TABLE DES MATIÈRES

Statistiques sur le commerce international du Canada
établies sur une base douanière et
en fonction de la balance des paiements

Les lecteurs noteront que deux concepts commerciaux distincts sont utilisés dans les tableaux suivants. Il faut user de prudence dans leur interprétation. La note ci-dessous explique les différences entre les deux concepts et les cas dans lesquels chacun devrait être utilisé.

Les statistiques sur le commerce des marchandises établies par Statistique Canada sont présentées sur deux bases différentes : la base douanière et la balance des paiements (B.D.P.). Les statistiques établies sur une base douanière reflètent l'information compilée à partir des déclarations présentées à Revenu Canada - Douanes et Accise lorsque les marchandises sont importées au Canada ou en sont exportées. Ces déclarations, qui doivent être remises aux douanes, donnent des renseignements détaillés sur la désignation et la valeur des marchandises, leur origine et le bureau de dédouanement ainsi que sur le mode de transport.

La principale différence entre ces deux concepts commerciaux est que les statistiques sur le commerce de marchandises établies sur une base douanière couvrent le mouvement des marchandises indiqué sur les documents douaniers, alors que les données établies en fonction de la balance des paiements portent sur toutes les transactions économiques effectuées entre résidents et non-résidents du Canada et concernant le commerce de marchandises. Les données commerciales établies en fonction de la balance des paiements sont des composantes importantes du calcul du PIB estimatif et de la balance des paiements internationaux du Canada, soit des soldes en compte courant et en compte-capital. Des données commerciales établies en fonction de la B.D.P. sont disponibles, sur une base agrégée, pour les États-Unis, le R.-U., la CEE, à l'exclusion du R.-U., le Japon et les «autres» pays. Les données établies en fonction de la B.D.P. constituent aussi une base internationalement acceptée pour l'analyse des résultats commerciaux et sont utilisées par des organisations comme l'OCDE, le FMI et la Banque mondiale.

Les données commerciales établies en fonction de la balance des paiements sont compilées à partir des données commerciales établies sur la base douanière et rectifiées pour qu'elles puissent concorder avec les concepts et les définitions de la comptabilité nationale. Les données commerciales établies en fonction de la balance des paiements :

- englobent les acomptes et les paiements provisoires pour les gros achats de marchandises militaires;
- prévoient des ajustements pour certains produits (or, uranium) afin de refléter les changements de propriété entre les résidents du Canada et ceux de tous les autres pays;

- englobent les commandes par correspondance;
- excluent les frais de fret jusqu'à la frontière;
- reflètent l'information plus précise de Statistique Canada sur la valeur des exportations canadiennes de gaz naturel et de pétrole brut par opposition aux données sur les importations américaines des mêmes produits;
- prennent en compte l'échelonnement et les frais d'escompte et de manutention; et
- intègrent au besoin divers autres ajustements liés à l'échelonnement, à la couverture et aux différences techniques d'évaluation.

À des fins d'homogénéité, la Direction des politiques économique et commerciale (CPE) nous fait savoir qu'elle préfère nettement que des données commerciales établies en fonction de la B.D.P. (plutôt que sur une base douanière) soient utilisées pour les allocutions, les communiqués et les autres documents d'information publique, surtout lorsque des données sur le PIB et sur la balance commerciale sont aussi citées et que des comparaisons sont faites. Toutefois, lorsqu'on fait une analyse des données commerciales au niveau d'un produit ou d'un secteur donné ou qu'on établit une comparaison entre divers pays (autres que les membres de la Quadrilatérale), il est approprié d'utiliser les données établies sur une base douanière puisque les données établies en fonction de la B.D.P. ne sont pas aussi détaillées. La personne qui utilise des données commerciales devrait toujours indiquer si ces données ont été établies en fonction de la B.D.P. ou sur une base douanière.

Canadian International Trade Statistics

Customs Basis versus Balance of Payments Basis

Readers will note that two different trade data concepts are used in the attached tables. Care must be exercised in this regard. The following note explains the differences and recommends when each concept should be used.

Statistics Canada reports merchandise trade statistics on two different bases: customs basis and balance of payments (BOP). Customs based trade statistics reflect information compiled from declarations filed with Revenue Canada - Customs and Excise when goods are imported into or exported from Canada. It is required to file these declarations with Customs, giving detailed information such as the description and value of the goods, origin and port of clearance of commodities and the mode of transport.

The principle difference between these two trade concepts is that Customs based merchandise trade statistics cover the physical movement of goods as they are reflected on customs documents, while Balance of Payments trade data are intended to cover all economic transactions between residents and non-residents which involve merchandise trade. Balance of Payments trade data are important components in the calculation of Canadian GDP estimates and Canada's balance of international payments, that is, current account and capital account balances. BOP trade data are available on an aggregate basis for the U.S., the U.K., the E.E.C. excluding the U.K., Japan and "other" countries. In addition, BOP trade data are the internationally accepted basis for the analysis of trade performances and are utilized by such organizations as the OECD, IMF and World Bank.

Balance of Payments trade data are compiled from Customs based trade data, adjusted to be consistent with National Accounts concepts and definitions. Balance of Payments based trade data:

- include progress or interim payments for large military goods;
- provide for adjustments for selected commodities (gold, uranium) to reflect ownership changes between residents of Canada and all other countries;
- include mail order purchases;
- exclude freight charges to the border;
- adopt more precise Statistics Canada information on the value for Canadian exports of natural gas and crude petroleum as opposed to U.S. import data for the same products;
- take into account timing and discount/handling charges; and,
- make other miscellaneous adjustments for timing, coverage and technical valuation differences, as required.

For consistency purposes, CPE advises and strongly prefers that BOP (rather than Customs based) trade data be used for speeches, press releases and other public information documents, especially when GDP and trade balance data are also cited and comparisons made. However, when trade data analysis on a commodity or sector basis or on a country-by-country comparison (apart from the Quad members) is being cited, then customs based data are appropriate, as BOP data are not available in such detail. When using this trade data, the end-user should always indicate whether BOP or customs based data are quoted.
