THE BOARD OF TRADE

Of the City of Toronto.

PRESIDENT'S REPORT, 1891.

In bringing to a close my career as President of this Board, an office which by your kindness I have held for two years, I desire to express my heartiest thanks for the generous support that from first to last I have received from the members of the Board. I desire also to express my obligations to the Vice-Presidents and my colleagues of the Council, the Secretary and all our officers, not only for uniform courtesy shown to myself, but still more for the ability, faithfulness and zeal with which their duties have been discharged during the terms of my presidency. I feel that I have been fortunate, in the character of the men who have upheld my hands, and I believe that at no period in its history has our Board been as useful and influential a body as it now is. I am glad that my associations have been as pleasant and satisfying as they have been in the past two years, and my earnest desire is that the Toronto Board of Trade may continue to grow in power and usefulness under each successive administration.

It may be, that in the opinion of some persons the Board is already a strong enough factor in the community. Fault has been found within the last few weeks because of the part taken by some of our members in municipal affairs, and we have been unfairly accused of "seeking to run the city," as the phrase goes. Well, I am free to say that in this matter no one of us has done more than his duty, and had more of our members shown a willingness to offer their service to the city, I am persuaded that the task of civic reform would be measurably nearer of accomplishment than seems possible now. In my address of a year ago, I took occasion to refer to the subject in these words:—

"As business men, it is one of our first duties to keep a wary watch on the conduct of city government, for its influence is at all times direct and potent for good or evil to the large enterprises in which we are en-

"gaged. I cannot but regard it as an outrage that we should be obliged to increase our working capital by one-fourth in order to provide the taxes levied for the city revenue upon our stock in trade and it is not less an outrage that the expenditure for all purposes in the city should exceed the amount required for managing the affairs of the whole province of Ontario, with its population of over 2,000,000, and its manifold interests extending over an area of at least 100,000 square miles."

And now, at the beginning of another municipal year, the situation cannot be said to have changed, but there is hope of better days. The discussion of affairs in the recent contest will yet bear fruit, if the strong business men of the city continue faithful to the reform movement. It is not enough that questions of policy or of executive management be left to the aldermen. I should not be inclined to do so were our representatives at the Council Board more able or experienced or clear-sighted than they are. Public criticism is always health-giving under democratic institutions. It is the breath of their life. But I would not have a monopoly of it left to the newspapers, such as I respect the newspapers. Without naming other bodies, I am sure that this Board possesses special fitness to deliberate upon civic matters, and its opinions and counsel could not fail ultimately to shape public judgment, even though disregarded or rejected by the aldermen of the day. If a bank or manufacturing establishment were to select its managers and officers without thought for business, how long could it hope to survive? The secret of success in all banks, factories, railways and business houses lies in the selection of capable men to carry on their affairs, and the matter of salary is not allowed to stand in the way of securing their service. Why should any other policy obtain in city government? Why should the ratepayers of Toronto entrust the direction of its affairs to men whom no bank or business house would dream of employing in a like capacity? I speak with reserve, of course, for there are able aldermen and officers in the service of the city. But manifestly they are not in control, or we should have less cause for complaint and criticism. It is the ward politicians, the ringsters, and the nominees of societies who exercise the rule over us, and we are paying for their domination through the nose. An educated public opinion we have not got; neither can we look for it until the ratepayers come to regard the city's business as their business. And, so I emphasize the importance of the consideration of questions of city government upon the Board of Trade and every member of the Board.

be obliged One of these questions I may here refer to briefly, because it is being
in order to pressed for immediate solution—the scheme for the reclamation of marsh
k in trade and on the Ashbridge Bay. The city is indebted to the generosity of the
poses in the Provincial Government for a proprietary right in that waste, which em-
airs of the braces an area of something like 1,000 acres. The government itself
000, and it might have reclaimed it, just as the state of Massachusetts reclaimed
000 square Back Bay in the city of Boston, and had it done so a few millions more
might have been added to the Ontario surplus. But now it is one of the
e situation city's possessions, and if a wise policy is adopted with respect to it, I am
lays. The confident that in good time it may become the most valuable of all our
the strong assets. Why hand this property over to any man or company of men to
ement. Improve it, and enjoy the rents of it for forty or fifty years or an indefi-
nent be let nite period when the city itself may undertake the work, carry it on
representa gradually and economically according to plans framed in the public in-
ighted that terest, make our harbor the largest and safest on the lakes, and dispose of
ocratic in the reclaimed land for parks and private dwellings, as well as for the seat
ave a num factories, warehouses and smelting works—the source of a perennial
newspaper revenue for the city treasury? Forty-three years ago the Board of Health
sses speci of the city of Boston described the sheet of water which skirted the com-
unsel cou mon as a nuisance, offensive and injurious to the large and increasing
regarded population residing upon it, for it was then an open cesspool, receiving
ring estab the sewage of a large community. The cry against this nuisance caused
ght for the legislature to take possession of the region; a plan for laying out and
s in all of the territory was prepared, and thirty-five years ago the work
ion of ex reclaiming and purifying it was commenced. Nearly seven hundred
not allow res of additional space for expansion has thus been given to the city;
ould an d in his Story of Boston Gilman tells us that the most elegant homes
epayers of the city have since been erected on the Back Bay improvements, and
nk or bu the parks and thoroughfares which have been constructed give Boston
speak w re-eminence above the cities of America for beauty and taste." And
the serv the statement has been made upon good authority that had the lots of
ould ha is reclaimed land been leased instead of sold outright the yearly
ticians, the revenue from rents might be expected on a moderate estimate to exceed
ver us, the whole of the direct State tax. Let us therefore profit by the lesson
ated pub the Boston improvement. A city of 200,000, growing in wealth and
ratepay numbers as Toronto is, can undertake its own enterprises without fear of
emphas a, providing, of course, the management is given to competent men,
ment up and that ringsters and boodlers are made to hold hands off. In the
some of reclamation there are large opportunities for adding to the

revenue, the health and the beauty of the city, and it is only one of the many schemes which call for training and ability in our civic rulers. The opinions of a writer in the last number of the *Annals of the American Academy* are so apt on this subject that I cannot refrain from quoting them. Dealing with the study of municipal government, Mr. F. B. Prichard, of Philadelphia, says:—

“Scientific knowledge, skilled labor, systematic organization, are all necessary for the conduct of the various municipal departments. The scale on which such operations are conducted increases both the dangers and consequences of a mistake. Inefficient sanitary regulations may cause a sudden epidemic, or what is worse, a gradual but steady increase of the death rate. Unskilful engineering may cause a water famine, or send the germs of disease into every household. Inadequate transportation facilities or unwise building laws may check the growth of the city or crowd its poorer inhabitants into tenements. Improper harbor regulations may drive commerce from its doors. Ignorant or dishonest engineering may bankrupt its treasury. In brief, the happiness and prosperity of that large portion of the population which lives in cities are directly dependent upon the administration by the government of those functions which require very thorough scientific knowledge and very great scientific skill. I use the word ‘scientific’ advisedly. Municipal government is a science by itself. As has been already pointed out, it involves the construction and maintenance of engineering and manufacturing works and the transaction of financial operations upon an immense scale, and this work is to be done, not under the ordinary conditions of business, but with due regard to various political and economic questions which complicate the problem and add to its difficulty. The probable growth of the city, the social conditions which may affect its future needs, the probability of constant changes in its administrative force, the necessity for a scientific organization of the work which will enable it to be carried on with some uniformity in spite of such changes, the equitable distribution of expenses among the citizens themselves and between the present and future generations; all these are considerations which enter into the problem of municipal government and render its operation a science, involving indeed many branches of scientific knowledge, but possessing an individuality distinct from all of them. To understand and apply this science requires a thorough knowledge, obtained by a careful study of past and existing facts; an investigation of previous experiments, with their results; a comparison of observations, and

the working out of rules of general application. This would seem almost self-evident, yet there has been in the past a general tendency to ignore this truth and to assume that all our difficulties of administration come from dishonesty in our officials. Year after year we spend a large part of our energy and some of our substance in the vain attempt to elect first-class men by means of second-class political machinery, and when occasionally we succeed we flatter ourselves that we have solved the problem of municipal government, as if all its principles were so simple and so well understood that any man of ordinary business capacity could administer them if only he were honest. The absurdity of this is apparent if we consider for a moment the character of the problems which our city officials must solve. Shall the city manufacture its own gas and electricity, or allow the work to be done by private corporations under proper regulations? Shall the water supply be taken from a source near at hand or remote? Shall the water be filtered? Shall the waste of the city be burned, or conveyed away in sewers? If the latter, what sewerage system shall be adopted? Shall the city exercise control over all the transportation lines within its limits; if so, what methods of transportation shall be adopted and under what restrictions? How shall the city be paid? How shall the cost of public works be assessed and collected? Shall the public moneys be kept in the city's own care, or shall they be deposited in private banks, and if the latter, what interest shall be paid? Shall the city do its work by contract or day's labor? How can the city's employees be so organized or supervised that careless or dishonest work can be at once detected? These are but a few of the difficult and complicated questions which are forcing themselves at the present time upon all our American municipalities. These are not questions which can be answered by any honest man of ordinary business experience and capacity. For their solution scientific knowledge is quite a requisite as honesty. It is time that we realized that many of the difficulties and mistakes of administration are due as much to ignorance as to corruption; as much to unskilful and unscientific measures as to dishonest ones. That honesty in officials is essential to good government no one will deny; but it is also true that skill and knowledge are quite as essential, and that an ignorant and untrained official at the head of a municipal department may work as much injury as a dishonest one." These views I very cordially endorse in the main, and they are as applicable to our circumstances in Toronto as to those of any city in America. With fit and capable men at the City Council Board and in

charge of the several departments, such as any first-class business house would secure for its own services, we might look with confidence to the accomplishment of the reforms we so much need. It is indeed a matter of grave import to find that in the ten years from 1881 to 1891 the annual expenditure has grown from \$15.22 to \$23.52, and the net debt from \$71 to \$89 per head of the population.

I turn from the subject of municipal administration in our city to its touch upon the business outlook of the country.

During the past year echoes of the Baring panic have been heard in many of the leading countries of the world, although we have been untroubled in Canada. There have been serious financial troubles in Europe and America, and in Australia, while we have gone on our way undisturbed. This is doubtless due to the moderation of our people and our excellent banking system. The new Banking Act, to which I referred a year ago, has since gone into operation, and now that it is exciting the admiration of our neighbors to the South our own people, I trust, be satisfied that we have a system, admirably, if not perfectly adapted to our needs. During the year ending 30th November the deposits of the seven banks having head offices in Toronto have increased nearly seven millions out of an increase for the whole Dominion of a little over seventeen millions of dollars. This does not of course represent the entire growth of deposits in Ontario, because, while the banks in question do little business outside of Ontario, the great banks having their head offices in Montreal gather deposits throughout Ontario. This increase in bank deposits is not necessarily an evidence of growth of wealth, but it is due partly to the ordinary profits of trade, partly to unusual economy, and partly to the stoppage of speculation in real estate and other things, all of which are causes for congratulation. The Bankers' Clearing House Association has at last been created in Toronto. Some people are astonished because the volume of clearings does not more nearly approach that of Montreal. But, as I pointed out a year ago, the clearings are only a rough index to the volume of trade. The items cleared do not all represent so much trading in merchandise, but to a great extent represent stock speculation, of which there is much more in Montreal than in Toronto. Again, the banks in the various cities and towns throughout Canada settle with each other to a large extent by drafts on Montreal, which go to swell the amount of Montreal clearings. In this way the entire bank settlements of Hamilton are added to the Montreal clearings. It is also to be borne in mind that one of our ha-

banks is not yet a member of the Toronto Clearing House. Altogether, an intelligent comparison does no discredit to the trade of Toronto.

The statistics of failures as reported by Bradstreet's give no cause for alarm, but apparently the retail business has been overdone in recent years. I find that in the five years, 1881-86, the total number of failures in Canada was 6,054, whereas in the five years, 1887-91, it was 8,133. Yet the average of assets in the latter period was only \$4,247 and of liabilities \$8,984, as against \$5,805 and \$11,209 respectively in the former. Comparing the failures by Provinces, I find that the number in Ontario in 1891 was 3 less than in 1890, the amount of liabilities less by \$286,000 and the assets by \$316,000; that in Manitoba, the North-west and British Columbia the number was less by 14, the amount of liabilities less by \$321,000 and the assets by \$124,000; that in the Maritime Provinces the number was greater by 38, the amount of liabilities greater by \$456,000, and the assets by \$387,000; and that in Quebec, while the number was greater by 189, the liabilities were greater by \$3,511,000 and the assets by only \$166,000. Quebec is thus shown to have experienced an unfortunate year, and the Maritime Provinces shared the same fate in a less degree. But in Ontario and the West the situation is more cheering.

In Canada the commercial condition depends largely on the state of the agricultural industry. If the crops fail, all other interests, and notably trade and manufactures, become depressed. If they are bountiful, every other industry and business is stirred into greater activity. Even in Great Britain, now a land of manufacturers and shop-keepers, the failure of a harvest is seriously felt, and in Russia it means starvation to millions. Last year agricultural failure was written across the whole map of Europe, and the worst results of the situation have not yet been realized. But in America our hearts have been rejoiced with the largest crops in the history of the Continent. At one period of the season in this Province the outlook was gloomy enough, owing to the long-continued drouth which followed seeding time; but the kindly rains worked an improvement in the condition that seemed like magic. Truly there are no gifts like those we receive at the hand of Providence, and I am constrained to say that the rain in its season is worth more than all the policies of men.

I took occasion last year to compare the average yields of cereals in Ontario and the principal States across the line, and I showed that for a series of years our Province held the first place. Well, I have no doubt

of the good record being continued, for I see by the report of the Bureau of Industries that our yields per acre last season were higher than the averages of ten years, with the two exceptions of beans and hay, which were cut short by the drouth. Fall wheat exceeded its average of ten years by $5\frac{1}{2}$ bushels per acre, spring wheat by 5, barley by 3, oats by $5\frac{1}{2}$, peas by $3\frac{1}{2}$, corn by 10, potatoes by 29, mangelwurtzels by 76, carrots by 36, and turnips by 136 bushels. And in aggregate yield I see that the wheat crop of last year exceeded the average of ten years by 5,640,000 bushels, oats by 16,500,000, peas by 4,400,000, corn by 5,500,000, potatoes by 5,200,000, and other field roots by 39,250,000 bushels. Hay fell below the average by 700,000 tons, and barley by 3,200,000 bushels. This, in the case of barley, is a consequence of the smaller area sown, which was 190,000 acres less than the average of ten years. No other Canadian cereal has felt the operation of the new United States tariff so grievously as barley, and I shall not be surprised to see a much greater reduction in the area devoted to this crop in the coming season. Whatever else the McKinley tariff may have done, no one can dispute that it has hit barley-growing in Ontario a hard blow. But the loss on this crop has been more than made good by the yield of wheat, which finds ready sale now for European consumption, and of the staple fodder crops, which may be converted into meat and dairy products for the British market. We have also to regard with just pride the magnificent harvest of our North-west prairies, which has taxed the resources of the country to reap and thresh it, and the capacity of our railway and steamship lines to carry it to market. We are only beginning to realize what a grand heritage we have in the North-west; a quarter of a century hence it may grow the wheat to feed half the populations of Europe and America.

A survey of all the industries of the country might be profitably undertaken here, if it could be compressed within the limits of a President's address; but after agriculture, which is our greatest in esse, I pass on to say a few words upon an industry which may safely be described as one of our greatest in posse. I refer to mining.

What I said last year on the vast extent of the nickel ores of this Province might now be repeated with increased confidence, for not only have new ranges been discovered, equal in riches and extent to any of those worked a year ago, but the value of nickel as an alloy with steel has been so satisfactorily demonstrated as to ensure for the ores a large and growing demand. The tests begun by the officers of the United States Navy in the autumn of 1890 were continued through the greater

of last year, and from the report of the Secretary of the Navy we find that the results have been in the highest degree satisfactory. In the trials of October and November, the Secretary states, the nickel-steel armour plates were subjected to tests more severe than had ever been tried at any foreign government trial, and they are pronounced to be superior to the best armour hitherto manufactured in Europe. Another fact finally set at rest is the relative merits of nickel-steel armour and plain armour treated by what is known as the Harvey process. "The nickel plates," Secretary Tracy reports, "proved to be far superior to the plain Harveyed plate notwithstanding the advantages which it may be derived from the special treatment." Another fact definitely established by the trials is that armour of excellent quality may be produced by the rolling process, and that forging by means of the hammer, the greatest source hitherto in manufacture, is no longer to be regarded as an absolute necessity. "The importance of this fact can hardly be overestimated," the Secretary observes, "for it raises a probability that in a year or two the armour producing capacity of the United States may be quadrupled, in case of necessity, and that if we had ten thousand men to let and could give 18 months from date of contract to commence work, the cost of manufacture would be reduced from 25 to 33 per cent, while the work hitherto confined to two firms would be thrown out to a large number of competitors." And finally, "the trial shows that the high carbon nickel Harveyed plate is undoubtedly the best armour plate ever subjected to ballistic test." It is therefore not to be wondered at that it has been decided to adopt nickel steel for armour plates, and we are told that the Navy Department has purchased a quantity of nickel matte for the purpose sufficient to produce 900 tons of nickel, the whole of which has been supplied by the smelting works at Sudbury. These are facts of great significance to us in Ontario, for we depend that the nations of Europe will not allow their war vessels to be out-manned by those of the United States. We may therefore look forward with hope to an era of activity in the mining ores in the Sudbury region, and the employment of capital and labour upon a scale which in the present circumstances of mining enterprise in our country is not easily brought home to one's mind as a reality. But there are still great possibilities before us if we would have the energy to open up some of the great deposits of iron ore to be found in different parts of the Province, erect smelting works and refining works to produce within our own borders iron, steel and nickel for our own and other people's uses. Those

who say that the iron ores in Lower Ontario, in the district between and the Ottawa River, are unsuited for the production of iron and steel of first-rate quality by reason of the presence of sulphur and other baneful substances, are obviously not aware of the great advance made during the last two or three years in the mechanical treatment of magnetic ores with crushers, magnetic separators and water. I am assured that the operation of cleaning ores high in sulphur by this process is so satisfactory, both as to efficiency and cost, that there is no longer a cause for apprehend failure. And as regards blast furnaces, why should not the Dominion of Canada produce its own iron and steel? Why especially should not Ontario produce a large supply of charcoal iron for export, well as for her own use, instead of depending on her neighbours for what we require? We have a limitless store of the fuel, the ore and the flux. What we need is skill, energy and capital. And once we begin to make our own iron we shall soon follow with the larger and more important industries of which iron and nickel furnish the raw materials. I can hardly restrain my enthusiasm in contemplating the possibilities of such industries and of their influence upon the future of our country, and in particular if we can enlist in the enterprise a substantial portion of that great volume of British capital which is seeking foreign investment, managed as it ought to be by those brainy and courageous men who have shared the glory of keeping the motherland in the forefront of the world's workers in metals.

And now I am led to remark very briefly upon another topic to which I referred last year, viz.: trade interchange between Canada and Great Britain. There is little to be added to what I said then, except that various things have transpired to show that we are coming within measurable distance of a Commercial Treaty between Great Britain and Canada, if only Canada takes the initiative in some authorized way. The reaction given to Col. Howard Vincent in every Canadian city that he visits cannot be explained away; neither is it possible to explain away the fact that he represents a great industrial community in England, and that other industrial communities are likely to be animated by the same sentiments as Sheffield. Why should it be thought strange that the working classes in Great Britain should think as the working classes in any country in Europe, as well as in America and Australia, are thinking? They wish to secure their own home market, especially when they have an Empire within which—with a little temporary encouragement—everything they need could be produced, and when every other self-govern-

country is determined to keep to itself its own market, save in so far as it consents to share it by regular bargain. Such facts are "stubborn facts," and the economic policy of a country must vary from time to time according to the facts with which it is confronted. Even if we were ardent Free-Traders we would need to admit this, for the question of how much free trade any country should have at any particular time is not to be settled by mathematics. It is always a question of national policy, to be settled by a balancing of all the facts of the time, and from that point of view the people of Great Britain are evidently now regarding the question. At the meeting of the Chambers of Commerce and of the various societies throughout the Empire, to be held soon in London, the first question will be asked of each part of the Empire there represented: "What are you prepared to offer?" If any practical basis can be laid upon, statesmen will soon be found to give it definite shape and effect. In view of this conference, and of the appointment of a committee to it by this Board, it is worth while considering whether they are already likely to be sufficiently well acquainted with Canadian commercial sentiment on this matter, or whether some means should be taken to make our sentiment clearer, or to give to them something in the shape of instructions.

What the destiny of Canada might be with freedom of commerce established between her and the United Kingdom, and the close community of interests that would inevitably follow in the wake of such a relationship, one cannot fully grasp until he has had an opportunity of surveying the territory of Imperial grandeur and vastness which lies between us and the Pacific Ocean. It was my privilege last spring to cross the Continent on that great highway, the Canadian Pacific. I left Toronto on the 14th of April, and five days later I was at Prince Albert on the Saskatchewan River, above the line of the 53rd parallel. You may judge of my surprise at finding the spring flowers in bloom, seedlings well advanced, and the weather so genial that I could drive all day with comfort without the protection of an overcoat, a thing which you could do in Toronto at the same date. Thence westward to the valley of the Red Deer River, 80 miles south of Edmonton, is a broad expanse of prairie and clumps of bush-land which recalls in beauty of aspect the parks of old England, and which will no doubt in the near future be turned to best account in growing wheat and pasturing cattle, maintaining a large and thrifty population. The extent of rich tillable land in the North-West must be seen to be appreciated; but there

is enough at least to make ten such Provinces as the settled portion of Ontario. And when one has crossed the Mountains another territory entered upon, vast enough and varied enough in its resources of agriculture, timber, minerals and fisheries for an empire in itself. The promise and the potency of Canada lie in that North-West and that far West.

THE TREASURER'S REPORT.

to the Members of the Board of Trade of the City of Toronto :

GENTLEMEN,—In presenting this my Eighth Annual Report as Treasurer of the Board, I think I have a right to congratulate you on the steady progress it has made, numerically and financially, since you honored me by first electing me to this important office.

The following table will bear out in part what I have said above, with the exception that our expenditure seems this year to have been greater in proportion to income than last, but this is explained by the fact that our rent, superintendence of building and office assistants have had to be increased in consequence of more ample accommodation for the members and better facilities for doing business in our institution.

Membership.	Income.	Expenditure.	Surplus.
1884—260	\$ 2,807 71	\$2,807 71
1885—669	5,353 35	4,790 26	\$ 563 09
1886—907	8,846 30	6,614 92	2,231 38
1887—915	10,274 35	5,973 04	4,301 31
1888—916	9,832 52	7,424 73	2,407 79
1889—916	9,739 89	7,620 11	2,119 78
1890—917	10,123 91	6,642 34	3,661 67
1891—922	9,807 55	9,053 67	753 88

The INCOME derived from all sources during the year just closed amounted to.....\$9,807 55
 And the EXPENDITURE to..... 9,053 67

Leaving the balance of Income over Expenditure...\$ 753 88

Invested in 1890 in new building.....\$12,520 00
 Invested this year (1891) in building..... 3,050 00
 Making total investment to date.....\$15,570 00

We lost, during the past twelve months, eight members by death and several by removal, but their places were speedily taken by others, and we have at this time 921 contributing members and one honorary member making in all 922,—an increase of five members over last year.

THE GRATUITY FUND was instituted, as you are aware, on the 29th June, 1886, and at this date 845 of our members are entitled to participate in it. There are, however, 77 of the members of the Board who have not availed themselves of its benefits.

The total number of deaths in this branch since its establishment, 29th June, 1886,—has been 42,—two of these having occurred since the Gratuity Board issued its last report.

The amount paid out to the widows and children of deceased members to this date has been \$45,523.01, and many have been greatly benefited thereby.

The fund now under the control of the Gratuity Board, amounts to \$60,650.00, of which \$3,400 is cash in Bank bearing interest, and the balance, \$57,250, has been invested in Land Security Company's debentures and first mortgages on real estate.

The following table will, doubtless, be of interest to the members of the Board who are subscribers to the Fund:—

	Deaths.	Average Age.	Per Centage.	Total Gratuities.	Assessments and Interest.
1st year.....	6.....	48-33.....	75.....	\$5,094 86.....	\$18,631

SECRETARY'S REPORT.

TORONTO, 31st December, 1891.

GENTLEMEN,—I hereby respectfully submit a report of the official proceedings of the Board for the past year ending 31st December, 1891. The exchange of the Board was opened for business 301 days, and closed 64, viz. 52 Sundays, New Year's Day, also January 2nd and 3rd, Good Friday, Queen's Birthday; June 10th and 11th, Sir John A. Macdonald's funeral; Dominion Day, Civic Holiday, Thanksgiving Day, Christmas Day and December 26th.

During the year, 526 meetings have been held in the rooms of the Board, as follows:

The Board of Trade of the City of Toronto.

GRATUITY FUND.

REPORT OF THE TRUSTEES.

TORONTO, July 2nd, 1891.

To the Council of the Board of Trade, Toronto.

GENTLEMEN,

The subject of the following report covers the operations of the Trustees of the Gratuity Fund for the Fifth year, and the financial statement appended will be found to be duly audited, as provided by the By-Laws.

It is gratifying to be able to record an increase of nine in the membership, the numbers now being 843 as against 834 with which we began the year. Of these, seven having acquired certificates from retiring members who were not subscribers to the Gratuity Fund, now participate therein, and two have had new certificates of the Board issued to them.

It is a matter of regret that notwithstanding the beneficent work being done there are still seventy-eight members of the Board who decline to unite with us. From various causes, however, the number is steadily diminishing.

The average expectancy of life is again improved by the year's changes in the membership, as out of the thirty-three certificates which have been transferred, six are past the limit of age (50 years) for participation in the benefits of the scheme,—the average age of those participating is 38 years as against an average of 44 years of those who have retired.

The removals by death during the year are the fewest in number we have yet experienced, forming a strong contrast with the record of 1890, and reducing the average of five years well within that anticipated.

	Deaths.	Average Age.	Per Centage.	Total Gratuities.	Assessments and Interest.
1st year....	6	48.33	.75	\$5,094 86	\$18,631 56
2nd "....	9	53.11	1.00	8,542 38	22,961 00
3rd "....	5	44.60	.62	5,171 45	14,819 83
4th "....	16	46	1.85	18,862 32	35,204 41
5th "....	4	54	.43	5,104 00	20,234 81

If further reference to the figures were needful, the trifling sum annually expended in administering the trust, the steadily increasing surplus fund, and interest thereon, together with the small amount of assessments in arrears, ought all to be regarded with satisfaction.

Who amongst the members will regret the average annual contribution of less than \$23, the distribution of which has been in so many instances of incalculable benefit to the bereaved recipients, and will yet be a boon to the numerous miners for whose use the payments are accumulating, while the handsome surplus fund, assured to the heirs of the surviving members a similar gratuity when the immutable destiny of each is fulfilled?

Nine meetings of the Trustees have been held during the year, and their interest in the work has been well maintained.

At the ensuing Annual Meeting in September, of which due notice will be given Mr. W. Ince, Trustee, retires by rotation, but is eligible for re-election.

Respectfully submitted,

HENRY W. DARLING,

Chairman.

W. INCE,

D. R. WILKIE,

JOHN I. DAVIDSON,

G. M. ROSE.

I certify that I have examined the books and accounts of the Gratuity Fund of the Board of Trade of the City of Toronto, and compared the entries therein with the proper vouchers ; that the above is a true statement of the same as on 30th June, 1891. I have also examined the Securities held for the funds invested and find them to be as stated in the accounts above. These securities are lodged in the Dominion Safe Deposit Vaults, subject to withdrawal only by two of the Trustees jointly.

DESCRIPTION OF THE HOME

OF THE

Board of Trade of the City of Toronto,

TORONTO, ONTARIO, DOMINION OF CANADA,

JANUARY, 1892.

SITE.—The site of the building is situated on the north-east corner of Yonge and Front-streets. A portion was previously occupied by the American Hotel, owned by the estate of the late Alex. Rennie, and purchased by the Board on the 25th day of November, 1887, for the sum of \$55,000. The remaining portion, some 20 feet on Front-street, was purchased from the Wilkes' estate on the 16th day of June, 1889, for the sum of \$14,500.

The site is irregular in form, Yonge and Front-streets intersecting at an acute angle, none of the angles of the site are right angles. The frontage on Yonge-street is 101 feet, and on Front-street 109 feet, containing an area of 9,323 square feet.

EXCAVATIONS AND FOUNDATIONS.—Building operations were commenced May, 1889, and the structure was ready for occupation December, 1890.

After the old buildings were demolished and removed, the excavation for the basement and foundation walls proceeded rapidly; a firm shaley bed of clay was found (with few exceptions) upon which was laid the concrete footings for the support of the structure; the concrete footings for the main walls were laid 6 feet 10 inches wide and 18 inches thick, upon this a limestone dimension footing course, 5 feet wide and 12 inches thick, was laid to receive the foundation walls. The foundation walls are built of hard grey clinker bricks laid in cement, and are 3 feet 4 inches thick. The interior foundation walls are 2 feet 3 inches thick, built upon concrete and dimension stone footings.

DRAINAGE.—The system for the disposal of sewage from the building has been executed in the most approved modern way. All soil pipes in the building are of tested heavy cast iron, with gasketed and caulked lead joints, every bend where possible is provided with brass trap-screw handholes so that access could be made to the entire system when necessary. The drainage system is connected with both the Yonge and Front-street sewers, thereby disposing of the sewage in the quickest manner. Weeping drains are laid under the concrete floor of basement to intercept any surface water that may find its way in upon the clay bed, and is connected with the system of drainage provided for the disposal of rain and snow water from the roofs. Cast iron

pipes are built in the heart of the walls to carry the water from the roofs to the drainage system in the basement.

FIRE-PROOF CONSTRUCTION.—The building has been constructed on the latest and most approved fire-proof principles. The floors are constructed of steel beams placed on an average of four feet apart, supported by the walls and heavy steel girders bolted together; the spaces between the beams are built in with porous terra cotta arching blocks of Canadian manufacture, then upon this was laid a 4 inch bed of concrete in which was bedded scantling to nail the flooring to, thus making a solid mass of steel porous terra cotta and concrete 14 inches thick. 1,427 steel beams and girders weighing 533,283 lbs. were used in the construction of the floors, as well as 61,309 feet of porous terra cotta arching blocks. 62,053 feet of porous terra cotta blocks were used in the construction of partitions.

A test was made upon the strength of the terra cotta floor arching, and what was supposed to be a weak section was chosen for the test. It was found to resist a load of 5,721 lbs. per square foot.

The roofs are constructed of steel. The roof and ceiling of the Board room is a piece of clever construction. Slate and copper is used on the roofs fronting on Yonge and Front-streets. The height from the sidewalk to the base of the flag pole is 145 feet, and 92 feet to the coping of the arcaded parapet.

The building has a main entrance on Yonge-street and another on Front-street, both having spacious vestibules with marble floors and marble wainscoting eleven feet high, from which springs a handsome barrel-vaulted ceiling, richly panelled and ornamented. The marble wainscot serves as a Directory Tablet, upon which is written in gold leaf the names and floors of the various tenants. The floors of corridors and lavatories are laid with marble tiles.

From the vestibules to the elevators and stairway is but a few steps. The stairway is circular in form, extending from the basement to the seventh floor; it is constructed of wrought iron with cast-iron ornamental balusters, mouldings, etc. A bronze newel, richly ornamented, starts the handrail, which is of solid cherry and in one continuous curve, winding and extending from the first to the seventh floor; it was wrought by hand out of solid blocks of cherry about five feet long, making, before it was completed, a long and tedious task. The treads of the stairway are of marble, similar to the corridor floors. There are 142 steps from basement to the seventh floor.

ELEVATORS.—Two Hale Hydraulic Passenger Elevators.—There are two Elevators in the building, with many efficient safety devices for the protection of those using them, both rising from the first to the seventh floor, a distance of about ninety feet, and this distance can be travelled with an average load in a fraction of a minute. The lifting capacity of each elevator is 1,800 lbs., which is equivalent to twelve or more persons at each trip, and as each car can make a round trip once every three minutes, the carrying capacity of the two machines would be about five thousand people per day. The cars are of handsome design, and as samples of Canadian cabinet work are unexcelled.

One of the principal features of these machines is the operating device. This is a lever in the car, and in the hands of skilled operators enables the cars to be stopped at landings without jar when travelling at high speed.

As an evidence of the superior safety of these elevators, it may be well to state that each car is suspended by six $\frac{3}{4}$ " wire cables, four of which are independently attached to the never-failing Hale Gravity Safety Wedge device under the car. Any stretching, or a possible breaking, of one of the cables will instantly operate the safeties and wedge the car to the guides. A speed governor is also provided, which is located at the top of the shaft, and directly connected with these wedge safeties, which will stop the car should excessive speed be attained. A device is also attached so that the cars will stop automatically at the upper and lower landings, and the very construction of the machinery itself, with solid water always filling the cylinder above and below the piston, wherever the car may be, is an element of safety not possessed in any other type of hoisting machine.

With the crowds constantly entering and passing up and down in this building, the universal comment is a congratulation to the officers of the Board of Trade on the superior elevator service, upon whose constantly satisfactory operation really depends the business of the building.

The building contains eighty-six offices, most of which have been arranged and fitted to suit the tenants. The offices are well fitted and finished in black ash, the floors are of oiled Georgia pine; most of the offices are provided with open fireplaces with marble mantelpieces and hearths; many also are provided with fire-proof vaults, and, in addition to the vaults in the offices, a stack of vaults is ingeniously arranged, commencing from the basement and continuing up through the centre of the corridors to the fifth floor. With few exceptions the whole of the offices are well lighted, most of them obtaining light from Yonge and Front Streets. Gas and electricity have been laid throughout the building, as well as telephone wires for connection whenever necessary. Each floor is provided with a well-lighted, ventilated and commodiously equipped lavatory, designed and executed upon the most modern and improved sanitary principles. All the offices are heated by steam.

DESCRIPTION OF THE SIXTH FLOOR.—The sixth floor has been arranged and built to suit the requirements of the Board of Trade, containing the Board of Trade Hall, Council Chamber, Committee Rooms, Secretary's offices and store-rooms, telegraph and telephone rooms, etc.

The Board of Trade Hall, or Rotunda, is situated directly on the corner of the building, with a magnificent view south and west across Lake Ontario. The hall is polygonal in form, having fourteen sides resembling a rotunda; it is fifty feet in diameter and thirty-two feet in height. The ceiling is circular, forming a dome, and is richly treated in modelled plaster ornament, which covers more than half the dome, an area of 1,800 square feet. The handsome effect of this ceiling will be the more apparent when it has been appropriately decorated. The remainder of the hall is finished in quartered oak, it being wainscotted with panelling. At the intersections of the fourteen sides of the hall, fourteen massive columns of quartered oak, supported upon heavy panelled and moulded bases, rise and support the dentilled cornice from which the dome springs. The columns are fluted, and are embellished with minor spiral columns at their angles. Handsome carved capitals surmount them, carved in free Renaissance ornament. The windows are high and lofty, having semicircular heads forming transome lights, which are artistically glazed with art glass; the centre of each

transome light is adorned with the standards of Great Britain, Canada, and the Union Jack, etc., worked in French enamel.

The Rotunda is lighted at night with seventy electric lamps and forty-two gaslights. The electroliers are handsomely designed and executed, having a Bower Barff finish (similar to the whole of the hardware throughout the building), and opalescent globes.

Four sides, or spaces between the oak columns of the hall, are occupied with unique substitutes for blackboards, on which the fluctuations and conditions of the principal markets of the world are marked up in chalk every day; they are of plate glass, eight feet square, ground to receive the chalk on one side and painted black on the other.

A Telegraph and Telephone Room is conveniently situated off the Rotunda for the exclusive use of members.

The Council Chamber is a lofty and spacious room, containing eight hundred feet of floor space; the walls are panelled eight feet high with black ash. An open fireplace, with a massive mantel and overmantel, occupies one side of the room, it is of a handsome design, having fluted columns with carved capitals and moulded bases. In the centre of the overmantel is carved the seal of the Board of Trade. The fireplace is well set in rich strip tiling with a hearth to match.

The Committee Rooms resemble closely the Council Chamber, all being well heated by a system of indirect radiation with a simple facility of admitting cold or warm air into the rooms at will. They are all provided with gas and electric light fixtures similar and as handsome as those used in the Rotunda. These rooms are well and adequately furnished, especially the Council Chamber, the effect of which is quite imposing. A massive antique oak table, about thirty feet long, occupies the centre of the room, rich with carving and skilful workmanship. Around the table stand massive oak chairs. At the head of the table stands the President's or Chairman's chair, prominent because of the amount of artistic workmanship wrought upon it.

The Secretary and Superintendent's offices comprise two rooms adjacent, with entrances from the corridor and the Rotunda. The offices have been fitted and equipped to ensure prompt and rapid performance of the duties of the Secretary and his staff; the fittings, including counters, desks, screens, vaults, etc., being expressly designed and executed. Call bells are connected by electricity from the private office of the Secretary to the various committee rooms and Council chamber.

A portion of the seventh floor has been arranged for the quarters of the caretaker. A parlor, dining-room, bed-rooms and bath-room have been provided, all being well heated and lighted.

The east wing on the first floor has been fitted as a restaurant. It is 94 feet long and 20 feet wide. The ceiling and a portion of the walls are artistically decorated. An oak panelled wainscot containing bevelled mirrors continues around the whole premises, with fluted pilasters having carved capitals and moulded bases. The windows and doors are all glazed with art glass. The whole of the fittings are of polished oak, and with the display of mirrors, electroliers and costly furniture makes one of the most, if not the most, inviting dining-rooms in the city. A portion of the basement has been fitted up for the restaurant kitchen, with pantries, sculleries, pastry rooms, etc.

A Mail Chute extends from the sixth to the first floor ; it is conveniently placed in the corridors with a letter box on each floor, and a mail box receiver on the first floor into which the letters mailed into the chute from the different floors fall, and is emptied by the post office authorities eight times a day. The Mail Chute is greatly appreciated by the tenants, saving them much time. A letter mailed into the Chute on any floor is just as safely mailed as if it had been deposited in the post office.

DESCRIPTION OF BASEMENT.—The basement is mostly used for the purpose of heating and ventilating the building. Two horizontal tubular boilers, 4 feet 6 inches in diameter and 16 feet long, containing 58 three-inch lap-welded tubes each, generate steam for heating during the winter. A smaller boiler, 4 feet in diameter, 12 feet long, having 52 tubes, is used during the summer months for running the machinery of ventilating apparatus, steam pumps, etc. The boilers are constructed of Park Bros. flange steel ; the shells are $\frac{3}{8}$ inch thick, heads $\frac{1}{2}$ inch thick and domes to each boiler are 30 inches in diameter, 24 inches high, of $\frac{3}{8}$ inch metal. All horizontal seams are double riveted. The boilers are fitted with 3-inch pop safety valves, glass water-gauges, etc., all having independent connections. The blow-off tank is situated at the back of the boilers, under the floor, is 3 feet in diameter, 6 feet long, and made of wrought iron 5-16 inch thick. A wrought iron smoke shaft 3 feet in diameter, and 120 feet high, carries off the smoke from the boilers. The boilers were tested by hydrostatic pressure of 150 lbs. to the square inch.

The supply to the boilers is made from the main water supply, and the condensed water from returns of heating system which is heated through an advance heater of 80 horse power to a temperature of 200 degrees, and pumped into the boiler, by two of Worthington's Duplex Feed Pumps ; they are arranged so that either separately or together they may be used to supply hot or cold water to the boilers.

The building is heated by direct radiation, with the exception of the Rotunda, Council Chamber, Committee Rooms and Secretary's offices, which are heated by indirect radiation, using live and exhaust steam, through 150 radiators containing 9,000 square feet of heating surface, with over 1,000 shut-off valves ranging in size from $\frac{1}{2}$ inch to 10 inch diameter. The exhaust steam from pumps, engine, etc., passes through a feed water heater, thence into a five inch pipe into the mains to the various radiators supplemented by live steam from the boilers.

The boilers are connected individually into leaders in two ways ; one for carrying low pressure for heating the building with condensed steam from radiators, returning by gravitation to the boilers ; the other for carrying high pressure steam for driving engine pumps and heating the building through a reducing valve. The heating mains start from boilers and make a circuit of basement with 50 branches for rising steam pipes to the various parts of the building, each having a shut-off valve in basement. All the exhaust steam passes through an oil extractor, removing any presence of oil from the steam before entering into the heating mains. The exhaust is arranged with a system of valves so that it passes through a 6 inch pipe to the roof, with condensing head on top.

A fifteen horse power horizontal engine is used to drive a 3 foot by 6 foot diameter Sturtenvent fan for the indirect system of heating, drawing fresh air through a shaft 100 feet above the sidewalk. The fresh air after leaving fan is forced through

large ducts containing radiators heated by steam, thus the air is warmed and forced through other ducts connected with the chambers of the Board of Trade.

The rooms are ventilated by foul air shafts of same capacity as the heating ducts; the foul air shafts are connected with ventilator above dome, and exhaust impure air as rapidly as the fresh air is introduced.

The engine also runs a 24 inch Blackman Air Propeller for exhausting foul air and odours of cooking from the kitchen department of restaurant; the air being driven through a foul air shaft carried 110 feet above street level, and from the same source power is also derived for working a Rotary Power Blower for forcing message forms for the Canadian Pacific Telegraph Co. through a tube from their receiving office on ground floor to the operating room on the 7th floor in three seconds. When the engine is closed down at night an electrical motor is used for the purpose.

In the pump room a large tool closet has been fitted up for engineer's and steam fitter's tools. The equipment is complete, so that refitting and repairing of any of the machinery or elevator apparatus may be done on the shortest notice. The whole of the machinery, boilers, pumps, engine, elevators and heating apparatus are under the control of an expert mechanical engineer. In the boiler-room there is a hot-water tank with a capacity of 300 gallons for supplying hot water to the lavatories and restaurant. The water is heated by exhaust steam passing through a brass coil in the tank to a temperature of 300 degrees.

DESCRIPTION OF EXTERIOR—The architectural treatment of the exterior of the building may be generally described as a modern development of Romanesque.

The two first stories are designed to form a base consisting of a series of piers of Crandled Portage Entry sandstone. Each pier is surmounted by a carved cap of refined Romanesque ornament. The simplicity of these piers is relieved by the Yonge and Front-street entrances, which are imposing and richly carved. Conspicuous among the ornaments are the Arms of Great Britain, Canada, Toronto, the Board of Trade, etc.

The next three stories are treated lighter and are more decorative. The piers between the windows are lofty and graceful, built of pressed brick with Portage Entry sandstone shafts, moulded bases and carved capitals. These piers support a deep frieze and dentilled cornice. The frieze is in one continuous length of the façade, richly carved in a refined treatment of Romanesque ornament; over each pier a head typical of modern arts and sciences is carved in bold relief.

The treatment of the sixth story is very fine, expressing the importance of the interior, which is devoted to the Board of Trade offices, etc. The Rotunda, or Board of Trade Hall, is easily discerned by the magnificence shown on the exterior, composed of an imposing arcade with decorated gables of stone finishing each bay, and uniting with each other at their bases, enclosing a portion of the interior devoted to the Hall. The arches are richly moulded and carved and spring from clusters of well proportioned columns and shafts with carved capitals and figures.

The sixth story is surmounted by a bold, yet rich cornice of stone finished with an arched parapet of columns and arches; the height from the sidewalk to the coping stone of this parapet is 93 feet.

The whole façade is one harmony of architectural detail and color, dignity, grace and beauty expressing itself from base to parapet, reflecting credit on its designers and artisans.

Statement of Toronto Clearing House From Its Commencement 21st July, 1891, to 31st December, 1891.

It will be interesting to the Members of the Board of Trade to know that while the Toronto Clearing House Association has no connection with the Board of Trade, the several preliminary discussions leading to its formation are embodied in the Proceedings of the Bankers' Section of the Board of Trade. The rules of the Association and the resolution to open the Clearing House were adopted at a special meeting of the Section held on 15th July, 1891.
