLD BY ALL DRUGGISTS. TRY IT. 25 CENTS PER BOTTLE.

Toronto's Big Fall Show

The Record Broken in the Number of Entries, 3,036
Head in All. Barred Rocks Lead with 137
Birds, 79 White Wyandottes. Full Reports
of all Meetings. Critical Show Re-
port, and All Awards.

TORONTO INDUSTRIAL EXHIBITION can again be congratulated on piling up an immense entry of over 3,000 birds, which though lighter in some sections than last year, was heavier in others, and thus the average was kept well up. The entry in sections was as follows: Fowls—old birds, 817; young, 767; exhibition pens, 436; turkeys, ducks and geese, 173; ornamental, 78; cage birds, 105; pigeons, 650.

The classes taken by the judges were as follows: Mr. Butterfield, Asiatics, Game, all Bantams, S.C. brown and buff Leghorns; Mr. Jarvis, Dorkings, Plymouth Rocks, Spanish Leghorns (other than S.C. brown and buff) Polands, Massey classes, Turkeys, Ducks and Geese; Mr. Drevensstedt, Orpingtons, French, Wyandottes, Javas, Minorcas, Andalusians, Hamburgs, Redcaps, Silkies, Sultans and any other variety.

A run through some of the classes shows us that there were seven dark Brahma cocks and ten hens, while on the other hand the young lights only made three and two. Five Partridge Cochins and seven hens is unusual. Silver grey Dorkings made six, eight, five and six. Black Orpingtons got down to two, two, one and one, a small lot. In LaFleche and Creves there were not enough to take the money, twelve birds in eight classes. Barred Plymouth Rocks headed the list with twenty-one, twenty-three, twenty-three and thirty with no less than 10 pens. Buffs had six, eight, eleven and seven, whites fourteen, seventeen, nine and ten. In white Wyandottes there were nine, sixteen, eighteen, eighteen and five pens. Golds made ten, ten, nine, seven and buffs six, nine, four, eight. Black Minorcas had nine, twelve, nine, ten; S.C. white Leghorns, thirteen, thirteen, sixteen, fourteen. Rose combs,

five, seven, seven, nine, S.C. brown, eighteen, seventeen, twelve, thirteen and buffs ten, twelve, ten, twelve. Hamburgs averaged little over two to a class having 117 birds in fifty-four classes. Looking over the Bantam classes, we find that black reds had no less than fifty-seven birds, brown reds 19, pyles an even fifty, and whites surely a record with forty specimens, Buff Cochins made nine, nine, five, five, black five, six, four, four, whites five, six, four, five.

THE MEETINGS.

CANADIAN BARRED PLYMOUTH ROCK CLUB FORMED.

THE inaugural meeting of the above club was held on Sept. 5th on the Industrial grounds. No attempt at formation was attempted, other than to give the Club a name, and solicit membership, which work Mr. Miller was prosecuting vigorously, both at Toronto and London, as the appended list of members will show.

The annual fee was fixed at \$1.00 and the next meeting will be held at Guelph during the Ontario show week. The members think that they receive no benefit from the American Plymouth Rock Club, though several have belonged to that body for years. They are also at variance with the ideals adopted by the Club.

Mr. W. F. Garland, Hintersburg, has the honor of being the first member to pay his fees. Others who have joined are T. A. Duff, A. H. Lake, H. B. Donovan, J. E. Bennett, J. W. Smith, Toronto; Geo. W. Miller, A. Bogue, W. McNeil, R. Oke, C. A. Stewart, Geo. Angus, Jas. A. Carroll, W. McLoud, R. B. Millard, London; W. J. Hill, Yarkar; A. G. Gilbert, Ottawa; J. W. Kedwell, Petrolea; Jas. McCormack & Sons, S. J. Plastow,

Rockton; John Ramsey, Owen Sound; I. K. Millard, Dundas; R. M. Patterson, Agincourt; Mrs. Iouson, Scarborough; Elias Snyder, Burgessville; Josiah McKay, Clachan; Thos. Coinbear, Chatham; J. S. Jeffrey, St. Catharines; W. R. Graham, Guelph.

Mr. Geo. W. Miller, London, who is acting as secretary, will be glad to have the names of others willing to join.

MEETING OF SEPTEMBER 5TH.

THE meeting called for September 5th, to consider the advisability of asking the Government for aid to local associations, was largely attended, though the chief promoters were not present.

Mr. Leary, of Peterboro', was voted to the chair, and Mr. Donovan was asked to act as secretary of the meeting. Mr. Anderson and Mr. Bogue spoke in favor of concentrating township grants into county grants, one decent sized grant for each county.

Mr. Bennett expressed the opinion, that breeders should not be compelled to take their birds all the time to one place to win.

Mr. McNeil said London men never had a local show and they were not so far behind.

A letter was read from Mr. Dilworth suggesting aid for one show in each electoral district to move from town to town.

Mr. Donovan—It is useless approaching the Hon. Minister of Agriculture for further aid to the ordinary feather shows, as he has plainly said he cannot favor giving it, and also, that the two associations now receiving Government aid were not doing the work he wanted.

The President—If this is the case, there does not seem much use in further discussion.

Mr. Donovan—Don't misunderstand me. If you can show the Government that you can benefit the poultry trade of the country, the purely practical side of it, I feel sure aid can be secured, and as much as is needed. But it must be towards the increasing of size of carcass and size and number of egg production.

After some further desultory talk, it was decided, on motion of Mr. McNeil and Mr. Ramsey that the meeting take no action.

MEETING OF "ONTARIO" DIRECTORS.

The directors of the Poultry Association of Ontario met on the Toronto show grounds on September 6th, vice-president McNeil in the chair. Other directors present were, A. Bogue, D. C. Trew, John Ramsey, C. Massie, W. J. Bell, Jas. Dundas and J. W. Kedwell. Secretary Westervelt looked after the minutes. Mr. F. W. Hodson, Live Stock Commissioner for the Dominion, took an active part in the meeting. Mr. Bogue referred to the recent amalgamation of the Fat Stock Show and the Ontario, and the good that would be done by its permanent location in Guelph. Last year, the Ontario went \$230 behind, and it would likely go still further in debt if the show had been held in Owen Sound. Permanent location will do away with much hard, sectional feeling; it will save the transportation of coops from town to town, also the \$100 grant given local associations. Exhibitors will now get half railway rates, not two-thirds as heretofore. Owen Sound was paid a moderate sum to satisfy the claims its association had on the show.

The list of last year was adopted in detail. Moved by Mr. Ramsey, seconded by Mr. Trew and carried, that the work so far done be approved by the Board.

Mr. Hodson was introduced by the chairman as the prime mover in the scheme of amalgamation. Mr. Hodson said he could see that for the past two or three years that danger was approaching. He had recommended to the Hon. Minister of Agriculture, that the grant be increased, and that tighter control be kept on the money granted the poultry associations. This was done; the grant being increased by \$300, and he was glad to be able to donate \$50 from the Dominion Government. There is nothing to prevent the two associations getting \$1,500, if the work is satisfactory. He was glad to see the fair permanently located; many more people would now see the stock, it will not now be a poultry show alone. It is expected that a passenger car would start from New Westminster, and another from Halifax, and prospective buyers would be carried practically free. Cultivate interprovincial trade. He wanted a secretary in close touch with the Minister. Would like to see the eastern association go in on

the same lines and choose a home. All fattening stations, etc., should be carried out under the control of the two associations. Have cut freight rates on live stock in two, between the east and N.W.T. He would like to see Provincial local board composed of two from each of the associations, to advise in matters of importance.

Mr. Hodson is a ready and forcible speaker, and his remarks bore the weight of conviction.

Mr. Tyson said the Ontario had not coops enough, but that the Guelph association would help them out.

Mr. Hodson, Mr. Bogue, Mr. McNeil and the secretary, were made a committee to provide speakers for the meetings to be held during the show.

Mr. W. R. Graham was made a director under clause of Agricultural and Arts Act.

The judges and the classes they will take are as follows:

Mr. Butterfield: Brahmas, Cochins, Langshans, Game, buff Leghorns, Bantams.

Mr. Jarvis: Dorkings, Plymouth Rocks, Leghorns, Spanish, Polands, Houdans, Turkeys, Geese and Ducks.

Mr. Smelt: Wyandottes, Javas, Dominiques, Minorcas, Hamburgs, Redcaps, Pheasants, Creves, La Fleche, and A.O. Variety.

Mr. Johnson, pigeons and pet stock.

The date of the show is December 11th to 14th, and entries close December 1st.

It is hoped a big list of specials will be put up and the following committee was put on to classify them, Messrs. Tyson, Karn and McNeil.

Mr. A. G. Gilbert congratulated the association on the appointment of one of its members, Mr. F. C. Hare, as superintendent of fattening stations, and a resolution of thanks will be sent the Government to this effect. Mr. J. H. Saunders will be superintendent of the show, and Mr. Karn his assistant. The four judges named above were recommended to the Pan-American Exposition.

THE BIRDS.

LIGHT Brahmas not a good lot, old birds ragged and youngsters small. There were more darks and they showed more quality, especially the firsts.

Buff Cochins were not large classes, nor were there many exhibitors.

First cock, nice color, 2nd, a bit dark, shapely; 1st hen, light, even color, 2nd and 3rd, good, either might have won. Chicks, especially pullets, nice. Partridge good, chicks young and the same may be said of blacks and whites which did not make big classes. Sound colored birds of good type, won in old black Langshans. Young, good but late. Whites made a very good showing, 1st and 2nd chicks are typical. Dorkings good as usual, but competition was not keen. Javas a nice lot, we made 2nd black hen an easy 1st. The mottles are improving. Red Caps a typical lot.

Black Wyandottes very nice. Nice hen is 1st, good color and shape, 2nd cock fails to 1st in size. Whites were a grand class. First and 1st old pair, a grand team shown very fit; 2nd cock a low set blocky bird of good color; 3rd hardly as big excels in color. Second hen is a big one, neat head piece, good; 3rd fails to her in leg. First and 1st chicks had no trouble in winning, a pair good in shape and color, we greatly liked the pullet. Second cockerel fails to 1st in color, 2nd pullet nice all over, pure in color, others good but many too young. First golden cock, a big blocky bird of brilliant color, 2nd also good, not quite so large nor full in breast, 3rd good, comb a bit loose. First hen an open laced one, looking a bit pale, good breast, 2nd a different type. First and 1st chicks were well developed, a nice pair, 2nd cockerel blocky, overdone in comb, 2nd pullet, decent breast, poor legs, 1, 2, 3, pullets stood out well, a nice trio that won well. Silvers were good, several birds shown that are nicely laced. First buff cock, a good shaped bird of excellent even, light color, including tail, decent comb, 2nd blocky, moderate comb, fair color. First hen even in color, close fitting comb, good shape, shown very fit, 2nd, a good hen, not yet ready and the same applies to the rest of the class. Cockerels poor, pullets better, 2nd might have won, more even in color, 3rd, about as good as any. V. H.C. cockerel, though young, we liked as well as any in the class.

Black Minorcas—1st and 2nd cocks both large and good in color, 2nd has the advantage in comb and lobe. First hen typical, good size lobe, good comb, 2nd has size and color to recommend her, but had no lobe and a poor comb, shown fit, not a typical Minorca, feathers plainly visible on the

**THIRD ANNUAL
EXHIBITION**
will be held in the
MARKET HALL (The best
in Canada.)
in the
**TOWN OF
PETERBOROUGH**
On Tuesday, Wednesday and
Thursday, Nov. 27, 28 and 29

Open to the Province. Liberal Cash Prizes, and a valuable list of Specials, will be offered on all the leading varieties of Land and Water Fowls, Pigeons, etc.

All entries in single birds. We invite all to come and compete, promising a **FAIR FIELD and NO FAVORS.**

Write Secretary for copy of Prize List, ready about Oct. 10th, 1900.

Entries Positively Close November 20th.

R. H. LEARY,
President.

WM. COLLINS, Sec'y,
Box 926, Peterborough

toes. First cockerel big, good head points, excellent color, 2nd and 3rd good, 1st pullet, large, deep body, 2nd hardly as big, good lobe, 3rd good, though young and her pen mate might have been 4th. Just a word here. Mr. Drevenstedt has often asserted that the looking for minute feathers on the legs of an otherwise good bird is a mistake, and that he is opposed to it. We are inclined to agree with him here, but then the Standard does not agree with either of us. Big typical birds won in old white Minorcas, kept well, winning chicks nice and very white. Buff Orpingtons big classes, but all fail badly in evenness of color. Blacks small classes, good. Houdans a nice lot as were French A.O.V.

White Plymouth Rocks—A decent lot though the old birds were in very poor fit. First cock big, coarse in head, sound color, 2nd beats him in head, not as large, grand beak and legs. First and 2nd hens both good and in nice trim. In the young ones we liked 1st pullet which is good in shape, with grand legs, 2nd, big but creamy and for this reason might have given way to others. First cockerel, a big bird of good color, on the best of legs, 2nd, has not his breadth nor legs, younger. Others nice. First buff cock, fair color, poor comb, 2nd, not so fit, neater head. First hen, poor color, mottled, 2nd, not in show fit. First and 1st chicks an even color pair that won well, cockerel could do with a bit stouter comb, a nice pair, best color in class, 2nd pullet, mature, light eye, fair color, an unnoticed one (Mrs. Logie) might have been 2nd or 3rd, very even all over, if a bit light. Third cockerel beats 2nd in tail and color, not so big.

Barred Rocks—Taken on the whole

this was a good lot, few really poor ones. First cock a big bird of the right stamp, good in color, standing on fine legs, perhaps a trifle coarse in head, 2nd fails to him in color and breast, 3rd, a neat headed one, tail not in, three good birds, 4th, neat in head, smaller. First hen nice type, beautifully barred, good shape and legs, 2nd fails to her in legs, better comb, good breast, 3rd and 4th both good. Many chicks too young to say much of them, on the whole hardly as good as last year. First and 1st a good colored pair of decent shape, especially cockerel, who has a grand breast and legs, 2nd cockerel we missed on Wednesday, 3rd, fair as is 4th; 2nd pullet well barred, good legs, 3rd, must have run her close. Nice even pen of chicks won.

Polands, as usual good. One exhibitor has a complaint to make here and that is that four of his birds (W. C. black) were penned in one coop, while others had but one bird in a coop. A good deal of grey in shanks of W.C.B. chicks.

Hamburgs, good, little competition. Some very decent rose comb Andalusians in A.O.V. class. Cosh showed a very even team of grand birds in the regular class. Not much wrong with the winning chicks, 1st cock has been well preserved. Spanish few, and outside one or two old birds but moderate in quality.

Buff Leghorns—First cock nice even color, neat comb, stands on good legs, lobes a bit rough and discolored. Second, big, coarse in head points, 3rd, large, tail in, rough lobe. First hen shown very fit, even in color but shafty, light all over, especially in fluff. We preferred 2nd, same owner, but rather pale legs, 3rd, we liked as well as any, better in tail, even color, except on breast where it is a bit mot-

FOR SALE.

I am going to sell my entire stock as I have to move and can not keep hens where I am going. My stock consists of S. C. W. and S. C. Brown Leghorns, S. L. Wyandottes and S. S. Hamburgs.

Two S. C. W. Leghorn Cocks, 8 hens and 14 chicks. Stock as you see ad. in March, April and May Review 1900, under heading of White Leghorns. S. C. B. Leghorns, 3 cocks, 8 hens, 13 chicks. See ad. in May Review under Leghorns. S. Laced Wyandottes, 1 cock, 4 hens 5 chicks, also see March to May Review under Wyandottes.

S. S. Hamburgs, 1 cock and 3 hens, see ad. in May Review.

All must be sold in a month. All chicks of best matings, hatched in May and first week in June. Prices very low.

CANADIAN POULTRY REVIEW,

Toronto, Ont.

tled. First cockerel, a good colored bird, neat in head, fair shape, 2nd, hardly as even, light shanks, 3rd, darker in tail, coarser in comb; three good birds. First and 2nd pullets, a large, even colored pair well grown and well shown. Third and 4th smaller, a shade deeper in color, 4th, rough in leg. White Leghorns, made one of the best sections in the show, competition was keen and the

stuff good. Cocks not yet fit, so can't say much of them, 2nd, a bit neater and better in color than 1st, though paler in shanks and not so large. First, has lost a great part of his wattles. First hen large, good shape, nice color and shown very fit; the same applies to 2nd, others a bit rough. First cockerel, well grown, fair color, stout legs, a stylish bird, perhaps a bit coarse, had no trouble in winning here, 2nd a bit neater, comb gone over at back, 3rd, young and sultry, 4th, though a bit off in color, might have changed places with him. Pullets a really grand lot, 1st, well grown, good color, 2nd, very white, good legs, perfectly shown. We made two unnoticed ones (Baldwin & Chambers) 3rd and 4th and could not quite follow the decision in pens. Blacks were few, nice, chicks small. Grand hen won 1st, good type and lustrous color. First cock nice, good head points. Brown Leghorns made an excellent showing and the quality in young and old was high. The winning chicks were well advanced. Rose combs good, whites better in color than last year.

Some nice rose comb black Minorcas in A.O.V. class, and quite a big lot of Silkies, though we could not follow the judge in many cases. Black Langshans were good, though we have seen better, typical birds of good color won; we thought the whites improved.

The Game classes filled fairly well, especially black reds, in which 1st cock stood well out, and 1st cockerel, a grand colored bird, well up on his pins. Pyles good Duckwings about as usual and brown reds were few but good. Indian Games, fine. First cock, 1st hen, and 1st cockerel were about the thing in shape, size and color. Some decent whites shown in A.O.V. Game.

Turkeys, Ducks and Geese were excellent. First old Pekin duck, a marvel for depth of keel, and winning youngsters grand.

Mr. Daniels made a nice display of appliances, incubators, brooders, fountains, shipping coops, bands, grit boxes and grit, etc. The Cyphers he had in operation brought off 140 chicks from 180 eggs, a nice lively lot. They attracted a great deal of attention from visitors, and were sold too soon.

(For Bantam report see Bantam page.)

TORONTO SHOW.

LIST OF AWARDS.

Barred P. Rocks—1st, A. H. Lake, Toronto; 2nd, E. Snyder, Burgessville; 3rd, 4th, George W. Miller, London; 5th, James McCormack & Sons, Rockton. Hen—1st, Miller, 2nd, J. E. Bennett, Toronto; 3rd, Lake; 4th, J. S. Jeffery, St. Catharines; 5th, A. A. Armstrong, Fergus. Cockerel—1st, 2nd, 3rd, Miller; 4th, Jeffery; 5th, J. Graham, Victoria, B.C. Pullet—1st, 3rd, Miller; 2nd, 4th, 5th, R. Mackay, Hamilton. Pen—1st, 3rd, Miller; 2nd, Bennett; 4th, Lake. Buff—Cock—1st, James E. Norris, Guelph; 2nd, Devins; 3rd, J. B. Gallinger, Southend. Hen—1st, 3rd, Devins; 2nd, Gallinger; 4th, Norris. Cockerel—1st, G. A. Ionsen, Ingersoll; 2nd, W. J. Brazier, London; 3rd, 4th, Mrs. James Logie, Eglinton. Pullet—1st, Ionsen; 2nd, C. J. Eisele, Guelph; 3rd, 4th, Devins; 5th, Karn. White—Cock 1st, T. Rice, Whitby; 2nd, 5th, W. H. Bessey, Coleman; 3rd, 4th, J. F. Kennedy, Agincourt. Best pair of Turkeys—Colwell. Geese—Colwell. Ducks—Colwell.

Pair of Guinea Fowls—1st, Goulding.

Common Pea Fowls—1st, Goulding.

THE NEATEST SHOW IN CANADA

The Western Fair, London. All Coops Filled. More Room Needed Soon

HERE is a brightness and neatness in the poultry department of the Western Fair, London, that her more ambitious neighbors might copy. The coops are all patent wire fronted and the building is always decorated with foliage and flowering plants. Superintendent Saunders sees to this.

Coops were well filled this year, and the quality was high, in many cases better than at Toronto.

Light Brahmas were better than at Toronto, good cock in first. Darks good. Cochins good and big classes. Langshans a nice lot, good color pullet in first. Andalusians and Dorkings good, about as at Toronto. Barred Rocks a decent lot. A neat type of cock 1st, not as large as 2nd. First hen very good, and chicks nice. White Rocks a better lot than at Toronto. Cocks, good; 1st hen very white good, yellow legs; 2nd and 3rd, lighter, latter a bit coarse in head points, and has lost one wattle, a good hen. Cockerels good; 1st wins over 2nd in size, leg and face, both white. Pullets good, and winner really white. Old buffs in no shape. Pick of youngsters in 1st pullet; very even, nice color, good shape, tail not all in yet. Wyandottes good all through, especially blacks and whites; blacks made much bigger classes than usual. An unnoticed buff cockerel (Milton & Mitcheltree) immature, should develop into a good one, nice shade of color and even. Hamburgs, of course, good, and Polish A.

Buff Dots nice; Jayas and Houdans good. We noticed the first black Java cockerel had good sized feathers on his shanks, so "Drev" is not the only sinner. Brown Leghorns were a good lot, but whites were not as numerous as usual, the winners good. Buffs a small class, winners good, especially the pullets, but color of legs wants looking to. Blacks a nice little lot. Rosecomb browns a big lot; white, few and neat. Spanish, poor. Black Minorcas good, especially old birds. Whites, few old birds in no shape. Red-caps a mixed lot; 1st and 1st old pair best. Games, a really hot

lot and in some sections better than at Toronto. Many begin to show a languidness. Third black-red cock best in shape; head and neck, not in feather; 2nd, in best feather. First cockerel well up on his pins, snaky head, a good one. He and his coop mate, 2nd pullet were purchased by Mr. Barber. Houdans a good lot. Silkies nice and well shown. Turkeys, geese and ducks were quite a feature of a good show.

LIST OF WINNERS.

H. Wyatt, L. Sage, Thorpe & Scott, J. Garside, C. Stewart, C. Moule, W. McNeil, R. B. Millard, Latta Bros., R. Oke, D. Bogue, F. H. Westbury, W. H. Butler, T. Sherlock, H. Sherbrooke's Big Fair

1,500 Birds on Exhibition.

THE poultry exhibit at Canada's Great Eastern Exhibition was again in both numbers and quality of stock, even better than in previous years. Owing to the past season being a bad one for young stock, it was expected by the management that there would be a falling off in numbers, but such was not the case, as the new building only completed last year was well-filled. We noticed that all the old exhibitors were on hand again, and a great many new ones. The directors were pleased at the number of new exhibitors, and even more so, that the old ones were again on deck, as it goes to show that they were satisfied at the treatment received at the hands of the management of this department in former years.

The cards for the poultry were again placed by Mr. Sharp Butterfield, of London, and for the pigeons by Mr. Jas. Anslie, of Montreal, and we think we can safely say that both these gentlemen gave satisfaction.

The following is a list of exhibitors with their addresses, and the awards received by them:

LIST OF EXHIBITORS.

D. J. Mumphrey, Montreal; John Gunning, Sherbrooke; W. M. Ford, Huntingville; J. Mackenzie, Ottawa; Wm. Cox, Montreal; N. M. Hubbard, Barton, Vt.; A. J. Shaw, Sherbrooke; A. Kilgour, Sherbrooke; R. The Reliable Spring Lever Poultry Punch.

If you keep a record of your chickens of the different breeds, hatches, strains, etc., there is no better, quicker, easier way than by using the Reliable Poultry Marker for punching the web between the toes. Hundreds of private marks can be made when your chickens are hatched, and a record kept so they can flock together until matured, and be separated by their mark. The Reliable Poultry Punch is made in one size only, which can be used on any age fowls.

Price, post paid, 35c.

BLACK LANGSHANS

Choice cockerels, pairs, trios, or pens for sale; strong, vigorous, and promising winter layers. All from the best strains in Canada and United States. Our matings have always been as good as time, brains, and money could make them. Record's nests are used exclusively, so that laying qualities are thoroughly tested. Birds for sale hatched from eggs out of very best layers. All shipments sent on approval; if birds are not satisfactory, I will cheerfully return money, less express charges. Send your orders at once and have them booked. **The most complete plant in Province of Quebec.** 700

Write for Circular and Prices—No Stamp.

Aqueduct Poultry Yards WELLAND, ONT. Black Langshans and Buff Wyandottes

The young stock are finer than I had dared hope for. If you want birds to win with, I can supply you, but don't ask for cheap stock; I have none such in my yards. The best is none too good for myself and my patrons.

John F. Hill.

WE WANT ROOM.

so are compelled to dispose of a number of trios of our best stock. These birds have all done their share of winning and can do the same trick again. Space will not allow of our stating what they have won, but we will be pleased to give full information and descriptions on application. As we require the room at once, the first enquirers will get the

Lowest Price,

which is less than half their value, for with the warm weather we can run them in our summer houses and would not need to dispose of them at a sacrifice price. Do not think they are only surplus stock. They are the birds we kept last fall for our breeders and are our best. We will ship to reliable parties on approval, or if anyone purchases any and are not satisfied with them they may return them. Read this list over and write us for a description of what you want.

Cochins—1 trio Partridge; 1 trio Buff; 1 trio black; 1 trio white. **Langshans**—2 trios black. **Minorcas**—1 trio black; 1 pair white. **Polands**—1 trio W. C. black; 1 pen W. C. white. **Andalusians**—1 trio. **Game**—1 trio brown red; 1 trio Silver Duckwing; 1 pen Pile. **Bantams**—1 trio black Rose Comb; 1 white Cochin hen; 1 black Cochin hen. **Game Bantams**—1 pen black reds; 1 pen brown reds; 1 pen Piles; 1 trio Duckwings.

You will never get as good a chance again to secure as good stock at the prices we are asking. We have got to get the space these birds are using at any cost. You can more than make the price of them during the coming breeding season. Write us at once.

POULTRY FROM A PRACTICAL STANDPOINT

Conducted by **A. G. GILBERT**, Manager Poultry Department, Dominion Experimental Farm, Ottawa.

NOTE—Mr. Gilbert is nothing if not practical and experimental. He will from his rich store of information on the subject of "Practical Poultry" give Review readers each month the result of his experience for the past thirty years. He will be glad to answer questions or afford information on any particular subject.

SOME HEAVYWEIGHT CHICKENS.

PROGRESS IN POULTRY RAISING BY FARMERS.

It can no longer be said that the farmers, as a body, give no care to their young chickens. It has been long a standing reproach that the chicken on the farm had to pick up its own living. As a result, the young bird developed bone, muscle, sinew and everything but the flesh that was so much desired. As we have already said, that day, among progressive farmers, has gone and we hope for ever. Recently I received the following from Mr. A. B. Armstrong, a farmer, at Codrington, Ont. I quote the writer's own words: 'I see that you evidently think our chickens are well developed, so will give you the weights and age of some we weighed this morning (August 29th):

B. P. R. Cockerel, 4 mos 7 days old, 4½ lbs.
 " " " " 4 lbs.
 and a trifle over.
 B. P. R. Pullets, 4 mos 7 days old, 3½ lbs. Ea.
 W. W. Cockerels, " " 4 lbs.
 B. P. R. " 3 mos 14 days old, 4 lbs.

"The last Plymouth Rock cockerel is not the best bird that we have of that age, but it was the one we caught most easily. My wife deserves the credit for the development of the chickens, for she did most of the feeding."

The above weights are certainly most creditable. What an improvement there would be in the quality of the poultry throughout the country if all the farmers' wives were to take as much interest in their birds! What a splendid example has Mrs. Armstrong shown to other farmers' wives. Of course I wrote and congratulated Mr. Armstrong on the fine showing.

RAPID PROGRESS ON SOFT FOOD.

An instance of remarkable flesh development on rations composed of shorts, cornmeal and waste of the house—very little hard grain—came under my immediate observation during the past three months and a half. The birds, which are B. P. Rocks, were hatched on the 24th of May. They are seven in number and composed of four cockerels and three pullets. On the 24th of August, three months after hatching, the four cockerels showed the following weights: 3 lbs. 13½ ozs.; 3 lbs. 15½ ozs.; 4 lbs.; 4 lbs. 7 ozs. The pullets: 3 lbs. 6 ozs.; 3 lbs. 5 ozs.; 3 lbs. 4 ozs.; 3 lbs. 5½ ozs. Remarkable development, certainly, and on soft food with a limited run. The whole amount of hard grain used did not exceed five pounds. I can vouch for the weights and descriptions of rations.

OTHER INSTANCES.

I might give other instances but space forbids. Suffice it to say that a recent visit to some farmer friends in the vicinity of Carleton Place showed me 161 incubator raised chicks, in one case and 350 in the other. Flesh development was most satisfactory. In both cases the farmers' wives had operated incubators and brooders, and regretted that they had not used them long before. So much for progress in another way.

AT THE EXPERIMENTAL FARM.

On weighing some of our chickens recently, the following satisfactory results were registered.

No. 6. B. P. R., hatched April 28th, weighed 11th Aug., 3 lbs 8 oz.—11th Sept., 5 lbs 3½ oz.
 No. 74. W. Wy., hatched May 11th, weighed 11th Aug., 3 lbs. 10 oz.—11th Sept., 5 lbs 6 oz.
 No. 78. W. Wy., hatched May 11th, weighed 11th Aug., 3 lbs 3 oz.—11th Sept., 4 lbs 10 oz.

No. 49. W. Wy., hatched May 11th, weighed 11th Aug., 3 lbs 1 oz.—11 Sept., 4 lbs 4 oz.
 No. 3. W. Wy., hatched May 11th, weighed 11th Aug., 3 lbs 1 oz.—11th Sept., 4 lbs. 14 oz.

It will be seen from the foregoing that some birds made much better progress than others, but that has always been the case. The weights are given to show what can be done by having: 1. The proper breeds. 2. Caring for and feeding the young birds carefully and properly. Better results have no doubt been secured by other persons, but the object of the present chapter is to incite to a beginning—or, to encourage to further effort. Beyond question the quality of the poultry now grown is much superior to that of years past.

SELLING CHICKENS BY WEIGHT.

A FARMER'S WIFE THINKS IT A STEP IN THE RIGHT DIRECTION.

THE following letter from a farmer's wife is important because it shows appreciation of a nearby market and gives expression to the opinion that the purchasing of chickens by weight is much more satisfactory than buying by the pair. She also thinks the formation of a company in Toronto for the purchase of chickens by weight will result in the farmers breeding larger birds. In her own words she says:

"I think the purchasing of chickens by weight is the best way. It will encourage farmers to raise larger birds. As it is at present on our markets, small fowls fetch almost the same price as large ones, for chickens are bought by the pair, as a rule. If I had known about the company earlier in the season, I would have hatched out many more chicks than I did. It is also handy to have such a market so near to us and to sell the birds without having to fatten them."

THE vote of thanks passed by the Committee of Management of the Ontario Association, at its recent meeting at the Industrial, to the Minister of Agriculture, for the appointment of a member of the Association and a practical man, in the person of Mr. F. C. Hare, to the charge of the Poultry Fattening Stations, was graceful and timely. We

cannot have too many experienced men appointed to charge of work requiring expert knowledge. The day of the man who speaks through his hat, in connection with poultry affairs, at any rate, is gone, and we hope forever.

A visit during the second week of the Industrial to Glenavy Poultry Farm, was very pleasant and satisfactory. Satisfactory, because every well-wisher of the great poultry interests of the country, is pleased at evidence of success in connection therewith. There is every evidence of thrift, vitality and progress at Glenavy. The enterprise is able to hold its own, and any concern, of the kind, that can pay its way after an existence of one year and a half, is more than likely to be a source of revenue to its promoters. The present is the critical time for the farm. Success now, means greater development later. The writer found the laying stock in business-like shape. They were moulting satisfactorily, and that means early winter layers. The chickens were mostly white Wyandottes and Plymouth Rocks, which make rapid flesh formers and good winter layers. The buildings were scrupulously clean. There was no more odor in them than in the chcery office, a new and desirable innovation since my last visit. Cleanliness, thrift and push cannot fail to succeed. I congratulate the genial and energetic manager on his prospects.

One of the pleasing features of the Industrial Fair of your city is the meeting of friends and fellow-poultrymen. It is really an annual reunion. The recent show was no exception. Old friends were met everywhere and it does seem as if time dealt very kindly with the veterans, who it is as hard as ever to win a red ticket from. Some new names were noticed as prize winners and it is well that it is so. New blood in any old association should be welcome, for it is of vital importance.

The Eastern Ontario Poultry Association, whose show will be held this winter in Almonte, has a farmer's class. This is a good move and ought to be hailed with great satisfaction by the farmers of this district. Prizes are given for the best pen consisting of male and three females,

raised and exhibited by a farmer. The first prize is \$3; the second \$2, and H.C. for third. This ought to bring out strong competition, for many of the farmers in neighboring counties hold fairly good birds. First, second, third and fourth prizes, ranging from \$1 to twenty-five cents, are also given, for the best collection of eggs. It is to be hoped the farmers will have lively competition. I trust this enterprising association will soon take up the dressed poultry section as the Ontario has done.

The experimental work in the way of fattening thoroughbred chickens, finding cost of raising the same and other work of a kindred nature, to be conducted under the auspices of the Ontario Poultry Association, is a most important step in the right direction. And it is all the more important because the chickens, so raised, are to be used in a practical demonstration of the best method of killing and dressing. There is no reason why Canada should not only produce the finest poultry for table use, but put that poultry on home or foreign markets in the most inviting manner.

Speaking of raising chickens, brings to mind the fact, so often repeated in my annual reports, that the future of the bird is either made or marred in the first five weeks of its existence. A chicken which has been stunted, in that period of its life, because stinted of food, stands a poor chance of recovering from the effects. To make the desirable foundation on which to begin the fattening process, the chicks require to be carefully housed and regularly fed from time of hatching. This teaching will no doubt be part of the duties of the officers in charge of the new experimental work. It may help them, to state that such instructions are in print and may be had at our Experimental Farm Poultry Department, free of any cost, by application to me.

201 CIRCULAR.

POULTRY FATTENING.

PROF. JAS. W. ROBERTSON, Commissioner of Agriculture, has issued a Bulletin, "Pointers for Poultry Fatteners," which contains practical information for farmers and poultrymen desirous of fattening for home or British markets. Additional information, with directions for constructing the fattening coop can be obtained from Prof. Robertson's "Evidences on Poultry Fattening," a copy of which may be secured by writing the Department of Agriculture, Ottawa.

The following is a copy of "Pointers for Poultry Fatteners":

1. Plymouth Rock, Wyandotte, Dorking, Cochin, Brahma or Indian Game chickens, or crosses of these, are more easily fattened than chickens of lighter breeds. They should be put up at from two and one half to three and one half pounds each. English buyers object to black legged poultry.

2. The most profitable period for fattening is about four weeks.

3. Be careful not to overfeed chickens during the first week. Feed lightly, three times a day. Remove any feed left in trough half an hour after feeding. Keep the troughs clean and sweet.

4. After first week give chickens all they will eat, regularly twice a day.

5. The oats must be ground very fine. Oats ground as for horse-feed are not suitable.

6. Feeding skim milk whitens the flesh, which is desirable.

7. Put a little salt in the feed.

8. Give water in the trough twice a day.

9. Give some form of grit twice a week. Sifted gravel will do.

10. Feed tallow during the last ten days. Begin with one pound per day to seventy or 100 chickens, increased to one pound to fifty or seventy chickens.

11. To prepare tallow: Weigh quantity required for three days, melt it, and thicken while hot with ground oats. Mix one-sixth of this paste with the morning and one-sixth with the evening feed.

12. Rub a pinch of sulphur under both the wings and tail of the chickens to kill the lice.

13. Do not feed with the cramming machine longer than two weeks.

14. Do not feed fowl by machine until its crop is quite empty.

15. Remove foot from pedal of crammer before fowl is pulled away.

16. Keep a record of weight of ground oats, and skim milk fed to fowls per week, and also their gain in live weight per week.

17. One gallon of milk weighs practically ten pounds.

18. To record feed consumed per week: Weigh each new bag of meal before commencing to feed from it, and place the weight in a book. At end of the week, add together the weights of bags of meal fed, and also weight of meal taken from the last bag.

19. To obtain record of gain in live weight of fowls: Weigh each crate empty, and mark the weight on it; weigh crate when fowls are placed in it, and again on each succeeding week, at same time of day and before feeding. To prevent any injury to the toes of the chickens between the slats and the scales, place two or three thicknesses of bags on the scales.

20. If a chicken gets off its feed, remove it from fattening pen for a few days, allowing it free run.

21. Do not allow fowls any food thirty-six hours before killing.

22. Kill chickens by dislocating the neck, or by bleeding in the roof of the mouth. Use care so that no outside blemish is made.

23. Dry pluck at once, while fowl is warm. Pluck clean, leaving only a ring of feathers an inch and one half around the neck.

24. As soon as plucked, place chicken on shaping board to give it a compact, square shape.

25. Chickens are not to be drawn.

26. When cold, wrap in clean paper, and pack tightly in shipping case to prevent injury from knocking about.

27. See that fowls, paper, and cases are kept perfectly clean.

JAS. W. ROBERTSON,
Commissioner of Agriculture and
Dairying.

FATTENING CHICKENS.

FROM THE EVIDENCE OF PROF. ROBERTSON, BEFORE THE COMMITTEE ON AGRICULTURE.

AT the two chicken fattening stations conducted in 1898 it was discovered that the cost for food consumed was a little over six cents per pound of increase in weight of live chickens. The food was ground oats and skim milk; and the gain per chicken was from one and three-quarters to two and one-quarter pounds in from four to five weeks' feeding. In our illustration work in the autumn and winter of 1899, we found that the information gained in 1898 was confirmed; but at some of the stations where the chickens were not of a large or table fowl breed, and where the grain was not ground very fine, the cost of feed per pound of increase was proportionately higher.

It is profitable to use the cramming machine one week or a little longer only, at the finish of the fattening. If the Committee will allow me, I shall put in some notes that I have here, in which directions for the feeding are specifically given. If taken as evidence they would be useful in the report.

1. The crates in which the fattening is carried on are six and a half (6½) feet long by sixteen (16) inches square inside measurement. Each crate is divided into three compartments, and each compartment holds four or five chickens, according to their size. The crates are made of slats running lengthwise on three sides and up and down in front. The slats may be from one inch to one and a half inches wide by five-eighths of an inch thick. The spaces between the slats in front should be two inches wide to permit the chickens to get their heads through for feeding. The slats on the bottom should be put on three-quarters of an inch apart. Each compartment has a small sliding door in front.

2. The crates are placed on stands about two and a half or three feet from the ground. The droppings from the chickens in the crates are received on sand or some absorbent material below.

3. A light "V" trough, two and a half inches inside, is placed in front of each crate, running the whole length of it. The bottom of the

trough is about level with the floor slats of the crate.

4. The birds of the larger breeds are best suited for fattening. Dorkings and Plymouth Rocks are good sorts, also light Brahmans and buff Cochins or crosses of these. The age may be anywhere from three to four or even five months, and the condition of the bird should be such as to indicate healthfulness and a tendency to fatten.

5. The feed may be oats, barley or wheat, preferably oats, ground very fine, as fine as they can be pulverized, the seeds or hulls being kept in and also thoroughly pulverized.

6. The ground grain should be mixed with skim milk only. The skim milk may be sweet or sour, preferably sour. The mixture should have about the consistency of thin porridge; so

for about two weeks. They should be fed lightly for the first week, and after that, they may be fed as much as they will eat up clean, twice a day. Then they may be fed by the cramming machine. When it is used, they should be fed twice a day only, and the feeding period with the cramming machine should not be longer than two weeks.

10. During the last ten days of the fattening period a small portion of tallow should be put with the feed. To begin with, the tallow should be used at the rate of one pound per day for about 70 or 100 chickens, according to size. That should be gradually increased until one pound per day is being fed to from fifty to seventy chickens. The best way to mix the tallow is to melt a portion of it, thicken it while still hot with ground

body, with the fingers over its crop. The rubber tube, being wetted with milk, readily slides into the bird's crop. By pushing the pedal with the foot, a sufficient quantity of the feed is caused to pass into the crop. That is known by the hand which is over the crop. The pedal is let up, and all pressure of food into the crop is removed before the bird is pulled back. If that is not done, some of the food will be exuded into the throat and that might cause choking. The operation is quite simple, and does not seem to be in any way harmful or even disagreeable to the chickens.

On the whole it may be concluded from our observations on the fattening that:

1. Chickens of the smaller breeds, such as white and black Spanish, Minorcas, Andalusians and others of that

THIS FIGURE SHOWS THE ARRANGEMENT OF FATTENING COOPS IN A SHED.

thick that it will not run readily and so thin that if a large spoonful of it were put on a plate it would spread.

7. The chickens should be fed from the trough in front of the crates three times a day. During the first three or four days they should be fed quite sparingly. After the first week they should be fed as much as they will eat up clean, twice a day. They should be given water twice a day and an allowance of grit twice a week. Ground oyster shells are suitable.

8. When the chickens are first put in, it is a good plan to rub a little sulphur close under both wings over a spot of about one and a half inches in size, and over a similar surface of the skin under the tail. That treatment will kill lice.

9. It is desirable to have the chickens fed in the crates from the troughs

meal, and then mix the right quantity of that paste with the other feed for the day.

11. The cramming machine is a pail-like hopper, standing on three legs about four and a half feet high, with a small force-pump at the bottom leading to an opening, on which is placed a rubber tube about ten inches long and three-eighths of an inch diameter inside. The rubber tube is about three and a half feet, or the height of the feeder's waist, from the ground. The feeder takes the bird by the legs and holds it against his body, partly under the right arm. He then opens its beak with his left hand and puts it over the rubber tube. The left hand carries the head forward, the neck of the bird being kept straight by drawing it slightly back by the right hand, which is around its

sort, do not give as good returns in the fattening as chickens from the larger breeds, such as Plymouth Rocks, Wyandottes, Brahmans, Indian Games. Dorkings and crosses of these:

2. Oats or other grain must be ground very fine, practically pulverized:

3. As a rule it is not profitable to fatten for a longer period than four weeks:

4. The use of the cramming machine is not necessary, but by means of it the chickens show a larger gain in weight for the quantity of feed consumed during the last ten days of the fattening period than when fed altogether from the trough;

5. All the directions in the notes for the guidance of feeders should be carried out in every detail.

SHIPPING AND SELLING.

The chickens were killed by having their necks wrung. They were not bled and they were not drawn when sent to the market. Their necks were broken, wrung in the usual sense of the word. It is done by taking the chicken in the hands, stretching the neck, holding the crown of the head in the hollow of the hand, and giving it a quick turn backwards. It is very easily done. The object of killing them in this manner is to avoid any mutilation of the chicken. The English buyer is very particular on this point and will not buy a chicken

are plucked clean except a ring around the neck about an inch or an inch and a half long. Those feathers hide any discoloration at the point where the neck is broken. In some cases a few decorative feathers are left at the tips of the wings, but most buyers prefer them plucked entirely clean. When the chickens are plucked they are put on a shaping board. That may be a board about six inches wide, placed against a wall and making with the wall an angle of about 65 degrees. Or it may be a V-shaped trough with about that angle. As soon as each chicken is plucked its legs are laid alongside its breast. The

cool, and set; and then they are packed in crates and shipped to market. The squeezing on the setting board gives them a more compact shape.

I found it advisable to starve the chickens for thirty-six hours before killing them. In England they are not particular to starve them so long as that, because the chickens are sent to the market very quickly after killing. Here we found we should starve them for thirty-six hours, in order to have the crops quite empty, and thus avoid the risk of leaving any food in the crops and intestines which would ferment and spoil the flavor of the birds. They were plucked, but were

THIS FIGURE SHOWS THE ARRANGEMENT OF FATTENING COOPS BESIDE A CLOSE HIGH FENCE OUTSIDE, WITH A ROUGH BOARD SHELTER AGAINST RAIN.

that has had its head cut off. Some of the buyers recommend killing them by bleeding them in the roof of the mouth. When the chickens are killed they are taken and plucked while warm. It is not a very tedious operation when one is trained to do the plucking properly. They are plucked fairly clean; the pin feathers and down are taken off by the poulterers in the shops. The method adopted when plucking is to pull the feathers slightly outward and away from the tail end of the bird with a quick, jerky motion. I never before actually understood the meaning of the expression "make the feathers fly" until I saw the plucking of chickens. They

stern of the chicken is struck or pushed against the wall and pressed against the angle of the shaping board or trough. Each bird is laid in with its breast downward. A glazed brick or other weight is laid on top and another brick is put alongside to keep it in position until the next bird is pressed closely there. After the row is full, the chickens are left lying on their breasts with a board laid on top of them with sufficient weight to hold them firmly and crush the breast bones slightly, but not so as to break them. While they are in this position the body is partly drained of the blood which collects in the neck. They are left there to

not drawn. A ring of feathers about two inches long was left at the head of each bird. They were placed on a shaping board as already described. After being thoroughly cooled each bird was wrapped in a piece of clean paper leaving the neck and head to project at one end and the legs at the other.

Shipping cases were made to hold twelve fowls each. The cases were thirty-three inches long by nineteen inches wide by six and a half inches deep. The ends were one inch thick, as also was the centre piece across the middle of the case. The sides, top and bottom were of five-eighth inch spruce.

CINCINNATI, OHIO, SHOW this year will be held from December 5th to 11th, inclusive. Mr. J. B. Rounhaum is secretary.

THE COMING BOSTON SHOW.

It is the purpose of the Boston management to offer to the breeders of the world by far the grandest opportunity yet offered for the handsome and substantial return to themselves, as well as the unquestioned honors that must go to the Boston winners at the first large show held in America on the opening of the new century. We hope to set a pace for quality that will start the ball rolling on to better poultry than has ever been seen in the whole world.

The novice classes at the last Boston Show was an introduction to what can be done to advance the interest of the amateur. Under our rule, those who have never won a first or second prize at the Boston Show on the variety they enter, may show in the novice classes. This presents the opportunity long clamored for, where those who are inexperienced in the art of exhibiting poultry can show their fowls unhampered by the fear that they will be overshadowed by the old and successful exhibitors.

Specimens entered in the novice classes are penned next to and following the same variety in the regular classes and are judged in classes by themselves, under the same judge who passes upon the variety; the same awards are made and the same cash prizes paid for as in the regular open classes. It simply provides for the amateur fanciers the chance of holding an exhibition of their stock under the same roof and side by side with the time-worn veteran, where the novice can compare his stock with that of the veteran, and in his presence, at the same time winning the honors in his own classes, and the additional honor of being published to the world as a new and successful exhibitor at the Boston Show.

BANTAMS AT THE INDUSTRIAL.

THESE pigmy inmates of the poultry yard keep on increasing in numbers, and will soon need more room, in fact, they need it now, as we noticed several pens "skied," and some few in exhibitors' coops. These classes, taking the average, pay well, and deserve all they can get.

Polish, a wonderful collection, the bearded growing more like the right thing. In single comb, the 2 and 2 chicks should be 1 and 1 or else 3 and 3, light legs. Third pullet best in class all over, excels in shape and color. Japs a nice little lot, blacks decent, though none to be compared to the cock imported by Mr. Oke some

years ago. Black tail, 2nd cock, a midget, low set, both 1 and 2 bad in comb, 3rd larger, good color, erect comb. Hens fair, chicks all young. Whites better, 1st hen very low and

FIRST AND SPECIAL BUFF COCHIN PULLET
Toronto, Jan., 1899. Bred and owned by
C. A. Stewart, London, Ont.

neat. 1st pullet has just enough leg to enable it to crawl, not walk along the ground, can't quite decide whether it is a freak or a wonder. the former if carriage counts for anything. First cockerel might easily give way to

2nd, which beats him in head, color, beak and legs.

Cochins in blacks and whites, especially the former, an extra lot, Buffs poor outside, 1st cock and 1st and 2nd hens, good in shape and color.

Black rose combs fair, too many, too big, the fault of 1st cock, who is excellent in shape, lobe and comb. Second hen shorter and lower than 1st, also better in lobe, rather pale in face and head partly bare. Nothing extra in chicks. Whites were few, quality fair. More white booted than usual, 1st cock the pick of the lot, good color and shown in grand trim.

Sebrights about as usual, some good ones and some moderate.

White Game Bantams were fine. First cock a model, hard, well up on his pins, which are nice yellow in color, good head and neck. First hen, good yellow legs, fails to 2nd in shape and color. Winning chicks all yellow-legged. Black reds good, as were the brown reds, and a better lot of birchens than heretofore. Duck-wings fair, as were pyles. We have seen better classes of both.

BANTAMS AT LONDON.

LOOK through the many pens should prove to show directors that Bantams "pay the rent." They made good classes here and were a very hot lot. Many were at Toronto.

Games were hot; neat black-red cock 1st as was the 1st brown-red cockerel. We made 2nd duckwing cock the best and preferred 2nd brown-red pullet, who beats 1st in style and color. We liked 1st pyle cockerel. Polish good. Cochins very choice, the winning buffs were at Toronto. Nice low-set black hen 1st; 2nd very typical shape, a ball of feathers, and for this we liked her best. Japanese good, a new black tail cock won, very sound tail, but a bit on the leg. Whites good; 1st pullet the legless wonder Sebrights about as Toronto, as were the rosecombs, the latter perhaps, a bit in advance on the whole. Best shape and style cock unplaced for white tips.

-THE INDUSTRIAL TOO LONG.

Editor Review:

AM sorry to report that my 1st white Wyandotte cock at the late Industrial Fair, has been very sick ever since returning home. It does seem too bad that the birds have to remain so long (nine days), in such extremely hot weather. One full week is certainly long enough, and the sooner the Association gets back to the old dates, Monday to Friday, the better for all concerned.

Yours respectfully,

C. MASSIE.

Port Hope, September 22, 1900

What the New Ads. say this Month.

In this column we note from month to month new display advertisements, changes for same and the advent of yearly "For Sale" ads.

Bargain month in Trenton see W. M. Reynolds' new ad.

J. Bedford offers some A₁ young stock in buff Leg horns, all sired by first prize males.

W. E. Robinson offers for sale his entire stock of Indian Game including several imported Frayn birds.

Mrs. Shales gives a list of recent wins on her specialties, good young stock for sale.

George Elliott has a few good white Leghorn cockerels for sale cheap.

W. H. Bessey, the white Rock specialist says his birds are still keeping up their high record. Young stock, and last year's breeders for sale at reasonable prices. Write for wants.

Note change of S. Dippel's address to Berlin, P.O. \$3.00 incubator and everything good for poultry is advertised by the Canadian Poultry Raisers Supply Co.

C. J. Daniels in his new page ad. sounds a note of warning and prints a testimonial of great value. Both are worth reading.

"Berner's buff Leghorns again won," so his ad. says, and he bears it out with a list of recent wins.

Aqueduct Poultry Yards were strictly in it at Sherbrooke—winnings as follows on Black Langshan 1st and 2nd cock, 2nd hen, 1st and 2nd cockerel, 1st and 2nd pullet, special for best Langshan cockerel; special diploma for best specimen on exhibition, on buff Wyandottes, 2nd cockerel and 1st pullet.

Henderson & Billings' removal sale. See a list of recent winners they have sold.

H. H. Bradfield offers at 50 cents each, 30 buff Rock hens, Essex & Forsyth strains. These are bargains.

Hillside Poultry Yards have a lot of choice young stock in white and buff Rocks.

The Puckhardt Renfrew Co. invite our readers to send for a free sample of their well known "Persiate." It kills lice.

16 out of 19 prizes at the leading shows, Miller's barred Rocks, see his new ad.

C. A. Stewart's buff Cochins won again at the big shows 100 grand early chicks for sale.

Harvey J. Cook, the buff Dot breeder offers some grand youngsters for sale, also some older birds.

Newton Cosh & Co., give notice of their removal to London. They are headquarters for Andalusians and are also heavy into buff Dots.

J. W. D. Cooper's address is now Stouffville, (see Wyandotte col.) His specialty is the popular white dot.

G. W. Kinder whose ad. appears under "various" offers some excellent Redcaps and silver Wyandottes at greatly reduced prices.

Dr. Hess & Clark's well known Pan-a-ce-a is again advertised in Review and this is a good time to use a tonic, when birds are moulting and cold rains and cold nights are coming on. "It pulls them through," so say those who have used it.

Breeders' Directory, 11-2 inches, 1 year, \$8; half year, \$5; 3 months, \$3.

Advertisements will be inserted at the rate of 10 cents per line each insertion, 1 inch being about 10 lines.

Advertisements for longer periods as follows, payable quarterly in advance:

Advertisements contracted for at yearly or half yearly rates, if withdrawn before the expiration of the time contracted for, will be charged full rates for the time inserted.

Back and front cover pages a matter of special correspondence.

These are our only rates for advertising and will be strictly adhered to. Payments must be made invariably in advance. Yearly advertisements, paid quarterly in advance, changed every three months without extra charge.

All communications and advertisements must be in our hands by the 15th to insure insertion in issue of same month. Address,

H. B. DONOVAN,

124 Victoria Street, Toronto, Ont.

FOR SALE OR EXCHANGE.

Advertisements of 27 words, including address, received for the above objects, at 25 cents for each and every insertion, and 1 cent for each additional word. Payment strictly in advance. No advertisement will be inserted unless fully prepaid.

Twelve Adv. \$2.50.

An advertisement of 30 words will be inserted EACH MONTH for one year in this column for \$2.50, paid in advance. Advertisements may be changed every month if desired.

* * *

This coupon is good for one advertisement of 30 words in the "For Sale and Exchange" column.

THE CANADIAN POULTRY REVIEW,
Toronto.

To meet the wants of advertisers who are continually using this column, and who find it a great trouble to be constantly remitting small amounts, we have adopted the plan of issuing Coupons (as above) good for 30 words each, 4 for \$1. Anyone buying these Coupons can use them at any time in lieu of money when sending in an advertisement. Not less than four coupons sold.

* * *

THESE RULES must be followed:

1. Payment MUST be made in advance, the amounts are too small to permit of book-keeping.

2. Write copy for ad. on a separate sheet from any other matter, and on one side of the paper only.

3. See that ads. are fully prepaid as per rate above.

4. Say plainly how many times ad. is to be inserted.

5. Give heading under which it is to appear.

6. Changes must reach us not later than the 15th. New advertisements not later than the 20th of each month.

Unless above rules are followed we cannot guarantee correctness.

ANDALUSIANS,

Standard Bred Andalusians.—Bred from prize winning stock. Stay White, Plymouth Rocks, Empire and Fishel. Strain stock for sale. Satisfaction guaranteed. Write us for prices.—Huntley & McKinnon, Ingersoll, Ont. 301
