When I asked the minister a perfectly fair question to-day, as to when the survey was made with respect to man-power, and whether the statements he was making were based upon a recent survey, his answer was that he would not permit any questions at that time. I suggest there is a perfectly good reason why the minister did not want to be asked the question, because as late as May 4 only a very broad answer could be obtained. Into such an indifferent position had our man-power situation fallen that when the question was asked as to how many men the government expected to get through the registration of men engaged in the industries mentioned in the two orders in council, the reply was, "Unofficial estimates are that the number of men affected are somewhere between 10,000 and 50,000." Had there been any kind of survey up to that time, one would have expected an estimate somewhat close to the facts and the results.

It indicates clearly that up to May 4, 1943, there had been no survey of man-power in Canada. On more than one occasion I, along with other hon. members on this side of the house, have asked the government to let the country know what has been done in connection with the registration of man-power, how many men are available for the armed services, and how many men will be available for industry and agriculture. This is the fourth year of the war, and yet there is no plan to-day for Canada, in so far as allocation of man-power is concerned.

As a matter of fact if hon. members want to get information in regard to the labour situation, they have to go outside the house to get it from officials of the department who make speeches elsewhere than in the House of Commons, and, in the case I have in mind, elsewhere than in Canada. I was in the library yesterday, and I picked up the May, 1943, issue of the proceedings of the academy of political science. A meeting of this organization was held in New York on April 7, 1943, and among those who spoke was the director of national selective service of Canada. Mr. MacNamara dealt with the man-power situation and explained why it was impossible to do many of the things the government would like to do. He set out in detail the policy of the government. My hon. friends on the government side never admit that they have brought in conscription; they do not admit that the present system is a means by which men are forced to volunteer in the armed forces for overseas service, but when the deputy minister of labour was speaking at this meeting he endeavoured to explain to those who were present why it was that Canada did not have selective service by which men would serve all over the world just as they have in the United States. He said:

> Canada's armed forces consist primarily of volunteers, but the method of voluntary recruiting is supplemented by conscription for service in Canada.

Mark these words:

Since a very large proportion of the draftees enlist for active service anywhere, either before or after their induction into the service, the net effect of our draft is not very different from yours.

At last we have from the mouth of an official of the Department of Labour definite proof of what we have been endeavouring to place before the house on more than one occasion, that Canada has conscription. Apparently he wanted to show that Canada had a plan. He said that from the end of 1940 down into 1941:

Employers often tried to recruit and train young workers, only to find after a few months that they would be called or would volunteer for the armed services. All of us had our sights set too low. Most employers at this stage, for example, refused to believe that they would ever find it necessary to replace men by women. But Canada's war effort continued to expand without any serious dislocation of other activities by the natural and almost automatic turnover of labour in search of better jobs.

The minister, along with his predecessors, took pride in the man-power plan of the government. We heard that pride expressed in 1940; we heard the same statement made in 1941 and again in 1942. What does this gentleman say? He said:

There was no central authority directing the movement, no master plan, although conscription and training for war industry had begun.

Referring to the fact that man-power had been lost to agriculture and indicating that there was no plan, he said:

The steady drain of agricultural man-power to the forces and the war industries has thus been checked.

And again, farther along in his speech, he said:

Our present plans through March 31 of next year call for a net increase of over 160,000 men for the armed services, agriculture and war production.

Why is it that we could not be told in this house that 160,000 men are to be required next year when the man who administers this department gives to a gathering in the United States information which has been denied to parliament? I pass on to another statement which was made, as follows:

At the other end, in the less essential occupations, not only will men be called for military service in the regular routine, but substantial numbers of those found unfit or who have previously been found unfit will have to be released by their employers and required to take available essential work. If this proves to be in agriculture, as we expect in many cases, the difficulty arising from the fact that agricultural wages are so much lower than industrial wages will be met by pointing out that each such man will earn at least as much as in the army.

The whole plan regarding man-power which has been denied to parliament is placed before the academy of political science. I would ask the minister to elucidate this next statement which I am going to quote, because parliament has not yet had this information. He said:

I have ignored many of the details of our regulations—the inevitable exceptions, the provision of travelling expenses, separation allowances and other special allowances to encourage workers to accept distant jobs—

Are separation allowances being paid to-day to men transferred from one industry to another? Are separation allowances being paid to their families? I continue:

—the right given to workers who are transferred to more essential jobs to claim reinstatement without loss of seniority in their old jobs when the more essential work is finished.

Have such regulations been brought into effect? They have certainly not yet been brought before parliament.

I must get on with some other matters to which I wish to refer. All of this indicates that in spite of the fact that emergency regulations have been issued by the department from time to time since March, 1942, we are still in the same position we always were in so far as compulsion is concerned, except with respect to the two groups of occupations referred to in the orders in council issued in May last. Fifteen months ago the Prime Minister declared for a policy of the negative compulsion of restriction. Time has shown that the policy that has been carried into effect has been a positive restriction of compulsion except in so far as it is necessary to force men to volunteer for overseas service instead of adopting selective service. Unless a true form of selective service is brought in, neither the minister nor any department of government will have the power or the support of the people of Canada to move men back and forth from one industry to another regardless of their personal wishes.

All of this was predicted last fall by Mr. Elliott Little when he said that there would still be a few months' grace before the situation became unmanageable. That is how it has worked out. To-day we find ourselves in the position where man-power is not available, not through the shortage of man-power—this was made quite clear some months ago by Doctor Couper of the Department of Labour—but because there is a shortage of the right men in the right place at the right time owing to the failure of the government to adopt a practical policy. Mr. Little recommended many things which were ridiculed at the time, of which some have since been adopted. The

events that have occurred since he resigned have entirely justified everything he said at the time. In part he said this:

> It might be well to point out that the prospects for the winter are for a continuation of the present situation; that is, for a fairly tight general condition, with some particularly acute local and industrial problems, but not reaching an overall shortage of really critical proportions until spring.

In the same memorandum Mr. Little also pointed out:

> Some of the special difficulties which already exist, such as the all-around shortage of able-bodied men, qualified for heavy and relatively low-paid work in the base metal and coal mines, smelters, foundries and steel mills, in branches of the lumbering and agricultural industries, will have cumulatively more serious effects on essential production.

What he said then has come true; what he warned of then has culminated in a situation that is now prevalent in all parts of Canada. Our mines are undermanned, it is admitted now; our farms have been depleted of man-power, so that men shall serve for the defence of Canada but not beyond the confines of Canada. The minister claims that the record to date of man-power on the farms has been a creditable one. But the minister could not assert in the agricultural portions of this country that the policy he enunciated to-day has been carried into effect since March, 1942. The promise was made then that essential man-power on the farms would receive postponement unless the boards were able to establish non-essentiality on the part of the farm worker. The regulations were there, but regulations without enforcement are words without works.

Boards were set up. But those boards did not carry out the regulations. The minister to-day endeavours to put the responsibility on the boards. The responsibility rests upon the government for failure to set up machinery to carry into effect the policy enunciated by the government. All over the dominion the situation has been such that in one province there has been strict adherence to the regulations, while in another province there has been a failure to observe the regulations. That is the reason why two years ago I made a suggestion which I thought would be of assistance. It was that there should be a court of appeal, consisting of a judge of the Supreme Court of Canada not to hear every appeal that would come before it in the ordinary way, but to hear only appeals from persons who believed that the interpretation of the regulations with respect to them was not according to the law of the land, and those persons should only then have a right of appeal after leave had been granted. If that had been done, there would have been equality of call, and certainly equality of administration.

To-day the coal mining industry is depleted of its man-power, all because there has been no selective service. True, this is selective service in name but not in practice. It is not in effect.

The minister says that the people of Canada as a whole are satisfied with the man-power policy of this government. Let me refer him to what has been said on that point by an outstanding Canadian, the president of the Canadian Legion, who, on June 7, speaking in Edmonton, said:

> Apart from certain compulsory man-power measures recently introduced on the home front, we seem to be as far away as ever from a realistic policy of total war and I'm afraid that both our government and people are in for a rude awakening when our army casualties start to come in in earnest.
>
> The problem of man-power is a question no country at war can afford to pussyfoot about, and we know that when the great test comes, it is man-power more than anything else that will tip the scales of victory or defeat.

Are we getting that man-power to-day? Brigadier James Mess, deputy adjutant-general and director of army recruiting, speaking in Toronto on June 18, said:

> Every man and woman medically fit is needed in the fighting services. It's just as important to get a girl in the services as it is to get a man. Those in industry may disagree but every girl or man they lose is no tragedy to them—it's an inconvenience.

A process has been going on for four years whereby man-power is subject to the attraction of the armed forces, the attraction of industry or the call of agriculture. The result has been that various ministers have been compelled to admit during the course of the man-power debate that the services under their control are short of the necessary man-power, each minister being in the position of a residuary legatee and receiving only what is left over after the conflicting claims of either armed forces or industry or agriculture have been met.

We are not getting the men. Requisitions for men are made by the defence department. The story is told in the latest return that was brought down on June 17, 1943. Requisitions were sent out for 104,684 men for the army between October 31 and June 17; and how many were secured? The number that answered the call was 52,459, or only forty-three per cent of the number required, and they must have been required or the calls would not have been sent out. Deduct from

[Mr. Diefenbaker.]

that 52,459, 17,000 who were medically unfit, and only 35,000 men were actually secured for the armed forces. And it is becoming worse as time goes on. A year ago ninety-seven per cent were secured for the armed forces of the numbers called. That was up until March, 1942. Then the figure dwindled until by December, 1942, it was only fifty-five per cent, and now it is down to forty-three per cent.

I realize that the problem of man-power is an intricate and difficult one in Canada as in all parts of the world. The effort to mobilize for total war demands adequate reinforcements for the armed services; adequate production of munitions; adequate production of food. The numbers in the armed forces are not entirely a matter of military determination. This is a problem in part depending on keeping what the minister called a balance between the various claims for the numbers available. A plan must be established that will meet the demands of each and every one of the claimants for man-power at the present.

At six o'clock the committee took recess.

After Recess

The committee resumed at eight o'clock.

Mr. DIEFENBAKER: May I now summarize to the committee the points of view which I had been making before the recess. We of the opposition demand in the interests of Canadian unity and of an all-out war effort, first, that there be one equality of service everywhere in Canada, and, second, that under the provisions of the National Resources Mobilization Act there shall be equality in enrolment and in the administration of the act. I am not going into details with regard to the statement I am about to make, but I have spent a considerable amount of time analysing the figures of the call-up in the various provinces, and I say without fear of contradiction that had there been equality of call in every province in Canada, up until December 1, 1942, there would be no shortage of man-power on the farms of western Canada and the province of Ontario, where I know there are shortages now. The minister has stated that from now on there are to be calls made in the country as a whole. Against that I protest, for in doing that all opportunity of securing equality of call will be denied, and there will be no way in which there can be a check-up to ascertain whether or not the law is being equally applied and enforced.

We demand that there shall be equality of enforcement. The minister produced a lot of figures to-day in a statement of the national selective service on man-power, which I believe he said was being placed on *Hansard*. That statement, even from a casual perusal, is a kind of mathematical sleight-of-hand. The figures that are given do not, I submit, give the picture as it is.

In connection with the enforcement of the law, a return was brought down on January 29, 1943, in regard to the penalties that had been imposed for infractions of the law throughout Canada. Hon. members will notice that in division A there is only one prosecution, and in division B the penalties run generally from three to six months. In division D penalties consist of one fine of $25 and costs, and sentences of six months and two years in penitentiary. In division E, with the exception of one or two gaol sentences, the penalty for failure to report for military training consists of fines of from $1 and costs to $50, $25 and costs, $5 and costs, costs plus $20 and the like, and the same applies to division F. In other districts you will find the penalties imposed for failure to report are generally gaol sentences.

If there is to be any enforcement of the law there must be such enforcement that, when infractions are ascertained and guilt established, the enforcement will not be so small as to result in penalizing the man who carries out the law. Some of the penalties that have been imposed are unfair and unequal, having regard to penalties being imposed in other parts of the country. I say that in certain districts the man who is a defaulter and does not answer the call is actually the better for not having done so. He can earn the wages available to him outside the army, realizing that when he is brought before the court the penalty will be so low as not to amount to a detriment. This unequal enforcement of the regulations in respect of call-up has resulted in a total absurdity from the point of view of the administration of justice in Canada.

The figures that were given in February, while Canada was at war, are figures of the department of information. I repeat what I said on a previous occasion, that, having regard to the statistics given therein, there are to-day in Canada, unaccounted for, or there were in February last, 205,776 men. I put the figures on *Hansard* earlier in the session. Has there been any enforcement since? Yes, there has been enforcement to the extent of a very few prosecutions, the total number being 1,326. There has also been a promise of immunity,

whereby in return for reporting there was to be no prosecution, and the total number that answered the call on the strength of immunity is approximately 7,200.

These statistics, which cannot be denied, show that no serious endeavour has been made to enforce the law. Now then, Mr. Chairman, I put this to you. When there is a law on the statute books which takes from a man the liberty he enjoys of going where he pleases and doing what he pleases in general, and places him in the armed service, and that law is not equally enforced, or at any rate not seriously enforced, the whole administration of justice is brought into disrepute.

Why are not the mounted police used in locating defaulters? Recently the government appointed an institution in Toronto, a credit bureau. It went to work on the matter. I had the figures before me a moment ago, but I cannot put my hand on them just now, but they show that there were located in Toronto or the province of Ontario fewer than 300; and none elsewhere.

Mr. MITCHELL: Three hundred and fifty approximately.

Mr. DIEFENBAKER: What a record of enforcement, having regard to the number I have given of 205,000! No doubt quite a number have gone into the armed services, but making due allowance for those that did so, there has been no serious endeavour on the part of this government to enforce the law which it placed upon the statute books.

Mr. MITCHELL: I do not think my hon. friend is serious when he says that.

Mr. DIEFENBAKER: I tried to ask some questions of the minister, and he said he did not want to be interrupted. I am serious when I say that there has been no answer from the minister to the statement which I have made on several occasions, that there is not now, nor has there been, any endeavour—

Mr. MITCHELL: I want to say to my hon. friend that there is, and let that stick.

Mr. DIEFENBAKER: I say, there has not been, and there is not now any enforcement of the law in the matter of the National Resources Mobilization Act equally throughout the dominion.

I pass now to another subject. The government has admitted that there must be compulsion in the transfer of labour from one industry to another. The minister to-day pointed to what has been done in that direction. While the statistics which will appear on *Hansard* would indicate that there has been a large placement, the statistics which I have, based on returns brought before this house, show that, of the million and many more workers in war industry or in other industry in Canada, no more than 900 have been compulsorily transferred from a less important industry to one of greater priority.

In that connection, the minister to-day placed on the record a plan showing the manpower of this dominion employed in industry and agriculture. That is something we have been endeavouring to get for a long period of time. As late as last January—to be exact on January 14, 1943—the answer which was given, when the question was asked by the hon. member for Rosedale as to the number of persons engaged in manufacturing industries, was that the information was not available, and would not be until the tabulation of the April returns of the unemployment insurance commission; and with regard to agriculture, the answer was given that the last figures the government had were of the census of June 1, 1941.

I commend the minister for having utilized the services of the unemployment insurance and other bodies throughout Canada to secure an up-to-the-minute census showing how many men and women are employed in the various industries, for it is only with such a picture that anyone can arrive at a proper conclusion as to whether or not there is a proper allocation and use of man-power which there should be. I may add that even now there is no control of man-power in Canada under selective service to prevent men from moving backwards and forwards within the same industry or even outside the same industry.

On Monday, June 21, the Minister of Munitions and Supply referred to the changing personnel in the shipbuilding industry. I asked him, as reported in *Hansard* at page 3839:

> I want to know if men are still being called up from these specialized jobs—
>
> That is, in connection with shipbuilding.
>
> —and being put in the army in Canada. If so, how many have been called up from shipbuilding since the beginning of this year?
>
> Mr. Howe: I do not know.

Mr. Chairman, if there is cooperation and collaboration between departments would you expect to receive the answer from the Minister of Munitions and Supply, dependent as he is upon man-power, that he does not know the answer to that question?

Mr. MITCHELL: I might tell my hon. friend that the best answer is this—

The CHAIRMAN: The hon. member for Lake Centre has the floor.

Mr. DIEFENBAKER: May I finish my quotation?

Mr. MITCHELL: I just want to say this: the best answer to my hon. friend's analysis of the shipyards situation is this, that we are building more ships in the Dominion of Canada than have been built in the history of this country, and more merchant ships than are being built in Great Britain. These are facts which speak for themselves—ships, ships.

Mr. DIEFENBAKER: I am not talking about ships.

Mr. MITCHELL: But I am talking about ships.

Mr. DIEFENBAKER: They have the man-power to build the ships. But I am talking about the fact that it is not owing to the minister's efforts that the ships are being built.

Mr. MITCHELL: No; it is owing to my hon. friend's efforts!

Mr. DIEFENBAKER: I then asked:

What did the minister mean by the statement he made earlier in the discussion that the proportionate rate of change in the personnel of the shipbuilding yards was too great, or words to that effect? Did he mean that it is difficult to hold the necessary trained men in the industry?

Mr. Howe: No. Men drift from yard to yard to some extent. It is a thing we would like to discourage; we would like to keep them where they are.

The use of the word "drift" does not indicate direction of man-power from one industry into the other.

Just one matter more. There are certain other matters I will deal with later on when the opportunity arises.

I think there should be greater use made on the advisory board of representatives of agriculture and of labour. I am not going to read in detail a letter to Mr. MacNamara; but if what is stated in this letter, dated at Calgary on June 4, from the United Mine Workers of America, from J. Stokaluk, vice-president, is correct, it indicates this, and it supports what one frequently hears from those engaged in agriculture as well, that their representations are not accepted or heeded by the department administered by the Minister of Labour. This is what this man says:

When I was nominated by district 18, United Mine Workers of America, and afterwards was appointed by your department on the coal mining industry advisory committee, I was under the impression that the duty of this committee would be to advise the director of national selective service on man-power in the coal mining industry.

One would expect that, Mr. Chairman, if he was appointed a member of the advisory board. Yet what happened?

At the last meeting, which was held on May 14, the procedure was entirely changed.

That is, in the matter of discussion and recommendation.

When the committee met in Ottawa on the above-mentioned date, a ready-made order in council was read out to us. A discussion took place and the representatives of the miners unanimously opposed some of the provisions contained in that proposed order in council. After the discussion was over, the committee was not asked for any further suggestions or recommendations as to the man-power in the coal mining industry, and the meeting was adjourned.

Then he says this, I am leaving out one paragraph, because it refers to another matter, unless anyone wants me to read it:

I consider that to bring eight of us to Ottawa for the purpose of reading the order in council to us without considering our opinion and advice was just a waste of time and money. I think the same purpose could have been served if this order in council had been sent to us by air mail, which would have been at the cost of some 56 cents instead of the some thousands of dollars spent to bring us to Ottawa.

The way the committee has been functioning since the first meeting, and particularly the procedure that was adopted at the last meeting, has forced me to come to the conclusion that this committee was not appointed for the purpose of consultation or advice, but for the purpose of being used as a rubber stamp for the policies adopted by the national selective service department.

Having given full consideration to the foregoing, I have no alternative other than to submit my resignation as a member of the coal mining industry advisory committee, believing in all sincerity that the method in which the committee has functioned to date has not resulted in its serving any good or useful purpose.

Mr. MITCHELL: I would ask my hon. friend to read the letter in reply, just to keep the record straight.

Mr. DIEFENBAKER: I have not the letter in reply. I am placing before the committee—

Mr. MITCHELL: Mr. Chairman, my hon. friend's time is up. I try to be fair about these matters, and I do not think that if I were in his place I would read only the one letter. I think, to be fair and to put the record straight before the committee I would have read the letter in reply.

Mr. DIEFENBAKER: I cannot.

Mr. MITCHELL: I say the hon. member might read the reply.

Mr. DIEFENBAKER: I have not the letter.

Mr. MITCHELL: Of course it suits the hon. member's political purposes just to read the one letter.

Mr. DIEFENBAKER: I conclude, Mr. Chairman, by saying this, that there would not have been the situation in agriculture which we find to-day, if the representations of the agricultural industry had received fair and proper consideration from the department. I shall be only too happy to read the reply to which the minister refers if he will send it to me.

Mr. MITCHELL: It is tabled.

Mr. DIEFENBAKER: According to this representative on the national coal committee, the government brought him here to face a decision already made without consultation.

Mr. ANGUS MacINNIS (Vancouver East): Mr. Chairman, the committee listened attentively to the statement of the minister this afternoon. It was rather long and evidently, if we are to judge by the criticism of the hon. member who has just taken his seat, it was not satisfactory. I think the position this group has taken in regard to labour matters is that we are not concerned so much with the mechanics of organization, but rather with what we consider the wrong attitude adopted by the government in regard to labour's part in our war effort. I wish to be quite fair with the minister, so that I am going to state at once that he has had a very difficult task with which to deal. If there is lack of organization; if there is confusion and misunderstanding in the Department of Labour—and I believe everyone agrees there is—I think we can absolve the minister of at least some of the blame, though he must assume a certain responsibility and must be prepared to accept or to listen to criticism in connection with that share of it.

Labour-industrial relations as they exist in Canada at the present time roots from the attitude of the government and the business men of this country who have had so much to do with the organization of industry since the beginning of the war. That being so, the government as a whole must accept the major responsibility. The attitude of the government was first indicated very early in the war, when it became clear that they did not realize the importance of labour in the war effort . Let me remind hon. members of what happened. When the war broke out, one of the most efficient and most imaginative ministers in the cabinet, the late Hon. Norman Rogers, was transferred from his position as Minister of Labour to the position of Minister of National Defence. I am not finding fault with the government for shifting a capable minister to what it might consider a more responsible department, but it indicates a failure on the part of the government to understand the importance of labour in the issues that were confronting the country. The change in the Department of Labour might not have resulted in any great difficulty if the government had appointed a minister who had some understanding of labour matters. Instead of appointing such a man, they appointed a wealthy lawyer. I have no objection to lawyers as a class, though I am inclined to believe that in a cooperative society they would not have any place, because where some one would not be seeking to cheat someone else, there would be nothing for them to do. My point, however, is that right at the beginning, when we ought to have made the best possible start, we appointed as head of the labour department a man who knew very little about labour and who had no associations with the organized labour movement.

So that from the very beginning the workers have not been considered as human beings or as members of the community entitled to a voice in determining the conditions under which they would work. Not only have they not been considered entitled to a voice in determining working conditions; they have not been permitted to have a voice in determining direction of policy. The hon. member for Lake Centre referred to the matter of labour representation on war boards. The Minister of Labour says that labour is represented. I have stated previously in this house that to the extent that labour was represented on any board, it was merely a token representation, and it was never intended that labour should be consulted. I think the proof of that statement is to be found in the fact that when the first order in council was passed freezing wages, the national labour council, which was then in existence, was not even consulted, though the order in council materially affected the conditions of labour.

Mr. MITCHELL: I know my hon. friend does not want to convey a wrong impression, but I was secretary of the national labour supply council at that time, and I have a vivid recollection of the consultations that took place with respect to the provisions of the order in council stabilizing wages. I am not suggesting that the opinion was unanimous.

Mr. MacINNIS: I have placed these facts on record previously. I have not the facts before me at the moment, but it was quite clear that labour was not consulted in that instance. As a matter of fact I do not think labour knew anything about the matter until the Prime Minister made his radio address announcing the policy.

Mr. MITCHELL: The hon. member was talking about the labour supply council, and that is what I am referring to. I do not say a general convention was held. If I remember correctly, there were at that time on the labour supply council Tom Moore, Mr. Mosher, Jack Bruce and, I think, Howard Chase, though I may be mistaken, and they were consulted. I am not going to say that they agreed with the government policy, but they were consulted.

Mr. MacINNIS: Well, we will not argue the point; I shall bring the evidence here again. I suggest to the minister that he was insistent he should not be interrupted during the course of his speech, so that he might allow me to carry on with what may be distasteful to him, since I allowed him to carry on with what was distasteful to me.

Mr. MITCHELL: Very well; I am sorry.

Mr. MacINNIS: Of course to anyone who has had anything to do with the labour movement in this country that attitude is quite understandable. Neither the government nor business in this country has got away from the old-fashioned idea that labour is a commodity, that its price can be regulated by the law of supply and demand. They may think it is unfortunate that the individual, in which labour power or the labour commodity is embodied, has to go around to deliver it. So far as they are concerned the individual workman is merely the wrapper in which the commodity is contained. Until we get away from that point of view and consider the workers as human beings, as members of the community, as people who are interested in all the affairs of our society and who should be consulted at every turn, conditions will not improve. I say that because to-day workers are the most important people in society.

Instead, then, of appointing a lawyer to the Department of Labour, the government should have endeavoured to get someone as head of that department who would feel about it, and the factors with which he had to deal, in much the same way as the Minister of Finance feels about financial matters, the Minister of Munitions and Supply about the organization of production, or the Minister of National Defence about military affairs. If we had something like that, there would be someone in the department who would stand up for labour, and I am satisfied we would not be in the difficulties we are in to-day.

Instead of that, however, the Department of Labour was a sort of Cinderella among government departments, and to-day we are paying for that view. The Department of Labour and the minister are paying the price in inefficient organization. The other departments took the cream of the executive staff available before the needs of the Department of Labour were realized. I am satisfied that in no department of government is it more important to have a specially trained personnel than in the Department of Labour. That department, more than any other, deals with the human factor in the war effort.

This afternoon the minister took up most of his time in dealing with the government's man-power policy. There are two aspects of the problem, namely the policy itself, and the administration of that policy. As I said before, the government as a whole must accept the responsibility for the policy, and at the most the Minister of Labour can be held responsible only for its administration. I consider that from the beginning of the war our labour policies have been wrong on account of our attitude toward labour. They have been wrong in another way. We have never come to a decision as to what portion of the labour force in Canada should go into the armed forces, and what portion should be available for production.

It is true that man-power policy cannot be static. It changes with developments in the military situation. I am convinced that at the present time the emphasis on man-power in Canada should be placed on production, rather than on men for the armed forces. Speaking in the house a week ago, the Minister of Munitions and Supply pointed out that only one-third of Canada's war production is for our own military forces. Consequently two-thirds of our production goes to the other united nations. I believe the Minister of Munitions and Supply put the case for what I am now saying when he spoke last year in one of the debates. I find these words at page 3371 of *Hansard* of June 16, 1942:

> In deciding our man-power policy we must consider whether we can contribute more to victory by continuing to be a principal source of munitions and supplies for the united nations, or whether we can make our greatest contribution by limiting our production in order to send overseas every physically fit man. . . . It seems to me that our whole war effort is being distorted at the present time by the undue emphasis now being placed on men for the army overseas.

Then he continued:

> I base my views on the fact that the supply of man-power for the armed services and for war production is not unlimited.

Canada is not the only country which finds itself in a position where demands for man-power may have to be met even by shifting

men from the armed forces. I hold in my hand the *Commercial Intelligence Journal* of June 12, 1943, in which is a report on conditions in New Zealand. It is credited to Mr. C. B. Birkett, Canada's acting trade commissioner in that country. He points out that in New Zealand they have come to the conclusion that they have put too many men into the armed forces, and that it may now be necessary to take men from the armed forces into production, if production is to be kept up. After pointing out what New Zealand has done in connection with supplying men for the armed forces, he says:

While this effort has been a splendid one, the opinion is generally held that New Zealand is over-committed in regard to the supply of men for the forces to the extent of seriously endangering production levels and the maintenance of public utilities. Much hardship has been experienced in the past year from the reduction of office and factory staffs, and of available farm labour. The loss of man-power to the railways, postal services and electric power schemes, despite the employment of women, has been particularly serious. Efforts to remedy the situation without interfering with established programmes, such as a transfer of over 6,000 men from non-essential to essential work and a return of between 8,000 and 10,000 men from the army to work on the farms, have proved inadequate.

I think we may have to change our minds in the matter of man-power in the interest of our war effort. That is, if our armed forces and our production are to be used to the greatest advantage in the global war in which we are engaged. We are all agreed that production in Canada has been large in comparison with the population of the country. We are a considerable distance from the theatres of war, and there are millions of men in the united nations who are ready to fight if they are given the arms, equipment and food necessary to carry on. If Canada can make a better effort by supplying these things, I think it would be the part of wisdom for this government and this parliament to direct our efforts in that direction.

For a few minutes I should like to refer to employer-employee management committees. On April 15 a return was made, I think in response to a motion made by the hon. member for Rosetown-Biggar, giving the number of plants in Canada in which there were production committees. The return states that the number of firms having established committees is 851, and the total number of employees of such firms is 486,896. I do not know what means the department had at their disposal to get this information, but after questioning employees of some of the firms whose names appear on this list I am doubtful if there are management production committees in many of the plants mentioned. I have information from Massey-Harris, Toronto, that there is a production committee in name only. The de Havilland aircraft, Toronto—tentative agreement between company and union to establish committee; still negotiating agreement, but no committee established. Wilson Motor Bodies Limited, Long Branch — discussions taking place, but no committee. Clarke Ruse Aircraft, Nova Scotia—no committee. Chrysler Corporation, Windsor — exploring situation; no committee as yet.

I could give a list of more than a dozen firms, the employees of which gave the same answer—no committee. I am doubtful if there are many real employer-employee committees in Canada. The reason for this is that Canadian employers are opposed to that sort of labour-employer cooperation. There is no doubt that these committees are extremely helpful in improving production. I have in my hand "Labour News from Great Britain," which contains an article by Herbert Tracey of the British trades union congress. He has this to say in reference to employer-employee committees:

As an important aid towards this organization of production, the congress—

That is the British trades union congress.

—welcomed the development of joint workshop and other production committees, and urged that these should be increasingly recognized as an effective means of promoting the maximum output of goods and services, material and equipment.

At the same time the Scottish congress pointed out that the necessity for maximum effort must not be regarded as applying only to those undertakings directly producing arms and war materials. Industries and services are so interrelated with the war effort that they must all be made to run smoothly if the military and social security of the nation is to be adequately safeguarded.

I note that when Elliott Little became director of national selective service he was anxious that committees of this kind should be established. Probably that is one of the reasons why he could not get along in the Department of Labour. In an address to the Quebec section of the Canadian weekly newspapers' association, held in Toronto on Saturday, May 9, 1942, shortly after he began his work, he had something to say about the opposition of employers to cooperating with labour. He said:

I'll tell you quite frankly that we have been given information about some employers deliberately stimulating the movement of labour to and from their plants with the definite purpose of persuading the government that it was necessary to freeze all labour to present jobs. I have had employers try to sell me on a policy

of blanket freezing. In their view, there were advantages—but only until I pointed out that freezing worked two ways: that if you froze labour you not only took the right to quit away from the worker, but the right to fire away from the employer. When they thought about it that way, their enthusiasm for a freezing order disappeared.

I think it was the hon. member for Cape Breton South who mentioned in the house the other evening that in nearly every strike that had taken place in this country since the war began, the workers had not gone deliberately on strike. In nearly every stoppage of work they had been manoeuvred into such action by means of tactics such as were referred to by Mr. Little in that speech. Having referred to the ways and means of organizing production, he said:

> Do not mistake what I am talking about. By better employer-employee relations I do not mean a concession to the workers here, a privilege there, such as a cup of tea at four o'clock. Those things have their place. I am talking about the whole broad field of personnel management which boils down to mean the best possible personal relations between management and the employees. The workers I meet and have worked with do not want employers to hold their hand. They simply asked to be treated as you want to be treated—as an adult and a responsible citizen.

That is the very thing the government has been loath to do; it is the very thing that employers have refused to do.

Continuing, Mr. Little said:

> Better employer-employee relations can produce more tanks, planes, and guns; they will help sell war savings certificates, they will put over the victory bond drives. Secured now out of this struggle for our lives, it should be obvious to the dullest mind that they can be made the foundation of our industrial and social reconstruction in the post-war period.

The people that Elliott Little had to deal with were not people who could see as far as the post-war period. They could see only as far as the interests of their own immediate industry were concerned, and they were very much afraid that if they had to cooperate with labour during the war, it would mean that they would have to cooperate with labour after the war, and that is the last thing they hope will come out of the war.

The minister quoted from Ernest Bevin this afternoon. May I make a brief quotation from a speech by Ernest Bevin, which can be found on page 127 of the collection of his speeches entitled "The Balance Sheet of the Future"? Mr. Bevin states there:

> This task of winning the war means you have to call for the utmost ingenuity you can get from the people, for every ounce of ability they have, for the willingness and courage to take decisions, to make them indifferent to enemy action and carry on. I do not believe you can do that with orders from the top.

Every attempt to get anything out of the workers in Canada since the war began has been made by orders from the top.

The minister this afternoon devoted very little time to the matter of labour organization and the difficulty that labour has to get recognition from employers in industry. The only reference he made to that subject was, I think, that the right of labour to organize is fundamental. If the right of labour to organize is fundamental—

Mr. MITCHELL: I was dealing there with selective service, which is mentioned in the estimates. I thought management and labour could be dealt with in the discussion of my estimates in supply. I just wanted to make that clear.

Mr. MacINNIS: That is all right. But it is nevertheless an exceedingly important matter. May I ask again, if the right of labour to organize is fundamental, and if that right is recognized by the government as fundamental, what is it that is preventing labour organization? I asked the minister the other day about the lay-off of men at the Rand-Ingersoll company plant at Sherbrooke. In replying to the question the minister said there was a report that the men had been laid off—note this—on account of trade union activities. These men are engaged in war work. I believe that they are producing engines or the material for engines for our cargo ships or it may be naval vessels. Whatever may have been the reason why these men were laid off, the fact of the matter is that the lay-off did not begin until the men began to organize, and the lay-off took place only in those parts of the plant where the men were organized. Ever since the war began, it has been the same story in almost all of Canada's war industries. In every one of them where to-day there is recognition for labour, that recognition has been attained only after a struggle and often by the threat of a strike. I have before me the submission of the Montreal Aircraft Lodge, 712, of the International Association of Machinists, to the national war labour board inquiry, and I think it would be interesting to read just one short paragraph, which is illustrative. When I read it the committee will have a picture of every submission made by every labour organization which appeared before the national war labour board. This is what it says:

> We set about organizing the plant, and then asked the company to negotiate an agreement with our organization, similar to that in force in our other plants. This the company refused to do, and on September 26, 1941, we applied for a board of conciliation. At that time, practically 100 per cent of the employees in this plant were members in good standing of our

organization. On one pretext or another, under the guise of attempts by the Department of Labour to "conciliate" the dispute, the board was not established until May, 1942.

Remember, the application for a board was made in September, 1941, and the board was only granted in May, 1942. The submission continues:

In the interval, the company had used every trick, including intimidation, mass lay-offs, and the use of the company-union set-up which existed in the car-building section of the works, to destroy the organization. When we complained recently in a letter to the Prime Minister of the dilatoriness of the department in establishing this board of conciliation, the minister defended himself by stating that our organization had agreed to the delay in that we had concurred with and participated in the conciliation efforts of his department. We can only conclude that the minister took our failure to go on strike illegally during this period as a sign of agreement with the delay, because we used every other form of representation known to us to constantly urge the speedy settlement of this matter, and complained many times of the delay.

Could anything more clearly illustrate that if the right to organize is a fundamental right, the workers in Canada are denied that fundamental right?

Earlier in the session, when I spoke in this house on some other matter, I pointed out that the government took the same attitude in those industries under its own control, and that it was not until December, 1942, more than three years after the war began, that the right of labour to organize was accepted in these crown companies.

I see my time is about up, and I will conclude with this. In the submission made to the war labour board by Mr. A. R. Mosher, president of the Canadian congress of labour, he makes this statement in reference to order in council P.C. 2685, which declared the fundamental right to organize:

It was also ignored by the government itself, as organized employees of crown companies were not permitted to negotiate with the managements of these companies although they were under the direct control of the government. However, after strikes had been threatened in several crown companies, order in council P.C. 10802 was passed in December, 1942, permitting the employees to join unions and permitting the managements to negotiate collective agreements. In spite of the recommendations made by the congress to the government the order does not yet apply to the Canadian Broadcasting Corporation or the National Harbours Board.

I would suggest to the minister that if the right to organize is a fundamental right, he as Minister of Labour has the bounden duty to see that labour is protected in the exercising of that fundamental right.

[Mr. MacInnis.]

Mr. HANSELL: I listened with a good deal of interest to the minister's statement this afternoon and in commenting upon it now I have no wish to traverse the universe. I shall direct my attention to one particular subject about which the minister did not say a great deal. I notice, in the little programme that has been given to us in order that we may pursue an orderly discussion, that there are about twenty-two items constituting an expenditure of about $21,500,000. I am quite certain that when we get through with these twenty-two items we shall have pretty well exhausted the administration of the Department of Labour.

The item which I wish to discuss does not seem to appear anywhere on this programme. About a month ago the Prime Minister (Mr. Mackenzie King) issued what was known as a statement recognizing that a national emergency existed in connection with the fuel supplies of Canada. About a couple of weeks ago, on the orders of the day, I asked whether the Minister of Labour would care to make a statement informing the country what progress was being made with respect to this national emergency. He rose and made some little statement that did not amount to anything, and I suggested to him that if he could not make a statement, then it would be all right for him to do so in a few days' time. A couple of weeks have now gone by, and when he made his speech this afternoon he seemed to have forgotten somehow or another that this national emergency existed, because it is the only national emergency we have, or the only one that has been announced apart from the obvious emergency of the war, and yet he made only a passing reference to it.

I shall have something to say with reference to the announcement of that national emergency. If we think deeply enough into this whole matter of the national emergency on account of the fuel supply we shall recognize, I believe, that the only reason why there is such an emergency in Canada is that the present Liberal administration of Canada were unable to see far enough ahead, or else they closed their eyes to that which was very obvious. In respect of the announcement of a national coal emergency, I think it would have been proper to announce that there was a great Liberal administration emergency. I suggest that judgment should begin at home, where it belongs, and it would have been fitting for the Prime Minister of Canada to announce this and to say: We did not foresee this, or our expert advisers did not tell us this would happen, and now, by reason of

our lack of foresight, I have to announce a national emergency on account of the shortage of fuel.

I had something to say about this last night when I asked the Minister of Munitions and Supply a question or two, in reply to which he said that he recognized the seriousness of the present fuel situation in Canada. I have reason to believe that the situation is serious, and I believe that the people of Canada should be told immediately and should be given a comprehensive picture to show, exactly how the situation stands to-day.

As I see it, the supply of coal falls very heavily upon, shall I say, three categories. We must supply our armed forces with the fuel, the coal, they need. This includes not only the army camps and so forth, but the fuelling of ships. I think the minister should tell us something about that. He rose a little while ago, interrupting a previous speaker, and asked: Does my hon. friend know that we are building more merchant ships in Canada to-day than ever before, even more than Great Britain? That being the case, might I also add that these merchant ships need coal. Are they going to get it? I wonder what it would mean if this country should suddenly realize that ships cannot sail from our harbours because they have no coal.

Mr. EVANS: Did the hon. member ever hear of oil burners?

Mr. HANSELL: Who piped up then?

Mr. EVANS: I asked if you ever heard of oil burners.

Mr. HANSELL: I cannot hear what the hon. member is trying to say. Oh, well, it is all right; I imagine it was not anything very important he asked me anyway.

Mr. EVANS: You would not be able to answer it anyway.

An hon. MEMBER: It was about oil burners.

Mr. HANSELL: I asked the minister about that, and he said that some of the ships were fuelling with oil but that many were fuelling with coal. Perhaps there is an oil emergency too. Does my hon. friend recognize that? Does my hon. friend recognize that Canada has oil, but that it is under the ground and that our administration in years gone by have so lacked foresight that they have not been able to get it out of the ground? Does my hon. friend know that? Not only must coal be supplied to our armed forces, but it must be available to our industries, or the consequences will be serious. The third category is the domestic consumer. Are the people of Canada to be cold this winter? These are three things the minister should tell Canada: is he going to guarantee that our armed forces, our industrial areas, and our domestic consumers will be supplied?

In respect of man-power in coal mines, I know of course that the minister appreciates there is difficulty in that regard. But that difficulty would not have arisen if the present administration had taken a long-range view of a proper and adequate national man-power policy. When war broke out, coal miners volunteered for the services. Many of them did so because they could not get full-time employment in the mines; they said, "We will enlist, we can make more money; at least, our families will be cared for. The coal mining industry is too uncertain; it is a hit-or-miss proposition". Accordingly many of our coal miners volunteered. I wonder whether the minister can tell us how many coal miners are in the armed forces, and how many are overseas. I do not believe he can. I challenge him to tell us.

An hon. MEMBER: Can you?

Mr. HANSELL: No. I am not administering this country.

Mr. MITCHELL: Another straw man.

Mr. HANSELL: We had a national registration some years ago. Men had to report their employment, their trade.

Mr. JOHNSTON (Bow River): That was to find out how they would vote.

Mr. HANSELL: I do not know whether, when a man joins the army, he states what his civilian occupation is. But if the federal administration is what I think it should be, it should know exactly how many men of the different trades there are in the armed forces, and where they are.

So much for that. Not only did many coal miners volunteer for the armed forces, but many of them went into other kinds of work because they could get more pay there. I know that a great many Crowsnest pass miners moved out to Vancouver or some other coast city and engaged in shipbuilding work. It may have been an admirable thing to do, I do not know; but at the present time we are short of coal miners, and I do not know whether the government intend to urge these coal miners to return to their work. Perhaps they will. What we are now facing is an emergency, and there is compulsion with respect to the moving of men from one industry to another. But if coal miners who left

their jobs, sold their homes, pulled up stakes and moved to another part of the country, as I know some of them did, are now to be recalled to go into coal mining, it is only fair that the government should compensate them for loss on the sale of their homes and whatever other expense may have been involved, to the extent of every cent of loss. Another thing the government should do is to assure these miners that when they return they will have proper employment, not only for the duration of the war but after the war. I know that some will say, "How do we know that we shall be able to get markets for our coal after the war?" Well, the greatest market for Canadian coal is right here in Canada, and if this country had a proper national coal policy, every mine in the country could be running at full capacity and employing its full number of miners during peace time.

Another factor which might cause some shortage or accentuate the present national emergency in respect of the production of coal is that much of our coal has been coming from the United States, which is now experiencing serious labour difficulties. What the Americans do is their own business; I shall not say anything about that. But comparatively speaking, Canada has been fortunate in that there has not been more trouble in the coal mining industry of Canada. I am not going to give the Department of Labour or the government any credit for that.

Mr. MITCHELL: We would not expect you to.

Mr. HANSELL: I believe that any credit that is due is coming to our own coal miners. There have been one or two small local upsets, but no general disruption of the industry has occurred, and I believe the coal miners are to be complimented upon the fact.

There is a tremendous man-power problem in respect of this industry, but I am not going to blame the minister for that. It dates from a long way further back than the minister's connection with the Department of Labour. He inherited the situation; it is a baby which was left on his doorstep.

Mr. JOHNSTON (Bow River): And he is not a very good papa.

Mr. HANSELL: He may not be a very good papa. As a matter of fact it was not a very nice baby they left there for him to handle. I am, therefore, not going to blame him so much. It has been said that there has been a sort of bungling man-power policy. I know the minister does not like that term; he has evidenced his dislike of it before. I am not saying that he has bungled; I am saying it dates a long way back and has its root cause in the fact that the government has been lacking in foresight with respect to the man-power policy of this country ever since the war began.

What was the situation before the war started? The coal mines of this country were operating on part time; men were on relief, and we could not dispose of our coal. Of course we realize that we did not need as much coal then as we need now, but we know also that the United States coal combines held a good share of the Canadian market. Even in those days if there had been a proper national fuel policy, the coal mines of Canada could have been operating at full capacity, and there would have been no need for coal miners to leave their jobs and go into other branches of war industry. But, you see, our governments—not only the Liberal administration of to-day but other administrations in days gone by—seem to have listened to the voice of the big business combines. They have sat at the megaphone and desired to hear their master's voice rather than the voice crying the needs of Canada as a nation.

Since an hon. member across the way interrupted to talk about oil, Mr. Chairman, I suggest that the same situation has existed in respect to oil. The other morning we read in the newspaper that a huge oil development was taking place in northwest Canada. That announcement was made by United States army officials. I placed a few questions in that regard on the order paper, as Mr. Speaker likes us to do, and what sort of answers did I get? I asked:

1. Is there any portion of country in Canada's northwest which is under the control of the United States army, and if so, what portion of territory, and what are the boundaries?

The answer was:

There is no portion of Canadian territory under control of the United States army.

I think there is a technicality here by reason of which the government does not have to answer, yes.

2. Is there any war-time oil development taking place in the Fort Norman area. . . .

The answer to that part of the second question was in the affirmative; in other words, yes; there is an oil development going on there. Then I went on to ask:

. . . and if so, how many oil wells are being drilled, and is such development being done under Canadian or American military authorities?

The answer was:

It is not in the public interest that the number of wells should be disclosed. The project is being carried out by the United States army with Canadian approval and cooperation.

Like other members of the house I become nauseated at times when the government persists in saying that it is not in the public interest to reveal this or that. I see no reason why the Canadian people should not know the extent of the oil development being carried on in the Canadian northwest, but the Prime Minister says it is not in the public interest for them to know. I think it would be a little more to the point if the answer had been: It is not in the interests of the Liberal party for us to tell the country. Then I asked:

3. Is a pipeline being constructed in any part of this territory, and if so, is this being done under control of Canadian or American military officials?

The answer was:

The construction of a pipeline is part of the project mentioned in the answer to No. 2.

4. If a pipeline is being built, what is the extent of this pipeline?

The answer was:

It would not be in the public interest to answer this question.

They do not want to tell us if the pipeline is three miles or three thousand miles.

5. If war-time oil development is taking place in this territory, is equipment and men being supplied by Canadian or American authorities?

The answer was:

Both.

6. To whom or what firms have the oil rights been sold or leased in this territory?

Well, they open up here just a little. This is the answer:

For many years the Northwest Company, a subsidiary of Imperial Oil Limited, held five leases and one permit obtained under departmental regulations authorized from time to time by order in council. The wells on these have been producing oil supplies for use in the Northwest Territories. These leases and permit now stand in the name of Imperial Oil Limited and that company has obtained thirty-six permits under regulations authorized by order in council P.C. 742, dated January 28, 1943.

To me it seems strange that it should take a Pearl Harbor to bring the United States authorities to explore the wealth of this nation while we could not get any development done in order to supply our own country with oil and gasoline in this emergency. Of course it is no secret; the United States military authorities are doing this work to save themselves, and incidentally we are letting them do it to save ourselves. But what have governments been thinking about in bygone years, that these vast reserves have not been developed for our own use?

Let us get back to the coal mining industry. I believe there are three essential needs to be kept in mind in endeavouring to find a solution of this coal mining emergency. The first is that there should be made available sufficient man-power to man these mines. I do not think I need to elaborate on that point; the minister recognizes the importance of it. A second very important point in the solution of our national coal problem to-day, as I see it, is that there should be an orderly and adequate supply of necessary new equipment for the purpose of expanding our coal mining industry, if possible. I should like to say just a word about that. Last night I asked the Minister of Munitions and Supply if he had subsidized any coal mining industries in order that they might expand their plants. His reply was in the negative, but he went on to say that if any coal mining industry thought it could expand its plants, he would be the first to help it, and he would not let finance stand in his way, that it would have his assistance in doing so. Well, I was very glad to hear that statement, so that I asked the minister what procedure it would be necessary to follow. His reply was, "Just let the secretary of the coal mining company write the emergency coal production board." That is all right Mr. Chairman; but once again, as you see, the coal mining industry has to take the initiative; some secretary has to do it. Surely, if there is a fuel emergency in Canada, the government must accept some little responsibility in taking the initiative in that regard. These coal mining companies may or may not make application, but while they are making application, that does not help solve the immediate problem. Some expert has to go out; some engineer has to survey. They have to make their report. The matter must go through the various channels of red tape, and perhaps this coal mining company will be able to expand a little next fall, or a couple of years afterwards, I do not know when. Certainly something should be done immediately to increase the output of coal in Canada, if that is possible. Let us remember that there must be a time lag in this. The coal mining industry in Canada is not equipped to put out more coal. In fact, if anything, its coal mining equipment is wearing out.

Another thing is that it must be remembered that the coal mining industry of Canada just cannot perform miracles. There is a third important matter in connection with the solution of the national coal emergency, namely, the matter of distribution. I refer to a proper, adequate and orderly distribution of coal throughout Canada. I am told that to-day some shipments of coal are left unloaded in coal dealers' yards. Why? Because man-power cannot be obtained to do the unloading. Yard staffs are being depleted. There may be

a man-power situation right there. Demurrage is charged on cars of coal left loaded. Undoubtedly delivery trucks are idle because there is not the man-power required for their operation. All these matters may seem tiny; nevertheless I suggest to the minister that the orderly distribution of coal should form part of the national coal policy of the country. Not only should the coal be got out, and not only should the men be put to work, but there should be supervision to see that it is adequately distributed, so that no city, town or hamlet will go cold this winter.

Before taking my seat I would say that there should be a little more coordination among government departments. When it comes to the man-power problem, as it affects coal mining, I am quite certain one could discover that there is not sufficient coordination among the three defence departments on the one hand, and the Department of Labour on the other, under which the national mobilization board operates. I have a point in mind which leads me to that belief. This is the case of a man who, although in the army, has certain deficiencies which prevent his going overseas. He is serving in what is known as the disposal corps. I am not sure that I know the functions of that corps, but I would fancy it is sort of a clean-up organization. This man is a coal miner, holding his first-class papers. He applied for leave of absence to go back to the coal mines. I have regarded this case as a legitimate one, because the man in question had an elderly widowed mother who was in ill health and living alone. His home and that of his mother was in a coal mining town. This man had received a number of leaves of absence. He had gone back to the coal mines, and each time his leave expired he made his report. On a number of occasions leave was extended. This condition obtained until about six weeks ago, at which time, so I am informed, the national resources mobilization board recommended to the Department of National Defence that his request for leave to return to the coal mines be not granted. The result was that he was returned to the army, and so far as I know he is still there.

But what happened? Within a couple of weeks of the refusal of this man's application to return to the mines, the Prime Minister ran to the microphone or to the press announcing a national coal emergency in Canada. Surely, if it were known to some members of the government that within a few days or weeks we would reach the stage where a national coal emergency would be declared, then all departments of government should have known about it. Surely the mobilization board should have known, and a recommendation of that kind should not have been made. This leads me to believe that there is not proper coordination among various departments of government in respect of this matter.

I close by taking just a little legitimate credit to this group, for the stand with respect to man-power it has taken in the past. This is the one group in the House of Commons that has had some foresight, even dating back to pre-war days—and it is the only one. This group has never had to retrace its steps. We have never had to change our policy.

An hon. MEMBER: You never had one.

Mr. HANSELL: We shall not have to retrace our steps, and we shall not have to change our policy, because we know where we are going.

Mr. GRANT: You never had a policy.

Mr. HANSELL: Hon. members across the way may laugh—

An hon. MEMBER: No wonder.

Mr. FOURNIER: (Maisonneuve-Rosemont): If we laugh it is because we do not want to cry.

Mr. HANSELL: The hon. member who might be known as Count Haw-Haw, might haw-haw a little bit. Well, let him haw-haw about some of the things I shall say. It was only a few years ago that this group advised the government it was possible for the country to provide large sums of money.

Mr. CRUICKSHANK: Twenty-five dollars a month?

Mr. HANSELL: What did my hon. friend say?

Mr. CRUICKSHANK: Twenty-five dollars a month?

Mr. HANSELL: Yes, twenty-five dollars a month. Mr. Chairman, my hon. friends who cry out in that way should wake up to the fact that we are supplying dozens of times twenty-five dollars a month, and we are supplying it, not to feed the people or to build their homes, but to make munitions of war, necessary as they are, to be sunk to the bottom of the ocean, or blown into the air. I say to my hon. friends that if it can be done for that, why can it not be done to bring Canada to a place where she will have developed a really Canadian civilization. Instead of that, what did we do?

Mr. CRUICKSHANK: Talk!

Mr. HANSELL: I will tell you what the government should do; they should hang

three brass balls on the top of the peace tower, so that people who pass by may know that we have been put in pawn to the rest of the world! That is what we had better do. We said we could issue money. The government is now doing it. They cried out, "Inflation!" We told them they could handle inflation, by a proper system of price control. "No, no!" said the Minister of Finance, "I will never stand for price control in Canada!" Within a year after he had risen in his place and said that they put in price control. That is what we told them they would have to do, and they did it. We told them they should subsidize industry, and what are they doing to-day? They are subsidizing industry by the hundreds and by the millions of dollars.

Mr. JAQUES: We said there should be a total war.

Mr. HANSELL: When the war broke out we said that we should not fool ourselves, that this war would be a long one, that we had better organize for total war.

Mr. JAQUES: Nobody knew where the money was coming from.

Mr. HANSELL: The Prime Minister of Canada was more interested in winning elections than he was in winning the war.

An hon. MEMBER: Oh, nonsense.

Mr. HANSELL: My hon. friend may say, "Oh, nonsense," but anyone that keeps half an eye open can see what has happened in Canada to-day. I knew that as soon as this group took a little credit for what it advised the government it would have to do, the pill would be too bitter for some private Liberal members to swallow.

Mr. CRUICKSHANK: It certainly would.

Mr. HANSELL: I am going to ask the minister to answer this question, to give this country an adequate answer if he can. Is the national coal emergency problem being solved? How is it being solved in respect of manpower, increased output and adequate and equitable distribution of coal? Let us remember that within two or three months cold weather will be upon us and then, if this problem is not solved, it will be an emergency indeed.

Mr. GILLIS: Mr. Chairman, I listened with a great deal of attention to the oration the minister delivered this afternoon, and I wish to compliment him upon his presentation. It was as comprehensive a survey of the department as it has been my pleasure to listen to since I have had the privilege of sitting in this chamber. I say that regardless of the fact that the Secretary of State (Mr. McLarty), who is sitting behind the minister, also made some pertinent statements while he was Minister of Labour. I think he laid the foundation for the job the minister did to-day. I am sorry I cannot agree with everything the minister said. I am not going to attempt at this time to discuss the many ramifications of his statement, but for a few minutes I should like to deal with one aspect of what he said. I believe this is the problem which is causing the Minister of Labour (Mr. Mitchell) and his genial undersecretary the greatest amount of anxiety and is one they would like to solve. Whether they have the authority to put into operation the necessary measures to solve this problem successfully, is a matter that will have to be determined by themselves.

This evening the hon. member for Vancouver East (Mr. MacInnis) discussed briefly the question of union recognition, a matter in which I am particularly interested. This problem is perhaps in the same position to-day as far as solution is concerned as it was when I first heard it discussed in this house in 1940, except that it may be more complicated. Many of the things that have been done since the outbreak of war have caused considerable confusion, and the complicated machinery that has been set up has retarded any progress in the right direction. For a few moments I should like to take the minister back over the trail and to try to draw the picture as I see it and have seen it for the past three years.

Over the week-end I sat in as a spectator at a conference of some 550 delegates who represented the trades union movement of Ontario. They were attending this conference irrespective of their union affiliations, they represented the C.I.O., the Canadian congress of labour and the A. F. of L. There was a unanimity of opinion because they had a common problem to solve. The thought that was uppermost in the minds of the delegates, section by section, was the establishment of industrial democracy. Democracy is not something that you can discuss in the abstract and let it go at that. We live in a democratic country; we are fighting for democracy and freedom; democracy is something that lives and must be exercised in the lives of the people in all phases of society. These men were discussing the industrial problems of Ontario, and they complained that democracy for the worker did not exist, regardless of all the platitudes the employers of Ontario have put out in advertising, in appeals to workers during victory bond campaigns and so forth.

The Department of Labour is simply an instrument of the government to administer policy. I do not believe in pounding the minister or any other official of the department on account of the policy that is being administered. I think that is a wrong attitude to take. Any time I hear anyone saying that we should get rid of the Minister of Labour or the Minister of Finance, I always tell them to leave well enough alone, because every time that is done we generally get someone worse. They never make any improvement. What you must do is to change the policy that is being administered. If you do not do that, there is no use in bringing in someone else thinking he will do a better job.

Mr. MacINNIS: Is the hon. member suggesting that the present minister is worse than the former one?

Mr. GILLIS: I leave that to the imagination of those who are listening. I am not going to make any accusations. I think the initial mistake that was made was to pass order in council 2685, which in very clear language gave the workers the right to organize. That order in council was nicely written, and it is a credit to the Secretary of State since it was during his regime that it was passed. It contained very nice language.

Mr. MITCHELL: I helped to write it.

Mr. GILLIS: The minister did a very good job. The mistake that was made in passing this order in council, as well as the other 35,000 orders in council that have been passed since the outbreak of war, was that it was not given legal status. It should not have been left simply as a declaration of policy because it created the impression in the minds of the workers across the country that they had the right to go out and establish collective bargaining based on that order. By giving that order legal status; by making it mandatory, I think you would go a long way toward solving the problem with which we are confronted at the present time.

I have said on many occasions that since the outbreak of the war I did not think there had been a strike in this country where the workers had gone out because they had any desire to participate in a strike. I do not want to go through them all and thresh old straw but if you start off with Kirkland Lake and go on from there and examine all the representations that have been made and travel the road followed by the workers since, you will find that the legislation was the determining factor in bringing about the strike at Kirkland Lake. Although that strike took place two years ago, I think it is not too late to point out that if the employers at Kirkland Lake were as loyal as the workers to the interests of this country and had recognized their responsibility in this serious war situation, there would have been no strike there. The government had appointed a commission headed by the man who now heads the national war labour board, Mr. Justice McTague, and that commission brought in a unanimous report recommending the miners' and smelters' union as the bargaining agency. But the employers at Kirkland Lake defied the laws of Canada and paid absolutely no attention to a government appointed board whose findings were implementing P.C. 2685. That strike was not brought about because the workers wanted to participate in it; they were forced to strike because the employers refused to recognize the laws of Canada and the findings brought in by that government-appointed board. You can go all through the piece and you will find that the same situation prevails. There is a reason for it, and this is my own opinion. I honestly believe that the employers in this country are not thinking in terms of winning the war, as the workers are. They are working on a long-range programme, and they are more concerned with their position when this war is over than they are in forgetting their own immediate problems and making an all-out effort to bring this war to a successful conclusion as speedily as possible.

I say that the orders in council which form the basis of the government's labour policy are not an accident. They are a formula upon which the employers are working to keep the workers in an unorganized state, so that the employers may be in a position when this war is over, to dictate the labour policy of this country. I am not going to make that statement without qualifying it.

When I use the word "formula" I mean this. The formula upon which company unions were built in the United States for example, has been summed up in a very short sentence, as follows:

> The fastest way to retard the growth of the trades union movement is to recognize it in principle, render it impotent, and do not allow it to function, and it will die of its own volition.

That formula is recognized in principle in P.C. 2685, which was followed by P.C. 7440, which partly tied up bargaining rights and restricted the right which had been exercisable by unions prior to its passage. That order in council was followed by P.C. 8253.

Mr. MITCHELL: By P.C. 5963.

Mr. GILLIS: No; P.C. 8253 followed P.C. 7440, and it further extended the restrictions, set up the bonus, and froze all wages at pre-war levels. That was not accidental. These things were well thought out by the heads of certain industries who exercise influence on certain boards. I said I was expressing my own opinion, but my analysis, I believe, is based on common sense. I think that order in council was designed to keep wages at their pre-war level, so that they will be at that level when the war is over. That is the position the employers want to be in. The order in council means that the bonus goes off as soon as the war is over, but no one has passed an order in council saying that the cost of living will go back to pre-war levels when the war is over. Those wage rates are wage rates that should not be frozen upon any country. That order in council, P.C. 8253, after people had got used to it, slowly but surely prepared the minds of the industrial workers for what I term dictatorship, because when you get persons to accept direction from a certain quarter over a period of time, they gradually cease to struggle against it. The employers of this country realize that from an organization point of view the Canadian workers are in a very weak position. Perhaps only sixteen per cent of those who are eligible for membership in trades unions actually belong to a union to-day.

Then they reached their arm in and took control over the franchise within the unions in P.C. 7307. I am not blaming the minister for the passage of these orders in council. My accusation is that the influence of the employers was sufficiently strong to have this formula worked out and passed along to someone who administers it. The government, of course, in the final analysis must bear the responsibility. Under P.C. 7307 the Minister of Labour has the right to determine how the vote shall be taken, who shall vote, how the vote shall be counted and scrutinized. There is only one instance that I know of where that power was exercised in a way that was detrimental to the best interests of the workers and to peace, order and good government in the section of the country concerned, and that was in Kirkland Lake, where that privilege was absolutely abused. I am not saying that it has been done since. What I am trying to point out is that every privilege and every right that the unions had under the laws of democracy has been usurped.

Then, of course, section 502A of the criminal code is supposed to give the workers a certain protection against discrimination. I am not a lawyer, but I have seen this issue tried in the courts and it is impossible to get a conviction against an employer under section 502A. So that there is no protection there.

That formula has destroyed a very important section of organized society, the working people of this country. It is that formula against which I am trying to warn the people of Canada, because once you get a dictatorship over one section of society it is reflected sooner or later on every section. When you allow the liberties of one section of society to be taken away from them unfairly, it is not long before your own turn comes and you travel the same road. The formula that established company unionism I see clearly pictured in these five basic orders in council which frame the policy of the department. Any time the workers have a problem and appeal to the department, the department must take them through that formula. The net result is that frustration and delay occur, and later on the men walk off the job. Nothing else can happen. The steel walk-out was on that basis. After twenty months of negotiations; after travelling through all that machinery, the men went on strike. There is a situation now in Galt, Ontario, which has not yet been settled. Perhaps there have been mistakes on both sides. Nevertheless, there is a serious interruption of work and a clash there.

The machinery as it exists at the present time makes it impossible to settle the matter, unless someone is big enough to exercise common sense and to say what is the solution of that problem. The solution of that problem is the exercise of democracy, the taking of a vote. That is the answer, and any employer who is not prepared to accept that principle and to give the workers the privilege of voting on that question is not a democrat and does not believe in the exercise of democracy. I do not care about tags; I do not care what tag they give me—C.I.O., A.F. of L., or Canadian congress of labour. John L. Lewis has taken us around by the ears so much that I do not know where we stand on these things. I sometimes think I am in the middle of the road, but it is immaterial to me. It is the principles of the organization that I stand for, and regardless of these tags that are hung upon them, the rank and file of the workers in any section of industry, in any of these organizations, are all fighting for the same thing, the right to the means of livelihood. Where there is a jurisdictional dispute I would be prepared to take exactly the same attitude with them as with the employers: You fellows cannot agree among yourselves. Fine. We will take a vote and settle this thing, and it will be settled on the same basis as that on which you elect

your members of parliament and other representatives in other departments of organized society. No favouritism. That is exactly the basis on which it should be done. It is simple; it is plain; there is nothing to it. Take this Galt business. I have gone over the reports, both majority and minority reports, and I listened to the discussion on Sunday. It was focussed on that very question, and I think the Department of Labour should take immediate steps to see that the situation is handled in that way.

I am a little bit afraid of the way in which things are going. Labour is not making progress. You are facing a bad situation. The Minister of Munitions and Supply said about a month ago that they were changing their lines of production and that there would be interruption in plant after plant, retooling plants, and considerable unemployment for the next three or four months—that was his statement—and in the meantime, where you throw people from one section of industry to another and attempt to route them around, in an unorganized state, you have a problem on your hands.

The greatest asset you can have is to have your organization set up properly. Suppose you want to change a steel plant in Sydney to-morrow or over at the Sault. Your shortest cut and fastest way of doing the job is to get in touch with the union officials. They will do the job more effectively than anyone else I know of. But when you tackle a plant that has no organization, where the workers mill around in any direction, and you send a selective service officer in there, or an official from the labour department, to make that transfer or change, then you have a problem which it will take a long time to solve. You have suspicion and lack of direction. People do not want to move, and there is no direction. But that does not exist where workers are organized. Look at Australia, New Zealand and Great Britain. Why, collective bargaining is considered just as necessary to those countries as the functioning of our parliament here to-day is to us. It is part of the parliamentary set-up of those countries, and it is utilized to the fullest extent. I cannot understand, therefore, except for one reason, why the employers of Canada take the attitude they do in keeping their workers unorganized. There is only one answer, and it is this: I will get as much as I can during the process of winning the war. We will establish our controls in behind the scenes. We frame the policy upon which the workers will be kept disorganized, and when the war is over we shall be in a position to control not only from the top but from the bottom, through the medium of plant council, superintendents and so forth, and the workers are not going to share in the democracy that we are fighting for overseas to-day. I know the minister is thinking about this. He is a trades unionist of long standing, and he realizes the significance of what I am saying on this question of the right of workers to sit around a conference table and to elect an agent who will sell their labour power to the boss. He said it was fundamental; that it was part of the set-up. Well, then, give legal status to order in Council P.C. 2685 and proclaim it and say that it must be accepted, otherwise there is a violation of the laws of the country. If it can be done with all the other orders in council that have been passed, it can be done with this one. Eliminate these disputes from all sections of the country These men want to elect someone to sell their labour power.

While I am on that subject, the *Commercial Intelligence Journal* of June 5 had an article from which I should like to quote. In New Zealand it is part of their regular set-up, part of their employment articles, part of their selective service regulations to recognize trade unions. I quote:

> Employers in essential industries must notify the district man-power officer of the names and addresses of all new workers. They are relieved of the responsibility, however, of ascertaining whether a man is a member of a trade union before engaging him. Now all workers in essential industries are to be considered members of an appropriate trade union and notifications to the man-power officers of names of new workers will be accessible to trade union secretaries. If a worker does not pay his trade union membership fee after reasonable requests it may be deducted from his pay.

Those are instructions right from the government to their selective service officers.

Mr. MITCHELL: One has to be a member by law.

Mr. GILLIS: That is what I am pointing out, and I think the same thing should apply to Canada.

There is another point I wish to make and I am not saying this for the purpose of arguing with the minister. The minister said this afternoon that within his department labour had representatives on practically every section of the department, administering regulations. That may be true. They may have representatives sitting in; I am not quarrelling with that; but they are not on the basis where they can be considered as representing the viewpoint, the hopes and the aspirations of the organizations

that sent them there. They are there in an administrative capacity or in an advisory capacity. They have no say in the making of the law. That is the point I want to make.

Mr. MITCHELL: I do not wish to interrupt, but the governor in council and this chamber are the only people who can make the laws. That is fundamental. First of all, you have to be elected, and then of course you have to be called into the government. You have to have the two agencies. I know of no country where an individual belonging to an organization, whether it be employers or employees or farmers, fashions the laws. All they do is merely to advise. The final responsibility for the safety of the state must be with the government and this parliament.

Mr. GILLIS: Yes; I agree with that. The minister says he does not know of any country in the world where the laws are made except by members of parliament and the government itself. We are living in one where that is done, right in Canada. That is exactly what I am quarrelling with. Your orders in council that are being passed have the same effect as the statute laws and are not drafted by the Minister of Labour or by any other minister, and they do not come before this parliament for ratification. Your emergency fuel production board formulates laws that will govern the producing of coal; and so on through each department. Your labour representatives are not given that privilege. Industry have their representatives in framing these orders in council.

Mr. MITCHELL: Not as far as my department is concerned.

Mr. GILLIS: I am not now arguing with the minister; I do not know. But I am saying that labour is in an unfortunate position from the viewpoint of having any influence in the making of orders in council or of the laws, of having any opportunity of representing their people on that basis. They merely sit in and take whatever laws are framed by the department or its advisers, and they are placed in the position of having to go out and sell something to the workers of this country which they have no voice in determining. In Great Britain the trade union congress officials sit right in with the war boards which formulate war labour policies. Unless the representatives of labour in Canada can perform a similar function, I certainly would not want to be sent by my organization to take a position in the minister's department and have to justify existing orders in council which regulate labour affairs. The minister has many good men in his department, but these men are placed in a rather impossible position. They are trying to make something work which is not workable, and they are in a sorry position when they face their organizations with a proposition of that kind. Until these fellows are given some opportunity of guiding those who are making the laws through order in council or otherwise, I do not think it can be said that labour has representation on any board that functions, since it has no say in the making of the laws.

Another matter: in making appointments the minister consults with the heads of the congresses, and persons are recommended by these bodies, but when they are taken in here and given a job on a board they are no longer responsible to their organizations. The organization has absolutely nothing to say as to the appointee's activities on the board; yet he has some responsibility to his union. These men should have at least sufficient freedom to give an account of their stewardship to their organizations.

Mr. MITCHELL: Is not the policy of which my hon. friend speaks the policy as far as the British trades union congresses are concerned?

Mr. GILLIS: They go back to their congress.

Mr. MITCHELL: Oh, no.

Mr. GILLIS: Oh, yes; they do.

Mr. MITCHELL: I know whereof I speak. I have gone into that thoroughly; I have also gone into the other matters which my hon. friend has been discussing this evening. With a lot that he has said I agree. But any outside organization cannot in the very nature of things, under a democratic form of government, be responsible for the fashioning of the laws; that is the responsibility of the government and parliament. This principle is elementary. I know the official attitude of the British trades union congress toward this matter. They send in a panel to the government, and the government picks out the members they want. The final authority is the government; they pick out the member they want on a particular board. From then on he is a free agent. I know what is in my hon. friend's mind. He has the United States viewpoint, with their international trades union movement. Like myself, he was raised in the international trades union movement and probably he has that North American viewpoint. When one talks about compulsory bargaining in Great Britain, my hon. friend knows there is no legal basis for a trade union in Great Britain such as there is in the United States.

Mr. GILLIS: I understand that. I am not arguing that point. The point I am making is that the British trades union congress have a policy. They have a policy with respect to this war; and when they send Sir Walter Citrine or anyone else to the government with a proposal for the enactment of certain laws or certain policies, he comes back and reports to the congress.

Mr. MITCHELL: That is, as a delegation.

Mr. GILLIS: No; they have permanent officials sitting in.

Mr. MITCHELL: I know whereof I speak.

Mr. GILLIS: They have permanent officials sitting in framing policies. Bevin is still responsible to his organization. Not so long ago he had some difficulty in justifying certain things which he was instrumental in bringing into the House of Commons. He is still responsible to his organization. These men are not cut adrift.

Mr. MITCHELL: I am not going to argue. This is like being in a local union meeting. But if I might put it in this way, my hon. friend is not responsible to the United Mine Workers of America because he, being a member of them, is a member of the House of Commons. I am a member of the International Union of Operating Engineers, but as minister of the crown I am not responsible to that organization. It just does not add up.

Mr. GILLIS: I think you are. I think, as members of the trades union movement, both yourself and myself are morally responsible in this house and out of this house to live up to the principles, policies and obligations of our organizations.

Mr. MITCHELL: That is another matter entirely.

Mr. GILLIS: No; it is not another matter entirely. I keep closely in touch with what my union is doing, and they keep closely in touch with what I am doing, and any time I rise in my place in the house to make a pronouncement on that industry I am absolutely certain that what I am saying is in accordance with their policy. I hope I shall always retain that loyalty and recognition of the principles of the people who sent me here.

Mr. MITCHELL: That is different altogether.

Mr. GILLIS: In my opinion, when a member of a trades union movement gets away from that principle, he is slipping as far as the movement is concerned.

[Mr. Mitchell.]

But I am not going to argue that point. The point I wanted to make was that labour, in my opinion, has no representation on these boards. I look upon them as merely, I do not want to say apologists, for legislation for which they are not responsible. Unless they are privileged to sit in with the minister or with those who are framing orders in council and have at least some recognition or have included in the regulations some of the principles which the organized movement supports, they cannot morally go out and support legislation which completely nullifies the whole work of the movement.

Under order in council P.C. 5963 the cost of living bonus needs, I think, reexamination. I know the minister is well aware of the fact that it is not uniform, and I do not believe it is possible to establish in Canada from one coast to the other a satisfactory cost of living bonus based on the figures compiled by the bureau of statistics. I think what the minister will have to do is to have a regional cost of living bonus arrangement set up, and when his board is determining wages in a certain section, the cost of living index as applicable to that particular section is the one on which it should base its findings when recommending a cost of living bonus. Go to the eastern end of Nova Scotia and compare the cost of living since the outbreak of war with what it is here or in certain sections of Ontario, and you will find a great discrepancy. The index as handed out by the bureau of statistics is certainly not applicable to that section of the country.

With respect to labour management committees, I agree with the hon. member for Vancouver East that the Department of Labour has missed the boat in not establishing national industrial councils for every section of industry in Canada, as exemplified by the building industry. That was done early in the war; it has worked out satisfactorily, and there has been little difficulty in that industry. I think the same thing would apply in any branch of industry if they were granted the right of organization—the building industry is organized—and if you had a national council set up, so that you could call in representatives of the unions and of the employers and work out formulas in connection with the re-tooling of plants and the transfer from one kind of production to another. That would be a wonderful thing to have to-day.

Mr. MARTIN: The present minister was the organizer of that construction council.

Mr. GILLIS: I know that, and it is unfortunate that it was not done in every industry. If we could call in representatives

of the employers and of labour in the steel industry, for example to work out plans for the re-tooling of plants, the shuffling of employees to other lines of work necessary to the war effort, and so on, it would certainly facilitate the work of the selective service officials.

The hon. member for Macleod spoke at some length on the fuel situation. I am not going to discuss that matter to-night because I went into it to a certain extent with the Minister of Munitions and Supply. I gave him my opinions; I told him what I thought was wrong and what I thought would have to be done to meet the situation. I believe that matter is now entirely in the hands of Munitions and Supply; the Department of Labour has nothing to do with the emergency war production board, so that I am not going to discuss that problem now. However, I would urge the minister to use whatever influence he has in the cabinet to have legal status given to order in council P.C. 2685, and then I would urge that he use every means at his disposal to settle the trouble at Galt. As I saw that situation on Sunday, it may develop into a very difficult matter to handle; many things may happen in connection with it. It is not good enough to say this side was wrong, or that side was wrong. Perhaps both sides were wrong; but still the problem exists; people are suffering who should be working and producing, and the war effort is suffering. Every effort should be made by the Department of Labour to settle the difficulty. It is an unfortunate situation, and the solution is so simple that it is hard to understand why such a situation should be allowed to continue. So that I would urge the minister to do what he can to settle that dispute. Then if he has any influence with national selective service and with the Department of Munitions and Supply, I urge him to exercise that influence to the end that the 289 men who were discharged from the Toronto shipyards and who, in my opinion, were dismissed illegally by their employer, without consultation with selective service, may be put back at work as key men in a key industry at this time.

Mr. NICHOLSON: I have read with considerable interest the statements the minister had placed on our desks this evening, and I should like some further information with regard to this summary of mobilization statistics. I think it is somewhat misleading to term this information statistics. For example, the summary states:

> The difference of approximately 380,000 between the number of men sent notices-medical, and the number examined is accounted for by notices undelivered, men who joined the forces voluntarily either before or on receiving notice-medical, men sent notices to whom the regulations do not apply, and some defaulters. Men registered from January to March 15, 1943, as not receiving notice-medical narrows the difference between notices sent and men examined. But without doubt voluntary enlistments account for a very substantial portion of the total difference.

Then it goes on:

> The reduction of approximately 319,000 in the number called for military training, compared to the number examined, is accounted for by men being medically unfit, men being granted postponements—and again (but no doubt fewer in number) voluntary enlistments. Defaulters would also add to the difference.

I think we should have some further information with regard to the difference of 380,000. A national registration was taken in 1940, when the people in all parts of Canada cooperated generously to give the government the information that was desired, and very large amounts of public money have been expended in maintaining the services. It seems hardly possible that 380,000 men could be notified to report for medical examination without some more definite information as to why they did not report. The figures by administrative divisions are as follows:

Administrative divisions	Medical examination	
	Number called	Number examined
"A" London	74,578	43,479
"B" Toronto	189,205	100,747
"C" Kingston	60,008	38,594
"D" Port Arthur	12,189	7,479
"E" Montreal	210,245	140,508
"F" Quebec	107,883	63,346
"G" Halifax	43,113	29,172
"H" Saint John	33,303	21,743
"I" Charlottetown	8,167	5,061
"J" Winnipeg	67,394	43,754
"K" Vancouver	72,147	46,394
"M" Regina	69,000	38,956
"N" Edmonton	41,243	29,409
Total	988,475	608,642

As I have said, we would expect an official document to give more specific information that is contained in this table. For example, I think we should know how many defaulters there were in the 380,000. I should like the minister particularly to give information as to the number of notices sent to men who at the time had been reported killed in action. I have had one case of this kind brought to my attention, and several hon. members have spoken about the same matter. There was one case of an airman who was reported missing and presumed dead. After his mother had received this sad information, a notice came to the home directing this young man to report for his medical examination. Would the minister give the committee the number

of defaulters according to administrative divisions, and also the number of notices sent out to men who have been killed or reported missing?

The CHAIRMAN: Order. Before the minister answers, I should like the opinion of the committee, as it was obtained in connection with the other departments which have been under consideration. The committee seemed to be satisfied with the general discussion we had to-day, which no doubt will be carried on for the first one or two items to be called. I should like the consensus of the committee as to whether or not an item should be called now. I realize it will have to be done as it was done in the other departments. I believe the committee wishes to apply the same principle at the present time.

Mr. NICHOLSON: The minister made a general statement this afternoon, and he has given specific information. Before we proceed to the detailed discussion he should give us some additional information. That is why I raised the question to-night, so that we might have this information available when we come to this particular item.

Mr. SENN: A number of hon. members are not present to-night on account of an important dinner held in connection with the meetings of the parliamentary association. I am sure some hon. members would like to speak to this question, and I hope the matter will not be closed until they have the opportunity to say something.

Mr. CHURCH: I think we should leave the matter open.

Mr. MITCHELL: To keep the discussion in order, I was going to suggest that I will get the information for which my hon. friend has asked in ample time for him to ask other questions. If, in the early part of the committee stage, we are to go on a roving commission, then we are likely to be here for a month. I thought that to-day and perhaps to-morrow certain members on both sides of the house would make statements. After that, many of the questions they have in the backs of their minds will come before the committee. Then I can have those questions looked into, and answers can be given the next day, the same as the other ministers have done. However, in my opinion it is unwise now to go on a roving commission. If we are to start with the estimates, we should keep them in order, commencing with this sheet, and following in sequence.

I agree with the hon. member for Haldimand that some hon. members on both sides of the house who would wish to make statements are not here to-night.

[Mr. Nicholson.]

Mr. MICHAUD: I believe it is agreed that some hon. members who would like to make statements on the broad principles of the question are unavoidably absent. It might be well to leave the matter open until to-morrow. It would be well to proceed as we are now doing, and let any hon. member who wishes to speak to avail himself of the opportunity now offered.

Mr. MacINNIS: This is a regular session of the committee. I agree with the minister when he suggests that we ought to be prepared to go on with the items. If we are finished with the general discussion, we ought to be prepared to go on with the items as they appear. If members are absent, it is their own fault. They know the house is sitting to-night, and they should be here. Let us get on with the business of the house.

The CHAIRMAN: As the committee realizes, in respect of the other four departments much latitude had to be given in the first part of the discussion. I understand fully the point raised by the hon. member for Haldimand, when he states that some hon. members to-night are unavoidably absent. They cannot be blamed for that. It seems to me a majority in the committee wishes to follow a certain procedure. I have noticed that officials of departments have had to be brought in at different times to give necessary information to ministers, and that fact must make us realize how difficult it is for the minister to have at hand all the information required. I would assume, however, that there would be a general discussion allowed at least on the first two items before they are passed.

Mr. CHURCH: A number of hon. members on this side of the house did not know the house was meeting to-night, and I suggest we might as well rise and report progress. This man-power question is the most important matter with which we are faced. A discussion of two or three hours would clear up a great deal of misunderstanding.

Mr. POULIOT: I do not see why the business of the house should be delayed because some hon. members wish to attend a dinner. That is not sufficient reason. If the business before the committee is of such great importance, why do they not attend the sittings, instead of a dinner? We must be reasonable in these matters. I should hope the fullest latitude would be given hon. members in this discussion.

Mr. MacNICOL: Only three members of the cabinet are in their seats to-night. They are just as much to blame as are private

members. They were not told that if they were not here this debate would not go on. I noticed that the officials were being brought in, and I was going to say something about it. They should not have been brought in to-night. This matter cannot be rushed, because many hon. members will have something to say. I am not saying anything to-night, but I am going to see that those who do wish to speak will have some protection.

Mr. POULIOT: My hon. friend will probably agree that we are the finest parliamentary association in this country.

The CHAIRMAN: I believe we should carry on in the asking of questions and the making of statements.

Mr. CHURCH: I had not wished to take part in this debate, but I can tell you this, that as one of the private members in the opposition I am very much surprised at the man-power policy of this government. I saw this war coming on in 1936, 1937 and 1938. I proposed that there should be a national selective service registration, because anyone who could read the signs of the times must have known that Canada would be involved in the war, and that the first thing required would be a national selective service register. That is something we had never had before. The first domesday book set out the population, and the available man-power between the ages of twenty-one and sixty. It is part and parcel of the assessment laws of the provinces and municipalities, and such a register should have been undertaken. This question came before the house on many occasions, but a selective service programme was not decided upon.

Then there was some consideration as to whether we should continue with the voluntary system under the Militia Act, or, in addition, have a compulsory system. When the war broke out, we found we had thrown away our army, navy and air force, and that to a great extent we were dependent upon the mother country for protection. I have no quarrel with the present minister at all. He has been trying to take up the load where others left off.

This government has never had a man-power policy. I remember the recruiting policy as it applied in Toronto shortly after the war broke out. Some of the young people walked in from Aurora and Newmarket, in the dead of winter —I believe the date was January 6, 1940— and landed at the armouries at Toronto. But the doors were not opened until after ten o'clock. The pictures of those young people were put in the papers, and there was some discussion as to the way in which the man-power situation was being handled.

We have gone pretty far along that line when we announce the conscription of high school students between sixteen and eighteen years of age. We have gone a long way when we have brought them under the conscription regulations, because that is all it is. Some may not like the word, but the fact is that we have conscription in this country. We have conscription of man-power. What for? Well, we are told, it is for home defence. We know there is no such thing as home defence. The people in the invaded countries—Norway, Belgium, Denmark, Holland and France—found out there was no such thing as home defence against the axis powers. The government came along and said in an election campaign that as long as they were in power there would be no such thing as compulsory man-power. A vote was held on the policy and programme of the government as announced by the Prime Minister and other ministers of the crown during the election campaign.

What are the facts? We seem to be the only dominion which has been going on in this haphazard fashion, so far as the war and the question of man-power are concerned. I come from an industrial city, one which has made a magnificent contribution. Its supply of man-power was practically dried up from voluntary enlistments. Not only that, but young men from that city enlisted from points right across Canada. That became necessary on account of the arrangement whereby artillery units were formed in one province, infantry in another and air force in another. The result was that many Toronto citizens, and citizens of other cities in Ontario, enlisted at points from Halifax to Vancouver.

The Minister of Labour has a very able assistant in Mr. MacNamara. Mr. MacNamara cleaned up a very bad situation in connection with money for dependents, and he deserves the thanks of the dependents of the soldiers who are fighting overseas to-day. I do not think the government have been fair with the people of Canada. Up to the last month there has been only one national seelctive industry in Canada, agriculture. About a month ago when the clamour rose for more fuel the government passed an order in council. I have known the Minister of Labour for many years, and he brought down a measure concerning the coal industry, making it the second national selective service industry.

They do not have this system of obtaining man-power in the air force or the navy

because there has been a rush of men to those two services. In the army they have what is called voluntary service, and they have draftees for home defence. The work overseas is done largely by those who enlisted volnntarily. Then the home defence was widened to take in Bermuda and other territories in the Atlantic, as well as on the Pacific. I am very much disappointed in the way in which the man-power problem has been handled. There has been no equality of service, nor has there been equality of sacrifice. There will be homes in Toronto where high school children of sixteen, seventeen and eighteen years of age will be taken away when the father is overseas and perhaps the mother in a munitions plant.

I have no personal quarrel with the minister or any other minister, as I have been a friend of his for a long time. But I say to him that he cannot succeed under the present belated system. I want to be fair to the government because I have known no politics since the war started. I have been ready to support the government if they had a total war effort, but they have not had that. I have seen how these recruiting units work around Toronto. It is a case of on again, off again, on again. Then they went to work and put out a lot of advertising, they put up billboards and appointed citizens committees to aid recruiting. I am prepared to say that you might as well not spend any money on home defence because there is no such thing as home defence. We are continually going to Washington for ideas, but what did they do in that country? They put in the draft. Just shortly before Munich the Chamberlain government in Great Britain brought in a system of national selective service.

The programme of the minister is divided into a multiplicity of classifications, and I notice that there are many registers. The one register about which we heard so much was committed to the archives. It is a case of earth to earth, dust to dust and ashes to ashes. The Minister of Transport (Mr. Michaud) is somewhat of a humorist, but I can remember when he and some of his colleagues seemed to be quite pleased that this report dealing with man-power was put in the archives. Everybody had to register and carry around his registration certificate. They even went into the restaurants, theatres and along the streets to ask men for their registration cards. I see a former mayor over there, a very fine citizen in his country who is now sitting behind the minister. I do not know whether he was asked for his registration card, but I have seen men hauled out of hockey matches and football games, and asked to show their cards.

You cannot fight Hitler with registrations. There are no labour unions in Germany; far from it. If the United States had a system like this, they would not have the army they have to-day. What is the policy of the government in connection with conscripting these sixteen, seventeen and eighteen-year-old youths? What is the policy of the government with respect to amateur and professional sport? The minister has failed to give this matter any attention. We should have a national policy with regard to sport in connection with the war. The present head of the Free French has said that there should not be a glorification of sport in connection with war. The figures presented by the minister are just the opposite to what the government has said. The government said that there would be no conscription in any form. That is what they told the electors of this country; that is what they told the people of Toronto; that is what they told the people of my constituency — they were promised that there would be no such thing as compulsory registration.

Then we have a registration of retail and wholesale trade. Is aynone allowed to conduct business? He cannot with the present controls and subcontrols that are in force. We have the Minister of Finance (Mr. Ilsley) saying one thing and other ministers saying other things in connection with national selective service. Mr. Chairman, you have proved to be very popular, and I am sure that if you had had anything to do with it, we would not have the present mixup.

Here is the Minister of Labour bringing down this programme to-day to send our high school population of sixteeen, seventeen and eighteen years of age out into the woods to cut trees while a lot of the government are away out at the country club. I do not know what hours they keep there, but there must be a very large attendance at the country club to-night. I see many seats in the house vacant. Probably a great many members have gone home. If this is the best programme the Minister of Labour can bring down, to draft our high school population of sixteen, seventeen and eighteen years to go out into the woods and chop down trees, for that is what they are going to do, that is a fine exhibition of national selective service. The dog days are here. A lot of members have gone fishing, or will be going soon. The minister is a popular sport. If he goes through some of the departments of the public service, he will find in one

department that over 5,976 officers in the air force who never knew how to form threes were put in uniform the next day and are now marching around the streets and in the department stores taking salutes. There is a large body of good sports on the government benches, many of whom have done good work in the municipal service of this country. I ask if they will rise in their places and say that they are in favour of the present form of conscription in this country. In the olden days it was declared by some of the leaders here that if war came we would have to have a national vote of the people before we could declare war, and one of our own leaders said it, too.

I look at this document which has been distributed among the members, entitled "Statistics on National Selective Service and Man-power." Statistics! That is all we have been getting. We have been fighting Germany on statistics all the time. There has been a regular carnival of statistics. In the early days of the war Britain did it. She dropped tons of literature on the cities and towns of Germany, and a great deal of it was written in the two great languages of this country.

My good friend beside me, the hon. member for Haldimand, seems very bashful to-night, and I see the young member for Fraser Valley in his place at the moment. A little while ago I saw him sitting in the seat of the Prime Minister and then he crossed the floor and sat in our leader's seat for a while.

I want to ask my friends to my left, and we have some good clergymen and good teachers among them, what do they think of this programme of sending our high school children, whose fathers are overseas, out into the woods to cut down timber?

I see magnificent parades around the city streets for victory loan, recruiting and national selective service. Last September there was a line up at 174 Spadina avenue of several thousand men and women to register at the selective service offices there, staffed by a lot of government-appointed officials with no war record. But if you want any kind of help you cannot get it from national selective service. A prominent citizen told me that as soon as he trains a man someone else calls him for something else. I never believed in this scheme of national selective service or in the government's handling of the whole man-power situation since the war began. I have lost all confidence in them. I believe in always telling the people the truth, especially during the war. I believe that one of the cardinal principles of good government is to keep people informed as to what goes on in connection with the war. But the people have not been given the real facts of the man-power situation.

We have Mr. Donald Gordon. He has a man-power policy of his own. Does Gordon's department come under this programme of the minister? I can tell you, no, because he is a parliament in himself. The house of Gordon has assumed the powers and functions of the House of Commons and of the Senate too. It is eleven o'clock, I have not finished.

Mr. KNOWLES: May I ask the minister or his assistant to make clear what items we shall be considering when we get to the stage of dealing with items?

Mr. MARTIN: If hon. members will refer to *Hansard* of March 3 of the present year, they will find at the bottom of page 919 under the general title "Labour", the items which we shall follow in committee. The statement furnished to the members to-day is a further break-down of items in accordance with the practice laid down by the ministers of defence when they presented their estimates.

Mr. POULIOT: I wish a happy birthday to the parliamentary assistant to the Minister of Labour.

Progress reported.

At eleven o'clock the house adjourned, without question put, pursuant to standing order.

Thursday, June 24, 1943

The house met at three o'clock.

PRIVILEGE—MR. POULIOT

CHANNEL OF COMMUNICATION WITH HIS MAJESTY THE KING

On the orders of the day:

Mr. JEAN-FRANÇOIS POULIOT (Témiscouata): As a private member of this honourable house I rise to a question of privilege for the safeguarding of the rights of parliament. I hold in my hand *Votes and Proceedings* No. 92, Friday, June 18, 1943. On the first page there is a letter dated Buckingham Palace, June 8, 1943, and signed A. H. L. Hardinge, private secretary to His Majesty. The first paragraph reads:

> Dear Mr. Speaker,—The King has received from the High Commissioner for Canada a copy of the resolution adopted by the House of Commons of Canada on the occasion of the official celebration of his birthday.

The High Commissioner for Great Britain in Canada is not a channel of communication, and should not be, between our parliament and His Majesty the King. The only channel of communication is His Excellency the Governor General. As the letter from the king's secretary was sent direct to you, Mr. Speaker, I do not see why in the world our resolution was conveyed to His Majesty by the High Commissioner for Great Britain in Canada. It shows once more that Canada is falling to the rank of a colony. If His Majesty is part of our constitutional system the High Commissioner for Great Britain is not. I hope therefore that in future such communications will be sent either direct to one of the secretaries of His Majesty or through the channel of His Excellency the Governor General, who is the viceroy of His Majesty in Canada.

Right Hon. W. L. MACKENZIE KING (Prime Minister): I think my hon. friend must have mistaken the High Commissioner to whom reference is made. The communication, as I understand, was sent to His Majesty through the High Commissioner for Canada in Great Britain, Mr. Massey, and not through the High Commissioner for the United Kingdom in Canada. That is a method of communication which has been followed at times in the past and will be followed in the future.

There are two methods of communicating with His Majesty the King. One method I have just mentioned, through our High Commissioner in Great Britain. That was the method which as a matter of fact was adopted at the time His Majesty was asked to proclaim a state of war existing between Canada and Germany. The communication from the government of Canada was sent to the High Commissioner to be communicated to His Majesty the King. There are other occasions on which communications are sent through His Excellency the Governor General to His Majesty the King. They may be replied to by the king through his excellency. I assume that His Majesty, in having a communication transmitted direct to the Speaker of the House of Commons, felt that it would be an additional compliment to the house and adopted that method.

Mr. POULIOT: If I may be permitted, the High Commissioner for Canada represents the government, not parliament.

[Mr. Pouliot.]

FUEL WOOD

EXTENSION OF SUBSIDY TO DECEMBER 31, 1943

On the order for motions:

Hon. C. D. HOWE (Minister of Munitions and Supply): A few days ago I promised to make a statement with regard to the payment of subsidies on wood fuel. In view of the continuing seriousness of the shortage of firewood the government has decided that the period during which a subsidy will be paid on cordwood production shall be extended to December 31, 1943.

The original plan for meeting the wood fuel emergency, announced on March 4, called for the payment of $1 subsidy to dealers only on commercial cordwood contracted for and cut on or before June 30, 1943, and delivered to a dealer or held to his account after March 5. Under the extension, the subsidy will be paid on the same basis for cordwood cut on or before December 31.

If they have not already done so dealers in wood fuel should arrange immediately to have wood cut for their account. In addition wherever possible they should make arrangements to purchase slab wood from the sawmills. On such purchases the transportation subsidy, which was also announced on March 4, will be paid if the dealer can show that otherwise he could not obtain wood for his customers.

The transportation subsidy can also apply to cordwood cut on or before December 31, the wood fuel controller having been authorized to pay whatever proportion of the transportation costs he may deem proper. To receive the subsidy the dealer must obtain a permit from the controller before he contracts for the supplies. Both the cutting and transportation subsidies will be made available only to wood fuel dealers registered as such with the wartime prices and trade board.

Mr. TUSTIN: Recently I have noticed in the press on several occasions that municipalities are going into the wood fuel business. For instance I noticed in the press only this week that my own home town is going to contract for a thousand cords of wood to protect the families of that community next year. Will the municipalities be paid this subsidy of $1 per cord?

Mr. HOWE: No; it is paid only to registered dealers.

Mr. HANSON (York-Sunbury): Are steps being taken to see that the subsidy of $1 is passed on by the dealer to the producer of the

wood, the man who handles the axe? In my country they are not getting it. I am told by those who are producing in the woods that the $1 per cord is being snapped up by the dealer or the middleman, and the producer is not getting it. That, of course, is wrong.

Mr. HOWE: The man cutting wood and selling direct to the consumer gets the ceiling price for the wood. The dealer must live as well, and the dealer also can get only the ceiling price for the wood. The purpose of the subsidy is to interest dealers in organizing cutting, and to make it possible for dealers to take part in the solution of this problem. Much of the difficulty last year arose from the fact that the dealers did not operate, because there was no margin left permitting them to do so.

Mr. COLDWELL: I understand that when the men who have trucks apply for permits to sell wood, after they have cut it, they are compelled to deliver to a dealer, and are not able to collect the $1 subsidy. I think only a few days ago I sent the minister a letter which I had received from Prince George, British Columbia, containing a statement to that effect.

Mr. HOWE: The men cannot receive the subsidy unless they are registered dealers.

Mr. COLDWELL: They cannot get registered.

Mr. HOWE: That is a matter between them and the wartime prices and trade board. If they are cutters of wood, selling direct to the trade, they are not entitled to the subsidy.

Mr. COLDWELL: But they are compelled to sell direct to the trade because they cannot get permits. I think that is the point the hon. member for York-Sunbury (Mr. Hanson) has in mind.

Mr. MAYHEW: What about groups who have organized as self-help organizations in communities in British Columbia where they are cutting wood? Are they entitled to this $1 per cord?

Mr. HOWE: No, they are not. They are cutting wood for themselves; therefore they are not entitled to the subsidy.

Mr. GILLIS: May I inquire what provincial machinery exists for the administration of this policy with respect to the cutting and distribution of wood, and generally to give effect to the policy announced by the minister? What machinery is set up in each province for that purpose?

Mr. SPEAKER: Order. This matter should not have been brought up under this order; it should have been brought up on the orders of the day. We are on the order for motions just now, and I would ask that the usual procedure be followed.

[*Later*]

Mr. DIEFENBAKER: Would it be in order at this time, Mr. Speaker, to ask a further question arising out of the statement by the Minister of Munitions and Supply in respect to wood fuel?

Mr. SPEAKER: It has been customary to allow a question for the elucidation of reports made by ministers. But I would point out that this is not a subject of debate.

Mr. DIEFENBAKER: The situation in parts of northern Saskatchewan is that there is a great deal of cordwood and wood for fuel available, but the farmers and settlers are unable to finance the work required to get it out. When the matter was before the house on another occasion I suggested to the minister that some financial assistance might be given to these producers to assist them in getting out the fuel. The minister said the matter had been under advisement. I would ask him now whether a policy has been adopted under which financial advances are allowed, secured in a proper way. I feel that in this way a large amount of wood could be made available.

Mr. HOWE: The point raised by the hon. member explains exactly why we are trying to put the dealers in business. It is the duty of the dealers to finance that sort of cutting, and they are doing it, all over the country. I am sure if my hon. friend will ask for the cooperation of the dealers in his area and advise them where help is needed, he will find them ready to finance the operations.

Mr. GILLIS: What machinery is provided in the respective provinces to give direction to this policy? There is considerable confusion. Many letters are being written, and apparently no one knows what the regulations are. I do not know what machinery is provided under which one can ask dealers, or those wishing to cut fuel, to apply this policy.

Mr. HOWE: In each city there is an office of the wartime prices and trade board. If those desiring information will apply to the nearest office of the wartime prices and trade board, they will get the information they require.

Mr. FRASER (Peterborough West): The minister said it was up to the dealers to look after the cutting of the wood. I know three

dealers in my riding who were unable to supervise the cutting of fuelwood this past winter because they could not obtain gasoline to go to their woodlots. In my constituency most of those woodlots are situated about forty miles from the city of Peterborough, and it is necessary that the wood dealers visit the lots at least once a week to pay their men and to lay out the work. Could the minister extend a little more leeway to the dealers by way of gasoline allowances?

Mr. HOWE: Every man who owns an automobile in this country on April 1 was given a book of coupons entitling him to gasoline. I cannot understand this great and acute shortage of gasoline that is so often referred to in the house.

Mr. NICHOLSON: From the minister's previous statement I understood the subsidy was to be passed on to the producers. Do I understand the dealer is now to get the subsidy?

Mr. HOWE: I think I have just explained that.

Mr. MAYHEW: Would not the minister reconsider his statement regarding those cutting wood labelling themselves as self-help? The term "self-help" is a misnomer so far as their efforts are concerned. They are cutting wood for those who are unable to get out and cut wood themselves. They have organized themselves to cut the wood, and they are entitled to justice just as much as those who are cutting it and expecting to make a profit out of it. They have equipment to buy, they have transportation to provide, and those expenditures are made out of their own pockets, They are as much entitled to it as those who call themselves dealers. I would point out further that I find, on reading to-day's press, that there are some who are setting themselves up as wood dealers, accepting orders and payment for orders, without any wood to fill them. I question whether they will be able to fill some of the orders, and I suggest the minister should look into the matter.

Mr. FRASER (Peterborough West): I was not very much taken with the minister's answer with respect to gasoline. Surely he must have misunderstood me.

Mr. SPEAKER: Order; sufficient explanation has been given in the matter.

[Mr. G. K. Fraser.]

QUESTIONS

(Questions answered orally are indicated by an asterisk.)

MANITOBA TIN DEPOSITS

Mr. KNOWLES:

1. Are there any known deposits of tin in Manitoba? If so, who owns the same?

2. What companies in Canada are engaged in the mining and/or processing of tin?

Mr. CRERAR:

1. There are several known occurrences of tin minerals in Manitoba. Authoritative information concerning the ownership of these occurrences is available only in the department of mines and natural resources of Manitoba.

2. The Consolidated Mining and Smelting Company of Canada, Limited, is the only company mining and processing tin ore in Canada, the very small tin-mineral content of the silver-lead-zinc ore of the Sullivan mine at Kimberley, British Columbia, being recovered as a by-product during milling and concentration.

BEET SUGAR ACREAGE

Mr. HANSELL:

1. What was the total sugar beet acreage in Canada for the years 1933 to 1943?

2. What was the total production from sugar beets for the years 1933 to 1943?

3. What was the total sugar production from cane or imported raw sugar for the years 1933 to 1943?

Mr. ABBOTT:

1.	Ontario (acres)	Alberta (acres)	Manitoba (acres)	Total (acres)
1933	29,852	13,955	....	43,807
1934	24,370	14,464	....	38,834
1935	37,999	14,464	....	52,462
1936	32,094	19,281	....	51,375
1937	23,939	19,983	....	43,922
1938	25,538	19,559	....	45,097
1939	35,851	21,774	....	57,625
1940	38,010	23,964	18,269	80,243
1941	30,107	23,908	16,755	70,770
1942	20,739	27,823	14,782	63,344
1943 (est.)	16,440	30,121	16,454	63,015

Note.—Planting in Ontario for 1943 has not been completed. The estimate given is for acreage contracted but present indications are that actual plantings will be considerably less and may not exceed 9,000 acres.

2. 1933, 123,350,000; 1934, 107,141,000; 1935, 129,785,000; 1936, 134,712,000; 1937, 109,017,000;

1938, 148,836,000; 1939, 168,715,000; 1940, 197,770,000; 1941, 197,365,000; 1942, 184,495,000.

Note.—The figures for 1943 cannot be given since no beet sugar is produced before September. The latest estimate of production is 160,000,000 pounds.

3. 1933, 749,775,000; 1934, 784,227,000; 1935, 820,549,000; 1936, 923,930,000; 1937, 859,699,000; 1938, 903,398,000; 1939, 994,544,000; 1940, 957,032,000; 1941, 954,423,000; 1942, 633,962,000.

Note.—Figures for 1943 would be for five months only and would not necessarily be an indication of production for the whole year. Present estimate of requirements, 690,000,000 pounds.

SUGAR RATIONING—WESTMOUNT, QUE.

Mr. FOURNIER (Maisonneuve-Rosemont):

1. Have some persons in the city of Westmount been allowed a quota of thirteen pounds of sugar?

2. Has distribution been made of the 617,000 pounds of sugar stated to have been held in reserve?

3. If so, on what basis, and to whom?

Mr. ABBOTT:

1. Yes. Westmount is included in local ration area M-2, which comprises the city of Westmount, the village of Cote St. Luc and the towns of Hamstead and Montreal West. Each local ration board was allotted home canning sugar on the basis of 11·34 pounds per applicant. The distribution of this sugar was left to the discretion of the local ration board in each case. Some boards filled all applications under ten pounds and then distributed the surplus amongst the applicants who had asked for more than this figure. Since a certain number of citizens of the village of Cote St. Luc, the towns of Hampstead and Montreal West and the city of Westmount applied for and received considerably less than ten pounds each, the surplus was divided among the remainder of the population of the municipalities of this local ration area.

2. Yes.

3. There were 239,360 misdirected applications reported after local ration boards had submitted their returns. As the applications had been dispatched on time but received at the respective local ration boards too late to be included in their report, it was decided that sugar should be provided in these cases accordingly. 2,293,600 pounds were allowed to the various local ration boards who reported these late applicants. This included the 617,000 pounds of sugar held in reserve.

72537—252½

QUESTION PASSED AS ORDER FOR RETURN

NO. 5 AIR OBSERVER SCHOOL, WINNIPEG

Mr. CASTLEDEN:

1. What companies have received contracts for the supplying of gasoline, oil, and other petroleum products for the servicing of No. 5 air observer school at Winnipeg?

2. What are the names of the local agents of each of the above companies?

3. What is the total value and quantity of petroleum products covered by these contracts?

4. What was the date of the signing of these contracts?

LABOUR CONDITIONS

TORONTO SHIPBUILDING COMPANY—REQUEST FOR INVESTIGATION

On the orders of the day:

Mr. GORDON GRAYDON (Leader of the Opposition): Has the Minister of Munitions and Supply received a request from the employees of the Toronto Shipbuilding company for an investigation of the conditions existing in that shipyard; and, if so, what steps is the government taking to conduct an inquiry?

Hon. C. D. HOWE (Minister of Munitions and Supply): I have no knowledge of any such inquiry or demand.

Mr. GRAYDON: Will the minister make some investigation in his department to see if that demand has been received, and perhaps he will give me an answer later.

Mr. HOWE: I have already made an investigation in the department, and no such demand has been received.

Mr. GRAYDON: There has been no communication between the employees and the department on this point?

Mr. HOWE: So I am informed.

ALASKA HIGHWAY

POST-WAR USE BY CANADA AND THE UNITED STATES—PIPELINE FROM FORT NORMAN OIL FIELDS

On the orders of the day:

Hon. R. B. HANSON (York-Sunbury): I would ask the Prime Minister if at some time before the end of the session he would make a general statement with respect to the position in the Northwest Territories with respect to the Alaska highway and kindred subjects. In order to be specific I shall place on *Hansard* what I have in mind.

Will the Prime Minister make a general statement or table the agreement between

Canada and the United States covering the position of the latter as to its use of or interest in the Alaska Highway after the war? Will the Prime Minister make a similar statement or table the agreement as to the ownership, the interest in and use of the pipeline from the Fort Norman oil fields to the refinery at White Horse and in the refinery; the amount of money involved in the construction of the pipeline and the oil refinery? Will title to the land through which the pipeline runs be alienated to the United States or to any company, or will it remain the property of Canada? Will individuals or companies other than Imperial Oil have the use of the pipeline after the war?

Right Hon. W. L. MACKENZIE KING (Prime Minister): I am obliged to my hon. friend for letting me know the nature of the questions to which he wishes replies. I shall seek at a later time to give him the information.

SAINT JOHN THE BAPTIST'S DAY

CELEBRATION OF THE FRENCH CANADIANS' PATRON SAINT'S DAY

On the orders of the day:

Mr. ELIE O. BERTRAND (Prescott): Mr. Speaker, I wish to draw the attention of the house to a special event. We are celebrating to-day the French Canadians' patron saint's day; that is to say, the feast of Saint John the Baptist. We crave his protection for the members of our armed forces who are fighting in the air, on land and at sea, and we beseech his help in behalf of racial unity and good government in this country.

WAR APPROPRIATION BILL

PROVISION FOR GRANTING TO HIS MAJESTY AID FOR NATIONAL DEFENCE AND SECURITY

The house resumed from Wednesday, June 23, consideration in committee of a resolution to grant to his majesty certain sums of money for the carrying out of measures consequent upon the existence of a state of war—Mr. Ilsley—Mr. Bradette in the chair.

DEPARTMENT OF LABOUR

The CHAIRMAN: I should like to make a brief statement. When we adjourned last night the parliamentary secretary to the minister mentioned the fact that the list of items appearing in *Hansard of* March 3, 1943, page 923, would be used as the estimates for the Department of Labour in the consideration of this measure. No item was called yesterday. I therefore call the first item.

[Mr. R. B. Hanson.]

Labour; war emergency training programme, administration $48,000; payments to the provinces re training for skilled and semi-skilled occupations connected with war work, $5,200,000; payments to the provinces re training for aircraft manufacturing and ground mechanics, $1,950,000—$7,198,000.

Mr. McIVOR: Mr. Chairman—

Mr. CHURCH: Last night I had not concluded my remarks. It was after eleven o'clock, and I ask for another ten minutes.

Mr. McIVOR: In the month of February I had—

The CHAIRMAN: The hon. member for Broadview (Mr. Church) had not concluded his address.

Mr. GRAYDON: Mr. Chairman, I understand we are not yet to be excluded from dealing generally with these items. I understand, too, that the hon. member for Broadview had not concluded his speech last night, and it is only fair that he go on to-day.

Mr. CHURCH: Last night I was about to speak until a few minutes after eleven o'clock—

Mr. POULIOT: The leader of the opposition said that there might be exclusion. There can be nothing of the sort. We have no reason to be excluded from discussing matters like this.

The CHAIRMAN: The point raised by the leader of the opposition was that the hon. member for Broadview had spoken only thirty minutes when we reached adjournment last night at eleven o'clock.

Mr. HANSON (York-Sunbury): A further point is that the general discussion had not been concluded.

The CHAIRMAN: I did not say that the general discussion had been concluded, and I believe it is in order to call an item, as I have done.

Mr. POULIOT: I did not say "concluded"; I said "excluded."

Mr. CHURCH: Mr. Chairman, I spoke last evening at the request of some hon. gentlemen who had a dinner engagement. I did not want to take part in the debate; far from it. I have no quarrel whatever with the present minister, but I raised the question of man-power before the war. The government's policy on man-power and the way it has been handled is everything by fits and starts and nothing long. We have had a different policy for every province in the country. We have done nothing about the greatest problem that faces this country. We need sufficient fuel

and coal to supply the needs for nine months of the year because by the middle of September, within two or three months, we will have to be opening up our fires again. Where is the coal to come from?

In 1917 we had some trouble about man-power and a coal famine in the Toronto district. There is also the question of what is non-essential and what is essential industry. You cannot solve this man-power problem with statistics and blue books. Labour is a human commodity and it has been mishandled by five or six ministers since the war began. This is not the first time I have spoken on this question. I do not know where we are going to be next fall or winter. Last evening the deputy leader of the Social Credit group made reference to this particular question. Next winter we are going to face one of the greatest disasters this country has ever had if we do not have fuel. People will be freezing in their homes. There is a lack of proper housing and people will not only be without homes, they will be without fires. Many of them will suffer the natural consequences.

I think I have been around the city of Toronto more than anyone else and I know what is going on. On January 6, 1940, I saw hundreds of youths trying to get into the army. It was almost sixteen degrees below zero and all some of them had on was a sweater with no coat. They were freezing outside the Toronto armouries and many of them had not a cent to buy any food. Some of the local agencies had to provide lunches for them. Only three or four years before that some of them were riding the rods all over the country looking for work, and then most of them went into the war. Is that the way to treat labour? Here we are now near the end of the fourth year of the war; compulsory selective service should have been started before the war began.

In 1937 and 1938 I proposed a national selective compulsory service register with survey of industry, a domesday book of every man, woman and child in the country, our man-power, our industrial power, our economic and food power and all those things. But nothing was done about it. That is what happened in the fall of 1940 and into the beginning of 1941. What happened then? The same policy—men not wanted; recruiting lagged. As I said, it was far easier to get into the Rideau club where there is a long waiting list than into the army. Last evening we were very sorry that many of our friends on the other side were not present. I do not know where the hon. gentlemen to my left were. There is no country party in this country such as they have in Australia, but we have a fine country club, and at eleven o'clock last night I proposed that the rest of us might just as well adjourn to the country club and carry on our discussions there.

We have a so-called compulsory system. I do not blame the present minister for what has happened, because I doubt if they could have got anyone else to carry the burden he has assumed. I would like to see his estimates go through quickly. I think it would be better to follow the policy we followed two years ago in connection with the appropriation bill, that is, allow those who have objections to say a few words on general policy and then let the items go through as quickly as possible. I have great respect for the minister and his deputy and his many assistants, but I am greatly disappointed in the whole man-power problem, especially when I go into the departmental stores, the retail stores and other small stores and see what they are up against. If all this red tape and rules and other things was going to help to win the war there would not be one word of objection in this house. But with our heavy taxation and all these regulations I fail to see how this new man-power will aid either peace or war.

I should like to deal for a moment with the question of the youths of 16, 17 and 18 years of age. What is the use of sending them to cut down our tall timber? The government has needed a lot of timber since the war started for the many different platforms on labour they have had. No doubt additional timber is needed, not only in the cabinet but for the platforms which will be constructed out of the numerous impossible proposals which they have put forth across this country. They are going to try to convert high school pupils into backwoodsmen, like the brave men who opened up this country long before we had such a system. What is going to happen when they do fell the timber? Where are the transportation facilities to cut the timber or to haul it away? How are you going to get it to the cities and towns?

I can remember when ninety per cent of the homes of Toronto burned wood which was brought in by the Nipissing railroad. But conditions have changed. There are many features to this fuel problem. The wood will have to be distributed. Just try now to get a bit of kindling wood. That is impossible, so where are you to get the heavier wood? You could not get it last winter, so where will you get it this coming winter? There

will be no wood to burn and the people will just freeze to death. And all we do is just talk about it. This is the ninety-sixth day of the session and we have done nothing but talk about a coal supply.

Two weeks ago the mining, production and distribution of coal was made a national selective industry, but nothing has been done since. We had lots of coal before the war. Some of the mines were running only half time. Toronto spent $30,000,000 on making a harbour and was able to bring in 700,000 tons of coal through the ship channel in Ashbridge's bay. If it had not been for that, I do not know what would have happened last winter. The government is going to use high school pupils. The same trouble occurred last summer. You, Mr. Chairman, have taken a great deal of interest in the secondary schools in your riding. Nobody would engage the youths last summer. Under Mr. Elliott Little's administration the school boards were notified that these pupils were needed on the farms, in what they called an essential industry.

This listing of certain former essential industries as non-essential industries is just ridiculous in my opinion, and I feel I am entitled to my own opinion. I have had some experience in these matters in the city of Toronto. In Hamilton, Toronto and other centres of population in Canada many industries now listed as non-essential are essential in the opinion of those who know more about it than the bureau of statistics and the other collectors of labour information we have had during this war. Tons and tons of information listed were deposited in the archives before the present minister came into the department. They go on to refer to school teachers. I can tell you this, that the board of education returns show that 236 school teachers enlisted for the war, but only about twenty-two of them are overseas. How many of them are doing so-called war work just at home in Canada and in physical training work, and is that an essential or a non-essential industry? Others are engaged in local sports activities and similar operations which I would not consider especially valuable or essential in the winning of the war.

Our position is by no means the same as that of England. Transfers in the northern counties of England as at the time of the industrial revolution seldom involved movements of more than sixty to a hundred miles; and similarly it is all right to transfer people from Hamilton to Toronto or other limited distances; but when you start transferring people from non-essential to essential industries from Vancouver to Halifax, and taking them out of industry in the cities of Ontario, which already are bled pretty well white through voluntary enlistments, it is another matter. I say to the government, do not legislate against human nature. Last evening I was referring to the bureau at 174 Spadina avenue. I got Elliott Little to open up another one on Grenville and Bay streets; overflowing with men and women and younger people for days and weeks during the heat of last September; they could get no valid information where to go or what to do. A huge bungle went on in that connection; a great number of the members of the staff could have been dispensed with. How did they get there? Many of them, I was told, were appointed on the nomination of government members of parliament; I am not blaming them for getting what they could.

In my opinion the whole programme of man-power has been a mistake from first to last. One would have no objection if this complex system assisted in the winning of the war, but that is not so; there is no equality of service, no equality of sacrifice, no attempt to get it, and it cannot be got now. The Minister of National Defence for the army has told us that this rationing of labour is only beginning. We may wait until doomsday before our man-power resources are dealt with properly and equitably under this system. I am not blaming the permanent officials; they are victims of the system; they have been asked to take up work which no human being could make a success of. I referred last night to the splendid deputy minister and the services he has carried on in other directions. But I do not believe that in the fourth year of the war we can continue as we are now doing. Agriculture has been pretty well taken care of. No small part of the high school population is now on the farms. But the first essential to-day is to win the war, and it cannot be won without soldiers. Wars are won by soldiers, sailors and airmen, they are not won on the farm. True it is that the armed forces need food and other supplies. But the government is far from adopting the practical policies of the mother country, where women have been doing far more essential work than they have been called upon to do here. In the matter of labour, farmers have received a fairly substantial allotment of man-power during the past year. I am strong for the farmers as well; I know the laborious conditions under which they carry on; but how are we going to win the war without men to fight the battles on land, on sea and in the air? The winning of the war by this indispensable means is primary; every-

thing else is secondary, although agriculture from time immemorial has been an essential industry, and has been rightly so regarded.

I wish the minister all success in his work, and I do not want to be unfair to him. He has taken up a burden which I do not believe under the circumstances can be successfully discharged. Figures are all very well, but no law which runs counter to human nature can be enforced, either in Canada or in the United States. I say this as a warm friend of labour: I have been connected with labouring people all my life, and one of the things I value most is that in my public career I have always managed to retain the respect and the support of the overwhelming number of industrial workers in the province to which I belong.

Mr. McIVOR: Early in February I stood in my seat and related the various stages through which the Minister of Labour has passed in order that he might learn something of his fellow man, of the difficulties of the toiler and the troubles through which he passes. Since then I have been watching this young parliamentarian, and yesterday I had the great satisfaction of seeing him arrive at true parliamentary manhood. What a credit his speech of yesterday was to the Department of Labour! You will notice that he did not say "I did it," but, like the little fellow who helped to blow the organ, he said "We did it," meaning himself and his departmental workers. I was reading this morning the story of a clear-headed, vigorous reformer who sat in the gates of Jerusalem and told the citizens the things that they must do. It was not a very popular proceeding, and our friend found himself in the stocks in a dark prison. When the present Minister of Labour spoke in January last he was not held in high repute. But stage by stage since that time he has been coming to the front, and to-day I am going to show you that when I spoke of him in February it was not, as somebody said, an obituary notice which I was giving, but an introduction of something worth while to follow.

Few of the men who serve labour but find at certain stages of their lives that their work is not appreciated, and it was perhaps not surprising to learn, as we did over the radio last night, that the labour government of Australia is not popular even with its own supporters and may have to go to the country. I regretted this, because, like some other hon. members here, there and over yonder, I am greatly interested in the man who toils, not by way of something I got out of a book but from what I have derived from experience in trying to look after those who toil and who have missed their chance in life.

I am sorry, Mr. Chairman, that labour itself is not united all over Canada. I would have to ask the Minister of Labour how many labour organizations there are in Canada, and how they love each other. I would say very kindly to labour: if you are going to speak to the Minister of Labour in this house, speak with one voice, drown your difficulties, follow the master workman and begin to practise the golden rule; then you will find that labour in Canada will go places not only in its own interests but for the good of industry as well.

The Minister of Labour has served well, and I must say that he caught my fancy not long ago when, in imagination, whether it is true or not, I saw him, as the Prime Minister asked him "Have you any great men in labour whom you would recommend for the king's honours?" reply, "I know some great men in labour, but there is one man who stands out conspicuously in the movement, a man who dedicated his life to labour and has given great services and literally worn himself out, so that while his mind is still clear his body is not able to carry him into active service." And when I found, in the list of those who were recommended, probably by the Minister of Labour, the name of Tom Moore, I said "Thank goodness the Minister of Labour is putting into the front rank men who are worthy"; and Tom Moore has his honours. Some people may say that Tom Moore has no blue blood in his veins, but I say, Mr. Chairman, that he has good red, honest blood in his veins, and is fit to associate with the cream of the land. If the Minister of Labour has done nothing else, I thank him for having put labour on the map in this way.

I was pleased to hear what the hon. member for Cape Breton South (Mr. Gillis) said yesterday about the labour minister. My hon. friend has a lot of good Scotch sense and it came to the top yesterday when he said: I do not want to change labour ministers. I think he is right too. Let my hon. friend from Cape Breton South follow that up and watch the Minister of Labour, just as I too will keep my eye on him.

The Minister of Labour first came to my notice in connection with the labour camps that were established in Canada, for a temporary purpose only, by the Right Hon. R. B. Bennett, and I admit that they served a good purpose. But afterwards they became nests of discontent, and then it was time to put them out of business. That is when the Minister of Labour first came to my notice, and he did his part at that time and did it well. He disbanded those labour camps and saw to it that those who were confined

in them were accorded the full privileges of citizenship. From that time on he was called upon to be the "trouble shooter" of the Department of Labour, which was then under the present Secretary of State.

Another of the minister's successful assignments was the organization in February, 1941, of the national joint conference board of the building and construction industry under the auspices of the national labour supply council, on which he was serving as secretary, having been appointed by the then Minister of Labour, the present Secretary of State (Mr. McLarty). This conference was constituted on the basis of equal representation of employers and employees, and functioned successfully as a national body to adjust wages and working conditions until superseded by the national war labour board. The conference was such a conspicuous success that the Ottawa *Journal* commented editorially on it as follows:

> Unique in the history of industrial relations in Canada, and heartening, is a conference being held here in Ottawa this week. It is a gathering of representatives of workers and employers in the building and construction industry; its purpose to agree upon a way to strengthen this country's war effort.
>
> It is not, therefore, just another conference. Here are the men sitting down together to discuss, frankly, points of friction that arise inevitably in an emergency programme and that cut across normal ideas of "rights" and "privileges"—men preparing to sink differences; to cope as best they can with unusual problems; to impose discipline for united effort towards victory.

Under the impact of war more and more men are employed on labour work than ever before in the history of Canada, and when men are working long hours and their friends and companions are across the sea fighting for their country, their nerves are just a little on edge; they are hard to handle, and friction easily develops.

I said the other day that you know when there is a strike, but you do not know how many strikes might have been which did not develop through proper action being taken to prevent them. The Minister of Labour was appointed chairman of the industrial disputes inquiry commission, a sort of flying squadron to nip incipient labour trouble and keep the assembly lines rolling. How successful the present Minister of Labour was in his role as chairman is indicated by the fact that out of fifty-two tough disputes, involving more than 52,000 employees, which were referred to the commission, that body under his chairmanship, was directly responsible for settling twenty-three and indirectly responsible for the adjustment of twenty-two others. In all these fifty-two disputes there was only one strike, and it was of short duration.

I know what happened in war industry at the head of the lakes. It seemed that two strikes must come there, but both these disputes were settled, and I am grateful to the Minister of Labour for not standing back and saying: It is all right, do not bother your head, everything will come out all right. The minister did not stand back, of course. He played the man and there was no strike at the head of the lakes. The workers, I think, did not want a strike.

Here is an order in council which the Minister of Labour had passed. It is one with which I agree thoroughly, P.C. 8253, which launched the policy of wage control. Here it is in the words of the order itself:

> Any agreement so modified and other condition of work otherwise suspended in the interests of war production shall be fully restored on the termination of the present war.

There is not a labour man in this house who will say that if labour has given up anything to help the war effort it will not get it back, perhaps with a little interest, after the war. I would say, in the words of the old book, give it back fourfold, because the workers in the unions have not everything rosy.

I am grateful to the minister for the organization of this national war labour board. I also want to congratulate the minister on the appointment of Mr. M. M. Maclean, one of the founders of the Canadian Brotherhood of Railway Employees, as director of the industrial relations branch of the Department of Labour. There is a man, not from the head of some great legal firm, but a man from the ranks of labour who knows what labour is. If there is any labour organization in Canada that does not appreciate that sort of appointment, I wonder what labour men are thinking about. The minister fully recognizes what a man has to put up with when he is working, what he has to contend with in his mind and in his body. There is the necessity of taking care of his health, taking care of his folks and providing proper housing for his family. Of course, I admit that it would have been of advantage to have a real live clergyman on the national war labour board, a man who looks to the other side of life, and I think that is needed; for to-day we find labour organizations sometimes holding their meetings on the sabbath day. They have six days a week to work and one day to rest. They have eight hours a day to work, eight hours to play, and

eight hours to sleep, and they should have brains enough to keep one day in seven for rest and to worship the Master Workman, and in that way come back to work with a happy heart on Monday morning. I say to members of this parliament, too, that the sabbath day is no day for political meetings. I will have none of it. If they want me to speak on the sabbath day I am going to give them the same stuff that I would give my people from the pulpit, and it would do them good. The members of this house, no matter to which body they belong, should not hold political meetings on the sabbath day, and my remarks now are directed just as much to the Liberal party as to any other party. Let us keep the sabbath day as a day of rest. If you break the law, the great Law Giver will measure you up. Remember the sabbath day to keep it holy. If you do not, the punishment will be yours, and you cannot get away from it. Break the civic laws of Ottawa and the Ottawa police get after you, but their punishment is not half as sure as that of the great Law Giver.

An order was passed recently which is one more indication of the minister's consistent effort to protect the worker and to assure him of a square deal. A fine has been authorized for employers who discriminate against workers on account of union activity. The fine is $500 for each day on which such an employer fails to comply with that ministerial order.

I wish to express to the minister my appreciation of his growth. I hope he will not feel too big for his job but will remain humble; and, as I said in February, I hope he will take his cue from the best workman this world has ever known.

Mr. POULIOT: I have just two questions to ask the minister. First, what is the occupation that is considered most important by the national selective service for a young man who is physically fit and of military age?

Mr. MITCHELL: If he is physically fit and of military age he should be in the armed forces unless he has a trade or calling of such a degree of essentiality that he should be left in civilian life. I say that as a result of my own personal experience in the last war. The strong men should go to war; they should be in the armed forces to defend our way of life, unless they follow a calling that is essential in the commercial, industrial or agricultural industries.

Mr. POULIOT: I thank the minister for his answer, but he did not meet the point I raised. My question is very simple: What is the most important occupation for a man of military age and of physical fitness? That is the question.

Mr. MITCHELL: I think I have answered it. If my hon. friend wants me to give advice on a trade or calling I will do so if I know the man and know the circumstances, but I say that the duty of a physically fit man is to defend his country.

Mr. POULIOT: I thank the minister, but the answer shows what is wrong with national selective service, and I have stated it before. There is a gradation of equality in essential industries. What is the use of putting a boy in the army if the R.C.A.S.C. trucks are empty? Therefore it is useless to discuss national selective service unless it is admitted, not only by the minister himself but by all members of the government, that agriculture, the railway industry, the lumber industry, about which we hear so much, the mining industry and fisheries are on an equal footing with the army. So long as the government considers that the first duty of a physically fit man of military age is to join the army, national selective service is doomed. It cannot work. What I say may sound strange. Just a minute ago I heard members from rural constituencies, who will support postponement for training for farmers, saying, "hear, hear", when the minister made a reply. It shows that they do not realize the importance of agriculture, they do not realize the importance of the lumber industry, they do not realize the importance of the railway business, and they do not realize the importance of mining and fisheries.

Of course, there has been a glamour around the soldier from the start. I am all for the soldier, the sailor and the airman, but on the other hand the men in the army should be protected; and what better way is there of protecting them than to keep them supplied with food and clothing and munitions? If a young man is a good tool worker and has experience and ability in that field, and if he is called to the army, his duty is not to go into the army but to a munitions plant; similarly, if there is a farmer whose farm will be closed if he joins the army he should stay on the farm.

Some progress has been made by the national selective service boards, at least in the city of Quebec—to some extent though not entirely—with regard to farmers who have done their training. But as regards farmers who are in the army for their training or who have completed part of their training, it is difficult to get them out by reason of the statement made last year by the Minister

of National Defence, which was corroborated this year by the Minister of National Defence for Air. They said, "We are not having men in the army and in the air force to become farmers". That is not the question. In the army there are men who are badly needed on the farm and they cannot get out. I do not put the blame on the minister alone; I do not put the blame on anyone. I simply want the government to understand that a farmer is just as essential in war-time as a soldier, and a railway man just as essential as both; and so long as they fail to dissipate the halo of glory that surrounds just one head we shall have trouble with national selective service. I say that in the best possible spirit, because I have tried to have a system of national selective service put into operation from the start, before it was put into legislation.

I did not wish to speak at any length on this question but I have put my position clearly before the minister. If the Department of Labour and national selective service are just ante-rooms to national defence, with the lowest number of young men there, less than in the air force and in the navy, we shall have trouble, and the fuel and wood business will be discussed every day. We shall hear more and more about the coal business, the fisheries and so on.

I hope that the minister will not be actuated by what was described last year by the hon. member for Richelieu-Verchères as fear of a vote of censure from the opposition for the establishment of conscription. What is the duty of the government? To govern is to foresee, and the trouble we have now could have been foreseen if there had not been so much drum-beating at the wrong time. What I say now is simply for the protection of young men in any branch of the armed forces as well as for the protection of the civilian population.

I hope that members will be able to get a copy of the instructions that have been forwarded by the government or the minister to the national selective service. There is apparently only one in which it is said that the farmer is protected; we had no such circular from the army and we cannot get it. Their orders are secret most of the time and it is impossible for us to get them, but I hope the minister will realize his duty is not only to fill requisitions from the Department of National Defence. It is a department which should see to it that everything runs smoothly in this country in war time as well as in peace time; and he will be able to do that so long as he does not remain subservient to his colleague the Minister of National Defence.

[Mr. Pouliot.]

Mr. KNOWLES: There are two specific matters to which I should like to make particular reference this afternoon, but before doing so there are a few comments of a general nature I should like to make. I confess that I was amazed yesterday afternoon, listening to the speech of the Minister of Labour, that during practically two hours, with the exception of a sentence or two, he found it possible almost completely to ignore matters of labour policy such as the right to organize and collective bargaining—

Mr. MITCHELL: If I might say a word—

Mr. KNOWLES: —although he did say the right to organize was fundamental.

Mr. MITCHELL: I did say a word in that regard, either to the hon. member for Cape Breton South or to the hon. member for Vancouver East. I know my hon. friend wants to make a speech, and I do not care much what kind of speech he makes—

Mr. BENCE: You did not like people interrupting you.

Mr. MITCHELL: If the hon. gentleman will stand up and say what he wishes to say—

Mr. BENCE: Very well. When the hon. member for Lake Centre asked the minister a perfectly simple question, which should have been answered but which has not been answered yet, the minister became rather rough with the hon. member, to the accompaniment of applause from the government benches, and refused to answer the question, saying that he did not want anyone interjecting remarks or questions while he was making a speech. Yet he is continually getting up when other hon. members are trying to make speeches. I suggest to the minister that he should remain in his seat while hon. members who want to make speeches say what they wish to say.

Mr. REID: As one who interrupts perhaps less than any other hon. member, except those who remain silent all the time, I want to say that it has always been the custom for any minister to correct what he thinks is a misstatement right at the time it is made. I think hon. members generally recognize that this has been the custom in this house.

Mr. MITCHELL: I just wanted to point out, in order to keep the record straight—

Mr. KNOWLES: I know what you are going to say.

Mr. MITCHELL: I just want to say it. These are not my departmental estimates, and there is no appropriation here covering the subjects about which my hon. friend is going to speak; that is all. I do not object to what he is going to say; but while I did not say much about collective bargaining, I think I said enough.

Mr. KNOWLES: When the minister interrupted me a moment or two ago I was in the middle of a sentence and was going on to refer to the fact that the answer he has just given to this criticism was voiced also last evening to one or other of the members of this group, namely that his reason for not discussing trade union organization or collective bargaining at this time was that these matters should be discussed when we come to deal with the civil estimates of the Department of Labour. My reason for mentioning what I consider to be the significant omission in this regard is that to me the very fact that there is no place in the war estimates of the Department of Labour for the discussion of these matters indicates the failure of the government to realize the importance of trade union organization and collective bargaining in relation to war-time efficiency and morale. My point is that when we are dealing with the relationship between the Department of Labour and the war there ought to be a place for a discussion of these very important matters.

I realize that whenever we raise our voices in the midst of war for an extension of the right of trade union organization and an extension of the principle of collective bargaining, it is said in some quarters that labour is demanding a price for its cooperation in the war effort. This is said by the same people who express the view that labour should accept a truce, as it were; that it should be satisfied to maintain things as they are, and should not use the war as a means of extending its rights and privileges. That objection reveals a total misunderstanding both of the aims of organized labour and of the philosophy of trade union organization and collective bargaining. I think perhaps I can best express those aims and that philosophy by saying that in the view of those of us in this group there are two main reasons for our insistence that trade union organization and collective bargaining should be extended in time of war. The first of these reasons is that there may be the most efficient production; that our working men and women may have the consciousness that it is their work they are doing and that, as a result of that consciousness, they will really produce to the limit of their capacity. Britain has been referred to time and again in this connection, and the references are deserved. We know that over there the principle of the effective say by labour in the conduct of the affairs of industry is an established right. We know that as a result of the voice labour has been given all down the line in Britain, we have a truly remarkable story as far as war production is concerned.

Many of the problems that are with us in this country are handled much more expeditiously in Britain than in Canada because the workers themselves are in charge of the matters in connection with which problems arise. One instance that was brought to my attention not so long ago was the problem of absenteeism, which concerns the authorities a great deal in this country. The only way we seem to be able to deal with it is by methods of law and attempts on the part of the authorities to put a stop to it if at all possible. It is my understanding that in Britain men who are guilty of unreasonable absenteeism are dealt with by their own fellow workmen through the medium of the shop organizations. As a matter of fact the way in which their fellow workmen deal with them is perhaps more severe than is the case in this country, but the result is a great deal less absenteeism there than we have here. So it is with the matter of getting people to do extra work after the regular hours in their particular line of work are over. Labour, the actual working people, are conscious of the fact, in their shops, in their organizations throughout industry, in the say they have on the various boards, and the fact that they have a labour man in the ministry of labour, that not only is it a people's war over there, but that it is a people's industry, and accordingly they are putting everything they have into it. In my view they take this attitude very largely because of the consciousness that it is their country and their work that they are carrying on, and that they control. I feel keenly that labour in this country, in asking for an extension of the right of trade union organization, the principle of collective bargaining and representation on war boards, is sincerely and genuinely seeking these things because it is deeply interested in the outcome of the war, and because it feels that if it had these things it could produce to a much greater extent and

in a much more efficient manner than it does at present. I assert most definitely that it is not at all true to imply that labour is trying to use the war as a means of increasing its own advantage. Labour is by no means merely asking a price for its cooperation, but is genuinely interested in the best and most efficient ways of industrial production.

The second reason why labour is seeking an extension of the right of trade union organization and the principle of collective bargaining is that there may be in this country a real experience of democracy. We say again and again that out of this war there must come a wider extension of the principle of democracy. That means something more than words. It is a fact that in this country we have political democracy; while we have a few abuses in it, we have political democracy and we are proud of it. If we are going to extend democracy it means infusing that principle into certain other phases of our national life. One of the phases into which it is most important that the principle of democracy be infused is that of the relations between workers and owners of industries, and the whole conduct of industry itself. At the present time less than twenty per cent—and that figure is on the safe side—of industrial workers in Canada are organized. In other words less than twenty per cent, so far as industry is concerned, know anything of the actual practice of the principle of democracy.

In recent months and years we have done a great deal of thinking about democracy, and I think we are coming to realize that if it means anything it means the control by the people of the things which affect their daily lives. While the people of Canada exercise considerable control over the things which affect their lives, through their right to elect their political representatives, we must face the fact that for thousands of our people, particularly those in industry, the most outstanding phase of their lives, the part of their living which is uppermost with them, is their day-to-day work. And if domocracy is to mean anything to them, it is in that day-to-day work in industry that they should have some voice and some control. If we are to get anywhere with the idea of extending democracy in the post-war world, I submit it must take place in the field of industry.

May I make it perfectly clear that my references to the post-war world do not mean that we can wait until the war is over to achieve this experience of democracy on the part of industrial workers. If we are to have any real faith that this is a war for democracy, and if our people are to have any real faith in the democratic process itself, I suggest that now, when they are hard at work in industry, working in a great cause, is the time that our workers should be getting this experience. We in the House of Commons who are so loyal to the ideals and principles of democracy, and who are so tremendously anxious that there shall be no set-back to democracy when the war is over, should be most keen to see to it that our people, our workers—the same is true of our farmers—should have actual experience in the control of the things which affect their daily lives.

Because of the sacrifices involved in the present war our workers have been doing a great deal of thinking. They are working hard. Those in industry have their sons and brothers in the armed forces. They are not in two different groups at all; they are all intermingled in our society. And as they do the things which the sacrifices of this war demand, they are realizing more and more that if it is democracy we are fighting for we ought to be getting some experience in it now. We ought to be having an experience which will increase our faith in the democratic process.

I submit that for this reason, as well as for the reason that it would be a much more efficient way of bringing about a maximum war production, our workers are on sound ground and are perfectly right in insisting upon an extension of the right of organization and the principle of collective bargaining. Just to make myself perfectly clear, perhaps I should say that when we speak of democracy in industry we have in mind two main expressions of that idea: on the one hand, trade union organization and collective bargaining, and on the other hand, labour representation on war boards and all governmental bodies which have any effective voice in the shaping of policy.

The minister said yesterday that the right to organize and the right to collective bargaining are fundmental. It is also true that in words at least these rights are recognized in P.C. 2685. Yet we know that very little progress has been made so far as trade union organization in this country is concerned. I have already referred to the fact that less than twenty per cent of our working people are organized; and our industrial workers feel—I think rightly so—that so far as the government is concerned advantage is taken of that fact. We have the encouragement of the company union plan. We have the use of one of the most deadly weapons, that of delay

in dealing with applications made by trade union organizations for collective bargaining agreements or for adjustments in wages. We have now a constant use of the charge that "it is a jurisdictional dispute". I am sorry I did not take the time to look up in *Hansard* the number of times that phrase has been used during the present session. It is perfectly true that there have been some jurisdictional disputes, but even as we used to hear the charge of communism or agitators from the United States we now hear it said that there are jurisdictional disputes. That is the choice phrase which is used when there seems to be any labour difficulty. The other evening we heard the hon. member for Cape Breton South (Mr. Gillis) make a most reasoned statement with regard to the situation at the Toronto shipyards. I am sure it was perfectly clear to practically all hon. members that he was making a correct statement of the situation, but to our surprise the minister with whom he was dealing at the moment could not see the point at all. He simply came back and said, "No matter how you disguise it, it is still a jurisdictional dispute".

The hon. member for Fort William (Mr. McIvor) who spoke a short time ago, expressed the hope that some day labour might be more united than it is at the present time. I imagine that he will agree with me when I say that the same ought to be true of the profession to which he belongs. As a matter of fact there are such things as growing pains. It is no surprise to those of us who are defenders of labour and advocates of the rights of labour that there are these troubles and these difficulties, particularly when you realize that for years and years every possible means has been used to keep labour down. Labour is beginning to feel that it has some future, that by organizing and getting together, by exerting its weight, it may get somewhere, and it is only inevitable that there should be some difficulty and some confusion among human beings as such. What we deplore is the fact that we have a government which is committed to democratic principles, but which seems to be unable to understand the real democracy involved in the struggles of the labour movement. Instead of helping to advance the cause of labour organization and collective bargaining, it is only too ready to point out that labour is divided, that there are jurisdictional disputes, and to attempt to discredit labour as a whole. Despite these attempts, labour organization is increasing and the thinking that is going on about the real meaning of democracy is having its effect, not only among industrial workers but throughout the community as a whole. I am satisfied the day will come when we will attain the ideal sought by the hon. member for Fort William, a united labour movement expressing with one voice its desire for democratic control of the things that affect the people of this country.

I said a moment ago that in my view democracy in industry involved two things. For a few minutes I have dealt with the right to organize and collective bargaining. The other point which is important at the present time is that of labour representation. I mean effective representation on the different boards that have been set up and which have some say in government policy. When I say "effective representation" I mean representation in sufficient numbers to have some say in the decisions arrived at. Every time we bring up this matter the minister replies that there are labour representatives on all boards. I have in my possession a copy of one of the lists he prepared to prove his point, but he knows that it is minority representation throughout.

Mr. MITCHELL: Would my hon. friend explain the minority aspect?

Mr. KNOWLES: The representation of labour on these boards is in all cases the minority of the membership.

Mr. MITCHELL: I would not like to have that go unchallenged. I should like to know the boards where labour is in the minority.

Mr. KNOWLES: I am sorry I did not bring to my desk the file which I have. I shall get it later and deal with it then.

Mr. MITCHELL: I do not think my hon. friend should make a statement like that without having the facts in front of him. The national selective service advisory board contains five representatives of the employers and five of the employees, and the boards of referees contain equal representation. I do not think the hon. member should say things like that when he must know that the opposite is the case.

Mr. KNOWLES: There is a chairman in each case. The minister knows that there are many other boards on which labour has less than half the representation.

Mr. MITCHELL: I hope my hon. friend is assuming that there is an independent chairman.

Mr. KNOWLES: Who is appointed by the government.

Mr. MITCHELL: The chairman of the national war labour board is a judge.

Mr. KNOWLES: When this matter was being discussed last evening the minister sought to make the point that we should not be too much concerned about getting representation on these boards because the laws of the country were really made here in parliament.

Mr. MITCHELL: I never said anything of the kind. It may be my hon. friend's lack of knowledge of the function of trade unionism that makes him make an observation of that description.

Mr. KNOWLES: I shall look that up and come back to it later. If my memory serves me aright, the minister said that he did not know of any country where the laws were being made outside of parliament, and the hon. member for Cape Breton South said he knew of one, this country right here. Our point is that these boards set up by the various ministers have some power. They make recommendations to the privy council, and, on the basis of these recommendations, orders in council having the effect of law are passed. It is because these boards have this power that we contend that labour should have a more effective representation in terms of membership.

At the outset I said that there were two matters to which I wished to make specific reference. I am going to say at once to the minister that I shall not mind now if he interrupts me. There are two matters I should like to get straightened out. The first is the question of minimum wages and their relation to the wage-freezing orders now in existence. I have before me sessional paper 316, and upon studying it I find that this matter has been under discussion among the Department of Labour, the national war labour board, various provincial ministers of labour and the regional war labour boards, for a year or eighteen months. I find that as far back as May 26, 1942, a letter went out over the signature of the associate deputy minister, as he was at that time, Mr. A. MacNamara, addressed to the chairmen of all regional war labour boards. This letter referred to the fact that at a then recent conference at Ottawa this question had been discussed and the promise had been made that an attempt would be made to clarify the situation. The letter made further reference to a proposed order in council which accompanied it and which the chairmen of the regional war labour boards were asked to study and to report back to Ottawa. The actual draft order in council does not appear in the sessional paper. The letter to which I have just referred says that the matter was to be treated confidentially, at least at that stage.

As I studied this sessional paper I found out that there were two ways in which this matter was being approached. On the one hand there was the possibility of amending order in council P.C. 7679. That is the order in council that deals with minimum wages, under the provisions, I believe, of the War Measures Act. The other proposal was to present a new amendment to P.C. 5963 to clarify the status of dominion and provincial minimum wage rate regulations. To try to make it a little clearer, let me say that there was on the one hand the possibility of doing something on a national basis, the fixing by order in council of minimum wage rates throughout the country. On the other hand, there was the possibility of clarifying the situation with regard to existing minimum wage rates and regulations, both dominion and provincial.

This latter phase of the matter came to a head particularly in the province of Manitoba, where the minimum wage board was anxious to amend some of its regulations and increase certain minimum wage rates in that province. Nothing having been done along the lines suggested in this sessional paper and in the documents contained in it, the Manitoba Department of Labour was advised that the changes it proposed to make in minimum wage rates could not be made because of the wage-freezing order. As I understand it, the wage-freezing order refers to basic wages. The situation is that basic wages can not be changed, certainly not without notifying all employers affected. On that ground the Manitoba minimum wage board was denied the privilege of amending the minimum wage regulations of that province.

It seems to me, Mr. Chairman, that the idea of putting a ceiling on wages should not have carried with it the possibility in some cases of making the floor the ceiling. To put it in another way, the minimum wage rates surely ought not to be regarded as basic wages. I understand that under the wage-freezing order it is possible for some employees who are above the minimum to make application to the regional war labour board and in some cases to get adjustment of their wages. But for those whose wages are down on the floor there is no possibility of having an adjustment made in their minimum wage. In

the answer of the deputy minister of labour, appearing on pages 2 and 3 of sessional paper 316, it is said:

It was decided to amend P.C. 5963 to clarify the status of dominion and provincial wage rates and regulations. This amendment has not yet been implemented and consequently is not tabled.

I would ask the minister whether any further progress has been made with this intention, to amend P.C. 5963 with respect to the matter to which I have been speaking. There is another matter to which I wish to refer but I shall be glad to yield now if the minister is prepared to answer that question.

Mr. MITCHELL: When the original wage stabilization policy—not the freezing policy—was introduced at a joint meeting of all the provincial ministers of labour, or the ministers responsible for wages and hours of labour under peace-time conditions, it was felt that the regional boards and the national boards should deal with all wages within the confines of their respective jurisdictions. Afterwards some of the provinces felt that these minimum wage regulations should go back to the provinces. Fortunately or unfortunately, according to the point of view one takes—the hon. member thinks they should go back to the provinces, and there is a great deal of merit in the contention—there has never been complete agreement amongst all the partners to the original understanding, and that to some extent has delayed progress in the direction my hon. friend desires to see it. But he can rest assured that as a result of recent meetings of the national war labour board there may be some crystallization of viewpoints on the question of minimum wage laws in the provinces, and when the proper degree of understanding is arrived at between the provinces and the dominion perhaps the end which my hon. friend is seeking will be the decision that is made. Hours of labour and wages are, under the British North America Act, a matter of provincial jurisdiction.

Mr. KNOWLES: I thank the minister for the statement he has made. I am glad to hear that there is some possibility of something being done in this matter shortly. If action is being taken in this matter by order in council along the lines of P.C. 7679, it seems to me that the federal government should seek to establish minimum wages for the entire country at rates higher than were set out in P.C. 7679. The minister has pointed out that these are matters coming within provincial jurisdiction, but as a matter of fact, under the War Measures Act, national minimum wage rates were set up by P.C. 7679. He has pointed out that he had some difficulty with some of the provinces when any proposal was made to increase the rates set out in order in council P.C. 7679. I am sorry that the correspondence was such that it could not be included in the sessional papers to which I have referred; naturally I should have liked to know the basis of the opposition to increasing the rates from the minimum now set out.

Mr. MITCHELL: It was not a question of opposition on rates; it was just a question of difference of opinion on jurisdiction. If my hon. friend will read that minimum wage order in council he will see that these rates are stipulated only in war production industries which come under the jurisdiction of the federal government. May I express this as a personal opinion. After all this country is a continent in extent, and the various provinces, particularly the province from which my hon. friend comes have worked out what I regard as satisfactory machinery to deal with the question of minimum wages, although possibly not as good as some would like. You have all the machinery in the other provinces where they have established the minimum wage law, and I am convinced that whether you or I like it or not, when this war is finished and the War Measures Act goes into the discard, the respective provincial governments will again demand their jurisdictional rights. I think that is inevitable. That may be in the direction in which my hon. friend is thinking. I do not know, but I assume it is, in view of the observations he made about the minimum wage laws of the province of Manitoba.

Mr. KNOWLES: As I was about to say before I yielded to the minister at that point, on the other hand if it is impossible to get agreement on upward revision of the rates set out in P.C. 7679 or a substitute order in council; if in other words that is being left to the provincial governments at the present time, I regret very much that the government found it necessary to use the technicality to which I have referred to prevent the Manitoba minimum wage board from revising its schedules in certain cases. I have already pointed out that there is machinery for workers who are receiving pay above the minimum rates which can be used to make application to the regional war labour board to have those rates increased; but here is a class of people down at the bottom, at the floor, and their minimum rates are

also treated, so far as the administration of these acts are concerned, as though they were basic and no provision is made for any adjustment in those cases.

The other matter I wanted to speak about is one which I raised in the house on the orders of the day on June 7, and to which the minister replied on June 9. It has to do with complaints made on the floor of the Winnipeg and district trades and labour council concerning the activities of the selective service office in Winnipeg. The complaint was that it looked as though that office was being used by certain employers who were paying low wages, to help those employers retain their workers. The minister's reply on June 9 really did not deal with the matter as I had presented it to him. He rather pointed out that his information was that there had been no formal complaint lodged by the Winnipeg and district trades and labour council. He was quite correct in that statement. Complaint was made by members of the council at one of its regular meetings, and the executive of the council was instructed to get information on this matter. A few days later, on June 16, answers were placed on *Hansard* to a set of six questions dealing with this matter, asked by the hon. member for Davenport (Mr. MacNicol). I should like to refer to questions 1 and 6 and the answers thereto:

1. Is there a priority list or classification of industries or firms for the guidance of national selective service in placing workers?

For the present I am not dealing with questions 2, 3, 4 and 5.

6. What is the order of priority?

The answers, which are given on page 3771 of *Hansard,* are:

1. Yes.

6. The detailed order of priority is confidential and is continually changing as the war production programme requirements vary.

The answer continues at some length. I am not going to read it all unless the minister so wishes. It starts off, "Generally speaking", and continues. The point to which I wish to take exception—and I shall be glad if the minister will give some explanation for it—is the keeping confidential of this order of priority. The result of that situation is that it certainly gives workers the chance to feel that employers are able to use selective service to keep them at low paid jobs if the employers are able to get on that confidential list. If there is no abuse in this regard it would clear the matter up if these priority listings could be made public rather than kept confidential.

[Mr. Knowles.]

I asked for a return of documents in this matter, which return was brought down as sessional paper No. 68D under date of June 16, 1943. Part of paragraph 5 of the answer of the Department of Labour is as follows:

A copy of the circular No. N.S.S. 225 is attached as exhibit 7 to this memorandum. This instruction provides that with reference to persons employed in the designated establishments, if these persons separate from their employment, they may not be given, except under exceptional circumstances, permits to take employment other than in the designated establishments they have just left. In other words they are to be redirected to the employer from whom they desire to separate. Again it should be noted that this is not a "freezing" provision because the employee is at liberty to actually serve notice of separation on his employer.

I am puzzled at the wording of that paragraph. It strikes me as a bit of sophistry to say to a man, "You are not frozen to your job; you have the right to quit by giving seven days' notice, but when you get to the selective service office after that seven days has expired you will be given a notice to go back to the employer whom you just left, and you can get work at no other place." I am told by workers in Winnipeg that even with respect to non-war industries they have considerable difficulty in getting permits to leave one employment for another, particularly where the employment they are seeking to leave is one in which the wages paid are very low. The minister realizes quite well the suspicions aroused in them by such a situation as this. If he can set aside these suspicions, well and good. I suggest that one of the best ways of doing this would be to change the situation with regard to the priority listing and bring it out into the open. It strikes me that this practice of having it confidential lends itself to abuse and to the kind of suspicions that I have voiced. I want to make it clear that we are not opposed to the principle of selective service, to the government stepping in and seeing to it that people work where their abilities are most useful in the present emergency. But we deprecate, with all the power of which we are capable, any use of the principle of selective service for the purpose to which I have referred, namely, assisting employers who pay low wages to retain their employees at a time when it is difficult for them to get workers, because of the low wages they are paying.

Mr. MITCHELL: Let me say without equivocation that national selective service is not, to my knowledge, being used to cut down wages. That is question No. 1. As to number 2, with regard to the priority schedule, that

of course is confidential for obvious reasons. Before that decision was reached, the question was considered by the national selective service advisory board, composed of permanent officials of the respective war departments, by representative employers and employees. It was felt that the priority schedule, by its very nature, changes from day to day and that we cannot have a public debate on priority. A plant may switch from one thing to-day to another thing to-morrow, and we cannot have public hearings in the midst of that change. We have to move quickly. If you had public hearings you would be continually discussing and arguing about priority in the respective war industries of the country. I want to be perfectly frank. We found that in the placement of people through selective service offices they could be placed on the basis of that priority listing. The priority listing is the heart of selective service. What we endeavour to do is to put people in those industries where they are most essential, and when the hon. member reflects he will see the absolute necessity for the procedure that is being followed by the department in this very important activity under the selective services regulations.

Mr. KNOWLES: Is it not true that other matters, such as deciding on industry generally so far as the priority list is concerned, are made public by order in council without there being any debate on the question? Why is it not possible to do the same thing here? Even if it is done by order in council, to which we object, these decisions could be made public.

Mr. MITCHELL: I cannot say more than I have already said, that it is the considered judgment of all the departments of government and of the representatives of employers and employees that these lists should be confidential.

Mr. MacNICOL: I did not find any objection to the answers given except as regards No. 5. Perhaps the minister will give the reasons for the answer to No. 5: Were representatives of the various industries consulted? The answer was, no. I wondered why the representatives of various industries were not consulted.

Mr. MITCHELL: On the national selective service advisory board, national organizations of employers are represented, such as the chamber of commerce, the manufacturers' association, the mining association, the construction association. They cover that field. On the labour side are the Canadian congress of labour, the railroad trades, the Catholic syndicates, the trades and labour congress of Canada, and of course the departments concerned in the production of war materials.

Mr. GRAYDON: In taking some part in the discussion of the estimates of the Department of Labour under the war appropriation resolution, I wish first of all to indicate to the committee one or two rather important points in the background with which the minister was faced upon his assuming the office of Minister of Labour. In part, the responsibility for the man-power problem, so far as the Minister of Labour personally is concerned, is an inheritance, though of course the responsibility in part is his for the time during which he has administered the department.

Let me call the attention of the committee to this fact. The measure of efficiency of a nation effectively to plan in a time of war may properly be regarded also as the yardstick by which we may measure what this nation, or for that matter other nations, may be able to do in the time of peace that will follow the cessation of hostilities. The all but unanimous decision made by this parliament on September 9, 1939, with scarcely a dissenting voice, was to enter the struggle on the side of righteousness, freedom and liberty; and it will be interesting to recall what this parliament actually declared at that time. To that end I might quote some words from the speech from the throne which was adopted on that occasion by this parliament. I will read only the pertinent words bearing upon the matters which are now under discussion. These are the words which his excellency read to parliament:

> My ministers are convinced that Canada is prepared to unite in a national effort to defend to the utmost the liberties and institutions which are a common heritage.

Let me emphasize and underline the word "utmost" which was used on that occasion. Reference to the Oxford dictionary shows that "utmost" means the most that we can do. In other words, on that occasion we endorsed, and quite properly so, the government's proposal to engage in these hostilities on the basis of the utmost that this nation was actually capable of doing. I think that may properly be regarded as an endorsation of total war.

So far as I know, this parliament and members of this parliament of ours still approve and preach war-time doctrine of total war. I think there will be little disagreement among hon. members that to approach the goal of total effort, to get the maximum possible and

to do our utmost, it is essential that our war-time economy should be well thought out, that plans should be carefully laid and that such plans should be diligently executed, taking the long view of things. Either parliament meant what it said in 1939, or it did not; and I want to range myself on the side of those who believe that parliament did mean what it said at that time.

Mr. CLEAVER: We all meant it.

Mr. GRAYDON: I am not going to enter into an argument with anyone as to who meant it or who did not. I thought I had pretty well given a blanket endorsation to everyone in this house, and I would also include the hon. member who just interrupted me. In any event, on the presumption that we meant what we said, the responsibility which has rested upon parliament and particularly upon the government to give effect to parliament's intention in entering this war has been heavy, to use the words of the government in the speech from the throne. It is not entirely sufficient that we should be able to say that we have done well or that we have done better than others. The question should be: are we living up to the undertaking we gave when we entered this struggle, and are we doing our utmost as a Canadian people? Are we doing as a government, as a parliament and as a people that which we pledged ourselves to do?

This means, of course, that there must be careful scrutiny and diligent criticism on the part of those who are not members of the government, in order to see how far that mandate has been carried out and whether or not we have taken the steps necessary to do those things to which we are committed, efficiently and properly, leaving no stone unturned. It may be that with regard to a total war effort, on some fronts total war has been waged as far as the government is concerned. It has been waged on the government's publicity front, because the government has not been modest as to its accomplishments. I am not going to take the Minister of Labour to task on this point, because I do not think he is given to being as boastful as some people might expect a cabinet minister to be. I am not referring to the Minister of Pensions and National Health either, though his guilty look betrays a great deal to me at this moment. But it seems to me that even if the opposition were in a less critical mood than it is its duty to be, our opportunities in regard to further blandishments would be extremely limited, because certainly on the publicity front total war is being waged by the government.

When we come to consider what we have done since the declaration of war there will be those who will say, and perhaps properly—I do not intend to enter into any argument in this regard—that much of this is water under the bridge. There may be men and women in Canada, who will say, "What is the use of crying over spilled milk?" I submit, however, that so long as the same people are carrying the pail we still have the right to go back and at least review the position in order to ascertain whether or not we have carried out our obligations in connection with our undertaking of September 9, 1939. I think it may be said quite properly that from September 9, 1939, to June, 1940, man-power was on the loose. That was a go-as-you-please period. Certain situations did develop during that period, which I need not recall for the purposes of what I desire to say this afternoon; but in June, 1940, under the pressure of most disastrous events which perhaps many members of this house would not like to recall, events which left Britain herself in the gravest danger she has faced in many generations, the Prime Minister rose in his place and urged that this parliament give him and his government certain powers under the National Resources Mobilization Act. Those powers were given; the legislation was passed perhaps as quickly as any legislation to have come before this house for a number of years.

That legislation called for a registration of our man-power; but despite the great urgency which was pleaded by the Prime Minister, the registration was not completed until August, 1940. I am not particularly raising that point now, but I mention the matter in order to indicate that, in spite of the alleged urgency of the matter, there was this lapse of time. Perhaps it might be of interest to see what the government actually believed that registration would do., As reported at page 854 of *Hansard* for June 17, 1940, the Prime Minister said:

> It will enable the government to make the most efficient use of our man-power for the varied needs of modern machine warfare.

The Minister of Agriculture, who was also in charge of the registration of man-power at that time, had this to say, as reported at page 2125 of *Hansard* for July 30, 1940:

> That cooperation is given to the end that every available man, every product of industry and primary production and the whole credit of Canada shall be placed at the disposal of the governments of Canada and Britain to drive back the forces of Hitler and reestablish freedom in the world.

Those were worthy statements with which I do not think any single member of this house will find fault to-day. But there is some criticism which may be properly directed to the government and those in charge of affairs

in connection with the realization of those objectives. As the months rolled on, from August, 1940 until March, 1942—and I believe one might properly take in that space of time—in my opinion there was not to be found in government policy a forthright desire or effort to carry out what that registration actually should have meant; because, if the registration was to be useful, so far as our man-power situation was concerned, it should have been used right away. Everyone knows that registrations made to-day are of little use to-morrow. They must be used immediately, if one wishes to obtain the greatest good from them. While it may be urged that in some respects moves were made to place in position men and women who had registered especially in respect of certain skilled operations, nevertheless I think no one in Canada would say that there was any real attempt on the basis of that registration to allocate man-power in an efficient or effective way, having regard to the conditions existing in those years.

And so the months rolled on. In March, 1942, two and a half years after the beginning of the war, paper plans—yes, paper plans—were made. I am not going back to the speeches made when the legislation introducing national selective service was before the house. But shortly after that it appeared as though the government were really paying serious attention to the situation in regard to man-power. I say that because they created the position of director of national selective service, and to that position appointed a prominent man, one who had the confidence of a large section of the Canadian people. There are, however, many who feel that, so far as the government are concerned, Mr. Little was too good a planner for what the government had in mind. Apparently he attempted to bring his branch to a point of efficiency and dispatch, despite the lateness of the time, and other factors which must be taken into consideration in assessing what was done at that time. But he found in November, 1942, some eight months after the date of his appointment as director, that a number of things had happened, things the exact details of which are not known to many. So far as the public knew, however, Mr. Little tried to do an efficient job. I do not think the government will say he was not conscientious in his effort to perform the job given to him. I think the most the government will say is that it disagreed with the manner in which he operated. And I am not so sure that the government was altogether ready to accept the carrying out of some of the policies contained in the throne speech of September 7, 1939. Apparently Mr. Little was attempting to see if in respect of man-power the government was prepared to do its utmost, in compliance with that undertaking of 1939.

As a matter of fact, he failed. There have been those who said that he was not a good enough politician, and that he did not understand public opinion well enough. Well, on this score one might say the worst that could be said of him was that he failed to realize that the government programme and policy had not progressed further than to the adoption of half-way measures.

I shall not deal in detail with the events which led up to Mr. Little's resignation, nor do I think there is any special point in my doing so. But I do say that one can read from the various public documents released from time to time clear evidence of a battle in progress back of the scenes, one for which the minister and the Department of Labour must accept some responsibility. That battle was perhaps a natural thing; but having regard to what was at stake, I suggest it is not quite as natural to find that it should have been allowed to run rampant.

When Mr. Little accepted the position of director of national selective service he was given the machinery of the unemployment insurance commission. But as time went on, and the order in council of September 4, 1942, was brought to light, it became clear that the unemployment insurance offices were to be finally given over to national selective service and to be used in the field of operations over which that body had control. I believe most of us realize what took place behind the scenes, so far as the unemployment insurance commission was concerned. They were jealous, if you like, of their position as an unemployment insurance commission, and jealous of this new body which was to be superimposed upon them, and which in their opinion at least was going to alter the picture as it applied to them.

I should like to bring one point to the attention of the committee, one which we cannot overlook, because it is understood that in the result the battle was won by the unemployment insurance commission and lost by the national selective service. That being so, I should like to read part of a letter addressed to "The Hon. Humphrey Mitchell," upon the resignation of the director of national selective service. I do not purpose reading all the letter, nor shall I read the minister's reply. Had I the time I should be glad to read more, but the part I shall read is the one in point. Neither the minister's letter, nor parts of Mr. Little's letter apply. In part, Mr. Little's letter of November 16 states:

> While I have made every effort to obtain your assistance, I have not only failed to do so but

have found your actions inconsistent with your word. This makes my position as director of national selective service an impossible one.

At another point in this letter Mr. Little says:

As director of national selective service I find myself carrying grave responsibilities without commensurate authority. The present situation is one of ambiguous and divided authority, which has led progressively from confusion to friction and obstructionism. The result has been virtual paralysis in the organization.

My only reason for reading this is to show the various rays of light by which we, the public, may be able to catch something of the extent and intensiveness of the difficulties behind the scenes.

When Mr. Little resigned in November and his resignation was accepted, of course the unemployment insurance commission had won the day. I want to give everyone due credit during the war-time period. I do not think any of us have any right to ascribe ulterior motives to people, no matter where they are or who they are. I do not want to do that to-day. But where their actions come in conflict with the national interest, then I think these facts must be brought out, especially when they have a direct bearing upon the effectiveness with which the whole man-power scheme or plan has been attacked and approached. When Mr. Little left his position in November, 1942, there was a feeling that many of the recommendations he had made were in line with the words of the government, even though they were not in line with all the intentions of the administration. So that we find to-day, some six months after Mr. Little retired from the public service, such things as the compulsory order of May 4, 1943, and the declaring of a state of emergency in the coal mines of Canada. We find the government and the minister's department gradually moving into the position into which they felt at one time that Mr. Little was moving. I am not suggesting it was the only reason, but that was one of the reasons why they declined to follow the particular policy at that time.

In November, 1942, the government had reached another fork in the road. Having reached that fork, they took the turn which led, shall I say, to a more delicate and more pleasant political climate. I do not intend to find any special fault with the government for taking that action, but they did fail to take the turn in the road to which the elongated finger of necessity and the elongated finger of national interest pointed. In his speech yesterday the minister painted a very bright picture. I do not blame him for that, because he is quite capable of doing it. He said:

In my opinion, and I believe the opinion of a great majority of this house, we have the best possible man-power policy that can be devised.

Some hon. MEMBERS: Hear, hear.

Mr. GRAYDON: I have no objection to hon. members endorsing that if they like, but I think it can be said that there is rather violent disagreement on that particular point. There are many who do not hold the same political views as the party which I represent as leader in the house at the moment and who are not entirely satisfied with the whole man-power position. I think the minister from time to time must have noticed that various people were writing in the newspapers, people who have previously supported the government and who, I believe, still support the government. If the minister ever makes another speech of this kind, I think he might refer to the Halifax *Chronicle* which contains an article by a writer who is no great friend of this party, although I must confess he is quite fair-minded. I refer to Grant Dexter, one of the leading men in the press gallery, a man who is highly respected by the government and by all. Under date of April 8, 1943, referring to selective service, he said:

There is no dispute to-day about what happened last year. None of the objectives of selective service were reached.

Mr. MITCHELL: That was three months ago.

Mr. GRAYDON: The minister must have worked much faster during the last three months than the government has in the last four years if he has made the progress which warrants the praise he feels he is entitled to. I could go on and quote others who are also government supporters and who do not think the minister's plan is the best one that could be devised. I have not the clipping with me, but I can remember taking it from one of the Vancouver papers. This was an article written by another writer who has at least been friendly toward the government and who is also fair-minded. I refer to Mr. Bruce Hutchison. He described the situation in connection with national selective service in a most homey way. He said, in effect:

We are going to lock the door after the horse has been stolen, but we are going to do more than that. We are going to unlock the door and go out to try to find the horse that got away and coax him back into the stable with oats paid for by the taxpayers of Canada.

I wanted to put that on record because it has a direct bearing upon the minister's

statement. He may find the majority of this house in agreement with his statement, but there are some important people in Canada, and many people generally, who do not believe that this is the best plan that can be devised. May I point out that in so far as the man-power policy for the needs of industry and of agriculture—

Mr. GRANT: You might tell us something about the old horses that were used in the last war.

Mr. GRAYDON: I am busy now, but I may see my hon. friend afterwards. We should be frank and truthful about this whole matter of meeting the needs of industry, of agriculture and of the armed forces so far as man-power is concerned. We should consider what the people across Canada are really thinking about this. We have not used the most effective scheme or plan for the best utilization of man-power in these three particular branches. We might as well be frank about it. I should like to see the minister expunge that statement of his from *Hansard*. He will be a bigger man if he does. He should admit that we have made mistakes —who would not make mistakes?—but this is now our new plan, and we are not going to depart from it. He should say that we are to have a national compulsory selective service in its broadest form. I should like to see the minister take that position, because then I think the public would react more readily to his statement. There is nothing worse from the minister's point of view than to try to defend the indefensible, and that is what he has been attempting to do in this particular case.

I know the minister will not mind my referring to the Winnipeg convention, nor will the hon. member for Kings (Mr. Grant) who wanted to interrupt me a few moments ago and who perhaps will be more successful on another occasion. This has been put on the record before, but I wish to put it on the record again because it represents the views of a great party which has its responsibilities well in mind and which represents all classes of our people. This party unanimously endorsed the following proposal, which I submit to the minister ought to be put into effect by him and by his government:

> Recognizing that the world struggle in which Canada is engaged requires a total war effort, we believe in compulsory national selective service, and that all those selected to serve in the armed forces should be available for service wherever required.

I leave that, because as a matter of fact we have problems with respect to the competition of various departments for men. It is only necessary for a man to sit in the house for a time to see the position in which the government finds itself with respect to these competitive demands for man-power.

There are certain questions affecting the whole man-power front. What is the government's position with respect to industry, labour and agriculture? When I hear the Minister of Labour talking of cooperating with labour, I really wonder whether this government has actually taken labour into its confidence and made labour a major partner in the war effort. Industry and agriculture are our two main civilian activities in connection with the war, and surely there is no reason why labour and the farmer should not be made major partners in our war effort. To hear the Minister of Labour talk, one would think that had been done, but what are the facts? On the general advisory board for national selective service there is but one farmer. That is not good enough. The people engaged in agriculture in Canada will not be satisfied with that.

The minister speaks of the representation of labour on various boards, but I was astounded to hear an answer he gave to an hon. member to my left. The Minister of Labour said: Of course, labour has equal representation in labour matters. But, Mr. Chairman, I see no reason why labour should not have majority representation in labour matters because they are not given sufficient representation with respect to any other matters in Canada.

Mr. MITCHELL: I did not say that.

Mr. GRAYDON: I am not very good sometimes at remembering a man's actual words, but I was not trying to misquote the minister. I am quite prepared to accept any statement the minister might wish to make by way of correction. I was saying, Mr. Chairman, that labour and agriculture have not been brought into this war effort in the way they deserve to be represented.

When the former director of national selective service, Mr. Elliott Little, was attempting to put through compulsory labour orders he had the backing and support of labour generally in this country, and I will tell you why, and why labour was so concerned over his departure from that office. He had the backing and support of labour because he took labour into his confidence as director of national selective service. You cannot ask labour to move, to shift their position, to suffer every inconvenience unless the government, yes and the director of national selective service, are prepared to cooperate and work with the representatives of the great body of labour in this country. That is the

solution, and that is one of the reasons why the Little way was so popular with labour in this country.

We hear much about the compulsory aspects of the man-power problem. But when the war-time prices and trade board was set up and when the anti-inflationary price ceiling and wage freezing policies were enunciated by the government and adopted by parliament, surely it must have been apparent to every member of the house that with compulsion applied to prices and compulsion applied to wages, an important leg of Donald Gordon's stool was left out, namely the compulsory power to allocate labour and man-power generally throughout Canada. When I talk about compulsory labour and man-power I talk about the kind of compulsory labour and man-power that has the backing and support of the trades union movement in this country and of our working men generally. Without that cooperation from labour, without their approval and consent, this problem becomes more acute and may perhaps become insoluble.

I want to say this, and the minister himself being a labour man knows it, that labour in every branch of our civilian activity has shown that it is prepared to do anything to help our national war effort. I defy anybody in this house to say that labour cannot be relied upon to play its part, no matter what it may be called upon to do. Labour is too loyal, too patriotic, to do otherwise. Labour, of course, does not want to be moved and jostled about unnecessarily. Nobody is asking that. But when the minister indicates that all our activities have been keyed up in a total all-out war effort, one thinks of the situation in the coal fields in Canada and of the shortages that exist in many other lines. Not so very long ago, I think it was in this debate, I heard the Minister of Labour say that the shortage of man-power in Canada actually indicated the extent of our war effort. I think he had better tell the whole story. The committee is, I believe, well aware of the fact that one of the members of the minister's own department, Doctor Couper, when he was in Toronto and talking of his department as people sometimes do when they are away from home—I do not blame him, because it is one way in which we can get information just as the hon. member for Lake Centre found out yesterday—said when he was away from home and free from the overshadowing wing of the Minister of Labour, that we did not have the right men in the right place at the right time. I cannot quote his exact words because I have not them with me at the moment, but the statement has already been put on *Hansard* and it was to the effect I have stated. Doctor Couper let the cat out of the bag. He told us what the trouble was with our man-power problem.

Mr. MacNICOL: Square pegs in round holes.

Mr. GRAYDON: My hon. friend the member for Davenport has always a better phrase than I have and I thank him for it. The minister talks about the measure and the yardstick of our man-power, but I think he will have to revise his remarks because, if there was one idea behind national selective service, it was to take out of non-essential industry and put into essential war-time activities the maximum of our man-power. The Minister of Munitions and Supply the other night, using figures rather recklessly I thought, said that between forty and fifty thousand men could be utilized in munitions industries generally, and I am not so sure but that he confined it to one particular industry.

Mr. MacNICOL: The aircraft industry.

Mr. GRAYDON: My hon. friend the member for Davenport helps me out again. He says that it was in the aircraft industry alone. That makes my argument all the stronger. It is all right for the Minister of Labour to say that all is well under national selective service, but I point out to him that there are industries closely allied to the furtherance of our war effort which require immediately and urgently men and women to fill vacancies in their plants. What do we find with respect to civilian activities generally? I am going to take the liberty of quoting again from one of the minister's favourite journals, the Regina *Leader-Post*. I do not want to hold up that newspaper as more accurate than any other, but at least it is reasonably accurate and fair, as the Minister of Mines and Resources has so often found in relation to his own affairs.

Mr. CRERAR: I wonder if my hon. friend always accepts what the Regina *Leader-Post* says.

Mr. GRAYDON: This is the only issue I have, and if I can judge it by this article, I might be ready to accept its statements on other points. This is an article which I do not think the minister could have read when he spoke of this plan as being the best that could be devised, because Mr. Dexter again comes to the front with a headline in the Regina *Leader-Post*, "Disquieting Facts." I shall not go over the whole story, which is very interesting, but I wish to quote one paragraph.

He says:

Hitherto the positive side of man-power policy has been reviewed. The record shows that grave mistakes were made.

The negative side is equally disquieting. The failure of the government to use men and women effectively has meant that they have been allowed to remain at non-essential work. And the proof of this statement is to be found in the statistics on employment and sales.

He goes on to make comparisons by index numbers of employment in several industries. These, he points out, are civilian industries and not necessarily directly connected with war material production in the usual sense of the term. Take, if you like, from his article, the making of furs. Employment rose from 96·5 in 1938 to 103·9 in 1942. Increases are registered practically all along the line. In beverages of all kinds, for example, he says that employment has risen from 168·9 in 1938 to 241·9 in 1942. As regards personal trades, meaning laundries, et cetera, the figures for 1938 are 141·5, and for 1942 194·6. It may be possible for one to make deductions from these statistics which are not warranted as far as man-power is concerned, and I do not want to do so, nor do I desire to reflect on the industries just mentioned. But it must be abundantly clear that on the question of man-power the government has not carried out the undertaking and the pledge made to the people of Canada on September 9, 1939. To those who deny that the man-power policy is not a good one I would repeat that, having in mind the history of the problem and the puny efforts made to deal with it, those adjectives which have been applied to it in the past are applicable to it now, namely, that we have a muddled, misconducted, misconceived and mistaken policy with respect to our whole man-power problem.

The national selective service system has paid sufficient attention to the matter of the local offices. It is there that the whole heart of national selective service is to be found. We are dealing with human beings, not commodities; and, having that in mind, is the minister satisfied that the local branches of the national selective service as at present constituted are capable of carrying out the work which actually has been assigned to them?

Mr. MITCHELL: If my hon. friend will let me say this, I think he will appreciate that in the last six months we have developed an enormous organization. These people in these selective service offices are human beings like ourselves; they are working in a virgin field, and I think they are entitled to all the credit that can be given them for what they have done in the most difficult job that has been undertaken during the present war emergency.

Mr. GRAYDON: I do not take a back seat to the minister in paying tribute to those men and women who were brought in there at the last minute, at a time when they should have had years of training in job placements and in special analyses of work. The minister now rises in his place and asks that special consideration be given them because they are amateurs in the field. Of course, in many instances, they are amateurs; of course the minister was right in rising in his place and defending them; but my contention is that upon the government rests a heavy responsibility for the fact that they are amateurs when we are nearing the end of the fourth year of the war.

Upon the item of national selective service I want to make a few more detailed remarks and ask the minister a few questions. I wish he would explain to the committee why there were so many other resignations from national selective service after Mr. Little's own resignation. I should like to know why it is that, so far as I know, no real records have ever been kept—records which are efficient and really mean something—in the local offices. Perhaps the minister may be able to give an explanation. I hope he can. It is not sufficient to change men's jobs just on the basis of something which happens to be on a card.

Mr. MITCHELL: If my hon. friend will tell me what he wants, I will try to get it for him. His question is a little vague.

Mr. GRAYDON: I appreciate that it may have been. I should like the minister to bring down at the appropriate time when the national selective service estimates are on, the whole picture, by statistics and otherwise, as to the records held and how they are kept in the local offices of the national selective service all over Canada.

I intended to say something more, but in view of the lateness of the hour I shall close my remarks in a few moments. The national labour board is doing a job with respect to labour, and will shortly bring down its report. But I point out to the committee that what this board should also be doing is making a sweeping investigation into the whole inefficiency of national selective service, from top to bottom. I am amazed when I recall that the House of Commons' industrial and international labour relations committee has not sat for years. Surely the government might appropriately have remitted this matter of selective service either to the war labour board or to the House of Commons committee I have mentioned, because, if ever there was the need of a sweeping inquiry, there is need of it in all aspects of national selective service,

even at this late date. We owe it, I believe, to the country, because this body will be used not only during the war but with respect to the demobilization of our men, which perhaps is a more important matter than any of the things we have mentioned this afternoon.

Without delaying the committee any longer, I ask the minister to accept the suggestions I have made as not actuated by carping criticism but, rather, as presented in a spirit of goodwill. There is not a gentleman in this house, nor a lady either, who can claim a monopoly of patriotism in our effort to win the war. We may differ in methods, but we are one so far as our objectives are concerned, and I think we may all thank God for that. Therefore I ask the minister, in the light of what I have said this afternoon, to see to it that his department is brought up to a standard which is worthy of the great war effort to which this house pledged the country on September 9, 1939.

At six o'clock the house took recess.

After Recess

The committee resumed at eight o'clock.

Mr. CLEAVER: Mr. Chairman, the leader of the opposition has just concluded an able presentation of the position and platform of his party with respect to our man-power problem. Some of his remarks were a bit severe; I recall once when he referred to Canada's man-power policy and added, "if we have one", and again when he said the man-power policy was a "muddle". In the main, however, I want to compliment the hon. gentleman upon a very thoughtful, well-reasoned and rather clever exposition of a weak cause.

In the time at my disposal I wish to try to advance before the committee the other school of thought in regard to our general man-power policy. I know my hon. friend will concede at once that practically everyone in this country, and certainly all political parties, desire the maximum and most efficient mobilization of Canada's man-power in order to achieve victory. Since we are in full agreement as to the object we wish to achieve, this narrows the subject under discussion to a reasonably small problem, namely the means by which the maximum mobilization of Canada's man-power can best be attained. The hon. gentleman went back into history to quite an extent in order to build up his argument, and I should like to remind him that in 1940 both major political parties were opposed to the conscription of man-power. If my memory serves me correctly, the leader of the opposition was one of the first private members in the 1940 election to commit himself strongly on the public platform as being opposed to conscription. I do not wish to say anything more about that, because in my opinion that stand, like the greater part of my hon. friend's speech this afternoon, is now past history.

To-day we have two schools of thought. The Progressive Conservative party is pledged to a 100 per cent regimentation of man-power by way of national selective service. They believe—and they have a right to their views—that Canada's man-power can be more efficiently mobilized by some selective service officer telling every grown person in this country just what job he or she should do. This, of course, means nothing less than the most autocratic form of bureaucracy, to the *n*th degree; there is no question about that. In the light of the many statements I have heard from members of the opposition in recent weeks opposing bureaucracy, I am a little bewildered and confused as to how they harmonize those two viewpoints. I concede at once that there is a certain mentality abroad in the world—and Canada is no exception—possessed by certain people who do not consider that they are accomplishing anything unless they have a master plan and are pushing or bossing somebody around. The other school of thought, the one with which I associate myself, is this. We believe that in any freedom-loving democracy a much better war effort can be attained, and a much more efficient mobilization of man-power can be achieved, on a voluntary basis. I believe that most individuals know what they can do to further Canada's war effort better than some selective service officer in Brampton or Burlington or Oakville can know. We believe that regimentation or selective service should not come into play and should not be used until the actual need for it arises.

In the light of that belief let me discuss some of the arguments advanced by the last speaker. The first comment I wish to make is in regard to his desire for a master plan and his statement that because we have not what he terms a master plan, we have a muddle or no policy or no plan at all. In advancing that argument and believing as he does—for I know he honestly holds this belief—that the plan is the all-important thing instead of the end to be achieved, it is only natural that he should devote much of his time to criticisms with respect to the

plan. He spent quite a good deal of time in discussing the resignation of one official from the department. He spent a good deal more of his time in referring to the fact that, as he put it, one commission had won a victory and some other commission had sustained a defeat. Then, of course, he had quite a generous display of criticism with regard to the lack of a master plan. In all charity, I suggest that my hon. friend entirely ignores the fact that a voluntary system can be a plan, and that it is the most effective plan for any freedom-loving democracy. I should like to remind the committee that year after year we have heard our war ministers forecast the man-power needs for the air force, the navy, the army, war industry and the like; and at the end of the year we have heard reports from these ministers telling us that these forecasts have been fulfilled under a voluntary plan. Just let me remind the committee that yesterday the Minister of Labour (Mr. Mitchell) told us that only a year ago, in March, 1942, the forecast was that we would require 100,000 additional workers in war-time industry. Now, with this "man-power muddle" that we had, and "no plan at all", did we raise 100,000 men for war-time industry? We increased our war-time workers not by 100,000 but by 320,000 in that period of time.

Then, coming to the armed forces, our ministers of national defence forecast that from March 1, 1942, to March 1, 1943, we would require an additional 193,000 men for the armed forces. Did we get them? We got 220,000 for the armed forces during that time. Once again the objective as forecast was more than achieved.

I should also like to remind the committee that when these forecasts were given I cannot recall any serious opposition from any member in the opposition as to the size of the forecasts. I think we all believed at that time that the forecasts were optimistic, and were quite as much as this country could expect to achieve in one year of war. To me the results speak much louder than words. With regard to the armed forces, by our voluntary system, in the air we have raised all the men we need, and we still have a waiting list in some departments. In the navy we have recruited all the men we can use up to date, and we have a waiting list that runs into thousands. In the armed forces, the field forces, we have recruited by the voluntary system all the men we need for overseas service, and in addition to that we have a good sized back-log of men taken on a compulsory basis, and trained. These men will be available, should any unexpected emergency arise, and should they be actually required for overseas service we have them already trained.

In agriculture and in war-time industry it is true that we are running into shortages. That is to be expected. As this country nears its maximum war effort it is inevitable that we should run into shortages of certain supplies, and surpluses of others. In war-time industry I believe that in the main there are three branches in which we have shortages.

Let me remind the committee of the terrific expansion that has taken place in aircraft production. At the beginning of the war just over a thousand men and women were engaged in the aircraft industry. They were working in nine little plants, involving less than half a million feet of floor space. What have we to-day? We are nearing the 100,000 mark with respect to workers in aircraft production, and factory floor space is well over 5,000,000 square feet. That is a terrific expansion. I do not think too great a compliment could be paid to the director of aircraft production, everyone in that branch and everyone in the aircraft industry for the tremendous results which have been achieved.

Then, we are running into shortages in shipbuilding. And yet, look at our production figures. One speaker yesterday was more interested in the shortages of man-power in the shipbuilding industry than in the number of ships we were producing. We are also running into shortages in coal production. On the other hand we are approaching a tapering off with respect to some other types of production, and this means of necessity that there will have to be a substantial transfer of workers from the industries which are tapering off to other industries where we still have unsatisfied demands. It also means, too, that we shall have to make still further draws on woman-power.

The Minister of Labour has outlined our forecasts of requirements for the coming year, both in war-time industry and in the armed forces. He has outlined, in an extremely able address, just what steps he is taking to ensure for Canada that this man-power and woman-power will be made available to meet our requirements. At this point, notwithstanding what has closely approached ridicule from some hon. members opposite, may I pay a well-earned tribute to the Minister of Labour, and to every official in his department, from the deputy minister down to the last grade clerk in the outlying office. They have earned the well-deserved tribute of the people of

Canada for the way in which they have kept man-power and woman-power supplied to industry and to the armed forces.

It is true that as we reach our maximum war effort—and by the way, Canada's war effort apparently is much more appreciated abroad than it is right here in the House of Commons—some forms of compulsory direction have become necessary. A state of national emergency has been declared in connection with our coal production. Some forms of direction and compulsion have become necessary.

At this point may I comment on the fact that the leader of the opposition is already dissatisfied with the way in which national selective service is commencing to interfere with some people's private freedom and private lives. He took pains this afternoon to remind the minister that he is dealing with "human beings," not with "commodities." Bless you, did the leader of the opposition not find out until to-day that national selective service deals with human beings, not with commodities? I have known it all along.

Mr. FRASER (Peterborough West): Wonderful!

Mr. CLEAVER: All right; my hon. friend will have a chance to speak later on.

That is why I am opposed to any unnecessary compulsion. I believe that every man and every woman in Canada have consciences, that they want to do their utmost to help win the war, and that each one individually can best decide what contribution he or she can make to the furtherance of victory.

Then, again, we are asked why we did not have selective service years ago, the implication being, that because it has been instituted comparatively recently the officials are ill-trained and not ready for the emergency. My answer to that is this: We did not have national selective service in its present modified form any sooner for the very same reason that we did not have rationing sooner, and for the same reason we still have voluntary victory loans, the reason being simply that compulsion and regimentation, down to the time they were brought into force, were unnecessary. I wish also to remind my hon. friends of the fact that while we have a very much modified form of compulsory savings in the income tax field, to help finance the war, still a very large part of war financing is done on a voluntary basis. I have not heard any member in the opposition say that the financing of the war or the victory loan drives have been a "muddle", a "half-hearted effort," or "no plan at all"; and yet we are carrying out exactly the same policy with respect to man-power as we are with respect to dollars to win the war. To my mind the freedom of the individual and his right to choose the job he wishes to choose, where he thinks he can serve best, are much more sacred than dollars and cents. I suggest that that is the reason why for well over two years in this war the government permitted every individual to get fitted into the type of work he or she could best perform.

In studying the present attitude of the opposition and trying to harmonize their protests of the day before yesterday and their great opposition to bureaucracy with their protests of to-day when they have stated that they want an autocratic bureaucracy to the *n*th degree with respect to man-power, the only inkling of an explanation I have been able to find is an article by Bruce Hutchison which appeared in the Winnipeg *Free Press* not long ago. This afternoon my hon. friend quoted from an article by this same gentleman. This article from which I intend to quote I think rather explains, if there is any possible explanation, this hot and cold position of the opposition. It is all very well for an opposition when in opposition to try to remain on both sides of the fence, but if they ever have the misfortune to get on the government benches I suggest that they will find it rather difficult to supply boiling hot ice-cream and the like. We have heard a lot about the Winnipeg convention, and it was quoted to-day. It is my view that the Winnipeg convention is couched in such high-flowery language that the man on the street does not understand it. Personally they have put the feed far too high in the rack for me. I think in this article by Mr. Hutchison there will be found an explanation of Mr. Bracken's interpretation of the Winnipeg convention which the man on the street can understand. I quote:

> Profiting by the recent utterances of Mr. John Bracken in these parts I have prepared the following address to the electors of Saanich, where I hope some day to be elected to some high public office like the school board.
>
> Ladies and gentlemen: In these grave times it is necessary for a public man to speak out frankly the faith that is in him and declare the policies by which he stands. I must tell you, therefore, that I stand unequivocally for general prosperity and a higher standard of living for everyone. For this reason I shall oppose depressions. I am a disbeliever in hard times.
>
> I stand for the right of every man to have a job, a wife, two children, a home, a car and vigorous health. I stand for the right of every man to be insured against all the hazards of life, but I object to any deductions from his

pay for these purposes. Nor should insurance be a charge on industry. To be fair, it must be financed without expense to anyone.

I stand for the right of every man to high wages. At the same time, I insist on low prices. As for inflation, I shall be frank. I am against it. But anyone except a slave of the banking system knows that, by creating more money, the state can pay higher wages without causing any rise in prices. If the state will only have the courage to take away from the working people, through taxes, all the extra money it pays them.

I believe in the right of capital to earn a fair income on its investment, provided, of course, that the public does not have to pay it.

I favour private initiative. But on the other hand, I have an abiding faith in socialism, applied with discretion. Private initiative must be given every opportunity to expand, unmolested by the state. But the state must certainly remove the last vestige of the profit motive.

I may be called a Liberal. Or, if you prefer it, call me a Conservative. I am also a member of the C.C.F. in good standing, with strong leanings towards Social Credit, technocracy, communism, British Israelism and somnambulism. Also I am an Elk and an A.R.P. warden.

In international affairs it is my opinion we should have world peace, after this war. Speaking bluntly, I think we should seek to avoid world wars. I also deprecate famine and pestilence. I stand for collective security. But I am opposed to any reduction of Canada's sovereignty. I want a strong league of nations, but I certainly would refuse to give it any power.

Provided our own industries can be protected from the competition of cheap foreign goods, I strongly advocate a reduction in tariffs. World trade must be restored but not, of course, at the risk of importing foreign commodities.

In provincial affairs, I favour a coalition government composed of Liberals, Conservatives, members of the C.C.F. and anyone else who cares to join it, so long as I am in it.

I ask the hon. member for Mackenzie (Mr. Nicholson) to take note of this. He attended a Cooperative Commonmealth Federation convention a few days ago which passed a resolution on beer. I continue:

While I am a prohibitionist, I am not a fussy one and favour more beer for the public, at less cost.

All provincial health, education and other services should be expanded. More roads should be built. Taxes should be reduced as part of the same programme and the budget balanced. The government should take over the British Columbia electric railway company—

Will the hon. member for New Westminster (Mr. Reid) please note.

—provided the management remains in private hands and is kept out of politics.

As a farmer I insist on higher prices for all farm products. But, of course, the consumer must not pay more for his food.

In all such problems I believe in long range national planning, a programme which will cover every part of the whole country. But I shall oppose to the last the centralization of authority in the government at Ottawa. What we need is control of and regulation of our whole economic system, without bureaucracy.

Summing up my views as to the future, I should say that the future undoubtedly lies before us. Let us face that fact boldly.

Mr. GRAYDON: That sounds like a 1935 election speech of the present Prime Minister.

An hon. MEMBER: 1930.

Mr. McKINNON (Kenora-Rainy River): Mr. Chairman, in opening my remarks this evening I should first like to pay a tribute to the Minister of Labour (Mr. Mitchell) for the comprehensive and excellent address he gave us yesterday. It is no mean job for any man to deal with so many subjects in the limited time he had at his disposal. I wish to pay a sincere tribute to him for the success he has made of his department. It is all very well, and I know they are within their rights, for our hon. friends of the opposition to adopt the attitude they have, but I think we must all be frank and admit that when one looks at the general picture there is not a person, regardless of his partisan politics, who will not admit, when he sits down and studies the matter, that in so far as the Department of Labour is concerned, particularly since the present minister took office, it has contributed its fair share to the development of the things that had to be developed in Canada and to the welfare of our war effort as a whole. Speaking as a campaigner of forty years' experience, I sometimes sit back in amazement at some of the things our hon. friends of the Cooperative Commonwealth Federation have to say, because I happen to have taken part in these affairs for considerably over forty years as a member and officer of a trades union movement. They seem to overlook many of the things that have been accomplished in days gone by and try to focus on the things they hope will be accomplished in the immediate present.

I happen to have come up the hard way. I am not talking because somebody wrote something in a book or because somebody else thinks it is a nice thing to say. I came up the hard way and went down into my pocket when it hurt and paid to get the things I now enjoy. I often say to myself—I have never said it here publicly before—that I wish some of our hon. friends of the Cooperative Commonwealth Federation, whose motives I do not question for a moment, had had some of the forty years of hard battling that brought about the conditions which my organization happens to enjoy at the present time.

Mr. COLDWELL: Give us a chance. We are not all that old.

Mr. McKINNON (Kenora-Rainy River): Probably you are not. But I think your party long before it is as old as this will change many of the policies it so strongly advocates to-day. Experience is one of the greatest teachers that anybody has. There are some things one cannot learn out of books; one has to learn them the hard way, and the hard way is, in my opinion, the way that pays dividends in the long run.

At the present time, when man-power policies are of such great consequence to our country and its war effort, it is not easy for a member to choose the particular topics to which he should address himself. As the minister's address shows, such a broad field is opened up by a consideration of his estimates that a member must make a careful selection of the items he chooses to discuss if he wishes to contribute something specific to the debate. Therefore, if I speak of some phases only of the labour department's activities and not of others, it is not that in my opinion they are not of importance but rather because consideration of time make it impossible for me to deal with them all.

It seems to me that nothing is more truly basic to a successful war production programme; nothing is more necessary for the welfare of our people, and nothing is more necessary for progress within Canada than peaceful industrial relations—a clear and satisfactory understanding between employers and their workers. Perhaps the public is sometimes to blame more than it realizes for strikes and other disturbances to industrial relations, not through any action the public causes to be taken, but on account of its complete neglect of the importance of industrial peace until a work stoppage occurs. Once a clash takes place; once employer-employee relations have passed the breaking point, the public, especially in war time, demands that something be done about it, that industrial peace be reestablished immediately. That, however, is quite late for effective action. A good deal of damage has then been done. Had public opinion been brought to bear earlier; had the cause of misunderstanding been removed in advance, no strike would have occurred; no interruption of production would have taken place, and continuing ill-feeling would have been avoided.

As a worker myself, as a member and sometimes an officer of a trades union for more than forty years, I am absolutely convinced that no strike ever occurs which could not have been avoided by men of good-will, representing employees and employers, sitting down together and settling differences in a spirit of give and take. During the period of more than forty years to which I have referred, I have been an employee of the Canadian Pacific Railway. As a union member, I never was called upon to vote "yes" or "no" on the question of a strike. Yet we had grievances and plenty of them. Some we got settled in our favour; others went against us. Maybe we were not always right, and I am sure that the company was sometimes wrong. But I must say this for the company as an employer: they were always agreeable to meeting us; they would always discuss grievances with us; they would explain their point of view and listen to ours. The company would give in here, and we would have to yield there. We tried to be reasonable, in order that the company would respect our views and would give in a little more readily the next time. It worked, for the company acted in a good deal the same manner. Mutual confidence was won and established. Union handling of cases was taken for granted. An excellent understanding has certainly resulted.

With a proper disposition on both sides, similar understanding can be developed in any industry. To encourage such a trend in industrial relations, the government should go all-out to support the workers' claims to collective bargaining rights. The right to join a union of his own choice; the right of workers to bargain collectively, should be corner-stones of our civil liberties, of our social arrangements. Leading employers will, I am sure, agree with this view. Those who do not should be convinced by government policy that they are wrong and must change their attitude. Advancement of the workers' recognized rights through trades union organization is the democratic way. Government policy and legislation should support it at every turn. Some leadership the government has given; I might mention the grant of bargaining rights to employees of government companies. But I wish to urge even broader action, greater support of collective bargaining as a means to industrial peace founded upon recognition of mutual rights. As evidence of the attitude of a forward looking employer on the subject of labour relations I wish to call attention to a statement recently made before the reconstruction committee of this house by Mr. W. M. Neal, vice-president of the Canadian Pacific Railway. Mr. Neal stated that his company takes for granted the settlement of working arrangements with their employees through dealing with trade unions; that he felt that organized labour through its leaders would make a big contribution to post-war developments in this country. I think anyone will agree that employees will respond to that attitude on the part of their employers will

give their best and will cooperate fully. We must try to have all Canadian employers come to the same point of view.

I trust that when the national war labour board reports on industrial relations, no time will be lost in putting into effect any recommendations it may make which promise improvement for labour and management in their relations with one another, and also, if any action in the same direction which is not recommended seems called for, such action will be taken. No one can disagree with the statement that full war production as well as post-war reconstruction demand improvement of industrial relations, removal of the causes of unrest.

To come now to man-power policies: the summary given by the minister of the steps taken in recent months is an impressive record. To say that more must be done is not to say that past policies have not been effective. I think the policy the government has pursued is the only possible one in the light of all the circumstances. An over-all plan, with all details blueprinted for the future, has a great appeal to it, I will admit, but I am not at all impressed that it would get us anywhere. Surely Germany is the example of a country with an all-out man-power plan; yet what do we find? That country has constantly to shift its plans, to get labour from Italy, from the occupied countries. Clearly Germany has man-power shortages; a blueprint did not avoid them. I subscribe to the idea that man-power policy must be a piecemeal affair in relation to the armed forces, in relation to industry—in relation to the different branches of industry. Of course, policies in regard to each section of the problem must be related to those of other phases of the problem—the forces related to industry, farming fitted in with mining and logging, and similarly with other phases. But the plan must be built up in sections, and pieced together later. It is not practical, in my opinion, to take a blank sheet of paper and draw up a broad plan to cover the whole case. I think the government has followed the wisest course, the course related to reality. Such errors as have been made are in detail, it seems to me, and many mistakes must be expected in such unusual conditions. But, generally speaking, the plans followed have given reasonably satisfactory results.

As one quite familiar with the views of Canadian workers, I believe it is necessary to say a few words on the compulsory measures to move men in industry, which have been taken lately. This is one subject which has been very much under discussion during the last couple of days, and I should like to express my opinion as one who is not speaking from the book, but speaking from forty-two years' experience in what makes the wheels of industry go round.

Labour shortages in wartime are bound to occur, and, at least in my opinion, no great plan for the distribution of workers can prevent them. The pressure on us to provide men and women for the armed forces, and at the same time for a stepped-up industrial organization, together with unforeseen changes, weather changes and other causes, must have their effects on the supply of workers. Then, of course, there is the question of skills, of technical training in industry; no man or woman can master overnight a trade which it takes years to learn. The consequence of this is that, as war develops, abnormal demands arise for some classes of workers; there may be people available, but they will not be people with the skills required. This has occurred in the present war; this may cause the less thoughtful to feel that the best use of our man-power is not being made, but that is not necessarily the case.

To overcome labour shortages; to cause men to shift to more important work—even if less desirable employment in some cases—the government has thought it necessary to bring in compulsory labour transfers. I consider that in doing so the government followed the only course open, and yet one must feel—and I do feel—that even in war time, when we grow used to taking orders from the government, there are dangers in this kind of compulsion. I suggest to the Minister of Labour that he give constant and careful study to the problems connected with these transfers to see that the rights of the workers are safeguarded as far as possible, that the coercion is administered in such a way that injustices will not be inflicted on those affected, and that inequalities and hardships will not exist if avoidable.

I suppose that these transfers are still in an experimental stage, that they will be studied and the system improved as time goes on. I hope this is so, and I would recommend that course to the minister. We know his problem. We need coal, farm production, lumber production and production of other types, and his is the job of getting the labour. But care should be taken to base the procedure on experience and on fundamental fairness. It seems to me that the method of placing large powers over the individual in the hands of a selective service officer has its difficulties. It must place that officer in a very difficult position at times, as, for example, in the case of these transfers. My suggestion

would be that the actual transfer of a worker should be decided by a small local committee, made up of local citizens, and representing, say, labour and employees, together with some general members.

I realize that a man to be transferred may appeal to a board. But I think the whole transfer system would be put on a more secure basis, that it would earn more public support, if the transfers were first decided by local representative committees, rather than by officials. This is a suggestion I should certainly like to see considered. It would undoubtedly inspire greater confidence and should lead to more effective results.

In conclusion, one thing that has always worried me is the rate of wages paid to grade one employees of the government. I congratulate the government upon recently deciding to increase the remuneration of these employees. In my opinion the lower paid services, grade one and grade two, should be put under the Minister of Labour. The finance department is no place to decide on the merits of these cases. Recently it has been decided, I gather from press reports, to pay $70 a month, but there is a period of waiting of eighteen months before the $70 becomes effective. Just recently a hostel has been opened here for grade one employees. My latest information in the matter is that only twenty-five have applied. These people cannot afford to live there.

In all fairness I suggest that the government should be a model employer, and if these people cannot afford to live in this hostel, which the government has spent many thousands of dollars to build, it is pretty nearly time that some of the milk of human kindness was injected into the members of the treasury board, so that when people are employed they may be given reasonable consideration. Eighteen months is a long time, and many people could starve to death in the first eighteen months of their employment by the government.

Mr. STIRLING: I should like to begin by expressing the opinion that it has been a pleasure to listen to the hon. member for Kenora-Rainy River (Mr. McKinnon). He has spoken words of sense with sensibility, and he has been speaking to us on a matter on which he is well informed. That must always be a pleasure in this House of Commons.

It has already been said that in our opinion the application of the regulations concerning man-power has not been carried out with equality right across the country among different sorts and conditions of men and women. To that opinion I subscribe, and I wish to speak for a few moments this evening on a manifest instance of inequality in the incidence of the regulations. I mean the Doukhobors in British Columbia.

The minister is one on whom we look with a good deal of kindliness. He has inherited a task which to many would be an unenviable one. He has had to add to schemes which were in preparation before he assumed his present position. He has a different crop of difficulties with his breakfast each morning, I imagine, and to that crop I am going to add one more, namely, the Doukhobors.

The minister knows that the hon. member for Kootenay West (Mr. Esling) and I, representing two neighbouring constituencies in British Columbia, and having acquired a certain amount of knowledge with regard to these people, have always done what we could with succeeding ministers to give what assistance we could to the minister in handling this problem which is so difficult. But I think it is quite manifest that there has been inequality of treatment so far as the application of the regulations is concerned.

In 1940 there was a national registration. That numbering of the people had of necessity to be spread equally over all the people, men and women, old and young, for otherwise the result would have been of little value; and yet it is within the knowledge of all who live in the neighbourhood of Doukhobors that many, many of them took no notice whatever of the registration. Although penalties were attached to those who did not register, I am not aware of any case in which a Doukhobor has been proceeded against for failing to register. A year and a half after that, there was a man-power check-up. Those in employment had to fill in certain cards and give more recent statistical information to the department. There were Doukhobors employed in southern British Columbia in sawmills and in this industry and that. Many of them did not fill in the cards, and it was intimated to at least one sawmill owner that perhaps he should not be too stiff in his requirements but should do all he could to assist the unregistered Doukhobor to answer the questions on the card, if the employer wished to continue to use him. I am informed that in a considerable number of cases those forms were sent to the registrar with little more than the names of the men on them, and they continued to be employed.

Then, when we came to the call-up by ages under the mobilization act, the medical notices were sent out to Doukhobors in common with other people, and in many cases no attention was paid to them. I am not aware of any

instance in which the regulations attaching to non-compliance were made use of with regard to Doukhobors. As a consequence, the people who live in that neighbourhood, the ordinary Canadian citizens, have seen their sons and daughters, their brothers and sisters, comply with the regulations at the time the registration was taken; they have seen them comply with the medical notices, and there have been instances when those who have chosen not to comply have been proceeded against, but I know of no instance in which action has been taken against a Doukhobor when he neglected to pay attention to the medical notice.

I am not going to weary the committee with a long, historical dissertation on this curious sect, but in a very few phrases I would remind the committee of one or two facts. This was a highly religious sect which followed agricultural pursuits in southwestern Russia. Because they conscientiously objected to military service they were accorded such treatment in their own country as to amount in their opinion to persecution. At the end of last century Canada required to expand her agricultural population and also needed labour to assist in her development. Therefore in 1898 she entered into arrangements, under an order in council, to bring some thousands of these people to Canada. There was just one proviso: that here they should be immune from military service. I do not join with those who, with wisdom after the event, say this experiment should not have been tried. It appears to me that with the facts before the Canadian government of that day it was not unreasonable to suppose that if these hardworking people should be offered liberty in a new country, there was a reasonable prospect that they would become citizens worthy of Canada.

Unfortunately they have not. They came to Canada and went to the northwest provinces, settling in that part which subsequently became the province of Saskatchewan. Very soon trouble cropped up. They were obstinate; they did not care for our laws and regulations; they desired to go their own way; and they did so to such an extent, with their nude parades and their indecent behaviour, that the council of the northwest provinces at last decided that it should be intimated to them that they must subscribe to our laws or get out. They had come with money; they had provided themselves with land and equipment; some of them were on the road to prosperity in farming. The consequence was that the majority decided that probably it would be better to give at least apparent allegiance to our laws, but a smaller number decided that they would not do so and started to trek. Unfortunately that trek ended in southern British Columbia. The provincial government of the day also was rather taken with the notion that all these people needed was kindness, that in time their difficulties would be overcome and that they would settle down and be amenable. Unfortunately for the second time a Canadian government was wrong; for trouble cropped up; schools were burned; they harnessed their naked women to their ploughs and did all sorts of things which were not in accordance with our way of life. They have given trouble off and on ever since. In the eighteen years that I have been a member of this house I have made one or two trips annually into the Grand Forks country in my constituency, where the Doukhobors are settled. I have endeavoured to keep in close touch with those public men and official people who are able to give me authentic information with regard to these troublesome folk, and I have made use of that information in Ottawa in discussing the matter with officials here.

It should be borne in mind that the first leader of this sect, Peter Veregin, who came with them from Russia, died as the result of a bomb explosion in the day coach of the train in which he was travelling. There is no evidence, and there never will be evidence, as to who put that bomb under Peter Veregin's seat; but in the minds of the people of that neighbourhood there is not the shadow of a doubt that it was an unruly, recalcitrant member of his own band who did so. After a year or two he was followed as leader by his son, Peter Veregin the second, and despite the man's dreadful character—intemperate, bestial, a bully, a perjurer—in spite of that, these people maintained a fanatical worship of him because they believed him to be the direct descendant of God Almighty. He died a year or two ago, and he has been followed as leader by a grandson of the original Peter of whom I know little and to whom I shall not refer, other than to say that he is a young man and as yet we do not know what sway he may have over his people.

I come, then, to the present state of affairs; I am not going to tell the committee many of the incidents which have occurred throughout the years. I will admit that these people have not been as unruly in recent years as they were previously, but still they will not obey regulations, law and order. Here we are in time of war. It is our purpose to endeavour to harness all the labour of this country in order to do our utmost in the war effort.

The minister made only passing reference to this subject in his speech; these are his words as reported at page 2937 of *Hansard:*

As of May 25 last mobilization boards had postponed 4,747 men as Mennonites, Doukhobors or conscientious objectors.

Then he proceeded to describe the steps the government has taken in the treatment of conscientious objectors. What I want to ask the minister is why he treats Doukhobors differently from conscientious objectors? He described how conscientious objectors have been put into certain camps, and have been used in that way. He points out that many of them have given their labour willingly and that good results have followed. The Doukhobors certainly object conscientiously to military service, but they should not be allowed to go scot-free simply for that reason. As a matter of fact, governments in Canada have taken a generous and lenient view of the clause in the 1898 order in council, because it does not strictly and in so many words apply that proviso to the descendants of those who originally came. Still they do conscientiously object—or at least they use that conscientious objection as a fence. It appears to me, and it most certainly appears to those I represent, that there should be equality of treatment as between their sons and young Doukhobors.

I would draw your attention, Mr. Chairman, to a paragraph in a letter from a prominent business man of Grand Forks written to me last February. He writes:

It is a disgrace and an insult to our soldier men and women that something is not done with the younger generation of these people. With the crying need for labour in our forests, mines and war industries, and the existing fuel shortages, in every town and city in the country, to see these strapping young men by the hundreds loafing around, doing absolutely nothing, is enough to cause any red-blooded Canadian to wonder whether our government had any guts left at all. There is not a day in the week this winter that at least twenty-five to fifty of these young men of military age cannot be picked up in the streets of this small town of Grand Forks, and still the timeworn policy of "hands off the Doukhobors" still goes on.

Through the course of the years I have been of the opinion that time would solve this difficulty. That time might be a very long period, but judging from what had passed I was inclined to think I did see some improvement. When I was in the district last year, however, and once more had an opportunity of meeting the principal people, and discussing the Doukhobor question, I was shocked to find that these people now say that it is the young people, the young Doukhobors—those who have been through the schools—who now are inclined to say, "Oh, you do not need to take any notice of that legislation. The government does not dare to do anything to us. We can go our own way." That is a sorry reflection on this problem. And it must be grasped more firmly than it has been grasped yet, if we are to do justice to our own Canadian people.

Upon returning from my visit last year I wrote to the minister, reporting what I had found. In my letter I made the suggestion to him that he should send an official of his department, not as a royal commissioner or anything as important as that, but just one of his officials whose opinion would be of value to the minister, and that such official should be permitted to go here and there and see the Doukhobors at their work or at their farming, see those who on occasions employ them, see the leading people in the communities, and report to the minister so that he might have first-hand information. Some months later the minister was good enough to accede to that request, and asked the commissioner of the Royal Canadian Mounted Police to send in an officer. That police report is now before him, and I have a copy of it. I have gone through the report, and in my opinion it contains some very useful suggestions.

There is no doubt whatever that the Royal Canadian Mounted Police and the provincial police of British Columbia are well informed on this problem, and it is with their assistance that a solution may one day be found. For instance, it is suggested that in connection with the work of the selective service organization an office should be opened at Grand Forks. Hitherto the selective service office has been at Trail, which is a considerable number of miles away from this settlement of Doukhobors. They are more likely to ignore the notices they receive, unless they are able more easily to go to a local office. He also suggests that when the medical notices are sent out they should be sent in an entirely different form from that used in respect of those who are to be taken for military training. Then he suggests that in view of the fuel shortage, a condition which unfortunately is not getting any better as we go through the summer, there being a considerable quantity of mature timber in that neighbourhood it would be desirable to employ the Doukhobors in cutting fuelwood. This would be a means of reducing fire hazard, since these are mature trees. The cutting could be carried out under the guidance, and taking advantage of the experience of the provincial forestry officers. He suggests that if the opportunity to cut wood is offered to them, and they still refrain from

playing their part in the game, then the minister should decide that they be put under restraint in selective service camps, where they would have to work.

These Doukhobors have been used to a certain extent in local industry, in connection with picking fruit, hoeing vegetables, cutting lumber and working in the sawmills. But there again we are met with the difficulty of inequality of treatment. On many, many occasions Doukhobors who had not registered were employed. The person who did not register, and still accepted wages, and the employer who paid the wages are both subject to penalties. Those penalties have been exacted against others, but I am not aware of their having been exacted against Doukhobors. That is another instance of inequality in the effect of these regulations.

It appears to me that the minister should discuss the question of treating these people as conscientious objectors, which they certainly are. Then, while honouring our word to their predecessors that they shall not be used for military purposes, they should be drawn in to do what work they can, so that there may be equality of treatment for all Canadians, and so that these people may no longer hang around the beer parlours and pool halls, before the eyes of the parents of those Canadian lads who have to conform to the regulations.

Mr. MITCHELL: I appreciate the sentiments expressed by the hon. member with respect to these people who for many, many years have been the problem children of Canada. Like the hon. member, I sat in this house some years ago, at a time when he was on this side of the house, and I have a vivid recollection of two members, one a bachelor prime minister and the other a bachelor leader of the opposition, discussing the question of a parade of thousands of naked people on a back lawn on a sunny morning. I remember vividly the burst of humour that occurred in a house that was so dismal in those days of desperate depression. What the hon. member said about these people is absolutely true. They were invited here and were granted certain privileges. When he referred to the beer parlours and poolrooms some would think it is an indication that they are becoming civilized in a way they were not in the old country. Like my hon. friend I have seen quite a bit of the government of British peoples in various parts of the world. I think one reason for the success of our type of government is that we do not interfere too much with other people. We do not try to make Britishers out of Indians, and so on. Notwithstanding the criticism offered by people who sometimes have not seen or experienced the contributions that our people have made toward the development of what are sometimes called the subject races, I believe considerable good has been accomplished. What my hon. friend has said this evening is an indication that these people will eventually become assimilated within the bosom of the Canadian family.

Mr. REID: Not in our lifetime.

Mr. MITCHELL: That may be quite true, but let me say to my hon. friend that his life or my life is just a heartbeat in the life of the nation.

Mr. REID: The minister is very optimistic.

Mr. MITCHELL: When my good friend, the hon. member for New Westminster, is pushing up the daisies there may even be a Doukhobor mayor of New Westminster. A good many of these people are now engaged in what might be considered callings of national importance, namely, farming, logging and so on. I should like it laid to the credit of this department while I have been minister that we have got these people to cooperate more than they have in the past. We have not given up the will to do something with them, and I say that with due regard to the difficulties which have been experienced by every government since these people first came to Canada.

I remember that last year—I want to say this on another occasion—the Department of Labour received a great deal of criticism about the Japanese problem. I think in a large measure we have solved it for the time being. If my hon. friend will leave the Doukhobor problem with us for another six months, we shall see if we can get it on the rails and have these people play the same part that other conscientious objectors are playing at the moment in the life of this country.

Mr. STIRLING: I do not think the minister has touched upon the main question. I was endeavouring to put before him the inequality in treatment accorded this young Doukhobor as compared to that given a young Canadian.

Mr. BENCE: Mr. Chairman, I listened with a great deal of interest to the speech made yesterday by the Minister of Labour (Mr. Mitchell), and I have since read it. If, when he made the statement that "we have the best possible man-power policy that can be devised", he meant that it was the best policy that could be improvised in the last six months after things had been allowed to drift into

the position they were in, there may be some basis for the statement on the ground that it has yet to be proven. I must confess that listening to the minister I could not help thinking of the small boy who, while passing the graveyard, whistled in order to keep up his courage. The rather dogmatic assertions that were made by him were nothing more than pious hopes. It is self-evident that the policy which the government claims is the best that can be devised has only been conceived and put into effect in the last six months. That is proven by the fact that the minister asked my leader not to be too harsh on the organization, because it was a virgin one and could not be expected to iron out all the rough spots within that space of time. So far as I am concerned the old saying still stands: The proof of the pudding is in the eating. The first pudding was not very good, but I am hopeful that the second one will be better. However, I have not much hope, because most of the ingredients have been lost. It may be that this is the best plan that can be conceived now.

I should like to point out to the minister that this is the time of year when there is the least pressure as far as labour requirements are concerned. The minister quoted certain telegrams the other day with reference to the farm situation. Anyone who knows anything about farming, especially in western Canada, knows that this is the best season as far as labour is concerned. We know also that there is not the same pressure at this time in regard to the coal situation as there will be later on. People do not require coal now, but they will require it next winter. The proof of whether the policy of the government is the best that can be devised will be forthcoming at that time when a great amount of labour will be required on our western farms and coal will be required from our mines. Coal will be required to heat our homes and factories, and to run our railways and industries. When that time comes; when the maximum amount of labour is required, we shall be in a position to judge how this policy is going to work out.

The responsibility is upon the administration to see to it that the people of this country have things like coal. If there is not sufficient coal available, many phases of our war effort will bog down. We must have coal to heat our houses and as fuel for our factories. We must have it for our transportation systems. If the scheme which has been worked out does not solve that one problem, there will be many difficulties with which we shall be confronted. I am quite prepared to admit that all the responsibility does not rest upon the shoulders of the Minister of Labour. He has been minister for slightly less than a year and a half. Since the beginning of the war the responsibilities of this department have been divided with another Minister of Labour. My belief is that this is a governmental responsibility. The working out of a policy to bring about a state of affairs which will be effective as far as labour for the war effort is concerned rests squarely upon the shoulders of the government.

It seems to me that a comprehensive plan should have been worked out months ago rather than to continue on the basis that was announced by the minister and by his deputy, Mr. MacNamara, as late as last fall. They said they would continue on a voluntary basis until that system broke down, and then compulsion would be resorted to wherever necessary. It seems to me that the administration should have shown some imagination in that regard and realized that we would come to the position we are now in where compulsion must be resorted to. The fact that there is and has been for some time a difficult man-power problem; the fact that there has not been any comprehensive policy available to the people of this country, is evident from the statements and assertions of many responsible organizations and public men throughout this country. I need only refer to a few of them, but they have been filling the newspapers for many months past. For example, the great wheat pool organization of western Canada sent a resolution to the administration last winter urging a new man-power scheme. One of the great voices of western agriculture, the *Western Producer,* as late as December 17 last, after the man-power problem for farmers was temporarily over, had this to say:

> On the opposite page we publish material issued by the Canadian Federation of Agriculture which we commend to the attention of all farmers and farmer organizations. The material shows conclusively the chaotic condition into which the question of adequate farm labour has been permitted to degenerate by the absence of a coherent enforced plan to guide the relevant authorities in maintaining agriculture as a vital part of war industry and to facilitate the production of the foodstuffs which are imperatively necessary in the war effort.

The United Farmers of Alberta, in the latter part of November of last year, had this to say as reported in the *Star-Phoenix* of November 25:

> "If the efficiency of Canadian farmers is regarded as desirable, there has been a serious bungling in man-power policy," the executive of the United Farmers of Alberta has informed Agricultural Minister J. G. Gardiner, in a statement sent to Ottawa.

I quote further from the same statement, and this is in answer to a reference made by the minister yesterday to the farm situation in western Canada and his statement that he had no control over the weather:

Many farmers have reported at this office they could have been completely threshed at this time or sooner had there been available sufficient men skilled in handling harvesting machinery.

One of the outstanding agricultural experts of Saskatchewan, Professor E. A. Hardy of the university of Saskatchewan, on January 18 of this year said:

The major problem of the Saskatchewan farmer is not one of power or of machinery, but one of skilled farm labour, capable of operating power machinery.

Mr. Grant Dexter, writing in the *Star-Phoenix* of December 23 and referring to the coal situation—this was just after the appointment of the emergency coal production board—made this statement:

Uncontrolled competition for man-power between the army and essential war production has become evidenced in the appointment of this board whose task it is to avert a coal famine in 1943.

I should like to refer to the statement made by the minister as reported by the Canadian Press on November 7, 1942. I quote:

Mitchell said the way the British labour ministry's man-power activities are coordinated with production functions of supply departments on both national and regional levels impressed him deeply.

"We have been groping for procedure of the same kind and I hope I have found the key to it" said the minister.

He said that if he was able to judge what he had seen of production in visits to factories since he has been here the tempo in British plants is faster than in Canadian factories. And he added: "I shall have some wholesome things to say to Canadian employers and workmen on my return."

My leader this afternoon referred to a series of articles which was published in the western press of this country last November and December. These articles were written by Mr. Grant Dexter, who, to say the least, has been favourably inclined toward this government for a number of years and certainly has never been anything but critical of the party to which I have the honour to belong. I do not refer to these articles for the same purpose for which some of them were referred to this afternoon by the leader of the opposition. I do so for the purpose of discussing what I would call the Elliott Little case. I must confess that this matter has been on my mind for many months. From what I have been able to ascertain from a reading of the press and discussing the matter with people, some of whom purport to be in a position to know or have been able to find out, it does seem to me that this man Elliott Little was given a very unfair deal by the administration.

May I say, first of all, that I do not know Mr. Little. But I do know this, that he was held in the very highest regard by the agricultural organizations of this country. I know that at the time of his resignation statements were made by the two largest labour organizations in this country, the trades and labour congress and the Canadian congress of labour, attesting to this. I want to refer to a Canadian Press dispatch of November 18, 1942. The first statement is by Percy R. Bengough, vice-president of the trades and labour congress. He stated:

As far as Mr. Little is concerned we believe he is honest and capable. As far as the Minister of Labour is concerned we have resented his dictatorial and uncompromising attitude. Generally, labour from coast to coast does not like him.

Here is the statement of Mr. A. R. Mosher, president of the Canadian congress of labour:

The Canadian-congress of labour is very deeply disturbed by the rumour that Elliott Little, director of national selective service, has resigned from that office as a result of a controversy with the Hon. Humphrey Mitchell, Minister of Labour.

It is a matter of public knowledge that the man-power programme has bogged down, but this, in the opinion of the press, is due primarily to the lack of an adequate government policy with regard to the whole war effort.

The responsibility for the present situation rests upon the cabinet, and especially upon the Minister of Labour. Mr. Little has been handicapped from the start by the failure of the government to make up its mind about man-power, and to give him authority to carry out a definite policy.

It is just about eleven months ago that I met one of the leading labour men of my city. He had just returned from a meeting of labour men in Winnipeg which had been addressed by Mr. Elliott Little. I was very pleased that Mr. Little was in charge of this matter then, and I must confess that I was pleased to hear the praise showered on Mr. Little by this labour man for the aggressive attitude he, Mr. Little, had taken and for the impression he had given to that labour meeting in the city of Winnipeg.

In my opinion, and so far as I can ascertain, Mr. Little did not quit the ship, as was stated by the minister a few days ago. He was pushed off. He had been given a job, but had been given no authority to carry it out. In his own words the trouble was:

The paralysis which has overtaken selective service was, of course, a progresive development over several months and the minister was aware of outstanding difficulties before he left for

England. During his absence I prepared proposals which I had hoped would serve as a basis for a constructive solution upon his return.

His attitude then, when I pressed for serious consideration of these proposals, was such that I obviously could not expect that support from him which is necessary if this or any other plan of national selective service is to function properly. I had no alternative but to submit my immediate resignation.

I have referred to the series of articles written by Mr. Grant Dexter. Mr. Dexter has a reputation for being an intelligent and hard working editorial writer. He is known for his diligence in ascertaining the facts, and the statements he makes in this series of articles completely exonerate Mr. Elliott Little. For example, on November 9 last he said:

When selective service was announced last March great things were expected of it. As described by Mr. King in parliament, its responsibilities were great. But few noted at the time that its powers were strictly limited. Mr. Little and others associated with him in administering selective service took the assignment in earnest, went about the country making speeches about what was going to happen. Figuratively they were like the farmer who thinks he has much land to work, but tunes up the tractors and the gang ploughs only to discover that all he really needs is a hand trowel to cultivate a window box.

To this day, seven months after the announcement, selective service is impotent, on its own, to hire a stenographer or to pay a bill. It has no power to take men from unimportant jobs and put them to work on essential ones. It can deal with people who come to its labour offices looking for work, but no more. Great sections of the population, and therefore of manpower, are totally withdrawn from its field of action—agriculture, for example. And the areas so blocked off are increasing, not decreasing; as witness the freezing, even if only temporarily, of half a dozen basic industries a few days ago.

Most people seem to have been thinking of selective service as the agency which would coordinate the war effort. There is, however, no warrant for such a view. This may happen: the crisis may have this result.

And on November 11 in another article he wrote as follows:

Most people think of national selective service as the organization whose task it is to give to every Canadian the job he can do best in this war. Indeed these are the words used by Elliott Little, the director, in a national broadcast on April 8, 1942, some two weeks after he was appointed.

The record, however, proves this is a mistaken idea. The confusion which now exists is only in a minor way attributable to Mr. Little and his associates. It is the result of government policy which, it would seem, has swerved sharply since March 24. In consequence, the position with respect to the mobilization of man-power has become increasingly complex. Right now it is a task shared by several agencies of government.

In retrospect, the action to mobilize manpower seems to have been halting and unsure.

[Mr. Bence.]

The explanation in part is to be found in circumstances for which Mr. Little is not responsible. His contribution to present confusion has been due only to an apparent miscalculation of the powers and responsibilities of selective service.

An article to a similar effect is set forth in the *Star-Phœnix* of November 30, after the resignation of Mr. Little. It is practically a repetition of one of the previous articles. I will read just the latter part:

Thus selective service, after six months of confusion, vacates the field so far as coordination of man-power is concerned. The four major contestants—army, munitions and supply, agriculture and essential civilian services—remain in the battle. Each of them is represented in cabinet by a different minister.

Coordination of man-power, therefore, remains just where it was last March before Mr. Little was appointed—a problem for the government. The moral of the Little episode is that no one man can do this job. Only the government can coordinate its competing departments.

And then it goes on, referring to the order in council which I have cited, and of which I may have something to say in a minute:

On examination the charge against Mr. Little of presenting his minister with a 70-page proposition and expecting an early answer does not stand up. The 70 pages comprise, largely, a consolidation of regulations and orders already in effect. Over 60 pages of the total are merely a re-hash of orders already approved by the government. The new material can be read in not more than 15 minutes.

Now, Mr. Chairman, I have something to say in connection with this order in council, because I believe that the manner in which it was presented to the people of this country constitutes one of the most unfair things I have ever known. For example, let me point this out. This order, this draft order in council, was, at the expense of the Canadian people to the tune of $558.40, printed so that it could be sent out for the purpose of showing that Elliott Little was nothing but a dictator—9,500 copies in English and 3,500 copies in French; and particular attention—and this is the point to which I take the greatest exception—was drawn to a certain section of the draft order in council. To the ordinary person who has not studied law it sounds pretty terrible, but may I say that I do not believe Mr. Little had anything to do with the drafting of this section, and I will explain why in a minute.

Section 21, page 32 of that draft order in council, is as follows:

No person shall, in the course of an investigation under this section, insult the director or wilfully interrupt any proceeding before the director, or refuse to obey any order made by the director in the course of an investigation; and if a person does any such thing the director may, without affecting such person's liability for

contravening regulations, direct any peace officer to take him into custody and remove him from the precincts and presence of the director to be detained in custody until the conclusion of the day's sitting.

Mr. MARTIN: What section is that?

Mr. BENCE: Section 21, page 32. That section was spread all across this country in black type for the purpose of showing what kind of man Elliott Little was, and there was great chortling and glee in many sections of the Liberal party in my particular part of the country because they could pick this out and say, "What kind of man is this who does not want to be insulted and puts in a draft order in council to this effect?" This draft order in council was drawn up by members of the Department of Labour and the Department of Justice. That particular section as a matter of fact is practically the same as a section in the Combines Investigation Act of this country, which was, I understand, drawn up and was certainly passed under the supervision of the present Prime Minister of Canada. Section 33 of the Combines Investigation Act, chapter 26, revised statutes of Canada, 1927, is as follows:

If in any proceedings before the Registrar or any commissioner any person wilfully insults the Registrar or any commissioner, or wilfully interrupts the proceedings, or is guilty in any other manner of any wilful contempt in the face of the Registrar or commissioner, the Registrar or commissioner may direct any constable to take the person offending into custody and remove him from the precincts and presence of the Registrar or commissioner, to be detained in custody until the conclusion of that day's sitting.

It is practically identically the same thing that was set out in this draft order in council and which was impressed on the Canadian people as an example of what a dictator this man was; yet it is a section which has been on the statute books of this country for at least the last twenty years. That was taking a very unfair advantage of Mr. Little, and it seems to me that, if the Minister of Labour had been as fair as he states he wishes to be, he would have drawn that fact to the attention of the Canadian people.

To my mind the confusion which has been demonstrated to the people of this country by the actions of the administration in its manpower policy is proven by the fact that, during the course of the last two years, they have had not only two ministers of labour, but two ministers of national war services, and now they have called for a parliamentary assistant —to whom I wish the very best of luck, because I believe that he will need it.

I wish now to refer, before I complete my remarks, to one particular thing in connection with my own constituency. I refer to the flour mills situation, which is very grave, and which I believe, unless it is solved, will affect many sections of Canada's war effort and will put the people of this country in grave peril.

We have in western Canada many large flour mills, and I receive, not complaints, because these are not the kind of people who complain, but numerous suggestions from them that some special consideration should be given to the men who work in the flour mills. There is a great deal of heavy work to be done there; yet it would appear that there is no special priority so far as they are concerned; at least it is certainly not as high a priority as obtains in other cases. The matter of the manufacture of flour is very important in this country, and I submit to the minister and to the officials who are in charge of the administration of these priorities that they should see to it that the necessary heavy labour, a good deal of which is required in connection with flour mills, is available. I wish to quote from a copy of a letter which was sent to the hon. member for Moose Jaw (Mr. Ross) from one of the mills in that city, and a copy of which was sent to me by the manager of a Saskatoon firm. It states as follows:

. . . But those vital food processing industries, long established on the prairies are inexorably being forced to curtail their output or shut down altogether, because of the man-power shortage. Such a condition, at this most crucial period in our national effort, is not only intolerable, but must appear incredible. Nevertheless, it is absolutely true.

We are under present regulations, unable to help ourselves. Our rating is apparently not high enough to warrant first choice of any available labour. That, seemingly is reserved for repair depots, coal mines, or oil refineries. We consider our food industries vitally essential. We will be here long after the war is won—if we survive.

I submit that the case is an imperative one and should receive immediate consideration.

An hon. MEMBER: Will the hon. member tell us who wrote that?

Mr. BENCE: Gladly. It was written by Robin Hood flour mills of Moose Jaw, of which Mr. Larkins is manager.

Mr. FAUTEUX: As the representative of an important constituency in Montreal, and representing labour, I should like to say a few words, but first I would ask the committee to be indulgent with me because I intend to speak in English and unfortunately I am not thoroughly familiar with the language. My first word will be one of congratulation to the Minister of Labour (Mr. Mitchell) upon the wonderful speech he made in the house. He has given us an

interesting statement of the affairs of his department, and not only to the house but to the country as well, which was very anxious to get his explanation.

At the beginning of the session there were labour troubles throughout the country and in many places people were asking for the head of the Minister of Labour. I well remember, as all hon. members no doubt do, the speech which the Prime Minister made in this house when, referring to the Minister of Labour, he said that at the time when it was decided to have a labour man in the cabinet the first thing he did was to ask Mr. Tom Moore to join the government in that capacity. Unfortunately, for some reason or another, Mr. Tom Moore refused, but he did suggest to the Prime Minister that the best man he could choose in the country was the hon. gentleman who now occupies the position of Minister of Labour.

If I rise to-night to pay my tribute to the Minister of Labour, it is because, not only in my own province and in my own constituency, but throughout Canada, those who think likewise are in very good company, since they are in the company of Mr. Tom Moore.

We have heard many criticisms of the minister since the beginning of the session, and of course we need to have criticism. It is the role of the opposition; it is the role of all parties who do not support the government, to criticize, and I do not blame them. The first criticism we have heard is that the Minister of Labour did not succeed in allotting to every department of our economic life sufficient man-power, and in some other quarters other critics have said that as a labour man he did not treat the labour men as he should have done. It is interesting to study the part which the Progressive Conservative party has played in the criticism of the Minister of Labour, and the part which our friends of the Cooperative Commonwealth Federation have taken. The Conservative party have taken the position of the patriot who wants to do more than anybody else to win the war and who thinks that we have not done enough, that we are not making an all-out war effort. The Cooperative Commonwealth Federation has assumed the role of the protector of the labouring classes.

I do not wish to impute motives to those hon. members. They have tried, I suppose, to do their best for their country. I realize, however, as a man who has been in politics for many years, what it would be like if there were an election. The Conservatives would go before the people and say, "The Liberal party has not done its utmost to win the war; it has not made an all-out war effort because it has not had conscription." And the Cooperative Commonwealth Federation would say to the people, "We are the only ones who have looked after you employees during the four years that the government has been in power."

Hon. members may recall what was said last session—and I do not like to speak about the past; I do not like to speak about measures that have been already discussed at considerable length, measures, moreover, that might create division between provinces. I think hon. members will give me credit for having done my utmost in this house to promote national unity, and perhaps they will allow me to say that, even though I am a young man, I have a son who is only eighteen years of age and who is now in the maritime provinces awaiting embarkation. In a few weeks' time he will be at sea going to defend his country, and I am proud of him.

What did we say during the last session on the question of conscription? If I refer to this subject it is because it was introduced by the member for Lake Centre (Mr. Diefenbaker). I remember when I spoke against conscription at the last session I said to this house that I was opposed to conscription for overseas but not for service in this country, and I did so because, like many other Canadians, I believed that we should retain as many Canadians as possible in Canada to work in order to comply with Mr. Churchill's request, "Give us the tools and we will finish the job." I was sincere; we were sincere, but during that time we heard our hon. friends opposite, the Conservative party, trying to impose upon the Prime Minister and the government of this country an all-out, total war effort, which to them meant conscription. We imposed conscription for Canada; we amended the law in order to permit the government to send men overseas or anywhere by order in council, if the men were needed. I believe, knowing the Conservatives of the province of Quebec—I will not say throughout the country—that they were sorry our Prime Minister did not impose conscription for overseas; not to save our country, not to save the allies, but to save their own party. I was greatly interested in the remarks of the hon. member for Lake Centre when he spoke of Mr. MacNamara, as reported at page 3956 of *Hansard* of yesterday as follows:

> My hon. friends on the government side never admit that they have brought in conscription; they do not admit that the present system is a means by which men are forced to volunteer in the armed forces for overseas service, but when the deputy minister of labour was speaking at this meeting he endeavoured to explain to those who were present why it was that Canada did not have selective service by which men would serve all over the world just as they have in the United States.

Then he further quoted what Mr. MacNamara had said and followed it with these words; and I ask you, Mr. Chairman, and my hon. friends from the province of Quebec to listen to this statement, to show the sincerity of those in my province who were asking for conscription:

> At last we have from the mouth of an official of the Department of Labour definite proof of what we have been endeavouring to place before the house on more than one occasion, that Canada has conscription.

That is what the Conservative party were interested in saving. I said in the beginning that I did not want to impute motives to the hon. member, but I really believe that the Conservative party in my own province were interested in having conscription, not to help Canada's cause, not to help the allied cause, but to help their party. What were we asking for last year? We did everything possible to impress upon the government that we wanted selective service in order that every Canadian should serve where he was best fitted to serve. We hear complaints now that we have not enough man-power on the farms. How many members on this side of the house have been asking the government to free farmers' sons, not from their duty, not because they were cowards and did not want to serve at the front, but because we thought at the time—and I believe we were right—that we needed those young men to serve on the home front, to serve on the farms not only of Quebec but of the whole country? I believe the best proof that we were right is to be found in the fact that this session we do not hear, as we heard last session, hon. members opposite asking the government to send all the young men possible overseas. This year they are complaining that we have not enough men in this country to serve in our war plants and on our farms.

An hon. MEMBER: Do you think we have?

Mr. FAUTEUX: Just a moment, my hon. friend. My congratulations go to the man who is at the head of the country, who has been chosen as Prime Minister of this country and has served in that office for many years. He was not only chosen by Liberals, but he was chosen by all Canada. When he was accused of playing politics; when he was accused of serving his party, he was really sacrificing himself and his party to serve his country.

I said a few moments ago, Mr. Chairman, that other criticisms came from the Co-operative Commonwealth Federation party. They would have the working people of Canada believe that they are the only men who will protect them. If I remember correctly, the present labour minister was not chosen because he was a Liberal; if I am not mistaken, only a few years ago he occupied a seat in the opposition side of this house when the Liberals were in power. He was chosen as labour minister because he was a labour man, because he was an able man and because he was recommended by Mr. Tom Moore, who, I believe, has the respect of all the labour people of Canada. I listened to the speech of one of our good friends of the Cooperative Commonwealth Federation party who specializes in labour problems. Everyone knows that he specializes so much that he spends a good deal of his time in travelling around Canada to meet and address labour people, which he has a right to do, I will admit. To my surprise, however, very often within a few weeks after he has left the labour people whom he addressed, labour trouble or strike followed in some instances. Let us read now what he said in his speech, as reported at page 3973 of *Hansard*:

> I do not care what tag they give me—C.I.O., A.F. of L. or Canadian Congress of Labour.

Then, Mr. Chairman, I draw your attention to this. I quote:

> John L. Lewis has taken us around by the ears so much that I do not know where we stand on these things.

Well, as a professional man, representing labour in the house and, I may say, representing one of the largest constituencies in Canada, I have done everything possible in the past to help labour, not only here, but in the legislative assembly of Quebec. May I add incidentally that I served free of charge as chairman of a board of conciliation which attempted to try to do something for labour.

But those of us who are not simply serving a party, but who wish to serve our country by serving labour will never say that we have been taken by the ears by John L. Lewis so often that we do not know where we stand. We believe in one thing—it is not the direction of John L. Lewis, or anybody else, especially if they come from outside the country—that will orient our conduct in Canada. Let me say to hon. members what I have said on many occasions to my many friends in the United States—and I have no hesitation in making this statement, and take full responsibility for it: I state, not as a member of parliament in Canada, but as a Canadian, that if we had John L. Lewis in Canada he would have been in a concentration camp a long time ago.

Canadians in general have much sympathy for labour. The people know, as I know, that

labour has not received all that to which it is entitled. I know perfectly well that employers —not all, but certainly some of them—do not do what they should for their employees. So far as I am concerned, I am not interested in the racketeering alleged to take place in labour organizations. I believe it is time to protect labour first and, I will repeat what my hon. friend said, when speaking about order in council 2865—and I believe he was right—"that in very clear language the order in council gave the workers the right to organize."

I have had an opportunity of serving labour organizations, and of realizing how generous are the orders in council for the benefit of working men, but I realize, though, that there are no teeth in those orders in council, neither is there always a sanction. We have very generous labour laws, and we recognize the right of labour to organize. The law even punishes employers who do anything detrimental to the right of employees to organize. Provisions have been set up to appoint conciliation boards. But, I repeat, there are no teeth in these regulations; there is no sanction, and we cannot punish employers or employees if they do not follow the advice of the labour board.

May I make a suggestion to help the working man and the employer, so that we may have peace and order in our country? Is it not time that we oblige our labour unions to incorporate, in order that they may be responsible organizations? What do our labour organizations ask for? They ask for compulsory bargaining powers. And what is the meaning of that? Well, we ask employers and employees to sit at the same table, to discuss their problems, and come to an agreement. For instance, they may decide that they will take a vote in the plant to choose which labour organization will be the bargaining agent. After the bargaining agent is chosen, a man or a group of men will make a contract with the employer. Such contract would be made effective for one or two years. But what happens? Well, three or four months after the contract is made, another labour organization —the C.I.O., the A.F. of L. or some such group —enter the plant and try to organize. They say, "We are the majority. This contract is no good. We will have to be chosen to replace the former collective bargaining agent, and another contract will have to be drawn up." After all, a contract is a contract. We are fighting this war because we believe in the sanctity of contracts. What happens among individuals when a party fails to keep a contract? The party is prosecuted in the courts. An employer can be prosecuted because he is a responsible party, but labour unions, not being incorporated, are not responsible and cannot be prosecuted. In saying that, I am thinking of my friends, the labour class, not only of my constituency, but of Montreal and elsewhere in Canada. They are honest people, and they believe in the sanctity of contracts. I believe the time has arrived when the labour unions should be made to incorporate themselves in order that they may be responsible for any trouble that may occur through a strike.

I have great respect for union organizations, but not so much for certain organizers. If labour unions were held responsible, I wonder if some of these organizers would call strikes so quickly when they knew that there might not be enough money in the bank to pay their salaries? If we do not want to have occur here what is happening elsewhere; if we want to protect the labour organizations and employees—I insist upon this—if we want to respect the rights of the employers and of honest capital; if we want to keep order in this country the Minister of Labour should ask the cabinet to put more teeth by sanction in the legislation already enacted.

Mr. GILLIS: Mr. Chairman, I rise to a question of privilege. I have been misrepresented by the hon. member for St. Mary (Mr. Fauteux) who has just taken his seat. If the remarks which I made last night and which he has attempted to discuss this evening went over his head, that is not my responsibility. If he had read my statement as set out in *Hansard* when I was discussing jurisdictional disputes, he would not have placed upon it the construction he has to-night. I was attempting to point out to the Minister of Labour that it was immaterial to me what tag was hung on any particular union, be it C.I.O., A.F. of L. or Canadian Congress of Labour. I stated, as set out in *Hansard,* that the rank and file of the labour men across this country who are attempting to organize are all fighting for the same principle, the right to a means of livelihood. I made certain remarks about my international president for whom I have a lot of respect, and who is respected by everyone on the north American continent who has had any connection with labour in the last thirty years. I merely tried to amplify my position in connection with affiliation and to show my complete disregard for it. I was not particular about what centre my international president is affiliated with in the near future. I have been in the A.F. of L.; I have been in the C.I.O., and I am now a member of the Canadian Congress of Labour.

Mr. FAUTEUX: I rise to a point of order. The hon. member has said that he has been misrepresented, but I quoted what was in *Hansard*.

Mr. GILLIS: The hon. member read what suited him. He pulled a couple of sentences out of the context to make it appear as though it read exactly what he was talking about.

Mr. FAUTEUX: I read what is contained in *Hansard*.

Mr. GILLIS: If anyone compares the lot of the workers who are led by John L. Lewis in the United States with the wages and conditions of the workers in Quebec, I think he will agree that it would be well for that province if they had a couple of John L. Lewises in the field of labour. To the best of my knowledge the only crime he has ever committed is to fight for the workers whom he represents and who pay him his wages.

Mr. FAUTEUX: He is even blamed by Russia.

Mr. COLDWELL: That is rubbish.

Mr. GILLIS: He fights for the members who have elected him.

Mr. FAUTEUX: To lose the war.

Mr. GILLIS: He takes his instructions from the international convention. Wage agreements are drafted by the policy committee which is set up by the rank and file of the union. He has no alternative but to follow the instructions of the international convention unless he is released by that body.

An hon. MEMBER: He is no leader at all.

Mr. GILLIS: He is a democrat. He takes his instructions from the people. The policy is drafted by the convention.

Mr. COLDWELL: That is democracy.

Mr. GILLIS: If the hon. member for St. Mary is trying to create the impression that anyone in this country is pulling me around by the nose or by the ears, he is making a mistake. I was merely amplifying my complete disregard for any of these tags. Every section of labour in Canada is fighting for the same principle as I am fighting for. The quicker we get away from all this busines of C.I.O., A.F. of L., Canadian Congress of Labour, Catholic syndicate and what have you, the quicker the problems faced by the Minister of Labour will be solved.

The hon. member stated that I travel a lot around this country. That is quite true, and I intend to continue doing so. This is still a free country. He has stated that every time I appeared in Ontario, Quebec or somewhere else, immediately a strike took place. I want to say that that is absolutely wrong.

Mr. FAUTEUX: I did not say each time.

Mr. GILLIS: My hon. friend will find if he checks the record—

Mr. FAUTEUX: It happened very often.

Mr. GILLIS: —that I have never attended a meeting in any province of Canada unless I was invited to do so by the people who were sponsoring the meeting. There is not a man in this country who can say that I ever advised the workers to go out on strike.

Mr. COLDWELL: That is true, and we know it. The Minister of Labour knows it well.

Mr. GILLIS: Just the very reverse has been true and with very good reasons—a strike is an obsolete weapon.

Mr. MacNICOL: I do not think any labour leader wants a strike.

Mr. GILLIS: No, there is not one. I am sorry I have had to occupy this time, Mr. Chairman, but I have no intention in this house or out of it of allowing anyone to rise in his place and make a statement of the kind that was made about me to-night. I would advise the hon. member to get the German labour laws. I have them in my office and he can see them. The kind of organization he would set up is exactly the same kind of organization that Hitler has in Germany. That is exactly what my hon. friend is advocating.

Mr. COLDWELL: That is it exactly.

Mr. GILLIS: And if that is the kind of labour organization he wants, I will give him the labour laws of Germany.

Mr. JOHNSTON (Bow River): First, I want to join with the hon. member for Kenora-Rainy River (Mr. McKinnon) in what he said about conditions in the civil service here in Ottawa, and more especially among the lower paid employees, those in grade 1. I think it is a crime to have the civil servants of this country paid wages by the government of Canada that are not sufficient to maintain a decent standard of living. As was pointed out by the hon. member, only twenty-five civil service girls in grade 1 have been able to take advantage of the accommodation afforded by the new hostel that is being built here because their salaries are not sufficient for them to avail themselves of that accommodation. Anyone who has lived in Ottawa

knows—I do not think there can be any argument about this at all—that one cannot live here on sixty, sixty-five or seventy dollars a month. As the hon. member for Kenora-Rainy River said, and I am in entire agreement with him, the dominion government at least should try to be a model employer and set an example in that respect.

I wish to say a word about the government's labour policy in general and then refer to a particular case or two. Working conditions in this country, generally speaking, are not good. I think we have had far too many strikes, perhaps not as many as other countries have had, but still we have had too many, and there has been too much disruption of work. I believe that every one of these strikes could have been averted if a proper investigation had been carried on beforehand and efforts had been made to iron out the difficulties.

Let us go back to the first of the war to show where the lack of planning came in. The Minister of Labour said, as reported at page 3940 of *Hansard*:

> Hon. members should keep uppermost in mind the magnitude of our navy, army and air force and the fact that our industrial output and food production is now the greatest in our history.

That is well to remember. But that is the very thing the government did not remember. That is just where they fell down. I am not blaming the present minister for that, because he was not in office when the war started. When the war first started, that was the time our labour conditions should have received attention and when planning for the future should have been done. Anyone who had to do with administration or with labour would know that to raise an army, navy and air force and satisfy the needs of war industry would take a tremendous amount of careful planning, and that if you simply took men and women from all sources of employment and put them into the army, navy and air force in the numbers in which they were taken in, and in the manner in which they were allowed to come in, there was bound to be disruption. There was no planning there. Whether these young men were enlisted voluntarily or whether it was conscription, I am not going to argue at the present time.

On the next page of *Hansard*, page 3941, the Minister of Labour is reported to have said:

> The commendable desire of our young men and women to volunteer for service in the navy, army and air force naturally led to shortages of labour for the jobs at home.

May I suggest to the minister that he has given the cause of the trouble right there in his own words when he said that these men and women were enlisting in all the different branches of the armed services and were allowed to go anywhere. No wonder there is now a great deal of difficulty in taking care of the needs of agriculture, of the coal mines, of war industry and of the armed services! We started out without any planning with respect to man-power. The minister went on to say:

> These shortages have been added to by the thousands of men called up for service in Canada under the National Resources Mobilization Act. In addition to the drain of man-power into the armed services, the movement of men and women into war plants creates difficult problems with which we are dealing every day.

I am not blaming the minister for making that statement, because it is true. But when he uses these words to try to give people the impression that everything is well and under control, he is missing the point entirely.

I want to speak of the situation in our coal fields. I think the coal shortage is going to be one of our major problems. I have spoken of this before, but I mention it again because I see great danger ahead of us. The coal situation has become so serious that the government has declared a state of national emergency in fuel. There is no danger at the present time of a shortage of coal for domestic consumption. This is not the time of the year for that. But there may easily be a crisis as regards the supply of industrial coal. The users of industrial coal may not be able to get their supplies even at this time of the year, and if mining conditions get any worse in the United States we in Canada will be faced with a very serious problem indeed. It is no use just sitting down and hoping that the United States will settle their labour troubles and that our coal requirements will be taken care of by importations from the United States. It is high time that we should begin to develop a coal policy for Canada, to produce at least sufficient coal to take care of our own needs. We have an abundance of coal on both sides of this country, and there is no reason why we should be dependent upon the United States for coal for either industrial or domestic use. The strike in the coal mines in the United States is causing a great deal of fear in Canada, because we are now dependent upon the United States for our coal supply.

The Minister of Labour said, as reported at page 3932 of *Hansard*:

> Last October we arranged to have coal miners receive special consideration for postponement of military service and instructed national selective service officers not to issue any permits for coal miners to seek any other employment. Then we arranged to have coal miners granted leave from the armed services in Canada if they were willing to return to the mines. Subsequently we established the emergency coal production board after full consultation with

the national selective service advisory board and the man-power advisory committee of the coal industry.

We have issued an order requiring all ex-coal miners to return to coal mining regardless of their present occupations and are guaranteeing them full employment.

That is a big undertaking, guaranteeing them full employment. I hope the minister can fulfil it.

He speaks of soldiers getting out of the army. If he is depending upon that, I warn him now that it will not work as smoothly as he supposes. Only this week a man from the armed forces came into my office. He is a miner; I know him personally, and I know the mine from which he came; it also is in the Drumheller area. He has tried, since the minister made his statement on this matter, to get released from the armed forces, and he told me, "You cannot get near your commanding officer."

Mr. MITCHELL: Perhaps the hon. member will give me the man's name privately.

Mr. JOHNSTON (Bow River): I went this far: I said, "When you return to your camp, ask to go before your commanding officer; if you cannot get to him this time let me know, and I will personally take it up with the minister." But here is the difficulty: very few of these cases are likely to come either to the attention of private members or to the attention of the minister. The man told me that as soon as he managed to get by the sergeant and went to the major, he was pushed back with the remark, "We need you here, and you are not going to get out." There are not very many men in the army who will be so persistent as to keep on trying to get out, because there are lots of ways of discouraging miners in the army from not pressing too hard to be released in order to return to the mines. Therefore I say that if the minister is expecting to get many miners from the armed services back into the mines in order to settle a national emergency, I fear he is due for a disappointment. If there is a national emergency such as the Prime Minister indicated, I am definitely of opinion that other measures will have to be taken either to get miners or to release those who are in the armed forces, because I see difficulties looming up at the present time.

I wish to bring one particular case to the minister's attention, and that is all I shall deal with this evening; anything else I have to say will be deferred until we are on the estimates under the different topics to which they refer. I believe a little more consideration should be given to the working man in regard to his employment. Not all these strikes which are occurring are the fault of the miners. I wish to refer specifically to the strike which took place at Drumheller when seventeen mines were affected and over 2,000 miners ceased work. It lasted, I believe, for about two weeks, and thousands of tons were not produced on account of it. It is true that the strike was settled, but the problem which was facing the miners is not settled. Certainly it was not settled by the board which was appointed to arbitrate the case. Judge Tweedie, I believe, was the chairman and was appointed by the dominion government. The difficulty in that case was a matter of principle, whether a mine operator could fire a miner at any time he wanted to, for almost any reason. It is true that the strike was settled, but only when another mine, the Red Deer Valley mine, hired the man who had been dismissed from the Star mine; that relieved the situation and these fellows went back to work. But I believe the same difficulty will arise again, and I wish to point out to the minister what I think was the very unfair attitude taken by the judge in rendering his decision with regard to this strike. The minister should take precautions that such a thing does not occur again. I happened to be in Drumheller at that time, and was talking to these fellows, some of whom I know personally, and they gave me some of the correspondence they had had. I should like to put it on record for the minister's information.

This is a copy of Mr. Justice T. M. Tweedie's ruling in the case of Mike Bokos, given by telegram. Bokos is the man who was fired and whose dismissal is supposed to have been the cause of the strike:

Re Bokos reemployment at Star mine. Bokos was a member of the local union of the United Mine Workers of America at Star mine and along with other members of the union went out on an illegal strike in violation of wage agreement then in force between district No. 18 United Mine Workers of America and various coal companies operating in Drumheller and Wayne districts Alberta as a result of which the Star mine was shut down for two weeks in February last. Bokos thereby ceased to be an employee of the Rosedale Collieries Ltd. Star mine. The company refused to reemploy him. The company was within its rights in doing so. I do not recommend his reemployment.

Statements of fact in Judge Tweedie's ruling are obviously wrong.

Mr. ROSS (Moose Jaw): In whose opinion?

Mr. JOHNSTON (Bow River): The men right there on the ground. In the first place this states that Bokos, a member of the local union, along with other members of the union

went out on an illegal strike. That man was not even employed by the mining company when the strike was called. He was on compensation from the provincial government. He had been hurt in an accident in the mine a little while before, and was still out on compensation. That is one statement which is definitely wrong and can be so proven from the records. The telegram states that "Bokos thereby ceased to be an employee of the Rosedale Collieries." The reason given is not at all how the dispute arose. It happened that something like two months before, there had been a little dispute regarding this man in the overloading of a car. But it was never drawn to his attention, and he was not fired on that account; in fact he was not fired at all. This is a matter of principle with the miners in Drumheller. It was not that they particularly cared about an individual as such, but the case involved the principle of whether a mine owner could just deliberately fire a fellow whenever he wanted to. That is what the union were fighting about, and of course that is what a union is for.

I want to put another document on record for the minister's information. This is from Rosedale Collieries Limited, Rosedale Mine, Rosedale Mine Post Office, Alberta, dated April 13, 1943, and it was sent to Mr. William Briggs, secretary, sub-districts 1 and 2, district 18, United Mine Workers of America, Drumheller:

I wish to acknowledge your letter of April 8 together with enclosure of a copy of a letter addressed to the Drumheller Coal Operators' Association. The purpose of these communications is apparently to threaten a strike unless one, Mike Bokos, is hired by the Rosedale collieries at the Star mine.

The employment of the above person was one of the disputes referred to Judge Tweedie as an independent chairman appointed by the dominion government. As Judge Tweedie has not as yet rendered his decisions on the matters in dispute, it would probably not be ethical that they be discussed. However, your letter implies drastic action to enforce the desire of some portion of your membership and credits Judge Tweedie with certain statements in regard to the employment of this man.

In order that your membership might have the benefit of some of Judge Tweedie's statements, I herewith relate a portion of the discussion at least.

It developed that Mike Bokos is a citizen of a country at war with Canada and our allies.

I want the committee to notice this:

The judge made the following comment:

"I have no sympathy with an alien who would earn his livelihood in this country for a period of some 13 years, during which a family was supported by sending money back from this country to the country of his citizenship. If this country is good enough for a man to earn his living in, it is good enough for him to become a citizen of, and to bring his family to where he intends to earn his living."

[Mr. C. E. Johnston.]

We are pleased to note that, in the last paragraph of your letter to me, peaceful solution of any controversy is desired as being beneficial to both parties and the country as a whole.

The reason for my writing this letter is that your delegates may have this information before them at the discussion which you state will take place April 14, and where a decision as to your future action will be taken.

The information was the previous paragraph which I have read and which was in quotations. Apparently one of the main reasons why the judge rendered the decision he did, and agreed that the mine should not rehire this man, was that the man was an alien. Whether he is an alien from a country with which we are at war, or whether he is not, does not, I submit, constitute a ground upon which to decide a strike. I think the minister will agree with me in that regard. It is not sound. I have no more sympathy than anybody else with the man who comes here and earns his living in this country and takes his earnings back, or sends them back, to the country from which he came, and I do not care whether it is a country with which we are at war or not. But that is a matter of immigration. In that connection, I would say that if any man comes here and after remaining in the country for five years does not take out his naturalization papers he should be deported. I would not give him ten or fifteen years; I would reduce the period to five years. Certainly, however, that is not a sufficiently good ground upon which to base a decision in a matter of this kind, and to declare that because this man is an alien we should agree that the mine is right and the strikers are wrong.

There was a considerable degree of hard feeling over this question, and the only thing that settled the strike was the fact that one of the other coal mining companies came to the rescue. This company gets along very well with its men and, so far as I know, there has never been any trouble in the Red Deer Valley mines. It seems to be one of the few companies that have the ability to cooperate with the miners in any sort of labour-management programme.

Mr. MacINNIS: Who wrote that letter?

Mr. JOHNSTON (Bow River): The letter was from Rosedale Collieries Limited, per J. F. Harvie. I believe that every one of these strikes could be solved if there were a proper relationship between labour and management.

Mr. MacNICOL: Can the hon. member tell us what the relationship is that is so satisfactory in that colliery?

Mr. JOHNSTON (Bow River): In the Red Deer Valley mine?

Mr. MacNICOL: How do they look after their men?

Mr. JOHNSTON (Bow River): I do not know the details. I do not know what sort of plan they work on, but I have bought coal from them—a good deal of it—and I know personally many of the men working there. I also know the management, and to my knowledge there has never been a serious dispute. But that is one of the very few mines about which that can be said. I do not believe there are any strikes that cannot be amicably settled if we go about it in the right way, but certainly the moment one of these men is fired in the Drumheller valley again under similar circumstances, there will be another strike, because the trouble has not been settled and they are certainly not in agreement with the decision rendered by the judge. And I do not blame them. I will be frank with the minister. When I read those letters I said to these fellows that in my opinion the reason given was not a basis upon which the judge could give the decision which he rendered. They were very much perturbed about it; they were anything but satisfied. I do not know whether we are supposed to criticize a judge or not, but I think that was a very poor decision to make. I suggest that the minister should pay a little more attention to these strikes. He is a labour man and has worked among labourers, and it would not be amiss in many cases if he went to the spot himself where he would be able to settle the matter. I have my doubts whether a judge is a man capable of rendering a decision in this type of dispute.

The CHAIRMAN: Order. I know the hon. member realizes that he may not attack the judiciary either in committee or in the house.

Mr. JOHNSTON (Bow River): Well, let me say that I have my doubts whether a man occupying such a position should be chairman of such a committee. I do not believe that such men are in a position to know the true relationship that exists between labour and management. Take a lawyer out of this house—

Mr. CASTLEDEN: Take them all out.

Mr. JOHNSTON (Bow River): —or take any lawyer in the city of Ottawa, whether you give him a judgeship or not, and I could name many of them around here—

Mr. MACKENZIE (Vancouver Centre): Order.

Mr. JOHNSTON (Bow River): I say, take any member here who happens to be a lawyer and send him to Drumheller to settle a dispute between labour and management, and he would not know anything about it. And definitely that was the situation here. So that, instead of appeasing these labourers; instead of settling the strike fairly, it was purely a one-sided affair. As I have pointed out, although the strike terminated it was not by reason of the decision handed down by the chairman but by reason of the good judgment of one of the operators in another company in hiring the man. As a result of actions such as I have described we have lost thousands of tons of coal at a time when the Prime Minister declares that there is a national emergency. If that is any way of solving our labour problems, then I am afraid we are heading straight for a real emergency, and when this winter comes it will be too late to start making plans to meet any national emergency. The government had better start now.

Progress reported.

At eleven o'clock the house adjourned, without question put, pursuant to standing order.

Friday, June 25, 1943

The house met at three o'clock.

SUGAR

REQUEST FOR FURTHER CONSIDERATION OF BASIS OF ALLOTMENT FOR CANNING

On the orders of the day:

Mr. NORMAN J. M. LOCKHART (Lincoln): I am sorry the Minister of Finance (Mr. Ilsley) is not in the house, but from an answer to a question tabled yesterday by the hon. member for St. Antoine-Westmount (Mr. Abbott), acting as parliamentary secretary to the Minister of Finance, it would appear that the division of Westmount was given certain preferences in the matter of the allotment of sugar for canning. I come from the district where much of the fruit is produced, and for days and weeks I have been seeking greater consideration for that district in regard to this matter of sugar. I was wondering if the minister or his assistant could give me any indication as to whether or not the areas in which the fruit is actually produced might receive more favourable consideration, rather than other areas at a distance from the point of production.

Mr. D. C. ABBOTT (Parliamentary Secretary to the Minister of Finance): I could give the explanation now, if it is desired, or it might be better when the estimates covering the wartime prices and trade board are under

consideration. The general position, as my hon. friend probably knows, is that it was decided that approximately one hundred million pounds of sugar should be made available for canning purposes this year, which was approximately the amount used last year for this purpose. The wartime prices and trade board called for applications from citizens for sugar for canning purposes, and the applications received totalled something over two hundred million pounds, or more than double the available amount. The board then decided to allot to the ration districts into which the country is divided, sugar to the extent of the one hundred million pounds, approximately, that was available; and, as was indicated in the answer given yesterday to which my hon. friend has referred, the allotment to the individual ration areas was on the basis of 11·34 pounds, speaking from memory, for each application received from the district.

In the district to which reference was made in the answer given yesterday a considerable number of applications had been received at the rate of less than ten pounds per person. The sugar was allotted to each ration district on the same basis, and the allocation of the sugar in each district was left to the local ration board. The local ration board, as my hon. friend knows, was made up of citizens from the area covered by the ration district. In respect of the ration district in which the city of Westmount is included, and which comprises not only the city of Westmount but the town of Montreal West, the village of Cote St. Luc and the town of Hampstead, the quota fixed was 11·34 pounds for each person who had filed an application for canning sugar in that area. The same allocation was made to other rationed areas.

The local ration board decided that they would allot to the applicants who had applied for less than ten pounds the amount which was actually applied for. In my own case, for instance, I learned from my wife that for our family of six she had applied for fifty pounds of canning sugar, which is slightly more than eight pounds per head. They allotted to each applicant requiring less than ten pounds the amount actually applied for, which enabled them, out of the quota they had received of 11·34 pounds per applicant, to allot to those who applied for more than ten pounds an additional amount. The maximum which they found they were able to allot in that particular area was thirteen pounds. Then, in addition, over a thousand applications were received late. Those were taken care of without getting any additional quota. That is the position with respect to that particular ration area. But I think the point my hon. friend had in mind was this, that the allotment to each ration area was on the same basis throughout the country. The basis of distribution was left to the local ration board.

Mr. LOCKHART: I do not wish to press the point, but the minute this appeared in the press this morning I received a long-distance call from the growers in my constituency pointing out that on account of the possibility that the fruit may ripen so quickly, and may be unfit to ship to Montreal or elsewhere, housewives in my constituency feel that if consideration can be given to people 400 miles away from the Niagara peninsula where the fruit is produced, then surely some consideration might be given to that very area in which it is produced. Consequently I ask the parliamentary assistant to bring the matter to the attention of the minister with a view to seeing that some consideration is given to these people, or consideration at least equal to that given to people 400 miles away from the base of supply.

SOCIAL SECURITY

PRESS REPORT WITH RESPECT TO NATIONAL INSURANCE LEGISLATION

On the orders of the day:

Mr. ANGUS MacINNIS (Vancouver East): Mr. Speaker, I should like to ask a question of the Minister of Pensions and National Health. A report in the press this morning states it is the intention that a national insurance measure will not be introduced at this session. As this matter has been discussed before the committee on social security for several months, and as great interest has been displayed in the subject, would the minister advise the house as to the correctness of this report?

Hon. IAN MACKENZIE (Minister of Pensions and National Health): I have not seen the report to which the hon. member has referred. The intention of the government cannot be decided upon until the committee on social security shall have made its report to the house. Of course the progress of that committee is a matter beyond my control. The introduction of any measure would certainly depend largely on the progress made in the committee referred to.

Mr. GRAYDON: There is the possibility, then, that legislation may be brought down this session?

Mr. MACKENZIE (Vancouver Centre): There is the possibility; that is to say, the recommendations made by the committee will be considered by the government when they are presented to this house.

WAR APPROPRIATION BILL

PROVISION FOR GRANTING TO HIS MAJESTY AID FOR NATIONAL DEFENCE AND SECURITY

The house resumed from Thursday, June 24, consideration in committee of a resolution to grant to his majesty certain sums of money for the carrying out of measures consequent upon the existence of a state of war—Mr. Ilsley—Mr. Bradette in the chair.

DEPARTMENT OF LABOUR

The CHAIRMAN: The committee is considering item No. 1.

Mr. COLDWELL: Mr. Chairman, there are one or two matters in connection with selective service which I should like to discuss. First of all, I noted with a good deal of interest the recent telegram from Hon. J. G. Taggart of Saskatchewan, in which he said:

> Clarification of mobilization regulations has greatly assisted agriculture. Postponements granted since February 1, major factor in seeding crops on farm affected. I believe present policy will result in labour being generally available for year round work, but severe shortage at harvest time possible.

I should like to point out to the minister that while in this comparatively slack season of the year there may be no labour problem worth mentioning in Saskatchewan, when harvest rolls round—and that may be earlier than many anticipate, despite the fact that the season at this time looks late—there will be another severe labour problem.

I should like to refer briefly to the situation which existed last August. In July and August of last year, just before the close of the session, I went west. While moving around my constituency I had literally dozens of complaints respecting notices being sent out to men to appear for medical examination. There were so many complaints that when I got to the centre of my constituency, namely Rosetown, I could not even begin to take notes of the cases of those who interviewed me. The result was that on the evening of August 21 I wired the Prime Minister. I shall not read the telegram, although I have it here. To summarize, I said the situation was scandalous, and that because of an indiscriminate summoning of men by the Saskatchewan board, people were being put to great inconvenience.

At that time I heard from Hon. J. T. Thorson, who was then a minister, stating that my information did not tally with his. I came back to Ottawa about September 1 and saw him. I had in my pocket eleven names that I had slipped there indiscriminately. Those I sent to the then Minister of National War Services, who promised that he would make an investigation of the cases and let me know. One can imagine my surprise as a member of the House of Commons when on September 29 a friend of mine forwarded me from Saskatchewan a copy of the Regina *Leader Post* in which appeared a long article dealing with these eleven cases, and going after me in no unmeasured terms. A report had been made to the press by an organization not responsible to this parliament, and of which two of the members of the board in Regina were honorary officers. I took exception to that, because had I cared to recount the conversation I had with Mr. Thorson—

Mr. MARTIN: What was the organization?

Mr. COLDWELL: The Regina branch of the Canadian Legion. Had I cared to recount the conversation I had with Mr. Thorson at the time it might have been embarrassing both to the Regina board and to certain other people. I wrote Mr. Thorson to that effect, and reminded him of the conversation. I also said that in the December before I had had a somewhat similar experience. When I spoke to Mr. Thorson about this breach of proper and decent procedure—for I should have been afforded an opportunity to see any report which was made, and such report should have been made by an organization responsible to the government—he told me too what he thought of that procedure. I make very strong protest against that sort of thing being done. I have no objection to any member of this house asking for the bringing down in the proper manner of any correspondence that I have had either with the Department of National War Services or with the minister, but I do object to reading in the public press a report which the minister should have first referred to me. I may say that the newspaper report varied considerably in tone from the official report which I received subsequently from the minister, under date of October 6, after I had drawn the matter to his attention.

I am not going over these cases, but I simply point out that I advised these young men, who did not seem to understand that they had to apply for postponement after they had received their medical call, to apply for postponement. The report of the minister shows that most of these young men did apply

for and receive postponements subsequent to August 21, the date when I wired the Prime Minister. I do not know who was responsible for this breach of parliamentary etiquette, but the minister gave me a good indication. I want to say to the present Minister of National War Services (Mr. LaFleche), who was deputy at the time, that that kind of procedure is against the rules and privileges of this house. I hope that the Minister of National War Services will bear that in mind.

Mr. LaFLECHE: Was the hon. member for Rosetown-Biggar indicating me personally?

Mr. COLDWELL: Mr. Thorson told me that he had handed to the deputy minister of his department the names I gave him, and I believe the minister was the deputy minister at that time.

Mr. LaFLECHE: Quite right. Is the hon. member indicating that the present Minister of National War Services is the one who gave out this report, to the public for instance?

Mr. COLDWELL: All I can say is—

Mr. LaFLECHE: I hope he does not mean that.

Mr. COLDWELL: I am glad the minister has said that he hopes I did not mean that, because in effect I did mean something like that.

Mr. LaFLECHE: In effect you are very much mistaken.

Mr. COLDWELL: I am glad to know that, and I shall not say what I intended to say. But I would say to the minister, who was then the deputy, that Mr. Thorson told me that he gave this letter to his responsible deputy, who I believe went west shortly afterward. The inference I drew from that was that it must have got into someone's hands out of the hands of the deputy minister. No one other than the minister himself had a list of these names.

Mr. HANSON (York-Sunbury): Would the hon. member clarify the charge he is making against the government? My mind is not too clear about it?

Mr. COLDWELL: My point is that the minister asked me to give him the names of persons who had been called in the middle of the harvest, and I gave him eleven names. I asked him to investigate them but I said that I could not vouch for all of them. The minister promised he would investigate. On February 21, four weeks later, the Regina *Leader-Post* contained a long, critical and bitter article concerning me, because I had requested, so the paper alleged, postponement for these men. The minister having promised to investigate, and naturally to report the result of his investigation to me, as he did subsequently, I should have had the report before it got into the public press.

Mr. HANSON (York-Sunbury): They used the information for political purposes?

Mr. COLDWELL: It looks as though the information was used for political purposes. The records will show that following the Prime Minister's statment in March, 1942, which laid down a policy, whether or not one agreed with it, Saskatchewan was treated in a manner different from the other provinces with regard to call-ups and postponements. I say that the Prime Minister laid down a policy based on an order in council. I do not care whether one agrees with that policy; once it has been laid down it should be carried out fairly in every province. That is the point I wish to make. A writer who I presume is friendly to the government—the Regina *Leader-Post* is certainly a friendly newspaper—wrote this article in that paper on Monday, February 15, 1943. One of the members of the board, Mr. Stewart, had commented on an analysis of farm deferments, and Mr. Burton Richardson replied to Mr. Stewart and showed that he had spoken too soon. I quote:

Farm worker deferments from April to November, 1942, in the three prairie provinces have been:

	Deferment asked	Not granted	Per cent
Winnipeg	4,312	422	9·8
Regina	3,974	916	23·05
Edmonton	2,101	96	4·5

There was a slight improvement after the Prime Minister made his speech in the house. From October 9, 1940, to March 12, 1942, the Saskatchewan board received 2,218 applications for farm worker deferments, granted 1,370 and denied 848, or 39 per cent. From April to November, 1942, both inclusive, this board received 3,974 applications for farm worker deferment, granted 3,058 and denied 916, or 23 per cent. Over the whole period its rate for refusing farm worker deferments has been 28 per cent.

In Manitoba the board was granting farm workers deferments before the change in policy in March at the rate of 61 per cent, but since then it has been granting them at the rate of 90 per cent. In the Quebec district the rate for granting such deferments was 67 per cent, and it rose to 95 per cent after the government changed its policy, or issued a clarification of its policy, whichever way you want to put it. The Ontario figures are the most interesting of all. The rate of farm

worker deferment granted was 93 per cent, and after the clarification it rose to 96 per cent. Practically everyone who applied in Ontario was granted a postponement, but in Saskatchewan we find an entirely different picture.

I do not want to pursue this further now. Those of us who come from Saskatchewan ask only for the same treatment as is given to the other provinces and the other military districts. We want no favours. While there may be a slack period for a month or six weeks, when this period is over the harvest will be upon us. Unless something is done we may see a repetition of what happened last autumn, when, because of a shortage of labour, hundreds of thousands of acres were either not harvested—

Mr. MITCHELL: And the weather.

Mr. COLDWELL: I was going to add, or cut. The weather had something to do with it, but the weather did not have everything to do with it. Fortunately we had a remarkable winter in Saskatchewan this year which seemed to make some amends for the shortage of labour last autumn. When I was out there in April I saw the most extraordinary sight I have seen in the thirty-four springs I have been in western Canada. There were the combines working in the fields, and the crops were turning out moderately well, having stood out all winter. The crops that had to be threshed from the stook were not in quite as good shape; those swathed were largely spoiled.

Owing to the growing shortage of food, western Canada has gone into the production of high protein foods, meats and fats. If we did not know it before, we ought to know it now, that the shortage of high protein foods and meats and fats to-day in Great Britain is causing a great deal of anxiety; and yet I have known of farmers who have had to sell their brood sows and their milch cattle this spring because they could not see how they could attend to their stock with their inability to get labour.

I know perfectly well that we are at war, and let me add that while I may not have agreed with the policy which the government laid down for the sending of large numbers of men overseas as we know have been sent overseas, yet parliament having approved what Canada is to do, we must keep up the reinforcements for our troops in order that they may be effective on the field of battle. I recognize that necessity fully. To-day we are reading in the newspapers items from London and North Africa foreshadowing an early invasion of Europe. Where that invasion will take place we do not know, but it is pretty certain that some attempt is to be made, and we hope successfully, to invade the European continent. It is said further that at this very time units of the navy and of the air force as well as of the army are in position to strike and that in all probability the Canadian army will form one of the spearheads of the invasion. Such reports are of unusual significance to this committee and to the house at the present time. We know that the venture when it is made will be very costly in human lives. If we did not know that before Dieppe, we knew it afterwards. What I would like to ask the committee is this: What is the situation which Canada will face when that time comes, possibly in the near future?

Mr. HANSON (York-Sunbury): With respect to reinforcements?

Mr. COLDWELL: Yes; we have to reinforce our army and keep it up to strength, whether we agree or not with the policy originally laid down.

Mr. HANSON (York-Sunbury): Yes, what is the position with respect to reinforcements?

Mr. COLDWELL: You will hear in a moment.

Mr. HANSON (York-Sunbury): I want to hear from the government.

Mr. COLDWELL: I understood the hon. gentleman was addressing his question to me.

The Minister of National Defence told us —if I am wrong I would like to be corrected, but I got these figures from *Hansard*—that we have some 190,000 in the armed forces overseas, the bulk of whom are well equipped and well trained soldiers ready to strike. He told us that we have in addition 250,000 general service personnel who could be sent overseas at any time. But this figure includes, as I understand it, a good many recent recruits who are yet insufficiently trained in the arts of modern war. Besides these there is the home establishment personnel of some 80,000 men. These, I understand, are engaged in instructional and other duties within this country. They are men who for various reasons are not fit to be sent overseas or are considered more important to be kept in the field of training here in Canada. We also have a part-time reserve army, a volunteer army of about 120,000 men. Then there is the home defence personnel who have been called up for service under the National Resources Mobilization Act. The Minister of National Defence told us, as I recall it, that

these men number about 68,000, and that they could be placed on duty under various orders in council anywhere in Canada, Newfoundland, Labrador or Alaska. The Minister of National Defence also told us that at the moment reinforcements are adequate. But in the light of the casualties that might be sustained in an invasion of the continent of Europe a pressing need might suddenly arise for all the reinforcements we can muster during the next few months. Again, let me repeat, this afternoon I am not going into the question of the wisdom of the government's military undertakings in the light of the needs of agriculture and industry. But I do think that consideration should be given now to what the government's policy should be if the need for heavy reinforcements arises. I venture to say that never since the war began has the government or this house, for that matter, faced the problem of devising a plan that would best serve the common cause or ensure our maximum contribution in the direction in which it can be most useful.

Now the time has come when our allies are crying aloud for more food from this country and we face a fuel shortage. The army at the same time is likely to need heavy reinforcements. Therefore, Mr. Chairman, we should make our decision now as to what we are going to do in the light of all the circumstances of which we have knowledge.

I have said that should an invasion of the continent of Europe occur our casualty lists would, I fear, be very heavy. Under those circumstances it would be difficult for this house to give proper consideration to the problem of man-power amid the pressure of an urgent war situation. The government must surely realize this, but I fear that it hopes to relieve itself once again of the necessity of giving calm consideration to the question and of making up its mind. I believe that it is hoping to rely on the pressure of public opinion to deliver it from having to make its own decision. That is not responsible government. In the long run it will be bad for the government, bad for parliament, bad for this country. That is a policy of drift which this house should protest vehemently against while there is yet time.

The story of the government's man-power policy has been one of opportunism rather than of calm consideration of the needs of the country as the war developed. Never have we had a clear-cut policy laid out for any length of time. I realize that as the war has developed, and as the government has committed this country to various plans with, or more often without, the consent of this parliament, or rather without prior consultation with parliament, all parties in this house have had to reconsider their policies in the light of circumstances and the needs of the country. Now we have surely reached the point, with the immediate prospect of heavy casualties and calls for increased food and other supplies, when this house should be fully apprised of the government plans to meet the situation. A year ago we discussed the amendment of the mobilization act, a measure which, incidentally, we criticized when it was passed in 1940, because we said at that time that the government would not use that act to do aught else than mobilize man-power, and time has shown that we were correct in that position. I have only to refer in a few brief words to the story of the Aluminum Company of Canada. When our people were being frozen in their jobs and wages, when farm prices were being frozen at a level too low to give a decent and adequate return, these people were not only paid a high price for their product but they were given an escalator clause in their contracts—not with Canada, because we have not even got a contract with them; we are following somebody's else's contract—so that during this quarter of the year 1943 these people are receiving five and a half cents a pound more for their aluminum because, it is said, the costs of transportation and so on have gone up. I said in this house on July 7, 1942, as reported in *Hansard*, page 3997:

> What should this house do? In our opinion, this house should decide now, at once, without further delay, for total mobilization of industry, of wealth and of man-power. But what are we doing under this bill that we are discussing?

That was the bill to amend the mobilization act following the plebiscite.

> We are merely allowing the government once more to postpone its decision on one phase of the mobilization that I have mentioned, and that not the most important. This, it seems to me, is distinctly an abdication of the responsibility of this parliament; it is undemocratic, it is unworthy of our tradition. This is the place where these grave decisions should be taken; this is the place where the policy should be laid down; this is the place where every regulation to be used under that policy should be carefully scrutinized by members of this house.

When, fourteen months ago, the people of Canada voted to free all the parties in this house from pledges given not to impose conscription for overseas service, they expected us to put into effect a policy of total mobilization for total war. I want to make it very clear that when I appealed for an affirmative vote on that plebiscite I did not do so on the ground that we should mobilize man-power only; I said that as far as we were

concerned we would demand, and continue to demand, that if we were to compel young men to join the army as we were already doing, we should use the same means to mobilize in the national service giant corporations like the Aluminum company, Consolidated Smelters, and Falconbridge Nickel. It will be recalled that the letter of the president of Falconbridge Nickel was tabled here the day before yesterday, and I shall have something to say about it on a more appropriate occasion. I thought with it would be included a letter from the Prime Minister saying what he thought of the statement made by Mr. J. Gordon Hardy, when he expressed satisfaction that their plant over in Norway had been preserved and used by the Germans. I thought the Prime Minister would have conveyed to Mr. Hardy, as he should have done—because although the Prime Minister said something in the house, Mr. Hardy may not have read *Hansard* or the reports in the newspapers—what the government and this house thought of a man who would say that kind of thing in the midst of this great struggle.

Mr. MITCHELL: I do not want to interrupt my hon. friend, but I think there is another time and place for discussing that matter.

Mr. COLDWELL: That is what I said.

Mr. MARTIN: The whole thing is out of order.

Mr. MITCHELL: I am just calling the Chairman's attention to it.

Mr. COLDWELL: May I say to the minister that that was just an aside, and I have finished what I intended to say as an illustration.

I said that our party stood for the total mobilization of industry and wealth as well as man-power. We expected that a policy of total mobilization would be put into effect. This has not been done. On the contrary, as I think I was able to show conclusively recently and as I have remarked already this afternoon, the government in the last twelve or eighteen months or two years has delivered this country more completely into the hands of powerful corporations than the country was before the war broke out.

When the offensive against nazi Europe opens and the demand for reinforcements comes, the government may take advantage again of a war necessity to enlarge the conscription of man-power, and rely on this house being compelled to support it because of the extremity of the situation. Speaking on July 7, 1942, just after I had spoken that day, the Prime Minister said, as reported in *Hansard*, page 4015:

> I wish, however, to leave no doubt in the mind of any hon. member that, if I am at the head of the administration when such a decision is reached,—

That is to say, to send men mobilized under the National Resources Mobilization Act overseas.

> —I shall ask to be assured of the confidence of the House of Commons before the government proceeds to enforce the decision.

In other words, we in the opposition, who may have little or no confidence in the government, are going to be compelled not to vote certain reinforcements to the men overseas, but to vote confidence in the government as the price which this house must pay for the reinforcement of our men in the battle line. That is the way the Prime Minister left it on July 7 of last year. Now on many occasions we of this group have voted against the government's economic and social policies, and I may say that if the rules of the house would have permitted, and it did not involve a reduction in the appropriation, I would have moved during this debate a vote of want of confidence in the government on account of the deal with Aluminum Limited, and I shall seek an opportunity yet to bring that matter before the house in a proper way. But, should the war situation require it, the government proposes to put me, my colleagues and other opposition members, including I take it hon. members to my right and to my left who are dissatisfied with the government's lack of policy or wrong policies—

Mr. HANSON (York-Sunbury): Or no policy.

Mr. COLDWELL: —or no policy, as we regard it, in the position of having to vote confidence in it, or it will be said that we refused to vote reinforcements to the hard-pressed men overseas. I say there was never a more reprehensible proposal made in this house. I repeat that we of this party are prepared to do all that should be done to ensure adequate reinforcements and supplies for our men wherever they may be called upon to serve. As I said before, even in this war time, in the midst of war, we will fight a proposed war policy of which we disapprove; but once this house has laid down a war policy in the midst of war, then we will support that policy. That is all that we can do in the midst of war, reserving the right to criticize that policy.

Mr. HANSON (York-Sunbury): Whether you approve it or not?

Mr. COLDWELL: Often the member for York-Sunbury rises and criticizes the policy proposed by the government in connection with the war, and so do I. But once this parliament as a democratic institution approves that policy and it is required by the government for winning the war, we have no alternative but to support such a policy even if we proposed a better one. That is so in the raising of loans, for example. I do not like the manner in which loans are raised, but that is the policy laid down. I am quite glad to go on the air and support the policy approved by parliament for the raising of loans, although I think that compulsory loans on a graduated scale ought to be imposed rather than the kind of voluntary arrangement which we have at the present time.

What we demand is that mobilization of our resources, wealth, industry as well as man-power, shall be considered as total mobilization and shall be considered apart from any attempt to stampede this parliament in a crisis. That is what I object to. I am therefore urging the government now, during this debate—for this is where it should be done—to place before the house at this time any proposals which it may have, and not to wait until perhaps, with long casualty lists coming in, and the country filled with alarm, we are called here—what for? For reinforcements? No. The Prime Minister would tell us that we were called together to vote confidence in a government in whom we may have no confidence. And if we vote against it, as the hon. member for Maple Creek says we can do, what will be said? It will be said that the opposition in the house refuses to vote reinforcements in a time of crisis. That is the position we shall be placed in, and I say that if the government is honest with this house it can clear up this situation now by coming before parliament and telling us exactly what it intends to do and asking the support of the house for the policy which it has for carrying out its intention.

What we are urging, what I am trying to urge as I sit down, is simply that the government shall present to the house now a clear-cut policy telling us the number required in industry, the number required in agriculture, and so on, to keep up the supplies we need, and the number we shall require to maintain the armed forces in the face of what might possibly occur. The government may say, "We do not know." Well, they made a survey of the man-power situation.

[Mr. R. B. Hanson.]

Mr. MITCHELL: Can the hon. member tell us how many casualties there are going to be?

Mr. COLDWELL: No. But any government in power to-day, with its military authorities giving it advice, who does not know any more about that question than I do—for no such advice is available to me—is not fit to govern the country. So that the minister should not ask me but should ask his colleagues. Having made a survey of the resources of the country from time to time, and having the knowledge that the government has, and having also its military advisers who can tell it more or less what is in prospect, the government should come before us with a policy so that we can make a decision now without having to vote confidence in the government at some later stage. For, as I say, so far as we are concerned, we have no confidence in the economic, financial, labour, agricultural and social policies of the government—because, as we saw in this morning's paper, the measure of social policy contemplated by the government is again to be deferred.

Mr. GRAYDON: You do not seem to think much of them in any department.

Mr. COLDWELL: No, I do not. I have been here long enough to form an opinion and I have given the government support in all its war measures, but I must confess that the longer I stay here the less confidence I have in its policies. I have a good deal of respect personally for some of the men who comprise the government, but I have no respect and no confidence in the policies of the government, which is a very different thing. And so, I say to the minister—

The CHAIRMAN: Order. The hon. member has spoken for forty minutes.

Mr. COLDWELL: Now is the time for the government to come before the house and place its man-power policy before us, asking us to support that policy, apart altogether from any question of confidence in the government itself.

Mr. POULIOT: The more discussion we have the more I regret that a parliamentary committee was not instituted for each war department, and especially for the Department of Labour, at the beginning of the session. Then members would have had an excellent opportunity to discuss fully matters that are of such importance to the country.

I listened yesterday to a part of the speech made by the leader of the opposition (Mr.

Graydon) and I think he spoke very well, but I do not think that he was clear enough. As the government has been acting according to what the member for Richelieu-Vercheres (Mr. Cardin) said, through fear of a vote of censure from the opposition, on the question of man-power, it is of some importance to know exactly what the leader of the opposition meant by some of the sentences which he uttered and which were the less clear parts of his speech yesterday.

On March 3, at page 938, of *Hansard,* he said:

> May I point out however that there is a feeling throughout Canada, one which will show itself in any movements which lie ahead, that when the war is over we shall have a higher sense of human values and shall give lesser emphasis to material things than we have done heretofore.

The question of human values cannot be included in a post-war policy; it must be considered right now. It must always be considered at the time such questions have to be dealt with and should not be deferred until every man has fallen on the battlefield or everybody has died of hunger. That is not the time to discuss questions of human value. We must discuss them now. I regret that so many young men with promising brains have lost their lives or have been injured since the beginning of the war, and now I come again to the question of national selective service. And here the name of Mr. Little has been brought into the discussion. Some hon. members are familiar with his plan, but I wonder if all have read his memorandum and the correspondence exchanged between Mr. Little and the minister.

I fully sympathize with the minister in the difficulties with which he has to deal in connection with labour matters, particularly because of the fact that he has not a free hand in respect to the man-power problem. To make this point clear, my point is that he has to fill the requisitions of the national defence department; and the old men there, as well as the younger men who have not served in any theatre of war though they have been wearing the uniform for some time, devise policies and sign requisitions for certain numbers of men, just in the same way that they sign requisitions for war material which they obtain from the Department of Munitions and Supply. They do not attach any more importance to human values than to material things. We need not only the arms and physical strength of these young men who are in the army; we need also their brains, their intelligence and their education in the various fields in which they have acquired experience.

Turning once more to what was said yesterday by the leader of the opposition, at page 3999 of *Hansard* I find this:

> . . . the responsibility for the man-power problem, so far as the Minister of Labour personally is concerned, is an inheritance. . . .

That is true; but on the other hand, Mr. Chairman, the leader of the opposition also had a legacy from his predecessor the hon. member for York-Sunbury, what we may call in law an onerous legacy. I have no grudge against the hon. member for York-Sunbury, though at times I have argued bitterly with him; the only reason I rose each time he advocated a national or union government—the letters N.G. being inscribed upon his political banner during the last election—was because every man with a free mind foresaw the disastrous results of the policies he was advocating, which were followed to a certain degree by the new government. I remember distinctly the day in 1940 when the mobilization act was passed; I recall the hon. gentleman's beaming face. He was feeling so happy because his suggestions had been accepted at least in part. But though the present leader of the opposition said yesterday that the policy of the government from the beginning of the war to the middle of 1940 had been rather complacent, I foresaw then the disastrous results of the policies being advocated by hon. gentlemen opposite. If to-day we have trouble in regard to man-power for agriculture; if we have trouble in regard to the fuel wood industry and in many other ways, it is precisely because the question of man-power has been considered only from the angle of sending able-bodied men of military age into the armed forces. This was a mistake. No one should be too proud to admit having made a mistake; it is always time to correct it. What is wrong is not to change the policy when we realize that what we are doing is having harmful results. That is my point. How can an hon. member still advocate conscription for overseas, either directly or indirectly, now when we have so much trouble in various other fields of human activity? Again at page 3999 of *Hansard* of yesterday the leader of the opposition said:

> The measure of efficiency of a nation effectively to plan in a time of war may properly be regarded also as the yardstick by which we may measure what this nation, or for that matter other nations, may be able to do in the time of peace that will follow the cessation of hostilities.

This fits in with what the hon. gentleman said on March 3 with regard to human values. We must consider the question now in order to have at least some assurance that the future will be brighter than the present. We need a

plan, and it is difficult to make one. There are prejudices, so many that I could not mention them all, but there is one to which I must refer. It is that in time of war the Minister of National Defence should rank first after the Prime Minister. In other wars that may have been true, but in this war the minister who has power in hand, if he wants to use it, is not any one of the ministers of defence but the Minister of Labour. Perhaps I shall be the only hon. member to tell the minister that, but I want him to be a free minister as he is a free man. I want him to make decisions based on his own judgment, after obtaining full knowledge—decisions that will bind his colleagues and the war departments. This is my view of national selective service, if such a name should be applied to a system or policy in force in this country during the war. In my humble view immediately after the Prime Minister the Minister of Labour is the one who has in hand control of every field of activity in this country. He has control over agriculture, over the army and so on; he can even say to young men who want to enlist voluntarily in the air force or the navy that it is their duty to stay on the job on the farm, in the munitions factory or some place else where their presence is urgently needed. This is my understanding, and I cannot see the Minister of Labour acting as parliamentary secretary to the Minister of National Defence or any of the war ministers. This may sound new; no one has said it before, but I believe in it very firmly and that is why I say it. This is the only place to express oneself with respect to those important matters. If headquarters at Ottawa come along with a requisition for a number of men, and say, "We need 5,000 men" or 10,000, as the case may be, the minister must be in a position to say, "Agriculture needs a certain number of men." Then it will be up to the minister to decide whether the gaps in farming will be filled by those men. The same would apply to the Department of Munitions and Supply. I do not want the minister to have more power, but I want him to exercise the power he has to the best of his ability, whether or not it pleases the brass hats.

Of course other ministers may complain, and may say that we have made engagements to Great Britain. We may be told that the Minister of National Defence went to London in the winter of 1940 and made engagements. This was mentioned in a committee room in this house, after the session was over; but he never told us what his commitments had been.

If the government has been released from pledges given to the people, surely there is one pledge from which it cannot be released,

[Mr. Pouliot.]

and that is to see that we have sound government, and that no class suffers from policies enacted by the government. That is my humble view.

I come again to what was said yesterday by the leader of the opposition. I regret that he is not in his seat at the moment, although while he was still in the committee I said I was going to refer to that speech. He spoke about the registration in 1940, and is reported in this way at page 4001.

> As the months rolled on, from August, 1940, until March, 1942—and I believe one might properly take in that space of time—in my opinion there was not to be found in government policy a forthright desire or effort to carry out what that registration actually should have meant; because, if the registration was to be useful, so far as our man-power situation was concerned, it should have been used right away.

What did he mean by that, I want to know? Any hon. member should be flattered when one of his colleagues takes the trouble to read his speech and asks enlightenment with respect to the darker corners. The leader of the opposition used the expression "what that registration actually should have meant"; what did he mean by that? And at another point he used this expression: "So far as our man-power situation was concerned, it should have been used right away." Mr. Little was not with selective service at that time, and all the hon. member said about Mr. Little had no bearing on this matter. It was before Mr. Little came. Therefore we want to know what the leader of the Progressive Conservative party meant by that, and if he is still boosting the obsolete policy so dear to the heart of the hon. member for York-Sunbury. Then he went on to say:

> While it may be urged that in some respects moves were made to place in position men and women who had registered especially in respect of certain skilled operations, nevertheless I think no one in Canada would say that there was any real attempt on the basis of that registration to allocate man-power in an efficient or effective way, having regard to the conditions existing in those years.

I want to know if this was said in such a way that it could not hurt the feelings of those who suffer from the application of the mobilization act, and also to appeal to a larger number of supporters in the coming Ontario provincial election. I know the leader of the opposition well enough to presume that not for one moment would he say something in this house only to promote the interests of the Conservative opposition in Ontario.

At page 4002 he goes on to say:

> In November, 1942, the government had reached another fork in the road. Having reached that fork, they took the turn which led, shall I say, to a more delicate and a more

pleasant political climate. I do not intend to find any special fault with the government for taking that action, but they did fail to take the turn in the road to which the elongated finger of necessity and the elongated finger of national interest pointed.

What is the road to which the "elongated finger of necessity" and the "elongated finger of national interest" pointed? I have never seen an elongated finger, but I should like to know about it. It is a fine figure of speech, but I do not understand it very well, —and I confess that humbly.

Then he proceeds to discuss the plank in the Winnipeg convention and at page 4003 he quotes from that convention as follows:

Recognizing that the world struggle in which Canada is engaged requires a total war effort, we believe in compulsory national selective service, and that all those selected to serve in the armed forces should be available for service wherever required.

It is the old story of conscription for overseas.

Mr. CRUICKSHANK: May I ask the hon. member a question?

Mr. POULIOT: No.

Mr. CRUICKSHANK: Thank you.

Mr. MACKENZIE (Vancouver Centre): That is courtesy for you.

Mr. POULIOT: And, sir, this is the way they are acting. They are afraid to say boldly, after the disastrous effects of the disguised conscription of which they complain, "Let us go straight forward to conscription for overseas, for the armed forces". What logic is there in what they say? They complain of the results of the policy adopted—adopted to a large extent on their recommendation or supplication. They complain of those results, and suggest that the government go on in a more vigorous fashion with the same policy. The leader of the opposition continues:

To hear the Minister of Labour talk, one would think that had been done, but what are the facts? On the general advisory board for national selective service there is but one farmer. That is not good enough. The people engaged in agriculture in Canada will not be satisfied with that.

Is that all the leader of the opposition had to say on behalf of the farmers? When I rose in my place to move the adjournment of the house, to remind the government that farmers are existing in this country, and that they are in distress, the leader of the opposition prevented hon. members in his party from rising in their places. I was informed afterward by the press that those who inspire the Progressive Conservative party had decided that that was not the time to discuss such matters. With the assistance of a few of my Liberal colleagues and of the former leader of the opposition, whom I thank; with the assistance of the hon. member for Yale (Mr. Stirling), the hon. member for York East (Mr. McGregor), the Cooperative Commonwealth Federation group, the New Democracy and the independents, we obtained an opportunity to discuss the matter. There are some draftees who come under the jurisdiction of the Minister of Labour and there are others who come under the Department of National Defence. As the rules governing discussion are rather strict it would have been impossible to discuss both cases at the same time. That is why we took a whole day for the farmers.

The leader of the opposition is reported on page 4004 of *Hansard* as follows:

—but I think he will have to revise his remarks because, if there was one idea behind national selective service, it was to take out of non-essential industry and put into essential war-time activities the maximum of our man-power.

Now we come to Alexander Gunn. I desire information about this man. I gave an interview to the local press and I sent the article to all members. In that interview reference was made to Mr. Gunn who had been brought from England to decide what was essential and what was non-essential industry. I am very much surprised that the minister has not said a word about Gunn. The soldiers need guns, but I do not think the minister needs a Gunn. But what astounds me is the admission that a man who knows nothing about Canadian business has been brought from Great Britain to decide what industries are essential and what are non-essential. I am surprised that this man has been given so much power. I have every respect for Canadians who have been born outside this country. I have said before in the house that there are some Canadians who were born outside of Canada who are better Canadians than some who have been born in the country. On the other hand, it is only fair that complete information should be given about this man Gunn so that we may know whether he has had sufficient experience. To a large extent he is responsible for the trouble we are now having in various fields of industry. I hope the minister will be able to attend to this.

Then the leader of the opposition mentioned a dispatch by Mr. Grant Dexter to the Regina *Leader-Post,* and quoted him as follows:

The failure of the government to use men and women effectively has meant that they have been allowed to remain at non-essential work.

What is essential work? What is non-essential work? What does Mr. Dexter know about essential and non-essential work? Does the leader of the opposition mean that conscription should be applied, not only to men but to women? That would be a good thing to know. The leader of the opposition goes on to comment upon the increase in employment in the making of furs. Furs are needed in our winter climate. He referred also to the increase in employment in beverage making and in personal trades, which includes laundries and so on. He is comparing the figures for 1938 with those of 1942, when there was no rationing. The figure for laundries for 1938 is 141·5, and it increased to 194·6 in 1942. All that means that we have more dirty linen to wash. Does the leader of the opposition mean that laundries are not performing essential work?

Then he asks for a sweeping inquiry. We could have had a sweeping inquiry if a parliamentary committee had been in charge of the expenditures of the Department of Labour from the beginning of the session. Witnesses could have been called and we would have been able to obtain information. This committee would have been of great help to the minister from time to time. I want to tell the minister that he will make a success of national selective service—I have not given up hope that it will be a success—just the moment he begins to act as the boss, in the Canadian spirit and not in any imperialistic spirit.

I do not want to be hard on the leader of the opposition because he is one of my best friends and I have great regard for him. He speaks as the leader of a party that was once great, and his words have more weight than those of any other member of the party. I say that without meaning offence to anyone. The leader of the opposition should act as the leader of his party. They should not have a wandering Jew as the leader of the party enjoying the beautiful climate of Prince Edward Island when we are sweating here just because he is afraid to run for the House of Commons.

Mr. HANSON (York-Sunbury): Oh, sit down.

Mr. POULIOT: No, I will not sit down. The hon. member for York-Sunbury does not seem to realize that what I am saying is the truth. This man John Bracken has a different policy for every parish he goes into. We do not hear any statements of his coming from the house, but he goes along preaching a different gospel in every town, city or village. He should be here. The leader should be with his army, and the army is here, not in Prince Edward Island. He should be acting as leader and the Conservative party should not be led in caucus by a former secretary of R. B. Bennett.

Mr. HANSON (York-Sunbury): Mr. Chairman, what has this to do with the resolution?

Mr. POULIOT: Now that the leader of the opposition has come into the chamber I will tell him what I have said. He will see in *Hansard* that I have criticized some of his utterances, and I think justly so. I said that he should be the leader of his party, that the Conservative members should have the courage to elect him and not to pass over all—

Mr. HANSON (York-Sunbury): Mr. Chairman, on a point of order, what has this to do with the resolution before the committee? Not a thing in the world.

Mr. POULIOT: I do not want to be interrupted by the dead.

Mr. HANSON (York-Sunbury): I am rising to a point of order. These remarks are entirely out of order. The hon. member for Témiscouata will take his seat if he is a gentleman when I raise a point of order. What has this to do with the resolution before the committee? How long have we to suffer this sort of thing?

The CHAIRMAN: On the point of order, I think the hon. member for Témiscouata must realize that it is difficult for the Chairman to keep speakers within the limits of the item before us. All I can do is to ask hon. members to keep their discussion within the limits.

Mr. POULIOT: I have nearly concluded my remarks, but I have just one word to say to the leader of the opposition. He does not realize that when I speak as I do I am avenging him for the fate which he suffered at the hands of his former supporters. Although I disagreed entirely with him I preferred to hear him advocating conscription as official leader of the opposition or leader of the Conservative or the Progressive Conservative party or the N. G. party—call it what you will—to reading the rosewater speeches of his present leader. At least I knew where he stood, and I fought him on that ground. But I will tell him another thing. I never rose to interrupt him except when he was interrupting me. I have given all members the opportunity to say what they wanted, and I

will tell the former leader of the opposition that he did not help his cause by speaking as he did. I tell him further that I regret that the Progressive Conservative party did not choose a pure Conservative as their leader. Instead they went out to find a man who had been able to form a small scale union government in Manitoba and they brought him here for the same purpose, thinking that with John Bracken as their leader they would have a union government at Ottawa. That is why I am opposed to John Bracken, because a union government would destroy the freedom of opposition in this house. It would prevent an opposition from expressing fair and just criticism of the actions of the government. That is why I am opposed to union government. I think the hon. member for York-Sunbury is still for it, and if he thinks that John Bracken is the man in Canada who can do it he is making a great mistake. I do not want to discuss conscription, I do not want to discuss national government, but I will fight John Bracken, and as he is the chosen leader he must be strong enough to defend himself. But he goes away all the time. He is a wandering Jew—an Isaac Laquedem.

Mr. GLADSTONE: He is a good Canadian, anyway.

Mr. POULIOT: A good Canadian wandering Jew.

Mr. HANSON (York-Sunbury): Surely the Chairman should do something about this.

Mr. GRAYDON: I rise to a point of order, Mr. Chairman. I am quite sure that the hon. member for Témiscouata on reflection will not want to cast aspersion upon the leader of our party. I am quite sure that he has gone a little further than he intended. It is not very often, Mr. Chairman, that it is necessary for me to rise in my place and defend the good name and reputation of a man who has been chosen the leader of a great party in Canada, the Hon. John Bracken. But I do so here with a great deal of pride and pleasure. I would ask the hon. member for Témiscouata not to follow his present line of argument; for at a time like this especially he should not cast reflections on a good Canadian who is trying to do his duty as Mr. Bracken is.

Mr. POULIOT: Is it unparliamentary, Mr. Chairman, to call a man a wandering Jew?

The CHAIRMAN: I think the point of order is well taken. It is not in order in committee of the whole house to cast reflections on leaders or members of any party.

Mr. CRUICKSHANK: May I ask a question of the Minister of Labour? I wanted to ask the hon. member for Témiscouata but I was not permitted. But first of all I would like to associate myself with the leader of the Progressive Conservative party. I have never found it necessary to lower myself by making personal remarks about the leader or prospective leader of a party in the house. I just wanted to help the hon. member for Témiscouata. As I understand it, the Minister of Labour has complete charge of all labour in all parts of this dominion. I do not want any unfairness done to any member of this house, particularly to the hon. member for Témiscouata, so I appeal to the minister, as head of the selective service, to see that the hon. member for Témiscouata is properly and adequately served. I notice that the *Chronicle* of June 23, 1943, has this heading: "Extra stenographers called in to handle Pouliot's mail".

Mr. ESLING: Mr. Chairman, in the manpower discussions in this house nothing has been emphasized more than the need for farm labour. Perhaps there is not a district in this dominion in which there will be found a greater number of husky robust men, farmers too, of military age than in the district of West Kootenay. I refer to the Doukhobors. They were born and brought up on the land; they are natural farmers, but they are leaving the farm for the older members of the family to work while they drift into the community centres to exploit the labour market, to take advantage in every way of positions which have been vacated by men who have joined the armed services.

The hon. member for Yale (Mr. Stirling) yesterday repeated the story of the admission of the Doukhobors to Canada. They were admitted and given the fullest immunity from military service. But that order also provided that they must present a certificate from the authorities in their own community. that was forty-four years ago. I am going to ask, what happens when the Doukhobor community no longer exists and when there is no authority to grant the certificate? The question also arises, does that immunity from military service extend to the descendants of the original Doukhobors? The Minister of Justice has ruled that it does, and under the mobilization act the same ruling has been followed. The fact remains that the government—not this particular government but every government both federal and provincial —are afraid to enforce the law in connection with this religious sect.

I have in my district some 3,500 Doukhobors. That is an approximate estimate. A national registration was taken about a year after the war was declared. The registrar sent capable and responsible men into that community to register the Doukhobors, and they did the best they could. But the one purpose of the Doukhobors was to evade registration. It will take a good strong armed force of ex-service men or mounted policemen to register these Doukhobors, and a half dozen of them should go into that community and register every one of them. More than that, they should see to it that these Doukhobors are not allowed to continue to drift into West Kootenay district from Saskatchewan for the purpose of hiding their identity. For many years I attempted to bring to the attention of the government the defiance of the law by this sect, and I have to say that about the only time one could secure the interest of hon. members was when they were visualizing a description of a nude parade. Then they all sat to attention. If some of them had to experience the continued bombing and firing of schools, of which there were twenty-two or twenty-three cases within a few years, while teachers were sleeping in the living apartments of the school and were able to escape only because those apartments were on the ground floor; and perhaps if hon. members had to suffer the humiliation of their wives and daughters who had to witness these nude parades, they would look at these things in a different manner. But you can never interest any government. Whether it be present or previous federal governments or provincial governments, all are afraid to enforce the law. It is a humiliation which this dominion must endure. A great nation which raises an army of 500,000 men, which looks after several thousands of prisoners of war, which can move 25,000 Japanese, has not the ability, has not the—

Mr. HANSON (York-Sunbury): Intestinal fortitude.

Mr. ESLING: Yes—the fortitude to enforce the law, to make these people follow the laws of Canada as laid down by both federal and provincial governments. That is a matter I want to emphasize to-day more than the mere question of man-power.

The government has before it three resolutions from my district, namely, from the Central Farmers' Institute, the Associated Boards of Trade of Eastern British Columbia, and the Rehabilitation Committee of the city of Nelson. These bodies represent three sections of outstandingly responsible citizens, people who have at heart the interest and welfare of the country. But if the government is not disposed to take cognizance of their representations, what is the use of presenting them?

They go on to show the privileges which these people have over and beyond our real Canadian citizens. They exploit the labour market, they exploit the produce market. As farmers they take their produce into town and secure higher prices than anybody else, with a total disregard for every provincial law. They refuse to register vital statistics and flaunt the law in every way.

The amended mobilization regulations provide exemptions for Doukhobors and conscientious objectors as well as for Mennonites. The minister through his selective service officers may call upon these people to do alternative service. He does not say that they must do it. The minister would get just as good results under these regulations if he sent a perfumed note asking these people if they would please come and do some alternative service, because they do not intend to do it and the government is afraid to force them to do it. That has been shown in the past. In 1941, after the national registration, what happened? This government in conjunction with the provincial government laid out a piece of work which was classed under these regulations as alternative service: these Doukhobors were to improve a road, were to receive fifty cents per day, and were to be under the control of the provincial government. The work was allotted on the recommendation of the provincial government by the authorities at Ottawa. What did the Doukhobors do? They just said, "We are not going to do any work for fifty cents a day and board, and we are not going to do this alternative service." They did not do it; they simply asked the government what they were going to do about it. The government did not and could not do anything about it, and has never been able to do anything about it, in any avenue of work which might be classed as alternative service.

That is the situation. To show further the absolute fear which this government and the provincial government—I include all federal governments since the day these Doukhobors were admitted to Canada in 1898—have of enforcing the law, what happened in connection with a large life insurance company which advanced to this sect $200,000? Several years went by. No interest and no principal were paid. Foreclosure proceedings were taken and an eviction order was issued. When the sheriff went to evict these Doukhobors from the land on

which the mortgage was held, he was afraid to do it. He got no support from the provincial government. Then what did the provincial government do? It paid the insurance company $200,000 and took over the land, and from that day to this, a period of five years, these Doukhobors have not paid one cent of taxes. They are on this land, scot-free of taxes; they cultivate the soil and take their produce to market in competition with the good Canadian farmer alongside who pays his taxes regularly and has to comply with Canadian laws.

Let me cite a little incident which came to my attention just before coming down here, relating to the need of dairy labour. Three of these Doukhobor girls—any of them can do a man's work—go to a dairy and offer their services. When they are told that they will receive the going rate of pay less the amount of taxes prescribed under the Income War Tax Act, they say, "No, we are not going to work if we have to pay taxes," and so they walk away, to the great discomfort of the dairyman. So the matter goes on, and the government still fears to enforce the law.

Then, what about the failure of the national registration to cover all these people? They drift in from Saskatchewan. Farmers in the district need help; and I have four specific cases of farmers who employed Doukhobor women to help them out, and then some government official discovered that these women were working without a registration certificate, and they did not penalize the women but they penalized the farmers and fined them $10 each for not having done something which was originally the duty of the federal government. For it is the federal government's duty to see that every Doukhobor is registered.

I have tried to make it clear that it is in view of the absolute defiance of the law that these three responsible bodies to which I have referred have appealed to the government to see that these Doukhobors are compelled to render alternative service. Some people raise the objection that this immunity does not apply to the descendants of Doukhobors. However, they are Doukhobors. You can call them Doukhobors or conscientious objectors, but the fact remains that the government is afraid to enforce the law. I appeal to the government to send the mounted police there or ex-service men to see that everyone is registered and that they meet the requirements of alternative service.

In conclusion, I appeal to the Prime Minister. Those Doukhobors who came in under the original orders are not Canadian citizens, and if they do not comply with the law it should be possible for the Prime Minister to negotiate with the Russian minister for their return to Russia.

As for those who are not of the original group, they are all under the age of 44. They came in 1898 and are 44 years of age, and they are just as bad as the others. I must say, however, that the younger element to-day are governed largely by the advice of the original settlers. One young man came to my office and I tried to persuade him to register. He was 21 and had put in one year in the university. I asked him why he had not registered and he said that his grandparents did not want him to. That is the influence that is exerted over the younger community.

I suggest that there be cooperation between this government and the provincial governments to forbid any Doukhobor who is not registered or who does not comply with the law to use any public conveyance, whether it be a train or a bus or ferry. It could readily be arranged for the conductor or the bus driver, or whatever officer may be in charge of such a vehicle, to have authority to demand the presentation of that certificate, and if they do not comply they should not be permitted to ride. Furthermore, there should be cooperation between the province and the federal government to see to it that there is no travelling from Saskatchewan to British Columbia. We certainly have enough of this undesirable class there now.

My closing word is this. Does this government intend to remain firm in its refusal to enforce the law? That is all that these various resolutions amount to. They merely ask that the law be applied to these people with the same degree of justice as it is applied to real Canadian citizens.

Mr. LACOMBE (Translation): I have followed with a keen interest the speeches delivered this afternoon by hon. members of this house. Whether they belong to the Progressive Conservative party, the Cooperative Commonwealth Federation or the Social Credit party, we can rightly put them in the same class. They are in perfect agreement with the government. They complain about the farm labour shortage, but all of them, one after the other, have voted against the amendments and the resolutions I moved in favour of the exemption of farmers. How inconsistent and hypocritical is such an action, Mr. Chairman! Certain statements are long overdue in this house and we are prepared to make them to-day.

The discussion on the estimates of the Minister of Labour (Mr. Mitchell) has been await-

ed with much concern for many weeks. All is not well as regards man-power. In connection with war industries, agriculture, commerce or civilian industries, we are witnessing the dismal failure of the organization of man-power in Canada. Agriculture is facing a shortage of experienced men through the action and by the fault of the government, who have always denied the farmers complete and definite exemption from compulsory military service. Indeed, they have through their huge majority in parliament and in collusion with all opposition groups with the exception of ten members of this house, invariably voted down all the resolutions and amendments I have moved along that line. It would seem that the government's single purpose is to bring about a shortage of agricultural products. Their first duty was to stimulate by every possible means the production of foodstuffs that are indispensable to the army and the civilian population of Canada. What have they done? They have called for military service thousands of farmers. They are still doing it in spite of our constant protests. On the one hand, they advocate agricultural overproduction and on the other hand they subsidize the western farmers so that the latter may reduce their production. That is the government's policy. On the one hand, they request the farmers to produce as much as they can, and on the other hand, they deprive them of every means whereby they could do it, in taking away from them their best workers. What conclusion is to be drawn from such an attitude? What must we think of such an administration? If we consider that seeding is not yet completed in many provinces of eastern Canada, and that thousands of farmers are still kept in military camps notwithstanding all requests and in spite of our protests, we cannot condemn too strongly the disastrous policy of this government. Who will restore to farmers the dairy herds that have been slaughtered for the lack of help, the farms sold for a mere song or left uncultivated. Who will set on its feet again our agricultural economy so thoroughly shaken by a most unwise policy? Who will return to the farm the numerous farmers who have moved to the cities under the incentive of remunerative but uncertain jobs? We can never be too insistent in reproaching the government for having destroyed our first line of defence in the country, agriculture. However, the day when they will be called to account is approaching. Those who are responsible for the present sorry state of affairs may be convinced of one thing: the Canadian people will have their revenge and treat according to their desserts those politicians whose blind obstinacy will have ruined our agriculture and given a mortal blow to our economic and financial set-up.

And the government set forth as an excuse the so-called postponements granted to farmers. Mr. Chairman, I shall say a few words about them. Let us be frank. How much trouble and bother, how many attestations before a notary public, and visits to their members of parliament and how much loss of time do these precious postponements occasion. What a joke! On the other hand, how many requests have had no other answer than a railway or bus ticket accompanied by a notice to report at a military camp. Let us stop being hypocrites. The government have deceived us long enough. We are now witnessing, in this country, the worst example of hypocrisy and lying of all ages. Never before have so many promises been broken when their fulfilment was known to be an impossibility from the beginning. Never have so many sacred undertakings been trampled underfoot by a government who climbed into power by promising to adopt a programme the exact opposite of that which is implemented. This government has been guilty of the worst breach of trust ever. Is it surprising that dissatisfaction is apparent in every section of the country? Is it surprising that strikes are breaking out all over Canada? The people, whom the government themselves have so often let down, are rightfully mistrustful and alarmed. They groan under burdensome taxes brought about by the extravagance and the shameful waste of a government so thriftless that our money will remain devaluated for a long time to come. Our dollar is now worth 10 cents less than the American dollar whereas, before the outbreak of the war, in 1939, it was worth 17 cents more. Our whole resources are mobilized, not only for war purposes, but for the enrichment of a flock of vultures wrangling over the last scraps of our economy. Witness the Lynches, in Montreal, the Engineering Works, that stole $250,000 from the government who took two and a half years to find it out. In the space of a few months, the government purchase close to a million dollars' worth of luxurious furniture for military camps. The same hypocrisy and deceit are always in evidence. The government recklessly spend the taxpayers' money. Scandals multiply. Our war expenditures committee is made up of eighteen Liberals and six members of the opposition. Can you see any fairness and equity in such a set up? We have here in the cabinet three new millionaires who have made their money since the war's outbreak. We shall denounce them at the proper time and

place. Fortunes are being built up. I say to the Minister of Justice (Mr. St. Laurent) that the minions of the regime are having a wonderful time and that those war profiteers all fondly hope that the war may last forever. They don't care a fig for our soldiers. They scoop up money by the handful out of our revenue and, as we shall prove in due course, they celebrate on behalf of those who work, who suffer and who toll. This shameful situation besmirches the fair name and spells the ruin of a country which, but yesterday, was proud and free! Not only that but, in the very name of freedom, liberties are now being despoiled which were dearly bought after centuries of struggle and include the most precious and sacred of them all—the freedom of speech. I appeal now to the Minister of Justice in the case of Mr. Camillien Houde, former mayor of Montreal, who is being shamefully persecuted. Why did the minister withdraw the charges against Colonel Drew? Yes, why did he?

Mr. LALONDE (Translation): Order, Mr. Chairman!

Mr. LACOMBE (Translation): Just a moment, we know all about you.

Mr. LALONDE (Translation): I suggest the hon. member is out of order when he refers to the case of Mr. Camillien Houde while the house is discussing the estimates of the Minister of Labour (Mr. Mitchell). He will probably have full opportunity to do so later. I submit the hon. member is out of order.

Mr. LACOMBE (Translation): This is possibly the most elaborate work we can undertake and the work of greatest national import I can tackle.

The CHAIRMAN (Translation): I would ask the hon. member for Laval-Two Mountains to remain within the limits of the matter before the house. He surely has no right to deal with this matter now, but he may do so when the house considers in committee the estimates pertaining to the Department of Justice.

Mr. LACOMBE (Translation): Mr. Chairman, I respectfully submit that we are discussing general estimates, war estimates under a motion which appears on the order paper, and that I have a perfect right to deal with the case of Mr. Camillien Houde.

Mr. LALONDE (Translation): The hon. member has no right to broach that subject.

The CHAIRMAN: I have expressed my opinion.

Mr. LACOMBE (Translation): I know the Liberal member is too skittish, he who defeated Mr. Bourassa, the most independent and truly Canadian man who ever lived.

The CHAIRMAN (Translation): Order! I would request the hon. member for Laval-Two Mountains to abide by the decision I have just given. With his parliamentary experience, the hon. member should realize that this is not the time to discuss the estimates of the Minister of Justice. I do hope he will obey this ruling. Otherwise, I shall be compelled to resort to other means.

Mr. LACOMBE (Translation): Mr. Chairman, I admire your sense of equity and of justice. I realize that your decision does not reflect your personal feelings and I know full well that there are members here who are interested in preventing me from having my say. It was not the Minister of Justice who raised the point of order.

Mr. LALONDE (Translation): The last words of the hon. member might convey the impression that I am one of those who are interested in seeing that certain things should not be revealed in parliament, in connection with Mr. Camillien Houde.

Mr. LACOMBE (Translation): I submit the hon. member has no right to interrupt me without my permission. I shall pay a visit to the hon. member for Labelle the next time elections will take place in his riding.

The CHAIRMAN (Translation): The hon. member for Laval-Two Mountains has said that the Chair may be influenced in its rulings some way or another. I will tell the hon. member that the rulings of the Chair have never been subject to any influence whatever on any occasion or at any time, and I ask him to withdraw his statement.

Mr. LACOMBE (Translation): What must I withdraw, Mr. Chairman?

The CHAIRMAN (Translation): I understood the hon. gentleman to say that the Chair was influenced in its rulings. I wish to say to the hon. member that he must withdraw the remarks he has made in this connection. Never, under any circumstances, has the Chair been influenced in any way when giving its ruling.

Mr. LACOMBE (Translation): I have never said you had been subjected to any form of influence. I said you were just and equitable. You may ask the Clerk of the House and those who have heard me. They know what I said. I have nothing to withdraw. I will say what I have to say in this house; I have already been ordered out of this chamber; if it is necessary I will suffer to be turned out once more, and I don't care a rap.

Mr. LALONDE (Translation): Good riddance!

Mr. LACOMBE (Translation): As I said a while ago, these individuals are digging into our revenues with their two hands; they are celebrating in the name of those who toil and labour, nay in the name of liberty itself. Here, those liberties for which we have fought so hard during centuries are thrown overboard. The most sacred of these liberties is done away with, namely, freedom of speech in this British country of ours.

I now wish to call the attention of the house to the abuses which are taking place in our war industries. I have already called the labour minister's attention to all these irregularities and injustices which have been brought to light in these plants. Bribery is still a common practice. Labourers are laid off while persons who are financially independent are being given the best positions. It is currently repeated,—and I think I ought to know since more than 2,000 of my voters are engaged in war work in the Bouchard plant,—that one must pay ten or twenty dollars in order to obtain and to keep one's job. It is a shame in a country where our workers are overburdened with taxes. As I did more than two years ago, I suggest again to the government that all war industries should be placed under the supervision of the Royal Canadian Mounted Police.

Let us now speak of the labour in those industries. Through lack of materials the workmen employed in the war industries have been out of work most of the time.

Mr. LEDUC (Translation): That is not true.

Mr. LACOMBE (Translation): If it is not true, prove it. I ask the hon. member for Wright to rise from his seat and to prove his assertion if he can do it, and I invite him not to stand behind the curtains. Name those industries.

Mr. LEDUC (Translation): About those industries, no workmen have been out of work for lack of material. The hon. member is saying those things. Let him prove them.

Mr. LACOMBE (Translation): In reply to the hon. member for Wright I state once more that the workmen were out of work for lack of material. Hundreds of workmen were sleeping on the job at the Bouchard plant, at Ste. Therese, fifteen miles from my own town. They had no lumber, no nickel, nothing to work on. Let the hon. member pay a visit to my beautiful county. I shall be glad to show him round the lovely touristic region. Then, we shall go to the Bouchard plant where he will see for himself all the extravagance going on in that war industry. I once said to the hon. member for Wright that he would sooner or later be appointed to the senate—he would not get a judgeship because he does not belong to the legal profession as does the hon. member for Labelle before whom I might perhaps be fortunate enough to appear.

Mr. LALONDE (Translation): On a question of privilege, Mr. Chairman, the hon. member has no right to impute motives.

Mr. LACOMBE (Translation): I am not insinuating anything. I hope he may be appointed a judge in the Terrebonne district.

Mr. LALONDE (Translation): I would ask you, Mr. Chairman, to order the hon. member for Laval-Two Mountains to confine his remarks to the matter before the committee.

Mr. LACOMBE (Translation): It is an indiscretion, Mr. Chairman, possibly because judges are appointed by the Minister of Justice, not by me. I am the leader of a small party, the only leader—

Mr. LALONDE (Translation): Very small.

Mr. LACOMBE (Translation): Very small, but also very great.

Mr. LALONDE (Translation): Tiny.

Mr. LACOMBE (Translation): Great oaks from little acorns grow. I hope that my good friend from Labelle may get a judgeship as soon as possible because otherwise he will take a good licking in his own constituency and I would not get much satisfaction in ensuring his defeat for he is a good friend of mine, but we will have to stick to our principles and fight him.

Mr. LALONDE (Translation): The hon. member is welcome to it.

Mr. LACOMBE (Translation): Is it a challenge?

Mr. LALONDE (Translation): Yes.

Mr. LACOMBE (Translation): I am delighted to accept the challenge.

Mr. LEDUC (Translation): The hon. member has been so successful in some by-elections that he must be right.

Mr. LACOMBE (Translation) We shall see. The hon. member should not raise the question of by-elections, because that would hurt the Minister of Justice, his leader. We will have the opportunity to talk about it later. I have raised in this house the question of fake voters' lists used in the constituencies of Quebec East and Montreal-Saint Mary and I was prevented from arguing the point.

Mr. ST. LAURENT (Translation): I ask that the rules be applied, Mr. Chairman. The hon. member is absolutely out of order in mak-

ing these innuendoes which he knows as well as I do to be false, while the estimates of the Minister of Labour are before the committee. I ask you to call him to order.

The CHAIRMAN (Translation): On the point of order raised by the hon. Minister of Justice, I again remind the hon. member for Laval-Two Mountains that he must confine his remarks to the question before the house and I hope that he will abide by my ruling. Otherwise I shall have to name him.

Mr. LACOMBE (Translation): Mr. Chairman, if I said anything displeasing to the Minister of Justice, it is because his friends have raised a point of order. At the opportune moment we will discuss all that and we will talk about the elections held on February 9, 1942, in Quebec East and Montreal-Saint Mary. It is a long time since that happened, but we have kept the voters' lists as well as the telegrams.

Mr. Chairman, what about the useless cuts of lumber and construction waste which are prevalent in those war plants? At a time when there is such a shortage of fuel wood and lumber, the government takes no notice of such disgraceful abuses. Therefore, it is our duty to expose those prodigalities, all of which are detrimental to Canada. Next winter, needy families will freeze because of the government's lack of foresight. I can see the hon. Minister of Labour smiling, his sympathetic face is just beaming. The poor people of the country will not be smiling then. The hon. member for Labelle will not be smiling either, he who, together with two other French-Canadian members of the House of Commons, has applauded the statement of the Minister of Justice to the effect that Houde should remain in the internment camp. What kindness of heart! That afforded pleasure to the hon. member for Labelle.

Mr. LALONDE (Translation): Certainly. I hope that he will remain there for a long time.

Mr. ST. LAURENT (Translation): Mr. Chairman, does your task consist in merely expressing a wish that hon. members confine their remarks to the matter under discussion, or should it imply that hon. members cannot everlastingly revert to it despite your ruling?

The CHAIRMAN (Translation): The chairman of the committee is in a rather delicate position. There are some rules which the chairman is bound to enforce under penalty of losing the confidence of the committee. I hope the hon. member for Laval-Two Mountains will find it possible, under the present circumstances, to confine his remarks to relevant matters. This is the last time I appeal to the good will of the hon. member.

Mr. LACOMBE (Translation): Mr. Chairman, we are now debating a resolution appearing in the orders of the day. This is all I have in front of me. As a lawyer, and the hon. Minister of Justice is a very brilliant lawyer, he knows that I have to confine myself to the terms of the resolution. This is what I am doing. I shall read it to the committee:

Resolved,—that it is expedient to introduce a measure to provide, *inter alia*,

Among other things, I might say, for the benefit of those who do not know Latin.

1. That sums not exceeding $2,593,333,333.34 (being two-thirds of $3,890,000,000) be granted to His Majesty towards defraying any expenses or making any advances or loans that may be incurred or granted by or under authority of the governor in council during the year ending March 31, 1944, for—

(a) the security, defence, peace, order and welfare of Canada;

Here is a very broad paragraph; however, I see nothing in it of a nature to protect agriculture.

(b) the conduct of naval, military and air operations in or beyond Canada;

(c) promoting the continuance of trade, industry and business communications.

Am I not entitled to discuss what is taking place in the war industries? Am I not entitled, Mr. Chairman, to discuss public order and Canadian legislation; am I not entitled to speak of the internment of Mr. Camillien Houde, under such an item as this?

Mr. ST. LAURENT (Translation): Order!

Mr. LACOMBE (Translation): The Minister of Justice is a great lawyer.

Mr. ST. LAURENT (Translation): I understood a while ago, that you had given a ruling, Mr. Chairman, and that the hon member was not entitled, at this stage, to discuss the internment of Mr. Houde.

The CHAIRMAN (Translation): I request the hon. member for Laval-Two Mountains to resume his seat.

Mr. ST. LAURENT (Translation): The hon. member is dealing again with the matter and his whole argument purports to show that your ruling was unwarranted. On a point of order, I submit to you that once you have given a ruling, it is not in order for an hon. member to question it. He must simply abide by it.

Mr. LACOMBE (Translation): I realize that the hon. the Minister of Justice, while he is an outstanding barrister, acting as he does as solicitor for the bank of Montreal, the Canadian Pacific, and every monoply and trust, has not much parliamentary experience. He ought to know that I am entitled to discuss here a

matter of public concern, a legislation of a public character, under which a Canadian citizen has been interned. He ought to know that. In any case, Mr. Chairman, if I am prevented from speaking, that is all right, but I know that the Minister of Justice wishes to withhold something.

Some hon. MEMBERS: Order, order.

Mr. LACOMBE (Translation): For my part, I will not withhold it. I will disclose it. I will produce the document if he refuses to bring it down.

The CHAIRMAN (Translation): May I ask the hon. member for Laval-Two Mountains to resume his seat so that I can give my ruling. The hon. member was to a certain extent within his rights in speaking on the resolution that is now before the committee, but I do not know whether he was in the house when, during the discussion on the four preceding departments, the committee unanimously decided that each item be taken up separately. The estimates of the Department of Labour are now before the committee. The chair must follow the directions given by the majority or unanimously decided upon by the committee of the whole. That is why I earnestly request the hon. member for Laval-Two Mountains to confine his remarks to the items of the Department of Labour. When the estimates of the Department of Justice are again before the committee, he will have every opportunity to discuss all matters pertaining to the administration of justice.

Mr. LACOMBE (Translation): Mr. Chairman, while I duly respect the ruling of the chair, I am quite surprised that you should deny me the opportunity to discuss this matter, in view of the fact that the leader of the Cooperative Commonwealth Federation has been allowed to deal with matters of general policy this afternoon.

Some hon. MEMBERS (Translation): Order.

The CHAIRMAN (Translation): Order.

Mr. LACOMBE (Translation): There are two standards of justice here.

The CHAIRMAN (Translation): Order. I would ask the hon. member for Laval-Two Mountains to postpone this discussion until the estimates of the Department of Justice are before the committee. He may be sure that every opportunity will then be afforded him. Rules are absolutely necessary and must be applied, if our work is to proceed in a practical and logical manner. I know that the hon. member for Laval-Two Mountains would be the first to support such a course.

Mr. LACOMBE (Translation): The hon. member for St. Mary (Mr. Fauteux), who is in agreement with the hon. member for Labelle and with my fellow-member for Wright, has attacked members of the Progressive Conservative party, charging them with having demanded conscription and with being themselves responsible for the present labour shortage. Let us set the facts in their true light, Mr. Chairman. On February 19, 1942, I moved in this house an amendment to the address, wherein I demanded the exemption of farmers and fishermen and workers in war industries. The hon. members for Wright and for Labelle were the first to vote against it, and on the very day he entered parliament, together with the hon. Minister of Justice, the hon. member for St. Mary also voted against my amendment. A year ago to the day, the hon. member for Richelieu-Vercheres (Mr. Cardin) moved another amendment calling for the exemption of farmers, and the hon. members all voted against it. Let there be an end of this tragic game, Mr. Chairman. Let the hon. members be sincere once for all. Actions only are important. Let there be no more great speeches. Let the government help the farmers, because they know quite well that our armies could not live without food. Seeding is scarcely completed in many provinces of eastern Canada.

Mr. LALONDE (Translation): Due to bad weather.

Mr. LACOMBE (Translation): Due to bad government. Once again the Liberal government will not be in a position to say that Providence is with them. They used to say: We have a bountiful harvest; Providence is with us. Providence has forsaken them for very good reasons.

Mr. LALONDE (Translation): For the Canadian party.

Mr. LACOMBE (Translation): As we, ourselves, have forsaken them for similar reasons. As for my young friend the hon. member for Labelle, I wish him a long parliamentary career.

Some hon. MEMBERS (Translation): Order!

(Text) Mr. MITCHELL: I rise to a point of order, Mr. Chairman. This is a war appropriation—

Mr. LACOMBE (Translation): Louder please. Do not speak to the Chairman. I want to hear something too.

Mr. MITCHELL: This is a war appropriation, and if my hon. friend wants to fight a private war across the floor of this house with one of his fellow members I suggest

it would be better if he would settle it out in the lobby and let us get on with the business of the house.

Mr. LACOMBE: I will answer the minister. I have the resolution before me. Perhaps I may not be required to read it because it is very long, but I submit, Mr. Chairman, that I am justified in discussing this resolution.

Mr. MITCHELL: I ask for a ruling on the point of order, Mr. Chairman.

The CHAIRMAN: The hon. member for Laval-Two Mountains has still five minutes to go. A fairly wide latitude has been allowed the previous speakers in this debate, and I must allow the same latitude to the hon. member.

Mr. MITCHELL: That may be true, Mr. Chairman, but I do not think there is any justification for a ruling that a man can be out of order for another five minutes. That does not add up to me.

The CHAIRMAN: The minister cannot criticize the Chairman's ruling. He may appeal. I have followed the debate closely; when a point of order was raised before, I tried to keep the hon. member in order, and for the last few minutes of his speech he has been in order.

Mr. LACOMBE (Translation): Mr. Chairman, I shall not take up the full five minutes to which I am still entitled, but, with your permission, I would like to relate to the committee a very bewildering anecdote. It is not a product of the hon. member for Labelle's imagination; it was thought out by the hon. member for Montreal-St. Mary. He has claimed that Progressive Conservatives, the Cooperative Commonweath Federation members and the Social Crediters alike had demanded the implementation of conscription by the government. The hon. member for Montreal-St. Mary must have known that conscription was already on our statute books.

Mr. LALONDE (Translation): It has not been enforced.

Mr. LACOMBE (Translation): It is being enforced since June 19. What does the hon. member for Labelle think of our contingents posted in Newfoundland, the Caribbean and Jamaica. Let us not delude ourselves; it is being enforced. The hon. member for Montreal-St. Mary condemns conscription after having voted for it when section 3 of the mobilization act was dropped and he still approves of it when he supports the policies of the present government. Let those who have deprived our farmers of their help bear their own responsibility. I shall have done my duty in this house; that is all.

(Text). Mr. MacNICOL: Mr. Chairman, after listening to what I may describe as a burlesque if that is parliamentary, for almost forty minutes, I wonder if those who listen to us believe that we really know there is a war on and that a great many of our brothers and kin are dying or at least fighting for us overseas, offering their lives to save civilization and Canada besides. The Minister of Labour has a most arduous and difficult task in trying to obtain the men to provide the munitions for our boys overseas, and I for one want to help him get on with this work.

I shall speak only briefly. I have no apologies for speaking in this debate. I represent no fewer than 45,000 to 50,000 honest-to-goodness industrious, hard-working men and women engaged in the great factories in the riding of Davenport, and I would feel that I was not doing my duty if I did not say a word or two on this subject.

I want to help the minister as much as I can. When he was appointed Minister of Labour I expressed my strong approval, for whatever faults he may have—I am not going to talk about his faults—he is at least a labour man. He has served in the ranks of labour and in industry and ought to be as well qualified as any man to hold the position he occupies.

There is a great man-power problem; there is no question about that, and the Minister of Labour knows that better than any other member of the house. The Minister of Munitions and Supply said just a few days ago that he could place 40,000 men in industry. That was an arbitrary figure. He might have meant 60,000 more or less. In any event there is a man-power problem. I should like to make it easier for the minister. I have been in industry and labour most of my working life and know something about operating industry and about working in plants. There are several ways in which industry can be speeded up, and I shall speak only of industry. Others have spoken of other callings in which our citizens are engaged and have advanced arguments as to why more men should be made available in those callings. But I confine myself to industry.

Production can be increased in four ways. First, by speeding up the machinery in the plants. I do not know whether that would be advisable under present conditions because many of the folks working in industry are elderly and many others are young. The most experienced men and the more physically fit are not all in industry, but countless thousands have joined the armed forces, so that I doubt very much whether speeding up the machines

would increase production. It would probably do an injury to the two classes I have mentioned.

The second way to speed up would be for man-power to speed up, but I doubt whether you can do much there. The youths working in the plants are not experienced enough to speed up, and the elderly men are past their day for speeding up. I am afraid that an endeavour to speed up man-power would mean more accidents, and one can see by reading the papers and looking over the lists of those drawing compensation that there are too many accidents now.

The third method by which we can increase production is by reducing absenteeism. This is a much greater problem than perhaps many of us realize. The minister is not to blame for absenteeism. I do not know that he can do anything to reduce it. But there is altogether too much absenteeism. A gentleman told me when I was home last, and he is a man who should know, that in the plant where he was, at least 10 per cent of the possible productivity of the plant was lost through absenteeism. I asked him for the reason, and he said that if the workmen worked six days a week or put in a full week they received so much pay and had to pay so much income tax. But if they worked only four or five days a week no tax was deducted from their pay cheques, and they felt, "We might better take a holiday than work because we shall be just as far ahead. If we work another day we shall have the tax to pay." How that is to be overcome I do not know. I see the minister nods his head; he recognizes that it is a problem, and he deserves the sympathy and advice of anyone who can give him advice on how to reduce absenteeism. Perhaps the Minister of Finance could so adjust workmen's tax matters that the Minister of Labour would have a chance to work his whole labour organization to the limit. That is one way by which productivity can be increased.

The fourth method is to get more workers. I do not know how that can be done. I assume the government is trying to obtain all the workers it can. If every riding in Canada had enrolled as great a percentage as has Davenport in the army and industry there might be another million available. Why are they not enrolled everywhere? I do not offer any comment. It is not my duty to say where workers can be got. But the fact is that nearly everybody in my riding has been enrolled in one form or another, including many who should not have been called upon. When I was home last I went to see a young man who has flat feet, a weak back, and is otherwise physically unfit; yet he had a paper—the second one—summoning him to appear for enrolment.

Mr. MITCHELL: Would that be for medical examination?

Mr. MacNICOL: Well, he had been down and was classed as C2, but he told me that they were calling him again, even though he had formerly been classified in a non-military category. This man operates with his mother a pressing and cleaning parlour. For the life of me I cannot understand why such men are called to serve either in the army or anywhere else. Even if the pressing and cleaning business is a non-war work, somebody has to look after the mother and somebody has to pay taxes to keep the war machine going. This man is only one of several with whom I have come in contact, and whom I could name, who are in a like situation. It is a big problem, and I know that, under the circumstances in which they are working, the department have their hands full to deal with it.

I read last evening in one of the newspapers a dispatch from Fredericton of June 22, which is in part as follows:

Claims knot in man-power Ottawa fault

Could have avoided muddle by adopting total war plan years ago, says legion head

Fredericton, June 22—If the dominion government had accepted the Canadian Legion's plan for "total war" three years ago, Canada would not be handicapped at present by a "terrible man-power muddle," declared Alex Walker, national president of the legion, in addressing the annual convention of the legion's New Brunswick command to-day.

I am not so conversant with the situation as to know all that President Walker knows. He is only one of a number, including my own leader, who have stated that there is a man-power muddle. This has been denied by hon. members on the other side. Anyway the problem is of major magnitude, and I feel it my duty not to throw fuel on the fire or cause any trouble that I can avoid. I would rather help in some way or another to solve the difficulty.

I have thought a long time that some way should be found of eliminating strikes. I am not finding fault with those who strike, or with the employers of the strikers. There must be faults on both sides. Labour is not wholly to blame; industry, certainly, is not all to blame. I have been wondering whether the minister during the recess, when the rest of us are away, would call a parliament of industry and labour. Perhaps if it were brought together in this chamber, it could

help to solve the problem. Let leaders of industry and labour talk back and forth across the floor, and let the minister, his officers and his departmental heads try to bring these two great classes together, at least until the termination of the war. The winning of the war is so huge a task that not an hour should be lost in any factory, mine, or elsewhere; every man or woman should be working to the extent of his or her capabilities. How are we to get them to do that unless we eliminate the causes of trouble between them? I regard with considerable admiration Senator Wagner, of the United States, a great representative of labour who did an outstanding job in that country. I like particularly the preamble of the so-called Wagner act, which reads:

An act to diminish the causes of labour disputes burdening or obstructing interstate and foreign commerce, to create a national labour relations board and for other purposes.

I have heard, although I am not familiar with the facts, that a national labour board has been set up in this country; if not, perhaps a board of this kind on the United States model might be helpful to us. That is not to say that the United States is free from strikes. But it is well to remember that, with their vast population, they have difficulties which we in Canada do not have to meet. We have our own problems; they have theirs. Perhaps all of us, working together, might succeed in removing causes of friction at any rate until the war ends.

Section 1 of the Wagner act reads:

The denial by employers of the right of employees to organize and the refusal of employers to accept the procedure of collective bargaining lead to strikes and other forms of industrial strife and unrest, which have the intent or necessary effect of burdening or obstructing commerce.

These words are absolutely true. We have not a collective bargaining act applicable to all Canada. Some of the provinces, I understand, are enacting such legislation. But would it not be a great deal better if the federal labour department provided a form of collective bargaining act which would be suitable to all the provinces? I cannot see any objection to collective bargaining, and I worked for many years in a big industry. Certainly the grievances of the employees would be voiced a little more emphatically. Apparently labour is stirred with the desire for collective bargaining. It is enforced in the United States and elsewhere; the Ontario government has passed a collective bargaining act; why should we not have similar legislation applicable to all Canada? If industry is not freed from the threat of strikes and workmen are not freed from the necessity of going on strike, I cannot see much hope that this country will increase its productivity.

An increased productivity should be the main objective. Certainly when men are contented there are fewer accidents in factories, and when they are discontented there are more. I ought to know because I have spent many years in association with workers in factories. When men are receiving a fair return for a fair day's work and adequate rest periods they are not likely to cause trouble. Many factories, recognizing this fact, have such rest periods, and I suggest that it should be the practice throughout the country. There should be a rest period in the forenoon and again in the afternoon. Some factories serve tea to their workers and there are no labour difficulties there. Everyone is satisfied. Naturally the workmen in other factories, observing this, and not enjoying the same privilege themselves, become dissatisfied.

I urge the Minister of Labour to take this point seriously into consideration. I have confidence in him, and I may tell him that I have not had confidence in some other Ministers of Labour. I have confidence in men who know about labour at first hand, but I have little confidence in those whose knowledge of labour and labour conditions is purely theoretical, because there is a great deal of difference between knowing something as a result of reading it in a book and knowing the same thing as a result of practical experience. I suggest to the minister that it would be a very good thing if he would try to bring about throughout the country such conditions as I have mentioned.

Why should there not be a rest period, morning and afternoon? Experience shows that men and women who enjoy such a period do better work. Employers who give their employees rest periods assure me that the workers, both men and women, produce more. But it seems to take some people a long time to learn the importance of fair and honest treatment of men and women working in industry. Just as the management would like to be treated if positions were reversed, so should the people working under them be treated. That is one suggestion I offer the minister.

And now one further word before I conclude. I do not know whether there is a man-power muddle, but all the authorities seem to say that there is. Boards here and there, annual meetings, conventions and so on are all discussing the man-power problem

and talking about the muddle. But that does not help the minister at all. What is wanted is something practical that will give him real assistance. That is imperative, and I will close with this remark about the threatening coal emergency. Do the Canadian people realize what will be staring them in the face three or four months hence? The weather is hot now and it will be for two or three months more, but about the middle of September people will certainly want coal, and it is no use telling them that they will have to do without heat. If they cannot heat their houses, they will have to call in the doctor and health will be impaired all round.

The question of course is, what can we do to help the minister to obtain men to send to the coal mines. In this connection I may remark that the member for Cape Breton South (Mr. Gillis), in my opinion, made a fair speech the other day. He strikes me as being a sane labour man, the kind I hope I am myself. I have been identified with labour for many years, and the fact that the hon. member and I are of different parties is neither here nor there, so long as our intentions are for the good of the country. We are all Canadians when our lives are threatened, not only overseas but by a shortage of coal.

I wish I knew some way in which I could help the minister to provide men to produce the coal we must have. It certainly is a problem. I notice the following press dispatch dated Winnipeg, June 24, under the heading, "Coal Dealers Plead for Aid—Ask Mitchell Draft Men on Compulsory Basis." This dispatch states:

> Labour minister Mitchell has been asked by the coal dealers of Winnipeg to draft men on a compulsory basis to handle deliveries here.

That is merely deliveries, so that it is getting very serious if we have trouble not only in production but at the delivery end. The dispatch states further:

> Dealers in greater Winnipeg are reduced to skeleton staffs and utterly unable to make deliveries to thousands of consumers who have ordered fuel.

That does present a grave problem, and I only wish I knew how I could help the minister. I want to see him succeed and overcome the difficulties with which he is now faced. There is a huge man-power problem before us. Whether it is a muddle or anything else, the problem is there, and if I have said anything that will help him in the slightest degree I shall consider myself repaid.

At six o'clock the committee took recess.

[Mr. MacNicol.]

After Recess

The committee resumed at eight o'clock.

Mr. ISNOR: The statement which has been distributed shows a total of $21,558,192 as the Department of Labour's portion of the war appropriation, and the first item of $36,882 covers the coordination of ship loading and unloading operations at the port of Halifax. I do not wish to deal with these estimates in a general way; I want to speak to this item alone, as it has to do with that particular activity in the port of Halifax, because I am interested in learning what has taken place in connection with the loading and unloading of supplies for overseas.

I recall that when Mr. Justice Thorson was chairman of the special committee on war expenditures he wrote all members of parliament asking for suggestions as to what might be undertaken by his committee, and on that occasion I replied as follows:

> In reply to your letter of March 15 addressed to the members, requesting suggestions as to any subject that might usefully be inquired into by your committee, I feel from perusal of the names of the members composing your committee that careful study will be made from every possible angle as to the expenditures for the defence services and for other services directly connected with the war. But I feel that your reference also extends to the probabilities and possibilities of methods whereby savings can be effected, and with this in view, I wish to place before your committee the question of investigating the most direct and advantageous route from which to ship supplies between Canada and Great Britain.
>
> I believe that, if any moneys are to be expended to increase facilities to handle the supplies in the quickest possible manner, said expenditures should be made at a port which can give full service for the entire 365 days of the year. I think, on investigation, you will find that the port of Halifax is the shortest route both to London and to Liverpool; and, as this port is open the year round, and is considered one of the finest, if not the finest, harbour in the world, every facility should be provided to prevent any bottleneck existing that would slow up shipment of supplies that are so badly needed.
>
> We know of the demand for planes, guns, ammunition and supplies, and we know that the production of all these is being speeded to the highest possible point; but there is a question in the minds of many as to whether as much consideration has been given to the transportation problem, both by rail and water, as is necessary; and it is because of this that I feel that your committee would be justified in going into the matter quite fully, with a view to recommending to the government that added facilities should be made on both the western side of the harbour as well as the eastern, and that a certain amount of goods should be switched at Waverley junction and brought into the Dartmouth side so as to avoid any congestion which might otherwise exist on the Halifax side of the harbour.

I also believe it comes under the jurisdiction of your committee to look into the question of speedy dispatch of ships and facilities for the repairs of these ships, so as not to unduly delay their departure. You have on your committee men who are familiar with the questions both of ships and repairs and the necessary facilities to expedite speedy handling of goods, and I would respectfully suggest that a subcommittee be set up to inquire into and report on this important phase of our war activities.

That letter is signed by myself. I brought this matter to the attention of the committee because I felt it to be important, and I considered that it should be given attention in order that supplies to our troops overseas might be speeded up. I also wanted to impress upon the committee that Halifax was the shortest and quickest route for the shipment of our supplies to Britain. I recalled at the time that a question had been placed on the order paper by the hon. member for Victoria-Carleton (Mr. Hatfield) as to the average sailing time of a sixteen-knot vessel from the port of London to three eastern Canadian ports. In reply, the following information was given. It would take such a vessel 203 hours to go from London to Montreal, 182 hours to go from London to Saint John and 172 hours to go from London to Halifax. So that by shipping goods from Halifax to London there would be a saving of thirty-one hours as compared with the port of Montreal.

I believe the present minister must have had that in mind, because when he took over his duties he visited Halifax where he met the longshoremen and went into the matter of the loading and unloading of goods, the turning of ships and the dispatch of ships in order to bring about speedier handling of goods. As an outcome of his investigation he put through order in council P.C. 3511, dated April 30, 1942, under which he was given authority to appoint a controller of loading operations. The order in council also outlined the duties of the controller and gave him authority to give proper direction as to how the work was to be carried on; to decide any disputes arising in connection with such action; to conduct a registration of longshoremen, and so on. Then the longshoremen of the port of Halifax, a very fine body of men numbering some 1,500, were requested to take in an additional 600 men, to be known as temporary longshoremen. The order in council also set out the procedure to be followed in making orders for working at night and on holidays. The controller was to recommend to the minister any changes or improvement in shipbuilding methods and facilities which might bring about more speedy or better methods of handling goods.

Another matter which was covered in this, and which the minister took up at the time he was in Halifax, was the method of hiring individuals. The new method was set out in the order in council, and it is for that reason that I wish to inquire from the minister as to the results brought about by the order in council, and as to whether the port controller, and the new system which has been inaugurated, are bringing about the results the minister desired in that connection.

I should point out that Halifax is one of those ports which come under the control of the national harbours board, and I believe it is the only port under their control which shows a net operating surplus. For instance, last year the port of Montreal showed a deficit of $1,734,429.42; the port of Quebec showed a deficit of $1,561,532.22; Saint John showed a deficit of $243,039.52, while Halifax showed a net operating surplus of $232,436.91.

I believe the size of the port at Halifax is well known. Hon. members will be familiar with the fact that it is a fine harbour, and today it is one of the busiest ports in the world. The safety in which ships can sail in and out of the harbour, and the speedy manner in which ships of any size can dock, are points worthy of consideration. I recall, for instance, that when in 1939 the king and queen were leaving Canada they sailed from the port of Halifax, on the *Empress of Britain*. Since that time the *Empress of Britain* has been lost. But that large ship of 36,000 tons was able to leave the dock and make a complete turn in the harbour without the assistance of any tugs whatsoever.

These are points which must be considered not only by the Minister of Labour but by the Minister of Munitions and Supply when they are issuing directions as to how supplies are to be sent overseas. This afternoon the hon. member for Rosetown-Biggar (Mr. Coldwell) raised the question of invasion. I do not know how quickly that will take place, but it is certainly being talked about at the present time. Undoubtedly when it does take place reinforcements will be needed; added supplies of food will have to be sent overseas, and munitions and other types of supplies will be required in large quantities. These must be handled in the fastest possible way, and that is the reason why I bring to the attention of the Minister of Labour these points respecting Halifax harbour.

Halifax is a very busy seaport. Not only has the population of the city increased by something like 30,000 or 35,000, apart from the armed forces, but industries have shown

a marked increase in their number of employees. For instance, the Halifax shipyards, on the Halifax side showed an increase in 1942 over 1941 of 147·93 per cent. Their branch in Dartmouth, on the eastern side of the harbour, showed an increase of 67·71 per cent in the number of employees. The Halifax dockyard, where our ships of war are refitted, has increased the number of employees to such an extent that last year it showed an increase of 148·4 per cent. Clarke Ruse Limited of Dartmouth showed an increase of 102·39 per cent. These four companies alone showed an average increase of something like 91·60 per cent increase in the number of employees.

I was surprised the other evening to hear the hon. member for Broadview (Mr. Church) speak of the railways of Canada in the manner in which he did. We who come from the eastern section of Canada are familiar with the efficient manner in which the Canadian National Railways in particular have handled freight going into Halifax. They have made a wonderful showing in handling goods, and in having a sufficient number of ships at hand to take care of the goods brought to the port by the railways.

To give some idea of the business carried on in Halifax I would point out that the revenue for that port last year was $1,832,318, as against $1,593,479 in 1941, or an increase in revenue of the national harbours board of $238,839. These figures will serve to show the volume of goods being shipped through that port.

There is one other indication of the amount of business being done at Halifax, namely, the amount of freight handled, as shown in the report of the Canadian National Railways for 1942, under the heading of "operating revenue in respect of freight." For 1942 the figure is $284,427,334.25, as against $236,519,309.12 in 1941, or an increase in handling of freight by the Canadian National Railways of $47,906,025.13. I would not say that this increase is made up entirely in the eastern section of Canada, or the Atlantic region, but a great part of it is. The Atlantic region is particularly busy.

I would ask the minister to outline to the committee just what action he is taking, and the results brought about at the port of Halifax in regard to the handling of supplies, as provided in this particular item. Last year there was an amount of $28,600 set forth for loading and unloading ships. This year the amount is $36,882, or an increase of $8,282. While the minister is giving information as to the steps taken by his department since he took over his duties as Minister of Labour, perhaps he would also let us know something about the floating equipment at the port of Halifax, as to who owns it, the manner in which it is rented out, and the revenue derived therefrom. I might say for the benefit of hon. members that prior to 1939 both incoming and outgoing freight was handled over our piers. These are fine and well-equipped piers, and they have the proper facility to handle supplies both incoming and outgoing. But on account of the exceptionally large amount of goods for shipment overseas it was necessary to bring in certain floating equipment. It is in connection with the floating equipment I would ask the minister to give us some information. How is this new scheme working out? What is the amount of goods handled by it, and the revenue derived therefrom?

I should like the minister to give particulars of the appointment of the port controller which was covered by the order in council. Could the minister give us his name and the name of any assistants who have been brought in to handle freight at Halifax? Are they carrying on their duties satisfactorily?

I said that I did not intend to deal with this general item but rather to confine my remarks to item No. 1. I do this because I want definite information in regard to this item, and I was hoping that we might get started on this one item and then go on to the others in an orderly manner, thus saving considerable time and enabling the minister to answer our questions in an intelligent way. That cannot be done when we jump all around as we have been doing. I would appreciate it if the minister could give me this information in regard to these men and whether they have brought about any improvement in the condition there.

Mr. MITCHELL: In reply to the senior hon. member from Halifax, I would say that just over a year ago when great shipping losses were occurring and there was an urgent need to turn ships around in Halifax as quickly as possible, I visited that port and discussed the whole matter with the longshoremen's organization. Arising out of my visit, arrangements were made for the setting up of a hiring hall and the passing of an order in council regulating the loading and unloading of ships. This has resulted in a tremendous increase in the tonnage handled by the port of Halifax. A controller was appointed, the dean of the law school of Dalhousie university, Mr. Vincent MacDonald, who is now assistant deputy minister of labour, and later Captain R. G. Perchard took over his duties. Mr.

C. W. Train of Vancouver was engaged as special consultant and Captain W. F. Spring was appointed as loading superintendent. After consultation with the union we appointed D. C. Reid, H. W. MacLeod and F. R. Penny as dispatchers in connection with the new set-up.

I have known the heads of the longshoremen's union for many years. I addressed them when I was there in Halifax. I told them that any amendments which it might be found necessary to make to their agreement would be cancelled at the conclusion of the war. In the organization of this undertaking I think tribute should be paid to Mr. Joseph Ryan, international president of the longshoremen's union in New York, which is the parent organization of the longshoremen in Halifax. I do not need to tell the committee that the longshoreman's work is much like that of a miner. It is a hazardous occupation. In some respects it is a highly skilled occupation, because it takes skill to stow a ship so that she will not capsize when she encounters weather in the open sea.

In addition to the arrangements that have been made already, we intend to set up a labour pool of about 750 men in Halifax in addition to the longshoremen who are at present engaged there. This will be a mobile labour pool for use in other vocations or callings and in the loading and unloading of ships in other ports when it is needed. The suggestion was received by the labour department from certain quarters that we should use army labour battalions as is being done in the United States, but we felt it would be better to develop this pool on a civilian basis. The men are to be paid the regular union rates of wages. Housing accommodation will also be provided. I want to make it clear to hon. members that this pool will not be used in the loading and unloading of ships until the men in the organization at Halifax have been given an opportunity to go to work.

As I said, the pool will be used in emergencies, when there are no other men to load and unload ships at Halifax or any other port. These 750 men are to be given a guaranteed work week of forty-eight hours, which I believe is the standard union week in that community. It should be pointed out of course that they will have to be available for work in order to get the forty-eight hour guarantee. This is somewhat similar to the arrangement that exists in Great Britain. I do not need to tell the committee how important it is to turn ships around in Canadian ports under present conditions. A speed-up of your turn-around is equivalent to building ships, and building them in a much more simple manner than on the slips. The British people have had a similar situation in their country.

Perhaps I could give another instance. When the Germans and Italians were defeated in Tunisia it was estimated that that was equivalent to 2,000,000 tons of shipping. Anyone who has had experience with shipbuilding will appreciate the benefit we have derived from that defeat. By turning ships around faster in our eastern seaports we are in effect building ships but, what is more important, it will be of untold benefit to the fighting forces of this country on account of the possible developments that are shaping up in Europe. I believe we will receive the same degree of cooperation from the longshoremen in Halifax in connection with this new undertaking that we received when the original order was passed which made possible the establishment of a hiring hall under the jurisdiction of the Department of Labour, on the staff of which members of the executive board of the longshoremen's union were appointed to assist in the work.

It is breaking new ground in this dominion, facing up to the labour supply problem in one of our vital industries. Recently in the coal mining situation we made certain guarantees to coal miners who were transferred from their present jobs back to the mines. May I just say in passing that I do not underestimate the magnitude of the problem that confronts us. It is one that would strike fear into the hearts of many men. It is the kind of problem that one cannot solve by running away from it; one has to stay with the ship. I am convinced that if the Department of Labour and selective service are given the chance to organize this thing on a basis on which I think it can be organized, we will amaze this country within the next six months with the progress that we shall be able to make in the allocation of man-power and the solution of the man-power problem generally.

If my hon. friend goes back to Halifax in the near future, I want him to thank the longshoremen of his community for the minister and, I am sure, for the government of this country for the cooperation they have shown in this very important work.

Mr. ISNOR: The minister mentioned a pool of 750 men. He did not mention whether they were longshoremen or freight handlers. Will they be paid the standard wage?

Mr. MITCHELL: They are both. They will be paid the longshoremen's wage, which is higher than the freight handlers' wage.

Mr. O'NEILL: Mr. Chairman, in rising to take part in this debate on the estimates of the Minister of Labour, my mind goes back to a year and a half ago when the minister was first appointed to his present portfolio. As a labour man I had long advocated that the portfolio of Minister of Labour should be filled by a labour man. All labour men advocated that. A great many of our best industrialists also realized that there would be better conditions if the man who headed the Department of Labour understood labour conditions, and they approved his appointment. As a matter of fact, most of the large industries and newspapers of this country approved the appointment of the Hon. Humphrey Mitchell as Minister of Labour.

But the minister, even before he had been elected, started to run into opposition, and after he was elected the opposition became very acute. We can recall an hon. gentleman rising in his place in this house not so many weeks ago, a man who was supposed to be one of the representatives of labour, and demanding the resignation of the Minister of Labour. I do not know how labour people or any class of people can think that a man is going to be able to give his best in a portfolio under circumstances and conditions of that kind.

Let me say that the present Minister of Labour has the toughest portfolio in the whole government at the present time. In addition to that, I believe that his is the most important portfolio. We have to have finance, certainly, and the Minister of Finance (Mr. Ilsley) is doing a wonderful job in producing the finances to run this war and run the country. But his financing would not be of very much use without labour. The same remark applies to the Department of Defence. All branches of the defence department are doing a magnificent job. I do not think any department of defence in any other country is doing any better job than Canada is doing in proportion to her population and the opportunities which have been given to her in the fighting zone. But what use would her army be if it were not for the great army of labourers who produce the engines of war and the foodstuffs that are required?

The Minister of Labour has been criticized on account of his labour policy, or lack of policy. It seems to me that the strength of the submission that the minister has made can best be measured by the criticism that he is receiving. The criticism that he is receiving most since he made his submission is that he used the expression that no better method can be found. I cannot say that I agree with that 100 per cent; but if that were the only thing I could find to criticize in his statement, I would not bother criticizing it. We find labour troubles in other countries, shortages of labour, shortages of man-power. Recently in Australia there was a vote of non-confidence in the government. By the way, they have a labour government, and I think it is doing a good job. Labour troubles and labour shortages are the natural consequences of war, and on this issue the government of Australia was saved from defeat by only one vote. If those things can happen over there with a labour government, I do not think we have anything to be ashamed of if people criticize the labour department here on account of shortages.

I wish to congratulate the Minister of Labour upon the excellent report he presented to parliament and upon the able manner in which he presented it. I have been a member of organized labour for over forty years, and I want to say this to the labour men of this country. Labour probably will play the greatest part of any body of our people in this country in the post-war period, provided, of course, that we do not allow the labour organizations to be destroyed, either from without or from within, by listening to selfish men who, by reason of personal ambition, wish to see their own particular labour organization go up to the top. Mind you, Mr. Chairman, that is a creditable ambition, but it should not be carried so far as to destroy the very thing labour organizations are trying to do. Labour organizations, however, can also be destroyed from the outside by selfish industrialists who do not and will not try to understand labour. They may be successful in destroying labour. But before we permit anything like that to be done, I think we should allow our minds to go back to some of the events which occurred prior to this war. Germany, in so far as the organization of labour is concerned, was one of the most highly organized countries in the world just before Hitler's rise to power. Hitler realized that he could not bring about the conditions which exist in Germany to-day unless he could first destroy organized labour. There were in that country industrialists who could not and would not understand labour. Hitler went along with them to destroy the trades unions, and he made a complete job of it. His next move was to destroy his erstwhile friends the industrialists; he called in the armed forces of the country to aid him against the industrialists, and the industrialists as such were completely destroyed. He then made a purge of the army and shot every general who did not agree with him. He thus became the

king-pin. Labour in this country, Great Britain and the other democracies is playing the same role to-day as in the years gone by, and if it is destroyed it will be a bad day for the country.

Mr. CASTLEDEN: Labour in this country is not organized.

Mr. O'NEILL: I beg the hon. member's pardon?

Mr. CASTLEDEN: Did the hon. member say that labour was organized in this country?

Mr. O'NEILL: No, absolutely not. Probably 15 to 20 per cent is organized in this country; I do not think the percentage is higher than that. But I am speaking of the principle of organization, not the extent to which it has gone in this country. I am sorry that it is not organized.

Mr. REID: Some of the labour is organized.

Mr. O'NEILL: I know, but the great majority of the workers are not. However, I do not think that interjections of that kind tend to help a speaker. So far as I am concerned, while other hon. members are speaking I keep my thoughts to myself, much as I would like sometimes to intervene.

Mr. CASTLEDEN: I was trying to be helpful; I am sorry.

Mr. O'NEILL: Very often I do not agree with the speeches of my hon. friends of the Cooperative Commonwealth Federation. I say that advisedly, although I think the members of that party are endeavouring, as I am, to help the labour situation in this country. I do not want my hon. friend to think I am resentful, but interruptions do tend to break the trend of thought which one is trying to put across.

The evening before last the hon. member for Broadview (Mr. Church) made a remark which I think is indicative of the viewpoint of a great many people. I do not say this in any unkindly spirit toward the hon. member, but it gives an idea of how some people are thinking. He said, as reported in *Hansard*, at page 3980:

> You cannot fight Hitler with registrations. There are no labour unions in Germany; far from it.

His idea seemed to be that because some strikes are going on in this country to-day, the labour unions are responsible. That is far from being the situation. That there are strikes is very largely owing to the fact that labour is not organized. If there were powerful labour organizations, the leaders of those unions could sit round a conference table with the leaders of industry and probably there would not be any lockouts or strikes.

I have been working for the Canadian Pacific Railway company for over forty years, and in all that time I do not recall any lockouts or strikes among the engineers or the firemen. To say that we never had any differences of opinion would be far from the truth. Yet I do not believe any labour organization in North America has done any more for its membership than the Brotherhood of Locomotive Engineers has done for the men who are running engines in this country. But let me tell the committee this, that the Brotherhood of Locomotive Engineers did not achieve that record by militant and revolutionary methods. You cannot do business in this country on a militant and revolutionary system; the only place where that may be tried is in a country which desires revolution, and I do not think we want it here.

In 1939 I had the good fortune, the privilege and the pleasure of being in Geneva at an international labour conference. The building in which it was held, the League of Nations' palace, is one of the finest buildings I ever saw. It took four years to complete. Daily they had 500 men, of different nationalities and languages, working on that project. They worked 550,000 days, and they were never stopped for a fraction of a second on account of strikes, lockouts or any labour differences. That is a wonderful record in any country. If that can be achieved in Switzerland—I grant you that the men were well organized—there is no reason why the same thing could not be achieved here.

Having made those remarks, I wish now to call some matters to the attention of the minister. Being himself a trade unionist, he will understand, what I am talking about. It seems to me that the Minister of Labour is the man who has the portfolio with the responsibility of looking after the interests of the working class. I agree, however, that, in a government composed of fifteen, seventeen or maybe nineteen men, policy must be decided by the considered opinion of the group, so that we should not at all times blame the Minister of Labour because things are done with which we as labour men do not agree.

There are some conditions which, I believe, the Minister of Labour might help to correct. If we want to have satisfied labour men, men doing their jobs as such, one of the first things is to have them contented and well satisfied with their jobs. To start with, no man or woman who works for a living can be contented or satisfied if he or she is working for a wage which will not provide the necessities of life. The hon. member for Kenora-Rainy River (Mr. McKinnon) in his speech last

night called attention to the pay of stenographers of the lower grades, and to the conditions which exist in the new hostel which has been erected here in Ottawa to take care of that class of employees. One or two things are wrong. The first, in my opinion, is the wage; it is too low. Then, the rate charged by that hotel is higher than these stenographers can afford to pay. These are things which in my opinion are more or less the responsibility of the Minister of Labour, and which he should look after and try to straighten out.

Another factor which disturbs labour in this country is the cost of living index. Labour is quite definitely of opinion that the cost of living index is the main concern of the government—not the keeping down of the cost of living, but rather the keeping down of the figures in the cost of living index. In corroboration of that, to-day or yesterday I heard someone speaking on the radio upholding the cost of living index. The speaker was a lady, and she said that many factors enter into the cost of living index besides the necessities of life such as food, clothing and shelter. She went on to state these things. I am speaking from memory, but, as I recall, she said that food represented only twenty per cent of the cost of living, while many other things had to be taken into account. She said that a housewife might go to a grocery store and find that certain articles had gone up in price twenty-five or thirty points, but that she would find that clothing had remained the same, that house rent had practically remained the same; that doctors' fees, hospital bills, life insurance and many other things had remained the same. So that on the whole, she said, the cost of living index was only 17 or 17·5 per cent higher than it had been at the outbreak of the war.

But that is not the way to reckon the cost of living as it affects those who are in the low income brackets. Any family in the low income brackets having a doctor's bill of $100, $150 or $200 will never get out of that debt. They can never pay it off because they are living from hand to mouth all the time, so that to count in what people pay to doctors, so far as those in the low income brackets are concerned, is a fallacy. And as regards life insurance it is an absolute impossibility to the low income bracket people to carry any. They do not carry life insurance.

These are some of the reasons why I say that the labouring classes are dissatisfied with the way in which the figures making up the cost of living index are computed.

Again, there are such commodities as shirts and boots. For instance, take boots for children. Before the prices were fixed, these boots were made of leather. But to-day in the great majority of cases they are made of pressed paper. The manufacturer does not guarantee them, and while you may not pay more for the same sort of article, the product you get lasts only from one-quarter to one-half of the time that the old product would last, before the wartime prices and trade board was set up. Therefore, instead of buying a pair of shoes for $1.25 for a child and expecting to have them last twelve months, you buy a pair for $1.25, the same price, and at the end of three months you are under the necessity of buying another pair, so that at the end of the year you have really paid $5 for shoes for that child. But it does not appear in that way in the cost-of-living index.

Recently I bought two shirts in Toronto. I paid $2.50 each. They were supposed to be the standard broadcloth type of shirt that would last a year. I regret to say that they are now worn out; they are gone already. They have lasted only three or four washings. I send them to the best laundry, and I may observe in passing that so far as the laundries in Ottawa are concerned, they are about as good as one can find anywhere. At least, that is my experience. So that the fault cannot be attributed to the laundries.

The hon. member for Battle River (Mr. Fair) has brought up on many occasions the question on which I wish to touch just now and I crave the indulgence of the committee for bringing it up again. I refer to the question of the wartime prices and trade board being permitted to put a five-cent tax on coffee or tea. I see some members grinning at this. Well, to the man getting $4,000 it does not matter whether coffee is five cents a cup more than it used to be; but when you come to people who cannot pay any more than twenty-five cents for a meal at any time, for the simple reason that they do not make enough, and you charge them five cents extra for a cup of coffee, I ask, did you ever figure out what the increase means to such people? From their point of view it is the most ridiculous thing in the world, and yet the Canadian National Railways and the Canadian Pacific Railway are permitted, when passengers get a meal for $1.50, to charge five cents extra for the coffee. These are the conditions under which the labouring people have to work, and if it is suggested that they will remain docile, happy and contented under such conditions, then I say it does not make sense.

[Mr. O'Neill.]

Again, take the cost-of-living bonus. I well recall when the order first went out; P.C. 7440 was the order in council, if I remember rightly. About the first thing the Department of Labour did at that time was to call in the heads of certain very strong and well-entrenched labour organizations in the country, and to ask them if they would be agreeable to enter into an arrangement whereby wages would be placed at a certain level—the basic rate would not be increased —and, in consideration of their relinquishing this right to negotiate a new wage agreement, if they would agree to that, they would be paid a certain cost-of-living bonus. That cost-of-living bonus was supposed to be paid, not on a percentage basis but on the basis of a flat rate to all the labour people.

Having in mind the conditions that prevailed in the last war, I agreed to that as an individual, and I went out among the labour organizations with which I was associated and tried to sell the idea to them which I did in good faith. Now, however, we find that many of the highly-paid skilled labourers, and those that are strongly organized, are getting the full cost of living bonus, while there are a great many others, particularly among the low-paid labour people, who do not get the full bonus. I can cite one case in which I am particularly interested. I will not mention any names, but there were three men and one girl working in a plant. They were all getting short-paid on the cost of living bonus, and I took the matter up to see what could be done. I will say for the Department of Labour and for the minister that he went after the case in a thorough way and cleaned it up as far as he could with the restrictions that had been imposed upon him. The result is that the three men are now getting the full cost of living bonus, while the girl, working for $12.75 a week, receives $2.71 cost of living bonus. On the other hand, the men who are getting $25 a week are being paid the full cost of living bonus. Surely, if there should be any difference at all, the people who are receiving $25 a week should get the $2.71 bonus, and the girl, receiving $12.75, ought to be paid the full cost of living bonus, if you want to make a discrimination. But it does not work out in that way.

A great many labour men in this country feel that the government have not played the game. They told us as plainly as possible, if I can understand the English language, that the full cost of living bonus would be paid to everyone on the basis of a flat rate, and they have not lived up to that.

I have just one other comment to make. I am thoroughly in agreement with the remarks of the member for Kenora-Rainy River when he said that stenographers in grades 1 and 2 should come under the Department of Labour. I would go farther and say that all those engaged in the civil service, at least those receiving under $3,000, should come under the minister. I am not objecting so much to the treasury board, because one can find out who are the members of that board and it is possible to go and speak to them. But one cannot find out who are their advisers, and those are the men whom I object to. Why do those fellows not come into the open so that we can find out who they are and what they are doing? They are the men who make the recommendations to the treasury board; the treasury board passes the recommendations on to council, and then they come out in the form of an order in council without parliament knowing anything about them. I do not think that is good enough, and as a labour man I object strongly to that sort of thing. For the life of me I cannot see why all these matters should be kept so secret.

Mr. ADAMSON: In taking part in this discussion on man-power I think certain general basic principles must be fully understood before we proceed. The first basic principle for total war is that man-power must be totally mobilized for that war. I should like to quote two paragraphs from an article by Eric H. Biddle, entitled, "Man-power; A Summary of the British Experience", published by the Public Administration Service of Chicago:

> The question is not what proportion of our man-power shall be devoted to the war effort and what part to other occupations.
>
> It is rather how soon and how efficiently we can allocate to the several military and civilian aspects of the war effort our entire supply or skills.

I want the committee to pay particular attention to the word "skills."

> Just as the army must balance the number of men assigned to combat service against the number in administrative and auxiliary functions, so the entire personnel of the fighting forces must be balanced against the personnel engaged in direct production of essential supplies such as food or munitions. Finally, both these must be balanced against the man-power for necessary auxiliary services of society.
>
> In total war the civilian population must share with the military the responsibility of national service. If this responsibility is to be properly discharged, civilians must be supplied, housed, and provided with essential services. All these problems, in the interests of the armed forces as well as the civilian population, must take equal place with military

needs in national policy and national administration. In a chain, no link is less important than another.

That seemed to me such an excellent description of man-power needs, Mr. Chairman, that I have read it into the record. It effectively expresses the goal which we must endeavour to approach.

Let us now look at what we have done in Canada. From the beginning man-power has been and still is dealt with as a partisan, political problem. It should have transcended that sphere many years ago. I am not going once more into the beginnings of mobilization; the thirty-day call-up; then the four-months call-up; then the conscription for home service; then the conscription for service in Newfoundland, Alaska and the West Indies; then the coercion and possibly if, as we must expect, we have casualties, the definite conscription for overseas service. This is a policy which is not honest and which is not playing fair with the men of this country. I have protested before; I protest again.

In August, 1940, we had the original registration, and hon. members do not need to be told how inefficient it was. Hon. gentlemen may remember that I was able to purchase a blank registration card without much difficulty on the streets of Montreal. They do not need to be told that the registration was practically of no value at all until quite recently. Now, however, with the rationing of beer and liquor, the registration has come to be of some use; one needs his registration card in order to get a permit from the local authorities for the purchase of beer or liquor, so that we are finding some use for the registration after all. I do not know whether the minister will remember the cartoon of the last war with the heading, "What did you do in the Great War, Daddy?" It will be very easy to say what one did in this great war; just hold up your registration card and you will be able to show that you were able to buy liquor all across Canada, and where you did buy it. So far as I am able to see, that is the only use we have been able to make of that farcical national registration.

I should like to mention one other matter, since it was broached this afternoon during the controversy concerning the former mayor of Montreal. I refer to the old bogey that we, the Conservative party, were the conscriptionists, that we were the people with the mentality of 1917, who wanted everybody in the army. Well, I took the responsibility at that time, as I should be willing to take it again, of being the first member of this house to advocate compulsory national service for anywhere; that was in 1940. Just to keep the record straight, I should like to quote what I said at that time, as it appears at page 162 of *Hansard* for November 18, 1940.

> The training of military personnel must be so arranged as not to conflict with industry. A comprehensive plan must be prepared by all industries engaged in our war effort, indicating the present and future demand in regard to man-power. To-day we have approximately fifty thousand employable unemployed in this country.

That will show how long ago that was, when we actually had fifty thousand employables still unemployed in Canada.

> It is estimated that by July of next year—

This is November.

> —industry will require a further 500,000 technically trained men. These men are as vital to the defence of Canada at the present time as are the soldiers who enlist in our army. Therefore I suggest that the Minister of National War Services (Mr. Gardiner) should go to the registration list and call out for training in our munitions industries all available people between the ages of 18 and 50 in order to make up this apparent deficiency.

And the next paragraph:

> This is a total war. Each of us in Canada has a job to do. If we are employed in civilian occupations, and the government needs us for war work, whether as a soldier or in making machine guns, we must be prepared to go and do the country's bidding. Therefore I suggest an immediate recapitulation of the national registration scheme calling out all those who may become useful in our war industries.

That was 1940. Does that sound as if we wanted to drag men from the farms and from industry, merely for the glorification of having a great army? No; we have advocated from the beginning—and I quote again—"the scientific use of man-power in Canada". And I say to the minister that it is still not too late, but the time is running very, very short. This crisis is approaching. A great many industries, including agriculture, have already reached the crisis. I am not a farmer, but I would hate to make an estimate of the amount of foodstuff we shall be needing during the next winter which is not being produced because of insufficient farm help to work the farms.

There is one other thing I wish to mention, something which was manifestly unfair and unscientific in our calling up of man-power. That was with regard to recruiting. The first and second quotas for the armed forces were based not upon the population, not upon the number of males between certain ages, but upon the number of voluntary recruits who had already enlisted from the area. If one area had an enlistment of fifty, and another with the same population had an enlistment

of ten, the area which had already sent fifty was asked for five times the number that had gone from the area which sent ten. That was unscientific, unsound and unfair, and it has caused a great deal of unrest and suffering across Canada.

There are those who have said quite recently in the house that in their opinion, so far as the armed forces are concerned, we had bitten off more than we could chew, and that to have an army of the size we have was greater than our population warranted. Mr. Chairman, I again take a certain amount of responsibility, because in that same year of 1940 I advocated a Canadian army of precisely the size it is to-day. It is not too big, judged by either Australia or New Zealand. We are not biting off more than we can undertake—and that is taking into account all our munition production, the fact that we are an industrial nation and New Zealand is not an industrial nation, and that Australia is not industrialized to the same extent as we are.

I have quoted the figures showing armed forces in Australia. An official dispatch estimates that approximately 850,000 persons were in the armed services of Australia, although she has a population of only slightly over seven million people. At that time I was told that the figures for New Zealand then given to me were most confidential, and under no circumstances was I to use them in the house. I respected that trust until quite recently when in volume 68 of the *Commercial Intelligence Journal* of June 5, 1943, I came across all the figures from New Zealand. That country, with a population of 1,500,000 has actually 160,000, or nearly twelve per cent of her total population in her armed forces. These are the exact words as they appear in the *Commercial Intelligence Journal:*

> At present out of a total population of just over 1,500,000, 160,000 men are in the armed forces of New Zealand, and overseas. This figure represents a high percentage of the available man-power, and takes no account of the large number of women now serving, or of the thousands of men and women doing part-time service in such organizations as the home guard, emergency fire service, emergency precautions scheme, coast watches, etc. Such a substantial withdrawal of men and women from civilian pursuits at this time last year, when New Zealand was threatened with invasion and air raids, was considered necessary in the circumstances.

I do not say that we in Canada could have recruited for our armed forces on the same proportions as New Zealand, but I do say that what we have done, and what we propose to do, is by no means too much. We are having difficulty; there is a man-power crisis. And yet with the exception of Hong Kong and Dieppe our army has not been in action. I admit that they were pretty bad disasters; but even without any action, without any service, we are hard pressed for reinforcements. The man-power situation is much more serious than appears on the surface and we have not yet tackled it in a realistic or total way. We should try to impress upon the people of Canada the seriousness of the situation. Different ministers have endeavoured at different times to awaken the Canadian people from the complacency into which they have been lulled by the government policy—too little and too late, a nibble here and a nibble there. But that did not do much good.

I should like to give one or two illustrations of the chaos that exists in Canadian industry. A year ago Canadian Car in Fort William came to the end of their contract. They had been building Hurricanes and had built up an organization of skilled aircraft workers. This work requires a considerable degree of skill, but these men were put out on the street. What happened? International Nickel company sent one or two special trains there, picked them up and took them to Sudbury. That is an extremely wasteful way of handling our man-power. That is why I used the word "skill" in my opening remarks to-night. Here we had skilled aircraft men being taken to a nickel mine to be made into miners. Both are skilled operations which require considerable experience and which entail considerable cost to achieve. That is the sort of thing that has been going on.

I was out at Victory Aircraft the other day, and I was told that between now and the end of the year they will require 7,000 more men in order to fulfil their estimate of production. They had no idea where they would get them. I asked what sort of men were wanted, and the manager told me that he would take anything as long as it had a pair of hands. They are in a desperate position. I know what some of these industrial plants are up against. We are just beginning to awaken the Canadian people to the fact that this war business is serious, but they do not know it yet.

What the government should have done was to say to the Canadian people four years ago, "We are in this war and it is going to be a tough business; it is everybody's war and it will be hell before we are through." Had the government done that, our man-power picture to-day would have been much brighter. Then the Minister of Labour would be in the same position as the Minister of National Defence for Air. That minister came out early in the war and said that he had a terrific job ahead of him. Month by month, half year by half year and year by year he has reported, either to this house or to the

press. At times he has said, "We have not done as well as we wanted to, we have failed here and there; we have not the aircraft and we have not turned out as many men as we hoped to, but we are trying; we are doing what we can." I do not think anyone will deny that the greatest success achieved in Canada during this war has been the Royal Canadian Air Force and the joint air training plan. Instead of saying, like Candide is reported to have said, that everything is perfect in this most perfect of Liberal worlds, the minister should have said, "We have not the men; we have a lack of skilled workers; we have bad management." But no; everything was perfect.

I have just one more subject with which I should like to deal, industrial disputes and labour unrest. In every plant where there has been labour unrest that I have visited I have found the cause to be inefficient and bad management. Work was being scrapped; men were wasting time because the raw materials were not coming through, and in some instances the plant had not been properly laid out. The government forgets that while the labourer is worthy of his hire, his self-respect demands that he be given something to do. The trouble is that the devil always finds work for idle hands to do.

I should like to mention one or two cases. The first is Victory Aircraft. During the change-over period one management wanted to discharge the present manager, according to the minister's statement made in the house. This manager knew his job; he had come from Fort William where they had been producing Hurricanes; he knew his job better than the company knew theirs, and he told them so. Yet they wanted to get rid of him and immediately there was talk of strikes. In fact, there was the definite liability of a strike by the workers in that plant demanding that the manager be kept on. They wanted to do a job. They did not want to be inefficiently managed. Just so long, Mr. Chairman, as there is inefficient management in a plant producing war equipment in Canada, there will be labour troubles. It is not the unions; it is not organized labour; it is individual human nature. To-day in the Toronto Shipbuilding yard there is trouble ostensibly between one union and another, but basically that trouble is as a result of inefficient management. I understand that since last year, since the plant was taken over from the Dufferin Shipbuilding company, only two out of the promised twelve ships were delivered to tide-water, and when they got there they had virtually to be rebuilt from stem to stern. I doubt whether any ships have reached tide-water this year and been commissioned, and this is virtually July.

That is the trouble to-day with labour; that is why we have unrest. I do not believe that the situation at the Toronto Shipbuilding company's yards is satisfactory. I do not believe that it is satisfactory either to the Minister of Munitions and Supply or to the Minister of Labour. By reason of the policy of saying, "everything is lovely," you have trouble there, and in my opinion the trouble will continue until labour is given an opportunity to work under management that it respects.

Mr. GILLIS: I regret to have to detain the minister a little longer on this general item. I appreciate that he wants to get to the estimates, item by item. But the matter on which I am going to speak, very briefly, would not be applicable to any specific item that I see in the estimates.

I was very much interested in the speech made by the member for Kamloops (Mr. O'Neill), which was a refreshing breeze from that side of the house. He said many things with respect to the problems of labour with which I agree, but one thing I do not agree with was his analysis of labour conditions in Germany and in Canada. He pointed out quite rightly that Hitler was built for certain purposes, and the first organizations to fall under his heel were the labour organizations. But the point which my hon. friend did not make is that there is absolutely no difference between the mentality of those who destroy labour unions and the mentality of those who refuse to allow them to be born. One destroys them, and the other does not permit them to be born—and for exactly the same reason.

The hon. member for Kamloops as a member of a section of the trades union movement for forty years eulogized what they had achieved, but pointed out that less than twenty per cent—I think sixteen per cent is correct—of the workers in this country eligible for membership in the trades union movement are permitted to become members of a labour organization. I say "permitted" advisedly, because any member who has sat in this house for the past three years and listened to the discussions that have taken place with respect to labour endeavouring, plant by plant, mine by mine, factory by factory to exercise its right to sit round the conference table and bargain, can easily see what the factors were that were precluding them from joining a labour organization. Those em-

ployers who take the position that they will not permit their employees to ballot on the question of whether they shall have representatives or not appear to me in exactly the same light as Hitler, except that they are smarter than Hitler. They are not allowing industrial democracy to be given birth, but in Germany it was there and Hitler destroyed it. Let us make no mistake about the employer who will not permit his employees to join a labour organization. The ultimate objective in the mind of a person of that calibre is, in my opinion, the same that is in the minds of those who have built the totalitarianism which we are fighting against in the war to-day, and any of us in this house who are interested in a free parliament, freedom of speech and the right to criticize one another in a constructive manner should be cognizant of that situation if we are to preserve our democracy in the aftermath of this war.

I rose specially to mention two or three matters to the minister. First, I should like to focus his attention on the complete inadequacy of the machinery for settling disputes. There are now in Ontario and Quebec some disputes of major proportions which have been dragging on for a considerable time. I would remind the minister that these disputes are all on the question of taking a vote, on the recognition of a union. There are no wage demands. All that the workers in these disputes want is the right to have one of their elected fellow workers sit in with the boss and sell their labour power to him, the only thing, the workers have to sell. In the Marconi company's plant in Montreal there is a dispute which has lasted a considerable time. I do not wish to tire the minister with the details. I will simply say that a vote is not permitted at that plant because the employer does not want it. This particular company ignored an order issued by the minister with respect to the re-employment of one of its employees and insisted on an order in council being put through empowering him to penalize employers who ignored the instructions given. That was P.C. 4020. This is the company that stands up and says that its employees have not the right to vote. Second, all the nine plants at Galt that are tied up are so tied up on the basis of union recognition. No wage demands are involved, merely the right to go in and negotiate an agreement, as the hon. member for Kamloops (Mr. O'Neill) has been doing for forty years, and also the hon. member for Kenora-Rainy River (Mr. McKinnon). The miners and steel workers, of course, have the same rights That strike in Galt has been dragging on for a considerable time. I have the reports here of a board of conciliation, headed by an eminent judge, which sat in this dispute. In every case, an examination of the record discloses, a majority of the men at the plant expressed their willingness to join a union, and in face of that there is an interruption of nine plants necessary to the war effort. All the employee there is looking for is the right to vote, and this the employer refuses him.

Mr. MARTIN: Is that before the Ontario labour court at the moment?

Mr. GILLIS: I will come to that in a minute. Another situation is at Hamilton Bridge; the vote is involved again; they have not the right to express their wishes in accordance with the franchise. The Ingersoll Rand company in Sherbrooke, Quebec, which is a well equipped plant, is, I believe, at the present time completely idle, and it is the general opinion of the men employed in that plant, numbering perhaps five or six hundred, that the reason for the shut down is that they were exercising the right to express their opinion through the medium of an organization. Over at Port Colborne, in a very necessary plant, one of the smelters of International Nickel, there is a similar situation, where the men are, I think, at least ninety per cent organized. They have done a very good job of organization; put their machinery together thoroughly, canvassed all the methods provided by the minister month after month with respect to the taking of a vote, and he finally wound up by advising them to hand their case over to the Ontario labour court. I do not know what that court is going to be. It is a one-man body. A judge is appointed for the purpose of adjudicating all matters of this kind. I have read over their act and know it fairly well, and I have not too much hope with respect to the ironing out of the difficulties of the workers on the basis of that act. But what I am complaining about is this, that in war emergency, where the federal government have exercised authority in every field of our war effort by the taking of emergency powers, at this stage of the game, after certain sections of the unions go through all the machinery provided by the federal government, it is a very convenient way of shelving the matter to now pass it back to a court which has not yet started to function. I believe that in the case of the International Nickel smelter at Port Colborne, affecting local No. 637 of the Mine, Mill and Smelter Workers Union, that matter should have been

handled and brought to a final determination by the Department of Labour instead of its being passed on to the Ontario labour court.

A few minutes ago the hon. member for York West (Mr. Adamson) mentioned the Toronto Shipbuilding yards. I have a few words to say on that, because the Minister of Munitions and Supply and I had considerable to say about it on Monday of this week. I endorse everything that the hon. member for York West has said. I speak about the matter now to the Minister of Labour because that dispute has been handed over to his department. I understand Mr. Ainsborough has been sent in there for the purpose of looking into the dispute and making his findings to the department. I know the men there are not satisfied; he has gone in there with limitations with respect to his authority to settle that matter. He is not there primarily to take care of the problem as it affects the 289 men who were illegally dismissed, by incompetent management, in violation of national selective service regulations: he is not there for the purpose of settling that matter which should have been settled, and settled on Monday of this week, because I think the men in that plant have been reasonable and fair. They demanded three things of the Minister of Munitions and Supply: First, that the 289 men dismissed from that plant should be placed back at their work. The minister stated on Monday that there was nothing to stop them from going back to their work, that there would be no discrimination. These men have applied, in many cases, and have been refused employment, and they have been told that they will not be taken back by that company except on a re-hiring basis. That is the old formula for discrimination. It is not new in Ontario; it is not new in Canada; it was developed a good many years ago over in the United States when they were fighting this battle for the formation of unions: "Fire them en bloc, re-hire them, and we will pick them and cull them out and leave on the streets the effective ones who lead the movement." So that it is an old formula which the Toronto Shipbuilding company is applying at the present time. These men should have been back at work. They should have been ordered back to work either by the Minister of Munitions and Supply or by the Minister of Labour on Monday of this week, and they should have been earning a living this week while this matter was being investigated by the department which is now inquiring into it. Second, they asked for remuneration for time lost by virtue of the illegal dismissals, and I think they are perfectly justified in the demand. Third, and most important to this house and to the taxpayers of Canada, they demand a complete examination of that yard on the basis of efficiency.

I listened to these men discussing their problems. I heard them draft a memorandum of their grievances and the matters about which they demanded investigation, and they are serious. I saw a copy of that memorandum placed in an envelope and mailed to the Minister of Munitions and Supply. An hon. member on this side of the house questioned the minister this week as to whether he had received that memorandum or not, and he said he had not received it. Well, if he has not, there is something wrong with the postal department or something wrong with his secretary who looks after his mail. I know that the memorandum was mailed. I have a copy of it here. I do not intend to read it, but the fact of the matter is that there is stuff in it that I am ashamed of. I am ashamed that the taxpayers of this country should see how their money is being spent in a necessary war plant. If the Minister of Labour has not a copy of that memorandum, and now, since this dispute is centred in his department, he intends to make a thorough examination of the question, I am prepared to give him this copy of the memorandum and let him make full use of it, seeing that the minister of munitions has evidently lost his.

A commissioner is in there making an investigation, and with the limitations that are imposed on his powers with respect to that dispute, I suggest that those powers should be extended to include an examination of the reasons why these 289 men were thrown out of that yard without any redress from any of the regulations laid down by this government respecting matters of this kind.

There was a serious dispute there last Saturday when 1,200 men walked out of the plant, and it was with considerable persuasion—

Mr. MITCHELL: Where were those 1,200 men?

Mr. GILLIS: They were idle last Saturday, in the Toronto Shipbuilding company. As I say, with considerable persuasion on the part of the steel workers' union officials, at a meeting I sat in on, these 1,200 men went back to work for the one purpose of placing the men so dismissed on a legal footing—

Mr. GOLDING: What is the total number employed?

Mr. GILLIS: About 2,500. I am not sure of that, but I believe that is the number. The object was that the union officials would leave the door open, not being engaged in the strike, to argue the matter out, to have it

arbitrated, and to have the men returned immediately. After listening to the discussion there last Saturday, I heard a telegram read, drafted by C. H. Millard. The telegram was to the minister of munitions. Surely he received this telegram. This is one of the men whom he characterized in the house as a promoter of strife, and Mr. Millard advises him that after considerable difficulty they had finally persuaded the men to go back to work, which opened the door for negotiations, and he suggested that an order should be issued immediately to get the men back to work pending a settlement through the medium of the regulations laid down by the government.

I was reasonably sure that once the minister of munitions had received that telegram and memorandum, and having in mind the background of the whole business, he would issue an order to get the men back to work. This is Friday, and with the exception of about twenty men the rest are still idle, still waiting for some settlement. They are not satisfied with the terms of reference which the conciliation officer, sent there by the Department of Labour, has submitted. It appears that he is restricted to making an examination into the dismissal of one man, which took place a few weeks ago and which has no relationship to the present dispute. They ask for the extension of his terms of reference to include an examination of the problem affecting the dismissal of these 289 men and also to go into the charges made against the management of that plant, as set out in the memorandum to which I have referred.

I do not want to take up the time of the committee, but there are five pages on this question, and every page contains certain charges by the employees of that plant with respect to wastage, loss of man-hours, discrimination, lack of building ships and various matters of that kind.

That yard, according to the description I heard from men whom I consider competent to make a criticism in their own departments, leaves much to be desired from the point of view of the public moneys that have been spent there.

My main reason for rising to-night is to focus the minister's attention on that Toronto Shipbuilding dispute, so that he may give Ainsborough—I believe that is his name—sufficient latitude to make his examination impartial and to judge the question on its merits through the medium of his department. I suggest also, in view of the necessity for building ships, an order should be issued immediately to put these men back to work. That is all they want. But they do not want to go back to work on the terms on which the company would take them back, because they know it will mean that about 20 per cent of the most efficient men in the yard will be left on the street. I think they are fully entitled to return to work, and the whole matter should be investigated.

Mr. ROSS (St. Paul's): I will not follow the hon. member who has just spoken, although I think there are some phases of the Toronto Shipbuilding yard matter that should be looked into. I do not understand why the government has not done something in this regard before now. I believe that a great many industrial disputes that have taken place in Canada have occurred on account of a weak policy on the part of the government. I do not blame the present minister to the same extent as I do the government itself.

With regard to the question of man-power as a whole, I read on a previous occasion something from a memorandum issued by General McNaughton when the war started. I quote:

> Some trades are vital, others are less important, and others again can be dispensed with under conditions of national emergency; hence a list of "reserved occupations" is needed.

Again he says:

> Some industries are important to or for the production of munitions, others for the maintenance of vital services to the civil community; others again, which are active in peace, are of little importance in war. In consequence, a list of "essential industries" is required.

He prepared these lists, and they have been in the hands of the government unless they have lost them. It is only a short while ago that these priority lists, as far as occupations are concerned, were brought down. Why is that? It shows the lack of policy there has been in connection with labour. After four years of war no policy has been laid down that is worth while, and certainly it is not for want of constructive criticism on the part of His Majesty's Loyal Opposition that some policy of this kind has not been adopted by the government. I warn the government, now that they have taken so long to lay down this policy and to get out their list of priorities, that it will be much harder to enforce them. This business of evolution, which the minister spoke about, does not go in war time. In spite of the urging of the opposition for the government to take a strong stand in connection with man-power, nothing has been done, and it is only now that we have had the survey which the minister the other day put on *Hansard,* showing where people are, what they can do and what they are doing.

We are in a total war these days, but the government do not seem to have thought so, judging by their actions. Although they have been urging the people to take the position implied by total war, they have not taken that position themselves, nor have they had strong policies in that direction.

Speaking in the house on January 30, 1942, I said:

So far as man-power is concerned, our problem is this. For a balanced effort there are so many people in this country. Some of them are trained for special jobs, and some are not trained, having, however, the natural strength and ability to become trained. Some are men of military age, while some are too young to fight and others too old. There are so many women, some married with children, others married without children, some young and others old. This is a vast pool of brawn and brain to draw from. On the other hand, there are so many jobs that have to be done. Obviously some of these people must be diverted towards the preservation of those physical amenities of life, the supply of food and shelter and clothing, transport and so on, which cannot further be shrunk or restricted. We have also huge numbers of men and women for the army, the navy, the air force and the merchant fleet.

It seems to me it would be only common sense to think it over; yet it has taken until this year to have any sort of survey made in that respect. Later, in the course of the same address, I said:

Total mobilization on the basis of equality of sacrifice would knit together the people of this country in closer bonds of brotherhood than ever before. It would be a long step toward the realization of the new and better world which everybody is wishing for after victory. It would show by this act of the government, backed by parliament, sincerity of purpose beyond all shadow of doubt, and our soldiers, sailors and airmen would have renewed confidence.

I was then speaking of the proposed plebiscite. I went on to say, as reported at page 192 of *Hansard* for the same day:

What good is a government if it will not act according to the needs of the country without seeking the opinion of the people before it acts?

We have crises every day; the government take steps every day without consulting the people of Canada. They decide to ration this, that or the other thing, but they never consult the people about them. The only thing the people were consulted about is the plebiscite. The government has drifted along, without taking any action. There is no strength of purpose, no leadership; there is only indecision. Speaking in the house during the same debate, on January 26, 1942, the Prime Minister realized the necessity for compulsory national selective service. As reported at page 45 of *Hansard* of that date he said:

It must not be supposed that there are large reserves of idle people leading a leisurely existence who can now be called to the national ranks. The entire adult Canadian population, with very few exceptions, gets up in the morning, works all day, and goes to bed tired out at night.

Surely he realized the seriousness of the situation even then; and if that was the condition of our Canadian people at that time, what must be their condition now? Yet nothing has been done along the line of compulsory national selective service; we have been simply drifting along. On the other hand, perhaps the Prime Minister gave the reason why nothing has been done, when he went on to say:

In our form of society people have been accustomed to find their own jobs to a very large extent, thus saving vast government machinery.

As a matter of fact, at that time we had all the machinery we needed; all that was necessary was to put it into operation, but I think the Prime Minister was afraid to do so. I do not know just why that was not done. Certainly people do not like to be regimented, but in war time they have to be regimented for their own good. If we are to have a total war effort people must have leadership, and to a certain extent they must accept regimentation. When a man joins the army he does not do just as he likes, and during a war the civil population cannot do as they wish, if they want to conduct a total war effort.

To-day we face a crisis overseas. Major events are about to take place, we do not know how soon. What will be our casualties? Have we sufficient reinforcements and, if not, where are we to get the men? Is the amendment to the mobilization act to be forgotten, or what is to be done about it? Speaking in this house on the taking of the plebiscite I said, as reported at page 196 of *Hansard* for January 30, 1942:

What do the government hope to gain by a plebiscite? At best the government get a respite of two or three months. Meantime there are all kinds of turmoil.

Well, we had all kinds of turmoil while the plebiscite was being taken.

When the three months are up there will be the same pressure for action.

There was.

This proposal of a plebiscite is an affront to the rights of parliament and an undeserved reflection on the people of this country, of whatever race or creed.

I was right.

It will get nowhere.

It has not.

If the proposal carries it will not get rid of the controversy—

It has not.

—and it will leave uncertainty as to future action—

It has.

—if it fails to carry, our troops will be abandoned to the uncertainties of voluntary enlistment. In either case the country is humiliated and disgraced.

Thank heaven it carried; that is all I have to say about it. It would have been a terrible thing if it had not. What disturbs me about the whole situation is the fact that the amendment to the mobilization act has meant nothing; we have continued to enlist men under a so-called voluntary system; that is all. It is just a fraud and a farce and coercion.

Here is something else that worries me at the present time. In January of this year some figures were tabled, showing that 750,611 notices of call-up had been sent out in this country. Apparently 216,791 men received notices, of whom nothing more was heard. From March 20, 1941, to December 26, 1942, the army asked for 150,000 men and were able to get only 107,678 from a total of 750,611 who were called. Now we come to the minister's statement. From March 20, 1941, to April 16, 1943, some 988,475 notices were sent out. Of these men, 379,833 were never heard of again; we do not know where they are. There may, of course, be reasons for this in some cases. Some 289,541 were called after being medically examined, but evidently 128,882 of those called after examination disregarded their notices; that is all there was to it. In all, the army got 126,963 after sending out 988,475 notices. In other words, the army got 107,678 from March 20, 1941, to December, 1942; or for the whole period, from March 20, 1941, to April, 1943, they got 126,963 men in all. In other words, they got an increase of 19,285 men from December 26, 1942, to April, 1943. That was the increase they got. What is the government doing about these 128,882 men who were medically examined and who disregarded the summons of the crown? It just shows the laxity of the administration. Does the government feel it is useless to do anything about this? Does it feel that even if the men are called up there will be no necessity to use them in Canada? What will it do with them after it gets them? As a matter of fact, the whole policy of the government can be described as vaporous, vacuous and vacillating; that is about all it is.

An hon. MEMBER: What?—no more?

Mr. ROSS (St. Paul's): That is enough. I could say much more, so far as that is concerned. I would point out to the committee that so far as the enforcement of the national selective service regulations is concerned, the government is so afraid of losing votes that it will not take a strong stand.

Mr. PERLEY: Let us take a vote now.

Mr. ROSS (St. Paul's): We could do that. The government has all power, but it does not use it. The point is that the government cannot make up its mind. I think I might use in this connection a few words which were used by a famous statesman in the House of Commons of Great Britain. This is what was said on November 12, 1936—and it might be said with equal force about this government at the present time:

> The government simply cannot make up their mind, or they cannot get the Prime Minister to make up his mind. So they go on in a strange paradox, decided to be undecided, resolved to be irresolute, adamant for drifts, solid for fluidity, all-powerful to be impotent.

I ask hon. members if that does not fit this government to a T. That great statesman in the British House of Commons was Mr. Winston Churchill. I do not suppose people in Canada will go hungry on account of the government's policy in connection with national selective service. We have the food in this country. But if we do not do something about the matter, so far as our farmers are concerned, we shall be responsible for not doing as good a job of feeding our allied nations as we should have done.

As a matter of fact, some of our people may have to go cold this winter. That will develop on account of this policy of drift, this procedure of putting things off, this vacillating policy of the government which we have had ever since the war started. We ought to take a leaf out of the book of that little island of Great Britain. They are now proceeding to call up part-time workers to do full-time work. They know they have mopped up all the surpluses from other industries, and men and women in non-essential jobs. They report that each worker is doing a day's work which ranks as a world's record for output per unit. But that is not enough to satisfy them. Norman Crump recently gave details of how they are going further in the use of women for part-time work. However, I have not time to give details of that at the moment.

We in Canada are not nearly in the position of the people in Great Britain. The minister's figures show that we have some 743,000 men and women who are actually engaged to-day in low priority occupations. That is shown by the minister's tables. We ought to be able to get all the man-power we require very easily, if we had a proper system of selection. That ought to be done quite simply. If we had some proper and strong policy pronounced and carried out, we should have no difficulty along these lines. But as I said before, this government never announces a policy; it only pronounces public opinion which it has failed through lack of leadership to create. It just follows public opinion. What we need is leadership. As I said before, it will be necessary to send large reinforcements overseas. We have some in Canada who could be sent anywhere. Our troops must be reinforced. However, some who are enlisted in Canada cannot be sent anywhere, a point which was emphasized to-day by the hon. member for Rosetown-Biggar. Before these troops can be used, the parliament of Canada must vote confidence in the government. How ridiculous to have the parliament of Canada vote confidence in the government—not just vote confidence by confirmation of an act, but vote confidence in the government itself! That is an entirely different matter.

Then, what will happen? The old Liberal election issue will be trotted out, just as sure as I stand here. We shall hear the old Liberal election issue of "no conscription," the one which they have kept up—

Mr. MACKENZIE (Vancouver Centre): Your party had that issue, too.

Mr. ROSS (St. Paul's): That is the point on which the Liberal party have kept up the racial issue in Canada all these years, with the result that they have brought forth more disunity.

Mr. MACKENZIE (Vancouver Centre): Your leader used that issue.

Mr. ROSS (St. Paul's): If we do not vote "yea" with the government, we shall be accused of refusing reinforcements for overseas troops. If we vote "nay," we shall be accused of supporting the government, and some of the policies we criticize. I do not know what we are going to do.

Mr. MACKENZIE (Vancouver Centre): Hear, hear.

Mr. ROSS (St. Paul's): It is a pretty good trick, if one might call it that—about the neatest trick we ever saw. But after all, I do not think it is quite fair that any opposition should be placed in a position of that kind. Had it not been for hon. members in the opposition, I doubt very much if the government would have had the great majority in favour of the plebiscite which it had.

May I say at once I think the minister is capable of laying down a policy. I do not know whether he has the support of the government, or support sufficient to enable him to carry out the policy he would like to carry out. But he must take the blame, with the government, for not carrying out such a policy. Everything is not rosy in connection with selective service. There are many things wrong, and many which might be corrected; but I say that unless the government takes steps now, lays down a policy and enforces it in connection with the crisis we shall have to face with respect to the reinforcements which will be required, the food which we must produce, the munitions which will have to be made quickly, the transportation which we shall have to furnish, and many matters of that kind, it will be everlastingly condemned by future generations.

Mr. HANSELL: I do not believe this evening should pass, and the week-end come upon us without our asking the minister to make some statement respecting the fuel situation in Canada, and how the national emergency is to be handled. I asked the minister that question, I believe almost three weeks ago, and he did not know the answer. The day before yesterday I took my full time in trying to tell the committee the seriousness of the situation as I saw it.

Speaker after speaker has been dealing with general matters, and perhaps the minister has in mind, when he rises to speak, giving this country the details of the situation as it exists. Can he do that before eleven o'clock? I do not want to take up any time in making a speech. There he sits with three expert advisers sitting in front of him. They have been there for the last couple of days, but I do not know why, because they have not had to advise him about anything. His parliamentary assistant is beside him, and if he needs any more help there are two ministers of the crown sitting behind him. He seems to be pretty well surrounded with sources of advice. Will he make a definite and comprehensive statement so that this country may know the exact situation with respect to the national coal emergency? Will he tell how the department is dealing with it?

Mr. MITCHELL: For the last three days I have been trying to say something, but

this general discussion has been kept up and the committee has talked about everything from here to Shanghai. This afternoon we had the exhibition of a private war between two members on the war appropriation measure. I do not think the minister can be blamed. I have been ready and willing to answer any questions that I can. My hon. friend talks about coal. I think he knows, or he should know if he is sufficiently interested, that an order in council was passed and an announcement was made dealing with the man-power side of the government coal policy. The announcement appeared in all the newspapers, and I do not know that the policy has been changed since the announcement was made.

In general terms it provides for the transfer of coal miners not now engaged in mining back to the mining industry. It provides that they shall not be called up for military service, and it even goes so far as to provide that they shall not join the fighting forces on a voluntary basis. It provides for the payment of transportation costs to miners who may have to move their families to new points of occupation. It also guarantees a minimum weekly earning for the men so transferred. It provides also for a separation allowance, if you want to call it that, to be paid to those who are living apart from their dependents. Appointments have already been made of the eastern and western directors of the man-power side of the government's coal mining policy.

The branch of the Department of Labour charged with the responsibility of going through the registration records and getting the names of all men who have been engaged in mining has been actively engaged at its task, and I believe it is completed. Speaking from memory, I understand the figures from the registration are 31,000. Since the policy was announced, over 1,000 miners have been transferred from their present occupations back to mining. If my hon. friend would like a copy of the order in council to refresh his memory, I can provide him with one.

Mr. HANSELL: I do not want that. The minister has told us pretty well what we know already. We wish to know if the programme is working out satisfactorily. We wish to know if we are to have coal this winter and if industry is to be kept going.

Mr. MITCHELL: I think the fact that we have moved 1,000 men in the short time at our disposal is an indication that we are going at the problem in a real way. I do not know whether we shall have coal next winter, and I do not think my hon friend knows. The same question might be asked about farm crops. It is dependent upon conditions outside this country. The Dominion of Canada is on an import basis as far as coal is concerned. Let us ever remember that. It is estimated that 23,000,000 tons of coal will have to be imported from the United States, and this importation will depend upon the situation that exists in the mining industry in that country. That situation has been very difficult in the last few weeks. Arising out of this, may I say that I think it is the duty of every member of this House of Commons and of every responsible citizen of this dominion to give the government every assistance in carrying out the policy that has been laid down.

Mr. HANSELL: I will say "hear, hear" to that.

Mr. MITCHELL: We think the thing out on paper, and it is much easier to plan than to execute. When we are confronted with what I would term is a grave problem, everybody concerned in the execution of the policy should put forth every ounce of his energy. The government is entitled to the cooperation of every person affected. My hon. friend comes from western Canada and he knows of the situation that existed there last winter. We had an early fall and the thermometer dropped to forty-two degrees below zero in Edmonton. I have a vivid recollection of the telegrams that came to my office in connection with coal supply. I am sure we have a policy, as far as the Department of Labour and selective service are concerned. My hon. friend may rest assured that no stone will be left unturned to see that any mining property that is capable of being operated is supplied with the necessary labour in order that coal may be mined.

Mr. GILLIS: Is it not true that representatives of the mining unions and the operators from the east and west are now in Ottawa meeting with the war labour board for the purpose of developing provincial machinery?

Mr. MITCHELL: I think that is a wage negotiation. My hon. friend is speaking about the war labour board, not the national fuel board.

Mr. GILLIS: I understood from those I spoke to that they were here making representations in connection with increasing the production of fuel.

Mr. MITCHELL: That may be true, but wages are involved also. It is a joint meeting of the two boards.

Mr. WOOD: The minister has just given us some timely advice, and if we would listen to it and endeavour to live up to it I think we would make a greater effort than we are making at the present time. I listened with considerable interest to the criticism put forth by the opposition with regard to the minister's department and the man-power problem generally.

There is a phrase, "Saying so does not necessarily mean that it is so". Consider the record of production which the Minister of Munitions and Supply brought down a few days ago, showing that Canada is making every week 80 planes; 4,000 motor vehicles; 450 fighting vehicles; 940 heavy guns, barrels or mountings, and that our small arms plants turn out 13,000 smaller weapons. Every week our ammunition factories make 525,000 rounds of heavy ammunition and 25,000,000 rounds of small arms ammunition. In view of this huge production, a lot of the criticism we have been listening to seems hardly justified. After all, we have history to light the path of the future. We have learned to recognize the lighthouses on the rocks of disasters, so that we need not fall into the errors of the past.

I should like to say to the leader of the opposition, whose modest, placid way of indulging in biting criticism of the government of the day I admire, that from the impression he has so far made I think he is more likely to be Prime Minister than his leader who is running at large, but I cannot harmonize his actions with some of the views which he has expressed. The other day he championed the cause of the little man. I have sometimes wondered where the little man ever came in on the platform of the Conservative party, with which my hon. friend has been associated for so long. The party has now adopted the hyphenated name Progressive Conservative, but what that means none of us knows. We have heard a great deal about unity in Canada, but I can see no unity, no unified policy which this new hyphenated party—

Mr. GRAYDON: I do not want to destroy my hon. friend's argument, but there does not happen to be a hyphen in the name.

Mr. WOOD: It is characteristic of the Conservative party that they manufacture a new name, such as National government, or a new programme whenever they think it is expedient to do so, and I will say that the hon. member is just carrying out the record of his party in changing its name.

We are all proud of the development that has taken place in our army, navy and air force since the beginning of this war, but what was the attitude of my hon. friend's party in 1911 when the Liberal government of that day proposed to build a Canadian navy? The Conservative party described it as a tin-pot navy and proposed instead to contribute to Great Britain $35,000,000 to buy three dreadnoughts for the British navy. They had no confidence in the Canadian people being able to build up and manage a navy of its own. But, thank goodness, the Liberal party had the courage to set about building a Canadian navy, which to-day is a credit to the Canadian people and to the British empire as a whole.

The same sort of thing happened in connection with our air training scheme. True, this government did not approve the first plan of air training which the British government proposed, but that was because the colonial mind was more or less associated with it. We wanted a larger air training scheme purely under the jurisdiction of Canadian laws and the Canadian parliament, and ultimately our modern air training plan has grown into the greatest in the world. Surely the record of this government is hardly one that justifies the picayune type of criticism to which we have been listening and which does not do credit to our own country. The fact that one-half of our whole economy is devoted to the production of war implements is an indication of what we have accomplished in spite of the man-power shortage. But for that man-power shortage, what might our accomplishments not have been? The leader of the opposition said on June 3:

> There is no question that the policy of the government with respect to man-power has been muddled, misconceived and misfitted.

That criticism is hardly characteristic of the leader of the opposition in his genial moments.

Mr. GRAYDON: It was hard to say, but I had to tell the truth.

Mr. WOOD: I did not think the leader of the opposition would ever come to the point where he would say that he had to tell the truth; I thought he would tell it voluntarily. I thought better of him.

Mr. GRAYDON: It was not an unusual situation.

Mr. WOOD: The leader of the opposition also waxed eloquent about the farmer. I admire his legal mind and his solicitude for his farmer friends in Peel county. The Ottawa *Journal* runs a reprint every day from its corresponding issue of twenty-five years ago, and on May 14, 1918, this appeared in the Ottawa *Journal* and was reprinted about a month ago:

Ottawa in 1918

From the *Journal* of May 14, 1918

Some 4,000 farmers, largest deputation ever to visit Ottawa, came to try to persuade the government that the draft regulations should not apply to agriculture. Two thousand of them crowded into the Russell theatre, where they presented their case to Prime Minister Borden and his colleagues. Sir Robert told them flatly the government would not change its course.

Mr. GRAYDON: Was not the Minister of Mines and Resources, whom the hon. member follows, a member of Sir Robert Borden's cabinet at that time?

Mr. WOOD: I think he was at that time, but that was twenty-five years ago, and the minister has been associated since with an element which would change almost any man's mind. There is always hope for a man who will change his mind.

So far as I have had anything to do with the present mobilization act I have found it to be applied reasonably toward the farmer. I believe that reasonable and fair consideration has been given to the honest-to-goodness farmer. Wherever there have been irregularities, they have been largely owing to the fact that the rules and regulations were not followed.

May I mention one other matter by way of comparison. This government each year gives one billion dollars to the mother country to help win the war. Fortunately the Canadian people and all those who live on this part of the North American continent, where there is so much wealth, have not had to endure the hardships suffered elsewhere. Let me compare present conditions with what happened in the last war under a so-called National government. I have before me the proceedings, on Thursday, May 4, 1922, of the public accounts committee, of which some hon. members who are sitting here to-day were members. I should like to show the committee the mentality of the government of that day—I am sure it was not a Liberal government—and their attitude toward Great Britain. This is the party that wrap themselves in the flag of loyalty and boast about their British connection and their imperialistic views. Certain equipment had to be purchased for the Canadian forces in the war. When the war was over, it was decided to dispose of it. Certain influences were brought to bear from some friends of the government at that time who did not want a lot of that equipment dumped back in Canada. Accordingly they made arrangements with the British war office, and the result was that they sold equipment to the British war office at prices far in excess of what they paid for it. I will quote one section from the proceedings of the public accounts committee on May 4, at page 18. The witness, the late Major-General J. H. MacBrien, chief of the general staff of the overseas military forces, was asked the following questions by Mr., now Senator, Vien, Speaker of the Senate:

Q. Can you tell us what the result will show?
A. You mean the mechanical transport?
Q. Yes.
A. I can tell you in this way: I will give you one or two specific items. The Cadillac car, which was perhaps the thing most in use with the forces overseas, cost, I have been informed, the Canadian government somewhere about $1,700 wholesale price, and they were sold under this agreement to the war office at as high as £800.

That would be close to $4,000.

Mr. STIRLING: A Cadillac cannot be bought for that.

Mr. WOOD: I will continue.

Mr. Hanson: I think we had better refund them something.

That is the hon. member who is the ex-leader of the present Progressive Conservative opposition.

The Witness: I am mentioning both the minimum and the maximum. The usual price was from £500 to £600 for that type of vehicle, and taking the same vehicle all the way through the Canadian government made a very large profit and had the use of the vehicles in addition.

Mr. GRAYDON: Mr. Chairman, may I rise to a point of order? I seldom interrupt my hon. friend the member for Brant, but it does seem to me, in view of what the minister has said, and the commendations the hon. member has made of the minister's statement, that he might get on with the job. Perhaps we are entitled to have some explanation by the hon. gentleman as to how relevant this quotation is to the item of labour.

Mr. MacNICOL: It has not any relevancy.

Mr. GRAYDON: It is the Department of Labour which is now being discussed in the committee. It may be there is some connection, but I would like the hon. member's explanation.

Mr. MACKENZIE (Vancouver Centre): It is perhaps as relevant as the mention yesterday of the Winnipeg convention.

Mr. WOOD: I am prepared to say that what I am quoting is quite relevant to the situation. I qualified my remarks in the beginning by saying that we may learn from experience to plant lighthouses on the rocks of disaster so that we shall not suffer ship-

wreck. I bring this quotation before the committee to show that, though the government may have made some errors, a person's worth must not always be measured by his errors, but sometimes by the temptations he has avoided—which occurs very much more often than the errors. Some credit should be given to the government for its accomplishments, and hon. members should not always be emphasizing its mistakes. Ministers are only human, but I believe the Minister of Labour has made an honest attempt to give efficient direction, and as far as the manpower situation is concerned we have accomplished sufficient to make me willing to take the commendation which Mr. Churchill gave of Canada's contribution. I listened also to the Right Hon. Anthony Eden, and he made complimentary remarks about what our people have done. More recently, an eminent Chinese lady, Madame Chiang Kai-shek, referred to Canada as having given the greatest contribution per capita of any of the united nations. Surely such statements explode all the arguments which have been advanced against the government to-day.

The leader of the opposition interrupted me, but I should have liked to finish this record of evidence before the public accounts committee:

By Mr. Hanson:
Q. Were they worn?
A. Very much worn.

By Mr. Vien:
Q. If I understand rightly your statement, it is that in respect to the mechanical transport the government got from the Imperial government more than they had paid for it?
A. Yes.
Q. And made a profit?
A. Yes.
Sir Henry Drayton: Fifty per cent?

I draw this to the attention of the committee. I wish also to quote some other comments, emanating from the New York *World-Telegram,* concerning Canada's contribution. This is a sheet reproducing a series of articles written by William Bloeth. I will just read the headlines:

1. Canada convoying ships across Atlantic and supplying resources to war effort.

2. Canada produces both munitions and skilled help.

3. Canada now ranks as major builder of ocean carriers.

4. Canada becomes largest exporter of basic metals.

5. Alcan highway seen reviving interest in development of oil in western Canada.

6. Canada laying groundwork for bright post-war future. Increasing industrialization expected to trim dependence on other nations.

[Mr. Wood.]

It goes on to say:

Canadian arms are helping the Chinese, and Canadian clothing is warming the Russians. Russia has publicly acknowledged her indebtedness to Canada for some $50,000,000 of tanks that are the "best of our imported tanks."

The country sends some 15,000 tons of wheat to Greece each month as a gift and three-fourths of all hogs, representing a quarter of the total meat supply, was sent to Britain last year.

This writer is far enough away to get a proper focus. I will draw the attention of the leader of the opposition to the old saying that there are those who cannot see the forest for the trees. I think that is the situation with him. Here is another heading:

Canada's example is an inspiration to the United States.

Just think of that.

Mr. GRAYDON: Just think of it.

Mr. WOOD: Here is what this newspaper says:

In publishing such articles as these by William Bloeth, the New York *World-Telegram* is doing more than giving due recognition to the great dominion. It is holding up Canada's war record as one that will help the United States to set still higher goals in production and in war loan subscriptions, and to realize its own ability to pay still higher taxes. The United States, in its second year of war, can learn much from Canada as the dominion continues to set new records in this, her fourth war year.

After all, I would rather accept the conclusions of those whose opinions concerning Canada's war effort are not coloured by prejudice or preconception, and who try to give the facts as they present themselves in the actual working out of the country's war programme.

There are several matters I should like to comment upon. The fact is that agriculture, in spite of the shortage of help and the hardships which the farmers have had to labour under, produced the largest income last year that we have ever had. The weather conditions this year are such that it is difficult to say what the future may have in store for us, but even with the shortage of labour the farmer will do his best to see that this nation will have an abundance of food. There are some things that we shall probably have to go without, but let us remember that we cannot win wars without sacrifice.

So far as our Cooperative Commonwealth Federation friends are concerned, they wax eloquent about the necessity for farmers receiving higher prices, and in the next breath they urge that the labouring man be given higher wages. They forget that if the farmer receives higher prices, wages will go up, and if

wages go up, the things which the farmers buy will also rise in price. In other words, they attempt to ride two horses. The hon. member for Rosetown-Biggar (Mr. Coldwell) rather outdid himself in his speech when he referred to some of the actions of this government as reprehensible. I have come to the conclusion that the record of the C.C.F. in this country, the attitude that they have taken when we try to pass a measure in this house for the defence of Canada and their attitude at the present time, are not at all consistent. Their whole policy has been inconsistent from beginning to end, and I would hate to think what the future would have in store for Canada if that element of society were called upon to form a government.

So far as our Social Credit friends are concerned, I give them far more credit for sincerity. They believe that they have a solution for Canada's problems, and that that solution is largely in the direction of monetary reform. While I may not agree with them, at least they are reformers, and since Liberals have always been reformers, I feel at any rate that I have a good deal in common with them. Even if some of the things they advocate are far-fetched, I think they are consistent, because they have stuck to that one particular idea. But the C.C.F. will cater to almost any element or type of society, and as far as playing politics is concerned, they have the Conservatives and the Liberals beaten a long way. I am led to believe that an arrangement has been arrived at in Ontario for collusion between the C.I.O. and Mr. Joliffe in the forthcoming election which it is expected will take place in that province, and the hon. member for Vancouver East (Mr. MacInnis) and the hon. member for Cape Breton South (Mr. Gillis) will no doubt play their part in delivering the goods in this House of Commons. It is all arranged. However, I do not believe that the good people of Ontario will fall for that kind of trash. We in Ontario have worked hard to build up one of the best standards of living to be found on the North American continent. Just consider the fact that one in every five people in Ontario can drive an automobile and you will realize what their standard of living is. I do not think, therefore, they will throw caution to the winds and embrace every sort of economic proposal that is submitted to them by hon. members.

Mr. MacINNIS: There is one thing which the hon. member for Brant (Mr. Wood) said that pleases me, namely, that he has nothing in common with the members of this group, because nothing would convince me that we were absolutely wrong so much as to have anything in common with the hon. member for Brant, and I say that after listening to him for many years in this house. However, that is not what I rise to say. I hesitate to say anything at this late hour, but we are not likely to do any business this evening apart from a general discussion, and therefore I want to emphasize as strongly as I can some of the points made by the hon. member for Cape Breton South (Mr. Gillis) when he spoke earlier in the evening.

Undoubtedly we shall have a certain number of labour disputes no matter what our labour laws and regulations are, and no matter what the policy of the government may be. But there are two kinds of disputes that should not be allowed to develop or to stand in the way of a settlement, and that is the sort of dispute where one side or the other—and it is usually the employer—refuses to negotiate. Most, or at any rate a great many of our disputes are of that kind, and a dispute of that kind should not be allowed to continue. The Department of Labour has sufficient authority to deal with it.

Another dispute that should not be allowed to continue is the dispute that arises because the bargaining agency has not been determined. I have on a previous occasion mentioned to the minister my personal opinion that the moment a dispute arises in an industry as to which group should be the bargaining agency, a vote should be taken to determine that agency, and then the minister should exercise his authority to see that the bargaining is done through that group.

Those are two matters particularly that I wish to impress upon the minister, because it is impossible to resolve disputes if one side refuses to negotiate, or if the bargaining agency is not determined. These are the first essentials to the resolving of labour disputes.

There is another point in connection with the Canadian Ingersoll-Rand company matter. Two weeks ago I asked a question about a lay-off in this plant. The minister replied that he was informed that the reason for the lay-off was union activities. I do not know whether he has ascertained if that was the fact or not, but I tell him that if he has found out that these lay-offs occurred in a war industry where a company had transferred its work to another plant simply because its workers were organizing, because they were carrying out the right guaranteed them by order in council passed by this government,

then the minister is certainly falling down on his job if he has not brought that to the attention of the company.

I have just one or two words more to say and I shall conclude. We are not only building for the organization that will carry on this war; we are building for what will come after the war, and the government of the day can help to build a labour organization that will promote the prosecution of this war, and help the government to organize after the war; or on the other hand it can build up a working-class movement where there will be nothing but bitterness and frustration.

I want the minister to feel that anything I may say at the present time is not said in the way of carping criticism; it is not said to embarrass him. It is said to help him, because I am convinced that the questions I have mentioned will have to be dealt with and dealt with in no uncertain terms before we can get an orderly arrangement of labour affairs in this country.

Item agreed to.

Progress reported.

At eleven o'clock the house adjourned, without question put, pursuant to standing order.

Monday, June 28, 1943

The house met at three o'clock.

PRIVILEGE

MR. ST. LAURENT—REFERENCE TO REMARKS OF MR. LACOMBE IN DEBATE ON JUNE 25

Hon. L. S. ST. LAURENT (Minister of Justice): Mr. Speaker, I rise to a question of privilege. On Friday last the hon. member for Laval-Two Mountains (Mr. Lacombe) made a speech which was rather difficult to follow. However upon looking at the report I find that at page 4045 of *Hansard* he is reported to have made this statement:

Je comprends que l'honorable ministre de la Justice, bien qu'il soit un grand avocat, avocat de la Banque de Montréal, du Pacifique Canadien, de tous les monopoles et de tous les trusts, n'a pas beaucoup d'expérience parlementaire.

This is translated in the annex to *Hansard* as follows:

I realize that the hon. the Minister of Justice, while he is an outstanding barrister, acting as he does as solicitor for the Bank of Montreal, the Canadian Pacific, and every monopoly and trust, has not much parliamentary experience.

I am not quarrelling with the last part of the hon. member's statement. To the best of my recollection I never, during my thirty-seven years of practice, had the advantage of a single retainer from the Canadian Pacific Railway. I did at times act for the Bank of Montreal, and I did have other clients who were engaged in business affairs of some magnitude, but none of them were monopolies or trusts. During those years I devoted the whole of my time and attention to the practice of my profession. When I accepted the invitation of the right hon. the Prime Minister to become Minister of Justice I similarly felt that I should give my whole time and attention to the performance of the duties of that office. I severed all my connections with each and every one of those who had been my clients theretofore, and I resigned from every board of directors of which I had previously been a member. I have more than once stated that in public; and I repeat here that the assertion of the hon. member that I am acting as solicitor for the Bank of Montreal, the Canadian Pacific Railway or any other client, is absolutely contrary to the facts.

There are other assertions appearing in the report of the speech of the hon. member which may have to be dealt with, but which might more properly be considered when the hon. member is in his seat.

[*Later:*]

Right Hon. W. L. MACKENZIE KING (Prime Minister): Mr. Speaker, a moment ago my colleague the Minister of Justice drew my attention to a statement made by the hon. member for Laval-Two Mountains which is of a very serious character. I had not up to that time observed the remarks to which my colleague referred as well as others and I was not in the house at the time they were made, but I find them in *Hansard* in the official report of the English translation of speeches delivered in French on the date indicated. The hon. member is not in his seat at the moment, but one statement which he made is so serious that I feel no time should be lost in drawing Your Honour's attention to it and asking that it be dealt with in accordance with the means taken to protect the privileges of this house. The statement to which I refer is as follows:

We have here in the cabinet three new millionaires who have made their money since the war's outbreak. We shall denounce them at the proper time and place. Fortunes are being built up.

The proper time and place to make a statement of that kind is in this House of Commons with the hon. member simultaneously undertaking to prove the charge, or, if he is unable to do so, to resign his seat in this

house. I submit, Mr. Speaker, that the hon. member should be obliged either to withdraw the statement completely or else to convert it into a specific charge to be investigated in the usual manner, and the consequences of the investigation also to be followed up in the usual manner.

FOURTH VICTORY LOAN

STATEMENT WITH REGARD TO FINAL RESULTS

Hon. J. L. ILSLEY (Minister of Finance): I should like to make a statement with regard to the final results of the fourth victory loan campaign.

Total sales of bonds amounted to $1,308,985,500. This represented 2,669,111 subscriptions. These sales were made for payment in cash. The fourth victory loan, like the third victory loan, did not involve the issue of any new bonds against the surrender of maturing securities.

It will be recalled that the total objective for the fourth victory loan was set at $1,100,000,000, and that this objective was split, $500,000,000 for individuals covered by the general canvass and payroll canvass, and $600,000,000 for large investors, mostly business firms and corporations, covered by the special names canvass. Each of these objectives was exceeded.

Combined sales by the general canvass and payroll canvass amounted to $529,641,800, representing 2,661,759 subscriptions. In the special names canvass, 7,352 subscriptions were received for $779,343,700 par value of bonds.

The fourth victory loan was the largest public bond issue in the history of Canada. The outstanding feature of the loan was the tremendous increase in the number and amount of sales to individuals in the general and payroll canvasses.

By way of comparison, I wish to submit the following figures showing the results of each of the four victory loans:

Victory loan	Final results of campaign		Cash sales alone		
	Par value of bonds sold	No. of subscriptions	Par value of bonds sold	Of which: General and payroll canvass	Of which: Special names canvass
First	$ 836,820,250[1]	968,259	$ 730,376,250	$279,500,000	$450,876,250
Second	996,706,900[2]	1,681,267	843,127,900	335,638,200	507,489,700
Third	991,389,050	2,032,154	991,389,050	374,828,200	616,560,850
Fourth	1,308,985,500	2,669,111	1,308,985,500	529,641,800	779,343,700

[1] Includes $106,444,000 par value of conversion sales.
[2] Includes $153,579,000 par value of conversion sales.

This record of voluntary bond purchases by the public of Canada is tangible and convincing evidence of the united determination of Canadians to win the war—it is a declaration of faith in the future of our country. The impressive record of these loans is also a reflection of the valuable and vital work being done for Canada by the national war finance committee, the organization entrusted by the government with the responsibility of carrying out our wartime public borrowing operations. The tens of thousands of men and women throughout Canada who are associated with this committee may well be proud of their contribution to the steady progress of Canada's wartime savings program.

In the budget speech delivered on March 2, 1943, I referred to the fact that some subscribers to victory loans dispose of their bonds over the period following the termination of the public campaign. I should like to take this opportunity to reiterate the statements I made at that time with regard to this practice.

Victory loan bonds are the property of their individual owners who have the right to sell them at any time they may desire. This right has always existed. No restrictions on the sale of bonds have been considered by the government at any time. When a person buys a victory bond, that person is making it possible for Canada to get the men and materials needed for war use, and, in addition, is helping

to fight the home-front battle against inflation. When people sell their bonds, they are withdrawing this help. I recognize the fact that emergency needs for cash are perfectly legitimate reasons for selling bonds or presenting war savings certificates for redemption provided the person has no other form of savings which can be used, or provided the person cannot obtain a temporary loan, to be repaid out of future income, to meet the immediate need for cash. But sales of bonds to get dollars to buy things that are not essential are not justifiable. Unless it is absolutely necessary to sell victory bonds, it is every person's patriotic duty, and in his own best interests, to hold on to his bonds for the duration of the war at least. Buying bonds is important; holding on to them is equally important.

On February 9, 1943, I tabled a statistical compilation showing a classification of the sources of subscriptions, at time of issue, to the first, second and third victory loans. For the information of the house, I am tabling a statement in similar form showing the estimated derivation of subscriptions, at time of issue, to the fourth victory loan, together with comparable figures for the three previous victory loans.

All figures in regard to the fourth victory loan are subject to final verification on the receipt of reports of actual deliveries by banks, trust and loan companies. The figures which I have used and which appear in the statement I have tabled reflect the final reports received in Ottawa from the field organization of the national war finance committee.

National War Finance Committee
Canada

First, Second, Third, and Fourth Victory Loans

Estimated Derivation of subscriptions at time of Issue

The attached memorandum contains the estimated derivation of subscriptions, at time of issue, to the first, second, third, and fourth victory loans. Figures in regard to the fourth victory loan are preliminary, as the final results of this loan are not compiled.

The subscriptions to each loan are divided into two broad classes, designated "individuals" and "non-individuals".

The class designated individuals includes two sub-divisions, described as "special names" and "all others". The amounts shown for special names represent subscriptions received in the special names canvass from individuals believed to be capable of buying $25,000 or more par value of bonds at the time of each issue. The amounts shown for all others represents the combined total of subscriptions received in the general and employee canvasses. General canvass subscriptions include sales to small commercial and small non-profit bodies, the aggregate subscriptions from which would be relatively small in proportion to the total amount shown opposite the designation "all others".

The non-individuals class has been subdivided to show subscriptions from banks for their own account; government accounts; insurance companies, pension funds, etc., and savings banks; and miscellaneous, this latter group reflecting, with minor exception, subscriptions from business firms and corporations.

These data have been compiled by the national war finance committee from information obtained at the time of public offering of the loans, and from other sources. The data should be regarded as estimates, and the results of the fourth victory loan should be regarded as subject to revision when final figures with respect to this loan become available.

June 19, 1943.

NATIONAL WAR FINANCE COMMITTEE

CANADA

VICTORY LOANS—ESTIMATED DERIVATION OF SUBSCRIPTIONS AT TIME OF ISSUE

(Dollar figures in millions)

Item	First Victory Loan			Second Victory Loan			Third Victory Loan	(Preliminary) Fourth Victory Loan

(iv) All Others, being practically all subscriptions from Business Firms and Corporations	241·5	6·4	247·9	276·4	2·7	279·1	298·0	377·8

(1) Includes small commercial and small non-profit bodies, the aggregate subscriptions from which would be relatively small part of total.

(2) Not separately calculated, included under Sub-section *(d)* (iv).

RADIO

INTER-AMERICAN AGREEMENT RELATING TO FREQUENCY ALLOCATION, ETC.

Right Hon. W. L. MACKENZIE KING (Prime Minister): I wish to table copies in English and French of the inter-American radio agreement signed at Santiago on January 26, 1940, and adhered to by Canada on May 8 last. This agreement supersedes the inter-American radio arrangement signed at Havana on December 13, 1937, which Canada later approved on December 22, 1938. The agreement is an undertaking, of a technical nature, relating to frequency allocation for the different services on the American continent, frequency tolerances, international police radio and amateur third party messages.

Mr. GORDON GRAYDON (Leader of the Opposition): Does the right hon. gentleman recall whether or not this agreement deals with the short-wave systems?

Mr. MACKENZIE KING: I do not recall at the moment.

QUESTIONS

(Questions answered orally are indicated by an asterisk.)

NATIONAL FILM BOARD

Mr. HANSELL:

1. What are the names of the members of the national film board?
2. What is the organizational set-up of the board; how many are employed, and in what position?
3. How many films have been released to, (a) motion picture theatres; (b) for other use?
4. How many films in the Canada Carries On series have been released up to the 31st May, 1943?
5. What remuneration has been received from motion picture theatres for use of films up to May 31, 1943?
6. What was the total cost of the national film board, and its work for each year of its operation?

Mr. LaFLECHE: Mr. Speaker, in asking that this question be made an order for a return, there is a reservation in regard to part 5 of the question, which has been explained to the hon. member for Macleod.

Mr. GRAYDON: An explanation may have been given to the hon. member for Macleod, but this is a question in which the whole house is interested. I would ask the minister to indicate the special reasons for the reservation.

Mr. LaFLECHE: The point is that the national film board advise me that it would not be in the public interest to give figures of rentals received from motion picture theatres for the use of the board's films, because, they say, it would be of assistance to the board's competitors.

Mr. GRAYDON: I protest and raise an objection. I am going to ask the minister to remove his reservation with respect to part 5 of the question, because it asks for information which the house is entitled to have. Certainly "in the public interest" is being stretched to cover matters which this house should not allow.

Mr. LaFLECHE: The remarks made by the leader of the opposition raise an interesting point. This is not the first time that this has been done since I have been in the house. The point is that the national film board is in some respects in competition with commercial companies; it is in the national interest that they have full right to make as good a bargain as they can, and they should not be put in a disadvantageous position by reason of information being made public. I shall be glad to give the hon. member privately the reasons for the reservation, as I have done to the hon. member for Macleod. It is the position taken by the national firm board that makes necessary the reservation. I think it is the traditional position taken by them.

Mr. HANSON (York-Sunbury): That explanation is not good enough. This is a government board. These figures refer to national revenue and national expenditure; surely we are not going to vacate our position in matters of that kind. Who set up the national film board to say what is and what is not in the public interest? Parliament should decide that.

Mr. HANSELL: As this question stands in my name and I happen to be in my seat, perhaps I may have a word. One of the officials approached me with respect to part 5 of the question and explained what the minister has already explained to the house. I can see that the point is not one of public expenditure but rather the question whether the amounts received by the film board from motion picture companies, as a result of its films being shown, should be made public. I readily understood that perhaps it might not be in the public interest to reveal these figures to the board's competitors who are in the motion picture business. Having been advised that I would receive the information for my personal use, I assumed the same thing would apply to every member, so that the information would not necessarily become public property. Under these conditions I agreed that there should be a reservation with respect to part 5 of the question.

Mr. GRAYDON: I am going to ask the hon. member and the minister to allow this question to stand. I think there should be opportunity for consideration of the matter. The minister is going entirely too far when he suggests that the national film board shall determine for the House of Commons and the Canadian people what information it is in the public interest to produce. Largely upon that principle I am going to ask the minister to allow the question to stand, so that further consideration can be given to it. I am sure the Prime Minister will agree that we must not lightly create any precedent on a principle of this kind.

Mr. MACKENZIE KING: May I say to my hon. friend that I did not understand that the minister was doing more than giving an expression of the view of the film board as conveyed to him. He did not take the responsibility of saying whether the board was right or wrong. I think my hon. friend the leader of the opposition is quite right in raising the point he does and in asking that the question should stand; later the minister might answer it on his own responsibility.

Question stands.

ST. HILAIRE, QUE., SUGAR REFINERY—
PRIORITIES ON MACHINERY

Mr. DORION:

1. Did the Minister of Munitions and Supply go to Washington to assist in obtaining priorities on machinery to be used in the installation of a sugar refinery at St. Hilaire, Quebec?

2. If so, (a) on what date; (b) who paid the travelling expenses?

Mr. CHEVRIER:

1. Whilst in Washington on business connected with the war production programme the minister assisted in the matter of obtaining priorities on the machinery to be used in the installation of the sugar refinery at St. Hilaire, Quebec.

2. (a) March 13 or 14; (b) the government of Canada.

WARTIME PRICES AND TRADE BOARD—
OTTAWA TEMPORARY BUILDING

Mr. BENCE:

1. On what date was construction commenced on a new temporary building for the wartime prices and trade board in the city of Ottawa?

2. On what date is it anticipated that construction will be completed?

3. What is the anticipated number of man-hours that will be used on the construction of the building?

4. What is the estimated number of feet of lumber that will be used in the whole construction?

5. What is the estimated weight of the nails that will be used in the whole construction?

6. What is the total amount of cement that will be used in the whole construction?

Mr. FOURNIER (Hull):

1. May 18, 1943.
2. July 28, 1943.
3. 95,500 man-hours.
4. 773,000 feet B.M.
5. 8,810 pounds.
6. 2,500 barrels.

SHORTAGE OF DOCTORS AND NURSES—
CLOSING OF HOSPITALS

Mr. NICHOLSON:

1. Have any hospitals in Canada been closed since the outbreak of war as a result of, (a) shortage of doctors; (b) shortage of nurses; (c) for other reasons?

2. If so, how many?

Mr. McLARTY:

1. (a) No official information; (b) no official information; (c) yes.

2. Zeballos, B.C., 9 beds, closed 1942 (Red Cross); War Memorial Hospital, Williams Lake, B.C., 23 beds, closed 1942; Red Cross Outpost Hospital, Armstrong, Ont., 5 beds, closed 1942; Hotel-Dieu de Sherbrooke, Sherbrooke, Que., 44 beds, closed 1941 (privately owned); St. Roch's Hospital, St. Boniface, Man. (contagious diseases); Fort Rae, N.W.T., 87 beds, closed 1942; Vanguard Union Hospital, Vanguard, Sask., 14 beds, closed 1941; Canmore Hospital, Canmore, Alta., 12 beds, closed 1941; Gloucester Hospital, Bathurst, N.B., destroyed by fire, 1941; re-opened as Hotel-Dieu of St. Joseph, 1942.

INTERNMENTS—CAMILLIEN HOUDE

Mr. LACOMBE:

1. Is Mr. Camillien Houde detained under section 21 of the defence of Canada regulations?

2. If not, under what statute or regulation?

3. Has Mr. Camillien Houde been officially informed of the reasons for his detention?

4. If so, where and when?

5. Before his arrest, was a charge laid against Mr. Houde?

6. If so, when, and what is the nature of such charge?

Mr. ST. LAURENT:

1. Yes.

2. Answered by No. 1.

3. Yes.

4. In the office of the officer commanding the R.C.M.P. at Montreal, August 3, 1940,

and in writing forwarded to him at Fredericton, May 22, 1943, immediately after he made a request for a hearing.

5. No information.

6. Answered by No. 5.

WARTIME PRICES AND TRADE BOARD—EMPLOYEES RECEIVING OVER $3,000 A YEAR

Mr. DIEFENBAKER:

1. Who are the employees who receive over $3,000 a year in the employ of the wartime prices and trade board, and where are they located?

2. What honorarium, living or other allowance, and travelling expenses, have been paid to each of the said employees since appointment?

3. Which of said employees are permanent civil servants? Which were appointed under the Civil Service Act?

Mr. HANSON (York-Sunbury): The government has scored an almost perfect record in answering questions to-day. I think four out of 43 have been answered. I want to know why the first question on to-day's order paper, which has been standing for six weeks, is not answered. It could have been answered long ago, if proper records are kept at the head office of the wartime prices and trade board.

Mr. ILSLEY: My parliamentary assistant could answer that better than I, but I suspect that the answer is that the work of compiling and segregating and copying such items as travelling expenses is very onerous. Answering many of these questions takes a good deal of time and is very expensive. I may say that never since I have been in the House of Commons have I seen so many questions requiring long answers asked by an opposition. It is the opposition's right.

Mr. HANSON (York-Sunbury): And duty.

Mr. ILSLEY: —but when the government asks, as it did to-day, that a number of questions stand, it is because of the enormous mass of work which is cast on the government and the overworked staffs of the government in compiling difficult and long answers to questions.

Mr. HANSON (York-Sunbury): I hope the inference is not that we should not ask questions.

Mr. ILSLEY: I did not make any such inference at all.

Mr. DIEFENBAKER: I cannot understand this explanation from the minister in regard to the failure to answer this question.

Some hon. MEMBERS: Order.

[Mr. St. Laurent.]

Mr. DIEFENBAKER: It is not the explanation for the failure of the government to answer it. I object very strongly to the minister suggesting that any question I ask is not being answered because of the amount of clerical help which it will require. There is another explanation, and I think the minister in fairness to me had better explain that it is the government that is holding up the answer—

Some hon. MEMBERS: Order.

Mr. DIEFENBAKER: —and that the reason is not that it is going to take much time to prepare the answer.

Mr. ILSLEY: If there is another answer I am not aware of it. But I was asked by the hon. member for York-Sunbury (Mr. Hanson) on a day when my parliamentary assistant was not present, and I said that he could give the answer better than I, but I suspected the answer was the one which I gave.

Mr. DIEFENBAKER: The suspicion is not correct.

Mr. ILSLEY: I do not know about that.

QUESTIONS PASSED AS ORDERS FOR RETURNS

FINANCIAL ASSISTANCE TO GALT, ONT., INDUSTRIES

Mr. NOSEWORTHY:

1. What is the total financial assistance given to each of the following companies since the outbreak of war by the government of Canada and/or the British government, (a) Babcock-Wilson and Goldie-McCullough Limited; (b) Shirley-Dietrich-Atkins Company Limited; (c) Canadian Machinery Corporation; (d) Whitehall Machinery and Tools Limited; (e) Galt Brass Company Limited; (f) J. A. M. Taylor Tool Company Limited; (g) R. McDougall Company Limited; (h) Galt Malleable Iron Company Limited; (i) Galt Metal Industries Limited, all of Galt, Ontario?

2. What is the total value of Canadian and/or British government machinery or tools of any kind installed in each of the above-named companies' plants since the outbreak of war?

3. What is the amount of depreciation (accelerated or other) allowed each of the above companies per year since the outbreak of war by arrangements of the depreciation board?

4. What percentage of each company's capital outlay for extension and equipment of its plant is permitted each year by the depreciation board, and over how many years do these arrangements apply?

DISALLOWANCE OF PROVINCIAL ACT

Mr. GREEN:

1. What provincial acts have been disallowed since the year 1920?
2. What were the respective reasons for the disallowance of such acts?
3. Upon what dates were such acts disallowed?

Mr. ST. LAURENT: Although this is something to be dealt with entirely by the Justice department, I hope the hon. member will agree that the question should be made an order for a return. The reasons asked for would extend over several pages.

Mr. GREEN: That is quite satisfactory.

MOBILIZATION ACT—FAILURE TO REPORT

Mr. SHAW:

1. By divisions, what was the actual number of persons called for military service under the provisions of the National Resources Mobilization Act?
2. What percentage of those who were called in each division failed to report voluntarily?
3. What percentage of those called for military service from each division still remain unaccounted for?
4. Of those who did appear following call, how many applied for exemption on the grounds that they were conscientious objectors?
5. What percentage, in each division, of those who applied for exemption as conscientious objectors were actually exempted from military service?
6. By administrative divisions, what percentage of those who were apprehended following failure to report for military service or alternate work service were, (a) jailed or jailed and also fined; (b) given the option of fine or jail sentence?
7. What was, (a) the average fine imposed in each administrative division; (b) the average jail sentence imposed?
8. By administrative divisions, what percentage of those who were fined were assessed, (a) more than one hundred dollars; (b) less than twenty-five dollars?
9. Of those who were jailed in each division, what percentage received sentences of, (a) one year or more; (b) less than thirty days?

FUEL SHORTAGE

Mr. McGIBBON:

1. How much money has been paid by the government in fuel wood subsidies to date?
2. (a) What is the estimated quantity of fuel wood cut to date in the year 1943; (b) what was the estimated quantity cut in the corresponding period of 1942?
3. (a) What is the estimate of the total supply of fuel wood that will be available on December 1, 1943; (b) what are the estimated total requirements of fuel wood for the winter season of 1943-44?
4. Are fuel wood reserves in excess of local needs being accumulated for distribution to large centres such as Montreal, Toronto, etc.?
5. (a) What quantity of coal was available June 15, 1942; (b) what quantity was available June 15, 1943?
6. What steps have been taken by the government, other than fuel wood subsidy, to alleviate any possible fuel shortage in the coming winter?

POTATO SUPPLY

Mr. BENCE:

1. Is there a shortage of potatoes in any sections of Canada?
2. If so, in which sections is there such shortage?
3. Is there a surplus of potatoes in any sections of Canada?
4. If so, in which sections is there such surplus?
5. Have any American potatoes been imported into this country since 1st January, 1943?
6. If so, what was the total amount so brought in?
7. Was any government subsidy paid with respect to any such potatoes? If so, what amount?
8. What steps are being taken by the government to ensure that Canadian potatoes, in those sections of the country in which there is a surplus, are used before any potatoes are imported?

COAL SUBSIDIES—NOVA SCOTIA

Mr. GILLIS:

1. How many tons of coal were mined, (a) in 1941; (b) in 1942, by each of the following companies: Dominion Coal Company, Acadia Coal Company, Nova Scotia Steel and Coal Company, Cumberland Railway and Coal Company?
2. Were any subsidies paid by the government to any of the above-noted companies in 1941? If so, what were the total amounts, on what basis were they paid, and at what rates?
3. Were any subsidies paid by the government to any of the above-noted companies in 1942? If so, what were the total amounts, on what basis were they paid, and at what rates?
4. Were any special depreciation allowances made to the above-noted companies in 1941? If so, what were the amounts?
5. Were any special depreciation allowances made to the above-noted companies in 1942? If so, what were the amounts?
6. What were the net profits of each of the above-noted companies in 1941 and 1942?
7. What taxes were paid by each of the above-noted companies in 1941 and 1942?

R.C.A.F.—OSTEOPATHS

Mr. SHAW:

1. Has the Royal Canadian Air Force considered at any time since the outbreak of war the enlistment of osteopaths?
2. Was a bulletin issued at any time inviting osteopaths to enlist in the Royal Canadian Air Force? If so, upon what date was such bulletin issued?

3. What were the stipulated qualifications required of osteopaths who were invited to enlist in the R.C.A.F.?

4. Was a bulletin issued at any time indicating the duties which enlisted osteopaths would be obliged to perform? If so, what were the said duties?

5. How many osteopaths have been enlisted as such into the Royal Canadian Air Force since the outbreak of war?

6. What rank was granted to each osteopath who enlisted?

7. Were any of the enlisted osteopaths officially advised that they would be granted promotion as they showed their ability in their profession?

8. Have any of the osteopaths who enlisted as such in the Royal Canadian Air Force been permitted to give osteopathic treatment to personnel of the Royal Canadian Air Force?

9. Have any of the osteopaths who enlisted as such in the Royal Canadian Air Force been given the opportunity to remuster or secure discharges?

10. Of the osteopaths who enlisted as such in the Royal Canadian Air Force, how many have been granted commissions?

VULCAN AIR TRAINING SCHOOL

Mr. HANSELL:

1. What are the names of companies or individuals having done contract work or subcontract work on the Vulcan air training school?

2. What amount did each receive for work done?

3. What companies or individuals have done or are doing work on the water pipeline for this school; how much has each been paid, and what is the estimated total cost?

DEPARTMENTAL NEWS RELEASE SERVICES

Mr. BENCE:

1. How many departments of the government have special news releases of their own?

2. What are the names of such departments, and how many such releases are sent out by each department per month?

3. What coordination is there in the dissemination of the news contained in such releases with that released by the wartime information board?

OTTAWA GIRLS' HOSTEL

Mr. MacINNIS:

1. What was the total cost of, (a) the building; (b) the furnishings and equipment of the girls' hostel, Laurentian Terrace?

2. What number of persons will the building accommodate?

3. How many are in residence there now?

4. (a) What are the rates charged; (b) on what basis are the rates determined?

5. Has the Ottawa housing registry committee approved of these rates?

6. What are the regulations regarding hours and supervision?

7. What is the total number of staff employed?

8. How was the staff appointed?

[Mr. Shaw.]

MOTIONS FOR PAPERS

INTERNATIONAL CURRENCY CONFERENCE

Mr. QUELCH:

For a copy of reports and recommendations of the Canadian representatives who attended the conference at Washington dealing with the stabilization of international currencies, summitted to the Canadian government, any department thereof, or Bank of Canada.

Mr. ILSLEY: One of these days I shall be making a statement to the house with regard to this matter, and in the meantime I should like this question to stand. There are no recommendations or reports—at least, if I understand the sense of the question.

Motion stands.

WARTIME HOUSING LIMITED—WINNIPEG

Mr. KNOWLES:

For a copy of all letters, telegrams, memoranda and other documents exchanged between Wartime Housing Limited, or any official thereof and the city of Winnipeg or any official thereof, dated since April 1, 1941; also for a copy of all letters, telegrams, documents and memoranda exchanged between the Department of Munitions and Supply, or any official thereof, and the city of Winnipeg, or any official thereof, relating to housing in the city of Winnipeg, dated since April 1, 1941.

WARTIME HOUSING LIMITED—WINNIPEG

Mr. KNOWLES:

For a copy of all correspondence, dated since January 1, 1942, received by Wartime Housing Limited, the Department of Munitions and Supply, and/or by any other department or official of the government, from any individuals or organizations, relating to the proposal of Wartime Housing Limited, to erect permanent houses in the city of Winnipeg.

R.C.A.F.—OSTEOPATHS

Mr. SHAW:

For a copy of air force recruiting bulletin No. 271; also for a copy of all correspondence, including letters and telegrams, passing between the Department of National Defence (air services) and any official thereof, and any person or persons respecting the enlistment of osteopaths into the Royal Canadian Air Force.

POST-WAR CIVIL AVIATION

PROPOSED ANGLO-AMERICAN CONFERENCE—CANADIAN REPRESENTATION

On the orders of the day:

Mr. GORDON GRAYDON (Leader of the Opposition): May I ask the Prime Minister

if he is in a position yet to make any announcement as to when the proposed Anglo-American civil aviation conference will be held? Press dispatches from Washington indicate that this meeting was originally set for June, but now may be delayed until September. Also I should like to have the Prime Minister assure the house that Canada will be represented at the conference.

Right Hon. W. L. MACKENZIE KING (Prime Minister): I have no comment to offer in answer to my hon. friend's question. It is based on a press dispatch from Washington which appears, I understand, in the Montreal *Gazette* of to-day. It may be a trial balloon intended to draw information from the comment it may provoke here, which might be used in London and possibly in Washington itself. In the circumstances I do not think I should make further comment at the moment.

Mr. GRAYDON: In other words, the Prime Minister is not going to be a trial balloonist.

LEGATIONS

INQUIRY AS TO EXCHANGE OF REPRESENTATION BETWEEN MEXICO AND CANADA

On the orders of the day:

Mr. GORDON GRAYDON (Leader of the Opposition): May I ask the Prime Minister if the government has received any request from the Mexican government asking that a Canadian minister to Mexico be appointed? If so, has the Mexican government indicated that it desires to appoint a minister to this country?

Right Hon. W. L. MACKENZIE KING (Prime Minister): Conversations or exchanges of views between governments looking toward the exchange of diplomatic representatives between countries are from the nature of the case necessarily confidential. I am not therefore in a position to answer my hon. friend's question. I would say however that the government is fully aware of the importance of developing closer and more direct relations between Canada and other friendly countries. I hope to be able to make announcements in the house from time to time of the advantage the government has taken of opportunities to that end as they may arise.

Mr. GRAYDON: Consideration is given, in other words?

72537—258½

Mr. MACKENZIE KING: To wider diplomatic representation, yes, with several countries.

CIVIL SERVICE

PRESS REPORT AS TO DISSOLUTION OF ADVISORY COMMITTEE

On the orders of the day:

Mr. GORDON GRAYDON (Leader of the Opposition): May I ask the Minister of Finance, in view of local newspaper reports which point to an early dissolution of the advisory committee on civil service matters, whether or not the Coon committee is being discontinued, and if so, what are the government plans with respect to the constitution of a new committee to carry on its work?

Hon. J. L. ILSLEY (Minister of Finance): This Coon committee has not been discontinued, and—

Mr. SPEAKER: Order. I do not wish to interrupt the Minister of Finance, and I desire to give as much latitude as possible to the leader of the opposition, but I think that in this case the rule of the house to which I have called attention must be complied with.

Mr. HANSON (York-Sunbury): The minister is willing to answer.

HALIFAX HOTEL PROPERTY

QUESTION AS TO PURCHASE OR LEASE BY THE GOVERNMENT

On the orders of the day:

Mr. P. C. BLACK (Cumberland): Will the Minister of Justice confirm or supplement the replies he made to a question which was passed as an order for return on May 13, with regard to purchase of the Halifax Hotel, Halifax, Nova Scotia? The replies brought down at that time were not accepted by a great many people in Nova Scotia, and there has been a recent report with respect to this transaction.

Hon. L. S. ST. LAURENT (Minister of Justice): I am very sorry if anyone was unable to accept the answer which was made. The answer was in accordance with the facts at that time. There have been subsequent facts with respect to which I shall be glad to supply an additional answer if the hon. member wishes it.

Mr. BLACK (Cumberland): I should like the minister to supply the house with that information.

LABOUR CONDITIONS

STRIKES IN QUEBEC SHIPYARDS

On the orders of the day:

Mr. KARL K. HOMUTH (Waterloo South): May I ask the Minister of Labour if he has anything further to say with respect to the settlement of the strikes at the shipyards in Quebec, apart from what has appeared in the newspapers?

Hon. HUMPHREY MITCHELL (Minister of Labour): No. I have not had forwarded to me yet the terms of settlement, but I think my hon. friend will agree that we are glad to see the men back at work.

WAR APPROPRIATION BILL

PROVISION FOR GRANTING TO HIS MAJESTY AID FOR NATIONAL DEFENCE AND SECURITY

The house resumed from Friday, June 25, consideration in committee of a resolution to grant to his majesty certain sums of money for the carrying out of measures consequent upon the existence of a state of war—Mr. Ilsley—Mr. Donnelly in the chair.

DEPARTMENT OF LABOUR

Vocational training of discharged members of Canada's armed forces, $525,000.

Mr. HANSON (York-Sunbury): I was not here during the latter part of the session on Friday evening. Am I to understand that the general discussion on this resolution, so far as it relates to the Department of Labour, has been completed?

The ACTING CHAIRMAN (Mr. Donnelly): Yes.

Mr. HANSON (York-Sunbury): And therefore it would not be in order to discuss a particular item until it is called?

The ACTING CHAIRMAN (Mr. Donnelly): That is right.

Mr. HANSON (York-Sunbury): Then I will sit down.

Mr. GRAYDON: Before this item carries, the question of vocational training of discharged members of Canada's armed forces requires something more than simply the passing of an item. It has to do with a subject in which there is more than usual interest throughout the dominion, and one which forms a vital part of the whole rehabilitation programme and the plan for settling and rehabilitating our men when the war is over.

[Mr. P. C. Black.]

The vocational training of discharged members of Canada's armed forces, and the plans which have been made in connection therewith, may I think properly form the subject of some consideration by this committee at this time, because on many occasions complaints have been made by the public with regard to the manner in which men who have been discharged from the armed forces are being treated in Canada. I realize that perhaps in many instances these reports are without foundation, but it is most important that the government should see to it that, of all classes of our people to whom attention is paid at this time, consideration is given to discharged members of the armed forces, because of the fact that they constitute the major section of the population and, further, because of the sacrifices they are prepared to make on behalf of the country. I should like the minister to indicate to the committee what the plans are with respect to this vocational training. If the minister will give me his attention—

Mr. MITCHELL: I am giving it. Don't worry.

Mr. GRAYDON: I would ask the minister to give the committee the benefit of his information with regard to the number of discharged soldiers who have either begun or have been offered or have completed training under this particular item. What plans are contemplated for the future? Will the minister also give some information as to the type of vocational training which the government has in mind for men who have been discharged from the armed forces?

Mr. MITCHELL: As my hon. friend is probably aware, the Labour department merely takes care of training through the instrumentality of the training section of the department. Up to date 1,200 returned men have been trained or are being trained. The course of training is similar to that undertaken under the general training scheme. There is a choice on the part of the men for the kind of training they wish to undertake, and I need hardly tell my hon. friend that it is simply a matter of training them and putting them to work, because there is no dearth of employment, as there was following the last war, after training is completed. The real problem will come when the war is over, but plans are laid under the act passed last year to set in motion policies that will have for their purpose the training of men discharged from the armed forces at the conclusion of the war.

Mr. HANSON (York-Sunbury): I am sorry the Minister of Mines and Resources is not in his place, because I had a communication this morning from a returned veteran in British Columbia who applied in November last for an allotment under the land settlement scheme. He has never heard a word about it since. Is that the kind of attention the Department of Labour will give returned veterans?

Mr. MITCHELL: If any member of this house has knowledge of delay in connection with the training of any veteran who has returned from this war, I shall be glad to hear about it.

Mr. MACDONALD (Brantford City): I have made an inquiry of the department in regard to a man who desired to go on the land, and I have been informed that the department is being organized by provinces and that all the provinces are not yet organized, so that men who are applying from some provinces may not yet have received word.

Mr. HOMUTH: What are you—an apologist for the department?

Mr. MACDONALD (Brantford City): The member for York-Sunbury has told of his experience with the department, and I have just as much right to tell of my experience.

Mr. HANSON (York-Sunbury): On a question of privilege, I did not refer to my own experience but to the experience of a veteran. I have taken the matter up in a courteous way with the associate director and I have no doubt I shall get a satisfactory explanation.

Mr. MACDONALD (Brantford City): May I continue to tell of my experience with the department? I have inquired with reference to men who are now serving in the imperial army. In fact, some of them have been taken prisoner, and it is my information from officials of the department that they will evolve a plan under which men who are now serving in the imperial forces and also in the Canadian forces will be given an opportunity when they return to go on the land. In all my dealings with the department I have had nothing but prompt replies.

Mr. PERLEY: I have had one or two inquiries with regard to this—

Mr. MITCHELL: On a point of order, I have nothing whatever to do with the farm settlement scheme, and there is nothing in these estimates of mine dealing with it. I suggest that if members have questions with reference to that scheme, they wait until the Minister of Mines and Resources is here.

Mr. PERLEY: What I have to say does not happen to refer to farming. It is another matter. These men who have returned are anxious to know how to proceed in order to take advantage of this opportunity, and I think a great deal of publicity should be given to the regulations. I was going to ask the minister what publicity they are being given, and what percentage of the men already discharged have made application for training. I believe a very small percentage of those who would like to take advantage of it have made application.

Mr. MITCHELL: I meant to point out in replying to the leader of the opposition that the returned men in question are referred to us by the Department of Pensions and National Health. If my memory serves me correctly, about 93,000 men have been discharged from the armed forces, and as I indicated a moment ago, 1,200 are receiving training under the auspices of the Department of Labour. In view of the comparative ease with which a job can be obtained at the present time it appears to us that most of the men who have been discharged from the armed forces do not bother much about training, because they can get a job without it. I suppose it is the natural thing to do.

Mr. HANSON (York-Sunbury): Are the men given any choice? Is it not up to the department to see that they have the opportunity to take advantage of this training?

Mr. PERLEY: I understand, then, that in the mines and resources estimates there will be an item similar to this; or will they work on part of this vote?

Mr. MITCHELL: What I meant was that I have no jurisdiction over the soldier settlement plan.

Mr. PERLEY: No portion of this money is used for that plan?

Mr. MITCHELL: No, none at all.

Mr. GREEN: The minister has mentioned a fact that is well known to all of us—that most of these discharged men are able to find work. But suppose a man does not wish to stay at that work for the rest of his life; suppose he wants to get training for some other type of

work. Can he get any assistance as long as he is employed? I have received complaints to the effect that if a discharged soldier is working he is not eligible for assistance. For example, could he get help to enable him to go to night school, or to take a correspondence course, or to get training in some other way for an occupation different from that in which he happens to be engaged at the present time?

Mr. MITCHELL: Of course there are what are called vocational advisers attached to the major offices under the unemployment insurance commission, and when a returned man wants training, his case is investigated by one of these vocational guidance officers. I do not know why he would be refused that assistance, because we are only too anxious to get people to train.

Mr. GREEN: If a discharged man has a job and is working, can he get help in order to train for some other job?

Mr. MITCHELL: Yes, he could attend evening classes; there is no objection to that.

Mr. GREEN: Is the minister sure that man would get financial help in order to attend classes in the evening, for example?

Mr. MITCHELL: Of course my hon. friend understands that it would have to be an approved course. If the man took these evening classes in his spare time, as many civilians do, I should not think he would expect to get paid twice.

Mr. GREEN: But will the department pay for his tuition at that evening class?

Mr. MITCHELL: Absolutely.

Mr. GREEN: And will the department pay for a correspondence course?

Mr. MITCHELL: It has to be an approved course. At the moment I could not go as far as to include a correspondence course.

Mr. HANSON (York-Sunbury): Where are these training classes held?

Mr. MITCHELL: At vocational and technical schools all over the country.

Mr. SENN: I do not suppose agriculture is included in these trades and occupations?

Mr. MITCHELL: As yet we have not established any classes in agriculture for returned soldiers.

Mr. SENN: Reference was made a few moments ago to the Veterans' Land Act. I understood from what took place in the committee that certain training would be given to soldiers when they came home if they wanted to go on the land. Would that be included under this item?

Mr. MITCHELL: While at the moment we are not following the suggestion of my hon. friend, I am sure if there should be a need for classes of the kind mentioned we would be prepared to develop them.

Mr. COLDWELL: Is any of this money to be used to enable university students whose courses have been interrupted by the war to go on with their training?

Mr. MITCHELL: That comes under the next item.

Mr. COLDWELL: I thought the next item was for assistance to the universities in meeting extra costs in accelerating courses.

Mr. MARTIN: And in providing loans to certain students.

Mr. COLDWELL: That covers the sort of thing I have in mind, then?

Mr. MARTIN: Yes.

Mr. GILLIS: Personally I am not quite satisfied with the explanation given by the minister in regard to the vocational training provided for men discharged from the army. I believe the machinery provided for that purpose is anything but satisfactory. There is a great deal of delay, and many factors militate against the man who returns from the armed forces. As I understand the machinery now provided, it is strictly of an emergency nature; the training given to-day is for the purpose of fitting a man to go immediately into industry. In other words a man is given a short course which will enable him to take his place in war industry. I do not visualize that as a satisfactory vocational training programme for the future, though it may be all right now, to meet a temporary need. The machinery provided to enable the man to get in touch with a vocational training officer is also unsatisfactory. Let me take my own province as an example. There is one welfare officer for the whole province, who sits in with the unemployment insurance officers in Halifax. It is necessary to get through to him in order to make application to take advantage of the regulations as they now exist, and many of the boys coming out of the service have no knowledge of this officer. Men who have been out of the army for three or four months have written me to find out how to go about getting this training, and there is a great deal of delay in getting in touch with this one welfare

officer. Most of the men coming out of the army are forced to take whatever employment is offered, in order to live.

If a discharged soldier desires to take advantage of these arrangements for vocational training, he is informed that he must present himself at a certain centre. This may mean that he will have to go three, four or five hundred miles from where his family lives. During the time he is taking that course he receives $14.40 a week if he is a married man. That is not sufficient to pay his board while taking the course and at the same time maintain his family in another part of the country. This situation is peculiar to Nova Scotia. I do not know what the arrangement is in the other provinces, but many more men would take advantage of vocational training if some provision were made for subsistence allowances while they were taking their courses. Many men who have been discharged from the army are in industry only temporarily, and later on the job of reestablishment will have to be done all over again.

I have a suggestion to offer to the minister which may be worthy of consideration. To-day, particularly in central Canada, there are some plants which are going out of war production; I would direct attention particularly to Research Enterprises Limited in Toronto, a technical plant which has been making certain instruments. Parts of these plants are going out of production. Employees are being taken completely out of them and placed in other essential lines. These plants are equipped to do certain jobs. They could easily be converted back into training machinery so that the plant might be utilized following the war. People could be trained to do a job which would be of permanent benefit to them.

I suggest the minister will have to give consideration to the matter of remuneration, especially if he expects returned soldiers to take vocational training. Provision will have to be made for the families of these men while they are living away from home. In Nova Scotia they are trained in New Glasgow, or in New Brunswick in Moncton, and they have to travel four or five hundred miles from their homes, maintaining themselves and their families at the same time. It is all right in an emergency to have men enter a war industry, but a permanent arrangement must be made for the time after the war.

Mr. MITCHELL: Of course, as I said before, the Department of Pensions and National Health merely turn the returned soldiers over to us for training. No doubt the minister of that department will take note of the hon. member's observations. With respect to using the buildings now used by Research Enterprises Limited, may I point out that at this very moment conversations are going on between officials of my department and those of the Department of Munitions and Supply with that end in view.

Mr. McCANN: Where discharged members of the Canadian armed forces take advantage of facilities offered by vocational and technical schools which are maintained by the various municipalities, does the assistance go to the individual or to the institution? If it goes to the individual, on what ground; and what are his prospective expenses in connection with it? I ask these questions in view of the fact that these institutions are maintained by local communities.

Mr. MITCHELL: The payments go to the individual. We pay any additional cost in the community. For instance, a municipality may give us a school. In some instances we share the costs, and in others we pay all the costs. We may pay the salaries of extra teachers.

Mr. WRIGHT: What is the position of a man who gets his discharge now and takes a job in a war industry which, after he has worked there a year or year and a half, closes down? Will he then be able to get vocational training for another job?

Mr. MITCHELL: We have not yet been faced with that situation, but the hon. member may rest assured that at least while I am minister we shall try to do the sensible thing.

Mr. MacNICOL: I should like to ask one or two questions with respect to vocational training. I refer to the returned men who are sent to factories or schools for such training. For instance, does anyone from the minister's department with authority to inspect make any follow-up to ascertain how these people are taught?

Mr. MITCHELL: We have regional directors in each province. They in turn have inspectors who look over the work that is being done.

Mr. MacNICOL: I am particularly concerned with the large increase in accidents in factories, particularly in Ontario. I refer to that province, because it is a report from Ontario which I hold in my hand. Are the men who have been called to these factories receiving adequate protection? If they are not used to working in plants they are much more likely to have accidents than if they had been trained in industrial plants. The statements with respect to accidents are alarming. For instance, the Toronto *Evening*

Telegram of June 25, 1943, contains a report in which figures issued by the Industrial Accident Prevention Association are given. The report shows that there has been an increase in accidents to the extent of five per cent, and that the number of accidents in May reached the alarming figure of 10,320, of which 26 were fatalities. Then, $937,649 was paid out by the workmen's compensation board in May of this year. These are figures for the province of Ontario alone, I believe, and they are very bad indeed. If they apply in equal proportion throughout Canada the total would be a matter of serious concern.

It must be remembered that many of the young men who went overseas and were there for two or three years had not done a day's work in industry before their enlistment, because many of them had not had employment during the depression period. What training are those men to be given? Unless they are taught how to prevent the loss of fingers, or to avoid being struck on the head or having a foot smashed, they may be the victims of accidents. If precautions are not taken, many Canadians will be handicapped, not only by injuries sustained in the war, but by those sustained subsequently as the result of industrial accidents.

The workmen's compensation board will not carry them on indefinitely. If the department has established means of training these inexperienced men in factories, it should see to it that they are protected against themselves. I have had a long experience in industry, and I have learned that accidents take place very easily. I know that various governments have inspectors who endeavour to surround machinery and other industrial hazards with every possible protection. Perhaps the time has arrived when the federal department of labour should step in and see to it that men sent to factories for training purposes are safeguarded against accidents.

Mr. MITCHELL: I too have noticed the increase in the number of industrial accidents. I suppose that is the natural result of the tremendous expansion in industry. Many are entering industry for the first time. As to these trainees of ours, so far as I know we have not had a serious accident in the last year. My hon. friend is aware of course that workmen's compensation is under provincial jurisdiction, and operates in all the provinces. In most of the provinces, if not indeed all of them, there are accident prevention associations, or organizations of a similar type, financed by industry on an assessment basis. We have indicated to the provincial workmen's compensation boards this alarming increase in the number of accidents.

[Mr. MacNicol.]

Mr. MacNICOL: Your department has, do you say?

Mr. MITCHELL: Yes, our department has. But I think the hon. member will agree with me that the matter of factory supervision and legislation pertaining thereto comes within the four corners of property and civil rights, and that it is far better to use the instrument already built up than to have the federal Department of Labour enter the field of its own accord. In Ontario they have a most efficient accident prevention association. Naturally the worker is conscious of any loss of earning power, and that possible loss is an incentive to him to take some interest in accident prevention. The employer is interested, too, because his assessment with respect to workmen's compensation goes up and down according to the accident rate.

Under our training plan, in some centres we conduct classes in first aid. I believe that is at least a contribution, possibly not to the actual prevention of accidents, but to the lessening of the results of accidents. We know that sometimes workmen do not take that degree of care in respect to the possibility of minor accidents that they should. A workman may cut his finger and let it go without the necessary attention, and this may result in something serious, such as blood poisoning. For a great many years I took a keen interest in workmen's compensation in Ontario, and I have served on many committees set up by the labour movement which waited upon the Ontario government to ask for amendments to the workmen's compensation act of that province. While I have not the figures before me, I think it can be said that within the period of a generation there has been almost a transformation in the approach to the prevention of industrial accidents and disease. There has been a tremendous improvement over what existed twenty-five years ago. While I regret along with my hon. friend the increase which has taken place, I think it is one of those things that you cannot control, especially when you consider the tremendous expansion in industry which has taken place and the fact that so many people have entered industry for the first time.

Mr. JOHNSTON (Bow River): How long does a man have to be in the service before he is eligible for this grant?

Mr. MITCHELL: If he has an honourable discharge I think he could get it at any time.

Mr. JOHNSTON (Bow River): Is there any stated time?

Mr. MITCHELL: Not to my knowledge.

Mr. JOHNSTON (Bow River): If he is in only one day, he would get it?

Mr. MITCHELL: As I pointed out, these men are sent to me by the Department of Pensions and National Health. If a man had never been in the army or the navy or the air force we should be glad to train him for industry.

Mr. JOHNSTON (Bow River): I have had a little trouble in getting a case settled with the Department of Pensions and National Health. The particulars of this case have a direct bearing upon the item before the committee. The Department of Pensions and National Health refused to make a rehabilitation grant to this man because he had not been in the service the required six months, and the whole case turned upon whether his length of service would date from the day he was sworn in or from the day he was first on full pay in the service. This point should be definitely settled, because I have no doubt the minister will have to deal with similar cases. I should like to read a paragraph from a memorandum of the Department of Pensions and National Health under date of June 24, 1943, with reference to this man. It reads:

> This man, after less than six months actual active service, was discharged from the forces whilst in Deer Lodge hospital, Winnipeg, on February 17, 1942, following treatment for rheumatic fever. As he had less than 183 days active service, he is not eligible for the rehabilitation grant of thirty days' pay.

The Minister of National Defence for Air stated definitely in the house that the man was actually in the service from the day he was sworn in, but when this case comes up before the Department of Pensions and National Health the question arises whether his service would date from the day he was attested or from the day he began to draw full pay in the service. This point is not clear from what has been said by the Minister of National Defence for Air and the Minister of Pensions and National Health.

Mr. MITCHELL: I thought I made it clear that the handling of men after they are discharged is not a function of the Department of Labour, that it comes under the jurisdiction of the Department of Pensions and National Health. If my hon. friend will give me the correspondence I shall be glad to get in touch with that department and try to get an answer for him.

Mr. JOHNSTON (Bow River): Is it not the minister's department that makes these grants?

Mr. MITCHELL: The Department of Pensions and National Health send the men to us and we train them.

Mr. JOHNSTON (Bow River): The minister would have to refer back to the Department of Pensions and National Health to find out whether a man was eligible?

Mr. MITCHELL: We do not come into the picture until it is decided that a man is to be trained.

Mr. JOHNSTON (Bow River): I suppose this question would properly come up under Department of Pensions and National Health?

Mr. MITCHELL: That is right.

Mr. JOHNSTON (Bow River): That is where we are having the difficulty.

Mr. NOSEWORTHY: I am not clear, and there are many discharged men who are not clear as to the procedure which should be followed in order for a discharged man to be considered eligible for this training. First, will the minister tell the committee what the procedure is? Second, will the minister make clear the nature of the assistance which is being given to these returned men? That should be done for the benefit of the men themselves. Third, how many men are now receiving vocational training, and where are they receiving it? I realize that there may be considerable difficulty at the present time when a few men are being trained here and a few more in another part of the country, but I should like to know just what classes are being set up and where this training is available. Next, what is the nature of the vocational training classes that are available for returned men? Next, have the government given any consideration to studying the future industrial needs of the country? Our technical schools spend a lot of money on training pupils for jobs which do not exist when the training is completed, for vocations which have become more or less obsolete. Considering the technological changes that are occurring I assume the government are making sure that they know what the needs of industry will be when this training is completed.

Mr. MITCHELL: First, my hon. friend asked how a returned soldier should go about getting this training. He would get in touch with the rehabilitation officer in his locality. In the larger centres this man is to be found in the unemployment insurance offices. Next, my hon. friend asked what allowances are being given. They vary from $7 to $18 a week according to the circumstances. He

asked how many are being trained. At present there are twelve hundred. He asked where they are being trained and what training they are receiving. I have not that information in front of me, but I shall endeavour to get it before these estimates have been completed. Next, he asked if these people are being trained so that they will fit into the post-war picture. That is a pretty hard question to answer.

Mr. NOSEWORTHY: What steps is the government taking to ascertain what will be the means?

Mr. MITCHELL: My hon. friend will appreciate that it is the function of the James committee to advise the government in that direction. Then there is the MacIntosh committee and a committee of this house on rehabilitation and post-war problems. It is a difficult question to answer. A man may learn a trade to-day, and with a shift in styles or in the wants of the people, that trade may be obliterated almost overnight. It is difficult to indicate the industrial structure of the post-war period. A committee of the House of Commons is at this very moment giving study to the question my hon. friend raises.

Mr. NOSEWORTHY: How is information given to the discharged soldier, a man out in a small village, for instance, as to the officer to whom he should apply, the location of his office, and so forth, if the soldier wants to take vocational training?

Mr. MITCHELL: He is told that upon discharge. I do not think the average soldier passes much up. That was my experience in the last war, and I think the hon. member for Cape Breton South will agree with me. We had a pretty good idea of what we were entitled to and where we were going.

Mr. GILLIS: That has been the theory, but the fact is that the soldiers are not getting the information.

Mr. DIEFENBAKER: This is a very important subject, and there is a suggestion I should like to make to the minister and to the committee in connection with vocational training. When hostilities end, under the present plans of the united nations there will be occupation of friendly countries now overrun by the axis, as well as the occupation of enemy countries. I am going to make a plea for a system of vocational training to meet the needs of the period immediately after the war and until the signing of the peace treaty. I think I ought to get considerable support for the suggestion from the parliamentary assistant to the Minister of Labour, who has given many years to the study of international affairs and who is the distinguished vice-president for Canada of the Institute of Foreign Affairs.

During the past several months in the United States, as in Great Britain, consideration is being given to the post-war period when there will be occupancy of various countries from the cessation of hostilities to the signing of the peace treaty. The experience after the last war in the matter of occupation of countries was not everything it should have been. Only recently I was reading an article on this subject which quoted Colonel Hunt, who was the United States officer in charge of the occupation of Germany in 1919 and 1920. He states in, "American Military Government of Occupied Germany, 1918-20":

> All of the energy of the American army had been centered on an early decision in the field, and there had been no opportunity to study the civil problems involved in an occupation of German territory. The American army therefore began its duties in occupied territory with only the scantiest information both of the particular situation confronting it and even of a broader nature, such as would permit it to intelligently frame an organization commensurate with its wide governmental powers. From the beginning there was a crying need for personnel trained in civil administration and possessing knowledge of the German nation.

The United States has already seen the necessity of doing something in this regard and has started schools for the training of civilian administrators and other officers who will be in charge of civil affairs in the occupied territories.

Mr. MARTIN: My hon. friend is referring to the school in Virginia, for instance?

Mr. DIEFENBAKER: Yes, that is one. Two types of government will be set up, one a military government and the other a civil government. The United States in consultation with the other united nations has practically concluded that as soon as possible after occupancy takes place of an area in friendly countries now occupied by the axis, the military government should give way to a civil government, and that there should be placed in charge of those areas men from the various united nations who have been trained in civil administration. A number of articles have been written on the subject.

When occupation takes place a wide range of social and rehabilitation activities will be required. Civilian administrators will be needed who have training and experience in such matters as public health and housing, and a knowledge of the territory occupied. Furthermore, under the present scheme, educational institutions will be set up in the

occupied areas and a system of re-education will be set up in Germany and the other axis nations in order to indicate to these people the falsity of the teachings they have followed during the last thirty or forty years. The united nations will show them through education that men in all the countries of the earth can live in amity one with another. The falsity of the doctrine of blood and iron and aggression which has resulted in two wars in our lifetime will be terminated by such a system of education. But to that end trained men will be necessary. As the minister's parliamentary assistant mentioned a little while ago, schools have been opened in Virginia, and in other states of the United States schools are to be established to train men for this work. They will have to be carefully trained and will require a comprehensive course of study. These men will be selected according to their ability, their character, and their maturity and powers of leadership.

Some time ago Mr. Sumner Welles in the United States said that for a period of some years after hostilities ceased — possibly five years—there would be no peace treaty signed until a settlement had been arrived at and peaceful relations restored among the nations of the world. I make this suggestion to the minister, who I know will do everything he can to train our men for a vocation when they return from overseas, to give them an opportunity to take their place in the post-war world, when it may be anticipated that some of the economic difficulties that arose after the last war will again rear their heads in our midst and employment for our service men will again be a problem to be solved. We do not want to have men returning after this war to conditions such as those to which the last generation returned. Now is the time to set up in Canada a school of civil administration complementary to the school which is operating in the United States. It would mean that several thousand service men—I would say, at the beginning, five or six thousand of them—would receive training in civil administration. They will have served their country in time of war, and possibly many of them will be prevented by war disabilities from doing physical work. By setting up a school of this kind Canada will be enabled to take her place in the sphere of international affairs and exercise her influence in a larger way than she did before the war. The first proceeding will be the setting up of a training school; then, later, will come the training of these men, which will assure them of employment for several years after the close of hostilities, and will supply them with training which will stand them in exceptionally good stead when they return to civilian life.

I realize that what I suggest is an innovation, but since the outbreak of this war there have been many breaks with tradition. After the last war it would not have occurred to anyone to establish schools of this kind. The United States is finding that the system is working out, and a skeleton organization should be set up in Canada at once. The necessary personnel for training is available. We have in the armed forces men who are informed on public health, social service, education and the like: suitable educational staffs exist in the army. I feel that if this suggestion were implemented, many thousands of our men who might otherwise be debarred from post-war employment because of disabilities will be assured of occupation for several years in work which will be necessary for the preservation of the peace of the world. Canada must take a larger place than ever before in international affairs after the war, and the adoption of this plan will train men to take their part in the new world.

Mr. MARTIN: The hon. member for Lake Centre (Mr. Diefenbaker) has referred to a matter which the department from one point of view has seriously been considering. The question of training men of the armed services and others at the end of the war or during the war to take assignments in what we hope will be the occupied areas of Europe and Asia is not entirely, in fact it is only very remotely, a matter in which this department from an initial point of view can be said to be interested. In this country the question of training men and women for service in Europe and Asia at the end of the war is itself dependent upon policy of a higher order. In the first instance there will be the question of the proportion of appointments as between the various members of the victorious powers. There will be the question of the wisdom of having, let us say, Canadians or Englishmen or Americans serving in an administrative capacity in some of the European states and one will have to consider the psychological factor in relation to that sort of thing. However, as the hon. member has mentioned, in the United States considerable attention is being paid to this subject. There are schools in Virginia, at the university of Michigan at Ann Arbor, at Portland, Oregon, and in Washington. These at the moment are largely under the department of war or such military departments as have to do with the conduct of the war. The course of training presupposes qualifications which are

not those of the average person, and it is doubtful, in view of the training which most members of the armed forces now have, whether any considerable number could take advantage of the course.

However, the hon. member has, I think, done a great service in bringing the matter to public attention, I believe for the first time in this country. A committee of the Department of Labour is considering these matters; and, to the extent that this may be regarded in any sense as a problem of the department—and primarily it cannot be said to be such—the hon. member can be assured, knowing the interest of the minister and myself in these matters, that it will be given not only the best possible consideration, but the closest attention.

Mr. HANSELL: I want to refer back to the discussion which was pursued a few minutes ago about the allowance provided for men who are discharged and are taking training while they are away from home. I notice that order in council P.C. 2/3241, passed on April 20, provides, in the first paragraph of section 11, as follows:

> The minister may pay to a person pursuing a course under the provisions of paragraph (6) hereof and who is (1) a married person or (2) a person in respect of whom an additional allowance for dependents is being paid under this order, a living allowance of five dollars per week for any week whilst he is necessarily living away from his usual place of residence in pursuing such course and is thereby, in the opinion of the minister, obliged to incur extra living expenses.

It does seem to me that these government regulations, whether relating to this or any other type of allowance, are never framed with a view of giving the men every possible advantage. Perhaps the minister's department is not to blame. The treasury department sit above or behind them and they whittle away, whittle away, until the rules have been written up with such meticulous care that not one penny more is given than will provide anything beyond bare necessities. I fail to see how $5 a week is adequate for a man living away from home. Let me ask the minister two questions. First, does he think that $5 a week is really sufficient for a man living away from home?

Mr. JOHNSTON (Bow River): Some get $25 a day.

Mr. HANSELL: Yes, but they are not discharged veterans. I do not know whether any of these men are taking training in Ottawa. I do not think that Ottawa is any different from any other city when it comes to housing congestion and the cost of living. That being so, can the minister tell us where we can get board and room in Ottawa for $5 a week? If he can, that information will be very useful even to members of parliament, who have no exemptions for expenses, and I am quite certain it will be very useful to civil servants who get just enough salary to get by on, provided they can obtain room and board at the cheapest possible place. Will the minister answer those two questions?

Mr. MITCHELL: In the first place I have no jurisdiction over allowances to soldiers; it does not come under my department. All that my department does is to train people. That question would come under the estimates of the department of pensions.

Mr. JOHNSTON (Bow River): I do not blame the minister for evading that question.

Mr. HANSELL: That is getting to be the regular answer now, and it does seem to me that the coordination of the various departments is such that when you ask one minister a question he can easily say that it comes under another minister, and when you ask that other minister the same question he says that it comes under the items dealt with by another department. It is a case of playing tag with the various ministers and passing the buck. Perhaps the question does not come under this department, but does the minister think that $5 a week is a sufficient allowance? Perhaps he does not, but has he brought influence to bear upon his colleague the minister of pensions to have a little more given to these men?—who, remember, enlisted in the army. They volunteered to sacrifice everything and are now discharged, some of them perhaps because of ill health. Not being in receipt of pension, these brave lads are asked to take some course of training, and we think we are doing wonders for them when we give them $5 a week to live on.

Mr. JAQUES: Ask the humanitarians.

Mr. GREEN: A few moments ago we were discussing the question whether discharged men could take correspondence courses. It so happens that this morning I had a file sent to me from Vancouver. I did not have it in my hands at the time of the discussion, but I have it now. This man had served three and a half years in Canada, eventually becoming company quartermaster sergeant. On his discharge, category E, he obtained a position with the dominion civil service as a grade 4 clerk in the Dominion of Canada assay office in Vancouver, but it was pointed out to him at the time that the job was only a temporary one because

the man who held it had enlisted for work which would not result in his becoming a casualty; in other words he would come back upon the conclusion of the war; so that my informant has known all the time that he had only a temporary job. That being the fact, he applied to the veterans' welfare officer for assistance in taking a correspondence course in the International Accountants Society Incorporated. His plan was eventually to write an examination which would give him a degree from the Canadian General Accountants association. The cost of the course was $140.25. He was advised by the welfare officer to write to Lieutenant-Colonel F. T. Fairey, a provincial government employee in Victoria, but also regional director of the war emergency training programme. I have here a letter from Colonel Fairey in reply, one paragraph of which reads:

I must say, however, that under the present regulations I have no authority to pay fees for correspondence courses of any kind, either as an official of the provincial government or as regional director of the war emergency training programme. If, as you know, you were taking vocational training under post-discharge order P.C. 7633, I then would be responsible for the cost of your training during the time you were drawing subsistence allowances, but no provision is made for the type of instruction you suggest.

In other words, the man would have to be out of work and be a charge on the government for subsistence allowance before anything could be done for him. Only by being out of work could he get assistance in taking that course. That is directly opposite to what the minister told the committee when the subject was discussed a few minutes ago. It is true that this letter is dated March 17, and perhaps there has been another order in council since that time. However, this discharged veteran again saw the veterans' welfare officer and wrote to what is known as the district rehabilitation board in Vancouver. I have here a letter from them dated May 6 of this year, from which I quote the following:

The local rehabilitation board has considered your request for a correspondence course in accountancy under order in council P.C. 7633. However, the writer regrets to inform you that the board does not consider it advisable to make a grant for this purpose owing to the fact that you have had considerable experience, that you are now employed in a relatively good position and that this course is not therefore necessary for your rehabilitation.

This letter shows that, regardless of what the Department of Labour here may think, this rehabilitation board in Vancouver is not in favour of granting assistance for courses of this type, and I suggest that the last-mentioned ground is a most unreasonable one, namely, that it is not ncessary for this man's rehabilitation.

Here is a man in a temporary job—and there must be thousands of others in the same position, for example men who work in war industries but are obviously there only temporarily. Perhaps they would like to have some training that would fit them for permanent work, but the point of view of this board is that help cannot be given in a case of this kind. I would ask the minister not only to assure the committee that this rehabilitation board is wrong and that correspondence courses can be given, but to go further and indicate that decision to the various boards across Canada. When men receive treatment of this kind, in most cases they are knocked out; they are through; they do not keep coming back, because they believe it is hopeless and that they cannot get help; they are dissatisfied and it makes for discontent throughout the country.

Mr. MACKENZIE (Vancouver Centre): Can the hon. member give me the details privately?

Mr. GREEN: Yes. I will give the minister the file. This is a matter that should be made absolutely clear. A discharged veteran, in order to get help, should not necessarily be out of work but should be able to get help so that he may become permanently established.

Mr. MITCHELL: I am sorry if I misinformed my hon. friend; I did not intend to. The labour department has not yet established the principle of paying for correspondence courses with private organizations in connection with the training programme. I want to make that clear. I am not trying to evade the issue, as has been suggested, but this matter does not come under the jurisdiction of my department. It comes under the minister of pensions. My department has to do with training for trades and callings, more than the sort of thing mentioned by my hon. friend.

Mr. GREEN: Suppose a man is working in the day time on a war job and wants to take training in some trade in the evenings. Can he get that or can he not?

Mr. MITCHELL: Of course we have part time evening courses, which are free, but there is no allowance paid in connection with those. Men and women work during the day and go to those classes in the evening.

Mr. GREEN: They are employed during the day.

Mr. MITCHELL: Yes.

Mr. GREEN: Then the department will pay for their tuition in the evening?

Mr. MITCHELL: Oh, absolutely.

Mr. GREEN: There is no doubt about that?

Mr. MITCHELL: No doubt at all.

Mr. NOSEWORTHY: There is another point regarding discharged members of the armed forces. I do not see anything here which would enable a soldier to continue his education which was interrupted because of the war.

Mr. MACKENZIE (Vancouver Centre): If I may interrupt the hon. gentleman, education comes under my department entirely and can be thoroughly discussed either on the war appropriation or the departmental estimates. I can assure my hon. friend that most comprehensive arrangements have been made both for ordinary education and for post-graduate courses for soldiers when they are discharged. I do not want to hold up the estimates of my colleague at the moment; later I shall be very glad to give my hon. friend all information on that point.

Mr. NOSEWORTHY: I just wanted to ask whether education came under the Department of Labour or the Department of Pensions and National Health.

Mr. MACKENZIE (Vancouver Centre): Although the actual work of vocational training is being carried out at the present time under the Department of Labour there is in addition a most comprehensive programme of vocational training being arranged in my department. A director of vocational training has been appointed, and I shall be glad to explain fully to my hon. friend what is being done in regard to both vocational training and education under my department.

Mr. COLDWELL: Then the next item does not cover the sort of thing I had in mind in connection with university education; that will come under the Department of Pensions and National Health?

Mr. MACKENZIE (Vancouver Centre): The selection of those qualified for vocational training will come under the Department of Pensions and National Health. At the present time we are making a national survey of the whole field of education for discharged soldiers, and that survey will be completed in two or three months.

Mr. COLDWELL: Including university education?

Mr. MACKENZIE (Vancouver Centre): The regulations in regard to university education are now complete, but the survey is being made in regard to the physical, educational and vocational facilities available in every part of Canada.

Mr. COLDWELL: Then I shall wait until the minister reaches his estimates.

[Mr. Mitchell.]

Mr. GILLIS: In view of the fact that the administration of the rehabilitation regulations, including vocational training, comes under the Department of Pensions and National Health, what function is performed by the Department of Labour in connection with the expenditure of this money?

Mr. MACKENZIE (Vancouver Centre): They are doing the actual work at the present time.

Mr. COLDWELL: Do I understand that this is before discharge?

Mr. MITCHELL: No.

Mr. COLDWELL: I do not see where the work of one department ends and that of the other begins. Perhaps the minister will make that clear.

Mr. MITCHELL: I can tell my hon. friend how it happened. We have been conducting these classes for several years now, since they were introduced by the late Mr. Rogers in 1936. When the present situation developed the Department of Labour had the machinery and the experience, and we took over this obligation from pensions and national health, but the setting of the scale of remuneration and the regulations in connection with education are matters for that department. The training in industry and in the technical and vocational schools is undertaken by the Department of Labour.

Mr. JOHNSTON (Bow River): A short time ago the minister indicated that determination of the date on which actual service began was a matter for the Department of Pensions and National Health.

Mr. MARTIN: That is in the case of a discharged soldier.

Mr. JOHNSTON (Bow River): Then what about a discharged member of the air force?

Mr. MARTIN: The same thing applies.

Mr. JOHNSTON (Bow River): That is not decided by the Department of National Defence?

Mr. MACKENZIE (Vancouver Centre): It is decided by the regulations of the service branch in which the man has served, and the Department of Pensions and National Health must take the regulations of that branch.

Mr. JOHNSTON (Bow River): But pensions and national health have no control over that at all; it is up to the defence department?

Mr. MACKENZIE (Vancouver Centre): Yes.

Item agreed to.

Assistance in meeting extra costs of the universities in accelerating certain courses and to provide loans to certain students, $440,000.

Mr. HANSELL: What types of students are given this assistance? Is it given to any young man who finds that he cannot afford to go through university; and if so what procedure should be followed by one desiring to apply for assistance?

Mr. MITCHELL: It is in medicine, dentistry, science and engineering; those are the four courses; first year engineering and science, and I think they must be over five years in medicine.

Mr. JOHNSTON (Bow River): And will these amounts be in addition to what the act actually calls for?

Mr. MITCHELL: These students are chosen by a committee in each university, and an allowance of approximately $275 is given the student towards the cost of his education at that particular university. The number of students who have been assisted in this way to date is just over two thousand.

Mr. BENCE: What arrangements are made in connection with the loans, with regard to repayment?

Mr. MITCHELL: That is undertaken at each university. Some universities give the money, while others lend it. It is all arranged between the federal government, the provincial government and the university.

Mr. BENCE: If it is the money of the federal government, why should the university have the right to say whether it shall be given or lent?

Mr. MITCHELL: Where it is the money of the federal government it is purely a loan, but this is usually a joint arrangement between the provincial and federal governments. There is nothing new about it.

Mr. COLDWELL: It is a federal loan to the students, is it?

Mr. MITCHELL: Yes.

Mr. COLDWELL: Lent by whom?

Mr. MITCHELL: In some cases a federal loan and in some cases a joint loan.

Mr. COLDWELL: But a loan in every case?

Mr. MITCHELL: Not in every case; where the province puts it up it may be a gift, at the discretion of the province and the university.

Mr. COLDWELL: How many provinces are making this a gift, and how many make it a loan, does the minister know?

Mr. MITCHELL: I do not know. I can say that one good Scotch university, Queen's, makes it a loan.

Mr. COLDWELL: Some of us would be interested in knowing what is being done in our own provinces. What about Saskatchewan?

Mr. MITCHELL: I shall get the information for my hon. friend; it is best to be sure about it.

Mr. CASSELMAN: Is the boy given more than a one-year course? My understanding is that if a boy gets this loan he has to sign up for enlistment at the end of the first year of his course. The boy may go on if his standing is high enough and he can finance himself; as long as he remains in the good graces of the universities he may continue his education, but if he gets this loan from the government it is because of the fact that he agrees to go into the army at the end of one year. He can only get a one-year education.

Mr. MITCHELL: No, he is allowed to complete his course, but he does not get the loan except under certain stipulations; that is, he either goes into the fighting forces or into some industry, at the direction of the Minister of Labour.

Mr. CASSELMAN: I wish the minister would look into that more carefully, because I am definite on the point. I could give the names of boys who were given this opportunity definitely on the basis that they could get only a one-year course.

Mr. MITCHELL: It may be that in the judgment of the university a young fellow's academic standing was not sufficiently high to permit him to continue his course, but in all these courses they are permitted to complete their education. I wish the hon. member would give me the particulars of the case he has mentioned.

Mr. CASSELMAN: I shall do so.

Mr. NOSEWORTHY: Is it not true that some of the universities are giving a special one-year course to officer material? Perhaps that is what the hon. member has in mind.

Mr. MITCHELL: But not under the jurisdiction of my department.

Mr. BENCE: Will the minister obtain the information, and let us have the picture in connection with the various universities?

Mr. MITCHELL: Yes.

Item agreed to.

National war labour board, $468,445.

Mr. BENCE: As I understand it, the national war labour board was reconstituted by order in council P.C. 1141 on February 11 of this year. At the time it was reconstituted three members were appointed to it, namely the Hon. Mr. Justice C. P. McTague, the Hon. J. J. Bench and Mr. J. L. Cohen. First, before the board was set up, Mr. Bench was appointed to the senate, and when I read in the press that he had been appointed to this board I was favourably impressed, because I thought it was an instance of giving to a man in public life a position in which he could do a good piece of work. I was disappointed, however, to find two and a half months later that another order in council was passed providing for the revocation of the appointment of the Hon. Senator J. J. Bench, and the appointment in his place of Mr. Lalande, at a salary of $10,000 a year.

In the second order in council, P.C. 3512, passed on April 29, 1943, we find the following statement:

> Whereas the Minister of Labour reports with reference to the war-time wages control order (P.C. 5963 dated July 10, 1942), that the Honourable Senator J. J. Bench, K.C., in accordance with an understanding at the time of his appointment has submitted his resignation as a member of the national war labour board. . . .

What was the understanding at the time of the appointment, and what was the reason for placing on the board a man who would go into the various matters coming before the board, and who would become acquainted with the problems with which the board was confronted, only to have his appointment revoked within two and a half months?

Mr. MITCHELL: I do not know whether the hon. member knows Senator Bench very well.

Mr. BENCE: I do not know him at all.

Mr. MITCHELL: He is not strong physically.

Mr. BENCE: He is under forty years of age.

Mr. MITCHELL: That may be true; but I am sure if my hon. friend knew Senator Bench and the nature of his disability, he would not have made the observations he has made.

Mr. BENCE: What I have said was not said with the intention of casting any reflection at all. I wished only to have an explanation.

Mr. MITCHELL: Well, that is the explanation. It was understood and discussed. I discussed this matter with Senator Bench, and it was understood he would not stay very long. The reason why he left as soon as he did was that he could not stand the strain of the work of the board. He had to go south to recuperate. Senator Bench felt that, in view of the pressing nature of the cases before the board, it was his duty to resign. That is what he did, and the other gentleman was appointed in his place.

Mr. BENCE: That was in accordance with the understanding; but it was not the understanding that he would quit within two and a half months.

Mr. MARTIN: Senator Bench is a close friend of mine. I know the hon. member did not intend to cast any reflection, but since he has made the observations he did make may I say that Senator Bench had been in the armed services, serving as a commissioned officer. He was discharged for reasons of health.

Mr. BENCE: I assure the committee I did not intend any reflection whatsoever.

Item agreed to.

Expenses in connection with general labour transference in war industries and agriculture, $500,000.

Mr. COLDWELL: I should like to raise a point on this item. To-day we approach the end of June, when schools are closing. On Saturday evening I had a long-distance telephone conversation with the secretary of the teachers' alliance in Alberta. It was drawn to my attention that a large number of teachers are anxious to find war work in the summer. It was pointed out that they had made applications to the selective service branch in Edmonton for work suitable to their particular experience, physical conditions and aptitude, but that they were being told in practically all cases that the work available to them would be work on the farms.

Probably some of the younger men and women in the teaching profession are quite able to transfer from the schools to farm work. But a large number of teachers, both male and female, on account of the sedentary type of work they have been doing for ten or fifteen or more years are not physically fit for farm work.

I have a letter confirming the telephone conversation, but shall not take the time of the committee to read it. The point in question is that in Edmonton, or at points just outside Edmonton, there is a good deal of clerical work, such as checking and the like, for which applications are being invited. These teachers, who are probably best fitted

in many respects for that kind of work, are told that they cannot have it, often because the employing firm is a United States organization. And yet, as many of us know, numbers of men are being brought in from the United States to do various types of work in northern Alberta. These men are brought in long distances, and at great expense. If people are available locally who, by experience and physical condition, are fitted to do that type of work, it seems to me that they should not be directed to work they cannot do, and that they should be given an opportunity of doing the work for which they are fitted.

This is something to which the department might give its attention. In the next week or ten days, approaching the end of June, a number of teachers will be released from schools all across Canada. I believe the school terms do not resume in some of the provinces until about October 15. That is the position in Alberta; and I believe some of the other western provinces and the province of Ontario are extending the vacation period in the same way. This is being done so that teachers and pupils alike may undertake other types of work.

It is true that the work on the farm must be done and that labour is short. Where people are fitted physically or by experience for that kind of work I agree they should be directed to do it. I am not criticizing that at all. But if they are not fitted, then I say they should not be debarred from doing the kind of work for which they are fitted.

Mr. John Barnett, who has written me, tells me that he makes no criticism of the officials of selective service in Edmonton. He points out that in every instance the treatment received by those who made inquiries at the Edmonton office was exceedingly courteous, and that there was no complaint to make in that respect. I mention that only because it might be inferred that there had been some trouble when, in fact, there has been none at all.

I was surprised to hear the minister's announcement in the house that farm labour was to be transferred from Saskatchewan to Ontario at this season of the year. I cannot understand where that source of labour is available; and if it is available I do not understand why it cannot be used in districts in Saskatchewan, Manitoba or Alberta where there has been a shortage of labour. Both in eastern and western Canada, particularly in the east, I think it is more a maldistribution of farm labour. No thorough survey has been made to ensure that farm labour is directed to those places where it can be utilized most economically and efficiently.

In my opinion the question of labour on our farms will become more acute as the days go by. The demand for food will become greater. Indeed, we are witnessing to-day one of the most surprising shortages of food in the United States. Yesterday I was reading some articles in the New York *Times* regarding shortages in the United States which are rather alarming. We have a little rationing in our own country, but we are not short of anything particularly. The people overseas are on fairly short rations because the food we are getting to them is not enough. If we open up any part of Europe food will be required in very large quantities. So that it seems to me it is essential that we should keep up our food supply. I had this in mind when I was discussing the whole man-power situation last Friday.

Perhaps there could be a transfer by persuasion of labour from farms where it is not vitally needed to other farms in the same area. I have heard of cases in both this and the neighbouring province where a number of people, old and young, are employed on farms who might be more efficiently employed on different farms or on different types of farms in the same locality. But even if we do this there will still be an insufficient supply of agricultural labour. I wish the minister would take up with his colleagues, particularly the Minister of Munitions and Supply, the question of providing more machinery for the farms. I am thinking not only of the western farms where mechanization has become fairly universal on the larger units, but also of the eastern dairy farms. I know of cases where four or five people with a milking machine are able to handle sixty, seventy or even more head of milch cattle.

Mr. MARTIN: The romance is being taken out of it.

Mr. COLDWELL: The minister might take up with his colleagues the question of providing more machinery for the farm. This should be possible if some branches of our war industry have reached their peaks and are now slowing down, especially if they were previously engaged in the manufacture of farm equipment. I ask the minister to give particular consideration to my first question, that teachers who are not particularly equipped to go on the land be permitted to take positions which their physical condition will permit them to fill more efficiently and more in the interests of the country.

Mr. MITCHELL: I think it is fair to say that a large proportion of the teachers in western Canada are children of farmers, and that is where they should go in the holidays.

Mr. COLDWELL: If they are physically fit.

Mr. MITCHELL: If they are physically fit. I want to make that very definite because many hon. members have been talking about the shortage of farm labour. These people will have to go where they can be best used. While I cannot give the number of men that will be required on the Alaska highway, I may say that some months ago I discussed this matter with the United States authorities, and the number of men that will be engaged during the summer on this project staggers the imagination. We just have not a man-power pool in western Canada even to attempt to meet this need. Under these conditions our good friends to the south have arranged for a labour supply themselves. We could not disrupt the labour pool in western Canada in order to do this work. My hon. friend can rest assured that the selective service officers will be judicious in their decisions in connection with teachers being sent into agriculture this summer.

My hon. friend referred to the question of a labour supply for the west. My mind goes back to last fall when, on account of weather conditions, we were faced with a difficult situation in western Canada. University students and some farmers were sent to the west. I think it is only in the nature of one good turn deserving another that any men in western Canada who are able to give assistance to farmers in the east between the planting season and threshing should do so. This is required particularly in connection with the hay crop which is heavy this year. We are taking the advice of our organizations in Saskatchewan and other parts of the west as to what men are available.

On the question of organization, I may say that in Saskatchewan we have a "win the war committee" in every municipality. The driving force between these committees is to have labour available where it is most needed, not only in connection with planting the crops but in converting them into food and generally supplying the needs of all year round agriculture. Committees have been established in every parish in Quebec and in every county in Ontario. That is the way we are organizing in order to make the best possible use of the labour supply available.

We must not forget that there are about 770,000 farms in Canada. I think it is fair to say that there is at least one man and woman on every farm. We are apt to be a little confused in our thinking and compare labour conditions in agriculture prior to 1941 with what they are to-day. I do not think that is a fair comparison to make because in those depression years there were many people on our farms who were living there rather than working. There was no employment for them in the industrial areas. I have seen the figures, and there has never been much more than 60,000 hired men engaged in the farming industry of this country. When these comparisons are made I think due allowance should be made for the point I have raised.

In connection with agricultural machinery I can tell my hon. friend that a committee of the Department of Agriculture is working with the priority committee of my department in connection with the supply of agricultural machinery for the farmers of this dominion. No doubt by the time we get around to the agricultural estimates the Minister of Agriculture will have something to say on this matter.

Mr. COLDWELL: The point I was making was that no matter what their physical condition might be, the only work that has been offered to male teachers in Edmonton has been that of labourer and farm worker, and to the women teachers, that of waitress and laundress. That is what I want the minister to look into, to see if these could not be extended.

Mr. MITCHELL: My hon. friend will appreciate that there is a tight situation in Edmonton.

Mr. FAIR: I do not belong to the teaching profession, but during the past three or four weeks I have had several communications from teachers in my province and I have taken up some of these cases with the Minister of Labour. So far as teachers being sent to the farm is concerned, I support the argument of the hon. member for Rosetown-Biggar. He must have a copy of the notes I have before me because he has discussed the points I intended to raise. When the minister is preparing to send these teachers to the farm he should consider the wages that are to be paid. A farmer cannot pay wages that will be attractive to a teacher and I am afraid it will be found that many of them will be trying to get into other lines of work. I agree with the minister that a number of the teachers have come from the farm, but I suggest that a number of them are not in shape to stand the hard work that must be done on the farm. In regard to the lady teachers, I would like the minister to make it clear whether those who have matrimonial engagements will be compelled to have a stay of proceedings on such engagements until the war is over, or whether

they can go ahead, because I know a number who have engagements for next month or immediately after school is out. Would the minister let us know the Liberal policy or definition of these teachers being frozen?

Mr. MITCHELL: All matters relating to the affections I shall refer to my assistant.

Mr. FAIR: I hope they will be as well taken care of as he has taken care of his own along that line.

The minister in his statement on Wednesday last gave great prominence to the agricultural profession, if I may call it that; I only wish it was elevated to that happy position. As reported at page 3934 of *Hansard*, the minister gave agriculture quite a boost. It was a real Liberal boost; it consisted of words only and said nothing about financial compensation. The minister said:

> What our farmers have done is to produce more and more with fewer people. This record of achievement by our farmers, their wives, their children, and their hired men and women will be read some day as one of the glorious chapters in our history. I should like as Minister of Labour to pay special tribute to the hired men and women on the farms. They are too often forgotten in plans for social betterment. Their lot is not an easy one or an exciting one. They are doing a grand war job to-day for this nation.

I want to join most heartily with the Minister of Labour in that statement, because he is quite correct in saying that fewer of our people are producing more food than ever before. The one drawback is that they are still not paid for their labours. I do not think that statement can be successfully challenged if we take agriculture as a whole. We have been told time and again that prices of agricultural products cannot be figured out and that for that reason we cannot get parity prices or the cost of production. I would advise the Minister of Labour and the Minister of Agriculture, and even the Minister of Finance, that if they have not sufficient statisticians here in Ottawa, I can get a number of farmers to work these things out for them if they on their part will then agree to pay the cost of production. We have on the farm a number of accountants, and while they may not be regarded in Ottawa as having very much ability because they are on a farm, nevertheless they can do accounting efficiently. So that if the government cannot find statisticians here in Ottawa, I can give them the names of some people who can work these things out for them.

Farm production, I am afraid, will be a little disappointing to the government this year, even though the Minister of Agriculture told a Liberal convention only a couple of days ago that everything would be all right unless some hoarding was done. I hope that his predictions will be realized in the interests of agriculture and of our allies.

The shortage of farm machinery has been spoken of by the hon. member for Rosetown-Biggar. I have worried quite a little about this shortage, because I know of dozens of farmers in my part of the country who have put in applications for machinery and have not been able to purchase it. The shortage of good farm machinery will be reflected in farm production this summer and harvest because, if you have a poor binder or some such machine, time will be wasted needlessly, and when I say wasted I mean just that, because with fewer good operators our machinery should be kept up to a very high standard.

Coming now to the extra hours of labour, I want to say that farmers have worked extra hours ever since I came to Canada, at least some twenty-nine years ago. Other lines of industry have an eight-hour day with half a day off a week, but twelve to sixteen hours a day is the average day's labour for the farmer in Canada. If you go on the farm and watch the farmer—I do not care whether it is in eastern Canada or western Canada or the central provinces—you will find that twelve to sixteen hours is the average working day, and with poor compensation for these hours of labour I think the farmers are not being justly treated. Perhaps we farmers will have to do the same as the industrialists did in August, 1939. They said: If we do not get the cost of production plus, we are not going to manufacture. The farmers have not yet come to that point, and I hope it will never be necessary for them to do so, but in case it is, I do not think the country could blame the farmer for taking that step to get the cost of production if he cannot get it in any other way. We have a system of just prices for other products, and there is no reason in the world why the farmer should not be treated the same as any other industry.

The call-up of men from the farms is a matter that is particularly under the jurisdiction of the Minister of Labour. During recent days figures have been given showing the trend away from the farms. I think the time has come and our agriculture production has reached the stage when we must not allow any more of our farmers to be called up. Otherwise the supply of food for the united nations may be drastically reduced, and our armies cannot fight unless we supply them with the food they need.

In connection with farm help for the coming harvest, I hope the minister will see to it that we are provided with all the help that will be required for this harvest season. While a lot of benefit was derived from the help that was sent from eastern Canada to western Canada last fall, I do not think the picking of those men was just what it might have been, so that I suggest to the minister that care be taken this year and that preparations be made early to make a better choice of help to send out west for the harvest. I realize that last year it was done in a hurry, and without exception the men who were sent out did the very best they could so far as I know, but a man who comes out of a university and goes straight on the farm to stook or pitch bundles for twelve hours a day is up against a pretty stiff job.

Mr. HANSON (York-Sunbury): Under this heading I wish to ask the minister for some clarification of the recent order with respect to students of sixteen, seventeen and eighteen years of age, with particular reference to forestry students. I have written a letter to the director about this matter but have not as yet had any reply.

I would point out that in New Brunswick there is one of the few forestry schools in the Dominion of Canada. It has been the practice for the students to take their theory in the academic term; and the pulp and paper companies, and other large timber limits holders, as opportunity permits, make it possible for them to apply the principles and the theories which they learn in the academic course. This year, in accordance with the usual practice, a number of these students of the university of New Brunswick made application to the paper companies in my province for employment, and I may say to the minister that of course the pecuniary reward is a great inducement to these students. Arrangements were made for several—not a great many—to go into the forestry departments of the paper companies and to report for duty on a certain date. Then intervenes the recent order with respect to students, and they are told that before they can be permitted to go they must present a permit from the national selective service local office. On applying for that permit they are refused on the ground of the broad—perhaps I should say, the limited, or not very liberal—interpretation of the regulation. I am not finding any fault with the selective service offices at Fredericton, but these students are told they cannot enter the service of the companies because they must go on farms. These men are not a large class. If it is necessary in New Brunswick that they do so they will comply with that rigid enforcement of the order, but I suggest to the minister that the regulation be interpreted liberally. These young men are pursuing their studies; at the same time they are earning money by going into these forestry camps and doing the work of forestry students, and I would hope that the minister and his director of national selective service would interpret the rules liberally and allow these young men, who do not want to go on farms and feel they will not receive the pecuniary reward they would obtain in the forestry camps, to proceed as has been the custom in years gone by. These young men in due course will be required to answer the call for national selective service, and I believe they are patriotic and will be prepared to do so. But they are still under age, and I think that in justice to them they should be allowed to pursue their vocation, preparing themselves in a financial way for the next term's work, and follow the practice of their chosen profession, rather than have to go on farms. I should like the minister to elucidate that position.

Mr. MITCHELL: The extension of the permit system to take in persons from sixteen to eighteen years of age inclusive is merely an extension of the other system, so that we can have some control over the movements, particularly during the summer months, of people in these age groups. I thank my hon. friend for bringing this question to my attention. As a matter of fact, we have already sent out instructions in conformity with his suggestion.

Mr. HANSON (York-Sunbury): Thank you.

Mr. MITCHELL: I think it is sound and logical. The university of New Brunswick has, I suppose, one of the finest forestry courses in North America. I look upon these young men very much as one would regard science students. We make provision for science students to go into industry where they can get experience during the summer vacations, and I think it is logical for young men in this forestry course to go into the lumber industry during the vacational period of their course. My hon. friend can rest assured that as far as my department is concerned that will be done.

Mr. HANSON (York-Sunbury): That is most satisfactory.

Mr. NOSEWORTHY: I should like to refer for a moment to the employment of teachers during the summer holidays. Can the minister tell us what if any provision has been made by his national selective service officers for absorbing some 80,000 teachers who

have been released from schools to-day or will be released to-morrow. I know that until last year no provision whatever was made for the absorption of these people into the labour market, and the selective service was absolutely helpless last spring when teachers in any numbers came for guidance. In the Toronto offices the interviewers in the selective service bureaux were given every morning for weeks, by the man in charge, a notice at the beginning of the day saying, "No employment for teachers", in order that the number of teachers coming in and applying for work would not occupy the time of the people in the offices. The same applied to Ottawa and every large centre across the dominion. No assistance was given to these people who desired to procure two or three months' employment. I know that last September, when the classes opened, most of the teachers' federations across the country wrote to selective service officers asking that they begin now, early in the year, to lay some plans whereby that force of help could be used during the summer months. I am surprised to hear that the same complaint has been raised this year as in former years. Can the minister tell us what decision has been made?

Mr. MITCHELL: A month ago a directive was sent out to the 216 officers of selective service advising them to encourage teachers to register at the offices. In addition to that, a letter went forward to all the provincial departments of education along the same lines, and they in turn, I am informed, wrote to all the school boards in the respective jurisdictions. I am prepared to admit that this time last year our machinery was not as good as it is at the moment, and I am prepared to predict that six months from now it will be a great deal better than it is at the present moment. I am not making apologies to anybody for the work of the officials of selective service. As I said the other evening, this is a new organization; they are working in a virgin field as far as this country is concerned, and I think it can be safely stated without any fear of successful contradiction that as the days go by, notwithstanding criticisms by people who should know better—and in saying this I am not referring to any hon. member—they have acquitted themselves very well. My hon. friend can rest assured that as far as the teachers are concerned everything that can be done will be done to see that they are channeled into useful occupations in the province of Ontario.

Mr. NOSEWORTHY: The only answer the minister has given is that some time ago certain selective service directives were sent out. Has any specific provision been made for absorbing 80,000 teachers whose services will be available for the next three months?

Mr. MITCHELL: I can only say to my hon. friend that the mechanics are there to take about 80,000 teachers. We apply a policy, we send out the directives, and then the organization of course undertakes the carrying out of those directives. It is a physical impossibility for me to know, for instance, all the vacancies that occur from day to day in my hon. friend's own community in the city of Toronto; but from what I see in this community I do not think anybody will have a great deal of difficulty in getting employment for three months this summer. I believe that, with the assistance of our selective service organization, and subject of course to the exceptions which occasionally occur to every rule, any schoolteacher who wants a job this summer will be able to get it.

Mr. COLDWELL: The minister said something about laying down a policy.

Mr. MITCHELL: The employment officers were told to get a list of vacancies and to direct teachers into them when school broke up.

Mr. NOSEWORTHY: When was that information sent out?

Mr. MITCHELL: A month ago. In connection with farming, there is, I submit, evidence that we have done some planning in the Department of Labour, when one considers the progressive steps that we have taken during the last six or eight months. I am not looking for credit for the Department of Labour, but it indicates that last winter we were alive to the situation that would develop this spring, and plans have already been made for the harvest this fall, at least to face up to the harvest in the west.

Mr. COLDWELL: Is it the understanding, then, that the directions sent out give a broader interpretation than is given at Edmonton?

Mr. MITCHELL: Yes. But do not try to get me in a corner on this. I want to have some leeway for my people in the country.

Mr. COLDWELL: That is what I am trying to do.

Mr. MITCHELL: I know you are trying to do it, but you are not going to. Getting back to Alberta, apart from the Alcan—

Mr. MacNICOL: Alaska, not Alcan. That is a hideous name.

Mr. MITCHELL: Apart from the Alaska highway, then—I know why people want to work on the highway; it is to make money—the priority list that exists in the Ottawa office of the selective service must be the yardstick for the guidance of the officials in charge there in the placement of teachers.

Mr. JOHNSTON (Bow River): We have had some experience in the past in putting people to work on farms. Last year, when the harvest was on, a great many people from eastern Canada went to the farms and the arrangement was not satisfactory. Now we are trying to do the same thing with teachers. Last fall we had evidence to show that the people who went out there from eastern Canada, though they were enthusiastic and tried to do their best, did not come up to the required standard for farm labour. They failed for two reasons: first, they were not experienced, and, second, they were not in a physical condition to carry on. I do not care whether a teacher has been raised on a farm, if he has been teaching for a number of years he is not in a condition to go and work on a farm. There is another aspect to this matter. I believe that the majority of teachers, with their education and the extra knowledge they have as compared with ordinary labourers, could be used more beneficially in some other line of industry than on farms. It might be possible to put teachers in clerical positions in offices where such work is necessary and better results would be obtained than by some teachers being put on farms, because they would not be in a position to carry on.

We have a wrong idea about farm work. Those who think anyone can go and work on a farm are definitely wrong. It takes four weeks at least for one to get hardened if one is to carry on even then. In my opinion, the government would simply waste a lot of time by putting teachers on farms. Apparently the Minister of Labour has taken the attitude that they will go on the farms or not work at all. There are many teachers who will not work on the farm, and if they are forced to go on the farm they will not work at all. Whether that is patriotic or not, that is what will happen in many instances.

Another question to be considered is that of salary. A teacher who is used to a good salary and is forced to go on the farm will be dissatisfied, because a large number of people have left farms on account of the inadequacy of the remuneration paid, and the government is going to replace those people with teachers who will receive a low income. The farmers cannot afford to pay more than they are paying; but on the other hand this will prevent teachers from taking up any other type of work in which they would receive a higher income.

These difficulties are all before us, and the minister would do well to look into the matter thoroughly before attempting to force teachers into occupations which they may not care for or for which they are not fitted. I join in the other remarks that have been made with regard to teachers.

Mr. BOUCHER: A great deal has been said about getting workers for the farms, but another aspect that must be kept in mind, is that of retaining men on the farms. I believe the selective service should go farther than they have gone in that direction. Anyone acquainted with agricultural conditions knows that the farmers very often hire men during the temporarily slack season in order to have them during the busy season, and under present selective service regulations farm help must give seven days' notice before leaving, and that at a busy time. That is a serious element in the agricultural farm labour requirements. I believe the government would be well advised to take the matter up on a cooperative basis with the provincial legislature with a view to having a little more compulsion on the farm hand, compelling him to remain with the farmer during the busy season, instead of being lured to some other farmer or some other industry or occupation by virtue of higher wages and other inducements such as easier hours and so on. If you look at our provincial statutes dealing with wages, failure to pay wages and so on, you will find that a heavy penalty is imposed upon the employer who does not pay his employee the wages contracted for. Selective service could assist agriculture quite well if they would specialize and pay more attention to compelling the farm labourer to render the services for which he has contracted. In that regard it will be necessary to take the matter up with the provincial legislature from the point of view of jurisdiction.

I have heard complaints over this very question, where farmers, having hired men, lose them. True, there is a law that the man must give seven days' notice but there is not enough sting to compel compliance with the regulations, nor is there enough power exercised by the selective service to keep a man at his job, to which he is so essential.

Mr. PERLEY: It is wonderful how the discussion develops. I have been sitting here for quite a while, and I have heard many different matters discussed under this item. Together with the other hon. members I was certainly glad to hear the minister, as reported at

page 4019 of *Hansard* for June 23, pay a compliment to the farmers for what they have done, and I certainly agree with what he said.

I am interested in the transfer of men from western Canada to the east to help out the farmers in this part of the country, and I am anxious that those men will get back to the west in time to do the work there. I think they will do a much better job in the east than was done in the west by some of the young fellows who went from our universities to help with the harvest last fall, and I am anxious to see that they all get back to where they will be needed at harvest time. It has been suggested already that the department should make plans well in advance to see that adequate help is provided for the coming harvest, and I think it is important that these things be organized in plenty of time.

With respect to these selective service offices to which the minister has referred so often, while out of the city on Saturday I had a little chat with a gentleman who has something to do with employing men for a certain organization which has a number of offices across Canada. He told me some of the difficulties they are meeting in securing men through these selective service offices; he mentioned the bottlenecks, the difficulties that arise through the red tape and routine that must be followed. He told me that it took from four to five days to get anyone after his firm made application to one of these offices. He mentioned the number of applications and forms that had to be filled out, and I think the whole thing could be made very much simpler if proper men were placed in charge, for I believe many people are being placed in the selective service offices who do not know their business.

Coming back to the teachers, I believe many of them in western Canada will be ready to take employment during the vacation, and I think they should be allowed to accept employment in the districts in which they have been teaching. I believe they will do good work. I venture to suggest that many of them will be able to give better service than many members of this house will be able to give if we are kept here much longer. In conclusion, I repeat that I hope these men coming from the west to work on the farms of eastern Canada will be sent back when their work here is over, and will not be frozen to jobs in the east.

Mr. CASTLEDEN: Is there a shortage of labour in Saskatchewan at the present time, as the records of the department would indicate? The minister mentioned that he had victory committees operating in all districts. What do their reports show as to whether there is a shortage of labour?

Mr. MITCHELL: My hon. friend will appreciate that we have no reports from individual committees, but we have a general report and the condition is much better than they expected it to be.

Mr. HANSON (York-Sunbury): But there is still a shortage?

Mr. MITCHELL: No, we expect to move a thousand farm labourers east from Saskatchewan.

Mr. COLDWELL: There will be a shortage?

Mr. MITCHELL: For harvest?

Mr. CASTLEDEN: How many men have you taken off the farms, through selective service, say up to the end of June?

Mr. MITCHELL: You mean to come to eastern Canada?

Mr. CASTLEDEN: No; through selective service; men called into the army.

Mr. MITCHELL: None.

Mr. CASTLEDEN: Well, there are calls going throughout Saskatchewan for men to report.

Mr. MITCHELL: That is merely to report for medical examination; that is not a call for the army.

Mr. CASTLEDEN: No men are being taken off the farms at the present time?

Mr. MITCHELL: No.

Mr. CASTLEDEN: What wages are being paid the men who are being brought east from Saskatchewan?

Mr. MITCHELL: They are getting the going rate in the district, whatever it is.

Mr. CASTLEDEN: What is it at the present time?

Mr. MITCHELL: It varies, I suppose from $40 a month to $75 a month, and we pay the return fare.

Mr. CASTLEDEN: You are paying everything?

Mr. MITCHELL: Yes, everything except $5. I think the return fare comes to $120, and we pay it all but $5 in order to make sure that they go back again.

Progress reported.

At six o'clock the house took recess.

After Recess

The house resumed at eight o'clock.

PRIVATE BILLS

SECOND READINGS

Bill No. 11, for the relief of Sheila Joan Milligan Hodgson.—Mr. Abbott.

Bill No. 12, for the relief of John Elliott Cockerline.—Mr. Hill.

Bill No. 13, for the relief of James William McDonald.—Mr. Hill.

Bill No. 14, for the relief of William James Chafe.—Mr. Emmerson.

Bill No. 15, for the relief of Nettye Steinberg Litner.—Mr. McIlraith.

Bill No. 16, for the relief of Mollie Jaslow Mitnick.—Mr. Casselman (Grenville-Dundas).

Bill No. 17, for the relief of Eleanore Jeanne Lonn Yanofsky.—Mr. McIlraith.

Bill No. 18, for the relief of Ada Lahn Corber.—Mr. McIlraith.

Bill No. 19, for the relief of Bessie McKenzie Balfour Whiteley Willard.—Mr. Boucher.

Bill No. 20, for the relief of Marion Catherine Bremner.—Mr. McIlraith.

Bill No. 21, for the relief of Feodor Karpenko.—Mr. Fulford.

Bill No. 22, for the relief of Dorothy Platt Vaz.—Mr. Whitman.

Bill No. 23, for the relief of Marion Ellen Topp Doré.—Mr. Casselman (Grenville-Dundas).

Bill No. 24, for the relief of Celia Lazarowitz Cohen.—Mr. Whitman.

Bill No. 25, for the relief of Frederick Hubert Fairbanks.—Hr. Hill.

Bill No. 26, for the relief of Maude May Frances Adlam Clare.—Mr. Hill.

Bill No. 27, for the relief of Gladys Mae Bond Jarvis.—Mr. Emmerson.

Bill No. 28, for the relief of Max Shulman.—Mr. Emmerson.

Bill No. 29, for the relief of Walter Pestun, otherwise known as Walter Preston.—Mr. Tomlinson.

Bill No. 30, for the relief of Sonia Litvack Shalinsky.—Mr. McIlraith.

Bill No. 31, for the relief of Evelyn Margaret Cooke Phippard.—Mr. Macdonald (Brantford City).

Bill No. 32, for the relief of Muriel Anna Chapman Longmore.—Mr. MacInnis.

Bill No. 33, for the relief of Joseph Fernand St. Louis.—Mr. MacInnis.

Bill No. 34, for the relief of Alexander Morgan.—Mr. Whitman.

Bill No. 35 for the relief of Norma Mady Albert Chamandy.—Mr. Macdonald (Brantford City).

[Mr. Mitchell.]

Bill No. 36, for the relief of Gerald Clarkin.—Mr. Emmerson.

Bill No. 37, for the relief of Edith Rose Smith Gendron.—Mr. Emmerson.

Bill No. 38, for the relief of Alice Bernadette Choiniere Horner.—Mr. Abbott.

Bill No. 39, for the relief of Eva Pearl Gilbert.—Mr. McIlraith.

Bill No. 40, for the relief of Emma Cowsill Hill.—Mr. Fulford.

Bill No. 41, for the relief of David Joseph Kennedy.—Mr. Hill.

Bill No. 42, for the relief of Leopold Boucher.—Mr. Emmerson.

Bill No. 43, for the relief of Beatrice Ashwell Dyson.—Mr. Abbott.

Bill No. 44, for the relief of Freda Sybil Nisbet Baldwin.—Mr. McIlraith.

Bill No. 45, for the relief of Sam Hadis.—Mr. Fulford.

Bill No. 46, for the relief of Carmen Hilda Olesker Gold.—Mr. Macdonald (Brantford City).

Bill No. 47, for the relief of Léo René Doré.—Mr. Hill.

Bill No. 48, for the relief of Mary Sophia Viora St. Pierre Malhoit, otherwise known as Mary Sophia Viora St. Pierre Mayotte.—Mr. Whitman.

Bill No. 49, for the relief of Violet Victoria Green Auclair.—Mr. Abbott.

Bill No. 50, for the relief of Laurette Jobin Lalumière.—Mr. Macdonald (Brantford City).

Bill No. 51, for the relief of Elizabeth Gunn Sparling.—Mr. Claxton.

Bill No. 52, for the relief of Bella Lerner Efros.—Mr. Whitman.

Bill No. 53, an act to incorporate Montreal Shriners' Hospital Foundation.—Mr. Abbott.

Bill No. 54, an act to incorporate Canadian Alliance Insurance Company.—Mr. Chevrier.

Bill No. 56, an act to incorporate The Felician Sisters of Winnipeg.—Mr. Howden.

Bill No. 61, for the relief of Kathleen Ena Ball Royer.—Mr. Abbott.

Bill No. 62, for the relief of Margaret Heddrick Lieth Gauld.—Mr. Claxton.

Bill No. 63, for the relief of Elizabeth Alexandra Ida Robb Lewis.—Mr. Emmerson.

Bill No. 64, for the relief of Joseph Aloysius Lavigueur.—Mr. Casselman (Grenville-Dundas).

Bill No. 68, an act to incorporate the Ukrainian Fraternal Society of Canada.—Mr. Hlynka.

Bill No. 79, for the relief of Helen Alissamon Wheeler Baker Macoun.—Mr. Claxton.

Bill No. 80, for the relief of Adele Le Roy Fuller Hardy.—Mr. Hill.

Bill No. 81, for the relief of Constance Maxine Keating Noseworthy.—Mr. Abbott.

Bill No. 82, for the relief of Alvina Antoinette Bouchard Winterson.—Mr. McIlraith.

Bill No. 83, for the relief of Bernice Evelyn Berman Sholomenko.—Mr. McIlraith.

Bill No. 84, for the relief of Marjorie Florence Gray Lever.—Mr. Whitman.

Bill No. 85, for the relief of Robert Gordon Shaw.—Mr. Macmillan.

Bill No. 86, for the relief of William Taffert.—Mr. McIlraith.

Bill No. 87, for the relief of Uuno Ojalammi.—Mr. McIlraith.

Bill No. 88, for the relief of Leo Guay.—Mr. Tomlinson.

Bill No. 89, for the relief of Marie Beatrice Arsenault Thériault.—Mr. Abbott.

Bill No. 90, for the relief of Margaret Varga Csabi.—Mr. MacInnis.

Bill No. 91, for the relief of Frances Helen Shand Howell.—Mr. MacInnis.

Bill No. 92, for the relief of Charles Cardin.—Mr. Ross (St. Paul's).

Bill No. 93, for the relief of Gladys Irene Harison Mathers.—Mr. Casselman (Grenville-Dundas).

Bill No. 94, for the relief of Eileen Grace Shearer Taylor.—Mr. Macdonald (Brantford City).

Bill No. 67, an Act respecting The Canada North-West Land Company Limited.—Mr. McIlraith.

Bill No. 97, for the relief of Maitland Richardson Silvester.—Mr. Claxton.

Bill No. 98, for the relief of Agnes May Jack Jackson.—Mr. Ross (St. Paul's).

Bill No. 99, for the relief of Marie Fernande Broca Taisne.—Mr. Ross (St. Paul's).

Bill No. 100, for the relief of Samuel William Simon.—Mr. Fulford.

Bill No. 101, for the relief of Vera Venning Prestt.—Mr. MacInnis.

Bill No. 102, for the relief of Katherine Scott Thacher.—Mr. Diefenbaker.

Bill No. 103, for the relief of Elias Shapiro.—Mr. MacInnis.

Bill No. 104, for the relief of Fannie Rubin Segal.—Mr. MacInnis.

Bill No. 105, for the relief of Doris Mae Sangster Webster.—Mr. Abbott.

Bill No. 106, for the relief of Charles Joseph Wilfrid Rousseau.—Mr. Macdonald (Brantford City).

Bill No. 109, an Act to incorporate Bethel Full Gospel Assembly.—Mr. Reid.

WAR APPROPRIATION BILL

PROVISION FOR GRANTING TO HIS MAJESTY AID FOR NATIONAL DEFENCE AND SECURITY

The house resumed consideration in committee of a resolution to grant to his majesty certain sums of money for the carrying out of measures consequent upon the existence of a state of war—Mr. Ilsley—Mr. Donnelly in the chair.

DEPARTMENT OF LABOUR

National selective service programme, $8,680,225.

Mr. MITCHELL: Mr. Chairman, on account of a misunderstanding of the statistical tables on mobilization as appearing in *Hansard* at page 3954, I should like to make a statement for the information of the committee. At this time the regulations apply to men born in any of the years 1902 to 1916 inclusive, who on July 15, 1940, were unmarried or widowers without child or children, or who have since that date been divorced or become judicially separated, or widowers without child or children, and to all men born in any of the years 1917 to 1924 inclusive, except that men born in the year 1924 are not ordered out for medical examination until they have reached the age of nineteen years. Within fourteen days of the date appearing on the order for medical examination, a man may apply in writing to his registrar for postponement of his military training.

Applications for postponement will come under three main headings: (1) men essential in agricultural operations; (2) men essential in war industry and essential industry, public utilities and so on, and (3) men whose departure for military training would cause extreme hardships to their dependents.

Mobilization boards hear applications for postponements, and decisions of boards are final. Boards may, however, of their own motion, reconsider applications for postponement. Representatives of agriculture and representatives of national selective service, civilian section, as well as representatives of the Department of National Defence may attend and make representations at meetings of mobilization boards.

Under national selective service mobilization regulations bona fide students of colleges and universities taking certain specified courses are allowed to pursue their course of studies undisturbed, provided that, if medically fit, they take the military training prescribed, and also pass their scholastic examinations.

Non-declarant enemy aliens as well as neutral aliens who forgo naturalization rights are accepted under these regulations. Men who have been granted a postponement are ordered out for military training immediately following expiration of the postponement, unless further application is made and granted.

Men ordered to report for training are supplied with transportation, lodging and subsistence warrants as required. Upon reporting at district depots or military training centres of the Department of National Defence (army), men are again medically examined by medical officers of the Department of National Defence, and, if found fit, are taken on strength and enrolled. As of that time they cease to be under the jurisdiction of the Department of Labour.

That is my point. Many hon. members come to me and speak with respect to men who are already in the army. Of course, once they are in the army they cease to be under the jurisdiction of the Department of Labour, and come under the jurisdiction of the Minister of National Defence.

Men rejected upon reporting at district depots of training centres for medical reasons are returned home and are provided with transportation, subsistence and lodging warrants. A medical officer is attached to each of the thirteen districts or divisions. His duties are to scrutinize carefully all medical examinations and certificate forms completed by examining physicians and to advise the registrar on matters of a medical character. Certificates of medical examination have been issued to men who, on account of their physical condition, are not required to report for the time being.

Medical revision boards have been set up at a number of points in Canada under the Department of National Defence where men who are placed in medical categories other than those at present acceptable by the military authorities are being medically reexamined. As I have told the committee, men subject to national selective service mobilization regulations whose conscientious objection to bearing arms is recognized by national selective service are called out for alternative service work of a civilian character for the duration of the war. Steps are being taken to mobilize these conscientious objectors for work in agriculture and in other private essential industry. I went into this more at length when I made my initial presentation to the committee the other day.

Under part II of the regulations, men who are not fit for military training but who are otherwise fit for special duty with the Royal Canadian Mounted Police may be ordered out for special duty at the request of the Minister of Justice. These men may apply for postponement on the same grounds and in the same manner as men ordered out for military training. Divisional registrars have been hampered in their work because so many have failed to report changed addresses. Sometimes we are critical of the man on the street for not complying with the regulations with respect to change of address, but may I suggest to hon. members that they look at their own registration cards and see if they have complied with the regulations. After having done that, perhaps they will be a little more charitable.

Mr. CRUICKSHANK: Is a member supposed to change his address?

Mr. MITCHELL: A member of the House of Commons comes within the law just the same as the man on the street.

Mr. HANSON (York-Sunbury): He does not have to give Ottawa as his new address.

Mr. CRUICKSHANK: Is a member supposed to change his address from that of his riding?

Mr. MITCHELL: Oh, no, that is elementary. During the year ended March 31, 1943, the number of address changes notified to national registration authorities was 779,278, or over 60,000 a month. Hon. members will appreciate the amount of detailed organization work that that entails in itself, without the other ramifications of administration which are encountered in the national selective service organization. The problem of tracing these men has been partly solved by the compulsory re-registration of men who have not received their order-medical examination. Preferred attention is being given to the prosecution of delinquents. The reexamination by the army medical boards of 150,000 men, being done on the recommendation of the medical advisers, is nearly completed. Approximately thirty-five per cent of the men reexamined have been found to be in acceptable categories to be ordered out for military training. Transportation, subsistence and lodging warrants are being issued to these men.

While most designated age classes are being ordered to have their medical examinations, the volume of work of the mobilization section of the national selective service will nevertheless continue in view of the fact that mobilization is at the mopping-up stage, so

to speak, which must be carried out for the purpose of bringing into the armed forces all the men liable to compulsory mobilization.

As to the method of call-up, may I say that in making requisitions, the Department of National Defence state the total number required and allot them to districts in accordance with their training facilities. This determines where the men report, but does not determine where they come from. These allotments are sent on to the registrar as a matter of convenience. If any division were able to mobilize more men than the Department of National Defence could train at that point, they would be sent to other training centres. That is somewhat of a change from the previous procedure. The number of men called out in a district or division is determined by the application of the mobilization regulations. Every man in a designated class, fit for military service, who is subject to the regulations is selected for the armed forces unless he receives postponement on any of the grounds set out in the regulations, such as essential industry, farming, national interest, compassionate grounds or conscientious objection. It may be interesting to the committee to know what is done in New Zealand, and I quote from a statement made by the minister of man-power of that country in connection with the man-power regulations. He said:

> They are to be administered with temperateness and discretion, and will not unduly affect the good worker or the good employer. The penalties are designed for the malingerer and the defaulter. It is my intention that such a person should be dealt with firmly—

That is the exact position taken by my department.

> —on the other hand, where any individual shows a genuine desire to meet his difficulties squarely these regulations will be so administered as to give him every possible assistance and co-operation. Although regulations are necessary to secure uniformity of practice and in order to harness and coordinate the war effort, it is to cooperation that we must look for good results.

The directions to our Canadian registrars are to deal with every man in the designated class as rapidly as possible. The divisions vary in size. Some have greater difficulty in getting accommodation and staff, and therefore the speed of selection varies, but, in the end, the same result is sought for; that is, all men fit for service in the designated class who are not given postponement and have not volunteered for service in the armed forces, are selected.

The staff concerned with compulsory mobilization has been increased since the 1st of August, 1942, by 1,575 new employees. These new employees have been engaged for the local divisions, and the total strength of the staff throughout Canada, including headquarters at Ottawa, is, at the present time, 1,843. This will give some indication to the committee of what I might term the resoluteness of the Department of Labour, and previously the Department of National War Services, in moving in the direction of mobilization of men for the armed forces since last August.

Since December 1, when administrative responsibility with respect to mobilization was transferred to the Minister of Labour, the following procedures have been adopted to enforce the regulations. Compulsory mobilization under the regulations had been enforced against the great majority of those men in the designated classes. Therefore, before proceeding with the compulsory mobilization of men married before July 15, 1940, it was decided to make every effort to complete enforcement against those men who had failed to register in national registration, 1940, or to advise appropriate authorities as to subsequent change of address and other necessary facts.

Accordingly, the mobilization regulations were amended to require the re-registration of men in the then designated age classes who had not been served with notice or order-medical examination. Mobilization registrars were provided with copies of each re-registration, and instructions were given for the registrars to proceed immediately with the compulsory mobilization of these re-registered men. The registrars were told that it was their primary duty to see to the prompt mobilization of these men. At the present time, the great majority of these re-registered men have been dealt with.

Shortly after December 1, 1942, administrative action was taken for the issuance of certificates to men in designated age classes to indicate compliance with mobilization regulations.

This action constituted the issuance in all appropriate cases of postponement order certificates, medical unfitness certificates, and other certificates indicating compliance with the mobilization regulations. The issuance of these certificates of compliance is practically up to date at present in all of the thirteen offices of the mobilization registrars.

After inspection of the offices of the thirteen mobilization registrars, it was found that registrars were not in possession of a complete up-to-date set of national registration records pertaining to all men in the then designated classes who were residing in the respective administrative divisions of the registrars concerned.

Mr. HANSON (York-Sunbury): When was that discovered? After December 1 last?

Mr. MITCHELL: I think that is probably right. I must be fair to the previous administration. It must be remembered that for the first two years of the war we had an unemployment problem and we found the recruiting and mobilization of men comparatively easy. I will put it in this way: In those days we were going with the stream, but at the moment we are digging in the cement, which is a much more difficult administrative problem than recruiting men when there was a surplus of man-power. I think some hon. members may have been forgetting the background of this war. In the early days of the war it was a war of position and blockade. We thought we could defeat the enemy through the instrumentality of the Maginot line and the British navy. Personally I always felt that was the wrong approach. But with the fall of France an entirely different problem confronted this dominion. I have some knowledge as all hon. members have of those desperate days when in North America we had hardly enough equipment—I am giving my personal opinion—to defend New York city, let alone the North American continent; and after Dunkirk we had little more left than our bare fists to fight with. I know something of the trials and tribulations of the government in those days. I know it is the easiest thing in the world to back the winning horse after the race has been won. But looking back upon those days I recall some of the sleepless nights I myself spent as an adviser. The people of this country and this government, I think, measured up in a big way to that very difficult situation.

Mr. HANSON (York-Sunbury): What does the minister mean by digging in the cement? Does he mean that all the volunteers are gone?

Mr. MITCHELL: I would not say that altogether.

Mr. HANSON (York-Sunbury): Pretty nearly.

Mr. MITCHELL: I would not say that altogether. When I speak of digging in the cement I mean we have pretty nearly reached the bottom of the keg.

Mr. HANSON (York-Sunbury): Not by the minister's own figures.

Mr. MITCHELL: I will come to that in a minute.

An hon. MEMBER: Bottom of the barrel.

Mr. MITCHELL: I like the "bottom of the keg" myself. I was in the British navy and we used to think more of the keg.

[Mr. R. B. Hanson.]

This situation arose because many men had enlisted or changed their address without notifying either the national registration bureau or the mobilization registrar.

However, immediate increased coordination was effected between the national registration bureau and the thirteen offices of the mobilization registrars. The result was that registrars commenced immediately to use the facilities of the national registration bureau in Ottawa for further information in connection with the tracing of men.

It was found that considerable time was required to effect compulsory mobilization of those re-registered in the designated classes. Also time was required to complete the issuance of certificates as to compliance. Therefore, it was not until the middle of April last that an order was issued under the national selective service civilian regulations requiring selective service officers to check as to non-contravention of the mobilization regulations in all cases of men seeking permits for employment.

Provision was also made under the national selective service civilian regulations affecting men designated for compulsory mobilization, whereby these men are ordered to report at the national selective service local offices when occupied in work of low labour priority, to the end that such men may be transferred to work of high labour priority.

When such men report for compulsory transfer, the selective service authorities check in cooperation with the mobilization registrars to determine as to compliance or non-compliance with the mobilization regulations.

There is in the Department of Labour a branch known as the mobilization survey division. The officials of this branch are responsible for surveying industry, so that designated physically fit men may be withdrawn for the armed forces in an orderly manner.

That is the way in which it is done in Great Britain. They do not merely take the employer's word for it or the employee's, but they have a corps of what they call industrial engineers who go through the various industries.

Mr. MacNICOL: The department has?

Mr. MITCHELL: Yes. Since my return from Great Britain last fall we have adopted a similar policy here. We do not simply take the employer's word for it or the statement of the mobilization board or the employee's word. We have a number of people

at the present moment going through the various industries in Canada to squeeze out the men who are suitable for military service.

Mr. REID: Are they all practical men?

Mr. MITCHELL: So far as possible, yes. But when you talk of practical men, that is a matter of opinion.

Mr. REID: I mean practical men who know what they see, not office men.

Mr. MITCHELL: This means that in a specific industry the man-power is graded from skilled to unskilled and, at the same time, a record is made of the physical fitness of the men concerned.

It is the intention by means of these surveys to place the mobilization boards in possession of information respecting the supply of labour available, the importance of the industry to the national economy and the prosecution of the war, and also the importance of the employee's position in the industry.

It is expected that by enforcing the compulsory transfer of unfit men through the facilities in the national selective service local offices an adequate stream of replacements will be provided for those workers withdrawn to meet the needs of the armed forces. To date it has been found that these surveys have revealed already the whereabouts of certain men not in good standing under the regulations.

Mr. MacNICOL: What does the department do to make sure that men of the proper type are sent to the factories to replace those taken out?

Mr. MITCHELL: That is done through selective service. You draw men out at one end and push them in at the other. My hon. friend laughs at that.

Mr. MacNICOL: I was laughing at the minister's expression.

Mr. MITCHELL: I think it is a pretty good expression. Men are pushed from the non-essential into the essential industries, and men are drawn out to go into the army.

Mr. MacNICOL: Suppose a company asks selective service to send them ten boilermakers or ten machinists or ten fitters; how does selective service go about picking the right men?

Mr. MITCHELL: Selective service offices have information on all the people in the community as to their various skills and training.

Mr. PERLEY: Do they insist on a medical examination?

Mr. MITCHELL: I would not say so. We have bumped into that in connection with coal mining to a limited degree. I think there is some argument for the coal miners in that regard. There may be many coal miners—I do not know that there are—who have left the industry on account of their health; and where men claim that they are not physically able to return to the industry, we are not taking their word for it but are making provision for their medical examination.

At the outset the mobilization regulations provided that upon conviction of a man for non-compliance with order-medical examination or order-military training, it was permissible for the person acting on behalf of the crown to recommend that the court order the convicted person to be escorted in police custody to an appropriate place, for compliance with order-medical examination, or order-military training.

Mr. HANSON (York-Sunbury): In how many cases did that happen?

Mr. MITCHELL: I will look up that figure. I would not care to give the number offhand.

Mr. HANSON (York-Sunbury): Not many yet.

Mr. MITCHELL: It has begun to show itself. May I mention why I am following my notes closely? I spent all day yesterday with my people on this question, because I thought by this means I could get the explanation over in twenty or twenty-five minutes, whereas it might take much longer if I were to speak extemporaneously or hon. members asked questions across the floor.

It was soon realized that this measure was a desirable one for facilitating enforcement and, therefore, the regulations were further amended to provide that in connection with two other offences, the convicted person could be escorted in police custody to an appropriate place for military training. These offences are: non-compliance with regulations which required re-registration before March 15, 1943, of certain designated men not served with notice or order-medical examination, and non-compliance with the provisions in the regulations as to giving notice of change of address and particulars as to where mail will reach a designated man.

The Royal Canadian Mounted Police report that these more stringent enforcement measures are of great assistance in enforcing mobilization regulations.

It is the policy of the administration to reduce as much as possible the work performed by the police authorities in tracing men in cases of mobilization orders undelivered or in cases of non-compliance for other reasons. Registrars have been instructed to take the following steps in the order indicated:

Dispatch of a postcard attached to each mobilization order in question for completion by the delivering postal employee to obtain a report explaining non-delivery or non-compliance.

Mr. HANSON (York-Sunbury): When did that start?

Mr. MITCHELL: It started since December 1.

Mr. HANSON (York-Sunbury): Oh, yes, the other day, long after December 1.

Mr. MITCHELL: I think my hon. friend will agree with me on this, that as you find these problems you set in motion machinery to meet them. I tell the committee frankly that the labour department is not all-wise; we have not—

Mr. HANSON (York-Sunbury): If the minister wants to be frank he will give us the date when that was put into operation.

Mr. MITCHELL: I shall be glad to do so.

Mr. HANSON (York-Sunbury): Last week, I think, likely.

Mr. MITCHELL: I will get the date for my hon. friend.

Mr. PERLEY: Will the minister give us an estimate of by what number the staff of the selective service offices will have to be increased to provide for all these regulations and see that everything is working?

Mr. MITCHELL: I am informed that it was in effect before I took over the mobilization.

Mr. HANSON (York-Sunbury): I have not heard of it before.

Mr. MITCHELL: Then, the dispatch of an inquiry to the assistant chief registrar in Ottawa to obtain all available particulars shown on the master card in the national registration bureau or on the records of the three armed forces in Ottawa as of the date of the inquiry; also dispatch of a request for investigation and report to the appropriate police authorities.

On the basis of the facts disclosed by the foregoing procedure, prosecutions are instituted by instructions from registrars to appropriate authorities.

[Mr. Mitchell.]

And now let me give the committee some figures to clarify the present position: As at May 15, 1943, the inventory of men in the designated classes is as follows:

Men in designated classes as at 1940: Registration total 1,043,163 less those in course of being called (54,688), net	988,475

That is the man-power pool.

Mr. HANSON (York-Sunbury): In the designated classes.

Mr. MITCHELL: In the pool.

Men now in armed forces who came out of foregoing pool	550,692
Men now on postponement	100,973
Men unfit	257,103
Men in C.O.T.C. and auxiliary units	5,776
Statutory exceptions (firemen, policemen, clergymen, judges, enemy aliens)	6,257
Residue of original man-power pool unclassified	67,674
	988,475

The last category of which I spoke consists of men in institutional care and custody, merchant seamen, men in remote areas, duplications and errors in the 1940 registration, men dead, not located on account of unnotified change of address, and delinquents.

The total number unaccounted for, namely 67,674, constitutes 6½ per cent of the man-power pool, and in my opinion this is a credit to the men of Canada.

Hon. members will realize in connection with the statement which I have just made, that in the early days of the mobilization offices the registrars were not instructed that specific figures would be required at various times, and this fact, together with the tremendous volume of work they had to undertake, created a situation wherein steps had to be taken to obtain an accurate accounting.

The national war services department realized this situation, and arrangements were made to have an actual man-power accounting undertaken which would show the exact classification of every man in the designated classes. This work was commenced last autumn and is not yet completed, but it is anticipated that it will be completed in the course of the next month or so.

I want to thank hon. members for their forbearance in respect of this lengthy detailed explanation, which I thought was necessary so that they could approach this item on the agenda with that critical sense of duty which I know they will apply to it.

Mr. HANSON (York-Sunbury): The minister tonight, in the early part of his statement, gave an analysis of the regulations and the *modus operandi* under which his department

operates. I assume that when he took over on the 1st of December he found a more or less chaotic condition; in fact, I am quite sure that he did. Some of the admissions which he has made here would indicate that. I think it is fair to say that, ever since the mobilization act was introduced in the early summer of 1940, the man-power problem qua the army—and that is the only phase of this problem with which I propose to deal, and to deal very briefly, this evening—has been one of trial and error, hit or miss, and mostly miss.

The first thing we had was the national registration; and I think it must be apparent to everybody that thousands upon thousands of people in this country—young men in the military ages—did not register. I think we have had a tacit admission from the department that that was the situation, because they had a re-registration and an amnesty against those who did not obey the law. I have forgotten how many the minister said—

Mr. MITCHELL: One hundred and forty thousand.

Mr. HANSON: I thought it was around 150,000 who had failed to register. That was an astonishing state of affairs, an astonishing lack of obedience to the law on the part of a substantial number of our citizenship, at a time when Canada was at war, and at a time when the war was in its darkest phases; that is, the year succeeding Dunkirk. I think everyone will agree with that. But because of a policy of appeasement, because of the lack of a realistic man-power policy on the part of the administration, that sort of thing was tolerated in this country for months and months and months. And if we have a man-power policy to-day, I suggest to the minister and to the membership of this house that it is a policy which has been improvised from day to day and from month to month as time has gone on. I think that is a fairly correct way of stating the evolution, if I may use that term to describe the man-power policy with regard not only to supplying man-power for the armed forces but to supplying man-power for agriculture and other industry.

I want to be reasonably fair about this. There is, I think, some excuse for improvisation in the early part of the war, because it is a well-known fact that Canada did not set herself manfully to this war for nine months after the declaration of war. We were having what people called a phony war, and did not approach the situation realistically. The cause for that is not far to trace. The cause for that lies at the door of the administration, which was to have only a reasonable participation in the war. If you want any evidence in substantiation of that assertion, let me page the speeches of the former Minister of Public Works; let me call to mind the speeches of hon. members from the province of Quebec, who have told this house and the country what responsible ministers of the crown told the electors prior to the last election.

An hon. MEMBER: And the member for Laval-Two Mountains (Mr. Lacombe).

Mr. HANSON (York-Sunbury): I would not page the hon. member for Laval-Two Mountains. I would rather have a higher authority than him.

An hon. MEMBER: The late Minister of Justice.

Mr. HANSON (York-Sunbury): I will come closer home to my hon. friends on the left. I am not unmindful of the declaration made in this house on September 9 by the hon. member for Rosetown-Biggar (Mr. Coldwell) in which he laid down four statements, the third of which was that under no consideration should there be an expeditionary force. I pause here to say that never at any time has that third proposition laid down by the socialist party in this country been repudiated by them, either in this house or out of it. So far as I am concerned, they shall never be allowed to get away from that proposition, and they ought never to be allowed to get away from it.

Mr. GILLIS: The hon. member will not have much to do with it.

Mr. HANSON (York-Sunbury): Maybe I will not. I shall be one single voice, but in so far as I have power and authority to raise my voice I intend to tell the people of Canada what was the position of hon. gentlemen to my left at the beginning of this war, a position that has never been repudiated by them.

Mr. GILLIS: They will not listen to him anyway.

Mr. HANSON (York-Sunbury): There will be some people who will listen to me. I am satisfied that there will be many who will listen to me as they are listening to me in this house today. There are members of this house who know that I state, generally speaking, the exact truth, and it will not do for the hon. member for Rosetown-Biggar, with a group of by-elections in sight, to come out now as he

did on Friday afternoon last, to try to put his party right with the loyal, patriotic people of Canada.

With respect to one feature of the speech of the hon. member for Rosetown-Biggar, I am in hearty agreement. He said that when the testing time comes; when the casualty lists begin to roll in; when there is brought home to the people of Canada the necessity for reinforcement upon reinforcement, and when the government to whom Providence has been, shall I say, unduly kind during the past three years, is obliged to bring in, as it will be obliged to bring in, the full implementation of the mobilization act as amended at the last session of parliament, then the Prime Minister (Mr. Mackenzie King) is going to come to this house and ask for a vote of confidence in a policy which he refused to put into effect at the time when it ought to have been put into effect so that we would have trained reinforcements for our armed forces overseas.

If that is to be a blanket vote of confidence in the administration, they will not get my vote.

An hon. MEMBER: Why have you voted for it?

Mr. HANSON (York-Sunbury): I have not voted for it. I voted for a half-measure because I knew I could not get anything better from this government, and I voted to relieve the government of its pledge to the people. My friends did not vote for that. Why? It is as plain as the nose on your face. They voted as they did because they thought they might curry favour with some sections of the country who did not want total war. I do not think there is the slightest doubt about it. But I did not rise to say that.

Mr. MACKENZIE (Vancouver Centre): You said it.

Mr. HANSON (York-Sunbury): Hon. gentlemen seem to take umbrage at what I have been saying. Well, let their guilty consciences answer them. That is the best thing I can say to them. Let them search their hearts and minds and consciences as to their course with regard to this gigantic, global struggle and Canada's participation in it. The people will judge if the people know.

Coming back to this question of the mobilization of man-power for the army, I listened with the greatest care to the minister's presentation on Wednesday last, a presentation which I suggest took him and his whole staff three long weeks to make, a studied piece of special pleading to make the worse appear the better cause. That is what the minister's statement was, an attempt to make the people of Canada believe that all was well. That has been the studied policy of this government in every phase of its war effort since we entered the war in September, 1939—that all was well; that all is now well, with the mobilization plans of this government. I am going to pay this minister the compliment of saying that until he got into office as the head of the department charged with responsibility for the direction of national service there never was anything but chaos under the former Minister of National War Services and his deputy minister, who now sits in this house as a minister. There never was any real policy of selective service for the army or anybody else. It was catch as catch can with the three armed services, and agriculture took the hindmost, while industry protected itself as far as it could.

Equality of service! Why, the minister knows in his heart, and it is indicated by the figures he has given here and the figures that have been placed on record as a result of the research of hon. members on this side, chiefly the hon. member for Lake Centre, that some parts of Canada have done twice what other parts have done in regard to national service qua the army. I have a question on the order paper now in regard to the air force, which I believe the minister will answer very shortly. I already have the information, which the minister was good enough to give me privately, but because I do not feel that I should use the figures until they become official I am not going to quote them to-night. I have them right here, however, and I can tell hon. gentlemen that having regard to population in the nine provinces of this dominion there has been no equality of voluntary sacrifice as far as the air force is concerned. When hon. members get the figures for Ontario with reference to voluntary enlistments in the air force and compare them with the figures for the province of Quebec they will be shocked, having regard to the population. That is all I am going to say about that. I shall not give the figures which were given to me by the minister until he answers the question which I placed upon the order paper to-day. The minister will give the figures, and hon. gentlemen then may judge whether or not the statements I have made to-night are correct.

Mr. JOHNSTON (Bow River): When will the figures be brought down?

Mr. HANSON (York-Sunbury): That is up to the minister. I have asked the question, as it was suggested I should do, and I have no doubt he will bring down the information. Perhaps it will be brought down to-morrow;

at any rate I hope it will be brought down before this debate is over. The minister indicated that if I asked the question he would bring down the information promptly, and I am taking him at his word, but until he does bring down that information I am not going to use the figures he has given me.

In the closing part of his remarks this evening the minister made a statement which greatly intrigued me, because in the analysis he gave he attempted to indicate how the man-power pool has been used up. He did not give us that information last Wednesday; and I want to tell the minister that the figures he gave on Wednesday last indicate that there are half a million men unaccounted for. If those figures are true, it is a national disgrace to Canada. I cannot assert that to-night because I have not been able to follow the figures the minister gave us, I suppose in anticipation of this debate and perhaps an effort to forestall criticism and what may result from it. Therefore I shall reserve some of the things I have to say until I have had an opportunity to analyse the figures the minister gave to-night.

I should like to impress upon the membership of this house the anxiety I feel to-night, and which I have felt through the years since the mobilization act was put into effect, with respect to the number of reinforcements for our troops overseas. We have a volunteer army overseas, composed of so many army corps, so many ancillary forces—I am not so much concerned about that—army headquarters and so on, all going to make up the large number of men indicated by the minister to-night. In that group of men overseas we are supposed to have a number of reinforcement units. How many of those units we have is a dark secret of the military authorities. They absolutely refuse to say. I asked ten pertinent questions of the Minister of National Defence last February. The vital questions remain unanswered to-day, and the minister refuses to answer them; that is, questions having to do with the ratio of reinforcements for our armed forces overseas. The non-essential questions were answered; the vital ones were not. I challenge anyone on the government benches to say that to-day we have that ratio of reinforcements we ought to have if the Canadian army is to go into action soon, as everyone believes it will. I challenge anyone to say that we have a ratio of 100 per cent of reinforcements for the men who are likely to become casualties. I doubt if we have half that; yet I tell the minister and the membership of the government that anything less than 100 per cent of reinforcements, trained men on the ground, ready to go into their units when the testing time comes, will not be good enough to sustain the position of the Canadian army. That is the anxiety I have, and it has never been allayed by any authoritative figures from the ministry of national defence. They absolutely refuse to divulge this information, though not on the ground that it would be of aid and comfort to the enemy. Not at all; that has never been urged as the reason. They refuse to divulge these figures, and I have the right to form my own opinion as to the reason. My interpretation is that they have not enough and they are ashamed to say so, because if they have not enough I think it is their bounden duty, as the government of this country in a time of war, to get the men, and they have full authority to do so. That is the position.

What did the figures given by the minister the other day indicate? I want to analyse them briefly, and then I am done. The minister revealed that the call-up notices sent out had numbered 988,475; I believe that is his exact figure. At the same time the minister indicated that as a result of these call-up notices some 608,642 men reported for medical examination. So that at that time there remained unaccounted for some 379,833 men, and there was no explanation given on Wednesday such as has been conjured up here to-night. I am going to help out the minister. Owing to faulty bookkeeping; owing to a lack of liaison between the recruiting offices and the office of national war services, as it was then, undoubtedly a substantial number of men who received these calls volunteered for service, were included in the active army, and became unaccounted for in so far as these figures go. Undoubtedly the reports which should have been made by the recruiting division of the national defence department were not made to the national war services department, or, if they were made, they lagged dreadfully. How many were included in that category I cannot say; I assume perhaps there were 50,000 or more, but that is a long way from 379,833.

There was a method by which each of these men could have been accounted for. There is an official in the Department of National Defence called the director of records, and I do not suppose there is any harder worked officer in the department than this same official. Exact records are kept of every man who has enlisted. When a man enlists voluntarily his papers go to the district office of the director. I happen to know the official in charge of that duty in New Brunswick, and he is as thorough and as exact as would be a chartered accountant. It takes a little time.

Then those figures are passed along to the head office in Ottawa. They are all collated, and every man is given a ledger, or a dossier, or whatever one would call it. And there was available at all times to the national war services department the good offices of the director of records here in Ottawa, or of the district recorders—for want of a better term—in the military districts.

I am told there was an absolute lack of liaison on the part of the army, the recruiting division of the army, the recording division of the army and the Department of National War Services. Then, undoubtedly there have been some deaths. Yes, undoubtedly there are some deaths, and the minister is entitled to the benefit of that number. How many? Nobody knows. There is no record of it.

In connection with notices, I think if the minister would be candid with us, and if he would tell us what has actually happened, as revealed in a survey which his department ought to have made, if indeed it has not made it, he would admit that there is case after case after case where certain officials of the government of Canada have deliberately not delivered the notices, or have reported that the men had gone away. I have heard of a case where a postmaster had reported a man was deceased or a man had gone away. That is one reason why some of these notices were not delivered. I wonder how much of a check-up was ever made.

Mr. MITCHELL: If the hon. member has knowledge of a case of that kind I should like to know about it.

Mr. HANSON (York-Sunbury): I have heard of it.

Mr. MITCHELL: I should like to know about it. I have heard of it, too, but I do not know about it.

Mr. HANSON (York-Sunbury): Then it is the minister's duty to find out. If a report like that is given to the minister, it is his duty to have it checked. It is not my duty.

Mr. MITCHELL: I would ask my hon. friend—

Mr. HANSON (York-Sunbury): I am pointing out the possibility of such things. But the fact remains that according to the minister's own figures there was a huge discrepancy of 379,833. I have tried to help the minister out by giving some explanations. I want to say further on that point that because there was a lack of liaison between the recruiting officers of the Department of National Defence and of the naval—well, I am not sure about the naval department—and of the air department, there have been heart-rending cases in Canada. There have been some very sad cases in this country.

I have in mind a case of a noble young man of my city, who was in the proper age category. When the time came, that young man enlisted immediately in the air force. He was sent to the manning pool at Toronto. He earned his commission, went overseas, and will never come back. But his father has been receiving calls for him to report, or else the mounted police will come and take him. That boy lies over yonder. That is the sort of thing which should never be allowed to happen. There are many men in that category.

Then, there are many more men in the category of those who have enlisted voluntarily, who have reported and gone into active service, but for whom calls are still coming. I know of the case of a young man, and I shall be glad to give the minister his name privately; I do not wish to place it on the record. In this instance one could scarcely believe that what happened could be possible. This young man was called for service, and had enlisted weeks ago. He was actually working in the same building that housed the administrative offices of the department from which were being sent calls and threats addressed to him. One would scarcely believe that could be possible, but I know it is so.

Of course I believe that is an isolated case, and it might happen even in the best of regulated families. But I do suggest it is indicative at least of a failure of the recruiting authorities, in the early stages. Recruiting officers were out to get their men. When they got them, and had them sworn in, their duties were over, so far as they were concerned. Of course, that sort of thing should not happen.

I should like now to deal with a further part of this picture. That great total of 379,833 is not the whole story. The department got 608,642 replies from the 988,475 notices sent out. Then it proceeded to call the men for training. In the period covered by the minister's statement they called up 289,544. But 289,544 did not report for training.

Mr. ROSS (St. Paul's): They were medically examined, too.

Mr. HANSON (York-Sunbury): Those were men called up after the preliminary medical examination. Out of 289,544 there reported only 160,162, and there are unaccounted for in that category 128,882. So

that you have that missing army, that potential army, according to the minister's own figures, of 379,833 plus 128,882, or a total of 508,715 missing men.

Mr. MARTIN: Subject to the minister's statement to-night.

Mr. HANSON (York-Sunbury): Which I propose to analyse. If last Wednesday the minister had given the authority of his position to those figures, there might be a different story. But I am reviewing what was supposed to be a complete statement of affairs made by the minister when he introduced these estimates. Since then there has been some tall thinking, because if you are to believe what the minister said last Wednesday, then the figures are nothing less than astonishing. They tell a story which is a disgrace to the Canadian people, and a disgrace to the government which is conducting the war effort. I leave that part of it with the minister, who may answer it if he will.

However, the fact remains that according to the minister's statement of last Wednesday there were 508,000 missing men. We got out of the total of 988,475 to whom notices were sent, how many? How many did the army actually get? The army actually got 126,963, who were accepted for training, or just over twelve per cent. What a situation that is!

And mind you, these men are not for active service overseas. They are for a perpetuation of two armies in this country, one at home, and an active army—a home army that ought never to have been, a home army, now that danger is receding, and has been receding month after month, and when danger of invasion is long past, a home army that will never see any fighting. And we are going to keep those men in uniform, and in expensive military camps at a cost of hundreds of thousands of dollars every day to the taxpayers of Canada. What a farce is there, my countrymen! If the government had any realistic idea of the situation, those men ought to be available for service where they can do something—after we spend thousands of dollars upon them.

I should like to know how much it costs this country to enlist a man, call him up for active service, examine him physically, put him into the army, give him elementary training and secondary training, and send him off to some camp like that at Debert. In a year's time. how much has he cost Canada? It would be interesting to have somebody give those figures. I suggest that it cost not less than $2,500 for every man.

An hon. MEMBER: $3,500.

Mr. HANSON (York-Sunbury): Perhaps $3,500. That is a mere guess on my part because I do not know. In any event the amount is huge, and to what end have we made this expenditure? In the expectation of invasion? That is all poppycock. Everybody knows that. To the end that these men shall fight Canada's battle in the theatres of war where battles will rage? Not so long as hon. gentlemen opposite follow the policy that has characterized their actions for three and a half years. That is the situation to-day.

We would never have had this home army if the government had been a responsible government, if the government assuming to run the war and realizing that it was a global war had said, as they ought to have said, "The Canadian army is for service anywhere." No; the government did not say that, and the government have not said that yet. If the Canadian army is not called up to fight, and it will not be necessary, Canada will have played an inglorious part in this great struggle. That is not the future which I would have for the Canadian army. I would not want to see the Canadian army shed blood unnecessarily, as was done at Dieppe, but I want to see our army bear itself gallantly as representatives of Canadian patriotism in this great war, just as our friends from New Zealand, our friends from Australia, our friends from South Africa, our friends from the United Kingdom and our American cousins are doing.

We will analyse the statement which the minister has given to-night. In the meantime I have given figures which I have based upon the minister's previous statement. What becomes of the basis of the theory that this is the best system of national selective service that could possibly be devised? I say to the minister that the policy is an improvisation from day to day. It never has been a basically national policy. It is like Topsy; it grew up overnight. I can see that by the end of the war in the natural course of evolution we may have a full-fledged national selective service policy—three years too late. That is all I have to say.

Mr. MARTIN: Mr. Chairman, since this debate has been under way there has been general acknowledgment from all sides of the house that we were dealing with the most difficult problem that any democratic government at any time in the history of the world

has had to deal with. On former occasions when this matter was being discussed hon. gentlemen pointed out to whatever minister was then in charge of the problem of Canadian man-power in relation to war that the government had no man-power policy at all. Some hon. gentlemen still persist in that view. Almost without exception, every speaker on the opposite side has begun his remarks by congratulating the present minister. Without wanting to show needless discrimination, the most thorough critic of the government on the opposite side was the hon. member for Lake Centre (Mr. Diefenbaker). When congratulating the minister he prefaced his remarks—I think he was most fair in so doing—by saying that the minister was dealing with the most difficult problem that any nation had to face at this time. It is in the light of this difficulty that the whole problem must be considered.

One could transpose the *Hansard* of this house into the congressional record of the United States, into the debates of the British House of Commons, into the debates of the Australian parliament, or into the debates of the South African parliament; one could read the debates of any of these parliaments, and one would almost think he was reading a discussion of the man-power policy of Canada. In considering this tremendously difficult problem we are dealing, not with milk bottles but with human beings who have family affiliations, who have financial interests, who have love of community, who have in their veins, as we all have, the persistent quality of love of freedom. That is why we realize that this problem is a tremendously difficult one. We find it difficult, and perhaps there may be, not justification but some extenuating circumstance in the fact that in those countries where the democratic process does not prevail, particularly Germany, where the individual is an ordinary commodity that can be shifted about and dealt with as though men and women were not human, they have had and have a man-power problem, although long before the war they were moving their men and women about in the fashion that total war envisaged. The fact is that in Germany to-day there is a bottleneck of man-power, even though they are able to call for assistance upon those countries which have been occupied by Hitler and his associates. If this is a problem in the totalitarian countries where there is as full a regimentation as possible, is it any wonder that we in this country should find it difficult? It is difficult, extremely difficult. The minister in his statement in chief indicated that this was why he suggested to hon. members that they should offer criticisms of the present policy such as it is.

An hon. MEMBER: Constructive.

Mr. MARTIN: Someone suggests, constructive. I think on the whole that suggestions by hon. gentlemen opposite have been constructive, although they have consistently pursued the view that the government's man-power policy, which they now accept to be a fact, is nevertheless conceived on terms that suggest a day-to-day policy. If the hon. member for York-Sunbury (Mr. Hanson) had one theme running through his speech, it was that we had a day-to-day policy, a policy that was evolutionary; that we did not have a master scheme, that we simply day by day devised ways and means of dealing with the inevitable competition for men by the armed services, industry and agriculture. Of course it is a day-to-day policy. Of course it is evolutionary. Is there any hon. member who can think of a policy being otherwise conceived? Is there any country in the world, apart from the totalitarian powers, that has anything but a day-to-day policy? Can anyone envisage in a democratic country the full utilization of man-power by the three branches in terms of the ultimate sequence of the war? Of course not.

The hon. member for York South (Mr. Noseworthy) quoted Eric H. Biddle who, in the opinion of Mr. Ernest Bevin, has written some of the most serious studies of England's man-power policy. Let us see what Mr. Eric H. Biddle had to say only a short time ago about the character of Britain's man-power policy. I quote from a pamphlet entitled, "Man-power" a summary of the British experience, as follows:

> A second type of assumption implicit in the British man-power programme was that the powers of compulsion should in practice be extended gradually, and should not be applied faster than an organization could be constructed to administer them efficiently. Thus the powers of compulsion have been used more to consolidate the positions won by persuasion than to initiate new methods for the assignment of skills. The government did not seek statutory powers to apply compulsion in civilian employment at the earliest stage. When it did seek these powers and got them, it proceeded to perfect its administrative organization, which was based to the greatest degree possible on voluntary cooperation and persuasion. And finally, it has applied its compulsory powers only to the extent necessary to channel the requisite skills to the place of greatest need. Only incidentally were these powers necessary to prevent the negligible minority from escaping their proper share of the national service obligation.

That was Britain's method; that is Britain's method. That is the day-to-day method, the

evolutionary method, and that, as the hon. member for York-Sunbury has said, is exactly our method too. Yet Mr. Corson, whom the hon. member for Lake Centre will recall as perhaps the man in the United States who has the best knowledge of the man-power policy and the selective service system of the United States and Britain, has said that in terms of success Britain's policy of selective service comes first. In the same book, "Victory for Man-power", he says in speaking of bottlenecks and the muddles of the United States selective service system that both the United Kingdom and Canada serve generally as models for man-power mobilization in terms of war service. Therefore our policy, while not perfect, while day to day, is nevertheless not deserving of the carping criticism which sometimes one hears in this house and more particularly outside in these days.

The hon. member for York-Sunbury, referring to table No. 1 presented by the minister on Wednesday last, made his speech entirely on the basis of certain differences that he saw in that table. One cannot quarrel with him for that. It might have been better—it could have been done because the material was available—for the minister to make then the speech that he did tonight by way of explanation. But it would have been a long speech, and it was thought that in the general debate that would follow some of these things could be demonstrated.

What do these figures indicate? And they deserve to be repeated.

As at May 15, 1943, the inventory of men in the designated classes was as follows:

Men in designated classes as at 1940 registration total	1,043,163
Less those in course of being called (54,688) net	988,475

That is the total figure, and it is the figure to which hon. gentlemen should address themselves.

Men now in armed forces who came out of foregoing pool	550,692
Men now on postponement	100,973
Men unfit	257,103
Men in C.O.T.C. and auxiliary units	5,776
Statutory exceptions (firemen, policemen, clergymen, judges, enemy aliens)	6,257
Men being traced	67,674
	988,475

Compare those figures with those of any other country in the world, and you will find that balance does not deserve the heavy denunciation which it has received. I suggest to the hon. member for York-Sunbury that instead of going on the basis of the minister's presentation of Wednesday night, without the explanation he gave in his speech to-night, he should to-night have relied on the minister's explanation of the figures previously given rather than allow to go out to the country the kind of limited understanding his speech will needlessly provoke.

The hon. member referred to the fact that we had a registration in 1940. He referred to the fact that there were imperfections in that registration. I believe there were imfections which, if we had known of them then as we know of them now, would have been avoided, but hindsight is always better than foresight. The thing to remember is that since the national registration of 1940 there have been continuing subsequent registrations, and they deserve to be mentioned.

There have been special registrations of persons in insurable employment as of April, 1942; of unemployed males as of June, 1942; of women aged twenty to twenty-four as of September, 1942; employer's reports, January, 1943; registration of nurses, March, 1943; registration of men in designated age classes who had not received "order-medical examination", March, 1943; men employed in certain less essential industries and occupations, May, 1943. Third, there has been a continuing registration of the unemployed at local employment offices, September, 1942.

So that when one talks of the failure of the registration of 1940 as it is sometimes referred to, these other registrations should be borne in mind. While I have not and do not pretend to have the knowledge of this problem that the minister and his officials and many other hon. members have, because my contact with it has been of recent date, I want to say this, and perhaps I am sufficiently removed from the administration of the department to be able to say, that there is no group of civil servants in this country, first of all those located in Ottawa, who are devoting more of their time day and night in trying to perfect this system than the officials of the Department of Labour and of national selective service. The same thing applies to the outside personnel and the increased number of offices. The latter have been more than doubled and their staffs have been increased throughout the country. They have had imposed upon them a tremendous task, a task which they are gradually and more effectively falling into with greater efficiency and greater ease. As the minister said, and the hon. member for York-Sunbury concurred, these gentlemen would take second place to none in affirming that the men and women who serve in the selective service offices throughout the country are doing their utmost in this difficult problem to deal with the various orders and directives that come to them centrally from Ottawa.

I think the best way to analyse the difficulty of this problem is to examine the speech that has just been delivered. The hon. member for York-Sunbury was frank to say, and I admire his frankness, as he has said in practically every speech he has made in this house since the beginning of the war—I have analysed them all during the past two weeks—that his primary concern is to get men for the army. One can well understand that as being his concern. What he is concerned about is getting reinforcements. He is not so much concerned now with fitting round pegs into square holes. His primary interest in the problem of selective service and of man-power is to see that there is a constantly increasing flow of men into our armed services. With that I do not quarrel. But relate that to the general criticism that is levelled. We are told that we have three groups that are competing for men in this country—the armed services, industry and agriculture. You cannot have the sort of plan the hon. member for York-Sunbury was talking about if you think solely in terms of one of these competing groups.

The best way to illustrate that, I think, is to remind the committee of a speech made by the hon. member on April 20, 1942. His speech will be found at page 1752 of *Hansard*. The hon. gentleman had gone on in eloquent terms to urge the government to make sure, as we all want to do, that there would be an adequate flow of reinforcements, that Canada would be able to have in her armed forces a number of men commensurate with our strength, with our dignity, with our convictions. He urged us not to pursue in our attempt at patriotism a policy of expediency with individual cases. Then he cited a case, and here are the words:

> Last week a woman, whose husband was ill, came to see me. She had a son eighteen years of age, who was the only support of her family, and he was being refused employment in New Brunswick under the provisions of the government's man-power policy.

I am not going to argue for one moment that that case was not deserving. I am not going to suggest that it did not merit the very attention which the hon. member for York-Sunbury wanted. But what I do wish to point out is this. Hon. gentlemen cannot urge in this house and in the country a man-power policy which will be rigid, which will be non-discriminatory, and at the same time rise in their places and make pleas for special cases.

Mr. ROSS (St. Paul's): Why not?

Mr. MARTIN: I will tell the hon. member why not. I think it is perfectly obvious, but evidently I have not made myself clear, and I will do so for the hon. member, who usually does not require such elucidation.

[Mr. Martin.]

Mr. ROSS (St. Paul's): I do not think the hon. gentleman has made himself clear.

Mr. MARTIN: Well, I am trying to explain it. I say that if you are to do what hon. gentlemen opposite want, and by compulsion take men and women and put them into places where it is thought they are best suited, you have not the right to say that there are instances where you should not pursue that policy. Either the policy is correct, or it is not. But the very incident quoted by the hon. member for York-Sunbury is a justification of our policy. We are not treating human beings as commodities; we are treating them as human beings. We recognize that that boy, the only support of his mother, had the right to special consideration. Under the kind of policy that Hitler has, under the kind of policy which some of the hon. gentlemen in this house advocate, you could not have that treatment. But this is why we have proceeded step by step, and also why we have not except in two instances applied the element of compulsion. We felt, and I support this view, that if we could get men to go into the armed services and into industry and into agriculture voluntarily, it is more effective to get them in that way than to put them in by compulsion. That is the reason why our policy is one of evolution; that is why it is a day-to-day policy meeting day-to-day needs; and if there is any hon. member who can suggest any other more effective method, I trust that in the course of this debate he will do so.

Mr. ROSS (St. Paul's): I suggest to the hon. gentleman that since the war broke out it might have been a very good idea if they had had a plan, and that they have had no plan since the war broke out.

Some hon. MEMBERS: Order.

Mr. ROSS (St. Paul's): No policy and no plan.

Mr. MARTIN: The hon. member says there is no plan. May I suggest to him that there is a definite plan, and, apart from magicians, it would seem to be the only possible plan, namely, by persuasion, as they have done in England, and in certain emergencies with respect to civilian occupations, by compulsion if necessary.

Mr. ROSS (St. Paul's): That has been done by leadership.

Mr. MARTIN: —to urge upon our people to help on the farms, to go into the armed services, and to serve the country. No one can say that that plea and that persuasion have been ineffective, because the people of Canada have done that very thing. But what

are the facts? Hon. gentlemen are worried about shifting people here and shifting them there without paying much attention to whether they have gone into these places voluntarily. What are the facts?

Mr. ROSS (St. Paul's): You have no compulsion to-day.

Mr. MARTIN: We have on two orders. To-day in Canada, the minister stated last Wednesday, 5,100,000 men and women out of a total population of 8,720,000 aged fourteen years or over are in the armed services or at work. I ask hon. gentlemen to compare that figure with the record of any other country in the world, with the one exception of Britain, and say if any has a better record.

Mr. ROSS (St. Paul's): Why except Britain?

Mr. MARTIN: Because, while I could easily make a generalization, I am in the habit of stating what I believe to be the truth. The fact is that Britain, with a natural urge that is not so persistent elsewhere—

Mr. ROSS (St. Paul's): That we do not have.

Mr. MARTIN: —Britain, a unitary state, not having the same difficulties in transporting her people, displays, as I am proud to rise in my place in this house and say, the shining example of an effective selective service system. She has had the advantage of a machinery which is over thirty years old. She has an unemployment insurance scheme which outdates ours by many years. Ours came into being only about two and a half years ago, but I defy any hon. gentleman to say that in those two and a half years the organization which has been built up is not one of which we in this house and the people of this country have every reason to be proud.

Compare ourselves with the United States. They have an unemployment service ten years old, one of the models in the democratic world; yet it will be found that ours, which is of much shorter duration—

Mr. MacNICOL: They have not had unemployment insurance for ten years.

Mr. MARTIN: But they have had an unemployment service office for ten years.

Mr. ROSS (St. Paul's): So have we.

Mr. MARTIN: The hon. gentleman says that we have. We had provincial offices. But the system was not integrated, and they were not part of a national scheme. That came into being under the Unemployment Insurance Act. These extenuations may not be justification for the weaknesses of our policy, but they certainly are extenuations.

The hon. member for York-Sunbury made a plea for greater equality of sacrifice, saying that there are some parts of the country which are not giving as much as the others. I cannot quarrel with that. Not much is to be gained by saying where that persists. But can any hon. member here provide a yardstick by which equality of sacrifice may be measured? Can anyone compare the heroism of the people of Stalingrad with ourselves at home? Can anyone compare the horrors through which the people of Poland have gone with any horrors of which we have personal experience? Can we compare ourselves with the people who were subjected to the blitz in Britain? Of course not. Equality of sacrifice is the thing that one should aim at, but merely to aim at it does not mean that equality can be realized. The fact is that the Canadian people in all walks of life, primarily those in our armed services, those who are serving in our war plants, the ordinary man and woman, the little man and woman in this country and the rest of us, with all our weaknesses, with all our imperfections of governmental machinery, are nevertheless putting up an effort of which we shall in the terms of days to come have every reason to be proud rather than to be ashamed. It is in that spirit, I believe, that this whole policy should be looked at.

Now, Mr. Chairman, I simply say this. This policy is not perfect by any means. Some hon. gentlemen may say it should have come earlier, and perhaps many will find reason to agree with that. Some will say that there should be a greater amount of compulsion than has been exercised, and that, too, will be a fair issue. Remember, sir, it will only be an issue. Those who entertain the view that persuasion is better than compulsion may be perfectly honest in that view. That is the view which we are trying, and have been trying during these last years, to meet. Where compulsion has been found necessary it has been exercised. Faced with a coal emergency we have sought to exercise, with reason, prudence and understanding, because we are dealing with human beings, the phases of compulsion. With regard to certain non-essential occupations, without trying needlessly to disturb our people, at long last we have been obliged to disturb them and to ask them to leave their normal vocations, and, if they are within the military ages, to go

and serve in those places where they will more directly assist the government at this time of our peril.

That is the record. That is a policy in terms of estimates of man-power supply and requirements, a policy in terms of the allocation of supply, a policy in terms of control of employment, a policy in terms of improvement in efficiency of welfare and administration. The work that we have done, with respect, for instance, to the endeavour to bring recreation facilities to workers through cooperation with the provinces, our efforts with respect to day nurseries, particularly in the provinces of Ontario and Quebec, trying thereby to introduce a greater and greater number of women into factory life—all that is part of a policy that is slowly perhaps but gradually making headway. And those hon. members who think we have not even now the sort of thing that was envisaged by a former director of national selective service, find it difficult, with the one sole possible exception of a suggested separate department, apart from full compulsion, to notice in the government's present man-power policy anything really distinguishable from that suggested by the former director of national selective service. I say that the problem has its difficulties. We are a democratic country, a people who are deep-rooted in the desire to be left alone. We do not like to be moved out of our jobs; we do not like to do things that disturb our family attachments or our community interests. But our people have done that very thing, and in its policy of bringing these things about, in the fashion it has, perhaps not always strong, perhaps not always as vigorous as some hon. gentlemen think it should be, nevertheless the government has pursued its course with vigour, with understanding and with results. I submit to you, sir, that nothing else counts.

Mr. DIEFENBAKER: In common with other hon. members I followed with great care and attention the address delivered by the parliamentary assistant to the Minister of Labour. As I listened to that speech I felt that the two problems that should be faced and that were referred to by the hon. member for York-Sunbury (Mr. Hanson) were precisely the two problems which the hon. gentleman did not face in the argument he advanced. He said we could not expect to have equality of sacrifice. No one in this house can disagree with that statement. He spoke of the sufferings of the people of Stalingrad and of the sacrifices of those who to-day are serving in the various theatres of war. He said that their sacrifice and their heroism made impossible equality of sacrifice on the part of the people on the home front in Canada. With that statement no one can disagree. The argument advanced by the member for York-Sunbury was not based on the principle of equality of sacrifice; it was based on the question whether or not this government was assuring equality of opportunity for service by the people in every part of this dominion. The argument which he advanced was that since the National Resources Mobilization Act was brought into effect there never has been, and there is not now, equality of call in every province and in every part of the dominion. I shall deal with that not by figures of far-off months, but by reference to a table that was recently brought down in this house in the form of a return which shows the call-ups between October 31, 1942, and April 15, 1943, which conclusively establishes the fact, which neither the minister nor the hon. gentleman who has just taken his seat has dared to try to answer, namely, that there is not now, nor has there been, equality of call in every military district in Canada, nor any reasonable approach to equality of call.

Mr. MARTIN: Take page 10.

Mr. DIEFENBAKER: I will take figures not in the reformed, revised, enlarged computation which it was found necessary to bring down to-night, because of the impossibility of any statistician arriving at any conclusion on the basis of the figures that were brought down a week or so ago. The tables a week ago revealed a muddle. The tables brought down to-night reveal a muddle of the muddle and reveal no clarification whatsoever of the earlier ones. I will take the figures set out in a return brought down recently by the government. That will show exactly whether or not there has been equality of call.

The next point raised by the hon. member for York-Sunbury was that there was lack of enforcement of the law so far as the National Resources Mobilization Act was concerned. All of us admit that lack of enforcement of the law tends to disruption and confusion. I was surprised to find that that, too, was one of the things the parliamentary assistant did not answer. He dealt with many other matters, but the two subjects dealt with by the hon. member for York-Sunbury, namely, inequality of call in every province and in every part of Canada, and, second, inequality in enforcement, with the large numbers who are delinquent in consequence and amounting to hundreds of thousands, were not answered nor was there any attempt to answer them.

The other day, on June 23, the minister himself tried to answer the argument I had made on many occasions in this house, that

there was inequality in the percentage of call-ups for men for military service in the different military districts. As reported at page 4030 of *Hansard,* he used these words:

The instructions to all mobilization divisions are to bring the men in the designated classes under the regulations as quickly as possible and to deal with them as rapidly as the machinery available permits. The districts vary in size. Some have greater difficulty in getting accommodation and staff. Therefore the speed of selection varies, but in the end the result sought for is obtained—that is, all men fit for service, in the designated class, who are not given postponement and have not volunteered for service in the armed forces are selected.

That statement is not in accordance with the known facts. The minister gave two reasons why there might be inequalities. The first reason was that the districts vary in size. What difference is there in the matter of call-ups on the basis of population because one district may be larger than another? That answer does not afford any defence for what is taking place. The second reason given was that some districts have greater difficulty in getting accommodation and staff. Well, Mr. Chairman, this same matter was dealt with by the Minister of National Defence at page 3059 of *Hansard* for May 26, when I drew to his attention the fact that there was inequality in call-ups, and that those districts in which the greatest number of volunteers were secured were the districts in which the largest percentage of men were being called up under the mobilization act. This is what the minister said:

Mr. Ralston: I do not requisition from particular districts. I ask for so many men to report at different depots. They can come from British Columbia, Halifax, anywhere at all; I do not designate the district from which they shall come.

Mr. Diefenbaker: Every one of the ministers says that some other minister is responsible.

Mr. Ralston: I do not think I am one who attempts to shelve responsibility.

Mr. Diefenbaker: No; the minister does not.

Mr. Ralston: I am asking if my hon. friend suggests that I dictate where the men shall come from?

Mr. Diefenbaker: I do not care who is dictating. I want an explanation from the responsible minister why this condition prevails.

Mr. Ralston: I am only saying my hon. friend cannot get it from me.

Then a little later:

Mr. Ralston: What we do is to make a requisition or statement showing that we want so many men at such and such a depot.

And mark these words:

The men may come to these depots from any place in the dominion. National war services and more lately the Department of Labour, through its registrars and boards, decide what men shall be requisitioned.

The Minister of National Defence indicated that men are called from all over Canada; that regardless of the districts from which they are called they are concentrated in the various camps, without regard to the provinces from which they are called. We are in the position that no member of the government has answered the claim made by me on more than one occasion in this house, reiterated to-night by the hon. member for York-Sunbury, that there is not equality of call throughout Canada.

Let us take the facts revealed, not in the recently revised, enlarged or expurgated computations, but those contained in a return brought down on June 17, 1943, in answer to a number of questions I had asked. I am going to place on record the information contained in this return, because it shows the facts as they are; it reveals the inequalities of the call-up and demonstrates that even yet there is no approach to equality of call in the various military districts of Canada. These were the questions:

1. How many men, by military districts, were requisitioned for by the Minister of National Defence for call-up under the National Resources Mobilization Act since October 31, 1942?
2. How many notices were sent out pursuant to requisition?
3. How many men, to whom notices were sent, reported?
4. How many of those reporting received medical examination, and of these, how many passed?
5. How many of the men to whom calls were sent were duly enrolled?

In the answer it is stated that the total requisitions, both new and supplementary, between October 31, 1942, and April 16, 1943, were 104,684. It sets out the numbers called in each military district, and then, in reply to paragraph 4, states that the following numbers were accepted:

"A" London	2,419
"B" Toronto	7,110
"C" Kingston	1,072
"D" Port Arthur	583
"E" Montreal	6,413
"F" Quebec	2,356
"G" Halifax	2,995
"H" Saint John	1,532
"I" Charlottetown	419
"J" Winnipeg	2,276
"K" Vancouver	3,445
"M" Regina	2,774
"N" Edmonton	1,842

I have analysed these figures on the basis of the statements made in the February issue of *Canada At War,* page 22; I have arrived at the figure of the number of men available in each military district, after making allowance for the number of men who have enlisted, and I find that if there had been

equality of call, in order to secure the men called up during this period, the rate of call from the available pool would have been 2·22 per cent. What I mean by that is this, that with all the available men remaining in the various military districts, after deducting from the pool as it existed at the time of registration, and as brought up to date by the subsequent registration, the numbers who are in the army whether voluntarily or under the mobilization act, the percentage of call would have been 2·22 per cent. What do we find? In district No. 1, London, the percentage of call was 2·41, or just a little over the average. In Toronto it was 2·78 per cent. In Montreal it was 1·8 per cent, or 34 per cent lower than the average call. In Quebec it was 1·16 per cent, or 91 per cent less than the call would be if it was equalized throughout Canada. In Halifax it was 4·2 per cent, or far above the average. In Saint John and Charlottetown combined rate was 3·8 per cent; in Winnipeg and Port Arthur combined, 4·16 per cent; in Vancouver, 2·87 per cent; in Regina, 2·2 per cent; in Edmonton, 2·13 per cent.

We find therefore that the same inequality in calls which was taking place prior to the month of October, 1942, is being continued in practice, and there is no defence by the government to the charge that there is no equality of call, excepting that the minister says there are two very good reasons by way of defence. I have referred to those reasons, neither of which explains the situation as it is.

The other point dealt with by the hon. member for York-Sunbury was the question of the number who to-day are wandering in the byways of Canada, who have received a call, but who have not turned up. Mention was made by the parliamentary assistant to the question of national registration. He pointed out that there was national registration in 1940, and that there had been a number of registrations since that time.

Is there any member in the house who will say there has been any endeavour on the part of the government to enforce compliance with the national registration. I do not know how many prosecutions there have been. I speak for the province from which both the Chairman and I come when I say that the number of prosecutions in that province—and I speak subject to correction—does not exceed fifty. The only occasion when there is a prosecution for failure to register is when a man is brought up before the court on some charge or another, and it is found he has not a national registration card.

There has been no enforcement of the provisions of the national registration of 1940, and little or no enforcement since that time for non-compliance. There is only one way in which this question can be brought to a head, as I see it, and that is that once more there will have to be a national registration, and an enforcement to ensure strict compliance. I do not think it is possible to-day for the Minister of Labour or for any other minister of the government to know to what extent there has been an evasion of national registration.

Mr. MITCHELL: I can give my hon. friend the figure immediately, if he would like to have it?

Mr. DIEFENBAKER: Yes, I would.

Mr. MITCHELL: To date there have been 1,351 prosecutions, of which 1,326 have been won by the crown.

Mr. DIEFENBAKER: Is that in connection with national registration?

Mr. MITCHELL: Yes, and 14,932 in the hands of the police at this time.

Mr. DIEFENBAKER: No, no; those figures do not answer me at all. Those are figures connected with prosecutions for failure to answer the call-up for military service. I am talking about prosecutions for failure to register under national registration.

Let me say this, too, that the figures the minister has placed before the committee show conclusively how indifferently evasion of the call-up is being enforced. I shall give figures in connection with the call-up, not from the revised list, but from the booklet "Canada at War", issued in February last by the wartime information board. The figures are to be found at pages 22, 23 and 24. They show the government admits that 135,890, of those called up, namely 1,028,753, never replied. They did not answer the call. And of the remainder, after deductions are made for those who received postponements, and for those proved medically unfit, there were 205,776 still unaccounted for. That makes a total of 341,000 men unaccounted for in December, 1942. Those are the studied figures sent out by the wartime information board. As a matter of fact, to-day the minister says there are only 13,000 or 14,000 delinquents in Canada.

Mr. MITCHELL: I never said that. Fourteen thousand names have been handed to the police.

Mr. GARDINER: Thirteen hundred have been already in court.

Mr. DIEFENBAKER: Fourteen thousand names have been handed to the police. Even in February, as shown at page 24 of this

booklet, it was admitted that the total number of medical notices undelivered was 87,485; military training notices undelivered, 9,345, and cases pending, delinquents, or otherwise unaccounted for, 98,128. Those are the war-time information board's figures in February last, and they show the number admitted to be delinquents, out of approximately 1,000,000 calls, to have been 194,958 men.

If the government would admit that it is having difficulty; that it cannot enforce the law; that it has not the moral suasion; that it has not the necessary police force, and that it was endeavouring to enforce the law equally, then one would have more sympathy with the minister's department. But that is not the answer.

I wish now to refer to Mr. MacNamara's speech to the Academy of Political Science in New York, in which he gave various reasons why it is difficult to mobilize man-power in Canada. In this speech, to which I referred the other day, he closes with these words:

We have felt our way slowly; are still feeling our way.

Well, Mr. Chairman, after four years of war are not the people of this country entitled to better than that? Can we not have a better answer than that with respect to inequality of call and inequality of opportunity of service for the people of this dominion? Can we not have a better answer than that we have felt our way slowly, and that we are still feeling our way?

When I read this speech I ask myself this question: What defence does the government offer to this speech wherein is set out the situation in Canada respecting man-power? What defence does it offer as to why there has not been the type of war effort Canada has a right to demand? On the first page he states that the situation in Canada is different from that in the United States. It states:

While time will not permit a detailed analysis of the differences and similarities between Canada and the United States, it seems advisable to mention some of the more significant items in any such comparison as a background against which you may consider Canada's man-power policy.

Like the United States, Canada is a federal union, but, because there are only nine provinces as against forty-eight states, the opinion of each province probably carries a greater weight in determining federal policy than does that of any single state.

That statement is a negation of the principles of the Canadian confederation, and a denial of the hopes of the fathers of confederation. That statement, translated into simple terms, means this, that in Canada any one province, be it Saskatchewan, or any other province, may hold the government back, because of the greater influence possessed by one province in a confederation of nine, than one state in a confederation of forty-eight states.

Next follows something that is rather interesting, an admission of what we have contended on many occasions, that the government of this nation, in so far as the war is concerned, is a matter of government by order in council. This is what Mr. MacNamara said:

Most of Canada's war-time policies are expressed in orders in council comparable to your executive orders, passed by the cabinet under this authority and simply tabled in parliament.

It remained for the deputy minister to place before the people of the United States that which has been denied times without number in this house, that parliament has ceased to function in so far as the war-time policies of Canada are concerned, and that they owe their inception in orders in council. Then follows the strangest doctrine I have ever heard advanced by any Canadian. I know my hon. friends from Quebec are just as anxious as anyone else for equality of service.

Mr. DUPUIS: Equality of privilege.

Mr. DIEFENBAKER: Equality of privilege and equality of opportunity for service. The deputy minister said:

Consequently all government policy has to run the gauntlet of democratic review, in that disapproval of any major policy would necessitate the resignation of the government and, unless the opposition could command a sure majority in the house, an appeal to the country in the form of a general election.

Although Canada like the United States is a land of many peoples, the fact that we spring chiefly from two main stocks, French and British, somewhat complicates, although it also enriches, our political and social life.

Certainly it enriches our political and social life. I continue:

Every government policy must be framed with due regard to their special rights—

That is true.

—and their convictions.

If that statement represents the viewpoint of the government, it denies the hope that this country will ever become united from the Atlantic to the Pacific, it denies an opportunity to the people of this nation to become Canadian, united, firm, strong and free under the British crown, united in their desire to dedicate themselves to common service and common sacrifice. I repudiate the doctrine enunciated in that speech. That will not make for true Canadianism. It is the type of doctrine

that will tear this country asunder, will split our people apart, and will separate us, instead of bringing us together in the bonds of common sacrifice in war.

Is it not time that we gave to the people of all parts of Canada equal rights of service, so as thereby to enrich the Canadianism of which we are so proud? We should give an opportunity to every man and woman in every part of Canada to serve equally as nearly as possible. The people in the province of Quebec are perfectly willing to defend Canada. They accepted the National Resources Mobilization Act; they accepted the principle of service for the defence of Canada, but under the enforcement of the legislation to-day they are being denied the opportunity that the other eight provinces have, namely, the privilege and honour to march together regardless of racial origin in a union such as we have never known before.

Mr. CASTLEDEN: The parliamentary assistant to the minister tried to spread some sugar over the selective service policy when he termed it the master plan. The fact that the figures given on Wednesday have had to be revised this evening would seem to be a contradiction of what he was trying to say.

Mr. MITCHELL: There was not a revision of figures.

Mr. CASTLEDEN: We tried to base our argument on the figures that were given on Wednesday, and those that were given this evening make it rather difficult for us to estimate exactly what is going on. Why was not this explanation given on Wednesday?

Mr. MITCHELL: In view of the confusion I thought I would give a simpler statement.

Mr. CASTLEDEN: Apparently it was required, but it should have been given on Wednesday. I think it must be admitted that when the board in one province grants postponements to the extent of ninety-three per cent and the board in another province grants them only to the extent of sixty-one per cent, the average for the whole dominion being eighty per cent, there is something definitely wrong. I realize that there are difficulties in this selective service the same as there are in many of the things we are trying to do in this war, but there is something wrong when the board in one province shows a tendency not to grant postponements to this extent. The government should have rectified this. I cannot understand why this condition should have been allowed to exist for two or three years. It is unfortunate that Saskatchewan should have been singled out in this way. I live in that province; I come in contact with the people, and I hear of cases such as that of the only son of a man practically blind who was taken off the farm, while two or three miles away two or three sons are allowed to remain. Such inequalities should not exist.

It seems to me the registration of 1940 was badly conducted. I do not know the minister's estimate of it, but I believe it was worth very little. The fact that selective service has operated under so many ministers in three years is proof of the situation we are getting into. The figures given this evening with regard to the number of call-ups and the number of cases in the hands of the police is evidence that the thing has been working poorly. Those who have not answered their call-ups have not been checked up soon enough. The difficulty with the board in Saskatchewan must have been owing to personnel. Who was the representative of the army sitting in with that board?

Mr. MITCHELL: There is no representative of the army who is a member of the board, but the representative sitting in was Lieutenant-Colonel A. S. Redford.

Mr. CASTLEDEN: Is he also officer commanding district depot No. 12?

Mr. MITCHELL: I do not know.

Mr. CASTLEDEN: I think we ought to have that information.

Mr. MITCHELL: I shall be glad to get it for the hon. member. I let the army run their own show because I have a large enough undertaking myself.

Mr. CASTLEDEN: It seems to me there is something wrong here, too.

Mr. GARDINER: He has never been in charge of district No. 12.

Mr. CASTLEDEN: I asked whether he was an official of the district depot.

Mr. GARDINER: He has never been in charge. He is appointed by the military authorities to appear before the board in the interests of the defence department.

Mr. CASTLEDEN: Was a similar representative of agriculture chosen to look after the interests of that industry? Could I have the name of that man?

Mr. MITCHELL: Mr. Dawson.

Mr. CASTLEDEN: Did he take the place of Mr. Milliken, who was appointed last January?

Mr. MITCHELL: Yes.

Mr. CASTLEDEN: Mr. Milliken was an agricultural representative. He tried the job for two or three weeks and then gave up in desperation, because he had so many cases that he just could not handle them. I should like to know whether Mr. Milliken at the time of his resignation made any recommendations as to what should be done. His statement to the press was that it was such a terrific job he could not possibly handle it.

Mr. MITCHELL: He was the legal representative of the pools out there?

Mr. CASTLEDEN: Yes.

Mr. MITCHELL: He found that in view of his legal practice it was not possible for him to continue in view of representations that farmers would make through legal counsel. In place of Mr. Milliken we appointed Mr. Dawson who, I understand, is giving satisfactory service.

Mr. CASTLEDEN: The point I wish to make is this. A good many people, as soon as they heard that Mr. Milliken had been appointed, wrote to him to ask for a postponement. They received no reply, because almost right away Mr. Milliken resigned, and their letters apparently were lost. A good many cases came to my attention which had received no consideration at all. The next thing the applicant knew he was called up. Who preceded Mr. Milliken?

Mr. MITCHELL: I do not know. It was not under my jurisdiction then.

Mr. CASTLEDEN: One of the most discouraging aspects of the whole situation was that the Prime Minister had made an announcement in March, 1942, to the effect that from then on those engaged in agriculture would pretty well be kept in agriculture, and the onus of proof, according to that statement of the Prime Minister and according to the order in council rested with the board. It was the board that had to prove the men were not essential to agriculture, but the difficulty seems to be that they did not have to prove it to anyone. I ask the minister, to whom did the board have to prove that a man was not essential to agriculture?

Mr. MITCHELL: As my hon. friend understands, the board is like a court, presided over by a judge of the supreme court. The board is the final authority under the regulations and it determines whether or not a man is essential to agriculture. The board takes no direction from the minister. It is a free agent in interpreting the law and regulations.

Mr. CASTLEDEN: But according to the order in council the board had to prove that the man was not essential to agriculture. Apparently it did not have to prove it to any one. There was no other court to which it had to prove it. It had to satisfy only itself.

Mr. GARDINER: The man had to prove to the board, which was headed by a judge, that he was essential to agriculture.

Mr. CASTLEDEN: That was prior to March, 1942.

Mr. GARDINER: That was always the case prior to 1942.

Mr. CASTLEDEN: No; a change was made in 1942, and the onus of proof placed on the board.

Mr. GARDINER: The man would state that he was essential to agriculture, and his statement would have to be accepted unless it could be proved otherwise.

Mr. CASTLEDEN: If the minister will read the order in council and the statement of the Prime Minister, he will find that that is not correct. The onus of proof was on the board, and that is where the difficulty came in. There was no one to whom the board was responsible, and no appeal if anyone questioned its decision. The board was not responsible to anyone so far as I know. In fact, it is difficult even to get the evidence that was placed before the board. About a year ago, on July 5, I put a question on the order paper asking for the evidence upon which the board had decided that a man was not essential to agriculture and was called up. That question was passed as an order for a return on July 13, 1942, and the order has not yet come down. Here is the master plan at work! I should like to know how many men have been called up from farms in Saskatchewan from March 23, 1942, up to, say a month ago.

Mr. MITCHELL: I have not the figures in front of me but, if I can possibly get them, I shall be glad to do so.

Mr. CASTLEDEN: I understand men are still being called up from farms in Saskatchewan.

Mr. MITCHELL: If they are not essential to agriculture they are called up.

Mr. CASTLEDEN: Medical notices are being sent out?

Mr. MITCHELL: They get a medical examination, of course.

Mr. CASTLEDEN: Men are still being called up.

Mr. MITCHELL: Certainly.

Mr. CASTLEDEN: How many in the past month?

Mr. MITCHELL: I do not know. I will get the information for my hon. friend.

Mr. CASTLEDEN: What is the basis for the board's figures as to how many notices of medical examination shall be sent out?

Mr. MITCHELL: I thought I explained that. The boards have been directed to move in on the designated age groups and call them up. We are approaching it in that way. There has not been any allotment. We are in a mopping-up process, calling up all men in the designated age classes. These men get their medical notices, but they can apply to a board for a postponement if they are essential to agriculture.

Mr. CASTLEDEN: They can get a postponement if the board proves to its own satisfaction that they are essential to agriculture. In the spring of 1941 medical notices were sent out and a number of men took their medical examination. Then they were suddenly notified to return all their medical notices and to disregard that call altogether. They did so and thought there was no necessity then for making any application for postponement. Then here is the unfortunate thing that happened. The very same group on November 23 last received notices to report in Regina on November 25, with no opportunity at all to make application for postponement. I know of numerous cases of severe hardship as a result of that action.

I would say this, that the efficiency of the department will be judged by the equality with which they administer the regulations, and the record as far as Saskatchewan is concerned is one of which this department cannot be very proud. To call this a master plan is a piece of gross overexaggeration.

Mr. ROSS (Souris): I endeavoured to follow the minister's assistant this evening when he dwelt on persuasion rather than compulsion, but I was not able to follow him in view of what we have experienced in the last few years, because certainly we have had conscription for our home defence army—not persuasion at all. The Minister of National Defence and the Minister of National Defence for Air said that many of their best men had been young men who had first received their call. Therefore I cannot see how there was any persuasion in these preliminaries; it was conscription for the army.

When we had the national registration in 1940 of men and women, certainly no plan was evolved for the use of our man-power and no estimate was made of the requirements of the armed forces or of industry or of agriculture. No plan was brought into being befitting Canada, not even as much as was done by our good neighbours to the south the moment war was declared. Those people certainly attempted to set up a plan, and they went a little further than we have gone yet in this fourth year of the war. One cannot help thinking that the Prime Minister and his ministers are still not assuming the responsibilities of their office with respect to the man-power problem to-day. There are, I believe, some 70,000 recruits in this country to-day who have been drafted. There is a difference of opinion as to what should be done with them, whether they should be in other and more useful employment or whether they should be available for any theatre of war. I know that in this regard, on another item, the hon. member for Brantford City (Mr. Macdonald) recently suggested that they should be sent to Alaska in order that United States troops could be relieved to do the fighting of the united nations in active theatres of war. I am sure that no red-blooded Canadian would feel proud of that suggestion, and we should not countenance it.

As to the matter of conscientious objectors, the statement has been made that in a very recent period 500 have been sent into Manitoba. I believe it was represented to the minister and to the government that this approximate number were required for beet production alone in that province. I know also that officers of the minister's department are in a quandary as to which is the most essential place for these men, whether it would be in this beet industry, or in the production of cereals, dairy products and bacon on the other farms of that province. In checking the minister's statement, I notice that he says, as reported in *Hansard*, at page 3937, that the mobilization boards no longer direct the placement of these men; they simply grant postponements. What cooperation is there between these boards and the minister's selective officers? It seems to me that up to date there is a distinct overlapping there. The mobilization board, when a man is called, hears the man's request for postponement. I assume it takes notes and keeps a record of all that evidence. I should like to know whether that is turned over to the selective officer, or what becomes of it, and if it would not be more beneficial that these selective boards should direct where that man should go at that particular time.

The minister has said that young men are called if they are not essential to agriculture. My understanding is that every young man, when he comes of age under the call, whether he is a farmer or not, does receive his call.

Mr. MITCHELL: He receives medical examination.

Mr. ROSS (Souris): And does he not have to report to the board, if he is fit?

Mr. MITCHELL: He has to apply for postponement, of course.

Mr. ROSS (Souris): And if he does not ask for postponement he goes to the armed forces whether he is essential in agriculture or not?

Mr. MITCHELL: I do not know.

Mr. ROSS (Souris): Well, I think the minister should know, and I think he does know.

Mr. MITCHELL: Well, now, I do not know. Let us be perfectly honest. I am not going to mislead my hon. friend. Here are the three steps. The man gets his notice; he receives his medical examination; and if he applies, he obtains a postponement. He has to ask for it, and it is the natural thing to do if the man has a tongue in his head. If I did not want to go in the army, I suppose it is the course I would take, though I may say that if I were ten years younger I would not be standing here. But if the fellow did not want to go in the army, surely, when he went before that board he would ask for postponement. I mean, that is no secret in this country.

Mr. ROSS (Souris): The minister's statement is still very confusing. He has sitting before him his deputy minister and other assistants who, I am fairly sure, can answer this more definitely than the minister has attempted to do. This statement is rather misleading to the people of this country, because I know young men on the farms who are required on the farms but who are receiving their call and reporting to the board.

Mr. MITCHELL: I just said that.

Mr. ROSS (Souris): I understood the minister to say, if they were essential to agriculture, they do not do so. But this is the system which the government are working in order to get volunteers for the army. Certainly many young men who to-day are essential on the farms are not going to ask for postponement. As the minister has just hinted, he would not do it; neither would I do it if I received a call; in fact, I do not think either one of us would wait until we received a call. But if we did, certainly, with our pals over there we would not want to ask for postponement. And many of these young men to-day are not asking for postponement, despite the fact that they are urgently needed on the farm. I say that the government is not fulfilling its responsibility in that I know of young men who have been operating their own farms, and who are of that call age, who this spring did not operate their farms though they would have done so had they some definite assurance that they could carry on for a year. Under the present system all they can receive is a postponement for six months. That is a most indefinite arrangement for any man who has to plan to-day for the production of foodstuffs to operate on. If the Minister of Labour will not agree with me, certainly the Minister of Agriculture will.

Mr. GARDINER: I will not agree that they get six months' postponement.

Mr. ROSS (Souris): What do they get?

Mr. GARDINER: They get a postponement until further call if they are essential to agriculture.

Mr. ROSS (Souris): But they are not assured of anything over six months, are they?

Mr. GARDINER: Oh, yes, they are assured until further call, which may take them to the end of the war.

Mr. ROSS (Souris): They do not know when the next call will be.

Mr. GARDINER: Well, they do not get another call unless there is new information.

Mr. ROSS (Souris): That is a new arrangement, is it not?

Mr. MITCHELL: If I may put it in a sentence to my hon. friend, in agriculture they get indefinite postponement; in industry, the maximum is twelve months and the minimum six months. That is the whole thing, simply stated.

Mr. MacINNIS: I shall not go into the question of policy. Most of the complaints received from my province arise, I believe, on account of lack of experience of men in the selective service branch. Perhaps that is inevitable by reason of the number who have been engaged and the kind of work they have to do. I think it was the hon. member for New Westminster (Mr. Reid) who asked the minister early in the evening if he had practical men to review or pass on the ability of the men to do certain work. I believe that is a very proper thing to do. I do not think a doctor can judge, absolutely at least, whether a man can work in a logging camp or in a mine or at any other employment where hard physical labour is required. I have before me

in concrete form cases which a certain firm employing help in Vancouver took up with the national selective service after the second compulsory transfer order. I have the names, the numbers, and all other particulars, but I will not give the names. In case A, as I will call it, the party has been known to the writer of the letter and to his company for quite a few years. He has suffered from extreme eye trouble since his early childhood. He has been under treatment for a considerable time and is still under treatment from Doctor Graham Elliott of that city, who has started him on a series of artificial fever treatments through another medical practitioner, which treatments cost $36 and necessitates his going into hospital. The writer goes on to state:

> At the present time this man is practically blind in one eye and has very limited vision in the other. He has done no reading for over six months and does no writing. Until March last year he had been unable to take employment. At that time, when he had sufficient vision to get around, we found a job for him in our hardware storeroom where he has served a useful purpose ever since. We of course allow him time off for his treatments, when his doctor recommends them.

Here is the disposition the selective service made. The officials of the selective service board slated him for a lumber or mining camp. The man explained his regrettable inability to consider either. The officials then wanted him to go to the shipyards where they would find him a nice easy job in the shade counting rivets. The man explained about his eyes and the fact that he was still taking treatment.

Then we come to another case, that of a furniture salesman, who had his rejection slip dated October 15, 1942, category E, permanently unfit. He has never done any labouring in his life. He has never been in the woods or in a lumber camp. The official is sending him to a lumber camp and has told him cheerfully that if he does not sign to go voluntarily they will drag him.

Anyone who knows anything about lumbering in British Columbia knows it is work for young able-bodied men. Before the war, only young men were accepted there. It is an extremely hazardous occupation, much more so than lumbering in eastern Canada, and to suggest that a man should go to the lumber camps in British Columbia without having had any lumbering experience, and being too old and in poor physical condition, is simply to make him a menace both to himself and to those who would be working with him.

The next case—the name and number are given in each case—is that of a man who applied to the air force and the navy prior to getting his army refusal. He was refused entrance into the armed forces on account of a heart condition. He visited the selective service board a second time and was told by the official who interviewed him that the medical board had decided that he should accept work in a logging camp. The man refused to accept the ruling, and he was told again that he either had to accept it or they would compel him to do so.

I suggest that in such cases there should be a committee of loggers. They may not be qualified from the medical point of view, but I am sure they would know whether a man was able to work in a logging camp or not, because they would have to work with him. In cases of this kind, where a man is slated for some industry, such as logging, or any other activity of that kind, a practical committee of people who know what the industry is like should be asked to say what they think of the possibilities of the man being fit for that kind of work.

Mr. MITCHELL: Those two gentlemen had the right to appeal to the court of referees against the decision of the selective service officer. I know the gentlemen comprising labour representatives on the board in Vancouver: G. Price, Canadian Congress of Labour; E. Morton, Canadian Congress of Labour; B. Showler, Trades and Labour Congress; R. H. Neelands, Trades and Labour Congress; R. Gervin, Trades and Labour Congress, and E. Smith, Trades and Labour Congress. The men to whom the hon. member has referred could have appealed to them.

Mr. ROSS (Souris): The minister did not answer the question in regard to the liaison between the mobilization board and the selective service office. I said there was duplication there, and I should like to know how the two offices operate.

Mr. MITCHELL: Representatives of the selective service attend the meetings of the mobilization board.

Mr. ROSS (Souris): They sit in on every meeting?

Mr. MITCHELL: Yes. We felt that the selective service covered all the ramifications of industry and agriculture, and we thought that if we took that from the mobilization board it would be better. All they do is to adjudicate the man as a conscientious objector and he is turned over to the selective service, who direct him.

Mr. ROSS (Souris): The selective service officer has all the evidence of that kind.

Mr. ROSS (St. Paul's): On page 3954, of *Hansard,* giving the tables which the minister submitted, there appears to me to be a point that is not answered. The number of men called is given as 988,475. They were called for medical examination. Some did not turn up, but the number examined was 608,642. Then we find that 233,224 requested postponements; 190,550 postponed and the number in effect, 100,973. That means that the number granted and the number in effect total 291,523. Are all these postponements?

Mr. MITCHELL: Yes.

Mr. ROSS (St. Paul's): So that out of the 608,642 examined we have 289,544 called for military service, and out of that number only 160,662 turned up. That leaves about 129,000 to be accounted for. In the statement the minister says:

> Voluntary enlistments, as well as postponements, account for most of the difference of 129,000 between the numbers called for military training and those reporting.

I do not know where postponements enter into this. What happened to the 129,000? That is what I should like to know.

Mr. MITCHELL: They are in the army or in the navy or air force.

Mr. ROSS (St. Paul's): Are there 129,000 who enlisted voluntarily?

Mr. MITCHELL: Five hundred and fifty thousand.

Mr. ROSS (St. Paul's): That is a most extraordinary thing.

Mr. MITCHELL: It may be extraordinary, but they are in the army.

Mr. ROSS (St. Pauls'): The number called was 988,000 odd, and the number examined 608,000, and out of the 608,000 that turned up you have 129,000 that you cannot account for. We do not know where they are.

Mr. GARDINER: They did not have to turn up if they went into the army.

Mr. ROSS (St. Paul's): I should like to ask the Minister of Agriculture how he knows they went into the army, and if he can tell me just why they went into the army.

Mr. GARDINER: Because I was the minister in charge of the registration the hon. gentleman is talking about, at the time it was made. There were 54,000 men who were enlisted at that time, which number added to the 988,000, makes the total registered who were of military age. Since that time men have been called, and they have enlisted in the army and did not have to report to this board.

Mr. ROSS (St. Paul's): But they did report to be examined.

Mr. GARDINER: Not the number over the 608,000.

Mr. ROSS (St. Paul's): They are part of the 608,000 who did report to be examined; and out of the 608,000 we have only accounted for the number I mentioned. I think that this is a farce of a statement, which does not give us anything at all. It is just a lot of figures that no one knows anything about, not even the government. They are trying to make excuses for the whole thing, but here you have 988,000 who were called, and you have 608,000 who responded, which leaves 380,000 about whom we know nothing. We know that some of those are in the army, that no doubt some of them have died and so on, but there were 608,000 examined during that time. What has happened to them? Then we have these 289,000 who were called, who had notices sent out to them. Nothing has been said during the debate, so far as I know, about any of the notices going astray in regard to these 289,000 men. They were examined and they were called; notices went out to them, but we never heard from 129,000 of them, and we do not know anything about them. No one knows anything about them, not even the government. The minister tries to make excuses for this state of affairs and goes away back to 1940, when he was in charge of the registration. I think he did a pretty good job at that time; I know I helped him all I could, as we all did. Perhaps I was one of the first members of this house to call for a national registration; that was away back in 1940. Do hon. members remember the registration cards we had to fill out, with all the questions on it; asking city people if they could milk cows, and all that sort of thing? By the way, I should like to ask the minister if he was responsible for drawing up that card and asking all those questions to find out if people in the cities could milk cows, and so on.

An hon. MEMBER: Order.

Mr. ROSS (St. Paul's): Did someone speak? The whole thing is just like that; some ghost here behind me said something; I do not know what it was, and that is the whole situation as far as I can see it. The point is that the government never wanted to get down to compulsory national selective service anyway. They made up their minds they were going to do this whole thing by evolution; they were going to go away back to the old monkeys and see if they could not get some of the monkeys to become men. Thank heaven we had a tremendous number of men who wanted to

volunteer and who did so. The answer to the whole question is that the government are not interested in where these 128,000 men may be; they are missing, but no matter. You can take this whole table and it is not worth the powder to blow it up; it is the same, as a matter of fact, as the government's national selective policy.

As I was listening to the hon. member for Essex East, who is the parliamentary assistant to the minister, I thought of the words I used on Friday night in describing the policy of the government. First, I said it was vaporous. Well, it was vaporous when the hon. member spoke to-night; there is no question about that. The next word I used—perhaps I did not go far enough—was that it was vacuous. Well, you know the dictionary meaning of "vacuous"; I believe it means empty, without anything in it, and that was what I thought of as I listened to the minister's parliamentary assistant. I do not think he is quite that bad, but there you are. It will be remembered that the hon. member for Vancouver Centre criticized me the other night for not saying enough, but the third word I used in describing the policy of the government was that it was vacillating. Well, did he vacillate to-night. That is exactly what he did; and then when he got through with his speech he said, "We won't use compulsion. We never have, and we do not want to have compulsion in this thing at all. We are going to continue on a voluntary basis." Then, when I asked him a question, as to whether they did not have compulsion, he replied, "yes, but only in two cases." Well, those two cases are for home defence, and for everyone between the ages of sixteen and sixty-five. There you are; that is the whole thing. Here is your list, and it is not worth anything; the figures on it do not mean a thing.

Mr. GARDINER: You are making quite a speech on it.

Mr. ROSS (St. Paul's): I cannot hear the hon. gentleman. I rather like him; he is a pretty good minister of agriculture, but he is a better politician. He has the province of Saskatchewan right in the palm of his hand, or he thinks he has. Wait until the next election comes along; perhaps he will find that it is not in the palm of his hand as he thought. He is clever, however, and I like to hear him speak in this house. I believe he is a smarter man than we give him credit for being, and I am sure he will say these things are as I have described them, that these figures in this table are worthless and do not mean a thing. I will ask him the question: does he not admit that?

Mr. Douglas G. Ross.]

Mr. GARDINER: No, no.

Mr. ROSS (St. Paul's): The minister does admit it; I can see him nodding his head. Well, Mr. Chairman, I have many other things I wanted to speak about but I am afraid I was side-tracked.

Progress reported.

At eleven o'clock the house adjourned, without question put, pursuant to standing order.

Tuesday, June 29, 1943

The house met at three o'clock.

EMPIRE PARLIAMENTARY ASSOCIATION

OTTAWA MEETINGS—DELEGATION FROM UNITED STATES CONGRESS

Right Hon. W. L. MACKENZIE KING (Prime Minister): Mr. Speaker, it would, I think, be in keeping with the wishes of hon. members were I to make a brief reference to the conference concluded to-day by the Empire Parliamentary Association. The meetings were attended by delegations from the parliaments of the United Kingdom, Australia and New Zealand and from the legislative assembly of Bermuda, as well as by many hon. members of our own parliament. The proceedings throughout were of a high order and demonstrated the value of the free expression and interchange of ideas among the nations of the commonwealth which the conference had been formed to promote.

The conference will be particularly memorable because of the attendance, yesterday and to-day, of a distinguished delegation of visitors from the two houses of the congress of the United States. The delegation, comprising senators and members of the house of representatives, was appointed by a concurrent resolution of the congress of the United States of America, accepting the invitation of the Canadian branch of the empire parliamentary association. The resolution itself will, in time, become an historic document. It is a signal honour, paid to Canada and to the empire parliamentary association, by the congress of the United States. The resolution is also of historic significance, as adding another bond to those which already join the nations of the British commonwealth of nations and the United States in the common defence of free institutions.

The house will, I am confident, wish to record its appreciation of the visit, at a time of war, of our distinguished fellow parliamentarians from other nations of the commonwealth, and its satisfaction that Canada should have been the place of the meeting for the first time of a delegation from the United States congress with the empire parliamentary association. In this meeting we can see the development of the understanding, friendship and good-will on which even now is being laid the enduring foundations of a new world order.

Mr. GORDON GRAYDON (Leader of the Opposition): Mr. Speaker, I am glad at this point to associate myself and the members of the party which I have the honour to lead with the sentiments which have been voiced so eloquently by the Prime Minister. The meetings of the Empire Parliamentary Association which concluded to-day have been memorable in character. They have served a most useful purpose and in future will be looked upon as having been of great value, not only in relation to the problems which may arise during the war period through which we are passing, but also in relation to the tangled problems which the nations and governments of the British empire, the United States and others will have to solve in the post-war period.

In my opinion the meeting of representatives of the people rather than the heads of government is an occasion of which we should take cognizance. If permanent peace is to come, the common man of each nation must learn to respect and to understand the common man of all the other nations. These meetings have brought forth a new feeling and have generated a new spirit which will be of great value in the days that lie ahead. I wish to echo the words of welcome extended by the Prime Minister to the delegates from the various parts of the British commonwealth and also from the United States. We view with a great deal of interest the renewal of the acquaintanceship, friendship and brotherhood among those who met together.

Mr. M. J. COLDWELL (Rosetown-Biggar): Mr. Speaker, on behalf of our party I should like to add an expression of appreciation that this conference has been held in Canada. To those of us who visited Great Britain some eighteen months ago it was indeed a pleasure to welcome such a delegation to Canada. There is not much that one can say, except that conferences of this kind, participated in by what we might term the rank and file of our legislative bodies, including on this occasion representatives of the congress of the United States, can bring nothing but good to the united nations and to the world. I hope that it will be the first of many such conferences.

Mr. J. H. BLACKMORE (Lethbridge): Mr. Speaker, the members of my party rejoice along with other Canadians in the fact that we have laid the foundation for the development of good-will between the two great branches of the Anglo-Saxon race. The conferences which have just been held were epoch-making in their significance. I do not believe I have ever attended meetings at which such frankness, candor and good-will were displayed. I am grateful indeed to those who arranged the conference and to those who have taken part in the meetings.

PRIVILEGE—MR. CHURCH

REFERENCE TO ARTICLE IN MONTREAL "GAZETTE" OF TUESDAY, JUNE 29

On the orders of the day:

Mr. T. L. CHURCH (Broadview): Mr. Speaker, I regret having to rise to a question of privilege. I wish to call the attention of the house to what purports to be a reprint in this morning's Montreal *Gazette* of an item from *l'Evenement* of June 9, but I can find no such article in *l'Evenement*. It refers to me as "one of the survivors of the Conservative opposition of 1908 which accused Laurier of building a tin-pot navy." I was not a member of the house in 1908 or for fourteen years afterwards, and I never attacked Laurier on the navy or used any such words as "tin-pot navy". It goes on to say:

> "It remained to Mr. Church to deny also the utility of the Canadian army and air force," *l'Evenement Journal* said.

I never did. That is ridiculous. It says further:

> It is not a bad thing, perhaps, that a representative of the Tory party in the House of Commons should demonstrate, by his extravagant words, that there is more than one blunderhead in parliament—that the province of Ontario can count one.

I was no blunderhead when I predicted that in this war the enemy might sail up the St. Lawrence and bomb the citadel, and advocated before the war that we should rearm on land and sea and in the air.

WAR APPROPRIATION BILL

PROVISION FOR GRANTING TO HIS MAJESTY AID FOR NATIONAL DEFENCE AND SECURITY

The house resumed from Monday, June 28, consideration in committee of a resolution to grant to his majesty certain sums of money for the carrying out of measures consequent upon the existence of a state of war—Mr. Ilsley—Mr. Donnelly in the chair.

DEPARTMENT OF LABOUR

National selective service programme, $8,680,225.

Mr. POULIOT: Mr. Chairman, in my humble view this is the most important matter that has been brought before us this session, because by virtue of chapter 13 of 4 George VI the Minister of Labour has authority over everybody in this country who is not in the army. This is the law:

> Subject to the provisions of section three hereof, the governor in council may do and authorize such acts and things, and make from time to time such orders and regulations, requiring persons to place themselves, their services and their property at the disposal of His Majesty in the right of Canada, as may be deemed necessary or expedient for securing the public safety, the defence of Canada, the maintenance of public order, or the efficient prosecution of the war, or for maintaining supplies or services essential to the life of the community.

This is selective service as it has existed since the midsummer of 1940. In 1942 orders in council were passed specifying the powers granted to the minister and to the head of national selective service. The matter was understood by Mr. Little in a clear and very simple way. I have here a publication that was sent to all of us, *Canadian Business*, of June of last year, which sets forth the conception which Mr. Little had of his work and of national selective service, as follows:

> The ideal behind national selective service is the fitting of every Canadian into the place where he can serve most effectively. Just coming into force, the new regulations provide for the gradual carrying out of this plan. Management's wholehearted cooperation is essential for its success, particularly in the field of personnel relations.

After March of 1942 we had the plebiscite, the effect of which was described in a contradictory way by the correspondent of a big daily, the New York *Times*. The same issue of the paper, November 1, 1942, had two articles on the plebiscite, one of which was entitled, "Canada is stirred by plebiscite," and the other "Plebiscite debate unifies Canadians". That shows there was a divergence of views about the matter. I shall not go into the whole chain of procedure which has been summarized by the member for Temiscouata in an article published in *Le Saint-Laurent* of February 4 this year, because that has been sent to all members, especially the members of the government.

The other day, I think it was on Friday, I asked the Minister of Labour for some information about Mr. Alexander Gunn, who was called here from England to make suggestions about essential and non-essential industries. I regret very much that the minister has not yet supplied the committee with that information.

It was said in the Montreal *Gazette* of April 26 of this year, "Mitchell gets wider control of man-power." He could not get wider control than he has now. The only thing that could make a change would be the exercise of the powers that he now has.

I have here a letter dated November 16, 1942, from an official of national selective service, in which he states:

> We conform ourselves to the requisitions made by the Department of National Defence according to their training plans, and our registrars act accordingly.

Which, I find, is all wrong, as I have stated before, because all the youth of this country should be under the control of the Minister of Labour, and the Minister of Labour should not be for any consideration the subaltern of the Minister of National Defence.

For a time matters were so bad that, according to a news item which appeared in one of the Ottawa papers on January 16, 1943, the Prime Minister wrote the Minister of Labour asking him, what about man-power?

> "What about man-power?" Mr. King asks Mr. Mitchell.
>
> Said requesting detailed answers to 19 "pertinent" questions.

"Among the things to which Mr. King is said to seek answers are:

> "What has been done to stabilize employment in agriculture?
>
> "What is the true situation regarding labour supply?
>
> "What has been done to give effect to the mobilization regulations of December 1?
>
> "What has been done to ensure the uniform application of these regulations throughout the nation? . . ."

The dispatch says it is learned that Mr. Mitchell has set up a special six-man committee of selective service and labour department officials to prepare the replies to the questions. The committee is described as made up of: C. F. Needham, recently appointed associate director, civilian, of selective service, chairman; Brig. Riley, associate director, military; Dr. Walter Couper, special assistant to the deputy minister; Allan Mitchell, director of unemployment offices; Harry Hereford, formerly chief of man-power records and now special assistant to the deputy, "and one other."

Quoting from the *Globe and Mail:*

The theme of the 19 questions is said to be: "What has been done to give effect to my man-power speeches of March 23 and August 19?" On March 23 last Mr. King announced the establishment of national selective service . . . and defined its policy. On August 19 in a nation-wide broadcast he told of the extension of that policy in order to put every competent man and woman to work in essential industry.

There is a great difference between the United States regulations and ours. American regulations specify what positions are essential; ours mention what positions are non-essential. That makes all the difference in the world. In the first place, what we should know is what positions are essential, and I regret very much to have to admit that in this connection the United States list is much more practical than that of this country.

Now with regard to the farming question. Here I have news items which appeared in the papers on January 28 of this year, in which are stated two things which may surprise us very much. In the first place, Lord Woolton said he was absolutely satisfied with the food situation, while we in Canada are expressing fears that there will be famine during next winter. Something was said about the legacy which the Minister of Labour inherited. I think it is a proper word to describe what happened. We must go back to the first draft of the regulations concerning conscripts. The first draft was passed in 1940 of the order in council which was adopted afterwards, and then some justification was sought in the report which was made by five men who had to decide about essential industry. They were: the deputy minister of agriculture, a gentleman from the Department of Fisheries, another man from the Department of Mines and Resources, another official from the Department of Transport, and the timber controller. They made a report which was sent to the deputy minister of labour, and by him to the Department of National War Services, and by that department to all registrars. Here is what is said about agriculture. It is considered in that report a primary industry for the south half of Quebec from May to August, and for the north half from June to September. It is a secondary industry regarding animal and vegetable products, butter and cheese, from May to October; other dairy products, June to August; fruit and vegetable preparations, July to September; tobacco processing and packing, January to March; leather goods and mitts, July and August; aerated and mineral waters, from June to August. What farmer in the province of Quebec is interested in making aerated and mineral waters? But what is essential to note is precisely that agriculture was not considered a primary industry for more than one-half of the year, when everybody knows that farmers are working from dawn to dusk a great deal of the year. That was all wrong.

The Minister of Agriculture was Minister of National War Services from July 12, 1940 to June 11, 1941. In *Hansard* of November 13, 1941, the Minister of National Defence for Air, who was taking the place of the Minister of National Defence on that occasion, mentioned that the thirty days' training had been decided and ordered by P.C. 4904 of September 17, 1940. May I point out to you, sir, that Lieutenant-General Crerar, who is commanding a division in Great Britain at the present time, has a fine military record, and he stated at the time that one month was enough for the training of those young men—

Mr. HANSON (York-Sunbury): He never said anything of the sort.

Mr. POULIOT: —which raised a storm, in which my hon. friend from York-Sunbury took part—

Mr. HANSON (York-Sunbury): The chief of the general staff never said anything of the sort. He said that one month was all that they could put into effect for the time being; and he stated the reason why—that the youth of Canada had to be taught a sense of national obligation.

Mr. POULIOT: Words speak for themselves, and if the hon. member for York-Sunbury has a power of attorney from Lieutenant-General Crerar it should be delivered to the Chair.

Well, sir, the extension of the four months was by P.C. 1910 of March 18, 1941, when the Minister of Agriculture was still Minister of National War Services, and clause 8 (f) regarding the thirty-day period was amended as follows:

Upon so becoming a member of the active militia each "R recruit" shall forthwith undergo training for a period of four months, or for such other period as the minister of defence may from time to time prescribe, unless in the meantime he is required for service or duty.

On July 2, 1941, the Minister of National Defence, by a stroke of the pen, extended the training for the duration. There were many young men who recognized their obligation to go to camp for training, but they were told by everyone that training was only for one month, and afterwards they found that it had been extended to cover four months. Well, they said that they would take the training during the dead season, but after having understood that their training would last one month, and then four months, and having made arrangements accordingly, they

were detained in the camp by means of an order, not an order in council but an order, signed by the Minister of National Defence in virtue of an order in council that was passed when the Minister of Agriculture was also Minister of National War Services. The farmers had no protection from the Department of Agriculture in their endeavour to remain on the farm.

In the first place, in consequence of that famous report that I have already read, in which agriculture was described as not being an essential industry throughout the entire year, and also because of the fact that they have had to remain for training, these men have not received the protection which they could have expected. Let me tell the Minister of Labour of the troubles we have had in the province of Quebec from the time we began to fight for the farmers. I have here a letter from the then chairman. I will send him the original, which I would ask him to return to me later. I quote:

> But you must understand that we cannot postpone their service indefinitely.
> Seulement il faut que tu comprennes que l'on ne peut pas remettre leurs services indéfiniment.

That is why we have to fight so hard. The fact is that these people did not understand either the letter or the spirit of the regulations and we have had to put up a struggle for the farmers. For everyone will realize the loss that must result when the farmers are taken away from their farms. It is disastrous.

Next I called the attention of the predecessor of the present Minister of National War Services, Judge Thorson, who entirely agreed with me, to the fact that the farmers had the same rights as others and were entitled to postponement. The staff had to be changed because there was no possibility of getting any understanding. Now, when we hear some people saying that the farmers are exempted from service, it is untrue because there are a good many young men whose place is not in the army but on the farm. They went to the army in good faith but they were kept there by men who are not expert in agriculture, as the minister admitted, to the great surprise of the hon. member for Bellechasse. It is those people, who have no experience in agriculture, that decide upon the necessity or otherwise of men remaining on the farms or going into the army. That cannot work.

There are many farms that cannot do as well now as they did before, and that is exactly the reason. But, I may say, I wrote certain articles in our local newspaper and sent a copy of each article to the ministers at the time. Some of these articles were translated; they had an opportunity to translate them at any rate. These articles explained the situation in the province of Quebec. I have high regard for the minister personally, but I believe that he was wrong in some of his utterances. Unfortunately, I have only the French version of the speech which he made on September 12, 1941. At that time he was not Minister of National War Services, but here is a translation of what he said:

> If we have to raise a million men for our armed forces we will have seven million other men in Canada, aged over 16. These seven million were organized and determined to help the armed forces, by directing our farms, our dairy industry and our business offices in a way which will give the required production.

Mr. GARDINER: Not 7,000,000 men.

Mr. POULIOT: I will send this to the Minister of Agriculture.

Mr. GARDINER: It has been translated twice, apparently into French and back into English. That is incorrect.

Mr. POULIOT: I am glad the minister corrects it. I send him the paper I received from the information bureau.

Mr. GARDINER: My hon. friend knows that there were not 7,000,000 men in Canada aged 16 and up.

Mr. POULIOT: I know that very well, but at the time the information was given by the Department of National War Services. I do not know who is responsible for that translation.

Mr. GARDINER: I am not responsible for the translation, because I regret to say I do not speak the language.

Mr. POULIOT: I take it for granted that the minister did not make that statement because it cannot be correct, but it will show him what is stated in French sometimes in the translations of speeches given by a minister. But if the minister did not say 7,000,000 men, and I am sure he did not say that, he did say that we could have a million men for the army. Now to give a million men to the army we must take men from the farms, men who are indispensable there. In the province of Quebec, I may say, we have not been as well treated as they have been in the provinces of the west, and here I have a copy of a letter from the Curé Bonne Madone of Saskatchewan, from which I quote:

> (Translation) My parish is cosmopolitan; I have parishioners of six different nationalities, and all the farmers' sons of my parish and of all other localities in Saskatchewan, as well as day-labourers who know the least little bit about agri-

culture have without exception been exempted, and no difficulties were made. Why do the French Canadians of the province of Quebec encounter so much trouble in trying to obtain justice? Farmers are asked to produce and even over-produce for the war effort, and in this area they are deprived of necessary and competent help.

He states that it is much easier to have postponements in Saskatchewan than in the province of Quebec where he is at present for a short time.

Coming now to the regulations, they were perfectly in accordance with the famous report I have quoted, in which agriculture was at first described not as an essential industry but as a seasonal industry, that is, seasonal during four seasons, although it was not stated in that way. It was regarded as a seasonal occupation for the summer months, as has been indicated officially by the deputy minister of national war services, who is now minister of that department. He sent that document to every registrar informing him that agriculture was a primary industry only during a part of the year. I had to fight as many people and I was supported by the present Prime Minister and by the late Mr. Lapointe. They understood perfectly well that agriculture was an essential industry, and finally the description was changed, but changed in such a way as to dumbfound people. Agriculture was described as a seasonal and essential occupation, meaning thereby that agriculture was essential during a certain season. And now to corroborate what I have said, we see farmers coming from Saskatchewan to help the farmers in Quebec. I say it is better to have in Quebec farmers from Quebec, than to have conchies and Japs. But we find there are farmers in Saskatchewan who have spare time, and a shortage of farmers in Quebec because the army would not let out those men who are indispensable on the farms.

Mr. HOMUTH: No, no.

Mr. POULIOT: My hon. friend does not know what is going on. I may quote him a case, among many others.

Mr. HOMUTH: We have an example from the hon. member.

Mr. POULIOT: I know of a farmer fifty-one years of age who needs help. His son, over twenty years of age, is in the army. He has three boys whose ages are fourteen, eleven and nine, and two girls of eighteen and seventeen, who are evidently unfit to run the farm. Of course they could milk the cows, possibly, but I do not see how they could do hard work, nor do I understand how a boy of fourteen years could do that work. This is a large farm, and the answer I received from the Department of National Defence was a great surprise to me. When I have an opportunity to talk the matter over with the hon. member for Waterloo South I will let him see the file in order that he may understand. I shall give him the evidence, as I have been giving it for a month to the parliamentary secretary of the Minister of National Defence. He understands the situation, and I am sure that he understands that I was justified in complaining about several cases.

Now, why do we have trouble? We have trouble in the first place because the mobilization act was passed only in 1940. It should have been passed at the first session in 1939. When we are at war we must act accordingly. In total war each man must be at his place, and each man must obey the law. But there are exceptions. Yes, there are many exceptions. What about those whose ordinary place of residence is not Canada? Why make a distinction in respect of immigrants who came to this country, who should be called for the medical test and for training, just the same as any other citizens of the country?

I understand that for a long time the government had trouble with the boys who belonged to other races or other countries. I refer to countries now under the control of Germany, and the governments of which are in England. In this class would be Belgians and others. They have refused to do their training. I do not know how it is working out now, but I do know that some of the nationals, whose governments are in England, were refusing to do their training and were retaining their places on the farms. Yet Canadians have to leave their places on those farms to give a better chance to these people. I do not know how it is working out now.

We should have a census of all those who have come to Canada through Canadian ports since the beginning of the war. We should have a census of all those who have passed customs offices at border points, and we should have a record of those who have landed in the United States of America en route to Canada. Those people should be called upon to do as much as Canadians. That is only fair; I cannot see why a man from any other friendly country must not do the same as the Canadian who happens to be born in this country and who has lived here all his life. What is the idea of treating with white gloves those fellows who have come here for shelter during the war? There should be a careful investigation of all people in that group.

In the second place, if it was the intention that the plebiscite should relieve the government of all pledges made to the people of Canada, I do not see why the Doukhobors, Mennonites and conscientious objectors should be treated differently from good Canadians who have lived here all their lives, and who

do not take advantage of the law by saying that they are conscientious objectors. Why do the Doukhobors receive special consideration? I ask that very serious question of the minister, and I hope he will answer it. If the government was to be relieved of all pledges, without exception, then did not such relief include pledges given to Doukhobors, conscientious objectors and Mennonites? How is it that those people have rights different from those held by people who have lived all their lives in this country, and who will be buried here? I cannot understand it.

I have before me a return tabled at the request of the hon. member for Lake Centre, and it shows correspondence with regard to Doukhobors. It is far from edifying. I do not see why these men receive special privileges. I now send to the minister two anonymous letters I have received from the city of Quebec containing complaints with respect to members of the staff in the registry office. He may have these letters translated, and take the action he sees fit. I have my own way of carrying out inquiries, and probing and making investigations.

I have in mind the case of three young men who were supposed not to have answered the call from the registrar to attend training camps. I pleaded their case. It was one of the few cases I have argued in many years. The first witness I called was Henri L. Gagnon, acting registrar. Under oath I obtained the truth from him. His statement was stupendous. He admitted 15,000 letters—I knew there were more—had been put in a file, without being classified. One man had been called a deserter because the sworn medical certificate stating he was not fit to attend for training had been sent by registered letter, and was left in the dump. He was called a deserter. Gagnon admitted there was something wrong in the office.

I think the Minister of Labour should be boss of national selective service. National selective service should be operated by officers of that branch, not by officers who were formerly in the Department of National War Services. That practice has been discontinued. The Department of National War Services has nothing to do with calling men to training camps. That must be done by the Minister of Labour, through the organization charged with that responsibility.

I remember when the present Minister of National War Services went to Quebec city some time before the change was made—and the change was long postponed. He said he would see to it that none of the staff of the registrar would lose his or her job. That was because they did not want any stenographer, typist, clerk or messenger from the office of the former registrar to lose his or her job. The law of the country is not applied by an organization which has always been under the Minister of Labour. It is still administered by the old national war services board, now called the mobilization board, which has done so much harm to agriculture in our district. This cannot be denied, because changes have been made. I will say to the minister that I appreciate the cooperation of some of his officials whom I know and with whom I have dealt in regard to certain cases. They are very modest; they do not want to be praised in public, but I know that he has very able men under him, especially among the bilingual staff whom I know better than the other members of the staff. They are men who understand common sense. But I want the minister to make a clean-up of what is wrong in his department; I want his department run smoothly according to the directions given by the minister and, more than that, in accordance with the law itself. I have here from the proper authorities information with regard to the staff of the registrar's office in Quebec city. I admit that the registrar is not a bad fellow; I am sure Judge Fortier means very well, but I cannot say the same for the other two commissioners.

Let me conclude by saying how difficult it is to obtain information in regard to certain people, but how easy it is to make men feel great when they want an increase in salary of $400 a year. I have here the case of one man who for some time acted as registrar at Quebec. On May 9, 1942, Major Benoit, who was then director of mobilization, wrote of this man in these words:

> He is the eyes and ears of head office throughout Canada. On his recommendations may depend important changes of policy or procedure. . . . For these reasons, subject to consideration by the comptroller of the treasury, it is suggested that the duties of Mr. —— warrant his reclassification to the rate of remuneration of $4,000 per annum.

A man like that, who is the eyes and ears of the head office throughout Canada, should be worth at least $100,000, but what I find strange is that it should be done in this way, making a superman out of an ordinary fellow. If he were merely the eyes and ears of the head office throughout Canada, that would be a bad thing. Then the deputy minister, who is now the minister of the department, wrote this in the margin:

> If anything Major Benoit has erred by understating the good work Mr. —— has done for us and underestimating the responsibilities which he is carrying.

Well, sir, I suppose these men make no mistakes.

Mr. HANSON (York-Sunbury): I do not rise for the purpose of making another speech on this item, Mr. Chairman, but primarily to correct an impression which my hon. friend the parliamentary secretary to the minister left with the committee last evening, I believe inadvertently. He did me the honour to follow me at that time, and it was through no intentional discourtesy that I did not stay in the chamber and listen to him. I must confess that the atmosphere here was so humid and so tepid that I could not remain in the chamber any longer. I have since read the remarks of the hon. gentleman, and I desire at once to correct an impression which he appears to have in his mind that through all these years since Dunkirk I have had one rigid idea, which was that the man-power policy of Canada should be directed only toward the reinforcement position of our army overseas.

It is perhaps fair to say that in the remarks I made last evening I did direct attention to that particular phase of the situation, and that on more than one occasion I have laid emphasis on the necessity of having ample reinforcements for our fighting men. But it is not a correct inference for anyone to draw, least of all one so intelligent as the parliamentary secretary to the Minister of Labour, that I am not concerned with other aspects of this man-power question. May I remind you Mr. Chairman, and the members of this house, that during the time I had the honour to lead this party we laid down the principle of selectivity as the underlying theme for dealing with the man-power situation in Canada. I had the honour to embody that principle in an amendment which I moved on one occasion to the address in reply, or at some other time; I have not checked it up. I think that is a fair statement for me to make here; but I have always recognized that a nation at war, like Canada, endeavouring to play a man's part, with an active army on service overseas in a theatre of war, should keep that army as the primary consideration with respect to our man-power policy, and we should never lose sight of that. We have lost sight of it in a degree, because of the fact that our army has not been in action; but it is not correct to say that this party or any members of it have ignored the other features of the man-power problem. We have accentuated the position with respect to the farmer; we have tried to emphasize the position with respect to the industrialist, and there have been occasions when we have taken exception to the regulations that have been adopted because we thought they were endeavouring to do in an indirect way what should be done manfully and in a direct way, toward getting men into the army.

The specific instance to which the hon. gentleman referred, the case of a young man eighteen years of age, whose father was ill and who was the only man left on the farm, I find was referable to a regulation under which no one could employ that young man. Behind that regulation was the theory that because this country would not adopt a manly system of getting men into the army, they adopted an indirect method of driving young men into the army by refusing to permit them to obtain employment when they reached a certain age limit. On that occasion I was objecting to that position, and I think rightly so. We have never been unmindful, as I think the hon. gentleman would lead the house to believe, of the fact that there were other aspects of this man-power question; but primarily, as I observed before, the duty of this nation—no matter what the demands of agriculture or the demands of industry may have been or are to-day—is to see that the army which has volunteered for service overseas, to fight and it may be to die, shall have first call on the man-power pool. That is the position we take, but we do not close our eyes to the fact that there are other avenues for the employment of man-power to sustain that army overseas. In that way we have urged upon the people of Canada and upon this House of Commons to adopt as an underlying principle for our man-power policy the principle of selectivity. We have never had it, I am bound to say, until quite recently. Under the present set-up an effort has been made—I want to be fair about this—to improvise ways and means by which this underlying principle may be integrated into the national effort.

Mr. HOMUTH: Not very successful.

Mr. HANSON (York-Sunbury): That is my opinion. However, I did not rise to castigate the minister or anybody else; I rose merely to make clear the position which I have always maintained. The immediate objective should be to adopt that principle of selectivity and to integrate the whole man-power of this country in such a way as to place a man in the job he is best capable of doing.

We heard something to-day about the farmer, and I should like to say something about that. Food is important. As we all know, the farmers have done a magnificent job under adverse circumstances. It is a matter of great regret to every one of us that agriculture may be placed in a difficult

position, not only because of a lack of manpower but because of the weather conditions that now prevail. I am somewhat apprehensive about the quantity of food we may be able to produce this year. I know our farmers and our farmers' wives—many of them are doing it—will do as good a job as it is possible to do. I think the mistake that was made at the beginning was that the recruiting branch of the Department of National Defence endeavoured to get volunteers where the picking was the easiest. I am bound to say that in my community the young men on the farm offered a favourable field. One reason was that as a rule, in my part of the country at all events, farmers' sons receive an inadequate pecuniary compensation for their services on the home farm. Many of these lads were glad to go, but the majority of them went for patriotic reasons. The number of men on the farms, in New Brunswick particularly, was rapidly depleted.

Then you have the situation, which I have seen, in which one farm is denuded of the young men and nobody leaves from another farm. Perhaps it is not proper to refer to specific cases, but often they illustrate the general rule. I have in mind two farmers living side by side, each with four sons. On one farm the four sons enlisted voluntarily, and not one went from the other farm. This type of situation causes discussion in the community, which discussion penetrates to me or to somebody else and is held up as an example of inequality of sacrifice, and it is. When the mobilization regulations are put into effect the man whose four sons have gone into the army will not be able to get them back, except perhaps on seeding leave if they happen to be on this side. If a liberal interpretation is given to the regulations the man with the four sons still left may be able to get every one of them off.

Mr. ROSS (Souris): That has happened in some cases.

Mr. HANSON (York-Sunbury): I have had this very case up with the mobilization board in my own province. The man with the four sons still left does not need them all on his farm.

Mr. MITCHELL: I should like my hon. friend to give me privately the name of that farmer.

Mr. HANSON (York-Sunbury): I shall have to look up my file; I cannot remember the name. It did not happen, because the mobilization board took the view that one son was sufficient to work the farm and the other young men had to go. I am calling this matter to the attention of the minister and of his deputy who is sitting in front of him. There should be some flexibility in administering these regulations, as there should be in connection with anything that deals with any form of human activity. You cannot be too rigid about this sort of thing. You must not lay down a law that all farmers' sons are to be relieved. Each case must be decided upon the circumstances. The man whose four sons had not enlisted should have no right to go to the authorities and say that he wants them on his farm. I do not believe that was the intention.

I should like the minister to give us a break-down of the figures which were put on *Hansard* so unexpectedly last night by himself and later by his parliamentary assistant. The first figure of 1,043,163 covers the men in designated classes as at 1940 registration total, while the second figure of 988,475, which I used last night, I understand is the difference between the first figure and the figure of 54,688, which represents the men being called. I should like to have some information with respect to the figure of 550,692. Does this figure not include the second figure covering the men now on postponement? A man is never given a postponement until he is actually called. The men on postponement, as I understand it, would have been actually enlisted and signed up. Does the figure 100,973 represent men who have never actually got into the army? I think I am correct in assuming that it does. That would help the minister's position. But I do want a break-down of the 550,692 figure. I also want the minister to tell us about this lost army of 67,674 men. What is being done to trace them? What is being done to get them into the army? What is being done with the acknowledged defaulter? In my view it is not good enough to have some advertising agency, or whatever it is, in the city of Toronto, given the job of tracing these defaulters. I have forgotten the name of the company.

Mr. MARTIN: Hooper-Holmes Bureau.

Mr. HANSON (York-Sunbury): Are they an advertising agency?

Mr. MARTIN: No, a collection agency.

Mr. HANSON (York-Sunbury): That may be the proper sort of agency to hire for this purpose, I do not know. I am not concerned about that; I am not prepared either to condemn or to commend the employment of this agency, but I want to know what is being done to vindicate the law. The law has been set at defiance by a large number of people.

Mr. HOMUTH: It depends on what province they live in.

Mr. HANSON (York-Sunbury): It depends on where these defaulters are located. I am happy to think that in the little province of New Brunswick from which I come there have been few defaulters. I am happy to think that the citizens of New Brunswick have not had to be taught a sense of national obligation, as we were told by the chief of the general staff in October, 1940, was needed. So far as I know, there have been no prosecutions in the maritime provinces. The minister ought to tell us what he proposes to do to get these men into the army. He should give us particulars of the machinery used in sending out these calls, because so many of them seem to remain undelivered. My understanding is that every call was sent out by registered mail, so that every one of them could be traced, mathematically. What happened when that machinery broke down? Who has been penalized, if anybody, because the law was not carried out? These are all interesting queries that I am putting to the minister, and I hope he will take the time to put the position before the Canadian people, because they want to know, and they are not satisfied with what has been done in the past.

In particular the Canadian people were not satisfied with the administration of the Department of National War Services. If ever there was a washout in government departments in the history of this dominion it was the institution of that ministry and its career from that time down to this. I am not going to blame the minister who first occupied that position, because he is a busy man and I venture to say that he took on the job only because nobody else would take it. I have an idea that is the fact. I happen to know that when the Prime Minister was endeavouring to get gentlemen from outside the pale of the Liberal party to enter his government after May, 1940, he approached various gentlemen who were adherents of the Conservative party and offered one of them this job of minister of national war services, but to his everlasting credit the gentleman spurned the offer because he was not going to do the dirty work of the administration. That is true; that is a matter of history. I shall not mention the man's name. As I have said, I am not blaming the Minister of Agriculture, who was the first minister of national war services, but I do say that the performance of his successor in that position—I am sorry he is not in the house so that I could say this to his face, and I am not going to cast reflections upon him now that he has become a member of the judiciary—was a perfect wash-out, and the Canadian people never had any confidence in his administration of the office. I wonder why the ministry has been continued until this day. What useful function does it perform?

Mr. HOMUTH: That is why the former minister was given social security.

Mr. HANSON (York-Sunbury): The hon. gentleman is quite capable of expressing his own views and I invite him to do so when I am through, but I am expressing the thoughts that are running through my mind. Is the ministry being maintained for the purpose of political expediency, to find a place for the present minister who was put into office for the ostensible purpose of converting his compatriots to the principle of conscription for military service overseas? That is what we were told prior to the by-election in Outremont, but I notice he soft-pedalled that in all the speeches he made during the contest, and we have never heard from him since with respect to that aspect of the matter.

Mr. HOMUTH: Except that "it is not in the public interest."

Mr. HANSON (York-Sunbury): I am speaking of this particular question of interesting his compatriots in the great national effort in which Canada is at present engaged.

Mr. GARDINER: Mr. Chairman, the discussion which has been going on since Wednesday last with respect to certain matters having to do with man-power has caused quite a number of speakers to refer to the registration which was made in 1940. The hon. member for York-Sunbury has called attention to the fact that I was minister of national war services in 1940 and therefore in charge of that registration. The fact which has brought about the discussion that has been taking place was that 988,475 men of certain age groups from nineteen to forty six years were available in Canada, single men who at some time might be called for military service. After a call had been made, 608,642 of these men responded to the call and 379,833 did not. If I remember correctly the argument which was used in the house and certainly in some of the press of this country was to the effect that these men had simply disappeared, and that if such a considerable number of men could disappear and their whereabouts not be known to the government there must be something seriously wrong with the system in force. As I understand the remarks made last evening by the Minister of Labour, he accounted for these men in a way that must have been satisfactory to the last speaker; because I listened to his

remarks last evening when he suggested that at some later date, after he had had time to review the figures, he would tell the house what he thought about it all. But this afternoon, instead of telling the house what he thinks about it, he has risen in his place to tell us that he wants a little further explanation from the minister. In other words he has discovered that instead of 379,000 men there are some 68,000 men who are not entirely accounted for, and he wishes the minister to tell him who those 68,000 are and where they are. I tell him in a word that if he reads the explanation that was given by the Minister of Labour last night he will find everything explained, and that the whereabouts of many of the 68,000 are pretty well known.

That brings me back to the question of the registration itself. One of the members speaking last night agreed that the registration had been fairly well carried out and that the results were satisfactory. I recall that the statistics then available from the statistical branch of the Department of Trade and Commerce, following the previous census, indicated that there were in the neighbourhood of 8,000,000 people in Canada who were sixteen years of age or over. A registration was taken in 1940 of the people of Canada who were sixteen years and over, and the actual registration reveals that 7,862,920 people registered. The highest estimate that we have of the number of people in that age group in Canada was around 8,000,000, and the final result of the registration was that 7,862,920 people registered. I venture to say that there is no other country in the world in which, if the people had been called upon to register their names in three days the result obtained would have been as favourable as the result obtained in Canada on that occasion. When the second chance was given last year to those who had not registered in 1940, about 144,000 turned up and registered. If you add that 144,000 to 7,862,920 you get almost exactly 8,000,000 people, which was the estimate that was made of the number of people in Canada from sixteen to the top ages of our population. In other words, practically all the people registered on the first occasion, and practically all of the few who did not register at first registered on the second occasion, when some 144,000 appeared.

Mr. MacNICOL: On the second occasion did the number not include those who in the interim had reached the age of sixteen?

Mr. GARDINER: No, I understand not. It was the persons who should have registered in the first place but did not, because the idea was that any who did not register after this second chance were to be prosecuted. As I understand the figures given last night, some 1,300 have been prosecuted, most of them convicted, and some 14,000 cases are still in the hands of the courts. That is the position in connection with the registration itself.

But the chief charge or the chief claim which was made in the press which criticized the statement made last week was that all these people should have been followed throughout the year, that this registration should have been kept up to date, and that somebody in the government should know exactly where every one of these 8,000,000 persons is at the present time. I submit that any member of this house or any person in Canada who is interested only in seeing a job done knows how ridiculous a thing like that would be. Any man in any community knows that at least seventy-five per cent, in many cases ninety per cent, of the people in the community are living to-day exactly where they were living in 1940. Everyone in the community knows where they are, knows that they were there in 1940 and that they are there still. As a matter of fact, when we examine into the farm population situation, we find that about twenty-five per cent of the man-power from our farms of certain large groups who are able-bodied men, have left the farms and gone into some other employment. That means that seventy-five per cent of them are still on the farms—that is, speaking of the man-power—and I venture to say that when you take the woman-power into account a much larger percentage than the seventy-five per cent are still on the farms. What would be the sense in a government or anyone else sending a body of people around to inquire every once in a while whether these people are at home or where they are? The facts with regard to the whole case demonstrate they are at home, and they are not only at home but they are working.

Something has been said as to whether the method which has been followed in connection with our man-power is a good method. I believe the minister, speaking in the house, said the other day that under the circumstances this was the best plan that could be devised in this country. Well, if one wants to test the plan itself what one should take into consideration is the results. What are the results? The hon. member for Témiscouata, (Mr. Pouliot) speaking a few moments ago, referred to the position of the farm population in his province; and he has a perfect right to discuss that and should discuss it, but in discussing it I submit that he was not altogether fair. The orders and the statements made in 1940 and 1941 with regard to persons who were on farms permanently and persons who were there only seasonally had to do

with the policy which was then being put into effect. The policy was one which was intended to give thirty days' training in the first few months, and, later, four months' training to every man of a certain age in Canada if he were single. In putting that into effect it was said that agriculture is more or less seasonal, and it was said, in the interests of agriculture, not in the interests of someone else, not in the interests of the army—the army if left to themselves would have desired to get those men called, so many in each six weeks period, as was done at the beginning, from every area right across Canada—but agriculture said, and certainly the Minister of Agriculture, who happened at the time to be Minister of National War Services, said, that the proper time to train men off the farms is in the season when they are least employed. In the western sections of Canada, where we are grain growers, we said, "If you want to call men for training from the farms, call them in the winter months and not in the summer months so far as those areas are concerned." It is true we had protests with regard to that policy from dairy areas across Canada where, they said, labour was just as necessary for dairying in winter as in summer, and conditions were provided to meet situations of the kind, and men went forward to training. It is true that when it was changed from thirty days to four months some difference was made in the ruling, and then, when the four-months regulation was removed and men were supposed to remain in, other changes had to be made, and one was the change which was made in the spring of 1942. Within six months of the time that the limitation had been taken off the four months' training, and within three months of the beginning of the off season, the regulation was that men who were on farms and were essential to agriculture and asked for postponement were entitled to be given indefinite postponement.

Some hon. members from the west raised the question last evening as to whether that intention was carried out. I do not need to repeat in this house what I said here last February, that in certain areas the intention of the regulations had not been carried out. I do not need to repeat what was said within the last three weeks in this chamber, and admitted by hon. members from every part of it, that since February last the intention had been fairly well carried out throughout the length and breadth of the country. But I do come back to this point, that an effort has been made to do what is the fair thing in connection with the calling up of men and to allow persons to remain in places where they are most useful.

After we have been carrying on for almost four years in connection with this war, what is the position with regard to man-power? If one were to take the able-bodied man-power of this country and divide it into three groups: first, the group that is on the farms; second, the group that is in the munitions plants, or in the yards that are building ships, or in factories which are building planes or tanks or trucks, and then take the group that are in the army, it will be found that the statement I made back in 1941 which my hon. friend was quoting a few moments ago has turned out to be not very far wrong. That statement was to the effect that if it ever became necessary in this country to have a million men in the army or in the armed forces of Canada, it would be found possible to produce the munitions of war, the ships and the machines of war, and also to produce a great deal more food than we had ever produced in Canada in the past. I backed up that statement by saying that if the registration showed approximately 8,000,000 people in Canada, and 1,000,000 were taken out to fight the war, surely the other 7,000,000 could take care of the other jobs, the jobs of providing the wherewithal to fight and the food to keep those who were fighting as well as ourselves.

Well now, coming to the position of to-day, where do we find ourselves? We find ourselves with 988,000 young men who have been called for service. Of that number, 550,000 are in the armed forces; 257,000 of them, as the figures revealed the other night, were found unsuited because of their physical condition to go into the armed forces; approximately 100,000 men have been found to be entitled to postponement and have been given postponement. Men in other exempted categories number about 12,000. When you go over the figures of the men who were available for military service because of being in certain age groups, and single, you have only some 68,000 of them still to account for, and they are accounted for in the general terms used by the minister the other night. In addition to that you have the married men who joined the forces and others who did not come in these groups who were in the forces. The figures given the other day show that approximately 700,000 men have joined the fighting forces of Canada, and in addition to those there are some 150,000 men, some of whom perhaps are too old to go into the fighting forces, to go overseas or into battle, but who nevertheless are in the forces performing services as guards or otherwise throughout the country. In addition there are 38,000 men in the merchant

marine, who are as truly facing dangers to-day as are the fighting men on any front in any part of the world.

These figures bring us dangerously close to the point where we are providing as many men as anyone ever estimated, since the war started, that the dominion would provide for the fighting forces. When I made that speech in 1941 I received criticism from every part of Canada. I was asked, how do you expect that there ever will be 1,000,000 men in the armed forces of this country? My own opinion has been from the beginning of the war that some day there ought to be three-quarters of a million men ready to fight for Canada in this war, and we are getting so close to it now that I feel rather proud of having made the estimate away back at the time when I was minister of national war services.

We have approximately 3,000,000 able-bodied men in Canada of these age groups, married and single who might be pushed around. Over 1,000,000 are on the farms, and almost 1,000,000 will be found in the armed forces, or among those who are doing work similar to that of the armed forces, and another million, approximately or more than a million of them, will be found in our munitions plants and factories of one kind or another doing work associated with the war. In other words, without getting down to exact figures—and exact figures bore a lot of people in this country—our population is split about three ways. I have listened to statisticians, and I have sat in committees with statisticians, who can give figures to the last man and the last fraction of a man, and I have listened so long now to that sort of thing that I am getting tired of it myself. However, I say that you can take the manpower of the country and split it into three about equal groups, and you will find that one-third of them will be doing something to produce food, another third will be doing something to produce munitions and equipment for the war, and still another third will be found in the armed forces or getting ready to go in.

That, I think, is the way in which the whole system should be viewed and criticized. Is that a proper division of the population? I submit that the results seem to indicate that it is. And what do I mean by that? In 1940 we were told in this country—I have repeated it in this house before and I will state it again on this occasion—that when the armed forces came back after Dunkirk there was not enough ammunition in Britain to keep them shooting for one hour if they had been given all the guns that were there and all the ammunition and told to shoot. But we in Canada and the people of the United States and of every one of the democratic countries which to-day are favourable to the allied cause were asked to produce munitions of war and machines of war as soon as possible. I am proud of the fact, whether my friend the hon. member for Témiscouata criticizes me or not, that I did not stand up on that occasion and say that every man ought to remain on the farm. We would not be in this House of Commons to-day discussing matters with the freedom which we enjoy, and the right we have to say anything we like, whether it hurts or not, if on that occasion men had not gone into the factories and the shipyards and into the munitions plants from every part of this country and other countries, from every activity of the country, and rolled out the munitions and guns and tanks and ships as they have never been rolled out in any nation of similar size before. We were told in 1940 that no nation could equip itself in less than three and a quarter years after it had begun to do so.

Mr. HANSON (York-Sunbury): I don't remember that.

Mr. GARDINER: My hon. friend says he does not remember that. He does not remember it because it was said to me in London by men who know, that no nation could equip itself with munitions inside of three and a quarter years after it had begun the task. It was estimated that because we did not begin until 1938—and I am not speaking of Canada; we did not begin in the world to realize that we were going to have a war, we did not realize that among the democratic nations until 1938—it would take until 1942 at best to become equipped with ammunition alone, to the extent of being able to beat the enemy on a battlefield.

When Mr. Churchill came over on his first visit to Washington he told us that we would have to be delayed on that job until 1943, and now in 1943 the allied nations are producing munitions, ships, equipment of various kinds, and Canada stands second to no nation in the world in that regard. In other words, we have a sufficient number of our population engaged in the task to-day to accomplish what was expected of us.

What about the farms? We have talked a lot about farm labour and the shortage of farm labour, and I agree with everything that was said a few moments ago by the member for York-Sunbury. I agree also with much of what was said by the member for Témiscouata with regard to hardships. But you will

have noted, Mr. Chairman, that in order to substantiate the criticisms which are made it is always necessary for members to come back to individual cases. It is all very well to say that in one family four sons went while in another family none went. I venture to say to the member for York-Sunbury and the member for Témiscouata that in those families where four sons went, no law or regulation, no organization in Canada, could have prevented those young men from going. They went because they thought it was their duty to go, and no one could have stopped them. No regulation or dictation from Ottawa, no indication, "We want you to follow a team of horses on the farm instead of going to fight," would have kept that type of man at home. And I am not too sure that some of the others that are spoken of would have made very good soldiers. I say, I am not too sure of it. Probably they would have found themselves in some job that was not as essential as the job they were doing before. I am not going to comment further on that.

I will not argue in this committee or anywhere else that war does not bring hardships. War is bound to bring hardships to any family or group of people who take their patriotism seriously. It will not to those who just talk about it. I heard a gentleman only today—I am not going to say who he was—make the statement in a meeting that a plan is no good if it is just on paper, a treaty is not of much use if it just has signatures on it. After all, what counts is work. The thing we have to do is to work at the job. I think that is very sound. These people of Canada on our farms have been working at the job, and to-day we are producing more food than anyone in this house would have stood up four years ago and prophesied that we could ever produce with the normal farm population.

I have heard members every session in the last four years declare that before the end of the year we are going to find out that our farms are lacking in labour and machinery and fertilizer, and for that reason we are not going to be able to produce in Canada what we were hoping to be able to produce. But every year we have been able to produce more than we hoped to be able to produce. As late as the year 1942 we sent to Great Britain all the essential products that she asked us for. In cheese and pork products we sent approximately eighty per cent of our production. And not only eighty per cent of our production, but we sent her in so far as pork products are concerned eighty per cent of what she got from all the countries of the world, before the war started. Our great problem in agriculture is the problem of determining what we are going to do in the future with all we are producing. But I have never met a farmer in Canada—and I travel among farmers from the Atlantic to the Pacific—who has told me that he is not prepared to produce until it hurts, even though he may be called upon to cut down again at the end of the war to where it hurts. He is not talking about that, seriously, until he has the first job done. And the first job is the winning of this war.

We know in Canada what it means to us to lose; I should say, not to completely win a war in which we take part. We went through one of them within the lifetime of every member in this house. Every man who got by the last war, even though many members of his family did not, and thought that war was over for his lifetime, has found out since, if he raised a family in this country, that in conditions which existed in the world his family might go down in battle, in due course. And having found that out on two occasions, what the men of this country want is to win this war, and a condition in the world which will make it possible for him to go on and to produce for a peace-loving world. We are producing more munitions than anyone ever expected us to produce. We are producing more machinery of war, more ships of war and more food from our farms. We have many men in the armed forces of Canada to-day who, had it not been for the war, would have been in the farm forces of Canada. Thousands of them did not wait for the call, but joined up. That was the meaning of what was said the other night by the Minister of Labour. If anyone believes they are not listed, he should consult the lists in our forces. It must be remembered that we have only 12,000,000 people in Canada. We cannot feed China with its 400,000,000. If it is left to us to do that job, some of them will be left to starve. We are doing the best we can do, with around 12,000,000 people. We cannot produce enough munitions to supply the millions who will come from Great Britain and the United States, with the millions of men they have already at the front, and the additional millions in China, and other places where there will be shooting. But we can produce and are producing our share of it. Every statesman of the world, including the stateswoman, Madam Chiang Kai-shek, who was here the other day, who has discussed the question at all, has said that Canada has done more than her share in connection with the war, in the production of machines and munitions of war. When it comes to our food supply, any information

we get from outside Canada is to the effect that they cannot understand how Canada accomplishes as much as she does.

When it comes to our armed forces for all services, our men manning the ships at sea, our men fighting in the air and our men in the army who have been making ready since the outset of the war, all are going to be available to finish it in numbers greater than was anticipated. None of the allies except Russia ever thought they were ready even to start fighting in this war until 1943. Those men who have died at sea and in the air in the past two or three years have died to give us an opportunity to get ready. We are ready now. The fight is still ahead. And as that fight goes on, we will continue to require men in the armed forces.

I can understand the hon. member who has just spoken saying that it is important that we should have men in the army. But I do not think he should have bothered making the correction he made a while ago. I still think it is important that men should be in the armed forces. And I still think we are doing a very good job on the farms—not we who are sitting here in this house. As a matter of fact, if we had been more anxious to get the job done on the farms, we would have been out of here two months ago, doing a little farming. Again I agree with my hon. friend that such work is more important than talking, and must be done. I know he is really anxious to get it done. I am anxious to get out on my farm and do a little work, too. There are other members who are anxious to get away. We all of us can help, out on the line in our country, if we are not able to help on the front line over where the battle is being carried on. If we want to do a real job, we have to get out as soon as possible where production is being carried on. We are not going to accomplish anything if we hold the opinion that the front line is here, in the House of Commons, and that we should sit here for twelve months talking about it. If we would just get the estimates through, we would then have an opportunity to get busy. Let every business man and every farmer here get back to his work, in the busy season, and we shall be doing the best job we can do, and getting on with the war.

Mr. MacNICOL: Yesterday I asked the minister a question with reference to the manner in which men are selected to be sent to the various industrial institutions. The military end of this matter has been discussed at some length. My remarks will be with respect to the industrial end. I asked the minister what the procedure would be if one asked the selective service office at Toronto for ten boilermakers, or ten riveters, or men of that type. He replied that the selective service office has all people in the community classified as to their various skill and training. That would indicate that selective service must take the responsibility for those who are sent to any industrial institution.

On the 23rd instant the Toronto *Telegram* contained an article which to my mind revealed a grave condition in the shipbuilding industry at Toronto. I am wondering if selective service sent the men referred to in this article to the Toronto Shipbuilding plant. I have had a great deal to do with labour, and to my mind this is almost an impossible situation. The article states:

> Employees of the Toronto Shipbuilding Company have asked munitions minister C. D. Howe to investigate conditions in the Toronto shipyard, said to be retarding production and resulting in the waste of thousands of dollars of public money.

The production end, of course, is under the Department of Munitions and Supply. But the sending of men to the plant is under the Minister of Labour. This article states:

> 1. Certain types of ships which are under construction at the yard for the past twenty-two months have not been commissioned.

That is a very long time in which to turn out a ship in war time. Then:

> It was pointed out that hulls Nos. 31 and 32 left the yard in September, 1942, uncompleted and were sent to the yard at Saint John, New Brunswick.

At the time of the writing of this article they were still not commissioned. The article sets out the reason for this situation as faulty workmanship, wrong material, faulty measurements which necessitated the almost complete rebuilding of the ships when they arrived at Saint John.

I have had a great deal to do with steel in connection with boilermaking. I know that to compete in the building of boilers it is necessary to drill and shear a number of plates at one time, perhaps two, three, four, five or six at once. Therefore the measurements have to be perfect or there is great loss and great delay. In my time we could not afford to have men who could not measure steel or who could not properly mark the holes to be drilled in the boiler sheets; we could not afford the losses, but evidently there is a great deal of trouble here if this article is based on fact. I have no doubt it is, because the brief on which this article was based was submitted by Mr. L. Sefton of the United Steel Workers of America. I assume that the brief is correct, and of course the article itself would be correct to the extent that the brief is accurate.

This article goes on to state that the mast on one of these ships was erected at the position indicated by the foreman superintending the construction of the ship. It was erected in front of the door leading to the captain's cabin; after it had been welded to the deck and all the work had been finished of course they found that the captain could not get into his cabin and the mast had to be taken down again. Surely that is a situation for which somebody must be responsible. I do not know how far the minister can go, but he is the Minister of Labour; he is a man in whom I have confidence, and he may have authority to see that conditions of this kind are wiped out. Certainly they should be. Certainly no plant building ships in war-time should have such incompetent labour or incompetent management or incompetent foremanship; I am not going to condemn one or the other.

The article goes on to speak of the ship's brass. Instances are mentioned of material being provided such as naval brass, which had to be scrapped because it was improperly laid out. Brass is one of the commodities of which we can hardly get enough for the construction of ships and the necessary workaday life of this country. There is something very seriously wrong in that respect. What kind of men were sent to that plant? Did the men in the national selective service offices who looked them over know enough to see that the proper men were sent there? I do not know; I am not saying they did not. I do not know how much they had to do with it, but certainly if all the facts set out in the brief are correct there was something very seriously wrong. The article goes on to tell about the boring of holes. That is something with which I have had experience, as no doubt the minister has. In steel or in iron you may allow a variation of perhaps one-thousandth of an inch, but if you go much beyond that you make an error which results in a good deal of material being wasted.

The article goes on to speak of brass storm valves, costing approximately $50 each, which were not the correct type and which were thrown into the bay. If that actually occurred I think the minister should make an investigation. To me it seems almost incredible that valves costing $50 each should be thrown away like that. Were there no foremen on the job? Where was the management? This is a government plant, remember; was it being run in this fashion? If so it is an alarming situation. Fancy throwing $50 valves into the bay! I think the minister should send a man to that plant and have a diver go down and dig those valves out of the bottom of the bay; they are too expensive to be thrown away like that.

The article goes on to speak of the difficulties in connection with welding. Well, that is also something with which I have had experience. It has to be done properly; certainly if two steel plates going into the construction of a ship are not properly welded, there will be a leak. Perhaps that is one reason why these ships had to be partially rebuilt when they got to Saint John. Mention is also made of the riveting of the plates. The article states:

> In the matter of wastage of public moneys it was pointed out that in Hull 43, when tested, 1,700 rivets leaked and had to be replaced, wasting material, time and money. It would appear that the system of paying a bonus for the number of rivets driven, rather than for the rivets tested watertight, "mitigates against efficient workmanship. . . ."

How much national selective service has to do with the muddle in this shipyard I do not know, but someone should be held responsible. We require ships; but when it takes twenty-two months to turn out a ship of that kind, and then it is necessary to keep it for approximately another year at Saint John being refitted and rebuilt before going into commission, it does not help to win the war. I think we should have an explanation as to just what part national selective service officers play in the distribution of man-power.

Mr. MITCHELL: If I could answer my hon. friend in a sentence—

Mr. MacNICOL: I shall be through in a moment. I sat for many hours in the labour offices in Manchester, Birmingham and London; and as a former employer of labour it did me good to listen to the questions which were asked by the men behind the counter; for I appreciated their knowledge of the trades to which they were sending men. Perhaps our national selective service has not had time as yet to get properly organized to send the most competent men to work in our munitions plants. If what was said yesterday or the day before by the minister or the hon. member for Essex East is correct, that there are 4,500 men and perhaps women employed in the national selective service offices, and that only 900 people have been transferred from one plant to another, perhaps the time has come when we should send 3,500 of the people employed in these offices to work in the factories, because it would appear that they have been doing very little.

I read in the press to-day, as no doubt the minister did, an article in regard to the strike in the Quebec shipyards. Something must be done to eliminate strikes in this country. Those shipyards have been shut down for two weeks, and 672,000 man-hours of labour have been lost. Well, surely there is something wrong when in the shipyards of one province, in war-time, 672,000 man-hours of labour can be lost. Surely the department should be able to cope with a situation of this kind. Surely they should be able to see that the men receive proper treatment, that the management gives them whatever fair treatment they are asking for, and that they are kept at work.

I wish to say a word or two about priorities. Some days ago I asked a question or two on this matter, and later the hon. member for Winnipeg North Centre asked further questions on the same point. At the time I was not paying very much attention to what the hon. member for Winnipeg North Centre was saying; I was busy at something on my desk, and I did not just grasp the significance of the minister's reply to questions 1 and 2. Questions 1 and 2, which I asked on June 16, 1943, were:

1. Is there a priority list or classification of industries or firms for the guidance of national selective service in placing workers?
2. If so, who prepared this list?

The minister's reply, as reported at pages 3998 and 3999 of *Hansard,* is as follows:

Let me say without equivocation that national selective service is not, to my knowledge, being used to cut down wages. That is question No. 1.

I did not say anything about wages, although the hon. member for Winnipeg North Centre may have. The minister continued:

As to number 2, with regard to the priority schedule, that of course is confidential for obvious reasons.

Farther down on the page he gives a list of those who make up the board that decides whether this or that factory is to have preference in connection with men. This advisory board is made up of representatives of employers' organizations such as the chamber of commerce, the manufacturers' association, the mining association and so on, and on the labour side are representatives of the Canadian congress of labour, the railroad trades, the Catholic syndicates and the trades and labour congress of Canada. There are also representatives of the departments concerned in the production of war materials.

I can picture a cast iron boilermaker sending to national selective service for ten moulders, and a hot air furnace manufacturer also sending for ten moulders to make fire-pots. If there is a representative of the castiron boiler manufacturers on the board, he will probably see that the cast iron boiler manufacturer gets the preference, or vice versa. I would suggest that the foremen in the shops should be represented, because in many instances they know just as much as or more than the manufacturers as to the type of man that is needed. Who represents the retail trade on the board? As we all know, the retail merchants distribute vast quantities of manufactured articles.

Take the large restaurants on Sparks street like Woolworth's or Kresge's or the large restaurant operators in Toronto. They buy their sugar and flour by the bag or barrel. The plan is to have girls and women handle all this work. A girl or a woman should not be asked to lift a 100-pound bag of flour or a 200- or 300-pound barrel, whatever a barrel weighs.

An hon. MEMBER: One hundred and ninety-six pounds.

Mr. MacNICOL: That is too much weight to ask help of that kind to shuffle around. Then take shortening, for instance. I understand it comes in 400-pound barrels. It is all very well to say that it could be put up in ten-pound or forty-pound kegs, that sugar and flour could be put up in ten-pound or forty-pound bags, but if that were done we might hear from the Minister of Munitions and Supply. The plants now turning out these containers are designed to manufacture those particular sizes. I am wondering if such things are not partly the cause of the muddle we now have in man-power. I am not blaming the minister for this, because I realize he has had a terrific job to handle. I would rather help him than do anything that would give him more worry. But the man-power situation is so serious that something must be done, especially in connection with ships and equipment for ships. They must be turned out more rapidly and sent down to the sea to safeguard the supplies going overseas.

Mr. MITCHELL: I think the hon. member asked me whether the Department of Labour had to do with materials. That would be under the jurisdiction of the Department of Munitions and Supply. My hon. friend also said something about the transfer of 900 people. I should like to tell him that during last year selective service placed 1,400,000 people in jobs.

Mr. MacNICOL: I referred to 900 transfers.

Mr. MITCHELL: That was all done within a short period. In Great Britain over 90 per cent of the transfers or placements have been

made without any direction. I feel sure that the Canadian men and women will give the same degree of cooperation as has been given in Great Britain. As to the fitness of a man sent to take a job, I may say that in the unemployment insurance offices we have card indexes of three and a quarter million people which indicate their skills, but the final say as to the fitness of a man must be the employer himself. National selective service regulations have been so devised as to take care of that particular phase of selective service activity, and either the workman can leave or the employer can ask the workman to leave without giving the usual seven days' notice up to a period of thirty days after work has been accepted.

My hon. friend inquired also about the priority list that is given to national selective service officers. As I indicated the other day, this list is drawn up by the priority division of the Department of Labour and representatives of the Department of Munitions and Supply and wartime prices and trade board. Naturally the list is confidential, because it changes from day to day in conformity with the changes in work being undertaken by different industries.

The hon. member for Témiscouata (Mr. Pouliot) referred to Mr. Gunn who came to Canada at my request from the department of labour in Great Britain. Mr. Gunn was of great assistance in the early stages of the organization of selective service. He has spent his life in the administrative side of the British ministry of labour, having been in it almost since its inception. He is one of the permanent officials of that department. I do not think it is a crime to go outside the boundaries of this country to get advice in connection with any work which any government, federal, provincial or municipal, might carry on. It is often done. I know the United States government requested Mr. Bevin to lend them one of his ranking officials in connection with their organization, and it is to the credit of Mr. Bevin, in view of the tremendous pressure under which the British ministry of labour is functioning at the present time, that he found it possible to lend us one of his senior officials for nearly six months.

Mr. GRAYDON: Did the government or the minister negotiate for the services of this man through Mr. Bevin or directly with the man himself?

Mr. MITCHELL: I know Mr. Bevin personally; I just cabled him, and he very kindly lent us the services of one of his senior assistants.

Mr. GRAYDON: He is the man Mr. Bevin chose?

Mr. MITCHELL: Absolutely. We owe to a Frenchman, Mr. Greber, a distinguished landscape architect, much of the scenic beauty round the centre of Ottawa.

Mr. REID: We have to walk round the monument now.

Mr. MITCHELL: Mr. Greber was employed by the government of this country to lay out the city of Ottawa. When I have been to Washington in connection with government matters I have been glad to get the experience and advice of our United States friends, and they have also come here and been glad to get our advice. I hope that free intercourse and interchange of ideas will continue. I wish there were more of it in the world, because no nation can live in a vacuum. Our doctors and dentists in peace time go to Vienna and Paris, and of course to London and Edinburgh, to continue their studies.

The other question my hon. friend raised was as to a difference in treatment between western Canada and eastern Canada in the military call-up. He said that was shown by the fact that men from Saskatchewan had come to work in Ontario during the summer months. That is made possible on account of the nature of farming operations in the western provinces. There is an off-season between seeding and harvest when the men on the western farms would be comparatively idle, and it is possible to make them available for a short period to other parts of Canada.

The hon. member for York-Sunbury asked with respect to the figures I gave last night whether the number outstanding, 100,973, was included in the 550,692. The answer is, no.

Mr. ROSS (Souris): I agree with the Minister of Agriculture that more work and fewer words are required so that we can get back to our farms; but the question of postponement was raised last night, and the minister said that in his view, where the man was essential to agriculture, an indefinite postponement was granted. I know a young farmer —it may be an isolated case—who has been granted only six months postponement on three different occasions, the last being March, 1943. He may have now become an "R" recruit; I think there should be greater cooperation between the army and this department. At all events, this young chap is the only male left on a section of land, with 80 head of cattle and the usual number of horses and hogs. I think he and others in like position should be granted indefinite postponement. I hope that will be the practice in the future.

I certainly think the hon. member for Lake Centre and the hon. member for York-Sunbury have proven in this house in the last few days that inequality does exist in the call-up between different sections of the country. The hon. member for York-Sunbury this afternoon told of a farmer in his locality with four sons who were granted postponement, or at all events they were not in the service, while a neighbouring farmer had his only son in the army. I could cite similar examples from my province. The examples I have given are not from my constituency. I know of a farmer who was not beyond an age at which he could continue to work his farm, who had four sons, grown up young men, and a younger son not of military age, who before the war were running less than a rented section, but since the war some of the boys have bought more land by agreement of sale and are continuing to stay on the farm. One can readily understand the feeling that exists in that community when they see that and then see a neighbouring farmer without a son left to help him on a much larger farm, and the older man forced to operate the farm alone. That is not a healthy situation; it is most unhealthy, but these are some of the results of the man-power policy of this government of to-day. As was stated by the hon. member for York-Sunbury this afternoon, the operation of a few of these mobilization boards under the Department of National War Services has been little short of a disgrace. My sympathies are very much with the Minister of Labour and his staff because, after almost four years of operation, the man-power situation has become so tangled that it is almost impossible for any human being to unscramble the man-power muddle we have in Canada. The minister and his department deserve sympathy in attempting to make something of the bad muddle we have at the present time.

Mr. GILLIS: I wish to say a few words on selective service and how it operates. The real test of any machinery is the way in which it functions and the service it performs. Before I go into that, I should like to pay my respects to the hon. member for York-Sunbury. I am sorry he is not in his place at the moment. Generally, after making one of his orations to the house; after making a left-handed swipe at the members of this group, he packs his grip and goes away for a rest, to get some more wind up. This afternoon he referred to bill No. 80 of last year, to amend the National Resources Mobilization Act, and the attitude of members of this group on that bill, and on the stand of members of this group who were in the house at the time war was declared. I did not happen to be in the house at that time, but I followed very closely the position taken by the members of this group, and I would say this with respect to bill No. 80: While we do not agree with the government's handling of man-power for military purposes, the Prime Minister, when he explained the government's position with respect to bill No. 80 of last year and the future of man-power for military purposes in this country, left no doubt in the minds of any member of the house as to his intentions. He clearly stated that there would be no change with respect to the raising of men for military purposes until he returned to this house and asked for a vote of confidence. At that time the hon. member for York-Sunbury and every member of his group voted for and supported the Prime Minister and the governernment with respect to raising men on that basis for military purposes, and incidentally at the same time made the remark, after the vote was taken, that the government had looped the loop three times within twenty-four hours on that particular question—and he looped the loop with them. His speech yesterday afternoon clearly indicates that he is now endeavouring to get hold of a parachute to ease himself to the ground in order to alibi his way out and apologize for the stand taken at that time. I cannot see where he can do anything in the future, on the basis of that vote cast for bill No. 80 of last year, except to support the government all the way in any policy they may bring before this house. The members of this group did not do so. We realized at that time that it was placing too much power in the hands of the Prime Minister on that question to support him in that measure, and left ourselves free to fight and analyse the proposals and take whatever action we think necessary on that question when it comes before the house. We insisted at that time on that vote that a bill should be brought before this house for the purpose of raising men for military purposes which we could vote on, and with regard to which we could clearly understand what the regulations were. The hon. member for York-Sunbury did not do that, and he has absolutely no criticism to make, or should not have, because the Co-operative Commonwealth Federation members kept both hands free and intend to fight that issue when it is brought before the house at some time in the future.

With respect to the attitude of this group in 1939, I think any hon. member who is conscious of Canada's position at that time would take exactly the same position. He could not take any other. The generation

that you proposed to place in uniform at that time could not be expected very readily to volunteer for military service, and I think the government took the proper attitude in approaching that very cautiously, to avoid a revolution. You had a disinherited, disfranchised generation that were on the rods from coast to coast, without a means of livelihood for the twenty years between the two wars, and were you to have approached them when this war broke out with a mandate that you were to requisition them for military service and send them overseas, you would not have had the military organization which you have in Canada to-day on a voluntary basis.

Second, anyone who looked at the problem realistically must have recognized that Canada was completely unorganized in every phase of war. The industrial machine was functioning at just about ten per cent. When war finally broke out, in view of the position which Britain and other countries close to the scene of war were in, it was recognized by General McNaughton and others who viewed the matter realistically that Canada's position would be one of producing machines, munitions, ships and other requirements for war purposes. While he was in Canada in 1941, General McNaughton clearly stated through the public press that the main emphasis as far as Canada is concerned should be placed on the production of machines of war, not the sending overseas of half-fed and half-trained men to be placed in a position where it was difficult either to feed or to train them. This is where the training job should be done.

With respect to the trainees who are in Canada at the present time, many demand that they should be conscripted and sent overseas. I do not believe that if the Canadian army goes into action, there will be any difficulty in having at least ninety per cent of the men now in the army in Canada on that basis, cross the sea and join in the battle with their friends, relatives and neighbours who at present are in England. To-day units are applying to be moved en bloc. I can mention units on the east coast that are in that category. They have done jobs on isolated posts and been in a much tougher position than are the fellows in the old country, and they are anxious to get away. They trained together; they want to move together, but they are being kept here year after year. I completely discount the argument which is advanced that these men will have to be moved by force. I do not think those who suggest that have any knowledge of the boys. They will go when they are needed, and I do not think that up to the present time they have been needed in England.

Mr. STIRLING: Does the hon. member mean units composed of our home defence recruits?

Mr. GILLIS: Yes, I do. To date they have not been needed in England. Moreover, there are now more there than we can feed. I think that is generally recognized by the boys who are remaining here. They perform the same service in Canada as waiting around in England. The time will come when they will move, and move voluntarily for the most part. I have not much doubt about that.

I have not much patience with the man who rises in his place in this chamber and takes the position that everyone should be in a uniform, that there should be conscription of man-power for military purposes and military purposes only. It is easy to be an armchair general back here in Canada and be willing to fight until the last farmer or the last worker in this and other countries is dying on battlefields across the ocean. I do not mind that contention when it comes from men who have already made their contribution on some battlefield in the past. But I think it is ill-advised on the part of those who have had a nice comfortable living during the years of poverty and frustration of the generation that to-day has to fight a second war, and some of whom have already made their contribution in blood on the battlefields of Europe, in order that those who are comfortably off may retain that comfortable position in Canada, and they are not prepared to make very many sacrifices. I think it is uncalled for and totally unbecoming for the hon. member for York-Sunbury to occupy the amount of time in the house that he occupies telling you and me that your son and my son and someone else's son should be conscripted in order that people of that calibre may live the kind of life that they have, as contrasted with what the average worker in this country has had during the past twenty-five years after doing the job that he advocates the workers should be compelled to do again.

I make these remarks because I think the hon. member goes out of his way, every time he rises, to attempt to discredit members of this group. Make no mistake about it, although this group is small, thirty-three per cent of its members have already made their contributions on the battlefields of Europe, and perhaps would do it again quite willingly if they were not in the position they are in now.

I started to say something on selective service. I said that the test of the machinery is, how it is working in the field. One of my main criticisms of selective service is that the offices are understaffed. The machine has been called upon to do a lot of work which it was not originally designed to do. Originally the majority of the offices were set up as unemployment insurance offices and they were staffed for that purpose. Second, selective service was dumped in on them. Third, the welfare officers' work was also passed into the unemployment insurance offices, plus the selective service offices. To-day there are some 80,000 ex-servicemen back in Canada discharged from this war, with very few welfare officers in the national selective service or national employment offices to take care of the work. In Nova Scotia there is one. This large group of ex-servicemen has to be taken care of through the rehabilitation regulations, which is considerable work and a job in itself. That is thrown upon the selective service offices as an additional burden. I believe the department has 4,500 men across Canada employed in the national selective service offices.

Mr. MITCHELL: Men and women.

Mr. GILLIS: Men and women. From conversation with people who I think are in a position to judge, there should be approximately 2,000 more people in those offices in order to do this work and do it properly. That is one of the first things that should be done. If the machine is to function properly, it will have to be given the necessary personnel to do the job.

One complaint I have to make is that the Department of Labour allowed to get out of its control the organization of production committees and labour-management committees. That belongs to the Department of Labour. It is now under the Department of Munitions and Supply, but I think the department has altogether too much authority, too much work to do in its own field, without usurping the machinery that rightfully belongs to the Department of Labour. These labour-management committees, if properly set up, could do a wonderful service, working in cooperation with national selective service, in ironing out the many difficulties they have to handle, and the Minister of Labour would be well advised to insist on the completion of that organization and the direction of it back under the Department of Labour instead of leaving it under munitions and supply.

Mr. MITCHELL: The production committee is a joint body comprising munitions and supply and labour.

[Mr. Gillis.]

Mr. GILLIS: I hope it will soon start to work. It should be wholly in the Department of Labour.

Mr. MacINNIS: It will get no sympathy under munitions.

Mr. GILLIS: I think that is why it was taken over there. Another phase of selective service that requires checking up is the necessary coordination between the call-up boards and the national defence boards. This happens in many cases. Selective service sends out a notification that a man must report for medical examination to one of the national defence boards. The man loses a day's work reporting to the board and taking the medical examination. If he is fit he is sent into the service, but in many cases he is declared unfit and is placed perhaps in category E, and he goes back to work. The next week he gets another call from the same people back to the same board. I have known men to go through that routine twenty different times. A man is unfit and is turned down by the national defence board, and he reports that he has already had a call, but he receives another notice and he loses another day's work going through the same machinery. When he reports that he has received a call they will tear up that reply, but the next week he will get the call again.

Mr. MITCHELL: If my hon. friend has the name I should be glad if he would give it to me personally.

Mr. GILLIS: I will give the minister half a dozen of them.

Mr. MITCHELL: I shall be glad to have them.

Mr. GILLIS: That is particularly true in the Toronto district. That is the fault of national defence. The thing to do is to have the national defence board, whenever a man is categorized as unfit, send in notification to the national selective service giving the record to show that this man has been reported in category E and that there is a special file made of his case, so that there will not be a repetition of the call-up week after week.

The hon. member for Davenport introduced the question of shipbuilding as applied to the Toronto shipyards. National selective service definitely have a responsibility there. Under the regulations, before an employee can be dismissed from his job he must be given seven days' notice. There are 289 men affected at the Toronto shipbuilding yards. These men were dismissed without reference to the national selective service regulations. That was a week ago this past Friday, and these

men are still idle with the exception of about twenty. The charge made by the management that they had committed an infraction of the rules and regulations has been disproved; it is not true, and the men so dismissed illegally —there is no doubt about their having been dismissed illegally—have made representations to selective service in Toronto and are endeavouring to negotiate their reemployment there. Because of infraction of the regulations in the first place by the Toronto Shipbuilding company, they are trying to get them back en bloc through selective service. One of the officials was there, but he was there on another matter; and to date no action has been taken by selective service with reference to returning those men to their employment. They are key men. I know very well the story which the hon. member for Davenport was reciting, although I do not intend to tell it here. The minister of munitions has it verbatim much more fully than it was recited by the hon. member for Davenport. What I am concerned about is this. Immediate action should be taken by selective service from Ottawa to return those men to the Toronto Shipbuilding yard, put them on the job and then determine whether they are entitled to remuneration for the time lost during the period they were out of the yard illegally.

If the regulations are to work they must work both ways. They will have to be followed up and applied to employer and employee alike. In this case they are not being so applied, and I suggest that this is something that the minister should attend to. If the regulations are to be respected they will have to be enforced religiously, regardless of who gets hurt.

Another point I wish to bring to the attention of the minister is the transportation of men from point to point.

Mr. MARTIN: That is under another item.

Mr. GILLIS: Is it not under selective service?

Mr. MITCHELL: We have a special item for that.

Mr. GILLIS: Well, I can wait for the other item. There is a lot of trouble with that particular phase of the regulations in Nova Scotia. They seem to be splitting hairs on administration when men are taken from one industry and transferred to another. If selective service hires these men and puts them through their new plant, transportation is paid for; but in many instances where groups of men are employed or are being transferred they do not bother with selective service. They go to the office and are hired, and there is that much more work taken from selective service. But to qualify for the transportation reimbursement they must go to selective service and make application on a special form for transportation, and in many instances it costs from $4 to $4.50 a week commuting between different points. The boards have taken the stand that because the men were not hired through them in the first place, the special form does not apply and they cannot get that reimbursement for transportation from plant to plant. The only crime they committed, however, was saving the national selective service some hours of work in employing with a new employer. They short-cut the thing themselves, but because they did that and saved that amount of work to the office, they cannot receive reimbursement for the money spent in transportation from point to point. I should like to see this matter taken up by the deputy minister, who is sitting before the Minister of Labour, because I know that representations have been made to him time and again on this particular point.

There is another matter I wish to bring up, because I received a telegram this afternoon with regard to it. There is a charge made by union 4527, U.M.W. of A., representing the views of 900 men, that national selective service in Nova Scotia, in the Sydney area, in a dispute that involved the employees of a restaurant supplied strikebreakers to the restaurant keeper. I mention the matter here for this reason. On Monday of this week 7,000 coal miners were tied up in that Sydney-Glace Bay area on account of this dispute. The point at issue was that the restaurant keeper was violating the minimum wage laws of Nova Scotia and consequently was violating the trade union legislation of that province. This was entirely a provincial responsibility. It should have been settled there within twenty-four hours, but it was not settled. It was allowed to drag on from day to day, until it reached a point where it tied up essential war industry. They were notified a week earlier that if the minimum wage laws and the trade union legislation in the province were not recognized and enforced by the provincial authorities, within a given time a certain thing would happen. It did happen.

The point I make, for the benefit of the administrators of national selective service, is that if they have taken the position where they are prepared to supply labour where there is a dispute, they will not get much respect. To the best of my knowledge the office at Sydney has been 100 per cent efficient, and I have had a great deal to do with it. It is

cooperative, and understands its job thoroughly. I am not so sure about the office at Glace Bay. I would assume that the people supplied in this particular dispute would be supplied through the Glace Bay office. I am requesting the minister to check up on the matter.

An ultimatum was arrived at last Sunday, and a provision for an idle day was brought into effect. Next week, if it is not settled, there will be two idle days. A dispute of this kind could be settled by responsible authorities in ten minutes, simply by a telephone call. If the province will not act, then recognizing the fuel emergency and the repercussions of this dispute, the federal minister should take the bull by the horns and settle the matter for them.

Mr. HANSELL: We listened this afternoon to a speech by the Minister of Agriculture delivered in his characteristic form. I noticed, however, he took a good deal of credit to his government for what the people of Canada have done in the past few years. He rather deplored the fact that hon. members in the opposition were attempting to prove certain contentions by citing certain cases. All I wish to say in that respect is that nobody on the opposition side of the house will say that the people have not done a good job. No one on the opposition side of the house will say that the farmer has not done a good job in producing food. No one will criticize the people of Canada for the job they have done. But certainly it must be the duty of His Majesty's Loyal Opposition to point out certain weaknesses they think they have discovered in governmental administration. That is what we do when we rise in our places and bring certain matters to the attention of the government.

The minister went on to say that it was a great accomplishment for the national registration of a few years ago to be able to register several millions of people in just a few days. I do not consider that such a great accomplishment, so far as the administration is concerned. An order went out that a national registration was to be taken. We were under the stress, strain and duress of war. Of course all came out and registered. Surely there is no great accomplishment about that. We might as well say it is a great accomplishment when the whole nation goes home to lunch when the twelve o'clock whistle blows. One is almost equal to the other.

We want to know what purpose the national registration served, and what the results of it were in the years since it was taken. In fact, I wonder if it is not time we were having another national registration, to find out exactly where we are in respect of our manpower situation. I am not going to advocate that, but I am certain that the last national registration did not fulfil the purpose the Canadian people expected it would fulfil.

We are not disputing the fact that the people of Canada have done a great job. But some of us feel that a certain portion of our people are not keeping step with those who are doing a great job. I say that after referring to some figures brought down in the house some days ago, figures which the editors of the Ottawa *Journal* have taken time to consider, and which they have made the basis of an editorial entitled "Five Hundred Thousand Missing Men." The figures look perfectly correct, so far as I can see. It is pointed out that notices have been sent out to 988,475 men and that out of that number only 608,642 reported for examination, leaving 379,833 unaccounted for.

Mr. MARTIN: That was explained, though.

Mr. HANSELL: Perhaps it was; I do not know.

Mr. MARTIN: The minister did so last night.

Mr. HANSELL: Perhaps it is another case of juggling around with figures. The fact remains that—

Mr. MITCHELL: Does the hon. member insinuate that the minister has juggled figures, or that the juggling was done by the newspaper editorial writer?

Mr. HANSELL: Either one or the other. This afternoon the Minister of Agriculture said he was getting sick and tired of listening to figures this way and figures that way. Then he attempted to give some figures. The figures I have before me were compiled by the Ottawa *Journal*. They were brought down by the minister, and reference is made to them in this newspaper.

Mr. MITCHELL: I am not responsible for what the editor of the Ottawa *Journal* did with figures brought down in the house. I have not yet reached the stage where I try to mislead the house; and I do not juggle figures.

Mr. HANSELL: I am not accusing the minister of juggling figures. The minister's figures may be correct; I do not know. I know when one person talks figures and another person talks figures the old adage may be true that figures do not lie, but liars figure. I am not accusing anyone. I make the simple statement that I have some figures before me. And regardless of whether the figures in the *Journal* are 100 per cent accurate, the fact remains that they cannot be depreciated to any great extent, no matter how we

work it out. I am only saying that there seems to be a tremendous portion of our people who are not keeping in step or in line with others who are doing a job. Perhaps I had better not go on reading the figures contained in this article, since it is not very palatable to the minister.

Mr. MITCHELL: On a point of order, Mr. Chairman, there is nothing my hon. friend could say that would be unpalatable to me. I tried to be fair with the committee yesterday; I gave what I thought was a clear exposition of the man-power situation as far as the armed forces are concerned, from the best available sources, which are the official government sources. I know it is the easiest thing to do what my hon. friend is attempting to do at the present time, but unless he can prove me wrong I think he should take my word for it and should accept the figures presented by me as Minister of Labour last evening.

Mr. HANSELL: I am not concerned with whether or not what I say is palatable to the minister; I simply said that the figures in the *Journal* evidently were not to his liking, because he had to explain them last night. In any event they were his own figures. However, let that go by the board; I do not mind. I am going to state a grievance which I think is quite legitimate. I believe I am right in saying that a large proportion of the people of Canada, because they have not been given the proper direction, have been out of line and out of step with the rest of the people. I hold in my hand the June issue of "Canada at War," an informative little pamphlet issued by the wartime information board, which I like to read. In it I find something which of course is well known, that in April the minister was given power to order employers in specified industries to discontinue the employment of persons within certain age classes designated for military training, and so on.

Mr. MARTIN: What page and what month?

Mr. HANSELL: At page 47 of the June issue. This is perfectly correct; I am not criticizing it at all. Men in these classes may not be employed except under special permit, and then a list of ten specified classifications is given; there is a second order which covers six more classifications. I do not know what is involved in these special permits or how they are obtained, but I notice that classification No. 8 includes waiter, taxi driver, elevator operator, hotel bell-boy and domestic servant. I am going to suggest that this regulation evidently has not been fully complied with, for in some of the best hotels in Canada they still have male waiters. That might be all right; I do not know, but I suggest to the minister that it does not tend to the creation of the best possible morale or to a total war effort to see husky men waiting on tables at a supper dance, for instance. I was in the Royal York hotel the other day—perhaps I should not have mentioned the hotel, but I imagine it does not matter—and saw men wheeling carts on to the elevators, wheeling them off again and through the corridors because people wanted to have breakfast in bed.

Mr. GRANT: Perhaps they had flat feet.

Mr. HANSELL: Surely, while that sort of thing is permitted, it cannot be said that we have a total, all-out war effort. Surely these men could be better engaged in that war effort. I wish the minister would give some explanation with regard to this matter.

Referring again to these figures, I am not going to mention half a million men, but I wish to say that farther on in this little booklet it states that those affected by the new orders must register at the nearest employment and selective service office. It continues:

> This ensures that those men who have been called for national service and are not acceptable to the army—

It may be said that the people I have mentioned were not acceptable to the army.

> —will be engaged in essential work, such as farming, lumbering, coal mining, fishing and munitions work.

Surely there is some place where these men can fit into the picture. I am sorry if I seem to have singled out these people, but I am citing these cases because I have seen them; there may be other hon. members who can give outstanding examples in other lines of work. I have nothing against the restaurant business or against waiters who are engaged at high-class hotels. The same condition exists in other industries, but I suggest that these instances are noticed by people who have sons or perhaps husbands in the front line of battle. Surely, if we are going to carry on a total war, every man should be put at some specific task within the structure of our war effort. I am not complaining about these regulations; I am complaining in regard to the effectiveness of their operation. It may be a good thing to have regulations such as are outlined in this little booklet. The regulations are good; from time to time certain industries which are non-essential should be set out; but setting them out on paper does not put the thing into practical operation, so that I am bringing up this matter now, and I think the minister should give some explanation in connection with it.

At six o'clock the committee took recess.

After Recess

The committee resumed at eight o'clock.

Mr. POULIOT: Mr. Chairman, I have only a few words to say in connection with the answers given this afternoon by the minister. Some time ago I asked for some information about the English expert who had been brought here, and he answered my question by referring to Mr. Greber who designed the plaza, Mr. Gunn being an Englishman and Mr. Greber a Frenchman. That is not the point at all, and to say that Mr. Greber is a Frenchman is no answer. We may bring in an expert from outside the country who has had experience in the development and beautification of cities; but when it comes to trade and national conditions, when it comes to choosing a man who must make suggestions or decisions on such matters, it is essential that we have someone who really knows the conditions that prevail. Conditions in England or the United States are different from what they are here. England is a small country with a large population; Canada is a large country with a small population, and the United States is a large country with a large population. How can a man from outside the country decide that an industry should do this or do that, decide that laundries are not essential and so on?

There is good material here among our people who possess common sense without bringing in an expert from some other country. This was supposed to be kept secret. Some of the members of the press gallery called on the department and were told in secret that Mr. Gunn had come to make these adjustments. I think the minister should rely upon people who live here. I do not say that in a parochial sense; I say it because I believe that a man who has spent his life in Canada, who has been in touch with business and industry, would know more about this country than an outsider who might spend a few months here and then make suggestions which amount almost to decisions. It is no answer to quote what was done in an entirely different field. I am not prejudiced or biased. If a Frenchman with a Parisian accent had been called in instead of Mr. Gunn, I would have criticized that action just the same. What I am complaining about is that this man has been appointed over the heads of good Canadians who could have done this job much better.

I should like to congratulate the former leader of the opposition upon many of the things he said this afternoon, but there are two or three sentences to which I must take exception. This reminds me of Doctor Edwards, the head of the Orangemen, who finally wrote me a letter in French. I nearly converted him. I do not contend that I have converted the former leader of the opposition, but he is making some progress. How long it will take, heaven knows. He stated one fact which deserves widest publicity. I took notes when he was speaking and I hope I can quote him correctly. He said that when the Prime Minister was endeavouring to get gentlemen from outside the pale of the Liberal party to enter his government after May, 1940, he approached various gentlemen who were adherents of the Conservative party and offered one of them this job of Minister of National War Services. Are we to have union government? Then the hon. member for York-Sunbury went on to say that to his everlasting credit the gentleman spurned the offer, because he was not going to do the dirty work of the administration. He went on to say that that is true, that that is a matter of history.

I never thought the Prime Minister had done that, although it was stated in the press. It is a surprise to me, and I hope the Prime Minister will make a statement when he has an opportunity to do so to-morrow. If we are to be the Liberal party we do not need anyone from the Conservative party as cabinet ministers. That is my humble view. I have been fighting against national government and union government ever since the last war, and I do not intend to change my views in consideration of anyone.

Then the hon. gentleman went on to ask: Is the ministry being maintained for the purpose of political expediency, to find a place for the present minister who was put into office for the ostensible purpose of converting his compatriots to the principle of conscription for military service overseas? I do not agree with the hon. member when he says that the Hon. Mr. Justice Thorson was a wash-out. That is not the language we would expect to hear from the lips of a gentleman of the legal experience and ability of the hon. member for York-Sunbury. We would not expect to hear him call the senior judge of the exchequer court a wash-out, comparing him to a shower. That is not worthy of the hon. member, and I am sure it was a slip of the tongue. What he said about the Minister of National War Services being appointed in order to convert the people of Quebec to the idea of conscription has been referred to by Miss Judith R. Robinson in the press, the Toronto *News*, and so far it has not been denied. If that is the case, then I think some questions that it would be proper to place on the order paper would be: What are the dates on and places at which

the present Minister of National War Services has spoken and what are the subjects discussed, first, from the time he was appointed as deputy minister of national war services until he was sworn in as minister; second, from the time he was sworn in as minister until his election as hon. member for Outremont and, third, from then on? It would be interesting to see what has been the programme of this perambulating Cicero in Quebec and outside.

The Minister of Agriculture, who is a very active man, has stated that he has travelled from coast to coast. I agree that on account of his position he must travel a great deal, but I am sure he did not stop off in the county of Temiscouata because he would have seen conditions entirely different from what he described. He stated that in round figures the loss of agriculture to the army was about twenty-five per cent. I know of cases where a key man on a farm was taken; no postponement was granted and he had to stay in the army. Even now when I ask the Minister of National Defence to release these men the answer is, no, most of the time. That is not right. The Minister of Agriculture said that we have in round figures a million men on the farm, a million men in the army, and a million men in our war industries.

Let me say to the Minister of Agriculture, who said that I was a bit unfair—I was not unfair, I was most generous—that at the start the regulations were made precisely to deceive the farmer, and it was the Minister of Agriculture, whose duty it is to keep men on the farm, who was made recruiting agent for the Department of National Defence, and he continued at that job even when he ceased to be Minister of National War Services, by making speeches like the one he made in London, Ontario, during the week-end. If there is a man who should work to keep the farmer on the farm, is it not the Minister of Agriculture? Is he not the last man to be the recruiting agent for the Department of National Defence? That is so in my humble view. The regulations, as I say, were made precisely to deceive the farmer. First, we had the one month's training; then, four months, and then indefinitely, although the men called up had no opportunity to make their own domestic arrangements accordingly. What I know very well is the fact that the regulations for the draft were all wrong. The minister for air, who has described agriculture as a seasonal occupation, should know something of the struggle we have had to have it recognized as an essential occupation, and we have not even yet succeeded in that. It is both seasonal and essential. Compare the conditions of the real farmers who work hard from dawn to dusk with those of the gentlemen farmers of the prairies who work only three months in the year and then fill up their tractors with gasoline and empty them in the fall. That was a profound mistake, a mistake from which we all suffer.

I regret the appointment of the famous chairman of the Quebec board, a man who had four of his judgments reversed at one term of the court of appeal. To have four judgments reversed in one term of King's bench must be a record—and this was the man who was to decide cases of postponement without any appeal being allowed. Moreover, I will tell the Minister of Labour in honest-to-goodness fashion that even the registrar wrote me once, saying that the board could not reconsider its own rulings. I had to write to Ottawa to have the board told that if there was no appeal from its ruling the board had the right to reconsider its own rulings. That was the fight I had to make. If the minister wants more information about that, his colleague the Minister of National War Services, if he is honest about the matter, as I presume he will be, will inform him that I am telling the truth. I can show the minister my file if he still doubts. That is a fight we had to make for the protection of the farmer and for the protection of this country, and for the supplying of the foodstuffs that are necessary in this war. Once a man knows he has done an injustice, it is his duty to repair it. Injustices were done by the board, in larger number last year than this year, I admit, but nevertheless injustices were done just the same this year, with no redress for those concerned. There are farmers who will be unable to cultivate their farms this year, because their key man has gone to camp and it is impossible to have him brought back to the farm.

I have the statement of no less a man than the premier of the province of Quebec, who said that all farmers should have a postponement. I can show the minister many cases where that has not been done. Of course a gentleman who is head of a provincial government does not have the time to see everything that goes on and to consider each case as a member of parliament has a duty to do for the benefit of his constituents. I know very well a large number of cases in which the farmers did not get the satisfaction to which they were entitled. Moreover, I will tell the minister once more and for the last time that so long as he is not the boss—I mean the big boss—exercising the powers that he has to tell the Minister of National Defence to release

this man and that man to go on the farm, the national service regulations will not work at all. I offer that suggestion to the minister in all honesty.

The regulations were arranged to get the farmers into a trap and keep them there. I have no objection to farmers enlisting voluntarily, but those who do not enlist voluntarily are not cowards; they are boys who could not leave the farm. It was impossible to let them leave the farm. If they did, it would be the same as padlocking the barn after the horse was stolen. That is the way it went, and that is the way it is now.

The season now is very late; it is late at home in my county. The weather has been disastrous in some places and we do not know what the future will be. Last year we had a fine crop, it is true, but we cannot conclude that the same thing will happen this year. Is the crop of last year to be considered a standard crop for all time to come? It is impossible to reason in that way; it is all wrong. If God helped us last year, I hope He will help us again this year. I hope that Divine Providence will help the farmers and the population of this country generally this year as well as we were helped last year. But we must not count on probabilities. That is very dangerous. We must neglect nothing.

After the Minister of Agriculture had spoken as he did he asked: How can we, with a population of twelve millions, expect to feed China with a population of four hundred millions? That shows one thing, that the farmer must stay on the land and provide the food that is required for our own economy and for our armed forces and those of the allied nations.

The minister also said that we must thank the boys in the army that we are able to discuss matters freely in this House of Commons. When we compare the population of China or Great Britain or especially the United States with our own—and the United States has twelve times our population—we cannot expect, if we have the same number of men in the army, to go on producing as we have been. We cannot do everything in the whole world. The policy of the government, especially the policy of the Liberal party must be rationalized. It must take into consideration many elements that are vital for success. That is why I insist upon this. I speak very earnestly to the minister. I want him to do a good job. While I have argued the case of the farmers with the associate director of national selective service here in Ottawa, I wish to pay tribute to him and his representative in Quebec City. I went to a great deal of trouble precisely to prevent the agricultural industry from being destroyed through the activities of some over-zealous men who want to take the farmers into the army.

I hope, sir, that from now on, the Minister of Agriculture will look after his department and not intrude upon the war departments by speaking of matters which do not come under him. At the present time, strange as it seems, the Minister of Labour has more important functions than the Minister of Agriculture, because the former is the one who can tell the farmers what to do. He has the seniority of right and the seniority of duties over the Minister of Agriculture, and his colleague the Minister of Agriculture should understand this and should not take advantage of his position to serve as recruiting agent for any one of the war ministers. That is my humble view, and I give it with all sincerity and hoping to get results.

I trust that all hon. members who have been advocating the case of the farmer will stop saying, "We need more men in the army, and we want the farmer in the field." It cannot work. Conscription for overseas will never work, because then again some over-zealous bureaucrats will think they are obliged to satisfy all the requests that they receive from the national defence departments and will take from the farms men who are essential there, to put them in the army where they are not so essential. I will say more than that to the minister. Does he know that men who were defaulters and others who were deserters have been sentenced to eight, twelve and even fourteen months in the "clink?" What is the use of a farmer who reports to the army and is kept in the "clink?" He does not serve the army; he does not serve the farm, and he is a burden to the country, which has to pay for his maintenance. That man would be more useful on the farm than in the "clink." Some of these fellows say they must remain on their farms, and there are pitiful cases of men who, if they have not a legal excuse, have in equity a plausible explanation to give of what they have done. Besides that, according to the old saying, you catch more flies with honey than with vinegar. I ask the minister to think of that. He may turn down my suggestions; that is his right; but I tell him what I think of his present duties and I shall add that as a good Canadian I was insulted and my statements were deprecated simply because I was fighting for real national selective service a long time ago. I remember an hon. member from Toronto who told me I was a supporter of Hitler just because I

was defending the farmer. It was not my hon. friend from Broadview; it was a member on his side; he threw insults at me because I was doing my duty as a good Canadian and because I wanted this country to survive, as it will do if the minister accepts suggestions which come from those who know the bad condition of the farmers in the country.

Mr. MAYBANK: There are just two observations which arise in my mind from the remarks made by the hon. member for Témiscouata. I shall give them briefly. I have, more particularly toward the close of his remarks, been listening intently, when the hon. member was pointing out that persons are called into the army who become defaulters or who become deserters; and then, as he said, they get put in the "clink," and are of no use to agriculture and of no use to the army. They are of no use in any section of either civil or military society. I do not suppose that any person will quarrel with that statement. But surely it does not constitute any argument in favour of anything or against anything; it is just a collection of words, which are true enough but do not lead us anywhere. I could always make that statement with reference to any criminal who is put in gaol. He is of no use to the country when he is in prison; you can only put him to picking rope or something like that, but you have lost him to the community. But, sir, that would be no reason whatever for wiping off the statute books the criminal code or for disbanding the police force, or for, in general, abandoning our ordered state of society in favour of chaos. I am quite sure that the hon. member for Témiscouata, when he thinks the matter over, will realize that when he has said that a man in the "clink" is no good as a farmer he has spoken that which is true, but which just does not mean anything, does not add up to anything of any importance. I am quite sure he will agree with that statement.

The other comment which occurs to me with reference to what the hon. gentleman said about putting people on the farm and keeping them there, is this. I quite understand, even though I do not follow agricultural pursuits but am strictly a city man, the importance of agriculture; I think every person does. But there do come times on farms when those who are working the farms have to make up their minds whether they will go a distance away from the homestead to put out a prairie fire, or perchance a forest fire, which is coming in their direction. After all, that is the sort of decision which has to be made in this country to-day. No person denies the importance of agriculture; indeed I should imagine that a group of men would almost vie with each other, were they to converse together, in emphasizing its importance. But this government, and the minister charged with the particular duties which we are now examining, are charged with the responsibility of deciding when one shall go to put out the prairie fire or the forest fire, and who it shall be that shall go.

I believe that almost any person can rise in his place in this chamber and make a strong plea for some particular industry as against certain others, and can criticize in its every aspect that which the government and the minister have been doing. But it seems to me, sir, that when one is considering whether or not the boys should be left back on the farm, due regard should be had to all the other needs of the country and, indeed, of the world. I submit in all kindliness that the hon. member for Témiscouata has not been taking that broad view; indeed, I doubt very much if he could have spoken with all the emphasis he used to-night if he had been taking a broad view of the problem, because that problem is so vast, so difficult, and so complicated that one can only express opinions upon it with great humility and with very much more uncertainty than the hon. gentleman has displayed this evening.

Now I really rose to make a few remarks with reference to the selective service problem generally and to turn after a moment or two to a particular matter connected with coal mining, coal delivery and so forth; and to lay before the committee a few facts that may be dealt with by the minister in due course. In the first place, I would say that what some rather ill-natured journals are pleased to call the "man-power muddle" cannot after all, in a country such as this, be quite so great a muddle as these journals would claim when the achievements of the dominion are such as they have been.

Again, I do not suppose there is a member of this chamber who has not damned the selective service, the minister in charge of it and all connected with it. I do not suppose there is a member of the ministry who has not criticized the selective service set-up. Every person in that very department has, no doubt, done the same. I should not be at all surprised if the minister holds cabinet meetings with himself and complains about the way the departmental work goes on. I know that everyone to whom I have spoken has, at some time or other, complained with reference to this organization; yet most people with whom I speak outside do end their criticisms by admitting that this is one of the most difficult of tasks, one of the most thorny problems in government to-day; and I do find, in spite

of criticism, that there is a good deal more fairness on the part of the public at large than I sometimes find among my own confreres in this chamber. It is because of the way in which people speak to me about the selective service problem, that I have, myself, been less inclined to anger sometimes when I have found something wrong.

After all, I do not think anyone will deny that the country generally has turned in a really good performance among the nations of the world over these war years; and, certainly, that could not have occurred if there had been quite such a man-power muddle as asserted by these various journals.

In the second place, I suggest that a person should be more restrained in criticism, because I have very deeply within me the impression that there is hardly anyone in this chamber, and very few people connected with the government at all, who at some stage or another have not made requests that such and such a regulation be not enforced with respect to so-and-so. I have not yet spoken to anyone who did not admit that at some stage he had approached the department and had asked either that John Doe be not pushed somewhere, or that he should be put somewhere, or that some sort of favour should be given.

Every person seems to want a variation in the rules and regulations to fit a particular case in which he has some interest, and of course all that sort of thing adds to the difficulties of the work. I do not doubt that a very large number of us would be willing to plead guilty to having requested some sort of favour which, added to all the others which have been sought, makes for a greater difficulty in this department's work. I have even been informed—not by someone in the department—that the government's chief critic in Canada, the *Globe and Mail* of Toronto, has actually asked for some such favours.

Now may I lay before the minister some facts that have been presented to me by persons who are keenly interested in the problem of coal mining. There are a number of western mines that have their offices in the Winnipeg area, and whenever I am in touch with people connected with this business, they naturally speak of their difficulties. I have in my hand a memorandum on the matter, but I shall not read it in its entirety, for that is hardly necessary. The memorandum refers to a pretty fair sized mine in the Edmonton neighbourhood. I would not be interested in giving the facts about this mine if it were just a particular case, but it is by reason of the fact that I have been assured—

Mr. MITCHELL: What is the date of the memorandum?

[Mr. Maybank.]

Mr. MAYBANK: It is dated a month or two back. I would not be making any remark about this at all, were it not for the fact that I have been assured, both by the person who gave it to me and by several others, that it is a typical case. Again, my reason for mentioning it is chiefly to lay before the ministry a suggestion which it contains and to make one other that has occurred to me.

The maker of the memorandum is telling me about a certain mine—I do not suppose one would call it a large mine—where there are fifty-seven miners and fifty-four non-miners. In the first place I would mention his statement relating to absenteeism over a two-week period. Over a two-week period we find that out of fifty-three miners there were sixteen who worked fourteen shifts; ten that missed one shift; seven that missed two; four that missed three; three that missed four; one that missed five; two that missed six; three that missed seven; three that missed eight; one that missed ten; two that missed eleven, and one that missed twelve.

Of course the question of absenteeism is not directly a matter of man-placement in the sense that it is dealt with in selective service, but there at any rate is a problem facing this particular industry, and the reason that most people give for absenteeism is one that would have to be dealt with, not so much by the Minister of Labour, as by the Minister of Finance and his faithful colleague, the man who collects the money for him, the Minister of National Revenue. At any rate most of the people who lose a number of shifts say that they are missing them because they do not actually get the money after they earn it. That is, it is an income tax problem. I do not know personally how true that is; but there would appear to be something in it. I find already about the country a certain amount of tax evasion is going on, and in some places there is a refusal to earn income because taxes are so heavy. Undoubtedly, in spite of the esprit de corps in the country, that sort of thing is going on. But whether or not that is the real explanation of the type of absenteeism mentioned here, I cannot say with certainty. It does seem to me, however, to play some part.

My informant recites a great many other difficulties in connection with mining operations, besides absenteeism, pointing out that in order to have fifty-three miners at work there have been employed, over the year, no less than 230 men; and that, at the end of the last winter season there was a straight personnel loss of thirty per cent. After detailing such difficulties, and giving the figures on absenteeism which I have mentioned, he

makes some suggestions with a view to correcting the situation faced in his mine field. As I indicated a little while ago, he is one who admits quite freely that it is an extremely difficult thing to do. But he points out that a considerable number of miners are lost to his mine by reason of the fact that they are what might be termed farmer-miners. Supposing that is true, that is, that they leave their mines and go to their farms, and supposing a considerable number of them do that sort of thing—and he states it to be so—I should like to ask the minister whether or not he has ever considered closing up that type of small industry. It is often a sort of combination of farm and mine. Many of these men have little mines of their own on their farms, and they dig a little coal and do a little mining. I do not suggest that there should be any ruthless closing up, by the appointment of some controller who would say, "Do not do this." I do not mean to suggest approaching this from a negative point of view. But I wonder if it has been considered that it might be worth while to buy out these small industries upon the condition that the men who are working these "coyote holes"—I believe that is what they are called—would go to work in one of the larger mines where, as the result of the proper division of labour and the general technological development in industry their hands could turn out more coal than is possible for them to turn out from the little mine. That is one suggestion I would ask the minister to consider.

Then, there is another suggestion—and I think we must come to adopt something like it. Persons who work at extremely uncongenial types of work have to be given some incentive. After all, in other sections of our economy we have recognized that sometimes we must provide an incentive to get a job done. We have had to encourage certain industrialists at times. And quite the right course was followed in that respect. For instance, we could not ask the ABC company to make such and such an investment, because if it did, it would be stuck with a useless plant at the end of the war. Therefore we gave them an incentive by way of accelerated depreciation, or something of that kind. In a variety of ways we have given incentives at times, in the Canadian economy.

I think, sir, we have to come down to the fact that such uncongenial work as coal mining must be specially stimulated by some incentive, if we are to have it done successfully. I know I have done many different kinds of hard work, dirty work, and uncongenial work in my time. But I remember that even when I was shovelling gravel on railway grades I would sooner have been doing that work out in the open air than have been working in a coal mine; and my views in that respect are the same to-day as they were then. I think the man who mines the nation's coal has to be paid for it something over and above the ordinary rate that everybody else can get at other more congenial kinds of work.

I recognize the problems in this connection. If we start to open a hole in the ceiling we may get into all kinds of trouble. I realize that we must take account of that. And that thought leads me to offer this suggestion: Might it be possible to work out some kind of scheme whereby, instead of immediate additional payments, there could be a payment into a bank account, where the money would be blocked. We are well acquainted with the expression "blocked payments" in respect of banks. Why could we not have blocked payments of wages to men engaged in this sort of work? It might very well be that that would be extended into certain other lines besides mining, but I do, indeed, believe that it will be necessary to do something of the sort in order to have men in this country do certain kinds of work which are uncongenial, and yet are very necessary.

I go further than that and offer what ought to be considered a stronger reason, although unfortunately it is not usually so considered. That reason is that I think it is equitable. But one has to be a realist, and he must recognize the fact that merely advancing the argument of equity is insufficient. As a rule, simply to urge that such and such a thing ought to be done in justice and equity never gets one anywhere. I believe Shakespeare would have called it a "bootless" remark.

In any event, I think it is equitable in this particular case, and it will be absolutely necessary to find some kind of stimulant for getting these uncongenial, yet extremely necessary kinds of work done. Anything I have said, of course, has not been offered by way of criticism. I believe my manner in addressing the committee is sufficient evidence of that. It is not the fault of this government, nor is it the fault of the minister that we have absenteeism, and this difficulty in the mines. But we are going to have more of it, unless we find some way now, before the coal shortage, of dealing with it. The suggestions I have made may be helpful; I hope so. But if they be not adopted, then I do urge that some sort of stimulant policy, if I may so describe it, be adopted; because we cannot take chances on

coldness inside houses, and inoperative boilers and machinery in industry. We cannot take chances on that kind of thing in Canada this year; and I am sure the minister and all those connected with him must agree with this last statement.

Mr. NOSEWORTHY: I listened with a great deal of interest this afternoon to the hon. member for York-Sunbury (Mr. Hanson) as he expounded to us the present man-power policy of the now Progressive Conservative party. I had for some time tried to ascertain just what was the policy of that party, particularly since I had had ample opportunity of familiarizing myself with the man-power policy of that party in 1942. The erstwhile leader of that party, in his opening broadcast during the campaign in York South in 1942, clearly enunciated that policy, which concerned itself with little more than the conscription of man-power for overseas service. That was confirmed the following day in full-page advertisements in newspapers across this country, in which there appeared but one little phrase in one sentence in reference to the conscription of man-power, selective or otherwise, other than for overseas service. All through the early stages of that campaign that gentleman, who I presume was speaking for his party, emphasized the need for the conscription of man-power for overseas service. Only in the latter stages of the campaign did he concede that any other form of conscription might be necessary and then, by his own admission, only as a last gasp.

Mr. GRAYDON: On a point of order, Mr. Chairman, the hon. gentleman is making a charge against the previous leader of the Conservative party. My recollection is quite clear on this matter. I believe the hon. member is now repeating a statement which gained some publicity at the time, to the effect that only in the last gasp would some policy with respect to the mobilization of wealth be adopted. I speak from recollection, but I believe that statement was denied by the then leader of the party, and now, in attempting to flog a dead horse, my hon. friend is not doing himself justice.

Mr. NOSEWORTHY: I fail to see any point of order, Mr. Chairman. An attempt was made to show that the statement was not in accordance with the facts; but if my recollection serves me well, as I think it does, no evidence was ever submitted to prove conclusively that the statement was not made.

Mr. GRAYDON: Did not Mr. Meighen himself deny it?

[Mr. Maybank.]

Mr. NOSEWORTHY: On certain conditions.

Mr. GRAYDON: Of course he denied it.

Mr. NOSEWORTHY: Not outright.

Mr. GRAYDON: Why does the hon. member try to drag that in now?

Mr. NOSEWORTHY: The hon. member for York-Sunbury never misses an opportunity in this house to deliver a jibe at the Cooperative Commonwealth Federation party, and I simply want to trace the twistings and turnings and improvisations of the Conservative party's man-power policy, as I have observed them.

Mr. GRAYDON: Well, stick to the facts, if you are going to do that.

Mr. NOSEWORTHY: My recollection of the debates that took place in this house last session, is that for the most part the members of the Conservative party who spoke on the question of man-power called for an all-out conscription of man-power for overseas service, and for little else. Only when they went to Winnipeg last summer did they erase the word "conscription" from their statement of policy; and I have not seen that word in their statement, nor have I heard them use the word, since that time. There has been criticism from the Conservative ranks of the government's farm policy, on the ground that the government was calling too many men from the farms. When the Minister of Munitions and Supply was before the committee he was criticized for allowing trained men in the aeroplane factories to be taken into the armed forces. To-day we heard a tirade against the government because they are not getting sufficient men into the army overseas.

I was interested in that exposition of the policy of the Conservative party. I think the hon. member for York-Sunbury made it amply clear this afternoon that, in his mind at least, the supreme effort, the greatest contribution Canada could make in this war, would be the creation of a large army overseas. He admitted, of course, that we were making a great contribution; he admitted that there were other calls upon Canada's man-power, but I think he made it quite clear that so far as he was concerned that was the outstanding contribution Canada could make. Last evening he attacked the attitude of the Cooperative Commonwealth Federation party toward the policy of sending an army overseas. I can certainly speak for myself, and I think I can speak for this group when I admit that we never at any time felt, as the hon. member for York-Sunbury apparently feels, that this was the way in which Canada could make her greatest contribution to the war effort. It was

and consistently has been, so far as I know, the policy of this party that Canada's man-power should be made available wherever it could be used to the best advantage in the cause for which we are fighting. Unlike a minority group in this country who still think of this war in terms of the war of 1914-18, who still think in terms of large armies, masses of infantry, as being the essential feature of our war effort, we felt that, on account of Canada's unique geographical position, on account of the extent of our natural resources, we were in a peculiar position to contribute to the war effort in fields other than that of the army. In view of the vastly greater armies that our allies can put into the field, we never felt that the size of Canada's army would be the vital, determining factor in the course of the war. We felt that Canada could make what would probably be a decisive contribution by supplying food to the armed forces, by utilizing to the full our industrial plants, and so on. We felt then, and I think time has shown that we were right, that on account of Canada's remoteness from the battlefield we were in a unique position to train young men for the air force, to provide our allies with ships and with men for the navy.

I am not suggesting for one moment that Canada should not have an army overseas.

Mr. GRAYDON: Your party said that before; that was your party's policy.

Mr. NOSEWORTHY: I am speaking now for myself. Since I became a member, the party has never at any time opposed the presence of a Canadian army overseas.

Mr. GRAYDON: The hon. member must be just a newcomer.

Mr. NOSEWORTHY: No one who knows the temper of the Canadian people; no one who has any knowledge of the Canadian people would for one moment believe that it would be possible for Great Britain and the empire to be engaged in a war and to keep Canadians out of the army.

Mr. GRAYDON: The hon. member's leader said that.

Mr. NOSEWORTHY: Our leader can defend himself on that point and give his own explanation. I am confident that no government in this country, whether it be Conservative, Liberal, Cooperative Commonwealth Federation, or any other, could possibly withstand the storm of public protest that would arise, should it be decided not to give Canadians an opportunity of serving in the army. Our point is that Canada's contribution will not of necessity be determined by the size of our armed forces. The hon. member for York-Sunbury expressed concern as to whether or not we had sufficient recruits to reinforce the five divisions of the Canadian army that may be called to go overseas. I have grave doubts myself as to whether we have sufficient reinforcements for that army. But my contention is that it is not a question of whether we send one or two divisions more or less, that is likely to be the determining factor in winning the war; that will not be nearly as important as our contribution through our factories and especially our agricultural production.

I do not profess to have the knowledge possessed by the Minister of Agriculture (Mr. Gardiner); I do not profess to know the situation regarding agriculture across this country as well as he does, but I have travelled considerably in Ontario during the past six or eight months; I have talked to many farmers in this province, and I am satisfied that the policy now being followed by the government will not enable this province to maintain the production of farm products on the scale we have been producing in the past. I do not think anyone in this house doubts for one moment the importance of Canada's contribution to the food supplies of the allied nations during the war. It is important that we should maintain this food production during this war.

On June 3, I gave to this house numerous reports which had been made by the Ontario department of agriculture and by the dominion bureau of statistics, showing that present prospects are that there will be a decrease in Ontario's production of beef cattle, hogs, dairy products, sugar beets and other essential war foods. If we are to maintain this production which is one of Canada's principal contributions to the war effort, which in my opinion will be a vital and determining factor in victory and in the post-war world, steps will have to be taken to see that no more experienced farmers are called from the farms of this country either into the army or into industry. Farms in this province have already been denuded of this help.

If our farmers are to be able to carry out the programme set for them by the Minister of Agriculture, I maintain that it becomes most essential that experienced men who are still on the farm be left there. I notice that an official of the selective service branch in Ottawa when speaking in Hamilton on May 24 made the statement that 60,000 additional farm workers would be needed to obtain the entire quantities of farm products required for the coming year without making any allowance for farmers who are likely to be

called to the armed forces. Reliable authorities estimate that Canadian farms need at least 100,000 workers.

Mr. MITCHELL: Would my hon. friend give me the source of that figure?

Mr. NOSEWORTHY: The 60,000 figure was given by—

Mr. MITCHELL: I am talking about the other. Does my hon. friend know that we put 53,000 additional workers on the farms of Ontario last summer? I should like the source of the statement with regard to the 100,000 additional workers.

Mr. NOSEWORTHY: I have heard that from leaders of farm organizations.

Mr. MITCHELL: Who are they?

Mr. NOSEWORTHY: They stated that in their judgment there are needed on the farms of Canada at least 100,000 workers. The minister may have more definite information and may be able to assure us that that is not the situation.

Mr. MITCHELL: Could my hon. friend give me the name of any leader who said that?

Mr. NOSEWORTHY: I prefer not. Unless selective service can deliver at least 50,000 or 60,000 men to the farms of this country, other steps will have to be taken to provide this number of farm help. I suggest, as has been suggested by other members of this house, that if selective service is not able to deliver the required number of workers to the farms of Ontario, arrangements should be made to grant long leaves to experienced farmers who now make up a part of this army of 60,000 or 70,000 men which constitutes our home defence army. Some such plan is needed. Some definite steps are required in order to enable the farmers of this country to deliver the production they are being asked to deliver. If our agricultural workers are to make their contribution, not only must the problem of help be solved, but some way must be found to enable the farmer to pay his help wages which are to some extent commensurate with those which could be earned in other fields of industry. That, I suggest, will have to be done either by enabling the farmer to secure prices for his products which will enable him to compete with industry in securing help, or the government will have to do in the case of the farmer as it does for Imperial Oil and other oil companies in this country, namely, subsidize farm help just as it has subsidized gasoline and other industrial products.

Mr. GRAYDON: I have a few questions to ask the minister with respect to national selective service, but first I would say to my hon. friend who has just sat down that if it were not for the profound pity I have for him because of the line of argument he followed in his remarks, I would be disposed to take a few minutes to set him right. I think we owe it to this committee that we should at least be fair with respect to what has happened in the past. I was sorry, because I have had a high regard for the hon. member and still have although he has made a mistake, to raise the question as he did to-night, in order to reflect upon a very great Canadian who has been rendering service as he sees best in our national life. When my hon. friend talks of twistings and turnings of policies I think the committee will agree that his group must be regarded as speaking with the voice of experience in such matters, for I think no one could follow the devious course which has been followed by that group since the war began and before. But I do not wish to weary the committee at this stage of the debate by detailing the various shifts and changes that have been made by these hon. gentlemen. It would take too long, and I doubt whether it would be profitable to the committee or to the country as a whole, so that I will leave it at that.

It seems to me from the notes I took this afternoon of the speech made by the Minister of Agriculture that either he or the Minister of Labour must have his facts confused. I have not had an opportunity of perusing *Hansard,* but I think my notes are reasonably correct. I understood the Minister of Agriculture to say that when the second call was made last year, all those who had not registered in 1940, about 144,000, turned up and registered. I think the Minister of Agriculture must have had the issues somewhat confused in his own mind. I think it is only proper that I should attempt to put the record straight, and it is particularly for that reason that I rise now. Surely the Minister of Agriculture was incorrect when he spoke of 144,000 having turned up of those who had not registered in 1940, because in the Minister of Labour's own statement as reported at page 3946 of *Hansard,* these 144,973 men are described as follows:

> This past winter we required all single men to report who had failed to receive or acknowledge their notices of medical examination, or to present themselves for medical examination. We announced an amnesty to those who complied as required by March 15. This resulted in 144,973 men re-registering.

Mr. MITCHELL: That is correct.

Mr. GRAYDON: I am glad to have the minister's confirmation on that.

Mr. MITCHELL: I think it was just a slip of the tongue on the part of the Minister of Agriculture when he said it was a second call. I do not think it was deliberate. There have been a good many calls.

Mr. GRAYDON: I was not attempting to attribute anything deliberate on the part of the Minister of Agriculture. I simply wanted to get the record straight, because we have had so many figures on the man-power situation that we are inclined to view every fresh figure with a little suspicion on account of the careless manner in which they are sometimes presented, and obviously the statements by the Minister of Agriculture and the Minister of Labour did not jibe.

I dealt with the general question of national selective service at some length in the remarks I made at the opening of this discussion, and I have no desire to traverse the same ground again. But there are some points on which I should like some further information. When Mr. Elliott Little resigned in November, 1942, there was a large exodus out of the department of men who had filled rather important positions under the then director of national service; and having in mind that there was at that time a change of control in national selective service, it seems to me that we should have some explanation of this exodus, I will not call it a mass migration, but there was a migration of at least from sixteen to nineteen men who left the service, following Mr. Little's resignation. A number of these men had gained some prominence in newspaper reports from time to time. One was Dr. Couper, who resigned or was transferred under circumstances previously explained by the minister so that I shall not deal with that at the moment. But I wish to point out to the minister that in a return which was brought down to the house as sessional paper No. 400 on Wednesday, June 16, 1943, I find a copy of all letters, telegrams and other communications which passed between Goldwin Smith, who had been brought here from the United States as assistant to C. F. Needham, assistant director, civilian, national selective service, and the minister or the Department of Labour. The correspondence is rather interesting. I shall not go into it in great detail, but I cite this document as evidence on the point I am making as to the position in which national selective service finds itself. True, it is not always possible to gain a sufficient footing in a department to find out exactly what is going on. Therefore, I suppose, hon. members generally have to deal with the evidence as it is produced in cases such as this. I will read to the committee what Mr. Goldwin Smith said in his letter of April 19, 1943, after a number of pleasant letters had passed between him and the deputy minister of labour. On April 19 he writes to Mr. MacNamara, the deputy minister, as follows:

> Thank you for your kind letter of this afternoon. My resignation was the result—

May I point this out, that Mr. Goldwin Smith was an unusually intelligent employee, of high standing.

Mr. MITCHELL: Who said that? Did he say that?

Mr. GRAYDON: He did not say it.

Mr. MITCHELL: That he was a highly intelligent employee of the department?

Mr. GRAYDON: Well, is the minister saying it?

Mr. MITCHELL: I have my own personal opinion.

Mr. GRAYDON: If the minister is not going to deny the statement I will let it stand at that. I notice the minister is rather hesitant, so that I imagine we will let it stand at that.

Mr. MITCHELL: I am taking the hon. gentleman's word for it.

Mr. GRAYDON: This man is very modest, but certainly, as his letter will show, he indicated in no uncertain terms what he thought national selective service was doing. He said:

> My resignation was the result of a sober and increasing conviction that the work I do is of relatively minor value in the war effort.
> Six weeks ago Mr. Caloren—

Who is apparently one of the senior officials of the department.

> —persuaded me to delay my departure. Since that time I have continued to be a rather ineffectual angel in the corridors, my duties undefined, my responsibilities unspecified. I do not earn my salary, even though I came to national selective service aware that my financial position would be far from strengthened. It is a situation in which I cannot be content.

These are matters which throw at least some light, I think, upon the position one finds in connection with national selective service itself. I would point out that the correspondence shows clearly that the department itself did not view Mr. Goldwin Smith in any suspicious light, as the minister's rather hesitant remarks a few moments ago would seem to do. I should like the minister to give me information, though I do not ask him to do so at the moment, as to the number of these men who have resigned from the department or have been transferred since the resignation of

Elliott Little in November, 1942. I wish the minister would be good enough at his leisure or at the earliest possible moment to table the corresponence dealing with the resignations of these sixteen or nineteen officials. I believe what I said before with respect to national selective service will be fairly well borne out by the evidence these documents will afford the committee.

One other matter I wish to deal with is the question of the enforcement of the regulations of national selective service. It is one thing to have regulations on paper, and another thing to have them enforced. Regulations without enforcement are not of much use. My information is that the chief enforcement officer, whose name I have forgotten for the moment, has left the department.

Mr. MITCHELL: Walsh?

Mr. GRAYDON: I think the name is Mr. Austin Wright.

Mr. MITCHELL: He is not with us any more.

Mr. GRAYDON: No; I know he is not. I should like to know whether or not he has been replaced, and why he left a position in national selective service. Also—and I suggest that the minister's parliamentary assistant or someone else make a note of these items, because I do not ask the minister to answer them all at the moment, as I want to get on with the business of the committee—I should like to know how many prosecutions have been launched with respect to enforcement of national service regulations.

There are one or two other matters which, I think, are also important. So far as the local offices are concerned, I realize that what the minister said when he made his speech the other day, in reply to something I had said was quite true, that no one wants to direct unfair criticism against these local officials; criticisms based on the government's policy should be shouldered, not by them, but by the government. The minister clearly and quite properly pointed out to-day that these men and women who are attempting to do their jobs in the local offices of national selective service are doing so under obvious difficulties, through lack of training and experience. The minister in effect said, "What can you expect in six months?" But the point is that we should not at this time have amateurs in these posts. The time is long past since the question of national selective service was first broached by the government, and particularly by the Prime Minister. The main criticism that most people aver against national selective service as an institution is that it was much too slow in getting into operation. It was not, and is not now capable of competently handling mass transfers from time to time, which it is so essential in the national interest that it should handle.

Someone, I am not sure whether it was the Minister of Agriculture or the Minister of Labour, made reference to-day to the question of special permits. I fancy he was referring to special permits with respect to agriculture. That opens up this particular subject: Once a special permit is given to a man who is leaving a farm for some other industry, what check has national selective service upon the return of that man to his original line of occupation? I will not say the minister is not frank about these things. He is, as far as his knowledge goes. But I should like him to tell the committee whether there is any possibility with the present national selective service machinery of any check as to whether these men ever return to their original occupations.

I understand, too, that there is a system of open permits, which are almost like blank cheques. When a man comes into a selective service office and is handed one of these blank permits, when and how are these permits checked off and records of them made? Once an open permit gets into the hands of an employee who is seeking a job, it then rests with the employer who finally hires him to send that open permit back to the selective service office where it belongs. But the check is, in my opinion, a very loose one, and one as to which I should like some explanation from the minister when he comes to make a reply to the various matters I have raised.

I should have liked to ask a number of other questions, but I do not wish to go into the subject in any further detail at the moment.

Mr. MITCHELL: I will try to be as brief as I can. I think I can now answer most of the questions my hon. friend has put to me.

With regard to the question of resignations, I am not concerned about an individual who probably should have been, if the terms of his letter have any basis in fact, a playwright rather than an executive. But hon. gentlemen will appreciate this, that when you get an organization of 7,000 people, a dozen resignations are not of any great consequence, particularly when you are in the process of building that organization. It is the easiest thing in the world to resign from a position when the job is difficult.

Mr. GOLDING: Running out when the going is tough.

Mr. GRAYDON: Did my hon. friend say something about running out? I do not know whether I heard him or not—he was whispering pretty loud—but I thought I heard him say something about running out. On that point, may I say that the sessional paper filed will show whether he ran out or not, because the deputy minister himself said:

> We sincerely regret we are unable to assist you in this matter.

He is writing to the coal administrator.

> However, Doctor Smith's background and recent experience particularly qualify him for the position which he will be assuming immediately with this department.

Mr. GOLDING: I hope the hon. member is satisfied now.

Mr. MITCHELL: I know the hon. member will agree with me that in my position as minister I cannot go into all the ramifications of the organization; but this might be truthfully said about the individual referred to, that he was offered a position of some responsibility and he did not stay with the ship. Let us be frank and honest about the matter. When my hon. friend speaks about experts in selective service, it may be said that prior to the outbreak of the war, or prior to a year ago, there were very few persons whom one might term experts in selective service. So far as the north American continent is concerned, the direction of human beings as free people is a virgin field. Let me say, however, frankly that notwithstanding all the criticism, I think our people have in a very large measure lived up to their responsibilities. I have been in countries where dictatorships have existed, where a man had to have a card with his finger-prints on it, his photograph and signature, and even under such conditions—I speak of course merely from observation, having had some experience in travelling in many countries—I believe that our people generally have done a better job than the people in the dictator countries. And they are doing just as good a job as the people in Great Britain.

My hon. friend speaks of permanence in the system we have for placing these various classes in industry and commerce within the compulsory orders. It is fundamental and axiomatic that you cannot overload the machine too soon. This machine has been taking care of the placement of nearly a million and a half people in the last year, and placements on a voluntary basis can be much more easily undertaken than when you have to give direction. I hope it will be said, I am sure it will be said when this war is over, that we have the same basis of voluntary movement as they have in Great Britain in proportion to the number of people moved. As time goes on, I look for an increase in the tempo of these compulsory orders. I think that is inevitable under present circumstances.

Might I say in passing that last night when I said that we were getting to the bottom of the keg, I meant it in the sense that it affects the age groups that we have already called up for military service, and my hon. friend will agree with me that when there has been the tremendous expansion which we have had in industry, where at the outbreak of the war we had to all intents and purposes no shipbuilding industry at all, whereas to-day we have over 100,000 people engaged in that activity, and in the production of aeroplanes, guns and all those necessities, it is inevitable that we shall have difficulties with labour supply. We shall have the same kind of difficulties they are experiencing in Great Britain and at the moment in the United States, as well as in New Zealand, Australia and South Africa. But I am not afraid of our people; I am not afraid of production on the farm front. Given the right kind of weather, I think our farmers will produce as much as they did last year and probably more; but I wish to give this warning, that I shall not be held responsible for the weather by the opposition or by anyone on the government side.

Mr. GRAYDON: You have exonerated yourself on that score before.

Mr. MITCHELL: I want to make it clear. There are one or two spots that are very difficult and grave. I hope, in the course of the next two or three days, to have something to say about coal. Of all problems confronting my department, that is the most important and vital in Canada. One can cut down on the family table, but one has to keep warm; and as I said the other evening, when you reflect that this nation is not self-supporting in regard to coal but is on an import basis, the situation will be realized. This year we have to import, in addition to our own production, 23,000,000 tons of coal. That is a lot of coal. No one can predict what will be the condition in the coal industry in the United States, and I think we might very well assume that if they run into difficulties to the south of us the supply of this country will, in the very nature of things, have to suffer. That is why I would plead with everyone in this house, whether he be a trade unionist, a miner or an employer, having some influence on coal production in Canada, that he lend every effort to see that coal production is not only maintained but increased.

Compulsory direction of men in the industry is not received with favour in some quarters; but I feel sure, that, taking the over-all view, the miners themselves, those having previous experience in the mines, will cooperate with this government and, may I add, with this parliament, because it may be said that there is a unanimous opinion in this parliament as to the gravity of the situation and as to the policies that have been put into effect by the government.

Mr. BLACKMORE: Has the government tried the device of increasing remuneration as a reward for men going back to the mines?

Mr. MITCHELL: That, of course, is not the duty of the government but of the national war labour board.

Mr. BLACKMORE: Are they doing it?

Mr. MITCHELL: I do not think this is the place, nor am I the person, in view of the establishment and the functioning of the war labour board, to express an opinion one way or the other.

Mr. BLACKMORE: I did not ask for an opinion; I asked for a statement of fact.

Mr. MITCHELL: I think both the men and the employees understand the situation well. And if either one side or the other feels that these increases are justified in the near future, they will make some representations to the national war labour board.

Mr. BLACKMORE: The trouble is they might take too long.

Mr. HANSELL: And freeze in the meantime.

Mr. MITCHELL: I do not think anything could be easier to say than what my hon. friend has said. That is the easiest thing in the world to say. I say to my hon. friend I do not think this government can be criticized with respect to the steps it took last winter in connection with the coal industry in Canada. There was no lack of decision on the part of the government.

I did not intend to speak at length, but in passing I wished to bring this coal question to the attention of the committee. As I say, I expect to make a statement in the course of the next two or three days on the subject. I believe I have answered nearly all the questions asked.

Mr. GRAYDON: Perhaps the minister might answer the question with respect to the number of men in the department who have resigned.

Mr. MITCHELL: Seventeen out of seven thousand.

[Mr. Mitchell.]

Mr. GRAYDON: Would the minister give the names of those persons? If he has not them now, he may put them on *Hansard*.

Mr. MITCHELL: Does the hon. member wish to have them on *Hansard*?

Mr. GRAYDON: I should like to have them on record.

Mr. MITCHELL: I shall be glad to do that, then.

Another question had to do with those returned to agriculture, who were engaged in industry in the off seasons. I believe the committee will agree that it would be a waste of man-power if we did not move people off the farms during the winter months. In my statement the other evening I put on record the number of men going from agriculture into industry, lumbering, base metals and mining. Those permits expired on a certain date. An employer cannot hold them after that date. I am frank to admit that there were one or two who got under the barrier, but that is inevitable in handling tens of thousands of men. In a big and general way, however, while we gave some extensions this spring on account of the lateness of the season, we are confident that all the men who were given permits last winter at the conclusion of the farming season have returned to agriculture. What we have endeavoured to do is to intensify that swing between agriculture on the one hand and primary industries on the other.

Then, there is another point. We permit farmers to leave agriculture for sixty days without permits. As my hon. friends know, that is done more particularly in western Canada. In that part of the dominion there is a great deal of work between seeding and harvesting which is generally undertaken by farmers. I refer to work on the railways and roadbuilding generally. That is the reason why that regulation was incorporated in the selective service regulations, and we find it has worked fairly well.

Then, in respect of open permits, a man is given the open permit and finds a job. Once he has located that job he must report to the selective service office. He then obtains the ordinary permit given to people who go to work. The check is that he has to pick up his insurance book. So that it is comparatively easy to control the issuance of these permits, because a man must pick up his insurance book as soon as he starts to work.

Mr. BLACKMORE: All through the consideration of the war appropriation measure I have refrained from speaking to any great extent. I have felt that the war appropriation was money parliament was granting so

that the government might go on with the war. My judgment is that we should have granted the money to the government, so that it could go on with the war, without so much talk about it. There will be plenty of opportunity for every hon. member to say all he wishes to say when the departmental estimates are before the committee. That is my own opinion in the matter.

Therefore I have said very little up to the present time, all through these weary weeks of talking and talking with respect to the war appropriation bill. The government has to have the money. It is essential to the prosecution of the war, so why not give it to them, and go on with other matters?

Perhaps, however, I should on this occasion make one or two observations. I believe the minister is struggling with a very difficult task, and so far as I can judge, and with my limited knowledge of the details of his difficulties, he is doing as well as a man could be expected to do under the circumstances.

Although he has endeavoured to clarify the whole situation with respect to selective service, I find that throughout the rank and file of the people everywhere there exists boundless confusion concerning regulations with respect to selective service. The average farmer is just bewildered by reason of the statements which are made. I believe the time has come—and very likely the minister fully agrees with me—for a frank, honest, open, clear and detailed statement of the whole selective service situation. When the Prime Minister on March 23, 1942, I believe it was, issued a statement to the effect that farmers were not to be taken off the land, people on the farms took it for granted he meant what he said. It never dawned on them that back behind the curtains there had been issued an order to the effect that probably a given number of thousands had to be taken out of a given province, whether they came off the farms, or whether they did not. I say any action of that kind was not playing fair with the people. It is just a cheap, base kind of trickery or treachery or double dealing. The ordinary man on the street, where I have been, feels just that way about those regulations as a whole. The minister is not to blame for them, but clarification would certainly be the remedy.

I received a letter from a farmer in my constituency, a very well-educated farmer, and one who showed good reasoning powers. He said, "When the statement was made that the boys were not going to be taken off the farms I assumed my boy was not going to be taken off my farm, and I invested in so many cattle, so many hogs and some other types of stock. I opened up on a rather extensive scale on my farming activities for 1943. And now, behold, right out of the blue, my boy is taken away; and all the efforts I can put forth will not prevent it. So, if the government is intending to take boys like that, surely a man has a right to be told about it." It is the mere fact that this man was not told which makes the situation so unfair as to constitute a betrayal.

We are giving consideration to industry along these lines. When men put money into industry the government has taken commendable care to try to help them avoid losing their money. Those men are given safeguards and guarantees, and that is the only way to build up the confidence of men who have money to invest. The same applies to farmers. If a farmer is to spend money on the purchase of good cows and good stock of various kinds, he must invest what for him is a large sum of money, and surely he is entitled to protection. This is just one way in which protection has not been given to him. I say it constitutes rather cheap double dealing, and I suggest at the earliest possible date the minister should clarify the whole situation, so that everybody will understand. That is one example.

We have heard a good deal in regard to a man being essential to agriculture. What is the meaning of that phrase, "essential to agriculture"? I do not believe any man can define what it means to be essential to agriculture. The board is left to form its own interpretation of the meaning of those words. A man who is running a farm may think his boy is essential to agriculture. The boy may think so; they may establish it to their own complete satisfaction and the satisfaction of the people around them; yet the board may not feel that this boy is essential to agriculture. That is just one example, one illustration of why clarification is necessary.

Let me give another illustration, and I have had cases of this kind brought to my attention. Supposing a man depends upon his son, nineteen or twenty years old, to run the tractor on the farm. That man simply cannot operate the tractor himself and cannot employ anyone else to operate it. A tractor is an expensive piece of machinery; it cannot be trusted to anyone who is irresponsible. Suppose that boy, after all the tractor work is done and the other hard work is finished in the fall, accepts a job teaching school, as a result of the persuasion of the school inspector, because of the very great shortage of school teachers that exists in many districts. He teaches for a few months

in the winter, when there is very little work to be done on the farm; then a policeman comes round and investigates the case and says, "This boy taught school for several months during the year; he is not essential to agriculture." Is that not enough to show the need for clarification? If a boy is essential to agriculture, certainly some sort of score card should be made out under which the boy would be able to qualify, and if he can forfeit his eligibility there should be terms laid down under which that might occur.

I think I need not say more; I have just laid down in a general way the need for clarification. I believe the same need exists in connection with labouring men throughout the country, but I shall have more to say about this later on. I want the minister to understand that I do not intend to indulge in any carping criticism of a man who is working under very great difficulties; I am merely offering these as suggestions.

Before I take my seat, however, I will say that in my judgment there is somebody behind the scenes over whom the minister has no control whatever, who is laying down a policy which is not what the minister feels it should be. I believe the minister is called upon to put into operation a policy which someone else is drawing up, which causes him great difficulty in carrying out his task. I want him to know that I appreciate that this sort of thing really exists, and I believe before we get done with this part of our work this year, we should find out who it is behind the minister or over in some other department who is having so much to do with the policy which so vitally affects the work of the minister.

Mr. CASTLEDEN: Would the minister answer the questions I asked?

Mr. MITCHELL: I have the figures for which my hon. friend asked if he would like them now.

Mr. CASTLEDEN: While the minister is giving those figures, would he also give us a short break-down of this amount of $8,680,225 which has been passed under this item?

Mr. MITCHELL: Would my hon. friend like a copy of it? It is quite extensive.

Mr. CASTLEDEN: If it goes on the record it will be all right.

Mr. MITCHELL: Then, with the permission of the committee, I would put it on the record.

Mr. CASTLEDEN: That will be satisfactory.

[Mr. Blackmore.]

The CHAIRMAN: By leave of the committee.

Mr. MITCHELL: The break-down is as follows:

National selective service programme	$8,680,225
Labour supply	
Salaries	$ 342,375
Cost-of-living bonus	21,000
Advertising	150,000
Printing and stationery	40,000
Communication services	10,500
Travelling expenses and living allowances	50,000
Sundries	7,500
	$ 621,375
Mobilization	
Salaries	$ 861,500
Fees and allowances	90,000
Cost-of-living bonus	112,000
Unemployment insurance	15,000
Travelling expenses	40,000
Printing and stationery	175,000
Transportation of recruits	215,000
Meals—recruits	30,000
Lodging—recruits	7,000
Medical examinations	720,000
Miscellaneous	47,500
	$2,313,000
Unemployment insurance commission	
To meet expenses in connection with national selective service work performed by the unemployment insurance commission	$5,375,150
Man-power records and national registration	
Salaries	$ 293,860
Cost-of-living bonus	48,140
Printing and stationery, equipment and supplies	20,000
Travelling expenses	500
Communication services	100
Cartage, freight, express	1,500
Machine rentals	6,500
Miscellaneous	100
	$ 370,700

Then the figures for which my hon. friend asked last night are as follows: In the period from March 12, 1942, to May 21, 1943, there were 17,208 requests for postponements of agricultural workers in Saskatchewan. Of these, 12,380, or 71·9 per cent, were granted, and 4,828, or 28·1 per cent, were rejected.

Mr. CASTLEDEN: Is there a shortage of farm labour in Saskatchewan at the present time?

Mr. MITCHELL: No, according to the information I am given.

Mr. CASTLEDEN: There is no shortage?

Mr. MITCHELL: No general shortage.

Mr. CASTLEDEN: At a recent dairy convention held in the city of Saskatoon an attempt was made to find a solution of what they termed the increasingly difficult labour situation on the dairy farms of Saskatchewan, and the delegates passed a resolution in regard to that matter. I noticed that at the same time the department was expected to move 1,000 workers from Saskatchewan to Ontario for some seasonal employment on Ontario farms, and I wondered what the situation was, because my information was that a serious farm labour shortage existed in Saskatchewan. The other question I wanted to ask was whether schoolteachers as such are granted exemptions if they ask for them?

Mr. MITCHELL: No. Perhaps I might answer my hon. friend's other question, with regard to a labour shortage. I said there was no general shortage. Of course it is quite possible that there may be a shortage of labour on the dairy farms; I think that is pretty general throughout Canada, but when I said there was no general shortage I had regard to the whole picture, not to any special branch of the industry.

Mr. CASTLEDEN: I had a case brought to my attention, of a man who was granted postponement on condition that he would move from his farm to another farm. He has been told to report to the employment office at Yorkton, which means that he must travel a distance of 130 miles. Is anything done in regard to that man's transportation, or does he have to go there as ordered at his own expense?

Mr. MITCHELL: We pay the cost of transportation from the employment office to the job.

Mr. CASTLEDEN: This man has to go from his home, which is at Hudson Bay Junction, to Yorkton to report, a matter of about 130 miles.

Mr. MITCHELL: He can report to the office by mail, of course.

Mr. CASTLEDEN: If he takes a job in the vicinity of Yorkton, does he have to pay his own fare to that job?

Mr. MITCHELL: This particular kind of transfer is new to me, but under the circumstances I should say that we would pay that man's transportation.

Mr. CASTLEDEN: I trust that will be so. There is one other field about which I should like to inquire, namely, the men who are in our prisons. In the United States men of this kind are being employed in munitions works and they have done remarkably well. In addition, I think there are certain types of men in our prisons at the present time who might be used to good advantage in the army. Of course there are some types who could not be so used, but I advocate that research be carried on in order to see what supply of men might be available there. With regard to the matter of teachers, I should think throughout the whole dominion there must be a shortage. I notice that in one issue of the *Western Producer* there are advertisements for 200 teachers. That situation will have a serious effect upon this country. People in the fields of social service and teaching are rendering particularly valuable service. I believe we could learn something in this connection from the old country, and I hope the adviser the minister has secured from Britain will give him some pointers in these matters. The vital need for the social work of these people in war time is not yet recognized in this country.

Mr. HANSELL: I do not want to hold up the item at all, but we are asked to vote to his majesty over two and a half billion dollars, and in view of that huge amount of money I think hon. members have a perfect right to air their grievances here. The minister has ventured to mention the great problem of coal and the national emergency which exists at the present time, and I was glad to hear him say that he will soon make a comprehensive announcement in this connection. He made a little pass at me when I said we might freeze in the meantime, by saying that, of course, that was an easy thing to say.

Mr. MITCHELL: My hon. friend will not freeze at this time of the year.

Mr. HANSELL: We may not freeze at this time of the year, but it takes a long time to get coal out of the ground or to increase production when the machinery is wearing out. I am not going to argue that point. Twice in the last few days the minister has made a rather significant statement, something we have all known for years. He said that Canada is not on a self-sustaining basis as far as the production of coal is concerned; in other words, she cannot produce enough for her own needs. The strange thing is that within Canada is to be found fourteen per cent of the world's coal deposits. I am not laying any blame at the door of the minister, but I should like him to answer a question, although I really do not expect an answer. Why is it when we have fourteen per cent of the world's coal deposits we do not produce enough coal for our own needs? I know it will be said that we have not the best grade of anthracite coal in Canada, but we have good coal that

will burn and that will keep our industries going. With fourteen per cent of the world's coal deposits we were not able to keep our small population of twelve million people warm last winter and our industries are liable to break down this winter. I will tell the minister why we are not on a self-sustaining basis, and this is easy to say. It is because over the years we have had too much old-line party stupidity administering the affairs of this country. That is easy to say because it is true.

Mr. ROSS (Souris): Did I understand the minister to say that schoolteachers are not being granted postponements?

Mr. MITCHELL: They are in the same category as persons in industry. They would have to prove their cases before postponements would be granted. Of course the boards have been giving special consideration, but schoolteachers must make out a case for postponement before it is granted.

Mr. ROSS (Souris): There is a distinct shortage of teachers in the province from which I come, and I think the mobilization boards are seriously considering the matter.

Mr. MITCHELL: That is the reason why the order was issued the other day under my direction. In view of the representations which had been made by the various ministers of education, it was decided to move all teachers through selective service under direction. I do not think my hon. friend would want to go so far as to take them outside the realm of the call-up machinery.

Mr. ROSS (Souris): This afternoon the hon. member for Cape Breton South (Mr. Gillis) was trying to straighten out the hon. member for York-Sunbury (Mr. Hanson). The hon. member for York-Sunbury does not need anyone to speak for him. I understood the hon. member for Cape Breton South to state that while they were only a small group, seventy-five per cent of their members were ex-service men. I have been looking over the records of the C.C.F. members, and I find that there are three members out of nine who are ex-service men. That is not seventy-five per cent of their membership. I do not know that any one group in this house has any particular claim on having ex-service men in its membership, and certainly no group should endeavour to capitalize on our armed services. I am surprised that a group with so many schoolteachers and ministers of the gospel in its membership should not have made a greater attempt to get their facts straight.

[Mr. Hansell.]

Mr. CASTLEDEN: The hon. member for Cape Breton South—he is not in his place at the moment—told me that he did not intend to say seventy-five per cent.

Mr. CRUICKSHANK: What was he talking about then?

Mr. CASTLEDEN: That is his concern and he will tell you that to-morrow. I think it will be found that the matter will be corrected, either in *Hansard* or by a statement by the hon. member.

Mr. STIRLING: He said it in the hearing of all of us, and he cannot alter what is in *Hansard*.

Mr. CASTLEDEN: I said he would make a statement on it.

Mr. SHAW: I should like the minister to give us a break-down of the 104,743 persons who were granted permits to leave the farm in order to engage in other types of work during the past winter. When I referred to this matter some time ago the minister endeavoured to ridicule a statement I made that no individual who had spent such a short period of time in industry could become essential to that industry.

Mr. MARTIN: To what item is the hon. gentleman referring?

Mr. SHAW: I am referring to the farmers and farm workers to whom permits were granted last winter in order to engage in work other than farming. On June 23, this year, the minister stated that a total of 104,743 persons had been granted permits, but only 23,960 had been cancelled. Later on in his remarks he asserted that in certain instances these individuals had not been obliged to return to agricultural industry because they had become essential in the work in which they had been engaged during the winter time. To-day the minister said that one or two permits had not been cancelled. In checking over the statements which have been made during the last four months, I find that there is little conformity between them.

Mr. MITCHELL: It has been raining for a long time and my hon. friend will appreciate that that would tend to make the season late. Then it is no use in cancelling permits unless conditions are right for these men to go back on the farm.

Mr. SHAW: They were granted permits for winter work.

Mr. MITCHELL: I appreciate that, but what is the use in having a farmer or a farm labourer—I hope I shall not be criticized for using this language—lying around a farm

until the weather clears up? If the spring had been earlier, these permits would have been cancelled earlier, and the reason for extending the life of the permits is the lateness of the spring.

Mr. SHAW: I am not raising any objection to certain permits not having been cancelled, I was simply trying to get a complete picture of the situation as it stands to-day. Otherwise we are utterly and hopelessly confounded with respect to the whole question.

Mr. MITCHELL: These men are spread over the nine provinces, some of them being in very remote parts. It would be impossible for me to make a statement until the weather clears up, so that these men may go back to agriculture. Even then it will take some time to check up with the 216 offices across Canada from which permits have been issued. I shall be glad to do that at the earliest opportunity if it is at all possible.

Mr. SHAW: That is perfectly satisfactory. Some of the statements that have been made have led me to believe that the matter was to be dropped at that point.

I should like to refer to those who have been prosecuted for not having reported for military service or alternate work service. I do not know where the cut-off comes between the Department of Labour and the Department of National War Services, so that what I am about to say may not be relevant to the work of the minister. We have discussed from time to time and more particularly to-day what has been characterized as the army of lost persons, those thousands and thousands who for one reason or another have not reported. I find upon checking available statistics that this condition is more prevalent in certain administrative divisions than in others, and I checked back to ascertain the reasons. During the course of my investigations I examined the records with respect to those who have been apprehended and prosecuted for failure to report for military service or alternate work service, and I am utterly appalled when I consider what has taken place in the various divisions with respect to these prosecutions. The absolute leniency shown in some divisions —for example, a one dollar fine—leads me to the conclusion that it is no wonder the individual does not care what may happen to him if he fails to report.

Then I go to another division and find that an individual—and it is quite common in this division—is given a gaol sentence of twelve months and a fine of $200. I will take two more divisions without referring to them by letter or number. In one of these divisions there were twenty-one prosecutions; nine persons were given a gaol sentence as well as being fined; ten were sent to gaol without the option of a fine, one was given the option of a fine or a gaol sentence, and one was sentenced to report for training. The average gaol sentence in that division was five and one-quarter months, and the average fine imposed was $110.

In another division there were fourteen prosecutions, but only three gaol sentences. In only one case was the accused both gaoled and fined. There were two gaol sentences and nine cases where there was a choice of a fine or gaol. The average gaol sentence in that division was 2·11 months. The average fine was slightly over $41.

What I am trying to get at is this. I realize that there must be a minimum and a maximum fine, and no doubt there are regulations covering that. But why throughout one whole division is such leniency shown? For example, out of forty prosecutions in one division, only two persons were given a gaol sentence and fined, while in another division they were given a gaol sentence of from six months to a year and a fine of $100 to $200 was imposed, with no option; they were both gaoled and fined.

I think it is high time that the minister or whoever is responsible should take into consideration a record such as is presented here, which I understand is up to date as of September last, and see if some equality of sentence cannot be meted out because, if an individual in a certain division knows he is to be fined only $5 or sent to gaol for ten days, he will not worry a great deal. But the fellow who knows he will be gaoled for twelve months and fined $200 is in a very different position. We talk of equality of sacrifice, but I say that there is absolutely no equality of penalty in dealing with these various cases. I shall not elaborate, but I believe this matter should be given immediate consideration.

Just one other suggestion. I have often wondered why the government did not pass a regulation providing that, where an individual fails to report for military service or alternate work service, he be turned over to the military police and treated as though he had been A.W.O.L. I think that is the cure for this situation, and it would avoid all the difficulties that arise as the result of a prosecution. I hope the minister will give this suggestion his consideration.

Item agreed to.

Removal of enemy aliens including Japanese nationals and other persons of the Japanese race from protected areas in British Columbia, $3,000,000.

Mr. REID: Mr. Chairman, I want to approach the problem of the Japanese in Canada without rancour or being accused of approaching it from a racial hatred point of view. There was a time when the problem of the Japanese in this country was entirely a British Columbia problem, but to-day the problem has become one for Canada because, since the entry of the Japanese into the war, the Japanese in British Columbia have been moved from the Pacific coast and located in certain parts of the interior and in various other provinces.

There are at the moment two schools of thought in this country on this problem. I shall not take time to go into all the aspects of the various views, but there is one school of thought which believes that the Japanese should be removed entirely from Canada and sent back to the country whence they came or to which they owe allegiance. There is another school of thought which believes that treatment like that should not be meted out to them and that those who advocate it are animated by hatred of the Japanese.

My own views regarding the Japanese and the Japanese problem have been well known. They have been expounded both publicly and privately for years before I came into the House of Commons and since. Many hon. members will remember the warnings which I and others gave the government and the country in earlier days between 1930 and 1939, and which passed unheeded but were later found to be well founded.

There are also divided views on this problem in some churches of Canada. Some churches have taken the attitude that the Japanese should remain, especially those born here, while other churches take the attitude that so long as the Japanese owe allegiance to Japan they should be returned to Japan. I mention this particularly because certain pro-Japanese writers in this country have written articles on this problem, and some have gone farther and written books on the subject. I want for a moment to take exception to some of these writings.

One article on this problem appeared recently in the Montreal *Standard*, written by Mr. Allen Roy Evans. I want to take exception to the remarks he makes about those who hold the view that an unassimilable race like the Japanese should not be treated as truly Canadian. I have stated, and I do so again, that the Japanees are an unassimilable race in Canada, and I have never yet heard anyone expound the contrary view. Any race that lives unto itself and is of Mongol blood will remain in Canada Mongol, separate and apart from the Canadian, and distinctly so. British Columbia is not alone in its attitude to this problem. I know the people of California are also determined that the Japanese will not return to that state. An editorial which appeared in the Vancouver *Sun* of May 28 sets out the matter clearly. It states:

> California, like British Columbia, does not want to take back the Japanese after the war. The Japanese realize this so clearly that many thousands of the former residents of California and other coast states are asking that they be repatriated to their ancestral homes in the Orient at the conclusion of hostilities.
>
> These interesting facts have emerged from a survey of Tukelake Japanese relocation centre, a depot on the border of Nevada which now houses 14,000 Japs. More than 6,000 of these people have asked to be repatriated. They include several thousand born in the United States but who went back to Japan for schooling and military training (just as many did from B.C.).

In dealing with this subject, I wish to make some suggestions to the minister, and through him to the government, on this problem, which must be faced and which will not be downed by mere glossing statements by any minister of the government.

As pointed out, the people generally of British Columbia are determined to see this thing through along the lines on which they believe it should be carried out. It is most unfortunate that the views of the people of British Columbia were not heeded many years ago. Perhaps, now that it has become a Canadian problem, something will really be done. I am not so very sanguine, however, especially when one looks over the records of past federal governments, that the Japanese will be returned to Japan following the conclusion of hostilities, but if not, I believe that the suggestions which I am about to outline should be given serious consideration and acted upon.

Canada has granted the Japanese citizenship because they were born here. This is perfectly satisfactory to Japan, as long as their allegiance to Japan is paramount or comes first. Japan maintains that all these people are subject to the Sun Emperor by virtue of their Japanese blood and by their religion. From the earliest days Japan looked toward a programme of Pacific conquest. Japanese were actually exported from Japan to Pacific coast countries as far as Hawaii. The Japanese government initiated, financed, directed and controlled concentrated Japanese enterprises. These were able to successfully exert pressure upon local governments and even upon the federal government. We must, however, give thoughtful attention to endeavouring to solve

the problem without persecution. To revoke Canadian citizenship of Japanese who were born here is probably unthinkable to many and, perhaps, too drastic a step. We should, however, require them to prove themselves worthy of Canadian citizenship.

The first step in any sound and permanent solution of the problem must be taken by the Japanese themselves. That is a very important point, and one lost sight of by pro-Japanese writers and others who have written articles and books on this subject, because they nearly always place the blame on the white Canadians who urge that something further should be done. But, I repeat, the first step to any sound and permanent solution of the problem must be taken by the Japanese themselves. They must cut themselves completely aloof from the control and authority of Japan and its emperor. If the Canadian government is not prepared to send them back to Japan, it should and must be prepared to protect loyal Canadian Japanese in their renunciation of dual citizenship and alien control. Despite the inquiry which was held under Judge Cameron, it is my belief that the Japanese who are loyal to this country or who would like to be loyal Canadians live under the threat of fascistic elements controlled and dictated by Tokyo. Let me in substantiation of this show what happened in Los Angeles a short time ago:

> Eight hooded Japanese beat members of their own race before a tumultuous five-day strike began at camp No. 1 of the Poston, Ariz., relocation centre last November, says Norris Edward James, former head of the camp's receiving centre for evacuees. The Japanese who were beaten had been aiding the camp administration . . . the former camp executive said that beginning then "a definite attempt was made to destroy the Americanism of the American-born Japanese" in the relocation centre with its population of 10,000.

It is true that a writer in the *Standard* says that no acts of sabotage have been committed by Japanese. Very true, but perhaps the time is not ripe. When he says that all Japanese are loyal, let me tell the committee this. When the Swiss consul, or one acting on behalf of the Swiss government, visited the camp at Hastings park on behalf of the Japanese government to find out how Canada was treating the Japanese interned in that camp, there was one Jap in that camp who was determined to interview the consul. On being refused, he told the Royal Canadian Mounted Police in charge, "I am making no bones about being a Japanese citizen. I was sent here from Japan five years ago. I am a Jap and will always be a Japanese citizen." It is assumed that he wanted to send some special message back to Japan, but was prevented.

Second, Mr. Chairman, we must expose and tear out the whole web of Japanese influence, propaganda and intrigue and prevent, if possible, tight, deliverable blocks of votes which can always be used to pander to certain politicians.

Third, we must make it impossible for Tokyo directed and controlled enterprises again to achieve control over essential activities in our Canadian economy.

Fourth, we must never allow again unsupervised Japanese schools conducted in Canada, which were carried on for the sole purpose of keeping the Japanese as Japanese, and I believe indoctrinated the creed of dual citizenship.

Fifth, Japan-controlled firms and institutions must break their connections with the Japanese government.

Steps must be undertaken along the lines suggested if we are to solve this problem and with a new awareness and a determination that never again shall we allow dual citizenship to prosper and flourish in this country.

I have spoken many times about their being an unassimilable race and about the dual citizenship. The dual citizenship charge has never been denied by the Japanese themselves, and I am one who has taken the view all through the years, and take it still, and reiterate it to-night, that no man should owe allegiance to two countries at one and the same time. As I pointed out, the first step must be taken by the Japanese to cut themselves aloof from the country of Japan. But so far not one of them has seen fit to take that step, and I repeat it is my belief that they are afraid that their lives would be endangered were they to do so.

There are, it is realized, certain schools of thought which differ entirely from the views I have expressed tonight. I was one of those who was abused; I will not say castigated, although it came very near to that, when we in 1934 opposed the granting of the franchise to the Japanese, and I say this without rancour. I was very sorry indeed that the matter entered the realm of politics in British Columbia after 1933. It was intimated by the Cooperative Commonwealth Federation that if they were elected to power, the franchise would be granted to the Japanese. I am not accusing the Cooperative Commonwealth Federation of intimating such a policy to those who support them, but it was very strange to me that many whose views were similar to mine, but who did support the Cooperative Commonwealth Federation, changed their

views about giving these people the vote immediately after such a policy had been announced. I am not holding them responsible for that, but I do say this, and perhaps for the first time publicly, that the question never entered the arena of politics in British Columbia until that time, because prior to that no one in British Columbia would have got up on a platform to discuss the subject, for the reason that it was taken for granted that everyone in that province was opposed to granting the Japanese the vote.

May I interject one word personally? I have never publicly or at any time in my public career taken the stand I have taken against the Japanese to influence in any way those from whom I sought support. I have refrained from doing that, although I have spoken many times to my own people privately about my stand on the Japanese question. But that stand I have taken from a practical point of view. When they came to the country first in 1911 and 1912, the people of Canada were not aware, nor were we in British Columbia aware, of the move that was being made by Japan at that time to plant her nationals on the Pacific coast, and it is most unfortunate that this country of ours followed Great Britain all through the years. I am gratified to know, however, in conversations with some of the parliamentary delegation from Great Britain, that the eyes of the British people have at last been opened; I would advise those who have not had an opportunity of speaking to some of the delegates to get in touch with them, and they will find out that their views on the Japanese have changed entirely and that they are of one accord now on the point that never again must they trust the Japanese. I say that after having talked with some of the delegates who visited Ottawa.

I say to the minister that the suggestions made to him this evening I should like him to convey to the government and not to accuse us, as sometimes he has done in the past, of not having the milk of human kindness, or of lacking in British fair play. I have taken my stand fearlessly, but without hatred; and coming from the old land, as he does, I do not have to have a lecture about British fair play. It does seem strange, however, that the people who have known the Japanese the longest in Canada, the people of British Columbia and California, are the people who to-day say, "We don't want them back". Surely all the people cannot be wrong in adopting that attitude. It is quite notable that every community in Canada which has taken the Japanese since we have entered the war have been notified by the federal government that they are only being asked to take them temporarily, and that if they later do not want them the government will remove them from those communities after the cessation of hostilities. It is for that reason that we have some misgivings in British Columbia. If Ontario, Quebec and other provinces who have Japanese at the moment are going to say to the dominion after the war, "Take them out of here; we don't want them," I am wondering where the federal government will put them. This question must be faced. It is now an entirely Canadian problem, whereas heretofore British Columbia alone was faced with it.

As I said at the outset, I wanted to speak on this subject on account of its great importance, particularly to the people of British Columbia, and because it is one that must be dealt with. There is no side-stepping it much longer. The foundations for a solution of it should be laid right now. The people of the United States are thinking along the same lines. I will not weary the committee by reading all the communications I have from prominent men in the United States who take exactly the same stand as we do, but let me read one or two paragraphs from a prominent American, Miller Freeman, of the Pacific coast. He says:

> By our blindness in the past we have brought upon ourselves and future generations the problem of the presence in this country of a prolific, insoluble Oriental race, already numbering some 300,000 persons.

That is the number estimated to be in the United States.

> For the safety of these people, and ourselves as well, we must recognize this problem, and seek its solution. We have currently controlled it; but the future will bring it back again, intensified by the bitter memories of war and perfidy.
>
> Let no one cry: "Persecution." There is no taint of persecution in our doctrine. Rather it is conceived in tolerance, but in realistic recognition of the dangers and brutality of racial hatreds, and of the perils inherent in a national ambition which litters its history with the tattered shreds of its honour and its most solemn obligations.

There are those who differ altogether from my views and who believe that those Japanese who were born in this country are truly Canadian. Well, to those who take that stand I would turn it the other way. How ridiculous it would be to say that if a Japanese were born in Scotland he would be a Highlander or a Scotsman!

Mr. MacNICOL: It would not be fair to the bagpipes, would it?

Mr. REID: I can tell the committee there is something in race after all, because I venture to say, of the race from which I have sprung, that if they had ever received anything like

the treatment given the Germans and others by Hitler, Hitler would have been shot long ago by some Scot. They would not have stood long for that persecution. That is one of the things which make a difference in races. I say to the committee in all seriousness that this is a great problem confronting our country. Here we have a race of people who, when one gets to know them, look with disdain upon us and look upon us as dirt under their feet, and who have put it over many of our people close to the government, and in some instances have blinded some of these people by gifts. I say that without fear of successful contradiction. They are, I repeat, unassimilable. Those who talk about the assimilability of the Japanese usually want the experiment tried on some other family and not their own. I want to warn the members of the committee that the people of British Columbia are not going to take it quietly and have the federal government say to British Columbia again, "The Japanese problem is entirely yours, and now they are all going back to British Columbia."

I commend the federal government for the steps taken in taking the fishing vessels from Japanese, and with regard to the land which has been taken from them, and I shall have more to say to the Minister of Justice, who has given a ruling—

Mr. MITCHELL: Will my hon. friend permit a question? He said that some people close to the government have been blandished with gifts by the Japanese. I think the hon. member should be more explicit when he says that. It is a reflection, and I think those persons should be named if they are close to the government.

Mr. CRUICKSHANK: Some of them are trips to Japan.

Mr. MITCHELL: For instance, my friend the assistant secretary of labour is close to the government, and members of the house are close to the government—at least we hope they are—even in the opposition.

Mr. CRUICKSHANK: Some professors are, too.

Mr. REID: I say, from the information I have, it is no one connected with the minister. It is no one connected with the minister's department, I will go so far as to say that. I will go farther and say this, that I have never made a statement in the house unless I had some proof when making it.

Mr. MITCHELL: If the persons the hon. member has in mind are officials of the government, they should be named. It is not fair to have a cloud like that hanging over anyone, or to make the statement that they have been blandished with gifts by Japanese. That is a pretty far-reaching statement.

Mr. CRUICKSHANK: Is a trip to Japan a gift?

Mr. REID: I suppose it is the minister's duty to run to the rescue—perhaps I should not say "rescue"—to run to the assistance of any member of his staff who he thinks is being attacked. I will give the minister the names in private, from the information I have. I think the committee will agree that it would not be nice, if I may use that word, to place someone's name on *Hansard*. However, I shall give it to the minister privately.

An hon. MEMBER: Or any member of the house.

Mr. REID: I did not say it was a member of the house or any member of the government.

Mr. MITCHELL: But I do think, to be fair, I should have the information. It is not fair to permit anything like that being said, when people are not here to defend themselves. If a stigma of that kind is placed upon a permanent official, then we have the right to know about it.

Mr. CRUICKSHANK: On a point of order, I do not think the minister has any right to interrupt the hon. member for New Westminster.

Mr. MACKENZIE (Vancouver Centre): Yes, he has.

Mr. CRUICKSHANK: The hon. member for New Westminster should be allowed to continue. He has made a perfectly fair suggestion. He never mentioned any member of the government or any member of this parliament. He might have suggested that some might have had a couple of crates of strawberries from one of their Japanese friends. I think the minister would do well to wait until the hon. member has finished what he is going to say.

Mr. MITCHELL: I am not going to be lectured by the hon. member.

Mr. CRUICKSHANK: And I am not going to be lectured by the minister, either.

Mr. MACKENZIE (Vancouver Centre): Order.

Mr. MITCHELL: My hon. friend has spoken about British justice. Well, a charge has been made with respect to a certain permanent official of the government. My hon.

friend must know as well as I do that by the very nature of things they cannot defend themselves in this house. I say that when a charge is being made that these people—

Mr. CRUICKSHANK: On a point of order, the hon. member made no charge at all.

Mr. MITCHELL: It was stated that a permanent official had been given a gift by Japanese; that is not a correct statement to make.

Mr. REID: I did not say they were; I said they had been, and that is a different matter. I am speaking of the past.

There are one or two other matters I should like to mention. Possibly the minister or his assistant would take note of my questions, so that he may answer them. The first matter I have in mind is in connection with the personnel of the British Columbia security commission. A return was brought down on February 15, and in that return a total staff of 115 was shown. There were twenty-eight stenographers, twenty of whom were in the Vancouver office; nineteen clerks, sixteen of whom were in the Vancouver office; and fifty-three of a staff in that office, making a total of 115 in all. My first question is: Why should there be an office in a town like Port Arthur? There is a man there receiving a salary of $2,400, and a stenographer receiving $720.

Before he answers that question, I should like to ask some questions with regard to the appointment of this staff. The information given me is that the staff was appointed by Mr. Austin Taylor, chairman of the security commission. No great objection was raised to that, because it was understood that by the order in council complete power and authority was given to the British Columbia security commission to appoint its staff.

I wish, however, to ask the minister this question: Who was responsible later on for advising the civil service commission to place all these positions under the civil service, and practically protect every one of these under the civil service regulations, when the only qualification many of them had for the job, or the chief qualification, was being a friend of Mr. Taylor?

Mr. CRUICKSHANK: Professor Angus, too.

Mr. REID: We have heard a great deal about political patronage. If the government appointed, or dared to appoint one man outside the civil service commission, I can imagine the cry which would be raised in this house. But here are 118 of them. If one of them retired from the position, that position would have to be advertised through the medium of the civil service commission. It is a splendid thing to have appointments made through the civil service commission, but I should like to know who advised the civil service commission to have all these appointees placed under it. As I say, with respect to many, if not all of them, the chief qualification was their relationship to the chairman of the security commission.

That is one thing I want to know. I want to know all the facts about the office at Port Arthur, and the need for it. I want to know the need for a staff of 115. I want to know, also, what Mr. Trueman, the placement officer, is doing, and especially after the statement he made publicly that the reason why the Japanese were being moved by the government was that there was mass hysteria, and the political agitation of some members of parliament.

Perhaps I had better permit the minister to answer those questions, or would he rather I should ask the remaining questions?

Mr. MITCHELL: I shall answer one at a time. The first question, as I understand it, is this: Why were employees of the British Columbia security commission placed under the civil service commission?

Mr. REID: After their appointment.

Mr. MITCHELL: Yes, after their appointment. If my hon. friend's mind will go back to the development of this Japanese problem in British Columbia twelve months ago, and the establishment of the British Columbia security commission, he will know as well as I do that as soon as it was handed over to a department of government—and it was handed over to my department—we moved with expedition. The first appointments were made by Austin Taylor and his commission. Eventually the civil service commission went into the matter, and they were finally approved by it. I believe that is the first question. If there is any responsibility I am prepared to take it, for the civil service commission.

Mr. NEILL: Let us go back farther: Who appointed Mr. Taylor?

Mr. MITCHELL: The government did.

Mr. CRUICKSHANK: Who made the recommendation?

Mr. MITCHELL: The government appointed Mr. Taylor. I do not think my hon. friend made the recommendation.

Mr. CRUICKSHANK: I certainly did not. I come from British Columbia.

Mr. MITCHELL: If my hon. friend had had on his mind what I had on mine at that time, namely the international situation, and particularly the situation in the near east, one which has cleared up considerably since then, I think he would have got anyone he could to move those Japanese out of British Columbia.

Mr. CRUICKSHANK: I think the hon. member for New Westminster can look after himself.

Mr. MITCHELL: The next question was about a gentleman and a stenographer in Port Arthur. At the present time I think we have about 1,800 Japanese in Ontario. We have a large concentration camp in northern Ontario in which there are about 600 or 700 Japanese. This gentleman and his office staff are engaged in the general supervision of the Japanese in that part of Ontario, and in their placement. The next question, I think, was about a Mr. Trueman, located in the city of Toronto. He has the general direction of the movement of the Japanese in eastern Canada, in the province of Quebec and particularly in central and eastern Ontario.

Mr. REID: Probably I shall have more to say about this before the item passes, but the questions I want to ask of the minister at the moment are in regard to an order in council which was passed on Friday, May 28, in connection with the wood-cutting proposition. By that order in council the Minister of Labour is made responsible for having the Japanese cut fire wood. Paragraph 1 reads:

1. To undertake and engage in wood fuel cutting and other timber operations to the extent necessary to supply the needs of the interior Japanese housing settlement in British Columbia. . . .

My question in regard to this is: Have the Japanese been engaged and paid to cut fire wood for their own homes? My second question relates to paragraph 3:

3. To deliver, sell or otherwise dispose of, and to make arrangements with the wood fuel controller. . . .

Will the wood they cut be sold to the wood controller at cost price or at a set price? The third question is in regard to paragraph 5, which reads:

5. Notwithstanding the provisions of the Civil Service Act to employ, from time to time, occidental machine operators, foremen and assistants required in carrying out the said projects.

Will these men be placed under the civil service commission after their appointments?

Mr. MITCHELL: The answer to the first question, whether they will cut wood for their own homes, is, yes; at cost price, of course. The second question was whether they will cut fire wood for sale, and the answer is, yes. I hope they will cut a hundred thousand cords of fire wood. Of course that will be sold on a strictly competitive basis; there will not be any question of unfair competition with those people who are at present engaged in the industry. The third question was in regard to the men operating the machines. My hon. friend, who comes from British Columbia, knows that, in the operation of the lumber industry there, certain highly skilled operatives are engaged. This provision was to enable us to appoint these people to operate the machines and also to appoint the necessary foremen in connection with getting out the lumber. I do not know about the civil service end of it. At the moment I have not given any thought to that.

Mr. REID: What will the Japanese receive for cutting fire wood for themselves and for the public?

Mr. MITCHELL: They will be paid so much a cord, according to the usual custom in British Columbia.

Progress reported.

On motion of Mr. Mackenzie (Vancouver Centre) the house adjourned at 10.55 p.m.

Wednesday, June 30, 1943

The house met at three o'clock.

PRIVILEGES OF THE HOUSE

REMARKS OF MR. LACOMBE IN DEBATE ON JUNE 25—STATEMENT OF MR. SPEAKER—MOTION FOR COMMITTEE OF INVESTIGATION

Mr. SPEAKER: In view of the widespread public interest regarding the statement which was made by the hon. member for Laval-Two Mountains (Mr. Lacombe) as contained in *Hansard* of Friday, June 25 last, at page 4042:

Nous avons dans le Gouvernement trois nouveaux millionnaires depuis la déclaration de la guerre. Nous les dénoncerons en temps et lieu. Les fortunes s'édifient.

Or, in English:

We have in the government three new millionaires since the declaration of war. We will denounce them at the proper time and place. Fortunes are being built up.

And also the statement made by the right hon. the Prime Minister (Mr. Mackenzie King) as set forth in *Hansard* of June 28, at page 4072:

> A moment ago my colleague the Minister of Justice drew my attention to a statement made by the hon. member for Laval-Two Mountains which is of a very serious character. I had not up to that time observed the remarks to which my colleague referred as well as others and I was not in the house at the time they were made, but I find them in *Hansard* in the official report of the English translation of speeches delivered in French on the date indicated.

I wish to say that the hon. member for Laval-Two Mountains has made a grave accusation against three members of the government, so grave that the implied and, it seems to me, the only meaning which can be drawn from the statement is that these three unnamed members are using their position to accumulate fortunes. Although unnamed, as the statement now stands, all and every member of the government stand accused.

No more serious accusation could be made reflecting as it does on the integrity of members of the government, especially those charged with the executive positions of government. The hon. member must have realized the import of his remarks and duly considered the disastrous effect such a charge, if unchallenged, would have on public opinion, not only in Canada but throughout the world, especially at this serious period of our national life.

The Prime Minister has challenged the statement and has asked that the hon. member should be obliged either to withdraw the statement completely or else to convert it into a specific charge to be investigated in the usual manner.

If the hon. member so challenged refuses either to withdraw the charge or make a specific charge to prove the truth of his statement, he must accept that responsibility and govern himself in accordance with the practice usually followed in such cases.

I would be loath myself to apply rigorous measures against the hon. member. I am inclined to the view that this is a matter upon which the house should decide. At this moment we are dealing with what is a question of privilege and no formal proceeding is before the Chair. I must point out, however, that I view this incident with grave misgivings not only because ministers are affected, but also because the privileges of each and every hon. member are affected.

[Mr. Speaker.]

Standing order 41 provides:

> No member . . . shall use offensive words against either house or against any member thereof.

If the house so decides, a motion can be made that this question be referred to the committee on privileges and elections for investigation and report, after which the house will decide what action should be taken.

I take it that the house will now expect the hon. member to make a statement, and I will ask him to do so now.

Mr. LIGUORI LACOMBE (Laval-Two Mountains): Mr. Speaker, I will not withdraw the words which are attributed to me in the English translation of *Hansard,* words which I never said, and which are attributed to me only by distorting the French text of my remarks. But first I would draw the attention of this house to the fact that the government has been delegating since the beginning of the war part of its power to numerous commissions where millionaires are sitting for a salary of one dollar a year. But these commissions are an integral part of the government or of the administration, which the opposition, to which I belong, has the right to criticize.

I point out to the right hon. the Prime Minister that my words were in no way directed against the members of his cabinet. According to standing order 41:

> No member shall speak disrespectfully of His Majesty, nor of any of the Royal Family; nor of the governor or person administering the government of Canada; nor use offensive words against either house, or against any member thereof. No member may reflect upon any vote of the house, except for the purpose of moving that such vote be rescinded.

Mr. Speaker, if I made a statement which is offensive to any member of this house, or to any member of the cabinet, I am prepared to withdraw immediately this statement, but I submit respectfully that I cannot withdraw what I never said. I repeat that if I have made any statement offensive to any member of this house or to any member of the cabinet, I withdraw it entirely and immediately.

Right Hon. W. L. MACKENZIE KING (Prime Minister): I cannot see that what the hon. member has just said in any way meets the very grave situation for which he is responsible. His words at the outset were serious enough in their reflection upon members of the cabinet. From what I read of his explanation in the press he said that "le Gouvernement" did not mean "the cabinet," that it meant the party which supported

the cabinet. I cannot say whether the hon. member said that or not, but he is reported so to have spoken to the press. At any rate he has withdrawn nothing to-day, it seems to me, which would remove the implication that some members of this House of Commons have been profiteering as a consequence of opportunities afforded by the war. That is an imputation which no member of this house can afford to have stand against either himself or any other member without the very fullest possible investigation.

I believe the quickest way to deal with this matter, Mr. Speaker, is, as you, Your Honour, have suggested, namely, to refer to the committee on privileges and elections the statement which the hon. member made as it appears in *Hansard,* and that the committee on privileges and elections should go very fully into the whole matter. I would therefore move, seconded by Mr. Ralston:

That Liguori Lacombe, Esquire, member representing the electoral division of Laval-Two Mountains, in the house, having declared from his seat:

"Nous avons dans le Gouvernement trois nouveaux millionnaires depuis la déclaration de la guerre. Nous les dénoncerons en temps et lieu. Les fortunes s'édifient."

the select standing committee on privileges and elections be instructed to inquire fully into this allegation and to report in full the evidence taken together with all the procedure on this reference and the result of their inquiry for such action thereon as the house may determine.

Mr. LACOMBE: Mr. Speaker, before this motion is discussed in the house, to avoid expenses on this account, and to avoid something against the war effort, I withdraw entirely what I have stated in this house, as the right hon. the Prime Minister asked me a few moments ago.

Hon. R. B. HANSON (York-Sunbury): I do not rise for the purpose of defending the hon. member for Laval-Two Mountains; but in a public statement which he made, or is reported to have made, and to which the Prime Minister has alluded, the hon. member raised an issue which, I think, ought to be settled, having regard to the fact that the allegations which he is said to have made in the house are in the French language, and his assertion that the translation upon which the Prime Minister relies is not a correct translation. I am going to ask the Prime Minister if the translation which he used the other day is an absolutely correct one. If this were a matter for a court of law, and one were framing a statement of claim or a declaration for defamation in a language other than—in my own province—the English language, the exact words complained of would have to be stated, and the innuendo framed thereon as to the defamatory intent.

I should like to know before this motion passes if there has been made an authoritative translation of the language alleged to have been used by the hon. member for Laval-Two Mountains. He has apparently challenged that both outside the house and, if I understood him correctly, inside the house to-day. While I have no brief for the hon. member, and while I abhor the hurling of these charges across the floor of the house, may I suggest to the Prime Minister that perhaps the concluding statement of the hon. member is a complete withdrawal, and that might end the incident. Perhaps he might be asked to apologize to the house. I think that would be the proper course to pursue. But I do not like to see people punished for things they may say on the spur of the moment. I suppose that if I had been punished for everything I said on the spur of the moment I would not be here at all. It seems to me that this would be a charitable view to take.

Mr. KARL K. HOMUTH (Waterloo South): Mr. Speaker, I quite concur in the motion that the Prime Minister has introduced this afternoon. Unfortunately, during the last two or three years of war, there has been built up in this country in the minds of some people the notion that certain persons are profiteering as a result of the war effort. Perhaps because I am in industry, I know something of the situation of those who are working in our war effort and doing a great deal to advance it, and I am opposed to encouraging in this country the idea that such people are taking advantage of the war to amass fortunes for themselves. I do not believe that anyone in industry to-day is in a position to make a fortune as a result of the war effort. I have never questioned the loyalty of any other Canadian; I have always felt that every one of us is in this war to fight it to a finish, it matters not at what cost. An allegation has been made by the hon. member for Laval-Two Mountains against members of the cabinet, or members of this house. In his apology he more or less referred to the members of the House of Commons in his own translation of what he said. I think that this is unfair, and so far as I am concerned, if there is any charge at all it should be investigated to the full, because the people of Canada ought to realize that everybody in this country who is invested with any responsibility is doing all he can to prosecute the war to the fullest

extent, without any regard to profit. But the result of the activities of a certain political party in the last two or three years has been to create the feeling that you cannot trust any man who has a responsible position in industry. I think the time has come when we should recognize that there are people in this country, regardless of their financial standing, who do want to win this war and are doing everything they can to that end. I vehemently resent therefore the insinuation that simply because a man happens to have an industry, or occupies some position that may carry a large salary with it, his sole idea is one of profit to himself. I have never questioned the loyalty of my fellow Canadians, and I resent with all the force I can put into it the idea that simply because some man happens to own an industry or to be interested in industry his only object is to make some profit out of the war, no matter what happens. I think we should have a full investigation into the charges made by the hon. member for Laval-Two Mountains, notwithstanding that he has withdrawn his statement. Let us go into the matter to the very bottom and show conclusively that the members of this house are certainly above any such imputation as that made by the hon. member for Laval-Two Mountains.

Mr. ANGUS MacINNIS (Vancouver East): I am wondering what purpose will be served by passing the motion after the withdrawal made by the hon. member for Laval-Two Mountains. If the hon. member had not withdrawn his statement that would be another matter, but in my opinion he withdrew unreservedly all references he made on the occasion in question. After Your Honour's request for a statement from the hon. member —I admit that his first explanation was not satisfactory—he did make a complete withdrawal. What can be gained by an investigation? I do not know that there are any damages or penalties that can be applied to the hon. member. We can find him guilty of making the statements and possibly he could be unseated and there would be another election. But I do not know that anything would be gained thereby. I suggest that under the circumstances, and taking into consideration also the circumstances under which the speech was made, it would be much better if the hon. member's withdrawal were accepted and the motion dropped.

Mr. RODOLPHE LEDUC (Wright): I was in the house on Friday afternoon when the hon. member for Laval-Two Mountains delivered his speech and I can swear that the words which he used in French are the exact words that appear in *Hansard*. At that time I wanted to ask the hon. member the names of the ministers, but it happened that there was a French minister sitting in his seat and I thought he would interrupt the member for Laval-Two Mountains and ask him what the names were. I cannot accept the withdrawal which the hon. member made a few minutes ago, because he declared, in withdrawing his statement, that he was willing to withdraw in order to save this country money and to save time as well. If therefore his withdrawal is accepted by the house he will be in a position to go outside this parliament and say that if he had not wanted to save the country time and money he could have proven his accusation.

Mr. BLACKMORE: It seems to me that the hon. member withdrew without qualification the second time.

Mr. LACOMBE: Mr. Speaker—

Mr. SPEAKER: Order. The hon. member for Laval-Two Mountains has already spoken. We are not in committee.

Mr. VINCENT DUPUIS (Chambly-Rouville): I wish to say just a few words. I completely concur in the views of the right hon. the Prime Minister. The integrity of members of this national assembly must be kept sacred, and no member of the house has the right to say anything which would diminish the reputation of any other member. The hon. member for Laval-Two Mountains made a very serious and grave charge, as Your Honour said. There may be circumstances which would not excuse, though they might explain, the language of a person, but in the criminal law it does not matter if a crime is committed while a man is not in possession of the well-balanced mind which otherwise he has. I am not here to defend the hon. gentleman, but I understand that in a case of slander, if a newspaper withdraws unconditionally what it has written there is no action in law against it and the matter is completely abandoned. The hon. member for Laval-Two Mountains did withdraw. He said, however, that he withdrew because he did not want to have this parliament go to the expense of an investigation or an inquiry. If I understood the Prime Minister correctly, he said that unless the hon. gentleman withdrew unconditionally the accusation must be referred to the committee on privileges and elections. As we are not satisfied with the declaration of the hon. member for Laval-Two Mountains, is it not permissible—because we know his intent; he intends to withdraw—for Your Honour to draft a declaration which would be satisfactory

to this house and ask the hon. member if he is ready to accept it? In those circumstances the House of Commons would be satisfied and the integrity of members of the house vindicated. I humbly submit to Your Honour that if this procedure could be followed, if you would ask the hon. member to accept such a declaration, if it were satisfactory to him, we could accept it also.

Mr. C. E. JOHNSTON (Bow River): I am not so sure that this type of investigation would be satisfactory. When you speak of putting this case before a house committee, that cannot be compared in any sense to a court of justice, because unquestionably on a house committee the predominance would be Liberal and other parties would be represented proportionately. I do not think the question will be settled in that way. I am very much in doubt about the translation that has been made of the statement. The Prime Minister has not yet answered the hon. member for York-Sunbury, who asked whether this was a confirmed translation. There are some of us here who do not know whether that is a proper translation.

Mr. LALONDE: The motion is based upon the French version.

Mr. JOHNSTON (Bow River): The hon. member himself has stated that the translation into English was not a proper translation. Further, I think that what you said when you first spoke was quite proper and I agree with the stand you took. You asked the hon. member if he was prepared to withdraw his statement; if not, other means would have to be taken. When he was speaking the hon. member said definitely that if there was a charge against any member of this house or any member of the cabinet he was prepared to withdraw it. Without giving him a chance to say anything further on the question, the Prime Minister moved his motion. Then the hon. member for Laval-Two Mountains made a further clarification of his former statement.

Mr. HOMUTH: He just beclouded it.

Mr. JOHNSTON (Bow River): That is what you think. Perhaps an investigation might prove a whole lot more than you have in mind.

Mr. HOMUTH: I have not anything in mind.

Mr. JOHNSTON (Bow River): The hon. member made a statement clarifying what he had said the first time. Without question he withdrew it unconditionally.

Some hon. MEMBERS: No.

Mr. JOHNSTON (Bow River): That again is your opinion. I hold no brief for the hon. member for Laval-Two Mountains, but I do like to see justice done. I do not care what he said before, he has said now that he will withdraw unconditionally.

Some hon. MEMBERS: No.

Mr. JOHNSTON (Bow River): We are divided even on that. This just goes to show what kind of procedure will be followed in the committee, I do not think you, sir, would consider a house committee as being comparable to a court in dealing with a case like this. As the Prime Minister has said, this is a serious charge. I do not think the millionaires are going to take much offence.

Mr. HOMUTH: Who are the millionaires?

Mr. JOHNSTON (Bow River): Maybe you can name them.

Mr. HOMUTH: I do not know them, but you referred to them. If you do not know them, why talk about them?

Mr. JOHNSTON (Bow River): You were talking about them.

Mr. HOMUTH: I was not talking about them. Name them if you know them.

Mr. SPEAKER: Order.

Mr. HOMUTH: The people get sick and tired of this.

Some hon. MEMBERS: Order.

Mr. SPEAKER: The hon. gentleman who has the floor has the right to speak.

Mr. HOMUTH: But he talks too much.

Mr. SPEAKER: I must ask the house to remember that we are discussing a very serious matter. Every member of this house is entitled to speak and to be heard.

Mr. HOMUTH: People are being accused.

Mr. JOHNSTON (Bow River): I am sorry if I seem to have trod on the toes of the hon. member.

Mr. HOMUTH: You have not trod on my toes, don't worry about that.

Mr. SPEAKER: I ask the hon. member for Waterloo South not to interrupt the hon. gentleman who is speaking.

Mr. HOMUTH: All right, but he should not make allegations.

Mr. JOHNSTON (Bow River): I believe it would be in the interests of all concerned if the Prime Minister would withdraw the motion he has placed before the house.

Mr. A. W. NEILL (Comox-Alberni): Mr. Speaker, I would suggest to the Prime Minister that this is a case in which justice might well be tempered with mercy, for three reasons. First, this man gets up in the house in the evening when he is perhaps feeling sick, or perhaps too good, and he makes what now appears to be a foolish and utterly untrue statement. Then, to make matters a great deal worse, the statement is not translated properly, something that is not his fault. I do not know much about French, but I know how to translate three or four simple words. The French as it appears before us here, and as it appeared in some of the newspapers, is to the effect that we have in the government three new millionaires since the declaration of war. Then the translation puts in words that were not there by saying, "three new millionaires who have made their money" since the war's outbreak. Those words "who have made their money" are not in the original French, and the translation makes the offence, if it is an offence, a great deal worse. The hon. member has explained that, and he has also suggested that "government" does not mean "cabinet". I do not know about that, but I do know that these English words that appear here were not in the original French. I think we could well overlook utterances made in the evening under certain conditions. I am not in that condition very often myself, so that perhaps I cannot speak with authority.

The third reason is that we are likely to make ourselves supremely ridiculous, and that is a thing not to be desired in parliament. Those of us who have been very long in politics know that this has happened before. I was not in the house at the time, but it happened in the British Columbia house. A reporter made some foolish break—I think he got up a fake bill or something of the kind. It was taken by most of the house as a good joke, but some of the members of the government were affronted. They thought their dignity had been affected and they demanded that he be called to the bar of the house. He was called to the bar of the house and was finally sentenced to be taken into custody by the sergeant-at-arms. They followed the English custom, and he was ordered to be placed in the tower. But they had no tower in British Columbia at the time, so that he lived at the best hotel in the town at the people's expense for a couple of days. Finally a delegate from the government went to him and asked if he would mind calling it all off. The result was that they appeared supremely ridiculous.

[Mr. C. E. Johnston.]

The hon. member feels that he has apologized. He says that he did not intend to cast any reflection upon any member of the government, and I think it would be well if we were to accept his statement.

Mr. SPEAKER: The words of the motion seem to have been overlooked. They read:

That Liguori Lacombe, Esquire, member representing the electoral district of Laval-Two Mountains in the house, having declared from his seat—

Only the French text is used in the motion, not the English text.

Mr. MAURICE LALONDE (Labelle): Mr. Speaker, I was present in the house when the hon. member for Laval-Two Mountains delivered his speech and I can corroborate what the hon. member for Wright (Mr. Leduc) has said, to the effect that the hon. member for Laval-Two Mountains used these French words:

Nous avons dans le Gouvernement trois nouveaux millionnaires depuis la déclaration de la guerre. Nous les dénoncerons en temps et lieu. Les fortunes s'édifient.

If my memory serves me aright, I think the hon. member for Laval-Two Mountains was reading his speech, so that it is of no use for us—

Mr. LACOMBE: I rise to a point of order. The hon. member has stated that I was reading a text. That is absolutely false as I had given my text to the newspapers. The hon. member for Labelle was interrupting me without my permission.

Mr. LALONDE: I am bound to accept the declaration of the hon. member for Laval-Two Mountains, but we must all admit that the words used by the hon. member were exactly the same as they appear in this resolution. We have to decide whether or not the house will accept the resolution now before the Chair. It is of no use for us to quarrel about whether or not the translation from French into English has been well done, because the resolution contains the French version, and we are called upon to approve or reject it. So that the hon. member for Laval-Two Mountains should not think I am getting after him too severely; but if he does not withdraw completely and without reservation the statement he made in the French language I am ready to vote for this resolution. If the house is kind enough to give the hon. member another chance to withdraw completely the statement he made, without any conditions, then I shall be ready to take another view.

Mr. HOMUTH: No, no.

Mr. ROBERT FAIR (Battle River): I do not intend to take any sides on this question, since I am a member of the committee which, if this resolution is adopted, will investigate this charge, but I should like to read a few words from *Hansard* of Monday, June 28.

Mr. SPEAKER: Is the hon. gentleman referring to a previous debate in this house? If so, he will be out of order.

Mr. FAIR: I want to read the words of the Prime Minister, because they have a direct bearing on the withdrawal that has just been made by the hon. member for Laval-Two Mountains. This is exactly the same question, and apparently it has not been decided yet. In the last paragraph on page 4072 of *Hansard* for May 28, I find these words coming from the Prime Minister:

> The proper time and place to make a statement of that kind is in this House of Commons with the hon. member simultaneously undertaking to prove the charge, or, if he is unable to do so, to resign his seat in this house. I submit, Mr. Speaker, that the hon. member should be obliged either to withdraw the statement completely or else to convert it into a specific charge to be investigated in the usual manner, and the consequences of the investigation also to be followed up in the usual manner.

I submit that on the second attempt the hon. member for Laval-Two Mountains did withdraw the charge which was made, completely and unreservedly.

Some hon. MEMBERS: No.

Mr. FAIR: I have been on committees of this house and in this chamber long enough to know that the sort of thing we hear across the floor of the house goes on both in committee and here, whether or not it is in accordance with the facts. If a member of the opposition wants to carry on some conversation or some argument which is not in line with what the majority of the committee wants to bring forward, then that hon. member is howled down, as I have been howled down in committee on more than one occasion. I do not intend to be howled down here or in committee after this. I am making my protest now; and I do not think the hon. member for Laval-Two Mountains will get the justice in the committee that he would get before a court of law.

Some hon. MEMBERS: Order.

Mr. SPEAKER: The hon. member who has just taken his seat has cast a reflection on hon. members of the house. I am quite sure the hon. member does not intend to do so, but certainly he should withdraw that statement.

Mr. FAIR: Owing to the noise in the chamber I could not hear exactly what you said, Mr. Speaker, but I think if you and hon. members of this house will look at what I have said you will find that I was perfectly right in making the statement I did make.

Mr. SPEAKER: Order. The words of the hon. member as I caught them were that, in referring to his relations with committees, he found that he had not received the justice from hon. members that he expected. That is a reflection upon the members of this house. I do not think the hon. gentleman intended to cast any such reflection, but it is on *Hansard* now and I would ask him to withdraw it.

Mr. FAIR: I stated, and I do not think there is any disagreement about it, that when I wanted to carry on an argument with which the majority of the committee did not agree, I was howled down.

An hon. MEMBER: Where?

Mr. FAIR: In the agriculture committee, if you want me to name the committee.

An hon. MEMBER: When?

Mr. FAIR: During the discussion of the wheat board report.

Mr. MACDONALD (Kingston City): On a point of order, Mr. Speaker, as I heard my hon. friend he went a good deal further than to refer to his experience in a committee. He went on to say that the hon. member for Laval-Two Mountains would not get justice from the committee on privileges and elections. I contend that this statement is a reflection on every member of the committee and every member of this house, and that the hon. gentleman should withdraw it unequivocally and unreservedly.

Mr. FAIR: I think the hon. member for Kingston City (Mr. Macdonald) should look over my remarks once more. What I said was that the hon. member for Laval-Two Mountains would not get the same treatment in the committee that is proposed to be set up to deal with his case as he would in a court of justice. Those are exactly the words I used, and they can be found in *Hansard*.

Mr. QUELCH: I do not see how there can be any dispute in regard to the statement made by the hon. member for Battle River. This will be a partisan committee, dealing with a partisan subject; therefore it will not be able to deal with it impartially and will not be able to give justice to the hon. member.

Mr. SPEAKER: I must call the attention of the hon. gentleman to the fact that in referring to the deliberations of any committee

no hon. member may cast reflections upon the justice or decorum of the members of the committee, or suggest that they will not properly carry out their duties as members of the committee. No such reflection may be cast upon any members of a committee or of the house, and I ask all hon. members to refrain from such statements.

Mr. HANSON (York-Sunbury): On the point of order, in effect Your Honour has ruled that no member may impute motives, and with that I am in agreement. But to dispute the decision of a committee and say that it is unjust, or may be unjust, is well within the rights of any hon. member.

Mr. MACKENZIE KING: My hon. friend has said that to dispute the findings of a committee or to say they may be so-and-so is quite legitimate. That is not what at least three hon. members have said in the hearing of this house this afternoon. Their statement has been that a committee of this house will not deal impartially with a certain question. That is the point of the statement that has been made; that is the intent of it, that justice cannot be expected from a committee of this house. Certainly that is a reflection upon the personnel of committees of this house, which no hon. member has a right to make. I do submit that we are losing sight entirely of what should be uppermost in the mind of every member of parliament; that is, to have his own privileges protected to the greatest extent possible. If the privileges of members are not fully protected the work of parliament under the democratic system cannot be carried on in a manner which will carry with it the support of public opinion. And every member who rises in his place and reflects upon another member's integrity, or the integrity of a committee of this house, is helping to undermine the true principles of democracy on which our parliamentary institutions are founded. I submit that Your Honour cannot be too rigid in insisting that where members do cast reflections upon other members, they be obliged to withdraw immediately. This whole case, of which so much is being said in the house, is the result of a lot of loose talking and of reflections by some hon. members upon others, which has been permitted to take place time and again. Had it been summarily dealt with at the outset it would probably not have resulted in the last incident.

Mr. BLACKMORE: On the point of order, when the hon. member for Battle River made his remarks, hon. members in other parts of the house were making so much noise that it was impossible to hear what the hon. member for Battle River was saying. I ask the Prime Minister if he thinks that hon. members of his party were granting the hon. member for Battle River justice and freedom. Were they granting justice to the hon. member for Laval-Two Mountains, in whose behalf the hon. member for Battle River was at that time speaking?

Mr. HANSELL: May we get on with the discussion of the motion?

An hon. MEMBER: What about getting on with the war?

Mr. LACOMBE: On a question of privilege—

Mr. SPEAKER: I have already drawn to the attention of hon. members the terms of standing order 41, namely that no member shall make offensive remarks against any other member of the house. There have been offensive remarks made to-day. They are not confined to one person, or two; because three hon. members have said that it would not in their judgment be justice to the hon. member for Laval-Two Mountains if this matter were sent to a committee. These remarks are wholly out of order, and they should be withdrawn. I ask that the hon. member for Battle River withdraw his remarks so far as they reflect upon hon. members of the house who are members of committees.

Mr. FAIR: I am bound to withdraw, and I do withdraw. But I want to say—

Some hon. MEMBERS: Order.

Mr. FAIR: —that my remark was that the hon. member for Laval-Two Mountains would not get the same treatment in a committee as he would in a court of justice.

Mr. E. G. HANSELL (Macleod): Mr. Speaker, it is true, as you have said, that the apparent charge of the hon. member for Laval-Two Mountains is a serious one. I recognize that, if I read correctly the English translation as recorded in *Hansard* of last Friday. But the motion now before the house is also very serious. Every hon. member in the house is placed in the position of having to take his stand on this motion, and having to weigh in his mind whether there is a possibility of a private member being, shall I say, put into absolute political oblivion, or permitted to retain his seat. That is the position in which every hon. member is placed, and that is what every hon. member must decide when he votes upon this motion.

I am wondering if such a motion may not be interpreted as even casting a little reflection

upon the Prime Minister and his cabinet, or his party in the house. I am certain the Prime Minister must have weighed the situation very carefully before he made this motion. May I just suggest one or two things at this point. The hon. member for Laval-Two Mountains was once a member of the Liberal party. He has disagreed with its policies. The time came when he eventually crossed the floor of the house. May I interject here that while the Prime Minister said a moment or two ago that there was very much loose talking, and that it perhaps resulted in the hon. member's making this statement, it is perhaps the result, too, of a beclouded policy held by the party which is now on the government side of the house, and that has caused an antagonism to arise on the part of this hon. member. Be that as it may, he did not agree with the government's policy, but crossed the floor to this side of the house. He stands alone. As a result, naturally his feelings are very keen in respect to his duties here. As a result of that he has caused some trouble in the house in days gone by. I am not speaking in behalf of the hon. member, for I have no brief for him. I am speaking of the interpretation which may be given to this motion. His feelings ran high last Friday afternoon when he made certain statements. The Prime Minister has seen the seriousness of these statements, and made a statement the other day about them, the result of which has been to-day's procedure. The hon. member for Laval-Two Mountains rose and withdrew his statement, with what some hon. members considered to be a certain qualification.

Mr. HOMUTH: Quite.

Mr. HANSELL: Now it would appear perhaps that the Prime Minister is not satisfied with that withdrawal, and seizes upon the opportunity of putting over—of putting a motion to the house which may result in the house getting rid of this member. I am saying that that could be the interpretation. And I think I can say that perhaps it will be the interpretation in some sections of this country, anyway.

Mr. MACKENZIE KING: May I ask the hon. member if that is his belief? He is making insinuations. I ask him to make a direct statement.

Mr. HANSELL: I am making no insinuations at all, and the Prime Minister cannot do with me what perhaps he thinks he can do with some people. I am making no insinuations. As a matter of fact I am trying to protect the Prime Minister.

Some hon. MEMBERS: Oh, oh.

Mr. HANSELL: I am saying that the interpretation in this country may be as I have said. I am simply following that up by suggesting what I believe to be a way out of the difficulty. What I am going to suggest may be regarded as—well, shall I say not a hundred per cent technically, according to parliamentary procedure. I am going to suggest this, that you might ask the hon. member for Laval Two-Mountains if he will now unqualifiedly withdraw his statement. If he answers yes, then cannot the Prime Minister respond by saying that he will withdraw his motion?

Mr. JEAN-FRANÇOIS POULIOT (Temiscouata): Mr. Speaker, as an old defender of widows and orphans I submit respectfully that I have some sympathy, in the first place, with the hon. member for Battle River, because when he started to speak there was some noise; perhaps someone was coughing. At any rate I know there was some noise which could have been interpreted as an interruption. It is against the principles of democracy to interrupt a member by making a noise, other than by putting a legitimate question, when he is addressing the Chair. He comes from a good Celtic race and perhaps was a little quick in making some observations, no doubt feeling that the hon. member for Laval-Two Mountains would not receive fair treatment before the committee on privileges and elections. I would remind the house of a case which had just been submitted to that committee involving a former member of the house, a man who is no longer a member, but who received fair treatment. All the members had a good word for him.

Let us come down to fundamentals. According to the Interpretation Act each publication which bears the name of the king's printer and comes from the printing bureau is official and is admitted as evidence before any court of the land, and must be accepted as such. The only difficulty in this case is that there are two texts of *Hansard,* but each of them is not a translation. It is what we call a version. There is the French version and the English version, or the French text and the English text. Both are admitted as evidence in a court of law. But on the other hand, as the hon. member for Laval-Two Mountains spoke in French the report of his remarks is in French, and the English translation is entirely different from the French text. In the French text he used the words which appear in the resolution now before the house:

Nous avons dans le Gouvernement trois nouveaux millionnaires depuis la déclaration de la guerre.

That means in English: We have in the government three new millionaires since the declaration of the war. But how is that sentence in the French text translated in the English version of *Hansard*? It is translated this way:

We have here in the cabinet three new millionaires who have made their money since the war's outbreak.

That is not the same thing at all; it is entirely different.

I have listened to some of the hon. gentlemen who have spoken, especially the hon. member for Wright (Mr. Leduc), who said: I do not accept the withdrawal of the hon. member for Laval-Two Mountains. But, Mr. Speaker, it is not for him to decide whether the withdrawal is sufficient or not. No one but yourself, Mr. Speaker, can decide whether the withdrawal of the hon. member for Laval-Two Mountains is sufficient to comply with the rules of the house. You, sir, are the only one in this house who may accept his withdrawal or not accept it.

I remember distinctly when I was sitting to the left of Mr. Speaker in the glorious times when Mr. Bennett was Prime Minister, I often had occasion to speak of Mr. Bennett, and in an innocent way sometimes I would say of him that he had a "million" air. Once I spoke in the house on very different lines. I was addressing Mr. Speaker and saying that we were all poor, that I was poor, that my deskmate, who has since died, was a poor man, that another hon. gentleman who was sitting in front of me and who is now in the senate was a poor man. The gentleman who is now a senator did not object to my saying that, but my deskmate said I should not have said it, that it is embarrassing sometimes to say that we are poor. Of course it is an embarrassment, but it is not a shame to be poor. But to say that a man is a millionaire or that he looks like a millionaire—is that such a terrible accusation? Many a time we will greet our friends and say: "You have a million-dollar smile." Is there any insult in that? The thing must be taken broadly.

I think that when a man with the pride which we know the hon. member for Laval-Two Mountains has withdraws in the terms in which he did, withdraws all that was offensive to any member of the house sitting on the treasury benches, he has done his utmost. What is there left to withdraw? There is nothing offensive left if he means what he said.

Further, the hon. member for Laval-Two Mountains has said that he had in mind the dollar-a-year men, and according to the rules of the house we must accept his statement. He said he had in mind those men who are giving their time to the government for a dollar a year and who are a part of the government. They are not members of the house. They are employees of the government and a part of the government. So much is that the case that when the clerks and stenographers of grades 1 and 2 who are assigned to their offices are asked where they work, they say: I am working for the government. Therefore, Mr. Speaker, I submit very respectfully to you that what the hon. member for Laval-Two Mountains has said in his withdrawal covers the case completely, and there is nothing left for the house to deal with, according to the rules that bind us all. I trust that you will consider what I have said, and I rely as usual on your wisdom to decide whether or not the withdrawal of the hon. member is sufficient according to the rules of the house.

Mr. LACOMBE: Mr. Speaker, on a question of privilege and to stop all this discussion, I withdraw unconditionally at the request of the Prime Minister the following words as reported in the French *Hansard*:

Nous avons dans le Gouvernement trois nouveaux millionnaires depuis la déclaration de la guerre. Nous les dénoncerons en temps et lieu. Les fortunes s'édifient.

Mr. GORDON GRAYDON (Leader of the Opposition): Mr. Speaker, may I preface my remarks on this question by saying that I do not suppose there are two members of the House of Commons whose views are so diametrically opposite on most of the problems which confront us than those of the hon. member for Laval-Two Mountains and myself. But I was in the house when the hon. member for Laval-Two Mountains made his speech, and while I was able to follow it only imperfectly, I have given some consideration to it since. I would say as emphatically as I can that, particularly in a period of war, loose statements must not be made with reference to public men, public institutions or public services generally. I want to make my position perfectly clear in that respect. Whatever justification—and little justification can I see—there may be for such proceedings in time of peace, we now require the maximum of unity if we are to survive or if our institutions which are under attack are to be maintained. I was shocked at the statement which was made by the hon. member. I hope no other hon. members will follow his example. I trust that there will be no repetition of things of this kind. Reflections upon the government, upon parliament, upon public

men generally—yes, upon private individuals as well throughout Canada—cannot possibly be helpful in the struggle in which we are now engaged.

Having thus stated our position with respect to this matter, I would, however, say in the most kindly way to the Prime Minister that the motion now before the house seems to me to betray some anxiety, although I do not say, by design, to press this matter as quickly as possible to its full conclusion. I do not wish to reflect upon the Prime Minister's attitude in this regard, but in these days he, as well as all of us, must avoid the very appearance of evil in these matters. When the hon. member for Laval-Two Mountains was asked whether he had a statement to make, and rose in his seat and in the English tongue made a withdrawal which the Prime Minister, or perhaps I should say, Your Honour, found to be an imperfect withdrawal, the Prime Minister at once rose and moved the motion which is now before the house and which is being pressed so vigorously by the government.

Some mention has been made from the government benches about the matter of justice. Without reflecting in this connection upon the government or the Prime Minister, it seems to me that, in the moral realm, at least, the hon. member for Laval-Two Mountains should be given the opportunity in a gracious and benevolent way by the Prime Minister of unequivocally withdrawing the statement he has made. He has now made a further withdrawal, which I personally think is sufficient in the circumstances. We should be careful in these times to avoid the possibility of any misapprehension as to our dealings with a member of this house, no matter how we may disagree with him or how far his views may be opposed to ours. As the hon. member for Témiscouata (Mr. Pouliot) said a few moments ago, at a time when we are standing for the rights and privileges of the little man, the House of Commons is the place where we must exercise every possible care so that no one can assume that one of our members receives any less than the measure of consideration which we would give to members of the general public.

I am very earnest about this or I would not have spoken as feelingly as I have done, but, having listened to the remarks of the hon. member for Comox-Alberni (Mr. Neill) I am further confirmed in my opinion as to the right course in the circumstances. I ask the Prime Minister in all sincerity if he will not reconsider the whole matter in the light of the unequivocal withdrawal which the hon. member has made, so that we in this chamber will not give the public the impression that this matter is being pressed to a conclusion which only meets the wishes of the government; rather let us be charitable under the special circumstances which have arisen with respect to the hon. member.

I would add, before I sit down, that any such course should not be regarded as a slackening of our diligence and vigilance in defending our institutions. If it were to be so regarded the situation, of course, would be different. But when the hon. member has withdrawn the statement he has made, when the House of Commons has thus defended its privileges and those of its members, I think we may properly be satisfied without taking our full pound of flesh. Nothing is to be gained by pressing this to the conclusion which the government now seems so intent upon doing. I would range myself this afternoon in what I regard as defence of a member of parliament whose views I cannot accept and for whose conduct so far as this or the previous debates are concerned I offer no defence. It was not in the public interest for him to have said what he did, and I am sorry he did so. But, these things being borne in mind, surely it is the defence of our institutions and the maintenance of our privileges in which we are most interested. I trust the Prime Minister will find himself in agreement with the suggestion that, by accepting the hon. member's unequivocal withdrawal, we shall have defended our privileges and at the same time have served warning and administered a caution to everyone across Canada that they cannot make loose statements and, to use a vernacular term, "get away with it." But let us not, so to speak, go over the precipice by doing something which might be regarded in many quarters—although I make no such charge or allegation—as nearing the point of actual persecution.

Mr. DANIEL McIVOR (Fort William): I should like to ask a question. But first I would say that the only thing of real value which any of us possess is character, and when anyone insinuates that I as a member of parliament am in the way of being a millionaire, I say that that man's freedom of speech ends when injury to my character begins. I should like to ask you, Mr. Speaker, in the face of the statement which has been made by at least one cabinet minister that there will be no crop of millionaires during this war—and I think that is right—if it is not too late for the hon. member to stand up in his place and say, "I withdraw the statement—"

Some hon. MEMBERS: He did.

Mr. McIVOR. "—absolutely—"

Some hon. MEMBERS: He did.

Mr. McIVOR: "—as totally untrue"?

Some hon. MEMBERS: He did so.

Hon. P. J. A. CARDIN (Richelieu-Verchères): I have one or two observations to make with reference to the question that has been raised touching the statements made by the hon. member for Laval-Two Mountains.

You, Mr. Speaker, drew to the attention of the house the fact that the incident had been given wide publicity in Canada and that was the chief reason, according to my understanding of your decision, why you invited the hon. member for Laval-Two Mountains to make a statement. If the statement was given wide publicity, do you not think, sir, that an investigation will provide much wider publicity for something that should not have been said by the hon. member and which he has retracted? When the investigation is being carried out by the committee on privileges and elections, an open investigation, who is to stop the reporting of the proceedings and the interpretations that will be given to every word uttered before that committee? Where will be the end to the wide publicity that will be given to an unwise statement made by the hon. member? That is one point.

The Prime Minister protested, and rightly so, against the assertion of the hon. member for Laval-Two Mountains. On page 4073, at the top of the page, the right hon. gentleman made this statement:

> I submit, Mr. Speaker, that the hon. member should be obliged either to withdraw the statement completely or else to convert it into a specific charge to be investigated in the usual manner.

I suggest that the hon. member for Laval-Two Mountains has agreed to the request of the Prime Minister that he should withdraw the statement completely. He did withdraw the statement completely. He withdrew it on two occasions. First of all he did it when Your Honour requested him to make a statement after you had given your ruling; and when his withdrawal was criticized on the ground that it was not complete, the hon. member rose again on a question of privilege and clarified it, stating that he was withdrawing word for word what he had said; the very words that are included in the motion made by the Prime Minister.

What will be the result of the motion? In the first place, what is the effect of the withdrawal of the statement of the hon. member for Laval-Two Mountains? It removes that statement from our records. The motion declaring that the hon. member for Laval-Two Mountains has made a certain statement is not therefore in accordance with the facts after the hon. member has withdrawn that statement. That is the situation as it appears to me at the moment. There is nothing to refer to the committee on privileges and elections. The statement referred to in the motion has been withdrawn by the hon. member for Laval-Two Mountains.

I need not repeat that I do not defend the hon. member for Laval-Two Mountains; I have been in disagreement with him on certain occasions. But I submit that it is a matter of justice and fair play. If there is something wrong in the publicity given to the incident, we should not go one better in widening that publicity by having a standing committee investigate a statement which, as I say, does not exist any longer on the records of the house.

According to standing order 41 of the House of Commons, when a member makes a statement which is injurious or unfair to another member and, on complaint, withdraws it, the incident is forgotten. It is all over. In my experience in parliament I have heard many misstatements made which were more serious and more definite than the general assertion made by the hon. member for Laval-Two Mountains in a moment when he forgot himself. But when the attention of the offending member, on such occasions as I instance, was drawn to the charge he had made and he was asked to withdraw it, he would agree to the request and the matter was closed.

I submit very respectfully that there is nothing to investigate and that we are losing time discussing such a question and trying to inquire into something that no longer exists as a matter of record. It has been withdrawn.

Mr. SPEAKER: I would point out that when the withdrawal was made by the member for Laval-Two Mountains it was not an unqualified withdrawal. The right hon. the Prime Minister then made the motion which is now being discussed. The matter therefore is not in my hands as Speaker; it is within the jurisdiction of the house, and the house must decide what it will do with the motion that is now before it.

Mr. CARDIN: All the speeches that have been made since the motion was submitted have referred to the withdrawal which the hon. member for Laval-Two Mountains made, and no one raised any objection. Everyone admits that the hon. member for Laval-Two Mountains has withdrawn the statement. Without desiring in any way to approve the assertions made by the hon. member, I want to point

out that he has several times expressed his willingness to remove the impression that may have been created by his words, and join with those who preceded me, and particularly with the leader of the opposition, in appealing to the government and to the Prime Minister to show some leniency under the circumstances by withdrawing his motion.

Right Hon. W. L. MACKENZIE KING (Prime Minister): In concluding the discussion, it might be well for me to recall to hon. members the sequence of events from the beginning, and also to give the reason why I have taken the course I have. References have been made to myself as Prime Minister and as moving in this matter in that capacity. I should like to remind the house that in the office of Prime Minister I fill yet another position, which is that of leader of the house, and it is a part of my duty as leader of the house to seek above everything else to protect the privileges of hon. members. I hope, therefore, that hon. members will believe that in the course I have taken I have been actuated primarily by the last consideration. I must say that the moment my attention was drawn to a statement which reflected upon the members of the cabinet, as Prime Minister I spoke on such immediately. I would certainly have been accused of possessing a strange degree of irresponsibility or of laxity had I not at once taken steps to demand that an investigation should be made into any allegations or imputations if there was the slightest foundation in the world for them. It was not so much a loose statement as it was specific, for the *Hansard* in the French version shows that reference was made to three cabinet ministers. That is a pretty direct statement and would imply that the hon. member had at least some knowledge upon which he was basing his statement.

What I have felt about the importance of an investigation is that the public mind would wish to be thoroughly satisfied that there was no ground whatever for any statement of the kind, as I certainly believed there was not. The hon. member for Laval-Two Mountains has himself made pretty clear this afternoon that he had not any ground for making the statement which he did. However the statement was made on Friday night in French. I was not in the house at the time, but when I came into the house on Monday my attention was drawn to it. When I read it I at once felt it to be my duty, both as Prime Minister and as the leader of the house, to rise and draw attention to the statement that had been made and ask either that it should be completely withdrawn or that the hon. member should make a specific charge and undertake to support it. And if, after investigation it were found that there was no ground for it, then the hon. member would have to resign his seat. If I had not taken that step, what would have been the attitude of some hon. gentlemen who this afternoon have been saying to me that I have been pressing matters unduly? I may say to the leader of the opposition that I think I have about as sound a moral sense as he or any other hon. member. When he used the expression he did this afternoon referring to the moral attitude—

Mr. GRAYDON: No.

Mr. MACKENZIE KING: I took down the hon. member's words. Perhaps he will be surprised when he reads his exact words.

Mr. GRAYDON: Those are words I have never used.

Mr. MACKENZIE KING: I venture to say that if *Hansard* were read this afternoon it would show that he used the word "moral" because I took it down as his lips uttered it. However, I do not wish to stop at a small point of that kind. What I want to say is that I think I have just as fine a sense of chivalry, or, if my hon. friend does not like the term, morality, as my hon. friend. Reference has been made to tempering justice with mercy. But I do not think anyone can say that at any time in my public life I have tried to be other than generous and gracious in my attitude towards others. That has been my attitude toward men who have been my bitterest political opponents. I challenge anybody to say that in the course of my public life I have at any time taken advantage of any rule or opportunity to try to destroy a political opponent or to belittle him in any way. That is something I hope and pray and believe is foreign to my nature. However, on Monday my duty clearly was to draw the attention of the house immediately to the statement made by the hon. member for Laval-Two Mountains.

Now then, what happened? Yesterday, Tuesday, when the house opened the hon. member was in his seat. I waited to see if he would rise and retract what he had said. I waited to see if His Honour the Speaker would direct the attention of the hon. member, as he has done to-day, to what was the correct course of procedure. Nothing was said at the time. I felt that if I were to rise immediately, possibly just what has been said by some hon. gentlemen opposite would be

said, namely, that I was unduly impatient in pressing the matter and was anxious for political reasons to have the hon. member put in a difficult and unpleasant position. I let the matter stand over simply because I wished to be careful not to have any possibility of any misunderstanding of the kind arise.

The hon. member said nothing; he let the opportunity go by, and then what did he do? To the press he gave an interpretation of his words which if anything enlarged the insinuations and imputations so that they became reflections not merely on members of the ministry but upon the supporters of the government in their entirety. I therefore made up my mind that my duty was to introduce a motion of the kind which I have introduced to-day unless on coming into the house the hon. member was to make full retraction of his statement. When hon. members assembled, His Honour the Speaker gave to the house the statement which is now on record as to what he as the Speaker of this house believed was the course which should be taken. When I spoke on Monday I did not make any request of the hon. member. I made a statement to His Honour the Speaker as to what I believed was the proper procedure in a matter of this kind. I felt it was my duty to direct the attention of His Honour the Speaker and of hon. members of the house generally to, or to remind them of, the procedure that should be followed. The words that I used were the following:

> I submit, Mr. Speaker, that the hon. member should be obliged either to withdraw the statement completely or else to convert it into a specific charge to be investigated in the usual manner, and the consequences of the investigation also to be followed up in the usual manner.

If I had made no reference to the procedure or the steps that should be taken, I should have been at fault in my position as leader of the house seeking to maintain its rights and privileges. To-day His Honour the Speaker has made to the house a statement which accords fully with the procedure I outlined. His Honour has drawn to the attention of the hon. member for Laval-Two Mountains the fact that there are two courses open to him: either he must withdraw unconditionally, or he should make a charge and ask that it be investigated, with the consequences of the investigation as they may happen to be. Up to that time I had said nothing. The hon. member for Laval-Two Mountains rose in his place but he did not make an unconditional withdrawal of his statement. Instead of that he used language which would make it possible for him to say that he had never made an unconditional withdrawal.

Mr. HANSON (York-Sunbury): He said that he had not used the language attributed to him in the English version as given by the Prime Minister on Monday. I think that would be a correct interpretation of what he said.

Mr. MACKENZIE KING: He also used certain qualifying words which at the moment I have forgotten. First, his withdrawal was quite conditional. What impressed me at the time he spoke was that he not only did not withdraw his statement; he went farther in his insinuations against others by intimating to this house that while it might not have been members of the administration who had become millionaires, there were gentlemen in the public service to-day who were giving their services to the country at a time of war but who had used their positions to become millionaires. That was a reflection upon a still larger group, composed of those who at this moment are seeking to assist the nation in the carrying on of the war effort. If I had allowed that kind of explanation to go as a withdrawal, I wonder what would have been said to me as to my anxiety not to press the matter. It would have been said I wished to get out of having any investigation at all because it might reflect upon members of the administration or my own followers.

As I say, my hon. friend made no unconditional withdrawal. It was then I introduced the motion, and only then. As a result of the considerate attitude which I took in this house yesterday, what impression has been given to the public in the press of to-day? If hon. members will look at this morning's newspapers, they will see it reported as I have no doubt many of them have, in more than one journal that because the Prime Minister did not proceed with further action yesterday in order to have this matter investigated there were all kinds of murmurings in the corridors, that there were expressions of discontent among his own following and others for his not having gone on with the matter immediately; and the impression would be and I have no doubt has been left in the minds of a large number of persons in this country that I was deliberately seeking to avoid pursuing the matter further. Could I have taken any course to-day other than to demand that at least this matter be referred to the committee on privileges and elections, without permanently leaving in the minds of many citizens of Canada the feeling that I had neglected to press this matter further because there were in my own mind reasons which made it inadvisable so to do? It is easy

enough to criticize and to say that if a certain course is taken you are persecuting a man; but the very hon. gentlemen who have directed words of that kind to me here are those who had the position been otherwise, would have been saying in this house this afternoon or a little later on that I was the one who had come along very boldly and demanded an investigation but, knowing what I do about the situation generally, I had not pressed the matter later in the house.

Mr. HANSON (York-Sunbury): Oh, oh; we never said a word.

Mr. MACKENZIE KING: That is exactly the case. I have been too long in association with some hon. gentlemen opposite not to know that what I say is true; and may I say to my hon. friend that I think probably he would have been one of those who would have wondered very much, and would have said something about it, if I had not taken the course I have pursued this afternoon.

Mr. HANSON (York-Sunbury): Now I rise to a question of privilege. The right hon. gentleman is transgressing the rules by imputing improper motives to me, and I ask him to take back that statement. When I have anything to say to the Prime Minister I am going to say it here, and I should like to remind him while I am on his feet —

Some hon. MEMBERS: Oh, oh.

Mr. HANSON (York-Sunbury): I did not intend to convey the impression that I was tramping on the Prime Minister's feet. I am not trying to do that, but I should like him not to forget the fact that subsequently in the course of events the hon. member for Laval-Two Mountains did withdraw the very words attributed to him in the French language. So that the Prime Minister got the retraction for which he asked on Monday. I think the Prime Minister should withdraw the imputation against me.

Mr. MACKENZIE KING: My hon. friend and I are too good friends for me to wish to leave any unfair implication in regard to him. I was only saying what I thought might possibly be the case, but I hope he will believe that I said it in all kindliness.

Mr. HANSON (York-Sunbury): Well, no; you do not say these things in that way, in all kindliness. I demand, Mr. Speaker, the unconditional withdrawal of the expression used by the Prime Minister. He said it in order that there might be a sting in it.

Mr. MACKENZIE KING: Well, I have said a good many things to my hon. friend but I do not think I have said many with a view to having a sting in them. I have said some things that I hoped would serve to remove all stings between us.

Mr. HANSON (York-Sunbury): I would agree with that entirely; very kind words, too.

Mr. MACKENZIE KING: The last thing I would wish at the moment would be to say anything unkind, and if it pleases my hon. friend to have me withdraw unconditionally what I said, I shall do so at this moment, totally and completely.

To come back to the next stage of the matter I was discussing, I wish to draw the attention of hon. members to the fact that the hon. member for Laval-Two Mountains had his opportunity to withdraw unconditionally before I moved any motion at all. The Speaker had given him the opportunity; but when he rose, instead of withdrawing unconditionally, as I have said, he enlarged his imputation so as to embrace other persons in the public service. It was not until after he sat down, and the house was waiting to see what step I would take, that I brought forward the motion I had prepared this morning, which I intended to introduce this afternoon unless the withdrawal was made. So that there was no haste on my part in moving the motion, and I do not think I can be charged with having pressed this matter unduly or with a desire for persecution. It was only after the hon. member saw that if this motion carried, as without retraction on his part it was certain to carry, he would have to appear before his fellow members of this house and either support what he said or wholly withdraw it, probably with an explanation that he might not have wished to give at this time, that he rose and made a further statement. That statement was made after the hon. member for York-Sunbury had risen to support him in his view that he should not be pressed further. Prior to that time, he had not made an unconditional withdrawal and it was not until the motion was before the house and he saw its consequences that he rose and said he was prepared to withdraw. But he did not withdraw unconditionally even then. All he said was that the expense of holding an inquiry would be too great; he gave as another reason that of the delay and loss of time that would result, and therefore, he said, for these reasons he would withdraw.

If the matter had been allowed to rest there I ask hon. members of this house what would be the next thing we would hear from the hon.

member when addressing the people of his own province. He would say that he had withdrawn the statement only to save public money and to save the time of parliament in a period of war. Yet I am now being accused of trying to make a martyr of the hon. member because I wish this matter thoroughly investigated. I have been listening carefully to what has been said from all parts of the house. I have made no request; I have left it to the hon. member himself to say whether he withdraws his statement completely. I do not wish him to say that he is withdrawing to-day at my request. It is a question not of any request on my part but of what he owes to this House of Commons. So I say to him that unless he is prepared to make the statement that his withdrawal is made because of what he feels he owes to this House of Commons, in view of the statement he made, I am not prepared to withdraw my resolution. However, if the hon. member is prepared to say that he withdraws the statement completely because it reflects upon hon. members of this house and that he regrets having made it, in the light of the discussion that has taken place here to-day I am quite prepared not to press the motion further. I say the hon. member owes it to this house to make his position perfectly clear in both regards.

Mr. LACOMBE: I would ask the Prime Minister to repeat what he said a few moments ago. I could not hear every word of the last statement he made.

Mr. MACKENZIE KING: The statement was very simple. I say to the hon. member I am making no request of him. I am leaving to him, in the light of the statement which His Honour the Speaker has made, of the proper procedure to be followed in a case where a member has reflected improperly upon other members of the house to be the right course. I suggest to him to rise in his place and declare that what he is saying is to the members of the house, not that it is in compliance with some request of the Prime Minister, and that he regrets having made a statement which has reflected upon hon. members. If he does that I am quite prepared not to press my resolution. I think it is a course which he owes the House of Commons.

Mr. HANSON (York-Sunbury): That is a very generous statement.

Mr. LACOMBE: It is not at the request of the Prime Minister, or at the request of any other member of the cabinet, or any other member of the House of Commons, that I withdraw the following words which I quote from page 4042 of *Hansard* for June 25, 1943:

Nous avons dans le Gouvernement trois nouveaux millionnaires depuis la déclaration de la guerre. Nous les dénoncerons en temps et lieu. Les fortunes s'édifient.

Mr. GARDINER: Finish it.

Mr. MACKENZIE KING: I think the hon. member, in view of what he has just said, should express his regrets to the house, if he wishes me to withdraw my motion. I would expect him to do that for hon. members because he has reflected upon the membership of this House of Commons. That he should do so is owing to the membership.

Mr. LACOMBE: I asked a few moments ago that the Prime Minister repeat the words he spoke so fluently. I understood that he asked me to state in the house that I regret my words. I regret the words, if I have offended any of my colleagues of the House of Commons, or any members of the House of Commons or of the cabinet.

Mr. GRAYDON: That is fair.

Mr. MACKENZIE KING: I would ask that the motion be withdrawn.

Motion (Mr. Mackenzie King) withdrawn.

QUESTIONS

(Questions answered orally are indicated by an asterisk).

NEWSPRINT PRICES

Mr. COLDWELL:

1. What was the price of newsprint in September, 1939?

2. What was the basic price in October, 1941?

3. Has permission been given since to advance the basic price? If so, by what amount, and at what date?

4. Has an application for a further increase been received? If so, when, and what is the amount of the increase requested?

5. Has a decision been reached? If so, what is the decision?

Mr. ABBOTT:

1. In September, 1939, the generally recognized basic price for standard newsprint in white rolls and in carload lots delivered at New York was $50.00 per ton of 2,000 lbs.

2. In October, 1941, the basic price had not changed from that of September, 1939.

3. Effective on March 1, 1943, the maximum price of newsprint was advanced by $4.00 per ton.

4. On August 26, 1942, the newsprint administrator of the wartime prices and trade board received from Canadian newsprint com-

panies an application for an increase in the price of newsprint. Since that time there have been continuing applications and representations from the industry on the question of price. Instead of requesting a specific increase, the industry has adopted the method of submitting cost figures for examination to assist in determining an equitable price that will maintain essential production of newsprint.

5. Approximately 94 per cent of the total Canadian production of newsprint is exported, (85 per cent to the United States, which represents approximately 75 per cent of their newsprint requirements) and practically all production is controlled by the ceiling price of newsprint in the United States. Frequent discussions are therefore held between the United States and Canadian government authorities in connection with the price and supply of Canadian newsprint. The determination of the domestic price for newsprint must await a decision as to the level of production necessary for essential requirements and the price of newsprint to customers in the United States will depend on the outcome of current discussions with United States government authorities. It is expected that both questions will be answered in the near future.

OLD AGE PENSIONS

Mr. REID:

What provincial governments have made representations since 1940 and up to the 16th of June, 1943, (a) for amendments to the Old Age Pensions Act; (b) for an increase in the amount of pensions?

Mr. ABBOTT:

(a) and (b).

British Columbia

British Columbia has asked that the amount paid to pensioners should be increased but has not requested that the Act be amended.

The province is paying supplemental allowances to pensioners.

Alberta

Alberta has requested an amendment to the act to provide for a maximum pension of one dollar per day and for a pensionable age of 60 years.

The province is paying supplemental allowances to pensioners.

Saskatchewan

In a resolution passed by the Legislative Assembly of Saskatchewan, it was recommended that the dominion should be requested to amend the act to provide for an increase in the maximum pension.

The province has made provision for paying supplemental allowances to pensioners.

Manitoba

The report of a select special committee recommended that the Manitoba government make strong recommendations to the dominion government to the effect that the maximum old age and blind pensions be increased from $240 to $300 a year and that the income limit be changed from $365 to $425 a year, the act to be amended accordingly. The report was concurred in by the Legislative Assembly of Manitoba. The government of Manitoba recommended to the government of Canada the adoption and the bringing into force of what was embraced in the report of the select special committee.

The province is paying supplemental allowances to pensioners.

Ontario

Ontario advised the dominion that the matter of increasing pensions had been under consideration by the provincial government and stated that it was hoped that the dominion would participate in such an increase. The province did not request that the act be amended.

The province has announced that it will pay supplemental allowances to pensioners.

New Brunswick

The Legislative Assembly of New Brunswick passed a resolution asking the New Brunswick government to request the dominion government to amend the act to provide for an increase in the maximum pension from $20 to $25 per month.

The province has not indicated what its intention is regarding the payment of supplemental allowances.

Nova Scotia

Nova Scotia requested that the act be amended to increase the basic rate of pension from $240 to $300 per year.

The province has made provision for paying supplemental allowances.

PURCHASE OF RED CLOVER SEED IN UNITED STATES

Mr. CARDIFF:

1. Was red clover seed purchased in the United States by the agricultural supplies board, or any department of the Canadian government, during the last nine months?
2. If so, how many pounds were purchased?
3. What price was paid per hundred pounds?
4. Was any duty paid on the imported seed?
5. If so, how much?
6. Was the import tax of 10 per cent paid?

7. Was payment made in American funds? If so, at what rate of exchange?
8. What was the total cost to the government per hundred pounds?
9. What was the price per hundred pounds at which the seed was sold to the Canadian trade?
10. How many pounds were sold in Quebec, and how many in Ontario?
11. Who purchased the seed for the dominion government?
12. Was he paid a commission or straight salary?
13. If so, in what amount?
14. What grades of seed were purchased?
15. How many pounds of each?
16. Was any Oregon seed purchased?

Mr. GARDINER:

1. Yes.
2. 787,150 pounds.
3. Average price per 100 lbs. $29.26 United States funds.
4. Yes.
5. $17,711.03.
6. Yes.
7. 11 per cent was rate of exchange.
8. Average cost per 100 lbs. $39.46 Canadian funds.
9. Average ceiling price per 100 lbs. $29.48.
10. Amount of seed sold in Ontario 248,405 lbs. Amount of seed sold in Quebec 538,307 lbs.
11. Nelson Young under direction of agricultural supplies board. He had the assistance of Mr. Wm. Ewing of the Wm. Ewing Company, Montreal.
12. Mr. Young received no compensation other than his regular salary as assistant director, production service, plant products, $4,920.00 per annum. Mr. Wm. Ewing was paid an expense account amounting to $45.88 covering telephone, telegrams, and one trip from Montreal to Ottawa.
13. See answer to No. 12.
14. No. 1 seed grade, No. 2 seed grade, No. 3 seed grade.
15. 374,787 pounds of No. 1 seed; 391,820 pounds of No. 2 seed; 20,550 pounds of No. 3 seed.
16. It is believed that one car amounting to 60,000 pounds, originated in Oregon.

TRUCKS DELIVERING BEER AND COLLECTING EGGS

Mr. NICHOLSON:

1. How many trucks delivering beer exclusively have been permitted to operate beyond the thirty-five mile radius?
2. How many trucks belonging to wholesale produce dealers have been permitted to operate beyond the thirty-five mile radius to collect eggs?

Mr. ABBOTT:

1. 203. An overall reduction of at least 60 per cent has been effected in the aggregate mileage of trucks delivering beer. There would be no material advantage in forcing a diversion of any part of the present beer traffic to public truck carriers, which type of vehicle is exempted under Order A-314 from the 35 mile limit, as brewery trucks are specially designed for economic transportation of this product and full loads are carried on both outward and return trips.

2. 126. Permits have been granted in the ordinary course to applicants whose normal operations take them beyond the 35 mile limit where such operations do not encroach on districts already served adequately. In addition, trucks authorized to collect "farm produce" are also entitled to collect eggs but information is not available as to how many of these are actually collecting eggs.

INCOME TAX—INSURANCE—CASH SURRENDER VALUE

Mr. WINKLER:

1. Does a policy-holder of limited payment life insurance policies have to pay income tax on any part of the cash surrender value when accepted of such policy regardless of the date of issue?
2. Regardless of date, is such cash surrender value when accepted subject to income tax on reserve or accumulated deferred dividends, if any, or both?
3. On funds set aside by payment into life insurance policies to buy a deferred annuity, is income tax applicable to cash surrender value when accepted before the annuity begins?

Mr. GIBSON:

1. No.
2. No, in neither case.
3. No.

CANADIAN FORCES OVERSEAS—REINFORCEMENTS

Mr. ROY:

Are any conscripts component of the army divisions available for reinforcement to our troops overseas?

Mr. MACDONALD (Halifax): Personnel called up under the National Resources Mobilization Act who have not enlisted for general service are not available as overseas reinforcements until the necessary action is taken to extend the scope of their service.

WARTIME PRICES AND TRADE BOARD—VANCOUVER MEATS OFFICER

Mr. O'NEILL:

1. Is Mr. J. C. Leaman serving as meats officer with the wartime prices and trade board at Vancouver, British Columbia?
2. If so, how long has he been with the said board?
3. If not, was he dismissed, did he resign, or has he been transferred?
4. If transferred, where is he now located?

Mr. ABBOTT:

1. Mr. J. C. Leaman was employed by the wartime prices and trade board on January 27, 1942 as investigator and later became foods officer. On March 27, 1943 he resigned effective June 7, 1943.

2, 3 and 4. Answered by No. 1.

ALUMINIUM LIMITED—CONTRACT AND PREVAILING PRICE

Mr. COLDWELL:

1. Has the government, or any department or official of the government, been approached by the Aluminium Limited with an offer or proposal to make any refund of sums of money in connection with contracts secured early in the war when the price of the company's product is said to have been higher than the prevailing price?

2. In view of the minister's statement regarding the basic price and operation of the escalator clause, as reported at page 3828, *Hansard*, June 21, 1943, what steps have been taken by the government to recover from the company such sums of money as may represent overcharges for their product?

Mr. ABBOTT:

1. No. The Department of Munitions and Supply is not aware that aluminum has been sold to any government at higher than the prevailing price current at the date of delivery of the product.

2. So far as the Department of Munitions and Supply is aware, no overcharges have been made by the Aluminum Company of Canada Limited with respect to aluminum ingot sold, and therefore no steps have been taken.

Note: Refer to page 3828 of *Hansard*—minister's statement on contracts and escalator clause.

QUESTIONS PASSED AS ORDERS FOR RETURNS

WARTIME PRICES AND TRADE BOARD—EMPLOYEES RECEIVING OVER $3,000

Mr. DIEFENBAKER:

1. Who are the employees who receive over $3,000 a year in the employ of the wartime prices and trade board, and where are they located?

2. What honorarium, living or other allowance, and travelling expenses, have been paid to each of the said employees since appointment?

3. Which of said employees are permanent civil servants? Which were appointed under the Civil Service Act?

CANADIAN NATIONAL RAILWAYS—MONCTON-HALIFAX-CAMPBELLTON

Mr. ISNOR:

1. How many Canadian National Railway passenger trains are operated daily between Moncton, N.B., and Halifax, N.S.?

2. With respect to these trains, (a) what are the numbers or names of each; (b) number of regular stops made by each; (c) mileage between each stop; (d) total mileage in run; (e) population of each place of stop; (f) time taken to complete trip; (g) the daily average number of persons reaching Halifax for month of May, 1943?

3. How many daily trains are running between Moncton, N.B., and Campbellton, N.B.?

4. With respect to such trains, (a) what are the numbers or names of each; (b) number of regular stops made by each; (c) mileage between each stop; (d) total mileage in run; (e) population of each place of stop; (f) time taken to complete trip; (g) the daily average number of persons reaching Campbellton for month of May, 1943?

HOUSING—PERMITS TO SENATORS OR MEMBERS OF THE HOUSE OF COMMONS

Mr. FRASER (Peterborough West):

1. Were there any permits issued to senators or members of the House of Commons for the construction of houses during the period from September 1, 1942, to June 1, 1943?

2. If so, to whom were permits issued?

3. In each case, what is the amount of the permit?

4. Where is the property situated?

5. Is there any check to keep the construction within the limits of the permit?

WARTIME HOUSING LIMITED—PURCHASE OF PLYWOOD

Mr. CASTLEDEN:

(a) What quantity of plywood has been purchased by Wartime Housing Limited; (b) what was the total amount paid for this plywood; (c) from what manufacturing firms or agents was this plywood purchased?

MOTIONS FOR PAPERS

NATIONAL FINANCE COMMITTEE

Mr. DORION:

For a copy of the minutes and report of the meetings of the national finance committee, which took place in Ottawa on December 9, 1936, and the following days, under the chairmanship of the Minister of Finance.

Mr. ILSLEY: Mr. Speaker, I explained to the house the other day that these are the minutes of a meeting which, it was agreed between the representatives of the dominion and those of the provinces, would not be made public. For this reason, and other reasons I stated the other day, I have to take exception to the passing of this motion.

Mr. DORION: In view of the fact that the other day when this motion was called the first time, the Minister of Finance endeavoured to show that it should be dropped, I believe it is my duty to make just a few remarks in support of the motion. The first reason given by the minister was that an arrangement had been made between

the government and the provincial representatives to the effect that the minutes of these meetings should be kept secret. I quote these words of the minister as they are reported at page 3694 of *Hansard:*

The minutes of the meetings of the national finance committee which took place in Ottawa on December 9, 1936, and the following days, under the chairmanship of the Minister of Finance, were understood to be for the guidance and information of the members of the committee only, and not to be made public.

Further on he said:

But I must take the position, in view of the arrangement with the provinces, thoroughly understood and agreed upon, that the minutes themselves are not producible.

I must say that if there was such an arrangement it cannot bind the House of Commons. My contention is that the people of this country, through the members of the house, have the right to know what is going on in these committees where sometimes very important decisions are made. Furthermore I must say I am informed from reliable sources that there never was such an arrangement between the provinces and the government.

The other reason given by the minister is found in his last remarks, when he said, as reported at page 3696:

To complete the record, I wish to state that in my judgment it is not in the public interest to produce these.

That is, these documents. I believe, Mr. Speaker, that we have too often been misled by the use of this expression "in the public interest", because the question is not whether it is or is not in the public interest to produce a document but whether its production would cause injury to the public interest. That is entirely different. I do not think the minister would be ready to state that the production of these documents would cause injury to the public interest.

Further, my contention is that the public would be much interested in knowing what has taken place at these meetings. We find in the "Canadian Annual Review" for 1935-1936, at page 86, some information about these meetings, and I quote a few lines to show that the public would be very much interested in knowing what went on there:

The first meeting of the national finance committee took place in Ottawa on December 9, 1936, under the chairmanship of the Minister of Finance. The meeting was attended by more than fifty government ministers and officials.

It says further:

At the close of the first session an official communique said that the committee "continued its discussion of the services that could be rendered by the Bank of Canada to provincial governments, and of the possibilities of a greater degree of coordination in governmental borrowing in Canada."

And further:

Taxation was also brought up with several of the provinces urging that certain sources of revenue exclusive to the dominion should be turned over in a measure to the provinces.

And finally:

In particular it was emphasized that the developments of the last 70 years, especially the increasing activities of governments in the field of social welfare, make it necessary to review the allocation by the British North America Act of sources of revenue and governmental responsibilities to dominion and provincial governments. Further discussions on this question were to take place.

Representatives of the province of Ontario raised the question of overlapping services of government in the field of agriculture, health, labour, etc., and suggested the appointment of a committee of officials to consider this question with a view to reducing the cost of government.

In conclusion, Mr. Speaker, I believe I am asking something very reasonable, just and fair in asking that this motion be carried.

Mr. HANSON (York-Sunbury): Mr. Speaker—

Mr. SPEAKER: This motion is not debatable. I allowed the hon. member to speak in introducing his motion, thinking he was going to speak to a point of order as to why he insisted on the production of the documents.

Mr. HANSON (York-Sunbury): Then I should like to speak to the point of order if a point of order has been raised.

Mr. SPEAKER: Standing order 51 states:

Notices of motion for the production of papers which the member asking for the same intends to move without discussion, shall be marked by him with an asterisk and shall be placed by the Clerk on the order paper above "Notices of Motions" under the heading "Notices of Motions for the Production of Papers". All such notices when called shall be forthwith disposed of; but if on any such motion a debate be desired, it will be transferred by the Clerk to the order of "Notices of Motions."

Mr. HANSON (York-Sunbury): Is this not marked with an asterisk?

Mr. SPEAKER: Yes, and therefore it is not debatable. The question has already been before the house, and the minister then took the position that he could not in the public interest produce these documents.

It is true that when a document—

Mr. HANSON (York-Sunbury): If Your Honour will pardon me, is Your Honour about to give a ruling on the point of order because, if so, I should like to speak to it.

Mr. SPEAKER: The hon. member may proceed to speak to the point of order.

Mr. HANSON (York-Sunbury): Mr. Speaker, I do wish to speak to the point of order by reason of the circumstances under which the minister took exception the other day to the passing of this motion. I have not his language before me at the moment, but I do not think he took the position then that he is taking to-day. He said to-day that his position was based on an agreement made between the representatives of the provinces and the Minister of Finance that the discussions would be held secret. May I point out to the minister two things. The motion does not call for the evidence taken in these discussions; it calls for a copy of the minutes and a report, I assume, of what was eventually decided. This would be the complete minutes. But the motion does not ask for a report of the discussion. I submit that this is a matter of public importance and that an alleged arrangement to keep that part secret could not possibly be binding on the House of Commons. The minister should not be in the position to make such an arrangement. It is not in the public interest that he should make such an arrangement. The minutes are merely a record of the decisions reached. The hon. member does not ask for the evidence; I would not ask for the evidence. But on a matter of such enormous importance as this I submit that the motion is in order and that any arrangement made that was without the jurisdiction of the minister is not binding on the House of Commons.

Mr. ILSLEY: Mr. Speaker, there was, so far as I know, no report made to anybody.

Mr. HANSON (York-Sunbury): Then there will be nothing to bring down. That wipes that out.

Mr. ILSLEY: This motion can mean nothing unless it means that the stenographic report of the meeting, the minutes and the report, be produced. It was agreed that for the convenience of the press a statement would be given out at the conclusion of each day, and I assume that it is from one of those statements that the hon. member has been reading. I am not sure just what he has been reading from.

Mr. DORION: From the "Canadian Annual Review" for 1935 and 1936.

Mr. ILSLEY: That was no doubt based on the reports that were given to the press at the end of each day. I stated on a previous occasion that I would have no objection to producing those, but I assume that the hon. member would not be satisfied with that because they are already public property.

Mr. HANSON (York-Sunbury): That is all he is asking for, technically.

Mr. ILSLEY: His motion has no meaning unless it calls for the production of the stenographic report and the minutes, and that I am not at liberty to produce.

Mr. GRAYDON: If I may speak to the point of order, during the last discussion in connection with this matter, the point was raised, either by the hon. member for York-Sunbury or myself, as to the necessity of the minister laying upon the table of the house the report and the minutes which he had in his hand. He read from that report and those minutes a certain excerpt, and having done so, he was then, according to the rules of the house, under obligation to table the document. That is as many hon. members, I believe, interpret the rules. The minister then objected, and, adding another string to his bow, he said that if he had inadvertently stumbled into this position he wanted to object to the tabling of the document because, he said, it was not in the public interest.

Mr. ILSLEY: Neither it is.

Mr. GRAYDON: I have the *Hansard* reference here. The first ground he took was that of confidentiality; in other words, he contended that it, being a matter of agreement between those representing the provinces and the dominion, was not a producible document and should not be in the public hands. Then, after I had summoned to my aid the long experience and intimate knowledge of the rules of the Prime Minister, who on this occasion at any rate found himself in agreement with me, the Minister of Finance shifted his ground.

Mr. ILSLEY: No, I did not.

Mr. GRAYDON: Perhaps I should not say he shifted his ground, because one thing the Minister of Finance does not do is shift very far.

Mr. ILSLEY: I wish to ask the hon. member whether he thinks it is in the public interest to break agreements with provinces.

Mr. GRAYDON: The minister realizes that I cannot say there has been an agreement between the provinces and the dominion. But if my hon. friend wants to ask me that question, I will ask him if he does not think that he himself was breaking that very trust when he read part of that document.

Mr. ILSLEY: I certainly was not.

Mr. GRAYDON: That is why the rules provide that, where there is a confidential document, neither the minister nor anyone else must read from it. If I am to answer the question which the minister has now raised, I will say the answer is in the minister's hands. He himself admitted that it could not have been a confidential document; otherwise he himself should not have read from it. I realize the minister committed an error.

Mr. ILSLEY: I do not think I did.

Mr. GRAYDON: The minister for years has never been very good at admitting any errors.

Mr. ILSLEY: I do not admit one here.

Mr. GRAYDON: I am not going to press the matter because I do not think there is any particular point in it, though I still have my own ideas. The minister himself said, "if he had inadvertently stumbled". You do not stumble unless you have made some little mistake. Having added ground to the position he originally took, it seems to me that he weakened the first one. The more you add to your first argument, the weaker, I think, the original becomes. However, I do not say that we can afford to be too technical about these matters. But this comes within the purview of a policy which the government is pursuing far too often. Confidence is not being shown to the house to the degree to which we are entitled, and here is one of the examples. The minister himself will recall that only a few weeks ago we had another instance of it. I want to show the fallacy of all these arguments about public interest. A motion was made for the adoption of the report of the advisory committee on the civil service headed by Mr. H. J. Coon. With respect to the tabling of that committee's minutes and report the minister took a parallel position to the one he is now taking. The one case coming on top of the other, it seems to me that this house must rise up and object to the situation. On that particular occasion the minister pointed out that this, of course, was a confidential report; that it should not be tabled because it had all the elements of confidentiality.

Mr. GOLDING: The hon. member is referring now to a debate which has already taken place this session.

Mr. GRAYDON: Oh, well, now—

Mr. GOLDING: I rise to a point of order.

Mr. GRAYDON: I am going to start my own debate on this occasion and I am not going to worry about the one that has gone by. This has a direct bearing on this particular debate, or I would not have mentioned it. When this was submitted to the house the minister found he was not able to command the support even of all his own colleagues with respect to the vote on that particular occasion. But coming after that—and I think we may take the Minister of Agriculture (Mr. Gardiner) as an experienced parliamentarian; I have always regarded him as such, and I hold his knowledge of the house rules in high respect—when I asked him on June 11, 1943, about tabling the report of the national advisory committee on agriculture, having always felt that these reports should be tabled and that there was no breach of the public interest in tabling them, the Minister of Agriculture, when I asked "If the committee makes a report I suppose it could be tabled?" said, "I would think so." I heartily agree with that. That, coming on the heels of the Minister of Finance's position as taken only a couple of weeks before, seems to me to indicate how untenable his position is.

So far as this motion is concerned it is a parallel motion to that which has been up in the house before. In view of the principle involved, I think we as an opposition ought to take strong objection to a repetition of this attitude, if it is to be similar to that which was taken in respect of the advisory committee on civil service matters. On that occasion there could have been just two things the minister had in mind. Either the Coon report contained some kind of recommendation which the government was going to adopt and take credit for, or it contained recommendations of which the government would not avail themselves and which they did not want published so that the opposition or any other interested parties might use those recommendations in the house or out of it.

This motion, in my opinion, should be passed. I cannot see how the Minister of Finance can properly object. He has lost all his grounds for valid objection to the carrying of this motion, and I ask him to allow it to be adopted.

Mr. MACKENZIE (Vancouver Centre): On the point of order, may I suggest to the leader of the opposition that he is completely in error in his interpretation of the rules with respect to citing a document. If we refer to Beauchesne, third edition, marginal note 278, at page 111, we find:

> It has been admitted that a document which has been cited ought to be laid upon the table of the house, if it can be done without injury to the public interest.

The Minister of Finance, when we discussed this point the other day, specifically said it was not in the public interest, so that

that rule overrides the ordinary parliamentary rule of producing documents which are cited.

In regard to the general principle underlying a confidential document or documents which it is not considered to be in the public interest to produce to the house, I refer my hon. friend to Todd on "Parliamentary Government," at page 440, where he cites no less an authority than Disraeli, whose word my hon. friend should accept. The minister, in this, has complete jurisdiction; when he states to the house that it is not in the public interest to produce these documents, that ends the matter.

Mr. POULIOT: Speaking not to the point of order, but rising to a question of privilege, as a member of the house I am interested in having a copy of that public paper. That, in the first place, is what I have to say in rising to a question of privilege. In the second place, I want to know what is meant by the words, "public interest." I want a definition of these words, which are used so often by ministers as an excuse for not tabling or producing certain papers. It is quite easy for a minister to say that something is not in the public interest; but what is the norm; what is the rule; what is the definition of public interest, and who decides that question? Is there a minister who can decide against the will of a certain number of members that it is not in the public interest to table certain papers? I submit that it is most important for us to know exactly where we stand on this, so that we may know what is meant by the government whenever such an answer is given.

In the third place, I hear at times amendments to motions to the effect that the government will accept a certain motion with certain reservations. The minister makes a reservation. What does that mean? I remember distinctly a typical case, relating to the station at Rivière du Loup, where the question was about the tabling of certain papers, and I wondered if the correspondence was to be made personal after it had been received. As I have mentioned before in the house many times, letters marked confidential or personal are sometimes sent to a minister, merely to bring them to the attention of that minister, but the subject matter is not personal. If hon. members will take the trouble to go back to the records of 1931, they will see what was said at that time by the then Prime Minister Mr. Bennett, and also by the present Prime Minister (Mr. Mackenzie King), as well as by Mr. Lapointe, with regard to the impossibility of changing the nature of a communication after it had been received.

In this case, what is asked for by the hon. member for Charlevoix-Saguenay is the discussion that took place, not between officials of the department alone, but between Ottawa and the provinces, and if there is one thing which we are interested in and with regard to which we ought to be fully informed, it is the relations of the provinces with Ottawa, especially on the eve of the Sirois report. The Sirois report was not down then, and it is of the utmost interest not only to the member for Témiscouata but to every one of us to know exactly what was discussed on that occasion and what were the views put forward by the representatives of the provinces and of Ottawa, and the more so by reason of the resumé which the sponsor of the resolution read to the house a minute ago. These are matters of vital importance for all of us, and for that reason I have risen to a question of privilege.

Mr. SPEAKER: In this matter, which has already been before the house, the hon. the minister, as reported at page 3696 of *Hansard*, stated:

> To complete the record, I wish to state that in my judgment it is not in the public interest to produce these.

The leader of the opposition (Mr. Graydon) made the argument that because the Minister of Finance had referred to some excerpts from the report, therefore he was bound to produce the report; but in this instance the Minister of Finance was not founding an argument or proving an assertion; he was simply stating from that report the reason why the report should not be produced. Therefore, in my judgment, the Minister of Finance is not bound to table the report by reason of the fact that he made references to an excerpt from it.

There is confusion as to the question of public interest, to which the hon. member for Témiscouata has referred. The Minister of Pensions and National Health (Mr. Mackenzie) referred to Todd. Todd says, at page 440 of volume 1, "Parliamentary Government in England", that:

> Consideration of public policy and a due regard to the interests of the state occasionally demand that information sought for by members of parliament should be withheld at the discretion and upon the general responsibility of ministers.

It is a mistake to believe that as long as a paper deals with a public question, parliament has the right to see it. Memoranda, letters or drafts submitted to a minister by his officer in the preparation of a government measure or ministerial statements, though they deal with public matters, are not in the category of official documents which ministers are bound to lay before the house.

They are written for the minister's information and they are subject to his approval. Until they are approved by him or by the governor in council they must be regarded as unofficial. Todd, quoting Lord C. Paget, adds, at page 442:

> The system of laying upon the table of the house reports from officers addressed to particular departments of the executive government is most objectionable.

He also quotes Disraeli, saying:

> The house ought not to insist upon the production of papers and correspondence which concerned the preparation and preliminary consideration of measures; they would thereby put a stop to that freedom of criticism which was always invited on such occasions, and which contributed so much to the perfection of public measures. If the house were to insist upon the production of such documents, instead of the government getting what we get now, confidential reports containing the most minute details of the opinions of officers, given frankly and freely for the heads of departments, we shall have a system of reports framed for laying upon the table of the House of Commons.

Todd concludes, at page 440:

> This principle is systematically recognized in all parliamentary transactions; were it otherwise, it would be impossible to carry on the government with safety and honour.

The minister, as reported at page 3696 of *Hansard,* said that he did not wish to produce these papers because in his judgment it was not in the public interest to do so. The responsibility is the minister's for making that statement. He is the best judge of the matter and the Chair must be bound by such a statement. I therefore rule that the document should not be tabled.

Mr. DORION: Do I understand, Mr. Speaker, that my motion is out of order? If so, I appeal from your ruling.

The house divided on the question: Shall the Speaker's decision be sustained? And the decision of the Chair was sustained on the following division:

SOLDIER SETTLEMENT—CLEAR TITLE TO LANDS HELD UNDER CONTRACT

Mr. FAIR:

For a copy of all letters, telegrams or other communications received by the Prime Minister, the Minister of Mines and Resources, the soldier settlement board, or any other department of government from January 1, 1943, to date, asking that soldier settlers still on the land be given clear titles to their lands held under contract from the soldier settlement board.

WHEAT

INQUIRY AS TO ARRANGEMENTS IN REGARD TO 1942-43 AND 1943-44 CROPS

On the orders of the day:

Mr. G. H. CASTLEDEN (Yorkton): I should like to direct a question to the Minister of Trade and Commerce, arising out of the emergency condition facing the western farmer to-day, in that hundreds of millions of bushels of wheat are still in storage on the farms, with the prospect of another crop coming on in six or seven weeks. Will the 1942 wheat quota be taken in by August 1, and what arrangements are being made for the delivery, the storage and payments in connection with the 1943 crop?

Hon. J. A. MacKINNON (Minister of Trade and Commerce): I am advised that present facilities are sufficient to provide for the remainder of the undelivered quota for the 1942-43 crop, and that the total amount will be taken by the end of July. I know of no circumstances that would suggest the need for changes in the existing regulations for the handling of the 1943-44 crop, but if conditions should develop making such changes necessary, they will be announced.

Mr. CASTLEDEN: How about the storage? There is a great deal of wheat beyond the quota out there at the present time, and there is no farm storage available for any further surplus. I should like to know what arrangements will be made, so that it will be possible for the farmers to get something with which to make bins.

Mr. SPEAKER: Order. These are questions which should be placed on the order paper.

ALLEGED DISCRIMINATION IN PLACEMENT OF CARS

On the orders of the day.

Mr. E. E. PERLEY (Qu'Appelle): Has the Minister of Trade and Commerce received any complaints from western Canada that there is discrimination as between the pool elevators and other line elevators, in the placement of cars, at many of the points where they have not been able to deliver the full quota?

Mr. MacKINNON (Edmonton West): I do not think I have heard of any charges of discrimination against the pools. I have had requests from many sources that a different basis of allocating the cars be instituted, but I do not think the wheat board are suggesting any different allocation.

DEFENCE OF CANADA REGULATIONS

ARREST OF FORMER LEADER OF CANADIAN UNION OF FASCISTS

On the orders of the day:

Mrs. DORISE W. NIELSEN (North Battleford): Newspaper reports to-day mention the arrest on June 21 of a man by the name of Crate, who was formerly a leader of the Canadian union of fascists, an illegal organization. About a year ago, I believe, the hon. member for Rosetown-Biggar (Mr. Coldwell) asked the Minister of Justice a question with regard to the activities of this man, but that question was, I think, somewhat summarily dismissed. This man has just now been arrested, a year later. My information is that during this period he has been working on government projects both in Newfoundland and in Alaska. Will the minister make a statement as to how a known leader of a fascist organization in this country could obtain permits, and why he should be allowed to travel in vital defence areas, when it has been known by the police all this while what were his aims and objectives?

Hon. L. S. ST. LAURENT (Minister of Justice): I will have inquiries made into the facts concerning this man and obtain such information as will enable me to determine whether or not I can make any communication to the house.

CANADIAN ARMY

PAYMENT FOR HARVEST WORK DONE BY MEN ON LEAVE

On the orders of the day:

Mr. G. A. CRUICKSHANK (Fraser Valley): I should like to direct a question to the Minister of National Defence. I am sorry I did not have an opportunity to give him notice of it, but I received my information by air mail while I was in the house voting on the matter under discussion a few moments ago. If the information I have been given is correct, under C.A.R.O. 3111 troops while on twenty-four or forty-eight hour leave are not allowed to work, say at haying or other harvest work, if they are to receive remuneration. I wish to make it clear, Mr. Speaker, that my question deals with an emergency. I am not suggesting that these

men should be released from training in order to assist in harvesting, but if they do work of this kind while they are on these short leaves, are the farmers not allowed to pay them?

Hon. J. L. RALSTON (Minister of National Defence): There is a general order that troops may not be paid twice, once by the army and then by someone else, but I shall look into this particular question and give my hon. friend and the house a prompt answer.

WAR APPROPRIATION BILL

PROVISION FOR GRANTING TO HIS MAJESTY AID FOR NATIONAL DEFENCE AND SECURITY

The house resumed from Tuesday, June 29, consideration in committee of a resolution to grant to his majesty certain sums of money for the carrying out of measures consequent upon the existence of a state of war—Mr. Ilsley—Mr. Bradette in the Chair.

DEPARTMENT OF LABOUR

The CHAIRMAN: The committee is considering item No. 7.

Mr. GREEN: Mr. Chairman, the item under consideration this afternoon is for the removal of enemy aliens, including Japanese nationals, and other persons of Japanese race, from protected areas in British Columbia. The amount of the vote is $3,000,000. Last year, according to the records, the vote for this purpose was $4,575,000. I take it there is no doubt that the vote is really to enable the British Columbia security commission to carry on its work for the present fiscal year. The money will be expended to maintain people of Japanese origin living in Canada—people, by the way, who were formerly self-supporting. So that we are now in the position that the Japanese problem has touched the pockets of the taxpayers of Canada from coast to coast. For the first time since the Japanese came to Canada it has become a matter of some interest to Canadians east of the Rockies, and the Japanese first came, in any large numbers, almost fifty years ago.

The people of British Columbia hope that now, at long last, this Japanese problem will be dealt with as a Canadian problem, rather than as a problem of British Columbia. The people of that province have always been the pawns—and I repeat that word—have always been the pawns in the dealings between Canada and Japan. They found themselves in that unfortunate position for the first time shortly after the Japanese started coming to Canada, in fact, before the turn of the century, in 1898. In that year, the legislature of British Columbia passed what was known as the labour regulation act, the purpose of which was to prevent the employment of Chinese or Japanese persons on works carried on under franchise granted by private acts of the provincial legislature. That measure was passed because the Chinese and Japanese were then coming into British Columbia in large numbers and were interfering with white labour in the province. It was disallowed by the dominion government.

The reason for the disallowance is set out on page 70 of a memorandum entitled "Dominion Power of Disallowance of Provincial Legislation," issued by the king's printer in 1938. The reason given is as follows:

> The act affects not only the relations between the dominion and Japan but also the relations of the empire with the latter country. Further, power of legislature to enact statutes affecting the rights of aliens not free from doubt.

That disallowance by the dominion government was made after there had been—and, by the way, this is a vital question to the people of British Columbia, and I would ask the Minister of Labour to listen. He may have a lot of heartaches over this Japanese problem, before he is through.

Hon. HUMPHREY MITCHELL (Minister of Labour): As a matter of fact, Mr. Chairman, in view of the hon. member's observations I believe I should explain that I was just looking up what the policy of the United States government had been toward the Japanese, so that I might reply to the hon. member.

At six o'clock the committee took recess.

After Recess

The committee met at eight o'clock.

Mr. GREEN: Mr. Chairman, before the dinner recess I was pointing out that the people of British Columbia have high hope that the Japanese problem will now be considered a problem of the whole Canadian people, and furthermore that the people of that province have been the pawns in the dealings between Canada and Japan. I went on to point out that the first time they found themselves in that unhappy position was in the year 1898, when the dominion government vetoed a bill passed by the British Columbia legislature known as the labour regulation act, which in effect provided that Chinese and Japanese could not be employed on works being carried on under franchise granted by private acts of the provincial legislature. It is interesting to read the correspondence that

took place in connection with that disallowance. One finds a letter from the Japanese consul in Vancouver to the governor general, complaining about the British Columbia act. Then one finds correspondence between the governor general and the colonial secretary, who was no other than the Right Hon. Joseph Chamberlain. One also finds a dispatch from Mr. Chamberlain to the governor general, dated the 20th of July, 1898, which began—I am quoting from "Provincial Legislation, 1896 to 1920", volume 2, at page 542:

My Lord, I have the honour to acknowledge the receipt of your dispatches of the numbers and dates noted in the margin, in which you forwarded copies of various communications received by you from the Japanese consul for Canada respecting the anti-Japanese legislation recently passed by the legislature of British Columbia.

The second paragraph asks that various documents be forwarded to Mr. Chamberlain, and the third paragraph, which is the significant one, reads:

In the meantime I have to request that you will impress on your ministers—

That is, upon the dominion ministers.

—that restrictive legislation of the type of which the legislation in question appears to be, is extremely repugnant to the sentiments of the people and government of Japan, and you should not fail to impress upon them the importance—

Here is where Mr. Chamberlain showed the Canadian government the way out:

—you should not fail to impress upon them the importance, if there is any real prospect of a large influx of Japanese labourers into Canada, of dealing with it by legislation of the dominion parliament on the lines of the accompanying Natal Act, which is likely to be generally adopted in Australia.

He enclosed a copy of the Natal Act, and by the way that act was adopted in Australia and as a result Australia went into this war with Japan with fewer than 2,400 Japanese in the whole Australian commonwealth, while in British Columbia alone we had almost 24,000.

The effective portion of the Natal Act is in section 3, subsection (a). Section 3 deals with prohibited immigrants, and subsection (a) reads as follows:

Any person who, when asked to do so by an officer appointed under this act, shall fail to himself write out and sign, in the characters of any language of Europe, an application to the colonial secretary in the form set out in schedule B of this act. . . .

Joe Chamberlain suggested to the dominion government in 1898 that it should pass a Natal act. Had that been done, there would to-day be no Japanese problem facing Canada. But for some reason or another the dominion government failed to pass a Natal act. The British Columbia government, when it found that it got no help from the dominion, itself had a Natal act passed through the legislature in 1900 entitled, "an act to regulate immigration into British Columbia", and it contained a European language test of the type set out in the Natal Act.

Again there was correspondence. The Japanese consul wrote in to the governor general; correspondence with the colonial secretary followed, and in due course, in 1901, the act was disallowed by the dominion government.

Again, in 1902, the British Columbia legislature passed the same act, and again it was disallowed by the dominion government. In 1903 they passed the same act for the third time, and again it was disallowed. In 1904 the act was passed again by the British Columbia legislature. During all this time the letters from the Japanese consul were becoming more insistent. We find this in his letter in 1904. I quote from page 645 of the same volume:

I see no reason why the British Columbia legislature is so very persistent in taking such high-handed and unfriendly measures against the Japanese people, and why this act should be tolerated—

Tolerated, mind you!

—to any length of time, without being disallowed.

Well, the dominion government disallowed it in 1904. Again in 1905 the British Columbia legislature passed the same act, and it was disallowed. In 1908, for the sixth time, the British Columbia legislature passed the same act, and it was duly disallowed by the dominion government.

About that time there were riots in Vancouver. The Japanese had been coming in by the thousands, and riots broke out. As a result, the dominion government negotiated a gentlemen's agreement with Japan which was known as the Lemieux act, and which by the way has not yet been tabled in this house. Under that agreement 400 Japanese labourers were allowed to come into Canada each year. Subsequently, in 1929, a variation in the agreement was negotiated which reduced that number to 150. All this time the Japanese were coming in.

I have no intention now of going into the reasons why the British Columbia people fought the entry of the Japanese. The house has heard them many times, and I shall not repeat them to-night. During all these years British Columbia members of parliament without, I think, one exception, have been pleading with the other members of this house for help in facing this Japanese problem. I have been

a member of this house since 1935, and I have heard these pleas and have made them myself since coming here.

In 1938 the hon. member for Comox-Alberni brought in a bill which would have made the Chinese Immigration Act apply to the Japanese. In 1923 the house did pass an act which excluded the Chinese. That is twenty years ago, and in 1938 the hon. member for Comox-Alberni brought in a bill to put the Japanese under that act. It was duly voted down. He also brought in a bill to amend the general immigration act, to provide a Natal act language test. That, too, was voted down in this house. We were met with the excuse: Oh, Japan must not be offended. In other words, it was an appeasement policy toward the Japanese. At the same time the Canadian government was allowing scrapiron to be shipped out to Japan, which is now finding its place in the bodies of the young men of the united nations.

Therefore I repeat, the people of British Columbia have always been pawns in the dealings between Canada and Japan, and now in 1943 there are signs that the government policy, or lack of policy, will make them pawns again. The people of my native province are watching developments with grave concern. They will not agree with the light-hearted optimism of the Minister of Labour when he said the other night, as reported in *Hansard* at page 4015, when he was being questioned about the Doukhobors:

> I remember that last year—I wanted to say this on another occasion—

And he said these words with a good deal of boasting in his voice:

> —the Department of Labour received a great deal of criticism about the Japanese problem. I think in a large measure we have solved it for the time being.

May I tell him, the House of Commons, and the rest of Canada that actually he has barely scratched the Japanese problem, let alone solving it. In order that the committee may see the situation, I propose to give a few facts.

Practically all the Japanese who came to Canada settled in British Columbia. If they had not done so; if they had scattered out across Canada, there probably would have been no Japanese problem to-day. But they did not. They knew a good place when they saw it, and they settled in British Columbia, practically all of them in the coastal area. Of course there has been uneasiness in that province for many years, and particularly so when Japan became friendly with Germany and Italy. There was a registration of Japanese, and in 1941, as a result of a recommendation from a committee which had been appointed by the government, there was a re-registration. Here are the numbers of Japanese then found in the province: I am quoting now from a booklet entitled "Removal of Japanese from Protected Areas." It is a report issued by the British Columbia security commission and distributed among the members this year. I quote from page 3; here are the numbers as found by this Royal Canadian Mounted Police registration:

Canadian born	6,727
Naturalized	7,011
Nationals (the largest group)	9,758
United States citizens	16
Total	23,512

In proportion to population British Columbia had twice as many Japanese as the state of California, which is the state of the union having the largest number of Japanese. Our population in 1941 was approximately 820,000. The state of California had a population of 6,910,000, eight times as large as our own; on the other hand they had 93,717 Japanese, which is only four times the number of Japanese we had. The population of Washington, our neighbour state, numbers 1,740,000, a little over twice our population, but it contains only 14,565 Japanese, about two-thirds as many as we had. The state of Oregon, which is the third Pacific state, contains 1,090,000 people, slightly more than the population of British Columbia, but it has only one-sixth as many Japanese.

The registration disclosed another very interesting fact. I note on page 29 of this booklet that in addition to these 23,512 Japanese, there were 1,500 children in Japan of Japanese families registered in British Columbia under this registration. Most of these young Japanese, I believe, would have been able in due course to return to Canada, because their parents are here. There has been a custom among the Japanese of sending back many of their young people for education in Japan. It has been said that in many cases they went there for military or naval training, and I have no doubt that to-day some of these children of British Columbia Japanese are members of the armed forces of Japan. Others are children left in Japan by their parents; some, no doubt, children left with the mother when the father came to Canada.

Mr. MITCHELL: My hon. friend said that some of these children no doubt are members of armed forces in Japan. Is he speaking of Japan, or does he mean, in the Dominion of Canada?

Mr. GREEN: No, no; I say that, of these 1,500 Japanese children whose parents are in Canada, I have no doubt that some at least are serving in the armed forces of Japan.

Mr. MITCHELL: In Japan.

Mr. GREEN: I do not know where they are. They may be in the Aleutians, or they may be down in the southern Pacific.

Mr. REID: We had Japanese who boasted that their boys were in the air force in Japan.

Mr. GREEN: This re-registration was in the spring of 1941. At that time Japan was a member of the axis. I remember very well a ship leaving Vancouver for Japan late in that year, carrying several hundred Japanese who, it was admitted, were strongly pro-Japanese and were getting out of the country before trouble started. We were spending money putting up guns and otherwise preparing for war with Japan; but all that time Japanese were living around these forts, near our airports, and scattered up and down our coastline where they could, if they wished, be of great help to an invading army. In October, 1941—on the 27th, to be exact—our Canadian boys sailed out of the port of Vancouver bound for Hong Kong on that ill-fated expedition. On December 7, 1941, Japan struck treacherously at Pearl Harbor. That was followed, of course, by the attack on Hong Kong and by the surrender of our troops there on Christmas day. On the Pacific coast no one knew whether or when Japan might attack; no one knew what the Japanese living there would do in the event of attack, and no one knew which Japanese could be trusted and which could not. So that it was only natural that in Canada, as in the United States, there was insistence that all Japanese be moved away from the Pacific coast. It was not a matter of persecution; it was a matter perhaps of life and death for the Canadian people. That situation is clearly expressed in this report of the removal of the Japanese:

> The government of Canada took no further definite action until public sentiment became inflamed and the members of parliament from this province became so vehement in their denunciation, and the press so vociferous in its expression of indignation that finally, faced with the necessity of establishing some security against possible attack from within as well as without, on March 4, 1942, the government of Canada issued privy council order Nos. 1665 and 1666 creating the British Columbia security commission, whose primary duty was to evacuate all persons of the Japanese race from certain strategic areas of British Columbia which had previously been declared "protected"—

Then the paragraph reads:

> —by order in council No. 365.

But I think it should be "pursuant to order in council No. 365."

Actually the protected area was defined on February 2 last year. It covered a strip approximately 100 miles back from the coast, as well as the whole of Vancouver island and the Queen Charlotte islands and an area in southeastern British Columbia in the district of Kootenay. Since then, I believe, there has been an area added near the city of Kamloops. On March 4 of last year the British Columbia security commission was set up.

Eventually last fall practically all the Japanese were removed from the protected area. For that I give due credit to the minister, to his staff and to the British Columbia security commission. The Japanese were moved, with the exception, I believe, of about 100. I got a return this spring which showed that there were fifty-four persons still in the protected area, most of them being either the husband or the wife where there had been intermarriage between Japanese and occidentals.

But it is interesting to note what has happened to these evacuees, and this is the key point. I have here a statement from the Department of Labour showing the location of Japanese in Canada as at May 27, 1943, a little over a month ago; it shows first of all that there were 2,439 who had settled outside the restricted area prior to the setting up of the British Columbia security commission. Some of the Japanese saw what was coming and packed up and left. Most of the 2,400 had settled in the riding of Yale and Kamloops, in central British Columbia. That leaves 21,236. Of that number, 606 are interned somewhere in eastern Canada. There are, I believe, more Japanese interned than members of any other nationality. Most of the remainder, 15,562 or over three-quarters, are still in British Columbia. They are located on a temporary basis in relocation centres in the interior of our province. This statement shows that there are in interior housing centres 11,960, made up as follows: Tashme, which is in the riding of Fraser Valley, 2,571; Greenwood, in the Yale riding, 1,199; Sandon, 844; Slocan area, 2,817; Lemon Creek, 1,875; Kaslo, 906; New Denver area, 1,748. All these last five centres are in the Kootenay West riding. These people are living in these centres. There are block-houses on the roads a certain distance from the centre where special police attached to the mounted police see that the Japanese do not go past the block-house. They are being maintained largely by the dominion government, and they are largely unproductive and have been throughout. There is now some suggestion that they are

to be used in cutting wood. They have been cutting wood for themselves and doing odd jobs of that type such as raising vegetables and so on, but they are largely unproductive and are being maintained by the government.

The next group are in what are called the self-supporting projects in British Columbia, and they total 1,290. Of this number, 108 are in Christina Lake in Yale riding; 336 in Lillooet; 333 in Minto City; 263 in Bridge River; 67 in McGillivray Falls, and 183 in Taylor Lake, all in the Cariboo riding. These are Japanese with funds of their own; they are keeping themselves, but they are largely unproductive.

There are 781 in road camps in the province; 210 on the Blue River-Yellowhead road in the Kamloops riding; 293 on the Revelstoke-Sicamous road in the same riding and 278 on the Hope-Princeton road. These are largely Japanese nationals, and they have not made very much progress in the building of roads, one reason being that they have not had sufficient equipment. Then there are listed 1,531 under the head of British Columbia placements. Of that number, 1,376 have permits for employment. They, I presume, are working in the woods and in the mills or in orchards in the interior, largely in Kamloops and Yale; twenty-one in hospital; two in gaol; 132 Eurasian; making a total of 15,562 in British Columbia, or over three-quarters of the evacuees. Practically all of them are settled on a temporary basis.

The remainder, 5,607, which is slightly less than a quarter, are east of the Rockies, and that is all that are east of the Rockies, except, of course, for those who are interned.

The figures for the prairies and eastern placements are: Alberta, 2,664, largely on sugar beet farms; Saskatchewan, 54; Manitoba, 1,093, also largely on sugar beet farms; Ontario, in industry, 1,119; road camp 36, giving a total of 1,155; I do not know how many but quite a number of these are on sugar beet farms in Ontario; and Quebec, 101.

Practically all the evacuated Japanese in Alberta and Manitoba and most of those in Ontario are likewise temporarily settled. They are settled subject to an express agreement between the dominion government, acting through the British Columbia security commission, and the respective provincial governments, that they shall be removed after the war. I have here sessional paper 126 brought down on May 6 of this year, and we find this paragraph in the agreement with Alberta:

10. The commission agrees to remove or to have removed from the province, upon the termination of the state of war now existing between Canada and Japan, the Japanese temporarily placed or maintained within the province, pursuant to the terms of this agreement as requested so to do by the province.

The Manitoba government was not quite so particular about getting an agreement, and it has a letter from the chairman of the British Columbia security commission, paragraph 10 of which reads:

We agree to remove from your province any Japanese placed therein through this commission upon the termination of the state of war now existing between Canada and Japan.

I understand that there is an agreement in identically the words of the Alberta agreement, duly signed and executed between the British Columbia security commission and the province of Ontario, and apparently there are to be still more agreements of that type, because on February 5 of this year the government passed order in council P.C. 946 which will be found at page 359 of volume 1, number 6 of Canadian War Orders and Regulations, 1943. It is entitled, "Order in Council Establishing Regulations re Provision for the Administration Relative to Further Placement, Control and Maintenance of Persons of Japanese Race in Canada." It provides for allowing the commissioners to resign—the gentlemen who had formed the security commission—and in their place it sets up a commissioner of Japanese placement who is now in charge of the whole scheme. Paragraph 10 of the order in council reads:

The minister may enter into an agreement on behalf of the government of Canada with the government of any province relative to the placement in such province of persons of the Japanese race and any such agreement may provide that any such persons will be removed from such province upon the termination of the state of war now existing between Canada and Japan.

These evacuees have been settled temporarily everywhere, and I doubt very much if there are many of them who will not be subject to this provision for removal after the war. As I say, they have been temporarily settled in different parts of Canada, but principally in British Columbia. Before considering the effect of this and suggesting what should be done about it, I should like to point out certain other features of this Japanese problem to the members of the committee.

The first is that there is great reluctance on the part of the Japanese to cross the mountains. They are not helping themselves by that attitude, but such is the case. On May 24, 1943, an answer was given to a question asked by the hon. member for Vancouver East (Mr.

MacInnis), and I quote one paragraph, as reported at page 2929 of *Hansard* as follows:

7. There has been reluctance on the part of certain groups among the Japanese in the interior housing centres to take work east of the Rockies, but this is gradually declining.

It must be admitted that some of the younger Japanese and the more forward looking of the group have come east and are trying to reestablish themselves. For this they deserve great credit, and the department deserves credit for helping them. But speaking by and large there is great reluctance among the Japanese to leave British Columbia.

The second feature is that many of the Japanese have voluntarily expressed a desire to be repatriated to Japan at the earliest possible moment. Press dispatches have stated that in the camp at Tashme, where there are about 2,600, approximately 600 have expressed the wish to be sent back to Japan. Other dispatches have stated that there are 1,600 in the different centres who would like to go back to Japan. I ask the minister to tell us during the discussion how many Japanese have expressed this wish; what progress has been made with arrangements for them to be repatriated, and when it is expected that they will be leaving. On February 8, in answer to a question by the hon. member for Kootenay West (Mr. Esling), the Prime Minister said that negotiations were under way for the exchange of nationals but had not been completed.

Mr. MITCHELL: Forty-three have been repatriated in exchange for Canadians, and there are some hundreds of Japanese who desire to be repatriated.

Mr. GREEN: How many hundreds?

Mr. MITCHELL: Several hundred.

Mr. GREEN: The minister must know how many. If he does not, he should, because he has all his officers with him to-night.

Mr. MITCHELL: The mere fact that a man says that he would like to go back to Japan does not mean that three months from now he will be willing to go back.

Mr. GREEN: Are you going to give them a chance to change their minds and stay here? Is that what this means?

Mr. MITCHELL: I am referring to the trend of the war. There may not be any Japan left when we are through.

Mr. GREEN: The third special feature I should like to draw to the attention of the committee is the fact that the Japanese government considers these people to be Japanese. There is published in Kaslo, one of the relocation centres in British Columbia, a paper known as *The New Canadian,* which is published by the nisei; that is second generation Japanese who have been born in Canada. The edition of March 27, 1943, carries a news dispatch from Vancouver which is captioned and reads as follows:

Sends Sympathy and Message of Hope

In a statement last week-end the Spanish consul-general in Montreal said he had been requested by the Japanese government to advise the Japanese in Canada "that the house of representatives in Japan approved a resolution on February 27, to express their maximum sympathy for all the compatriots residing in enemy countries and to send in the name of the whole nation a message of hope."

And I would remind hon. members that a few years ago the Japanese government took a census of Japanese living in Canada.

The fourth special feature is the fact that we are getting along very nicely in the protected areas without the Japanese. There were about 2,000 Japanese in the fishing industry, but I find the following in the May *Fisheries News Bulletin,* published by the Department of Fisheries:

2,000 Japanese Out but B.C. Fishermen Increase

More than 2,000 people of Japanese descent held commercial fishing licences in British Columbia in 1941 and none at all in 1942 but, nevertheless, the total number of licences issued in the latter year showed an increase of nearly 1,800.

The final special feature concerns the fact that many of these Japanese are naturalized. I have no doubt that some of these naturalizations were genuine; that those applying really wished to become Canadian citizens, but on the other hand many applications were made in order to secure fishing licences. As far back as 1900 a commission was appointed by the dominion government to look into the Chinese and Japanese situation, and the report of the commission will be found in the sessional papers of 1902, from which I quote as follows:

The evidence made it clear that the larger number of Japanese become naturalized, not to become citizens of the country, but to enable them to obtain fishermen's licences. Nearly the entire number of Japanese who have become naturalized, take out fishing licences, and but few of those who do not take out licences become naturalized.

That is the picture, and the British Columbia security commission have summed it up very neatly in the report from which I have quoted already. I quote again from page 18, as follows:

It is evident, therefore, that the now most important angle of the Japanese problem in Canada—relocation in self-supporting family units—is a matter for parliamentary and gov-

ernment decision, and definitely an issue to be faced in due course by the country at large. The people of all parts of Canada should come to realize their war-time obligation in connection with the Japanese evacuees, and to recognize that their cooperation will, to a great extent, remove the necessity of the present relocation centres, now operated mainly at the expense of the already heavily-burdened taxpayers.

In conclusion it may be said that the foregoing summary of this first episode of the saga of an industrious people lifted from the fields of activity to which they had been accustomed, and placed in comparative idleness in interior towns, depicts no permanent static condition, but is believed to be only the frontispiece to the still unfolding story of the final relocation and rehabilitation of the whole Japanese-Canadian population.

The CHAIRMAN: I must inform the hon. member he has spoken for forty minutes.

Mr. GREEN: I make it a rule not to encroach upon the good-will of hon. members, but I would appreciate the privilege of finishing, because this is of such vital importance to us.

Some hon. MEMBERS: Go on.

Mr. MITCHELL: Go ahead.

Mr. GREEN: What is the policy of the government? These agreements containing the provision to remove the Japanese from the other provinces after the war, this order in council giving the Minister of Labour the power to enter into new agreements containing the same terms, point to a possible attempt to send all Japanese back to British Columbia after the war. Of course that would mean also that the policy will be to leave there the other three-quarters who are now in British Columbia. I warn the government just as emphatically as I possibly can that if this attempt is made, there will be grave trouble in British Columbia. The ministry might as well realize that at once. In effect, such a policy would mean that the government is still looking upon the Japanese problem as a problem for British Columbia, rather than for Canada as a whole; that British Columbia is still a pawn, and she does not propose to be that any longer.

If such an attempt is made by the government; if that is the policy; if these agreements to remove these people from the other provinces are the best the government can do; if the rest of Canada—and here is the main point—is unwilling to do its part in settling this problem, then the people of British Columbia will insist that in negotiating the terms of peace the Canadian government make certain that the Japanese in Canada will be repatriated to Japan.

There has been no announcement as yet by the government as to what is to be done, no pronouncement as to where these people are to be located. Once again I ask the minister for a declaration, to-night, as to the policy of the dominion government in connection with the Japanese problem.

Mr. NEILL: This debate on the appropriation for the war has been going on for nearly four months, and I have taken no part in it. I thought plenty of criticism had been offered and too much time had been taken up, and therefore I felt I could best serve the interests of my constituents by allowing the debate to finish so that the government might be released as soon as possible to go on with its other duties in connection with the war. But the matter which has been brought before us so definitely under this item, which provides for payments in connection with the moving of the Japanese, is of such great importance that I feel compelled to state again, at least in part, the very strong views held by the district I represent and I think also by the province from which I come. I spoke on March 1 about this matter, and now to some extent I must confirm what I said on that occasion.

This item is for $3,000,000, but there must be some other item as well, because the cost of removing these Japanese and taking care of their boats runs to over $5,000,000, which is a great deal of money. Just by the way, a good deal of criticism could be offered in that connection, but I shall inject only one matter here. Long after the war had started, though before Japan had entered it, we thought it necessary, looking at least a little ahead, to build some seaplane bases on the west coast. One was built in the district which I represent; and in view of later events hon. members will hardly believe me when I say that I could not get the government of Canada to take the slightest notice of two facts which I laid before them with great emphasis, stating that I knew them of my personal knowledge. One was that within two hundred yards of the aerodrome there was a Japanese village from which they could observe, without let or hindrance, everything that went on, everything that went into or came out of that base. They could take the numbers of the planes, the hours that were worked and everything else. The other matter I brought before the government was the fact that a Japanese had been seen taking photographs of the whole undertaking from an ordinary passenger plane. The answer I got back from the government officials, in the blandest and most indifferent language, was that even if the Japanese had been turned out

of the village they could have gone just a little farther away and continued their observations, while as far as the man in the plane was concerned, while that might be true —and it was true—he had now gone back to Japan. They seemed to think that happily ended it. I suppose he had taken the photographs away with him as a souvenir of his love for us or of our love for him. That sort of thing seems absurd, looking back on it now, but I could not get anything done about it then, and there were other matters into which I have not time to go now.

There was a great deal of money wasted in the moving and handling of the Japanese, particularly in connection with their boats. So far as I can make out, the Japs were allowed to carry away from their boats stoves, batteries, radios and everything else movable. Then, when the government decided, quite properly, to sell the boats they replaced all these articles, but they did not replace them at the cost of the people who had stolen or taken them away; they replaced them at the cost of the government, and it came to a very large sum, too. The boats were not properly cared for. They were supposed to be under constant guard, either naval or civilian, yet when we came to sell them, apparently for shame's sake we had to spend something like $120,000 in order to put them back into what was presumably the shape they were in when we took them over. If that had been the ordinary wear and tear through being laid up in the harbour, rust and so on, surely that was the loss of the owners; but no; we had to pay all that, and those costs went to make up this total of $5,000,000 which I have mentioned.

Then again, we had what I might almost call the lavish hospitality that was shown to these gentlemen. They were put into camps, yes; and they ran the camps—the Japs did, not the government. If the Japs did not like a white foreman, the government fired that foreman. The Japs were not disciplined at all. If the foreman could not get on with the Japs—which meant letting the Japs do as they pleased—he was fired. Not long ago they had a strike because they were not being supplied with asparagus tips for breakfast and also because the rice was not of the quantity and quality they desired. Whose fault was it if the rice supply was a little shy? But every attention was paid to their comfort. They had three lady dietitians working for them, three college graduates in home economics. I wonder if our boys who a few years ago, in the time of depression, were riding the rods and then were put into camps, had lady dietitians to look after their welfare. If they did, I do not remember it. Would it not have been a good idea to have Jap camps, Jap prisoners and Jap cooks, and let them do their own cooking? But no, they had to have lady dietitians, and one can imagine how that ran up the cost.

This all makes good campaign material for some of our friends who perhaps would not have done half as well if they had been given the opportunity, but there is no use in attacking the present minister because of these things, since all this happened before he became minister. There is no question about it; British Columbia has enemies, or at least the Japs have friends in high places in Ottawa, as was stated last night by the hon. member for New Westminster. Perhaps we are too far away; but so were the Japs, though they seem to be able to reach out and have the hand of friendship extended to them here. However, I have listened to so much abuse and such unfair criticism of the Department of Labour and also of the Department of Munitions and Supply, criticism which I knew was false and made only for party purposes, that I feel inclined to discount some of the allegations being made now. I heard so much that has proved to be untrue and unfair that I am inclined to give the benefit of the doubt to the present minister. The ink was hardly dry on his appointment before a certain clique of people in this house and in the country were damning him, before he had even started. If they had not been such tintype politicians, they would have realized that this was the way to create sympathy throughout the country for the man they appeared to hate so much. At least it would have been a good policy to let him prove himself wrong and incompetent before condemning him so completely as to excite the sympathy of all decent-minded men.

In the middle of this war, when perhaps tomorrow or perhaps next week this house may be called upon to provide an enormous number of reinforcements or to take other drastic steps, it might be well for us to forget the past for a moment, to deal with the present and to look to the future and the possible demands for action that may arise.

A man well known, a member of parliament in the British House of Commons, Mr. Herbert, who, I believe, is editor of *Punch,* made this statement:

> I have always taken the view that it is better for a person of my limited capacity to try to get a few things well done than to vapour vainly about the ways of the whole world.

I think that is a wonderful thing. I have taken it to my heart, and it might be well perhaps if some amateur politicians did the same thing. Let us forget about vapouring vainly about the ways of the world, and concentrate on something practical, something that is before our eyes.

Following that principle, I wish to concentrate, and have concentrated on two points of vital importance both to British Columbia and to Canada. One is an increase in the old age pension, and the other is the repatriation of Japanese. So that at this crucial stage in Canadian history I made bold enough on the part of the people whom I represent to make this request—no, I do not make it a request; I make it a demand. The time has come when we are justified in demanding two things, first, that parliament shall introduce legislation to prohibit the further immigration of orientals and, second, that the Prime Minister or the leader of the government pledge his great influence, his vast influence—because Canada's part in the war has been such that she must occupy an almost undefinable position at the peace table, and the Prime Minister of Canada will have such influence that he will have to be listened to, to a large extent—at the peace table to insist upon the repatriation of all Japanese now in Canada, whether of Japanese origin, whether naturalized—by a fake naturalization—or native born.

I place these issues as clearly and vigorously as I can, so that there will be no doubt about them whatsoever. The people, or at least those whom I represent, because I could stake my life in that regard, will ask for these things. I will seek that every party asking for votes, and every candidate will be asked to pledge himself. And I do not mean that he will only be asked to say whether or not he is in favour of Japanese not coming in, or doing something in that regard. Oh, yes, they will all say that to get the votes. But let them vote for it when it comes to the house. Let them be challenged to vote for it when they are given the opportunity irrespective of the party which has brought it in. Let them pledge themselves to it, no matter who proposes it. A man will hesitate to pledge himself to a thing unless he has some intention of carrying it out.

I listened carefully to what was said the other night by the hon. member for New Westminster, and I agreed with a great deal of what he says. But I thought he rather weakened the effect of his speech by adopting an attitude of anticipated defeat, and suggesting, instead, certain palliatives which would not, to my mind, achieve the desired end. I can well see the Minister of Labour or the Prime Minister saying, "Why, sure, old man, I agree to all that. I can pledge myself to that." But the suggestions were of such a character that we would not get very far.

For instance, he put forth five conditions. These he laid down as a sort of substitute. If the government would not turn the Japanese out, then he insisted they should do these four or five things. He said:

> The first step in any sound and permanent solution of the problem must be taken by the Japanese themselves. . . . They must cut themselves completely aloof from the control and authority of Japan and its emperor.

That is quite true. Of course they will cut themselves loose. Of course they will take the oath of allegiance to the British king. What does that signify when they are heathen? What does a mere oath mean to them? They will take an oath, but that will not get us anywhere. And while we are waiting for them to do it, how about expatriating them in the meantime?

The second suggestion was:

> We must expose and tear out the whole web of Japanese influence, propaganda and intrigue and prevent, if possible, tight, deliverable blocks of votes which can always be used to pander to certain politicians.

I heartily agree with that. But how are we going to do it? The United States have found it impossible. They have found it impossible to tear out secret propaganda. Great Britain failed. The United States failed, and we have failed. How are we to be able to do it. Then, with regard to the preventing of blocks of votes, and with the understanding that a person will commit himself to vote in a certain manner, let me say that the whole attitude of British Columbia has been trying to keep them from getting the vote, and we have been successful up to date, and to talk of preventing a block vote is a suggestion that they will get the vote. Anyhow, you cannot stop people voting en bloc.

Another suggestion was this:

> We must never allow again unsupervised Japanese schools conducted in Canada, which were carried on for the sole purpose of keeping the Japanese as Japanese, and I believe indoctrinated the creed of dual citizenship.

That is perfectly true, and I am heartily in agreement with it; but how are we to do it? They will simply say, "Oh, this is a Sunday school"—or a college of science—and they would still have the same propaganda.

The time has gone past for any palliative or alternative. We have finished dealing with these things we call gentlemen's agreements. My understanding of a gentleman's agreement

is that it must be between two gentlemen, not one gentleman and a tiger. We must do away with all that. We have had our experiences in that for forty years, and we do not want another twenty years of it. So urgent and bitter is the feeling in British Columbia and as I have lived among them for forty-five years, I ought to know—that if what we ask is not granted, I would subscribe to the demand to break away from eastern Canada, and have a federation of provinces west of the great lakes, not with any feeling or idea of malice, of course. It could be done by an amendment to the British North America Act. We would move away, and maintain our own federation.

I think, if carried to the prairies, it would be found that they would vote for such a thing. Feeling in British Columbia is high with respect to the Japanese, and I am told that there are reasons why they feel somewhat the same way in the prairie provinces. I need not go into those reasons which would produce sympathetic consideration of the same thing in those provinces.

Unless the Japanese situation is settled in the way I have suggested, this action will have to be taken. There are two things we want, namely, the stopping of immigration and the expatriation of Japanese. Why do we want to stop immigration? I have made speeches in the last twenty years. I made them in May, 1938, and in February, 1942, and for the last twenty years—I have all the dates here. In British Columbia we do not want immigration of Japanese or Chinese, because they, but especially the Japanese, can never assimilate with us. They can never become part of us. They can never be absorbed. They have a low standard of living. They do not intermarry with us, largely because they do not want to intermarry with us. They despise us. That is their privilege, of course; but because they do not marry with us they can never become absorbed.

In Great Britain, the most cosmopolitan country in the world, all are absorbed. Every class of people that comes along is absorbed —those who have made invasions, their conquerors, refugees, Huguenot refugees from the continent. They have assimilated all of them, and they have become a fine race. But we cannot do that in Canada, when we have within our body politic a cancer composed of these unassimilable people.

They do not wish to mix with us, and they are simply waiting for a chance to conquer us. They are always loyal to their own heathen god. They have a religion which teaches them that their emperor is their god. Kipling was right when he said that you cannot breed a white man in a brown or yellow hide. We have tried it, and now we know. I hope we do not have to pay too high a price for that knowledge. It is physically possible to intermarry the white and yellow races, but the results accomplished are very poor. Intermarriages seem to increase the bad qualities of both races. But there are mental strains in both races which forbid a proper amalgamation. The main menace, especially in connection with the Japanese, is their fantastic devotion to their god-emperor, and their belief in their destiny as world conquerors. I do not often advertise a book, but if hon. gentlemen will look at "The Three Bamboos" by Robert Standish, published recently, they will get without bias or prejudice a fine conception of the whole Japanese history and of the military junta right up to the time of Pearl Harbor.

Something has been said about the second generation of Japs being all right. Here is a clipping which says that at Los Angeles on June 10, 450 American-born Japanese—American-born with all the virtues we are told the second generation of Japs have—refused to repudiate their loyalty to the emperor or swear allegiance to the United States. An emperor they have never seen, in whose country they were not born! They refused to repudiate their allegiance to him. Get that? A loyalty to something outside the United States where they were born! Over and above that there were another 180 who gave qualified or evasive answers, such as: "I am neutral", to the loyalty question. If we were asked, "Are you going to be loyal to the British king?" and we said, "I am neutral", what would be thought of us? The same paper carries a headline "20,000 negroes belonged to group formed by Japs"—negroes of the lower type, almost morons, subnormal, who were found to have joined a Japanese association in Detroit which stirred up all that trouble which ended in a race riot the other day. They have also found large caches of food and munitions stored by the Japanese in the southern states. To support Americans? Do you think so? You must be very simple if you do. No; it was to help the invading Japanese when they landed in California and other states.

Talk about the treacheries in connection with Pearl Harbor! The Japanese did something of that kind in the Russian war. They attacked Russia before they declared war. It is just a piece of their general policy, and as for their atrocities we have not heard the full story of them yet. I do not know if they are

to be wholly blamed for that. You cannot argue with a tiger. You cannot blame him for being insensible to the ordinary decencies because it is not in him, and even when they are educated and cultured they still remain savages. In a way they might not be held to blame for this. We ought to take steps to see that such things do not happen to us any more. There are at least a million reasons why we should not give them a stranglehold on our civilization. What do we want immigration to Canada for? We want more people to make us a more prosperous and successful Canada, I suppose. Is that the way to get it, to allow an influx of people whose loyalty to their own land and their own race and their own religion is so intense? Is it a crime to seek to prevent the entry of such people into our land? If it is a crime, and I have heard myself accused of it, write me down in letters of red, in letters of blood if you like, as being such a criminal; because the time has come when we are no longer to be sloughed off with remarks about what we are going to be and what the Japanese will do by way of gentlemen's agreements, and so on. Those in the thraldom—I use that word rather than a coarser one—of Japan, directly or indirectly, tell us that the Japs born here are all right. If that is the case, why did the British Columbia security commission have to give a written guarantee, signed and witnessed and everything else, to our brothers of Alberta and Ontario and in a modified form to Manitoba that they would take the Japs back after the war if the other provinces would let them come in now. Here it is:

> The commission agrees to remove or to have removed from the province, upon the termination of the state of war now existing between Canada and Japan, the Japanese temporarily placed or maintained within the province pursuant to the terms of this agreement, as requested so to do by the province.

I do not think that is legal. I ask any lawyer, has the government power to delegate such large powers to a commission? But suppose it has, why was not British Columbia given a guarantee too when these Japs were moved away from our province to Alberta and Ontario? Where are they to be sent when the war is over? We do not want them. We want them still less than the other provinces, because their objections to the Japs are second-hand, but we know them. Why not give us in British Columbia a pledge that you will remove the Japanese from our province? But no, they are to be unloaded on us, against our known and deliberately and earnestly expressed opposition.

Mr. BLAIR: What would you do with them?

[Mr. Neill.]

Mr. NEILL: Send them back to Japan. Anything you like. I won't bother, whatever you do with them. But they are not coming back to British Columbia, and that is the voice of British Columbia. You may say: We will send them to the United States. Not if they know anything about it. I have here a clipping that the senate of Oregon has passed a resolution demanding that the Japanese be expatriated. It says:

> The Oregon senate voted to-day to ask congress to send all persons of Japanese blood back to Japan after the war and to bar all Japanese from serving in the armed forces.

So that it is not that we are cranks in British Columbia. Oregon thinks the same way. And so it goes. Here is an extract from a speech by the Hon. Henry M. Jackson, of Washington, in the house of representatives, on February 23, 1943:

> Mr. Jackson: Mr. Speaker, I have to-day introduced a resolution asking that a special committee of the house be set up to investigate Japanese activities in the United States and its possessions. I have requested that this committee direct an investigation into any and all activities of the Japanese in the United States, its territories, and possessions. . . .

And so on. He says further:

> After my study of this question, I wish to assure the members of this house that there is not the slightest doubt in my mind but that the Japanese consul, taking his orders directly from Tokyo, ruled the Japanese colonies in our country with an iron and dictatorial hand; thus there was a society within a society and a race within a race. Every two years the Japanese consul in the large Pacific coast cities was changed and a new consul came in, bearing direct orders from the "Son of Heaven" in Tokyo. He directed the establishment of Japanese language schools; he managed the complicated Japanese financial system through the Japanese banks, owned and controlled in the land of the Samurai. The consulate office was the fountain-head from which flowed all directives to Japanese residents, both alien and native to this country, and was also the centre of espionage and propaganda activity.

And so on.

A committee is to be formed, and he or some of his friends suggested that we should take similar action here and have a joint committee to bring out the facts.

To come back to Canada, if the Japs get the vote here, millions of these fellows will rush in. We are holding them up by a restrictive quota now, which they often abuse, but once give them the power they ask and seek, they will have to have the vote, and they will come in by thousands, by millions, and take possession—infiltration is the nice word for it.

How are we doing without the Japs in our fishing? We are doing better than we did with them. It was not so popular to speak

against the Japanese in 1898, which I have done ever since I was elected to the house in British Columbia in that year. But the British Columbia government to-day has passed a resolution against the Japanese and so have city councils and the union of British Columbia municipalities. Here is what the union of municipalities said:

> That the provincial government be asked to demand that upon cessation of hostilities, all Japanese, both alien, naturalized or native born, be repatriated to Japan. . . .

And so on. I have resolutions from different Conservative associations—"Tories" they are called in some cases—demanding the calling of a special session of the British Columbia legislature if necessary to emphasize their view. "The Native Sons demand deportation"; "Tories ask ban on Japs," and boards of trade and similar associations pass resolutions to the same effect. I have had many letters on the subject, and I received only one opposed to my point of view and accusing me of being un-Christian and pandering to the mob for the sake of getting votes. But the writer gives the show away when he talks like that, because if I am simply engaged in pandering for votes, it must be assumed that I would pander for the most votes. If the population of British Columbia is divided into two groups, those for and those against, and I am just a vote-catching panderer, having some sense I would pander to the side which has the biggest majority; and in this very statement it is implied that the majority of the people in British Columbia want the Japanese repatriated. That argument works both ways. One can go back thirty-five years and find the same kind of record for the whole period.

I should like to endorse the statement made by the hon. member for New Westminster in connection with this man Trueman. Something ought to be done about that. Trueman has been appointed by this government on the British Columbia placement commission, and he had not well got there—I do not know that he had got there—when he made the statement:

> The reason for the mass evacuation of Japanese from Pacific coastal areas was not because of the Japanese, but because of the white residents. The problem was one of mass hysteria and race prejudice.

I say that any government that will allow a man to stay in office after making such a gross prostitution of his duties and obligations is unworthy of support in this or any other house. Here we have an appointee, a placement officer who is expected to try to carry on things smoothly, and he comes out and makes a statement like that. He could not possibly know what he was talking about. I think the next best punishment would be to turn him loose in British Columbia, but I am afraid he would have a hard time.

The last time I spoke I used these words, and I use them again: "It is not often in the lifetime of a nation that we get a chance to turn back the pages of history and start again." This is a chance that we have never had before and we shall never have again. If we do not use it now, we are sunk.

I should like to speak one word to my eastern friends the French Canadians, courtly sons of a courtly race. I say to them that I feel we have the same situation in British Columbia as they have, only our population is much smaller. We, too, are a minority, but our numbers are much smaller than theirs. We solicit their support, and if they help us we will not fail them when they want help from us. If you fail us to-day, it will be your turn to-morrow, because the Jap influx will spread over Canada; an invasion of the east would be just as ruthless and merciless as it would be in British Columbia.

A word to the politicians, who are supposed to be very bad people and have an eye on the next election. I say with all the emphasis of the experience I have that that man and that party that will pledge themselves to the two movements I have suggested will have my earnest and undivided support in the next election, and I am certain that the same applies to the great mass of the people of British Columbia, and possibly beyond that province, because the thing is beginning to spread. Alberta knows what is going on. So that I beg the government, before it is too late, and not, according to their habit too often, just after it is too late, to grapple with the situation and meet it before it gets out of our hand. As the hon. member for Vancouver South said, we cannot expatriate British subjects, even if they are only imitation British subjects, after the war, except in individual cases. We know that we can thus deal with people guilty of crimes connected with the traffic in narcotics, but I do not know if expatriation can be done on a large scale unless it is part of the terms of the treaty. That is for the government to decide. But I want to emphasize this, if it is the last thing I say in a lifetime: British Columbia and western Canada want stopped totally immigration of Japanese into British Columbia, and we want the repatriation at the end of the war of every individual of Japanese origin.

Mr. MacINNIS: Mr. Chairman, I am afraid that after that flesh-creeping speech, what I have to say will sound rather tame. We are now considering the item in the appropriation to care for persons of Japanese origin who were moved from the defence area of the Pacific coast following the declaration of war between Canada and Japan. I agree with the other hon. members who have spoken on this question that although for many years the question of the orientals in Canada—and this is only one phase of it—was almost altogether a question for the province of British Columbia, it is not any longer so, it is now a question for the Dominion of Canada. One of the things which the other provinces can do if they want to be helpful in this situation is to assist the government and the people of Canada to find a solution. It is not going to be easy to find a solution.

I want to congratulate the minister upon the manner in which he has handled this very difficult problem. A great deal more might perhaps have been done, but taking the situation by and large, with all the difficulties that surrounded it, I think the minister and the British Columbia security commission have made as good a job as could be expected. Perhaps the matter could have been more easily handled if the clearing station which was at Hastings Park had been put outside the defence area at the beginning. However, it might have been difficult to find an appropriate place, and that was not done. Nothing further need be said about it now.

Because this is a question which must be decided on principles, principles I believe such as are laid down in the Atlantic charter, the first thing I am going to do is to make my own position clear and definite beyond the possibility of a doubt either in this house, in my own province or anywhere in Canada.

Canada is at war with Japan. Canada is also at war with Germany and Italy. I see no reason why we should deal with the population of Japanese origin among us any differently from the way in which we deal with those of German and Italian extraction. If we deal with them differently—and we have done so—we do it on account of racial prejudice. So far as I have been able to ascertain: so far as anything that has been said in this house is concerned, the population of Japanese origin in the Dominion of Canada has been just as loyal as any other section of the people; and note this, no other section of the people has been treated in the way that these people have been treated. They have indicated their loyalty and their Canadianism in many ways. They have indicated their loyalty and Canadianism by their willingness to enlist. Very few of them, however, were allowed to get into the armed forces. They have indicated their loyalty by their willingness to work and to produce, and they have indicated their loyalty by cooperation with the government in the difficult task of evacuation from the Pacific coast. So far as I know, there has been no sabotage. There have been no subversive acts. I thought it was rather unkind of the hon. member for New Westminster (Mr. Reid) last evening in his speech, with a great deal of which I agree, to say, in mentioning that there had been no sabotage, that "perhaps" the time is not ripe. They are damned if they commit subversive acts, because there is no doubt then of their disloyalty; but when they do not commit sabotage or subversive acts, then it is not right to say that possibly the time is not ripe. Let us take the fact that the act was not committed as evidence that there was no intention to commit it. That is what we would expect in regard to ourselves, and I think it is part of the Christian creed that we should do to others as we would have them do to us. In the same way, we should think of others as we would like to have them think of us.

I said they were not allowed to enlist, and the reason for that is not one that Canada can be very proud of. They were not allowed to enlist because it was feared that their services to the country would strengthen their claims for the full rights of citizenship after this war was over. The hon. member for Vancouver South (Mr. Green) referred to certain steps that were taken to stop Asiatic immigration. We do not refer to Asiatic immigration now. We do not refer to the oriental question. We merely refer to the Japanese question. Why? Because we are at war with Japan. But after the war the whole question of the oriental population of British Columbia will be there just as it was there before the war began, and we cannot divide it now into watertight compartments. The hon. member for Vancouver South referred to steps taken to stop Asiatic immigration. He referred to what was done in 1923, the Chinese Exclusion Act, and he also referred to the bill introduced in 1938 by the hon. member for Comox-Alberni (Mr. Neill). I was wondering how he overlooked the resolution introduced by myself in 1936. That resolution was very explicit. It was debated in this house for at least a part of two sessions. I will read it:

Whereas it is detrimental to the best interests of Canada that there should be in the country

groups to whom, because of race or religious beliefs, we do not extend all the rights of citizenship;

Therefore be it resolved, that, in the opinion of this house, the government should take the necessary measures to exclude from the country all persons belonging to those groups to whom we do not grant the full rights and privileges of citizenship.

The Japanese belonged to "those groups" mentioned in the resolution; yet every Liberal and Conservative member of this house, alike, voted against that resolution; and the hon. member for Comox-Alberni, in speaking against it, told the house how satisfied he was with the manner in which the gentlemen's agreement between Canada and Japan had worked.

The hon. member for New Westminster, speaking last night, said he was sorry that the Cooperative Commonwealth Federation had brought into political discussion the question of votes for Japanese. May I tell the hon. member for New Westminster that the Cooperative Commonwealth Federation did not bring that issue into the political arena. If it was brought into the political arena and if it became a political issue, it was brought there by those who thought they could use it against the Cooperative Commonwealth Federation. That is how it was brought there. Let me tell the committee how it happened. During the discussion of the Franchise Act in 1934, the late Mr. Woodsworth spoke against the section in the act disfranchising the Doukhobors in British Columbia, and in the course of his remarks he mentioned that he was in favour of extending the franchise to the orientals. This dialogue took place in the house during the discussion:

Mr. Mackenzie (Vancouver): Is the hon. member in favour of enfranchising orientals in British Columbia?

Mr. Woodsworth: I am in favour of enfranchising orientals in British Columbia.

Mr. Neill: Did you say that during the late election in British Columbia?

Mr. Woodsworth: I did.

Mr. Neill: I did not hear of it.

Mr. Mackenzie (Vancouver): Is the C.C.F. in favour of it?

Mr. Woodsworth: Yes.

Mr. NEILL: Go on; finish the sentence.

Mr. MacINNIS: When we say, yes, that is all that is necessary. I did not stop reading it because I did not want to read it; I stopped reading it because I thought—

An hon. MEMBER: He thought there was a catch in it.

Mr. MacINNIS: Let me tell the hon. member that I act on principles. Do not think you will catch me. When you act on principle you do not have to worry about being caught.

Mr. NEILL: It reads, "I will go into your district and tell them." I have it here.

Mr. MacINNIS: If my hon. friend has it there I shall be glad to have him read it; I have mislaid the mark I had showing the page. I have been in British Columbia, a resident of Vancouver, since 1908, or thirty-five years, and I have never known an election yet in which the oriental question was not an issue. It was kicked around by both political parties, each one trying to make capital out of it against the other. But I agree that the question of the franchise did not become a political issue until 1934 when the C.C.F. decided that, because the orientals were brought to British Columbia by greedy employers for cheap labour, it was necessary to raise their standard of living by putting them on a par with white workers. The purpose of the old parties who wanted to exploit both the oriental worker and the white worker was to keep them apart. We decided to raise them to the status of citizenship and extend to them all the rights of citizenship so that they could better defend their own interests and the interests of all workers.

Mr. NEILL: I have that extract, which states:

Mr. Mackenzie (Vancouver): Is the hon. member in favour of enfranchising orientals in British Columbia?

Mr. Woodsworth: I am in favour of enfranchising orientals in British Columbia.

Mr. Neill: Did you say that during the late election in British Columbia?

Mr. Woodsworth: I did.

Mr. Neill: I did not hear of it.

Mr. Mackenzie (Vancouver): Is the C.C.F. in favour of it?

Mr. Woodsworth: Yes;

Then there is a semi-colon. The hon. member stopped reading in the middle of a sentence. Mr. Woodsworth then went on to say:

—there is no doubt about that. I will go into your riding and tell them so; there is no doubt about that.

I also have some letters here from the hon. gentleman himself.

Mr. MacINNIS: Anyone who knows anything about punctuation knows that a colon or a semi-colon is as good as a period. It is amusing to see the attempts that are made to-day to confine this question to the Japanese. If it will help the hon. member for Comox-Alberni, let me say that the C.C.F. has not changed its position since Mr. Woodsworth made that statement. If it does change its position on that question; if it ever discriminates as between race and race, then I shall be no longer a member of the C.C.F.

There are nearly as many Chinese in British Columbia as there are Japanese, and besides that there are some 2,000 East Indians, possibly not that many.

Mr. NEILL: Fifteen hundred.

Mr. MacINNIS: These are the blood brothers of the two million East Indians who have voluteered to fight for this country as well as for their own. Yet when these East Indians went to the legislature in British Columbia, these people who were British subjects before they came to this country, they were denied the right that every British subject should have, no matter in what part of the British commonwealth he may find himself. A few days ago we paid homage in this chamber to a woman, an oriental, one of the loyal Japanese race.

Mr. NEILL: Chinese.

Mr. MacINNIS: Chinese; that was a slip of the tongue. Along with many other members of this house I attended the reception given in her honour by the Chinese minister. I was greatly amused to find my British Columbia friends there sipping their cocktails quite unembarrassed.

Mr. NEILL: Was I there?

Mr. MacINNIS: I did not see my hon. friend. I did not mind that, but I wondered how they were going to square themselves with the Chinese, our gallant allies, when they went back to British Columbia and told them, "You are good enough to fight the Japanese but you are not good enough to have the vote in British Columbia."

The hon. member for New Westminster referred to the objections raised to the Japanese in the United States and he quoted a statement by one Miller Freeman. I do not know who this gentleman is; he may be a quite important person; but some little time ago I noted in the press that an action had been started by the native sons of the golden west in California to have the names of Japanese of United States birth removed from the register voting. The state appeal court consisting of seven judges gave judgment against this action without leaving the bench. I always thought that in the treatment of minorities the British people were ahead of any other nation in the world. I would hate to think that the United States had a better record than ours in this regard.

I have referred already to China and to what that country is doing in the great struggle in which we are all engaged. But there is another country toward which the eyes of the world are turned these days on account of the resistance put up by her people against a relentless foe. I refer to the Union of Socialist Soviet Republics. I was interested to note that one of the sections in the constitution of the Soviet Union provides for equal rights for all citizens. It reads:

> Equal rights for citizens of the U.S.S.R. irrespective of nationality or race, in all spheres of economic, state, cultural, social, and political life, shall be an irrevocable law.

I would not like my country to be behind any other country in those things that put the hallmark of civilization upon people.

The hon. member for New Westminster referred to the fact that some churches had declared against repatriation, while others were in favour of it. I have seen a resolution by at least one church against repatriation, but I have not come across any resolution in favour of the repatriation of persons of Japanese origin in Canada which has been passed by any church.

Mr. REID: The Baptist Church of British Columbia, at a conference in Vancouver, went on record.

Mr. MacINNIS: I have before me *The New Canadian* of May 29, which contains a resolution passed by the United Church of British Columbia at their conference. Referring to what we call repatriation but which for most of the population of Japanese origin in British Columbia would not be repatriation but would be deportation or exile, they have this to say:

> Such proposals as to deport large numbers of people born in Canada or who otherwise have acquired Canadian citizenship, is contrary to the Christian conscience and carries with it natural reactions in a deep threat to unity in Canada and of smoldering ill-will with promise of future wars from outside of Canada.

The resolution went further and said:

> We protest against the selling of private property by the government without the consent of the owners because the people belong to a particular race or are of a particular national origin, and against the application of the law of Canada in a different way with respect to persons due to difference of race or of national origin.

I associate myself completely with the resolution and protest of the United Church. I wonder if, when Franceschini was interned for a short time, his holdings were sold by the custodian of enemy property.

Mr. McLARTY: Yes; the assets of the Dufferin Construction Company were sold to the government of the Dominion of Canada. I can answer that question immediately.

Mr. MacINNIS: They were sold, but not in that way; he carried the deal through.

Mr. McLARTY: There is only one way to sell property.

Mr. MacINNIS: But those properties were not sold by the custodian of enemy property, so far as I have been able to learn.

Mr. McLARTY: Yes; they were sold by the custodian of enemy property and were purchased by the government of the Dominion of Canada.

Mr. NEILL: With regard to the resolution read by the hon. member as coming from the United Church, did he read that from a newspaper or from a letter?

Mr. MacINNIS: I read it from a newspaper.

Mr. NEILL: Well, I saw the same thing in the newspapers and I wrote those people. They wrote back and said it was a mistake, that they had not passed the resolution but had sent it back for reconsideration.

Mr. MacINNIS: If my hon. friend has that letter I should be glad to see it. I do not have it. I took the resolution as it appeared in the newspaper.

Mr. McLARTY: If the hon. member would permit me to ask a question. He quoted from a book in connection with what the Soviet Union was doing. I wonder if he would mind giving the name of the author of that book.

Mr. MacINNIS: The book is "Land of the Soviets" by Marguerite Ann Stewart, edited by Maxwell S. Stewart, cover by LaVerne Riess, a cooperative project between the American council, institute of pacific relations, and the Webster Publishing company, St. Louis, Dallas and Los Angeles.

Mr. McLARTY: If I might ask a further question; is the author of that book the erstwhile secretary of the communist party of Canada?

Mr. MacINNIS: I do not know whether the author of this book is the secretary of the communist party of Canada; I am not acquainted with the communist party of Canada or its officials. But whether or not he or she, as the case may be, is secretary of the communist party, the quotation I read was from the constitution of the Soviet Union, and consequently would not be modified either one way or the other by the political views of the author of the book.

In conclusion, I want to put myself definitely on record as being opposed to what is called repatriation of persons of Japanese origin in Canada. Most of these people, so far as I have been able to learn—the figures are conflicting—are of Canadian birth. I have in my hand the report of a special committee on orientals in British Columbia, made in December, 1940. I believe the chairman of this committee was Mr. Sparling, and the report has been sometimes referred to as the Sparling report. The figures given as to the status of persons of Japanese origin in British Columbia are as follows:

(1) Canadian nationals by naturalization, approximately	2,400
(2) Canadian nationals by birth, approximately	13,400
(3) Japanese nationals, approximately	7,200
	23,000

Mr. STIRLING: Would the hon. member give the date of that report?

Mr. MacINNIS: December, 1940.

Mr. STIRLING: Those figures are entirely different from the figures of the mounted police.

Mr. MacINNIS: These figures are different from those read by the hon. member for Vancouver South, a copy of which I have before me. Those figures are as follows:

Canadian born	6,584
Naturalized Canadians	7,012
Japanese nationals	9,868
United States citizens	16

I thought the figures I was reading were in answer to questions asked by myself, but the hon. member for Vancouver South has just handed me the answers to my questions, which give figures which are also different. These figures are as follows:

Japanese nationals	9,382
Naturalized Japanese	6,497
Canadian born	6,084
Citizens of other countries	12

I said I was opposed to repatriation because it would not be repatriation in the proper sense; it would be deportation or exile for these people. As a Canadian, as a Britisher, I am opposed to that sort of thing. There are reasons why that policy would not be feasible even if we agreed to it. It is very doubtful if it could be done for many years, or at least for a considerable time after the war was over, and then certainly it could be done only in consultation and agreement with the other united nations and under the general policy laid down for the settlement of questions having to do with racial minorities and matters of that kind. In that connection I should like to put on record a statement made by the Cooperative Commonwealth Federation, British Columbia section, in convention in April of this year:

1. That Japanese be now assisted to obtain productive and permanent employment outside

the protected area, and in other provinces at prevailing rates of pay to protect labour standards, and under conditions enabling them to re-settle with their families. This will substantially relieve the present man-power shortage and mitigate against any future concentration on the coast in British Columbia. In this connection attention is directed to the fact that a similar policy is being carried out in the United States, to the point where loyal Japanese-Americans are being enrolled in combatant units of the American army.

In the United States they are taken into war industry, and into all forms of production.

The statement continues:

2. That transfer of investments held by Japanese in British Columbia to other sections of the dominion be facilitated.

3. That education of the Japanese children be conducted in strict conformity with Canadian standards and under qualified Canadian teachers.

At the present time the Japanese who have been moved from the Pacific coast have no teachers other than Japanese. An attempt was made to shut them off altogether from the education facilities of the province, but there was so much objection to any policy of that kind, that it was not gone through with. But the fact remains that while we object to their national schools, we put them in a position where they can get no teachers other than those of their own race.

Then the statement continues:

4. That responsibility for the satisfactory resettlement of Japanese across Canada be fixed now with the dominion government.

I wish to draw that point particularly to the attention of the Minister of Labour. This situation is definitely now the problem of the dominion government. It must deal with this question in a national way; in a way which will be satisfactory to the people of British Columbia and the people of Canada as a whole. We should deal with it, not on a basis of racial prejudice, not on a basis of our present feelings in a time of war, but on the basis that we should extend our hatred to those who have earned it. In this case it would be to the leaders in Japan, to the ruling class in that country. But the innocent should not have our hatred; they should have our assistance and our protection.

Mr. CRUICKSHANK: I am sure the committee will agree that this is a matter in which there is great interest. This is the first time, since I have been a member of the house, that there has been any inducement or encouragement to look toward the staff sitting in front of the minister. We have talked all round the globe. We have made a global trip, touching upon Russia, China and India. I understood we were discussing the Japanese.

We have had quotations from the Winnipeg platform, and now the hon. member for Vancouver East gives us the platform of the Cooperative Commonwealth Federation. I understand the hon. member has definitely stated that his party is still in favour of giving the vote to the Japanese.

Mr. MacINNIS: And to the Chinese; do not forget that.

Mr. CRUICKSHANK: Mr. Chairman, I believe in taking one subject up at a time, not covering the whole globe all at once.

Mr. MacINNIS: The hon. member is very careful about the subjects he takes.

Mr. CRUICKSHANK: And I am not afraid to say what I am going to say now either in or out of my riding. The hon. member for Vancouver East has said definitely that he is in favour of giving the Japanese the vote. Now, I must say I understand why this item appeared in the Japanese Press.

Mr. MacINNIS: The hon. member understands something, then.

Mr. CRUICKSHANK: I would be a very clever man if I could understand the hon. member for Vancouver East. This article is headed:

Jap paper congratulates C.C.F. on Revelstoke win.

Then we find these words:

"New Canadian," an independent weekly for Canadians of Japanese origin, now published at Kaslo, has congratulated the C.C.F. on its "victory in hectic Revelstoke by-election."

The Japanese paper adds:

"To Japanese Canadians who have been agreeably surprised in the past by the democratic and forthright stand of the C.C.F. party regarding racial minorities, the election results defeating the repatriation advocates was a pleasant omen."

I can understand that, after my hon. friend has definitely stated where his party stands.

I do not wish to go into details which have been mentioned by other hon. members and which I have discussed before. The reason why hon. members from British Columbia continue to bring our points of view before the people from the east is that we must do so, or we shall get no action after the war. There were exactly six or seven British Columbia members who secured the removal of the Japanese from the Pacific coast area. Mark that, either six or seven were in battle, day

after day. Finally we convinced the government of the necessity of following the point of view we had advanced. And we certainly got no assistance from the preceding speaker in that connection.

We believed that the rest of Canada should be told our stand in the matter. I must say I have never heard any other hon. member, with the exception of the hon. member who preceded me, talk hatred in any way, shape or form. I do not know of any hon. member from British Columbia, other than the preceding speaker, who has introduced the word "hatred." We had absolutely no hatred for the Japanese, a point which was brought out well by the hon. member for Vancouver South.

It is neither reasonable nor sensible to expect us to handle as many Japanese as we have had, in proportion to our population. So far the rest of Canada has not shown us that it is willing even to assume part of the problem as a defence measure. I am surprised that the hon. member who has so much to say for the minority does not repeat that. We find that the rest of Canada is not prepared, even as a defence measure, to take part of these Japanese during the war. That is the reason why, so far as I am concerned, every time there is a session at Ottawa, and every time there is some excuse, I am going to mention the Japanese problem as it applies to British Columbia.

So far as my constituency is concerned, we do not want them back. And, following up that very line of being fair to the minority, may I say it would not be in the interests of the minority if this or any other governmental department attempted to bring them back. That is not an idle statement. Anyone who knows British Columbia knows it is the truth. Get in touch with the Canadian Legion or any other organization, and find out what they have to say.

For instance, my hon. friend referred to the churches. Well, he did not quote the Baptist convention. I hold in my hand a report appearing in the Vancouver *Sun* of June 18, and I should like to read what the Baptist convention said:

> The convention passed a second resolution criticizing "Those in political and religious life who have shown an exceptional interest in the fate of a very small minority of enemy aliens here in British Columbia."

I should be glad to read the rest of it to my hon. friend, because the *Sun* is a good newspaper. I would advise him to read either the *Sun* or the *Province,* instead of the *Federationist.* If he does so, he will keep up to date in British Columbia. The article continues:

> The resolution stated that "A great proportion of the Japanese minority are not clear in their loyalty to Canada, their land of adoption, and that every member of the Japanese community who is an adherent of the Shinto faith has by that attachment clearly indicated his allegiance to Japan and to no other country."

That is the Baptist convention. I should like to read a few other things, but I want to be brief.

What about this Prince Konoye, or that little rat Tojo—yes, coyote would be good enough. These famous, loyal Canadians, with "B.A." after their names, were the most dangerous ones we had to contend with. What did they say in the Vancouver press? They said that through the kindness of their hearts they permitted us to look down from our office windows on this distinguished Tojo. I am looking up to no Tojo, vote or no vote. The hon. member for Vancouver East said in effect that we ill-treated the Japanese, that we did not give them fair treatment.

Mr. MacINNIS: I said that they were treated differently from any other section of the community, and from any other racial group.

Mr. CRUICKSHANK: I accept the hon. member's statement. I admit that the Japs were treated differently. They were treated a great deal better than most races. I cannot read all of this paper. Part of it is in Japanese. It is called *The New Canadian,* and is dated February 20, 1943. There may be a speech by my hon. friend the member for Vancouver East on the back page. I cannot read all this sheet, but I can certainly read the English part of it, and I see here a federal government advertisement paid for by war bonds and war savings certificates. This is the advertisement the federal government puts in a Jap paper, run by these Japs that we are ill-treating so much! It is a selective service notice! I did not know before that they came under national selective service, but I know what some of the camps are like where these Japs are. I do not think the hon. member for Vancouver East has been to one of these camps. He should go and see them. I have one in my riding. We are paying $500 a month rental for a hunk of woods, with eighteen feet of snow in it, and you cannot get out of it for six months in the year. That is what we are spending each month to look after these Japs that we are ill-treating. There are 2,670 of them in one camp in my riding, and if I belonged to the right party I might get a hold on those 2,670 votes.

The hon. member also mentioned loyalty to Canada and said that we should take the Japs into our army. He said that was done in the United States. Has he read that article in the *Saturday Evening Post* by a United States aviator who was shot down? Has he read of the executions of United States flyers who came down over Tokyo? Did he hear a Canadian girl speaking from Toronto over the Canadian broadcasting system last Sunday and telling of her experiences as a prisoner in Japan during the war? In my opinion you cannot pay allegiance to two countries. You must owe your allegiance to one country and one country only. I would be insulted if I happened to be in Tokyo and anyone accused me of being loyal to Japan. I would still be a Britisher wherever I was and I think the Japs are the same way too. One of our allies has made the mistake, I think, of taking some Japs into their army. We have, I believe, exactly one Jap in the Canadian army. I hope I shall be corrected if I am wrong.

An hon. MEMBER: One too many!

Mr. CRUICKSHANK: One too many! It may be one less vote for some hon. gentleman's party in the next election.

The hon. member for Vancouver East criticized the hon. member for New Westminster and said that there had been no sabotage by the Japs yet. Does he seriously think we should wait until sabotage takes place before we prepare against it? Surely he does not mean that. Fortunately, there has been no particular sabotage by the Japs or the Germans or the Italians in Canada so far, but to suggest that they are loyal simply because there has been no sabotage does not make sense to me. I defy the hon. member to show any organization in British Columbia other than the Co-operative Commonwealth Federation, which has endorsed the retaining of the Japanese in British Columbia. The boards of trade, the women's institutes, the Canadian Legion and every other organization that I know of in British Columbia is not asking, it is demanding that the Japanese be sent out of the country after the war. I am surprised that one particular organization for which I have great respect, for it has recommended a lot of good legislation—

Mr. MacINNIS: I suppose we are doing it for votes!

Mr. CRUICKSHANK: I am glad to hear the hon. member make that statement. I had my own ideas about it. I do not mind the interruption. The hon. member for Vancouver East and I are good friends. We both enjoyed the hospitality of the Chinese consul, and it was intimated to me that I might be asked what my stand would be in connection with votes for the Chinese. I think I stated that after seeing their gracious first lady I would be delighted to join the Chinese army. But I am not here to discuss whether we should give votes to the Chinese or to the Japanese.

I want to bring home to hon. members from every part of Canada this point. I think it is the duty of this government to intimate to us in British Columbia what their policy is in connection with the Japanese problem. We cannot expect this government to lay down a definite policy now; I don't think any government could do that while the war is on, because, as the hon. member for Vancouver East said, there will have to be an international settlement after the war. We all know that, but I think this government should declare to the people of British Columbia what their stand is. Most of the Japs are still left in British Columbia. Make no mistake about this: The security commission is not running the Japanese in British Columbia; the Japanese are running your commission out there. They are telling you what you are going to do and what you are not going to do, and so far they have been successful in getting away with it. Then we have some two-by-four penny-ante official here in Ottawa saying that the people of British Columbia are getting hysterical over the Japanese. I resent that. Mr. Grant MacNeil, a former member of this house, a prominent member of the Cooperative Commonwealth Federation in British Columbia, and a former member of the British Columbia security commission, said publicly that there was no such hysteria. I would fire that penny-ante official in Ottawa to-morrow for insulting the people of British Columbia. We have no saner or more loyal people in Canada than are to be found in British Columbia, and if that two-by-four official is still on the payroll I would not wait until to-morrow, I would fire him out to-night.

I do not want to take up any more time. I am not afraid of any political party in my riding hearing the truth; Fraser Valley does not want and will not permit the return of the Japanese, and the government might just as well face that fact. Any party that is looking for votes from that class will be badly disappointed because we will not have them back in British Columbia.

Mr. STIRLING: It is not my intention to occupy many minutes this evening on this question of the Japanese. The matter has

been debated on many previous occasions, on most of which I have taken part, and there can be no doubt as to where I stand on the question. If we were to look back over the record, I doubt whether we should find a statement better and more clearly made and more comprehensive than that made this evening by the hon. member for Vancouver South. It was entirely fair in that it did not in any sense magnify facts out of their proper bearing. The reason why I rose at all this evening is that I do trust that this debate will not end until the government has made a plain statement with regard to its policy of the future of the Japanese.

I make that plea for this reason, that I represent a riding in the centre of the southern part of British Columbia. Perhaps hon. members will imagine a map of British Columbia suspended from the gallery, and draw a stripe of 100 miles wide down the Pacific coast, which would represent the protected area out of which these 24,000 Japanese were moved, and then will visualize the fact that directly after the treachery of Pearl Harbor some of these Japanese started creeping and seeping out of that area, before ever the British Columbia security commission got into the saddle, and landed into the three ridings which border that stripe—the southern part of Cariboo, the riding of Kamloops, and the constituency of Yale which I represent. I want to endeavour to impress upon the minister the fact that the feeling of anxiety which exists in the minds of the people of the southern part of British Columbia is but a natural one. In the central portion only of the Okanagan valley we had 500 Japanese residents long before Pearl Harbor. When the seepers came in, before the security commission got into the saddle, something like another 500 hived up with the original 500, so that we have a thousand Japanese. On top of that, about six weeks ago a few more entered that central portion as a result of permits which were issued, against the wishes of the population, by the security commission for Japanese to come in and labour.

The people in that interior part look on this question somewhat in this way. From the protected area the 24,000 Japanese have been removed. We have a thousand in the centre of the Okanagan. Far and away the majority of those 24,000 are still in British Columbia, and the 6,000 odd that have been sent across the Rocky mountains into other provinces have been sent in under agreements with the provincial governments, each of which contains the understanding that those who come shall also be sent away. The clause in the agreement has been quoted here this evening. So that the people in my part of British Columbia look at it in this way. The protected area has been emptied, and it has been emptied into our part of southern British Columbia. The voice of the inhabitants of the protected area is stridently in favour of declining ever to see these Japanese go back into the protected area. They realize the time will come when those who have gone into the other provinces will be removed from those provinces. Is it unnatural of them to ask, well, where will all these Japanese go? In the earlier part of the existence of the British Columbia security commission the commission made no bones about it whatever that the most convenient place to get rid of these Japanese from the protected area was to let them settle as soon as they got outside the edge of it, namely in the Okanagan valley and the riding of Kamloops and the riding of Cariboo, and the inhabitants of that part, agricultural land as it is, have no intention whatever of agreeing placidly to the return of the Japanese there.

There must be a solution which will deal with this matter once and for all. For at least twenty-five years it has been so great a difficulty to the province of British Columbia. That is well illustrated by the speech of the hon. member for Vancouver South. The dominion government once, twice, three times, four times prevented the carrying out of these actions that British Columbia decided to take. Let it be recognized at last that this is not a British Columbia question; it is a Canadian question, and if we are to have unity within Canada we must settle the Japanese question this time once and for all.

Mr. REID: There are one or two questions I should like to ask the minister.

Mr. MITCHELL: If I could reply in a general way to some of the observations, and then have the questions after, that might be satisfactory. I am going to be very brief, in view of the lateness of the evening.

In connection with the policy of the government having to do with the removal of the Japanese from the protected areas in British Columbia, my mind goes back a little over a year, when the responsibility for that movement was placed in the hands of the Department of Labour. I think it may be fairly said that in view of the apprehension on the British Columbia coast the Department of Labour has moved with expedition, and might I say, on behalf of the British Columbia security commission, has performed a satisfactory job under very difficult circumstances.

Some criticism has been voiced of certain members of the British Columbia commission.

As I said the other night, I have some knowledge of international affairs, particularly in the Pacific area. When I travelled west to British Columbia for the purpose of setting in motion this policy of moving the Japanese from the protected areas, I say frankly that in view of the situation at Pearl Harbor, in India, Australia, the Straits Settlements, Hong Kong, and the Dutch East Indies, I did not feel a very happy man. The news of course was of a character which I had to keep to myself. Nevertheless we set about the removal of these people. I think it was the hon. member for Vancouver East who said that possibly it would have been better if we had chosen a concentration place other than Hastings Park, but when I got off the plane and looked the situation over, that appeared to me to be the most satisfactory place to use as a dispersal point for these people.

I say, as I said last year, that it is not going to be said about me or my department while I am in charge of the policy of handling Japanese people that we will depart one iota from the kind of treatment of human beings that characterizes the British people and has given them the reputation they enjoy in the world. Let that be clearly understood.

The hon. member for Vancouver East made some constructive suggestions, particularly in connection with education. I say to him that there was no racial prejudice as far as the labour department was concerned in the removal of the Japanese. We moved that number in the manner we did on account of concentration of the Japanese in the protected areas. So far as my department was concerned, no racial prejudice entered into the question at all. At this point, in view of the fact that the British Columbia security commission has finished its labours, and now that the matter comes squarely under the jurisdiction of my department, may I give my personal thanks to the members of the commission for having undertaken a very difficult task. I have found, as I suppose other hon. members have found, that when you have a very difficult task it is sometimes not the easiest thing in the world to assume responsibility. But when the undertaking is completed, criticism is sometimes voiced about mistakes that have been made in the process of execution. So that I pay a tribute to Mr Taylor, Mr. John Shirras of the provincial police, assistant commissioner F. J. Mead of the Royal Canadian Mounted Police and Doctor Hodgins, who was and still is in charge of the medical services to the Japanese people, as well as to the advisory committee, who represented a good cross-section of all political parties and interests in British Columbia.

[Mr. Mitchell.]

Do not forget that to tear up by the roots a community equivalent to a fair-sized city like Guelph was no mean undertaking. We had to provide hospital accommodation, housing and schooling for those people, and all those health measures that are necessary in what we may term a civilized community, and I think it is to the credit of the people responsible that there have been no epidemics among the Japanese. There have been investigations by representatives of the Japanese government, through the Spanish consul in Canada, of the settlements that we have instituted and the policies that we have pursued, and I am glad to say that the representative of the Japanese was completely satisfied, as was the representative of the International Red Cross in Geneva, with the treatment which we have given these people, who at the moment, to all intents and purposes, are wards of the state. I hope that when the war is over and the story is told of our own flesh and blood who are at the moment prisoners of the Japanese, the same thing may be said of the Japanese government with regard to their treatment of our kith and kin who are at present prisoners in their hands.

Something has been said about the expense of the movement. I should like to compare our operations with those of the United States. They had about 110,599 to move to camps. It is true, as one hon. gentleman said, I forget who, that about 5,000 Japanese Americans are in the United States army. The estimated expenditure for a year of the United States government is $70,000,000 for that 110,000 Japanese, and that works out on a per capita basis of roughly $600. The expenditure in the past year by this department for the movement of our Japanese works out at $173.05 per capita. In that connection the economical operation by ourselves was not at the expense of the Japanese. We endeavoured to have a policy whereby from the outset as many Japanese as possible would be self-supporting. We felt, and I still feel personally, that the policy of dispersal is far better than the policy of concentration, and I understand, from advices from our good friends to the south, that they intend to follow a similar policy in that country. I think it is far better to have the grown-up Japanese go to work in a productive way and in turn to support their wives and families than to have them live in idleness in camps, and accordingly we have seen a movement east from British Columbia into other provinces. We see a movement into Alberta, Manitoba, Ontario and Quebec.

I think it is fair to say that in considerable part the fact that we can have the amount of sugar that we have at the moment

is owing to the manner in which the government and its agencies worked in getting the Japanese people to go into the sugar beet fields in Manitoba, Ontario and Alberta. Of course, we have the Japanese building roads in British Columbia and we intend to use them for the cutting of wood.

An hon. MEMBER: Oh, oh.

Mr. MITCHELL: Yes. My hon. friend can laugh. It may be that the Japanese in British Columbia will make it possible for him to keep warm this winter. We are setting in motion a policy whereby we hope—I would not say expect, but hope—to have them cut 100,000 cords of wood for use in British Columbia next winter, and if we are successful I hope that the complaints that came to my department last winter owing to the shortage of fuel in that province will not occur again this winter, so far as wood is concerned.

I should like to pay a tribute to the hon. member for Vancouver South for the contribution he made with respect to the historical background of the Japanese problem in British Columbia. I think it all adds to the sum total of the knowledge which the members of this house have of the problem. I would also thank other hon. members including the hon. gentleman representing the Okanagan district. I know something of the difficulties of the people there and something of their background, and I hope that we shall be able in large measure to meet their wishes. He knows, as I do, something of the complexities of the problem in that part of British Columbia, although numerically it is not a big problem. There is a difference of opinion as between certain sections of the Okanagan valley.

My hon. friends said something about government policy and asked what we are going to do after the war. I think this matter will be settled on an international basis, irrespective of our own personal opinions, irrespective of my own personal opinions, in regard to the matter. We know that eventually, when victory is assured or is ours, there will be a peace conference. No doubt the question of racial minorities in other countries will be dealt with at that conference, not only by Canada but by the major powers engaged in the present conflict. I assume that what will be the agreed policy of all the powers at the peace conference will be the policy of this dominion.

At the moment the policy of this dominion is, first, to keep the Japanese out of the protected areas in British Columbia or in any other province. Second, to find useful work for them so that they will be self-supporting. I think that is a sound policy. While it is not a glamorous policy and one cannot make emotional speeches about it, it is a constructive policy. I think all hon. members will agree that we have been reasonably successful in that direction. Third, as far as possible reduce the concentration of these people in large groups. I think that is a sound policy. When one considers the size of Canada, 23,000 people on a continent—Canada is part of a continent—are hardly more than pebbles on the beach. If there can be that degree of decentralization or dispersal, I do not think even my good friends in British Columbia will worry. Fourth, to see that the Japanese behave themselves, but to treat them fairly if they carry out the regulations as laid down by the government. The next is the international aspect, but I have dealt with that already.

In conclusion, I wish to thank hon. members for the contribution they have made to this debate. I appreciate that in attempting to formulate and undertake a policy as involved as one dealing with the Japanese problem it is a good thing to have suggestions and criticisms from members of this house and from people outside of the house through the members. Hon. members can rest assured that the labour department will do all in its power to face up to the problem in a common-sense, practical and humane way.

Mr. FRASER (Peterborough West): In referring to cordwood, the minister said ten hundred thousand cords; was that what he meant.

Mr. MITCHELL: I am sorry; it should be one hundred thousand cords.

Mr. REID: I am glad I gave way to the minister a few moments ago, because I believe he has given the lie to the statement made by Mr. Trueman who said that the removal of the Japanese had been demanded as a result of mass hysteria and of agitation by some members of parliament. The minister has pictured the situation as he saw it when he went to British Columbia. It was serious and the government acted wisely. It was not on account of mass hysteria. While the danger to-day on the Pacific coast may not be as great, when Pearl Harbor fell no one in this country knew what might happen in British Columbia. Here were 23,000 Japanese, hundreds of whom had bought new trucks which they had filled up with gasoline and loaded with gunpowder. They had the finest maps of the coast and they have eleven hundred fishing boats. Is it any wonder that the people of

British Columbia pictured another Pearl Harbor in that province? One might just as well talk about doing away with the A.R.P. in British Columbia, or on the east coast, as to talk about allowing the Japanese to go back to the coast.

I am glad the minister spoke as he did, because I believe he has drawn a true picture of the situation. I am glad the government moved as it did. Many of us took strong exception to the statement made by Mr. Trueman, who I claim did not know anything about the situation. I have only one thing to say about the speech of the hon. member for Vancouver East (Mr. MacInnis). I think he and others outside the house have failed to recognize the great difference there is in the two races. Whether he believes in what I believe in may not matter, but I want to bring this point forcibly before hon. members of the committee. There is a difference between people of German or Italian extraction and those of Japanese. We have hundreds of thousands of people in this country who are of German and Italian descent, but who in the second or third generation have become good Canadians. But who is going to marry into the oriental group? If they do, what will their progeny be? They will be oriental because that is what has happened whenever mixed marriages have taken place. That is one reason why I have taken this stand against the Japanese in British Columbia.

I may be misinformed, but my information is that the Japanese in British Columbia are under the surveillance of the Royal Canadian Mounted Police, and that they are moved about under a permit system and do not come under national selective service. If that is correct, I should like to know who is responsible for the large advertisement which appeared in a Japanese paper. There is a magazine published in New Westminster called *The Pensioner,* which is distributed throughout British Columbia and Alberta. The publishers of this magazine have tried to get some advertising from the minister's department or the government, but they have been turned down, the excuse given to them being that they are a class newspaper. I shall send the two papers along to the Minister of Labour and ask him how much this large advertisement in the Japanese paper cost. This is an advertisement in connection with national selective service and is over his name and the name of his deputy. Yet we could get no consideration for the old age pensioners' magazine. I should like to know why a white Canadian magazine could not get any advertising from his department.

Mr. CASTLEDEN: It probably attacks the government on account of its old age pension policy.

Mr. REID: I will leave the minister to answer that. When I asked the minister how it was that 115 members of the staff of the British Columbia security commission had been placed under the civil service commission, the minister had this to say, as reported at page 4174 of *Hansard:*

> The first appointments were made by Austin Taylor and his commission. Eventually the civil service went into the matter, and they were finally approved by it.

That is just a blanket statement. I wanted to know who interceded on behalf of these people with the civil service commission. I maintain that the civil service commission would not go out deliberately and take these 115 employees within the purview of the commission, these people whose chief qualifications were that they were friends of either the chairman or members of the British Columbia security commission. The minister must accept responsibility, and I should like to know who told the commission what was to be done. I should like an answer to that question.

Mr. MITCHELL: I do not know whether my hon. friend knows the procedure, but of course the security commission was permitted to take on these people for sixty days, after which they must be certified by the civil service commission. It is just automatic, and I do not know that I can add anything to that. They were not told to do it; it was done automatically. The civil service commission went in there and certified them.

Mr. REID: What about the advertisement?

Mr. MITCHELL: I do not know about that, but I shall be glad to look into it.

Mr. REID: I should like to know why you are advertising in that paper at all.

Mr. MITCHELL: If my hon. friend wants to ask a question on the orders of the day I shall be glad to give him the information.

Mr. REID: It is all very well to say I can ask a question on the orders of the day and probably be ruled out by the Speaker, but now is the time to ask questions in regard to these matters, and I think I am in order. The minister can give me the information privately if he wishes.

Mr. MITCHELL: That is all right, but if my hon. friend will be fair he will realize

that advertising amounting to tens of thousands of dollars passes through the labour department, and to be perfectly frank with my hon. friend I must say that I do not read every newspaper in which advertisements are placed. That would be a physical impossibility. However, I shall be glad to look into the reason why this advertisement appeared in this Japanese language newspaper.

Mr. REID: And why the other newspaper cannot get any advertising?

Mr. MITCHELL: Yes, I shall be glad to do that.

Mr. O'NEILL: There has been considerable controversy this evening with respect to this Japanese question. I may not be able to add anything to the debate, and I may repeat things that have been said already, since unfortunately I was not here throughout the discussion, but there are some things I wish to say so that I may not be misunderstood in my own province.

First, I wish to say that I am most emphatically with those hon. members from British Columbia who say that the Japanese must be repatriated to Japan after the war. I have in my hand a magazine put out by the British Columbia security commission entitled, "The Removal of Japanese from the Protected Areas". It is a fine little magazine, with very nice illustrations, and I think gives a fair outline of the work done by that commission. It is not my purpose to-night to quarrel with the members of the British Columbia security commission or with the work they have performed. However, there are some things I wish to call to the attention of the committee with respect to the Japanese.

When it became apparent that the Japanese must be moved out of the protected area, for very good reasons which were well considered by the military authorities of this country, the government erected some of the finest construction camps it has ever been my pleasure to see. These were in the North Thompson area, really from Blue River to Jasper, and the idea was that these men would be put to work to finish the construction of the highway between those points. Provision was made for the accommodation of about 2,000 men, and they were moved in there. Their accommodation, I may say, was far better than that provided for our own unemployed during the depression period; but what did the Japanese do when they went into that area? They started in to stage a succession of strikes against constituted authority in this country, until it become necessary to move them out of there. Now we have these camps, the finest any working man ever went into, standing idle.

It is said that the Japanese cannot be accused of sabotage. That may be true, but I say to you, Mr. Chairman, that by their constant striking they did everything humanly possible to destroy what the government was trying to do for them. Then the British Columbia security commission had Mr. Trueman look into the situation in the North River area, and report. But what did this same Mr. Trueman have to say about the people of British Columbia? This is his statement:

"The reason for mass evacuation of Japanese from Pacific coastal areas," he declared, "was not because of the Japanese, but because of the white residents. The problem was one of mass hysteria and race prejudice."

That is the man who, I believe, is still in the employ of this government, one of those who advise the Department of Labour and national selective service with respect to the Japanese. I do not see how we could expect any conditions other than those we have to-day when we have giving advice to the department a man who knows absolutely nothing about conditions in British Columbia and, I venture to say, very little about the Japanese people. Let us look at what we do for the Japanese people and contrast it with what we do for other people in this country. I have in my hand a statement submitted by the committee for the legal rights of the Finnish organization of Canada. I have no brief for these people; I am not pleading their case, but I wish to cite these conditions in contrast to the conditions in regard to the Japanese. The brief states:

The question of the properties of the Finnish organization of Canada is becoming more acute as the state of illegality continues. The fact that the people who built these halls and other properties and paid for them, often with great sacrifices from their meagre earnings, are denied the use of these properties although they are anxious to use these halls and other properties to the best interests of the Canadian people as a whole, still continues to be the worst thing in this connection. But as the state of illegality continues other factors are arising which aggravate the situation.

Not only are many of these halls standing padlocked and useless, serving no purpose whatsoever, but they are deteriorating very fast, because they are not heated or looked after otherwise. Many of them have already deteriorated to the point that it is very questionable whether it pays to ever repair them again.

Still worse is the fact that the custodians are not paying the running expenses, interests, taxes, insurance, etc., of these properties. The debts of these properties is thus accumulating and piling up against the original owners. This seems to be the case with most of these properties which are standing useless. It has been brought to our attention that at least in some cases even in places where the halls have been continually used, and the custodians no doubt

have collected the rent regularly, taxes and other expenses have not been paid. Rouyn, Quebec, is one such case, and there are no doubt others. In fact this state of affairs has now developed to the point that municipal authorities are in some cases threatening to sell the halls for arrears in taxes. Sprucedale, Ontario, is one of these places.

These people are Canadian citizens; they are allowed to vote and have all the other rights of citizens in this country, but because they belong to an organization which was considered illegal these things are being done to them. On the other hand we have the Japanese, who are not loyal to this country; who, though they may have been born here and are registered here and are supposed to be citizens of this country, are at the same time registered also as citizens of Japan, a country with which we are at war. This seems a very unfair situation, but that is the condition which exists at the present time with respect to the Japanese. I understood that the Japanese boats were all put under a commission, which had authority to sell them or deal with them in any other way, but they had to keep this Japanese property in shape. On the other hand here is the property of real citizens which is not being looked after. It does seem to me that in these instances the Japanese are being used far better than they have any right to expect to be used by this country.

My principal idea in rising to-night was to place myself on record in support of the other hon. members from British Columbia who have spoken with respect to the repatriation of the Japanese after the war.

Item agreed to.

Payment to the provinces in connection with organizing and operating day nurseries and like facilities, $120,000.

Mr. GRAYDON: This item calls to the attention of the committee a matter which, I believe, has engaged the sympathetic ear of the people of Canada in a way which has not been accomplished by some other items with which we have dealt. It would be in the interests of the committee and of the public if, before proceeding further, the minister would give a statement respecting the operation of day nurseries. I would suggest that he make a somewhat comprehensive statement in the matter, and that in so doing he would be performing a useful service.

Mr. MITCHELL: I have a statement in front of me, but I believe it would be unwise to give part of it now and part of it to-morrow. For that reason I would suggest that we call it eleven o'clock, and that I give the whole statement to-morrow. I would not want to cut it in half.

Mr. GRAYDON: I agree with the minister. This is a matter in which many hon. members are interested.

Progress reported.

On motion of Mr. Mackenzie (Vancouver Centre) the house adjourned at 10.55 p.m.

Thursday, July 1, 1943

The house met at three o'clock.

PRIVILEGE—MR. KNOWLES

REFERENCE TO PRESS REPORT OF SPEECH OF MR. CRERAR AT STONEWALL, MAN.

Mr. S. H. KNOWLES (Winnipeg North Centre): Mr. Speaker, I rise to a question of privilege. The privilege to which I refer has to do with a newspaper report concerning a speech of mine made in this house, in which report there was an entirely incorrect statement, as I shall prove by reference to *Hansard*.

The report to which I refer appears in the Winnipeg *Free Press* of June 29, 1943. The article is entitled, "Aluminum contract defended by Crerar." The portion which I wish to read is directly within quotation marks and is attributed to the Minister of Mines and Resources (Mr. Crerar). The speech was made, according to this report, at Stonewall, Manitoba, last Monday.

"Suppose the government had taken over the Aluminum Company of Canada, as the C.C.F. wanted us to do, what might have been the result? The international cartel might have denied us the use of bauxite and cryolite, two necessary ingredients, and we would not have been able to produce any aluminum.

"I asked Mr. Stanley Knowles in the House of Commons what he would have done under such circumstances. He gave me no answer."

It is in connection with that last sentence that I rise to a question of privilege—the statement that I gave the minister no answer, which, in the light of the record, to me is misrepresentation. I hold in my hand a copy of *Hansard* of June 14. On page 3634 I find the following:

Mr. Crerar: Assuming that the government had stepped in and expropriated or taken over the whole enterprise of the Aluminum Company of Canada on the Saguenay river, what would it have done for raw material? All the raw material that is converted into aluminum in the plant on the Saguenay comes from another country, and we do not and could not control that by any expropriation proceedings.

Mr. Knowles: The answer I make to that is, first, that the raw material comes from Newfoundland and from British and Dutch Guiana, all of which countries are part of or under the united nations.

Then there were certain interruptions, points of order and so on. A little later in the column the Minister of Mines and Resources repeated his question:

Mr. Crerar: The hon. member for Winnipeg North Centre offers strong criticism of the government because it did not do a certain thing. I think I am quite within my rights in asking him how he proposes we should have done it. I ask him how he would have done it.

Mr. Knowles: I take it that the minister has admitted that the aluminum interests had the government on the spot, so that the company could say to the government: This is the world price and you must pay it. And the government agreed to it.

My point, Mr. Speaker, is that the statement that I did not answer the minister's question is entirely incorrect, as *Hansard* bears out. He asked the question twice, and I gave an immediate answer on both occasions.

Mr. MACKENZIE (Vancouver Centre): No answer at all; absolutely none.

Hon. T. A. CRERAR (Minister of Mines and Resources): I do not know if I am in order, but since my hon. friend has raised the question I may be permitted to make a comment on his remarks. I submit still that any reading of *Hansard* indicates clearly, and what my hon. friend has read indicates clearly, that he did not answer the question I asked him. I will put it to him now, and perhaps when he goes out to—

Mr. HANSON (York-Sunbury): Selkirk.

Mr. CRERAR: Well, to Selkirk or Montreal or anywhere else, he will answer it then. I asked him what the government would do if it had taken over the plant and raw materials were denied to it, and my hon. friend did not answer the question. He has not answered it yet, and I venture to say he will not answer it when he goes on the hustings in Selkirk to make speeches.

Mr. KNOWLES: Mr. Speaker, if I had taken time to quote further from *Hansard* I could have shown that I said that the entire properties of Aluminium Limited should be taken over under the National Resources Mobilization Act, and further the minister knows that the properties outside Canada from which the raw materials are taken are owned by Aluminium Limited one hundred per cent, so that we could have taken them over at the same time.

CANADA AND THE WAR

REVIEW OF EVENTS OF RECENT YEARS—76TH ANNIVERSARY OF CONFEDERATION

Right Hon. W. L. MACKENZIE KING (Prime Minister): To-day Canada celebrates the seventy-sixth anniversary of confederation. To-day is also the fourth Dominion day to be celebrated since the outbreak of war. To place our war-time situation in perspective, I should like for a moment to recall the conditions of war in previous years.

On July 1, 1940, the whole free world had been shaken to its foundations by the collapse of France. That was the darkest period in the war. The British nations alone stood—and they stood almost unarmed—against the seemingly invincible nazi war machine. Italy had joined the aggressor, and her armies were poised on the borders of Egypt. Most of the world waited anxiously for some inevitable climax.

The year which followed was the year of survival for the cause of freedom. The seemingly inevitable did not happen. Britain stood, battered but unbroken, against the nazi onslaught.

On July 1, 1941, the character and scope of the war had just been vastly changed by the furious and treacherous nazi assault on Soviet Russia. The minds of free men, deceived for years by lying propaganda, were suddenly called upon to face a wholly unexpected situation. None of the free nations faltered. In that hour, all extended the hand of friendship to the Soviet Union.

In the following year, as the titanic struggle on the steppes of Russia ebbed and flowed, the war in the east was joined with the war in the west. The dastardly attack upon Pearl Harbor made of the war a global struggle.

On July 1, 1942, the war had reached another dark hour. The soviet armies were being driven back; Japanese power had been extended far and wide in southeast Asia, and the islands of the Pacific. The gates of India were threatened by Japan; the Germans and Italians had reached the outskirts of Alexandria. Suez was in deadly peril. On the Atlantic and on the Pacific, enemy sea-power was increasing. The shores of North America were threatened.

The past year, however, witnessed the turn of the tide. In Russia, the Germans were driven back. In the Pacific, Japanese advances were checked. The axis forces were driven completely out of Africa; and on the Atlantic the U-boat menace has, for the time being at least, been greatly reduced.

On this Dominion day, July 1, 1943, the world scene is vastly changed from a year ago. The united nations have everywhere gained the initiative. In the Atlantic, in the Mediterranean, in Europe, in the far east, and in the Pacific—in fact, in every theatre of war, there are substantial reasons for encouragement. The united nations are prepared for even fiercer fighting. They have steeled themselves to endure heavy losses, and to meet reverses and setbacks. All are determined to do their utmost to win. All now believe that their combined efforts will result in ultimate victory.

Each Dominion day in war time has marked steady progress in Canada's contribution to the cause of freedom. In 1940 we had only one division of our army overseas, a mere handful of airmen in action, a few ships on the Atlantic. Air training was only beginning; war production barely beyond the stage of planning and organization.

In 1941, our army overseas had served for a year as a bulwark of Britain's defences in the period of her gravest peril; our trained airmen were already a considerable factor in combat; our navy, greatly expanded, was taking a growing share in guarding the vital north Atlantic sea lanes; our war production and our foodstuffs had proved essential to Britain's continued resistance.

In 1942, our forces on land, at sea, and in the air had still further expanded. Canada's fighting men had continued to keep the world's citadel of freedom secure from invasion. Our fighting men had seen action on every sea and in the air, over almost every battlefront in a world-encircling conflict. Our war production was approaching its peak; our production of foodstuffs reached heights which seemed incredible. Our country was approaching a total effort.

To-day, July 1, 1943, as the united nations everywhere turn to the offensive, Canada is ready to take her full part in the forthcoming combined assault upon the enemy. We have mobilized our production, our forces, and our resources for the great offensive.

The war effort of Canada—on the production lines of the home front, in the skies over many an embattled land, on all the seas around the world, and in preparation for the supreme offensive against the European stronghold of the nazi enemy—is an evidence of our strength and of our purpose. It is an affirmation of our faith in the cause for which all the united nations fight. It is a gauge of Canada's emerging importance among the great nations of the world.

In the course of the last great war, we saw general recognition given to Canada's status as a nation; a status later accorded full recognition at the imperial conference of 1926, and still later confirmed by the parliament of the United Kingdom in the statute of Westminster. In the course of the present war, we have seen Canada emerge from nationhood into a position generally recognized as that of a world power.

In the greetings which have come to the governent from many parts of the British commonwealth, and from foreign countries, this note has been predominant. The consensus is summed up, I believe, in the following paragraphs, which, according to a Canadian Press cable, appeared to-day in a leading London newspaper:

> Britain and the empire join in a salutation on the dominion's 76th birthday.
>
> They hail her not only as a member of our group of peoples, but as a world power in her own right.
>
> Such is the energy of her people that industrially, and by measure of armed power, Canada ranks fourth in all the company of the united nations.

As our contributions to the war effort of the united nations have increased, so also has the stature of our nationhood. We are all proud of the extent to which mutual aid from Canada is helping other allied nations in arms, in the fight against axis aggression. In the years that lie ahead, our country will have responsibilities never hitherto imagined. There will be tasks of helping to feed the liberated peoples whose homes and homelands have been destroyed and despoiled; of joining in the economic rebuilding of shattered national economies, and coordinating them within a world-wide system of interchange of goods and services; of sharing in the ordering of the world community for the future, so that there may be peace and justice, freedom and security for all. These are great tasks for any nation. We are already preparing to take our full share of these tasks.

The realization that we may still be at war when we reach July 1st of next year must certainly colour our thoughts and remembrances on this national anniversary.

The new year of our existence as a dominion, which begins to-day, will witness the supreme effort of Canada. Our people may, in the course of its days, be called upon to pass through an ordeal greater than our country has ever experienced. In that ordeal we know that our fighting men will nobly uphold the honour of our country; that they will display the utmost resourcefulness, fortitude and heroism. The coming months will demand from all of us steadiness, determination and the utmost unity.

After nearly four years of war our country, fortunately, is more united than it has been at any time since the outbreak of war. Canadian workingmen and women, Canadian farmers, Canadian business men, Canadians in all walks of life, have shown their readiness to put the interests of their country and of the world's freedom before their own immediate interests. In a world in which racial strife and racial domination are the instrument and the aim of the enemy, we in Canada have achieved a measure of racial harmony which is surpassed in no other country. It may truly be said that we have built a nation founded on the principles of equality and brotherhood among men. If a new era in which men and women can enjoy peace and prosperity is to be achieved, the application of these principles must be extended to the relations of all nations with one another. By our strength in war, and by our understanding and cooperation in peace, Canada can contribute mightily to the building of a better world.

To-day it is the prayer of the people of Canada that the Divine Power which has guided and guarded our country throughout the years of its growth may sustain our armed forces in their endurance of bitter conflicts, may give courage to our homes during the period of supreme trial that already is so nearly upon us, and may endow all the forces of freedom with the power and wisdom necessary to secure for mankind a just and enduring peace.

Mr. GORDON GRAYDON (Leader of the Opposition): Mr. Speaker, on this memorable and historic occasion, as we pass another milestone along the pathway that has led us from confederation to this day it is with no small feeling of pride and of responsibility that I rise to add a word to what the Prime Minister has just said.

It is a sobering thought, and I could not help but think how sobering it was as I listened to the Prime Minister this afternoon, that perhaps in this seventy-seventh year of our Canadian federation, upon which we are now entering, we, the Canadian people, may be called upon to endure an ordeal such as this country has never before experienced. Since the year 1915 on eight different occasions, including to-day, we have celebrated Dominion day in the midst of a global war. We have been engaged in two global wars since we celebrated Dominion day in 1915. We can all at least hope and pray that whatever may lie ahead, whether or not it may bring the peace for which we are all looking, in the holocaust through which we must go before the rays of the sunshine of peace fall upon us, the Canadian people will carry the burden in the historic and traditional way of Canadians in years gone by.

Canada so far in this war has enjoyed relative security compared with many of our allies among the united nations and the British commonwealth itself. We have been spared some of the sorrows and sufferings which our allies have had to undergo. But as we celebrate the anniversary of confederation—and may I say, sir, that we celebrate it not simply as English-speaking and French-speaking Canadians, but as Canadians all, whatever our extraction—I am proud as a Canadian to join with the Prime Minister in marking this important occasion.

I should like to close with this reference. In the midst of our thoughts are the members of our armed forces, our soldiers, our sailors and our airmen. They have written in the past and are writing now and will write in the days to come glorious pages in the history not only of Canada but of the British commonwealth of nations—yes, and of the world too. As we send them our greetings, whether they be overseas or in Canada, we wish them godspeed and good luck. To their loved ones left behind, and to those who have already lost some of their dear ones in this war, we extend as a parliament our condolences.

I think parliament too must pledge to the men of our armed forces, to whatever branch they may belong, unanimous support to the full limit of this country's resources in manpower, materials and finance in the perilous task in which they are engaged for the sake of all of us. We owe them a debt of gratitude which it will be very difficult for us in the years to come to pay. But we must resolve as a people to pay that debt, no matter how much it may be.

We are proud indeed as Canadians, as we look upon the past and assess the present and face the future, to feel, as the Prime Minister has said, a new power within ourselves from the position we occupy in the great British commonwealth of nations and in the world at large.

Mr. J. H. BLACKMORE (Lethbridge): I have always rejoiced in the coming of Dominion day; for I have always been proud of our country, Canada, and have always been glad to contemplate the great future which can be in store for Canada if we manage our country wisely. It is a cause for satisfaction to all Canadians that Canada has attained national status; that she has become a world power; that she is now recognized as the fourth among the world powers. It is cause for deep satisfaction that we have almost boundless responsibilities in the world which is to come—responsibilities for the feeding of the peoples of the world, and for the rehabilitation of the world. But while we are rejoicing in what has been achieved; while our hearts are swelling with gratitude for what

has been done in our behalf, I trust that on this fateful day we shall not allow ourselves to be lulled into complacency with respect to the things that are ahead. Not only must we win this war; we must win the peace, and the foundation of that peace must be laid right here in this parliament, this year.

I am sorry to have to say, and I trust it will not mar the spirit of this occasion, that up to the present time there has not been one single, solitary fundamental principle laid down by which the reorganization of a sound and safe world may be undertaken. The all-important problem for the Dominion of Canada, as for the world as a whole, is to learn how to distribute goods both within this country and among the nations. Until the Prime Minister can stand in his place and tell us that this problem has been solved, that the principle upon which the solution depends has been discovered and that he will adopt that principle, most of his beautiful speeches will remain just beautiful speeches.

The men are doing their share. On many occasions I have expressed reverence for the youth of this land; they have conducted themselves magnificently. I am not going into details to show how little right we had to expect the glorious achievements that our boys have brought about, but in spite of the handicaps under which they were placed they have achieved greatly, and an everlasting tribute of gratitude is due from all the people to the youth who have risen to such heights. My only concern, Mr. Speaker, is as to whether or not the men at home are to be worthy of the youth who have gone to fight our battles, or whether they are to betray those youths when they return, as they have already betrayed them into war.

Canada can contribute a glorious share to the future of the world. The important question is whether she will do so, or whether, when this war is over, she will plunge into fierce commercial rivalry. Is Canada preparing to-day to engage in genuine cooperation, or is she preparing for commercial rivalry? That question should be answered; and if the answer is that she is looking forward to commercial rivalry, then on this Dominion day we are far from having attained the degree of perfection which we should have attained.

There is great hope for the future. When the war broke out I said we must not expect to be destroyed. There is a splendid future in store for us if we are but wise enough to know how to enter into the promised land. If we cooperate with the members of the British commonwealth of nations as we could and should, we can build a greater and stronger commonwealth and empire than has ever been dreamed of during its long history. If we do not cooperate, we shall be on the way downward with respect to the empire. If Canada and the members of the commonwealth and the United States can learn to cooperate as they should, then we can assure the world freedom from war in our own right, as an Anglo-Saxon race associated with the friends who are within our gates. The question for us to ask ourselves is whether we are to discover the principle upon which true cooperation is based.

May I, sir, join with those who have already expressed solemn gratitude to the boys and girls who have gone forth to fight this war, to defend the principles of freedom, to defend us and all that we hold dear. May I join also in the note of reverence with which the Prime Minister concluded his remarks. I feel that we should be filled with the deepest thanksgiving to-day to the God of our fathers who has thus far guided our destinies through this dreadful conflict and given us the hope which we are now able to enjoy. In these two respects I wish to join with those who have already spoken, in expressing profound gratitude and thanksgiving on this Dominion day.

Hon. LOUIS S. ST. LAURENT (Minister of Justice) (Translation): Mr. Speaker, may I also, as a Canadian who is proud of a title which befits all of us, of whatever racial extraction, be permitted to add just one word?

This is the anniversary of the birth of the Canadian confederation and on this occasion I deem it appropriate—and I am sure all hon. members of this house have the same feeling—to emphasize that the term "Canadian" applies to the citizens of a nation whose parliament is bilingual.

I shall not attempt to summarize again in French the events which have marked the last four anniversaries of our confederation. If I refrain from doing so, it is for the simple reason that both languages are official, and because what is said in one language does not need to be repeated in the other language; it is said to all. I wish particularly to associate myself with the noble statement made by the right hon. the Prime Minister (Mr. Mackenzie King) to the effect that our young nation intends to fulfil ever proudly her part as a member of the united nations, everywhere recognized as a full grown, important and *sui juris* member of the family of those great nations which are to-day united in defence of liberty and Christian civilization, which constitute the most treasured heritage of each of them.

Mr. ANGUS MacINNIS (Vancouver East): In the absence of the leader of this party it is appropriate that I should say a word for our group on this anniversary of confederation. We should be thankful indeed for the improvement in the war position to-day as compared with 1940. I doubt if any member of this house can ever forget the dark days of the summer of 1940. I am sure I can never forget them, because they were the most terrible days I ever experienced.

In considering the improved position to-day I think we should try always to keep in mind how we arrived at this position. We have reached our present position through the cooperation of all the people of the united nations. It was not the work of governments; it was not the work of industrialists; it was not the work of this class or that class. It was the welding together into one whole of the combined efforts of our people for a common purpose. In that, and in that alone, lies the hope of the future. If after this war is over, if after peace comes we are not able to continue this cooperation, then I am afraid all we shall have won through suffering and bloodshed will be lost.

The Prime Minister spoke about the great achievements of this dominion, and mentioned that we have now reached the status of a great power. I believe that we have; and having reached the status of a great power we have immensely increased our responsibilities. We must no longer in the councils of the nations allow other people to make our foreign policy for us. We must exercise the power which we have now obtained.

In the reading of history I have not derived comfort from the achievements of the great powers. I do not think any great power to this day has used its power for the good of humanity. Power has been used for the creation of empires. Empires have not always been used for the welfare of humanity. If we are to be great, if we are to achieve greatness in the future, if we are to have peace and harmony, then we shall have to stop thinking of empire and begin thinking in terms of a world community—not Anglo-Saxon, not of only English-speaking races, but of the whole world.

Mr. GRAYDON: The hon. member will not forget the empire, will he?

Mr. T. L. CHURCH (Broadview): Mr. Speaker, I should like to say a few words in support of the splendid addresses of the Prime Minister (Mr. Mackenzie King), the leader of the opposition (Mr. Graydon), the leader of the Social Credit party (Mr. Blackmore) and the hon. member who spoke on behalf of the Cooperative Commonwealth Federation (Mr. MacInnis). They have rewritten to-day the axiom laid down by Sir John A. Macdonald at Kingston in 1844, with respect to the destiny of this country. I was pleased, too, to hear the Minister of Justice (Mr. St. Laurent) speak on behalf of French Canada.

Four years ago we were honoured by the visit of the king and the queen. The tremendous popularity of the monarchy was clearly demonstrated in all the provinces; in Quebec the school children turned out in such large numbers to welcome them. We are fighting this war for the right to live, but we must not forget the peace terms. The little man who saved England and who fought at Dunkirk will have something to say about those peace terms. And unless we as a dominion remain part of the British empire we shall have very little to say at the peace table. Let us not forget that we are allied with two powerful and imperialistic nations, the United States, and our great ally Russia. They may not be imperialistic in the sense that they want to grab more territory; that remains to be seen. There are many leading men, however, in those countries who do want extra territory. I say, however, that they are imperialistic only in the sense that they want to have a large share in world affairs and in the stipulation of the terms of peace.

Great Britain cannot exist after the war without the dominions. She needs them, as they need her. She has been the good Samaritan during this war to all the nations. Unless we remain closely allied with her she will become only a second class power after the war, and we shall have little or nothing to say about the terms of peace.

In this war we are fighting as an empire on the side of humanity, liberty, freedom and civilization. We will remember that the British Prime Minister said that he had not become prime minister to preside at the liquidation of the empire, or to let the empire go by default. If that were to happen, the mother country would become a second class power, at the edge of Europe.

I rejoice that this message of hope is to be sent to our troops at the front, and it pleases me that those of us who are working in the House of Commons have taken this opportunity to pay tribute to the glorious record of the mother country down through the ages, and to the part the dominions have played.

Mr. MACKENZIE KING: Mr. Speaker, I suggest this would be the appropriate time and occasion for hon. members to join in the singing of *O Canada*.

Whereupon the members of the house rose and sang *O Canada*.

PRIVATE BILLS

FIRST READINGS

Bill No. 111, for the relief of Gertrude Mantha Hore.—Mr. Fulford.

Bill No. 112, for the relief of Claire MacLaren Hunter Barlow.—Mr. Ross (St. Paul's).

Bill No. 113, for the relief of Mary Constance Helena Keys Bates.—Mr. Claxton.

QUESTIONS

(Questions answered orally are indicated by an asterisk.)

SUGAR FOR CANNING PURPOSES

Mr. CRUICKSHANK:

1. What amount of sugar for canning purposes has been allotted per individual in each rural and urban ration centre in Canada?
2. What was the average amount of sugar used per housewife for canning purposes in each of the years 1939, 1940, 1941 and 1942?
3. Upon whose advice was the amount set in rationing of sugar for canning purposes in rural and urban districts this year?
4. What experience has such person or persons in practical canning?
5. Were women's organizations consulted? If so, which of them?

Mr. ABBOTT:

1. Sugar for canning purposes was allotted to the various local ration boards on the basis of 11·34 pounds per applicant.

2. The average amount of sugar used per housewife for canning purposes in 1939, 1940 and 1941 is not available. According to statistics prepared by the ration administration, 106,179,000 pounds were used for home canning purposes during 1942.

3. The home canning programme was decided upon after discussions between the sugar administration, the foods administration, the consumer branch, the ration administration of the wartime prices and trade board and the Department of Agriculture.

4. The questions to be decided related to sugar distribution and the mechanics of rationing, rather than the method of canning.

5. The foods administration, the ration administration, the consumer branch of the wartime prices and trade board and the consumer branch of the Department of Agriculture each had a woman representative attending these discussions.

YOUNGSTOWN, ALTA., DEFENCE PROJECT

Mr. QUELCH:

1. What is the purpose of the proposed defence project immediately north of Youngstown in Alberta?
2. How much land does it embrace?
3. How many farmers were situated in this area?
4. Have any farmers been moved out?
5. Has it been decided to abandon this project?

Mr. MACMILLAN:

1. An explosives depot.
2. It would have embraced 11,840 acres.
3. No resident farmers situated at site selected.
4. No. Farmers only held leases and grazing permits. Other owners not resident on land.
5. Yes.

R.C.A.F.—ENLISTMENTS—NURSING SISTERS

Mr. HANSON (York-Sunbury):

1. What is the distribution of Royal Canadian Air Force enlistments and appointments by provinces from October 1, 1939, to May 31, 1943?
2. How many of said enlistments and appointments are nursing sisters, and how many nursing sisters are there in each province?
3. Do the figures include the overseas enlistments?
4. What is the basis of transformation of enlistments?

Mr. MACMILLAN:

1. Distribution of R.C.A.F. enlistments and appointments by provinces as at 31st May, 1943:—

Province	Number
Prince Edward Island	1,407
Nova Scotia	6,216
New Brunswick	5,468
Quebec	22,554
Ontario	76,209
Manitoba	17,642
Saskatchewan	18,289
Alberta	16,691
British Columbia	18,806
Total	183,282

2. 286 nursing sisters distributed by provinces as follows:—

Province	Number
Prince Edward Island	3
Nova Scotia	12
New Brunswick	11
Quebec	23
Ontario	104
Manitoba	42
Saskatchewan	29
Alberta	41
British Columbia	21
Total	286

3. No.

4. Transformation of enlistments by recruiting centres into enlistments by provinces is based on 80 per cent sample of R.C.A.F. strength as at the end of 1942. In other words, enlistments in the first five (5) months of

1943 have been assumed to be in the same relative proportions by provinces as was revealed in an accurate count taken at the end of 1942, and which covered 80 per cent of R.C.A.F. strength at that time.

NATIONAL BREWERIES LIMITED—REPATRIATION OF SHARES

Mr. NICHOLSON:

1. What is the value of the shares of National Breweries Limited formerly held by residents of Great Britain which have been repatriated to this country?
2. What has been the total value of these shares sold to Canadian investors?
3. What disposition has been made of the balance?

Mr. ABBOTT:

1. $669,175.
2. $669,175.
3. Answered by Nos. 1 and 2.

RECEIVER GENERAL OF CANADA

Mr. HANSELL:

1. Who holds the position of Receiver General of Canada, and where is his office located?
2. What are the duties of the Receiver General of Canada, and what is his salary?
3. Does he occupy any other government positions? If so, what remuneration does he receive for each of these positions?
4. How many are on the staff of the Receiver General, and what are the classifications of these positions?

Mr. ABBOTT:

1. Hon. J. L. Ilsley, East Block, Parliament Buildings, Ottawa.

2. The Department of Finance and Treasury Board Act (chap. 71, revised statutes of Canada, 1927) provides that "there shall be a department of the Government of Canada, which shall be called the Department of Finance, over which the Minister of Finance and Receiver General for the time being, appointed by the Governor General by commission under the Great Seal of Canada, shall preside . . .". Salary of Minister of Finance and Receiver General is $10,000 per annum.

N.B.—For some years after confederation the office of receiver general was a separate office distinct from that of the Minister of Finance but this separate office was abolished in 1879. Section 1 of Chap. 7 of the Statutes of Canada, 42 Victoria, reads as follows:

"The following provisions of this Act shall come into and be in force on and after a day to be fixed by proclamation under an order of the governor in council.

The Department of the Receiver General shall no longer be a separate department of the civil service of Canada and the office of receiver general shall no longer be held by a separate member of the government of Canada, but the Minister of Finance shall be also ex-officio receiver general, and shall as such, in addition to those of the Minister of Finance, have the powers and be charged with the duties which the receiver general now has or is charged with; and he shall have and be charged with such other duties generally as may be assigned to him from time to time by the governor in council; his name of office shall be "Minister of Finance and Receiver General"; and the expression "Minister of Finance" or "receiver general" in the act passed in the forty-first year of Her Majesty's reign, and intituled "An act to provide for the better auditing of the public accounts", or in any other act or document, shall hereafter be construed and have effect as meaning the "Minister of Finance and Receiver General".

3. Answered by No. 2.

4. The staff of the receiver general is the same as that of the Minister of Finance. See estimates for details of salaries and positions of the Department of Finance.

QUESTIONS PASSED AS ORDERS FOR RETURNS

NATIONAL FILM BOARD

Mr. HANSELL:

1. What are the names of the members of the national film board?
2. What is the organizational set-up of the board; how many are employed, and in what position?
3. How many films have been released to, (a) motion picture theatres; (b) for other uses?
4. How many films in the Canada Carries On series have been released up to the 31st May, 1943?
5. What remuneration has been received from motion picture theatres for use of films up to May 31, 1943?
6. What was the total cost of the national film board, and its work for each year of its operation?

SOLDIER SETTLERS—QUIT CLAIMS AND REPOSSESSIONS

Mr. FAIR:

1. With respect to soldier settlers who signed quit claim deeds or who were served with thirty days' notice of repossession between April 1, 1941, and March 31, 1943, what was the date of the original purchase of the land in each case?
2. What was the original purchase price?
3. What amount was advanced for implements, stock, etc.?
4. What amount was paid by each settler on account of his loan?
5. What amount was written off in each case?
6. How many acres of new land were brought under cultivation?
7. What was the valuation of the land and improvements at the time of recision of the contract either by quit claim deed or thirty days' notice?

Mr. CRERAR: I should like to say a word to my hon. friend about this question. There

will be about 330 accounts affected, and it will be necessary to go back for twenty years to get the information. There is not the slightest objection to bringing it down, but it will be some considerable time before the information can be got together. Perhaps on that basis it might stand as an order for return.

HALIFAX HOTEL PROPERTY

INQUIRY AS TO PURCHASE OR LEASE BY THE GOVERNMENT

On the orders of the day:

Mr. P. C. BLACK (Cumberland): I should like to ask the Minister of Justice if he is able to give the answer to the questions asked by me on Monday of this week with regard to the purchase of the Halifax hotel.

Hon. L. S. ST. LAURENT (Minister of Justice): I have not all the details available. An order for a return in this connection was passed on June 21, with respect to which the information available in the Department of Justice has been transmitted to the Secretary of State, who is making inquiries from other departments, because the order covers all properties acquired by any department of government. However, I may say that the purchase of the Halifax hotel with furnishings was completed on June 23, at a price of $100,000.

Mr. HANSON (York-Sunbury): That is what you call salvage.

Mr. ST. LAURENT: I must confess that I do not know what my hon. friend is referring to as salvage.

Mr. HANSON (York-Sunbury): The public will be interested.

Mr. ST. LAURENT: This is a property that was required for the use of the R.C.M.P.

Mr. HANSON (York-Sunbury): Salvage; over a hundred years old.

Mr. ST. LAURENT: If my hon. friend wishes to answer the question in my stead, I am perfectly willing to take my seat.

Mr. HANSON (York-Sunbury): I do not want to be discourteous, of course. If I have been discourteous, I apologize. The interjection flashed through my mind and it was too good to let pass.

Mr. ST. LAURENT: This property was purchased to house ninety men at present lodged and boarded by Wartime Housing Limited in Halifax. Other personnel located in various parts of the city will also be housed in the same property.

[Mr. Crerar.]

Mr. BLACK (Cumberland): I wish to thank the minister. If I remember correctly, inquiry was made as to the estimated cost of improvements and furnishings.

Mr. ST. LAURENT: There are practically no alterations required. There is a very small amount—I would not venture to give the exact figure from memory, but it will be in the return which will be available within a day or two—to be paid out for minor repairs in addition to the purchase price, which purchase price included the property and the furnishings.

LABOUR CONDITIONS

THREATENED STRIKE IN CAPE BRETON MINES

On the orders of the day:

Hon. R. B. HANSON (York-Sunbury): I should like to direct a question to the Minister of Labour. It will be recalled that there was a strike in five mines on Cape Breton island over a most trivial matter but which resulted in a loss of production of 10,000 tons of coal. I am informed from Sydney that there is a threat hanging over this government or over the powers that be to the effect that if this strike is not settled there will be a two-day strike next week which will mean a loss of 20,000 tons in production. This situation ought to be dealt with. I want to know what the Department of Labour is doing to prevent a repetition of something that should never have been allowed to happen last week. It is serious, and it may be more serious if the situation is not dealt with. To my mind there was not the slightest reason for a cessation of work there.

Mr. MITCHELL: There was a strike in a cafe—

Mr. HANSON (York-Sunbury): I know the cause of it; what are you doing about it?

Mr. MITCHELL: As soon as we had information of the strike at this particular cafe, I believe in New Glasgow—

Mr. HANSON (York-Sunbury): The strike I am talking about was in the mines.

Mr. MITCHELL: We immediately sent a conciliation officer and it was agreed among the parties that this came under provincial jurisdiction.

Mr. HANSON (York-Sunbury): Passing the buck.

Mr. MITCHELL: There was no passing the buck; let that be clearly understood. In view of the observations made by my hon. friend I shall be glad to have one of our conciliation officers look into the matter.

NATIONAL ANTHEM

"GOD SAVE THE KING" AND "O CANADA"

On the orders of the day:

Mr. T. L. CHURCH (Broadview): I have a question I should like to ask the Prime Minister. Just before the war broke out in 1939 when we were being visited by the monarchy I asked the Prime Minister what was the national anthem of Canada. He replied, quite properly, that "God Save the King" was our national anthem. I asked if there was any other, and he said there was another provincial anthem, as I understood it, "O Canada." I contend that that was just the same as "The Maple Leaf Forever" or any other sectional anthem sung by any of the other races. Parliament has all along refused to change our flag and parliament refuses to change our anthem. Our only national anthem is "God Save the King," and why the other anthem was sung to-day I do not know. It is not the national anthem. Why was not "The Maple Leaf Forever" sung? Have we two national anthems? If so, who authorized them?

Mr. HANSON (York-Sunbury): Let us sing "God Save the King" now.

Mr. MACKENZIE KING: If my hon. friend does not know why "O Canada" was sung to-day, I can only say that I am very sorry for him. Perhaps my hon. friend if he wishes further information will put a question on the order paper with respect to matters pertaining to flags and anthems. There are already several on the order paper which I have not answered as yet.

Mr. CHURCH: There is only one national anthem—"God Save the King".

JEWISH REFUGEES

INQUIRY AS TO AID TO BE GIVEN BY CANADIAN GOVERNMENT

On the orders of the day:

Mrs. DORISE W. NIELSEN (North Battleford): I should like to ask a question of the Prime Minister because of several inquiries which have come to my desk. Would he let us know when he intends to make a statement with regard to the aid Canada may give to Jewish refugees?

Right Hon. W. L. MACKENZIE KING (Prime Minister): I should like to be able to oblige the hon. member, but I cannot say how long the present discussions are going to take. When we have made progress with some matters which are on the order paper I shall be making a statement on external affairs. I hope it will be soon.

REDISTRIBUTION

PROPOSED AMENDMENT OF BRITISH NORTH AMERICA ACT—CONSIDERATION ON MONDAY NEXT

On the orders of the day:

Mr. J. SASSEVILLE ROY (Gaspé): I wish to direct a question to the government. There are persistent rumours, which have found their echo even in the newspapers, to the effect that the government is about to withdraw the resolution which has appeared on the order paper for the last few weeks, in the name of the Minister of Justice, for the purpose of amending the British North America Act as regards redistribution. As it is a matter of very great importance, the people of this country wonder if this rumour has any ground. Has the government considered the advisability of withdrawing this resolution, and if so, when does the government intend to proceed with the redistribution in conformity with the constitution and the 1941 census?

Right Hon. W. L. MACKENZIE KING (Prime Minister): The hon. member's question as he has expressed it has gone beyond the point of a mere question. I shall not therefore attempt at present to answer specifically what he has asked, but I would say to hon. members that I have felt that the government should not lose further time in getting before the house the resolution on the order paper in respect to the amendment of the British North America Act. I had intended to confer this afternoon with the leader of the opposition (Mr. Graydon) opposite and ascertain if he would be willing to agree, and I hope other hon. members will be willing to agree, to have it understood that on Monday next we would take up that particular order. The house will realize that the action this parliament takes if the resolution is adopted will require further action on the part of the parliament at Westminster. It is inadvisable to delay that much longer. The discussion of the resolution should not take very long. I would hope with the consent of the house to make it the first order for Monday next.

WAR APPROPRIATION BILL

PROVISION FOR GRANTING TO HIS MAJESTY AID FOR NATIONAL DEFENCE AND SECURITY

The house resumed from Wednesday, June 30, consideration in committee of a resolution to grant to his majesty certain sums of money for the carrying out of measures consequent upon the existence of a state of war—Mr. Ilsley—Mr. Bradette in the chair.

DEPARTMENT OF LABOUR

Payments to the provinces in connection with organizing and operating day nurseries and like facilities, $120,000.

Hon. HUMPHREY MITCHELL (Minister of Labour): The leader of the opposition (Mr. Graydon) when the house adjourned last night suggested that I should make a complete statement on this item, which I am now prepared to do.

While at all times there is undoubtedly division of opinion in Canada on the subject of mothers of young children working in industry, I think it is fair to say that the majority opinion tends to favour mothers remaining in the home rather than working, where at all possible, and the mothers' allowance acts of the various provinces have been designed with this objective in view.

Whatever might be said of normal times, war conditions must of necessity of course temporarily change our views with regard to many peace-time practices. Because of manpower and woman power shortages it is necessary to accept the offer of services in industry made by mothers with children, and in some cases it is even necessary to encourage these women to accept industrial employment as an aid to our national effort. Nevertheless, the policy of the Department of Labour is to put emphasis on single women or married women without children accepting industrial employment in the first instance. Of course at all times some mothers must work by reason of domestic circumstances. This is apart from cases where any industrial demand may require their services.

Fully recognizing the problem which arises in regard to the care of children when mothers are engaged in industry, and realizing that their numbers will gradually increase as long as the war lasts, the government believes that special arrangements should be made for the care of the children of mothers working in war industries. The provincial governments were approached, and we received advice that at the moment there was no need of special arrangements except in the provinces of Quebec and Ontario. Further correspondence has taken place from time to time with the other provinces.

On June 16 of last year a conference was called in Ottawa and attended by the ministers and the deputy ministers of public health and welfare in Ontario and the department of health and social welfare in the province of Quebec. With the full and sympathetic cooperation of the provincial governments, a proposed agreement was discussed.

Prior to this conference many meetings were held with experts in the field of child care. Among others we were indebted to Doctor George Davidson, executive secretary of the Canadian Welfare Council, and Doctor Karl Bernhardt, acting director of the Institute of Child Study, and to the International Labour Office for their comprehensive summary of systems of day care established throughout the world.

We decided upon a high standard for the day care centres, believing that over a period of time, the expenditures would be well worth while. Health and nutrition services, staff and equipment, were to meet an agreed upon standard.

An order in council passed on July 20 authorized the Minister of Labour to enter into an agreement with any of the provinces for the day care of children. Agreements have already been signed with Ontario and Quebec, the former on July 29 and the latter on August 3, 1942. All other provinces have had the agreement submitted to them. Surveys are being made from time to time by the provincial departments and the social agencies to study the situation and agreements will be signed when the need arises.

The agreement provides for:

(1) Day nursery care for children two to six years old.

(2) School supervision, outside of school hours, of children over six years old.

(3) Foster home care for children when nurseries are impracticable.

(4) A provincial committee with dominion representation and also local committees. All committees represent labour, community welfare, health and educational interests.

All of these plans are developed on a fifty-fifty cost basis between the dominion and the province, less the amount contributed by the parents. We decided that the parents should pay a fee. In general the parents pay 35 cents a day for one child and an additional 15 or 20 cents for other children from the same family. In the school plan the mother contributes 25 cents a day for the first child and an additional 10 cents for other children from the same family. These rates set out in the agreement are not hard and fast and may vary somewhat, according to the unit and circumstances. Our aim is to keep them sufficiently low for the parents to afford them.

In order to keep in touch with the need, our local employment and selective service offices have been directed to cooperate with local committees and provincial authorities

and, in addition, to keep the federal department informed. There is a constant exchange of information, and one of our federal officials confers frequently with the provincial authorities.

In Toronto, as well as in Montreal, an officer, formerly a social welfare worker, devotes all her time to interviewing mothers who seek work and making arrangements for the children to have day care if such is required.

A sample survey was made over a period of some weeks, and it was found that approximately eighty per cent of working mothers made their own arrangements for the care of their children, with the help of relatives, et cetera, and each mother must be approached before the real need is known.

When I was in Great Britain recently I made inquiries as to the system of day nurseries and child care which is in operation there, and the information I received was that it was slow in getting under way for the reason that most mothers prefer the child to be looked after either by the mother-in-law or by friends or by some member of the family. I take it that the same is true of Canada, more so in view of the fact that we have not had such long experience in these matters. I believe that accounts for the result of this study, in which it is indicated that eighty per cent of the mothers prefer to have their children looked after either by relations or by friends. This explains the fact that in many centres where the need would seem to be apparent a survey will show no actual need. Through the employment office, the provincial government or committees of social agencies, inquiries have been made in Kitchener, London, Windsor, Welland, Niagara Falls, Kingston, Ottawa, Collingwood, Guelph, Belleville, Vancouver, Victoria, Trail, Alberni, Fort Erie, Edmonton and several other places, where it is felt the situation may warrant day care centres. In cooperation with the provincial governments, the situation will be met as it arises.

When twenty children are registered or likely to be registered, plans are drawn up by the local committee. These, with the estimate of expenditures, are submitted to the federal government and approved with the least possible delay. We are usually informed of the situation previously and the inspection has already been made.

Serious consideration was given to the clause in the agreement which defines the scope of the project. Child care is normally the responsibility of the province, in cooperation with its local groups. However, it was felt that the federal government should assist by sharing with the provinces the additional burden caused by war conditions. This would of course relate chiefly to war industries. The interpretation of war industries covers a very wide range; for all A and B priority occupations are considered under the agreement to be war industries. By reason of the general tendency for more mothers to accept employment, owing largely to the need for man-power in other lines of work, the dominion felt that it was only fair to extend our help somewhat beyond industries which are strictly war industries. Therefore, it has been agreed with the provinces that twenty-five per cent of the children cared for in any centre may be the children of working mothers who are not in industries clearly defined as war industries.

Two weeks ago a conference was held with the representatives of the provincial governments concerned, and after a careful examination of the records it was believed that the original decision was satisfactory.

The present situation is as follows:

Eighteen day nurseries are approved.

Fourteen day nurseries are operating—six in Toronto, one in Brantford, one in Oshawa, one in St. Catharines, and five in Montreal. Accommodation, 750 children.

Sixteen school units have been provided—twelve in Toronto, three in Hamilton, and one in Lakeview Beach. Accommodation, 1,000 children.

Waiting approval since yesterday: one day nursery in Toronto; one school unit in Toronto.

Mrs. NIELSEN: There are one or two observations I wish to make on the item now under consideration, but before I do so I would call the attention of the committee to the innovation that has been introduced by the Minister of Labour in bringing a woman from his department to assist him with his estimates in the house. I wish to congratulate the minister upon this, and I congratulate also the woman in question upon having entered, not as a woman member, but in the important position as an adviser to the minister. I only hope that other ministers will follow his example and that we shall see more women in this position in the chamber before long.

Listening to the statement which the minister made when he first spoke, and again the statement he has made to-day, I would say that on the surface what he has said regarding the care of children looks very good, but I have had a considerable amount of correspondence with those who are working both on the boards set up in Ontario and Quebec and with other people interested in this matter, which has

brought to my attention many facts and proves conclusively that there is a great deal of dissatisfaction.

I myself am one of those who feel very strongly the need for the care of small children. We are lauding the place of women in our war effort, but unless we realize the penalty which many women have to pay for taking a job and at the same time being responsible for the care of their children, we are not really giving women an opportunity to take up to the maximum their share of responsibility.

When he was speaking on Wednesday, June 23, the minister paid a fine tribute to the women of Canada. He is reported to have said, at page 3941 of *Hansard:*

> If I had unlimited time I would amaze this house by reciting the occupations in which women are now employed. I will simply mention that they are now employed in sawmill operations, in the delivery of ice, in surface operations at the International Nickel Company's mines, and we are to use them at surface work in our coal mines.

And again he said:

> For the mother who must go out to work, the care of her children is a vital and often distressing problem. Her peace of mind requires assurance that the smallest children are in safe hands throughout the day and that the older ones have supervision after school hours. Only then can she give her mind fully to the job in hand.

The knowledge I have of children's day nurseries extends only to the two largest cities, Toronto and Montreal. The joint dominion-provincial scheme, although it may have appeared to the government to be the best, is I think the cause of some unnecessary delay in the setting up of these nurseries. There appears to be delay when the board in the city of Toronto has applied for certain buildings in connection with day nurseries, because the provincial government then has to apply to the dominion government and time elapses before anything is really done. It is an astounding thing that in a city the size of Toronto, where we have so many thousands of women workers, we are actually taking care of only roughly 280 children of pre-school age. The reason why the government has not made further progress is that the whole question of creches and day nurseries is regarded as a temporary measure, merely something to fulfil the needs of war time. In my opinion this is an incorrect premise upon which to build a scheme of this kind. The emancipation of women as wage-earners has come to stay. It is not just a temporary war measure. I feel I am speaking the views of every Canadian woman when I say that the women of Canada do not want, after the war is over, any suggestion that the only place fit for them is the home. The old slogan which was trotted out before the women of Germany, that the only things that they were fit for were kirchen, kuchen, kindern, is not applicable to the women of a democracy, and women will not be content to work only within the limits of their homes. They realize that the fullest and widest extension of democracy is necessary that they shall be able to take their place in full equality with men in the whole social and economic structure of this country.

The day nurseries which have been started during the war were started, of course, as a war-time emergency, but the need for day nurseries was felt long before the war started and will continue and grow after the war is over. Among the low income groups, mothers have for a good many years been forced to work, and the need they have for care of their children has always been great. The first years of a child's life are the ones in which the child needs the best care and the most careful training. The years leading up to school age are those in which habits are formed. But in many homes, among the poorer working people, the mothers have been overburdened with housework as well as the work they have done outside their homes to earn a living, and it has been a terrible thing for the children that these mothers have not been able to devote the time they should have devoted to the care and training of the pre-school age children.

Among the higher income groups, too, I would say that there has also been a need, and still is and always will be, for nurseries to take care of children. In the higher income groups we find not so many children to a family, but I think it would be quite correct to say that some of the mothers in the higher income groups do not have any better knowledge or understanding of child training and child psychology than the mothers in the lower income groups. Sometimes the children in those homes where there is a better income are petted too much and given an exaggerated sense of their own importance. They are not trained in social habits. Children who have suffered from a lack of training in their very early years, when they grow up to adult life and take their place in society, often become known, for want of a better term, as "rugged individualists". There are too many of this type in our society to-day. They are the cause of many of our social ills. The present generation of "rugged individualists" will die off sooner or later, and we do not want to raise another generation of this type in Canada. I would say that the pre-school nursery is the answer.

There may be some people who would say: why should the state provide pre-school nurseries for children in the higher income group so that mothers may be able to spend more time at bridge, perhaps? But my concern is not with the mothers so much as to help the children who need the benefit in their earlier years of training in social consciousness to make them better members of society. We are, I hope, near the end of the age of individualism and advancing to an age of new social relationships and new social responsibilities.

One of the chief obstacles to the government's getting further ahead with the day nursery scheme I believe is their policy with regard to the buildings for housing the children. It is the government's policy at present to rent, not to buy or build. I would suggest the use of the war-time housing plan for providing suitable buildings. At present in the city of Toronto there are five day nurseries, and the minister has just said that a high standard has been attained. But four of these day nurseries are maintained in churches and one in a rented house, so that I am just a little dubious as to the high standard prevailing. In my opinion, churches, which are usually somewhat dark and dull buildings, are poorly equipped for taking care of little children. A building of that type is far removed from the ideal of the light and airy place in which little children should be living. After all, many of these children arrive at seven in the morning and do not leave until five or six at night, so that they are in the nursery the whole day long. It is essential too that there should be a playground in connection with the nursery so that the children can get out in the fresh air. It is not a usual thing for churches to have any large open space around them. It seems to me that in choosing church buildings for day nurseries the government has chosen a very poor type of housing.

In Toronto I understand that the board of education has arranged in two schools for some space to be allocated for day nurseries, but the trouble is that in the most overcrowded parts of the city, where there is the greatest need for day nurseries, there are neither houses to rent nor churches with space around them, nor rooms in schools to be had. That is particularly true of ward 2, in the Moss Park area. Three months ago a request was made by the committee on day nurseries for the purchase of a war-time house for the care of children. The provincial government promised to take it up with selective service three months ago, but so far nothing has been done.

There is another thing which I think is wrong with this scheme, and that is that only children of mothers who work in war industries are eligible for the day nurseries. I know that the government says that their definition of war work is a broad one, but I quote from a letter sent to me recently from one of the board members in Toronto:

> The government say that their definition of essential war work is very broad indeed and also the twenty-five per cent allowed from non-essential industries, but you will see how ridiculous it all is when I tell you that on the list of priority industries which selective service has here—

This is in Toronto:

> —and which we have to be governed by, both for the school feeding of the school child and of the pre-school child in a day nursery, the Royal York and the King Edward come under the priorities list, so a mother working there can get care for her child, while another mother working at Muirhead's restaurant or other restaurants or, of course, Eaton's, etc., is turned down at once. Those are not essential industries, though of course the women working there are releasing men for the armed forces and for war work. Of course, it should be for all children of working mothers.

I should like to say something about the feeding of school children. There are ten schools in Toronto, so my information goes, where this feeding plan is carried out. It is done by charity organizations. The Salvation Army and various churches are responsible for looking after the feeding of these children. In Toronto fifty per cent of the applications for the children of working mothers to receive a hot meal in the middle of the day have been turned down because the mothers were not working in priority industries, that is, direct war industries, although the school boards are all in agreement that the child of any mother who is working as a result of the war emergency should have the advantage of being given a hot meal in the middle of the day. I shall have something to say a little later about the prices for these meals.

In the city of Montreal there are no creches at all for children under two years of age. There are five day nurseries. In Montreal these day nurseries are run on strictly denominational lines. There are two English Protestant, one Jewish, one English Catholic and one French Catholic. I am very much opposed to the idea of anything of this kind on behalf of the children of this country being done on strictly denominational lines. Children are children; they are not Catholic or Protestant or Jewish or anything else. They have the right to equal treatment, to

be mixed together, to learn to know each other and not to be segregated into these strict groupings. There is also this point to it. At the present time I understand that not all the children in the Jewish day nurseries of Montreal are Jewish. It so happened that there were not enough Jewish children in that area, and at present some other children are there, but as more Jewish children apply for admission to the day nurseries the others who are not Jewish will be refused admission and will not be allowed to go there.

The other point with regard to these day nurseries in the city of Montreal is that they are practically all in the eastern part of the city; and in the whole of Montreal at the present time we are taking care of only about 250 children. There are three day nurseries run by religious orders in that city, but they are not for mothers working in war industries. Last November it was estimated that there were some 12,000 women working in one large war plant in Montreal, and that they had approximately 3,000 small children. Here we have 3,000 small children belonging to mothers working in one plant, yet in the whole city of Montreal we are taking care of only 250 children. The minister says that as the need arises the scheme will be expanded. I would say that the need has arisen, that it has been apparent for many months, but that we have been very lax and very slow in the whole project, which was instituted over a year ago.

I should like to say something about the salaries paid to those in charge of the day nurseries. My information is that the director of a day nursery receives $108 a month, the first assistant $85, and the second assistant $75. In my opinion we need highly trained people to take charge of day nurseries. I was trained as a teacher of small children, and I have a great deal of knowledge with regard to the requirements of kindergarten training. I should say there is no phase of a child's life when knowledge of child psychology is more needed by teachers and trainers than during the first few years, when they are in these pre-school nurseries. The salaries paid at the present time to those in charge of these organizations are not sufficient to attract people of the right type. Particularly is that so because in my opinion this should not be a temporary measure but should be brought gradually within the full scope of our educational system, to be a lasting and proper thing for our children henceforth.

Referring to Montreal again, the buildings are usually churches, and I was told by the minister of a Protestant church, who is on the board in that city, that the churches of Montreal are not very anxious to rent their buildings for this purpose. I can quite understand that. Questions such as heating, lighting, janitor service and so on are not easy to arrange, and it is only when the need becomes pressing that the churches become willing to allow their buildings to be used by these small children.

Then there is the further question of the supervision of play for children after school, before their mothers return from work. Here again we have not been successful to any great degree. The way children in the cities are running the streets after school hours is having a most detrimental effect upon their young lives. Teachers have written to tell me about children sleeping at their desks in school because of the fact that they are running the streets at night, with no one at home to open up the house so that they might be cared for and looked after. There is great need for the establishment of supervised play centres for the children of our big cities whose mothers are working.

The Minister of Labour also mentioned the cost of the meals given these children. The charge for the noon meal of school children whose mothers are working is 25 cents for one child and 35 cents for two children. In Great Britain the cost of the noon meal is only 7 pence, of which the government is responsible for the payment of 3 pence. Our price of 35 cents for two children may not be too bad, but the charge of 25 cents for one child in my opinion is far too much to ask any mother to pay. A good, nourishing meal can be provided for much less than that if the thing is properly run and looked after.

I should like to quote another statement from this letter which I have received from a member of the board in the city of Montreal:

> What is not yet clear and what needs to be made clear immediately is how the whole cost of this programme is shared as between the dominion government, provincial government and parents of children. The general public balks when they cannot discover what it is going to cost them until a project actually is running. To ordinary working people deductions for meals or for care in a nursery for one or more children is too often just another deduction to the many already made from the pay cheque.

In my opinion the government should definitely take over part of the cost of these meals.

I should like to make it perfectly clear to the minister that I regard absenteeism as one of the worst problems we have to face in industrial production; yet I could never blame a woman for taking time off if she was nervous or worried about a small child. Being a mother myself I understand the anxiety which

a mother feels when she believes her children are not being adequately cared for. We are in urgent need of proper provision for all the children of mothers employed in industry, and when that is provided I believe we shall eliminate one of the causes of the absenteeism which is so rife among our people.

I suggest to the minister that certain things be done immediately. First, I think a survey should be made at once by the boards in the various cities where women are employed in industry, to ascertain exactly the number of women who would be anxious to place their children in day nurseries if adequate facilities were provided; that is, if proper war-time housing were provided and the mothers knew their children would be looked after in properly equipped buildings. That is a very different thing from asking women, as I imagine they are being asked to-day, whether or not they want their children to go into some old building or some church during the time the mother is at work. Second, the government should start at once upon a programme of erecting prefabricated houses in the parks and open spaces, where supervised outdoor play can be provided for the children. Third, the children of all working mothers should be made eligible for these benefits. Fourth, we should greatly extend the training of the principals and assistants who work in these day nurseries, and should pay such salaries as will attract women of the right type and make it possible for us to carry on day nurseries with efficient staffs. Fifth, further provision should be made for organized play centres for school children after school hours, to keep them off the streets. Further, the government should accept responsibility for helping to pay the cost of feeding school children, and the children of all working mothers should be eligible for meals.

I look forward to the time when day nurseries and creches shall become a regular part of our educational system in Canada, under dominion control. I believe that is a necessary part of our social structure. I have listened to many of the post-war plans now being discussed. But I think I am something of a pragmatist; I like to know how things will work. To me a bird in hand is much better than two in the bush. Right now I am not so much concerned about post-war plans as about something which can be done immediately to remedy the situation which exists in our great cities, so as to provide really adequate accommodation by way of free school nurseries and creches, school meals and after-school play and recreation. I would urge the minister to go much further than he has gone, so that this scheme might be made possible.

Mr. MITCHELL: May I first of all thank the hon. member for the tribute she has paid to Mrs. Eaton, the director of this particular phase of the activities of my department. I am not going to argue with my hon. friend as to where a woman should be—whether she should be in the home or in industry, at the conclusion of the war. I have fixed ideas on the point, but anything I would say would be only an expression of opinion, and would not be of interest to the committee.

But if I may be excused for making a personal reference, I was one of a family of nine children. My father died when I was ten years old, and I believe I know something of what a mother is up against when she has to work and, at the same time, maintain her children. In Canada this idea has to be sold to the women of this country. Our people are a little wary about giving their children to what some might consider institutional care. I came from an industrial city, and I believe I could say that was the feeling there. About twenty years ago I played some part in the establishment of widows' pensions in Ontario. I was quite active in the movement that brought that improvement about, one which I believe was adopted by the Ferguson government, if I remember well.

Mr. MacNICOL: And so was I.

Mr. MITCHELL: I think the hon. member will find that this idea has to be sold to the working women of Canada. I believe the great majority of mothers, particularly in Montreal, would rather have their children looked after either by friends or relations. Whether that is right or wrong is not for me or any other person to decide. It is a decision which must be made by each mother.

At least we can be given this credit, that while this is purely a provincial matter, the subject of child care was instituted by the federal government in cooperation with the provinces. This is the first time in the history of Canada that anything of this nature has been set up. There has been some criticism in connection with our using churches. I believe we obtained the best possible person for the establishment of this scheme in Toronto. I refer to Miss Millichamp, a member of the Institute of Child Welfare in Toronto. Not long ago she was invited by the British government to go to England and advise them on their problem over there. She came back with the definite opinion that in Great Britain they had to take the same steps as we have taken here. We must get the best we can, in the present circumstances.

I believe if my hon. friend went to Toronto and saw the places in question first-hand she

would not be so ready to criticize. Before they were selected they were approved both by provincial and local committees. On each committee were representatives of the various organizations I mentioned this afternoon.

Something has been said about cost. It is not anticipated at the present time, on the basis of cost as at present calculated, that the mother will pay more than a third of the total cost of the undertaking. With respect to the suggestion that fifty per cent of the mothers were turned down, I would ask the hon. member to give me the details, so that I may make an investigation.

Mention was made of Montreal. In that city we have I believe one of the most eminent men in this work charged with the duty of supervising and assisting in the planning of these nurseries. I refer to Doctor Lalonde, who is not only a medical doctor but is also a specialist in this type of welfare work. I do not believe that in these initial stages we can be accused of not at least trying to lay a good foundation for this form of governmental activity.

In respect of education along this line, may I point out that I have visited other countries where this type of service has been in operation. I well remember being in Russia a few years ago. What I have to say is not said in any spirit of criticism. From some of the pictures I had seen before going there I thought only a few of the children of the working classes would be found outside of institutional care in the day time. There can be no doubt of the vast range of occupations in which Russian women engage. Their work is somewhat different and covers a greater range than that in which women on the north American continent engage. We may call the state of women on this continent one of emancipation, if we wish, but I am afraid that the vocations in which some Russian women are engaged would startle some of our Canadian women, and also those in the United States. It was clear over there that they were moving, perhaps in a small way at first, toward care of the children of women engaged in industry. I thought children in Russia would be dressed somewhat in the same fashion as those in North America are dressed in the summer months. I noticed however that many of the peasant women—and I do not say this disrespectfully—had their children clothed just the same as they had been clothed many years before.

I think the hon. member has not been altogether fair in her criticism in the steps we are taking to establish at least some degree of responsibility on the part of the state in connection with women employed in industry, or women who find it necessary to get others to care for their children during hours of employment.

Mr. CHURCH: Mr. Chairman, I had not intended taking part in this discussion, but as chairman of a local board of health, and as one who brought Doctor Hastings into a modern health department in Toronto, I must say that this policy of handing money to the provinces is a bad one. That seems to be a very popular procedure in connection with many matters which have been brought before the house in war-time. There seems to be a general tendency to give everything to the provinces. You, Mr. Chairman, come from a district in which a famous physician in child welfare has practised. I refer to the late Doctor Dafoe, whose younger brother was only recently promoted to the head of the obstetrics and diseases of women branch of the university of Toronto. I should hope the Minister of Pensions and National Health, who is in his seat, might see that some national recognition is given to the late Doctor Dafoe for what he has done for the people of Canada and the medical world, and particularly the mothers and children.

This problem is rural, suburban and urban. Why should we adopt something like this and turn the money over to the provinces to administer? We are being asked to vote only $120,000 as payments to the provinces in connection with organizing and operating day nurseries and like facilities. But that is only $120,000 out of $21,000,000, and the result will be that some places will get help and others will not—rural, suburban and urban. This money should be turned over to the municipalities instead of to the provinces.

I should like to refer to what has been done in Toronto and Hamilton. The minister will be more conversant with the latter district, but in both these centres the school boards and boards of health have done a considerable amount of work along these lines. At considerable cost to the city the boards of education and of health have established nurseries and have staffed them with the proper nurses and doctors. This has proved a blessing to the community.

If this were to be started over again, I would not go to the universities for assistance. I would investigate what has been done in the matter of day nurseries in Toronto since 1907. This work was started then and it has spread across the country. I brought this matter to the attention of the house in 1940 when I quoted the British *Hansard*. Reference was made there to the midland counties where they were transporting people from one

industry to another, a distance of about thirty miles, about the same as that from Toronto to Hamilton. This is where the industrial revolution occurred nearly a hundred years ago. The money was given to the districts concerned in order that they might be able to organize and operate these nurseries near war plants.

The city of Toronto has provided buses because there has been such an overcrowding of the street cars that they cannot transport the civilian population. In addition, some of the cars ordered by the transportation commission have been sent to other cities. Toronto needs some help from the federal government, and instead of voting only $120,000 we should be voting much more. This work has not been looked after as it should be. I do not wish to delay the minister any further with his estimates because I have taken up very little time except to fill in when some of the hon. members were out at the country club the other night.

What is going to be done after the war when these large industries are closed up? I asked the Minister of Munitions and Supply about that the other day. We are going to have a serious situation when the war is ended. These workers will have the same trouble as the workers had after the last war. Many of them have not got settled up with the government even though twenty years have passed. If we are going to adopt this policy we will have to enlarge the scope of the activities. There is bound to be duplication in this work. I had a return brought down in the house the other day which showed that the Department of National War Services had made grants to seven organizations during the last year of the war totalling $6,000,000.

In some cities the school boards are doing this work, and in others the boards of health attend to these matters. This work should be decentralized and handed over to the municipalities. Some industrial plants are carrying on this work now. I have seen a few of them, and I repeat that this grant should be much larger. While you have been doing good work as far as I see it, I think it would be far better if you worked through the boards of health or school boards of the municipalities.

I have been talking to some health officers about this. In 1940 and 1941 some of them wrote to me and I sent them copies of the debates in the British House of Commons on this nurseries question. Near the new general hospital on University avenue a number of trailers are used to house some soldier families. There are hundreds of mothers who are out working and in some cases their children are roaming the streets. We all know what that means in delinquency. This is going to be a serious problem before this war is over, and it certainly will be serious after the war. It is one of the most important problems with which this parliament has to deal.

I do hope the Minister of Pensions and National Health will hearken to what I said about the Dafoe family. You should consult doctors like that and the different health departments and the different nurseries; a conference should be held to coordinate, save duplication and waste, and discover what should be done about day nurseries. That would be better than just handing over the money to the provinces. I have seen something of the administration of some of these things by the provinces. Some places get help and some do not get any; instead of their being equality of treatment, there is no equality of treatment. There is bound to be duplication of the work. This is confirmed by some of the health department officials I have spoken to. I hope the minister will remedy this, if not immediately at least during the recess.

Mr. NOSEWORTHY: Mr. Chairman, I was surprised to learn, from a return which was brought down on May 20, of the comparatively few children who are in day nurseries across the country. Despite what the minister has said, this matter of day nurseries is not a new one. As the hon. member for Broadview (Mr. Church) has said, there have been day nurseries in Toronto for many years. The minister attempted to explain the small number of children in the day nurseries by saying that the mothers of Canada have not been educated to placing their children in such institutions. I want to say to the minister that if he and his department in this fourth year of war have not been able to sell the idea of sending children to day nurseries except to the mothers of one thousand children, then they are not very good salesmen. I suggest to the minister that instead of trying to defend his department, as he did this afternoon, he give serious consideration to the suggestions offered by the hon. member for North Battleford (Mrs. Nielsen). From what I know of suburban Toronto I am convinced that if an adequate system of day nurseries was set up you could find more than one thousand children of war workers in the riding of York South alone who would be placed in such nurseries. If the minister's survey shows that only a few mothers are willing to entrust their children to these schools, then I submit he should find out what is wrong with the system. From my knowledge of those who

have been in charge of day nursery work in Toronto for many years I suggest that the fault could not possibly lie with the personnel or the staff employed. It is true that England requested the services of a group of workers or teachers who have been engaged in this work in Canada, in order to assist in the instruction in England of personnel for this work. We are not a particularly backward country as far as the personnel of day nursery schools go. I understand a comprehensive report was made to the minister or to his predecessor more than two years ago with regard to the establishment of day nursery schools. I am quite satisfied that if the direction of the personnel in charge of day nursery schools in Toronto were accepted in full there would be many more than 1,000 children in these schools across Canada.

I am interested in this item because it provides $120,000 for "day nurseries and like facilities". I should like to know what the "like facilities" are and what portion of that $120,000 is set aside for these "like facilities". I assume that at least one of these facilities will be provision of recreation for war workers. A conference was held in Ottawa nearly three months ago and a very successful conference held in Toronto a few days later. Would the minister give us a statement as to just what progress has been made in the matter of this recreation for war workers? I feel that it is vitally important in view of the enormous amount of juvenile delinquency in this country. Only a few days ago I went into a city in western Ontario and found the newspaper editor there, the mayor of the city, much perturbed about the amount of child delinquency. A conference of those interested in the problem was being held on the evening of my visit. I should like the minister to inform us, while he is making that statement, what money will be available for this recreational work, particularly in Toronto, the city with which I am most associated; and second, what provision is being made to secure trained personnel for this work. I understand that in England and other parts of Great Britain this is deemed so important in its contribution to the building of the morale of the civilian population that trained men have been recalled from the armed forces to take charge of this work. If they can do that in England, I think our government should be prepared to see that trained men and women are made available in Canada for this work, even though postponements have to be granted for that special purpose. I should like the minister to take those two points into consideration in reporting on recreation for war workers.

[Mr. Nosewerthy.]

Mr. MITCHELL: In reply to the questions put forward by the hon. member, let me say first that I am not one of those who think the state should do everything. I wish that to be clearly understood, whatever may be the opinion of other hon. members. I believe that it is all to the good to have recreation organized on a voluntary basis, in some cases probably with some direction from the state. In many industries and some municipalities that is being done. In my own city of Hamilton we pride ourselves—I say this with some diffidence—on having probably the best playgrounds organization in Canada.

Mr. MARTIN: You should see Windsor.

Mr. MITCHELL: My hon. friend says, "You should see Windsor". There passes through my mind the work which is being done in my hon. friend's own city, and in Vancouver, Winnipeg, and elsewhere. Some communities have expanded tremendously since the outbreak of war. I do not think it is the duty of the federal government to undertake the direction of all recreational activities in Canada; that would be going a pretty long way. But in my judgment some communities are in urgent need of some direction, and I have them in mind at the present time, though I shall not enumerate them at the present time because I might get into trouble.

My hon. friend spoke of the conference. That conference was held, I think, a few weeks ago.

Mr. BLACKMORE: April 9.

Mr. MITCHELL: I have a vivid recollection of the conference, although I did not attend it. There was a thorough discussion of the entire question, and conversations are now going on between Ontario and Quebec with respect to the matter and looking forward to the possible signing of an agreement between these two provinces. An initial sum amounting to $40,000 has been voted by order in council. I say that that is an initial sum. I do not know what the total cost will be before we are through with it.

I wish to be perfectly frank with my hon. friend, so, I must tell him that if he thinks we are going to employ an army of directors across this country in connection with this plan he is likely to be disappointed. We shall endeavour in the terms of this agreement to give some direction to recreation. I know many trade unions are deeply interested in the subject of recreation. My own trade union used to have its own recreational activities. But the hon. member can rest assured that when the agreements are consummated they

will be tabled. If they are not, and my hon. friend will give me a reminder, I will send him a copy if the house should not be in session.

Mr. BLACKMORE: May I tell the minister that I do not find myself in agreement with the hon. member for Broadview (Mr. Church) with respect to turning the money over to the provinces. I think that for the minister to turn the money over to the provinces to be administered by them is the right course. If the provinces cannot assume the responsibility for the dominion government with respect to the care of the children of the dominion, it is time they took a course of training; they will take that if they have the responsibility thrust upon them.

What I should like to know is, why this is a $120,000 estimate. What determines the amount which the minister is going to spend? Do the provinces apply for a certain amount? Do the municipalities apply? Do the mothers apply? Just how does the machinery work?

Mr. MITCHELL: You get the recommendation, of course, from the committees. I pointed out to my hon. friend about the local committees, and then the provincial committees, the provincial governments, and the national selective service. Then it is funnelled into my office. That may appear on the surface to be rather a slow procedure. It is not so slow as it appears to be. But I am sure my hon. friend will appreciate that first of all we have to be sure that the accommodation is the best obtainable and the conditions surrounding the nurseries are of a kind and character that would be approved by the public in general. I would rather go slowly myself and see that we did a good job thoroughly than be rushed into it hurriedly and probably receive far more criticism, and properly so, for doing it without having given due consideration to those interested organizations that I have mentioned.

With regard to the amount, $120,000, that is merely an estimate; that is all. In war time, if the need shows itself, that amount can easily be increased and matched by the provinces.

Mr. BLACKMORE: What constitutes the local committee? How is it organized, and who determines the personnel? Is it chosen by the people or selected by the minister?

Mr. MITCHELL: We get nominations or suggestions of names from organizations interested—labour organizations or it may be farm organizations; I do not know. It depends on the nature of the locality. The provincial government picks out the provincial committee. That is the way you choose people. I have endeavoured to get the best people I possibly could, people who understand and more particularly people who have some interest in whatever phase of policy it is on which I desire advice.

Mr. HARRIS (Danforth): First, may I pay a tribute to the nursery services in the eastern part of Toronto and to those public-spirited citizens who have assisted so much in the direction of the actual work and made it possible for the nursery services to have the premises in which the work can be carried on. This is not a new venture at all. To my own knowledge, for thirty years we have been giving this service to the people of Toronto. I speak for that part of the city with which I am best acquainted, and I can say that public-spirited citizens have headed the board of trustees and have seen to it that premises in which children are housed have been of a kind suitable for the purpose. I join with the hon. member for York South in paying a tribute to the personnel. My criticism is with reference to the women's voluntary services. Since the outbreak of the war they have been anxious to do something to assist in the work connected with these day nurseries; but, as the minister knows, the government in its wisdom saw fit more or less to disband this voluntary unit and to substitute a paid unit, thus dampening the enthusiasm and the ardour of these volunteers. More than that, the government has even suggested what work they might do.

I know the minister is of my own opinion, that the state should not do everything. I recognize the responsibility so far as the dominion and the provinces are concerned, and I think the provinces should be charged with the responsibility for this class of work. But for the extra day nursing facilities necessitated by the war, the responsibility is definitely on the shoulders of the dominion government. There has been no expansion to take care of that extra work occasioned by the extra number of mothers who find it necessary to participate in war industry. No direction of any consequence has been given, largely for the reason that the directors and trustees of the day nurseries were men who knew nothing of how to direct or guide war workers' children. They did not regard that as their particular job. They felt that their only job was to see to it that the assets were being used properly, that the premises were well taken care of and that the facilities were there. The personnel in the day nurseries did not feel that it was their responsibility to

give advice or to instruct women workers. They just carried on in the day nursery such work as came to their door.

There is a gap in the direction of women working in war industry. There is not proper information with regard to facilities that are available, and there is also a lack of coordination among the trustees and municipalities and the war working women. Something constructive might even at this late date emerge from this discussion, and I suggest that the minister might confer with his colleague, the Minister of National War Services, and with the women's voluntary organization under his direction to see if they cannot coordinate their efforts so that the maximum use may be made of the facilities and the personnel available.

I am amazed at the statistics. There is room for far more of this work to be done, even with the present facilities, without more capital expenditure, if there could be some coordination among the many bodies affected—the municipality, the province, the dominion, the women war workers. The women war workers themselves lack information, and the personnel are perhaps too timid even to approach those charged with authority with regard to the conduct of these institutions. There does not seem to be coordination in that particular set of circumstances. In the last few years, even since the war, the trustees of these institutions and those who took an interest in them were men who were able to provide facilities, but they seem to have faded out and to have lost interest. It has not been emphasized that they are doing a real community service in looking after this capital asset.

I make these few observations in order to help the minister generally, because I am convinced that expansion is essential at this particular time and this is a move in the right direction. But what we have done so far really amounts to a failure. I am anxious that the department should give some direction to the set-up, so that women war workers will know that their children will be well taken care of. For this purpose I think some leadership should be put into the hands of those who are carrying on the day nurseries, so that they in turn can make their institutions something which is so necessary during this time of war.

Mr. ADAMSON: As one of those members of the house who have seen the nursery schools in England in operation, I would say that this is a step, a short and halting step, but nevertheless a step in the right direction. I congratulate the hon. member for North Battleford, who has obviously made quite a study of this problem. I agree with what she has said.

[Mr. J. H. Harris.]

Under the English system new nursery schools were built not only where there was an absolute necessity for it, but in areas where there was no necessity. First of all, it was done for the bombed-out victims for whom new schools had to be found, and it was done for children of all ages. I see no reason why we could not have done the same thing instead of putting up with basements of churches and other improvised accommodation. Under the English system, just as under our proposed system, there is cooperation with the local authorities, which I think is essential.

It is essential that these services should not be considered on the basis of a free hand-out by the state. That is not so in England, except where the parents of the children have been either killed or crippled by enemy action.

The immediate effect of these nurseries in England has been a tremendous improvement in the whole standards of the children, and not only of the children but of the adult population as well. It seems extraordinary that even with the terrific bombing and the terrible devastation that was caused in 1941 and part of 1942, the health of the English people has actually improved over pre-war days. The number of cases of illness and sickness has gone down, and the nursery schools and the public nurseries have been one of the contributing factors to that improvement.

It is quite true that the nurseries in England charge sevenpence, threepence of which is paid by the state. We ask for thirty-five cents. While I do not quarrel with the sum of thirty-five cents, I think we could get a good deal more service for that sum, especially when one considers that the cost of feeding a soldier in Canada with the excellent food he now gets is thirty-eight cents a day.

It was impressed upon me in talking to a number of social workers in England that these nursery schools and supervised schools have had a great effect in improving family morale. One of the great problems with which we are faced in Canada is the demoralization of the family. It may sound paradoxical for me to advocate nursery schools and institutional care for practically all the children in the state. But I believe that it is one of the surest ways to restore the high morale of the Canadian family, which, according to most authorities, has suffered a serious decline in the past few years. It is infinitely better to have all children properly looked after and properly supervised during the working hours of the day than to allow them to play on the streets. They have discovered in England that taking the children off the streets has

strengthened tremendously the family tie. That is a surprising and important discovery. I see every reason in favour of even the mothers of small children working in time of war. The civilization of any country is in direct ratio with the emancipation of its women, and I just mention as an example of this what has happened in Turkey since Mustapha Kemal Ataturk took power. In every way he was an absolute dictator, just as much a dictator as the dictators of Germany and Italy. But he had a different idea from them about the emancipation of women. He insisted that women should take part in government and in the life of the state. He did not believe that woman's part was kirchen, kuchen, kindern, as Hitler did, and to-day we find as a consequence that Turkey is an advancing, go-ahead country that is capable of living at peace with its neighbours.

Before I conclude I would ask the minister one or two questions. There have been built up in Canada what are known as Well Baby clinics. I think they have been one of the greatest assets in the life of the community where they have been established. My first question is this: Is there any cooperation or coordination between these nurseries and Well Baby clinics? My second question is: What are the minimum and maximum age limits for children attending these nurseries? My third question is this: Has any provision been made, or is it likely to be made for the government assisting to get these children out of the city into the green spaces in the hot summer months?

Just one word in conclusion. This whole question of nurseries emphasizes strongly the absolute necessity for adequate town planning in the future of Canada.

Mr. MITCHELL: The answer to the last question is, no; to the second question, two to six years of age are the limits. The answer to the first question is, yes; there is cooperation. I used to be a member of the board of health in Hamilton, where we must have had about twenty baby clinics. I think they have them also in Toronto under the health department of the city. There are also clinics in the schools to which the mothers take their children.

Mr. ADAMSON: There is a very effective Well Baby clinic in the southern part of my riding.

Mr. MITCHELL: I was a member of the board of health in Hamilton for a number of years, and when these clinics were established we had to educate the mothers to bring their children to them. It took some time. I have been through these things; I went through the campaign in Hamilton in connection with inoculation for diphtheria, and I know something about the resistance that was shown to that innovation by a good many people in our community. It was a question of education. I can remember the time when there were many deaths from diphtheria in Hamilton, but I lived to see the day when during a whole year there was not a single death from diphtheria in that community.

Mr. ADAMSON: I agree with the minister that a very great deal of missionary work has to be done.

Mr. BLACKMORE: As I see it, there are two main aspects to the problem which confronts us. First, there is the woman who needs some assistance in connection with her children, who knows she needs that assistance and wants to provide it, but finds herself unable to do so either because she cannot afford it or because she does not know how to go about getting it. To whom should a given woman in a given community apply if she needs assistance in taking care of two children, let us say, in order that she may undertake some war work? The second main aspect is that of women who have children in need of care, but who either do not realize that their children need care or who are too indifferent to bestir themselves to see that the care is provided. By what means are the needs of such children brought to the attention of the proper authorities; through the police, or welfare workers, or what other mechanism?

Mr. MITCHELL: I am afraid I cannot answer the latter part of my hon. friend's question. I can say something about my own community, but I am not sufficiently well versed in the situation that exists in the province of Alberta or the city of Lethbridge to say what might be done there. In Hamilton there is, first, the police department, which would come in contact with extreme cases. Then there are various other agencies such as the big brother movement and other organizations which take care of delinquent girls. This scheme does not provide, at the moment, for investigations of that kind. My hon. friend's first question was how these mothers might find out about these day nurseries. Well, they do that through selective service, when they go to the employment offices. The natural thing for a mother to say would be, "I have a baby at home that will have to be looked after," or something like that, and the people in that office will give the necessary information.

Mr. BLACKMORE: What would be the cost to the mother for children of various ages? I gather that children are admitted to these nurseries between the ages of two and six. What would be the cost to a mother engaged in war work if she had two children, aged two and four, whom she wished to put in a nursery?

Mr. MITCHELL: It would be 35 cents for the first child and 15 or 20 cents for the second child.

Mr. BLACKMORE: That is for the whole day?

Mr. MITCHELL: Yes, for the whole day, with all meals. For school children it is 25 cents for the first child and 10 cents for the second. That is where they get their meals, and milk after school, and supervision.

Mr. BLACKMORE: For how many hours would they be kept in the nursery for those amounts?

Mr. MITCHELL: That is a rather difficult question to answer, for it would vary in each individual case. It would depend upon local conditions, how long the mother took to go back and forth to work and so on. They would be there for ten or twelve hours I should think.

Mr. McIVOR: I believe this vote is necessary now, but I do not think we should consider continuing these nurseries indefinitely. The care of children in this way is not new; I can remember thirty-five years ago when these clinics were established in Toronto. I would warn the Minister of Labour, however, that no one can take care of a child like that child's mother, and I hope the day may come when mothers may be provided with sufficient of this world's goods that they may be able to remain at home and take care of their children. Those who understand something of the causes of divorce realize that children are an extremely fine tie in the home, and when we delegate the care of children to a nurse, no matter how fine and Christian a woman she may be, she cannot take the place of the mother. When children have to be cared for outside the home, whatever the reason, to me it is a sign of the breakdown of the home. After all, the home is the bulwark of the nation, and I hope the Minister of Labour will keep this in mind so that, when the war is over, mothers may not be required to work in order to earn a living. It is a case of necessity, of course, in connection with war work, and I know some mothers are quite willing to go out and work so that they may not have to live in straitened circumstances. I just give this warning, and I am sure the Minister of Pensions and National Health also will keep this in mind.

Mr. MacINNIS: I should like to say a word in reply to the remarks of the hon. member for Fort William. First, I think this amount is rather small in view of the need that must exist, and I believe it should be increased. I have been associated with public affairs in one way or another for a good many years. For some twenty to twenty-five years in the city of Vancouver we have had day nurseries, though we called them creches, to look after the children of women who had to go out and work. The provision made was very inadequate, but they did fulfil a great need; and I am quite satisfied that when this war is over, unless we improve conditions much quicker than I expect them to be improved, we shall have to continue these day nurseries. Whether or not the home is the best place for the child and the mother is the best person to look after the child depends altogether upon the home and the mother. I have seen mothers who were not fit to look after their children; and until all mothers are educated to look properly after their children and then are provided with sufficient means to do so, other ways will have to be found in order that the children may be saved and that the community may be spared the expense that inevitably it will be put to unless we provide for the proper bringing up of the children while there is yet time.

Mr. REID: I should like to say a word in support of the remarks of the hon. member for Fort William. I listened to the speech of the hon. member for North Battleford, and I rather thought she was advancing an idea which was new to this country but which has been tried in other countries, namely, the idea of collectivism in the bringing up of our children. I hope the minister was not too much impressed with that idea because, after all, as the hon. member for Fort William has pointed out, the home is the bulwark of the nation. There may be homes in which children would be better cared for, but by and large our people have always depended upon the home. I want to point this out to the committee. The department may look after young children, as pointed out by the hon. member for North Battleford. This more than takes care of the very young children. But I am told that in many cities the juvenile delinquency, pertaining to children of mothers who have gone out to work, is alarming. I should hope that aspect has not been lost sight of in any scheme of this kind. I am one who hopes that this vote may not be necessary after the war, and

that we shall make conditions such that the women of the land will be able to stay in their homes. Generally speaking—and I say this without fear of successful contradiction—the home is the bulwark of the nation.

Mr. CASTLEDEN: Canada must recognize that we have here an emergency. The government is taking the responsibility of calling men to fight in the war. The fathers have been taken from their homes. Figures presented by the minister's department show that 1,152,000 women are employed in industry, and therefore we have a responsibility to take care of about 500,000 children. There must be at least that many who must now be cared for without their mothers' supervision. It is quite evident, therefore, that $120,000 is quite inadequate to cover the whole of the emergency. I hope it is the department's intention to use at least some of this sum for adult education and the training of personnel, as well as for organizational work. Would the minister give the committee an outline of the programme he has ahead of him, and whether he considers there is sufficient money in this vote to cover the programme?

Mr. MITCHELL: I have made a lengthy statement to the committee. The programme will grow with the need.

Mr. CASTLEDEN: There must be a tremendous need.

Mr. MITCHELL: I admit that. At the moment there has not been any great demand for this type of care, but it will develop according to the need. If the need increases we shall have to have more money; that is all there is to it. It is a war estimate.

Item agreed to.

Assistance to the provinces in recruiting, transporting and placing labourers upon farms, $250,000.

Mr. GRAYDON: How many workers from farms in Saskatchewan, or in other parts of western Canada, have now been brought east in connection with the arrangement the minister announced some weeks ago?

Mr. MITCHELL: The figure to-day is 367.

Mr. GRAYDON: What was the estimated amount?

Mr. MITCHELL: It was 500. We are shooting at a thousand.

Mr. ADAMSON: I wonder if this covers a case brought to my attention? In this instance high school children are being picked up at certain points in Toronto and taken out to market gardens, either in trucks owned by the market gardeners, or in their cars. This is done at their own expense. Is there anything in the item making provision for this condition? This is definitely a case of bringing workers to farms.

Mr. MITCHELL: If it is done by a farmer as a farmer, it is shared fifty-fifty between the province and the dominion.

Mr. REID: Are all the provinces participating? Have they all schemes?

Mr. MITCHELL: Every province has a scheme.

Mr. GRAYDON: Does the minister expect more from western Canada?

Mr. MITCHELL: Yes.

Mr. TUSTIN: I have had several communications lately with respect to men who wish to go to the country to help on farms, but who have found some difficulty in securing transportation. Would the minister lend some assistance to those men, either by securing a greater gasoline allowance, or in some other way? I realize this does not come under the minister's department, but any assistance given would be helpful in getting the harvesting done this year.

Mr. BLACKMORE: Does the amount going to any province depend upon the request of the province? For instance, how is the amount determined for a province like Manitoba?

Mr. MITCHELL: It is determined after discussion between provincial and federal officials. There is a sort of joint cooperative agreement. I had my officials go through the various provinces last January or February, and the basis of the agreement was negotiated at that time. The agreements of the provinces differ very little. For instance, Alberta considered that some instruction should be given to people who were going out to the farms. We made provision for that. However, I can report that there has been harmony in our relations with the provinces, and I appreciate the cooperation shown by the provinces in facing up to this problem.

Mr. BLACKMORE: May I commend the minister very highly for his attitude in this connection. If all the ministers in the cabinet will take exactly the same attitude toward the provinces, and if the Prime Minister will do the same thing, we shall have an end of trouble arising out of the British North America Act.

Mr. CASTLEDEN: I wish to draw attention to a case which I believe comes under this item. I refer to a man in my own province

who was engaged in lumbering. He states that between October 1, 1942, and April 12, 1943, he and his brother cut and shipped 300 cords of peeled pulp from their lands, and that they have twenty cords of pulp still on hand. He says that in 1942 they had cut and sawed 100,000 board feet of lumber, that they own their own sawmill, tractor and logging outfit, and that they are prepared to log and saw 200,000 board feet of lumber and to cut and ship 200 cords of pulp in the coming season.

The man in question presented his case to the selective service, pointing out that he was occupied in an essential industry. The board at Regina advised him that his application for postponement could not be granted. This is a copy of the letter received from the supervisor of farm labour requirements, Veteran block, Regina:

> I have been advised by the mobilization board that your application for postponement from military service has been granted on condition that you accept employment on another farm, where your services are essential to agriculture.
>
> In view of the fact there is no labour shortage in your immediate district, to comply with the order of the board it will be necessary for you to report to the employment office at Yorkton, where you will be supplied with a list of farm vacancies in that area.
>
> I would be glad to have advice from you as soon as possible as to the name of the farmer with whom you have accepted employment, so that I may pass the information on the mobilization board.

This is a man engaged in lumbering. I would point out to the minister in charge of selective service that in Saskatchewan there is a shortage of lumber for the making of bins. Already in western Canada nearly a billion bushels of grain is being stored. The wheat board will not be able to take more than about 280,000,000 bushels of wheat, and there is a great shortage of lumber. This man will be compelled to leave his lumbering business, travel about 130 miles and take a job on a farm. It seems to me the officials in charge ought to realize that lumbering is an essential industry, that there is a great shortage of it in Saskatchewan, and that if we are to take care of any kind of a crop in the west this year, that lumber will be needed. The moving of a man in this fashion is, to say the least, short-sighted.

Since men are being moved to act as labourers on farms, has any definition been given or any standard set from which one may estimate a man's necessity on a farm? How does the department describe a key man in the farming industry? Is there any acreage basis, or any basis of production requirements upon which the department estimates whether or not a man is a key man? That would vary with the different districts and with the different types of production throughout the dominion. In my own province it requires at least one able-bodied man to carry on the production from one hundred acres, particularly if there is anything in the way of milking cows or raising hogs. Have any standards of production been set in order to measure whether a man is essential in agriculture?

Mr. MITCHELL: I think my hon. friend will agree that it would be difficult to establish a yardstick. One farm may be different from the one next door. The real yardstick that we are using is common sense and reason. There are agricultural experts who are advising the different boards, and we also have reports from the various municipal committees scattered around the province of my hon. friend. I wish my hon. friend would give me the particulars of the case he mentions, because it would seem to be establishing a precedent.

Mr. CASTLEDEN: They have established a point production system in the United States, and if a man comes up to a certain standard the recommendation is made accordingly. Much of the inequalities which have arisen in selective service with regard to agriculture is caused by the fact that on one farm there will be three or four men left with an able-bodied father, while on another farm the last son is taken when the father may not be in the best of health to carry on the work.

Mr. MITCHELL: My United States friends come in to see me. Sometimes I think I have a lot of grief on my doorstep, but from what they tell me they seem to have a great deal more.

Mr. CASTLEDEN: Standards help.

Mr. ROSS (Souris): Is there not some basis established as a direction for all the mobilization boards? I am told that in one province not far from here a man and a son will be left on a twenty-five acre farm, whereas in my province or in the other prairie provinces there might be only one man for a section of land. Is there any basis set up which would provide some equality in the decisions by the mobilization boards across Canada?

Mr. MITCHELL: I will answer my hon. friend's question, but I think it should be understood that we discussed this matter for two days. The last speaker and the one before him are really out of order. Giving my own personal opinion, I do not think it is possible to do it on that basis. I would rather rely on the common sense of my Manitoba or Saskatchewan friends. I do not know whether

I have said this before in the House of Commons, but there are some people who believe that if they make a thing so complicated that they cannot understand it themselves, other people should be able to make it work.

Mr. GRAYDON: Is that the job you are working on?

Mr. MITCHELL: With all due respects to some of the people who have resigned from selective service, I would rather have good common sense such as we are using at the moment.

Mr. ROSS (Souris): I think the boards in Manitoba are doing their job reasonably well, but there are inequalities in the way in which this thing is handled in other parts of Canada.

Item agreed to.

Wartime bureau of technical personnel, $220,500.

Mr. GRAYDON: Could the minister explain the work of this bureau?

Mr. MITCHELL: I think I pointed it out quite clearly in the exposition I gave when these estimates were first introduced. The war-time Bureau of technical personnel is to all intents and purposes a selective service for the professions. It was established prior to selective service itself. At that time I was the secretary of the labour coordination committee or the man-power committee of the government, and it was decided to try a modified form of selective service on the professional classes after representations had been made by various engineering societies. I think this is as efficient an organization along selective service lines that we have in the Department of Labour. It has rendered distinguished service to industry and the army.

Mr. GRAYDON: The minister thinks it is a little better than the others?

Mr. MITCHELL: It has been in operation longer.

Mr. ADAMSON: To what extent has this bureau been used? I happen to be a member of two professional societies, and some time ago considerable criticism was offered about the limited use which had been made of this bureau.

Mr. MITCHELL: I believe the total registration is 30,000, and the number of placements last year—I speak from memory—was between 1,500 and 2,000.

Mr. ADAMSON: Fifteen hundred out of 30,000?

Mr. MITCHELL: Yes.

Mr. STIRLING: That is last year.

Mr. ADAMSON: Has the minister any idea of the total placements?

Mr. MITCHELL: I am talking about last year only.

Item agreed to.

Mr. GRAYDON: Does this finish the Department of Labour, including sundry services?

The CHAIRMAN: I believe it was understood that the three items would be taken together.

Sundry services, $86,022.

Mr. HARRIS (Danforth): This item of sundry services would seem to offer me an opportunity to make a few general observations with regard to a rather critical condition which exists at the present time in the larger cities. We all admit that there is a shortage of man-power for special work which is sometimes needed to be done by the transportation systems and those engaged in providing storage facilities. For example, a cargo of sugar may land in Toronto and there is no help to unload the ship, which is held up. National selective service may not have a priority rating for sugar. These priorities are confidential and no one seems to know just what they are. The local organizations do the best they can, but quite often they do not have very much success.

I can cite another case. Eighteen cars of wool were landed in Toronto on June 4, and some of them are still on the track under demurrage. Wool is a war necessity, and some direction should be given to national selective service so that they can deal with emergencies of this kind and avoid the tie-up of railroad facilities and boxcars. Thirty cars of coca beans were sent to a manufacturer whose resultant product is sent to the troops, but they found themselves unable to move this commodity.

The fault lies in not having taken hold of this problem at the outset. As I said some two years ago in this chamber, there should be some way of knowing where a man of a certain vocation is in this country, so that he can be located to do the work for which he is best fitted. For instance, here is a firm in Toronto manufacturing glycerine. They lose a man and there is no way of knowing where he is. By accident he is found to be working in a factory making pop. Is it more essential that we should be manufacturing glycerine or manufacturing pop? The man who manufactures the glycerine had no means of knowing where the man was.

Another case I could refer to was that where forty men who had been previously employed in what might be termed an essential industry were found to be working at the ball park peddling peanuts during the summer months. Some hon. members smile at that, but the fact is that during the winter months these men were working in an essential war industry, and peddling peanuts should not have priority over a war industry.

Some machinery is needed to keep track of where these men go. We should be able to trace them and bring them back into essential industry. It would help considerably if their former employer knew where they could be found or that they could be traced. But at present they cannot be traced. At the present time when a worker in essential war industry leaves his employment he does not have to say where he is going. The employer does not know exactly where these men are going. He generally finds out that they are going to some work somewhere where they will get a few cents more an hour. The next step is that the employer appeals to the regional war labour board for permission to increase the rate of pay. Very often this entails a long delay. I have in mind a case where it took from January until May before the employer got an answer. In the meanwhile twenty men out of the hundred had found themselves other employment, and when the regional war labour board made the allowance which was decided upon these men could not be found, because there is no system whereby the national selective service organization can trace these men through. I do not say that you should compulsorily take them and haul them back into the industry they have left, but you might talk to them and point out that war industry needs them rather than some industry which is a non-essential industry, and if you are in a position to pay the wages they want they would probably come back to their previous job. I make these few observations in the hope that they will be to some extent constructive.

Mr. GRAYDON: One thing before this item passes. I propounded a number of questions to the Minister of Labour, but I am quite prepared to allow the item to pass upon the understanding that after eight o'clock the minister will answer me in full.

Mr. MITCHELL: I believe there is only one question the hon. member wanted; it was a list of the people who had resigned?

Mr. GRAYDON: I wanted a list of people who resigned; also a question came up in connection with enforcement of the regulations of national selective service. I wanted to know what prosecutions had taken place and the steps which had been taken to undertake them. I believe that in my original address on this particular debate I raised a question as to the extent of the records kept by the local offices of national selective service.

Mr. MITCHELL: I should like to get away this evening. I have had a pretty tough time. May I do as was done by the Minister of National Defence for Air? I will get all the questions and give the answers to-morrow, if that is acceptable to my hon. friend.

Mr. GRAYDON: I have no objection to that. I do not want to have these questions stand over indefinitely, but if the minister desires to give this information to-morrow I shall have no objection. If, however, when he makes his answers, any supplementary information may be called for, I do not want to be debarred from making some observations.

Mr. HAZEN: Has the minister a bureau of public relations or a publicity department in his department?

Mr. MITCHELL: I do not know what the hon. member means by a "publicity department". There has always been an information bureau in the Department of Labour.

Mr. HAZEN: Will the minister let us know when it was established; what it has cost to date; how many people it employs; how many receive salaries of over $5,000, over $4,000, over $3,000, and over $2,000?

Mr. MARTIN: It is all covered by the general estimates.

Mr. GREEN: The hon. member is entitled to get that information.

Mr. MARTIN: Well, we will give it to him.

Mr. HAZEN: May that information be placed on record?

Mr. MITCHELL: Absolutely. But why not put a question on the order paper?

Mr. HAZEN: Well, if we do that we will get an order for return.

Mr. MITCHELL: I will promise my hon. friend that I will answer him immediately, if he would rather have it that way.

Item agreed to.

At six o'clock the committee took recess.

After Recess

The committee resumed at eight o'clock.

DEPARTMENT OF FINANCE

Wartime prices and trade board—administration, $14,300,000.

Hon. J. L. ILSLEY (Minister of Finance): Mr. Chairman, I should like to say a few words about this item.

Mr. STIRLING: Is the minister going to give a schedule of the items which he will deal with, as the other ministers have done?

Mr. ILSLEY: I can do that readily. I have nothing printed for distribution, but in *Hansard* of March 3, at page 922, there appears a break-down of the finance items. They are very short. I have been out of the house so much that I was not aware of the practice, of which I am now advised, that ministers have been having items mimeographed and circulated.

Mr. STIRLING: Since the minister proposes to follow that schedule, that will do to work on.

Mr. ILSLEY: That is what I propose to do.

Mr. HANSON (York-Sunbury): Could we have it by to-morrow afternoon?

Mr. ILSLEY: Yes. There are only four items in the wartime prices and trade board estimates: administration, $14,300,000; commodity prices stabilization corporation, subsidies due to application of order placing a ceiling over all prices, $120,000,000; Wartime Salvage, Limited, administration and losses, $1,000,000; and Canadian wool board, administration, $500,000. Virtually there are only four parts to any discussion that will take place: first, the administration of the board itself; second, the commodity prices stabilization corporation; third, Wartime Salvage, Limited; and fourth, the Canadian wool board, administration. Those are the only items. In addition to those items, there are other finance items: comptroller of the treasury, $7,950,000, and sundries, $102,000. What I think the committee would like to have would be a comparable statement for the fiscal year 1942-43. I believe other ministers have put similar statements on *Hansard* and, if it would be more convenient for me to have prepared a mimeographed statement showing these items and circulating them among the members to-morrow afternoon, I will do that. The items are so few, however, and the division so simple that I do not think anyone would be hampered much to-night in discussing the matter.

Mr. HANSON (York-Sunbury): We shall have to do the best we can to-night, but may I suggest that with respect to the second and third items, the wartime prices and trade board, $14,300,000, and the commodity prices stabilization corporation, $120,000,000, we ought to have a substantial amount of detail as to the proposed expenditures, with a comparable statement for last year. With respect to the commodity prices stabilization item, we ought to have the amounts for the various commodities; and may I venture to ask for the amounts paid to various organizations. I suppose that latter point raises a question of some difficulty for the minister. I understood the minister refused to give that information some time ago. Perhaps my memory is defective, but I believe he refused to name the firms in relation to these subsidies. Is that correct?

Mr. ILSLEY: Yes. The position I took in that speech in the spring of 1942—April—was that I did not think I could give currently the subsidies that were being paid to particular firms or individuals or companies, but that later these would be given in the form of a report, and as a matter of fact they have been given for the fiscal year which ended March 31, 1942, in the report which has been tabled in the house. The question came up again more recently, earlier in this session, and by that time the number of recipients of subsidies had become so great that it would be nearly impossible physically to give the names of all of those. It certainly could not be done without months and months of work and at very great expense, so that I left open the question as to what should be done about giving the names of recipients of subsidies for the fiscal year that has just closed. I want to make a general statement on the wartime prices and trade board first, and if the hon. member does not mind he can return to this question.

Mr. HANSON (York-Sunbury): Could we not settle the principle on which we are to get the break-down so that we can understand it before the minister goes on with his general statement? I hold the view that with respect to expenditures already made in the past fiscal year the country is entitled to know who got the money, just as in the case of any other government expenditure, and I do not think it will do for the minister to say that it involves months and months of work. In the

administration, if they are a business organization, as I assume they are, they must keep up from day to day a correct statement of the whole position, ready to be reviewed by the minister at any time, and that document, if kept in a businesslike way, brought up to date from day to day, from week to week or from month to month, ought to be readily available to the ministers. Otherwise I do not know how he will keep an organization of that kind in operation if he does not know where the money is going, to whom it is going, and on what account it is going. He must have that information submitted to him frequently, because this item is likely to run into a very large sum of money.

In the course of his observations I wish the minister would make some reference to the position of Canada with regard to this policy vis-a-vis the action of the United States congress in refusing to grant any further subsidies, and what effect it may have on the price ceiling in Canada; because I can see that, if that policy is carried out there, there is trouble looming up to maintain the price ceiling, and a grave difficulty in maintaining it in Canada. Already we are having tremendous difficulties in connection with certain commodities in my own province. I need only mention the difficulty that has arisen with respect to pulpwood, where, in my part of the country and in Canada generally, there is a ceiling, whereas across the line there is not. This government has undertaken to deliver, whether the Canadian mills get the farmers' wood or not, a certain allotment or quota which has been promised. I am not quarrelling with the promise made by the Minister of Munitions and Supply to the United States mills; but what I would point out in passing is that these mills in Canada, which have been depending in a degree upon pulpwood cut from settlers' lots, are just out of luck. I am sorry the Minister of Transport is not here to-night, because he knows of the difficulties that are being experienced in the northwestern part of New Brunswick in connection with this very matter, where a huge mill in his constituency is likely to be shut down as a result of the position to which I have referred, namely, a ceiling in New Brunswick of $12.25, or whatever it may be, while across an imaginary line closely related to this country by railroads and short freight hauls there is no ceiling at all. The difference, I am told, may run to as much as $6 a cord, and that undertaking on the part of the administration, that very large quota from New Brunswick, amounting to at least 550,000 cords to be delivered to the Maine mills during the current season, at a time when there is a great scarcity of labour and when it is almost impossible to fill the camps to procure rough wood, is a matter that must be considered. It is something that has been brought about, I would say, through no fault of the policy of the government, but by the situation which has developed side by side in the two nations. You cannot get pulpwood for the Canadian mills from the farmers or those who make a business of cutting on their own freehold limits and, in some instances, crown timber limits. You cannot expect them to sell to Canadian mills when they can sell their pulpwood across the line at an advance of $6 a cord, plus ten per cent premium on $18 a cord. Perhaps the $18 a cord includes the ten per cent premium, but the figures are an approximation at any rate, and they illustrate beyond peradventure the position which I am trying to envisage for the minister. Those are the conditions which are developing in Canada and which are making it extremely difficult for our own industries to operate, and extremely difficult to satisfy our people.

I should like to make this further observation. While I have never quarrelled with the objective of the policy of price ceilings, because I realize the minister's objective is good—I have been tempted at times to criticize it; yet my common sense told me the objective was good—I tried to visualize from the very beginning the difficulties that would accrue to our own producers. They are the people who will suffer under this situation. It is not human nature to expect the pulpwood producers in New Brunswick, outside of the big timber limit owners themselves who own a mill and find it difficult to get labour, to sell to Canadian mills if they can export under the present set-up, and they are obliged to export because they have a priority on that class of wood.

I do not know what the minister is going to do about the situation, but I want to tell him that it is likely that one big mill in New Brunswick will close down. I know the management are trying to grapple with the situation. One suggestion was made that this company, which produces, we will say, sixty million feet board measure of spruce and fir lumber, should take that lumber and put it into the pulp mill. But the British government is crying for lumber, and if you take sixty million feet of sound lumber out of the market you create an intolerable situation in the lumber industry in eastern Canada. There is the position, and I would ask the minister to give some consideration to it and to consult with his colleague before he makes any reply on that point. But we ought to deal with it somehow or another and know what is proposed to be done to meet that situation.

Coming back to my original request, I think the people of this country have a right to know where the millions went which were voted last year and were expended before March 31 last, and to whom they went. This year we have $120,000,000 proposed to be expended in this budget, and I venture to suggest that if the policy is continued to its logical conclusion that sum will reach $200,000,000 this year.

I should like to make this suggestion to the minister. The price stabilization policy in respect of certain commodities has been too inflexible, and some consideration ought to be given to the increased cost of production and the increased cost of labour. Deny it if you will, but there have been increases in every item of cost of some of these commodities. I am not speaking of imported commodities at all. There could be a levelling up of the ceiling in certain given instances so that we would avoid, if possible, this policy of subsidization of our own production and thus equalize to a degree at least the increased cost of production. The minister will say at once, of course that that is inflation, and theoretically he would be right. But what is $200,000,000 spent on subsidizing Canadian production? Is that not inflation?

Mr. BLACKMORE: What is inflation?

Mr. HANSON (York-Sunbury): Please pardon me; I am not going to get into an academic discussion of inflation to-night. I know what it means to myself.

Mr. BLACKMORE: Let us hear it.

Mr. HANSON (York-Sunbury): I refuse to be tempted. I certainly am not going to get into an altercation with the hon. member for Lethbridge on inflation, because I have an idea that he would win. I do not know anything about the theories of economics; I just think I have a little common sense. I am not saying that he has not, but I know that if it comes to a battle on textbook theories and information I do not stand the ghost of a show.

I am trying to get across to the minister in a very inadequate way what has developed from the government's policy in respect of one commodity only, and I am limiting my remarks to that at the moment. I have discussed this matter privately with the Minister of Munitions and Supply, who made the commitment for all Canada. I know the trade itself is struggling with the situation. I do not know what solution, if any, has been reached, because I have not been apprised. But I know there is very grave danger of the situation which I have tried to envisage for the minister becoming more and more acute, with the result that Canadian labour will be thrown out of employment, because mills will have to lay off men for a time at least. That is a very real danger. I am not raising this question for any political purpose at all. I want the minister to understand the viewpoint of those who are attempting to give some consideration to the producers of this country. This whole policy of price stabilization is in the interests of the consumer and in the interests of the government's policy against inflation, but I suggest to the minister and his advisers that no consideration, or very little, has been given to the producers of this country under this policy. That is the position. I wanted to limit my remarks to this pulpwood situation, and I hope the minister will be able to say something that will alleviate the anxiety of those who have to face and deal with this situation.

Mr. ILSLEY: Before I come to any particular matters I should like to make a general statement.

The chief items in the war appropriation estimates for the Department of Finance relate to the wartime prices and trade board and its associated crown companies, the Commodity Prices Stabilization Corporation Limited, Wartime Salvage Limited and the Canadian Wool Board Limited. Hon. members have already been furnished with a copy of the report of the board and its associated companies for the period ending March 31, 1943, and I do not think it is necessary for me to repeat what is in that report by giving at this time a further detailed review of the activities of these organizations. I may say that one of the chief reasons for having the report prepared was to facilitate discussion in the committee by providing members with a much more complete account of the administration of price control and related matters than could possibly be given in a verbal statement. The few remarks I intend to make will, therefore, have to do with the general results achieved rather than with particular aspects of administration.

Nineteen months ago, in December, 1941, the overall price ceiling was established. As the Prime Minister said in his announcement of policy, the overall price ceiling represented an experiment "hitherto untried by the will and consent of any free people anywhere." Many said it could not succeed; and I am free to admit that even in the government there was no one who could be entirely confident that a general price ceiling was the right answer. But we did recognize the terrible consequences that inflation would have

for the Canadian economy both during and after the war and we were determined to prevent it, if at all possible.

As the months pass and the war affects more and more intimately the economic life of the nation, it becomes increasingly apparent that the right decision was made at the right time. If there had been compromise, if there had been delay, if the problem had been attacked in piecemeal fashion rather than by a bold stroke, we in Canada would to-day be faced with an extremely confused and well-nigh uncontrollable situation. In saying this, I am not drawing any parallels with events outside Canada. The best evidence as to what would have happened is to be found here in Canada. We have only to observe the eagerness with which scarce goods are purchased when they appear on the store shelves; we have only to follow the action of prices of the few commodities which for various reasons it was necessary to take out from under the ceiling; we have only to watch the scramble for housing accommodation in congested areas; we have only to experience the difficulties of securing transportation by rail or bus, to realize how quickly prices and rents would have soared if at the time when shortages began to be felt we had not taken steps to control virtually all prices at levels then prevailing.

Our action in introducing a ceiling when we did has been a tremendous advantage in the fight against inflation. Reinforced by a rigorous programme of taxation and borrowing, we have had a large measure of success. I would not want to create the impression, however, that the government is over-confident as to the future. A crucial and difficult testing time lies ahead. Nevertheless, the experience gained and the very fact that the price level has been held until now will stand us in good stead whatever difficulties may be encountered.

The primary purpose of the controls established in December, 1941, was to stabilize the cost of living. It is the outstanding achievement of the wartime prices and trade board, as the agency responsible for the administration of the price ceiling, that this purpose has been accomplished. It cannot be claimed that there has been no increase whatever since the base period in the prices of every one of the thousands of individual items purchased by Canadians in their day to day living. This is an ideal towards which the board is constantly striving, but for various technical reasons it has not been possible to maintain a rigid ceiling everywhere. A full account of the exemptions and adjustments that have had to be made will be found in the report of the board. Nevertheless, after nineteen months the price ceiling holds in the main, and partly as the result of reductions in the price of certain common foodstuffs as an offset to increases in other items, the average cost of living of the average Canadian has been stabilized. This fact is reflected in the movement of the official cost-of-living index prepared by the dominion bureau of statistics, which from November 1, 1941, to May 1, 1943, rose by only 1·5 per cent.

When it is considered that in the United States the cost of living during approximately the same period rose by 12 per cent according to their official index, and that during the corresponding period of the last war the Canadian cost-of-living index rose by 22·5 per cent, I think the accomplishments of price control in Canada speak for themselves. While I would not want to suggest that conditions in these other countries are fully comparable with Canadian conditions, it may interest the house to know that in Australia the cost of living from December, 1941, to March, 1943, rose by about ten per cent; in South Africa from December, 1941, to February, 1943, by more than ten per cent; and in Mexico from December, 1941, to April, 1943, by nearly thirty per cent. I would have liked to give figures for some other countries where the rise in cost of living has been even greater, but owing to war conditions, up-to-date and accurate statistics are not always available.

As a measure of the effectiveness of the price ceiling, I thought the committee might be interested in the results of certain calculations which have been prepared indicating how much it might have cost the Canadian consumer if prices had not been under control. In the first twenty-seven months of this war, prior to the establishment of the ceiling in December, 1941, the official cost-of-living index rose fifteen per cent as compared with an increase of sixteen per cent during the corresponding period a generation earlier. This similarity of price movements in the two wars stopped abruptly, however, after the establishment of the ceiling. During the eighteen months following November, 1916, the cost of living rose 22·5 per cent, in striking contrast to an advance of only 1·5 per cent in the first eighteen months under the ceiling. Prices in the last war continued to rise rapidly, with only minor interruptions, to July, 1920, when the cost of living was 198 per cent of what it had been in July, 1914.

Now it has been calculated that for each increase of one point in the cost-of-living index, the consuming public pays out something like an additional $34 million per year.

On this basis, therefore, had prices been allowed to rise in 1942 as in 1917, the public might have paid out an additional $350 million during 1942.

Should prices remain stabilized through 1943, instead of continuing upward as they did through 1918, an additional saving of $850 million might accrue to consumers this year.

There are, of course, enormous indirect benefits from the ceiling, including savings to the government. These are difficult to measure, but I am satisfied that without effective price control, government expenditures would be much higher than they are now and it would be practically impossible to finance them on a sound basis.

It is true that the earnings and incomes of some persons increase during a period of inflation—enabling them to obtain a larger proportion of the limited supply of goods and services available for consumption. But it is equally true that the incomes of other persons do not rise proportionately to the increase in prices, and as living costs rise they are forced to do without more and more. I think it is fair to say, therefore, that the vast sums saved by the consuming public and by the government by reason of the price ceiling are a significant measure of the dislocation which has been avoided.

Control of prices is only one side of the work of the wartime prices and trade board. Equally important is the responsibility of the board for supply and distribution of civilian goods. Quite naturally, public attention is focused on the more obvious aspects of the board's work in these fields such as consumer rationing. A great deal of constructive work goes on, however, of which the public is hardly aware, and I would direct the attention of hon. members in particular to those sections of the report of the board that deal with the programmes of rationalization and simplification and with distribution, allocation and rationing. It is not just by chance that the housewife is able to continue shopping as usual in her neighbourhood store or that the corner grocery shop is able to get a fair share of supplies in competition with the powerful chain or departmental stores. These are the results of careful methods of distribution and allocation, arranged by the board in cooperation with the trade.

Before leaving this subject, may I say a few words regarding the general civilian supply situation.

Mr. HANSON (York-Sunbury): Before the minister leaves this matter dealing with the retail stores, do I understand him to say that the retail store, the small retailer, vis-a-vis the big departmental stores, is getting a fair share of consumer goods for sale?

Mr. ILSLEY: Yes.

Mr. HANSON (York-Sunbury): Well, I do not believe it. I will tell the minister frankly that is not the evidence I get. That is a statement made by the wartime prices and trade board, and I should like to have it supported with evidence.

Mr. ILSLEY: The hon. member has made a fairly broad statement, too. Perhaps he should support it with evidence.

Mr. HANSON (York-Sunbury): I have made it my business to find out.

Mr. ILSLEY: Before leaving this subject may I say a few words regarding the general supply situation?

So preoccupied have we become by the problems of distributing scarce goods that there is a tendency, I am afraid, to overlook the fact that levels of consumption in Canada have so far been well maintained on the average, and that the consumption of many common items is actually considerably larger than in pre-war years. The record of retail sales reveals that the volume of civilian consumption, generally speaking, rose steadily from the outbreak of war until the latter part of 1942. Towards the end of 1942 the rate of buying tended to fall off, indicating that the expansion is over and contraction has begun, but I think it may fairly be said that consumption levels in general still compare favourably with the period before the outbreak of war or the early months of war.

The fact that consumption standards have been fairly well maintained to date is remarkable considering the enormous contributions Canada has made to the cause of the united nations in the form of men, munitions, raw materials and foods. True, some of this consumption has been possible because inventories have been depleted to some extent and will not be replaced until after the war, but credit for maintaining our average living standards can be given in large part to the magnificent way in which the people of this country, on the farms and in the factories, the forests and the mines have organized their productive efforts.

There has, of course, been an important enlargement and a desirable redistribution of consumer purchasing power, those whose previous standards of living were relatively low gaining at the expense of those whose previous standards of living were relatively high. This accounts for many of the difficulties that consumers are experiencing in obtaining supplies.

In many cases quantities available to civilian consumers have been well maintained or even increased, but the added demands are so great that there appears to be a very short supply. A good instance of this is jams, jellies and marmalades. Before the war the production of these items was in the neighbourhood of 45 million pounds. By 1942 the output had risen to over 70 million pounds. Of this total some 15 million pounds were used by the armed forces and other priority users, but there still remained a considerably larger quantity for civilians. Yet hon. members, or at least their wives, know that jams, jellies and marmalades are very difficult to obtain in retail stores. Another example is evaporated milk. In 1939 Canada retained 95 million pounds. In 1942 the quantity of evaporated milk retained for use in Canada was 144 million pounds, of which 127 million pounds was set aside for civilian consumption, yet the board has had numerous complaints that the supply is quite inadequate.

To maintain the price ceiling policy has involved certain costs, but I think it can be said that these have been much less than anticipated and certainly well justified by the results achieved. Perhaps the committee will recall the fears expressed at the outset that business could not continue to operate under such a policy. It is true, of course, that many sacrifices and inconveniences have been imposed on business; a programme that cuts across ordinary methods of price determination was certain to have this effect. But in the result these gloomy forecasts have not been borne out. The number of commercial bankruptcies in 1942 according to Dun's "Statistical Review" was 609, while in 1941, the year prior to the imposition of the price ceiling, the number was 882. Some businesses, for example, many dependent on the automobile industries, have had to discontinue operations, but most of these difficulties are not due to price control. They are the inescapable result of changing the country's economy over to the fulfilment of the war programme.

The committee may also recall the predictions that to maintain an effective price ceiling it would be necessary to employ an army of officials at a cost to the country out of all proportion to the value received. The staff of the wartime prices and trade board has, of course, expanded substantially since the price ceiling was introduced, from 154 on November 30, 1941, to 5,251 on March 31, 1943, and the cost of administration from $1,436,988 for the fiscal year ended March 31, 1942, to $9,277,480 for the fiscal year ended March 31, 1943. These figures, nevertheless, are by no means great in relation to the task in hand, which involves the regulation of virtually the entire civilian sector of the Canadian economy.

The major item of costs is, of course, subsidies and trading losses paid by the Commodity Prices Stabilization Corporation, which actually amounted to $68 million from the inception of the ceiling to March 31, 1943, and which are in the estimates as $120 million for the present fiscal year. The reasons for subsidies and the basis on which they are paid by the Commodities Prices Stabilization Corporation have been fully explained to the house on several previous occasions, and a complete account of the payments made will be found in the report of the board. With these records available, I do not think it is necessary for me to make any extended remarks at this time, except to say that payment of subsidies and the bulk purchase operations of the Commodity Prices Stabilization Corporation have played an integral and vital part in ensuring a supply of essential goods and services and of protecting the standards of living of those receiving low or moderate incomes. British experience as well as our own has convinced me that price control can only be effectively maintained by the judicious and timely use of subsidies.

The CHAIRMAN: Shall the item carry?

Mr. HANSON (York-Sunbury): No. I would ask the minister to give a break-down of the expenses of administration, and salaries paid.

Mr. ILSLEY: The item is $14,300,000, and the breakdown is as follows:

Salaries	$ 9,200,000
Travelling expenses	920,000
Printing and stationery	1,400,000
Telephones	260,000
Telegrams	100,000
Legal and audit	100,000
Advertising	800,000
Sundries	640,000
Postage	250,000
Freight and express	30,000
Local ration boards	600,000
	$14,300,000

Mr. GRAYDON: What would be the expenses of the local ration boards? I understand that a great bulk of the work done by these local boards is on a voluntary basis.

Mr. ILSLEY: That is correct. Generally speaking, the work is done voluntarily, but there are 550 ration districts with 550 local ration boards. There are permanent secretaries.

Mr. GRAYDON: Are those paid on any regular basis?

Mr. ILSLEY: The secretaries are usually paid by the municipalities which we reimburse. Then there are postage and other expenses.

Mr. HANSON (York-Sunbury): Secretarial help, stenographers?

Mr. ILSLEY: Yes.

Mr. GRAYDON: Does that mean that a municipality can pay what it likes and the government will reimburse it?

Mr. ILSLEY: Some municipalities pay the whole thing themselves, and others have come to the board for assistance which is given when required.

Mr. QUELCH: When does the minister want the general discussion to take place, on this item or when the others are called?

Mr. ILSLEY: The general discussion on the activities of the wartime prices and trade board would take place under this item which covers administration.

Mr. QUELCH: I mean on the whole policy.

Mr. HANSON (York-Sunbury): Could we have a break-down of the salaries item, which is quite large? I think we ought to know how many men are receiving $12,000; how many men or women are receiving $10,000, and how many men and women there are in the various categories. I should like to know what these ladies are doing who are travelling round the country putting on musical shows and revues. There was one in my city this week headed by a Mrs. Aiken, I think it is. I should like to know what she gets and what good she does. What is the object of putting on this free entertainment? I just mention her as an illustration; I do not know anything about her. Who recommends this class of propaganda, because that is all it is? What is the value of it?

Mr. ILSLEY: I am informed that Mrs. Aiken is engaged in—

Mr. HANSON (York-Sunbury): I do not want to know about her particularly; I just quoted her as an illustration.

Mr. ILSLEY: She is engaged in what is called conservation work, a campaign to get people to save.

Mr. HANSON (York-Sunbury): Is that in this vote?

Mr. ILSLEY: Yes; her salary would be paid out of the salaries vote. It is an educational campaign to encourage the making over of old clothes and that sort of thing instead of spending money for new ones.

Mr. MacNICOL: What salary is she receiving?

Mr. ILSLEY: I would have to get that; I have not that before me. I do not know just exactly what the hon. gentleman means by a break-down. There are over 5,200 employees.

Mr. HANSON (York-Sunbury): I understand that a return is to be brought down. We ought to have had this return before this item was up.

Mr. ABBOTT: There was one brought down before.

Mr. HANSON (York-Sunbury): It was held up by the minister once. I understand that the information was all ready to be brought down and that the minister held it up. Then it was passed as an order for return yesterday without any objection. If that return is full and complete, I am told that it will show great inequalities in salaries, as well as a large number of very high salaries.

Mr. ILSLEY: No.

Mr. HANSON (York-Sunbury): It will show some very high salaries and will show inequalities in salaries; that is the information I have.

Mr. ABBOTT: Just to get this salary matter cleared up, there was a return brought down about a month ago which gave all salaries of over $5,000. This return will show the salaries between $3,000 and $5,000.

Mr. HANSON (York-Sunbury): How many are there of $5,000 and over?

Mr. ABBOTT: If my hon. friend would look at the return; I cannot remember from memory.

Mr. HANSON (York-Sunbury): You should have it in front of you.

Mr. ABBOTT: I do not think you have even seen it.

Mr. HANSON (York-Sunbury): The officials in front of the minister must have that information.

Mr. ABBOTT: That return has been in for a month or five weeks; it has been available to the house.

Mr. HANSON (York-Sunbury): That is one of the objections to these questions being passed as orders for returns. They are usually buried and most people never see them. The answers should be given in *Hansard* where we

can all see them and read them. It is not open to 245 members of this house to send down to the proper office to get the return.

Mr. ABBOTT: If my memory serves me correctly, the complete return was published in both the morning and evening editions of the press.

Mr. HANSON (York-Sunbury): That is not good enough; that is not official.

Mr. ABBOTT: You do not read the press.

Mr. HANSON (York-Sunbury): We do read the press, but that is not official.

Mr. MacNICOL: That is not an answer anyway.

Mr. HANSON (York-Sunbury): I think we ought to have it on *Hansard*. That is why I am interested in those making $5,000 and over. How many are there from $3,000 to $5,000?

Mr. GRAYDON: This return referred to by the hon. member for York-Sunbury calls for a list of salaries from $3,000 to $5,000 paid by the wartime prices and trade board. Some debate occurred yesterday or the day before in connection with this matter. Has the minister the information called for by the question which was passed as an order for return?

Mr. ABBOTT: If my hon. friend does not mind, perhaps I can answer this, because I am familiar with the facts. I was not here on Monday when the question came up. When it first appeared on the order paper I took the matter up with the wartime prices and trade board. The question covered more than the names of the persons receiving $3,000 and up, it asked for allowances and travelling expenses. The first difficulty was in connection with travelling expenses. The board does not keep the travelling expenses separate for each individual employee. For instance, if an investigator goes to Renfrew and spends $3.25, he puts in a voucher and it is charged to the regular travelling expense account. It will mean a tremendous amount of work to segregate these travelling expenses and allocate them to each individual employee. Speaking from memory, I believe there are several hundred employees.

Mr. GRAYDON: Surely this does not mean that the board has no record of the individual travelling expenses of its employees?

Mr. ABBOTT: Oh, yes; that is the practice in every large organization. You do not open a special account for each employee to show what his travelling expenses are. You have the general account in which you charge travelling expenses, and you indicate to whom the travelling expenses are paid. That is the practice which is followed in the wartime prices and trade board, and the information is there showing the amount of expenses paid each individual employee. But it will mean going through the general account and segregating the amounts paid to each individual. As I say, in the group $3,000 to $5,000 there are several hundred employees.

Mr. MacNICOL: That travel around?

Mr. ABBOTT: I am just speaking from memory. Perhaps I had better get the accurate figure. It is at least 200.

Mr. MacNICOL: That travel around here and there?

Mr. ABBOTT: I do not know that. There are several hundred employees in the category $3,000 to $5,000. Some may have to travel and some not. That varies according to their duty. That is the second point.

The third point in connection with that particular question was that the information with respect to $5,000 and up had been given in the return I mentioned a short time ago. Accordingly I went to the hon. member for Lake Centre (Mr. Diefenbaker), who had asked the question, and pointed out to him the amount of work which would be involved in giving the individual travelling expenses of all these employees. I also pointed out that the information had already been given in the return with respect to those with salaries of $5,000 and up, and I indicated that among the two or three hundred in between $3,000 and $5,000 there were a number of inequalities; that is to say, one man might be getting $100 or $200 more than another man doing perhaps the same sort of work. The reason for that was that the staff was got together in a relatively short time; a good many of these employees were lent to the board by private firms; and in these instances they would be paid their salaries by the private employers, and the private employers reimbursed by the board. I pointed out to the hon. member for Lake Centre that the board felt that the publication of this complete list with names would create a difficult internal situation amongst these employees—

Mr. MacNICOL: So it would.

Mr. ABBOTT: —and that the board would be faced with a number of demands, not for decreases but for increases. I put that up to him. I said, "If you insist on this information being filed and the full list given, of course you will get it, but I am pointing out to you the reasons. Let me know what you think." I think I suggested to him that I would give

him, and I did give him, a list of the employees receiving from $3,000 to $5,000. I sent that to him. He said he would think the matter over. He did nothing about it for a week or ten days. I asked him again what he wished to do, and he said, "Well, I don't know; I didn't realize that perhaps the publication of the whole list might create these difficulties to which you refer. What do you suggest?" "Well," I said, "I don't know that I have anything to suggest. Perhaps you might reframe your question and ask for any particular group of salaries, or, if you are interested in any particular individual salaries you have the list before you." That was the position in which the matter stood when the question came up last Monday, and the hon. member for York-Sunbury (Mr. Hanson) asked why it had been standing so long.

Those are the facts. I asked yesterday that it be made an order for return, because, in the first place, the list of names will be lengthy, and in the second place, it will take some little time now to get out these travelling expenses to which I refer.

Mr. HANSON (York-Sunbury): So far as the travelling expenses are concerned, in view of the statement made by the parliamentary assistant to the minister, knowing as I do the practice in big commercial houses, I would be perfectly willing to waive that part of the information, namely, the individual travelling expenses of individuals. I should like to know, though, if these people travel by aeroplane or if they are instructed to keep their travelling expenses down to the minimum. Great care ought to be exercised in that respect. I understood that some of them did travel by plane.

I should like to point out a case of what I consider to be useless travelling. A friend of mine operates a general store about half way between Saint John and Moncton. One day an inspector arrived by taxi from Moncton, forty-five miles away, to investigate an alleged overcharge of one cent above the price ceiling of a can of a commodity. Some person had made a complaint. The books were opened up and shown to the inspector, and it was made evident that after freight and all other expenses were paid on this commodity the retailer had a net profit of one cent, which was one cent above the ceiling. This showed that the ceiling had not been raised to cover the increased cost. The inspector went away and nothing was ever again heard of the matter. But that inspection about a one-cent overcharge—I think there were half a dozen tins involved—must have cost this country in salary and travelling expenses $50. I will give the minister the name of the merchant.

Mr. ILSLEY: The amount involved would not be the consideration.

Mr. HANSON (York-Sunbury): No; but it shows how money is wasted. I admit regard must be had to a principle. The minister will say that a principle would be involved there. There is a principle, but to vindicate a principle often costs a man his life. A man had the right of way—you know that rhyme—but he was dead, just the same, through vindicating his position and taking the right of way. The same principle applies here. A little common sense must be exercised. There was not an office between Saint John and Moncton. The complaint came in. Instead of writing the merchant, who was a reputable merchant, and asking for the facts, they sent an inspector by taxi. Why he came by taxi I do not know, but that is the fact. That is the sort of thing that people question. An incident like that is told all over the country and brings the practice of the office into disrepute.

I am quite willing to waive the demand for individual travelling expenses, on account of the difficulty mentioned by the minister. I think we ought to have the names of those with salaries of $3,000 and over.

Then I have the curiosity to know how many lawyers are in the employ of the war-time prices and trade board and how much they are getting out of it.

Mr. MacNICOL: They will not get much, surely!

Mr. HANSON (York-Sunbury): They do. The board has an army of young lawyers, a good many of whom ought to be in uniform. How are they selected? Are they selected by the civil service commission, or is the civil service commission a rubber stamp as far as the employment of these young lawyers is concerned? There is an avenue there for investigation on the part of hon. members. I do not want to be the chief critic of this set-up, but I know a very large amount of money is spent, and I am not sure that we are getting a dollar's value for every dollar that is spent; in fact, I feel quite satisfied that we are not. I wonder if we are getting a dollar's value for every five dollars that are spent? I should like to have an expression of opinion by hon. members who know about the operations of this board.

I will give the committee another example of the ineptitude of this board. In New

Brunswick the strawberry crop will soon be on. Our strawberries are the latest in any part of eastern Canada to come on the market. In the south half of the county of York, the county of Sunbury and the county of Queens, the big strawberry producing country, the surplus goes to the Montreal market, and they feed it in gradually so as not to disturb the price and so as to keep it, of course, as high as possible to the producer. In the upper part of the county of York and the county of Victoria and Carleton the practice has been for buyers from the adjacent state of Maine, where they do not raise many strawberries but specialize in one crop, namely potatoes, to bring quart baskets over and then take them across the line. Strawberries always command a good price in that market. It is a ready local market immediately adjacent to that part of New Brunswick. An order was put out by the board, I understand, that none of these strawberries were to be exported without a permit. I understand there are about 250,000 quarts of a surplus besides what is used for local consumption and home canning, and when inquiries were made as to what was to be done with these strawberries, the officials of the board replied that the strawberries were to be sent to Montreal for processing, in a market that was already supplied, so far as fresh strawberries are concerned, from the areas I have indicated. To do this would have broken that market.

I have taken the precaution, as others have done, to make representations, and I am hopeful that the decision will not be adhered to because, instead of getting twelve cents f.o.b. Montreal for these berries, the growers will get twenty cents in Woodstock, New Brunswick, for fresh berries, and they will not have to supply crates, as they would have to do if they shipped the berries to Montreal. The crates are never returned to them. Buyers across the line supply the crates, and all the growers have to do is to cultivate and pick the berries and put them into small boxes and then into the crates and away they go, and the growers get their money at an advance of eight cents over anything they could otherwise hope to get. That is an illustration of the ineptitude of this board. There is no question of keeping the ceiling down, because the first berries that came into the market at Saint John sold at fifty cents a quart. I hope the position will be retrieved before it is too late, but that is the situation as it was this morning.

Mr. MacNICOL: Just a word in reference to what the parliamentary assistant to the minister has said about salaries. I find myself in agreement with a portion of his remarks in reference to giving out information about the salaries of men or women lent by companies to the government. It would be most "infra dig" to give any salaries paid to anyone lent by a company to the government, without the consent of the company. I remember how important this was regarded in the case of the list of salaries paid to employees in big companies, which were known only to one or two or three of the personnel, and I recall very well that it was almost impossible to find out what any of the officials of a company received by asking, because the heads of the company would not reveal that information, and rightly so. Before the government gives out the salaries of any of the men lent by companies, the companies should be asked for consent. These men are paid by the companies themselves who are latterly reimbursed by the government, and the consent of the companies ought to be obtained before the salaries are revealed.

Mr. ILSLEY: This matter of salaries in the wartime prices and trade board has given me a good deal of difficulty. The salaries are reasonable; I am satisfied of that. The salaries of those getting less than $5,000 have been practically all fixed by the civil service commission. The salaries of those getting more than $5,000 have been fixed by the governor in council and sometimes, though not always, on the recommendation of the civil service commission. But they are not very high salaries. The highest salaries paid are, I believe, considerably less than $10,000. It is well known that the board, in many instances, is paying men exactly what the companies paid them. They borrowed the men, as the hon. gentleman says, from some company and remunerate the company for the amount. They pay what the company paid the men, and for that reason the board has been most reluctant to make public these salaries.

Something has been said about salaries being out of line with one another. I do not know whether they are. It is always a matter of argument whether salaries are out of line with one another. But it must be remembered that this organization was got together under circumstances of terrific pressure and was built up from 150 to 5,000 in a year or two. It is harder and harder to get men. In most cases the men have been paid what the companies paid them, while in other cases they have not been so paid, having severed their connection and being taken on, on a different basis. It causes a tremendous

amount of trouble—I say this frankly—to have the scale of salaries published, but I do not think we can avoid publication if it is pressed for by hon. members. We did make a return of salaries over $5,000, and now we are being pressed to go down the range below $5,000 and publish those. It is a matter of great curiosity to people who are working for a private company, but people could not get that information at all if they wanted it from a private company. But the moment the information is given out, this terrific pressure starts from men who say, "I do not think I am fairly treated, because So-and-so is getting $400 or $300 more than I am," and presently the board is in hot water. It may be said that this is public money and that the public is entitled to the information, no matter how much trouble it causes or how much it costs the taxpayers. All I can say is that the committee is entitled to the information but that it would do more harm than good.

Mr. GRAYDON: This discussion is going on while the hon. member who asked the question is absent on very important public business, and so far as I am personally concerned I feel like reserving any remarks I may have to make until he returns to-morrow. In the meantime, perhaps the discussion need not take the turn it has at this particular time. Personally I am not sufficiently familiar with the hon. member's views on the subject, because he has given a great deal of study and consideration to it, and he is one member on our side who has an excellent judgment in matters of this kind. I should like to have the matter left over in the meantime.

Mr. HANSON (York-Sunbury): Could the item stand?

Mr. ILSLEY: I do not expect that we shall get through the item to-night.

Mr. HANSON (York-Sunbury): I have now received the original of the return, 127Q, brought down on Friday, May 14. I think the public ought to understand that no member of the board gets any salary at all. This huge sum of money is outside the board altogether, and only two of the members of the board, so far as I can observe, have drawn anything for travelling expenses. The reason for that is that the members of the board themselves are, every one of them, in the public service already, and are being paid by other departments. That is correct, is it not? For instance, the chairman is an official of the Bank of Canada, and Mr. Sim is commissioner of customs. Mr. MacGregor occupies a position in some other department, finance, I believe. The travelling expenses of the board itself are very meagre, in most cases none. This report goes on to indicate that there are forty-three officials with salaries of $5,000 or over; eighty-three with salaries of $4,001 up to $5,000; 174 with salaries of $3,001 up to $4,000; 683 with salaries of $2,001 up to $3,000; 3,723 receiving $2,000 and under. The total for salaries, honoraria and living allowances is $6,714,000, and travelling expenses in excess of ten per cent of the total for salaries and so forth. Of course, travelling expenses is a big item. Whether we should press for the names in the face of the minister's statement is something I should like to consider, but if the minister takes extreme exception to giving them for the reasons he has alleged I do not want to ask for the names just out of curiosity, because that is all it is, just to know what is being done. If it is not in the public interest to give them, this is one time I will be in agreement with the minister in the use of that phrase. I am not going to press it myself, but since the hon. member for Lake Centre has studied this whole situation, perhaps this might stand over until to-morrow.

I would ask the minister to tell us about the number of legal gentlemen he has on his payroll, how they are selected, and how they are paid. Are they paid a per diem allowance? Are they on the payroll six days a week or thirty-one days a month? What salaries do they get? There is certainly a raft of young lawyers being paid by this board and going round the country. I am informed, too, that in addition to all these young lawyers permanently upon the payroll, counsel are employed in various communities; I know a leading counsel in my city is employed to prosecute cases from time to time. Some explanation is due.

Mr. ILSLEY: All the solicitors with the exception of two have been appointed by the civil service commission. Their rates of salary have been set by the commission.

Mr. HANSON (York-Sunbury): On whose recommendation?

Mr. ILSLEY: I do not know about that.

Mr. HANSON (York-Sunbury): What do these young lawyers get—$3,000 a year?

Mr. ILSLEY: There was a return brought down a year ago setting out all their salaries. I think it would be something like that. The amount varies.

Mr. HANSON (York-Sunbury): So much for a king's counsel, and so on?

Mr. GRAYDON: They might get less.

Mr. ILSLEY: I think the money spent on enforcement is well spent. If a substantial sum had not been spent on enforcement, I do not think the price ceiling would have been respected, and at the present time it is fairly generally respected. There are many ways of evading it. From December 1, 1941, to May 31, 1943, there have been 3,335 prosecutions, and ninety-four per cent have resulted in convictions.

Mr. HANSON (York-Sunbury): Most of the cases are, I suppose, not contested?

Mr. ILSLEY: I suppose a great many are not; I do not know about that. I was talking to a United States gentleman the other day about the price ceiling in Canada. He had come into contact with some business men here, and his experience with them was that when easy and obvious ways of evasion of the price ceiling were open, such as by changing the number of a certain grade of goods, these Canadian business men said, "We do not dare do that."

Mr. HANSON (York-Sunbury): Most people want to observe the law.

Mr. ILSLEY: Yes, and the ones that do not have a fairly wholesome respect, generally speaking, for the price control regulations, and that has been brought about by the faithfulness of the enforcement. That is the reason.

Mr. HANSON (York-Sunbury): Through fear of prosecution?

Mr. ILSLEY: Among a certain type of Canadians.

Mr. HANSON (York-Sunbury): One further question about these young lawyers. There are a great many young lawyers on the payroll of the board who work in connection with the local offices, but is it not true that when it comes to a prosecution a requisition is made to Ottawa and the Department of Justice appoints an agent to prosecute?

Mr. ILSLEY: That is right.

Mr. HANSON (York-Sunbury): That is a form of political patronage. What is the good of employing these young lawyers if they cannot do the job?

Mr. ILSLEY: They have a great deal of legal work to do besides appearing in court.

Mr. JOHNSTON (Bow River): In regard to these dollar-a-year men who have been lent to the board by different companies, the company paying them their salaries and the board paying them one dollar a year, what check does the Department of Finance make to see whether the whole salary or any portion of it is not deducted from the company's excess profits tax?

Mr. ILSLEY: I think it ordinarily is treated by the company as an expense of carrying on its business—not if they are reimbursed, of course.

Mr. JOHNSTON (Bow River): But what check has the Department of Finance on whether the company deducts the whole of that salary or any portion of it from its excess profits tax?

Mr. ILSLEY: They do not deduct it from the tax at all. No one would deduct it from the tax. But they would likely charge it as an expense and deduct it from their income for taxation purposes.

Mr. JOHNSTON (Bow River): That is the way it is done?

Mr. ILSLEY: I think that is the situation.

Mr. JOHNSTON (Bow River): My information is that in some cases it is deducted from the company's excess profits tax.

Mr. ILSLEY: The hon. gentleman must have misunderstood what his informant told him.

Mr. JOHNSTON (Bow River): I am just asking for information, because I quite well recall an incident that came before the public accounts committee, where Mr. Martin got a quarter of a million dollars in connection with the cancellation of a contract, and it was definitely stated on several occasions that that quarter of a million was taken from the excess profits tax.

Mr. GIBSON: That was a repayment of capital.

Mr. JOHNSTON (Bow River): The statement had been made that no portion of that had been deducted from the excess profits tax until the inspector of income tax came before the committee and said definitely that that was the situation. I bring this matter to the attention of the Minister of Finance by way of caution, because I think there should be some guard against that kind of thing. I shall not name any company, but it is well known that many companies are lending men to the board and paying them their regular salaries; if they deduct that salary as an expense from their income tax, then indirectly the government is paying the man's salary, and it might just as well do it directly as ostensibly to be paying the man only a dollar a year. The government would be really paying the man for his services if the

company were allowed to deduct that amount from that tax. It would be better for the government to pay the man his salary direct than to have this roundabout method of doing business. If the minister has not already checked up, it might be worth while doing so.

There is one other question which probably will come under this item, which I should like to ask the minister while I am on my feet. I will say that I have not investigated the matter personally, but it has been reported to me on very good authority that a large amount of sugar was shipped to Calgary and stored at one of the R.C.A.F. stations there, just a matter of a month or so ago, and that while it was stored in that place it was spoiled. I received a letter asking about this, and I replied that I did not know anything about it but that when the time came I would ask for information in regard to it. Has the minister any information on the matter?

Mr. ILSLEY: I shall make inquiries about the sugar. The hon. gentleman does not know who stored it or where it was stored?

Mr. REID: I suppose it was stored under the wartime prices and trade board in a warehouse in Calgary which is under the control of the R.C.A.F. If the minister would answer those two questions, I would appreciate it.

Mr. ILSLEY: Which two?

Mr. REID: The question in regard to salary and the other question in regard to sugar, if he has that information.

Mr. ILSLEY: I thought I had said everything that could be said in regard to the first matter. When the hon. gentleman talks about deducting these salaries from the tax he is not expressing the matter correctly; I do not think anyone would ever charge or say that. But if he says that the salary should not be allowed as a reduction from the income of the company lending the man to the government, he has an arguable point. However, if the board were confronted with the alternative of sending the man home, or not taking the man at all, or accepting his services without charge, I should think on the whole it would be in the public interest for the board to accept the loan of the man's services. Often that is done on a temporary basis, for a short time only. I can think of men who have been in the employ of the wartime prices and trade board, who were in receipt of large salaries and who kept partly in touch with their business and whose salaries I believe, though I have no personal knowledge, were regarded as expenses of the companies employing them throughout the period when they were working for the wartime prices and trade board, just as they were both before and after that period. In such cases the taxes of the companies were affected indirectly to the extent of the salaries paid, but the men were working for the government rather than for the companies, though the government was paying them nothing.

Mr. JOHNSTON (Bow River): The companies were deducting these payments as expenses?

Mr. ILSLEY: That is right.

Mr. JOHNSTON (Bow River): So that in effect the government was paying to that extent.

Mr. ILSLEY: If the man had not been here at all the government would be paying him to the same extent in the same way.

Mr. JOHNSTON (Bow River): I had particular reference to an individual who was permanently employed by the board. I do not like to mention any names, but I could send the information to the minister so that he could get the information in regard to the individual concerned.

Mr. ILSLEY: What does the hon. member think we should do in a case of that kind?

Mr. JOHNSTON (Bow River): When the government is supposed to be getting a man on loan from a company for $1, and the company, which is really paying this man's salary, deducts from its income or from the excess profits tax, I think that is entirely the wrong way to go about it.

Mr. ILSLEY: Then tell us what we should do about it.

Mr. JOHNSTON (Bow River): You should hire the man and pay him a decent, reasonable salary, though not necessarily what the company is paying him.

Mr. ILSLEY: But I do not think we could get the one of whom I am thinking. I have in mind one man whose salary was $25,000 a year. He was an excellent executive. He worked for the wartime prices and trade board for some period; it may have been six, seven or eight months, during which he gave faithful and extremely efficient service.

Mr. JOHNSTON (Bow River): He does not work full-time?

Mr. ILSLEY: He was here fairly steadily for that limited period. I am just wondering what position we should have taken about him. If we had said, "You must resign your position with the company, or at least you must not take any pay from the company and you must come here," it would have been out of the question for us to pay him $25,000.

Mr. JOHNSTON (Bow River): Does the minister not think it would have been far better to have hired that man outright? I have never seen any man so indispensable that his place could not be taken by somebody else, and I would suggest to the minister that $25,000 is an extremely good salary. If the company is lending that man to the government; if the government pays only that portion of his salary applicable to the period during which he is employed by the government, in addition to a living allowance or other expenses, then I suggest to the minister that this man is not working for a dollar a year. To suggest to the public that this man is being lent to the government by this company for a dollar a year is certainly misleading the public in that regard. I say to the minister that if we need these men we should hire them outright. Let us do it fairly and openly, and let us pay them decent salaries. I am not one of those who advocate that you should underpay anyone, either a worker or a salaried man; I think there should be justice in all cases, and I believe it would be much better to give these men decent salaries and not allow any deductions by the companies. I think that would be more satisfactory to all concerned, and everyone would know what they were getting.

Mr. REID: I think every member of the committee realizes the great task and heavy responsibility of the Minister of Finance as the responsible head of an organization such as the wartime prices and trade board, but I say in all kindness that the minister must not take it amiss if some criticisms are offered in regard to what has occurred. So far as I know, there has never before been an organization that has touched the individual lives of all citizens in Canada to the extent the wartime prices and trade board does at the present time. When the chairman of the board was in Vancouver he was challenged as being a sort of dictator, as being separate and apart from the government, but he made it quite clear to the people of British Columbia that such is not the situation. He said this was a very democratic organization; if anything went wrong, the people had their members of parliament and could complain to them, and of course their members would bring these matters to the attention of the minister.

I must say that I hardly needed that advice to bring any matters of this kind to the attention of the house. However, it has been a unique experience for a member of parliament to be called into disputes between farmers and others and the wartime prices and trade board, and to be told that members of parliament have nothing at all to do with these matters, that we are separate and apart from the government and that if there are any complaints they should be taken up with the Minister of Finance. We all realize that the Minister of Finance is not in a position to know everything about agriculture. His field is finance, and we have a Minister of Agriculture; but I am afraid we are drifting into the position of having three ministers of agriculture in the house, the Minister of Trade and Commerce, the Minister of Finance and the Minister of Agriculture. I am one of those who have said publicly both in the house and outside that it is an extremely good thing we have the present Minister of Agriculture, or, heaven knows, the farmers would not have got as square a deal under Donald Gordon as they have managed to get.

I should now like to bring one or two matters to the attention of the minister, and to offer one or two suggestions. The officials of the board whom we have met out in British Columbia by and large have treated the public very fairly. I have visited the office and had occasion to meet the personnel, and I have heard the same thing said by others who have had occasion to do business with them, but I wish to warn the minister that he had better take care that the prosecutions do not keep increasing, in case they might amount to persecution.

Greater cooperation might be obtained by the officials of the department were they to consult municipal and city authorities. I will give a case I have in mind. During the wood shortage on the Pacific coast a report was sent to the wartime prices and trade board in Vancouver that a poor widow woman in New Westminster had two cords of wood. Within an hour two men in a large car came all the way from Vancouver to New Westminster to investigate the matter. Of course anyone who knows anything at all about the wood situation knows that very often out there wood is taken directly from the water, and that one has to stack it and leave it for months before it can be used. This good lady was following the usual practice of buying what is known as green wood, and having it stacked. Of course that did not save her from being prosecuted.

Then, only last week an old age pensioner seventy-six years of age had been up against it for the need of a load of sawdust. I might explain that out there some people burn sawdust; some burn wood; others burn coal, and others burn oil, when they can get it. As I say, he was stuck for fuel, and he said to a truck driver, "I will give you a little honorarium if you will just deliver a load of sawdust to my home." The truck driver did that.

I do not know how the board got word of the case, but the result was that the poor old soul was taken to court and fined for giving an honorarium. It was claimed that he had paid a price higher than the ceiling price for sawdust.

I mention these two cases because I believe that we shall have to have a careful watch. Some men are not capable of handling authority. In case we drift along in this country until we are met with persecution, or we have a sort of gestapo running around, it would be just as well to have these things calmed down a little, and not be so keen to take some poor old soul to court, and say to him, "You are violating the price ceiling regulations, so I will make an example of you by hauling you into court."

I do not want the minister to say that this is a question of east against west, or British Columbia against the centre. But I have claimed that these inequalities cause a great deal of friction. The wartime prices and trade board touches every person, and there is a considerable amount of feeling throughout the country to the effect that people do not like regimentation.

For instance, I have in mind the time when rent control had to be put into effect. We in British Columbia were one or two years later than Ontario and Quebec in having war industries started in our province. Where do you think rent control was put into operation first? Well, it was in those very districts where war industries had not yet started. In New Westminster, Vancouver and, I believe, Victoria, rent control was put into effect in 1940, before war industries were started out there. In the boom in Ontario and Quebec which resulted from war industries in those provinces rents went up, but nothing was done by the wartime prices and trade board to control rents in the east. That is the information I got, anyway; if it is wrong I should be pleased to be corrected. However, the information given to me by those who have studied the matter is that such was the situation. Could we have an explanation of this situation?

I do not know whether I should speak of any other matters I have in mind. However, I had intended to say a word about sugar. In my opinion some statement should be made, something in greater detail than has been given thus far, in connection with sugar. There again, inequality has caused a great deal of criticism. We hear of some fruit districts receiving twelve pounds per person and other fruit districts receiving only eleven pounds, another district receiving twelve and a half pounds, and some districts receiving ten pounds. The public are not altogether to blame in connection with the sugar situation, as the history of what has occurred will indicate. First of all, last year, the public were told, through statements emanating from the board, that there would likely be plenty of sugar for next year's canning. Then, later, housewives were told to put down all the jams and jellies they could, so as to release the national output for the armed forces. Then this spring we were told there would be plenty of sugar for canning. A form was sent out asking what amounts were required. Later on, another report went out stating that probably fifteen pounds per person would be allowed in urban districts, and twenty-five pounds in rural districts. Of course, now it has been made known that the maximum is about eleven pounds. So that I say the public is not altogether to blame for making complaints. Very often regulations put out by the board lead them to believe one thing, and later on something else crops up which is not in accordance with the first piece of information given to them.

I wish to draw the minister's attention particularly to the two cases in which wood was involved. In my opinion the sugar statement should be in greater detail than has been given thus far, because the situation has caused a great deal of discontent. People in the country tell me, "there are not available the jams and jellies which are available in the cities, for the use of city people." Then again, farmers are complaining that when they have to have four or five extra help for a day or two they cannot ask their neighbours for their sugar rations, with the result that they are left short. All these matters were not thoroughly canvassed before the regulations were let out to the public.

Mr. NOSEWORTHY: According to a copy of sessional paper 106B brought down in answer to my question of June 21 I find that section 4 of wartime prices and trade board regulation is entitled, "Maximum price regulations exempt all sales to the Department of Munitions and Supply, or any agency thereof." I learned that the commissary division of that board has paid more than the established ceiling prices for such commodities as beef, poultry, lamb, cheese, split peas and potatoes. I learned also that in September, 1942, as the result of a conference between the officials of this department, and the department of agriculture and finance, a system of allocation was instituted whereby beef and pork supplies were guaranteed on a pro rata basis at ceiling prices, that since October no purchases of beef or

pork have been made at more than ceiling prices and that soon a similar arrangement will be made regarding poultry, lamb and liver.

Then I have a list of the firms from which these commodities have been purchased. Would the minister explain why—and I presume there is a reason—the Department of Munitions and Supply are exempt from ceiling prices, and whether this is the entire list of commodities, or whether they have purchased above the ceiling price a number of other commodities, for how long they have been purchasing at more than the ceiling price, and why it was possible to make agreements such as the one to which I have referred of September, 1942, but was not possible to have made it earlier. In other words, I should like to know how long the Department of Munitions and Supply have been purchasing supplies at more than ceiling prices. I wish to know also whether the Department of Munitions and Supply have been paying more than the ceiling price for rented properties; that is, have they been subject to the same regulations in connection with renting as have civilians throughout the country? I think that is a matter on which we should have some information.

Mr. ILSLEY: I may not be able to give a very complete answer to the hon. gentleman. My recollection of this runs back to the fall of 1941. I remember distinctly that the question arose as to whether purchases by the Department of Munitions and Supply would be exempt from the provisions of the maximum prices regulations. I can remember the argument there was about it. One day we thought there should be no exception; the next day we thought there should be an exception. The reason why these purchases were exempted from the maximum prices regulations was that the Department of Munitions and Supply felt it desirable to have a free hand in connection with what they were buying, so that they could get what they had to buy. They are buying very largely for the armed forces; they are buying for war purposes. Most of the time they buy at lower than ceiling prices; in a great many instances they buy by tender; in the odd case they have paid more than the ceiling price. I do not remember just what period of the price ceiling it was in; but at a time when beef was scarce, during one of our periods of beef trouble, the Department of Munitions and Supply paid more than the ceiling price for beef in order to get a supply for the army when there was a considerable shortage in the country. This made trouble, and finally the agreement which the hon. gentleman has read was arrived at in the fall of 1942. That is my recollection of the reasons for the exemption and the development of the matter since that time. They certainly have a free hand in regard to rents and everything else; they are not bound by the law, by the price ceiling. They have a paramount and overriding interest in supply, greater than that of the civilian population, in order that they may carry on the war effort. If it should become necessary to go through the ceiling in order to get what they have to have for the armed forces, they are free to do so, but they have not done it to any great extent.

Mr. GILLIS: Why should the Department of Munitions and Supply have to go through the price ceiling?

Mr. ILSLEY: Because sometimes there is a great shortage.

Mr. GILLIS: That is not a good reason for puncturing the price ceiling. Why should Canada Packers, one of the firms indicated in this return, hold up Munitions and Supply for a higher price? The answer is profitable patriotism.

Mr. ILSLEY: I do not think Canada Packers—

Mr. GILLIS: They are listed in this return. The minister stated definitely that when there was a shortage of beef in the country the packing houses took advantage of that to drive up the price and extract from the taxpayers of Canada—

Mr. ILSLEY: I certainly did not state that.

Mr. GILLIS: It is not Munitions and Supply that is paying the bill, it is the taxpayers of Canada. The minister's argument is very weak. Many times the minister has referred in the house to the seriousness of inflation, to the dangers of puncturing the price ceiling and to the necessity of having workers work at starvation levels.

Mr. ILSLEY: My hon. friend should not put words into my mouth. I did not say any of those things.

Mr. GILLIS: That is exactly what the minister said. He said that when there was a shortage of beef in Canada the Department of Munitions and Supply were obliged and were permitted to go through the price ceiling.

Mr. ILSLEY: They did once.

Mr. GILLIS: They did that in order to get necessary war supplies. That is not an argument; that is an accusation against the

packing houses. They took advantage of a shortage, perhaps created by themselves. It is a dangerous position for this government to take, to allow people who are more interested in making money than in prosecuting the war to hold up the taxpayers of Canada through the Minister of Munitions and Supply in order to get higher prices for a commodity that is short, when the shortage has perhaps been created by themselves. That is something that should be definitely prohibited. If this government places a price ceiling on any commodity, it should prevail. Munitions and Supply have a priority; every war material has a priority, and these rules and regulations should not be tossed aside at a moment's notice. This is a weakness which should be corrected.

Mr. ILSLEY: The hon. gentleman says that I said that these higher prices enabled the packers to profiteer at the expense of the government. Those are not my words at all. I do not know who got the benefit of that; it may have been the farmers who delivered the cattle.

Mr. GILLIS: I think that was the effect.

Mr. ILSLEY: There was a time when cattle were hardly being delivered at all.

Mr. PERLEY: We have heard a great deal to-night about salaries, and I should like to say something in favour of the local committees that have been set up. These committees have been set up in the rural parts of Saskatchewan and, if I understood the minister aright, he said that in some cases they are paid by the municipality in which they operate. I have received some complaints that this remuneration was not sufficient to reimburse these people for their time. Other people have given their time voluntarily, and it is of those people that I want to say a word of praise. The committees were set up to assist in the operation of the price ceiling. I am not complaining about the salaries paid to inspectors or investigators, but I should like to know how many inspectors there are to cover the rural parts of Saskatchewan. Did I understand the minister to say that in some cases the rural municipality or town is paying for the services rendered by these local committees?

Mr. ILSLEY: Not the members of the committee, but for certain of the expenses. Some municipalities, I do not know whether they are rural, pay some of the expenses of the local ration boards, and in other cases they are assisted to varied extents by the board. This does not apply to the members of the ration board who work on a voluntary basis, it applies to secretaries, clerks and so on. This vote of $600,000 would be just over $1,000 per board because there are 550 boards.

Mr. PERLEY: There is no voluntary work at all?

Mr. ILSLEY: Yes, by the members of the boards, but not by the stenographers or secretaries.

Mr. ROSS (Souris): The chairman is usually the reeve or the mayor.

Mr. ILSLEY: Yes.

Mr. PERLEY: Is that quite general in the west?

Mr. ILSLEY: Yes, that is general.

I did not reply to the hon. member for New Westminster. If I do not cover all the points which he made, he will remind me. He has brought to the attention of the committee two prosecutions under circumstances which evoke sympathy. I have not any knowledge of these prosecutions, but I will bear in mind what he has said and bring his observations to the attention of the head enforcement officer of the board.

With regard to the rental control, he suggested that control was imposed in British Columbia in January, 1940. The first order freezing rents was of October 1, 1940; it is dated September 24, 1940, but it provides that it shall become effective on and after October 1, 1940. That order applied to the following municipalities:

Nova Scotia: Dartmouth and Woodside; Halifax, Armdale, Buckingham Station, Dutch Settlement, Fairview Station, Falkland, Jollimore and Melville; New Glasgow, Trenton, Stellarton and Westville; Sydney.

Quebec: Brownsburg and Thetford Mines.

Ontario: Allandale, Barrie; Kingston and Portsmouth; Ottawa, Eastview, New Edinburgh, Overbrook, Rockcliffe, Westboro and Woodroffe; Parry Sound and Nobel; Trenton, Windsor.

Manitoba: Brandon.

British Columbia: Vancouver, Victoria and Esquimalt.

It froze the rents as of January 2, 1940. It is possible—and perhaps this is the argument of my hon. friend—that rents rose in these other places before they rose in Vancouver, Victoria and Esquimalt. I would not know about that. I do not know whether that is the situation, but I do know that the complaint about the freezing of rents is general; it is not local at all; there are just as many from Nova Scotia and, certainly, from Ontario as from any other part of Canada. The argument is not local or territorial; it is individual. It is that certain landlords were slower than others or more merciful than others or something of that kind

and did not put their rents up, and therefore they were caught by these freezing orders. This freezing order later became general. The first freezing order selected certain localities where rents were on the way up and something had to be done about them. I presume that a fair selection was made. At that time, in September, 1940, the board was much smaller and was not working under the terrific pressure under which it has worked since the price ceiling, and I would be surprised if the selection of places was not very carefully done. I believe that it was very carefully done, and after exhaustive investigation. I forget who the rentals administrator was at that time; it may have been Mr. Justice Martin, of Saskatchewan; it was for quite a long time. At any rate the board went into these matters very carefully and did not have anything like as many things to attend to as they have had since the price ceiling, which set in in 1941. I do not think there would be any basis for a claim of discrimination on regional grounds. There is certainly a basis for claims of discrimination on individual grounds; there always is under any freezing order; but you have just to decide whether you will freeze or not, and if you do not you never can control.

Mr. REID: What about canning sugar?

Mr. ILSLEY: I will leave that to my assistant.

Mr. ABBOTT: I suppose it is not necessary for me to repeat the explanation I gave last Friday with respect to the general basis on which sugar was allotted for canning purposes. But perhaps I might remind members of the committee that it was decided that the available supplies of sugar would permit the allotment of approximately 100,000,000 pounds for canning purposes this year. That was about the amount used last year. The board had three courses open to it as far as canning sugar was concerned. It could say, you will have to provide your canning sugar out of the ordinary ration. Or, second, it could decide to allot so much sugar to everybody in Canada, and incidentally that is the procedure which is followed, so far as I know, in all other countries. Or it could ask consumers to estimate their requirements, and thereby find out how many people proposed to do canning. Beforehand the estimate was made that about thirty to forty per cent of the population did home canning. In the actual result it turned out that eighty-four per cent of the population applied for canning sugar.

Mr. REID: Of course, they were asked to do so.

[Mr. Ilsley.]

Mr. ABBOTT: Oh, yes, there is no objection to that. The procedure followed in the United States, I understand, is that a flat allocation is made per consumer, to each holder of a ration book, whether he is going to do any canning or not. That, I am told, is the system followed in every other country, including Germany, where sugar is rationed. It was felt here that this third alternative, of asking the public to send in applications for canning sugar and allocating the sugar to those applicants, would provide a more equitable and better way of distributing the supply of sugar which was available for canning.

Mr. LOCKHART: Would the hon. gentleman permit an interjection? The hon. member for New Westminster referred to definite appeals having been sent out to home canners to can larger amounts, and I wish to say that the housewives collected every possible jar that was in their possession in order to try to do what they thought would help out the general situation.

Mr. ABBOTT: I think my hon. friend is perfectly right. The board did ask people to do as much home canning as possible. I may not be quite right on this, but I think, when that appeal was made, it was not certain what amount of sugar would be available and it was hoped there might be a larger amount. Incidentally it was desired to know how many people would do home canning. As I say, the estimate was that thirty to forty per cent of the population did home canning, and in the result it turned out that eighty-four per cent either did or claimed they were prepared to do home canning.

Mr. STIRLING: Does the hon. member mean eighty-four per cent of the eleven and a half millions?

Mr. ABBOTT: Precisely. About 8,000,000 people made applications for canning sugar, or at least applications were made on behalf of that number. Those applications were called for. The country was divided into 550 local ration areas; and these areas were asked, after the applications had been sent in, to tabulate them, to reduce the quantities asked for to the nearest five pounds, and in the case of applications which were higher than twenty-five pounds for a rural resident or fifteen pounds for an urban resident, to reduce the quantities applied for to those amounts. These were the instructions sent out to the local ration boards, to tabulate their applications on that basis and to advise the ration administration in Ottawa of the result; that was in

order that the ration administration here would be in a position to decide how the sugar could be located.

As a result of this request for applications, 8,763,185 persons made application for canning sugar, for a total of approximately 210,000,000 pounds, which was about twice the amount of sugar available. The problem then arose as to how that quantity would be allocated. As I said last Friday the decision taken was that it would be allocated to each local ration area, 550 in all, on the basis of 11·34 pounds for each applicant from that area, and that fixed the quota for that local ration area. The method of distributing the sugar available in each area was left to the local ration board, and the instructions given to the local board, which went out on May 7—I have before me a copy of the letter that was sent to each of the local ration boards—outlined the general manner in which the distribution should be made. I quote:

> In making your decisions as to the amount of sugar per person which will be granted to the consumers in your territory, we suggest you keep the following in mind.
>
> The foods administration is of the opinion that rural residents have a legitimate claim to more sugar per person for canning than the urban population, owing to the inaccessibility of fresh fruits and certain other supplies during the winter months. It is not possible to lay down rigid instructions, but we are acquainting you with this opinion so that in allotting your sugar you may provide sugar per person at a slightly higher rate to rural residents than to urban residents. Of course, your final distribution must not exceed the total amount of sugar granted to your board. If you feel from your knowledge of local conditions that an equal amount per person would be more acceptable you may make your arrangements on that basis.

That was the general letter of instructions to all local boards. In the result there was, of course, a variation between the amounts allowed in different local ration areas, and I think one of the greatest causes for dissatisfaction has been that in two local ration areas, one alongside the other, one applicant in area No. 1 would receive eleven pounds while her neighbour across the road in area No. 2 might receive only ten pounds.

Mr. LOCKHART: Did the hon. gentleman say that rural areas were to get more than urban?

Mr. ABBOTT: That was left to the discretion of the local ration board, but the general instructions sent to the local boards by the ration administration at Ottawa were as I have read.

Mr. SHAW: May I ask whether the board insisted on the sugar being used for canning purposes?

Mr. ABBOTT: It would be physically impossible to check every applicant to see whether the sugar was used for canning. It would be very difficult to enforce that provision.

Mr. SHAW: Last year they checked up. Of course, you do not have to check everyone, but my point is that there is a fifty per cent increase in the number of those who applied for sugar for canning purposes, and if you do not insist on its being used for canning purposes, I am afraid there will be bootlegging in sugar.

Mr. ABBOTT: I am advised that the regulations require that coupons not used for sugar for canning purposes shall be surrendered. I am not in a position to say what steps the board proposes to take to see that that regulation is complied with.

Mr. SHAW: I would urge that some type of check be made, because it is not fair if this sugar is not being used for food purposes.

Mr. ABBOTT: It would be difficult, I should think, to make any widespread check. Last year it was on an honour basis, and people were allowed to sign slips for canning sugar. There was no definite limit put on and for that reason a check-up was made, but it would be nearly impossible to make a coast to coast check under this system. The distribution has been left to the local ration boards, which are continuing in existence.

Mr. FRASER (Peterborough West): Last year was it not really householders alone who could get sugar for canning purposes? If you bought fruit last year they would give you a pound of sugar for a pound of fruit. This year the landlady in a boarding house who wants canning sugar must get all her boarders to sign the card.

Mr. ABBOTT: That is right. Perhaps I might complete what I was saying on the general system of allocating sugar, pointing out why these differences arose in different areas. The first reason why there would be a difference between one local area and another would be the percentage of persons applying for less than the general allowance varying from area to area. As I mentioned in connection with the ration district I discussed last Friday, my own district of Westmount, there were in that area a considerable number of applications for less than ten pounds, while in another area the average might be well above ten pounds, in which case there would be no amount available for higher applications, and in those areas it would probably be more suitable to make a flat allocation per

head from the available quota for the district. The other reason is the decision taken by the local ration boards.

Mr. REID: The suggestion was made that perhaps, in view of the fact that country people are at a disadvantage as compared with city residents in obtaining canned fruit, and there being a large amount of fruit likely to be on hand, sugar might be taken from the soft drink industry and used for food purposes. Another criticism was this. It was stated that the supply of sugar in the United States was very plentiful, and the question was asked why we should allow cherries to be imported during these times if there are ample supplies of sugar in the United States. Why not import sugar instead, and take some of the sugar from the soft drink industry and put it into food?

Mr. ABBOTT: I am not in a position to deal with the soft drink question, but as to sugar supplies in the United States, it is completely erroneous to say that there is a large supply of sugar there. As a matter of fact they are complaining that we are getting too much sugar. Eighty-two per cent of our supplies of sugar have to be imported, and the raw sugar has to be brought in by boat, and we are depending upon allocations of shipping from the United States for the quantity of sugar we get. They are now complaining that our situation is better than theirs and that we are getting more sugar than they are.

Mr. REID: What distribution has been made to the soft drink industry?

Mr. ABBOTT: That information was given the other day in answer to a question.

Mr. ILSLEY: There was a thirty per cent cut from the year before. You cannot cut soft drinks too much. It is down a lot this year as compared with last year, and thirty per cent is a substantial cut. The figures were given in a return to the house a few days ago.

Mr. WRIGHT: I recognize the difficulty in getting an even distribution of sugar, but there is considerable complaint, and I would bring to the attention of the government the position of people in the outlying districts who depend entirely on canning sugar for the preservation of fruit. They are in a position where they cannot get canned goods. They are probably from twenty to thirty miles from the nearest source of supply and have always depended on canning wild fruit. This small allotment of sugar will certainly mean that they will not be able to put in anything like their accustomed supply of fruit. They are not in a position to get fresh fruit during the winter months, and many of these people have large families and depend entirely on the fruit which they can. Some additional allowance should be made in such districts. You are allowing eleven pounds in each of the 500 districts and some of them will be entirely urban.

Mr. ABBOTT: Very few.

Mr. WRIGHT: Some of them will be mostly urban; others will be almost entirely rural. If it is possible, I think the government should provide an additional allotment of sugar for the rural areas, especially in northern Ontario, northern Saskatchewan and Alberta, and areas such as that, as well as parts of the maritime provinces where the people are entirely dependent in the winter on canned fruit.

Mr. ROSS (Souris): I should like to support the plea of the hon. member for an increased allotment of sugar in the parts of the country he mentioned. You will see there tons of rhubarb going to seed and waste just because the people have not enough sugar allowed them to can it. These people who normally can wild fruit and rhubarb are not able to do so this year, and I would urge the minister to have a rearrangement made of the present set-up so that the people in these outlying areas can preserve this fruit. It would help in the conservation of essential foods for the use of these people and indirectly help the whole nation. But the people who normally can this type of fruit, rhubarb, wild fruits, and so on, are not able to can any under the present set-up. I trust the minister will see that these people get a larger allotment of sugar.

Mr. NOSEWORTHY: If I may go back to meat, the return to which I have referred names only four packing companies as being paid more than the ceiling price for meat.

An hon. MEMBER: Who were they?

Mr. NOSEWORTHY: The Swift Canadian company, Canada Packers, the Pacific Meat company and Burns Company Limited. I would ask the minister if these were the only firms from which the Department of Munitions and Supply bought meat at higher than the ceiling price? This return says that wherever the ceiling price was pierced the prices board was taken into consultation, so that I presume the minister's department has that information. Did any other firms receive more than the ceiling price for meat? I do not see how these firms could secure more meat, if the higher prices was paid for that purpose, unless by reason of that fact they went out and paid

the farmer or producer a higher price in order to obtain the meat. I wonder if that was done, whether these companies passed on the higher price to the producer.

Mr. ILSLEY: What are the dates?

Mr. NOSEWORTHY: The date of this return is June 21.

Mr. ILSLEY: What are the dates of the purchases?

Mr. NOSEWORTHY: The return does not give that.

Mr. ILSLEY: It is a munitions and supply return. I would not know very much about it. The munitions and supply people are good buyers.

Mr. MacINNIS: Good payers.

Mr. ILSLEY: No; it is easy to say that, but I will support the buying authority of munitions and supply against any other organization in this country. They are hard buyers, and they have not paid any more than they have to for that meat. I am just saying that on their general record.

Mr. WRIGHT: Would the Department of Munitions and Supply not have the right to go in and acquire that meat from the packing companies without paying higher than the ceiling price if they required the meat for military purposes? It seems to me it should not be necessary for the Department of Munitions and Supply to go in on a barter basis if they require that meat for military purposes. But if the price ceiling is to be punctured, there is no limit to what the company may not insist on receiving. There should be some safeguard there.

Mr. ILSLEY: I do not think that could legally be done without the consent of the seller. That would be an expropriation, which would have to go to the exchequer court. I do not think any department of government has the power to expropriate property and compulsorily fix the price.

Mr. QUELCH: Not under the War Measures Act?

Mr. LOCKHART: If this meat question is to be disposed of in a few minutes, Mr. Chairman, I will yield the floor and wait, because I wish to speak on sugar.

Mr. SHAW: I have just one statement to make in connection with this matter of puncturing the price ceiling in purchasing meat. My understanding is that under the War Measures Act the government have the complete right to expropriate property.

Mr. ILSLEY: Right, but not to fix the price.

Mr. SHAW: The exchequer court of Canada will fix the price if the owner is not satisfied.

Mr. ILSLEY: That is right.

Mr. SHAW: Almost every week we find owners of property protesting against the price which the government has offered for property which it has expropriated. These cases go to the exchequer court. I cannot see why these meat packing plants should not be offered the prevailing price and go through the same channel if the price is not satisfactory to them, just as the city dweller has to do when a piece of property he owns is expropriated and the price offered him is not satisfactory. Like the other hon. gentlemen who have spoken, I feel that the minister has a pretty weak case, and I would urge him to strengthen it if he intends to satisfy a cross-section of this house. If the price to the packing plants is allowed to go up, the same thing should apply to commodities in general. I am not advocating that, but I cannot see what difference there is in principle between puncturing the price ceiling in one case and not in the other. This is the sort of thing that is causing dissatisfaction among our people.

Mr. ROSS (Souris): I have wondered for some time why the price ceiling did not apply to purchases by munitions and supply—all purchases, not simply meat. My understanding is that munitions and supply in making purchases for the armed forces do not have a price ceiling set-up at all. I have argued many times that the producer is not getting a square deal, but here is the middleman being allowed to puncture the price ceiling, and this can easily develop into a racket. I do not see why the Department of Munitions and Supply should not be compelled, just like the ordinary consumer is, to buy under the price ceiling. That would eliminate a great deal of the dissatisfaction in the country to-day. Surely the minister can give us a better reason than he has done so far why the price ceiling should not apply to purchases by the Department of Munitions and Supply. Without repeating many of the arguments that have been made in the past, I would simply say that the producers in the agricultural industry were placed in a very unsatisfactory position when the price ceiling was set up on the declaration of war. Now to have returns brought down showing that munitions and supply bought these products, after they were processed, at higher than ceiling prices, certainly creates a very unhealthy feeling throughout this country. I

believe the minister should give us some better reason than he has advanced so far as to why that department should not be under the price ceiling if that ceiling must prevail in regard to the civilian population.

Mr. GRAYDON: Just before the minister answers that question I should like to ask him another one, having regard to the fact that there is no price ceiling upon the articles or commodities purchased by the Department of Munitions and Supply. I wish to ask if in his experience in administering this price ceiling policy under the wartime prices and trade board he has found that the fact that there is no price ceiling on commodities purchased by the Department of Munitions and Supply has had the effect of interfering with the operation of the general price ceiling policy and, if so, to what extent. How far do the breaches of the price ceiling which have been mentioned by hon. members during the course of this debate go toward endangering the whole price ceiling policy of the government? I just wanted to have the minister's opinion on that point, because, after all, he is administering the department, and I think his reaction would be very interesting to the committee.

Mr. ILSLEY: Before I come to that let me make one point clear in regard to the return quoted by the hon. member for York South. Certain meats, while not subject to the price ceiling when purchased by the Department of Munitions and Supply, in effect are subject to that ceiling now by agreement; or I believe the agreement is that they will not pay more than ceiling prices without first consulting the wartime prices and trade board. I am instructed that it goes even farther than that, that they will not pay more than ceiling prices for these meats, though the hon. member for Souris rather seemed to be under the impression that they were now paying more than ceiling prices for meat. They are not. That matter was settled by agreement last September, as I understand the situation. Naturally the wartime prices and trade board is concerned, as one of its main lines of activity, with civilian supply. It is the government body which is trying to meet the civilian needs of Canada, to see that the civilian part of the population of Canada has available what it needs.

Mr. GRAYDON: Of course it is doing more than that; it is keeping down prices, too.

Mr. ILSLEY: It is doing two things. Its representatives in the various districts are prices and supply representatives. They have two great functions to perform. One is to see to supply and the other is to control prices; and the one cannot be done without the other. That is, prices cannot be controlled without enormous trouble, unless supply is provided. That is what this large organization is concerning itself with. It is a civilian organization; and when the military purchasing body, the body that must concern itself with supplies for the forces, comes in with its overriding and paramount powers which, as a matter of policy, it was felt it should be given, it disturbs the operations of the wartime prices and trade board, because it is likely to shorten the supply or unbalance the distribution. That may be inevitable, but for that reason it is desired to get these two bodies together, to get them to agree as far as possible. I am advised by the officials that very recently the Department of Munitions and Supply have agreed that they will not buy anything at all above the ceiling prices without first consulting the wartime prices and trade board and giving that board an opportunity to get for them what they require, or of directing them to it and arranging in some way that they may get it.

Mr. GRAYDON: That is really a reversal of your previous policy, under which you left the ceiling open as far as munitions and supply were concerned.

Mr. ILSLEY: No, it is not. The maximum prices regulations did not tie down the Department of Munitions and Supply, nor was it thought they could be tied down, because of the overriding importance of the function they perform.

Mr. GRAYDON: But now you are doing the same thing by agreement.

Mr. ILSLEY: It is provided that they shall not pay more than ceiling prices for anything without consultation with the wartime prices and trade board. That is only for civilian type goods.

Mr. ROSS (Souris): That applies to all foodstuffs purchased by munitions and supply for the armed forces?

Mr. ILSLEY: In regard to meat it is agreed that they will not pay more than ceiling prices anyway, but on the whole range of civilian type goods it is agreed—this is a working arrangement between two agencies of the government—that they shall not pay more than ceiling prices without consultation with the wartime prices and trade board.

Mr. GRAYDON: What happens after consultation? What chance has the wartime prices and trade board to do anything about the matter?

Mr. ILSLEY: The wartime prices and trade board controls, to a degree not understood by the population of Canada, the sources of supply. It controls all the imports of a great range of commodities. It has ramifications everywhere, trying to see to it that the civilian population of this country gets enough of the goods it requires. The board carries on that work in every direction, in regard to imports and everything else. It concerns itself day and night with the question of supply. In the first place, it does not want to ration if that can be avoided. Theoretically, rationing is the most equitable way of distributing goods, but you see what we get into when we start to ration. Here is this question of sugar for canning, about which my colleague has been talking to-night. If I were to ask hon. members now to say what we should do other than what we did, I do not believe anyone could tell me.

Mr. GRAYDON: I can tell you something you should do; now that you are asking for it I shall give you a suggestion. If you are going to do this again do not go advertising all over the country as you did in February, telling the housewives of Canada that on account of the situation existing in regard to canned goods, as a result of which there was likely to be a great shortage, they should go ahead and can their own preserves. There was no limitation suggested in the advertisement, which I brought to the attention of the minister. The housewives all over Canada took the government at their word and made arrangements to do up a tremendous amount of stuff, for the reasons advanced in the advertisement. One reason given was the shortage of tin and other materials which were so necessary for war purposes. I think the minister knows the housewives of Canada have responded nobly to almost every suggestion put forth by the government. I do not know any class of people in Canada who have been so quick to respond to suggestions and requests by the government as have the housewives. On one occasion I went so far as to say that this looked to me, as it must have looked to many people, almost like a deliberate hoax upon the housewives, the way in which the sugar rationing was carried on. After the advertisements appeared in the newspapers; after all plans had been made, then they found that limitations were placed upon the amount of sugar available. In some rural areas the allotment was twenty-five pounds per person for canning purposes; in some urban areas it was fifteen pounds per person. The worst feature of it, however, was this; and I am going to offer a suggestion in this regard, though I am sure it is not necessary. After this do not leave it to the poor local rationing boards all over the country to be the goats for government policy; because that is, I think, what they have been, although the minister may not have intended it in that way in the first instance. Actually what happened was that a certain amount of sugar in certain sections was given, and local ration boards—most of them volunteers—found the great body of housewives wanting to know what in the world the policy of the government was. First of all, they asked housewives to preserve plenty of fruit and vegetables, and then, in the final analysis, without any previous knowledge or any previous instructions from the government, they found that the local ration boards came along and said, "You are going to get only so much." That was not fair, and I submit the minister knows it was not fair.

If he wishes to have a suggestion—and he asked for it—then let us not have that situation occur again. I say that, because I have been informed by people in various townships where, with one township adjoining another, on account of the difference in the rationing in different districts, people in some townships got considerably less than people in others, although they were actually neighbours, and there was only an imaginary dividing line between them. In my opinion that kind of thing should not be repeated, so far as rationing is concerned. It caused untold concern to the housewives of Canada. I am not trying to exaggerate, nor am I trying to overemphasize the point that has been raised so many times.

In addition to that, another situation has arisen, namely, that sugar coupons were for five pounds each. In some instances they found that perhaps they were entitled to an odd amount. Instead of getting the full amount to which they were entitled, they found that the five-pound coupons gave them less than the amount to which they were entitled under the last regulations of the local boards.

If the minister wants suggestions—and he asked for them—I will offer him these. I am quite sure the minister will not make the mistake again, because if he is going to tell the housewives anything, then let him tell them at the beginning that there will be some limitation. Do not send out an advertisement all over the country asking them to do certain

things, without at the same time telling them that there will be a limitation, so far as sugar rationing is concerned. They do not mind, as long as they understand the general plan. But give them the general plan, and do not leave it to the local ration boards to carry the whole brunt of responsibility, and all the complaints that normally arise.

Mr. ILSLEY: When I said I would welcome suggestions on how to ration sugar I meant exactly that. I asked for suggestions on how to ration sugar for canning purposes. I have not got any from the leader of the opposition, although he did start in to tell me that he was going to give me some. All he did was to tell me two things I should not do again. That is the extent of his suggestions.

Mr. GRAYDON: Exactly.

Mr. ILSLEY: He does not touch the central problem at all, namely, that of how I should ration sugar for canning among the population of this country. He has suggested one thing, namely, Do not decentralize; run it from Ottawa. That is what he said.

Mr. GRAYDON: The minister suggested a short time ago that words should not be put in his mouth. I do not want that, either.

Mr. ILSLEY: Well, that is what it meant.

Mr. GRAYDON: Will the minister accept my word? Surely he has not followed my point.

Mr. ILSLEY: What is it, then?

Mr. GRAYDON: The point I was making is this: Actually what happened was that the central authority had one policy and sent it out to the housewives of Canada, and then regulations were sent out some months afterwards to the local ration boards saying there would be no limitation.

Mr. ILSLEY: No.

Mr. GRAYDON: Perhaps I should not say that, because that is not quite fair. I did not mean that; after all, I do not wish to be unfair. But I think it had the same effect; that is, they put no limitation upon what the housewife was going to get.

Mr. ILSLEY: Correct.

Mr. GRAYDON: They did not say a single thing in the advertisement. They just asked the housewives to plan to can vegetables and fruit during the coming season. Why, there was a lot of stuff in the newspapers, and I have no doubt there was plenty on the radio —although I did not have time to listen to it as much as I should have liked to. But word was sent across this country for the housewives of Canada to can, can, can! That is the point I am trying to make to the minister.

He asks about suggestions. Well, if I can make a suggestion as to what he should not do, why should I not? In effect, by telling him not to do it again, I am suggesting what he should do—and that is, that when he advertises next time—

Mr. ILSLEY: Oh!

Mr. GRAYDON: Now, then, the minister has asked for a suggestion—

Mr. ILSLEY: All right.

Mr. GRAYDON: When he advertises again, let him be frank with the housewives of Canada. Let him tell the people that when they do apply to the local ration board they may expect a definite limitation. Let him tell them that they are not likely to get more than fifteen pounds each in urban sections, and not more than twenty-five pounds each in rural sections.

Mr. ILSLEY: We did not say anything about fifteen pounds and twenty-five pounds.

Mr. GRAYDON: You did say something about fifteen pounds and twenty-five pounds, because I happen to have seen the instructions to the local ration boards. You did not tell the housewives that there would be any limitation. You said there would be fifteen pounds to urban and twenty-five pounds to rural residents, and by the time they got finished there was a hodge-podge and patchwork-quilt policy all over Canada which had been worked out for the housewives of this country. All the housewives are asking is fair treatment. They do not wish to be misled by the government. They will try to follow the instructions handed out by the local ration boards, and they will finally end up with a different result altogether.

Mr. ILSLEY: I just wish to come back to this: I have asked for suggestions as to how to ration sugar for canning purposes in Canada. I have got advice about how to advertise next year. But we have not reached the main question. We could do what they do in other countries. That is, we could give so much sugar per head of population for canning purposes. Then, if that were done, instead of being distributed on an applicant basis it would be distributed on a per capita basis over the whole population. We could do it in that way. It could be central, and it would be as rigid as it could possibly be. If that policy had been applied this year, the applicants would not have got as much per

capita, by a considerable amount, as they actually got under the system we did follow. But we could do what I have said.

Mr. GRAYDON: What does the minister mean when he says they would not have got as much?

Mr. ILSLEY: Because only about eighty per cent of the public applied. Under this other system 100 per cent would have got sugar, whether they applied for it or not. The point I am trying to make is—

Mr. GRAYDON: Is the minister going to give sugar to people who do not apply for it at all?

Mr. ILSLEY: They do that in other countries.

Mr. GRAYDON: I did not advocate that.

Mr. ILSLEY: Oh, no, the hon. member has not advocated anything.

Mr. GRAYDON: Oh, yes, I have.

Mr. ILSLEY: Well, if the hon. member has, it is purely negative. I am interested in constructive suggestions as to the best way of rationing sugar for canning purposes.

Mr. JOHNSTON (Bow River): Then do not go to the Conservative party for it.

Mr. ILSLEY: I do not care where I go for it. We did want as much canning to be done as could be done, and that was the reason for this joint advertising under the auspices of the wartime prices and trade board and the Department of Agriculture. We did that advertising because we wanted to conserve as much fruit as possible. Applications came in for 210,000,000 pounds of sugar, instead of the 106,000,000 pounds which had been used in the previous year. We sold the desirability of canning fruit; in fact, we oversold it. There is no doubt about that. Perhaps it would not have been necessary to encourage the people to can fruit. I do not think it would have made much difference if we had said, maybe you will not get the sugar you require.

Mr. GRAYDON: Will the minister do that again next year?

Mr. ILSLEY: Perhaps we will not.

Mr. GRAYDON: I do not think you should.

Mr. ILSLEY: Perhaps we will not. You correct your errors as you go along; everybody does that. But the main point is how to handle this rationing of sugar for canning purposes. Could we do what we did last year? Could we allow people to go into a grocery store and make out a slip, hand it to the grocer and get what they needed for canning purposes? That went on for two months, and we know the abuses that developed in that time were serious. It was quite obvious that that should not be repeated. Should we make a flat distribution for the whole population? Should we make a per capita distribution for all applicants? Should we advertise for applicants, try to get people to put in their applications in the spring, as we did this year? That was the real purpose of the advertising, to get persons to put in their applications early in the year so that we would know who wanted sugar and would be able to make as good a distribution as possible. Should we make each one the same as the others? I do not know about that. What we did was to give all the ration districts the same amount per capita of applicants.

Mr. GRAYDON: You gave each ration district the same amount, having in mind the number of applicants?

Mr. ILSLEY: That is right; the same amount per capita of the applicants. Some were rural districts predominantly; some were urban districts predominantly, but nearly all were both rural and urban. We said to the ration boards, "You know your local conditions; you have so much sugar; make the distribution in the most equitable way you can." Some of the ration boards went at it and made things rather difficult for themselves. They varied it as between rural districts and urban districts; they applied various rules which they thought were equitable, and went at it in that way. Others took an easier way. That was decentralization of authority. We have been told time after time that we should not try to run everything from Ottawa. We handed this over to 550 local ration boards, and that is the thing the hon. gentleman denounces us for doing.

Mr. GRAYDON: Just a minute; my hon. friend should not put words into my mouth again.

Mr. ILSLEY: Exactly; he said, do not pass the buck.

Mr. GRAYDON: I did not suggest anything like the minister says I did, and he knows that very well. I am trying to find out from the minister why certain sections are getting more sugar than others, and I think he ought to answer that question.

Mr. LOCKHART: I think I have given away about as much time as I should. While I cannot suggest anything that might be an

improvement on what has been done, I should like to point out how this has worked out in practice, and perhaps that will be considered as an indirect suggestion that will help in solving some of these difficulties. The parliamentary assistant to the minister said that a larger amount had to be given in rural areas than in urban areas.

Mr. ABBOTT: That was the suggestion made to each local ration board.

Mr. LOCKHART: There is no doubt that that was conscientiously carried out. I went upstairs a short time ago and got a file containing some evidence of how this has worked out. Later on I shall give the minister a memorandum about this. I am not criticizing the board. The minister has stated that he would try to do something should the season happen to turn quite hot, the fruit ripen quickly and it be found impossible to ship it to the larger centres. He said an effort would be made to prevent the tremendous amount of waste that might occur. As an illustration of what has occurred, in a strictly rural area the people were allowed ten pounds per person, and just a few miles away the people in two urban centres were allowed twelve and a half pounds per person. In that case it worked out just the opposite.

Mr. ABBOTT: Did everybody in the urban centre get twelve and a half pounds?

Mr. LOCKHART: That is the information I have. On a rural road running out of a smaller urban municipality a family of four got forty-five pounds, while the next-door family of five got fifty pounds. Some correction is necessary in cases of this kind.

Mr. ABBOTT: Were they in the same ration area?

Mr. LOCKHART: Definitely so; they were next-door neighbours. I have been making a study of this, or I would have drawn it to the minister's attention a week or so ago. These people say that they are not complaining about sugar rationing if it is necessary; but they do not want discrimination and desire to help to correct any discrimination. I think it should be realized that the people are trying to do their best. The hon. member for Westmount perhaps worked this out favourably in his own area, but—

Mr. ABBOTT: I had nothing to do with it.

Mr. LOCKHART: We are in the very heart of the fruit belt.

Mr. MacNICOL: Westmount is not in the fruit belt.

Mr. ABBOTT: We buy a lot of Niagara fruit.

[Mr. Lockhart.]

Mr. LOCKHART: Perhaps if I give the minister or his assistant this information, something can be worked out. If there is any sugar available, I again urge the minister to give it to the fruit centres if it is needed to prevent waste when fruit cannot be shipped to the larger urban centres.

Mr. CARDIFF: I want to congratulate the minister and the government upon trying to ration sugar and give approximately the same amount to each person. But the fact is that the farmer's wife must depend entirely on fruit that she cans herself, while the woman in the town or city, who perhaps never does any canning—at least a great many of them do not—is able to go down to the store and buy canned fruit. The woman on the farm must feed the threshing gang and the silo filling gang with what she puts up herself, and her own family must be provided for. The people on the farm have very few opportunities to go out for a meal, whereas those in the urban centres are able to do this. Just how this can be equalized is more than I can say, but it is something that should be given consideration. I do not think it would be fair to give everyone the same amount of sugar, because they would not use it; the country people should have a larger ration than the city people.

Mr. SHAW: In my opinion there is no fool-proof scheme for rationing anything and I do not propose to try to advance one. It is unfortunate that the housewives of Canada were given to understand that they would have an opportunity to can more fruit this year than they could last year. However, it did occur, and I sincerely trust that the government will endeavour to prevent a recurrence of that situation.

Has the minister contemplated the rationing of jams, jellies, marmalades and honey? I have always felt that, where scarcities occur, the fairest method of dealing with the distribution of the commodity is through rationing. We recognize, of course, that in war time the occurrence of shortages is inevitable; we are not complaining about that. But this is my personal experience. In my own town, a town of 1,200 people, the word "jam" or "jelly" or "honey" has become a forgotten part of our vocabulary. Yet I find that on going to other centres—we do not have to name them—we have no difficulty in procuring these articles in restaurants. We find that stores secure shipments periodically, although not all that their customers require. I should like to ask the minister if he has contemplated the rationing of these commodities, as tied right up with the sugar question.

Before I sit down I wish to say that I concur in the remarks of the hon. member for Melfort (Mr. Wright), the hon. member for Souris (Mr. Ross) and others with respect to the situation which the rural housewife finds herself in at the present time. However, if there is no sugar she cannot secure it. But I suggest that if at some time in the future it is discovered that you have extra sugar, you should endeavour to provide an additional supply for rural housewives, without giving additional consideration to people living in urban centres, because, after all, it is extremely difficult for a man and his wife and, let us say, three children to get along on the present sugar rationing, even without the making of pastries, whereas if I live in a town all I have to do is go to the bakery and procure these things, which, of course, the rural housewife is not able to obtain. So that, while I am not trying to tell the minister how to do it, I suggest that if he finds he has an extra amount of sugar he should try to make it available to housewives in the more remote areas.

In conclusion, may I ask what arrangement has been made to provide canneries or processors engaged in the canning of fruits with sugar?

Mr. ILSLEY: They will be given the sugar they require for light syrup for the canning of fruits.

Mr. SHAW: What quantity is expected, as compared with the volume of processing carried on last year? Do they intend to extend the volume of production?

Mr. ILSLEY: It will be lower, because the fruit crop will be lighter. There will not be as much fruit available.

Mr. WRIGHT: I should like to say a word in agreement with the speaker who has just taken his seat. If the minister feels that a larger allowance cannot be made to rural housewives, the sooner we have rationing of jams, jellies and marmalades the better, and that distribution should be made equitably across the dominion, so that people in the rural areas will be able to obtain their share of these particular goods. I know that rural stores in outlying areas have not these things on their shelves, and the people living in those areas are not able to obtain them.

Mr. STIRLING: It is much the same in urban centres.

Mr. FRASER (Peterborough West): I believe the fact that the Department of Munitions and Supply has taken the jams and jellies is what has made them so scarce in the stores.

Mr. STIRLING: You cannot get them here.

Mr. FRASER (Peterborough West): In Ottawa I went to seven grocery stores and could not get jam or marmalade.

Mr. SHAW: Of course that is in the one place. I did not mention Ottawa.

Mr. FRASER (Peterborough West): But it is the same all across the country. The shortage of jams and jellies in the stores is going to make it so much harder for the housewife, especially one who has a husband or son working in a munition plant, because she needs something with which to make sandwiches, and she cannot get meat.

The minister remarked last year that there were abuses. Last year, if you bought an eleven-quart basket of fruit you were allowed six pounds of sugar if you intended to make it into preserves, and eleven pounds if you intended to make it into jam. The government was at fault in this, because we did not need that much sugar, though in many instances the storekeepers would let you have it. Many a housewife would say, "I do not want eleven pounds; I want only five, or four." Now it is up to the government to find ways and means to have fruit made into preserves or jam with less sugar, and the sooner they get recipes out to the housewives the better for the government.

Mr. BLACKMORE: Would the minister tell us whether there is any sufficient reason why wholesale and systematic rationing should be more difficult in Canada than it is in Great Britain?

Mr. FRASER (Peterborough West): We live higher.

Mr. ILSLEY: I am informed that there are several reasons.

Mr. BLACKMORE: I think it would be worth while to have the minister discuss those reasons.

Mr. ILSLEY: All right, I will do so tomorrow.

Progress reported.

At eleven o'clock the house adjourned, without question put, pursuant to standing order.
