DOMINION OF CANADA

OFFICIAL REPORT

OF

DEBATES

HOUSE OF COMMONS

FOURTH SESSION—NINETEENTH PARLIAMENT

---

7 GEORGE VI, 1943

VOLUME IV, 1943

COMPRISING THE PERIOD FROM THE TWENTY-EIGHTH DAY OF MAY, 1943,
TO THE FIRST DAY OF JULY, 1943, INCLUSIVE

BEING

VOLUME CCXXXVII FOR THE PERIOD 1875-1943

INDEX ISSUED IN A SEPARATE VOLUME

OTTAWA
EDMOND CLOUTIER
PRINTER TO THE KING'S MOST EXCELLENT MAJESTY
1944

CANADA

House of Commons Debates

OFFICIAL REPORT

Friday, May 28, 1943

The house met at three o'clock.

AGRICULTURE COMMITTEE

Mr. T. F. DONNELLY (Wood Mountain) moved:

That the first report of the standing committee on agriculture and colonization, presented to the house on Wednesday, May 26, be concurred in.

Motion agreed to.

NATIONAL WAR LABOUR BOARD

TABLING OF DECISION WITH RESPECT TO MONTREAL TRAMWAYS EMPLOYEES

Hon. HUMPHREY MITCHELL (Minister of Labour): Mr. Speaker, yesterday I promised the hon. member for Vancouver East (Mr. MacInnis) that I would table a copy of the decision of the national war labour board in the case of the employees of the Montreal Tramways. I now do so.

LABOUR CONDITIONS

AGREEMENT WITH UNITED STEELWORKERS UNION —"CRISIS IN STEEL"

On the orders of the day:

Mr. GORDON GRAYDON (Leader of the Opposition): Mr. Speaker, I should like to direct a question to the Prime Minister. There has come to the desks of members of parliament this morning a publication of the United Steelworkers of America entitled "Crisis in Steel." It contains serious allegations against the government in connection with the settlement of the strike in January of this year. Among the startling allegations made there will be found at page 3 of the publication the following:

> There was indeed a settlement solemnly agreed upon by both parties. The steelworkers' leaders had promised to recommend the terms and to urge that work be resumed at once. The government had promised to implement those terms. The steelworkers kept their promise; the government did not.

In view of the statement made in the publication, and the rather widespread press comment thereon, I would ask the Prime Minister (Mr. Mackenzie King) to make a statement to the house, commenting on the allegations the steel workers have made.

Right Hon. W. L. MACKENZIE KING (Prime Minister): Mr. Speaker, my recollection is that yesterday the Minister of Labour (Mr. Mitchell) asked that certain questions appearing on the order paper in the name of the hon. member for York South (Mr. Noseworthy) should be passed as an order for return. I suggest that instead of having a return made which might not be immediately available to hon. members, the contents of the return might be placed on *Hansard*. It would I think constitute a reply to my hon. friend's question. I believe the replies to the questions asked by the hon. member for York South will be found to answer pretty conclusively the statements contained in the pamphlet to which my hon. friend has referred. In other words it would place on record the government's statement of the position. So far as I am aware, the government has implemented to the full every undertaking it gave at the time it had its conferences with the steel workers.

Mr. GRAYDON: I would ask a supplementary question. I have no knowledge f what was contained in the return, which I understand the Minister of Labour tabled, nor am I sure that it dealt with the matters discussed in the booklet "Crisis in Steel". Does the information which has been tabled represent the full government answer to the questions which have been raised in this booklet?

Mr. MACKENZIE KING: I have not read the booklet, so that I am unable to say whether or not it is a full answer. I suggest that the house agree to having the documents which have been tabled as a return printed in *Votes and Proceedings*. I believe the replies as given there will be found pretty well to answer what my hon. friend has in mind.

Mr. GRAYDON: Perhaps any further questions I may have to ask with respect to this had better be reserved until such time as I have had an opportunity of seeing what the government's answer is in this other matter.

TRANSFER OF MINERS TO COAL MINES FROM OTHER INDUSTRIES

On the orders of the day:

Mr. CLARENCE GILLIS (Cape Breton South): Mr. Speaker, I wish to direct a question to the Minister of Labour arising out of two telegrams I have received, one from the steelworkers union and the other from the mineworkers union of Nova Scotia. Copies of these telegrams have been forwarded to the Prime Minister. The telegrams express apprehension if the order regarding the transfer of miners from other essential industries is put into effect immediately without due investigation into the physical capabilities of men so transferred. They are requesting an extension of the date at which the order becomes operative and suggest that a representative of the Department of Labour should proceed to the Pictou shipbuilding plant to conduct such an investigation. Will the minister explain to the house the machinery that will be used in applying this order? Are the miners' union and the steelworkers' union and the shipbuilders' union in Nova Scotia being consulted and working with selective service in the application of the order in council? If not, why not?

Hon. HUMPHREY MITCHELL (Minister of Labour): Mr. Speaker, I thank the hon. member for Cape Breton South (Mr. Gillis) for giving me notice of his question regarding the transfer of miners from other essential industries, and in respect of the physical capabilities of men transferred to underground work who are physically incapable, and in regard to those who feel that a transfer even to surface work would be detrimental and would like to have their cases investigated and if necessary a medical examination made.

The hon. member asks as to the machinery which will be used in implementing the government's decision in regard to moving coal miners back to coal mines. The answer, of course, is that our chain of employment offices across Canada will be used. At the moment, as hon. members are aware, the order is not effective and does not become effective until June 1, 1943. However, any men who report for work are being placed. When the compulsory features of the order become effective it will be the duty of each employer to send any ex-coal miners he has in his employ to the employment offices, and it will be the duty of the employee to report. At this stage he will be immediately placed in the coal mines if there is an opening for him and if he is found to be fit and capable for the work. If there is no immediate opening for him he will be allowed to resume his former employment on a temporary permit. Transportation will be supplied and the other conditions set out in the order in council will go into effect.

If the man objects to the transfer he has a right of appeal to the court of referees, whose decision is final. At this stage if there is any question in regard to physical capabilities, a medical examination will be arranged.

Before the government decided to pass the order in council it was considered by the national selective service advisory board, on which labour is represented, and the board approved the recommendation in principle. A further conference was held with the coal mining industry advisory committee, on which are representatives of coal mine operators and coal mine workers.

As stated in answer to a question raised by the hon. member for Cape Breton South the situation at Pictou, where a large number of men from the coal mines who have engaged in shipbuilding are required to return to coal mining, will be investigated. As a matter of fact arrangements to this end have already been made.

Mr. GILLIS: Would the minister mind explaining who comprise the court of referees?

Mr. MITCHELL: It was established under the unemployment insurance legislation, as my hon. friend no doubt knows. We are using these courts all the time right across Canada as appeal courts for men who feel that their transfer to some more essential industry is not fair or in keeping with the principles underlying the order in council.

Mr. GILLIS: Rather slow for an emergency.

Mr. McGARRY: I wish to ask a question of the minister relating to the fuel shortage so far as the supply of labour is concerned. In the effort to deal with the fuel shortage crisis, does the minister deem it necessary that all men who in peace time were engaged in mining, but are now employed in other industries, should be reverted back to the mines?

Mr. MITCHELL: My reply to my hon. friend is, yes. Further, replying to the hon. member for Cape Breton South, whose question I did not quite catch, but who asked, I believe, whether the board of referees would rule on the case of a man who thinks he has

been unjustly dealt with, I wish to point out that these boards of referees are composed of employers and employed; in the majority of cases the employees are representatives of trades unions, and it is somewhat like the policy adopted in Great Britain under similar circumstances, where there is a compulsory transfer of labour.

ONTARIO ELECTION

DELIVERY AND DISTRIBUTION OF VOTING PROXIES FOR ARMED FORCES OVERSEAS

On the orders of the day:

Mr. GORDON GRAYDON (Leader of the Opposition): I should like to ask the Prime Minister what arrangements have been entered into between the government of Ontario and this government with respect to the delivery and distribution of voting proxies for the armed forces overseas in connection with the contemplated provincial election in Ontario. I would ask the Prime Minister to inform the house on these points. First, have the proxies been sent overseas and, if so, when were they sent and through what department of this government? Second, how and by whom will the proxies be distributed to the armed forces overseas? Third, have any arrangements been made by this government for any officials of the dominion government or the Ontario government to proceed overseas in connection with the work of such distribution, and, if so, what officials are being sent by either the federal government or the government of Ontario? I understand that in the normal course of events the government of Ontario must work in cooperation with this government in connection with the work involved.

Right Hon. W. L. MACKENZIE KING (Prime Minister): I am not in position myself to give my hon. friend an answer, but I think my colleague, the Minister of National Defence for Air, can give at least some of the information requested.

Hon. C. G. POWER (Minister of National Defence for Air): I am not in position to answer all the questions that have been asked.

Mr. GRAYDON: Do your best.

Mr. POWER: All I can say is that Major Lewis, who is the chief election officer in the province of Ontario and therefore in charge of matters concerning elections, called upon me, and I think some of the officers of the defence forces. Without asking us specifically to take any particular action, he inquired if we would cooperate to the fullest extent possible. We told him that we would. Speaking on behalf of the three ministers, I do not think there will be any difficulty about cooperating with the Ontario government.

Mr. GRAYDON: Perhaps the minister's knowledge does not go this far, but does he know whether the proxies have yet been sent?

Mr. POWER: We did not discuss details. All that was said was that we would be willing to help out and do whatever they asked us to do, having regard to the exigencies of the operation.

COMMITTEES OF THE HOUSE

PROCEDURE IN CALLING OF MEETINGS

On the orders of the day:

Mr. H. C. GREEN (Vancouver South): I should like to direct a question to the Minister of Justice. On February 22 he moved for the setting up of a select committee of the house to consider and review the defence of Canada regulations and also the law relating to naturalization and deportation, I believe the committee met subsequently to choose a chairman, but no meetings have been held since the appointment of the chairman. The subjects to be considered by this committee are of great importance, and I should like to know if there is not some way by which the government can see to it that the work of this committee is commenced now so that something may be accomplished before the house adjourns.

Hon. L. S. ST. LAURENT (Minister of Justice): I do not know that there is any way in which the government can direct the proceedings of a select committee of the House of Commons. As the hon. gentleman has stated, this committee was set up on February 22. I have turned up *Votes and Proceedings* of the house to see what happened, and I find that on March 17 and on March 24 certain changes were made in the personnel of the committee. A notice for a meeting on March 26 appeared in the *Votes and Proceedings* of March 22 and the following day. I heard after March 26 that a chairman had been chosen. When I received notice yesterday from the hon. member that he intended to ask these questions, I mentioned them to the hon. member who I understand had been chosen as chairman. He told me that he had been discussing the possibility of holding a meeting this week with other members of the committee, but it was found that some of the members of the committee were to be away on official business to-day, the day suggested for the meeting. He told me that

arrangements were being made for the committee to meet some day next week. I have no doubt that the fact that the hon. member has brought the matter to the attention of the house will make the members of the committee realize that all the members of the house are interested in the matters which have been referred to the committee for consideration.

Mr. NOSEWORTHY: What steps should a member of that committee take to bring about a meeting. Each week for the past four or five weeks I have asked Mr. Dun and the chairman of this committee to hold a meeting, but without any success. I wonder if the Minister of Justice can tell me what should be done.

Mr. ST. LAURENT: I have searched the rules of the house and I have not found anything which deals specifically with that. I understand that the select committees meet upon notice which the clerk of the committees causes to be inserted in *Votes and Proceedings*. I am sure that the hon. gentleman, who is a member of the committee, will experience no difficulty in arranging with the chairman of the committee or with the clerk of committees to have a notice of meeting published in *Votes and Proceedings*.

Mr. GORDON GRAYDON (Leader of the Opposition): I had some difficulty in connection with the public accounts committee. I brought it up in the house once or twice and finally I asked the Prime Minister about it. He suggested that there was a certain procedure which should be followed and he was good enough to give me the procedure. He said that any member of our party who had been appointed a member of the public accounts committee could write to the clerk of committees. That was done at once by one of our members, and although the committee had been set up quite a while before, we finally did get action. I think that is the procedure that must be followed, if I can take the Prime Minister's word on that particular point.

There is another matter I should like to bring up in connection with the radio broadcasting committee. Surely the government has some responsibility in connection with these committees. It is all very well to try to throw it off on private members, but there is some responsibility upon the government to take action with respect to these committees. On May 7, the radio broadcasting committee was set up, but since this other matter came up I have been making inquiries and I find that nothing has been done to call this committee. That was three weeks ago, and there is a lot of work to be done by this committee. If we are to finish this session within any reasonable length of time we may have the same result that we had last year, that is, the report of the committee will be left to the last and there will be no opportunity to discuss it, perhaps no opportunity even to move concurrence. Then there is likely to be criticism of hon. members if they attempt at the next session to discuss matters that should have been discussed at this session.

This committee is under the jurisdiction of the Minister of National War Services, and I should like him to make some explanation as to why the committee has not met. I feel that the government has a responsibility, even greater than that resting on private members, with respect to the calling of these committees and seeing that they function.

Hon. L. R. LaFLECHE (Minister of National War Services): I am hardly in position to give an explanation to the leader of the opposition, but I am in position to express my gratitude to him for having brought up this matter. Having assured myself that certain gentlemen who I understand will be called as witnesses will be available at an early day, yesterday I suggested to certain gentlemen who are members of the committee that we should have an early meeting. I am sure these hon. gentlemen will get busy and do as requested.

ICE

RESTRICTIONS OF DELIVERIES TO THREE TIMES A WEEK

On the orders of the day:

Mr. D. C. ABBOTT (Parliamentary Assistant to the Minister of Finance): Mr. Speaker, I should like to refer to the question which was asked on Friday of last week by the hon. member for Shefford (Mr. Leclerc) who said that he had received several complaints with regard to the order of the wartime prices and trade board prohibiting ice deliveries to private residences oftener than three times a week, and urged that deliveries be authorized at least four times a week.

The wartime prices and trade board have considered the situation and although the hon. member is not in his seat he will be glad to learn that the order has been amended providing that for the period commencing May 31, 1943, and ending October 2, 1943, distributors may make regular deliveries of ice to an ordinary place of residence up to six times each week provided that not more than one such delivery shall be made to any one place of residence on any one week-day.

SEED POTATOES

CEILING PRICE AND REGULATIONS AS TO SALE

On the orders of the day:

Mr. J. H. BLACKMORE (Lethbridge): May I ask the Minister of Finance whether he is prepared now to make the statement on seed potatoes which he hoped to make?

Mr. D. C. ABBOTT (Parliamentary Assistant to the Minister of Finance): During the last few days seven questions have been asked by hon. members regarding potatoes. This is a problem that concerns the Department of Agriculture from the point of view of production and the wartime prices and trade board in so far as the questions relate to the price of potatoes. As most of the questions were about prices, it was decided that the answers should be given on behalf of the Minister of Finance, though part of the information has been obtained from officials in the Department of Agriculture.

In addition to dealing with the specific questions asked, I propose to adopt the suggestion of the leader of the opposition and make a brief statement regarding the potato situation in general.

The yield of potatoes in 1942 was unsually good, 70 million bushels being produced in Canada compared with 65 million bushels in 1941. But like many other foods, consumption has been rising. Canadian consumers have been eating more potatoes, while substantial quantities have been converted into the dehydrated product for use by the armed forces and shipment overseas. Consequently, in spite of the good crop, shortages have appeared. These have been most acute in British Columbia, Ontario and Quebec, which are deficiency areas and dependent for part of their supplies upon outside sources.

Another factor contributing to the shortage has been the reduction in imports of new potatoes from the United States this spring. Normally, fairly substantial quantities of United States potatoes are marketed in Canada before the Canadian crop is available. This year the United States is suffering from a more serious shortage of potatoes than Canada, with the result that prices in that country have risen above Canadian ceiling prices and only a very few cars have been imported.

In order to distribute available supplies of potatoes as equitably as possible, the wartime prices and trade board has adopted some exceptional measures. On shipments of potatoes from the maritime provinces into Quebec and Ontario, the board has, in effect, been requisitioning cars of potatoes and directing them into districts of greatest need. In order to make prairie potatoes available in eastern Canada, the board has also been paying a freight subsidy equal to the difference between the laid down cost of the potatoes shipped from the prairie provinces and the eastern Canadian ceiling prices.

I will now deal with the specific questions asked. The hon. member for Huron North (Mr. Cardiff) asked a series of questions relating to seed potatoes. He asked:

> Must potatoes sold as seed potatoes be labelled as such, and if not, what check is there to show that they are not potatoes for domestic consumption?

The answer is that certified seed potatoes must be sacked and labelled as such. The hon. member then asked:

> Is there a ceiling price on potatoes sold for seed and, if so, how much?

The answer is that there is no ceiling price on certified seed potatoes. I would point out, however, that only a very small fraction of the potatoes sown in Canada—possibly less than 10 per cent—are certified seed, the balance being ordinary table stock, on which there is a ceiling price.

The final question of the hon. member for Huron North was:

> Has the minister received any complaints that potatoes being used for domestic consumption are being sold as seed potatoes?

The answer to this question is that neither the Minister of Finance nor the Minister of Agriculture has received complaints that ordinary table stock potatoes are being sold as certified seed potatoes.

Mr. GRAYDON: Do I understand that neither the Minister of Finance nor the Minister of Agriculture has ever heard of these complaints?

Mr. ABBOTT: That is right. I think what my hon. friend intended to ask was whether seed potatoes were being sold for domestic consumption, but his question was whether table stock potatoes were being sold as certified seed potatoes. If he intended to ask the question I have just suggested, complaints have been received that certified seed potatoes have been sold for domestic consumption and an order of the board was passed on May 12 prohibiting such sale.

Mr. FRASER (Peterborough West): Are ordinary potatoes being sold for seed?

Mr. ABBOTT: The majority of potatoes sold in Canada are not certified seed potatoes, but the ordinary table stock potatoes.

The hon. member for Lethbridge (Mr. Blackmore) also asked two questions, one relating to the price of seed potatoes and the

possible effect of such price on seeding, and another as to what precautions had been taken to guard against a serious potato shortage next fall and winter. Prices of certified seed potatoes not being under a ceiling have risen to somewhat higher levels than usual as compared with ordinary table stock potatoes. These prices have not interfered with demand, however, which is very active. I am informed that the quantity of certified seed potatoes distributed in Canada this year is higher than ever before, the increase in Ontario and Quebec being in the neighbourhood of 25 to 30 per cent.

Exports of certified seed potatoes were placed under control by permit several weeks ago and supplies which would otherwise have moved for export are now being diverted into the domestic market.

Now as to the steps taken to stimulate production during the present year. First, I should point out that ceiling prices on table stock potatoes have been fixed at levels substantially higher than prevailed during the base period, even after taking into account normal carrying charges, which may provide some encouragement to production.

The Department of Agriculture has also been active in its production campaign. At the dominion-provincial meeting in December, definite plans were laid for increased potato acreage, and dominion and provincial departments of agriculture have been in constant communication on production plans in subsequent months. The goal for 1943 is 560,000 acres against approximately 506,000 in 1942. Each province has accepted a share of this dominion total and has been carrying on active promotional work. I might also mention in this connection the victory garden campaign.

Yesterday the hon. member for York-Sunbury (Mr. Hanson) referred to newspaper reports of a black market for maritime potatoes. I am informed that some preliminary investigations have been made by officials of the wartime prices and trade board in the maritimes, but so far no evidence has been received to substantiate the report that such a black market exists. The situation is being further investigated.

Mr. GRAYDON: May I ask—I do not know whether to call him "the deputy minister"—

Mr. MACKENZIE KING: "Assistant to the minister."

Mr. GRAYDON: May I ask the Prime Minister how we are supposed to address parliamentary assistants?

[Mr. Abbott.]

Mr. MACKENZIE KING: Parliamentary assistant to the Minister of Finance.

Mr. GRAYDON: Then I ask the parliamentary assistant to the Minister of Finance this question. Has his minister, or has the Minister of Agriculture, or his parliamentary assistant, had any reports or complaints that potatoes have been coming to dealers' hands or retailers' hands as the ordinary domestic product, not certified seed, which were then sold to the public at the higher, un-ceilinged prices of certified seed potatoes? I believe most hon. members have had complaints of this practice here and there.

Mr. ABBOTT: No, we have had no complaints that ordinary domestic stock potatoes have been sold as certified seed potatoes. That is a proceeding which would be contrary to the regulations, and a person involved would be subject to prosecution. There have been some complaints of certified seed potatoes having been sold for domestic use, and as I pointed out a moment ago, an order has been passed dealing with that.

Mr. COLDWELL: What steps will be taken this year to encourage farmers to store potatoes? Last year there was a bountiful crop on the prairies, and many thousands of tons this winter have been destroyed because they were not stored. I know of farmers who have caves of potatoes who are just feeding them to the stock, because there has been some deterioration during the winter; and when, in the autumn, the crop was bountiful they were not encouraged to take care of them. I know I drew the situation on the prairies to the attention of the Minister of Agriculture—last December, I think it was—and suggested that some steps should be taken to keep the potatoes for further use, but they have been destroyed.

Mr. ABBOTT: I am not in a position to answer that. As I pointed out at the beginning of my statement, the question of production is the primary responsibility of the Minister of Agriculture, but I will bring the hon. member's question to his attention and ask him to have it answered.

Mr. BLACKMORE: With reference to the question of seed potatoes, it would be unfair to ask the minister to give offhand the prices at which these potatoes are now sold throughout Canada. But would he give the house on Monday an idea of these prices? It has been drawn to my attention that prices for seed potatoes asked by the retail stores in Ottawa are exorbitant beyond all reason. I

myself called at two or three stores yesterday and asked, as though I were a prospective buyer of seed potatoes, what the price was, and I hesitate to mention it on the floor of the house lest I should be accused of extravagance. I submit that the matter should be looked into at once. Now is the time to see to it that the seed potato situation is attended to and not in two or three weeks' time, when it will be too late.

Mr. ILSLEY: How wide an area does the hon. member wish me to cover? He has asked me for a statement covering prices in all parts of Canada. Do I understand that that is what he wants?

Mr. BLACKMORE: Take the prevailing prices in the different provinces, in the various centres of the provinces. If the prices mentioned to me in Ottawa yesterday are any indication of the prices prevailing throughout the country, I would say that a large percentage of prospective planters of seed potatoes will not plant them at all.

Mr. MacNICOL: What was the price?

MEAT

INQUIRY AS TO DISTRIBUTION OF PRICE CHARTS

On the orders of the day:

Mr. G. K. FRASER (Peterborough West): Yesterday was the first day of meat rationing; and yesterday, also, the ceiling was raised on meat prices. I understand that there are price charts printed on meat prices. Can the minister tell us whether those charts have been issued yet to the retailers and also to the householders?

Hon. J. L. ILSLEY (Minister of Finance): To the retailers?

Mr. FRASER (Peterborough West): And the householders.

Mr. ILSLEY: I am not in a position to give the hon. gentleman that information.

Mr. FRASER (Peterborough West): Can the minister find out?

Mr. ILSLEY: Oh, yes.

Mr. FRASER (Peterborough West): Because there were no price charts issued up to yesterday morning.

WAR REFUGEES

INQUIRY AS TO ADMISSION OF JEWS UPON RELEASE FROM ENEMY TERRITORY

On the orders of the day:

Mr. S. H. KNOWLES (Winnipeg North Centre): Mr. Speaker, I should like to direct to the Prime Minister a question of which I gave him notice earlier in the day. Has the government received a copy of a resolution adopted recently by the annual conference of the western division of the Canadian Jewish Congress, which was held in Winnipeg? The resolution to which I refer requested that sanctuary be provided in Canada for a reasonable number—and I quote these words directly from the resolution, "sanctuary for a reasonable number"—of Jewish refugees who may be released from nazi-held territory. In the light of the untold suffering of these people, will the Prime Minister make a statement either as to the nature of any reply to this resolution, or as to the attitude of the government in this matter?

Right Hon. W. L. MACKENZIE KING (Prime Minister): I did not receive my hon. friend's note until just before coming into the house. I had not an opportunity to find out definitely whether the particular communication to which he refers has been received, but I think I should be safe in saying, having regard to the number of communications which have been received on the subject to which he refers, that it would be among the number.

Yesterday the hon. member for York-Sunbury (Mr. Hanson) asked me if I would consider making a statement with respect to refugees from Europe generally, and the government's attitude towards the problem. I had better wait, I think, until I make the statement on refugees generally before attempting to reply to that part of the problem which would refer exclusively to members of the Jewish community. I shall, I expect, be making the statement in the course of a few days.

Mr. COLDWELL: May I ask the Prime Minister, Mr Speaker, whether, when he makes a statement on the refugee situation, he will call an item in external affairs so that there may be an opportunity for discussion, instead of giving a statement that will not afford that opportunity.

Mr. MACKENZIE KING: I may take up the subject when I get to the estimates of the Department of External Affairs.

CANADIAN FORCES

AGRICULTURAL LEAVE—QUESTION OF FURTHER EXTENSION

On the orders of the day:

Mr. GORDON GRAYDON (Leader of the Opposition): May I ask the Minister of National Defence a question respecting seeding leave for the armed forces. As the minister knows, seeding operations in Canada have been delayed because of the weather to the extent that farmers have not had a similar experience in several decades. I know that in the various military districts seeding leave has been granted to a great many soldiers. May I ask the minister, first, what was the normal or average period of leave granted to men in the armed forces to enable them to engage in spring seeding operations this year; second, is the minister giving consideration to the extension of this period of leave, in view of the fact that some farmers may find that leave will be over before they can get on the land?

Hon. J. L. RALSTON (Minister of National Defence): The normal period for which leave was granted was, on the average, six weeks. With regard to requests for further extension, I am advised that, except in the case of one particular formation, there have been practically no requests. I may say that in that particular formation the general officer commanding has been instructed to use his discretion, having regard to the military situation and to the merits of the case, and I propose to give instructions that the same consideration be extended in connection with any other applications which are made where the circumstances are such that the seeding operations have been seriously interfered with on account of weather, and the applicant has not been able to utilize the full six weeks of leave granted.

INQUIRY OF THE MINISTRY

PROCEDURE IN QUESTIONS ASKED ON THE ORDERS OF THE DAY

On the orders of the day:

Mr. S. H. KNOWLES (Winnipeg North Centre): Mr. Speaker, may I ask the Minister of Labour a question, notice of which I sent him yesterday? Has the government reached a decision—

Mr. SPEAKER: Order. Hon. members have been asking whether the government has reached decisions concerning different matters and whether it has decided upon a particular policy. I must direct the attention of the house to the form of questions that are being asked on the orders of the day. These questions are out of order. In view of the urgency of certain questions, however, for example with regard to seed potatoes and matters of the kind, I have allowed them; but I must once again point out that there are only certain questions that can legitimately be asked on the orders of the day, and certainly questions concerning government policy are not among them. Some hon. members seem to have taken the position that the mere giving of notice of questions to a minister is sufficient to justify these questions and to bring them within the rules of the house. That is not so. Hon. members may ask only such questions as are of immediate urgency and such as ministers may reply to in accordance with the rules; but simply to give notice of a question which may not properly be asked under the rules does not justify it.

Mr. KNOWLES: The question which I was anxious to direct to the Minister of Labour had to do with the status of dominion and provincial minimum wage rates. I wonder, Mr. Speaker, whether a statement in that regard is permissible.

Mr. SPEAKER: That is hardly a question that can be asked on the orders of the day and certainly it should not be put. I must point out further that a practice is coming into vogue in the house of putting supplementary questions to elicit answers in addition to those given by ministers. If the rules permitted it, that would be entirely proper; but the rules do not permit of supplementary questions being asked. I have allowed a number of these questions where explanations or statements by ministers might reasonably be requested, in circumstances where the minister would no doubt wish to have his remarks made as clear as possible. But I must point out that the rule is as I have stated.

BUSINESS OF THE HOUSE

WAR APPROPRIATION BILL—PROCEDURE IN DISCUSSION IN COMMITTEE

On the orders of the day:

Mr. GORDON GRAYDON (Leader of the Opposition): I wish to make one request of the Prime Minister and of the government, if I may. We are now proceeding with the war appropriation bill in committee. I am not sure what the procedure will be with respect to calling in sequence the various departments in committee, but two of the departments have now been called, that of national defence as related to the army and national defence for air, the minister in charge

of which gave his statement a week ago to-day. After these two departments which have now been opened up have been disposed of in debate in committee, I would ask the government to consider seriously the question of allowing the Department of Labour to be taken up next. I make that request for this reason. During the debate in committee we have found ourselves handicapped in the discussion of man-power by reason of the fact that we have dealt with the subject in piecemeal fashion, and the Minister of Labour has expressed on two or three occasions the desire to get on and to give his remarks on the man-power question. We feel that man-power at the present time is perhaps the most important problem facing us in parliament and I should like to see the committee come to grips with it in a broad way rather than, as I have said, only in the piecemeal manner that has been possible so far. I should like to have the Prime Minister consider this suggestion and, if it is not possible, he might at least give us an undertaking that at the earliest opportunity the man-power situation will be brought up for discussion.

Right Hon. W. L. MACKENZIE KING (Prime Minister): I would assume that the logical procedure would be to conclude with the departments of defence before taking up any other department. Munitions and supply is of course a department that is much concerned with the question of man-power. Whether it would be advisable to have that department taken up before the Department of Labour is a question which I should like to have a word about with my colleague, the Minister of Munitions and Supply, in conjunction with the Minister of Labour, but it might be understood that either of these two departments, as might best suit the convenience of hon. gentlemen opposite, could be taken up after the three defence departments are disposed of.

Mr. GRAYDON: I can understand the Prime Minister's position with respect to the three departments of defence. They may be interrelated in such a way as to make continuous discussion of the three desirable. I cannot agree, however, that munitions and supply should come before labour, because the man-power situation must be grappled with in the house and we cannot do it properly until the Minister of Labour makes his statement.

Mr. MACKENZIE KING: I was not suggesting that we would not proceed first with labour, but that in the absence of the Minister of Munitions and Supply I did not wish to make a definite statement.

WAR APPROPRIATION BILL

PROVISION FOR GRANTING TO HIS MAJESTY AID FOR NATIONAL DEFENCE AND SECURITY

The house resumed from Thursday, May 27, consideration in committee of a resolution to grant to his majesty certain sums of money for the carrying out of measures consequent upon the existence of a state of war—Mr. Ilsley—Mr. Bradette in the chair.

NATIONAL DEFENCE

Mr. POULIOT: In order to save time I sent to the minister a copy of a memorandum with regard to one man who was described as a deserter. He was not guilty and the case was so bad that the department informed the provost marshal that the man did not have to report at all. The discussion of the estimates must be thorough, and that is impossible as long as we stick to theoretical questions and answers. We must get down to the facts; we must expose the facts as they are in these cases. That should be very easy, because I can refer the minister to the departmental files, and I have no objection to passing over my own files after *Hansard* is through with them. A few days ago I quoted some letters from various counties. I have others to-day. I need not take time to read them now but I will send them to the members representing the respective counties, so that they may deal with these matters.

There are some cases which are very interesting and very novel, and which would seem incredible if the quotations were not from official papers. Here is a file, No. 51-C-14, and another number Q-39-S-203. The number of the man is E-29326; I will not give his name. Six years before he enlisted he was working as a lumberman and struck his ankle with an axe, as a result of which he was deformed. Then he worked on a tractor and a tree fell on him, breaking his shoulder. As a result he was unable to carry a rifle on his shoulder, and he was totally unfit for military service. However, he was accepted, and on June 27, 1940, was transferred to Camp Borden. He wanted to transfer to depot No. 5, Quebec city, but was not allowed to do so. On August 20, 1940, Commander MacLachlan, who was then deputy minister, informed me that this man was to be discharged as unfit. I wrote Lieutenant-Colonel Mercier on August 28, 1940, and again on September 7, asking for a discharge for this man. On September 6, 1940, Colonel Des-Rosiers, whom I have found to be an excellent official of the department, informed me that this man was suffering from congenital mental

deficiency and was unfit for service. His injuries to his ankle and shoulder were not mentioned.

The CHAIRMAN: If the hon. member will allow me to interrupt, we are now discussing item No. 3, dealing with travel, transportation and freight, and I must absolutely abide by section 2 of standing order 58, which states:

Speeches in committee of the whole house must be strictly relevant to the item or clause under consideration.

Surely the hon. member must realize that he and all the other members of the committee have been given a great deal of latitude so far, but there comes a time when a line of demarcation must be drawn. This is the time, and I am now going to abide by the rule I have just read.

Mr. POULIOT: Item No. 2 was passed last night under certain conditions; at page 3118 of *Hansard* the minister said:

I would say that no one will be shut out by reason of having allowed this item to carry. No one will be shut out from receiving an answer to such questions. As a matter of fact, I have made notes of the questions asked.

I understood I could go on with these matters to-day, otherwise I would have objected to the item passing last night. I was right here when the statement was made, and that was my very clear understanding. However, if that is not the case I will not insist upon dealing with this matter; I will not impose upon the committee. Yesterday a sort of committee was formed behind the curtains; some members went out while I was speaking, so that there was hardly a quorum left; they were all behind the curtain, but two minutes later there were more than fifty members in the house. I want to know if a joke was played on the committee last night when item No. 2 was passed. If that is so I shall not insist; I will take my medicine all right, but I will remember what happened on other occasions. I want to know if I can go on now, after what was said by the minister last night.

Mr. RALSTON: I think my hon. friend is wrong in his construction of the reservation. That reservation was made in answer to a question by the leader of the opposition, who referred to certain questions which had been put during the course of the debate, to which answers had not been brought down. The hon. gentleman referred particularly to questions asked by members of his party. At page 3118 of *Hansard* he said:

A number of questions were asked by some hon. members in this party during the afternoon and evening sittings, and if the item is to carry it should be with the reservation that the minister will answer the questions asked.

Then I said:

I will, as fully as I can.

Mr. Graydon: I should have said that they were asked not only this afternoon and last night, but during other parts of the debate. I should like to have them answered.

Mr. Ralston: I would say that no one will be shut out by reason of having allowed this item to carry. No one will be shut out from receiving an answer to such questions. As a matter of fact I have made notes of the questions asked.

Then the time was agreed to. I say to my hon. friend that I do not think that reservation carries him far in connection with his contention. But I must say something further. I do feel responsible in connection with this matter, because at five minutes to eleven I interrupted the hon. member for Témiscouata when he was dealing with medical matters, and asked that I might place on record some information with regard to the man who had been referred to earlier by the hon. member for New Westminster. At that time, at page 3116 of *Hansard*, I said:

I want to ask my hon. friend if he would mind dealing with this matter when we go on to-morrow.

On that understanding the hon. member for Témiscouata yielded, and so far as I am concerned, Mr. Chairman, I feel that I am bound not to take any objection to-day. I rather think it was the understanding of the committee.

The CHAIRMAN: On that understanding I do not see how I can apply the rule, and my ruling cannot apply.

Mr. McIVOR: Might I have a word?

The CHAIRMAN: The hon. member for Témiscouata has the floor.

Mr. POULIOT: I have no objection to the hon. member saying what he wishes to say.

Mr. McIVOR: I think the hon. member for Témiscouata understands now that we would like him to be brief in his remarks. He can be very pointed and very intelligent; now we would like him to be very brief, because the temper of the committee is not in favour of any more long speeches from that source.

Mr. POULIOT: I thank my hon. friend for his kind words, to which I am not accustomed, but I would suggest that he should address the Chair while we are in committee. I say, however, that even if there were no such reservation—and I thank the minister for what he has said—I would be strictly in order under

this item, because it deals with travel, transportation and freight. I am referring to the case of a man who was transferred from Quebec to Camp Borden, back to Quebec city and back again to Camp Borden; he was like the wandering Jew. If any case comes under this item it is this one, but in addition I have something else to say.

Mr. RALSTON: Just for the information of all hon. members I suggest to the hon. gentleman that these matters could be discussed quite properly under item No. 5.

Mr. POULIOT: Oh, yes, I could take up all these cases under item No. 5, but I should like to get rid of them and I do not want to take much more of the time of the committee. Just for a change I should like to go to the movies to-night if I am free. But there is another point. These items represent the subdivisions of a large item, and we can decide to take one item after the other only by unanimous consent of the committee. These are not like ordinary estimates, as I have stated on more than one occasion. However, I shall not be long. If the minister prefers I shall take it up later; I am in his hands. Both deputy ministers had told me this man was unfit; one had made the statement in August, and the other in September. Well, what happened? I received a letter from Lieutenant-Colonel Mercier stating that he was pleased to inform me that all necessary proceedings had been taken to settle the case with the shortest possible delay. On October 16 I wrote another letter, and on October 29 I received the following from his office:

From the information received to-day about this soldier, that man has not been discharged from the army, and will be at the hospital at Riviere du Loup. It seems there has been a contradiction in the information that has been supplied, regarding the locality where he should be, and also his status in connection with the active army.

Mention is made of the letter they had received from Camp Borden. It was a long time after that the statement was made by officials of the department that he was unfit.

Then, on November 2, 1940, the lieutenant-adjutant of the Royal Canadian Army Service Corps training centre at Camp Borden wrote as follows:

We are enclosing a certified true copy of M.F.B. 227, classifying the marginally named as category "E" and recommending his discharge from the army.

2. Our records show that Pte. Slight, F., was admitted to Christie Street Hospital, Toronto, 4-7-40, and discharged from there 27-7-40. He was then granted a six-day pass to return to his home in Riviere du Loup, P.Q., where his wife was ill.

That is true.

A special extension was granted by Major Ross-Smith of our training centre, permitting this soldier to stay with his wife from 12-8-40 until 26-8-40.

3. On August 23 we received a telegram from a Dr. D. Saindon at Riviere du Loup stating that Pte. Slight was suffering from appendicitis and would require an operation. From that date our information about this man is vague. We were informed that he had been admitted to Riviere du Loup Hospital 19-9-40, and awaited his discharge from hospital before proceeding with his discharge from the army.

4. Please let us have any additional information concerning the marginally named, that might help to clarify his case, at your earliest convenience.

Then here is a letter I received from the medical office of the army at Quebec:

(Translation): You will find enclosed the letter we have received from the adjutant, R.C.A.S.C. training centre, at Camp Borden.

According to a telegram dated October 22, 1940, from Dr. D. Saindon, of Rivière du Loup, this man has never been in hospital.

As you may see, there is some contradiction. The man does not belong to district No. 5. However, if I could ascertain the facts—and only the man himself can explain the extension of his leave at Rivière du Loup—I could easily find out his status.

If this man has not been admitted to the hospital at Rivière du Loup, I am afraid he will be considered as a deserter. However, his case must be cleared up.

(Text): He was considered a deserter at the time, after it had been stated by army officials that he was unfit. Then, on November 15 he received a telegram from Camp Borden, which I translate as follows:

Return at once Royal Canadian Army Service Corps training centre, Camp Borden, Ontario.

And this is signed "service training". This was received after he was declared unfit. I learned he was sent to Quebec city, and was about to be put into the clink. He was about to face a court martial, after all that. Finally he was discharged as unfit. The trouble is that this man should never have been accepted in the army. There are many similar cases respecting men who have been sick. I shall refer to a number of them. It was not because they did not wish to be in the army, but because their families complained that the men were not in good physical condition, or in a state of health to stand regular training.

I have before me the files for H.Q. 869-P-872 (DM); H.Q. 405-P-5000 (DM); H.Q. 869-L-2263 (DM); H.Q. 869-L-1578 (DM); and E/577,820. These are all files respecting men who were put into the army in error. I do not complain only about army doctors. Some of them are good and some are bad. The

same applies to civilian doctors. But I say sincerely and frankly to the minister, because I am in earnest, that in many cases the civilian doctors rely on the army doctors, and some of them are not very attentive to the medical examinations of recruits. They were being paid only a dollar, and did not realize that they had made a lot of money as family physicians. This is not true of many civilian doctors, but it is true of some of them. On the other hand, I understand the army's position. The army doctor will say, "Well, this man has been examined by his family doctor, and placed in category A—or E, as the case may be. He knows the family well, and understands the circumstances, and therefore it is something like a political football. I understand they have many men to look after.

Here is another file. Doctor Fortin wrote me this letter with respect to one of these men:

(Translation): As evidenced by the enclosed certificate, the above named man is suffering from a disease which should make him absolutely unfit for military service. In spite of that, an English-speaking physician did not hesitate to include him within category "A". Is the physical condition of a man totally disregarded? Sooner or later, and perhaps within a short time, this man will have to undergo a rather serious operation. I cannot understand why such an attempt is made to increase the number of unfit men, in view of the fact that this man had a job and was able to earn his living.

(Text): That man could look after himself. Here is the affidavit from the doctor:

(Translation): This is to certify that this man is suffering from an active suppurating otitis in the right ear, which makes him absolutely unfit for military service. This man should normally be put in category "E".

(Text): Then, I have the following memorandum respecting E-626,786:

(Translation): The man is suffering from anaemia. He is unable to withstand long marches, because the little toe of the right foot overlaps the next toe. Chafing occurs during long walks, and this is quite painful. The man cannot wear regulation boots, and even with other shoes he is unable to withstand long marches.

His left shoulder and arm were scalded during his youth, and since that time, his skin is quite sensitive in that part of the body. He still has very large scars in front of the shoulder and behind, and also on the upper part of the arm.

He is suffering from rheumatism in the left arm after exertion. He is unable to carry a rifle on his left shoulder.

Finally, the bone at the base at the spine is very much enlarged, so that the man is unable to assume an erect position when sitting, and even when walking he has to stoop in order to avoid pain; as soon as he stands erect he breaks into perspiration.

[Mr. Pouliot.]

(Text): What I have read states that the last bone of the spine was just as big as a closed fist, that the man could not stand upright, nor could he sit normally. I had to fight his case, because he could not become a good soldier.

Then, here is case Q-39M-3119, respecting a soldier whose toes turned under his foot. I believe this condition is called hammer toes. He could not walk, nor could he wear shoes without great pain. Afterwards he was classified in E category. He should never have been accepted in the first instance. It was not proper to accept him as a soldier, because he could not perform a soldier's duties.

Mr. MacNICOL: Were these men passed and accepted?

Mr. POULIOT: Oh, yes.

Mr. MacNICOL: They could not have been subjected to any medical inspection.

Mr. POULIOT: Surely; I shall have something to say to the committee about that These are not theoretical cases. I bring these facts before the minister. I know he is willing to run his department well. We are the ones who get the immediate reaction to these matters. I hold no rancour against anyone. I do not care about Mr. Mercier or Mr. Rathbone in Quebec city and I do not want to hurt them unjustly, but I think it is a shame when these fellows are taken into the army when they are sick like that.

Mr. McCANN: Does not the fault lie with the local physicians in the communities in which these men lived? The fault cannot be placed upon the military authorities, as the hon. member is probably attempting to do. There may be some blame upon the military authorities for not discharging these men, but primarily the duty lay upon the family physicians who examined them when they were inducted.

Mr. POULIOT: I agree with the hon. member for Renfrew South to a certain extent. As I said before, there are responsibilities in both quarters. There may be some responsibility upon the family doctor, but the fact is that these cases are on record. Here is one case where a man had been classified E by the family doctor and that classification was not considered at all by the army. He was kept in the army. Many of these men have been several months in the army.

Mr. BLACKMORE: Has the hon. member any evidence to show that these men applied to the military officers for reexamination and were refused?

Mr. POULIOT: Yes, I have many cases. I have taken these files at random. I do not

wish to impose upon the committee, but I am sure hon. members will be interested when they hear the details. It will be a revelation. I have a case just like that, the one I referred to last night. This man had a curvature of the spine and he had to wear a belt to support the sacroiliac. I do not know whether my translation is correct. Besides that, he had broken his wrist. I wrote to headquarters about this matter, and just here I may tell the minister that the office of the deputy minister took good care of all these cases. I know they handle cases from coast to coast and have a lot to do and I desire to praise them sincerely for what they have done.

Mr. RALSTON: I have no doubt that my hon. friend will be able to find cases in which the medical officers of the army and civilian doctors have gone wrong. Lawyers go wrong quite frequently. Most of the cases he has cited go back to 1940. But what I do object to is the broad statement of my hon. friend. Yesterday he said that a number of the medical officers of the army were incompetent and that with a few exceptions they were the dregs of the medical profession. That is what I object to most emphatically. To-day my hon. friend is quite fair in saying that it is not wholly the blame of the army officers, that some blame may be attached to civilian doctors who might not understand medical examinations and army procedure. But I consider that a statement like that by a member of the House of Commons with regard to the medical service of our armed forces is wholly unwarranted. At the proper time I shall give the committee the particulars of the qualifications of the men at the head of this service. A statement of that kind is calculated to do irreparable damage to the army and to morale, without doing any corresponding good. My hon. friend is indicating to-day that the cases to which he is referring have come up from time to time and that there may be some negligence or lack of knowledge on the part of the civilian doctors who examined these men, and also a lack of vigilance on the part of the army doctors in not turning them out. As I said before, most of these cases go back to 1940 and I submit that they do not justify a statement such as the one made by my hon. friend, especially when this service is headed by the type of men that are there at the present time.

These medical officers have been consultants and practising physicians. They are members of the Canadian Medical Association and the French-Canadian association of Quebec. Many of them gave up good practices, because at a time like this I should think it would be possible for every doctor to have a lucrative practice. Young men are coming out of the medical schools and going into the army instead of taking up what might, under conditions as they are to-day, be most attractive professional prospects. It is unworthy of any hon. member to say that these men should be classed as the dregs of the medical profession, and I hope that at the proper time he will see fit to withdraw that statement because I do not think he believes it himself.

Mr. POULIOT: Last night was a special occasion, and sometimes words like that may be exaggerated. My idea in bringing these cases to the attention of the minister and the members of the committee was to give full details. I am ready to make concessions, but I think the minister will admit that there should be at least a little purge among some of those who are in the service, because of observations I made last night.

Mr. RALSTON: The hon. member speaks of a purge. There have been changes. I am not going to say it is a purge. For the last eight months there has been at the head of the medical services Brigadier G. B. Chisholm, C.B.E., M.C. He won the military cross in the last war. He had post-graduate experience in clinical and psychological medicine and general medical practice, and for six years was a member of the teaching and clinical staff of Yale university. He was a lecturer in mental hygiene and psychotherapy at Yale medical school. He is a post-graduate of the medical school and Yale school of nursing. In addition, he took extensive post-graduate work overseas, and prior to the war carried on a special practice in psychotherapy and mental hygiene. He was a special lecturer in the department of social service, university of Toronto. It must be remembered that Brigadier Chisholm is not only a medical officer; he has been a senior combatant officer in the Canadian army and organized the department of personnel selection prior to his appointment as director general of medical services.

Associated with him as deputy director general of medical services is Brigadier J. C. Meakins. Brigadier Meakins was physician in chief to the Royal Victoria hospital, Montreal, and has an international reputation. In addition to many other appointments, he has been professor of therapeutics, university of Edinburgh; director of the department of medicine, McGill university; dean of the faculty of medicine, McGill university, and past president of the Royal College of Physicians of Canada. He could hardly be classed as being one of the dregs of the medical profession.

Then there is Colonel G. A. Winfield, who is also deputy director general of medical services. This officer proceeded overseas early in the war and held the appointment of assistant medical director, officer in charge of hospitalization, Canadian military headquarters. He became a member of the staff of Dalhousie university after five years post-graduate work in surgery and carried on an extensive practice in Halifax as a specialist.

Then there is Colonel A. E. Archibald, who is as widely known as a consultant as any surgeon in Canada. He has been a chief consultant surgeon for some time. Then there is Colonel W. P. Warner, who is chief consultant in medicine. He was associate professor of medicine, university of Toronto, and has been a specialist in internal medicine in Toronto for the past fifteen years. Then there is Lieutenant-Colonel C. S. Fahrni, who is a consultant surgeon. He is the immediate past president of the Canadian Medical association and was assistant professor of surgery, university of Manitoba. He has carried on a leading surgical practice in Winnipeg for the past twenty years.

The next is Lieutenant-Colonel J. D. Adamson, who is a consultant physician. He was professor of medicine, university of Manitoba and chief of the medical staff, Winnipeg general hospital. Next is Lieutenant-Colonel R. I. Harris, M.C., who is a surgical consultant. He was assistant professor of surgery, university of Toronto, as well as chief surgeon of the orthopaedic service, university of Toronto. He is past president of the American orthopaedic association and for the past twenty years has been a leading consultant in surgical practice in Toronto. These are the senior men at national defence headquarters. Along with them are eleven district medical officers throughout the districts. I will give their names:

Lieutenant-Colonel G. L. Jepson, Military Cross and V.D., the district medical officer for military district No. 1, has been a specialist in anæsthesia for the past thirty-seven years and assistant professor of anæsthesia, Western university; also chief anæsthetist, Victoria hospital, London, Ontario.

Colonel A. R. Hagerman, another Military Cross man, is the district medical officer of military district No. 2. He has specialized in internal medicine and cardiology for the past twenty years and is on the staff of the department of medicine, university of Toronto, as well as on the medical staff of St. Michael's hospital, Toronto.

[Mr. Ralston.]

Colonel A. E. Lundon, whom I knew in the last war, is district medical officer, military district No. 3. He has had extensive post graduate work in ear, nose and throat in the United States and Europe. He has been a specialist in ear, nose and throat, Montreal, for the past twenty years, having served on the staff of Montreal general hospital and McGill university in this capacity.

Colonel R. H. McGibbon is the district medical officer, military district No. 4. He has had post-graduate training in medicine for six years in Canada and the United States. He has had a large general practice in Montreal for the past sixteen years and is a member of the medical staff of the Montreal general hospital.

Lieutenant-Colonel J. P. A. J. Mercier, whom my hon. friend has mentioned, is district medical officer of military district No. 5. He has had post-graduate experience in mental and nervous diseases, and has had a general medical practice in the city of Quebec for the past eighteen years. These are not the dregs of the medical profession, Mr. Chairman.

Colonel G. R. Forbes, the district medical officer of military district No. 6, has had a large general and surgical practice in Kentville, Nova Scotia, for the past eighteen years.

Lieutenant-Colonel A. A. James, the district medical officer of military district No. 7, became a member of the permanent force subsequent to relinquishing his appointment as assistant professor of biochemistry at the university of Western Ontario. This officer proceeded overseas in 1940, where he held the appointment of A.M.D. 1 at Canadian military headquarters.

Lieutenant-Colonel P. G. Bell, another officer whom I knew in the last war, is a D.S.O. and V.D. He is district medical officer at military district No. 10. This officer has had three-and-a-half years post-graduate work in eye, ear, nose and throat and has specialized in eye, ear, nose and throat work in the city of Winnipeg for the last twenty-two years. He held the appointment of head of the department of ophthalmology at the university of Manitoba.

Colonel W. A. Wilson is the Command medical officer, Pacific Command. He took post-graduate work in internal medicine in London, England. This officer has carried on an extensive practice in internal medicine in Vancouver for the past twenty-two years. He holds the appointment of chief of the medical staff of Shaughnessy hospital, Vancouver.

Lieutenant-Colonel R. A. Hughes, district medical officer, military district No. 12, had four years post-graduate work in eye, ear, nose and throat in the United States. He has carried on an extensive practice in his specialty at Saint John, New Brunswick, for the past twenty years.

Lieutenant-Colonel J. A. Reid, the district medical officer for military district No. 13, has carried on a large general and surgical practice in Calgary, Alberta, for the past nineteen years.

Lieutenant-Colonel N. K. Wilson, V.D., camp medical officer, Petawawa, has had two years post-graduate work in ear, nose and throat work in the United States. He has specialized in nose and throat work in the city of Toronto for the past twenty years and is a member of the ear, nose and throat staff of the Western hospital, Toronto.

I would say once more that it is men like that and the men who are serving all over Canada and overseas whom I object to being referred to as the "dregs" of the medical profession in Canada. I say to the hon. member and to the committee that there were errors in connection with medical examinations as well as everything else, particularly in the early days, and I brought that to the attention of the committee very frankly on previous occasions and told the committee of the steps taken to remedy the situation, of the instructions which went out and of the endeavours we were making to teach civilian doctors the job of making examinations from the military standpoint. It has not been easy. I have no doubt there have been slips. But I do say as regards the medical organization for the whole army I am exceedingly gratified that we have been able to get the services of the type of men we have. I say this further, that no body or service in Canada, bar none, has any more representative, any more skilful, any more proficient, any more devoted band of medical men than has the army, whose medical officers have come in from the profession to help us out in this time of need. I hope with that assurance and with that statement the hon. member will feel that the situation has been adequately taken care of in connection with these old cases in 1940 which he has reviewed. It is, of course, useful to have them brought to our attention so that we will not get complacent.

Mr. BLACKMORE: I can understand these cases getting into the army, but I cannot understand why in the world they were allowed to stay in the army after they appealed for an examination.

Mr. RALSTON: I have not seen these files and I cannot deal with these cases. My hon. friend says he is going to pass them over to me, and I will deal with them when the time comes. It must be remembered that we have 450,000 men in the army. I do not know how many cases my hon. friend has; he may have fifty.

Mr. DOUGLAS (Weyburn): Mr. Chairman, what are we discussing? We are supposed to be discussing item 3, for travel, transportation and freight. But now we have got on to medical services again. That should be discussed under item 5, which reads: "Personnel supplies and services; food, medical and dental stores, clothing and personal equipment."

Mr. RALSTON: The reason that came up was that when the hon. member for Témiscouata last night was discussing medical services on the item for pay and allowances, where it can be discussed, as a matter of fact, though not as properly as under item 5, I interrupted him and told him that if he would allow me to make a statement with regard to the case brought up by the member for New Westminster he could go on with his statement to-day. My hon. friend the member for Weyburn was not in perhaps at the time.

Mr. DOUGLAS (Weyburn): I was in.

Mr. RALSTON: Perhaps he did not agree to it.

Mr. DOUGLAS (Weyburn): I can understand the hon. member for Témiscouata wishing to discuss the medical services, but I do not see how he cannot discuss them under item 5. If there was no other item on which to discuss them I could understand his discussing them now. But we are supposed now to be discussing travel, transportation and freight.

Mr. RALSTON: I have my transportation and freight men here.

The CHAIRMAN: I myself was in error. I well remember now the minister asking the hon. member for Témiscouata to allow him to make a statement. A little later the leader of the opposition asked the minister if he would answer some questions after item 2 had been carried. I understood that practically unanimous consent was given by the committee at the time.

Mr. GILLIS: Still on the point of order, Mr. Chairman, if this afternoon is going to be taken up entirely with a debate between the hon. member for Témiscouata and the minister, the rest of us might as well go up to our rooms and do some work. If the hon. member for Témiscouata is to go back to deal with cases in 1940 and iron them out with

the minister there is going to be no room for anybody else here this afternoon. If I were trying to discredit parliamentary government in Canada, what has been going on here the last two or three days is exactly the technique I would adopt.

Mr. POULIOT: Speaking to the point of order, Mr. Chairman, I protest strongly against what the hon. member, for whom I have great respect, has just said. I will tell him that it is only by unanimous consent that we can divide up these so-called estimates, which are not estimates, and discuss them one by one. We have a global amount of three and a half billion dollars which we have to consider as a whole. It is not divided up here, and when this resolution passes, the whole amount will be voted and then a bill will be introduced. The items we have before us are just a lead. There is no rule that binds any hon. member to restrict his remarks to any particular item, because we are discussing the whole thing. I complained at the start that these were not presented as supplementary estimates. How can any member raise this point of order when what is before us is the whole amount of three and a half billion dollars? It is the entire amount we have to consider. It has been divided up merely for convenience to enable explanations to be made to members. But the discussion cannot be divided up except by unanimous consent.

Mr. DOUGLAS (Weyburn): It was divided by unanimous consent.

Mr. POULIOT: The hon. member for Lethbridge, leader of the New Democracy group, asked for some information. The minister rose, and I did not say anything. If an hon. member has anything to say, let him go on. I do not intend to monopolize the time of the house. How many times have we been sitting here when I did not rise, so as to give a chance to other members to put their questions and make their remarks? But here I have facts which I want to bring to the attention of the minister, and I will tell him also that I am sure all the learned men he has mentioned never had any knowledge of the questions I have with regard to what has happened at the citadel in Quebec, the camp at Rimouski, and the camp at Valcartier, which are three places where reforms should be made. I ask the minister in all kindliness not to take for granted that when a civilian talks about the way men are dealt with in the army, he does not know his business because he is neither a soldier nor a doctor. He has eyes to see and ears to listen. We know these men and respect them. What I am doing now is not easy; it is extremely hard for me to do it, but I do it because I find it is my duty; I do it for the information of the committee. And I am not afraid to speak in this way, because if there is any member who has conveyed information to his colleagues it is the humble member for Témiscouata. I am not stingy about the information I have; I am always glad to share it with my colleagues.

The file I have been referring to is not a file of 1940. The file of 1940 is a real novel; it would be incredible, if the records were not kept in the department. I was answering to the best of my ability the hon. member for Lethbridge, when the minister rose. I do not object at all to his remarks. He was right, in the main; but there are other fellows who cover themselves with the glory which belongs to others, and people suffer on this account; the army suffers from it. I am here to advocate the cause of the under-dog, the man who has no protection, the man who is afraid to talk to others at times and who comes to me in all confidence, being sure that he can trust me.

Now, sir, if I am permitted, I will say what this is. The trouble about this file, which is E554,886, H.Q. 869 L-1418, is that in the first place this man was suffering from a deviation of the spine, and he had other illnesses. It was written in a letter on June 1, and on July 8 I had this letter from the Quebec doctor—I translate it as best I can:

> This man has been admitted on June 15 to the military hospital, Quebec, and went out four days after. We find light scoliosis of the spine, with shorter left inferior congenital member. However in his history we note that he has broken his left fist five years ago, and he said that that was not enough to change his category, which was A.

A man suffering from a deviation of the spine and being classified A!

I have another letter, from the department, dated August 17, to the same effect. He was attended by specialists, who admitted the same thing, according to a letter which I have received from the department, and which is to the same effect as the one of July 8 which I have read. It was dated October 2, and it admits that the man was suffering as I have stated and that he was kept in category A. Finally, thanks to his major, whose name I do not mention here, but the minister will see it when I transfer the files to him, a medical doctor at camp Valcartier, Dr. Demers, changed his category. This is a case which is clear. I complained of the physical inability of that man. The doctors concurred, yet they kept him in class

A until representations were made by his major to the local doctor at Valcartier camp. I want the doctor who is responsible to be fired.

Here is another case, a classic case, from the citadel at Quebec. I do not know that the man concerned is still there. The man had rupture. He was on sick parade. The doctor asked, "What is the matter with you." He said, "I suffer from a rupture." The doctor answered, "Have a good rub." The man who rubbed him was a lumberjack with hands as long as I am indicating to you, and like sandpaper.

Mr. BLACKMORE: Is the hon. member really serious in what he says, that a doctor prescribed a rubbing for a rupture?

Mr. POULIOT: Yes, sir, surely; it was said there. They do not call such men doctors; they call them blacksmiths. That man had to do his drill, though he could hardly walk.

Here is another case, HQ 869-0-1367. It is that of a son of a farmer who asked for postponement but did not get it. He was in camp at Rimouski from March 16, 1942. In August, 1942, he was sick for several weeks and was at room 208, military hospital, Laurier avenue, Quebec. The doctors declared he could not make any cure. On August 17, headquarters at Quebec informed him that the mobilization commission had refused his postponement. On August 24 headquarters informed me that the young man was actually under observation at the Quebec military hospital. On August 26 Lieutenant-Colonel Mercier informed me that he had been classified C for a period of three months and that he will have to be reexamined to establish definitely his medical category. On September 4, Lieutenant-Colonel Mercier informed me that he was still under observation.

Mr. RALSTON: My hon. friend says "informed me." He is really reading a diary?

Mr. POULIOT: Yes. On September 4 he was still under medical examination. On September 9 he was passed in category C-1. A minute examination was made; the man was transferred from Quebec military hospital to the hospital l'Enfant Jesus at Limoilou, and finally to the hospital of Saint Sacrement, Quebec. On January 8 information was given that he had been sent to the hospital for a complete medical examination. On March 4 he was released.

The CHAIRMAN: If the hon. member will allow me, the minister has stated to him that if he will give him this information he will deal with it. Would it not shorten the debate if the hon. member would do so? I do not say this with any idea of trying to discipline the hon. member for Témiscouata; it is not in my power to do so; but I believe that if he would accept my suggestion the debate would be considerably shortened. I may remark that the reactions of the public to the discussions which have been going on during the past few days are not very favourable to the parliamentary system as it is operating at the present time. The minister has undertaken gladly and voluntarily and diligently to deal with matters which are placed before him. I offer this suggestion to the hon. member as a piece of advice.

Mr. POULIOT: If I am allowed, I will quote only one more memorandum, and afterwards I shall refer to a few matters which will take only five or ten minutes.

This file, which is numbered H.Q. 869-L-1251 (DM), relates to a man, classified A, who went to the camp at Rimouski on March 17, 1942. He had already suffered from pleurisy and abscess of the throat, and had lost seven pounds the first month he was in the camp; he was coughing to such an extent that he could hardly speak. Once his temperature rose to 102.3. He was excused from the obligation to drill, but he had to wash the floors of the camp for three hours. On April 1 two medical certificates were sent to Lieutenant-Colonel Mercier from the doctors stating what was wrong with the man. He suffered from arterial hypertension and also from pleurisy. On April 28 another letter was sent to Colonel Mercier, and on the 9th of May a reply came from Doctor Mercier stating that his pulmonary radiography was negative. There were, from a clinical point of view, it was stated, indications of acute sub-ague. And so on. On April 15 I received this letter from his mother:

> Our son, whom we had succeeded in getting out of the army where he had been classed as A, has always been very ill since. He suffers with his back, which is sore, and they could not find the cause of it. Fifteen days ago he was operated on for appendicitis. The operation succeeded but as he still had a sore back the doctor took a radiography and found he had some vertebrae that were sore. We sent him immediately to Doctor Samson, a specialist at Cartierville. This doctor found an abscess on the spine and he will be operated on next week.

Here is a man who would have died if he had been kept there, and yet he was classified as A. There is something wrong somewhere. I do not deny the qualifications of the doctors whom the minister has mentioned. They may be the ablest men, but there are others who are not so competent. If you go to the Cha-

teau Laurier you will find a very good cook there, the chef, who looks after all the cooking for the establishment, but there are others who have not the skill that he has.

Here is another case, H.Q. 869-B-3452. This fellow had had pleurisy each year for three years previously, and he was transferred from Rimouski to Chicoutimi and kept in the "clink" as a deserter because his health was such that he could not leave his home and go to the camp. I could mention many others. Here is another young fellow on leave at home. He suffered from appendicitis and had an operation, and after fifteen days he had to report to Rimouski; otherwise he would have been considered a deserter. He went there in the dead of winter with the result that he caught cold and nearly died, not from appendicitis but from pleurisy contracted on the way down. I have his file here and I will pass over the full file to the minister. I would ask the minister to look through that file and return it to me afterwards because I should like to use it in connection with the estimates of national selective service.

I do not wish to take up much more of the time of the committee, and therefore I take the minister into my confidence and pass him my own file, as I am prepared to do with all the others. These boys are not afraid to enlist. Here is a young man who was found unfit, E-41997. What did he do? He enlisted again until it was discovered that he was too unhealthy to remain in the army. There is another case that is simply incredible. I will not mention it now, but I will give the minister a copy of the letter I wrote to the deputy minister. The doctor said in this case that they were not afraid of Jean François Pouliot and that the man would stay in the army.

I am ready to cooperate with the minister to the fullest extent, but I want to see these men dealt with fairly by the authorities. I am not raising any prejudice, racial or religious. The doctors I complain of are French Canadians in these camps. They are not all of the type mentioned. In the province of Quebec there are French-Canadian doctors for whom I have the greatest respect, but I do not want to see people who are kind to me looked after by blacksmiths when they are sick. At times the doctors actually forget to examine a man's heart. One man could not do anything without perspiring freely. He was weak and very delicate and I sent him to a doctor. I wanted him to pass the medical examination, and I trusted the army doctors enough to have him sent to the army for examination. The result was that he was declared unfit. I will give the numbers of some of these cases: H.Q. 869-B-3452; H.Q. 869-O-1367; H.Q. 869-L-1261; H.Q. 869-C-2833; H.Q. 869-M-3011; H.Q. 869-P-1799; 83-802; F.3818; E-41997; H.Q. 869-O-406.

I am putting these cases on *Hansard*, and afterwards I should like the minister to look through the files. I know he will see that what I have said is borne out by the facts. I quite understand that the minister cannot see everything that goes on in the department, and it is precisely for that reason that he has a parliamentary assistant. If, therefore, the minister is too busy with the other business of his department, I would be delighted to take the matter up with his parliamentary assistant and discuss these various cases of young men who are indispensable on the farm but who are kept in the army.

What I complain of is that the idea seems to be that every man counts as one, even if he is sick. But surely a sick man does not count; he is not an asset but a liability. Some commanding officers will not allow any man to leave the regiment. They seem to regard it as a reflection on the army to have a sick man leave, because it would mean one man less. What a shame. So that they retain sick men and have them wash floors notwithstanding that they are suffering from pulmonary diseases. They force them to drill when they should be in category E. It is absurd. That is where we need reform.

I thank hon. members for their patience in listening to me. They know quite well that I am acquainted with the facts and that if they were in my position they would do the same. What I am doing for the boys from Témiscouata and from other counties who write to me I would do for all the boys who are in the army. I can assure the committee that what is done with reference to these cases that I have submitted to the minister will have their repercussion throughout the army and doctors will be more careful. I can tell the minister also that nothing is worse, from the point of view of the ill-treatment of these fellows, than the protection which is accorded to some. My remarks do not apply to all the doctors. If what I said yesterday were imputed to all it would be unfair because that is not my belief. I have a high regard for several of the doctors whom I consider real savants, scientists. But, I repeat, reform is urgently needed, and I could give the minister letters that I have received from these young men thanking me for what I have done for them. In some instances they were ready to work in depots. They were willing to serve in positions where they would not have to walk, and so on, because they were unable to

do so, but their request was refused. I fight for the under dog; the minister understands my point of view, and I hope he will bring reform where reform is needed.

Finally, I would ask the minister for some information which he may give me some other day if he wishes; at any rate I wish to bring the matter to his attention. In Quebec city Major E. Douglas Rathbone is in charge of the medical revision board at the armoury.

Mr. RALSTON: That is not an army board. The medical revision board comes under the Department of Labour.

Mr. POULIOT: This is my last question, and I will tell the minister why I ask it. I am told that this doctor comes from the west and does not speak a word of French. He has been acting commander of the 16th ambulance, which I understand is to go overseas. I wonder how long this gentleman will stay in Quebec city, and who appointed him to the medical revision board there. I am told that in army medical circles in Quebec city it has been said that no eminent Quebec doctor would have accepted that post, but I find that hard to credit. I think that position could have been given to a French-Canadian doctor of Quebec city; I must say that the French-Canadian doctors of Quebec have not been scorned except by one department, and there are eminent doctors there who I am sure would accept this position. So that I do not see why Major Rathbone should be there. I would ask the minister if he made that appointment, or if it was made by the Department of Labour.

Mr. RALSTON: If it is the medical revision board, it is under the Department of Labour.

Mr. POULIOT: Thank you.

Mr. RALSTON: The hon. member has sent me quite a number of these files, and he will have *Hansard* send me the others. Certainly I shall have the most careful examination made, and in connection with anything for which the army is responsible I shall see that action is taken, remedial or disciplinary or by way of any change in system which may be indicated. Though I could not follow all the cases cited by my hon. friend, apparently most of them resulted from examination by boards of civilian doctors, who I must admit were under the direction of the army, but I think a good many of them were in the days before the examinations were as carefully carried out as they are now. There were also some circumstances in connection with some of these cases, in regard to continuing disabilities and renewed disabilities after a man appeared to be well, which would justify examination, and that examination would be made.

There were three or four items of information I wanted to file with the committee in order that we might get right on with item No. 3, which is under consideration at the present time.

Mr. POULIOT: Would the minister have any objection to my discussing these cases with his parliamentary assistant?

Mr. RALSTON: None whatever.

Mr. POULIOT: All the cases I have mentioned have been settled, but I should like to speak to his parliamentary assistant about future cases.

Mr. RALSTON: That will be quite satisfactory.

The hon. member for Lake Centre, as reported at page 3060 of *Hansard*, asked for the cost of recruiting for the army during the year. It is not possible to give actual expenditure figures for the cost of army recruiting for 1942-43 at the present time. Based on the best information available, the approximate cost of army recruiting is estimated at $1,290,000, broken down as follows:

Pay and allowances of military personnel, $870,000, of which $510,000 is chargeable to recruiting	$510,000
Salaries and wages of civilian personnel	50,000
Advertising—newspaper, radio, billboards, etc.	375,000
Travelling expenses	225,000
Miscellaneous — comprising rentals office expenses, etc., plus costs of special recruiting campaigns not included under above heads	130,000

As I said before, the military personnel included in the figure of $510,000 are performing additional duties as well as recruiting.

Mr. SLAGHT: That would cover all three armed services?

Mr. RALSTON: No; this is just for army recruiting. Then, as reported at page 3077 of *Hansard* for May 27, the hon. member for Lincoln asked about the additional officers, other ranks and personnel, and the cost, in connection with the authorization of the formation of the First Canadian Army. As I indicated to the hon. member, it would be very difficult to be exact, because an army is not a fixed establishment, but what I have had the officers try to do is prepare a statement with regard to what was regarded as the approximate numbers and amounts involved. This is the statement.

The formation of First Canadian Army did not entail a large number of additional ancillary units, because when the divisions were organized for service overseas we also formed a portion of corps, army and line of communication units to the extent necessary to serve those divisions. The formation of the First Canadian Army means the provision of an additional control headquarters in the rear of the two corps headquarters, under which rear headquarters the previously provided portion of army, general headquarters and line of communication units would be grouped and would serve. Consequent upon the addition of an army headquarters, a relatively small number of additional units were added to the army, in order to provide additional headquarters defence, engineer, intercommunication and supply and medical services.

The total additional numbers involved in the formation of units directly serving army would approximate 7,000, included in which number there would be ten additional senior appointments of the rank of colonel and higher, namely, one lieutenant-general, four major-generals, three brigadiers, two colonels. The estimated cost for 1943-44 of the foregoing units including the army headquarters would be in the neighbourhood of $16,000,000.

Then on May 26, as reported at page 3058 of *Hansard,* the hon. member for Lake Centre asked if I would give the committee the information as to enlistment by districts for January, February, March and April; I had already given the totals for those four months. The statement which has been prepared shows the total male enlistments by districts of general service volunteers, according to telegraphic returns, from January to April, 1943, inclusive, and in order that we may have information as to the man-power intake during these months there has been added a table showing the number of National Resources Mobilization Act recruits enrolled during the same months. The table is as follows:

(a) Total Male Enlistments by Districts (G.S. Volunteers)
(According to telegraphic returns)

January to April, 1943 (inclusive)

Military district	Jan.	Feb.	March	April	Total
1	765	655	542	443	2,405
2	2,672	2,152	2,233	1,959	9,016
3	853	514	564	424	2,355
4	1,078	884	759	625	3,346
5	384	319	269	188	1,160
6	1,163	1,097	677	693	3,630
7	719	487	381	317	1,904
10	927	663	547	667	2,804
Pacific command	1,000	809	647	531	2,987
12	1,180	628	380	316	2,504
13	875	703	526	269	2,373
Petawawa	15	5	4	5	29
Camp Borden	....	11	6	5	22
Total	11,631	8,927	7,535	6,442	34,535

(b) Number of N.R.M.A. Recruits Enrolled at District Depots and Training Centres
During the months of January to April, 1943

(Based on telegraphic returns)

Military district	Jan.	Feb.	March	April	Total
1	358	165	373	175	1,071
2	565	859	800	724	2,498
3	389	106	87	50	632
4	1,134	527	715	889	3,265
5	327	693	536	456	2,012
6	608	384	98	98	1,188
7	280	213	211	102	806
10	673	478	254	360	1,765
11	486	303	342	229	1,360
12	1,029	385	236	30	1,680
13	291	381	310	212	1,194
Total	6,140	4,494	3,962	3,325	17,921

Mr. DOUGLAS (Weyburn): Last year when the minister gave a similar table I believe it also showed those enlistments on a per capita basis, and the number of trainees called out, also on a capita basis.

Mr. RALSTON: This does not give that information; it is just for the first four months of this year. I could probably file a statement bringing that information up to date. I think my hon. friend refers to the statement that was given as of December 31, and I shall see if I cannot bring that up to date. I think that contains a percentage figure.

Mr. DOUGLAS (Weyburn): Yes, it does.

Mr. RALSTON: I shall try to bring it up to date. I presume there is no need of reading this document.

Mr. GRAYDON: To what date is the statement?

Mr. RALSTON: It is for the four months, to April 30.

Mr. GRAYDON: I understand the hon. member for Weyburn asks for the figures for the remainder of the period from that time until now.

Mr. RALSTON: No; he was asking for the percentage per capita.

Mr. GRAYDON: That is your latest information?

Mr. RALSTON: Yes, up to April 30; we get day to day telegraphic reports, of course, for current enlistments.

Mr. STIRLING: Will the minister now answer the further question of the hon. member for Lake Centre with regard to the 91,000 Canadians in the United States, and the success which attended the recruiting stations? I believe the minister has answered only that portion which deals with the transfer of those who have enlisted in the United States army. I know the hon. member for Lake Centre is anxious to have the answer to the question whether we are missing potential recruits among those 91,000.

Mr. RALSTON: I cannot answer that question now. I thought I had the statement with me, but it does not seem to be readily available.

Mr. STIRLING: Will the minister bring it down later?

Mr. RALSTON: Yes; it will be here on Monday. I may possibly be able to find it before we adjourn.

May I answer one more question, namely, that asked on May 27, 1943, by the hon. member for St. John-Albert (Mr. Hazen), as reported at page 3080 of *Hansard*. He asked about the pay for artillery signallers, pointing out that those in the signal corps were getting specialty pay, while artillery signallers were not. I say to him now that artillery signallers are now classified as tradesmen, and under authority of order 144, 1943, after January 1, 1943, they are eligible for extra pay.

Mr. GREEN: He had also asked a question about the cost of publicity. Has the minister that information?

Mr. RALSTON: I have not obtained it yet, but I shall have it on Monday. If I remember correctly, the hon. member asked for a break-down of all the officers and of the civilian personnel.

Mr. GRAYDON: There may be one or two further questions which have not been answered. It may be that some hon. members who are away on a visit to the war plants may have further questions when they come back.

Mr. RALSTON: I am not purporting to have answered all of them.

Mr. GILLIS: I do not wish to break the continuity of this discussion. I was going to say something about travel, transportation and freight; that is, if I am in order. And if I am, everybody else is out of order.

Mr. PERLEY: There is one question I should like to ask now, and it would only require a moment to answer it.

The CHAIRMAN: The hon. member may ask it.

Mr. PERLEY: I did not say anything yesterday, although I had about twenty questions to ask. As I listened, however, I found that nearly all of those questions were answered. But I believe the one I shall now ask is worthy of consideration. Three or four cases have been brought to my attention where the mother of three or four boys finds herself in difficulty. I have in mind one case where the mother has three sons, two of whom are overseas, and a fourth who was called up only recently. She has found that she has had to desert her husband, if I may use that expression. We have heard some talk about desertion by husbands, but in this instance the wife is the deserter. She cannot persuade her husband to give her sufficient accommodation, food or clothing for the rest of the children.

Mr. RALSTON: She has had to leave her husband?

Mr. PERLEY: Yes. The two sons overseas are quite willing to make contributions to the mother from their pay. She thinks some allowance should be made by the department, by way of separation allowance. Could the minister inform the committee if he has heard of other cases similar to this one, and if there is any way whereby a woman in that position could receive some consideration, particularly when her sons overseas are willing to contribute a portion of their pay? I have in mind two or three cases which could be described as desperate, and which, I believe, should have some consideration.

Mr. RALSTON: From what the hon. member says I understand the husband is not a soldier.

Mr. PERLEY: No. I regret to say he is a returned soldier of the last war, but he now refuses to maintain the wife.

Mr. RALSTON: The investigation would be made to ascertain whether dependency could be established as between the mother and the sons; that is, if she is partly dependent upon the sons for support.

Mr. PERLEY: She was.

Mr. RALSTON: It sounds rather discouraging, from that point of view.

Mr. PERLEY: She was dependent upon them to a certain extent, before they enlisted.

Mr. RALSTON: And they are making assignments of pay?

Mr. PERLEY: Yes.

Mr. RALSTON: And she wishes to see whether dependents' allowance can be paid in respect of them?

Mr. PERLEY: Yes.

Mr. RALSTON: The matter would be investigated from the point of view of dependency. The dependents' allowance board takes the position that in such cases they do not interfere in respect of rights between a wife and a husband. But the way my hon. friend puts it, it might be contended that she was deserting her husband. She voluntarily elects to leave him, and has elected to cut herself off from the support he would give her, provided they lived together. Is that correct?

Mr. PERLEY: Yes; that is correct. He has refused to give support, and there are two other small children to be fed and clothed.

[Mr. Perley.]

Mr. RALSTON: But she does not have to leave them.

Mr. PERLEY: The conditions have been such that she has had to.

Mr. RALSTON: It sounds to me as though she could take legal action for separation.

Mr. PERLEY: It has not gone that far.

Mr. RALSTON: I am referring to legal action for separation, in view of the fact that she has not condoned his refusal to support her. I do not think the wife can simply pull out, and say, "I am not going to stay here any longer," if he provides her with a home.

Mr. GRAYDON: It would depend upon the provocation.

Mr. PERLEY: The boys are willing to assign part of their pay.

Mr. RALSTON: The hon. member asked me if we have had any similar cases. My deputy tells me that he has not heard of a case of that kind. He was advising me on general principles, namely, that dependency has to be shown. If the hon. member has the case in mind, he might give me the name, and I could look into it.

Mr. GILLIS: I wish to say something about travel, transportation and freight, but I shall not go into any specific cases. I am just a little bit disappointed with the functioning of parliament, as I have seen it since coming here. We talk about everything, except the matter before the Chair. If every hon. member took the position he was going to bring his files for the last four years down to the chamber, so that he might discuss individual cases, and then, after occupying a couple of hours of time, tucked his files under his arm and went away for two or three weeks—because that happens, there is no doubt about it—we would find ourselves in a peculiar position.

An hon. MEMBER: I hope he does.

Mr. MacNICOL: He does not go away that long.

Mr. FRASER (Peterborough West): Do not be too optimistic.

Mr. GILLIS: I am both disappointed and disgusted.

Mr. MacNICOL: Here he is now.

Mr. GILLIS: If he has a quarrel with the Minister of National Defence or anyone in the minister's department, it should be a personal matter.

I bring to the minister's attention the matter of transportation as applied to different

branches of the service. My information while travelling, and from information received, is that there is considerable discrimination as between certain branches of the service, and as between branches of the service east and west.

There is another matter I should like to bring to the attention of the minister. When men of the air force are being transported from one point to another west of Toronto they are supplied with meal tickets and a berth. But east of Toronto they are not supplied with meals or a berth. When men in the army travel anywhere in Canada they have to sit in a second-class car, are provided only with a sandwich and must buy a bottle of coca-cola or something else to wash it down. This applies also to ratings in the navy. Berths are not provided in either case. There is definite discrimination between the men in the air force and the men in the army and the navy, and further discrimination in the air force as between travel west of Toronto and travel east of Toronto. I have a specific complaint to make to the Minister of National Defence for Air, and I shall not bother the Minister of National Defence with it at this time. This matter should receive thorough examination.

Yesterday I brought up the question of free transportation for the men in the army on their furlough after six months service and embarkation leave. If a man is in a camp in central Canada and receives embarkation leave, as a general rule, it will cost him a good deal to go home. Just recently I was on a train going to Montreal, and I met a group of boys who were en route from Petawawa camp to Sydney, Nova Scotia, on their embarkation leave.

Mr. RALSTON: Artillery men?

Mr. GILLIS: Yes. When their leaves came through they had no money, and their chums in the camp took up a collection to buy their tickets. They had a placard nailed to the end of their seat, "Kindly help five starving soldiers."

Mr. RALSTON: This was not a special train.

Mr. GILLIS: No. They were depending upon other people in order to get their meals on the way down. That is not good enough for a man who has enlisted voluntarily and who must take his training at whatever point is decided on by the military authorities. When embarkation leave comes through a man should not have to travel under such circumstances in order to see his family, possibly for the last time. Free transportation should have been provided a long time ago. Most of these boys in the service are assigning the greater part of their pay, and the few dollars they have left is hardly enough to buy the shaving materials and other little things they need.

I ask the minister to check up on this discrimination which seems to exist in the present regulations. As I say, there is even discrimination in the air force itself. When a boy in western Canada enlists and is assigned to the manning pool at Toronto, he is given his meals and a berth, but the boy from Halifax does not receive this. I know of one case where some boys had to sit up all the way from Halifax to Montreal without any meals, and they could not even get seats from Montreal to Toronto; they had to stand.

Mr. GRAYDON: The minister will recall that almost from the beginning of the war a number of members of this party have been insisting upon free transportation being provided for members of the armed forces. The matter raised by the hon. member for Cape Breton South deserves the serious attention of the Minister of National Defence and the other two defence ministers. Many of these men are undergoing training thousands of miles away from their homes. This was not the situation in the last war. I know that practically every member of this committee will be able to recall boys from his constituency who are located almost at the other end of Canada, and have been there for some time.

When their furloughs come through, in most instances they find that they have not been able to save sufficient money to pay for their transportation. There are many things that must be paid for out of their limited pay. I for one make no apology for emphasizing the need of free transportation for the men in our armed forces. I think the minister should make an immediate decision, and I hope it will be favourable, in connection with providing free transportation at least on these two occasions, namely the furlough and the embarkation leave.

Perhaps I might go a little farther than the hon. member for Cape Breton South. This whole matter of furlough and embarkation leave is linked up with the man's service. It cannot be said that a man has an option with respect to these two matters. There may be an option so far as week-end leaves are concerned, but that is not so in connection with furloughs and embarkation leaves. I ask the minister to consider this in a different light than he has on previous occasions when war appropriation bills were before the com-

mittee. The situation is serious, and the minister should give some indication of governmental policy in this connection. If there is one section of our population which ought to have, not simply concessions, but equality, and that is all this means, it is the armed forces of our country, and I make this appeal to the minister this afternoon in the hope that he will provide for our armed forces in Canada that equality of treatment which cannot in any sense be regarded as a concession or as something extra. Rather it must be regarded as part and parcel of that which is rightfully due to the men in our armed forces who are prepared to give, not merely their money, not just material things, but what is infinitely more precious, life and limb itself.

Mr. SLAGHT: Mr. Chairman, I wish to support the requests made by the two last speakers with regard to leave and the granting of transportation and proper provision for eating and sleeping. I have addressed the committee on previous occasions on this subject, and therefore I shall not repeat myself this afternoon. But I endorse the requests that others have made and want to record myself as supporting them.

Mr. NOSEWORTHY: In supporting the suggestions that have been made by two or three hon. members, I would submit to the minister that there is at present a special reason why consideration should be given to granting free transportation on these leaves. The press has recorded that during the recent victory loan campaign no community in this country contributed more generously than did the members of the armed forces. I recall visiting, a little while ago, a camp at North Bay, an educational centre, where 700 men in the army had contributed over $35,000 to the victory loan. I saw their pay envelopes, and man after man at that camp, after the various deductions had been made from his two weeks' pay, had pledged himself for victory loan support to the point where he was leaving himself only two dollars a week to carry on. Under these circumstances many of these men cannot possibly afford to pay their way back home when they go on leave. I sincerely ask the minister to give the matter consideration. I am sure that the railways and the country can afford to do this on behalf of our men.

Mr. CRUICKSHANK: I wish to endorse everything that the previous speakers have said. I should also like to bring to the attention of the minister the request which has come from the soldiers who are residents of British Columbia. I think they are being unfairly treated in the length of time they are given when going home on leave. I understand that previously the air force got a longer time for leave than the army and the navy, but I am informed by the parliamentary secretary that that has been changed and that all branches of the armed forces are now on an equal footing with regard to the length of their leaves. I am entirely in accord with that. I think all branches of the armed forces should be treated equally in the matter of length of leave. But the soldiers of British Columbia should in addition be allowed travel time. I admit that this should apply equally to the soldiers who live in eastern Canada and are posted far away from home, on the west coast, let us say, but they have the advantage of passing through a beautiful part of Canada which they never saw before when they go home on leave, and that helps to make up for the shortness of their leave.

As the minister well remembers, during the last war, if you were in France and were going on leave and gave an address in Ireland, you got three days extra allowed for travel time, and if you were going to Scotland you got two days extra for travel time. I well remember that the minister and I were always getting ready to go to Ireland to get those three extra days, but we never got there. All the soldier associations in British Columbia have written, I presume, to all British Columbia members asking that they be granted travel time in addition to their leave. We are not asking for extra leave for our men. It seems only reasonable that a man from British Columbia who has been trained on a corvette at Halifax or in the air force on the eastern coast of Canada should be granted travel time in addition to his leave, because it takes him four days to get home and four days to get back, and that leaves him only one or two days at home. I think every hon. member will agree that this is a reasonable request. We are not asking for extra leave for the men from British Columbia or from the far west, include Alberta if you like. We are simply asking for travel time, so that they may have an equal length of time to spend at home. I think it is a reasonable request. I hope the minister will have something to say about it.

Mr. JOHNSTON (Bow River): I should like to support what has been said by hon. members who have spoken with regard to the accommodation for soldiers travelling on the trains, and free transportation. I have particularly noticed travel conditions on the trains

for the armed forces, because I have travelled a great deal on the trains. I have spoken on this question before and have said, and I say now, that it is a wrong principle to distinguish between the branches of the armed forces, especially when social distinctions are made. I recall that not long ago there was a little difficulty in getting recruits for the army, and we went so far as to advertise that we would provide them with walking-out uniforms. A great deal of propaganda was put on at that time to get recruits and to raise the morale, shall I say, of those who were contemplating joining the army. Evidently it was felt by those who were thinking of enlisting in some branch of the armed forces that there were social distinctions and that the army was not as highly thought of as the other two services. That is wrong, and there should be no distinction, social or otherwise, between the different branches of the armed forces, because the soldier has just as an important job to do as the man in the air force and the man in the navy. He is just as important as the other two. I am quite confident that there was a feeling in the armed forces that those in the army were not so good as those in the air force and that, therefore, it was all right for the men in the army to sit up in a day coach when going home on leave, while the other fellows had a sleeper. There is still a great deal of hard feeling in that respect. I have talked to men in the air force and to men in the navy, and they are very much disappointed that this distinction is made. The air force fellows do not think they are a bit better than the men in the army, and they resent the conditions under which the army men have to travel. I am sure that the minister realizes this and probably has done what he could to rectify the situation. It is one that certainly must be rectified.

Mr. McGARRY: When the question of free transportation for the soldiers was brought up in the house last year I expressed very sincerely my opinion that free transportation should be granted to them. I have not changed my opinion in that regard. Indeed, I feel more strongly about it than ever, and I just wish to take a moment to associate myself with the other hon. members who have spoken on behalf of this concession being granted to soldiers. In view of what they are accomplishing in a military way and their splendid contribution to the recent victory loan, I think all hon. members will agree that this is a concession which the men in the army certainly merit.

Mr. GRAYDON: It is a right rather than a concession.

Mr. MacNICOL: A few days ago I came from Montreal on the afternoon train and had the experience of seeing just what treatment is handed out to soldiers on the trains. I did not know that there were such trains running between Montreal and Ottawa. On the train, which consisted of quite a number of coaches, were 200 soldiers, perhaps more. I never before remember having ridden in such cars. I would call them cattle cars. When I went on the platform there was a trainman there—it was not his fault—who said "Ottawa passengers in here." I went in. It was one of these old-fashioned cars with brass fittings on the seats. The seats were back to back. The cars were packed full. That is not the way to treat soldiers, whether they are on their last trip or their first. I got off the train and asked an official on the platform, "Where are our passenger cars?" "Why," he said, "those are the passenger cars." I said, "I would call that a cattle car." I was put out at having to ride in a car like that, and although I had not intended to mention it here, now that the question has been raised, I think it is in order to do so. I wonder where the old second-class cars are; they were infinitely better than those which were used on that Montreal-Ottawa train. Where these cars came from, I do not know. I have never seen cars like that one before. What I particularly objected to was the way in which the seats were placed, back to back. There was no one going through selling chocolates, soft drinks or other refreshments. I do not think such conditions are good enough for soldiers; in my judgment they are entitled to better treatment than we civilians are and as a civilian I very much objected to the train on which I had to ride that day from Montreal.

Some hon. member has spoken about free trips on the soldier's last leave. The hon. member for Broadview has raised this matter here frequently since war broke out. My leader to-day has strongly urged that on the last trip and on furlough such consideration be given to soldiers. I think every hon. member is in accord with having the last trip made a free trip. I have seen soldiers on trains who had not a cent in their pockets. How could they have saved anything out of $1.30 a day, when one considers all the expenses they are up against? I join my appeal with those of other hon. members, particularly the hon. member for Peel, that the minister consider providing the soldier with free transportation to and from his home when he is on embarkation leave.

Mr. ADAMSON: I merely want to go on record as supporting the proposal of free trans-

portation on embarkation leave. In Great Britain there is free transportation for Canadian soldiers on their privilege leaves, to wherever in the United Kingdom the soldier wishes to go. I think it is an excellent provision, in that it gives great numbers of troops overseas an opportunity of seeing Scotland and other parts of England which otherwise they would not be able to visit. I assume, in fact, I am sure, that the Canadian government pays the fares. I wish to recommend that on a privilege leave as well as on embarkation leave—the annual furlough in the army overseas is called privilege leave—free transportation leave—free transportation should be given. I know that a step in the right direction has been made in the form of a substantial reduction in the fares, but I believe the authorities would find it advantageous, simply as a matter of morale, if the trip were made free.

Apropos of service on trains, I have travelled during this war on a number of trains, including troop trains, both to and from the embarkation port, and I have found that they, the troop trains are extremely well organized and run. Certainly, with regard to none of these trains upon which I have travelled could any justifiable complaint be made as to the coaches, the organization of the railways, the feeding arrangements or anything else. But that was definitely on embarkation trains.

There is just one other small point. It has been found that a number of soldiers returning from overseas land on this side without any money in their pockets. They are given a grant, or pay, or an advance on pay of two pounds sterling just before they leave the non-effective transport depot, or at the time they are there.

Mr. LaFLECHE: Crown and anchor!

Mr. ADAMSON: What happened is this, the two pounds very soon finds itself translated into beer or into—

Mr. POWER: —a poker game.

Mr. ADAMSON: Yes, through a regrettable inability to hold the better hands at cards, or some other common mishap. At any rate, by the time the soldier arrives on this side he has no money. I suggest that the grant be still given; but instead of two pounds give him ten dollars, Canadian currency, which he cannot spend in England, so that when he arrives in Montreal or wherever he does arrive, he will have some cash.

[Mr. Adamson.]

Mr. POWER: What will he do on the boat? Can't you play poker with Canadian money?

Mr. ADAMSON: Well, it is a little more difficult. The same facilities and space are not present, and there is little or no beer.

Mrs. CASSELMAN: I think Alberta has a special interest in this matter of transportation, because we feel that we are in the centre of things, and our men, particularly sailors, are frequently transferred from one coast to another. The railway fares from either coast to points in Alberta are very high. I wonder, if it is impossible to give free transportation, whether a ceiling could not be put on railway fares, so that, where a man's railway fare is above a certain amount, the authorities would step in and assist him by paying some part of it. That, I think, would help to overcome the difficulties of embarkation leaves for our Alberta men.

Mr. RALSTON: I think I had better speak first of the toughest proposition, namely, the suggestion which has been supported by all speakers this afternoon with regard to free transportation. I certainly wish that I could gratify my own personal inclination to make the situation just as favourable as possible in this respect.

I am not in a position to give the committee any assurance in this connection just at present. Two years ago we got this arrangement with the railways which we thought was a substantial concession. We thought it would be of real assistance to the soldiers and it has worked very well. I realize that distances are long and that even a one-third fare on a return trip is a considerable tax on a soldier's purse. But, although it may not be very striking in any one item the committee will recall that there has been a very large addition to this item due to increases made this year in connection with soldiers' pay, dependents' allowance and subsistence allowance. As a matter of fact there is between $45,000,000 and $50,000,000 of an increase in this year's appropriation, due entirely to the changes which were recently made in pay, dependents' allowance and subsistence allowance.

I cannot give the committee any assurance at the present time with regard to free transportation for embarkation leave and furlough. There have been two alternatives or two lesser measures suggested. One is free transportation on embarkation leave and the other suggestion, made by the hon. member for Edmon-

ton East, was that at least there should be a ceiling on all transportation. I shall talk this matter over with the Minister of National Defence for Air and the Minister of National Defence for Naval Services.

Mr. MacNICOL: Does the minister mean that the ceiling would be uniform to the soldier no matter where he went?

Mr. RALSTON: I take it that what the hon. member for Edmonton East meant was that the longest trip would not exceed a certain fixed maximum. I think the hon. member is referring to a zone system, so that say from any place between Winnipeg and the coast the rate would be the same.

Mr. MacNICOL: I felt that a soldier returning from Halifax to Quebec, a soldier returning from Halifax to Toronto and a soldier returning from Halifax to Winnipeg or any other point west on his last leave should all be given the same rate.

Mr. RALSTON: The only rate that would be fair in that event would be the shortest distance. That would mean that the fellow living in Halifax and going to Truro would govern the rate from Halifax to Winnipeg. The idea of the hon. member for Edmonton East was a maximum, that no rate should exceed some fixed figure. I shall discuss the matter with the Minister of National Defence for Air and the Minister of National Defence for Naval Services. I do not hesitate to say that our personal inclinations are all one way. But we have to balance different considerations and give the very best study and attention we can to the question. I cannot say more than that.

Mr. CRUICKSHANK: Would that apply tc length of leave as well?

Mr. RALSTON: With reference to length of leave, as I remember there are two forms in which leave is granted. There is the two-week leave every year. There is one two weeks after the first six months and there is another two weeks once each year after that. You cut into that leave very easily on a long trip. As a matter of fact—this is not in the book—I have reason to believe that commanding officers in cases of soldiers going long distances try to take account of that to some extent in allowing leave. Somehow or another they have a way of providing that the leave shall begin at such and such a date, although the soldier may not be in camp for perhaps a day before that actual date.

Mr. DOUGLAS (Weyburn): Where they are given forty-eight hour leave at each end.

Mr. RALSTON: On embarkation leave there is provision that travelling time is out. The intention with regard to embarkation leave is that they shall have forty-eight hours at home, and necessary travelling time is given to provide for that. It is not the same with furlough. I understand the point and we shall discuss it.

Mr. CASTLEDEN: Would the minister give some possible reasons that are advanced against giving soldiers, sailors or airmen free transportation on embarkation leave?

Mr. RALSTON: I cannot give my hon. friend any reasons from the point of view of public policy. There might be one reason, namely, traffic accommodation. There would be a great deal more use of the railways if free transportation were given, and the congestion which has been referred to would be increased. I do not believe that is really a reason against giving free transportation. I say that frankly, because I feel that the congestion which the hon. member for Davenport found—I say this with all due respect to him—was due to civilian travel just as much as to service travel. My feeling is, and I have said as much to the railways, that the armed services have done pretty well in the regulation of the flow of traffic by the men in the three forces and that civilians have not done any more than their fair share in the way of curtailing travel. That will be borne out by what one sees on the trains from day to day and on week-ends. The week-end rate has been cut out. I have only to go to the railways to see how many civilians are still taking advantage of week-ends to do travelling. I do not believe that we shall ever come to a situation in this country, so that this terrific jamming will not occur until we have passenger travel rationed and until a man has to show a certificate of near necessity before he buys a railway ticket. That is what is causing the trouble about which my hon. friend is talking. The railways have not got the cars. I know the kind of cars they are running out and the railways themselves will admit that they are not fit for soldiers or civilians as modern railway vehicles. But that is all they have.

With regard to the matter raised by the hon. member for Cape Breton South—he started this discussion—with reference to discrimination betwen the services, I have done everything I can and so have my colleagues to canvass these questions common to the service in order to see to it that conditions are exactly uniform with regard to travel and allowances. In connection with travel I have

here the Canadian army routine order No. 3035, which I am advised is in exact terms the order for the air force and the navy, changing the names and ranks in order to suit the particular service which may be referred to. The rule is:

Army personnel below the rank of sergeant, if required to spend two (2) consecutive nights or more on a continuous journey, may be provided with a berth in a tourist car, if available.

This means that a man coming the first night from Halifax to Montreal would not be provided with a berth, and it applies I am told, to the air force just as to the army and the navy. If there are two nights of travel, then as a matter of fact the man leaving Halifax or Sydney gets tourist accommodation on both nights, and if the class of accommodation provided is not available, then he gets the next higher class if that is. The joker in the thing, if there is one, is that this accommodation often is not available; I think that is the real difficulty. I do not think there is any trouble about the regulations.

Mr. DOUGLAS (Weyburn): Is there not this further difficulty, that very often airmen are moved in small groups of probably three or four, being posted somewhere, while soldiers are moved as a unit or company?

Mr. RALSTON: There should not be any difference under the regulations:

Army personnel below the rank of sergeant, if required to spend two (2) consecutive nights or more on a continuous journey, may be provided with a berth in a tourist car, if available.

This still deals with privates, lance corporals and corporals.

Army personnel below the rank of sergeant proceeding on a special duty which requires them to report for duty immediately on arrival at destination, if travelling overnight, may be provided with a tourist berth. If a tourist car is not operated, first-class transportation and standard berth may be provided.

I am informed that this would apply to a motor or tractor driver, for instance, going to meet a convoy at some particular spot. He should be fresh in the morning, so that he is given a tourist berth. The change that was made, the last nail that was driven in order to make these regulations uniform, I think was regulation 3C which I have just read providing that sergeants are to be given a tourist berth when the journey involves night travel. If tourist accommodation is not available, first class transportation in a standard berth may be provided. There was a difference between the air force, the army and the navy in that respect. Up to that time army sergeants were given the same accommodation as other ranks. As I remember it, that particular item was changed several months ago. This order is actually dated March of this year, but the changes that were made in the order, which made it necessary to react it in March, were changes with regard to officers.

I must now say a word with regard to meal tickets. I cannot understand the situation to which my hon. friend refers, if the regulations are as they tell me. It would appear to be a case of bad administration if the hon. member found five men travelling from Petawawa to Halifax, as I understood him to say, having nothing to eat and no means of getting it. I am told that when the warrant for the railway transportation is issued at Petawawa, it includes the meals; and the ticket agent gives the man not only the railway ticket but also tickets for meals. If the orderly room sends down for the tickets, it gets the railway ticket and the meal tickets as well, and gives them to the men. I am told further that if men are travelling and for some reason or another have not been given meal tickets, they are entitled to put in charges for their expenses on the train. The answer to that may be that they may have no money to buy meals with; that may have been the situation with these boys. I am told, however, that without exception the meal ticket is issuable east of Ottawa as well as west of Ottawa. I should like very much if my hon. friend would give me that case, because we would like to run it down. Perhaps the hon. member can tell me the train he was on.

Mr. GILLIS: These boys are now overseas.

Mr. RALSTON: Would the hon. member tell me the name of one of the boys?

Mr. GILLIS: Yes, I will.

Mr. GRAYDON: Why is a differentiation made as between one night and two nights? It seems to me that if we are to do the right thing by these boys, we ought to provide them with some reasonable kind of accommodation for sleeping, even if they are on the train for only one night. I imagine the minister and members of the house who ride on trains often find it difficult enough to obtain decent accommodation. Surely we should not ask these men to travel even for one night without proper accommodation. I cannot see the reason for making any difference between one night and two nights. The travel time is longer, but the principle is the same, and I do not think we should have that difference.

I do not wish to put this in any cheap way, but I do feel that our armed forces are entitled to everything a civilian would get in ordinary travel. As civilians, what are we actually contributing, as compared with these men? If there is any question of differentiation it should be in favour of the soldier.

Mr. RALSTON: I can only say to my hon. friend that the answer is very trite; that is to say, it has always been the practice that the first night is without sleeping accommodation. I thoroughly agree with everything my hon. friend has said and I appreciate the spirit in which he has said it. I know it is not any cheap appeal at all; I believe my hon. friend feels genuinely about it, and so do I. He mentioned that this was not the sort of accommodation that would be provided for civilians. As he knows, however, it has become a regular routine now to run these cheap trips for civilians, on which they sit up all night. I know that trips from Halifax to Montreal are put on in that way, with the trains composed entirely of first-class coaches, and everyone sits up all night. I quite agree that if the rolling stock is available it would be better to have berths provided, but I do not think you would get the rolling stock at the present time; that is my own feeling.

Mr. GREEN: There is just one other matter I should like the minister to discuss with his colleagues, namely, the possibility of granting extra time to men who are going on sick leave, to enable them to get to their homes. For example, men from British Columbia stationed in Toronto become sick. When they get sick leave it means that their time is very badly cut down.

Mr. RALSTON: Does my hon. friend mean men who get sick after they have gone on leave?

Mr. GREEN: No; I mean a man who becomes sick in Toronto, who goes to hospital for a time and is then given sick leave. I understand he is not given any extra time if he happens to be a resident of Vancouver or Halifax; he gets just the same time as though he lived in Ottawa. I may be wrong in that, but I have had some cases of that kind and I think the situation should be remedied.

Mr. DOUGLAS (Weyburn): Could the minister tell us on Monday how this sum of $54,453,570 is divided between the two railways, and what basis is used by the army authorities in determining the railway over which these men will travel? I have had men of all three services tell me that if they are travelling say from Halifax to say some point in the west, they may come as far as Montreal by Canadian National and then for some reason or other may be compelled to switch over to the Canadian Pacific, even though the Canadian National could take them right on to Winnipeg or Vancouver or wherever they might be going. What is the determining factor in deciding how the business is divided, and how has it been divided in regard to this amount of money?

Mr. RALSTON: I am informed that the only rule that governs is efficiency of routing. I cannot understand the change from Canadian National to Canadian Pacific west of Montreal, unless a man was coming north shore or in case it might be possible to get a through train on one railway and not on the other. Has my hon. friend a case in mind?

Mr. DOUGLAS (Weyburn): I have had a number of men on the trains tell me they were compelled to switch from one railway to the other going perhaps to Winnipeg, where the Canadian National could take them very easily.

Mr. RALSTON: Is the hon. member talking about a party of ten or twenty, or a troop train?

Mr. DOUGLAS (Weyburn): I am talking about a small group travelling on a passenger train. Has the minister the figures showing how this money is divided between the railways?

Mr. RALSTON: We would have to get the figures from the treasury department and break them down. We have not them here, though I could get them.

Mr. CRUICKSHANK: I should like this question of travel time to British Columbia clarified a little. I understood the minister to say the commanding officer has authority, though it is not in the book—

Mr. RALSTON: I did not say he had authority; I said I had an idea that quite often the commanding officer made leaves date a little later than the time the men actually left.

Mr. CRUICKSHANK: Then I put it in another way, because I think we have a very just case in British Columbia. So far in this war with respect to embarkation—now, just a moment, do not shake your head, because this is important to British Columbia—all embarkations have been from the eastern coast. That affects British Columbia.

On that ground I ask the minister to give consideration to a further extension of leave for our boys who are on embarkation leave.

Mr. RALSTON: Sick leave.

Mr. GRAYDON: That sounds reasonable.

Item agreed to.

Progress reported.

On motion of Mr. Crerar the house adjourned at 6:05 p.m.

Monday, May 31, 1943

The house met at three o'clock.

QUESTIONS

(Questions answered orally are indicated by an asterisk).

NATIONAL HOUSING ADMINISTRATION—UNITS BUILT AS AT DECEMBER 31, 1942

Mr. NICHOLSON:

1. What was the total number of housing units built under the supervision of the national housing administration as at December 31, 1942?
2. What was the total value of the said units?
3. What was the total cost of the administration up to December 31, 1942?

Mr. ILSLEY:

1. Loans approved under the National Housing Act, 1938, and the Dominion Housing Act, 1935, to December 31, 1942, were used to finance the construction of 23,606 housing units.

2. The estimated construction costs of residential dwellings built under the provisions of the National Housing Act, 1938, and the Dominion Housing Act, 1935, to September 30, 1942 (latest available date) were $92,049,322.

3. The administration costs of the National Housing Act, 1938, and the Dominion Housing Act, 1935, to December 31, 1942, total $555,415.33.

ALUMINUM COMPANY OF CANADA LIMITED, AND ALUMINIUM LIMITED—REVIEW OF TAX RETURNS

Mr. KNOWLES:

1. Has the treasury board, at any time since January 1, 1938, reviewed the income tax, and/or excess profits tax returns of the Aluminum Company of Canada, Limited, and/or Aluminium Limited, and/or any other companies subsidiary to or associated with either of the foregoing, under the provisions of section 32A of the Income War Tax Act?
2. If so, on what date or dates?

Mr. ILSLEY:

1. No.
2. Answered by No. 1.

[Mr. Cruickshank.]

PURCHASE OF SYDNEY HARBOUR WATER LOTS

Mr. McGARRY:

1. Did the Department of Public Works purchase water lots on Sydney harbour?
2. If so, from whom?
3. What was the price paid for the lots?

Mr. FOURNIER (Hull): Yes, the Department of Public Works purchased properties on Sydney harbour consisting of land and land covered with water as follows:—

Parcel 1—From the Sydney Foundry & Machine Works, Limited, for the sum of $68,000, by deed dated March 8, 1927.

Parcel 2—From the Sydney Foundry & Machine Works, Limited, for the sum of $75,000, by deed dated April 12, 1939.

Parcel 3—From the estate of J. E. Burchell for the sum of $4,000, by deed dated May 2, 1940.

SALE OF BUTTER FOR OTHER THAN HUMAN CONSUMPTION

Mr. DIEFENBAKER:

1. Has any butter that was in storage been turned over or sold to companies or individuals who are engaged in the manufacture of soap products or other products not meant for human consumption, during the past six months?
2. If so, how much has been sold, to whom, and what prices were secured therefor?

Mr. ILSLEY:

1. The wartime prices and trade board has no knowledge of any butter having been disposed of for use in the manufacture of soap products or other products not meant for human consumption.

2. See answer to question No. 1.

PURCHASE OF CANADIAN WHEAT BY UNITED STATES

Mr. CASTLEDEN:

1. What arrangements were made for the purchase of Canadian wheat by the United States authorities at the April conference in Washington?
2. What is the quantity and grade of each of the grains involved in the agreement?
3. Are the purchases of wheat to be made through the Canadian wheat board? If not, why not?
4. Have permits been issued for the export of grain under this agreement?
5. If so, to what persons, and for what amounts?

Mr. MacKINNON (Edmonton West):

1. United States authorities through the Commodity Credit corporation desired to purchase Canadian wheat for feed purposes to be consumed in the eastern states. As Canadian rail and lake transportation is fully utilized

in supplying the domestic and overseas market, the quantity of wheat to be purchased by the U.S. is limited to the lake tonnage which can be supplied by the U.S. The U.S. lake tonnage available for the shipment of wheat is limited by the requirements of the ore trade.

2. So far the Commodity Credit corporation has purchased 7½ million bushels of Canadian wheat. The grades of wheat to be shpped will be No. 3 northern, or higher.

3. The Commodity Credit corporation decided to purchase this wheat on the open market.

4. Export permits are not required for wheat grading No. 3 northern, or higher.

5. See No. 4.

PRAIRIE FARM ASSISTANCE

Mr. FAIR:

1. What is the amount of, (a) prairie farm assistance; (b) prairie farm income, and (c) wheat acreage reduction bonus, paid to farmers in each province each year up to and including 1942?

2. What is the cost of administration of each act, each year, in the different provinces?

Mr. GARDINER:

1. (a) Prairie Farm Assistance

Fiscal Year	Manitoba	Saskatchewan	Alberta
1942-43	$ 8,498 13	$ 1,203,816 44	$ 1,081,114 84
1941-42	84,662 96	11,138,107 89	2,457,972 02
1940-41	593,793 63	5,499,089 44	625,349 93
1939-40	849,998 26	7,251,661 76	1,351,801 60

(b) Prairie Farm Income

Fiscal Year	Manitoba	Saskatchewan	Alberta
1942-43	$ 129,105 62	$ 1,099,509 10	$ 1,488,897 00
1941-42	2,862,426 92	9,214,169 00	4,221,908 39
1940-41	Nil	Nil	Nil
1939-40	Nil	Nil	Nil

(c) Wheat Acreage Reduction

Fiscal Year	Manitoba	Saskatchewan	Alberta
1942-43	$ 4,314,023 66	$13,806,153 38	$ 6,406,185 43
1941-42	3,835,465 01	16,668,346 12	9,150,417 78
1940-41	Nil	Nil	Nil
1939-40	Nil	Nil	Nil

2. (a) Prairie Farm Assistance—Administration

Fiscal Year	Manitoba	Saskatchewan	Alberta
1942-43	$ 5,760 50	$ 141,444 11	$ 50,723 31
1941-42	14,522 88	316,765 61	91,105 07
1940-41	31,208 83	287,814 86	27,741 20
1939-40	26,973 20	195,464 35	44,158 07

(b) Prairie Farm Income—Administration

Included above in Prairie Farm Assistance Administration

(c) Wheat Acreage Reduction—Administration

Fiscal Year	Manitoba	Saskatchewan	Alberta
1942-43	$ 212,383 89	$ 701,090 49	$ 352,910 22
1941-42	176,790 20	521,648 69	283,334 30
1940-41	Nil	Nil	Nil
1939-40	Nil	Nil	Nil

QUESTIONS PASSED AS ORDERS FOR RETURNS

POLYMER CORPORATION LIMITED

Mr. KNOWLES:

1. What are the names of the directors of Polymer Corporation Limited?

[Mr. MacKinnon (Edmonton West).]

2. Have any individuals resigned as directors of the above company since its incorporation? If so, what are their names?

3. In the case of each of those named in answer to questions one and two, with what firms or corporations are they now employed, with what firms or corporations have they been employed at any time since January 1, 1942, of

what firms or corporations are they now directors, and of what firms or corporations have they been directors at any time since January 1, 1942?

4. What are the names of the officers and directors of Citadel Merchandising Company Limited, of Montreal?

FEED WHEAT AND COARSE GRAINS

Mr. CASTLEDEN:

1. What is the quantity of coarse grains held at present by the Canadian wheat board?

2. What quantity of feed wheat has been shipped to the farmers of eastern Canada through the Canadian wheat board from September 1, 1942, to April 30, 1943?

3. What was the total expenditure by the government in assisting this transfer of grains?

4. How does the government assist in making feed wheat and coarse grains available to farmers of eastern Canada?

5. What price is paid by the Ontario farmer for feed wheat, 2 C.W. oats, 2 C.W. barley, at London, Ontario?

WINNIPEG ELECTRIC COMPANY

Mr. KNOWLES:

1. Was the Winnipeg Electric Company, at any time between September 1, 1941, and April 30, 1942, designated as a depressed industry? If so, by what department of the government, or branch or board thereof, and on what date?

2. What was the decision of the Excess Profits Tax Act board of referees relating to the standard profits claim of the Winnipeg Electric Company, referred to in a copy of a letter dated April 13, 1942, included in sessional paper No. 348, of May 24, 1943?

3. Has the above decision been used by the Winnipeg Electric Company in any representations to the Manitoba regional war labour board relating to the wage rates of any of the employees of said company?

Mr. GIBSON: I ask that this question be passed as an order for return, subject to the usual reservation as to information obtained under the provisions of the Income War Tax Act and the Excess Profits Tax Act.

SUPPLEMENTARY LIVING ALLOWANCES

Mr. KNOWLES:

1. On what projects, or at what plants, have supplementary living allowances been paid by the government, as authorized by order in council P.C. 246, of January 19, 1943, section 212, subsection (3)?

2. To how many individuals have payments been made as above?

3. What is the total amount paid out as above?

4. On what projects, or at what plants, have supplementary allowances been paid, (a) by the government; (b) by employers, as authorized by order in council P.C. 246, of January 19, 1943, section 212, subsection (4)?

5. To how many individuals have payments been made as above, (a) by the government; (b) by employers?

[Mr. Knowles.]

6. What is the total amount paid out as above, (a) by the government; (b) by employers?

UNEMPLOYMENT—PROVINCE OF QUEBEC

Mr. ROY:

1. How many unemployed were there in the province of Quebec during each year from 1931 to 1942, both inclusive?

2. What number of unemployed were given work in each of the above-mentioned years?

3. What number received assistance during each of the above-mentioned years?

Mr. MITCHELL: We have no knowledge as to the number of persons receiving relief because relief is under provincial jurisdiction. I do not know where we might get these figures because the federal government does not deal with relief.

Mr. GRAYDON: Are there no records at all?

Mr. MITCHELL: No. With that provision, it may be passed as an order for return.

NATIONAL RESEARCH COUNCIL—ENLISTMENTS IN MILITARY DISTRICTS 3 AND 4

Mr. DUBOIS:

1. How many officials and employees of the national research council, working in territories known as military districts Nos. 3 and 4, have voluntarily enlisted during the twelve months ending May 1, 1943?

2. Have these voluntary enlistments been credited to the said military districts? If so, how many to each district?

DEHYDRATION PLANTS

Mr. CRUICKSHANK:

1. Have any companies applied for financial assistance to convert their plants, or to establish dehydration plants, for potatoes and other vegetables?

2. If so, what are the names of such companies?

3. Which, if any, received assistance, and to what amount in each case?

4. What companies applied for contracts, and on what dates?

5. To what companies were contracts awarded, on what date, and to what amount in each case?

LUNENRURG, N.S., PORT DOCTORS—SICK MARINERS FUND

Mr. BLACK (Cumberland):

1. Who were the port doctors at Lunenburg, Nova Scotia, during the years 1926, 1929, 1931, 1934, 1936, and 1942?

2. What salaries, fees or other allowances, were paid to them during each of such years?

3. On whose recommendation, and for what reasons, were appointees relieved of their duties and new appointments made?

4. Did drug stores supply port doctors and sick mariners with requisite drugs and other medical supplies during these years?
5. Has this policy been discontinued? If so, why?
6. What sums were paid into the sick mariners' fund through the customs office, Lunenburg, Nova Scotia, in the years 1926, 1929, 1931, 1934, 1936, and 1942?
7. What was the number of vessels, their tonnage, and the numbers of members of crews, during each of such years?
8. Are men in the naval service advised to secure medical treatment from the port doctor at Lunenburg, Nova Scotia? If so, does such port doctor receive special remuneration in addition to salary on scale fixed by government?
9. Why are other resident doctors not permitted to share in such practice?

BRUCE COAL COMPANY

Mr. LACOMBE:

1. Has the Bruce Coal Company, of Ottawa, been prosecuted?
2. If so, for what reasons?
3. Has the trial been postponed?
4. If so, how many times?
5. Does the government intend to proceed effectively against this company?

GRANTS TO PROVINCE OF QUEBEC

Mr. LACROIX (Beauce):

What sums were contributed by the federal government to the government of the province of Quebec, from August 26, 1936, to November 8, 1939, in the form of statutory grants, assistance to unemployed, contributions to old age pensions and to the blind, and in any other manner?

COST OF LIVING BONUS—VETERANS' ASSISTANCE

Mr. CHURCH:

1. How many men of His Majesty's forces have been granted the qualified high cost-of-living bonus under the recent new regulations regarding veterans' assistance, (a) overseas or adjoining territory to Canada; (b) those serving in Canada?
2. To how many men of the forces does this new regulation apply?
3. When did those overseas start to receive this increase over $1.30 per day?
4. Is it given to all the men, or just those whom their officers choose, or under what regulation?
5. How many men have been refused this increase, by whom, and for what reason?

HOUSING—MONTREAL

Mr. CASTLEDEN:

1. What action is being taken by the government to relieve the serious housing situation which exists in many of the larger cities throughout the dominion, particularly Montreal?
2. What steps are being taken to prevent the outbreak of any epidemic which might arise as a result of bad housing conditions?

CANADIAN PACIFIC RAILWAY

INQUIRY AS TO ATTEMPTED WRECK OF MONTREAL-VANCOUVER TRAIN

On the orders of the day:

Mr. GORDON GRAYDON (Leader of the Opposition): Mr. Speaker, I should like to ask a question of the government. I am not sure whether it should be directed to the acting leader, to the Minister of Transport or to the Minister of Justice, but I have sent notice to them all just in case the question may come within their purview.

A Canadian Press dispatch from Fort William under date of yesterday says:

> A railway sectionman was shot and wounded in what was believed last night to have been an attempt of saboteurs to wreck the Canadian Pacific Railway's crack Montreal-Vancouver flier. The section worker was fired upon from ambush when he tried to replace spikes that had been removed from the track.

In view of the widespread public interest which has been aroused by this hinted act of sabotage I ask the government to give a full statement to the house in connection with this report, and I should like also to inquire what steps the government is taking immediately to investigate the incident.

Hon. L. S. ST. LAURENT (Minister of Justice): Mr. Speaker, when I received notice of this question from the hon. leader of the opposition I mentioned it to the acting leader of the government (Mr. Crerar) and to the Minister of Transport and ascertained from them that what was the case with respect to the Royal Canadian Mounted Police was also the case with them. No official report has yet been received concerning this incident. All the information we have at police headquarters here is that the Manitoba division of the Royal Canadian Mounted Police is co-operating with the provincial authorities and with the constables of the Canadian Pacific company in investigating the incident.

REDISTRIBUTION

INQUIRY AS TO PROCEDURE

On the orders of the day:

Mr. M. J. COLDWELL (Rosetown-Biggar): Mr. Speaker, I would like to direct a question to the Secretary of State. Could he inform the house when the government's proposals for redistribution will be made, and whether consideration has been given to the suggestion that a judicial committee rather than a parliamentary committee might undertake the task?

Hon. T. A. CRERAR (Acting Leader of the Government): Mr. Speaker, consideration is being given to the manner in which redistribution will be brought before the house.

LABOUR CONDITIONS

MEASURES TO RELIEVE MAN-POWER SITUATION ON FARMS

On the orders of the day:

Mr. J. S. ROY (Gaspe): Mr. Speaker, I would like to ask the Minister of Labour a question on a very important and urgent matter. I have received many complaints that the sons and employees of farmers are being called up at this time right in the midst of the sowing season. Public opinion seems to be alarmed over this. I hold in my hand the *Financial Post* of May 29, which complains of this state of things and asks if postponements could not be granted to the sons and employees of farmers until the sowing season is over.

Hon. HUMPHREY MITCHELL (Minister of Labour): If my hon. friend will forward to me the complaints he has received I shall be glad to look into them. I would say that the newspaper to which he has just referred cannot, I think, be considered an authority on call-ups under the selective service programme.

PARLIAMENTARY ASSISTANTS

OPINION AS TO LEGAL STATUS

On the orders of the day:

Mr. GORDON GRAYDON (Leader of the Opposition): Mr. Speaker, I was rather hoping that to-day the Minister of Justice might have an answer to the question which I have propounded to him on one or two occasions as to the swearing in of the parliamentary assistants. I hope he is now in a position to enlighten the house.

Hon. L. S. ST. LAURENT (Minister of Justice): I have had this question examined by the law officers of the department and was informed by them that they found no provisions, statutory or otherwise, which require that the parliamentary assistants to the ministers take any additional oath beyond the oath of allegiance that they naturally took before they became members of the house. There is a provision in the statutes under which other persons than those named can be required by the governor in council to take, in addition to the oath of allegiance, an oath of secrecy, and the question whether or not that would be appropriate is still under consideration.

Mr. GRAYDON: Have the parliamentary assistants access to the secrets of cabinet council, and are cabinet secrets discussed with them? If they are, it seems to me that an oath of secrecy should be taken. If they have not that access, the position of parliamentary assistant in relation to the cabinet generally should be clarified.

Mr. St. LAURENT: I can assure the hon. member that up to the present time cabinet secrets have not been discussed with the parliamentary assistants. The question whether or not they should take the oath of secrecy so that it might be unobjectionable to discuss with them certain matters which otherwise would be kept from them is still under consideration.

Mr. MacNICOL: That is fortunate, anyway.

WAR APPROPRIATION BILL

PROVISION FOR GRANTING TO HIS MAJESTY AID FOR NATIONAL DEFENCE AND SECURITY

The house resumed from Friday, May 28, consideration in committee of a resolution to grant to his majesty certain sums of money for the carrying out of measures consequent upon the existence of a state of war—Mr. Ilsley—Mr. Bradette in the chair.

NATIONAL DEFENCE

The CHAIRMAN: We are on item 4, dealing with the construction, purchase, repairs and operating expenses of properties.

Mr. GREEN: Mr. Chairman, this item is for $109,401,172. That is an increase of about $35,000,000 over the estimated expenditure for 1942-43. In the break-down that was given on March 3 of this year, which will be found at page 920 of *Hansard,* it is shown that $62,780,482 of this amount is for capital expenditure. The balance is for repairs, operating expenses and rentals. Will the minister tell us what provision is made for checking the plans of the various new army buildings before they are built? For example, is there any authority who decides what type the construction shall be, having in mind the cost? Is there anyone who decides how large the building shall be? Just what check is there on this construction? I mention these points because to those who see these buildings going up many of them appear to be of such construction and material that they would last for fifty or a hundred years, and accordingly must cost much more than a temporary building would. Yet we all know that they will be of no use at all after the war. In many cases there has been tremendous waste. Leading men in the construction business have come to me and said, "It is all money in our pockets to put up these huge permanent or semi-permanent buildings, but it is a terrific waste of public money, and we think some care should be

taken to see that the buildings are not of such an expensive type." The very fact that this expensive type of building is being put up annoys our people and makes it that much harder to get in taxes and to sell victory bonds. I should like to know just what system the Department of National Defence has of checking the type as well as the cost of the various buildings that are being put up for military purposes.

Mr. RALSTON: The system is that the particular service which considers that the building or other structure is required makes a requisition, which comes through the particular district concerned, to the national defence department. I may as well deal with the question of construction, *vis-à-vis* existing buildings, because it seems to me that that comes into it.

The question always is whether or not the service can do with something which exists at the present time, either by, if it is for accommodating personnel, putting more personnel in that particular building, by making such readjustments that less floor space will be occupied per head; or readapting the building; or making some addition to the present building; or acquiring some building already constructed and adapting it in order to save labour and material.

In the army we have adopted a practice of requiring from the district officer commanding what we call a certificate of necessity with regard to new construction. We ask him to certify that he has carefully reviewed the necessity for so-and-so—whatever it may be, and he says:

With full knowledge of my responsibility I give assurance

(a) that full consideration has been given to the necessity of conserving materials and labour involved in further construction;

(b) that the provision of accommodation to the extent and for the purposes proposed is necessary in the interests of the service;

(c) that no rearrangement of personnel is feasible to provide the required space in existing accommodation;

(d) that there are available no existing buildings held by the government which could practicably be altered or extended to provide the required accommodation;

(e) that the necessary additional accommodation cannot be secured by acquiring or leasing on any reasonable terms existing civilian buildings;

(f) that there is no other feasible provision which can be made as economically for the services required.

After that certificate is signed and forwarded to headquarters, the matter has to be dealt with; that is, the deputy minister and the engineer services generally examine into the matter, and if they consider there are no facts which would justify them in questioning that certificate, the question of the best type of building then becomes the responsibility of the engineers of the quartermaster-general's branch. The deputy quartermaster-general (engineering) is himself an engineer and was a contractor in civil life, and he is, I think, well acquainted with the necessities regarding types and various kinds of construction.

I think the general plan followed in connection with the construction of these temporary or semi-permanent buildings is that they should have at least five years' life; that is to say, the services and the general equipment must be such as will give service for five years. In that connection there has been experimentation, of course. If my hon. friend is thinking of buildings in Ottawa, some buildings were started quite early; I believe the first buildings which were erected were put up by the Department of Munitions and Supply to house their personnel. I should think that that general type of building has been followed pretty consistently. There have been changes from time to time, but the instructions are and every effort is made to build a building at the lowest possible cost consistent with the purpose for which it is required. That is to say, in weather such as we have had you cannot house personnel, either male or female, in buildings which are not properly heated, which are not properly ventilated, which have not a reasonable amount of light and which are not reasonably convenient; also, such buildings should be reasonably soundproof, so that there will not be too much noise from one office to the other.

The engineers of all three of the armed services have been at work on these matters endeavouring as far as possible to evolve the best possible type for the least money; that is, so far as what might be regarded as temporary buildings in Ottawa are concerned. I know, as my hon. friend knows, that, for instance, Camp Hill hospital at Halifax was erected as a temporary building in the last war and that it is still being used. The same state of affairs exists with regard to St. Anne's in Montreal. You cannot put up a building which is so temporary that it will fall down just at the end of five years and yet have been sufficiently useful for the purpose for which it was intended. There is therefore a degree of permanency in connection with all these buildings.

With regard to camps, quite early we evolved a plan of hut construction. That has been varied somewhat as time went on and as experience gave us opportunities to

improve; and by "improve" I do not necessarily mean increased cost, but enhanced utility and convenience for the same amount of money. I think I can say that we have in the army a standard type of hut, of which I am sure my hon. friend knows, both in the way of messing huts, which are built in the form of an H with the kitchen in the bar of the H, and in the form of sleeping huts, which are also in the form of an H, with wash-rooms and ablution rooms and toilets in the bar of the H. I believe these have been reasonably satisfactory and that the cost has been as low as it could be, having regard to the necessity of decent construction and of buildings which will house men properly.

The answer to my hon. friend is that the responsibility is on the engineers of the department, who are in constant consultation with others, including the engineers of the Department of Munitions and Supply, and the experience gained has been helpful in producing as time went by, an improved type of hut and of building at what is regarded as a moderate price, having regard to the service which has to have the accommodation.

Mr. GREEN: Well, is there no check by any other department? Apparently the defence department decides what buildings it needs and then builds them, and there is nobody to check the decisions. It does seem that there should be some check, perhaps by the Department of Munitions and Supply, perhaps by housing experts under the Department of Finance, to see that these buildings are not too expensive. I believe the idea is prevalent across Canada that a great deal of money is being wasted on these buildings. I would ask the minister to tell us whether it would not be possible to set up some system of checking both the types of, and the expenditures on, these different army buildings.

Mr. RALSTON: The D.Q.M.G. advises me that we have had independent engineers from time to time in consultation with regard to plans and specifications. There has not been any other department which checks on the engineers of the Department of National Defence (Army): that is part of our job, and it is in the deputy minister's purview to see that the job is done as cheaply as possible. I do not think that the Department of Munitions and Supply are in a position or would want to be in a position to check the matter of specifications and that sort of thing for all the different kinds of accommodation which are needed. The Department of Munitions and Supply is a procuring agency for accommodation just as it is a procuring agency for armaments or equipment or anything else. The kind of specifications, the degree of need, et cetera, have to be checked by the department concerned, and the matter comes in due course to the government in the form of an order in council when the contract is let by the Department of Munitions and Supply.

Mr. GREEN: These buildings all require lumber and other building materials in huge quantities and necessitate labour of various kinds, with the direct result that it is impossible in Canada to-day to build sufficient houses to accommodate our people, apart from the cost that is incurred. I suggest to the minister that there should be some method of checking these military buildings. Here we have a vote of nearly $63,000,000 for this present fiscal year, presumably for the construction of new buildings. The total expenditure on this item has gone up $35,000,000 over what it was last year; yet the minister told us that the army in Canada was to be reduced by at least 15,000 men in this fiscal year. Buildings have been put up all over the place. Why is it necessary to have this greatly increased vote in the present year under these conditions?

Mr. RALSTON: The suggestion that the vote is increased is perhaps not strictly accurate. It is true that the figures show an increase but it is accounted for in this way. The expenditure last year is shown as $75,000,000, whereas the anticipated and estimated expenditure was about $90,000,000. That means that $15,000.00 of the actual estimated expenditure was not used; it is $15,000,000 less than was provided for the buildings intended. In other words, if the materials had been available and the projects had been completed, the expenditure last year would have been $90,000,000, and instead of this $15,000,000 being spent this year, thus increasing the amount to $109,000,000, the expenditure this year would have been $94,000,000. So that the vote is about the same this year as it was last year, having regard to the needs in the particular year.

My hon. friend asked why it was necessary to put up buildings. I have not before me the list of buildings but I can give some idea of the construction. There is a considerable amount of construction overseas—I am purposely not giving the amount—and a considerable amount for anti-aircraft and airport defences and coast defences. The completion

of the coast defences is still going on and that is a large item. There is further construction in Newfoundland of several millions; there are certain communication and signal stations and equipment particularly in two vital areas that require construction; there is hospital construction and renovation, which includes something in connection with convalescent hospitals; there are special ordnance buildings which have a low priority on the building list but which are vitally necessary. If my hon. friend was here the other day he will no doubt remember that the hon. member for Broadview (Mr. Church) complained bitterly that ordnance at the present time in M.D. No. 2 is occupying a part of the post office building, which the Postmaster General desires very much to have. We have not been able to get out of it this year and construct an ordnance building and I do not know when we shall be able to do so.

There is accommodation at Longue Pointe which has involved millions of dollars and the purpose for which the committee knows. There is training centre accommodation. There are two training centres not yet completed and there is accommodation also for a staging camp. There are certain storage and depot buildings and other projects as well. Most of these do not involve accommodation for personnel but rather for services which are necessary to enable us to carry on here in order that we may make our most effective contribution.

In some items here, certain reductions have already been made, and our policy is that in anything that can be reduced, even though it has been authorized, a reduction shall be made if the circumstances justify it. The deputy minister is constantly reviewing, with the chief of the general staff, every item of construction to see whether or not the situation may have changed or is likely to change, so that this or that particular item may be eliminated or may be modified with a view to reducing costs.

Mr. GREEN: How much of this capital expenditure is to be spent overseas?

Mr. RALSTON: I can give it privately to the hon. member; I should prefer to do that.

Mr. GREEN: Is it a large proportion?

Mr. RALSTON: Some millions.

Mr. GREEN: The navy is also asking for over $36,500,000 for capital expenditure for construction and the air force is asking for practically $93,500,000 for the same thing. It is a tremendous amount.

Mr. RALSTON: The hon. member referred to the tremendous amount of lumber and material required—

Mr. GREEN: And labour.

Mr. RALSTON: —and labour. No one appreciates that more than we do in the services. There is an inter-service priority committee which meets and goes over the respective projects and endeavours to place them in some order of priority which will enable the most urgent to be done first, dealing with the Department of Munitions and Supply on that basis. There have been constant meetings between the deputy ministers and the controllers of lumber and of other materials to ensure that first things come first. We are under no illusion as to the scarcity of materials or the necessity for conserving them.

Mr. BENCE: I am concerned about the matter to which the hon. member for Vancouver South (Mr. Green) has referred. In the first place, the minister has stated that the particular department concerned deals with these various matters. For example, if a building is required for the purposes of the Department of National Defence, only that department concerns itself with acquiring that building. At least, so I understood him. I should like to know how the whole situation is canvassed in view of the existing possibilities of finding some substitute instead of building, in order to save the necessary materials that are being used. For instance, is there anyone in the department who will go through Ottawa and canvass the whole situation and determine whether or not a certain building on a particular street could be used, thus avoiding the necessity of erecting a new temporary building? Again, is the department prepared to put up with a certain amount of inconvenience instead of erecting a new building, in order that necessary materials may be saved, together with the labour that will be required?

I should like to know what the policy of the department generally is with respect to purchasing and renting. In some of the returns made to the house I find for example that in the city of Ottawa a substantial amount of property has been purchased by the Department of National Defence. I am confining my remarks to the army; I am not here dealing with the navy or the air force. Here are some of the buildings acquired: Ottawa Ladies' College, purchased for $225,000; Woods and Canadian buildings, purchased for $680,000; Aylmer apartments, purchased for $321,000; Bate building and Truro apartments, $233,000. I should like to know what the policy of the department is with regard to such purchases. Did it determine first of all whether there was any

possibility of renting these buildings? Did it consider whether it would be better to rent than to purchase, and did it consider the question whether such buildings could be used after the war? In other words, what has the department in mind with respect to these buildings? In Saskatchewan, according to a return given to the house, no buildings have been purchased; whereas, in several of the other provinces buildings have been purchased, and in some a substantial number.

Mr. RALSTON: In what province have no buildings been purchased?

Mr. BENCE: Saskatchewan. I have in mind the fact that in Regina a building known as the Westman chambers is being rented for $20,000 a year. The assessed value of the land and buildings is $80,390. What did the department have in mind in renting rather than purchasing that building? Then, what did it have in mind when it purchased various buildings in Ottawa, rather than trying to negotiate rental payments for their occupancy?

Mr. RALSTON: Generally speaking the plan is, if at all possible, to get the use of the building rather than to invest in it. I repeat that that is the general pirnciple. But that principle is cut into by reason of a number of considerations. One is that if we rent a building it generally has to be renovated or adapted for office use. In such circumstances we have to give an undertaking that at the end of the rental term it will be restored to its previous condition. The result is that we have found renting so costly that manifestly it would be uneconomical to rent rather than to buy. I am referring to a building, of course, which would have a post-war use. Time and again we have been tempted to use our power of expropriation of a limited interest, that is to say two, three or four years, instead of taking over entirely. And time and again our real estate advisers have reported that it would be uneconomical and bad business for us to do so, having regard to the obligations we have to undertake, (a) to make capital expenditures on the building so that it may be suitable for our use, and (b) that at the end of the time we would remake or remodel the building, so as to put it back in the shape in which it was when we took it over. I can assure my hon. friend that the keeping down of capital expenditures has been one of the cardinal principles we have tried to adopt wherever practicable. The difficulty has been that no one can guess the length of the war.

[Mr. Bence.]

The hon. member referred to the purchase of the Ottawa Ladies' College for the use of the Canadian Women's Army Corps. In that connection every consideration was gone into. I do not think the valuation of any building could have been gone into more thoroughly than was this one by our real estate officers. We were advised that the Ottawa Ladies' College refused to lease. They would sell, or nothing. This meant that we would have had to expropriate, on a limited interest, carrying it for three or four years, and then handing it back, with the liability for remodelling. As my hon. friend probably knows, it was considered desirable property as a permanent building. It was believed much good use could be made of it after the war, and the department considered the advice of our real estate advisers was sound. The result is that the purchase was made.

Mr. BENCE: Is it the thought of the department that a building like that will be resold after the war?

Mr. RALSTON: All I can say on the point is that that just depends on the need for buildings.

Mr. McCANN: Who are the appraisers or valuators in Ottawa?

Mr. RALSTON: Our chief real estate adviser is Colonel Goodwin Gibson of Toronto, who has been in the department from the beginning. He has with him a number of gentlemen, all of whom have been in the real estate business. Then, he has the benefit of the advice of real estate advisers in Ottawa. I cannot remember offhand the name of the appraiser who worked with Colonel Gibson in the appraisal of the Ottawa Ladies' College. However I can give those names later, and I can also give the names of those who appraised the Woods and Canadian buildings and the Aylmer apartments.

The Woods and Canadian buildings are one illustration of the folly of leasing permanent buildings. I do not know how long we have had the Woods building, but I know I was there in 1926 when on an earlier occasion I was Minister of National Defence. The Canadian building was there also at that time. I am sure that in rentals paid we have paid completely for the Woods building, when we consider the time it has been occupied. It was decided we should purchase these buildings and put an end to these annual obligations. Then, we wanted to obtain the benefit of 12,000 square feet which could be obtained by joining the two buildings with a per-

manent structure. That has been done, the new portion having just been completed. The whole has been made into one building.

If I remember correctly the Aylmer apartments were purchased at the time the Department of National Defence for Naval Services was formed. It is just opposite the Woods building. It was considered desirable to purchase the building for purposes of national defence—any one of the departments—as was the case with the Bate building. That was the income tax building; it stands directly alongside. This means that the crown owns all the property on both sides of Slater street from Elgin street to the park.

Mr. GLADSTONE: Are those buildings included in the Ottawa beautification scheme?

Mr. RALSTON: I do not know whether my hon. friend is being sarcastic when he asks that question.

Mr. GLADSTONE: Not at all.

Mr. RALSTON: My hon. friend is asking whether these buildings would be included in the scheme connected with the widening of the street?

Mr. GLADSTONE: There has been some talk about their demolition.

Mr. RALSTON: There is no such plan yet. I must say that I do not see any possibility of the demolition of buildings of that kind for a great many years after the war. I believe we have to set our faces against that sort of thing for a while. We will have to do without some beautification measures for a little while. Possibly that would have taken place if the war had not come along, necessitating other expenditures.

The hon. member asked if there was anyone in Ottawa or in the department who canvassed the situation in the city as to the availability of accommodation.

Mr. BENCE: The necessity for saving materials.

Mr. RALSTON: With all due respect to real estate men in Ottawa, I think the hon. member would find in Colonel Gibson's office as complete a catalogue of every bit of space, prospective, potential or present, as could be found anywhere. Colonel Gibson and his associates have toured this city from end to end, time and time again, almost at the point of the bayonet, in the hands of officers who needed space and were unable to get it. Not long ago we had a situation where personnel, instead of having something like 75 or 80 feet of space, which is considered the average amount required, had only 45 or 50. I know Colonel Gibson has looked in every direction to find space which could be used without having to construct new buildings. I am sure no one was more regretful than we were in the Department of National Defence when we had to accede to the suggestions from the navy and the air to allow buildings to be erected, and when later we had to use the remainder of the space for a building for the Department of National Defence (Army). But it was simply impossible to find accommodation of the kind required by the services.

I can say that the building on Cartier square, which is being erected by the army, will be practically filled by the quartermaster-general, the master-general of the ordnance and part of the treasury. The tremendous strain under which these departments have been working will be realized when I say that the master-general of the ordnance has been accommodated in eighteen or nineteen different buildings in Ottawa. I believe that number is correct. Those buildings will be vacated by M.G.O. staffs when the move is made into the new one. But it was simply impossible to carry on properly with a staff scattered throughout the city. As a matter of fact, if I may make a personal reference, I would say that one of my own offices was used by draftsmen of the engineers' branch of the quartermaster-general. We had special lights installed in order that they might prepare the plans for these different buildings. The fact is that we have had a very difficult time, from the point of view of space.

Mr. BENCE: What possibility is there of some of this work being done in other centres, away from Ottawa? Would it be feasible to have some branches in other cities, where more accommodation is available, rather than have them all in Ottawa? Then, with respect to sales: Were sales effected directed between the Department of National Defence and the owner, without the intervention of a real estate agent?

Mr. RALSTON: Absolutely.

Mr. BENCE: I should like an answer to the other question.

Mr. RALSTON: That is really a matter for my colleague the Minister of Public Works, rather than for me.

Mr. BENCE: It is a matter of policy with respect to the Department of National Defence, to a certain extent.

Mr. RALSTON: I may say to my hon. friend that it is always a case of being willing to sacrifice your wife's relations. Each depart-

ment is perfectly willing to have someone else make the move; each is absolutely convinced of the soundness of the principle that some other department ought to move out of Ottawa, but it is difficult to persuade a particular department that this is possible in its particular case.

Mr. BENCE: They all want to be here.

Mr. RALSTON: Yes. I am not going to put up any defence for the Department of National Defence, but we think it is absolutely necessary that the department be here. We moved the records office out to the experimental farm, and we have under construction an ordnance building out at Plouffe park; those are both some distance away. With these exceptions, however, there has been a gradual centralization, and that will be more or less accomplished when the new army building on Cartier square is completed. I can say seriously and sincerely that I am entirely in agreement with my hon. friend that some way ought to be found whereby congestion in a centre like Ottawa could be avoided. There are places which suggest that they might accommodate people, but always you find physical difficulties brought about by the fact that we are in a period of stress and strain and rush, and we have problems of transport and accommodation. If you move a department you have to move the personnel; if you move the personnel you have to put up buildings for them wherever they may be. I do not think it can be said that Toronto has very much space; I do not think Montreal has very much space. Therefore any move would have to be to a smaller place, and generally speaking in these smaller places you have to provide accommodation for personnel as well as for the particular activity carried on.

Mr. PERLEY: Following the suggestion by the hon. member for Saskatoon City and the statement made by the minister, there is, as the minister said, one province in which there has been very little construction carried on; that is the province of Saskatchewan. Has a proper survey been made to see whether it would be better to construct one or two new buildings in the city of Regina instead of renting several buildings and space in several others? In this item, as I understand it, there is an amount of $46,620,000 for rentals alone. Can the minister give us a break-down of that amount, to show just how much of it will go to Saskatchewan? The return which was referred to by the hon. member for Saskatoon City shows that in the city of Regina alone many buildings and parts of buildings have been rented; I think the total is something like sixteen. Perhaps the minister would refer more particularly to the terms under which his department has taken over the Regina college, the Regina normal school and the Regina Trading building.

Mr. RALSTON: Is that not under the air force?

Mr. PERLEY: It is given here under national defence.

Mr. RALSTON: Is that under the army?

Mr. PERLEY: Yes, under the army; I have checked off the ones coming under national defence.

Mr. RALSTON: I think my hon. friend will find that the normal school comes under the air force.

Mr. BENCE: They are both under the air force.

Mr. RALSTON: This was a joint return, apparently, covering all three services.

Mr. PERLEY: The hon. member for Saskatoon mentioned that $20,000 a year was paid in rental for the Westman chambers, and I notice this return also sets out the McCallum Hill building. I have checked the rentals paid per square foot, and I find a very wide range, from as low as 15 cents to as high as 35 and 40 cents. Most of these buildings are in the centre of the city. How is the amount of rental arrived at and what investigation is made to be sure the standard is fair? I should like to know also who recommended that these particular buildings be rented by the department, and finally I should like the minister to tell me how much of this $46,000,000 will go to Saskatchewan?

Mr. RALSTON: My hon. friend is wrong about the $46,000,000; that refers to operating expenses of property; fuel; light; operating expenses of property overseas; repairs to property; engineer stores and equipment, and so on.

Mr. PERLEY: And rentals.

Mr. RALSTON: Quite so. The total amount there is something like $17,000,000. My hon. friend wants a statement or break-down showing what rent is paid by the army in Saskatchewan, or just in Regina?

Mr. PERLEY: In Saskatchewan, with particular reference to Regina.

Mr. RALSTON: That will be given. I think there is some confusion about some of these buildings; remember, I cannot carry all these matters in my head, nor can the deputy quartermaster-general remember them all. I

doubt whether the Regina Trading and McCallum Hill buildings are rented by the army.

Mr. BENCE: Yes, there is a recruiting centre in the new McCallum Hill building, at an annual rental of $6,800.

Mr. RALSTON: Would the hon. member give me the number of the return to which he is referring?

Mr. PERLEY: It was brought down on March 15, I believe; I just copied the main part of it.

Mr. BENCE: I am sorry I have not the number. It was passed as an order for return on March 15 and tabled on May 13.

Mr. RALSTON: I have these notes with regard to Regina. My hon. friend had an idea that not much construction had been carried on there. There was some construction, though perhaps not much when compared with the construction in Ottawa or Halifax; it amounted to a little over $200,000. There was additional accommodation for the Canadian Women's Army Corps, which I think I saw when I was there; there was the amalgamation of the two depots, No. 12 and No. 12A; I think that is out near the exhibition buildings, if I am not mistaken. There were repairs to the Keist building for the use of stores; the construction of a recreation room, and provision of a parade ground. Those are all in Regina properly. Then at Dundurn, as my hon. friend knows, there was accommodation for C.W.A.C. personnel and there were expenditures on the water supply. My hon. friend knows also that a complete training centre was established at Maple Creek, at an expenditure of something like $500,000. In Saskatoon there was an officers' mess and repairs and renovation to the stadium, totalling a little over $30,000. At Prince Albert there was an expenditure of $340,000 at the basic training centre.

Mr. ADAMSON: What were the expenditures during the last fiscal year at Camp Borden?

Mr. DOUGLAS (Weyburn): While the minister is getting that information perhaps I could ask something with reference to Saskatchewan. First, I should like to refer to the conditions of the barracks at Saskatoon. In the early stages of the war it was necessary to put men in any quarters that were available, but since that time many fine huts have been built and other buildings have been taken over and fixed up. With that in mind, I was shocked during the Easter recess when I visited the exhibition grounds in Saskatoon and saw the conditions under which these men had to live. They have built a new officers' mess which is a lovely building, but the quarters for the men underneath the grandstand are just about as undesirable as I could imagine. The quarters were not filled, but even as it was they were badly crowded. I understand that all the beds have been occupied and probably will be again, and if that should happen there certainly would not be sufficient cubic feet of air per man. I checked the number of wash basins and showers and the toilet facilities with the idea of writing the minister when I came back. I have been too busy to do that, but I can give him the figures. There are certainly not adequate washing and toilet facilities for the number of men quartered there. If I remember, there were about sixty-four wash basins and about eleven or twelve showers, but I am speaking only from memory; the figures are upstairs. But the facilities were not adequate to take care of the number of men quartered there then, and most certainly they would not be adequate if all the beds were occupied.

The men pointed out to me that they had no facilities for washing their clothes and the result was that many of them had to send out their laundry. This was quite a heavy item of expense especially for the married men who had assigned part of their pay. Laundry facilities should be provided so that these men could wash their clothes. A pipeline running along one side of the stadium had been covered with manure to protect it from freezing. I do not know whether it is to remain covered, but even though the day on which I was there was not very warm, I could hardly stay in one end of the sleeping quarters because of the stench. In really warm weather that end of the barracks would be positively uninhabitable. After three years of war I was surprised to see men in quarters like that, especially when there are so many fine quarters in other places.

I should also like to ask the minister about the fire which took place in the barracks at Regina. The newspapers report about a quarter of a million dollars' worth of damage. I should like to know if there has been any investigation into this fire. There have been rumours of sabotage, but those rumours always start. Has there been any investigation as to the cause of the fire and whether there was adequate fire protection and whether there were adequate fire fighting facilities? Are proper precautions

being taken there and elsewhere to protect army quarters against a recurrence of this sort of thing?

Mr. RALSTON: In connection with the conditions at Saskatoon I may say that I have not had a report of the kind my hon. friend refers to. It might not come to me, but the inspector-general is rigorous in these matters. The depot at Saskatoon is to be amalgamated with Regina and the conditions that prevail there will not have to be borne very long. I am not suggesting that they should be put up with at all, and perhaps some temporary arrangements should be made to eliminate the conditions of which my hon. friend speaks. Perhaps I am more impressed by what he says about the stench and general atmosphere than I am with regard to the matter of air space, because I do not think the quarters will be filled up. The Regina depot is being built for the purpose of amalgamating the two. I am obliged to my hon. friend for bringing this to my attention and if there is any possibility of these men being there any length of time I shall see to it that temporary remedies are applied at once.

All I have seen with regard to the fire at Regina is the telegraphic report which is required to be sent in and which answers certain specific questions at once. The two points with which I am most concerned is the matter of the adequacy of fire protection and fire fighting equipment, and the cause of the fire, whether or not it was sabotage. There was no evidence of any kind as to the cause of the fire, but the investigation was proceeding when this wire came in. With regard to the adequacy of the fire equipment, I was concerned about the fact that the answer made was that the equipment was not adequate for this fire. That raised the question whether the equipment was the standard equipment. I personally put questions on the memorandum. First, I asked: Was this equipment adequate, having regard to the standards we have set up for fire equipment in these different places? If it was inadequate for this fire, does this indicate that the standard is insufficient? The memo came to me on Friday and I made inquiries about it at once. It is just answered briefly in that respect and there is no indication as to what the town fire equipment was as compared with the military fire equipment. I hope to have further information on that point.

Mr. BENCE: The minister has said that the conditions referred to by the hon. member for Weyburn will not have to be put up with very long because these men are to be moved.

[Mr. T. C. Douglas.]

The complaint we have in Saskatoon is that the solution to every problem is to take away men or equipment from the city. We have one of the finest cities in western Canada with ample facilities of all kinds. For years we have been trying to induce the administration to construct proper armouries in Saskatoon. I think the minister from his own experience of that city will realize that it is a fine place for such a building. Our strongest complaint is that the centres which are closer to national defence headquarters always seem to be able to put on sufficient pressure to have necessary buildings erected, but the answer given to a place like Saskatoon, which is 1,500 to 2,000 miles from Ottawa, is that there is no material or labour; yet in other parts of the country there seem to be ample. On a number of occasions I have referred to the number of temporary buildings which have been erected in Ottawa, which number is increasing every year. These buildings required material and labour and yet there never seems to be any available to construct a proper armouries in our city. We are right in the centre of the province and are one of the largest recruiting centres in the province. I should like to know why it is that only $30,000, representing material and labour, can be found for that city whereas large sums are found for other centres in the country.

Mr. RALSTON: My hon. friend puts it on a very narrow basis when he asks that question. We are not finding money for cities, as my hon. friend knows.

Mr. BENCE: You are finding it for accommodation, and the accommodation there is bad.

Mr. RALSTON: My hon. friend asks why can we find only $30,000 for Saskatoon.

Mr. BENCE: Not for Saskatoon, but for accommodation in Saskatoon.

Mr. RALSTON: Nothing is too good for Saskatoon, of course, in my hon. friend's mind or in my mind either, so far as that goes. Saskatoon is the junction point and the service point for Dundurn camp. That is where all the men go. There are not very many military establishments there, I know, and nowhere has a military establishment been supported more enthusiastically than by citizens of Saskatoon. But we do not make allotments for the different cities. There are a good many cities and towns, some of them much nearer home than Saskatoon, which feel they have been overlooked. I can only say to my hon. friend that I had his representations and representations from gentlemen

who came down here from the board of trade or chamber of commerce—I have forgotten which—particularly about Dundurn, and I tried to take a personal interest in the matter. I am sorry that the situation was that the quarters which existed in Saskatoon were such as to make it desirable not to build in two places but to combine the depots just as depots for other provinces are combined. I think that was proper economy and proper efficiency. I do not think there is any other province which has two depots. I fully realize the justice, shall I say, which would be done by recognizing Saskatoon in every way possible and I tell my hon. friend that I certainly will keep it in mind, as I have promised to do before. Representations were made with regard to building materials there, but we were not able to use them as yet. I spoke to the deputy quartermaster general about that to-day. It has not been economically possible to use that material. But the wheel turns sometimes. I need not say to my hon. friend that there is no disposition to do anything but recognize Saskatoon in every possible way, and the fact that only $30,000 was spent there is no indication of what the department thinks of the contribution Saskatoon has made. There are many other cities and towns in Saskatchewan and elsewhere which would be equally glad to have Saskatoon's proximity to a camp like Dundurn and the opportunity to serve the boys of that camp and have the benefit of whatever might come from the city's proximity to the camp.

Mr. DOUGLAS (Weyburn): Has the minister given consideration to the question whether it is advisable to concentrate these military establishments in one city? It often means moving large bodies of men into cities that are already highly congested, and it means taking equipment out of other places which have already been set up. For instance, if the present military establishment is moved out of Saskatoon to be merged with the Regina set-up, there is already standing the officers' mess I have already mentioned, put up at an expenditure of $25,000 or $30,000, which will no longer be used. It is just newly built, and workshops and equipment have been set up there also. Of course the equipment could be moved, but it seems to me it is time the department gave some thought to the wisdom of moving these military establishments into cities which are already congested. Certainly it has been of great advantage in Saskatchewan to have training camps at Prince Albert and Maple Creek. It has taken a strain off the larger centres. In Weyburn we have an excellent barracks on which considerable money was spent. It is now standing empty. It could easily train five or six hundred men, and they would be much better quartered there than in some of the larger cities. Before the department takes a definite step in the matter I hope that consideration will be given to putting in a few huts to make it possible for troops to be trained in various centres rather than concentrating them at one large point, with the danger of adding to the congestion that already exists.

Mr. RALSTON: The thing which is being moved is the depot. The hon. member for Saskatoon City will correct me if I am wrong, but I think the vocational training establishment is still there. What is being moved is the depot. Honestly, while I agree with my hon. friend about dispersion as far as possible, I believe the depot can best be run when concentrated at one place. There you have, on the one hand, the men who are coming into the army, and on the other hand you have the men who are leaving the army. You have all your provision for induction into the army and medical examination. We are endeavouring to have these reception centres, as they are called, made just as complete as possible. It would mean two establishments if we had to duplicate all that organization in Saskatoon or some other place. It is not done in the other provinces. In the case of the depot I do believe it is desirable to concentrate. A good deal of consideration was given to the matter before the decision was reached, and I believe the decision is sound.

The hon. member for Saskatoon City said a word about armouries. The policy is not to build armouries during the war, and I think I advised my hon. friend of that. So much in the way of temporary building has to be done that we feel we would not be justified in adopting any policy now of building permanent structures for the purpose of armouries. Primarily, of course, they would be for the use of what would become active battalions, but armouries are generally built for the reserve battalions in peace time. I have had representations from other places as well. I am sorry that I cannot hold out any hope of the present policy being changed, much as I should like to meet my hon. friend's wishes if we were in a position to do it.

Mr. DOUGLAS (Weyburn): Is vocational training to be retained at Saskatoon?

Mr. RALSTON: I think so.

Mr. DOUGLAS (Weyburn): These are the men who are living under the grandstand in the stadium. Some consideration ought to be given to building huts for them.

Mr. RALSTON: That is a situation which will be relieved when this move is made.

Mr. NOSEWORTHY: While we are on the subject of construction I will review a case for the minister's consideration. I think it has already been called to his attention. On September 11 last, twenty construction men employed by the Royal Canadian Engineers at London were discharged without being given any notice or any pay in lieu of notice. The matter was referred to selective service by the local union, and I have here copies of correspondence in which the assistant director of national selective service assures the Canadian Congress of Labour that the work on which these men were engaged was not casual work and did not come within the conditions where discharge was possible without notice. I have here one letter in which he assures the secretary of the Canadian Congress of Labour that every effort is being made to induce national defence to pay these men their seven days' pay. He says in that letter:

I should hate to have to take legal action on the part of national selective service against national defence.

This matter has dragged on for more than eight months. The last correspondence I had was a letter from the Minister of Labour dated April 24, in which he says he is sending a special officer in to investigate the situation,—

Mr. RALSTON: What is the date of that?

Mr. NOSEWORTHY: —and was to let me have a reply immediately. That is more than a month ago, and still these men are waiting for their seven days pay. Has the minister any information on this matter?

Mr. RALSTON: Perhaps my hon. friend wrote me about it. I had forgotten about it until I asked my officers here. They tell me that the facts are as my hon. friend has stated, namely that these men were discharged without the seven days' notice and it was claimed that seven days' notice should be given. Apparently there has been some ruling by national selective service. Remarkably enough, the assistant deputy minister tells me that we cabled London for a telegraphic report which ought to be in to-day. That is to say, we did not want to deal with the matter until we had communicated with London to find out if the district officer commanding had any comments. I take it that the matter will be dealt with promptly, as soon as the report is received.

Mr. DIEFENBAKER: There are a few questions I should like to ask in reference to this item. I think the discussion which has taken place so far indicates how impossible it is for the member of this house properly to check expenditure. The minister answered a while ago that to break down this item of $108 millions would be impossible because of the expenditures which are being made overseas.

Mr. RALSTON: Oh, no. I gave all the subjects. I did not give the amounts, that is all.

Mr. DIEFENBAKER: I understand the amounts were given.

Mr. RALSTON: I gave the items.

Mr. DIEFENBAKER: But there is no break-down as to the items.

Mr. RALSTON: Oh, yes. I gave a long list of items.

Mr. DIEFENBAKER: Not the necessary particulars.

Mr. RALSTON: Yes. I did not give the places.

Mr. DIEFENBAKER: No, I understand. That is just a break-down in amounts; that $108 millions is being broken down in the following particulars—

Mr. RALSTON: That is right.

Mr. DIEFENBAKER: —but no opportunity comes thereby to make any close examination.

Mr. RALSTON: Well now, wait. Let us get off on an even keel. For instance, coast defence was one of the items. My hon. friend does not expect me and will not ask me to give the places where coast defence expenditures are being made and how much they are.

Mr. DIEFENBAKER: That is true; coast defence, so many million dollars.

Mr. RALSTON: Well, does my hon. friend expect me to give the committee all the particulars?

Mr. DIEFENBAKER: No.

Mr. RALSTON: I thought not.

Mr. DIEFENBAKER: But I am just indicating how utterly fruitless it is to try to make any check of expenditures which have been or

are being made, when all we have is information that so much is going to be expended. I am not arguing on the propriety of not giving full details. But I do think we are entitled to more information than we actually receive under this item. We should have some information as to what camps in Canada are to receive expenditures this year, and in what amounts. Are any new camps or military establishments to be built or set up? And, just in that connection, are any further military sites to be secured and established?

In that connection would the minister explain the circumstances connected with the choice of Debert military camp, in Nova Scotia. No one objects to Nova Scotia receiving a military establishment; its closeness to the sea necessitated the establishment of a camp there. But if ever there was a camp chosen anywhere in Canada which was little short of disgraceful in its early stages in so far as the men are concerned who were required to live in that camp, it is Debert.

Mr. RALSTON: I do not know what my hon. friend means. If he wants to particularize, all right, but he should not make a general statement of that kind.

Mr. DIEFENBAKER: I will particularize.

Mr. RALSTON: Debert camp has certainly filled a marvellous place in the defence plans of Canada.

Mr. DIEFENBAKER: Yes, but I want to know why this particular place was chosen.

Mr. RALSTON: I will tell my hon. friend.

Mr. DIEFENBAKER: All right; that is what I am asking for. The minister is rather touchy on some of these things.

Mr. RALSTON: When my hon. friend uses the expression "little short of disgraceful" in connection with the camp, I suggest he is exaggerating a little.

Mr. DIEFENBAKER: I say that the conditions in which some of these men were placed were just that. In the spring of 1941 the camp was almost inundated. With all the available sites in Nova Scotia, the expenditures made on that camp in order to drain it are difficult to understand or to justify. I realize that further figures are available; up to February 26, 1941, the cost of draining that camp was $236,127.

Mr. RALSTON: That is not excessive.

Mr. DIEFENBAKER: I should like to ascertain from the minister what has been the expenditure for drainage since, that is in the past two years. That is a tremendous amount to expend just for drainage and getting the camp ready.

Mr. RALSTON: Does my hon. friend know the size of the camp?

Mr. DIEFENBAKER: I criticize the choice of that particular location.

Mr. RALSTON: I say, does he know the size of the camp?

Mr. DIEFENBAKER: It is five thousand and some acres: 5,028 acres were to be acquired, according to the figures I have. I should like to know why a location was chosen for a camp that required an expenditure of almost a quarter of a million dollars for drainage when so many other alternative choices were available. I realize that at the outbreak of war, in the desire to secure immediate action, in the rush to establish camps and get operations under way, inevitably some choices might be made which would not be the best possible. But I should like to know who recommended the choice of this site, and who recommends the choice of sites to-day. After a choice has been made by the military authorities, is that choice confirmed by the minister? Generally, I think, we should have a statement regarding the establishment of these camps and the choice of sites.

Mr. RALSTON: I cannot at the moment throw my mind back to all the circumstances. Debert camp has been mentioned several times. The hon. member for York-Sunbury (Mr. Hanson) seems to have a scunner against the camp for some reason. On one occasion when he talked about its being low, I pointed out that according to the contours it was higher than Sussex camp, which is in his own province, and so far as I can remember I have never heard any complaint about that.

Debert camp was chosen at a time when we needed a large camp for the concentration of troops down on the east coast. We needed it for tactical reasons. Debert was located, I think, by the engineers of the department and the engineers of the military district, as it was then,—the Atlantic command was not then formed. It was located and selected on the ground, first, of its tactical location. That is to say, it was near the railways. At the same time it was far enough back to provide for the reserve of troops which could be disposed of by moving over to Pictou and the short line towards Cape Breton—because it was within six miles of Truro, which is a junction

point—moving into Halifax over the main line there, or moving down the valley over the Midland railway which connects with the Dominion Atlantic railway at Windsor: It was right at that junction point; and further, it was just about the right distance from Halifax and these coastal towns to be effective as a reserve camp. Further, it was directly beside a large airport which, as I recall, was a Royal Air Force airport at that time, although I am not quite sure about that; but Debert had been chosen, and the airport was either completed or well on the way to completion. Those, I would say, were the two main reasons, along with a third, that it was well located beside a good town, the town of Truro, where men could have a reasonable opportunity for diversion and recreation. I would say those were the three outstanding considerations which influenced the decision to select Debert camp.

My hon. friend speaks of the disgraceful condition. I think he must have in mind the idea that the land is low lying. He speaks of the cost of drainage. As a matter of fact, he is speaking about a camp which is nearly nine square miles, and if that area were to be drained all over it would cost a good deal of money. I only hope that the drainage has been effective. I was down there in the early days when Debert was just being cut out, and I shall never cease to admire the Regina Rifles who were there at the time pulling stumps out of the parade ground. They were helping in every possible way to get things into shape. They were doing a splendid job under conditions which were and which could not but be primitive at that time. The engineers themselves were practically the last to get into quarters of their own, for they were engaged in getting quarters for everyone else ready first. Nothing has been brought to my attention which indicates that Debert camp is in any condition that might be described as disgraceful. I think I would have heard about any such condition; it would have been brought to my attention when I was down there.

Mr. DIEFENBAKER: What has been the cost of drainage since 1941?

Mr. RALSTON: There were no major expenditures last year.

Mr. DIEFENBAKER: What was the expenditure?

Mr. RALSTON: There are nine miles of paved roads in the camp and a hard-surface parade ground. I consider that absolutely essential for any camp of that size, whether on the top of a hill or elsewhere. I consulted with the camp engineer and the engineer of the Atlantic command, and I may say that the parade ground is about completed now. I am disappointed that my hon. friend should speak as he does about Debert camp, because I know of some people who have come from the United States, having visited the camp, and who were considerably impressed by it. They were people who knew something about camps and about construction and they wrote me a very complimentary letter with regard to the camp. My hon. friend will probably say that this was during the summer. As a matter of fact, I do not remember when it was. I think the hon. member has been misinformed to some extent when he speaks about disgraceful conditions. The camp has served a most useful purpose and has been one of our most efficient and effective camps in Canada.

Mr. ADAMSON: What about Camp Borden?

Mr. RALSTON: The amount expended is about $2,000,000, including the construction at Meaford tank range.

Mr. ADAMSON: Is that the last fiscal year?

Mr. RALSTON: Yes.

Mr. ADAMSON: The minister mentioned construction overseas. This item includes rentals in Canada. Does it include such items as the rental of headquarters buildings and billeting expenses in England?

Mr. RALSTON: I am not sure about the last point. It includes rental of buildings, but I am not sure about billeting expenses, because there has been a discussion about the per capita rate. In connection with some troops the capitation rate, as it is called, applies with regard to billets as well as certain other personal items.

Mr. ADAMSON: But it would include, shall we say, corps headquarters?

Mr. RALSTON: Yes, I am so advised.

Mr. ADAMSON: One other question. When the department rents a building, does it employ an agency or does it do this work itself?

Mr. RALSTON: It does the work itself.

Mr. ADAMSON: It is its own agent?

Mr. RALSTON: Yes. You will see orders in council passed from time to time appointing so and so at a rate of so much a day when employed in connection with this particular work. These men cover all parts of the country. From time to time, however, many men from real estate agencies give their services free in the matter of advising.

Mr. PERLEY: Coming back to the buildings in Saskatchewan I suggest to the minister

that there are many armouries in the towns throughout the province, particularly in the southeastern part, which could be made use of. At Indian Head there is a good building of which more use could be made. Some of these armouries could be used for the training of home guards and veteran guards. Last year they were all taken away from Indian Head where they had quite a good corps in 1940 and in the early part of 1941. I wish the minister would give some attention to this. I believe there are some buildings at Grenfell and Moosomin, and, as I say, there is a good one at Indian Head. Better use could be made of these armouries.

Mr. RALSTON: Is there one at Katepwa?

Mr. PERLEY: Maybe the Minister of Agriculture would look after that. There may be one at Melville. I am pleading for southeastern Saskatchewan, however. I find that there are ten buildings in Regina which the department has rented either in whole or in part. Can the minister give an estimate of what proportion of this item for rentals will be paid in the city of Regina and what has been spent in repairs or in changes in these buildings to meet accommodation? I understand that there have been many changes in the buildings rented. Who pays for that? Does the landlord or the department?

Mr. RALSTON: I cannot give now the amount in this vote for the rental of buildings in Regina. The assistant deputy minister refers me to a return which I presume is the one my hon. friend is dealing with, namely, a return to No. 178 of March 22. That gives a complete list of buildings rented and rentals paid. This is not a very definite answer, but all I can say is that there is included in this item the rental of all these buildings in so far as they are retained by the department. That is the most I can say.

Mr. PERLEY: Can the minister give the cost of repairs?

Mr. RALSTON: The cost of remodelling?

Mr. PERLEY: Yes.

Mr. RALSTON: I think I could get that for the hon. member.

Mr. DIEFENBAKER: I have not yet received an answer. Possibly the minister has not the information available as to expenditures for drainage and the like in 1942 and 1943.

Mr. RALSTON: At Debert?

Mr. DIEFENBAKER: Yes.

Mr. RALSTON: No, I have not the information available. My officer tells me that no major expenditure has been made for that purpose in 1942-43. By major he would mean anything above $5,000.

Mr. DIEFENBAKER: I think the minister missed what I had in mind. In the choice of sites for military camps consideration should be given to the securing of sites where the expenditure of amounts for irrigation and drainage totalling $230,000 would not be necessary. That is the point I am endeavouring to make. In 1940, when I was there, conditions were such as to be most discouraging to the men established in that camp. Who makes the choice of sites? Is the final determination that of the minister? What has been the total expenditure, to date on Debert camp? I refer to expenditures for the purchase of land, the installation of facilities, and the like.

Then as to another matter, which is possibly the antithesis of drainage, namely the securing of water for the various camps, if my recollection is correct, in 1940 and 1941 the services of a company with office in London, Ontario, known as the International Water Supply company, were utilized for the purpose of ascertaining information in connection with and securing supplies of water.

Mr. RALSTON: At Debert?

Mr. DIEFENBAKER: At all the camps across Canada. How much was disbursed to that company during each of the years 1940, 1941 and 1942?

Mr. RALSTON: One further word about Debert camp: my hon. friend says we should never have selected a site in connection with which $230,000 would have to be spent for drainage. I am quite satisfied that that figure includes expenditures for sewage and the other services necessary in a camp of that kind. I am satisfied it does not apply only to surface drainage, as perhaps would be indicated by my hon. friend's remarks. Even if $230,000 did have to be spent for drainage in a camp of that size, if it had all the other features about which I have spoken, and they could not be obtained elsewhere, there would be ample justification in making the expenditure where such facilities can be obtained.

Water is one commodity in point. The Debert camp is placed where we can get water, and I can assure the committee that it is not everywhere that one can find water in sufficient quantities to serve 12,000 to 15,000 men, in a camp area as small as that at Debert.

The choice of site, if I remember correctly, was based on the examination made by engineers in military district 6. They were the ones entrusted with the responsibility of making the preliminary survey in that district. The report—and when I say this I am only stating the practice—would be made in the usual course to the quartermaster-general. I have no doubt he would discuss the matter with the chief of the general staff, looking at it from the point of view of tactical position and the supplying of camp requirements. The matter would then go to the deputy minister, and then to the minister. That is the practice in connection with the choice of sites.

I remember filing a return last year which showed total expenditures at Debert amounting to something like $5,000,000. On that occasion I was replying to the hon. member for Cumberland. I have not the figures at the moment, but I shall get them.

I have not before me the information and figures respecting amounts paid to the International Water Supply company, but I will see that they are obtained.

Mr. HAZEN: Recently I have received several letters from subdivisions of the Catholic Women's League in my constituency, in which they set out a resolution forwarded to the minister. I have not a copy of the resolution before me but, if I remember correctly, it refers to the lack of accommodation for holding divine services in the different training camps. I presume this matter has been brought to the attention of the minister. Is it receiving his consideration?

The statement the minister has placed on *Hansard* sets out the estimated total amount of expenditures to the end of the last fiscal year for construction, purchase, repairs and operating expenses in connection with properties. The total amount is $75,861,194. Would the minister give a break-down of that amount by military districts?

Mr. RALSTON: I do not mind giving the figures to the hon. member, nor do I mind giving them to the committee. However, I should prefer not to have them on *Hansard*. The statement shows where the activities have been. As I pointed out the other day, the practice in the British House of Commons is to put in an estimate for £10, and set a day to discuss everything. They do not show where the expenditures are made. I will show the hon. member the break-down, if that is satisfactory.

[Mr. Ralston.]

Mr. HAZEN: That is the difficulty pointed out this afternoon by the hon. member for Lake Centre. It is almost impossible for the committee and the public to get at information—

Mr. RALSTON: Oh, I think it is.

Mr. HAZEN: —as to where a good deal of this money is spent. How many men can be trained at Debert training centre?

Mr. RALSTON: There is accommodation for 13,000, all ranks, and 150 Canadian Women's Army Corps. And there are at present under construction building lines to accommodate two units.

With regard to chapels, I would point out that the matter has had close attention. At present there are twenty-seven religious centres under construction. In all I anticipate there will be constructed something like forty-two across Canada. I should like to place on record the purpose of these chapels, because there was some discussion about them during the victory loan campaign. The statement I have before me is in these words:

The need of these buildings is summed up by the principal chaplains as follows:

"The general consensus of opinion of the principal chaplains and district chaplains in Canada and district officers commanding based upon the experience of the past three and a half years is that a building set apart solely for religious purposes is absolutely necessary in training centres and camps if the moral and religious needs of the men and women of the armed services are to be worthily met and if the chaplains are to carry out effectively their duty towards those for whose spiritual welfare they are responsible."

The general purpose of these buildings is that they be used as a religious centre not just on Sundays but for every day in the week. It will be a place where limited accommodation will be provided so that communion services can be held on Sundays and holy days and to permit of week-day services and special services and classes such as church membership and bible classes. These services and meetings will be simply for those who desire voluntarily to attend and are entirely apart from church parades which will be held as in the past in the open air during the summer and in the local churches during the winter.

The centre will also be a building where officers and men may come as they wish at any time when they are off duty for quiet and meditation. In the centre will be chaplains' rooms where members of the centre may feel free to come and talk with the chaplain on personal matters at any time they desire. In short it represents an exceedingly modest provision whereby there is maintained within the camp and as part of camp life an opportunity for the cultivation of spiritual and moral values along with the physical and intellectual development which is such a large part of camp activities. . . .

This matter has been most carefully considered by the department and by the govern-

ment in the light of the recommendations received from those who are responsible for the moral and spiritual welfare of the men and women of the army. The decision has not been made hastily but only after study over a considerable period with a view to appraising the needs and scrutinizing carefully the proposals involved with a view to achieving the most economical structure which would meet these needs. I cannot help but feel that the expenditure of a sum within the range of a modest amount such as the above as an aid to building character and fortifying morale is an investment well warranted both as an aid to success in the war and to the future of the nation in the hoped-for days of peace.

I am reading from a communication which I have sent to a number of people who have written me in connection with this matter. I thought it would be as well to place it on record so the committee might know the considerations which prompted the authorization of these religious centres.

Mr. QUELCH: Could the minister give us any information with regard to a defence project at Youngstown, Alberta; the purpose for which it is being constructed and its estimated cost?

Mr. DOUGLAS (Weyburn): Before the minister leaves the matter of chapels, did I understand him to say there were twenty-seven chapels to be built?

Mr. RALSTON: Twenty-seven under construction now.

Mr. DOUGLAS (Weyburn): With the fifteen already built that will make a total of forty-two?

Mr. RALSTON: No, it is the other way round. There are twenty-seven under construction now, but the total will be forty-two.

Mr. DOUGLAS (Weyburn): There are fifteen more to be built, and twenty-seven under construction?

Mr. RALSTON: Yes.

Mr. DOUGLAS (Weyburn): What is the seating capacity of each of these chapels?

Mr. RALSTON: About two hundred on the average, according to the deputy quartermaster-general.

Mr. HAZEN: The minister told me he would let me see a break-down of the expenditures last year for buildings and so on. Will he let me see that now or will he send me a copy?

Mr. RALSTON: It is in this book, and I want the deputy quartermaster-general to have this book here in case there are other questions to be answered. If my hon. friend will come over here I will show it to him, and then if the book is required he can give it back to the deputy quartermaster-general.

Mr. GREEN: How much of this item is to be spent on hospitals, first of all by way of capital expenditure, and second for repairs, operating expenses and rentals?

Mr. RALSTON: I cannot tell my hon. friend in regard to repairs, but there is less than $2,000,000 in capital construction in regard to hospitals.

Mr. GREEN: What is the policy of the government with regard to the construction of military hospitals? There have been complaints that the government builds military hospitals where it would be far better to construct additions to civilian hospitals. In most cases these military hospitals will not be needed after the war, whereas if an addition were put on a civilian hospital, that addition would be very useful to the people of the area after the war. It does seem to me that the government should very carefully consider whether or not it would be better to construct additions to civilian hospitals. That question came up at Victoria. I do not know the facts of the case personally, but newspaper articles have stated that the government decided to build its own hospital at a cost of about a million dollars, whereas an addition could have been made to the Jubilee hospital at a cost of $250,000, just one-quarter as much. Then this article goes on to point out that after the war this wing would be badly needed by Jubilee hospital. Could the minister tell us what is the policy with regard to these hospitals?

Mr. RALSTON: The policy in regard to hospitals must be determined by the particular circumstances. Obviously there is no opportunity to add to a hospital in the case of a camp which is isolated from any existing hospitals. There are a few cases, only a few —as a matter of fact I remember only one in connection with the army, and that was at Prince Rupert—where authorization may be given for the construction of an addition to an existing hospital. As the hon. member knows, this whole matter of hospitals now has been put in excellent shape, as far as preventing overlapping is concerned, with the creation of the interdepartmental hospitalization board which I think was the subject of discussion before the war expenditures committee last year. A civilian administrative member has been added to this board, at the instance of the war expenditures committee, and to it also has been added a hospital expert

in the person of Doctor George Stephens, formerly of Winnipeg. Treasury board will not give approval to the construction of a hospital without the approval of that committee. The committee meets whenever the need for hospital accommodation arises in a particular centre. It considers what the navy has there, what the army has there, what the air force has there, what pensions and national health have there and also what civilian facilities exist. In the light of those circumstances it decides the most economical and soundest method of procedure. The idea of building on to an existing hospital is attractive from some points of view. Economically, so far as immediate expenditure is concerned, it is not sound, because the cost per bed is very much higher than the cost of constructing an ordinary hospital. There is also the fact that it is highly desirable that service personnel have an opportunity, as part of their training, to treat and serve the service personnel in the hospital. I know of one case down at Gaspe where we rent a floor of the hospital. There the service doctors, the army, navy and air doctors, the orderlies and everyone connected with the service medical units, have the opportunity of dealing with their own patients; it is simply a wing or floor of the civilian hospital. When that opportunity presents itself we are glad to take advantage of it, but I think we can say that this matter of hospitals has had a thorough going over, and I believe the committee can be well assured that during the past year there has been little duplication in regard to hospital accommodation.

Mr. GREEN: I realize that there would be difficulties in administering an addition to a civilian hospital, but does not the minister think that in the long run it would be far cheaper, far more efficient and far more beneficial to the Canadian people for the department to build additions, wherever that is reasonably possible, instead of setting up its own military hospitals?

Mr. RALSTON: My hon. friend quite properly puts in the provision, "where it is reasonably possible or practicable," because each case is different. I remember one case where the training centre was two miles away from the hospital in town. It was suggested that we should build an addition to that hospital. This would have meant the continual use of gasoline, tires and oil running back and forth all the time to this hospital, instead of having perhaps a ten-bed hospital right on the premises; therefore we decided not to do it. There might be another case, such as Gaspe, where it would be possible. I am not sure whether it is a success, and I say that because I am in absolute ignorance as to just how we are getting along with it. However, I think it can be said that it is sound in the interests of everybody concerned and having regard to post-war as well as emergency needs.

Mr. GREEN: Why was an addition not built at Victoria?

Mr. RALSTON: The deputy quartermaster-general is giving me this information from memory, but he tells me that his recollection is that we took over the normal school at Victoria. We spent about $75,000 and provided in effect a 200-bed hospital. To have provided the same facilities in any other way would have cost between $400,000 and $500,000. It is a permanent building which can be used after the war.

Mr. QUELCH: Perhaps the minister would answer my question. I was at Hanna last fall and I visited the office of the special areas board and was shown on a map the area which had been taken over by the defence department. This consisted of several townships from which the farmers had been moved but the chairman of the board did not seem to know for what purpose this land was being acquired.

Mr. RALSTON: I may say to my hon. friend that I cannot tell him.

Mr. QUELCH: Perhaps the Minister of Munitions and Supply will know that.

Mr. RALSTON: I have sent out a note to find out if we have anything on it.

Mr. GLADSTONE: Is consideration being given to the building of chapels at the army camps? There is a rumour to this effect, and I do not know whether it applies to the army or the air force.

Mr. RALSTON: That is what I was speaking about, but I called them religious centres because they are used not only as chapels but as places where the men can go to discuss their private affairs with the chaplains. The list I have before me shows that none of these chapels has cost more than $10,000, and they go down as low as $7,550.

Mr. DOUGLAS (Weyburn): What is the total amount that will be spent on the forty-two chapels? Will any camps be without chapels? Will the chapels to be provided be Roman Catholic or Protestant, depending upon the church affiliation of the chaplain?

Mr. RALSTON: The total amount of the contracts let for the twenty-seven chapels is

$227,000. The chapels can be thrown open or can be used for the religious service of either denomination. When they are not being used for that purpose, there are private rooms where the chaplains may meet their parishioners. Religious centres are being built in all camps where a request has been made by the principal chaplain.

Item agreed to.

The CHAIRMAN: The next item is No. 5, personnel supplies and services; food, medical and dental stores, clothing and personal equipment, $185,868,300.

Mr. GREEN: About two months ago an announcement was made in the press that the army intended to reclaim thousands of men by curing physical defects. As I understood it, men who were not eligible for enlistment in the army would be taken in and given an operation or other necessary treatment in order to bring them up to the category which would permit them to serve. Has any progress been made with this plan?

Mr. RALSTON: It would be difficult to give any statistics with regard to the army. As I remember it, the plan was that a man who volunteered and required remedial treatment would be sent to the Department of Pensions and National Health under a certain scheme of pay if he were a serious case. If he were a less serious case, if he had some disability which could be readily cured, he would be enlisted in the army and treated by the army. I cannot give my hon. friend any statistics about those who came into the army, but I think any that were taken in would be taken in only on the sound judgment of the medical officers. I am advised that in connection with the Department of Pensions and National Health perhaps a few hundred have taken advantage of the provisions. These were mainly operative cases.

Mr. GREEN: Are the men enlisted before they get treatment?

Mr. RALSTON: Not the serious cases; they go to the Department of Pensions and National Health.

Mr. GREEN: How do they get back to the army?

Mr. RALSTON: They are discharged to the army.

Mr. GREEN: Are they attested before they go to the hospital?

Mr. RALSTON: No. We do not enlist the men that go to the Department of Pensions and National Health. They volunteer for the operation or other treatment and then come back to the army.

Mr. GREEN: Is that not the old scheme? I was referring to a new scheme that had been announced.

Mr. RALSTON: I do not know what my hon. friend is referring to.

Mr. GREEN: The scheme announced in March of this year was that a man would be enlisted and then receive treatment; the scheme the minister speaks of is one which has been in force for a considerable time. Under that scheme a man went voluntarily and took treatment and then when he was cured he enlisted or not as he chose. I should like to know what steps have been taken under the new plan.

The CHAIRMAN: I do not know whether these questions would come under the item which covers personnel supplies and services; food, medical and dental stores. It is for the committee to decide.

Mr. GREEN: I think they would come under medical stores.

Mr. RALSTON: I think I indicated that medical matters could be discussed under this item.

Mr. GREEN: Can the minister give us any information about this scheme?

Mr. RALSTON: I am sorry, but I cannot. I have just sent for the information. I do not know of any change under which we enlist a man in the army when it is not almost certain that he will react successfully to remedial treatment. I am bound to say that my hon. friend has caught me off base when he refers to a report in March to the effect that some change has been made. I shall have the information very soon.

Mr. GREEN: I will send over the clipping.

Mr. GRAYDON: I should like to ask a question with regard to the clothing allowance, which I think would be within the purview of this particular item. General order 139 was issued by the army and under it a number of personnel were called up for service, many of whom were veterans of the last war. These men were taken into the administrative and training staffs at the basic training and other centres in Canada. Some of these men have been discharged for various reasons. Under the ordinary discharge arrangements, when a man leaves the army he is given a clothing allowance or the equivalent in clothing. I have had complaints from time to time from men discharged from the basic training centres who

come within the category under general order 139, and I would ask the minister why a distinction is made in their case. Why are they not treated in the usual way upon discharge? These men are not given any clothing allowance. In every other respect these men are treated the same as those who receive a clothing allowance on discharge. The difference in treatment has caused considerable difficulty and some unrest. Would the minister explain, first, why the clothing allowance is not given to men in this category when it is given to men who are discharged in the ordinary way, and second, if the facts are as I have given them, and I think they are, will the minister give consideration to allowing a clothing allowance to the men who come within this category?

Mr. RALSTON: On the first point I say frankly that I cannot give my hon. friend the reason. These pay and allowance regulations are fearfully and wonderfully made. But they are the result of a good deal of thought and consideration by those who took the merits pretty well into consideration. I remember the pay and allowance regulations being reviewed prior to 1939 by a responsible body of men, and they were not men in the army alone. As a result these regulations were evolved. That does not say they are like the laws of the Medes and Persians, because they have frequently been amended since. But I shall certainly look into the matter. As I remember it, the clothing allowance is granted after six months' service. But I will see what the reasons are and whether any changes can be made.

Mr. GRAYDON: I would ask the minister to do that if he would, because the men I have in mind had all served for six months, which is the period the minister mentioned. I should be glad if he would give this matter his earnest consideration with a view to seeing whether some change should be made.

Mr. DOUGLAS (Weyburn): This item deals with stores, clothing and personal equipment. In the early stages of the war the army was at somewhat of a disadvantage because it was felt that the uniform was not as attractive or glamorous as uniforms in some of the other services. The minister is to be congratulated upon having issued to the army the walking-out uniform, which has done a great deal to improve the morale of the men. I believe in giving credit where credit is due, and I wish to say that whoever was responsible for designing the Canadian Women's Army Corps uniform is to be congratulated because it is by far the smartest uniform in all the women's services.

Mr. JACKMAN: That is a matter of opinion.

Mr. DOUGLAS (Weyburn): I think it is generally accepted by everyone that the Canadian Women's Army Corps uniform is by far the smartest of all.

Mr. REID: The air force pipe band's is not bad.

Mr. DOUGLAS (Weyburn): I am speaking only of uniforms.

Mr. REID: That is a uniform. Don't be insulting.

Mr. DOUGLAS (Weyburn): May I ask the minister whether the Canadian army has decided to use the bowler type of tin hat? I understand that in Britain the British government have decided to adopt or at least are giving consideration to adopting a steel helmet similar to that used by United States troops, on the ground that it gives better protection to the back of the head and around the ears. Has the Canadian army given consideration to that, and if so, has any decision been reached?

The other question I wanted to ask was with reference to revolvers which I understand are now issued to all non-commissioned officers, to No. 1 man on the Bren gun, and to commissioned officers. I have been told that the Canadian army along with the other forces of the British commonwealth is the only one that uses the single-action revolver; that all the other armies use the automatic revolver. I tried to ascertain the reason, and the statement was made that there is greater accuracy and less waste of ammunition with the single-action revolver. But that does not look like a very good argument because, if the automatic, even if it wasted ammunition, saved a man's life, it would be well worth it. Has consideration been given to issuing the automatic revolver instead of the single-action type? If not, what is the reason for continuing to use the single-action revolver?

Mr. RALSTON: First, with regard to the bowler type of tin hat, the revised or United States pattern, extensive study and actual tests have been made of an improved pattern both in the United Kingdom and by the Canadian army. Exactly the same consideration will be given here that is being given in Great Britain. We are just waiting for a report on tests that are being made of certain modifications, having regard to providing a

helmet that will give not only greater security but further facilities for use, particularly by signallers and services of that kind.

Mr. DOUGLAS (Weyburn): No decision has been reached?

Mr. RALSTON: No. With regard to the revolver I can only say to my hon. friend that the possibility of improvement of weapons is always under consideration, and that supply has something to do with the matter. I can go no farther than that at the moment.

Mr. GRAYDON: I think in connection with all these items we should be given a break-down of the expenditures which are bulked here under several heads. Item No. 5, for instance, covers expenditures under personnel supplies and services; food, medical and dental stores, clothing and personal equipment; total $185,868,300. I should like to have a break-down, showing the expenditures under personnel, supplies and services, and so forth, if the minister has that information available. If it is not available at the moment, perhaps the minister will put it on *Hansard*.

Mr. RALSTON: I can give it now roughly. Personnel supplies and services, $107,000,000; food, $60,000,000; medical and dental stores, $19,000,000.

Mr. GREEN: Why is there an increase of $40,000,000 in this item?

Mr. RALSTON: The increases are to provide for an increase in personnel over the average of last year and to provide for a higher cost of issue of rations, not only of rations, but some other supplies as well.

Mr. GREEN: What is the average cost per man in the army for a year for food and clothing and various other supplies?

Mr. RALSTON: My hon. friend understands that there are two or three divisions. Take clothing: what they call the vocabulary, as made up here, comes to roughly $85 for clothing and all personal outfitting. That does not include rifles or any equipment of that kind. In addition to that, for certain parts of Canada and for Newfoundland there is an addition of about $25.

Mr. GREEN: For clothing, et cetera?

Mr. RALSTON: Yes.

Mr. GREEN: That is, per year?

Mr. RALSTON: No. That is the initial outfit. The total cost would depend upon how often it is renewed.

Mr. GREEN: Has the minister the figures for cost of food per year per man?

Mr. RALSTON: No; I have not the cost of food.

Mr. GREEN: Could the minister get that?

Mr. RALSTON: I do not know whether I can or not. I will see if I can.

Mr. NOSEWORTHY: Could the minister give us information regarding the regulations for issuing uniforms overseas? I have been informed that a number of men overseas are still wearing the uniforms they were issued three years ago. Some of them report that theirs have become so threadbare they are ashamed to wear them. I wonder if that can be possible.

Mr. RALSTON: Of course I would say at first blush that it could not be possible, but I have learned enough on this job not to be surprised at anything, and I am very careful about making statements of that kind. Certainly, if the fact is as stated, there must be some most extraordinary situation in connection with it. I know that the supply of clothing is ample.

Mr. NOSEWORTHY: How frequently are uniforms issued?

Mr. RALSTON: There is no particular time. Uniforms are issued when a new issue is regarded as being required. The man gets the new issue and his part-worn one is worn as a second. My hon. friend, I suppose, does not want to give me the name of his correspondent, or the boy will be regarded as complaining; but would he give me the unit?

Mr. NOSEWORTHY: Yes; I can give the minister the name.

Mr. RALSTON: Could he give me the unit?

Mr. NOSEWORTHY: Yes. I have the letter.

Mr. RALSTON: I would appreciate it.

Mr. NOSEWORTHY: I have the letter which came from the soldier overseas. He makes the statement that he has been unable to get a new uniform since he got over, and the uniform he is wearing is out at the elbows and out at the knees.

Mr. RALSTON: I may say that the estimate for clothing this year is down from last year, on account of the fact that we have a bigger reserve on hand; so that the two things do not jibe.

Mr. GRAYDON: In this item there is a substantial amount set aside for the food requirements of the army. Would the minister give us some general statement as to the catering arrangements with respect to the army, whether catering is handled locally, whether it is done in a general way by some central arrangement, or how it is dealt with?

Mr. RALSTON: I am afraid there will be some hiatuses in my recital. The food is requisitioned by the district officers commanding the particular camps for which it is required. These requisitions come in here and are gone over at national defence headquarters, and what we call a contract demand is signed and sent over to the Department of Munitions and Supply. Munitions and supply put these demands together, not only for the army but also for the naval and air services, and purchase in quantities goods for delivery at certain points, at certain supply depots. The supply depots, of course, are all known to the supply authorities. There are supply depots in the districts, and in turn in the camps those supply depots are provided from the central depots. Sometimes all in-shipments are made direct to the supply depots and not to the district at all, and we have a supply officer there who issues to the units on the basis of the parade state the rations required for the particular day. If a unit is isolated, it probably has some storage facilities, so that it may have rations for two or three days in reserve.

From then on, the rations, of course, go to the unit quartermaster and from him to the sergeant cook, and by the sergeant cook are prepared for the men.

Speaking of the messing, I believe it has improved greatly. These are days of specialization. As the committee knows, we have a messing officer, Colonel R. H. Webb, who has been in charge of that matter. He has succeeded in impressing us with the fact that his branch is important, and the result has been that we have appointed messing officers in the various districts whose job it is to see to it not only that the food is provided but that it is put up in proper shape.

I would think that one of the chief arguments among these messing experts in reference to the preparation and serving of food is whether or not the so-called orderly system or the cafeteria system is to be used. I have heard both views expressed in camps; I myself am not in a position to express an opinion.

[Mr. Ralston.]

A good deal has been said about waste in camps. As is known, one of the jobs of the messing officers is to see to it that every possible care is taken to use all usable food. Contracts are made for garbage, and what cannot be used in any way is destroyed in the incinerators.

That is a very rough and ready survey of the food situation, but it begins with the requisition and ends up with the men at the table.

Mr. PERLEY: As regards a camp like Dundurn, would a contract for beef be let by the year?

Mr. RALSTON: It might not be. It might be a contract let by the Department of Munitions and Supply to the supplier for a supply of so much beef to the camps in a certain area. Then the Department of Munitions and Supply would direct that so many hundredweight of beef be sent each day to Dundurn; or it might be supplied direct to Regina and forwarded from there. But I would think Dundurn would be supplied direct by the contractor.

Mr. GRAYDON: Of course, contracts for supplies of food are wholly in the purview of the Department of Munitions and Supply.

Mr. RALSTON: Yes, and they are generally made on a three months' basis, or something like that.

Mr. ADAMSON: Since the director-general of medical services is here, could the minister give us the figures for rejects in the army? I know these have already been given, but can they be broken down into causes of rejection, whether rejected for pulmonary reasons, skin disease, heart trouble, rupture, flat feet, mental causes, or for whatever reason? I know all that information is available, and I believe it would be of interest to the committee to have it.

Mr. RALSTON: I do not want to have my hon. friend get us off on that if I can avoid it. I have a proposition to make to the committee with regard to general matters of that kind. I suggest with deference that the inquiry does not come quite within the purview of this item, but if my hon. friend thinks it does, I will stop.

Several questions have been asked, the answers to which I have not brought down yet, on items which we have passed. I suggest that in connection with the item for departmental administration we deal with any matters of that kind if they are not within the item we are discussing and if there is something about which questions have been asked. I do not

want my hon. friend to open up the general departmental administration to have a free-for-all talk about the department again, except in so far as the discussion may be relevant to that item. It has been suggested that hon. members might ask certain questions if they do not insist on answers at the time.

Mr. GRAYDON: The minister may be inviting the very thing he is trying to avoid. Under medical and dental stores, I cannot see very much reason why the hon. member might not be permitted to ask about the health of troops.

Mr. RALSTON: Probably it would be better and would help to keep us closer to the subject if we did that. I should prefer to consider it as part of this item. I have not the record before me. The other night I gave an indication of the large percentage of rejects which has taken place. I believe the rejects are in the vicinity of fifty per cent at the present time, and I may observe that this was under consideration in connection with the Pulhems system. Was my hon. friend asking about the break-down?

Mr. ADAMSON: Yes.

Mr. RALSTON: This is only approximate. It may change as the system gets into effect, and there may be some difference between those called under the National Resources Mobilization Act and the volunteers, because the volunteers are in a wider range of age class than those under the National Resources Mobilization Act. Roughly, however, the rejections are of the order of thirty-five per cent on medical grounds and fifteen per cent on nervous and mental grounds.

Mr. ADAMSON: Thirty-five per cent of the total?

Mr. RALSTON: Of those examined, fifty per cent roughly are rejected, and thirty-five per cent of that fifty per cent are rejected on the ground of physical disability and about fifteen per cent on the ground of mental and nervous disorder.

Mr. ADAMSON: That is, of the total fifty per cent rejected, thirty-five per cent are on physical grounds and fifteen per cent on mental?

Mr. RALSTON: One hundred men come up and fifty are rejected. Of those fifty, thirty-five are rejected on physical grounds and fifteen on the ground of mental or nervous disability.

Mr. ADAMSON: That is what I am driving at. I think it would help the committee on social security and this committee as well, to get at the true state of the health of Canada at the present time if we knew how many were rejected for tubercular lesions, for example. These figures are available, because at the reception depots—this I know is the case at the depot in No. 2 district—at the end of a period the percentages are calculated from a daily tally. The information derived therefrom would be very useful for this committee.

Mr. RALSTON: This committee or another?

Mr. ADAMSON: It would be useful for this committee, and the other one could use it, too.

Mr. JACKMAN: Would the minister be good enough to say whether there is any co-ordination in the handling of food and the preparation and serving of it between the different armed services, particularly among the army, the air force and perhaps the navy? In connection with the messing officers, with regard to whom the minister mentioned Colonel Webb, are these qualified medical practitioners and nutritionists, or are they drawn from the quartermaster's department in accordance with the manner in which the army used to be fed in the old days? Does the army retain women in connection with the preparation of food or in connection with dietary matters as regards the feeding of the troops? I have heard it said that in one of the services the orderly officer, instead of going round to the mess halls and asking the men if they had complaints, usually receiving no response at all, as has always been the custom, is now required, during his day on duty, to take his meals with the men in order to find out for himself just what the condition of the food is. Would the minister be good enough the answer these questions?

There is another question I might ask at the same time. Is it true that the ration given to our men in Canada is greater than the ration which maintains the fighting strength of our own soldiers in Great Britain?

Mr. RALSTON: First, with regard to co-ordination, each of the armed services has its own plans for the serving of food.

Mr. JACKMAN: There is no coordination despite the tremendous amount of research work that has gone on in one or other of the services? I frequently hear—

Mr. RALSTON: Please let me finish. Each service has to do with the serving of its own food, but there is coordination in the nutrition committee. We have a joint nutrition com-

mittee dealing with all three services, headed by an eminent Toronto gentleman, a member of the faculty of the university of Toronto.

Mr. JACKMAN: How long has that joint committee been in operation?

Mr. RALSTON: A year anyway; perhaps longer than that. Each service has to do with the actual serving of its own food. What was the other question?

Mr. JACKMAN: Is there a uniform diet for the men in the army, and for the air force in Canada?

Mr. RALSTON: They have a uniform diet, but there are options on the diet. Some units may take a different option from others.

Mr. JACKMAN: With regard to the messing officers whom the minister mentioned, are these men qualified medical practitioners, or are they drawn from the quartermaster's department? Further, does the army employ women in connection with the preparation of food or as dietitians at the various army depots?

Mr. RALSTON: The messing officers are not medical officers, nor are they from the quartermaster's department. Generally, they are from the unit and are given special training as arranged by Colonel Webb and his messing branch. With regard to the preparation of food by women, in some camps women do prepare food and in others they do not. I have explained that the supply of C.W.A.C personnel is not great enough to supply all our needs in that respect. Generally speaking, women in hospitals do prepare the food and there are professional women dietitians as well.

Mr. JACKMAN: My other question is whether the food ration for our troops in Canada is greater than that sufficient adequately to maintain the fighting strength of our troops in Great Britain?

Mr. RALSTON: The ration overseas is the ration which conforms with British standards, and is regarded as quite adequate to maintain the fighting standards of troops overseas.

Mr. JACKMAN: Is the ration in Canada a greater or lesser amount?

Mr. RALSTON: As my hon. friend knows, I think the ration in Canada is greater in some instances.

Mr. McCANN: It would be too bad if the impression were to go out to the people of Canada that fifteen per cent of those whc come up for medical examination are rejected on the ground of mental and nervous conditions. I suggest that the implication and the significance of such a statement would cause a great deal of concern in the minds of our people. I suggest further that the minister use the term "emotional instability," which is used under the Pulhems system. This term conveys an entirely different impression from saying that these people are mentally unsound or suffering from a nervous condition.

Mr. RALSTON: I must say I never liked the term because "emotional instability" did not seem to convey anything. However, I certainly accept the correction, and shall be glad to use it.

Mr. McCANN: The other term is too strong.

Mr. RALSTON: If permitted, I would insert the term in the record, in place of the other one.

Mr. GRAYDON: It sounds like a legal term.

Mr. McCANN: That is one of the classifications under the new system.

Mr. RALSTON: As my hon. friend is aware, reference to a mental condition includes not only a nervous condition but also low mentality.

Mr. McCANN: On many occasions I have been asked about the number of men being returned from England, and why there are so many with a mental condition. The newspapers have stated on occasions that so many men have been returned on account of mental condition. Those men may be emotionally unstable, but that is an entirely different condition from what is implied in the general understanding of a mental condition.

Mr. RALSTON: We will use the term "emotional instability," then.

Mr. ROSS (Souris): We have been told the percentage of men rejected upon application for enlistment. Further, we are told there have been about 100,000 discharges from the army, of which number about 7,000 have been returned. Could the minister give the percentage of the 100,000 who have been discharged on account of either physical defects or emotional instability? I have always pointed out that this is a very large percentage of waste. The minister may be in a position to tell us the cause for this tremendous number of discharges of men who have had some training in the armed forces.

Mr. RALSTON: The director-general of medical services tells me that, to be entirely accurate in connection with cases of nervous or mental disability, one ought not to use the

classification I used, but rather one would refer to emotional instability and mental deficiency. There are two factors. There are not only the simple neurotic types represented by the term "emotional instability," but also those who are mentally deficient.

Mr. ADAMSON: And there are morons, as well.

Mr. RALSTON: The number of discharges, according to part 2, unit orders—and I have to put it in that way, because there is some difference between part 2, unit orders and the number of discharges actually recorded here in the records office—stands at 74,410, to April 30, 1943. Those medically unfit, including the mentally deficient and emotionally unstable—and they are classified together—number 54,044. That does not include personnel under the National Resources Mobilization Act. In the beginning the records office in charge of National Resources Mobilization Act personnel had a tremendous load placed upon them. They did not have time to make up the Hollerith cards. However, they have been catching up on the Hollerith system, and I believe within three or four weeks we shall have the full figures for personnel under the National Resources Mobilization Act. I refer to discharges particularly. They will be in addition to the number I have given.

Mr. ROSS (Souris): I should like to find out whether the great percentage of these people broke down in training, or whether the examination upon attestation had been insufficient. It seems to me that in a large percentage of cases some medical defect may have been missed, upon enlistment.

Mr. RALSTON: I believe I have given my hon. friend all the information I have. Of course I have not individual case histories.

Mr. ADAMSON: I disagree with the hon. member for Renfrew South. In my opinion the Canadian people should be shocked, and the more shocking we can do in respect of our mental attitude toward mental health in Canada, the sooner we are likely to improve it. According to the "Canada Year Book", numbers in our mental institutions are doubling every thirty years. That is a very serious condition, and the sooner the Dominion of Canada is shocked into doing something about the mental health of our people, the better it will be. I hope the figures we hope to get from the army will show the seriousness of the situation. That is why I raised the matter.

Mr. NOSEWORTHY: Under this item would the minister give an outline of the educational work being done among the soldiers? I am thinking of educational work apart from regular army training.

While I am on my feet I should like to compliment the minister and his department upon the magnificent job of educational work they are doing in the educational centre at North Bay. I have watched the progress of the work there, and I have been delighted to find the excellent job being done in that camp.

Mr. RALSTON: The hon. member was most generous in the letter he wrote me the other day in which he referred to his visit to North Bay. I appreciate what he has said.

The army has two educational centres, one at North Bay and the other at Joliette. These two centres handle men who are not mentally deficient or emotionally instable, but who have not had a fair chance in civil life and who, as a result, are simply illiterate. They are promising material, if given an opportunity to learn. We send them to these points. In this work we have been extremely fortunate in obtaining not only men of excellent experience as educationists, but men who have a sympathetic understanding of the situation, and who realize that they are salvaging an important asset not only for the army but for Canada. The men at these training centres, both Joliette and North Bay, get their basic training there instead of at an ordinary training centre, and at the same time they are given this educational training. I do not think that educational training is limited in the same way; that is to say, a man is not told that he must train for two months and that is all he gets. What we try to do is to train them sufficiently that they can be reasonably efficient soldiers; and of course it is a satisfaction to them, as it is to the teachers, to have them become more proficient in training which will help them in connection with their soldiering and also will enable them to write to the folks back home and let them know that some of the opportunities which hitherto they have been denied have finally come to them. It has been a great satisfaction. The number is not large, of course; North Bay, I think, would take about 750, and Joliette nearly the same number, but there is no doubt it is a worth-while investment and a worth-while effort, and I am sure it will yield good results to the army and to the country as well.

Mr. CASTLEDEN: What standard is used to decide whether or not a man is illiterate?

Mr. RALSTON: You mean before he goes to one of these camps?

Mr. CASTLEDEN: Yes. Is it the ability to read and write?

Mr. RALSTON: The army examiner at the depot, recruiting centre or induction centre examines the man and decides whether or not his mental capacity is such that he would be able to absorb training and give promise of becoming a useful soldier. If that is decided, the army examiner makes his report accordingly and the man goes to the centre, where the officer in charge has that knowledge of his qualifications and knows what he requires in the way of special attention. I am also reminded that not at North Bay, not at Joliette, but throughout the camps the directorate of army education which is under Colonel Kilpatrick, who is known to a great many hon. members, has the benefit of the help and co-operation of the Canadian Legion educational services, which, as hon. members know, has been operating in Canada and overseas ever since the beginning of the war. An attempt has been made to connect the legion services and those services which perhaps the army has more facilities to furnish, and put them together in the shape of something which would be useful primarily to make a man a better soldier—and I want to impress this upon the committee—because that is the army's job; but that effort cannot help but have its effect in fitting a man to be a better citizen as well. They are not given the frills or the embroidery; they are given good, sound education which will help them both in the army and in civilian life.

Mr. CASTLEDEN: Could the minister give the percentage of the men enlisting in Canada who are classed as illiterate?

Mr. RALSTON: I cannot give that at the moment, but I will see if I can get it.

Mr. GRAYDON: I should like to make one observation in respect of a matter which came up a few moments ago, as to the use of the medical term "emotional instability". It seems to me that in connection with those who return from overseas who may come within that classification we should give some consideration to the use of another expression, perhaps that which was suggested by the hon. member for Renfrew South. I think our men who come back suffering either temporarily or permanently from that condition should be regarded as war-shock casualties instead of being called "emotionally unstable" or considered to have some mental incapacity, because it seems to me there is a vast difference. I think we owe that much to the men who have gone through so much in the air, on land and at sea, and I should like to offer that suggestion to the minister. I believe some other term should be used in order to remove any vestige of stigma in that regard. I think the expression "war shock" would be proper and appropriate in that connection.

Mr. RALSTON: So far we have been using the term in connection with men who have been rejected, not in regard to men who have been discharged; I want to point that out.

Mr. ROSS (Souris): I should like to ask whether in the medical examination given to a person offering to enlist, a thorough examination is made for venereal disease and, if not, why it is not considered feasible to do so.

Mr. RALSTON: I have discussed this matter before the committee on previous occasions. As was indicated in a return brought down, the situation is that the Wassermann test is not administered at the time of enlistment. The committee will recognize, and we are so advised by the medical authorities, that this is not necessary; that is to say, a man does not need to have a negative Wassermann test to be qualified to be admitted to the army or any other of the armed services. The point is to discover his condition, if he should have a positive reaction, and to see that he is treated promptly. What the army has done is to arrange and put into effect a system whereby men will be given a Wassermann test as soon as possible after enlistment. I may say that positive reactions do not always indicate v.d.s. or v.d.g.; but those who have positive reactions are immediately put under observation, and if the disease exists, they are given prompt treatment. The principal physical equipment necessary in connection with the Wassermann test is the laboratory equipment; as my hon. friend knows, it simply consists of taking a sample of the blood, and the laboratory facilities are used to test the blood and keep proper records. Arrangements have, I think, been made with every province whereby provincial laboratories are to be placed at the disposal of the armed forces, and these facilities are being made available. I am hoping that by July of this year we shall have facilities throughout Canada for making between three and four hundred thousand tests a year. In that connection I just wish to say that some people have the idea there has been no Wassermann test in the army. There has not been a universal Wassermann test, but I am told there have been over 143,000 Wassermann tests made by the Department of Pensions and National Health as well as the army, probably during the last one and a half to two years.

Mr. ROSS (Souris): Then it is the intention to make these tests compulsory as soon as possible after a man has enlisted; is that it?

Mr. RALSTON: The order is out now making it compulsory for the medical officers to give the men the test. There is only one thing that is lacking, namely, laboratory facilities. They are available in quite a number of the provinces, and as fast as they become available generally the tests will be given. We shall be able to catch up with those who did not have the test promptly after they came in. We expect that by July 1, the machinery will be in operation over the dominion.

Mr. DOUGLAS (Weyburn): Will the minister tell us after recess how many men in Canada and how many men overseas have been tested up to date?

Mr. RALSTON: Yes; I shall have that.

At six o'clock the committee took recess.

After Recess

The committee resumed at eight o'clock.

Mr. GREEN: Has the minister the information about reclaiming men who are unfit?

Mr. RALSTON: No.

The hon. member for Weyburn asked the numbers who had been given the Wassermann test in Canada and overseas to date. We have not the overseas figures, but in Canada over 143,000 were tested in 1942, and the approximate number to date this year is 75,000. The plan is that the facilities will be such that about 360,000 will have been tested during this year, beginning with June 1.

Mr. DOUGLAS (Weyburn): Are plans being made to give all the men overseas the Wassermann test also?

Mr. QUELCH: Has the minister obtained information regarding the Youngstown project?

Mr. RALSTON: I shall have to ask my hon. friend to give me more particulars about that. I intended to inquire, but was so crowded that I did not have time.

Mr. FRASER (Peterborough West): On May 13 I had on the order paper a question, which was passed as an order for a return, in regard to checking for venereal disease the men who had been enlisted into the army. I asked if they were checked. I also wish to know if those who were rejected for the army were also checked. The reason why I ask is that if those checked are given treatment and cured, they might make good material later on for the army. Since then, I notice that Lieutenant-Colonel Williams said at a meeting of the social security committee of this house that an army general order had gone out three weeks before to give routine blood tests for venereal disease to those enlisted in the army. Has that policy been started yet?

Mr. RALSTON: Yes. Perhaps my hon. friend was not here this afternoon.

Mr. FRASER (Peterborough West): I had to go out just before six o'clock.

Mr. RALSTON: That routine order has been issued. The principal necessity in connection with the Wassermann test is laboratory facilities. It is a blood test and the test has to be made in the laboratory. Arrangements have been made with all the provinces to supply their laboratory facilities, and by June 1—I said July this afternoon—it is expected that things will be in shape to start the tests immediately and to follow them through so that about 360,000 will have been tested when the year is over. There seems to be some misapprehension about the Wassermann test, and my hon. friend showed it in his question. Men are not generally rejected, as I understand it, because they happen to show a positive reaction; treatment, unless they are in a late stage, is efficacious and generally cures them. Therefore, men are taken in, not rejected on that account. The men who are so far gone, shall I say, as to be rejected go back into civil life. Was my hon. friend asking whether these cases were reported?

Mr. FRASER (Peterborough West): That is what I wished to find out, whether they are quarantined and reported, as I believe is done in the United States, given treatment and let go when cured.

Mr. RALSTON: They are all reported to the civilian authorities if they are rejected on that account.

Mr. FRASER (Peterborough West): The minister stated that the tests are to begin in June or July. I understand that practically all the training camps across Canada permit the men to go to the Red Cross blood-donor clinics and give their blood. When they go to these clinics they are given the Wassermann test. Does the army keep a check on these cases to see if they are O.K.?

Mr. RALSTON: The director-general of medical services advises me that we do get a check on that. When men who go from the army to these blood-donor clinics are found to have a Wassermann reaction, we get a report on them.

Mr. FRASER (Peterborough West): Does the women's army undergo the same check?

Mr. RALSTON: The intention is that they will be checked in the same way as the men.

Mr. DOUGLAS (Weyburn): Is it the intention of the department to give all the men overseas the Wassermann test? The reason why I ask is this. I notice that some writers in Great Britain have been expressing considerable alarm over the serious increase in venereal disease in Great Britain. Therefore I think it is important to know whether the department is planning to examine all the men now stationed in Great Britain. Can the minister also give us the number of men who have been discharged from the army on account of v.d.s. or v.d.g., and the number of men who have been treated and retained in the service as cured?

Mr. RALSTON: I am informed by the director-general of medical services that no instructions have been given overseas for giving everybody over there the Wassermann test; that is, men who have been in the army. The check is planned to be made upon reexamination or upon hospitalization. Hon. members will see that men who have been over there for a good while and are in healthy condition are not in quite the same position as the men in Canada. As a matter of fact, this whole movement, as my hon. friend knows, is not as active in the United Kingdom, even among the civilian authorities, as it is in Canada.

As to the number discharged, in a return to an order of the house dated March 24, 1943, order No. 41, it was asked: "How many have been discharged from all branches of the active service overseas up to December 1, 1942?" The answer was, "7,722." "What percentage of these were discharged because they were suffering from syphilis?" The answer was "·725 per cent, a total of 56 cases." Then, question No. 5, "How many of the armed forces serving in Canada only were discharged up to December 1, 1942?" Answer, "71,488." "What percentage of these were discharged because of syphilis?" Answer, "·505 per cent, or a total of 361 cases."

Mr. DOUGLAS (Weyburn): The minister was to give me the figures of how many men have been treated and cured.

Mr. RALSTON: We have not them right here. The director-general of medical services is endeavouring to see if he can get them.

[Mr. Ralston.]

Mr. DOUGLAS (Weyburn): It seems to me that some consideration ought to be given to the advisability of making the Wassermann test universal for Canadian troops now stationed in Great Britain. One of the British medical authorities made the statement in a periodical a few weeks ago that venereal disease in Great Britain had increased about forty per cent and that there was a great deal of alarm on that account. I would think that for the protection of the Canadian troops there should be periodic examinations. I know the laboratory facilities required would be very large, but it would seem to be possible to take men by units, by brigades or divisions, and have at least an annual Wassermann test for the protection of these men in order that proper treatment might be given before the infection had done serious damage.

Mr. RALSTON: I have made a note of what my hon. friend has said, and I will discuss it with the director-general of medical services. He tells me there is a periodic examination, but it is not a periodic Wassermann test, which of course is what my hon. friend is talking about.

Mr. McCANN: Is it the intention of the army medical authorities to have a blood-reaction test on discharge from the army or on demobilization? It would be a protection to the individual himself and also to the civil population, and it might provide information worth while in the event of a man being discharged and being a potential pensioner.

Mr. RALSTON: I have made a note also of that. The matter of a test on discharge as distinguished from a test during service has not been determined upon, but I will discuss it with the director-general of medical services.

Mr. FRASER (Peterborough West): Across Canada we have a number of wartime housing staff houses. Some of these have cost a great deal of money, and some at the present time are losing money. The staff house at Peterborough has about ninety men in it at the present time, and I understand the loss on these premises alone is over $5,000 a month. Has the minister considered using these staff houses for hospitals for the armed forces? They are extremely adaptable for that purpose, and could be turned into suitable hospitals at very little cost.

Mr. RALSTON: Of course, as my hon. friend understands, it depends upon the location of these staff houses. I will make inquiries. We do not want to build any hospitals if we can adapt to the purpose places which are already available. I take it that these houses are in industrial districts.

Mr. FRASER (Peterborough West): Yes, they all are in industrial towns. They are located right across Canada, at Sorel, St. Catharines, Peterborough, Hamilton, Fort William, Pictou, New Glasgow, Halifax, Amherst, Saint John, Prince Rupert, Vancouver, and Esquimalt.

Mr. McCANN: What amount of money does the department propose to spend this year with reference to additions to civilian hospitals throughout Canada to be used during the war period for the treatment of men in the service? I understand that as a matter of policy the government have adopted the plan of making grants to civilian hospitals. A case in point is the city of Ottawa, where an addition is being made to the Civic hospital. Is that general policy throughout the country and, if so, what amount does the government propose to spend within the next year for this purpose?

Mr. RALSTON: As I was explaining this afternoon, it cannot be said that there is a general policy of spending money for additions to civilian hospitals. Each case has to depend upon its merits and the circumstances. That is to say, in a city it may be quite possible to do that, and in camps, of course, it is impossible. There is not any specific amount which is set aside for that purpose, but each case will come before the interdepartmental committee, and if authority is given, of course the money will be available. There is sufficient money in this vote to take care of that situation.

Mr. McCANN: Has the government given any further consideration to the matter of amalgamating the medical services of the three departments? Two years ago, when the war appropriation estimates were up, I made some observations along this line. It is generally known that there is a very considerable shortage of medical personnel throughout the country, and the services of the medical profession have been given freely and generously from one end of Canada to the other. I have felt since the beginning of the war that it was a triplication of services to have a medical corps in the army, one for the air force, and a separate one for the navy. I have suggested before that we could have a distinctive Canadian medical corps; call it the Royal Canadian Medical Corps and give the members a distinctive uniform, and they could render service in any particular branch. After all, when men or women in the services are ill and go into hospital, there are very few problems peculiar to one branch of the service. I understand that in connection with the air force problems arise having to do with flying and with altitude, but they are not such as could not be easily handled by a medical board as one unit.

My reason for making the proposal is, partly on account of the enormous expense which is entailed to the country in having three services, but more particularly because there is throughout Canada a very serious shortage of medical men to take care of the civilian population. I know this matter is being studied and acted upon by the assignments and procurements board; steps are taken to keep available medical men, especially in rural and smaller communities, in order that these essential services to the civilian and the industrial populations may not be lessened and that there will be a reasonable amount of care in these particular localities. I believe, and I think it is the opinion of medical men throughout the country, that it is a waste of money, man-power and efficiency to have a triplication of services. I do not know personally, but I have been told that last year, on the Pacific coast, for 6,000 men in the naval service there were fifty-four doctors. That would work out at one doctor to 150 men, which of course is out of all proportion to the number who attend to the civilian population ordinarily. I submit to the minister that it is an unfair distribution of an essential service.

While I am on this point I wish to commend the minister for the tribute which he paid the other day to the medical men of this country. The derogatory and insulting remarks made by the hon. member for Temiscouata with reference to the medical men, that they represented the dregs of the professon, are absolutely untrue. It is false and is a gratuitous insult, and I hurl it back into the teeth of the man who made it. After all, the medical men in the armed services are but a cross-section of those who are in the profession in Canada. Let me say that the medical profession in this dominion stands as high as that profession does in any country in the world. That is generally conceded, and to have a member of this house hurl an insult at a dignified and worthy profession, a profession that gave freely of its services in the last war and is giving those services with equal liberality in this war, is not worthy of the man who made that statement.

I wish the minister would take into consideration what I am about to submit to him

The war may last for a couple of years longer, and although it would have been good business economically, from the point of view of saving man-power, to have had one medical board for the three services at the beginning of the war, it is not too late, because if the war drags on for another two or three years, not only the services of the armed forces but also the civilian services will suffer for lack of trained medical personnel.

Mr. RALSTON: I am glad that the hon. member has spoken as he has. I felt really that what I had said was inadequate to deal with the situation, on which I hold views as strongly as the hon. gentleman does. I may say to him that when I was speaking the other day of the members of the medical profession in the armed forces I intended to mention, and I should have mentioned, the cooperation which has been given by the medical profession generally to the armed forces, whether the members of the profession happen to be in uniform or not. Speaking as a member of another profession, I am sure that no profession could have given more wholeheartedly or more devotedly or effectually of their time and talents than the medical profession in Canada generally has done, and that has meant long hours of service contributed gratuitously in an endeavour to assist the armed forces and to help in the prosecution of the war.

The Canadian Medical association, including their French-speaking compatriots in the province of Quebec, have all united to see that everything possible was done in order to serve the armed forces and at the same time to endeavour to meet the needs of the civilian community; and men have worked early and late, committees of doctors in the various towns, at some disagreeable tasks in an effort to find men who could serve in each of these capacities.

In reference to the matter of scrambling of medical services in the armed forces, that is a subject which is being considered by the medical assignment and procurement board which has made a survey of all Canada in order to ascertain, first, the supply, and, second, the needs, not only of the armed services but of the civilian population as well. In their report I am sure they will be dealing with the question of the best use of medical man-power in the three armed services and also in the department of pensions, which is the other governmental service particularly concerned. What may be done in respect of that matter I cannot of course predict.

Members of the committee will recall that the unscrambling of the services came at a time when strong representations were made that there were differences in technique and in the manner of handling the various disabilities that arose as a result of the particular service in which a man happened to be engaged, and it was also at a time when medical man-power was not nearly as scarce as it is to-day. The assignment and procurement board has the matter fully under consideration, and the government will give every attention to it when the report is received.

Mr. GRAYDON: Perhaps it might be of interest to know, now that the three ministers are in the house, the distribution of medical men in the three services. How many are there in the army, how many in the air force and how many in the navy? That goes to the root of the question that has been raised.

Mr. MACDONALD (Kingston City): May I ask the hon. member for Renfrew South one question with regard to the figures he has given of the medical men on the Pacific coast. I understood him to say that there were fifty-four medical men in that area for a total force of 6,000. I wonder if he has checked those figures. My impression is that the number of doctors he has given is too high. It is about thirty, I think, but I cannot speak with assurance on the point.

Mr. McCANN: I have not made that statement from my own personal knowledge. I was told by a medical man in the service that as at November 1, 1942, these figures were correct, fifty-four doctors for 6,000 men in the naval services there. I am not making that statement critically, because it is only a maldistribution of man-power, and at the time it may well have been that men were congregated in British Columbia when the forces were there and more forces may have been expected. I can readily understand the difficulties which the minister and his advisers will have with reference to the distribution of medical personnel. You cannot just call up a doctor or procure one out of a mail order catalogue, and it may have been that the men were there prior to the time when the forces that it was expected would be there had arrived. I am quite sure that such a proportion may exist in other places and in other parts of the service, and in making the statement I do not intend to be critical. My only wish is that the men who are entitled to it shall receive the best service there is, but that at the same time other parts of the country, in civilian and industrial life, may also have a fair distribution.

Mr. MACDONALD (Kingston City): If there were such a number of doctors on the

Pacific coast at the time, a good many of them must have been there for training purposes, perhaps for only a few weeks or a month. I was there in late October, and my recollection is there were about thirty doctors at that time. Even some of those were doctors merely attached to the base for the necessary training and disciplinary course. I think the average number of doctors in the navy is something like four for every 1,000 men, or one for every 250 men.

Mr. McCANN: I suggest to the armed services that, if there is and continues to be a shortage of medical men, young men who are of age and practising medicine throughout Canada be inducted into the armed forces, and that it be unnecessary for them to take basic training. Let them return to their civilian practices, but be on call at any time at twenty-four or forty-eight hours' notice. I believe this suggestion would work out well. If the time comes when we have to send increased reinforcements overseas, and it becomes necessary to augment the numbers in the medical services, then in from forty-eight to seventy-two hours those men already inducted into the medical corps of the armed services could on short notice report for duty.

Mr. RALSTON: The leader of the opposition asked a question as to the number of doctors in the three services. As at April 30, 1943, my figures show: navy, 301; army, 2,135; air force, 683, making a total of 3,119. From July, 1942, to the present date the following have been assigned by the medical assignment and procurement board: for the navy, 100; for the army, 677; for the air force, 181.

Mr. FRASER (Peterborough West): At Camp Borden a clinic has been set up by chiropodists of Toronto. Have any other camps chiropodist clinics? Are any being taken in, and what training are they being given? I know of a number of men who, when on leave, in order to remain in the army, have gone to chiropodists, and have also bought special shoes or boots so as to participate in the marching.

Mr. RALSTON: I am told that the services of chiropodists are being utilized at many of the big camps. Camp Borden is the only camp at which a class is being carried on. As the hon. member knows, the Royal Canadian Army Medical corps training centre is at Borden, and that would be the natural place to train chiropodists.

Item agreed to.

On item 6—Signal and wireless equipment, line construction, et cetera, $27,826,751.

Mr. GREEN: How much of this is for installations overseas, and how much for Canada? Why should there be an increase of practically 100 per cent?

Mr. RALSTON: The amount shown as expended for 1942-43 is what was actually expended, under existing conditions. It was anticipated that a great deal more would have been expended but, in view of the comparative inactivity, it was not. The reason for the difference is the increased equipment and reserves, looking forward to the possible activity of this fiscal year.

Mr. GREEN: Is it practically all to be expended in Canada?

Mr. RALSTON: This money?

Mr. GREEN: Yes.

Mr. RALSTON: Canadian wireless, particularly, is really just coming into its own, so far as extensive production is concerned. In the past there has been a great deal of expenditure on wireless sets of the United Kingdom. We have developed two or three sets of our own which are particularly good, and of which we are rather proud; and there will be a very much larger proportion spent in Canada this year.

Mr. FRASER (Peterborough West): Does this take in teletype machines? I understand that up to a few months ago if repair work had to be done outside Ottawa, an Ottawa repairman did the work. At the same time there was a man in the services, stationed at Kingston, who, although a good repairman, was never used. The Ottawa man was always called in.

Mr. RALSTON: If that happened I think it was an instance of poor administration. The director of signals will make inquiry into the matter. Repair districts are set up throughout Canada, and of course there will be a distribution of workmen.

Item agreed to.

On item 7—Ammunition and bombs, $273,325,890.

Mr. DOUGLAS (Weyburn): Why is this item fifteen times greater than it was last year?

Mr. RALSTON: For the same reason I gave the hon. member for Vancouver South in connection with another item. This item, also, was much larger in last year's estimates than

subsequent activities warranted. The present item provides for full equipment and reserves for every gun and mortar the Canadian army or any of its formations will have for the whole year. That is the simple explanation of it.

Mr. FRASER (Peterborough West): Does the army buy from the Department of Munitions and Supply, or direct from the plants?

Mr. RALSTON: Sometimes. There is an arrangement with the British under which ammunition is bought by the British. Since it is anticipated we shall be serving with the British, when we serve with them we will be furnished by them with ammunition. It will be Canadian ammunition. But, as in the last war, it is based upon a capitation basis; that is to say, so much per gun. The rounds are not counted; it is just simply a service for the guns which is provided by the British.

Mr. MacINNIS: Formerly the arsenal at Quebec, and other Canadian arsenals were under the control of the Department of National Defence. Is that so to-day?

Mr. RALSTON: It is under the Department of Munitions and Supply.

Mr. MacINNIS: I shall not discuss the matter further, then, at the present time.

Item agreed to.

On item 8—Armament, including rifles, machine guns, mortars and guns of all descriptions, $123,070,907.

Mr. GRAYDON: Having in mind the matter of public security, can the minister make a statement as to the proportion of manufacturing in Canada of rifles, machine guns, mortars and guns of all descriptions?

Mr. RALSTON: About eighty-five per cent of small arms; that includes rifles, Bren guns and Stens.

Mr. GREEN: Have we not now reached the stage where our reserve army can be given complete equipment, including mechanical equipment? The minister praised the reserve army very highly the other day when he was making his statement, and I should like to join with him in paying tribute to them. They have done remarkably good work, but I think the time has come when they should get complete equipment, and I would ask the minister whether it is not possible for us to give them that equipment now. When the minister was speaking the other day he hinted that the reserve army were to be given additional responsibilities, particularly in the coastal areas, and he went on to say that this would apply especially to infantry and anti-tank units. Is the time coming when Canada will have to depend upon the reserve army for the defence of her shores? If that is the plan, I suggest that we cannot give them complete equipment too soon. I should like also to have the minister make a statement with regard to the equipment of the Pacific Coast Rangers, for example. I do not believe they have received full equipment yet, nor have they been issued uniforms. When can they expect to get this equipment and these uniforms?

Mr. RALSTON: I have not in mind exactly the scale of equipment of the Pacific Coast Rangers, but I will look into that. In reference to their uniforms, I have a definite recollection of having authorized a special water-repellent uniform for them, I think only the week before last. I believe two uniforms per man are to be issued, one being water-repellent.

Mr. GREEN: Is that for all of them?

Mr. RALSTON: I have it in mind that the authorization was for 15,000 suits in all. With regard to equipment for the reserve army, it goes without saying that we will provide equipment just as quickly as possible. As my hon. friend knows, our equipment is not simply for the Canadian forces; it is for the allies as well. However, this year we expect to do considerably better than we have been able to do so far in connection with the equipment for the reserve army, in things like transport, carriers and matters of that sort. We have had some improvement already; as my hon. friend knows, we have formed pools in the different districts in order that units might have sufficient equipment to carry on their training, and I know they have responded well. I think they have shown a great deal of consideration in view of the fact that we have been short, but every bit of equipment is being used, I can assure my hon. friend, and we do plan to give the reserve army more equipment; I have just consulted my officer who has that matter in mind. I indicated exactly what I had in mind when I said that we were looking forward to giving the reserve army more responsibility in defence roles, particularly in connection with anti-aircraft work, and that will mean more equipment will be issued to them.

Mr. GREEN: Is there a plan that eventually they are to be relied upon to defend our shores?

Mr. RALSTON: That just depends upon events; we cannot tell. It depends upon how long the war lasts, and what are the calls upon us. It is planned that they shall be ready to do so.

Mr. GRAYDON: May I ask if there is any shortage of Bren guns in the equipment of the reserve army? I have heard that statement made, and I wonder if the minister would say whether or not that is the situation.

Mr. RALSTON: We are not up to establishment in Bren guns for the reserve army.

Mr. GRAYDON: Does the minister expect to have the supply of Bren guns for the reserve army brought up to establishment in the very near future?

Mr. RALSTON: It depends upon activities overseas, as my hon. friend can understand. We are doing everything possible to bring the Bren guns for the reserve army up to establishment, but as my hon. friend knows, we will send them overseas first.

Mr. FULFORD: Speaking as a member of the reserve army, I must say that I have been astounded at the amount of equipment the reserve army now has, and also at the vast improvement in the curriculum. In our own unit, which is a small one, we are equipped with Bren guns, Sten guns—a type of Thompson sub-machine gun—we are fully equipped with rifles; we have a Boys anti-tank gun, and we have small trucks. Granted we have not some of the heavier equipment, but I do not expect that the reserve army will get that until such time as it is called out for active service. I refer to such things as the Bofors anti-aircraft gun, Bren carriers and the smaller tanks. There is one suggestion, however, that I should like to offer. We have been shown training moving pictures twice a week. Unfortunately by the time we receive these pictures they are quite out of date; in fact some of the tactics we are shown are obsolete. I understand that in the United States all army units are given the very latest pictures as soon as they come out, and I would ask the minister to give serious consideration to whether it would not be possible to give us more modern moving pictures on tactical problems.

Mr. RALSTON: The provision of additional training films is not only receiving consideration but having active attention.

Mr. DOUGLAS (Weyburn): I should like to have the minister elaborate a little more fully on the role he expects the reserve army to play. I think members of the reserve army as well as members of this house generally would be interested in knowing whether there is some part they can play, as they are hoping they will have a part to play as the war progresses. It seems to me that if at some not far distant date they are to be assigned the responsibility of protecting the shores of Canada, several things will have to be done. If all the general service personnel in Canada should be sent overseas, and if the government should decide to send overseas the home defence personnel as well, the entire defence of Canada's shores would be left in the hands of the reserve army. If that is in contemplation, I think the department should take into consideration now extending the training of the defence units. Fifteen days at camp is a very small amount of training. Of course units stationed in the cities train two or three nights a week and very often carry out schemes over week-ends. In the case of dispersed units, however, a very limited amount of training is carried on; it is limited by weather conditions, by geography, by the difficulty of procuring equipment and places to meet. As I suggested to the minister last year, in the case of dispersed units particularly, some consideration might be given to having thirty days training instead of fifteen, or having fifteen days training in the summer time and another fifteen days training in barracks during the winter. Dispersed units are usually located in agricultural areas, and many men can leave the farms much more easily in the winter time than during the summer, when there is haying, harvesting and so on to look after. If these men are to be given the responsibility of playing an important part in Canada's defence, some of them will have to be given a great deal more training than they are given now. They have a fairly good basic training, but they have had no opportunity at all to handle such things as mortars and some of the more specialized weapons. Some training ought to be given if the minister has in mind that they are to play some important defence role in the near future.

The second matter, that of equipment, was mentioned by the hon. member for Vancouver South. As I said, to-day our equipment is immeasurably better than it was, but I am surprised to hear the minister say, and I know it must be true, that there is a scarcity of Bren guns. The other day when some one asked the Minister of Munitions and Supply

why two thousand men were being laid off at the John Inglis plant in Toronto, he replied that they were levelling off their production. It seems to me that there should be no levelling off of production until every reserve unit in Canada has sufficient small arms to make themselves an effective fighting force in the event of an invasion of Canada. I recognize that what the minister says is true, that the last units to get weapons would be the reserve force. The first is the general service personnel, then the home defence personnel, and then the last is naturally the reserve force. But they ought to get the necessary weapons long before we start to discuss levelling off of production in a small arms plant.

Mr. HOWE: May I interject a remark at this stage? I did not say that we are levelling off the production of Bren guns; I do not think I have mentioned Bren guns. We are dropping two other guns which are now being made at the Inglis plant, but we are still increasing the production of Bren guns and probably will do so for some time.

Mr. DOUGLAS (Weyburn): I am glad the minister says that there is to be no levelling off of production of Bren guns. The principal production at the John Inglis plant has been the Bren gun. I do not think there should be any levelling off of production of the Boys anti-tank rifle. The reserve units could certainly use many of these rifles, because I know of only a few men in the reserve forces who have fired them. I would suggest to the minister that until the reserve forces have been completely equipped, there should be no change in the production schedule of Canada. I have a couple of questions I should like to ask the minister, but I do not know whether he will want to answer them. The first is with reference to mortars. The minister will know from having read the several books that have been written on Dieppe, such as "Dress Rehearsal" by Reynolds and "Combined Operations" by Saunders, that the value of the mortar as an infantry weapon has increased tremendously as a result of the Dieppe operation. I understand that the Germans have perfected the technique of the mortar and are now using a four-inch mortar which throws a twenty-five pound bomb as compared with a three-inch mortar throwing a ten-pound bomb with which our infantry is equipped. I am not asking the minister to tell us what the department is doing, but I am sure the committee would like some assurance from him as to the possibility of a more adequate use of the trench mortar.

[Mr. T. C. Douglas.]

Has the minister received any reports on the performance of small arms as a result of the Dieppe operation? I have in mind particularly the Sten sub-machine gun. A number of men who came back from Dieppe, with whom I have talked and who were equipped with Sten sub-machine guns, all gave the same report. As the minister knows, there are parts of the Sten sub-machine gun which are quite exposed, and when it is dropped in sand it has a tendency to become plugged. This is not true of the Reising gun, which is well closed in. You can drop it anywhere, pick it up again and use it. Many of these men found that the Sten sub-machine gun—I know this is an excellent gun on the range because I have fired it many times—had a tendency to jam in actual battle conditions where it was necessary for men to throw themselves down on the sand.

Mr. RALSTON: With reference to the mortar I know my hon. friend will not expect me to say more than that the matter to which he has referred has been in the minds and has had the consideration of the weapon development people of all the allied nations, and none more so than our own army technical development board. When I was speaking the other day I mentioned a development which might have something to do with it. I can assure my hon. friend that every step is being taken to see that our weapons are second to none, and certain matters have been worked out already in that respect.

With reference to the Sten gun I think this weapon has had perhaps as severe trials as any gun could have during the last six months. I am speaking of the Canadian Sten particularly. We have watched with great interest the reports which have come in, and as a result of these reports we are increasing the production of the Canadian Sten gun. I think it will be found to stand up all right. The Reising gun has not had a test under battle conditions, nor has it been tested under conditions which would approximate those of battle, but the Sten gun has. We are advised that the Canadian Sten gun is a gun which our troops overseas can use in connection with any activities which may take place. As I say, as a result of the reports which have been made we are increasing the production.

Mr. ADAMSON: Could the minister clarify the role of the reserve army? I know the minister has probably already given a statement in this regard, but I do not think he has done so during this debate. I know that everywhere the minister goes he is asked to describe the role of the reserve army. This

force can be shown to have a definite role, but the country is not sure. There is a great deal of criticism, perhaps misguided and erroneous, about the functions of the reserve army. Criticism is levelled against the reserve army as being the last line of defence in Canada. Criticism is levelled against the reserve army as being an expensive method of recruiting. Criticism is also levelled against it as being a morale building force.

There is probably a good answer to all these criticisms. I suggest that instead of going ahead with posters and other forms of advertising in an effort to have men join the reserve army, the minister should have published a small booklet outlining the role of the reserve army and answering all these questions. Many people criticize the reserve army because they do not know the real facts. I know in the Toronto district there was some difficulty in getting sufficient recruits for the reserve army. I do not know how successful the last recruiting drive was, but at one time it dragged considerably. In fairness to the reserve army some definite and concrete statement should be made as to its functions. Men are giving their time freely and with a great deal of keenness, and the reserve army is doing a great deal of good among the young men of sixteen and seventeen. They are learning about the army, getting instructions and the rudiments of discipline, being taught their way about, if nothing else. A lot can be said for it. I do not think it has been said. There is a great deal of groping in the dark as to the functions of the reserve army, and I suggest that the minister either make a statement at his convenience or else publish a small booklet setting forth clearly all the functions of the reserve army.

Mr. RALSTON: I took pains when I made my statement to the committee on May 18 to try to do exactly what my hon. friend has just suggested, and what I said will be found at pages 2771-72 of *Hansard*. No one values more than I do the opportunity not only to pay tribute to the reserve army but to indicate my belief in its usefulness. I emphasized then that the reserve army is, of course, a reserve army, but that its password must be preparedness; that is to say, to be ready. That is what the reserve army is for.

The functions which the reserve army fulfils are, I think, fairly definite. There is, first, the function of local or community defence and, second, the possible function of general defence. In addition to that, it does act as a body which impresses the citizens of Canada with the idea that this war is not won yet; that we cannot wait until the hun is on our doorstep before we get ready to meet him. Members of the reserve army set a fine example by recognizing not only the opportunity but the obligation of Canadian citizens to devote some of their spare time and some of their comfort—and time and comfort are two solid commodities that are generally appreciated—to preparing themselves for an eventuality which may come. Everybody hopes it will not. Everybody hopes there will not be murders committed; yet no one suggests that we should not have a police force. Everybody hopes there will not be fires; but no one suggests that we should not have fire-fighters. They stand prepared, and the reserve army is for that very purpose.

I sympathize with the men of the reserve army and appreciate the steadfastness they are showing, day after day and night after night, working at their bench or in their office and, when the day's work is done, going out and drilling along with the boys and young men in order to be ready. I say they are doing a fine job for Canada. We must not forget that only six months ago did the tide apparently begin to turn. It was only six months ago that the British and United States forces landed in North Africa. Up to that time it was a pretty blue prospect. We are not out of the woods yet by any means, and there may be an opportunity and a necessity for the reserve army. That is exactly why we are taking all this time and spending all this money to assist them to be prepared. The pay and allowances are a fleabite so far as the individuals are concerned, but we are providing the reserve army with a lot of equipment. Some of that equipment can be made use of in other places; at the same time we are providing a reasonable amount in order that men may be trained. I have not been at a reserve army camp but, from what I have learned, the enthusiasm shown at these camps has been outstanding, even though the men who give their time to go may not see an opportunity to serve immediately ahead. They are there to get ready and to be ready. As I said the other day, I think the country owes them a great debt of gratitude and real appreciation for the way they have stood by Canada at this particular time. I do not know what more I can say than that. The same request has come to me from other quarters as came from my hon. friend to-night that I should go across Canada and speak to the reserve army. I wish I could, as I have said repeatedly to them, but it has often been charged that the minister goes into too many things. The best I can do is to make to the reserve army when I see them the kind of statement I have made to-night.

When we appointed Major-General Browne director-general of the reserve army, it was not just a gesture. We believe that the reserve army deserved encouragement and the sort of supervision he can give. I believe his appointment has been amply justified by the results shown across Canada. It is quite possible that the reserve army units in military district No. 2 may feel that there is little chance of activity, but it is a great satisfaction to them, as I know from what I see when I visit them, that they are ready if the opportunity for action does come, and I have not any doubt, seeing them as I did, led by veterans of the great war, that they would give a good account of themselves. I saw businessmen in all walks of life doing their part in the reserve army along with the young chaps to see to it that the traditions of the army are upheld, and seeing them I have felt that Canada had a reserve force which could be depended upon should the need arise. It is not a glamorous role, I know. They do not expect a glamorous role. All they want is to feel in their hearts the satisfaction of knowing that they are doing their duty, that the people of this country appreciate what they are doing and that their job is something worth while. That is what I have tried to tell them. That is what I honestly believe myself. The reserve army gives the men two chances to serve, a chance to serve at their ordinary vocation or business in the daytime and a chance after hours, to prepare to serve as soldiers to prevent homes and business from being swept away if the threat should come. Their readiness to serve is a challenge to any citizen of this dominion.

Mr. DIEFENBAKER: I should like to ask a question of the minister arising out of a statement he made some time ago. If I understood him aright, he said that there would be an increase in Sten machine-gun production this year. Recently there has been considerable reference in United States papers to a reshuffling of war production in Canada. Only the other day there was a dispatch from Washington by a Canadian Press writer who said:

> As seen from here, Canada may be forced to make drastic changes in the next two or three months, switching factories to new production, stopping the production of some war materials, particularly certain ground equipment and, generally, reshuffling her whole industrial machine built up since the start of the war.

This article is dated Washington, May 7, and goes on to say:

> Instead of guns and shells, it may be ships, naval and cargo-carrying. The total effort will be the same, the change coming in emphasis.

[Mr. Ralston.]

Reference has been made by some hon. members who have preceded me to the necessity of providing for the reserve army still more supplies, such as munitions, machine guns and the like. Up to the present one of the main reasons why these units were unable to be supplied with the necessary munitions and equipment was the fact that requirements in Britain and in other parts of the world and in the Canadian army overseas made it impossible to supply the units in Canada. The minister to-night has made it very clear—I think he has uttered a warning to the people of Canada—in discussing the possible role of the reserve army, that it is within the realm of possibility that the men of the reserve army may have to be used for the defence of Canada, if I understood him aright. That being so the reserve army should be fully equipped. As I have already pointed out, during the past few weeks the press of the United States and, in a lesser degree, of Canada have given great attention to the fact that, in a reshuffle of production, great changes will take place in the war factories of Canada. I ask the minister if it is a fact that there is on hand to-day such an excess of rifles, machine guns, mortars and the like as to justify reduction in production of any of these lines at this time. The minister has mentioned that there will be an increase in Sten gun production, but I would ask him, knowing there must be consultation with him in the determination of a matter such as this, whether it is intended during the next six or eight months, in any event from now until the end of the year, to cancel the further production of Boys anti-tank rifles, to reduce Bren gun production by approximately sixty per cent, as well as to drop the production of 3·7 anti-aircraft guns and mountings. There has been a great deal of reference in the press to this sort of thing. If it is correct, my submission is that it is not justifiable at this time, provided that the reserve army and the other units in Canada have not, as they have not at the present time, full equipment. I think it would be a fine idea if the minister could give a statement, circumscribed as it must necessarily be by consideration of safety, as to what changes in the matter of gun production and the like have been decided upon and how these changes will be effected during the next few months.

Mr. RALSTON: I may say to my hon. friend that, with the limitation which he imposes, and which is quite justified, I could not possibly make any statement at all. I mean that I am circumscribed by the bounds

of security, and I do not think my hon. friend proposes to have me declare to the world in what lines we shall restrict production, and in what lines we shall increase production of munitions of war. I do not quite understand my hon. friend, but if I have correctly stated what he is asking, my reply is that I cannot give him a statement. Production will be regulated in accordance with need and with the requirement of production facilities for other things.

Mr. DIEFENBAKER: Can the minister assure us that there will be no reduction until the reserve army is equipped?

Mr. RALSTON: I cannot give that assurance. There may be some demand which is very much more vital and which may therefore come first.

Mr. DOUGLAS (Weyburn): Before the minister leaves that point, may I draw his attention to what I think is a marked inconsistency with reference to government policy. As the hon. member for Lake Centre is emphasizing the minister admits to-night, what most of us know, that the reserve army has not been fully equipped with all the weapons it would need in the event of having to take part in repelling an invasion.

Mr. RALSTON: That is to say, all the reserve army are not fully equipped. My hon. friend must remember that there are a good many weapons available to the reserve army.

Mr. DOUGLAS (Weyburn): That is true, but that statement and that fact stand in very bad contrast with, for instance, the statement which is now reported in the press from the Minister of Munitions and Supply. He is reported from Washington as saying that we are now to be able to turn our production intc producing more consumer goods. There is a marked inconsistency between what the Minister of Munitions and Supply says, that we are to be able to turn our productive resources to the manufacture of consumer goods, and the admission of the Minister of National Defence that we have not yet sufficient of the weapons essential for the use of the reserve army to equip them adequately with what they would need to take part in a defensive operation.

Mr. HOWE: Since my name has been mentioned, perhaps my hon. friend will read the dispatch. I have not seen it. Certainly I made no such statement.

The CHAIRMAN: Shall the item carry?

Mr. GREEN: Before item No. 8 carries, will the minister tell us what provision, if any, has been made to supply the troops in Canada with transport planes for training? We asked that question last year. Apparently at that time Canada had no transport planes at all, so that there was no means of transporting our troops by air. I should like to know whether that is still the position.

For some reason or another, despite the fact that Canadians are a very progressive people, we have not been very progressive in our training methods during this war. It came out last year that we were leaving all our advanced training to be done in Great Britain, just as we did in the war of 1914-18; but as a result of the Hong Kong inquiry and of the condition of our troops when sent to Hong Kong some change was made, and Canada then took up commando training. We have only recently been doing paratroop training. We had to wait until the United States came into the war before we started this training, and then we had to send our troops to the United States to be trained. Now, I think, we have one battalion back here in Canada. We have been very dilatory in putting into effect the most modern types of training for our men. I would ask the minister why it is that Canada has been so long in getting the transport planes and in taking any steps to train air-borne divisions. Some years ago the Germans were doing that, training their men in gliding, and they took Crete by the use of troops of that type. There would seem to be no reason why Canada could not specialize in carrying troops by air and in training air-borne divisions. We have the space; it is much easier to train troops here for that kind of warfare than it is in Great Britain. I should like to know whether we have taken any steps yet in that direction.

Mr. RALSTON: I can only say to my hon. friend that in order to train air-borne troops, transport planes are required.

Mr. GREEN: Why have we not got them?

Mr. RALSTON: My hon. friend had better ask some of the allies why they have not got them on the active fronts. Does my hon. friend think they grow on trees?

Mr. GREEN: They certainly do not grow on trees around here.

Mr. RALSTON: And they do not grow on trees anywhere else, either. My hon. friend just rises in his place and asks the question, as though somebody had been negligent in not having asked for transport planes, as though one could get them off a shelf. I think my hon. friend knows without my saying it that transport aircraft is not yet in

such tremendous production that we can get transport planes for training just at the present time.

Mr. GREEN: Does the minister say it is impossible for Canada to get any transport planes for training troops? We had a big transport plane over Ottawa last week, and the Americans have had them. I submit to the committee that if the defence department wanted to train troops in that way, wanted to get some transport planes for training troops, they could get them; and if we could carry more troops by air, if we had air-borne brigades or divisions, we should probably need far fewer men to defend Canada. I am quite serious about this matter. I do not understand why Canada should not be up to date with regard to the training of troops for transport by air.

Mr. RALSTON: I do not want to be short with my hon. friend, but when he makes a statement like that, that the Department of National Defence, had they wanted to, could have had transport planes and could train air-borne divisions, I only say to him, respectfully, but very firmly, that he does not know what he is talking about.

Mr. GREEN: The Minister of Munitions and Supply is here. Between them, do the ministers say that Canada cannot get transport planes for the training of our army?

Mr. RALSTON: I am saying that at the present time Canada is not in a position to demand transport planes, in view of the need for transport planes in active theatres.

Mr. GREEN: Probably if we had had a few paratroops at Dieppe we would not have had such casualties.

Mr. RALSTON: If we had had my hon. friend at Dieppe I have no doubt it would all have gone according to the book.

Mr. GREEN: It could not have been much worse. Have our troops in Great Britain been given an opportunity of being trained in this regard?

Mr. RALSTON: Our troops in Great Britain have taken every opportunity to train in connection with aircraft cooperation and airborne activities in so far as the equipment was available.

Item agreed to.

On item 9—M.T. vehicles: trucks, tractors, trailers, tanks, A.F.Vs. and repair parts.

Mr. FRASER (Peterborough West): Is all this equipment delivered and in actual operation? I am referring to the $272,000,000 worth. Do I understand that it has all been delivered, none of it being on the sidings in Canada?

Mr. RALSTON: There is certainly some of it, not on the sidings but on the docks in Canada.

Mr. FRASER (Peterborough West): I mean, in the packing cases?

Mr. RALSTON: Certainly. There is some on the docks. It is being shipped all the time.

Mr. FRASER (Peterborough West): I do not mean on the docks, but in different places like Belleville, Trenton and so on.

Mr. RALSTON: It will have to be in stores, too, until shipping comes along. We cannot put it all on the docks. It is being delivered as shipping is available and whenever the need arises. It is all ready for use.

Mr. HAZEN: Was all this money spent in Canada last year, and will it all be spent here this year, or was part of it spent outside? If so, how much?

Mr. RALSTON: In connection with some of this equipment, components are purchased in the United States. Some heavy motor transports are purchased in the United States, but the great bulk of it, apart from the money for components, is spent in Canada.

Mr. FRASER (Peterborough West): Some of this equipment has been on the dumps or sidings for two years or more. Is that included in this amount?

Mr. RALSTON: So far as equipment for Canada is concerned—the material that is covered by this item—there is a very small proportion of it that is on the dumps, to use my hon. friend's expression, or the sidings, and such as there is, is awaiting shipment.

Mr. FRASER (Peterborough West): That is what I am trying to find out.

Mr. ROSS (Souris): This seems to be $100,000,000 more than last year's. How is it accounted for?

Mr. RALSTON: It is accounted for in this way. The money was not all spent last year owing to the fact that reserves were not used up, there being no activity, and what is put in this year is to provide reserves and to provide against casualties. The expenditure last year would have been almost the amount shown for this year had there been activity. Since there was no activity, the reserves were not used up and the money was not required, so that only $270,000,000 was spent.

Mr. ROSS (Souris): And that includes equipment for the army overseas?

Mr. RALSTON: Yes.

Item agreed to.

On item 10—Operating cost of mechanical transport, fuel maintenance, etc. (not including repair parts).

Mr. GRAYDON: May I ask the minister a question arising out of one part of the discussion that took place the other evening, either on this item or on some other comparable item, in connection with the war appropriation bill while it was in committee last year. I refer to the economies which were to be instituted by the minister. I believe it was the Minister of National Defence who undertook to see that certain economies were put into practice in connection with the use of mechanical vehicles such as jeeps and other mechanical transport using gasoline. The point was raised in the committee that there was some thought in the public mind that there was perhaps a rather reckless use of gasoline in certain instances. Naturally that was something that would creep in, but the minister indicated that the department was prepared to institute a campaign of economy in the use of gasoline, in view of the shortage generally with which we were faced. What plans has he put into effect to bring about those economies?

Mr. RALSTON: All I can say is that the strictest check is kept on cars going out, the routes to be followed, the mileage to be covered and the gasoline to be used. Strictness is observed with regard to the use of cars in an endeavour to avoid two trips where one will do. I myself sometimes observe that this is not being carried out. I see a car going without a full load. But I know the quartermaster-general is particularly strong on this and has checked a good many times the use of cars for any purpose which is not strictly a service purpose, and even the use of a service car by service personnel when that use could have been obviated. I cannot tell of any system except rigid vigilance in an endeavour to see that the use of gasoline is curtailed in every way possible. In connection with staff cars and cars of that kind, there has been a marked reduction in the use of them since the gasoline shortage has become acute, and everyone is concerned to conserve gasoline. I cannot give my hon. friend any system which has been put into effect apart from that.

Mr. GRAYDON: Has there been a reduction in the number of ordinary automobiles used by the army here, outside training or service generally?

Mr. RALSTON: The transport officer is not here, but I do not know of any number. In some places cars have been cut down or taken off the establishment altogether. I cannot say about Ottawa.

Mr. FRASER (Peterborough West): How are the service stations selected for supplying gasoline and oil for the different army vehicles that pass through the various cities, towns, and villages? I ask that question because I know that in some instances army vehicles go two miles or so out of their way in order to get gasoline from some particular service station, and they pass half a dozen others on their way.

Mr. RALSTON: I am afraid I shall have to guess at that in the absence of the transport officer, but gasoline is bought by contract from different companies and is supplied at their stations. The service station is not selected; it is supplied by contract, and they go to the nearest station of that particular company to fill up, when they cannot be served at our transport supply station. That is my idea of what the practice is.

Mr. FRASER (Peterborough West): My understanding is that, first of all, tenders are submitted by these companies. It is by tender system, is it?

Mr. RALSTON: The Department of Munitions and Supply buys it for us.

Mr. FRASER (Peterborough West): If an army truck were going to Kingston, it could stop at one of the supply depots of that company.

Mr. RALSTON: I think so, when necessary. Ordinarily, they would first stop at military supply depots, if available.

Mr. FRASER (Peterborough West): It would not be told, "You must go to No. 1 gasoline station, and must not go to No. 3 or No. 4"?

Mr. RALSTON: It could go to any station of the company. Remember, I am speculating when I make that answer, because I have no transport officer with me. Perhaps I had better get the information accurately for the hon. member, because I do not wish to put on record something which is only a pure guess.

Mr. FRASER (Peterborough West): I should be glad if the minister would do that.

Mr. RALSTON: I wish to put on record one paragraph of an order which has been brought to my attention. Paragraph 17 of routine order 1992 is as follows:

As a further measure of conserving tires and gasoline, all vehicles, except those at advanced training centres and centralized schools of instruction and vehicles required for urgent operational purposes, will be immobilized two full days each week. Neither of these two days will be a Sunday. On these days only the minimum number of administrative vehicles as are necessary to carry on proper routine will be allowed to operate and the drivers of such vehicles will be provided with permits signed by their commanding officer.

That is, two gasless days for these particular establishments. If I remember correctly, they have a gasless day in England as well.

Mr. ADAMSON: Does the minister say, "not advanced training centres"? Does it not include advanced training centres?

Mr. RALSTON: It states:

. . . except those at advanced training centres and centralized schools of instruction and vehicles required for urgent operational purposes. . . .

Mr. ADAMSON: It includes everything in England.

Mr. DOUGLAS (Weyburn): When the minister is getting information regarding the supply of gasoline to army vehicles, will he tell us what companies have these contracts, and how much has been given to each company.

While I am on my feet I should like to place on record this paragraph appearing in the Winnipeg *Free Press* of May 29, 1943, under a Washington date line of May 28:

Howe Reviews Production

Canadian arms and military equipment production has reached such a stage of output that there can now be some easing up on restricted production of civilian equipment, according to Hon. C. D. Howe, Canadian Minister of Munitions and Supply, in Washington to-day. Specifically mentioned by Mr. Howe as items which may be supplied now in larger degree for civilian use are farm machinery, railway rails, textiles and repair parts for power plants.

I point out to the minister that, according to the report, the impression was given to the public that we have now reached peak production in the output of war materials, and that it would be possible to turn Canada's production machinery to producing consumer goods. I merely point out that this is rather out of harmony with the statement of the Minister of National Defence.

Item agreed to.

[Mr. G. K. Fraser.]

On item 11—Sundries, including printing, stationery, telephones, telegrams and other costs not included in above items.

Mr. GRAYDON: This is a sufficiently important item to warrant a break-down. When the minister is giving the break-down, would he tell the committee if the item with respect to printing covers any of the advertising for the reserve army, or recruiting generally?

Mr. RALSTON: I have not a break-down showing the amounts for telegrams and telephones. Printing and stationery stands at $9,400,000; training equipment, not provided elsewhere, $400,000; and sundries, $4,800,000.

The increase in printing and stationery is due to the fact that, with the increased personnel in the United Kingdom the expenditures for printing and stationery, telephone and telegrams has risen more than proportionately because United Kingdom costs are higher than in Canada. The increase is something like $5,000,000.

Mr. GRAYDON: Will the minister give the committee the costs of telephonic and telegraphic communications?

Mr. RALSTON: I thought an order for a return had been passed recently with respect to telephones.

Mr. GRAYDON: And telegrams?

Mr. RALSTON: I should like to be heard on it when it comes up.

Mr. ROSS (Souris): There was a return tabled a few days ago in answer to a question standing in my name. This is the only item which shows a reduction in the total amount. Would the minister tell the committee whether his department has private lines, like the Department of Munitions and Supply, or whether the business is done through the various commercial telephone companies?

Mr. RALSTON: We have no private telephone lines. All the business is done through the commercial companies. Of course, as the hon. member knows, we have teletype circuits.

Mr. GREEN: This item looks as though it includes a good deal of the red tape.

Mr. RALSTON: Not if it refers to telephones and telegrams.

Mr. GREEN: Could the minister say whether there has been any reduction in the paper war in the last year?

Mr. RALSTON: I have not here the text of a directive, as it is called—the modern term—which was issued, and sent out in simple language; nor have I mentioned the

lectures which have been delivered to the staff, to the minister and to everybody, with regard to the amount of paper used. I think it is reduced to some extent. I am not enthusiastic about the results, but at the same time we keep on trying. The difficulty is that so many people have to see and have to know about what is going on that it means passing from one to another. The tendency to put on another memorandum, instead of just saying, "Noted and concurred in", is very great. The tendency is for one official to write a memorandum and another to write a memorandum repeating the previous officer's memorandum. We have cut out all salutations, and things of that kind, and we make our memoranda as terse and to the point as possible.

Mr. GREEN: By the time the war is over, the experimental farm will be full of records buildings.

Mr. RALSTON: These memoranda will not be on the records.

Mr. GRAHAM: I was interested in the remarks of the hon. member for Leeds respecting moving pictures, and the work done through that medium in the training syllabus. Would the minister make a statement on what assistance is being received from moving pictures and, generally speaking, what use they are? I am told great use can be made of moving pictures, particularly in connection with training in the reserve army.

Mr. RALSTON: I would have to be a Hollywood director to give my hon. friend a description of the films. I have not seen many of them, but I do remember one which impressed itself upon my mind, namely, that having to do with the Boys anti-tank rifle. It was a realistic representation of the rifle, all its parts, and the way in which it is operated. The film carried an excellent running commentary. One need only see it for about ten minutes, and it seemed to me he would have the operations of the rifle fixed in his mind better than he could in any other way.

I have not any memorandum before me with regard to training films. I have, however, taken an interest in the matter myself, and I believe it was only the day before yesterday that I discussed this matter with the chief of the general staff. I remember that there were something like a thousand copies of different films being circulated, and we have a technical man trained in that work attending not only to the possibilities of making the films but also that what is just as important, namely, the distribution of them. There is the greatest tendency, I find, in connection with training films to have them tucked away somewhere in a pigeon-hole, or to have them kept at one training centre instead of being passed on somewhere else. That sounds like a very simple sort of problem with which to deal, but it is not quite so simple with the number of training centres we have and the number of different films with which we have to deal. Films are being made now; the national film board is helping us a great deal in that respect, and we have had some commercial films as well. On the whole, I think great strides are being made in that particular method of training.

Mr. GREEN: Could they be used at all in the training of the school cadets?

Mr. RALSTON: They certainly could.

Mr. DOUGLAS (Weyburn): Yesterday the minister said he would give me the division of the money spent on transportation as between the different railways. I wonder if, when the minister gives that information, he could give me the same information in regard to telegrams and telegraph service, as between the two companies.

Mr. RALSTON: I do not think we have the information in regard to telegrams and telegraph service. The break-down as between the two railways for the fiscal year 1942-43 was as follows, and if I may I will lump the figures: passenger, freight, express and meal services, Canadian National Railways, $12,384,042.90, or 51·40 per cent; Canadian Pacific Railway, $11,710,314.25, or 48·60 per cent.

Mr. HAZEN: A day or two ago I asked the minister one or two questions about the directorate of public relations, and he said he would make a note of it. I do not know whether he is in a position to give the information now, but, if not, I should like to know when I may expect it.

Mr. RALSTON: Does my hon. friend want it on this discussion?

Mr. HAZEN: No, not particularly.

Mr. RALSTON: As a matter of fact it is almost ready. Would my hon. friend accept it as an order for a return?

Mr. HAZEN: No; I should like it answered here.

Mr. RALSTON: Then my hon. friend wants it on this discussion?

Mr. HAZEN: Yes, but not necessarily right away.

Mr. RALSTON: I am anxious to get these items through, if I can. Could I give the information on the estimates of my colleague the Minister of National Defence for Air?

Mr. HAZEN: Yes.

Item agreed to.

B—Sundry Services

Departmental administration	$ 1,526,405
Dependents' allowance board	657,700
Internment operations	8,430,895
Dependents supplementary grants fund	1,285,000
Inspection board of the United Kingdom and Canada	10,600,000
Total	$22,500,000

Mr. DOUGLAS (Weyburn): Could we take these one at a time? After all, some of these are fairly important items.

Mr. RALSTON: Certainly.

Mr. DOUGLAS (Weyburn): I have not a great many questions, but I think several hon. members have one or two to ask.

Departmental administration, $1,526,405.

Mr. GREEN: This afternoon the minister promised to make a statement in regard to this plan for reclaiming men for the army.

Mr. RALSTON: I intended to do that while the director-general of medical services was here, but I forgot.

Mr. GREEN: And also the cost of food and supplies per man per year.

Mr. RALSTON: Could I give my hon. friend that information on the estimates of my colleague?

Mr. GREEN: The minister will answer both these question then?

Mr. RALSTON: Yes.

Mr. GREEN: There was one other question, having to do with the enlistment of aliens in the army. A return was tabled on March 8 which showed that under the provisions drawn up a few months ago a total of 751 aliens had been called, but apparently only three had been chosen; at any rate up to that time only three had managed to get into the army. Could the minister tell us the position to-day with regard to the taking of aliens into the army? Over a year ago we were told that they were all to be called up; yet very little action has been taken. What is the situation at the present time?

Mr. RALSTON: A set of rules has just been approved with regard to both the enlistment and the calling up of aliens. I would not undertake to give them from memory, so that I think I had better answer that question at the same time as I give the other information.

Mr. GREEN: Could the minister tell us how many aliens actually have got as far as the army?

Mr. RALSTON: No; I cannot.

Mr. GREEN: Can the minister not get that information?

Mr. RALSTON: Certainly.

Mr. GREEN: The minister will give that at the same time?

Mr. RALSTON: Certainly.

Item agreed to.

Dependents' allowance board, $657,700.

Item agreed to.

Internment operations, $8,430,895.

Mr. GILLIS: I think the minister should make a statement for the purpose of clarifying what was said the other day in this house by the hon. member for Broadview, to the effect that Ontario universities were full of enemy aliens and that the Department of National Defence was supplying them with uniforms. During the Easter recess, due to considerable propaganda carried on in the press, at several meetings I attended I met quite hostile audiences on that very point. They wanted to know if it was the policy of the government indiscriminately to release enemy aliens in this country and give them the privilege of attending universities while our own boys were being called from the universities and relegated to the armed forces. Having had some little experience in Ontario last summer, I had some knowledge of the situation. My conception of the matter is that instead of being called enemy aliens, these boys should be classified as refugees from Hitler and the totalitarian countries. However, coming from me that is not official, and I think under this item the minister should make some statement as to the status of these men, why they were interned and what are the regulations with respect to their release. I think this has been a subject of controversy right across the country, and the statement made by the hon. member for Broadview a few days ago added fuel to the fire. Therefore I think a clarifying statement by the minister would be in order.

Mr. RALSTON: This matter was the subject of a return brought down in response to a question asked by the hon. member for Carleton. The persons to whom the hon.

member for Broadview referred were eighteen students who had lived in England for several years before being sent to Canada in July, 1940; I think some of them were undergraduates of Oxford or Cambridge. They came to Canada in a general round-up of aliens in the United Kingdom in 1940. In order to make sure of catching the few aliens whom it might prove unsafe to have at large, practically all aliens from Germany and Austria were corralled and sent to Canada from the United Kingdom. When time permitted, their cases were investigated, and many were found conclusively to be harmless. The home office sent a representative, Mr. Paterson, out here in November, 1940, and he checked all the records. Then his duties were assumed by Lieutenant-Colonel Fordham, and Mr. Paterson returned. Then it was decided after an investigation of the cases in conjunction with the home office—we were really holding them as a result of the home office having sent them to us—that it would be better to allow these undergraduates to continue with their studies in Canada rather than to waste valuable years behind barbed wire. The original plan was to permit one hundred of them to go to Canadian universities. Their records were closely scanned by the home office, the commissioner of refugee camps, the director of immigration and their respective staffs. Each individual's history was thus scrutinized by three sets of officials.

A responsible sponsor, residing in Canada, came forward for every student released for the purpose of attending a Canadian university. The sponsor had to be a reputable citizen possessed of assets, who would undertake to guarantee the cost of maintenance and the tuition fees of a student. This was to prevent a student from becoming a public charge. The sponsors were usually found through the agencies of a voluntary organization known as the central committee for interned refugees. Every sponsor had to meet with the approval of Mr. Blair, director of immigration.

This plan was put into effect in the late summer of 1941 and has worked successfully. The students involved have given neither the commissioner of refugee camps nor the director of immigration any trouble at all, and in most instances have done exceedingly well in their studies. There are two students in the school of law, university of Toronto, who are said by their professor to be two of the most brilliant he has ever had. All are hard working. There are released refugees at ten universities in Canada, including Toronto university, and all have given the utmost satisfaction. There is one exception, because a case came to my attention the other day where a student had not given the utmost satisfaction and the necessary action is being taken. That is the only case I have had come before me.

Mr. GRAYDON: What does the minister mean by not having given utmost satisfaction?

Mr. RALSTON: His conduct was entirely unsatisfactory; there was nothing in the way of subversive tendencies. His character was not of the best. Some of these men have brothers and other close relatives serving in the British army and navy. That is the statement. I have received strong letters, particularly from British Columbia, about this matter. There were considerable protests over the episode. I think that is what my hon. friend has in mind.

Mr. DOUGLAS (Weyburn): There is still a question in the people's minds which the minister has not answered. The argument they advance from time to time is a fairly logical one. They contend that these people must be opposed to the Hitler regime, or they would not be released. If they are opposed to the Hitler regime, then they should be making some contribution toward defeating Hitler. We require our own young men to leave their educational pursuits or whatever else they are doing in order to make some contribution, either in the armed services, on the farm, in our munitions factories or wherever else they may be placed. Is there not the same obligation devolving upon these young men? Can they be placed in the armed forces? If not, the people should be told why. If they can, why are they not there? Is there something more useful that they can do? Can they be used on the farms? These are the questions that are being put, and they are the questions contained in a number of letters I have received. Are these 230 young men in our universities scientists who it is felt will be able, when they complete their courses, to make some contribution as a result of the education they may receive? Or are they merely being allowed to finish their education because there is no other way in which they can render a service to the common cause?

Mr. ADAMSON: Have any of them offered to enlist in the army?

Mr. RALSTON: I have not heard of any.

Mr. BOUCHER: The hon. member for Weyburn has expressed one viewpoint in this connection, but there is another angle to this matter. Our own boys have been limited in the education they may receive or in other activities and have been forced to undertake war duties, whether it be in the armed forces, in industry, in private business or otherwise.

Yet these people of alien descent are attending our universities and are apparently not subject to call. These universities are kept going by the state. It is true these young men are paying their tuition fees and the cost of their board and lodging, but the cost of maintaining the institutions is a state responsibility. These young men are being qualified in their respective professions, whether it be science, the law or anything else, and will be ready to enter into competion with a generation which has been limited in its attendance at university.

This situation is rather disconcerting to the public. On account of their background it may not be possible to take them into the armed forces, particularly when they have been sent here by England, but we have a duty to our own people to see that these people are not allowed to take the cream of the land without having taken part in the struggle in which we are now engaged. I think we could satisfy public opinion without being too generous to these aliens who are attending our universities We could give them every possible assistance, but require of them a scientific application of their knowledge rather than provide an advancement of their learning.

This matter has been brought forcibly to the public mind by reason of the questions asked following the controversy which took place at Toronto university about the admission or non-admission or rejection of these students. There are many ways of looking at this matter. There should be a proper way to handle this problem and satisfy public opinion.

Mr. RALSTON: First, I want to correct an impression I may have left with regard to the one individual who I said had not behaved properly. He was not a student at Toronto university; he was at another university.

I am sorry that I have not before me the exact text of what had been determined in connection with this matter of enlistments and call-ups. I wish to say that I am thoroughly in accord with the idea that these young men should serve this country and should be prepared to do their full part in so far as the country can avail itself of their services. I want to go farther and say that so far as the army is concerned I am not one of those who believe that we should keep these young men out of the army if, after investigation, we are able to satisfy ourselves that they will serve the country properly. I feel that the obligation is on us to investigate them and, if possible, to make use of their services. That goes both for voluntary enlistments and for men being called up. My hon. friend has suggested as an alternative that if they cannot go into the army, they should at least be required to serve this country in some other way by utilization of their scientific training or ability in that line. As a matter of fact, that has not been considered by the government so far as I know, but, to express my personal opinion, I am thoroughly in accord with that. I am not one of those witch hunters who feel that everybody who happens to be of alien birth is, therefore, somebody whom we must either put behind barbed wire or else relieve from the obligations of residence in Canada in time of war if he is to have the benefit of domicile and asylum here. Not long ago the army discharged certain men who, I believed on investigation and from what the sponsors who spoke for them said, would prove eminently good soldiers in every way. After their cases had been investigated they were told that if they cared to be reenlisted we would reenlist them. That is the attitude of the army, and I do not believe we are endangering the safety of the state, provided we take the necessary precautions, which we have the facilities to do, to check up on them and make sure that they are the sort of people who can give good service in the army.

Mr. POULIOT: I have just one question to ask the minister. It is about internment camps for anti-nazis. I should like to know how many of them there are in this country and what is being done at the anti-nazi refugee camp at Sherbrooke. I am informed that last year they were getting two big truckloads of beer each week. I understand that it is pretty hard to get it now, but all last year they had it. I could give the minister the name of the driver. It seems strange that while we are fighting the nazis, some others who are opposed to them are placed in internment camps in this country under the Department of National Defence. I should like to know how many of these camps there are, how much they cost and why we keep these men behind barbed wire if they feel as we do about the nazis.

Mr. RALSTON: I know nothing about the matter, but I will make inquiries to find out the circumstances of which my hon. friend speaks.

Mr. POULIOT: The man in charge of the camp gave a public lecture in Sherbrooke last year and it was printed in *La Tribune*, a daily paper. I think we are entitled to some information with regard to the matter. I do not wish to cause any trouble to the minister, but I find it astounding that these men who feel like we do about the war and want to defeat the nazis should be kept in an internment

camp. I cannot conceive it. I should like to know how much it costs the country and how it is that the internees receive so much beer.

Mr. STIRLING: The cases which the minister dealt with just now were those of students. Can he tell us with regard to those others who have been released after investigation from among those brought from Britain by Britain's permission? For instance, I am informed that there are some who, on account of their knowledge of languages, have been of considerable use; I do not know how many there are. I am further informed that besides those who have been so made use of on account of their knowledge of languages, there are still others in the camps who have been cleared by the investigators but have not yet been released. Does the minister know anything about them?

Mr. RALSTON: I do not think we have any information in National Defence as to the first class of which my hon. friend speaks. If they were released, they would be released either on parole and be required to report to the police, or be released under general parole. With regard to the second class, those who have been investigated but not yet released, I have no report on them but I shall certainly make inquiries. I shall also make inquiries regarding the matter raised by the hon. member for Témiscouata.

Mr. EDWARDS: In reference to what the hon. member for Témiscouata has just said, because a man happens to be anti-nazi it does not necessarily follow that he is pro-ally. There are some rather big internment operations in my part of the country, and it is known that within the confines of the internment camp the nazi party rules with an iron hand. They have their gestapo within the camp. It is not difficult to imagine that among those who fought us on the fields of battle, whether in North Africa or elsewhere, there are those who do not subscribe to the principles of the nazi party, and I believe that upon the discovery of such in the internment camps these same anti-nazis are given a very difficult time. But that does not put them in any different category; they are still enemies of the allied nations.

Mr. POULIOT: And they drink a lot of beer.

Mr. EDWARDS: Well, after all, they buy their beer with their own money. So far as I know, there is no restriction upon what an interned soldier can buy in Canada, in Great Britain or in Germany with those funds which are provided to him by the interning country, whichever it may be. In other words, Canadian soldiers interned in Germany in the last war could spend what money they had available to them for luxuries or niceties such as they were able to purchase or the country afforded, and I believe the same rule applies in Canada. I have heard the same comment in discussion in my part of the country. People were wondering why there were certain kinds of fruits and candies being bought by the internees. The explanation is very simple. Each of these interned German soldiers has a limited fund, ten or fifteen or twenty-five cents a day, that is paid to him, and if he sees fit to spend his ten or fifteen or twenty-five cents a day to buy beer or chewing gum or cigarettes or whatever else is available to him, there is no law of the land that would deny him the right to have it. I think that is recognized by all countries which are involved in this fight.

I rose, however, primarily, to direct a question to the minister with respect to a certain class of people with whose ideas I confess I have little sympathy, but for whose religious convictions, if they are in truth founded on beliefs of the mind or the spirit or the heart, I have every respect. I refer to the so-called conscientious objectors, more familiarly known as the "conchies". In the section of the country to the west of me we had camps where men of this category were interned or required to do alternative service. I think even the devil is entitled to his due; and while I hold no brief for the conscientious objectors as such, I was pleased, indeed I was astounded, to learn at first hand of the favourable impression which these so-called conscientious objectors created in the minds of those who were charged with their internment. I was told and have every reason to believe that they were doing excellent work, work which in Canada has a money value of three or four or five dollars a day.

But my inquiries led me farther afield, and have prompted me to raise this question in the committee. I was told by not a few officers and men who are in charge of these internment operations and learned as a result of interviews with several internees, that these people would like to be allowed to make a contribution to the winning of the war if there could be found for them a

niche which would not necessitate the violating of their consciences by requiring them to carry arms and take the lives of their fellow men. They have no conscientious objection to engaging in any of these auxiliary services contributory to the winning of the war; the one point at which they draw the line is that they will not deliberately and consciously take the life of a human being, be he friend or foe. Having regard to the constitution of the modern army, I have been wondering whether, among the hundreds of thousands of men required in the armed services, there is not a place where these men, who are good citizens and loyal Canadians and are sympathetic to our ideals, but have a firm conviction, founded on what, as they understand them, are orthodox Christian beliefs, that they should not take the lives of their fellow men, could usefully serve their king and country at this time.

I was told the situation had been met elsewhere. I find that in the United States, by presidential decree issued in 1941, the government recognizes two classes of conscientious objectors: those who are absolutely opposed to any kind of participation in warfare, whether by bearing arms or otherwise, and those who are willing to engage in any of the activities of war except that of taking the life of a fellow man. The head of the United States army, in conformity with the presidential decree, designated certain branches of the armed forces as non-combatant services; and I believe that last year over five thousand adherents of one sect alone, namely the Seventh Day Adventists, were regularly inducted into the United States army and are now wearing the uniform with pride and distinction. Only the other day I received a clipping of a citation of one of these Seventh Day Adventist soldiers for bravery at Guadalcanal. Surely somewhere in our armed forces there are places for such men. I find it difficult to believe that in every branch of the armed services men are required to carry arms.

It is with some hesitation I bring this matter before the committee and put the question squarely to the minister, whether there is not some way whereby the conscientious scruples of these men can be respected while enabling them to do a worth-while job in the armed services. In this connection I am aware that there is a little buck-passing going on, because whether or not a man is a conscientious objector is determined elsewhere than by the service departments. The Department of Labour, or national selective service, which the Department of Labour now administers, makes

[Mr. Edwards.]

that decision. I am a little afraid that a man who approaches that board claiming exemption as a conscientious objector goes to bat with three strikes against him. Are we being quite fair in this respect? To determine a man's medical fitness we employ medical advisers; to pass upon his engineering and trade qualifications we have boards of men who have spent their lives at this work and are competent to judge. I suggest that in matters involving conscientious scruples and objections founded on religious convictions, the ordinary civilian board may lack the requisite background and training to appreciate fully the problem upon which they are to pass judgment. It seems to me that men whose life work it has been to deal with problems of religion and conscientious scruples, or the reverse, might well be added to the board when it is required to pass judgment on a Canadian citizen who comes before it asking for special consideration on the grounds of conscientious objection. Ministers of the gospel are familiar with such matters, and one, if not two, might well be included in a board when it is required to pass on cases involving religious or conscientious scruples.

I commend to the favourable consideration of the committee and of the government, first, that boards dealing with conscientious objectors or those claiming on such grounds should be differently constituted from those dealing with national selective service under other conditions; and, second, that it should be possible to find some place in the Canadian army, navy or air force where a person, despite conscientious scruples in regard to the one matter of taking life, can make his contribution, as is done in the United States.

Mr. McIVOR: I should like to ask the minister how many of the men who tried to escape from internment camps are now at large, if any are at large.

Mr. RALSTON: I think there is only one; he was last heard of on the other side of the ocean.

Mr. McIVOR: That shows two things, first, that the old soldier who wanted to get into the war and could not, on account of his age, has given outstanding service. To think that of all those who were interned on this side, only one is at large, and perhaps not even that one! It shows, too, that the Germans and Italians are not quite as clever as the British or French who can escape from a German camp, get away with it and get back into the war again.

Mr. NOSEWORTHY: There were one or two classes of people to whom I wished to refer, not at all by way of criticism of the government's policy, but because I question the wisdom of the course we are following at a time when man-power is badly needed. Reference has already been made to the refugee internees of whom the minister spoke. My information is that there are still a considerable number of these people whose history has been checked and with regard to whom there is no reason to believe that they should not be freed from internment and put to useful work. There are also, I am told, some who were released for a period of time and given jobs and who were taken back to these internment camps when the specified period of employment stopped. I have been told by people who have been in close touch with this question that a number of these people are being kept in these internment camps for the simple reason that the camp must be kept in operation. You cannot have a camp in operation and officers employed unless you have internees there. I have heard that from public-spirited citizens who have made a close study of the refugee problem. I think the minister might check that.

Then, concerning the conscientious objectors, I have had considerable correspondence with the Department of Labour, but very little satisfaction. I know personally two young men taken from Toronto university on the ground that they were conscientious objectors who would not go into the killing branch of the army, though they are quite willing to serve in any other capacity. One of these was a second year medical student and the other a third year medical student. They have asked to be permitted to do work in hospitals, orderly work or something of that kind, where their services can be used. I have correspondence from another, a graduate scientist, who is anxious to give his services in research work or in any other way in which he can be used, except to do actual fighting in the army.

There is another class, a religious group, who not only refuse active service but refuse alternate service, and they are sent to gaol. I have met a number of them, both before they were sentenced and afterwards. My story from their relatives is that they are put in solitary confinement for a given period, then brought out and asked if they are willing to join the army, and if they are not willing they are put back in solitary confinement. Some of them would be willing to serve in essential industry or on farms if the government saw fit to release them for that purpose. The one freedom they want is to be permitted to preach the religion of their choice as they see it and believe it. Those I have known personally are harmless. One of them, for instance, was a railroad mechanic doing an excellent job on the railway. We take him and put him in solitary confinement, because, by reason of his religious scruples, he will not go into the army or into one of the alternate services. It seems to me that by using some intelligence we could utilize this man-power to better advantage without affecting the war effort in any way. There are these three classes, the class of refugee internees and the conscientious objectors. I am collecting more information on these three types of individuals. I am confident that these boys should be given service of some kind instead of cleaning up brush in an alternate service camp as at the present time. There are the conscientious objectors who have been sent to gaol. I wonder whether something can be done in this regard.

Mr. MacINNIS: I support the hon. member for Calgary West (Mr. Edwards) and the hon. member for York South (Mr. Noseworthy) in what has been said about conscientious objectors. I think the attitude that is adopted toward these conscientious objectors is not a correct one. We first made provision for conscientious objectors, and then we treat them as if they had violated the law. We treat them in some respects as criminals. Most conscientious objectors I have known are a very high type of citizen. We may not agree with their point of view or the attitude they take in the national emergency; nevertheless they are men of the highest character. I was impressed with this fact a few days ago when I got a letter from a conscientious objector who worked in a forestry camp in British Columbia. He told me that the treatment he received in the camp was everything that could be desired, that neither he nor any of the others had objections or could find fault with it. But this is what he said: "We feel that at this time when man-power is so badly needed we are really not doing very useful work here. Taking a long point of view, this forestry work may be very desirable, but it is not work that should be done now when there is essential work that we should be doing, which the country needs far more than this." He suggested that they should be transferred to agricultural work. In my opinion, the hon. member for Calgary West put the case

very well indeed. We should try to utilize the services of these men in the interests of the country, and not be swayed by prejudices and intolerance. I know that some of the members of the boards investigating these cases, whatever their qualifications may be in other walks of life, certainly have not the proper qualifications to consider the cases of persons who are conscientious objectors. I believe the minister, in so far as he is able, will give the matter his attention. I support most heartily the point raised by the hon. member for Calgary West.

Mr. STIRLING: Are these conscientious objectors not now being used on useful work within the parks?

Mr. MacINNIS: To-day work within parks is not necessarily useful work, when the agricultural districts are requiring men, and when we are taking men out of the shipyards, and from many other kinds of work, to put them on the farms. To keep men in the parks filling up holes, then digging the holes again, and then filling them up is not making a proper use of man-power.

Mr. STIRLING: The hon. member disagrees with the kind of work in which they are engaged?

Mr. MacINNIS: Yes, at this particular time.

Mr. ADAMSON: I was glad to hear what the minister said respecting the possible utilization of persons—even in the armed forces—despite their being enemy aliens. As the minister may be aware, I have repeatedly disagreed with the policy of the government, and particularly that of the Department of National Defence, which operated on the premise that because a man was an alien, even though he might be naturalized after a certain period, there was no possibility of his being used in the armed forces.

I was instrumental in getting into the army one young man whose father was a German. He did extremely well, and was recommended for a commission. It was discovered eventually that he was of German parentage, and an attempt was made to have him discharged from the army. I am prepared to believe that that young man, as well as many others, was as loyal a Canadian as any hon. member in the house. The fact that a father happened to be born in Germany is no reason for damning a second or third generation.

I emphasize the point that after due investigation has been made—and we cannot be too careful—these people should be accepted. The simple basis of nationality is a false premise. It is wrong and even undemocratic to prevent a young man from fighting for his adopted country, if he chooses to do so. A number have wished so to do, but as a result of the present regulations they have been prevented.

Elsewhere I have seen men whom I have known to be Germans, working in the imperial forces, and performing extremely valuable and confidential tasks. I was delighted to hear the minister's statement to-night, and I hope he will see to its enforcement in the department.

The forgotten man in the armed forces to-day is the man engaged in internment operations. I was glad to hear the hon. member for Fort William mention the veterans guard as being among those in charge of internment operations. There is no job in Canada as trying, as exasperating or as objectionable as looking after prisoners. And of all the prisoners the Germans are the most objectionable. Looking after them is a thankless and miserable job. The only thing that can happen to an internment guard is that he collects abuse, in the event of an escape. A hue and cry goes up, followed by a court of inquiry and occasionally a court-martial.

There have been escapes, and probably there will be more of them. We cannot help having some, when we are dealing with as large a number of interned prisoners as are now interned in Canada.

I think the minister should emphasize the fact that there have been very few escapes in Canada, whereas on the other hand, in respect of our fellows, I will not mention any number, but will say that at times there are hundreds of members of the British armed forces loose in enemy territory. I mention that only by way of comparison with our effort. I believe we have lost only one man. Von Werra secured a boat, crossed the St. Lawrence river and got back to Germany.

Mr. RALSTON: And even he was not lost from a camp.

Mr. ADAMSON: No; he was lost from a train, and was subsequently killed on the Russian front. It cost the German government $25,000 for Von Werra to break his parole. He is the only one who got back to Germany. On the other hand, we read stories as to the numbers who have escaped, after being taken prisoners at the Dieppe and other operations.

The veterans' guard has to put up with the abuse of these sullen prisoners. A particularly objectionable feature was the unfortunate practice of manacling prisoners. This is the unfortunate and unhappy job he has to

do. But he is doing it efficiently, and I pay tribute to him for a job being performed under difficult circumstances.

Mr. FRASER (Peterborough West): Does the amount of $4,595,535 cover food and attendance? I ask this question because many people have asked why the German prisoners in Canada do not need boxes of food to keep them well fed, whereas our troops who are prisoners overseas have to have them to keep alive.

Mr. RALSTON: Was the hon. member asking about operating expenses?

Mr. FRASER (Peterborough West): All operating expenses, including food and administration. Then, of course, we must include the pay to the internees, as well. I understand it comes from Switzerland.

Mr. RALSTON: Yes; for all except officers.

Mr. FRASER (Peterborough West): Since a number of these internees have been captured by the British, does the British government pay any part of the expense?

Mr. RALSTON: Yes. I am not in a position at the moment to disclose the financial arrangement with the United Kingdom, but there is an arrangement as to their contribution.

Mr. GREEN: The hon. member for Calgary West said that in these prison camps the nazis are in command, that they have their own gestapo and so on. Would the minister say what system is followed in organizing these camps, and whether it is a fact that the Germans in the camps practically control the whole organization?

Mr. RALSTON: There is a spokesman in each camp.

Mr. GREEN: He is a German?

Mr. RALSTON: It would depend upon the set-up in that camp; I suppose he would represent the majority. Endeavour has been made to segregate those of different tendencies and types particularly civilians. You will remember that this came up some time ago in connection with the Fredericton camp. The nazi group as far as possible are segregated from the anti-nazi group. That was the situation which arose in the Fredericton camp, which brought about the alleged riot which was spoken of here some time ago.

Mr. GREEN: The situation is that the prisoners themselves have practically complete control within the wires?

Mr. RALSTON: Not complete control. They have an organization whereby one man speaks for them and is responsible for—I was going to say their good behaviour, but that is hardly the right expression. A communication to him is regarded as a communication to the prisoners in the camp; a warning to him is regarded as a warning to them; if the arrangements he has made are not carried out then the necessary punitive, remedial and disciplinary measures follow. As my hon. friend knows, the guards are closely in touch with the prisoners in the camp, who are given a certain amount of freedom inside; that is to say, they are not harassed continually if they are behaving properly. They are given a certain amount of autonomy in connection with their day to day arrangements. Their parades are at a certain time; they are out during certain hours; their meals are served at certain hours; roll call is at certain hours, but with regard to what they may be doing at a particular time, that can be largely arranged by themselves. The guards do circulate through the inclosure as frequently as may be necessary in order to see that no untoward event is taking place, and endeavours are made to check any attempts to escape by tunnelling and all that sort of thing.

Mr. GREEN: Who is the director of internment operations; who is in charge?

Mr. RALSTON: Colonel Streight.

Mr. GREEN: Then how do the veterans guard fit into the picture?

Mr. RALSTON: They have full charge with regard to the guarding arrangements of the camps. They are distributed all over Canada, but within the district they are under the district officer commanding, whoever he may be. The guard is just like a detachment of infantry or any other part of the Canadian army which is sent to a particular place to do a particular job.

Mr. GREEN : Are they under the director of internment operations also?

Mr. RALSTON: No; the guard are under the district officer commanding. The director of internment operations is the liaison with External Affairs, and has particularly to do with seeing that international arrangements are carried out with all the incidents which deal with the maintaining of the Geneva convention respecting prisoners of war. The director of internment operations is not directly responsible for the guarding of the prisoners or for their security; rather he is the headquarters officer having supervision over the

entire operation. The district officers commanding are the men responsible for the actual guarding of the camps.

Mr. BOUCHER: Did I understand the minister to say that this amount of $8,430,895 covers all expenses of internment camps, including food, clothing and lodging of the internees; maintenance of the institutions, pay of the guards and administration, except in so far as international contributions are concerned?

Mr. RALSTON: That is so.

Mr. GREEN: In a large camp where there are perhaps ten thousand nazis, would the position be that the ruler of that camp within the wires would be the nazi leader, who would have complete control of the ten thousand prisoners?

Mr. RALSTON: I do not want to say "complete control". He looks after the domestic arrangements, shall I say, among the prisoners themselves, with regard to their comfort and matters of that sort. He has no control in the sense of being able to order the prisoners to do certain things. He is rather a liaison officer between the camp commandant and the prisoners.

Mr. GREEN: If the camp commandant wants anything, he deals with the nazi leader?

Mr. RALSTON: That is so, if he is the camp spokesman.

Mr. DOUGLAS (Weyburn): I understand that many of these internees are sent over from Great Britain to be placed in these camps, and that many prisoners of war are sent here as well. Does Great Britain make any financial contribution toward the cost of these camps?

Mr. RALSTON: Yes. I answered that question a moment ago. I prefer not to disclose the terms of the financial arrangements, but there is a very substantial arrangement, as a matter of fact, in regard to both capital and operation.

Mr. DOUGLAS (Weyburn): Would the minister also indicate what pay is given? I understand the prisoners of war cannot be made to work but, if they volunteer to work, they are paid twenty cents a day extra. Is that correct?

Mr. RALSTON: I think it is twenty cents a day.

Mr. DOUGLAS (Weyburn): What pay do they get if they are not doing any work, and what pay is given the officers?

Mr. RALSTON: Under the Geneva convention officers receive from the power in whose custody they are, certain pay and allowances, while other ranks are paid small sums by their own government through the protecting power. Other ranks who work are paid twenty cents a day. I cannot give my hon. friend the rates at the moment.

Mr. ADAMSON: One of the causes of friction in the past has been the fact that the responsibility of the district officer commanding started at the wire, while the responsibility of the director of internment operations ended at the wire and began in the compound. I know this is a matter of international arrangement, but there seemed to me to be a certain amount of divided authority, that internment operations looked after the prisoners until they escaped, and that immediately they escaped it became the job of the Canadian military authorities and the veterans' guard, under the district officer commanding. I know that matter has been brought to the attention of the minister on previous occasions, but this has been one of the difficulties in connection with internment operations, and there have been cases where the military authorities have not operated inside the compound as they might have, had there not been this dual authority. Has the minister any information as to what is done in other countries? For instance, what do the Americans do in this regard?

Mr. RALSTON: I think my hon. friend is mistaken with regard to the dual responsibility. The Department of National Defence, under the new arrangement, has absolute responsibility except in one aspect; namely with regard to external relations, which are handled through the Department of External Affairs. In all other respects the Department of National Defence is responsible. As I pointed out, the director of internment operations is a headquarters staff officer at national defence headquarters. He does not have executive power in the sense of allocating troops here, there and the other place. Those troops are allocated by the adjutant-general to the officer commanding the district in which the particular camp is located. There is no such thing as divided responsibility. The hon. member suggested that the military authorities go to the wire and the commissioner of internment operations has jurisdiction inside. That is not correct. The military authorities have complete jurisdiction. The guards are under the Department of National Defence and under the district officer commanding, and are responsible for both interior and exterior

security. The order in council is that the entire responsibility for prisoners of war, enemy aliens and other internees is transferred to the Department of National Defence.

Mr. ADAMSON: When was that passed?

Mr. RALSTON: One was passed on November 19, 1942, and another on January 20, 1943. The latter order in council provided for the transferring of refugees as well as prisoners of war. The Department of National Defence became responsible for guarding, discipline, the censorship of mail, the welfare of prisoners, internees and refugees, and the maintenance and operation of all camps. There was what I regarded as some divided responsibility, but that has been cured.

Mr. ADAMSON: That answers my question. The camp commandant is responsible to the district officer commanding.

Mr. GREEN: Has the director of internment operations any authority over the various camp commandants?

Mr. RALSTON: He has not.

Mr. GREEN: He has no right to move them about or discharge them or do anything of that kind?

Mr. RALSTON: No. The director of internment operations as an officer of the adjutant-general's branch has the right to go to the camps and reports direct to the adjutant-general. The usual practice is for him to consult with the district officer commanding, since he is in the district. He acts almost in the capacity of an inspector-general in regard to matters of security and the carrying out of the Geneva convention.

Mr. ADAMSON: Are representatives of the International Red Cross and the international Y.M.C.A. allowed inside the camps as well as representatives of the protecting power, the Swiss government?

Mr. RALSTON: The protecting power has the right, and the others are allowed in by mutual agreement with the detaining power.

Mr. DOUGLAS (Weyburn): What pay is received by officer prisoners? Is it correct that they are paid a percentage of what they would receive if they were serving in their own army? Should they receive a promotion while a prisoner, does that automatically increase the pay which they receive from the Canadian government?

Mr. RALSTON: They are paid the amount agreed upon as between the German government, if they are German prisoners, the United Kingdom government and the Canadian government. They may receive a promotion if intimation comes through their government or the protecting power.

Mr. DOUGLAS (Weyburn): Does that apply in the same way to Canadian prisoners of war in Germany? Do they receive an increase in pay in the event of promotion?

Mr. RALSTON: It is not certain.

Mr. POWER: We cannot get definite information on that point. I have been trying to get it for the last eight months.

Mr. DOUGLAS (Weyburn): Should we not have a quid pro quo in regard to that?

Mr. RALSTON: We have been trying for some time to have a quid pro quo in connection with prisoners of war.

Mr. JOHNSTON (Bow River): If a German prisoner receives a promotion do we have to increase his pay?

Mr. RALSTON: By agreement, if the agreement refers to the rank, the pay is increased.

Mr. HANSELL: I do not think the matter of conscientious objectors and their internment has been cleared up entirely.

Mr. RALSTON: Conscientious objectors are one thing, and internment is another. We have been somewhat confused in the discussion. The hon. member for Calgary West (Mr. Edwards) was really discussing a matter which was outside the terms of this resolution entirely, while the hon. member for York South (Mr. Noseworthy) was discussing something which was within the terms of the resolution. He was discussing those who are interned, and that is part of this vote. I have no objection under the proper circumstances to discussing the matter of conscientious objectors, but I do not think this is the item under which it should be discussed.

Mr. HANSELL: I should like to know just where I could bring in that discussion.

Mr. MACKENZIE (Vancouver Centre): Under the labour estimates.

The CHAIRMAN: Shall the item carry?

Some hon. MEMBERS: Carried.

The CHAIRMAN: The next item is dependents' supplementary grants fund, $1,285,000.

Mr. JOHNSTON (Bow River): I believe this is the item under which we can discuss assistance given to wives who have been deserted by soldiers. I brought a case to the attention of the minister the other day, and he said he would review the matter and make a statement to the house.

Mr. RALSTON: The chairman of the dependents' board of trustees tells me that the case submitted by my hon. friend is being examined. He is right in assuming that it can be discussed under this item.

Mr. JOHNSTON (Bow River): I took the matter up with the department separately, but I was wondering if there was a breakdown of this particular case.

Mr. RALSTON: No.

Mr. GILLIS: I am interested in a matter similar to that brought up by the hon. member. The dependents' board of trustees is not permitted to grant an allowance unless the dependent is receiving pay and allowance. When a man goes absent without leave and is away for the period covered by the regulations, his dependent's allowance is cut off and, if it is a wife, she cannot receive any assistance from the dependents' board of trustees. I ask the minister to see that the functions of this board are extended so that they may give assistance to these women. There are many cases across Canada, and a sad situation is being created because this board cannot give assistance to women in this position.

Mr. RALSTON: After the three months.

Mr. GILLIS: That is as I understand it.

Progress reported.

At eleven o'clock the house adjourned, without question put, pursuant to standing order.

Tuesday, June 1, 1943

The house met at three o'clock.

RADIO BROADCASTING

CONCURRENCE IN FIRST REPORT OF SPECIAL COMMITTEE

Mr. J. J. McCANN (Renfrew South) presented the first report of special committee on radio broadcasting, and moved that the report be concurred in.

Motion agreed to.

PRIVILEGE—MR. POULIOT

REFERENCE TO ARTICLE IN OTTAWA "JOURNAL" OF MAY 31

Mr. JEAN-FRANÇOIS POULIOT (Témiscouata): Mr. Speaker, I rise to a question of privilege. I hold in my hand the five o'clock edition of the Ottawa *Journal* of yesterday, on the front page of which the member for Témiscouata is given equal precedence with the united nations. Of course the article is with regard to the exercise of his unquestionable right as a member of this house to express his views and also those of his constituents. Some calculations have been laboriously made by the skunk kittens of the *Journal's* tycoons with petrifying hearts and softening brains, and they are all wrong. For instance, they say that I have been speaking for 20 pages in the first place, then 30 pages before the Easter recess, and then 64 pages more, which makes a total, they say, of 94 pages, and they repeat that total three times. Now 20 plus 30 is 50, and 50 plus 64 is 114. Not only is their calculation wrong, but they also say that "it takes 34 other members to equal Mr. Pouliot's wordage." Here again they are wrong, because I have noticed that in the present discussion some members have spoken four lines, and I do not know how many times four lines is more than silence, more than naught. It is pretty hard to make that calculation.

I do not contend, sir, that I have spoken for an average of 34 members. I have expressed my views. As one member from Montreal said not long ago, the members from Quebec province who were elected at the last election were expressing in this house the views of the province. I have been speaking, not for 34 other members, but for 160 members who have not uttered a word since the beginning of the session, and if other members were exercising their rights as I do I would certainly not take so much time. But I deny anyone the right to say what the *Journal* said.

A great writer, Homer, in his "Iliad," said—

Mr. CRUICKSHANK: Get on the wheat committee.

Mr. POULIOT: That is a book which the hon. member for Fraser Valley (Mr. Cruickshank) ought to read. It is a classic. Homer said of one of his heroes: *Palletai itor ana ta stoma* or "My heart leaps to my lips." The *Journal* editors or correspondents take so much space for the member for Temiscouata that they cannot express the deep feelings they have for those members who say nothing. They are not fair to the members whom they admire for their silence. They should take less time on me and devote more time to the members they admire for saying nothing in this house, thereby fulfilling their duty in a way that is approved by the *Journal*, the board of censors, the wartime information board and the press liaison officers of all the war departments.

FEED GRAINS

GOVERNMENT AID IN RESPECT OF PRICES AND LOCAL STORAGE

On the orders of the day:

Mr. M. C. SENN (Haldimand): Just before coming into the house my attention was drawn to an article in the *Globe and Mail* regarding the movement of western grain east. It is a comprehensive statement. One matter to which it refers is, I think, the crux of the whole situation, and that is the price of feed grains. Before seeing the article I had a question framed and I am going to put it to the Minister of Agriculture. It is as follows: Owing to unfavourable seeding conditions throughout Ontario and the consequent certainty of a shortage of feed grains, resulting in high prices therefor, farmers are disposing of their brood sows in alarming numbers. Will the minister take into consideration the advisability of issuing a statement giving assurance that feed grains may be obtained at prices which will encourage producers to keep their breeding stock?

Hon. J. G. GARDINER (Minister of Agriculture): The present intention of the government and, I think, the policy for the year is that the same assistance will be given as was given last year, and there is under consideration at the moment some plan by which it is hoped we shall be able to encourage the storing of grain during this summer by feed merchants and others in order to have it available next winter.

Mr. ROWE: What about the price?

Mr. GARDINER: The price, of course, will be maintained on the same basis as it now is; that is, the price as established under arrangements which have already been made by the Minister of Trade and Commerce and, I think, have already been announced to the house. That is, the price—the ceiling price—as it was last year is maintained.

Mr. SENN: I do not want to pursue the matter too far, but the difficulty is that farmers are disposing of their breeding stock in very large numbers, and in view of the need to keep up our hog production, some assurance should be given to agriculture.

Mr. GARDINER: We will see that a statement is put out in the press indicating just what are the facts with regard to the feed situation.

WHEAT

QUESTION AS TO REQUEST FOR INCREASED INITIAL PAYMENT

On the orders of the day:

Mr. E. E. PERLEY (Qu'Appelle): I desire to direct a question to the Minister of Trade and Commerce. Has the minister received in the last two or three days a request from the central board of Canadian Cooperative Wheat Producers in the form of a brief, requesting that the initial price paid by the wheat board be increased by ten cents a bushel in order to bring it to one dollar per bushel basis Fort William? If so, has he given serious consideration to the matter, and will he have a statement to make within a few days?

Hon. J. A. MacKINNON (Minister of Trade and Commerce): The answer to the first question is, no. I think that answers also the second question.

Mr. PERLEY: The minister has not received any such request?

Mr. MacKINNON (Edmonton West): No such request.

PERMITS FOR EXPORT OF COARSE GRAINS

On the orders of the day:

Mr. T. C. DOUGLAS (Weyburn): Will the Minister of Trade and Commerce inform the house why no permits are required by those exporting feed wheat? The minister will remember that he told the house that permits were being required for the export of coarse grains. According to an answer he made yesterday, no permits are demanded for the export of feed wheat, thus enabling those who export it to make quite a profit out of the differential between Canadian and United States prices.

Hon. J. A. MacKINNON (Minister of Trade and Commerce): I do not think that the inference the hon. member draws is correct. I shall look into the matter and bring down an answer.

SEED POTATOES

PRICES, ACREAGE PLANTED, AND SUPPLIES

On the orders of the day:

Mr. J. H. BLACKMORE (Lethbridge): I desire to direct a question to the Minister of Finance. He indicated, I understood, the other day that he would give the house a statement pertaining to the prices of seed potatoes in various parts of Canada. Yesterday he did not do so, perhaps because he did not under-

stand that the request was urgent. Is he able to give the house to-day an account of the prices of seed potatoes prevailing in various centres throughout Canada?

Hon. J. L. ILSLEY (Minister of Finance): I took that matter up with the wartime prices and trade board and they agreed to wire the various cities to try to get the information. They cannot get it immediately; it will take a few days to obtain it, but when it is procured I will give such information as I get.

Mr. BLACKMORE: May I ask the minister one or two more questions bearing on this very important matter of the price of seed potatoes? Can the minister tell the house how many potatoes are in storage in Canada? What I wish to know is whether the wartime prices and trade board or any food supply board or other agency that has this matter in charge, have any idea how many seed potatoes or potatoes of any kind are in storage. It is important that we should know how large a quantity of potatoes is available or can be made available to people who may plant potatoes.

Mr. ILSLEY: I believe the agricultural statistics branch have some record monthly of the quantities of potatoes in the country. Beyond that I do not know what statistics are available.

Mr. BLACKMORE: May I ask the minister one more question. Has the government gathered any information which would indicate the number of acres of potatoes that are planted in Canada? The parliamentary assistant to the minister issued a statement the other day in which he told us how many they planned to plant. I wonder if they know how many are reported to have been planted.

An hon. MEMBER: It is too early.

Hon. J. G. GARDINER (Minister of Agriculture): The information with regard to these matters is gathered for the Department of Agriculture, and the latest reports I have received are that the acreage going into potatoes this year is considerably higher than last year, and higher than we anticipated at the time the conference was held, in December. I am not able to give the exact figures; I can bring them down to-morrow or at a later date.

BEER

EXPORT BY CANADIAN BREWERS FOR BRITISH TROOPS IN WAR THEATRES

On the orders of the day:

Mr. THOMAS REID (New Westminster): I should like to direct a question to the Minister of Trade and Commerce. It arises out of statements made by the Rev. Andrew Roddan, of First United church of Vancouver, that 800,000 cases of beer were being exported every month by the brewers of eastern Canada to North Africa, and that valuable shipping space was likewise being used for this purpose. My question is, first, what shipments of beer have been made each month, and whether any such shipments made are for the Canadian government, or for the British government; second, who provides the shipping space?

Hon. J. A. MacKINNON (Minister of Trade and Commerce): The hon. member informed me that he was going to ask this question to-day and I am prepared to give an answer. I just briefly repeat the main points of the statement I made several months ago dealing with this matter.

First, what beer is purchased is bought by the United Kingdom government through the British Navy, Army and Air Force Institute. Second, the beer has been shipped to war theatres on vessels wholly under the control of the United Kingdom government. Third, the Canadian government has nothing whatsoever to do with this transaction, in regard either to purchasing or to shipping, except that, on the request of the United Kingdom government to ship beer to desert battle fronts and elsewhere, my department, through the export control permit branch, automatically grants export permits.

WAR APPROPRIATION BILL

PROVISION FOR GRANTING TO HIS MAJESTY AID FOR NATIONAL DEFENCE AND SECURITY

The house resumed from Monday, May 31, consideration in committee of a resolution to grant to his majesty certain sums of money for the carrying out of measures consequent upon the existence of a state of war—Mr. Ilsley—Mr. Bradette in the chair.

B—Sundry services.

Dependents supplementary grants fund, $1,285,000.

Mr. GREEN: Has the minister the answers to the questions I asked him?

Mr. RALSTON: As soon as this item is disposed of I shall put on the record what answers there are.

Mr. GILLIS: When the committee rose last night I was making some inquiries with respect to the dependents' board of trustees. I should be glad if the minister would indicate just what the machinery of the board consists of. What is the administrative body that functions in Ottawa? How many of the com-

mittees are set up across the country, and what machinery is provided to make contact with these committees? In Nova Scotia there is only one committee functioning under the dependents' board of trustees. That committee sits in Halifax and there is no one in the province that I know of, apart from a few social service workers, who has any idea to whom to appeal under a given set of circumstances. If this body is to function efficiently there should be at least a representative of it in all the large centres.

Another thing. The secretaries of the veterans' organizations in their respective towns and communities could very well be utilized in making the necessary investigation where an application is made for a grant under the dependents' board of trustees. They are familiar with the line of work and are well known in the communities, and they can be depended upon to make a fair recommendation. If this particular grant serves any purpose at all, there is one class of people that should be brought under it, and that is the women in Canada with families whose husbands go absent without leave, either in this country or overseas. Regulations have been extended to cover the matter up to a certain point. While a man is under apprehension the allowance is carried on for three months, but there are a large number of women in Canada who have been faced with the necessity of having their allowance discontinued. This particular class does not come under the dependents' board of trustees, because I understand that the object is simply to augment the allowance where there are extenuating circumstances, and when the allowance is not applicable the dependent will not be brought under the board of trustees. I should be pleased if the minister could make a statement as to the machinery and what the possibilities are of utilizing the secretaries of the veterans' organizations throughout Canada, in their respective communities, to carry out investigations. If an application is made from Sydney, someone has to come from Halifax to look into the situation and weeks are lost in investigation; whereas, if the veterans' branch secretaries were utilized, a telegram or a telephone call would clear the matter up in twenty-four hours.

Mr. RALSTON: I have endeavoured to put on the record the general outline of the organization. I did so early in the discussion, but on this occasion I may repeat that the dependents' board of trustees itself consists of nine persons selected across Canada who, I think, are fairly representative and form a cross-section of those who take an interest in the welfare of dependents. The Canadian Legion is represented, the Department of Pensions and National Health is represented, there are French-speaking and English-speaking representatives on the board, and so on, and there has been no complaint of any kind with regard to the constitution of the board itself. The board functions through committees in different centres. I have here a list of the centres in which the committees in each province are located: Charlottetown; Saint John; Moncton; Halifax; Quebec; Montreal; Kingston; Ottawa; Toronto; Hamilton; Peterborough; London; Windsor; Sudbury; Port Arthur; Winnipeg; Regina; Saskatoon; Calgary; Edmonton; Vancouver; Victoria. Each committee covers a specific territory. In some cases it is the province, in some cases the military district and in some cases a smaller area. The membership of the committee is not confined to residents of the city in which the office is located, but wherever it is appropriate it includes members from outside points.

My hon. friend, I believe, is interested in the procedure which is followed and the opportunity which a particular dependent has for making application and having that application considered. As I understand it, the procedure is this. In the first place a notice has been sent to every person receiving dependents' allowance in Canada advising of the existence of the dependents' board of trustees and, as well, of the location of the offices of the board, and advising further as to the procedure which they shall adopt should a situation arise in which they feel that the services of the board can be of benefit. In addition to that the Canadian Legion and the welfare agencies in each province and in every community know of the operations of the dependents' board of trustees and are prepared to help to forward the applications and the investigation of any case, with a statement of the circumstances. I noted my hon. friend's suggestion with regard to investigations. Naturally—and I think he will agree with me—one does not want to multiply the number of investigating agencies. There is nothing worse than that from the point of view of morale, because it might easily give a wrong impression to a prospective recipient as to the attitude of those who are dealing with his or her case. Emphasis is put on the fact that these agencies, whatever they are, are not for the purpose of doling out charity, but to help applicants to show their right to assistance under the regulations which the board administers. I have reason to feel that there has been a general measure of approval of the method and general acceptance of the fact that the board is sincerely trying not to chisel on dependents, but, on the contrary, is endeavouring to

approach their cases in the spirit of assistance which the order in council intended. I have asked the chairman of the board, who is before me, with regard to Sydney, from which my hon. friend comes. There the dependent would have learned from the notice she received that her nearest local committee was located in Halifax; however, if he or she went to the Canadian Legion or to a welfare agency, they would be immediately put in touch with the committee. In this particular case there is a member of the provincial committee living in Sydney. Mr. Muggah is a member of that committee. I must say that I do not feel that we want to multiply organization too much. We want to be sure to get the meritorious cases, or those which are thought to be meritorious, presented to the board. The best test is that it has worked. It has not worked in the case my hon. friend speaks of, but as he realizes, that is not because of the organization of the board, it is because of the regulations to which he refers.

The provision is that if a man overseas is struck off strength because of being absent without leave, the absence having continued for three months, his pay is stopped and the dependents' allowance is suspended by the dependents' allowance board. The function of the dependents' board of trustees is to make supplementary grants, and there would be nothing to supplement where the dependents' allowance was suspended. Otherwise we would be giving a dependents' allowance to the dependent of someone who was not a member of the forces. The provision is that a man is struck off strength when he has been absent without leave for twenty-one days and his pay stops. But notwithstanding the suspension of the allowance, the dependents' allowance board considered that there should be some relief from the sudden suspension and they have adopted the procedure in overseas cases of making a new award to cover a period of three months to assist the type of case to which my hon. friend has referred.

I think what the hon. member has in mind is the possibility of the dependents' board of trustees considering the merits of a case like that. I do not think you can make a hard and fast rule. There might be a case in which you would say, "No, the dependents' allowance should not be continued any further even though the man has been absent only one month." There may be another case in which there were meritorious circumstances, where the character of the man was known and it was doubtful whether or not he had really intentionally deserted or gone absent without leave. Different situations might also exist in connection with the circumstances of the dependents. There might be a case of extreme hardship and another case where, although there had been a considerable reduction in the income, the situation was not such as to justify the payment of a grant.

All I can say to my hon. friend is that it is only by bringing up these cases that they are called to our attention. Perhaps the existence of a type of case is established. I will study the matter with the chairman of the board and my colleagues to see if there is any possibility of making a rule which would fit the particular type of case to which my hon. friend refers. I am always afraid of trying to fit an individual case, because very often hard cases make bad law. If there is a type of case which has merit, I shall endeavour to see if it is possible to meet it.

Mr. DOUGLAS (Weyburn): We are particularly interested in those who are entitled to assistance from the dependents' board of trustees. The board should be in position to grant this assistance as quickly as possible. The case was mentioned the other day of a member of the forces who was seriously ill in a hospital and whose dependent made application to the office of the board to secure transportation. In the agricultural areas particularly this would be a slow process to be followed by a woman who had received a telegram that someone belonging to her was seriously ill. By the time she made application to the office of the dependents' board of trustees and obtained her transportation, it might be too late. Some time ago I sent to the minister a copy of a resolution which had been passed by a farm women's organization in Saskatchewan and which I thought was worthy of consideration by the minister and his department. The suggestion was that where a man was seriously ill and word was being sent to his dependent, a transportation warrant should be sent along with the telegram. One can almost take it for granted that if the dependent is a long distance away she is not going to have the necessary money from her dependents' allowance and assigned pay to meet these transportation costs. If she has to make application to the dependents' board of trustees it may take too long. She will either have to borrow the money to go, or not go at all. I wonder if the minister has given any consideration to the possibility of having the transportation warrant accompany the telegram that goes out to a dependent informing her that a soldier is seriously ill?

Mr. RALSTON: I think that case is covered by the procedure which has been adopted. I am informed that when a hospital informs a dependent by wire that she is required because of the illness of a soldier, a duplicate telegram is sent at the same time to the dependents' board of trustees. The dependents' board of trustees, by wire again, immediately gets in touch with the local committee and has the committee get in touch with the dependent to ascertain just what is the situation with regard to transportation. The railway companies will accept a telegram from the dependents' board of trustees, or from the local committee as authorization for transportation. The only difference in this procedure from that suggested by my hon. friend is that he suggests that the provision of free transportation should be automatic. I am not prepared to go that far at the moment. I can conceive of quite a number of cases where there would be no need of providing free transportation to dependents. My hon. friend is assuming that all dependents are in the same financial position, but that is not so. I am sure that if the meritorious cases are taken care of, it will meet my hon. friend's suggestion. I did not know of this procedure when I spoke the other day about this matter.

Mr. DOUGLAS (Weyburn): The procedure outlined by the minister would work fairly satisfactorily in the more heavily settled areas, but in a great scattered province like Saskatchewan some considerable time might elapse between the sending of the wire by the board in Ottawa to the committee in Regina or Saskatchewan and their getting in touch with the dependent. The dependent might be three hundred miles away from either one of these centres. She might be living on a farm where there was no telephone; she might be in a community where there was not even a branch of the legion. It would be a very complicated procedure and would take a great deal of time.

Mr. RALSTON: My hon. friend is portraying Saskatchewan as a lot more primitive than it really is. I know there are great distances, but I do not think there are many places which are not within reach of a telephone. The railway station could be got in touch with, because the station from which the dependent would leave would be known to the committee. But my hon. friend is right in this: if the system does not work, it must be made to work. That is the principle that has been adopted. I have just inquired whether or not there have been any cases in which complaints have been made, and I find there have not.

Mr. DOUGLAS (Weyburn): They may not have been made to the minister, but the fact is that at a farm women's convention—this was not a convention of soldiers' dependents —the matter was brought up so frequently that they took the trouble to pass a resolution and I believe sent a copy to the minister. They sent a copy to me and I forwarded it to the minister. They thought that it was a serious problem. I was not emphasizing the distances in Saskatchewan, but it is a scattered province. Merely sending a telegram to the railway station does not mean that you will get in touch with the dependent who may be on a farm fifteen or twenty miles away. Furthermore the committee at Regina or Saskatchewan may not know anyone in the particular community who could give them information as to whether the dependent required transportation, and it might take some time to get in touch with the dependent.

Mr. RALSTON: The chairman of the board tells me that they use the postmaster or the clergyman or the priest or whoever may be able to get in touch with the dependent without delay. However, my hon. friend and I are at one in the matter of principle, and it is up to us to see that the details are worked out.

Mr. McCANN: When a new dependent arrives I think there might be a simplification of the procedure which is followed at the present time. It appears that the father of the new-born child has to make application to the board to have this member of the family added to the list of dependents. I know of instances where the fathers are overseas—

Mr. RALSTON: Overjoyed.

Mr. McCANN: —overjoyed and overseas, and of course at a time like that there is a good deal of extra expense. I suggest to the dependents' allowance board that they accept the certificate of the attending physician or a copy of the registration of birth, and that the child be given the dependents' allowance the same as the other children. That would do away with the long delay which must ensue when the application has to be made by the father, who may be overseas.

Mr. RALSTON: I will certainly note what my hon. friend has said. It sounds to me as though the evidence he suggests should be quite ample for the purpose.

Mr. JOHNSTON (Bow River): Am I right in understanding that the minister says arrangements will be made whereby the dependents of soldiers who have been away without leave for more than twenty-one days will be looked after?

Mr. RALSTON: I went as far as I could in that regard. I cannot go further than to say that I have made a note of the case; that I realize it is not covered by the regulations now; that I shall see what the merits are in regard to making any general regulation about it and, having seen that, having received recommendations and having consulted my colleagues, I will decide what should be done. That is all I can tell my hon. friend.

Mr. JOHNSTON (Bow River): I understand that the dependents' board of trustees has to do only with the dependents of soldiers, that it does not deal with the dependents of officers at all. I think some consideration should be given the dependents of officers. I have in mind one such dependent in the city of Calgary who made application to the dependents' board of trustees and was turned down, I am informed, on the ground that she was the wife of an officer. It seems to me that where the dependents, even of officers, are in need they should be considered by this board, but I understand that is not the case. Would the minister explain that situation?

Mr. RALSTON: That is so. Of course the dependents of officers receive allowances at rates higher than are paid the dependents of other ranks. These regulations do not apply to the dependents of those above the rank of warrant officer class 2. They apply to those up to and including warrant officer class 2, one reason being the different rate of dependents' allowance above that rank.

Mr. JOHNSTON (Bow River): Take the case of a captain's wife, for instance, who is in dire need, not receiving sufficient to properly maintain herself. Would that be given consideration by the board as a special case, or would it be automatically thrown out because the dependent happened to be the wife of a captain?

Mr. RALSTON: There are more difficulties in this connection than perhaps my hon. friend realizes, and I can mention one offhand: Hospital standards, for instance, and things of the kind which are constantly coming up. It is considered, generally speaking, that the higher dependents' allowance, plus the difference in pay received by the officer, create a situation in which the special provisions concerning the dependents' board of trustees are not required. My hon. friend will say that there is the odd case, and perhaps more than the odd case, of this kind. I can only tell him that I will look into it. As a matter of fact I remember one case of which I heard, but it was the case of a man who had been promoted from the ranks and I think the claim was with regard to an indebtedness incurred while his wife was receiving the lower dependents' allowance. I can only say to my hon. friend that I will examine the situation and see if there are any other grounds than those which I have mentioned for not including the dependents of officers within the provisions of these regulations.

Mr. MacNICOL: If a soldier is reported missing in action is the dependents' allowance continued without interruption, or is there an interval until the department finds out whether the man is alive or dead?

Mr. RALSTON: It is carried on for at least six months.

Mr. MacNICOL: Without interruption?

Mr. RALSTON: Yes.

Mr. FRASER (Peterborough West): I have a case of a soldier who just returned from overseas. Some four or five months ago his wife was taken ill and had to be rushed to the hospital. Her bills were paid partly by her friends and partly from her dependents' allowance. Is there any chance of that soldier getting any of that money back, or is there a time limit within which application must be made to the dependents' board of trustees?

Mr. RALSTON: I think the only limitation as far as time is concerned is the proviso that the man must be still in the service. I believe that is a case which would be considered by the board on the particular circumstances; I cannot go further than that. Cases of that kind have come before the board and assistance has been given.

Mr. FRASER (Peterborough West): Would it be covered if the soldier was in the service during the time his wife was in the hospital?

Mr. RALSTON: No. As I remember the regulations the person who makes the application must be the dependent of a soldier at the time the application is before the committee or the board.

Mr. GILLIS: I wonder if the minister could give us the number of applications received, and the number granted, by provinces.

Mr. RALSTON: I have the figures here, but at the moment they are not in the form in which my hon. friend wants them.

Mr. DIEFENBAKER: I should like to direct a suggestion to the minister in regard to article 102, subsection (g) of the regulations. I have always found the dependents' allowance board very fair in its administration, but of course it cannot go beyond the provisions of the law. This section provides that no allowance shall be paid or granted to the wife of a non-commissioned officer or man who subsequent to enlistment marries without obtaining the permission of his commanding officer. Having regard to the instances that have been brought to my attention I think this section is rather unfair in its general operation. I have in mind the case of a man who enlisted on June 22, 1940. At the time of his enlistment he said that he had been married on June 17, 1940. In Saskatchewan it is necessary to give notice of your intention to marry; then you must wait for a period fixed by statute before the marriage can take place. Apparently this man had given notice of intention on June 17 but did not get married until June 27, 1940. As soon as this fact was ascertained the wife's allowance was taken away, and she has not been in receipt of it since that time.

Mr. RALSTON: What was the date of the notice?

Mr. DIEFENBAKER: I shall send the minister the file, in full detail. I am just pointing out the circumstances. I received a letter the other day, dated May 20, 1943, which stated that if permission to marry is granted the woman in question, dependents' allowance may be reinstated. But until such permission is granted, no allowance may be paid to her. I submit that after a lapse of almost three years some provision should be made for removal of the penalization of the woman for having married the soldier without his first having secured his commanding officer's consent. Considering the other side of the question, if this soldier had what is commonly known as a common law wife, under certain circumstances she would be entitled to the allowance.

Mr. RALSTON: He must have lived with a so-called common law wife for at least two years before enlistment. That is the difference.

Mr. DIEFENBAKER: But, regardless of the period, there are circumstances under which a common law wife can receive an allowance. Here is a woman who is being penalized because of the infraction by her husband of military rules. This section could and should be amended so as to make provision that after a reasonable time, say a matter of three or six months at the outside, an allowance could be granted. That would seem to be proper, if we must penalize soldiers for marrying without the permission of their commanding officers. I make this suggestion to the minister. In my opinion a change in this connection is very necessary to cover what must be a considerable number of cases coming within the purview of this regulation.

Mr. RALSTON: If the hon. member will send the particulars to me, I shall make a note of them as indicating a type rather than an individual case.

Mr. GILLIS: Is it possible for the minister to obtain those figures by military districts?

Mr. RALSTON: I have just had the figures prepared. The total applications and reapplications are 42,017. The completed applications number 33,734—and when I refer to completed applications I refer to those in connection with which evidence is completed and a decision reached. Uncompleted applications, those in connection with which further details are being obtained or decision has not yet been reached, number 8,143. I have not the total number of cases in which the allowances were granted, but the total amount of grants stands at $694,214.63. Then, giving the hon. member some local information, I would point out that through the committee in Halifax city there have been 1,158 applications, 851 of which have been completed and 307 incomplete. The grants have amounted to about $13,000. Those are single grants. In addition there have been some recurrent or regular monthly payments.

Mr. DOUGLAS (Weyburn): Has the minister the figures for the other military districts?

Mr. RALSTON: If we have not the figures for the districts, we have them for each city or town in which a local committee is situated.

Mr. DOUGLAS (Weyburn): The information by local committees would be satisfactory. What does the minister mean by a completed case? Is that a case in which an allowance has been granted?

Mr. RALSTON: No, not necessarily. It means an application which has been dealt with—that is, a grant has been made or refused, or the application withdrawn.

Mr. DOUGLAS (Weyburn): What number of those applying were granted allowances?

Mr. RALSTON: I have not the number of cases. The chairman of the board has given me an approximate estimate of over seventy-five per cent.

Mr. DOUGLAS (Weyburn): That are granted?

Mr. RALSTON: Yes.

Mr. HANSELL: I am a little confused as to what is meant by the term "supplementary grants." I know the meaning of the word "supplementary," used in its ordinary sense; but if the minister will look at number 2 on the list he will find it deals with pay and allowances. Are dependents' allowances included in the first amount of $539,730,211?

Mr. RALSTON: Yes; the item for dependents' allowances has already been passed. The amount paid as dependents' allowances is included in item No. 2, pay and allowances. The hon. member will find a subsequent item for the dependents' allowance board: that is an administrative item, covering the cost of administration of the board. That item has also been passed. The item we are now discussing is the supplementary grants fund, a fund administered by the dependents' board of trustees.

Mr. DOUGLAS (Weyburn): Has the minister put on record the number of cases handled by each committee?

Mr. RALSTON: The number for Regina is 1,337, of which 1,187 were completed; and for Saskatoon, 1,766, of which 1,285 have been completed. The cash paid in Regina is $21,736.52 and in Saskatoon $30,821.60. That is for single grants, not including recurrent payments. There would probably be additional recurrent grants to dependents filing applications through these committees.

Mr. DOUGLAS (Weyburn): If the minister had a list of the number of cases handled by the other committees we would have some idea of the comparative service rendered. Perhaps he would put that information on *Hansard*.

Mr. RALSTON: I shall be glad to do so. The following is a list showing the total applications, and the completed ones, that is, those which have been dealt with:

	Total	Complete
Charlottetown	347	336
Saint John	1,332	1,127
Halifax	1,158	851
Quebec	7,652	6,967
Montreal	3,782	2,566
Kingston	708	529
Ottawa	1,887	1,616
Toronto	6,850	6,035
Hamilton	2,102	1,617
Peterborough	685	607
London	1,435	992
Windsor	571	374
Sudbury	719	491
Port Arthur	269	207
Winnipeg	2,829	2,530
Regina	1,337	1,187
Saskatoon	1,766	1,285
Calgary	1,377	1,090
Edmonton	1,439	1,088
Vancouver	2,618	1,510
Victoria	1,154	729
Total	42,017	33,734

Mr. GRAHAM: I know that the minister will not have this information but I think he will agree that there will be a tendency for dependents who reside in centres where the boards have representation to make greater use of and secure greater benefits from the dependents' board of trustees because they know where the board is located and their access to the board is very easy. With reference to the different points which have been named by the minister, how many of these applications arose in the city in which the board committee resides and how many in the surrounding district? It would be well if the chairman were requested to make a survey of one or two points to see whether the benefits are penetrating the countryside and whether the board's purpose is being fulfilled of distributing the benefits fairly among all dependents, not only in the larger centres but in the rural areas and small villages and towns.

Mr. RALSTON: The statistics asked for by my hon. friend are not available here but they are kept and they can be produced either in the form of a return or in some other way which would be convenient to the members. Notwithstanding the fact that the boards are located in the cities I am informed that there is a very heavy number of rural applications.

Item agreed to.

B—Sundry services.

Inspection board of the United Kingdom and Canada, $10,600,000.

Mr. MacNICOL: Has Canada full control over the inspection board of the United Kingdom and Canada?

Mr. RALSTON: No, it is a joint United Kingdom and Canada inspection board. The sponsorship of the board is joint with the High Commissioner of the United Kingdom and the Minister of National Defence of Canada. The Minister of National Defence in turn derives his powers in regard to the Canadian end from the governor in council.

Mr. MacNICOL: I would like to bring to the minister's attention a case I have had with the board. A gentleman in Toronto made application to the board in 1941 and sent to the board some carefully prepared testimonials which were important to him because they had been given to him by responsible persons and companies. He has never been able to have these testimonials returned to him. He was informed a little while ago that they were lost. To-day in conversation with an officer of the board I was informed that they cannot be found. It is gross carelessness to have such an inefficient filing system in the board, and I should be pleased if the minister would give this matter his attention and make inquiries about it. I will send him the correspondence I have.

Mr. RALSTON: I appreciate my hon. friend's bringing the matter to my attention. I have just spoken to the officer who is in charge of the administration of the board and he will have a check made, but I should like to get in touch with my hon. friend or with his correspondent to get a little more information as to the date.

Mr. GRAYDON: Is this sum of $10,600,000 contributed on an equal basis by Canada and the United Kingdom?

Mr. RALSTON: Roughly it is in proportion to the value of the material inspected on behalf of each of the two countries.

Mr. ROSS (Souris): I should like to ask a question with regard to the use of horses or cavalry in the army. I realize that the universal carrier is probably the best cross-country vehicle that we have in the armed forces, but I have seen articles in the press that the army council in Canada has considered the use of horses in this war. Some pictures have been shown to the members of the house at the instance of the government which indicate the recent extensive use of cavalry by the Russians to be feasible and effective. We have places in Canada, some on the Pacific coast and in Alberta, where it would be difficult for mechanized equipment to operate, and in view of what has been accomplished by the Russians with cavalry and horses in this war I should like to know what has been the decision of the army council regarding the use of horses in this war. Is there any possible use for them in the future, or has the day of the horse entirely passed? If there is use for them, it must be remembered that it takes time to collect and train horses. Many people are interested in this question.

Mr. GRAYDON: There is no rationing of oats and hay.

Mr. RALSTON: I was jokingly going to suggest that we are dealing with the inspection board of the United Kingdom and Canada, and that what my hon. friend has referred to is a horse of another colour. But since he has referred to it I would say that we have a small horse-driven unit at Petawawa and a limited organization in connection with that unit. The matter has been carefully considered from the point of view primarily, as my hon. friend will understand, of the saving in gasoline. I have not the figures here but it was found from that point of view the use of horse-drawn vehicles to any large extent except in camps where short turns could be made was not justified. I do not think I can say more. My hon. friend did not say it but I know it is in the back of his head that he has, as I have, the greatest respect for our old friend the mule. I do not think that in the last war there was any better transportation or traction facility than that particular animal.

Mr. CASTLEDEN: Would the minister give us the number of men employed by the board, where they are stationed and a summary of their activities? Is this $10,600,000 Canada's share, and if so what is the United Kingdom's share?

Mr. RALSTON: This estimate of $10,600,000 is Canada's share.

Mr. CASTLEDEN: Is it on a fifty-fifty basis?

Mr. RALSTON: No, it is in the rough proportions of the value of the material inspected for Canadian account and United Kingdom account. The number of employees on the board as of May 1 was 18,946. In Canada the total number of male employees is 5,839, and female, 12,547. That includes the administrative officers. In the United States there are 560 employees. The rest are in Canada. The service which the employees of the board give is to inspect all war materials of Canadian manufacture and some in the United States which are made for Canadian or British account except aircraft, ships and ship repairs, naval ammunitions, ordnance, naval equipment, naval electrical equipment, foodstuffs, medical and dental stores, fuel, and a few other odd items. I do not think I should occupy the time of the committee by going into detail. I assume hon. members have seen all over this country in the various plants the inspection staff of the joint board operating. They have served, it seems to me, as ably and as efficiently as any body in connection with the war effort. They are

not very much heard of; they are somewhat like the veterans guard of whom an hon. member spoke last evening; nobody knows very much of their activities; but I think Canada and the United Kingdom have reason to be very much satisfied with the effectiveness of the work they have done. Having regard to the terrific amount of munitions and supplies which have come off the lines in this country and also in the United States in the way of components, and the comparatively few instances of failures, it seems to me that the inspection board is entitled to a word of tribute and of appreciation.

It was in January, 1941, that the joint board began, although some of the inspection staff from the United Kingdom were over here considerably before that time. They had to build from the ground up, and build under conditions in which technical personnel were being required in the various industries just as much as they were for purposes of inspection. They have had the job of creating that organization, not only administratively, but technically, and of installing it and seeing that it worked in the various industries cooperatively with, and not combatively with, industry. I believe the results which have come from their work have been highly gratifying.

As members of one of the house committees know, manufacturers have themselves to a certain extent put in their own inspectors as well, I assume in order to preserve their own reputations and save time and labour by catching defects at an early stage. Duplication of inspection has lessened, I understand, to some extent as time has gone on, and in view of the mutual confidence which has developed in the inspectors of the board, and those of the manufacturers.

I do not think there is anything I can add to the discussion. The financial arrangements generally are satisfactory. The administration is carried on by the officers of the board without any interference on the part of the United Kingdom government or ourselves except in connection with matters of policy through Major-General Lock, the chairman, or Brigadier Howard, who is on the floor this afternoon. There has been a certain amount of capital expenditure, for instance, for proof ranges built in order to conduct tests, but the great bulk of expense is in connection with the operating departments.

Mr. ADAMSON: They operate the range at Burlington?

Mr. RALSTON: Yes.

Mr. ADAMSON: That is completely under the United Kingdom?

[Mr. Ralston.]

Mr. RALSTON: Under the joint board.

Mr. NOSEWORTHY: I have had two general criticisms from the management of plants I have visited regarding employees of this board. I do not know whether they are general or just local, or whether they have come to the minister's attention. First, managers have told me that in their particular plants employees of this board usually stop work and begin to prepare to leave the plant ten or fifteen minutes before quitting time, and that that has had an effect upon the regular employees of the plant, who are expected in the interests of production to stay at their machines until the last minute of their time. Second, several employees have pointed out to me or have shown the difference in the numbers of employees employed by this board for inspection as compared with the number of company inspectors in the same plant, and have intimated that in many instances there were more personnel than were required for the job. Are these just local conditions? Have they come to the minister's attention?

Mr. RALSTON: With regard to employees of the board getting ready to leave ahead of time, I am satisfied that that is a local situation, but it is one which of course cannot be permitted to exist, and, knowing the management of the board, I am sure they would not have it go on if it were brought to their attention. The policy is that the inspection staff shall stay till the last minute, the same as anybody else. If my hon. friend would care to give me the name of the plant to which the complaint refers I will see that it is transmitted to the board and investigated.

Mr. GRAYDON: Do the hours of these employees parallel in each case those of the plant?

Mr. RALSTON: Generally speaking that is the rule, that they work parallel hours. The administrative officer states that there are exceptions, and the exceptions he speaks of are where a plant may be working three shifts and the inspection employees may work only one, because it is obvious that they might inspect in eight hours what would take three eight-hour shifts to manufacture. But I can say this, for I know, that the strict policy of the board is that their inspections must keep up with the outturn so that there shall be no slowing down of production on account of inefficient inspection facilities.

In reference to the number of factory inspectors, there again I think that may be a local situation, and it must be owing to the fact that the particular manufacturer is not inspecting and does not purport to inspect and does not have to inspect with as much com-

pleteness as the employees of the inspection board. That is to say, he might make a more general inspection of materials, castings, components, and things of the kind, and—quite properly—leave it to the inspection board employees to do the final inspections. There again it would be appreciated if the name of the plant, without the name of the informant, could be brought to my attention, and I will see that it is dealt with.

Mr. NOSEWORTHY: As regards the minister's comment that it may be a local condition, I have visited several plants in different places where that situation has been brought to my attention.

Mr. RALSTON: About employment, or numbers?

Mr. NOSEWORTHY: Regarding the number of employees. On one occasion the employer of several thousands of factory workers, when I asked him why he did not report that situation, replied that if he were to do so the percentage of rejections in his plant would immediately increase.

Mr. RALSTON: I do not think that is quite fair. The board has no interest of any kind in rejecting material; what it wants to do is to get the material out and to get it to the troops. I know all the board well enough, from General Lock down, to be satisfied that that is their primary consideration.

Mr. FRASER (Peterborough West): There has been dissatisfaction among men and women working in different munitions plants in regard to the inspectors being able to take rest periods during the day, whenever they cared to do it, whereas the workers had to stay on the job. That is the case not only in one place but right across the country.

Mr. RALSTON: I am informed that they do try to conform to the work rules and the hours laid down by the plant itself. I have an idea that I know the plant which my hon. friend is talking about, and I can only surmise that there might be a chance for a lay-off until some piece comes through, and, instead of standing around the machines, they go away and sit down. I realize, of course, that morale might not be particularly enhanced by that action on the part of the inspection staff.

Mr. DOUGLAS (Weyburn): I should like to have some information with regard to the findings of the inspection board. Has the minister any data on the number of rejections; whether the percentage of rejections tends to increase or decrease; what arrangements are made with the firms manufacturing war materials, and, where those firms are responsible for these rejections, whether they are charged back to the firms or whether they are allowed a certain percentage of rejections and charged anything above that? As the minister no doubt knows, two trials have taken place in the United States in recent months, one three months ago and one now in process, in which two large firms have been charged by the United States government with the production of defective material knowing it to be defective. What has been the experience of the board in Canada wth regard to such rejections? Are they increasing or diminishing, and in the event of rejections being on the increase, what steps are taken by the board and the government to see that the firms in question are made to pay for mistakes which are attributable to their own carelessness or negligence? Further, what material has been accepted and later found to be defective or faulty when put into actual use? An answer to this question would show to what extent the work done by the inspection board has been useful.

Mr. RALSTON: As to the percentages of rejections, the committee realizes of course that it depends altogether on the particular piece of equipment under discussion. It depends also on the length of time during which the manufacture has been going on, because the longer a piece of equipment has been in production the more efficient the operation will become. In reference to the question of payment, that is to say as to what is done about rejections, a report is made to the Department of Munitions and Supply and payment depends entirely upon the contract which is made with the particular concern. It may be that they are operating on a cost-plus contract or on a contract which entitles them to a certain allowance on development, or it may be that they are operating on the straight basis of being paid for the actual usable machine which is delivered off the line. I am told that definitely the percentage of rejections is decreasing. I do not know that we should particularly pride ourselves upon that fact, because they ought to be decreasing the longer manufacturing has been going on. My advice is, however, that quality in Canada has not been surpassed in any part of the world, and that goes both for material and for workmanship. Manufacture and industrial experience have been extremely satisfactory compared to other countries, particularly where Canada has taken on such a variety of lines which were entirely new to Canadian industry.

Mr. DOUGLAS (Weyburn): Has the Department of National Defence found cases in which there have been acceptances of material which later has proved faulty or defective?

Mr. RALSTON: I was trying to recall anything of the kind, but I could not. I am reminded, however, of the Pickering plant, where there were defective cartridge cases, but those did not get to the Department of National Defence. I am told, though it has not come to my personal attention before, that there have been individual instances of a piece of equipment or perhaps a series of equipments reaching the national defence deparment and not standing up properly, but I am sure there have been no outstanding instances, because they would have come to my knowledge. I must say that the Department of National Defence and the officers have come to feel that they can pretty well take for granted, that a particular machine is up to specifications, and that if it has been designed to do a particular piece of work they need not fear that either the materials or the workmanship will fail to answer the purpose intended.

Mr. JACKMAN: Is there any difference in the set-up of the inspection board in the case of a privately-owned plant and in the case of a government-owned plant? It might be difficult to believe that some of the large arsenals which operate in the United States, in peace as well as in war, would have an additional inspection board belonging to the army or the navy pass upon the product of these plants. It seems to me that if the Department of Munitions and Supply turn out articles in one of their own plants in Canada their inspection should be sufficient without having a duplication by the Department of National Defence when the article is accepted. Why can you not rely on the Department of Munitions and Supply to turn out a product adequate to meet the requirements without having the national defence department carry out a duplication of inspection services in connection with the same article?

Mr. RALSTON: I think my hon. friend is under a misapprehension as to the position of the Department of Munitions and Supply in this regard. The Department of Munitions and Supply makes the contract and arranges to have the article manufactured; then the inspection board comes in, not for the Department of Munitions and Supply, but for the user, that is to say, the Department of National Defence, and makes the inspection. We have great confidence in the Department of Munitions and Supply, but naturally the user would prefer to have his own inspection, or at any rate an inspection more directly under his control than the inspection that would be provided by an intervening department; and the Department of Munitions and Supply has never suggested that it should do the inspecting, but rather that it should be done by what I might call their customer—because we are the customers and the Department of Munitions and Supply are our agents in procuring a particular article.

Mr. JACKMAN: I do not know whether there are any government arsenals as such operating now.

Mr. RALSTON: They are government arsenals in the sense that the Department of Munitions and Supply operate them. There are two government arsenals, one at Lindsay and the other at Quebec.

Mr. JACKMAN: That is, government-owned; and you adopt the very same method of inspection of their output as in the case of a private contract?

Mr. RALSTON: Yes.

Mr. JACKMAN: I was thinking of a case like the Bren gun plant in Toronto which is financed by public money. If I understand correctly, the gun end of it is owned by the government. While you might have private management operating the plant and turning out the product, it is virtually a government job with a management fee attached to the operation. You have government employees who are doing inspection work, and on top of that you have the inspection board which is operating for another department of government.

Mr. RALSTON: I do not follow my hon. friend. I thought this was the most logical set-up that one could have, namely, that the party who is to use the article should be the one to control the inspecting. You will find that in the government arsenal at Quebec and in the arsenal at Lindsay. There are inspectors there who are paid by the management and who inspect components and production processes and things of the kind. But the joint inspection board also have inspectors who act at the request of the Department of National Defence in order to see that the specifications are complied with.

Mr. JACKMAN: The question arises only where the manufacturer and the user are the same, namely, the government.

Mr. RALSTON: The Department of Munitions and Supply is not responsible for seeing

that a gun operates properly or that a proper type of gun is being supplied. The blame would be on the Department of National Defence for accepting an improper design or for not ensuring by inspection that the gun delivered was in accordance with the design.

Mr. GRAYDON: They both have responsibility.

Mr. JACKMAN: I do not wish to labour the point, but in the case of the government arsenals at Lindsay and Quebec the government is entirely responsible, yet you have another department of government spending a lot of money to carry on inspection work. The government is putting up the money to carry on the arsenals at Lindsay and at Quebec; they are both directly under government supervision, yet when the product is finished the government spends a considerable amount of money to make sure that the article is all right. In other words, it inspects its own article of manufacture. It is the government in both cases; there is a duplication. I am not protesting against the government doing this; I am simply asking the minister whether he feels it is necessary to have a duplication of inspection in these places.

Mr. RALSTON: There is really no duplication of inspection. There is the necessary inspection for the user of any goods or article which he has ordered, and that is made by the board as representative of the user. The production inspectors I have spoken of are there to inspect components and to see that they are proper to go into the particular article. I cannot conceive of this thing called "government" being responsible just in a general way. Even if munitions and supply did the inspecting, there would be no saving, because they would have to have the same number of people as the board acting for national defence has now. They could not get along with the staff they have in the plants to expedite production; they would have to have additional personnel as inspectors to inspect the finished article and see that it conforms to the specifications and is suitable for the purpose for which it is made.

Mr. JACKMAN: Naturally I accept the minister's answer, but at one time I was an inspector myself, so that I know something of the inspection that goes on in these plants. Sometimes it is done by government inspectors, and perhaps it is necessary to check up the operations. Yesterday the hon. member for Peterborough West asked the following question to which the minister made the following reply:

Does the army buy from the Department of Munitions and Supply, or direct from the plants?

Mr. Ralston: Sometimes. There is an arrangement with the British under which ammunition is bought by the British. Since it is anticipated we shall be serving with the British, when we serve with them we will be furnished by them with ammunition.

What are the financial arrangements in connection with the use of ammunition by our troops in Great Britain or on any other fighting front?

Mr. RALSTON: There will be a capitation rate applying to the supply of ammunition and the supply of certain other consumable stores. It would not be possible for each component of a force to have its own supply of ammunition. There must be some central source of supply, and the amount used is based upon the guns to be served.

Mr. JACKMAN: I am interested only in the financial arrangements, not the physical.

Mr. RALSTON: I could not give my hon. friend the capitation.

Mr. JACKMAN: Do we pay for the ammunition we use?

Mr. RALSTON: Oh, yes; we pay for the ammunition that is used. It is paid for at an arbitrary or approximate rate. No attempt is made by us or by the British to count the rounds which are used. If we have so many guns in the line, we pay so much for the ammunition.

Mr. HANSELL: Is the work of this inspection board confined to the inspection of munitions and equipment, or does it also carry on the inspection of construction work? If not, how is that handled? I have had no complaints with respect to munitions and equipment, but I have had one or two in respect to construction work.

Mr. RALSTON: Speaking for the army, construction work is inspected by the engineers under the quartermaster general's branch.

Item agreed to.

Mr. DIEFENBAKER: Perhaps I could take advantage of this opportunity to make a suggestion with respect to the need of establishing in Canada at this time a system of life insurance for the men and women in the armed forces.

Mr. RALSTON: I do not wish to shut off my hon. friend, but I have the answers to about a dozen questions which were asked and which I should like to put on record.

There will be an opportunity for my hon. friend to deal with this matter when the bill is before the house or in committee. I do not know whether he was in the committee or not, but this matter was pretty thoroughly discussed the other night.

Mr. DIEFENBAKER: What I had in mind was to place before the minister and the committee the need there is at this time for the establishment in this country of a system of national service life insurance similar to that in effect in the United States.

Mr. RALSTON: That was discussed the other night.

Mr. DIEFENBAKER: The matter discussed the other night had to do with policies that might be lapsed by reason of a man being in the service.

Mr. RALSTON: And also insurance. The Sparkman Act was discussed.

Mr. DIEFENBAKER: This has nothing to do with the Sparkman act; this is the national service insurance which is in effect in the United States.

Mr. RALSTON: That was also brought up.

Mr. DIEFENBAKER: I was here all through the discussion.

Mr. RALSTON: I think it was the hon. member for York West (Mr. Adamson) who raised the question. I do not want to be understood as shutting off my hon. friend, but if he could bring up this matter again I would appreciate it. As I said, there were several questions asked which I promised to answer so far as I could at an early day. I think it was the hon. member for Lake Centre who asked a question with regard to the procedure respecting men in the United States who might opt to serve in the armed forces of Canada rather than be inducted into the United States army.

Mr. DIEFENBAKER: And also what was being done to secure the enlistment of these men in the United States.

Mr. RALSTON: By agreement with the United States we are not permitted to recruit actively in that country. We are permitted to place before the men called up by selective service their right to opt for service in the Canadian forces. That is done through the Canadian enlistment centres, the list of which already has been given. It is not a very long list now; I think they are in St. Paul, Boston, Detroit and Seattle. It would obviously be impossible to have a Canadian officer or other rank at every draft board in the United States, but the rights of Canadian nationals are publicized through the enlistment centres. In addition to that our officers have visited many of the draft boards; there are at least 6,500 draft boards, so that of course they have not visited them all, by any means, but a great deal of publicity has been given in the newspapers, and in addition of course there has been much publicity through letters to these men from their friends in Canada.

When an individual presents himself at an induction centre or before the draft board in the United States, he has an opportunity to decide whether he will serve in the armed forces of the United States or exercise his right to serve with the Canadian forces. A plan recently has been under discussion whereby United States national selective service authorities would communicate by form letter with all non-declarants, to inform them of their right to opt. Under the plan it is proposed to supply copies of these letters in each case to the appropriate Canadian authorities, who then would be able to get in touch with these men, either directly or by letter. In addition to that a memorandum was issued by selective service headquarters in the United States to all local boards, just last month, giving instructions that for all co-belligerent nations, who have made agreements with the United States —and Canada is one of them—posters pointing out the right of electing service in the forces of one's own nation would be distributed to local draft boards and would be displayed in their offices, and literature concerning service in one's own national forces would be kept on hand at those offices. That is the extent to which notice is given to Canadians in the United States respecting their right to serve in Canada.

Mr. DIEFENBAKER: When was that notice sent out by the United States government?

Mr. RALSTON: Local board memorandum No. 129, as amended May 2, 1942.

Mr. DIEFENBAKER: What is the total enlistment to date in the Canadian army of Canadian citizens resident in the United States?

Mr. RALSTON: I cannot give that to my hon. friend, though perhaps I have something here that may help. No, I have not North America separate from South America, though I think I could break that down. The total there, I may say, for both North

and South America is 14,163. I am sorry; that is not correct, either; this is not the information my hon. friend wants. This is the number who have enlisted in the army who were born in North and South America, not in Canada.

The hon. member for Vancouver South (Mr. Green) asked regarding the matter of remedial treatment and the announcement made not long ago with respect to a change in that procedure. This proposal has been in force only for about a month or a month and a half; I think the announcement was made in March. As first announced, that policy was not general; it dealt particularly with cases of hernia. In February we announced that hernia in general would not be regarded as a ground for rejection if the recruit was otherwise in good condition. It was provided that the recruit might be accepted and might be categorized provisionally A(R)—that is, A-remedial—or B(R), which is B-remedial, with a view to an operation and probable grading up to A or B. New regulations are just being issued whereby varicose veins and some other similar ailments will be included in these regulations, and I anticipate that conditions such as non-toxic goitres and similar disabilities will be included. Whether those remedial disabilities will preclude enlistment will be decided upon in each case by the consultants at the reception centres which are now being organized. In other words, instead of sending men to Pensions and National Health before enlistment to have their disabilities remedied by comparatively minor operations, they will be enlisted and put in this category, and of course it will depend upon the result of the operation whether or not they will remain in the army. The object is to deal with cases in which there is every likelihood that remedial treatment will be effective.

Mr. GREEN: Have many men taken advantage of that?

Mr. RALSTON: There is no experience in that connection at all as yet; sufficient time has not elapsed to give us any experience.

Mr. GREEN: Have any men taken advantage of that provision?

Mr. RALSTON: I cannot tell my hon. friend, but I should think there would be quite a number.

Mr. GREEN: Is there a very wide field there? Is it expected many men can be recruited under that provision?

Mr. RALSTON: Well, I would think so; quite a number have varicose veins, goitre and hernia.

Then the hon. member for Weyburn (Mr. Douglas) asked with regard to the cost of telephones and telegrams, and I have a breakdown here. I cannot give it by districts, but this is the total cost for each item of expenditure, I think for the fiscal year: telephones, $742,903; telegrams and cables, $278,987; teletype, $25,841; making a grand total of $1,047,731.

The hon. member for Peterborough West (Mr. Fraser) asked last night with regard to the practice concerning gasoline and the procedure which the drivers follow in getting gasoline on the road. The procedure is that normally drivers obtain gasoline from the supply pumps at the army station. There is not a purchase from a commercial station except in case of what they call a local emergency, which means that a man has travelled farther than he has expected and finds himself without a sufficient supply of gasoline, and is not able to reach an army station. I am told that the amount of gasoline purchased under these circumstances, that is, in the opinion of the officers—they had not any exact figures before them—would be considerably under one per cent of the amount of gasoline used; they felt quite sure of that estimate. There are no directions given to the drivers as to what commercial stations to patronize. This ought to be noted, that even though a commercial pump were owned by a contractor—that is to say, suppose a commercial pump were owned by a contractor such as Imperial Oil or the Canadian Oil company—a purchase at that pump by the driver would be regarded as a local emergency purchase, because the gasoline that is bought from the contractor is bought for delivery at the army station, not for delivery at a local tank. There would be an exception to this general rule in the case of some centre where there might be a number of army cars—perhaps two or three—but not sufficient to justify the installation of a pump. In that case Munitions and Supply would be asked to make a contract for the supply of gasoline by one of the local service stations, and that contract would be made on a competitive basis.

The hon. member for Vancouver South asked as to the annual cost of food per man. This is a rough estimate which has been made up, and I think it is approximately correct; $153.30 per man per year.

Mr. GREEN: Is it the same overseas as in Canada?

Mr. RALSTON: I am told so. I am told that it is an average over-all figure.

The hon. member for Yorkton (Mr. Castleden) asked the percentage of illiterates who enlisted. In June, 1942, the estimate for

England was 1·6 per cent of the enlisted personnel. That estimate was based on a survey of approximately 70,000 troops. Of those who enlisted in Canada in the first three months of 1943 about one per cent were illiterate.

The hon. member for Vancouver South asked a question respecting aliens in the army. It is very difficult to give figures which really mean anything, because our figures are by country of origin. The total number in the Canadian army whose country of origin is other than British is less than 25,000.

Mr. GREEN: I think the minister did not get the idea of my question. Those, I presume, are British subjects now?

Mr. RALSTON: Some of them are, and some are not. Those from enemy countries —and in this I am getting a little nearer to what my hon. friend wants—whose country of origin are enemy countries are less than 2,500. With regard to those I would point out that investigations are constantly in progress. Such investigations as have been made show that between 65 and 70 per cent are actually naturalized prior to enlistment.

Mr. GREEN: The minister has not yet touched the point. About a year ago the Prime Minister announced that we were to call up aliens, under the provisions of the National Resources Mobilization Act. Formerly only British subjects could be called. In the return I mentioned yesterday it was shown that 751 aliens had been called up under the National Resources Mobilization Act, but that only three had got so far as to be taken into the army. What I want to know is how many have now been taken into the army; if there have been very few, why has there been such a long delay? I was dealing with the aliens called up under the National Resources Mobilization Act.

Mr. RALSTON: I have not that information. I am afraid what the hon. member wants would require securing a return, first, from each of the boards—and from my colleague the Minister of Labour, because some of them would have been called up there—and, second, a return from induction centres of those who have got past the board and have been sent for medical examination. This is an involved investigation. However, the number is not large and I shall see what I can do about it.

[Mr. Ralston.]

Mr. GREEN: Perhaps the minister could bring the information down in a return. I want to find out how many have got into the army.

Mr. ADAMSON: How many of those 2,500 are serving overseas?

Mr. RALSTON: I have not the information here, and I am always afraid to guess. I had in mind saying there might be 500, or something like that.

Mr. ADAMSON: Serving overseas?

Mr. RALSTON: Yes. The hon. member for Qu'Appelle (Mr. Perley) asked a question respecting rentals paid. The rentals paid in Saskatchewan, on a quick calculation, show in round figures, an amount of $104,000. Those paid in Regina were $44,000 and in Saskatoon, $36,000.

The hon. member for Weyburn asked with regard to treatment for venereal disease, namely, v.d.g. and v.d.s. I am not able to give complete information, but I shall give what I have to the committee. Overseas in 1940-41 there were 2,458 cases of v.d.g. treated and cured, and 656 cases of v.d.s. treated. I am unable to state how many of these men were retained in the army, or the number of cures obtained by treatment of v.d.s. Presumably all soldiers cured of v.d.g. were retained in the army or, if discharged, were discharged for other reasons. In Canada up to March 31, 1943, there were 2,873 cases of v.d.s. and 18,191 cases of v.d.g. treated. Up to April 1, 1942, there were 416 discharged on account of venereal disease, the most of which, presumably, were cases of v.d.s.

The hon. member for Lake Centre asked for the total amount expended for Debert camp. It will take several days to get that information together, and I shall furnish it at some convenient time. He asked about the International Water Supply company; that question also is still outstanding.

Mr. GREEN: The hon. member for St. John-Albert (Mr. Hazen) asked a question respecting the public relations branch.

Mr. RALSTON: I told the hon. member the return was nearly ready, and I shall see that it is brought down and laid on the table. It will be ready shortly, and it can be laid on the table when the estimates of the Minister of National Defence for Air are under discussion.

Mr. DIEFENBAKER: I asked the minister a question with regard to the proportion of active men called up for service in the three Canadian divisions.

Mr. RALSTON: I feel I am justified in giving the number of N.R.M.A. men in Canada, but I do not think I am in a position to give the percentage of home defence men and general service men in the operating formations.

Mr. ADAMSON: I asked a question concerning reasons for discharge or non-acceptance.

Mr. RALSTON: Rejections?

Mr. ADAMSON: Yes. It would be of value to have this information.

Mr. RALSTON: I believe I gave it roughly last night. The hon. member is referring to physical disabilities?

Mr. ADAMSON: Yes, that is correct. I have one further question, following that of the hon. member for Lake Centre. First, are Canadian citizens in the United States subject to call under the United States draft regulations, if they have not taken out their first papers? Secondly, if they opt to serve in the Canadian Army do they opt to serve on the home defence personnel, or must they opt to serve under the same conditions as they are called up for, under the United States service?

Mr. RALSTON: The hon. member has asked two questions involving a very lengthy agreement which has been entered into. I have no objection to giving the information as soon as possible. However, it is a matter of a lengthy agreement following negotiations between our officers and the Department of External Affairs and officials of the United States.

Mr. DIEFENBAKER: I regret the answer by the minister regarding the proportions of men who were active and who were called up for service in the three Canadian divisions. The minister has said he does not feel as though he can give that information. Mr. Chairman, this is one of the most important matters with which we are faced, and one about which the people of this country want to know. We want to know whether the men who are actually going to defend Canada are, in fact, men who have been trained and who have received the necessary training of active service men. I do not wish to press for information that could be valuable to the enemy, but I fail to understand in what way information as to the proportions of the three Canadian divisions as between active service men and men for service only in Canada could be regarded as being in that category. This is a matter of information which would be most helpful to the Canadian people in determining whether or not there are reinforcements in Canada available for the army overseas. I am going to ask the minister to give this information, but I will not press for it; if he takes the stand that it is not in the public interest to give it, that is the end of it. But I should like the minister to explain how such information can by any stretch of the imagination be detrimental to this country.

Mr. RALSTON: I say to my hon. friend that I consider it against the public interest to give it. That is all I can say about it. I think my hon. friend, upon consideration, will realize just why. It would be just as if when we were overseas in the last war we had given out information as to how many men in a battalion had been called up and how many had volunteered. I do not think anybody, least of all a member of parliament, would suggest that we give that information. On the matter of training I am perfectly willing to give the fullest information. That does not touch at all the question whether the men are volunteers or called up under the National Resources Mobilization Act. I have given the whole situation with regard to reinforcements, and I have given the number of the N.R.M.A. men in Canada.

DEPARTMENT OF NATIONAL DEFENCE FOR AIR

Hon. C. G. POWER (Minister of National Defence for Air): Mr. Chairman, I should like to table certain information which I think would be useful to the committee. It is a comparison of the 1943-44 cash requirements with the cash requirements for 1942-43 for all votes combined. I am laying on the table a certain number of copies for distribution to the members, and I request that this table be printed in *Hansard* to-morrow. It is as follows:

Department of National Defence for Air

Comparison of 1943-1944 Cash Requirements with 1942-1943 for All Votes Combined

Objects of expenditure by groups	Probable expenditure 1942-1943	Estimated expenditure 1943-1944	Differences Increase	Differences Decrease
1. Civil salaries and wages	$ 16,260,000	$ 18,620,637	$ 2,360,637	.....
2. Pay and allowances	148,700,000	238,023,232	89,323,232	.....
3. Travel, transportation and freight.	18,190,000	20,838,068	2,648,068	.....
4. Construction, purchases, repairs and operating expenses of properties:				
(a) Capital expenditure	110,000,000	93,421,100	.....	$16,578,900
(b) Repairs, operating expenses and rentals	9,417,000	13,482,925	4,065,925	.....
5. Personnel supplies and services: food, medical supplies and services, clothing and personal equipment	55,566,600	50,451,918	.....	5,114,682
6. Communications: signal and wireless equipment, line construction, etc.	13,060,000	26,838,773	13,778,773	.....
7. Ammunition and bombs	12,000,000	23,990,000	11,990,000	.....
8. M.T. vehicles and marine craft: capital cost and repairs	6,117,000	10,508,405	4,391,405	.....
9. Fuel costs for aircraft, M.T. and marine craft	15,460,238	29,368,636	13,908,398	.....
10. Aircraft, engines and spares including overhauls	148,550,000	231,846,296	83,296,296	.....
11. Miscellaneous stores and equipment: including machine guns and other armament	16,524,000	26,623,160	10,099,160	.....
12. Flying training contracts	21,000,000	33,805,829	12,805,829	.....
13. Overseas squadrons and ancillary units	7,605,000	303,783,729	296,178,729	.....
14. Sundries: including printing, stationery and other costs not included in the above items	4,670,000	7,818,706	3,148,706	.....
Totals	$603,119,838	$1,129,421,414	$547,995,158	$21,693,582

Mr. McIVOR: Mr. Chairman, before the anti-aircraft battery from Toronto, Vancouver and Témiscouata go into action against the "Power" machine, I wish to say a word. Those of us who were in the house the other day and heard the Minister of National Defence for Air make his statement will, I am sure, agree that the eulogistic editorials that have been written in the press across this country from the Atlantic to the Pacific were well merited. We got an earful that day.

There are three reasons why I should like to sound a note of appreciation of the minister for air and those associated with him, from the boys and girls right up to the minister himself. First, a word as to the training centres. I am fairly familiar with the airfield training centre at the head of the lakes. This field was owned by the city of Fort William, and when the war broke out, the Department of National Defence for Air took it over, or rather they allowed a committee of citizens of Fort William who put up their money, to manage the field. They chose a keen, honest, successful businessman to manage that field and I can assure the committee that it has been well managed, for this group were determined to contribute something to the cause for which we are fighting at this time. The officers in the training centre from the squadron leader right on down have been men of very high character, efficient men who knew their work and would allow no sham work to get by. I found complete harmony between the officers and every student in the air school. I found also that the accommodation was the very best possible, and the food suited those who were there. No one can overestimate the value of the air training scheme, scattered as it is all across Canada from the Atlantic to the Pacific, and perhaps nobody can have a greater respect for it than the enemy, whether he be in Italy, Germany or Japan.

Second, I should like to sound a note of appreciation of the character of the students and the men. I know one boy intimately. Nearly two years before the war he was determined to fly, and he thought he could learn more rapidly if he made his own plane. Accordingly he got his blueprint and his tools and started to work. However, just as he had his plane ready for the fabric, a recruiting officer for the air force came along and the boy fell for it at once, just as quick as a snap. Within the year he was made a sergeant, but he was not satisfied because he had been promised a course in flying. So that he reverted, and a little later in the city of Ottawa he received his wings. Since then, he has been just like a boy going out to play a big rugby game. He delights in his work and is extremely proud of his officers. I have never heard from any one of the Fort William boys, the pilots, pilot officers or any of them, one word of criticism of their senior officers that they did not get a square deal. I think our minister should also be told this, that they respect him for his driving force—I did not call it "Power". More than that, they respect him on account of his courtesy, his thoroughness, his ability to get things done.

Our air force pilots have given a splendid account of themselves. They feel they have a job to do. I have told the story once before in this house of the young lad who left his training centre where he was in training for an officer and fought his way to get overseas. Finally he got overseas, but just before he left he said, "Mother, don't worry. The cause is bigger than I am".

The third thing I wish to mention about the air force is the casualty lists, and this is a tender subject with anybody who knows something about it. There have been, I believe, more casualties in the air force than in any other branch of the service. Look at the losses! The material loss is great, yes. Those giant bombers cannot be made in a short time out of nothing, but their loss is as nothing compared with the loss of the young pilots who give their lives for a cause they deem worthy. One thing about the casualty lists which has pleased me immensely when I have been allowed to call at a home to try to bring a steadying influence upon those who perhaps were beginning to doubt whether good would come out of it all or not, was the letters that I was able to read from those in the chaplain service and especially letters from squadron leaders. I must say that I was surprised. The character of these officers showed itself in the letters they wrote. Sympathy, kindness, courage and helpfulness came from them to the men and women who had lost their boys.

I should like to make the same request of the minister for air that I made of the Minister of National Defence. I think that when a boy has lost his mother, when the boy had not the joy and happiness of a young wife, his stepmother or his aunt or his sister or his father, should have the honour, and the little bit of comfort that goes with it, of having the silver cross bestowed upon them. I pay my tribute in a feeble way, though to the best of my ability, to the efficiency of the air force. We all through Canada from the Atlantic to the Pacific say to the minister for air, "Well done; carry on, and God bless you."

The CHAIRMAN: Before we proceed any further with this summary, I should like to receive a direction from the minister and the committee as to the procedure we should adopt in order to proceed with efficiency and diligence. On the previous estimates, namely, those of the Minister of National Defence (Army), we followed the summary item by item, and I wish to know if it is the wish of the committee and the minister to do the same with respect to these estimates.

Mr. POWER: I understood, before the war appropriation estimates came on that it was intended to proceed by way of discussing them item by item. Personally, of course, I would very much prefer that we discuss them in three separate items, corresponding to the three separate organizations which go to make up the air force. It would be much simpler for me. That is to say, we could discuss at one time the joint empire training establishment; when that has been thoroughly discussed, go on to overseas, and when that has been fully dealt with, proceed to western hemisphere operations or home war. It would make for much less confusion. But I am entirely in the hands of the committee, and since we have started in the army estimates by following the items as they are listed, I am quite willing to proceed in that way.

Mr. STIRLING: Since the break-down has been placed before us in this form, it seems to me that it would be better to adhere to it, in spite of the minister's desire to consider the whole large question under three heads. I think if we were to attempt to do that now, having had the experience of the army estimates, and with this before us, it would make confusion.

Mr. POWER: If my suggestion were followed it would make thirty-three items instead of eleven, so that it would not be to my advantage, but at the same time it would save a great deal of confusion if we discussed it subject by subject: the training scheme, until it was finally exhausted; then, operations in Canada, until they were thoroughly exhausted; and then overseas. I fear that otherwise we shall get confused in spots. But that is part of the job; I do not mind.

Mr. ADAMSON: Mr. Chairman,—

The CHAIRMAN: Is the hon. member speaking on the point I have brought before the committee?

Mr. ADAMSON: I had rather intended to make a general statement, but I can see the advantages of the minister's suggestion, of dividing the operation of the air force into its three main component parts. If the committee will allow me, I will endeavour to confine my remarks to the joint air training scheme, but if I digress or transgress a little I hope the Chairman will not be too strict.

Mr. GILLIS: I do not wish to interrupt the hon. member, but the Chairman asked a question, and the minister has made a suggestion. I think that, so that we shall not get into the tangle which we had with the national defence estimates (army), we should have some idea as to how we are to proceed. Personally, it seems to me that if the sheet which is before us now is followed item by item, that is the most expeditious way you can get the business done. If you adopt the suggestion of the minister, you open up the field of discussion on different branches of the service, and you will, I think, just ramble around until further orders without being on anything specific. In my opinion, if we take this and discuss it as it is set out, we shall not go far astray.

The CHAIRMAN: It seems to me, then, the opinion of the committee is that we should proceed item by item.

Mr. DOUGLAS (Weyburn): That does not solve the minister's problem.

Mr. POWER: The minister is quite willing. I merely threw out the suggestion, thinking it might be helpful to the committee, but I am quite willing to go ahead with the items as they are laid down here; I have no objection.

Mr. DOUGLAS (Weyburn): It is agreed, then, that we follow these fourteen items, and it will be understood that each of them has three divisions; that is, for instance, "1. Civil salaries and wages". That has to do with three things: commonwealth training, overseas, and western hemisphere defence; and that will apply to each item as we go down.

1. Civil salaries and wages, $18,620,637.

Mr. ADAMSON: I will endeavour to confine my remarks as much as possible to certain basic questions. Before we go into the air estimates we should get ourselves orientated, as to how we wish to discuss the problem. I believe the proper way would be to regard oneself, as to what one would like to do, how one could improve the air training or the Royal Canadian Air Force, as though one were in the position of minister. I believe the minister's position is that what he would like to learn from any discussion is, how can what is admittedly an excellent show be made even better? That seems to me to be the basis upon which discussion of these estimates should be made.

I suggest that it has not been sufficiently emphasized what air power has done for the united nations. As time goes on, we shall see that the date of August 15, 1940, was the turning point of the war, the day on which the war could have been lost, and the day when the air power of Great Britain prevented the war from being lost. The war was not won then; it was prevented then from being lost. In any discussion of air power, sufficient credit cannot possibly be given to the fighting services of the Royal Air Force during the battle of Britain.

The Royal Canadian Air Force is in a particularly happy position, because it is an entirely volunteer and voluntary organization. It has none of the difficulties of two classifications of fighting men; it has no air men who serve only in Canada. Admittedly there are ground crew and aircrew; but the ground crew are, I believe—and this is the first question I would ask the minister—composed as far as possible of men who are not fit for aircrew. Of that I am not sure, but I understand that an attempt is being made to get ground crew who, on account of either age or other disability, are unable to act as aircrew.

It is rather peculiar, but the army started off as a definite unit and the air force started off as merely a part of the whole scheme of united empire or, at that time, British air power and we now hear talk of the army being divided and of the air force becoming more and more a Royal Canadian Air Force with thirty-eight operational squadrons, or

there are to be thirty-eight operational squadrons. I see the minister has said that for every Canadian in a Canadian squadron there are eleven Canadians in the Royal Air Force.

Mr. POWER: Aircrew only.

Mr. ADAMSON: Yes, aircrew only. I was speaking of overseas aircrew. The question of the establishment of a separate Royal Canadian Air Force has been dealt with by as good a compromise as could be achieved under the system. There were definite opponents of purely Canadian squadrons. Some of the pilots were very happy in the United Kingdom, or English squadrons, the esprit de corps of which was very high, and the Canadian aircrew in many instances objected to being transferred to a purely Canadian air force. On the other hand, there were some squadrons where perhaps the commanding officer was not quite as understanding, from the Canadian point of view, and where Canadians longed to become part of a Canadian squadron. So that the compromise of thirty-eight squadrons is probably a good one.

Before we go on to consider the whole plan, we must remember that any talk about sovereignty in war is dangerous. We must not forget that the formation of the joint air training plan was delayed a whole year because the government of Canada objected, and objected strongly—in fact it was a prohibition—to the United Kingdom having their own air squadrons or air training operations in Canada. That shows a point of view which I hope we in Canada have got over for all time. It shows the colonial mind at work. I suggest that had we established the joint air training plan when it was first mentioned, we would have had a year or six months in hand.

There is one other point with regard to the training of aircrew in Canada. I suggest that more emphasis where possible be put on the training of South American pilots in Canada. There are a number of Mexican and South American nationals who would make excellent aircrew. Some of them have been trained in Canada, but I believe that, for the future, the training of aircrews in Canada, particularly South American aircrew, would be a step in the right direction for hemispheric solidarity. The South American republics look to the United States for all their air training and as the leader in North America. I believe a great deal of good could be done if we took a number of these South American citizens for training; that is, of course, if there is space in the schools to train them. I mention that for this reason. It has been found that a great many of our new Canadians, particularly of Slav descent, have shown a flair for the air which was absolutely unbelievable. A good many Czechoslovakians and men of central European descent have proved amazingly efficient pilots and aircrew, and I believe an extension of this air training plan to include some of the South American nationals would be a step in the right direction. It would show South America that Canada also was a power in the air in her own right.

We now come to the hardy annual, the question of commissions for aircrew. It has been brought up before. The minister has given it consideration, but nothing has as yet been done. We still have the distinction, slight though it may be; nevertheless it exists on the ground, of the sergeant-pilot and the commissioned aircrew. I suggest to the minister that aircrew should all be considered in the light either of ensigns or of cadets, call them what you will, until they have made a certain number of operational flights, either operational bombing flights or, if they are army cooperation squadrons, a number of sorties against the enemy, and that then they all be automatically commissioned. I realize that these barriers of officer and non-commissioned officer are being broken down, and I know the difficulty exists because we have our squadrons and personnel training or fighting with the Royal Air Force. But I believe that if we made that suggestion strongly enough, the whole air force of the empire would and could be put on that basis.

I should like to say a word with regard to prisoners of war. When a man falls into enemy hands and a commission or promotion subsequently goes through, is that promotion recognized by the enemy? I understand that it is in Germany, but that so far Italy has refused to recognize promotions, whether granted at the time of the operation or subsequently thereto. I understand that the air force has recommended the use of cracked high octane gasoline for training purposes in Canada, and I should like to know if this is the fact.

What percentage of the training received by members of aircrews is given in Canada. Do these men fly combat planes in Canada, or is that training given only in the United Kingdom? It is quite likely that we shall be engaged in air operations against Japan which will require long overseas operational flights over the Pacific ocean. What steps are being taken in Canada to train air-sea rescue crews?

With the probable shift of operations to the Pacific, this matter should receive a great deal of serious consideration. What form of training do the aircrews receive in air-sea rescue work? Are they trained on this continent, or do they receive their training on the other side?

This may be a post-war matter, but I wish to recommend the establishment of a Royal Canadian Air Force college. We have the Royal Military College at Kingston and the Royal Naval College at Esquimalt, and I should like to see established a Royal Air Force college which would operate along the same lines. We realize that after the war there will be a great reduction in our air force, but at all times we shall have to have a large and powerful air force. So far as I can see, no country will be safe in the future without adequate air defence, particularly a country so rich and as sparsely populated as Canada. The work being carried on by our air cadets is a step in the right direction, and their work in making this country air-minded deserves the highest praise.

The question has been raised whether air power will defeat the enemy. Every day that passes shows us that air power will do more to defeat the enemy than we thought was possible, even last month. In Coventry and Liverpool, which cities received heavy bombings, the destruction to industry was extremely great. The complete cessation of the production of certain items took place for a considerable time, and it is admitted freely in the United Kingdom that the bombing of the industrial centres of England was a serious matter indeed. But what happened in England is as nothing to what is happening to-day in the Ruhr and throughout Germany. Every day air power is bringing the war closer to a conclusion. Nothing that we can do to support the Royal Canadian Air Force is too much. The devastation and softening up of Germany by air power constitute an essential prerequisite to invasion. Air power alone is insufficient, but once the central channels of Europe have been destroyed by air power, the job of our land forces will be made infinitely easier. The degree that bomber command is contributing to the defeat of Germany and Italy is increasing daily. Air power is expensive, but it is infinitely cheaper than attempting to carry out an unprepared operation. Before we can consider landing an army on the shores of Europe, the devastation that must be brought about—and Dieppe showed this as well as anything else—must be immense. Consider the raid on Wuppertal the other evening, when we lost thirty-three bombers; consider what it would have cost in men and material to have done that job by artillery. I think the committee will see how important air power has become.

I had some questions to ask the minister, but in view of his suggestion I shall wait until the items are taken up one by one. However, I should like to congratulate the minister upon his statement and to express my pride in what has been done by the Royal Canadian Air Force so far, and what will be done in future, to bring about the defeat of the axis.

Mr. ROSS (Calgary East): Before the outbreak of war, a number of young men from all parts of Canada enlisted in the Royal Air Force; at that time there was no place for them in the Royal Canadian Air Force. These young men took courses in aeronautics at their own expense; after completing those courses they went to Great Britain, at their own expense, and joined the Royal Air Force. Many of them would now like to transfer to the Royal Canadian Air Force, because they find themselves in this position. They see their friends from Canada drawing higher pay than they are drawing. The dependents of their friends from Canada are receiving much better allowances than their dependents receive. They are very much alarmed at what may happen when the war is over and they try to reestablish themselves in civil life; they consider that they will be handicapped because it may be held that at the time of their enlistment they were not ordinarily domiciled or resident in Canada, which might preclude them from many of the benefits that will accrue to those who were domiciled in Canada at the time of their enlistment.

I submit that for the duration of the war these boys should have the benefit of the higher pay which is given members of our air force; that their dependents should receive the higher allowances which are given in Canada, and that when the war is over, they should have an equal chance to rehabilitate themselves in civil life. I should like to ask the minister if anything is being done in the way of working out some plan to help these boys to transfer from the Royal Air Force to the Royal Canadian Air Force.

Mr. POWER: That question requires a very long and somewhat involved statement. I would be willing to make that statement at any time, but I know many other hon. members are intensely interested in this matter, and I should prefer to have as many as possible state their views. Then I shall be only too glad to make a statement.

Mr. CASTLEDEN: I believe the recent achievements of our airmen, particularly in the European war zone, reveal the importance of the striking power of our air forces. The ability of this arm of the service to reach over the fortifications, the armies and the navies of the enemy and strike at the nerve centres of a nation's production and distribution, and paralyze them, is rapidly changing the technique of war. To-day the immense value of the air force in saving man-power and the wastage which ordinary land fighting involves is becoming realized as never before. It is quite possible that the role of the army will be changed very largely to the essential work of carrying out occupational duties. The deep striking power of the allied air force has made it one of the major arms of allied forces, and I know Canadians generally are justly proud of the part our men have played in the air on every front where the united nations are fighting.

The British commonwealth air training plan in Canada has done a good job; it has turned out men who have maintained the high standards which Canadians set in the first war. These men are carrying on and winning new laurels for this dominion. When we realize that the boys who to-day are standing the brunt of this attack and carrying on this work only a few years ago were lads in our high schools and universities, playing hockey and football, carrying on their studies in technical schools and so on, we marvel at the ability of a training scheme to turn them into fighting men with the nerve, the will and the natural ability to adapt themselves to changing circumstances so that they get through, do their job and come back. I do not think Canada will ever be able to repay these men for the sacrifices they are making. I wish to pay tribute also to those thousands of brave mothers and fathers of these men who month after month stand the strain of worry and anxiety and who so bravely take the news, when it comes, that their boys are missing after air operations. Some interesting figures were published recently in the press showing how the casualties were distributed among the empire troops. These figures show that the United Kingdom has suffered 275,000 casualties; Canada, 10,400, Australia, 53,000; New Zealand, 19,000; South Africa, 22,000; India, 101,000 and the colonies, 30,000. Those are the rough figures. In the break-down of Canada's casualties I find that the Royal Canadian Air Force has suffered the loss of 3,957 men killed, 1,899 missing, 565 wounded and 629 prisoners, making a total of over 7,000.

Mr. POWER: I do not wish to interrupt my hon. friend, but those figures do not quite coincide. He will notice that the figures of total empire casualties are given as of three years of war. That would be September of 1942. As a matter of fact, the casualties list I placed on *Hansard* was as of May 14, or of very recent date. Most of the Royal Canadian Air Force casualties have occurred within the last several months. So that a comparison is not quite exact.

Mr. CASTLEDEN: It states that the Canadian army figures are for to-day, whereas the air force figures are as of April 30. The minister is correct in that. The total for Canada at the present time is over 13,000.

We all are interested in making the air force the most efficient weapon possible. There are some little matters, such as the granting of commissions, which very often alter a man's attitude. It seems to me it is only right and fair that any man actually engaged in aircrew, flying over enemy territory, should be qualified for commission. It is an incongruous state of affairs when we find, we will say, a sergeant-pilot who is piloting the bomber, and having under him during operations a commissioned man as one of his gunners. Then, it may be that the pilot of the next machine is a commissioned officer. These men are assuming the same responsibilities, but one is a pilot officer and the other a sergeant.

If these men were forced down or had to bail out over enemy territory, and be taken prisoner, they find that in the prison camps there is a difference between the treatment handed out to a commissioned man and that given non-commissioned men. I am not saying that every man who graduates from an air training school should necessarily receive a commission. But if he completes his training successfully, and engages in operational duties over enemy territory, surely he has won his right to a commission.

When a ship returns safely, the sergeant-pilot, who has been in command of the craft, leaves it, followed by his gunner, who may be a commissioned officer. From then on, the commissioned man receives recognition of his rank, and the sergeant must salute him. One goes to the officers' mess and the other to the sergeants' mess. The sergeant is not allowed in the officers' mess.

It would be good for the morale of these fighting men to grant the recognition I suggest. I know that in Canada commissions are granted to men doing clerical work, or to others who are doing technical or intelligence

work. Ground service men are granted commissions. Under such circumstances, surely the men who are facing what these men on operational duties must face, have won their right to commissions.

I would be pleased to hear the minister's statement as to what objections there may be against the granting of these commissions. Is it a matter of pay? Is it a matter of some special social distinction? Is one to be looked upon as a "gentleman" and the other just a "player"? Why should there be any objection to giving them commissions? The country would like to have an answer.

Then, as was asked by the hon. member for Calgary East, what steps are being taken to Canadianize the Royal Canadian Air Force? Is any obstacle being placed in the way of men in the Royal Air Force who desire to transfer to the Royal Canadian Air Force? If they are in a Royal Air Force squadron, is it possible for them to work together as Canadians, in one crew, or is there any Canadian control over them?

I have only one serious criticism to make, and it arises from what I believe was a mistake. I came across a case in my own province respecting a young man who, after a serious air accident, was discharged from the air force. While he was acting as gunner in aircrew on a practice flight, the aeroplane in which he was operating crashed with another machine in mid-air. This boy's brother was killed in the same crash, and the boy himself sustained twenty-eight fractured bones, but is still alive. He was offered a commission, because it appeared the authorities wanted him to stay in the air force. I believe he asked for his discharge. I hold in my hand a letter from the deputy minister in which he states that this man was discharged from the Royal Canadian Air Force on November 3, 1942, at his own request, in category A4hBh, which means fit for home service in Canada. The deputy minister points out:

> Although suffering from some disability at the time, it was considered that he would eventually be fit for service at least on the ground, and he could not, therefore, be discharged as permanently unfit for all forms of duty. His disabilities were noted in the medical board proceedings.

When I saw this young man he was carrying on as a relief railway agent. He was suffering, and was wearing a brace at the time. His own remarks in the matter were rather interesting. He said:

> When I was discharged I asked them if I may make an application for a pension. From the way they talked it would be more than useless to make one, so I never bothered.

Mr. POWER: Whom did he ask? I would say it would be useless to make it to the air force, but there is a board of pension commissioners to which he could apply at any time. We have nothing to do with that.

Mr. CASTLEDEN: When he spoke about it, that was the reply he got.

My second point is, I believe, a reflection of a similar condition in the army. The women in the women's divisions of the air force, army and navy are surely entitled to equal pay for equal work. I think the minister would have the support of everyone if he were to see that that was brought about.

Then, dependents' allowance should be payable to those who are entitled to it, even if they are in the women's division. In many instances these women have been supporting parents, or other dependents. They are rendering a valuable service, and I believe the minister would agree that in performing some phases of the work they are even superior to the men. In my opinion, they are entitled to the same pay and allowances as are granted men in the army.

At six o'clock the committee took recess.

After Recess

The committee resumed at eight o'clock.

Mr. HOBLITZELL: Mr. Chairman, as one of those who have taken up very little time of the committee, I should like to say a few words in connection with the operation and leadership of the Royal Canadian Air Force. I have for various reasons been very much interested in this branch of the service, no doubt due to the fact that I know so many young men of the force who have paid the supreme sacrifice and many others who also are ready to give everything they have to defend our country in this fight for freedom and justice.

Let me pause for just one moment to offer my hearty congratulations to the minister of National Defence for Air upon his splendid speech on the floor of this house, as reported at pages 3723 and 3724 of *Hansard* of June 26, 1942. With such leadership the Royal Canadian Air Force is bound to fly at a very high altitude.

The Royal Canadian Air Force is one of Canada's chief sources of pride in our whole war effort. It is composed of young men who are among the finest in the land. In many theatres of war its members have brought glory to themselves and to their country and will continue to do so in even greater measure

as the war becomes more intense in the final struggle on the continent of Europe and elsewhere.

I was very much interested in receiving information that I asked for with regard to the number of decorations awarded to men in the Royal Canadian Air Force who were enlisted or appointed in Toronto, and I should like to put the numbers of these decorations on *Hansard* so that they may be on record. Decorations have been awarded to men enlisted or appointed in Toronto as follows:

Order of the British Empire	1
Distinguished Service Order	1
Distinguished Flying Cross	44
Air Force Cross	4
Distinguished Flying Medal	16
Air Force Medal	2
British Empire Medal	1
"Mention"	13
"Commendation"	6

Knowing a number of these young men who have won such honourable distinction, is it any wonder, Mr. Chairman, that I should give high praise to the service? I am sure that all hon. members will agree with me that there is very little criticism that can be applied to this branch of our armed forces. Everywhere you go you hear nothing but the highest praise of the Royal Canadian Air Force, and what has been said along that line by speakers who have preceded me is a good example for the rest of us to follow.

May I make one or two suggestions to the minister which I believe will meet with widespread approval? It is hard to say that all young men in the aircrews are of officer material, but what I should like to see is that all members of the aircrews be placed together in the use of a common mess as is the custom in the far and middle east.

I should also like to offer a suggestion in connection with the rehabilitation of the Royal Canadian Air Force personnel. This would, I believe, be a fitting conclusion to a glorious incident in Canada's air history. With your permission, Mr. Chairman, I will read what I have prepared in this connection.

REHABILITATION OF R.C.A.F. PERSONNEL

1. The question of rehabilitation of R.C.A.F. personnel is a matter which deserves not only the best thought that is possible on the particular question, but also that this thought should be initiated immediately. The success of any rehabiliation measures will depend on having them determined in all their different aspects before rehabilitation, on any large scale, becomes necessary.

2. The rehabilitation of air force personnel, more particularly aircrew, has certain special features, namely:

(i) Air force personnel, more particularly aircrew, are men and women of a high level of educational standing.

(ii) Aircrew will have been through emotional experiences which will have given them a maturity beyond their years.

(iii) The majority of aircrew personnel will be young men in their early twenties who have a good educational background but no special vocational experience.

(iv) The rehabilitation of women personnel will be a particular problem in so far as there will be many young women of good educational background who have interrupted their educational and vocational training to enter the air force.

3. There is at present within the air force an organization for the repatriation of air force personnel. It is submitted, however, that this organization must of necessity be confined entirely to the routine of arrangements for discharge of personnel. There must be a separate organization for the rehabilitation of air force personnel.

4. It is suggested that there should be established within the air force some kind of organization to provide facilities for air force personnel who are to be repatriated or discharged to enable them to do some serious thinking about their future vocation.

5. It is suggested further that the educational directorate of the air force should be so organized as to undertake immediately the whole question of rehabilitation, whereby facilities could be provided to give air force personnel who are to be repatriated or discharged, vocational guidance and an opportunity to pursue the necessary educational courses required for their future vocations. Aircrew personnel, who are to be repatriated or discharged, will require this vocational guidance during the period (in the service) in which they are being emotionally restored towards future civilian life. It will be the responsibility of the Royal Canadian Air Force to give this vocational guidance. Furthermore, it is submitted that there will be no better therapeutic measures for these young men than to stimulate in them healthy thoughts about their future vocations.

6. The answer to rehabilitation is a job, and it should be the responsibility of the air force to provide any necessary educational training to enable air force personnel to get this job. Also it is realized that there will be in the air force personnel who return many

of the best brains of Canada. The majority of these brilliant young men will have interrupted their education. It is the responsibility of the air force to direct the thoughts of these boys to the furtherance of their higher education and to dissuade them, as will be necessary in many cases, from breaking away from their early pre-war intentions of a university career.

Mr. Chairman, I believe that this job of rehabilitation can best be done by those in charge of the building of the Royal Canadian Air Force. In conclusion, may I say: Carry on, Royal Canadian Air Force.

Mr. JACKMAN: Mr. Chairman, it would be almost redundant for me to add a humble tribute to the administration of the Department of National Defence for Air, but I am very glad to do so because I believe that the minister has given it his very best attention; he has accepted criticism where it was due, and he has never paraded the Royal Canadian Air Force or the British commonwealth air training plan as a perfect model, but has endeavoured at every turn to improve it where improvement was required. I hope that any suggestions which may come from this side he will take in that spirit as he has done in the past, for he is assured in his heart, and he knows it without anyone saying it, that there is nothing which any member of this house and any member of the Canadian public will not do to further the interests of these men over whom he has charge.

I do not think the people of Canada fully realize the debt of gratitude which they owe to the men who serve in the aircrew of the Royal Canadian Air Force, to say nothing of the men who served with the Royal Air Force and fought in the battle of Britain and in all the battles which have been waged since that time. I shall not say that the failure to realize exactly what the air force has done for us is because of poor publicity; it may be due to the fact that the air raids are now so constant, and the air battles in the past were of such frequency, that we do not realize the significance of each of these air raids which takes place.

Let us consider for a moment what is meant to Canada when an air raid of 600 planes takes place on any one of these evenings which we are now passing through. With an average crew of say eight to a plane, that means 4,800 men. Every night we have, in the number of aircrew going over Germany, a force equivalent to that which took part in the raid on Dieppe. That is something we do not realize on account of the great frequency of these air raids. And, so that we may realize how large a share is Canada's in these air raids, no less than a quarter of the aircrews that take part in the raids are R.C.A.F. personnel, serving with the Royal Canadian Air Force and Royal Air Force, and for good measure we can add another five per cent of Canadians who enlisted in Royal Air Force units. Only a few nights ago, fifty-seven of the casualties reported were boys of our own country, our own brothers and sons.

Whether anything can be done to bring the realization of this great contribution more vividly to the general public apart from those whose actual relations are engaged in it I do not know, but I feel that if it is possible to give greater publicity to the individual exploits, as well as the exploits of the corps, it should be done. I believe that the minister, if he is of the same opinion as he was last year, will agree that we must give all the personal tribute that we can, because we on this side of the Atlantic at least are used to having heroes, and it is a great inspiration to the young men serving in the force and to those who are likely to enlist to know that they have a chance of getting this glory personally, as well as serving in the common cause.

I am also glad to know the minister feels that we may make very considerable progress in the winning of this war through bombing operations alone. He shares, I think, the view of the Prime Minister of Great Britain when he says that it is something well worth trying, as long as we do not forget the other arms of the service.

One point which has been mentioned already and which will find, I believe approval among all parties of this house, is in connection with the granting of commissions and the withholding of the same to aircrew. It is an invidious distinction which grew out of the tail-end of the last war. I remember it very well, because at that time I was a boy of seventeen and I was in the Royal Air Force, as it was called then. I can remember lining up with the other young recruits, and a young lieutenant there simply picked some of us to be cadets for pilots, which meant a commission, and others to be sergeant-pilots, without any preliminaries at all. It did seem an unfair way, because those who had special influence might be able to change their position afterwards. But the distinction between commissioned officers and non-commissioned sergeants, all of whom were to serve as aircrew, grew out of the end of the last war and apparently was carried over into this war. I do not see that

it has any relation at all to Canadian soil; it may have something to do with other countries, but certainly it is entirely foreign to Canada, and I do not think we want to see any of it here.

It is quite true, on the other hand, that if the only consideration in granting a commission is grades in the courses, those who do better than others are perhaps entitled to rewards, as in other walks of life. Nevertheless, when the men are serving together in the same aircraft there is an invidious distinction, which I think should be done away with. It was suggested by one of my colleagues that it might be better to adopt the United States system of appointment of aircrew to become flight officers with the equivalent of warrant officer's rank, and subsequently they could earn their commissions. I am not positive on that point, but I have heard it said that that is the way in which the matter is handled there. Certainly, the man who graduates as a member of an aircrew is entitled to some rank which, I think, should be at least that of warrant officer; and upon proof of service, not necessarily operations over Europe but including good service in the corps, he should be entitled to rank for his commission.

As I understand it, the system in practice works that only the top third of the graduating classes are granted commissions and the remainder become sergeant pilots. Now that Canada has a larger number of R.C.A.F. establishments and is paying for the same, the old reason of being influenced by joint costs, because Great Britain was paying a good part of the shot of the increased remuneration which officers would get, has to a large extent gone. We are running our own show to a considerable extent, and we should be able to call our own tune with regard to creating officers or not. I understand that a sergeant-pilot or an aircrew sergeant must be recommended by his commanding officer for a commission, or he may apply, under certain rules, for a commission. I should like to trespass on the privilege of the house and read from the agreement in connection with the air training plan dated at Ottawa, June 5, 1942, which I think is the last agreement. This is "Conditions of service of air crews, R.C.A.F. pupils."

1. Commissioning— . . .

(a) All pilots, observers, navigators and air bombers who are considered suitable according to the standards of the government of Canada and who are recommended for commissions will be commissioned.

I do not see any limitation in the clause to one-third, which I understand is the practice.

Mr. POWER: It does not exist any longer.

Mr. JACKMAN: There is no limitation; you are perfectly free to create any officer or sergeant?

Mr. POWER: It does not exist any longer.

Mr. JACKMAN: On graduation, of course.

(b) The percentages of commisisons given at the date of this agreement to wireless operator-air gunners, namely twenty per cent of total graduates, divided ten per cent on graduation and ten per cent after service, and air gunners, namely twenty per cent of total graduates, divided five per cent on graduation and fifteen per cent after service, will be maintained.

I might ask the committee to bear in mind, with regard to these percentages after service, that from what information I have it does not appear that the chances of being promoted afterwards are very much better than theoretical. Actually the total who have been promoted after failing to get their commissions upon graduation has not been very great.

Then:

Some flexibility will, however, be permitted to ensure that airmen in these categories who have the necessary qualifications are not excluded from commissions on account of the quota.

Well, according to the minister the quota has gone except perhaps as to the air gunners, et cetera.

Mr. POWER: I am speaking of the P.N.B.s only—pilots, navigators, bombers.

Mr. JACKMAN: The next clause has to do with procedure in getting a commission, and I think hon. members will be interested if I read it at length.

(c) Normally, the initiative in recommending an airman for a commission will rest with his commanding officer, but an airman may apply to be recommended, and, if his application is endorsed and forwarded by his commanding officer, it will receive the same consideration as if it had been initiated by the latter.

Namely, the commanding officer.

An application for a commission by an airman of the Royal Canadian Air Force, even if it is not endorsed, will be forwarded through the usual channels to R.C.A.F. overseas headquarters. The headquarters will be provided with all relevant documents and will arrange for the candidate to appear before a selection board convened by the air officer-in-chief, R.C.A.F. overseas.

In regard to that clause, I would ask the minister if what is there indicated exists anywhere at all except on paper—

Mr. POWER: You bet.

Mr. JACKMAN: —and if it does, I should like to know whether there is any substantial number of men, and how many, who have actually received commissions in that way.

Mr. POWER: What clause is it?

Mr. JACKMAN: That is appendix 3, 1(c). Then there is another clause with reference to the man who is shifted about, and who comes to the attention of headquarters. Clause G is also pertinent:

> The R.A.F. authorities, in conjunction with R.C.A.F. overseas headquarters, will at once review the case of every airman in all aircrew categories who has been in an operational unit for more than two months.

One would expect that these men, who I am sure we all feel, and the public feel, should be entitled to a commission, namely, the boys who have served for more than two months in operational flights in Europe, should be recognized, and that their cases should come up automatically for review. But we find that seventy-five per cent of the Royal Canadian Air Force aircrew who are reported killed or missing as of recent date were not commissioned, which would seem to indicate that this clause, which calls for an automatic review, is not very operative, or at any rate not very effective, in obtaining commissions for aircrew who are serving and have served for some period over the battlefields of Europe. As a matter of fact, to reinforce the point which I made, that it is most difficult for a graduate who has not obtained a commission on graduation to obtain that commission subsequently, I find that only 607 sergeant-pilots have been commissioned in Canada subsequently to graduation, and 1,464 have been commissioned overseas, which is a very small percentage of the number who, one might expect, would be entitled to consideration on that score. I think the minister will agree that there must be a bottle-neck somewhere, and if no one is actually trying to hold things down, certainly commissions are not flowing as freely as we think the men are entitled to have them.

There are one or two other points in regard to commissions which I should like to make. One is that while there is no limitation on the number of pilots, navigators and bombers who graduate and who may become officers, nevertheless there was, until some time in the near past, a condition that made it impossible for more than the very top number, about the top third of the graduating class, to receive these commissions. As we also know, the requirements for enlistment or for men to get into the air force in the early days were even more stringent than they are to-day from the educational point of view and perhaps from some other points of view, with the result—and I am not casting the slightest reflection upon the type of manhood we have in the air force to-day—that those who went in at the beginning were perhaps on the average slightly higher. But with the old rule in force in the early days, we find there are a great many in the bottom two-thirds of the class, perhaps brilliant fellows, in every way entitled to commissions, who have not received them, as indicated by the figures I gave showing how few had been commissioned after once leaving the school.

Then, again, as the hon. member for York West mentioned this afternoon, an aircrew officer receives better treatment if he becomes a prisoner of war in Germany. Whether or not a man can be promoted if he is a prisoner, I do not know. I have heard it said that if his recommendation had gone through in Great Britain or in Canada prior to his capture, the Germans will recognize his commission; otherwise they will not. Perhaps the minister will throw some light on that question.

One other point is that the legislature of British Columbia has passed a resolution, reflecting the opinion of that great province, in favour of commissions for all members of aircrew.

Another matter upon which I hope the minister will throw some light in the course of his reply is in connection with recruiting. We should like to know what the status is as regards the waiting list of applicants who are eager to get into the air force at the present time. How large is the reserve? It will be interesting also to know how many members of the Royal Canadian Air Force are employed on ground duty who would be available to the army as first-class fighters and who might be exchanged with the army for men who are not fit for front-line fighting. Has the minister made any such proposal to the army, and would the army be willing to cooperate in that direction?

Mr. POWER: Would the hon. member be good enough to repeat that? I want to get it more accurately.

Mr. JACKMAN: I understand that there are some members of the Royal Canadian Air Force ground crew who would be fit as fighting men in the army, and at the same time the army has among its ranks those who are not fit for combatant service, low category men who would be good material for ground crew. Could an exchange be made? The suggestion has been made that the minister might not care for that idea, but there is nothing wrong with some of these men, and, after all, valuable as the services of the ground crew are,

such service is not quite as irreplaceable as that of front-line fighting men. I think the minister appreciates the point.

Mr. POWER: Does the hon. member think the ground crew in North Africa, in Ceylon and in the middle east are not fighting men?

Mr. JACKMAN: The other day I understood the minister to say that the ground crew overseas is relatively small—

Mr. POWER: I rather object to the hon. member saying that the ground crew are not fighting men. We have in North Africa, in Ceylon and in the middle east men who are as much fighters as the men in any other service.

Mr. JACKMAN: I confine myself to the ground crew within Canada.

Mr. POWER: Or in Great Britain?

Mr. JACKMAN: We are bound to have a very great number of ground crew men who must be kept here to look after training requirements of the joint plan.

Mr. POWER: I tell my hon. friend I am not going to have an organization of cripples.

Mr. JACKMAN: I am not suggesting that the minister should.

Mr. POWER: I tell you that right now.

Mr. JACKMAN: I do not suppose the minister imagines for a moment that I would press the matter so far.

May I ask the minister also if there was anything in the suggestion that was made in a newspaper about a fleet of air arm being formed? Surely that is not due to any suggestion of inability or inefficiency on the part of his colleagues, or otherwise, or that the Royal Canadian Air Force cannot look after patrol. It was a news item that appeared once and perhaps it was not official; nevertheless it was there. I understand that the fleet air arm in Britain is confined to aircraft carriers, and so far as I know, we have no aircraft carriers here.

The minister might also throw some light on the stores and equipment depots. I often wonder, when I see the tremendous equipment depot at the foot of Yonge street in Toronto, which has been filled for years with parts, what becomes of outmoded material. Have the old materials been moved out for replacement and their places taken by new materials so that the equipment in the various depots is fairly modern, or has any substantial part of these materials become entirely outmoded? I should not blame the minister if it has, because there have been great and rapid changes in connection with aircraft.

Then a question with regard to the Canadianization of the Royal Canadian Air Force. As we have seen from agreements which the minister has tabled, this Canadianization has gone on somewhat apace during the last year. I think the minister stated that in order to have sufficient ground crew to service our aircrew we should require something over 200,000 men. Obviously that would be impossible. Therefore we cannot hope to complete the total Canadianization of our air crew in the near future or perhaps during this war. It might not be practicable. However, as the hon. member for Calgary East mentioned, there are still some Canadians in the R.A.F who enlisted prior to or at the outbreak of the war. These men went over to Great Britain after, in some instances, taking some preliminary training here, and enlisted with the R.A.F. I do not know how numerous they are, but from time to time I have met Canadians in this category. The minister will probably have fairly exact figures.

Have these men been given an opportunity to re-muster into the R.C.A.F.? I think it was stated last year that some of these men had become so attached to the R.A.F. service that they did not want to change over, but I think they should be given an opportunity to re-muster, not only because they would be with their fellow-Canadians, but for other very practical reasons. There is not only the difference in pay between the English and the Canadian rates, but a Canadian in the R.A.F. is obliged to pay the British income tax. I was told by a Canadian squadron leader serving with the R.A.F. that after deductions his pay was equivalent to that received by a pilot officer in the R.C.A.F. who was serving in the same squadron in England. On the surface this seems to be an absurd situation.

In connection with pensions our government has seen fit to give Canadians serving in the Royal Air Force the Canadian rate of pension. So far as I can discover from the agreements, the primary responsibility for this pension is still upon the United Kingdom government rather than the Canadian government.

Mr. POWER: Those men are not covered by any agreement we have made with the United Kingdom. They have nothing to do with it at all.

Mr. JACKMAN: I shall quote from this letter to the Department of Pensions and National Health, as follows:

> Group 3 consists of a very much smaller number of personnel who, under certain recruiting offers which were made in Canada by the R.A.F. prior to the war, enlisted . . .

Mr. POWER: I am sorry, but I understood my hon. friend to be speaking of the air training agreement made in June of last year. The men who enlisted with the Royal Air Force before the war have not been covered by any agreement made by National Defence for Air of Canada with the air ministry. We have had nothing to do with them in so far as pensions are concerned.

Mr. JACKMAN: They are covered by the Pension Act. It was probably the minister's colleague who handled that. We have undertaken to see that those Canadians who enlisted with the Royal Air Force before the war shall get the same treatment, and I wish to make sure that this is not just a privilege which is being given to them, but a right.

Mr. POWER: It was granted by this parliament, so that I take it to be a right.

Mr. JACKMAN: It would be so under the Pension Act.

There are one or two matters upon which I hope the minister can throw some light. One is in connection with the appropriation of $93,000,000 this year for works and buildings. As the minister suggested in his opening speech, less building is being done this year. The whole air training plan has been set up, and it is now simply a matter of turning the wheels and getting production. Yet the overhead in connection with works and buildings appears to be maintained. I should like to ask the minister, when the time comes—it must be the same in this department as in many others—for a specific reduction to take place, just how the reduction will come about. There is always a reluctance to disturb a situation which is functioning.

Another word in regard to organization. I think one reason why the Royal Canadian Air Force has made such tremendous strides and achievements is the fact that it was a new service. At the beginning of the war the number of personnel in the permanent force was not sufficiently large to clutter up the machinery, nor was it sufficiently large to stop the wheels of progress, as some of us think has taken place in some of the older services. Adequate recognition has been given to personnel which did not see any great future in the air force in peace time, but did see a future in business, to which they applied their abilities. These abilities have been transferred to the air force and they have received the appropriate recognition. I think the minister has been wise to make sure of any contribution, no matter where it comes from, whether from new blood or from the old Royal Military College type if you like, and to give it due recognition.

[Mr. Jackman.]

Nevertheless, as your organization matures, things tend to become static, and you find new jobs for people who are simply performing functions which were performed by some of the old personnel. For instance, I understand that at one of the training centres the personnel is about double what it was in 1941, whereas the output of pilots has not changed at all. This tendency to increase overhead is common to all organizations, as the minister knows, and I believe he would want to check any growth along this line.

Mr. POWER: Would my hon. friend mind giving me privately the name of that particular station, so that I may check this matter?

Mr. JACKMAN: I shall be glad to do so.

There are a few smaller matters I should like to mention, but perhaps they can be raised more appropriately on the various items. I only hope that the minister will continue to make the progress and achieve the success with the R.C.A.F. that he has in the past, and that our boys overseas will continue the glorious work they have been carrying on in the past.

Mr. NOSEWORTHY: I shall not take the time of the committee to assure the minister of what he knows already, that all Canada is very proud of his boys in the air force and that by now I judge Germany and the countries under German domination have learned to fear them. I have a personal interest in the men in the air force, because more than three hundred boys from my classes and fifteen of the teachers with whom I worked before coming to the house are now in this force.

There are three matters I should like to call to the minister's attention. While the first may not be within the scope of these estimates, it has been referred to already and I am sure it will interest the minister. I wish to speak, as the hon. member for Calgary East and others have done, for our Canadian boys who are in the Royal Air Force. I know some of those boys who went to England on cattle-boats during the depression years, when they could find no employment in this country; who signed six-year contracts with the Royal Air Force and who were among the first Canadian boys to see active service in the air when war broke out. Practically all our legislation with regard to returned men and their rehabilitation provides that Canadians in the Royal Air Force or other branches of the services of the allied nations shall receive the same treatment as those in the Canadian forces, subject to the provision that

they must have been domiciled in Canada at the time of enlistment. Those boys, probably together with others in other branches of the service, were not domiciled in Canada at the time of their enlistment. Some of them are writing home now asking what their status will be when the war is over. I have been in communication with the Minister of Pensions and National Health on this question, and he assures me it is the intention of his department to see that those boys are brought within the scope of the legislation providing for rehabilitation. But unless this matter can be cleared up now, before those boys come home, it is quite possible that when the war is over, grounds may be found for excluding them from some of the benefits to which the boys in the Canadian forces will be entitled. Therefore I would suggest to the Minister of National Defence for Air and to the ministers of the other service departments that steps be taken now, before those boys come back, to see that their position after the war is clarified, so that there may be no doubt that they are entitled to whatever rehabilitation benefits are provided for the boys in the Canadian forces.

There is one other point of a similar nature to which I wish to direct the minister's attention; I imagine later on it will probably come under the administration of the Department of Labour. I refer to the matter of education interrupted by the war. A number of boys have written me wanting to know just what is meant by education interrupted by the war. I should like to impress upon the minister the fact that the training and educational advantages that have been given the boys in the air force, and the training that has been given the boys in the other branches of the service, have given many of them a new realization of the value of education. A great many of the boys who will return from overseas, who had very little interest in education before going into the armed forces, will be desirous of continuing their education, regardless of the point at which that education was interrupted. We shall find that many boys who did not finish their high-school education, who probably never gave any indication of any intention to enter university, will, in all probability, when they return, want to complete their high school education and to be given the privilege of entering a university. I have discussed this matter with the educational officers of the air force and army, and the consensus among them is that any boy who returns from the war should be given the privilege of taking up his education where he left off, without being asked to show that before he enlisted he intended to go through high school or on to a university or some other educational institution. I think in the interests of the future of this country we should provide for the boys who return from overseas any educational opportunities which they desire and of which they can make use. It will be of benefit to the boys now in the forces if some statement can be made clarifying just what is meant by that term, the continuation of education interrupted by the war.

I have one other matter which comes within the scope of the first item, which deals with civil salaries and wages. A year ago I was in communication with the minister concerning the wages paid to civilian employees at some of the air force camps. I understood then that steps were being or had been taken to improve this condition, and I have received information to the effect that the condition which prevailed a year ago has been considerably improved. But there are some of those camps in which veterans of the great war are employed as civilians at what I still consider very low wages.

Mr. POWER: If I may ask my hon. friend a question in connection with the class of labour to which he refers, are not those men employed at the prevailing rates in the different localities, as fixed by the Department of Labour? That was my impression, and I should like to know if that is the situation.

Mr. NOSEWORTHY: Here is one concrete example. A great war veteran employed at I.T.S. No. 5 near Belleville tells me that he receives $50 a month plus $1 a day subsistence allowance, giving him less than an average of $20 a week in all. The camp is situated at some distance from the city, and transportation costs most of the men going to that camp sixty cents a week. I do not know what the minister thinks, but to me that is a pretty low wage. I gather from the letter of this man that he has a fairly responsible position in the camp.

Mr. POWER: Unless the hon. gentleman has some other information I can only suggest that this rate of wages must be fixed either by the Department of Labour or by the civil service commission. I am quite sure that must be the situation, because we do not fix the rates of wages for this work.

Mr. NOSEWORTHY: I do not know who fixes it, but I would say that wage is too low for a man of that calibre.

Mr. POWER: I do not think it is very high.

Mr. NOSEWORTHY: This may not be the responsibility of the minister, but it is a matter which does affect men employed in his organization, and if he has any responsibility in the matter I would suggest that some adjustment should be made.

Mr. WARREN: I do not rise on this occasion to condemn or even to advise, but I do not wish this opportunity to pass without paying, on behalf of my riding of Renfrew North, a tribute to the Royal Canadian Air Force and the commonwealth air training plan. Sometimes I think we are inclined to forget the great background of the air training plan. We are inclined to forget the enormous amount of work that went into the setting up of the plan, before it finally got under way. We are told that originally the plan called for seventy-four air training schools dotted here and there across Canada, and that it was later enlarged to 154. Can anyone imagine the amount of work that went into the locating of those air training fields, right across the country? Can we properly understand the work involved in finding the right locations, and in surveying them? That work was done by the Department of Transport. It was a work which must have involved a great deal of effort and organization on the part of the officials of that department.

Then the Department of Munitions and Supply was called in to get the fields in order, to let contracts for the grading of land, the erection of buildings, the laying of pipelines, the supplying of water, the disposal of sewage and the installation of plumbing. All this involved a tremendous effort, one we are apt to forget about. It was accomplished, not only by the officials of that department but also with the aid of a great army of civilian labourers. They accomplished a magnificent amount of work in the preparation of these air training schools.

I believe the minister said that approximately 50,000 airmen who go aloft have been trained under the plan. That is surely an accomplishment of which we may be proud. A great amount of education is involved in the training of a pilot, an observer, an air gunner or any of the personnel who fly.

Sometimes I stop to think why those boys wanted to get into the air force. In the early days of the war the boys who complained to me were those who wanted to join the air force, and who did not know why they should not be accepted at once. They were clamouring to join, knowing all the time that a pilot, observer or air gunner must be trained to a high degree of perfection. They knew, too, that they had to be almost perfect physically and mentally, and that the educational standards were high.

I believe I heard the minister say on one occasion that possibly he had spoiled our young men who entered the air force. But he said he deliberately set out to do that, because he wanted the cream of the country. He set out to pay them well, to feed them well and to treat them well. He stated further that his plan worked, and that he got what he wanted. Even to-day boys from my constituency are still on the waiting list, and still clamouring to join the air force.

I presume one reason why they prefer the air service is that they know they will see action, and that the air force has been in the front line during a time when the army has had to wait. When a civilian decides to go to war he prefers to go at once, get the fighting over and be done with it. They want action, and our boys knew that if they were taken into the air force they would find plenty of action. They have covered themselves with glory in all parts of the world. I pick at random clippings from my home town of Pembroke, and I find that they record the deeds of many of our boys in all parts of the world—Egypt, Africa, Tunisia. They are here and there across the world. They are fighting, winning medals for their valour, doing splendid work and bringing glory to their country and to themselves.

There is another reason, however, why the boys want to see action. This was put beautifully in a letter written by a North Bay boy to his mother. It is contained in a newspaper article bearing the North Bay dateline of April 17, as follows:

> Mr. and Mrs. Arthur Boyer have just received a letter written by their son, Flt. Sgt. A. B. Boyer, R.C.A.F., who was killed in action overseas, last October.
>
> The letter was written last July and handed to a chaplain to forward in event of his death. It says: "I am writing this week in case I get killed, because if I did get killed I would want you to know why. It's because I have always loved you very much and I came over here, as all other Canadian did, to stop Hitler from going to Canada and doing harm to you."

That is very touching, and just the language a boy would use. I think he is right in saying that the motive in the minds and hearts of our young men, when they offered themselves to perform this dangerous task, was that they were thinking of their loved ones. They felt they had a duty to perform, a job to do, and they did not hesitate to do it.

I pay tribute to those boys of ours who have gone in that spirit to do their work, a work they are doing so magnificently and so well.

While I am on my feet may I pay tribute to the mothers who have given those splendid boys to this task. Some of the boys will not return to the mothers who gave them to their country. In those cases the mothers' hearts will be terribly broken. In other cases boys may learn in foreign lands that during their absence their mothers have gone to a better land. But they should not worry unduly. While the mothers are here, they pray unceasingly for the welfare of their boys. Their thoughts go with them; they live with them. But if they are taken, they go to a better land, and then I feel the mothers may be in an even better position to stay close to those boys to protect and care for them. I am going to put on record a poem written by Edna Jaques of Toronto which I think sums up the feeling of the mothers of the boys of the air force in most beautiful language:

"Son's Going Away"

Nobody mourns them as mothers do
Nobody watches and waits and weeps,
Love forgets and the world goes by
But mothers sorrow and pray and keep
Little bits of him treasured up
His old school sweater—his hockey cup.

Never a day goes by or a night
But she visions him in a hundred ways
He lives in the night, in the wind and stars,
He is part of her, and the weary days
Go empty save for her dreams of him
Brave as a lion, stalwart, slim.

She rides with him in his shining plane
Over the channel upon a raid
Sharing the cockpit, charting trails,
Flying his Spitfire, unafraid.
Prays for his safety, day and night
Upholding him by her love's sheer might.

Nobody mourns him as mothers do
Morning—evening—sunset and dawn
Love forgets and the world goes by
But mothers keep faith when hope is gone,
Steady and true as the stars above
Nothing can touch it—a mother's love.

Mr. JOHNSTON (Bow River): Mr. Chairman, I do not think there is anyone in the house or outside it who does not appreciate the work the air force is doing, and certainly no one underestimates the responsibility which these young fellows will have to assume in the very near future, to say nothing of the splendid work they have been doing up to the present. As time goes on, I think we shall realize that the air force is bound to become more important than perhaps any other branch of the armed forces. But there is one thing I would point out to the minister. In view of the fact that the air force will be called upon to render greater service as time goes on, and there will be a greater number of air force casualties too, we have not in my opinion expanded the air force as much as we should have done in Canada. From my experience in travelling over the country I believe that the air force is not being expanded as rapidly as it could and should be.

We have in Canada at the present time more training aircraft than the air force can use. I remember talking to an officer in one of the air force training centres, and I asked him if that was a fact. He told me that they were training men just as fast as they could with the facilities they had at hand. I said, "What do you mean? Have you not enough space here for landing fields, or buildings?" He said, "That is not necessarily the cause of our not training more men. The point is, we really have not enough planes." I drew his attention to the fact that we had in storage in Canada large numbers of training planes which were not being used. It seems to me that this condition of affairs should not exist. I know we should keep a sufficient number of planes in reserve in case of smashes or crashes and a sufficient supply of parts for repairs. But when this officer told me that they were not training any more men because they did not have the aircraft, that did not just jibe with what I knew to be the fact. My information is that we have more training planes available than the air force is using, and that as fast as the air force wants to expand the Minister of Munitions and Supply can supply the planes required if they would only order them. But I think the practice is that the Department of Munitions and Supply makes no move in regard to supplying planes unless the air force orders them.

That brings me to another point. I would ask the minister how it is possible for a man in the army to transfer to the air force. I believe that is being done. I recall that over a year ago a young fellow who was in the army in England wrote to me and wanted to know how he could get into the air force. That had been his goal ever since he enlisted, about six months after the war started. He was eager to get into the fighting forces and his choice was the air force, but he was advised at that time to join the army and that he would then have no difficulty in transferring over to the air force. He spent all his training time with the army here in Canada; then was sent over to England and was there for a year when he wrote me asking how he could get into the air force. I took the question up with the Department of National Defence and was informed by the department what steps he

should take. I accordingly wrote and told him what he should do. He did that, and then about two months ago I received another letter from him saying that he had not got into the air force but still had hopes of getting there. I would ask the minister how that can be done.

I also wish to bring to the minister's attention a case that came before me about three weeks ago. I would ask the minister, is a young fellow in the air force on the day he is sworn in? My information is that this young fellow was sworn into the air force on July 16. Then he was sent home on leave without pay. Was he in the air force on the day he was sworn in, or was he in the air force after he was called back from being on leave without pay? I should like the minister to settle that point, because it so happens that later on this boy developed a sickness and upon his discharge the question arose as to when he was in the air force.

Mr. POWER: I will look into the matter. Roughly I would say this. If he developed a sickness while on leave without pay and had not participated in any way in the work of the air force, I would hate to say that I would be responsible for him.

Mr. JOHNSTON (Bow River): He did not develop the sickness while on leave without pay. He came back from leave and was in the air force for four or five months.

Mr. POWER: My hon. friend will have to discuss that with the department of pensions. He certainly was in the air force if he served in the air force and was actually a member of the air force. But the question of responsibility for pension or compensation or what have you, is one for the board of pension commissioners and is not for the decision of the Royal Canadian Air Force.

Mr. JOHNSTON (Bow River): Would he be considered on strength the day he was sworn in on July 16?

Mr. POWER: I do not see how that question would arise if the beginning of the illness or disability occurred when he was a member of the air force. If my hon. friend would send me particulars—

Mr. JOHNSTON (Bow River): I think the whole thing hinges on whether he was on the strength the day he was sworn in.

Mr. POWER: If my hon. friend will let me have the particulars I shall be only too glad to hand the case over to pensions to get an opinion.

[Mr. C. E. Johnston.]

Mr. JOHNSTON (Bow River): I have already taken the case up with some of their officials but have not got very far. The whole case hinges on whether the man was on the strength the day he was sworn in.

Mr. POWER: I am quite certain the hon. member cannot get very far with me to-night because I would have to see all the particulars.

Mr. JOHNSTON (Bow River): Surely the minister could say whether a person—

Mr. POWER: The minister will not give a decision on a pension case. He never did it even when he was Minister of Pensions, and he is not going to start it now, when he is out of the job.

Mr. JOHNSTON (Bow River): I am not asking the minister to decide on a pension case. All I am asking is, was the man on the strength when he was sworn in?

Mr. POWER: I do not know.

Mr. JOHNSTON (Bow River): That is the whole point of the case.

Mr. POWER: I do not know whether he was on the strength for the purposes of getting a pension for disability or not. I would have to look into the matter. It is a legal question.

Mr. JOHNSTON (Bow River): Then there is a difference between being on the strength for pension purposes and being on the strength for service, I suppose?

Mr. POWER: I shall be only too glad to get the legal officers of my department to give my hon. friend the best legal reply which can be given.

Mr. GRAYDON: The minister should do better than that.

Mr. GILLIS: I am not going to take this opportunity to make a speech. The Minister of National Defence for Air made a comprehensive statement to the committee, and I do not think there is any doubt in the mind of anyone who listened to him about the job which the air force has performed since its inception; we also have some idea of the task which lies ahead for that particular branch of the service. The only observation I would make in this connection is that it is not good policy to take the position of eulogizing one branch of the service. I believe that if and when the opportunity comes, the army will acquit itself just as creditably as the air force. The same remark applies to our navy. It is merely that the air force has had the first opportunity.

To-night we are dealing particularly with the estimates as tabled by the minister, and,

in accordance with the understanding that we were to take them item by item and discuss them specifically, I shall take up the first item and make a few observations dealing with civil salaries and wages.

I believe the minister is aware that there has been some controversy across the country arising out of complaints, by civilian personnel employed by the air force, as to the cost of living bonus. I have had some correspondence, and I understand that national selective service, unemployment insurance, have made a decision to the effect that civilian personnel employed by the air force in the various camps across the country come under the air force direct in the matter of interpretation as to whether they come under the regular order 5963 or the supplementary order applying directly to this particular branch.

I have a complaint specifically from the airport at Sydney, Nova Scotia. It was handled by the regional war labour board and also by the unemployment insurance commission. The complaint is that the civilian personnel employed at that port were engaged with the understanding at the time they were employed that they were to receive forty-three and a half cents an hour, plus cost of living bonus amounting to something over $18—I believe $18.18—a month. The cost of living bonus has not been provided. The unemployment insurance commission, under date of May 19, 1943, observe that they are unable to determine the exact status from the information submitted and suggest that the question of rate should be taken up direct by the employees concerned with the officer commanding the Royal Canadian Air Force. Quite a number of people are affected, and I rise at this time to bring this point to the minister's attention so that he may make some examination with respect to that particular situation.

Mr. POWER: May I ask, did they take it up with the officer in charge?

Mr. GILLIS: I understand they did.

Mr. POWER: What happened?

Mr. GILLIS: There has not been any decision arrived at. It has been a matter of controversy for some months.

Mr. POWER: Has my hon. friend any correspondence which he can send over to me? I shall be only too glad to look into it.

Mr. GILLIS: Yes; I will do that.

Mr. KNOWLES: There are two matters under the item before us, namely, that relating to civil salaries and wages, about which I should like to make a few remarks. Before I do so, may I join in the tributes which have been paid by all hon. members who have spoken to the work which has been done in connection with the organization of the Royal Canadian Air Force, to the men and women in the force, to the families of those who have already made the supreme sacrifice, and to those for whom the present is a very anxious time as they listen to the news from day to day.

The cases to which I would direct the attention of the minister come out of equipment depot No. 7, at Winnipeg. The first case has to do with some forty-two employees who in June of last year were informed that trade tests would shortly be available to them in order that they might seek promotion as civil servants working in that depot. I understand that trade tests were conducted on August 17, and that the employees concerned had been advised in daily routine order 165, which had been issued on July 9, that those who were successful at these examinations would have their promotions made retroactive to July 1, 1942. After a considerable time it turned out that, although the tests were held in sufficient time for the increase to be made retroactive to July 1; although the employees had done everything that they were expected to do; although they were assured in daily routine orders that July 1 would be the effective date, still there was delay somewhere along the line, with the result that this matter did not receive the approval of the treasury board until some time after October 1. Accordingly, when the increase was granted it was made retroactive only to October 1 of last year, and the employees were so advised in daily routine order 307 of December 22, 1942. The employees, of course, were rather disappointed, particularly after they had been advised frequently that the effective date would be July 1. Immediately they got in touch with the officers on the station to seek an explanation and to see what should be done. I shall not take the time of the committee to go into all the details, either as to the explanation or as to what was done, but I may say that these employees have been in constant touch with the officers on the station and have endeavoured to work through them. In fact, the employees are quite satisfied that the officers in Winnipeg are with them in this matter and that they have done everything in their power to have the increase made effective at the date at which it was promised.

Some time after getting the news that the promise was not to be implemented, the employees were able to have one of their number visit Ottawa during the course of a

trip to the east and take up this matter with the authorities. At that time I was brought in contact with this particular situation, and I have been in quite close touch with it ever since. It was, I believe, in February or March that this representative of these forty-two employees was here. He was in touch with both the civil service commission and the Department of National Defence for Air. The whole story was gone into, and he was assured, both by the chairman of the civil service commission and by the officer in the Department of National Defence for Air, that the matter would be reconsidered. Accordingly, on March 29 of this year, the civil service commission approved an order for making these payments retroactive to July 1 of last year. On the same day, March 29, the approval of the civil service commission was sent to the treasury board. On March 30 the treasury board sent it back to the civil service commission with a request for further information which it felt it should have. The minister will realize what is happening when I give these dates, which are so close to the end of the last fiscal year. The result was that it was April 2 before the civil service commission was able to get back to the treasury board the information asked for on March 30. I emphasize that on March 30 the treasury board acknowledged that it had this matter in hand, because it was on that date that it requested this further information. Matters dragged on until April 22, when the treasury board sent the matter back to the civil service commission again, at this time advising that the change of effective date called for the signature of the Minister of National Defence for Air. I was in touch with the minister as well as with the civil service commission at that time; within a few days the matter was before the minister, and I understand that he signed it. On April 27 the formal application, with the joint approval of the civil service commission and the Minister of National Defence for Air, was again sent to the treasury board. I emphasize the fact that on March 30 the treasury board had had the matter sent back for further information, and that later it asked for the minister's signature. But on May 11, having secured these things the treasury board had asked for, it rejected the application that these payments be made retroactive to July 1.

I must say to the credit of the department that after that date, May 11, I discussed the matter quite fully with one of the officers and that as a result of that discussion the officer agreed with me that the case was one that merited an attempt to have it reconsidered, because the treasury board was apparently rejecting the application on the ground that it related to the last fiscal year whereas we were now over the line into the new fiscal year. I pointed out that the treasury board had the application for reconsideration on March 30, and that the matter had been hanging fire since last June, July, August and on through the year. I understand, in fact I have a communication to this effect from the department dated May 20, that the matter has again gone to the treasury board, with a request that they reconsider it.

I realize that the minister is familiar with the story, and if he reviews it he will find two or three points, on the basis of which he can say that the responsibility rests upon other shoulders. He can point out that last summer his department was in favour of the effective date being July 1, and that throughout the whole story he has been, or at least his department has been, in favour of the request of the employees. But the problem is still with us.

I do not know how to get at the treasury board; I have not been in the house long enough to find out. But in view of the fact that this is a matter relating to the civilian employees of the Royal Canadian Air Force, and that the item of money we are now voting is the money that goes to pay civilian employees, it seems to me that this is the place to raise the question, and I hope the minister will be able to give some statement at least indicating that he and his department are doing their very best to implement this definite promise which was made to this group of employees as indicated by certain daily routine orders that were issued. These employees were amazed on January 22, 1943, when they read in D.R.O. No. 17 of that day that one of their number had had the effective date of her increase changed from October 1, 1942, to July 1, 1942. They did not regret the fact that she was given what they were all asking for, but they found it difficult to understand why it was impossible to do for the rest of the group what had been done for her.

Mr. POWER: I wish the hon. member would tell me how she worked it. I would do it for the rest.

Mr. KNOWLES: I am glad to have that statement on the record. I will communicate it to the rest of the group and try to find out. I will give the minister by correspondence the name of the person who was more fortunate than the rest.

There is another matter I should like to discuss with the minister, but perhaps he might like to make a statement first in connection with what I have just brought to his attention.

Mr. POWER: I do not know what statement to make. I should like to know how they beat the treasury board. If anyone can tell me, I will throw up both hands and cheer.

Mr. KNOWLES: Will the minister at least confirm my statement that he and his department agree that the promise made these employees ought to be implemented and that he and his department are doing everything possible to that end.

Mr. POWER: I would have to look over the correspondence again, but I take it that my hon. friend's statement is accurate, and if we made a promise we will fight to have it fulfilled. But I will not promise that we can beat the treasury board.

Mr. KNOWLES: The other case to which I wish to refer arises likewise out of No. 7 equipment depot in the city of Winnipeg. This time it relates to a group of more than 200 employees, and I hope that in our discussion we do not have any passing of responsibility such as we had a moment ago in response to some of the remarks of the hon. member for York South. In this case we have a group of more than 200 men who are known as general duty men. They are not classified as civil servants, but they are employees of the Department of National Defence for Air, and I take it that their wages come out of the item which is now under discussion. The matter affecting these employees has its origin at least two years ago, and it is still hanging fire and causing a great deal of discontent and dissatisfaction among these men. There has been some change since they were first hired, but not a great deal. When they were first hired the desire of the department was to engage them at forty cents an hour, but it was discovered that the minimum wage or the fair wage provisions in the Manitoba act made it necessary to pay forty-five cents an hour, and that rate was paid. However, when the question of a cost of living bonus came into the picture and it was agreed that the men should get this bonus—let me make this clear—it was added to the forty-five cents which they were then receiving. In other words, they were paid forty-five cents, plus the bonus, for a matter of two or three months; I just forget how long it was. It was then discovered that it was possible to tell these men that before the bonus was paid they were getting forty-five cents an hour only because the provincial law required that they should be paid this rate, but since the cost of living bonus on top of the lower rate of forty cents would give them a total in excess of the rate demanded by the provincial law—I notice the minister is laughing, and perhaps it is amusing, if it were not so serious to the men concerned—

Mr. POWER: It is getting pretty complicated for me to follow.

Mr. KNOWLES: It is complicated, and amusing to some, but it is a serious matter.

Mr. POWER: I do not know who thought up the reason to keep these men from getting the bonus. He must have been trying very hard.

Mr. KNOWLES: He must have been a second cousin to the treasury board. Let me go back and line it up again. They were hired at forty-five cents an hour. They were paid this rate not because their employers, the minister's department, wanted to pay it, but because the provincial law required that it should be paid. Then when the bonus was paid—whoever thought up this scheme apparently did not think it up quickly enough, because they got the bonus for two or three months on top of the forty-five cent rate—these men were told that they would have to go back to the forty cent rate as a basic rate, because that rate plus the bonus would give them a little more than forty-five cents and the provincial regulations would thus be met. This happened perhaps two or three years ago and, while there has been considerable change in the personnel, these men have never got over what they felt—

Mr. POWER: May I ask what is the situation now?

Mr. KNOWLES: I was leading up to that point. The situation has been improved in the sense that the basic rate has been increased to forty-five or fifty cents, and the bonus is paid in addition. In a sense the situation has been corrected, but the injustice of the experience has stuck with them and they feel quite discontented and unhappy about the whole thing.

Mr. POWER: Was that the equipment depot at Winnipeg?

Mr. KNOWLES: Yes, No. 7 equipment depot. At that time I had not become a member of this house, but I was in contact with this situation. These men asked me to see what could be done, and I wrote to one of the members of this group, the hon. member for Mackenzie (Mr. Nicholson), who endeavoured to take it up with the Minister

of National Defence for Air. I shall not take the time to put the letters on the record, but the minister replied suggesting that the hon. member should get in touch with the Minister of Labour. He did so, and the Minister of Labour replied suggesting that it was really the responsibility of the Minister of National Defence for Air. These men kept after me to give them such information as I was getting, and when I showed them these letters it did not help matters a great deal. After I came to this house I made further inquiries about how these governmental boards were set up, for whom government employees work, who pays them, who decides how much they will be paid and so on.

An hon. MEMBER: Have you found out yet?

Mr. KNOWLES: Not altogether, but I know a lot more than I did before I came here. However, I still have a great deal to learn. The minister will correct me if I am wrong, but I did learn that these men are employed by his department and that the money paid them comes out of his estimates. That is the item we are now considering. So long as these men are not classified as civil servants but are considered to be general duty or common labourers, the rates paid to them are fixed, not by the minister or his department but by the regulations of the Department of Labour. These men do not think very kindly of the Department of Labour, largely as a result of the experience they had which I have outlined in some detail.

I found out also that if these men could be classified as civil servants, they would still be employees of the Department of National Defence for Air and would receive their pay out of this item, but their rates of pay and working conditions would be set by the civil service commission rather than by the Department of Labour. That cleared up a point in my mind which had not been clear before. I understood that these men were trying to get connected with the civil service commission. They pointed out to me that the work they are doing could hardly be called general duty or common labour. They have a great deal to do with storing and looking after quite valuable equipment. Some of the men have been there for a considerable time, and a large percentage of them are veterans of the last war. They are keenly interested in what they are doing, and they feel they ought to have a higher rating. They have become interested in the possibility of being classified as civil servants.

I took the matter up with the civil service commission. I have admitted already that there is a great deal I have to learn, and I may have made a mistake in going to the civil service commission before I went to the Department of National Defence for Air. I did not consider it to be a terrible mistake, but I have been told that it might have been better if I had made my representations first of all to the Department of National Defence for Air.

Mr. POWER: The Department of National Defence for Air would have sent them to the civil service commission, so that I thank my hon. friend for taking the short-cut.

Mr. KNOWLES: I thank the minister for absolving me of having made a serious mistake. The civil service commission explained the rigmarole which I have outlined and indicated that they were prepared to consider this application. Then we went through more rigmarole. The civil service commission has been in touch with the men, and they have been asked to fill out statement of duty forms as to what they are doing so that the civil service commission might draw up a statement showing whether the men would be better off in the civil service or under the Department of Labour, although they are actually in the minister's department. For a time it looked as though we were making pretty good headway, and the men were hopeful that a civil service classification would be granted and their rates would be higher. They would thus be able to forget the unfortunate experience they had when their rates and conditions were under the direction of the Department of Labour.

The upshot of this was that during the Easter recess an official of the civil service commission and an officer of the Department of National Defence for Air visited Winnipeg. I had quite a lengthy interview with them, and they went out and had interviews with the men. I should like to have gone with them at the time, but they advised against it, and whether or not I should have done so, I accepted their advice in the matter. Now I am told that the men were given a hypothetical choice to make. On the one hand they were asked if they would like to continue as unclassified, general duty men at the hourly rate and be given holidays with pay, one week or two weeks, or if they would prefer to become classified as civil servants with a possible reduction in their total income.

Mr. POWER: I do not know anything about this, but my impression is that if they were civil servants they would get holidays with pay and that if they were on the prevailing

rate they would not get holidays with pay. Perhaps my hon. friend has reversed the situation. If they became civil servants they would get holidays with pay. If they were not civil servants they would get the prevailing daily rate and would not get any pay while they were not working. Am I not right in that?

Mr. KNOWLES: The minister is making the very criticism of this proposal that was made to these men that I was about to make.

Mr. POWER: I do not know anything about this particular case, but for twenty-five years I have been fighting to get similar privileges for people in my constituency and have not succeeded. I understood that if one remained on prevailing rates one was not paid for holidays, whereas if one became a civil servant payment went on for the period of the holidays, one week or two weeks. If there is any change in that rule I do not know about it.

Mr. KNOWLES: That was exactly my understanding of it, and it was the understanding of the men to whom the proposition was put. I am quite sure the proposition was made in the way I have stated; as a matter of fact it was discussed with me in the interview I had with the two officials.

Mr. POWER: How could they pay people on prevailing rates if they did not work, if they were on holidays?

Mr. KNOWLES: That was my question.

Mr. POWER: This is a new one on me. I do not understand it.

Mr. KNOWLES: But that is what the men were asked, if they would like to continue on the hourly rate and have a concession which they could not possibly realize, or if they would prefer to become civil servants at a rate which was indicated by the officers as lower than actually it might be. The men feel that the proposition which was put to them was deliberately distorted in order to get them to say that they would prefer to remain on the hourly rate.

Mr. POWER: I do not know anything about it, but I hardly think a responsible officer of the civil service commission would make an offer that was not bona fide, at any rate. I should be surprised if he did, and I would draw it to the attention of the civil service commission if that were done.

Mr. KNOWLES: If the minister will look into the matter I think he will find that he should draw it to the attention of an officer of his own department. If my information is correct, and I have reason to believe it is, it was the air force officer who made the proposal with the official of the civil service commission standing by. If I may try to state their case, these men feel that the department does not want them to be classified, that the choice was deliberately distorted so that they would choose the alternative the department wanted them to choose.

Mr. POWER: I can assure my hon. friend that I do not care; I am all in favour of their getting increased rates. We are not trying to distort anything, so far as the department is concerned.

Mr. KNOWLES: May I say further that if the statement just made by the minister indicates his view on the matter—

Mr. POWER: I am afraid that will not help my hon. friend. I have been fighting the civil service commission and treasury board ever since I have been a member of this house, and I have been here since 1917, but it has not done me any good.

Mr. KNOWLES: I am still of the opinion that if the minister or the department would like to have these men classified, the civil service commission is ready to classify them, but that actually the officers in the minister's department are not sympathetic. They have given me their reasons for not being sympathetic, though I need not take time to give those reasons.

Mr. POWER: I should like to know them.

Mr. KNOWLES: Since the minister has asked for them, they feel that there will be problems related to getting overtime work out of the men if they are classified as civil servants instead of being on an hourly rate. That is the principal objection that was raised.

Mr. POWER: I was under the impression that it was just the opposite, that when you are in the civil service you do overtime work, but that if you are on a prevailing rate of pay you get time and a half for overtime.

Mr. KNOWLES: At least one officer in the minister's department feels that there would be difficulty in persuading the men to work, even though civil service regulations say they may have to, after having been paid for it. He also felt that there would be difficulty as between these civilians and the service personnel. I am glad to hear the minister's statement, despite his feeling that it will not do any good. I am glad he is for a civil service classification in a case like this; and if

he will go ahead and battle this thing through, from my talks with the officials of the civil service commission I have reason to believe that something can be done. Let me make this comparison. In the other case about which I was talking, the case of the forty-two whose promotion was made effective on the wrong date, the department was on the side of the employees, while the civil service commission did not stand up for them at first, although later it agreed with their request. In this case, however, the civil service commission has already indicated to me its willingness to go ahead and classify these men, certainly if the department asks for it. I may repeat that it was at a fairly late stage of the proceedings that I was told that the attitude of the Department of National Defence for Air toward this whole matter might have been more sympathetic if it had come about either through my going to the department or through the men making that approach, but that my having gone to the civil service commission—

Mr. POWER: I hope my hon. friend will disabuse his mind of that idea. I have not the slightest objection to his going over my head to the civil service commission at any time.

Mr. KNOWLES: I am glad to have that statement from the minister. Now it is on record, and I should be able to use it if ever I am told that sort of thing again.

Mr. POWER: You bet.

Mr. KNOWLES: I am now told that conditions are getting a little worse. For a considerable length of time the personnel of this group of over two hundred did not change a great deal, but lately the personnel has begun to change quite considerably. I am told that every day men are resigning or are being discharged and are being replaced the next day with other men sent over in response to applications made to selective service; in fact, the selective service office at Winnipeg is now beginning to wonder at the turnover at this place. The men themselves are wondering whether this rapid change in personnel, which occurs partly because the men are getting fed up and leaving and partly because some are being discharged, is an attempt to break up this group which has been struggling in this matter for about two years. They wonder what is happening, and are becoming quite discouraged. As I have already indicated, I have been in touch with this matter for at least a year and a half; and these men have been in touch with the Department of National Defence for Air and the Department of Labour for about two years. And yet through all this time this matter has never before been brought up in the house or in committee. An attempt has been made to deal with the matter direcly with the department. That has been my aim right along. But I feel the thing has reached the stage where it is necessary to say something about it in a more public way, and to express here the hope that the minister will do what he can to fight this case. I do not share the sense of futility he seems to have as to the effectiveness of his activities in the matter. I believe that if I can enlist his support on behalf of these men, despite what he says some good will come of it.

Mr. POWER: I shall be glad to help all I can against the civil service commission at any time. I moved for its abolition on three occasions in this house.

Mr. KNOWLES: This is a serious matter.

Mr. HANSELL: Reverting to the discussion raised a little while ago by the hon. member for Bow River, may I point out that the minister seemed to focus his attention on the point as to whether or not that particular case was one for the pension board. I am not going to discuss the case, but I believe that a principle worthy of some clarification is involved.

As an illustration I shall present a set of circumstances to the minister. The young man in question is, we will say, around the age of nineteen years. Recognizing that he may be called into the services, he enlists in the air force. But he does not wish to be called immediately. The fact is that he is not called, but enlists and obtains his number. Then—and I do not know whether I am using the proper term—his file is put back, and there is a general understanding between him and the recruiting officer that he will not be called until a certain date. After that, should he be checked by the mounted police—and that is not likely—he has in his pocket documents showing that he has enlisted. Then the time arrives when the air force calls him to the service. Five or six months may have elapsed between his date of enlistment and the date he is called up and sent to the manning depot, or to the training centre. Is this young man considered to be in the air force at the time of his original enlistment?

Mr. POWER: Yes.

Mr. HANSELL: I will leave the case mentioned by the hon. member for Bow River in the hands of the minister and the hon. member. The statement is, however, that this young man is now enlisted, and on strength.

Would the minister make a statement with respect to decorations, awards, medals and the like given to members of the air force who have rendered outstanding service? I ask the question because I am under the impression that usually awards are given to those men in the air force who have commissions, or who are in higher ranks, and may have better opportunities to distinguish themselves. The mere fact that they are in positions of authority may win them awards, whereas those who serve under the officers—wireless air gunners, air gunners or men of lower rank, but serving in aircrew—do not seem to receive the same distinctions. The country would like to have a statement from the minister. I was asked about this matter by a man well known in public life. How are these awards granted? On what basis are they given, and what process is followed in giving them?

Mr. POWER: The question of awards is a difficult and complex one. I cannot answer the hon. member offhand as to how awards are given. I suppose he is aware that overseas awards for gallantry are usually granted on the recommendations of a commanding officer. Then, through a routine process the recommendation reaches the higher authorities. Awards other than awards for specific acts of gallantry—these are periodic awards—but for service over an extended period, and not necessarily including acts of gallantry, are usually given upon recommendation of the commanding officer of the command, group, unit or whatever the formation may be. Beyond that I am afraid I cannot go into detail, because I have never looked into the matter carefully. However, I shall do so, and I shall be glad to give the hon. member all the information I can to-morrow.

Mr. ROSS (St. Paul's): There are several points I should like to mention, but first may I say that as I look across the floor of the chamber I see my old friend who is commonly known as "Chubby" Power.

Mr. POWER: Tut, tut!

Mr. ROSS (St. Paul's): I think "Chubby" Power is well named. We all have the greatest respect for him. As a matter of fact the country wishes it had three "Chubby" Powers in the House of Commons, instead of one, and that they could be in charge of the three defence departments. The minister, as a matter of fact, is more or less human—and that is something not peculiar to ministers. Most ministers I have known have not been human at all, except, of course, the Minister of Pensions and National Health. Sometimes he is human, too. But they are the only two in the cabinet who are any good, anyway. You could wash all the rest out—and that is what the public thinks, too. The rest of the cabinet are just a wash-out; but these two are pretty good. I have not had enough experience with the parliamentary assistants to express any opinion, but we shall get to know them, just the same as we know the ministers.

I have one or two observations to make which may be worth while. First of all, I take off my hat to these gallant boys of the air force. But in all our armed forces we have the youth of Canada who are equally impressed with a sense of their duty and each of them will do his duty when the opportunity comes. Canada's air force has done a marvellous job for Canada but it has had more opportunity. I am sure that when the army gets its opportunity it will give just as good account of itself as all our other forces. I do not think it is quite right for us to eulogize one force and not pay tribute to the other branches of the service as well. Of course, we all realize that when our air force is on a bombing raid over Europe the sacrifice of one of our pilots might mean the saving of possibly ten thousand lives. I want the minister to listen to me for a moment.

Mr. POWER: I am listening.

Mr. ROSS (St. Paul's): I did not catch the minister's eye. These boys of the air force are all young. You have picked out the best of the whole crowd—

Mr. POWER: Hear, hear.

Mr. ROSS (St. Paul's): Well, you have just picked them out, that is all, but equally fine young men have been picked for the army and navy, too. They are all young, and what I wish to know is this. After the war is over, what do you propose to do about giving these young men the university training they otherwise might have had. What opportunities will you give them to carry on and make their way in life?

I should also like some information about transfers from the Royal Air Force to the Royal Canadian Air Force. A great many lads who were turned down by the Royal Canadian Air Force in the early days went over to England and joined the Royal Air Force. Some of them now want to transfer to the Royal Canadian Air Force. I hope the minister will give some information on that question. Another question that arises is that of seniority. What positions are they to have? How is seniority to be worked for them in so far as the permanent force is concerned and so far as the temporary force or whatever you like to call it is concerned?

The Minister of Agriculture the other day said that rumours had come to his ears of extravagance on messes. I must say that I, too, heard something about extravagances and so on. But when you look into it you find that where there is a fairly nice mess, whether in the air force, the army or the navy, somebody donated all this stuff. No question like the extravagances we heard about in connection with rugs enters into the matter at all. Some people when they see a nice mess get the idea that there is extravagance and that everything is cockeyed. But the truth is that very often the equipment has been donated.

I should like to know what we are doing about gliders in Canada. Are we doing anything in connection with gliders?

I think the people of Canada would also like to know something about our activities in connection with the United States air force in Alaska.

I should like to know something about air defence in the St. Lawrence. I do not know whether the minister is free to tell us anything about that, but it is a subject in which the public is interested.

Do we propose to have a fleet air arm in Canada? Can the minister tell us something about that?

What about the standards for enlistment at the present time? What are the requirements?

Mr. POWER: The physical standards?

Mr. ROSS (St. Paul's): The physical standards, the educational standards, qualifications as to age and so forth. What enlistments do we require in the air force to-day? Do we need any more ground crew, repair men, and so forth? The minister knows what I mean.

I should be glad if the minister would tell us something about equipment depots. What personnel is required for an equipment depot? Where are our equipment depots? What do they do?

There is also the question of financial responsibility for the Royal Air Force in Canada and the Royal Canadian Air Force overseas. Are the pay and allowances for the Royal Air Force in Canada on the same basis in Canada as for the Royal Canadian Air Force in Canada?

Mr. POWER: The answer to that is yes right away.

Mr. ROSS (St. Paul's): The pay and allowances are the same? O.K. I think I have now all my questions off my chest except the question of commissions for our air force. The minister has already been asked several questions about that. I do see an incongruity, and this happens in certain cases, in having a sergeant-pilot taking a bomber over Germany with a pilot officer or a flying officer as part of his crew. I do not know how that works out, but I do know that it has happened on many occasions. My personal opinion is that all these men who go into the air, after they have had a certain number of flights, should automatically become officers if they qualify. Perhaps the minister would make a statement on that.

One last word. I wish to pay tribute to all those men of Canada in the Royal Canadian Air Force who are doing such a magnificent job and to all those who unfortunately have lost their lives in the service of their country. Their names will live forever. Too much cannot be said for what they have done for Canada.

Perhaps when the minister makes his statement he would tell us the number of Canadians in the Royal Air Force and in the Royal Canadian Air Force who have lost their lives or been wounded or made prisoners of war. I congratulate the minister, not for himself, but for all those fine men in the Royal Canadian Air Force who have such a wonderful sense of duty and are doing such a marvellous job so far as Canada is concerned.

Mr. PERLEY: I have only two questions, and I shall be quite brief. I ask them now, although I do not see any item in this break-down of the minister's estimates which they come under.

First, may I join with many other hon. members who have spoken this evening in expressing appreciation of the valour and self-sacrifice of the splendid young men and women whom we have in the Canadian air force. Had I the time I would tell of the splendid type of enlistments in that part of the province of Saskatchewan which I represent. Not only are they qualified from the point of view of education, but physically they are splendid men. I regret to have to say that many from our own community have already made the supreme sacrifice. No doubt the Royal Canadian Air Force will play a very important part in the months to come in the winning of the war.

We have listened this evening, as we did while the estimates of the Minister of National Defence (Army) were before the

committee, to various hon. members bringing individual cases before the minister. I think a great deal of time could be saved if, instead of putting these cases before the minister while he is sitting in committee, hon. members would bring them to the attention of the proper officers of his department. Rules and regulations have been adopted for the guidance of each branch of the armed services, and if hon. members will acquaint themselves with the conditions governing promotions, salaries, salary increases and pensions, and then will carry on their inquiries in the correct way, by going to the proper authorities, they could save us a lot of time. I will say this for the minister who is before us this evening, that they will get action. I have taken three or four cases to him. In one case we got action so fast that the man concerned obtained his postponement and was out of the air force before he realized it. I appreciate that the air force must be governed by rules and regulations, and I repeat that if hon. members will study them and follow the right procedure they will soon obtain the information they require and will be able to advise those who write such letters as we have heard so much about to-night.

I have two questions to ask the minister. One of the young men in my locality is a prisoner of war. He was in England when the war broke out, joined the Royal Air Force, and was taken prisoner. He would now like to transfer to the Royal Canadian Air Force, and I wish to know from the minister how he can go about having a transfer made. He has made representations through certain authorities, but without getting satisfaction, and he would like to have the application definitely dealt with.

Another subject to which I would invite the minister's attention relates to cases of men—I have two particularly in mind—who were killed while serving in the air force. They were industrious chaps and had opened a savings account in a bank in England. Their parents are unable to get any action with respect to the transfer of these accounts. One of the cases is of six months' standing, and one family which is concerned with this question has three sons in the air force, one of whom has already paid with his life.

Mr. POWER: That is the estate of a deceased?

Mr. PERLEY: Yes.

Mr. POWER: I must say that earlier in the war there was a great deal of confusion and it took months and months to get estates settled. But only two or three days ago I inquired as to the progress in settling estates, and I am informed that over two thousand had been already settled and another fourteen or fifteen hundred are well on the way to settlement. I will get these figures for my hon. friend. If he will let me know the particulars to which he refers we will cable to England.

Mr. PERLEY: I do not think the parents are so anxious for an immediate settlement that that is necessary.

Mr. POWER: As I say, there was a great deal of delay at the start, but I know things are being hastened.

The other question, regarding the transfer of a prisoner of war to the Royal Canadian Air Force, is really a poser. I never contemplated that, and I do not think I can do much about it.

Mr. GERSHAW: I wish to bring to the attention of the committee and the minister the matter of getting compassionate leave for some members of aircrews. It seems to be settled policy that a member of an aircrew cannot get leave or be released from the service under any circumstances whatever. It happens that conditions in the homes of some of these people—I have farm homes particularly in mind—change rapidly, and I have learned of some very unfortunate cases. One I have in mind is that of a young man, an only son, who enlisted in good faith. His father has been taken seriously ill; yet it is quite impossible for the young man to obtain a long enough leave to go back to the farm and carry on until the farm and the stock can be sold or some other arrangement made.

I quite realize that it costs a good deal of money to educate a man in an aircrew. I realize, too, that these boys are doing wonderful work and are badly needed at the present time. But it is most discouraging for some to find that farm help cannot be obtained and that although their families are suffering very severe financial loss they cannot get leave to go home. It seems to me that often the commanding officers to whom applications are made are not very sympathetic. Sometimes the file is missing; weeks and months go by, and the lads become discouraged and feel that the sacrifices which they are asked to undertake are out of all proportion. Could the minister not suggest some way whereby leave could be granted for at least a number of months, or the boy be allowed to get out of the service altogether where desperate conditions have arisen in the family which would make compassionate release seem justified.

Mr. STOKES: In connection with this item we are discussing, I wish to ask the minister

a question somewhat along the lines of those of the hon. member for Winnipeg North Centre. I speak with some trepidation after the remarks of the member for Qu'Appelle, who advised us not to ask the minister questions and then asked a few himself. My question is with regard to the variation in the rates of pay for ordinary service men at Trenton air station. The men whose case I am discussing are not receiving cost of living bonus.

Mr. POWER: Civilians?

Mr. STOKES: Yes. They advise me that there are men on the staff who do receive cost of living bonus. The men in particular to whom I refer work long hours, as high as ninety a week, and they have not been able to get a satisfactory disposition of their claims. That is the question I wish to put to the minister with regard to civilian employees.

Mr. POWER: I will look into it.

Mr. FRASER (Peterborough West): Following what the hon. member for Qu'Appelle has said, I have had a number of cases in regard to airmen who have been killed and whose estates it has taken months to settle.

Mr. POWER: I agree with my hon. friend, but I made inquiries only a few days ago and they said the situation was better.

Mr. FRASER (Peterborough West): Have they a new system of checking, or is it due to the fact that the officers in charge have not been reporting these cases properly or sending them here? I have received letters—

Mr. POWER: I imagine it is better organized, and the fact that we are having a hand in it might account for the improvement.

Mr. FRASER (Peterborough West): If you had a hand in it, it would be better.

Mr. POWER: I mean, the Royal Canadian Air Force having a hand in it overseas, which they did not have at that time.

Mr. FRASER (Peterborough West): This is also in regard to Newfoundland. I am thinking of the fire there. In Peterborough we had a man who was burnt to death.

Mr. POWER: We cannot blame it on anyone but the R.C.A.F., but if there is anything wrong we want to know.

Mr. FRASER (Peterborough West): This case has not been settled, and it was said that the facts had not been sent to Ottawa.

Mr. POWER: Will the hon. member send me the details?

Mr. FRASER (Peterborough West): Yes.

[Mr. Stokes.]

Mr. HAZEN: There is some information under this item and the next which I should like to obtain. Will the minister furnish the number of civilian personnel and the number of air personnel employed by his director of public information, or publicity department, during the past fiscal year or up to any subsequent date, and will he let us know how this personnel is distributed by provinces or by military districts, also the number in Great Britain, if any, and the number in the United States? Will the minister furnish us also with the total wages and salaries paid to civilian personnel and air personnel who are employed in his publicity department or by the director of public relations? Will he give also the total travelling expenses and all other costs and expenses that were paid to these civilian personnel and service personnel during the past fiscal year or up to any subsequent date? Will he let us know also how many of the personnel, both civilian and service, in this branch of his department receive salaries over $5,000, if any; how many receive salaries of $4,000 or more; how many receive salaries of $3,000—

Mr. POWER: I will give all the salaries. Why ask for $4,000 or $5,000? We will give them all from nothing up. I was under the impression that these questions had been made an order for return already. I am not sure.

Mr. HAZEN: If they have, I have not seen them.

Mr. POWER: Anyway, I will give them.

Mr. GRAYDON: Under civil salaries and wages, may I ask the minister whether or not the bomber command comes within the purview of the operations of the Royal Canadian Air Force? My understanding at the moment is that it does not, but I was wondering whether in the civil salaries and wages here the bomber command actually came within the purview of the department.

Mr. POWER: The ferry command?

Mr. GRAYDON: That is what I mean.

Mr. POWER: We have nothing to do with that.

Mr. GRAYDON: As a matter of information, under whose jurisdiction is it? I should not say the bomber comand, nor is ferry command the right term; transport command is the actual designation in the income tax act. Who is it that provides the salaries for these men, and under whose jurisdiction does the transport command operate?

Mr. POWER: It is absolutely independent of the R.C.A.F. We have no control or juris-

diction; we have nothing to do with pay or anything else. It is the government of Great Britain.

Mr. GRAYDON: When the minister says the government of Great Britain, does he mean that the Royal Air Force of Great Britain has control?

Mr. POWER: I cannot give my hon. friend all the details. The ferry command started as the B.O.A.C., the British Overseas Aircraft Corporation. I do not remember what the name was, but it got mixed up with the Canadian Pacific Railway, who furnished pilots and a great number of personnel, and after that it was taken over by the R.A.F. ferry command under Sir Frederick Bowhill in the last two or three months. They formed it into the transport command, with different branches, and it is controlled by the British government. We have nothing to do with it except that frequently we furnish personnel to the ferry command and they ferry bombers overseas to do work for them.

Mr. GRAYDON: Supplementary to what the minister says, when the Royal Canadian Air Force provides personnel for the transport command, are these particular personnel under the rates of pay of the Royal Canadian Air Force, or do they participate in the higher rate of pay of civilians in connection with the transport command?

Mr. POWER: So far as I know they are still under R.C.A.F. rates of pay. I do not think they get a higher rate of pay.

Mr. GRAYDON: If that is the case—

Mr. POWER: We do not pay them.

Mr. GRAYDON: —what you have, then, is some men ferrying bombers across at Royal Canadian Air Force rates of pay which are proportionately a good deal lower than those of the transport command?

Mr. POWER: I believe that was one of the reasons why the Canadian Pacific came into the business. They employed a great many Americans and were paying them $2,000 a month, as against Royal Air Force or Royal Canadian Air Force men who were getting $150 a month. They figured they had to get these men to perform that job of work. We have had nothing to do with that. That was entirely a responsibility of the British government, and I must say that a great many of the boys who were taking the same risk and doing the same job did not like to get ordinary rates of pay. I understand that now the rates of pay for civilian ferry pilots who work alongside Royal Air Force or Royal Canadian Air Force men are a great deal less than they were originally.

Mr. HARRIS (Danforth): In reference to another subject matter, the minister will recall that two years ago he, as minister, and his department conceived the idea that probably like services in the Department of National Defence for the army and navy, and even for pensions and national health, might coordinate their efforts by convening all the heads of such services as medical services and hospitalization where the type of work was much the same. I will admit that they did not have much success or did not carry out the idea originated by the Minister of National Defence for Air. No one was placed at the head of this coordination committee. Perhaps between now and to-morrow when the minister is to make his reply he will look into the matter and see what has been done to appoint a head of this coordination committee and have it called at the proper time. I am also anxious to know if a secretariat has been set up for this committee so that minutes and records may be kept of what they are able to do. If this committee is not functioning or cannot function for some reason or another, I should like to know. I realize that sometimes it is difficult for men in blue to associate with men in khaki; one service finds it is hard to attend on the other. I was hoping that something would develop from the minister's original idea which I thought was sound and which I felt would save this country many thousands of dollars. He will recall that the plan covered not only the three armed services but also certain branches of the Department of Pensions and National Health. A short statement as to where the matter stands would, I am sure, be appreciated by the committee.

Mr. POWER: The committee on hospitalization is functioning, and functioning extremely well. At present all four medical services are represented, the armed services, and pensions and national health. It is headed up by Colonel Currie, of the Department of National Defence. There is no hospitalization scheme or anything connected with hospitalization that goes through the treasury board or privy council, or is submitted to the ministers without being submitted to this committee. It is one committee that is working extremely well and it sits almost every day.

Mr. HARRIS (Danforth): Does its work cover the medical services?

Mr. POWER: So far as I know, the committee has nothing to do with medical services.

It was really constituted to see that hospital facilities across the country were not duplicated.

Mr. GREEN: How long has it been functioning?

Mr. POWER: It was started about two years ago. I do not know when it really struck its stride, but it is in its stride now.

Mr. HARRIS (Danforth): Following the matter of medical services is the question of medical supplies. As the Minister of Pensions and National Health knows, there is a duplication in connection with those responsible for providing supplies for the different hospital units. The Minister of Pensions and National Health is fortunate in having a service which has been built up over two or three decades and is in good working order. However, the department which has to do with medical supplies for the air defence and the department that has to do with supplies for the army have been in a deplorable tangle. I was hoping that the tangle might have been straightened out by coordinating the different branches which are handling the same supplies.

If the minister feels so disposed, perhaps he will enlarge upon his statement and place a deposition on the record in connection with medical supplies. The supplies run into many millions of dollars, particularly when you get into X-ray equipment and equipment of other types. Undoubtedly there has been considerable duplication. I hesitate to say it, but the supplies branch of the Department of Pensions and National Health apparently are not aware of the working of the supplies branch of the army. One is situated across from the Chateau Laurier, the other being on Kent street, and there does not seem to be any cooperation between these particular units. The department for air was not organized with regard to supplies.

Mr. POWER: The army purchases all our supplies with the exception of special equipment, such as X-ray equipment.

Mr. HARRIS (Danforth): The view is taken in England, and perhaps it is quite sound, that air should handle hospitalization connected with the physical endurance which must be undergone by members of the air force. These men face particular hazards, quite different from those faced by men in the army. In that view I concur. I agree with the extent of the hospitalization which has to do with the peculiar operations of the Department of National Defence for Air, but when it comes to dealing with the ordinary sicknesses to which we are all subject I think there should be the maximum cooperation to provide the maximum service at a minimum cost.

For the information of the minister I would say that there seems to be a tendency on the part of his department to set up an organization to deal with all phases of this work, quite apart from the special hazards of his branch of the service. As I say, there could be considerably more cooperation, and those in the minister's department who are charged with this responsibility should be encouraged to cooperate to the fullest and enlarge their activities only in connection with the special hazards of their particular service rather than to try to enlarge them to cover the entire field of hospitalization.

Many of these men find themselves located in small communities. While up Goderich way, I had the pleasure of the company of half a dozen of the young men from the field there over the week-end. They tell me that they have to get hospital treatment and medical supplies in a small community in Huron county. I suggest to the minister that he encourage his medical officers and those charged with this responsibility to use, wherever possible, the local facilities instead of setting up too many expensive units here and there across the country.

Mr. GRAYDON: Would the people employed at the privately-owned training schools come within this item of civilian salaries and wages?

Mr. POWER: They would come under civilian schools.

Mr. GRAYDON: The item in the army estimates covering civilian salaries and wages for this year amounted to a little over $9,000,000, whereas the similar item for the air force comes to some $18,500,000. I think by way of clarification the minister ought to indicate the main items that would be responsible for such an increase, having regard to the difference in size as between the two forces.

Mr. POWER: I do not know just how many civilians the army have in their employ, but we have somewhere between fifteen and sixteen thousand. I will say to my hon. friend that very early in my career as a minister I insisted that as far as possible where one could get a civilian to do the work, one should do so rather than get a service man. I preferred that. As time went on, it became impossible to get civilians and I have had to

use more service men, so that probably we have proportionately more civilians in our employ than they have in the army.

Mr. GRAYDON: Then is it fair to assume that the average rates of pay of those engaged as civilian personnel are higher than the rates of those in the service generally?

Mr. POWER: The average civilian rate is $1,210 per annum. So far as civilians are concerned, if they are casual labour or what we call exempt positions from the civil service commission; they are employed at the rates prevailing in the locality. Otherwise they are under civil service rates, whatever they may be, for that particular class of work. There is no difference between our rates of pay for civil servants and those of any other department. Perhaps seventy-five out of the whole fifteen thousand were appointed directly by order in council. The remainder are under the civil service or in a class which is exempt as casual labour.

Mr. GRAYDON: Has the minister adopted this policy largely as an economic measure, or was there any other reason?

Mr. POWER: Early in the game I felt that sooner or later there would be criticism in this house and in the country if a very large number of people in uniform were doing work that could be done just as well by civil servants. I held to that theory until such time as we could no longer get civilians; then it was necessary to use service personnel. It was really from a political point of view as much as any other; I do not think the question of saving money entered into it, because I do not believe there is very much difference.

Mr. GREEN: What is the practice with regard to the civilians who are employed at the different air stations? Do they take an oath of allegiance, or what is the provision in that regard?

Mr. POWER: I am told that they do take an oath of allegiance.

Mr. GREEN: I suppose they come and go a great deal?

Mr. POWER: Yes.

Mr. GREEN: I understand, for example, that at some of the stations many civilian waitresses are employed.

Mr. POWER: I would not think so, at any of our service stations. There may be some at the civilian training schools; I would not know about that. At nearly all our service stations the waitresses are members of the women's division of the air force.

Mr. GREEN: What about the training stations?

Mr. POWER: They are all under contract with the department; they look after the food and everything else.

Mr. Green: But they have civilian waitresses at the training stations?

Mr. POWER: I would not know whether or not they have civilian waitresses, but I would suspect so.

Mr. GREEN: Is it the intention to replace those waitresses by members of the women's division?

Mr. POWER: No, not at contract schools. These civilian training schools are operated on a contract basis; we just pay them the contract fee of so much.

Mr. GREEN: I do not mean the civilian training schools; I mean the training stations operated by the air force.

Mr. POWER: I do not think we have any civilian waitresses; I cannot think of any at our own service schools. We would have a great many of the women's division of the R.C.A.F. They are in the service; they are enlisted.

Mr. GREEN: But no civilian waitresses?

Mr. POWER: I do not think we have any; I should be very much surprised if we had.

Mr. GRAYDON: Then may I ask whether under this item covering civil salaries and wages will come the provision for the new R.C.A.F. cafeterias in Ottawa, about which we see so much in the newspapers from time to time? Perhaps in view of the minister's keen interest in this matter and his desire to give the committee information on these points, he would not mind saying a word to the committee now with respect to the position in which the air force now finds itself.

Mr. POWER: I really do not know just what I can tell the committee that they have not read over and over again, rightly or wrongly, accurately or inaccurately, in the Ottawa newspapers.

Mr. GRAYDON: Perhaps we should have an accurate account.

Mr. POWER: Perhaps you had better get it from the newspapers; they seem to know far more about it than the minister does. We were operating a cafeteria for our employees, both civilian and service, in the Lisgar building.

Mr. GRAYDON: That is the building out near the farm?

Mr. POWER: No; the one in the Lisgar building; the other one was not to be taken over until to-day, I think, or to-morrow. In the Lisgar building, where headquarters is located, the service was performed by service personnel, and for that reason the cost was comparatively low in comparison with that of similar meals outside. Then it happened that trouble developed at No. 5 temporary building, near the farm, and I understood we were asked to care for our nine hundred employees there. We undertook to do so in the same way that we were operating the cafeteria in the Lisgar building.

Mr. GRAYDON: In other words, by air force personnel?

Mr. POWER: Yes. After some discussion as to the prices to be charged it was decided that in order to be fair to everyone and so that there would be no discrimination later on, when the government policy with respect to cafeterias generally in Ottawa is developed, for the time being the same prices would prevail at the farm and at the Lisgar building as had prevailed hitherto; that is, comparatively low prices at the Lisgar building and prices somewhat higher at the farm. These will remain in force until about June 20 or June 21, at which time comparisons will be made, and it will be our endeavour to see whether the prices cannot coincide, to some extent, and to ascertain the real costs of carrying on these operations.

Mr. GRAYDON: You do not know yet whether you are losing or making money?

Mr. POWER: I think on the straight cost of the food alone I am not losing much in the Lisgar building; I do not know whether I am making much either. At the other building, with all services furnished free, so to speak, by the R.C.A.F., I rather imagine some money would be made. I am not sure, though; I am not very familiar with this matter. I learned most of it from the newspapers.

Mr. GRAYDON: A moment ago the minister mentioned a general policy on the part of the government with respect to cafeterias.

Mr. POWER: It is being developed now.

Mr. GRAYDON: Did I understand the minister to say that this policy has already been defined?

Mr. POWER: It is under very serious consideration, and I imagine the results of these two experiments will be taken into consideration before a policy is defined.

Mr. GRAYDON: Does this mean that the government has in mind eventually providing a cafeteria service for its employees in Ottawa generally?

[Mr. Graydon.]

Mr. POWER: I think they have in mind some attempt to solve the difficulty of obtaining meals at the present time, under my hon. friend the Minister of Pensions and National Health, who will endeavour to obtain the best kind of nutrition at the lowest possible cost to civil servants generally, and particularly the low paid civil servants. I am speaking only in broad terms, because I know it has been a matter of consideration by the government for some time, but I do not know that any policy has been defined. The experiments now being carried on in these two locations will, I imagine, have some bearing on the solution.

Mr. GRAYDON: Some move has been made to meet the housing problem here, but I do not want to give the government too much commendation because I fancy there is still a great deal to be done. Having in mind the problem connected with workers in Ottawa, and in view of the terrific overcrowding in this capital city, it seems to me the next logical move would be one in connection with feeding of employees. I think everyone is pretty well agreed that the conditions under which most people in Ottawa have to take their meals in the downtown area are not very satisfactory. All one needs to do is to walk along the streets of Ottawa and see the situation for himself. Those who suffer most are the ones who have only a limited noon hour. It is all right for the person who has a long time to spend at an eating house, but for those who have only a short time between the time they leave their work and the time they must come back it seems to me there is a crying need for some relief. Every hon. member sees them attempting as best they can to line up, grab a sandwich and a cup of coffee. They are lucky if they can get that much before it is time to go back to work.

Mr. KNOWLES: Would the minister bring down additional information regarding these civilian employees? I believe he has already been asked to give information respecting their salaries and wages, and possibly as to the number.

Mr. POWER: I can give the number right away.

Mr. KNOWLES: What I want—possibly the minister can give it, and possibly not—is a break-down showing how many of them are in civil service classifications and how many are exempt.

Mr. POWER: I think I have that information, too.

Mr. KNOWLES: That will be fine.

Mr. POWER: We have 15,324. The average rate, including bonus, is $1,210. Appointments to all positions which might, in the opinion of the civil service commission, be classified under the Civil Service Act are legalized by the civil service commission. Positions exempt from the Civil Service Act; that is, exempt by law—

Mr. GRAYDON: If it is exempt by the act, it is exempt by law.

Mr. POWER: Civilians are employed in prevailing rate positions at Royal Canadian Air Force units to conduct maintenance work. This class of employee is utilized as firemen, mechanics, skilled and unskilled labourers, and so on, who are paid wages in accordance with the minimum wage schedule issued by the national war labour board. The department is authorized by order in council P.C. 48-2105, dated March 16, 1943, to engage such personnel as may be required for the building, renovating, remodelling and maintenance of buildings and landing fields at Royal Canadian Air Force projects, such personnel to exclude professional, technical and clerical employees.

The selection of personnel is made through the national selective service offices in the various localities and, prior to the inception of national selective service, the provincial employment bureaus.

In appointment of specialist services for technical and administrative duties, selection is made from private industry, appointment effected by individual order in council, which is referred in each case to the civil service commission for consideration.

Since the inception of the department in 1940, a total of seventy-five appointments by individual orders in council have been effected; forty-two of the personnel were seconded to the department from private industry; thirteen construction personnel for employment in Newfoundland; seven stenographers for appointment in Washington, and thirteen direct appointments. Fourteen of the seventy-five personnel have completed their respective assignment, and the employment has been discontinued, leaving the net appointments by orders in council still on the strength of the department at sixty-one.

I think I have a list of the different types of employees, and that list could be put on *Hansard*. I have the information with respect to civilian personnel employed at headquarters, although I have not that information with me. I can place on *Hansard*, for my hon. friend's information, a full list of civilian employees, and the number in each category or class.

[Mr. Johnston (Bow River).]

Mr. KNOWLES: The minimum I should like to have from the minister—and if he wishes to give more I should be glad to get it—would be to break that 15,000 into three groups—those appointed by orders in council—

Mr. POWER: That is seventy-five.

Mr. KNOWLES: Sixty-one, net. Then, I would want those who are classified as civil servants, and those who are exempt. And then would he give the average wage of each of those three groups? The minister has already given the average for the 15,000. Let us have the average for each of the three groups I have indicated.

Mr. POWER: Perhaps I can get together the wages paid to each particular trade in each group. Would that be what the hon. member wishes—carpenters, and so on?

Mr. KNOWLES: I should like to have that, but I have hesitated to ask for it.

Mr. POWER: I do not know whether I could get that information, but that is what the hon. member wants.

Mr. KNOWLES: I should like to get it.

Mr. POWER: I will see whether it can be obtained.

Mr. BLACKMORE: Reverting to the question of cafeterias, may I congratulate the minister upon any effort which he might have put forth to render available at reasonable prices good and substantial meals to the people concerned? I believe much more attention must be paid by the government to the matter of giving employees, who are working for incomes far too small, and who are being taxed far too much, substantial meals at rates as low as possible, so that they may be able to save a dollar or two.

Mr. JOHNSTON (Bow River): Are the civil employees at the air training stations given the cost of living bonus, the same as private industry would pay in that locality?

Mr. POWER: Just the same as any other civilian employees.

Mr. JOHNSTON (Bow River): Whether they are employed by the government or not, they are given the same bonus as private industry would pay in that locality?

Mr. POWER: I do not know just what the civil service bonus is, as compared with the bonus paid by the individual employers, outside. I cannot give information on that point, but I can have it checked. That is a matter for the civil service commission and the treasury board. But I understand there is a rate of bonuses given to civil servants throughout the country, and I do not think they vary much.

Mr. KNOWLES: The civil service would affect only those who are civil service appointees.

Mr. POWER: Those under the control of the civil service commission. And those who are performing work which exempts them from the Civil Service Act get the same bonus as those who are employed by individual employers, I assume.

If hon. members would be prepared to have the item pass, I shall be only too glad to make replies to questions as to civilian employees.

Item agreed to.

Progress reported.

At eleven o'clock the house adjourned, without question put, pursuant to standing order.

Wednesday, June 2, 1943

The house met at three o'clock.

THE KING'S BIRTHDAY

RESOLUTION EXTENDING GREETINGS AND GOOD WISHES TO HIS MAJESTY

Right Hon. W. L. MACKENZIE KING (Prime Minister): Mr. Speaker, as to-day has been set apart for the official recognition of the birthday of His Majesty, King George VI, I am sure hon. members would desire to have an expression of their wishes extended to His Majesty. I have spoken to my hon. friend the leader of the opposition (Mr. Graydon), and he and I have agreed upon a resolution which, we believe, hon. members would be prepared to support. I would therefore move, seconded by the leader of His Majesty's Loyal Opposition:

That a humble address be sent to His Majesty, King George VI, in the following words:

"To the King's Most Excellent Majesty:
Most Gracious Sovereign:

On this day set apart for the official celebration of Your Majesty's birthday, we, the members of the House of Commons of Canada, in parliament assembled, desire respectfully to extend our loyal greetings and heartfelt good wishes to Your Majesty.

[Mr. C. E. Johnston.]

The devotion to duty and high courage which you have continuously shown throughout the present war have been an inspiration to the people of Canada, to the peoples of the British commonwealth, and, indeed, to those of all of the united nations.

We pray that Divine Providence may continue to guide and protect Your Majesty and that you may be given strength to meet, at all times, the great responsibilities of your high office.

May you witness an early triumph of the forces of freedom and share with your peoples everywhere, for many years to come, the blessings of a just and enduring peace."

Mr. GORDON GRAYDON (Leader of the Opposition): Mr. Speaker, in rising to second the motion of the Prime Minister (Mr. Mackenzie King) that a humble address be sent to His Majesty, King George VI, I would echo the sentiments so well expressed in the Prime Minister's motion. I think all hon. members will recall at once the visit of Their Majesties in 1939 and the beneficial effect of that visit, in a greater understanding between the parts of the empire and the Anglo-Saxon nations generally.

During the very trying times through which the empire, and particularly Great Britain herself, has passed, the tender sympathy and understanding of Their Majesties can be recalled to-day by all of us with a great deal of pride and satisfaction. In the days of trial through which this nation and this empire are going, and will go, the bond of sentimental attachment to the monarchy and to Britain has, I believe, never been stronger. I take this opportunity of thanking the Prime Minister for the privilege of seconding this motion.

Mr. M. J. COLDWELL (Rosetown-Biggar): We also support the motion of congratulation to His Majesty the King. The monarchy is the symbol of unity among the peoples of the British commonwealth of nations, and, as such, we are glad to support the resolution.

Mr. J. H. BLACKMORE (Lethbridge): Members of my group and those who support us also desire to associate ourselves with this address; and we wish to say, in addition to what has already been said, that it is our desire that the king of the British commonwealth shall continue to be sovereign in this commonwealth.

Mr. JEAN-FRANÇOIS POULIOT (Témiscouata) (Translation): Mr. Speaker, as a private member and as a French Canadian, it is my duty to join in the best wishes which have just been offered His Majesty King George VI, our Sovereign and the Sovereign of Canada, on the occasion of his birthday. I speak in the

name of my French-Canadian countrymen, not only in the province of Quebec, but in the whole of Canada. I speak particularly in the name of the young men of my constituency who have enlisted in large numbers in the three branches of our armed forces.

In 1939, when their gracious majesties, during their stay in Canada, stopped at Rivière-du-Loup, which is a little town of 9,000 people, they were cheered by a gathering of 25,000. The welcome was one of the warmest extended to them in the whole country.

We send the King birthday greetings, and we do not forget our gracious Queen Elizabeth nor what she said at the time she laid the cornerstone of our Supreme Court building about the similarity between the laws of Scotland, her own native land, and the French laws of the province of Quebec. Mr. Speaker, speaking for all French Canadians, I wish a happy birthday to His Majesty the King of Canada and I present our humble respects to Her Majesty the Queen.

Motion agreed to.

(The members rose and sang the national anthem.)

PETITION

FEMALE LABOUR IN PLANTS—WORKING HOURS

Mr. WILFRID LaCROIX (Quebec-Montmorency): Mr. Speaker, I have the honour of submitting a petition signed by 122,283 citizens of the province of Quebec urging that:

1. Female labour at night be prohibited.

2. Mothers of children under sixteen years of age be forbidden to work.

3. The eight-hour day and the forty-hour week be adopted as working hours.

These 122,283 petitioners base their request on the words of the Right Hon. William Lyon Mackenzie King, Prime Minister of Canada, found on page 321 of his book "Humanity and Industry". I quote:

> Few, I imagine, who are interested in human well-being, will take exception to the findings of the commission that "the working of women at high pressure should be made a crime at law as it is a crime against nature herself."

QUESTIONS

(Questions answered orally are indicated by an asterisk.)

WARTIME INFORMATION BOARD—PAYMENTS TO WRITERS OR AUTHORS

Mr. DIEFENBAKER:

1. Have writers or authors of booklets, pamphlets, or articles, been paid for their services by the wartime information board during the past seven months?

2. If so, what are their names, and how much has been paid to each?

Mr. MACKENZIE KING:

1. Yes.

2. E. Desrosiers, $100; Thos. Greenwood, $40; Mrs. M. Fielden, $30; Mrs. Edith Adamson, $200; K. R. Wilson, $100; Rev. A. Maheux, $15; W. Kirkconnell, $150; O. Oligny, $260; D. B. Cote, $500; Mrs. Savella Stechishin, $90; H. R. Law, $25; C. Clay, $150; Charles Bilodeau, $116.25; M. McDougall, $80.

FOURTH VICTORY LOAN

Mr. SHAW:

1. What was the actual amount obtained during the fourth victory loan through a combination of actual cash receipts and promises to pay?

2. What proportion of the amount subscribed was in the form of actual cash, and what proportion was in the form of promises to pay, payroll deductions, etc.?

3. What part of the loan was secured from inflationary sources, and what part from non-inflationary sources?

4. What was the actual amount subscribed directly by chartered banks?

5. Are figures available to indicate the total amounts loaned by chartered banks to individuals or others for the purchase of bonds during the fourth victory loan? If so, what were the amounts?

6. Has consideration been given to limiting the amounts which commercial banks might subscribe during any victory loan campaign?

7. Is the Department of Finance, or any other department of the government, in possession of details of the United States plan for limiting commercial bank subscriptions made during victory loan or other campaigns?

8. What percentage of the amount promised during the third victory loan campaign remained unpaid at the time the fourth victory loan campaign commenced?

Mr. ILSLEY:

1. Final sales returns are not yet available. Incomplete returns covering substantially all subscriptions as of the close of business May 21, 1943, showed total sales of $1,291,051,150 par value of bonds.

2. The government of Canada receives immediate full cash payment for all bonds sold, except a small amount of delayed deliveries made through the Bank of Canada. Purchases by means of payroll savings plan and other instalment plans are financed by loans from the chartered banks or other sources to those making the instalment subscriptions. Information is not yet available to indicate the amount of loans incurred by the public to finance these instalment purchases.

Actual funds received by the government up to the close of business May 28, 1943,

amount to $1,255,659,000. The difference between this amount and the sales noted above consists of the delayed deliveries to be completed in due course through the Bank of Canada, as already mentioned, and delayed remittances in the course of transit.

3, 4 and 5. The total amount subscribed directly by chartered banks was $500,000 par value of bonds, purchased by one chartered bank for its own account. Figures are not yet available to indicate the loans by chartered banks to individuals or others for the purchase of fourth victory loan bonds. Substantially all of such loans will be liquidated during the six months following the fourth victory loan, and for that reason these funds should not be regarded as coming from inflationary sources, although they do give rise to bank loans for a short period. It may be noted that the bank loans for this period will be offset during part of the period at least by substantially larger government balances held in anticipation of later expenditures. These balances counteract any short term inflationary effect of this temporary bank borrowing.

6. Yes. As indicated by the answer to No. 4 above and by the figures given in *Hansard* for February 9, 1943, page 257, it will be seen that cash subscriptions from chartered banks on their own account are a negligible proportion of the subscriptions to victory bonds.

7. Yes, but such subscriptions are not limited to such an extent as in Canada.

8. As at April 26, 1943, the government of Canada had received payment for 99·99 per cent of bonds sold during the third victory loan campaign.

Borrowings of the public from the chartered banks to finance purchases of third victory loan bonds, remaining unpaid at March 31, 1943, the last pre-loan date for which figures are available, were reported at $37,348,252. Any amount of borrowings from other sources not yet repaid is not known, but believed to be small.

CANADIAN NAVAL ESTABLISHMENT IN JAMAICA

Mr. DUBOIS:

1. Is there a Canadian naval establishment in Jamaica?

2. If so, what are the names of the officers and sub-officers stationed there?

3. What is the amount received by each officer or sub-officer, in salary, allowance, remuneration, or compensation?

Mr. MACDONALD (Kingston City):

1 and 2. There is no Canadian naval establishment in Jamaica, but one Canadian naval officer is on duty there—Lieutenant C. G. Boulter, R.C.N.V.R.

[Mr. Ilsley.]

3. Lieutenant C. G. Boulter, R.C.N.V.R., pay per diem, $6; lodging, provisions, fuel and light, allowance per diem, $5.

COBALT SMELTER

Mr. NOSEWORTHY:

1. Was the metals controller asked to approve of the construction of a smelter in Cobalt which was to be financed by the United States government by a loan for five years and an order for refined metal for the entire production for three years?

2. If so, what was his answer?

3. Was this previous to the metals controller securing an order for 7,000 tons of cobalt ore or concentrates to be stockpiled at the Deloro smelter?

4. Did he approve of this smelter construction to an official of the mining company verbally, showing him an original letter of approval to the United States government?

5. Was this letter sent as drafted, or did the metals controller change his opinion?

Mr. ILSLEY:

1. No.

2. Answered by No. 1.

3. Answered by No. 1.

4. The metals controller has no recollection of any such conversation with an official of the mining company nor is there anything on the records to show that a letter such as he suggests was ever drafted or sent. There is, however, on file a letter written to Mr. S. D. Strauss, assistant vice-president of the Metals Reserve Company, under date of 27 February, 1942, in which the following is a quotation:

"Mr. Sutherland has shown me your letter addressed to him under date of 23 February in which you state that you would require my approval of the export of the products to the United States. If Mr. Sutherland is successful in establishing a plant at Cobalt, we would have no hesitation in granting export licences."

This is the only letter to which we believe such a conversation could have referred.

5. Answered by No. 4.

QUESTIONS PASSED AS ORDERS FOR RETURNS

SUGAR FOR HOME CANNING

Mr. CRUICKSHANK:

1. Does the government encourage home canning?

2. What steps are being taken to provide ample sugar for rural residents accustomed to canning large amounts of fruit?

3. What steps are being taken to prevent misuse of sugar ration by those not canning fruit?

4. What arrangements are being made to prevent wastage of perishable fruit?

Mr. GRAYDON: Is there any reason for having this question passed as an order for return? The question of sugar for home canning is one of the live issues to-day, and the answer ought to be on *Hansard*.

Mr. McLARTY: It was not for any purpose of delaying the answer, or keeping it out of *Hansard*, that it was passed as an order for return. There are two departments definitely involved, the Department of Agriculture and the wartime prices and trade board. That is the only reason it was passed as an order for return.

Mr. GRAYDON: I thought this was under the wartime prices and trade board.

Mr. McLARTY: The Department of Agriculture is also interested. That is the advice I have with regard to the question, and it would come from that department.

GOLDEN MANITOU MINES LIMITED—ZINC CONCENTRATES

Mr. BLACKMORE:

1. Did the Golden Manitou Mines Ltd. acquire from the Quebec Manitou Mines Ltd. the zinc claims from which it supplies zinc concentrates to the Metal Reserve Company of United States, under contract with the Metal Reserve Company?

2. How many claims did the Golden Manitou Mines Ltd. so acquire?

3. What consideration did Quebec Manitou Mines Ltd. receive for these claims?

4. Was this transaction approved by the shareholders of Quebec Manitou Mines Ltd.?

5. On what date was the shareholders' meeting at which such approval was given?

6. Where was the meeting held?

7. When did the notice go out calling the shareholders to that meeting?

8. Did that notice specifically state that the meeting was being called for the purpose of approving the transfer to the Golden Manitou Mines Ltd. of certain important claims from the property of Quebec Manitou Mines Ltd.?

GOLDEN MANITOU MINES LIMITED—CAPITAL STOCK

Mr. BLACKMORE:

1. How many shares comprised the authorized capital stock of Golden Manitou Mines Ltd.?

2. How many of those shares were issued?

3. To whom did these shares go; (a) how many went to the underwriters (Messrs. Milner, Ross & Company, and Draper, Dobie & Company); (b) did any of such shares go to Quebec Manitou Mines Ltd. in payment for the claims Quebec Manitou Mines Ltd. transferred to Golden Manitou Mines Ltd.; (c) how many remained in the treasury of Golden Manitou Mines Ltd.?

4. How much did Golden Manitou Mines Ltd. receive from Milner, Ross & Company, and from Draper, Dobie & Company, for the "one-half of the total authorized share capital of the company" which those gentlemen received?

VERNER, ONT., CREAMERY

Mr. HURTUBISE:

1. What action is the government taking to relieve the serious situation which exists at Verner, Ontario, creamery, where 560,000 pounds of butter are produced yearly, and where the proprietors are threatening to close business?

2. Can any relief be expected in the near future as to, (a) limitation of collection of cream to three times every two weeks; (b) lack of metal cans for collection of cream; (c) lack of gas, tires, and tire repair?

MOTIONS FOR PAPERS

INDIANS—TRIAL OF FRANK KNOCKWOOD, LENNOX ISLAND RESERVE

Mr. BLACK (Cumberland):

For a copy of all correspondence, accounts, payments and other documents, in the possession of the Department of Justice, and Department of Mines and Resources (Indian Affairs), with respect to the trial of Frank Knockwood, a resident of the Indian reserve, Scotchfort, Lennox island, Prince Edward Island, during the years 1941, 1942, and to date in 1943.

Also a copy of all correspondence and recommendations on behalf of George J. Tweedy, K.C., of Charlottetown, P.E.I., that he act for the government or for the defendant, Frank Knockwood, or for the Indian Affairs branch, along with a statement of any accounts or payments for salary, fees or expenses submitted or paid him or any other person.

Mr. ST. LAURENT: The adoption of this motion should be subject to the usual reservation with respect to confidential communications between the officers of the department and other officials.

LABOUR MANAGEMENT COMMITTEES

Mr. COLDWELL:

For a copy of all correspondence, telegrams, questionnaire and memoranda exchanged between the Department of Labour and the regional labour boards, in connection with securing the information on labour management committees listed in sessional paper 155A, tabled by the Minister of Labour on April 15.

FALCONBRIDGE NICKEL COMPANY

REFERENCE TO STATEMENT OF PRESIDENT OF THE COMPANY AS TO NORWAY REFINERY

On the orders of the day:

Mr. M. J. COLDWELL (Rosetown-Biggar): Mr. Speaker, I would like to direct a question to the Prime Minister, notice of which I sent to the Minister of Justice (Mr. St. Laurent) yesterday, and which he suggested might more appropriately be asked of the Prime Minister.

On May 11, I drew the attention of the house to a statement by the president of the Falconbridge Nickel Company, and contained on page 2 of the annual report presented to the general meeting of shareholders at Toronto on April 21, 1943, to the effect that he was glad to know that the company's Norwegian refinery was safe and being maintained. He added that it was in operation by the company's staff under German control. I would ask the Prime Minister what steps if any have been taken to deal with the author of this particularly callous and subversive statement?

Right Hon. W. L. MACKENZIE KING (Prime Minister): Mr. Speaker, my colleague, the Minister of Justice, mentioned to me that my hon. friend would ask this question to-day. Unfortunately I have not had a moment since then to consider the reply to be made, but I shall seek to make a reply to-morrow. I would say to my hon. friend that the reply will be along the lines that he himself anticipates.

POST-WAR CIVIL AVIATION

CONVERSATIONS BETWEEN UNITED KINGDOM AND SELF-GOVERNING DOMINIONS

On the orders of the day:

Mr. GORDON GRAYDON (Leader of the Opposition): Mr. Speaker, I should like to direct two questions to the Prime Minister based on a Canadian press dispatch from London, England, which quotes Sir Archibald Sinclair, United Kingdom Air Secretary, as follows:

> We have put first in our work the importance of coming to an agreement "with the dominions", Sir Archibald said of the government's civil aviation plans. After the war we shall either be in a world dominated by the United States or the Soviet Union, or the centre of a great empire bound together by air routes.

The dispatch goes on to say:

> Discussing the question of dominion representation on the board of the British Overseas Airways Corporation, Sir Archibald said it would not be appropriate to invite the dominions to be represented on the board of a United Kingdom corporation. Were such an invitation tendered, he thought the dominions might consider it inappropriate to accept.

Arising out of this dispatch, I would like to ask the Prime Minister the following questions: Have conversations been initiated between the United Kingdom and the self-governing dominions with respect to an empire plan for post-war civil aviation? If so, what progress has been made? Has the dominion government ever been approached, formally or informally, by the government of the United Kingdom with respect to representation on the board of the British Overseas Airways corporation, or with respect to the formation of a like corporation of empire-wide scope?

Right Hon. W. L. MACKENZIE KING (Prime Minister): Mr. Speaker, my hon. friend gave me notice of this question. Without commenting at all on the dispatch itself I shall answer the specific questions my hon. friend has asked.

> Have conversations been initiated between the United Kingdom and the self-governing dominions with respect to an empire plan for post-war civil aviation?

The answer is no. His second question was:

> If so, what progress has been made?

That question is answered by the answer to the first question. His third question was:

> Has the dominion government ever been approached, formally or informally, by the government of the United Kingdom with respect to representation on the board of the British Overseas Airways Corporation, or with respect to the formation of a like corporation of empire-wide scope?

The answer is no.

Mr. GRAYDON: May I ask the Prime Minister, in view of his answer that conversations have not been initiated between the United Kingdom and Canada with respect to an empire plan for post-war civil aviation, whether it is the intention of the government at some later time to initiate such conversations?

Mr. MACKENZIE KING: The only reply I can make to my hon. friend is that the house will be informed in due course of any steps which may be taken in the matter. The subject is one which is being considered at the present time.

CZECHOSLOVAKIA

VISIT TO OTTAWA OF PRESIDENT BENES—MUNICH AGREEMENT

On the orders of the day:

Mr. GORDON GRAYDON (Leader of the Opposition): I understand that Doctor Eduard Benes, President of the republic of Czechoslovakia, is paying a visit to Canada and will be in Ottawa shortly. Will the Prime Minister kindly indicate to the house such plans as the government has made for welcoming this distinguished visitor and extending Canadian hospitality to him?

Right Hon. W. L. MACKENZIE KING (Prime Minister): Mr. Speaker, His Excellency, Doctor Eduard Benes, President of the republic of Czechoslovakia, arrives in Ottawa

to-morrow morning. During the course of his visit, which I understand is likely to be until the end of the week, Doctor Benes will be the guest of His Excellency the Governor General and Her Royal Highness Princess Alice at government house. To-morrow morning at half-past eleven it has been arranged that Doctor Benes will meet the members of the press at a conference in room 16, and at twelve noon Doctor Benes has agreed to speak to the members of both houses of parliament in the railway committee room. The senate is not in session at the present time and there may not be a large representation of the members of that house, but I am sure that hon. members of this house will greatly welcome the opportunity to hear an address from Doctor Benes. We are greatly honoured by the visit of Doctor Benes to our country.

A number of engagements have been made for Doctor Benes during the course of his stay and also some by him. The Governor General and Her Royal Highness are entertaining Doctor Benes at dinner at government house to-morrow night. An official dinner will be given in his honour by the government on Friday evening of this week. On Saturday evening I understand that Doctor Benes himself is entertaining at the Czechoslovakian legation. President Benes will receive on Friday morning, June 4, heads of foreign missions, high commissioners, and officers of the International Labour Organization at government house. On Saturday morning he will receive delegations of Czechoslovak societies and members of Czechoslovak forces in training in Canada. In the afternoon of Saturday, June 5, the president will visit the service flying training school at Uplands.

A number of engagements have been made which will permit of an opportunity being afforded to the members of this government and other members of the house for conferences with Doctor Benes. There are other social engagements of lesser significance.

EXCHANGE OF NOTES BETWEEN THE GOVERNMENT OF THE UNITED KINGDOM AND THE REPUBLIC OF CZECHOSLOVAKIA

On the orders of the day:

Right Hon. W. L. MACKENZIE KING (Prime Minister): Mr. Speaker, I should like to take this opportunity of referring to the exchange of notes between the foreign secretary of the United Kingdom, Mr. Eden, and the foreign minister of the Czechoslovak republic, Mr. Masaryk, which took place on August 5 of last year. The statement I am making has reference to the Munich agreement. It is a communication that I am glad to have the opportunity of making to the house before Doctor Benes, the President of the Republic of Czechoslovakia, arrives. I had intended making it at an earlier stage of the session, but an opportunity has not presented itself.

In his note, Mr. Eden stated that in order to avoid any possible misunderstanding, he desired to declare that as Germany had deliberately destroyed the arrangements concerning Czechoslovakia reached at Munich in 1938, his government regarded themselves as free from any engagements in this respect. He stated further that at the final settlement of the Czechoslovak frontiers to be reached at the end of the war, the British government would not be influenced by any changes effected in and since 1938.

The Canadian government has not considered it necessary to enter into a similar exchange with the Czechoslovak government, since Canada was not a party to the Munich agreement. I am glad, however, to take this occasion to state that the Canadian government fully shares the view of the United Kingdom government that the Munich agreement is void.

It is not without interest that, when our government amended the defence of Canada regulations in April of 1941, in order to remove any possibility of Czechoslovaks being regarded as enemy nationals, the amendment stated that for the purposes of these regulations, Czechoslovakia means "Czechoslovakia as it existed on the first day of January, 1938." It is the earnest wish of our country that the day will not be far removed when the brave people of Czechoslovakia will again enjoy those liberties which enabled them to make their very real contribution to the democratic life and culture of Europe.

MADAME CHIANG KAI-SHEK

ANNOUNCEMENT OF EXPECTED VISIT ABOUT THE MIDDLE OF JUNE

On the orders of the day:

Right Hon. W. L. MACKENZIE KING (Prime Minister): Several times my hon. friend the leader of the opposition (Mr. Graydon), both across the floor and in private conversation, has asked me when we might expect a visit from Madame Chiang Kai-shek. I am happy to be able to tell my hon. friend that yesterday in New York I had the privilege of an interview with Madame Chiang and have from her the assurance that she hopes to be able to visit Ottawa and to address the members of both houses of parliament about the middle of this month.

DEFENCE OF CANADA REGULATIONS

DECISION OF THE ADVISORY BOARD ON MR. HOUDE'S APPLICATION FOR LIBERATION

On the orders of the day:

Mr. LIGUORI LACOMBE (Laval-Two Mountains): Mr. Chairman, I wish to draw to the attention of the hon. Minister of Justice (Mr. St. Laurent) the following news item which appeared in the Montreal *Gazette,* and then ask him some questions.

The *Gazette*—Wednesday, June 2, 1943.

Houde Stays in Camp
Release Appeal Fails

(*Gazette Resident Correspondent*)

Ottawa, June 1: Camillien Houde, ex-mayor of Montreal who was interned in 1940 for advocating refusal to register, has lost his appeal for release from an internment camp, it was understood to-night.

Houde's hearing was conducted in camera in Fredericton, New Brunswick, last Friday by a committee which has since forwarded its report to the justice department here. Had the recommendation been for his release it would have been public by now.

In pursuance of this news item, Mr. Chairman, the hon. Minister of Justice will allow me to put the following question to him: Has the advisory board which, in Fredericton last May 28th, granted a hearing to Mr. Camillien Houde, former mayor of Montreal and member of the Quebec provincial legislature, made known its decision to the Minister of Justice?

In the affirmative what were the terms of this decision? In the negative, will the hon. Minister of Justice soon be in a position to make a statement before parliament concerning the liberation of Mr. Houde?

If the news item which appeared in this paper is correct, does the minister intend to use the rights to which he is entitled by law and order the release of Mr. Houde notwithstanding the decision?

Mr. SPEAKER: Order. I understand the hon. gentleman is asking a question with regard to the internment of Mr. Houde. Such a long introduction is not necessary in order to ask a question. If the minister wishes to reply he may do so, but certainly this is a question which should be placed upon the order paper.

Mr. L. S. ST. LAURENT (Minister of Justice): Mr. Speaker, I have no objection whatsoever to answering the hon. member immediately. The advisory committee appointed to examine Mr. Houde's objections to his internment sent me, on May 31st, a unanimous report, which I received in the afternoon.

The findings of the report were to the effect that the internment of Mr. Houde should be continued. I studied the report and the file as well. I came to the conclusion that I had no alternative but to comply with the findings of the report, and yesterday I signed an order in accordance with these findings.

As to the news item which appeared in the *Gazette,* I have no idea where that newspaper's reporter secured his information. That reporter and several others contacted me as early as Monday about this matter, and I refused to give them any information. As I expected that questions would be put to me before the house, I preferred not to give any details to the newspapers before I had acquainted the house with the information.

OLD AGE PENSIONS

REQUEST FOR PAYMENT OF PENSION OF $30 AT AGE OF SIXTY

On the orders of the day:

Mr. J. H. BLACKMORE (Lethbridge): Considering the commendable action of the treasury board in granting long overdue increases of salary to many civil servants, does not the Minister of Finance consider the time opportune to ask the treasury board to make such provisions as will ensure that all Canadians sixty years of age and over shall receive an old age pension of not less than $30 a month, retroactive to June 1, 1943? Will the minister undertake before this house to ask the treasury board to make such old age pension provisions as I have indicated, and will he tell the house at an early day what action the treasury board saw fit to take in this respect, together with the reasons for their decision?

Mr. SPEAKER: The hon. gentleman knows that such questions involve matters of policy and cannot be asked on the orders of the day in the expectation of receiving an immediate answer.

BUSINESS OF THE HOUSE

FARM DEBT LEGISLATION

On the orders of the day:

Mr. VICTOR QUELCH (Acadia): Could the Prime Minister tell the house when the debt legislation will be brought down? I understand the delay is having a serious effect in certain parts of western Canada.

Hon. J. L. ILSLEY (Minister of Finance): I think it will be possible to introduce the legislation in question at the conclusion of the debate on the war appropriation bill, or at about that time. I do not think any purpose would be served by introducing it sooner, because it could not be dealt with.

REDISTRIBUTION BILL

On the orders of the day:

Mr. A. W. NEILL (Comox-Alberni): On May 14 the Prime Minister told us that it was the intention of the government to introduce a redistribution measure this session. The last time such a measure was before this house was in 1933, and from the time the committee first met until the bill passed it took three months and seventeen days. There is no reason to suppose that it will take any shorter time on this occasion, and that would mean we would be sitting here until the end of September. Is it the intention of the government that we should sit continuously, except for the week-end adjournments, until this work is finished?

Right Hon. W. L. MACKENZIE KING (Prime Minister): I may tell my hon. friend that though the government does not have any intentions as to the length of the session, it does entertain some hopes that we may be able so to arrange the business of the session as not to prolong its sittings unduly. There were I think special reasons why the redistribution measure to which my hon. friend referred took as long as it did. I hope the redistribution measure to be introduced this session will not take as long. A large number of committees have been meeting and there has been very important legislation before the house concerning matters pertaining immediately to the war. The government has felt that until the war appropriation measure was pretty well disposed of it would be inadvisable to have the redistribution measure introduced, but immediately the discussion on the war appropriation bill is concluded the redistribution bill will be introduced.

WARTIME HOUSING LIMITED

INQUIRY AS TO CONSTRUCTION OF HOUSES IN EDMONTON AND SARNIA

On the orders of the day:

Mr. D. G. ROSS (St. Paul's): Arising out of a news item appearing in a trade paper, I should like to ask the Minister of Munitions and Supply if it is the intention of Wartime Housing Limited to build 250 permanent houses in Edmonton, and also whether some two hundred permanent houses are being built in Sarnia at the present time.

Hon. C. D. HOWE (Minister of Munitions and Supply): The answer to both questions is yes.

Mr. ROSS (St. Paul's): May I ask the minister why?

WHEAT

PERMITS FOR EXPORT OF COARSE GRAINS

On the orders of the day:

Hon. J. A. MacKINNON (Minister of Trade and Commerce): Yesterday at page 3203 of *Hansard* the hon. member for Weyburn (Mr. Douglas) referred to an answer to a question which I tabled on Monday. He stated:

> According to an answer he made yesterday, no permits are demanded for the export of feed wheat, thus enabling those who export it to make quite a profit out of the differential between Canadian and the United States prices.

If the hon. member will refer to the answer I gave on Monday he will see that I said:

> Export permits are not required for wheat grading No. 3 northern, or higher.

The situation in respect to grades of wheat suitable for feed purposes is that such wheat is required in Canada and consequently is under export control. The general situation referred to by the hon. member for Weyburn relating to profits cannot arise, because total wheat imports into the United States from all countries are restricted to 800,000 bushels annually. Of this import quota Canada receives a substantial share, but the amount is so small as very nearly to stop the export of Canadian wheat into the United States market. The purchase of the seven and a half million bushels of wheat to which I referred on Monday was made by the United States government and consequently was outside the 800,000 bushel limit of wheat imports in effect in that country. In regard to wheat of feed grades, it is very difficult to secure a sufficient supply for the domestic market, and consequently the feeds administrator does not permit exports of this class of wheat.

Mr. DOUGLAS (Weyburn): The minister has said that export permits are not required for wheat grading number 3 northern or higher. Would he give information at the same time as to why they are not required, and what steps are being taken to have those who sell this wheat to the commodity credit corporation make some contribution to the stabilization fund, in order to permit the differential between Canadian and United States prices?

Mr. MacKINNON (Edmonton West): I shall be glad to do that.

Mr. CASTLEDEN: With regard to the purchase of 7,500,000 bushels of wheat by the United States government, I understand the chief commissioner of the Canadian wheat

board went down to make arrangements for the purchase of this grain. Will the minister say why the grain was not purchased through the Canadian wheat board rather than on the open market?

Mr. MacKINNON (Edmonton West): I doubt very much the accuracy of the hon. member's premise when he states that the chairman of the wheat board went to the United States to arrange this sale. My information is that the United States government communicated with the exporters of wheat in Winnipeg. Various offers were submitted to the United States government, of which it took the 7,500,000 bushels.

Mr. CASTLEDEN: The statement tabled in the house by the Minister of National Defence (Mr. Ralston) states that discussions took place in Washington in the early part of last week between United States authorities and Canadian officials, that the Canadian officials attending were so-and-so, including Mr. McIvor, chief commissioner of the Canadian wheat board, and that as a result the purchase was made.

Mr. MacKINNON (Edmonton West): Indirectly it may have been the result of conversations between representatives of the Department of Trade and Commerce and the Department of Agriculture at that time, dealing with the whole question of wheat and coarse grains.

Mr. DOUGLAS (Weyburn): Can the minister say why the wheat was not purchased through the wheat board rather than on the open market?

Mr. MacKINNON (Edmonton West): The hon. member would have to ask the United States government as to that.

REQUEST FOR INCREASED INITIAL PAYMENT

On the orders of the day:

Mr. E. E. PERLEY (Qu'Appelle): Mr. Speaker, yesterday I directed a question to the Minister of Trade and Commerce (Mr. MacKinnon), to which he replied in the negative. To-day I wish to direct another question to him, based on yesterday's answer. Yesterday I had received a letter enclosing the front page of the *Leader-Post*, and it was on that that I based my question. The minister's reply was that he had not received any such request as set out in that newspaper.

Immediately after the minister answered the question I went to the reading room, and found the following headline in the Winnipeg *Free Press*, "Request dollar wheat payment". It is upon that headline that I am basing my question to-day, because it is the same as appeared in the *Leader-Post*. The Winnipeg *Tribune* headline is "Central Board of Wheat Pools Requests $1 Initial Payment". These three papers of the western press contain the same statement, that a wire had been sent to the minister asking for immediate consideration of the proposal. Has he received a wire from the Canadian Cooperative Wheat Producers asking him to consider the brief placed in his hands, and to give immediate attention to it.

Hon. J. A. MacKINNON (Minister of Trade and Commerce): Mr. Speaker, so far as I can remember and as far as my officials can remember—because I checked with them since the question was asked yesterday—no request has as yet been made to my department. The first I heard of this was when the hon. member asked the question yesterday, and when I saw the newspapers to which he has just referred.

SEED POTATOES

STORAGE HOLDINGS, COMMON AND CERTIFIED—POTATO ACREAGES BY PROVINCES

On the orders of the day:

Hon. J. G. GARDINER (Minister of Agriculture): Mr. Speaker, yesterday the hon. member for Lethbridge (Mr. Blackmore) asked for certain information with regard to the storage of and acreage in potatoes. I agreed to bring down the information to-day.

The following table indicates the cold and common storage holdings of table and certified seed potatoes in commercial producing areas, and at the principal centres on May 1, 1942 and 1943:

		1942	1943
		tons	tons
Inland, Prince Edward Island	Table	6,200	34,000
	Seed	9,135	1,578
Inland, Nova Scotia	Table	1,398	1,725
	Seed	593	848
The only other places where seed and table potatoes are stored, are as follows:			
Inland, New Brunswick	Table	4,293	5,156
	Seed	9,680	5,876
Lower St. Lawrence, Quebec	Table	3,160	1,628
Quebec province (farmers' hands)	Seed	1,617	1,280

The only other figures I would need to give in this connection would be the total showing potatoes stored in Canada. At May 1, 1942, the figure was 44,716 tons and at May 1, 1943, there were 60,483 tons.

Then, so far as acreage is concerned, if the house agrees I shall place this table on *Hansard*, because it is too long to read into the record. It indicates that the figures are lower, according to the intentions to plant as of April 1, 1943, than we had asked for in December of 1942. That is contrary to what I said yesterday. But they are considerably higher than we had last year, as stated yesterday. The table is as follows:

Acreage of Potatoes by Provinces
1941-1943

	1941	1942	Goal[2] 1943	Intentions[1] 1943
Prince Edward Island	39,900	37,000	42,920	39,000
Nova Scotia	18,500	20,800	23,920	23,000
New Brunswick	47,800	50,500	58,580	55,600
Quebec	153,000	157,000	172,700	174,000
Ontario	120,300	122,000	134,200	106,000
Total east	379,500	387,300	432,320	397,600
Manitoba	35,000	29,000	31,900	30,000
Saskatchewan	47,000	46,000	48,300	47,400
Alberta	30,000	28,500	29,925	34,200
Prairie provinces	112,000	103,500	110,125	111,600
British Columbia	15,600	15,100	17,516	16,900
Canada	507,100	505,900	560,000	526,100

[1] Farmers' intentions to plant, April, 1943.
[2] Goals established at dominion-provincial agricultural conference, December, 1942.

PRIVILEGE—MR. POULIOT

REFERENCE TO ARTICLE IN MONTREAL DAILY STAR OF MAY 28

On the orders of the day:

Mr. JEAN-FRANÇOIS POULIOT (Témiscouata): Mr. Speaker, now that my honourable colleagues seem to have finished asking questions, I rise to a question of privilege, based on an article which has been published by a newspaper which specializes in not informing its readers, or in misinforming them, and which wrote a very bitter article against Mr. Aberhart last week, before his ashes were cold. The article is entitled, "Less Talking, Please," and refers to the speeches made in the house by hon. members for Leeds (Mr. Fulford) and Wellington North (Mr. Blair). They are quotations, but I understand the ration limit of gags has been exhausted, and that the manufacturer is out of stock. The article goes on to say:

> There is an increasingly large number of citizens throughout the country who will heartily endorse Doctor Blair's sentiments.

And for your information, my name is mentioned in the first part of the article.

Mr. COLDWELL: What paper?

Mr. POULIOT: The Montreal Daily *Star*, a paper which either does not inform its readers or misinforms them. The article continues:

> Parliament was not established in order to provide any member with an entirely erroneous idea of his own importance, to talk interminably in debate, particularly when what he says is for the main part obviously not intended for any other purpose than to draw the limelight upon himself.

I have been fighting for the underdog and for the people, but when hon. members express ideas which I desire to express, I am perfectly satisfied because I believe in the law of least effort. The article continues:

> It may become necessary to amend the rules of debate if the privilege of free speech continues to be so flagrantly and insensately abused. This abuse is all the more irritating because it is confined to a very small number of members. We wonder, by the way, if it would be so persistent if the privilege of franking *Hansard* to the members' constituents were to be cancelled.

I suggest that a copy of *Hansard* be sent daily to each reader of the Montreal *Star* so that he may be informed, because the parliamentary reports of the Montreal *Star* are pure rot. I quote:

> We urge that some action of an effective nature be taken. They manage to control time-wasters elsewhere without any outcry as to the

curtailment of the privilege of free speech, and it certainly ought to be possible for the parliament of Canada to do the same.

Here is a loyalist paper that is suggesting that we do the same thing as is done in Germany. My work is hard; I am doing a painful and a painstaking task, and I should like to ask something of the government. Parliamentary secretaries have been appointed and I wonder if I could not have three. I should like to have the hon. member for Renfrew South (Mr. McCann), if he can be spared by the Minister of Pensions and National Health (Mr. Mackenzie); I should like to have the hon. member for Wellington North (Mr. Blair), if he can be spared from his groundhogs—

Some hon. MEMBERS: Order.

Mr. SPEAKER: The question of privilege is something that should be raised rarely by an hon. member and only if he has been libelled or an aspersion has been cast upon him. As a matter of privilege the member has the right to deny what has been said about him, but he can refer only to the article which has appeared in the newspaper and which should be placed on the table of the house. His denial may be given but he is not entitled to enter into an argument or to comment at length on what has been published. All he is entitled to do is deny what has been said in the editorial and to state his position as shortly as it can be stated.

Mr. POULIOT: I shall read five or six lines in the article where my name has been mentioned and which are directed against me. They are:

Mr. Fulford pointed out that if all members took as much time as Mr. Pouliot did, the house would have to sit twenty-four hours a day three hundred and sixty-five days a year, and said that members were becoming exasperated. Doctor Blair was more outspoken. Mr. Pouliot has been keeping up a continuous barrage of futile and inconsequential comments about Colonel Ralston's administration of his department, and Doctor Blair, referring to this, said:

"If we want to retard our war effort, then the way for us to do it, in a sly, deceptive way, is to keep the minister sitting in his seat and not allow him to attend to his duties. I do not know how to prevent it, but I do know that if this house could purchase a mouthgag or a few things like that, it would be worth while."

What I was saying a minute ago is that as 160 mouthgags have been used in this house, the manufacturer is out of stock.

That is all, at least for the time being.

[Mr. Pouliot.]

WAR APPROPRIATION BILL

PROVISION FOR GRANTING TO HIS MAJESTY AID FOR NATIONAL DEFENCE AND SECURITY

The house resumed from Tuesday, June 1, consideration in committee of a resolution to grant to his majesty certain sums of money for the carrying out of measures consequent upon the existence of a state of war—Mr. Ilsley—Mr. Bradette in the chair.

NATIONAL DEFENCE FOR AIR

2. Pay and allowances, $238,023,232.

Hon. C. G. POWER (Minister of National Defence for Air): Mr. Chairman, I should like to take up what I am afraid will be considerable time of the committee to discuss a matter which was brought up yesterday by a large number of members, namely, that of the commissioning of aircrew in the Royal Canadian Air Force. This is a question which has aroused much public attention and has been discussed and debated a great deal throughout the country during the past year. I must ask the committee to give me some little time in which to make this explanation because it is a complicated matter and one in which a number of interests are involved as well as, apart from the broader interests, the individuals who are entitled to the promotion which they desire.

It will be remembered that when we were discussing the war appropriation bill last year this question of commissioning was brought to my attention, and I expressed myself somewhat forcibly as being strongly in favour of the commissioning of all aircrew. I have not changed my opinion in that regard, although I must admit that circumstances have been such that it has not been possible to carry out the policy to the extent I should have liked. It will be necessary for me to go into some detail and to give some account of the background of the story of commissioning.

When the joint air training plan agreement was signed in December, 1939, there was only passing mention of commissioning. It was said that pilots and observers could be commissioned in certain numbers, and I think it was arranged that agreement would be made as to the percentage and numbers of aircrew which would be commissioned. It was not until February, 1940, that any concrete plan of commissioning was laid before the partners to the agreement. At a meeting of the supervisory board, which as the committee knows is the board which supervises the administration by Canada of the empire training agreement, it was agreed that commissioning of pilots and observers would be on the basis as expressed by the hon. member for Rosedale (Mr. Jackman), that is, the top one-third who had

passed their examination would receive commissions on graduation and the remaining seventeen per cent, in order to bring the total up to fifty per cent, would be commissioned on active service provided they were recommended at the time of their graduation.

That referred only to pilots and observers. There was no provision made for the commissioning of wireless operator air gunners or of straight air gunners. As a matter of fact straight air gunners were not being turned out to any extent in the early days. I call the attention of the committee to the fact that this arrangement was made in February, 1940, before any aircrew had begun training, in fact I imagine before any aircrew had been enlisted. The first aircrew began their training in April, 1940. This procedure existed for some little time, as I shall presently show.

A year after, in February, 1941, at the instance of the Canadian government, or rather of the Royal Canadian Air Force, who felt that it would be extremely difficult to obtain recruits for wireless operator air gunners, who had a very long and tedious course to follow, unless some recognition were given at least to the persons who came out best in their examinations, it was agreed that two per cent of the wireless operator air gunners should obtain commissions. Even then there was no question of commissions for straight air gunners. A month or so later it was decided that five per cent of the wireless operator air gunners, instead of two per cent, should be commissioned. There were still no commissions for the air gunners. Then, during the course of my visit overseas in 1941, I took up this matter of commissioning of air gunners and wireless operator air gunners with the air ministry, and as a result of discussions at that time it was agreed that ten per cent of the wireless operator air gunners would be commissioned on graduation and ten per cent later on in operations, making a total of twenty per cent. With respect to air gunners, five per cent would be commissioned on graduation and fifteen per cent on operations, making a total of twenty per cent.

That brought it down to April, 1942, when I stated in this chamber, on the appropriations, that I favoured one hundred per cent commissions. Then came the empire training air conference in May of 1942. At that conference Canada proposed to its partners that all aircrew be commissioned. The partners did not agree either to the proposition that all aircrews be commissioned or, alternatively, as a second suggestion, that all aircrews be given what might be called an intermediate rank—ensign or cadet or flight officer, call it what you will—which would be the intermediate probationary rank between the non-commissioned officer and the commissioned officer. Such a rank is now in existence in the United States army air corps, and presently I will give some indication of how it works.

Mr. GRAYDON: Before the minister passes to another matter, what were the reasons advanced by the partners for failure to commission those in the aircrews?

Mr. POWER: I have a long story to tell on that. So, by way of a compromise—which is in accordance with the genius of British institutions—it was decided—Canada having refused to continue the old system—on 33 per cent on graduation and 17 per cent in the field. So that, as was stated by the hon. member for Rosedale, the agreement, appendix 3, page 11, contains this clause:

1. Commissioning— . . .

(a) All pilots, observers, navigators and air bombers who are considered suitable according to the standards of the government of Canada and who are recommended for commissions will be commissioned.

It goes on to give the percentages with respect to wireless operator air gunners and to air gunners. That is to say, our partners agreed that we should commission whom we wanted but asked us to establish a certain standard, and that we agreed to do. We receded from our position of commissioning everybody and we adopted a formula which was first suggested by the United Kingdom, that all aircrew who were commissionable should be commissioned. That formula might or might not mean a great deal—"all aircrew who were commissionable should be commissioned." Therefore we said, "That is all right, but we had better have some kind of yardstick and some kind of standard," and we did establish such a yardstick and such a standard, to which I will presently refer, and which in effect has resulted in the granting of a very much larger number of commissions on graduation.

My principal anxiety during all the time this agitation was proceeding for commissioning on graduation was with respect to the poor lads who were overseas. Not so much was being heard about them in Canada in those days, partly because we had not our own squadrons, partly because our publicity had not been properly arranged, and to a certain extent, too, because we had not been in operation to the extent that we have been recently, and not so many of our men were returning. So that the agitation in Canada largely had for its objective

the commissioning of men on graduation. I felt that that would be grossly unfair to the lads who had been over for a year or so. They were my first consideration; and in discussing this subject with the United Kingdom—in which reams of paper were consumed in dispatches—I said: At least give commissions to the seventeen per cent who are recommended on graduation—at least seek them out and see that they get their commissions. Well, that did not seem to work. There are reasons. I am not attempting in any way to blame, as somebody expressed it, Great Britain or anybody for this. It is very difficult in the course of operations for a commanding officer—who after all has the say in spite of the fact that there was a recommendation on graduation—to follow all these things through, and I am absolutely certain that ninety-five per cent of the Royal Air Force commanding officers did not know anything of the agreements made at the time of the joint air training plan, or of the ruling of the supervisory board that seventeen per cent should be commissioned, or that John Jones from Saskatoon had been recommended for consideration for a commission when he started in on active service. He saw John Jones, but he probably never saw John Jones's file, and did not know anything about it. The result is that those commissions were not coming through. Presently I will give a statement of the numbers in 1941, 1942 and 1943. So that something had to be done about it, and we wrote into the agreement of 1942 something which hon. members, particularly those who know something of military affairs, will agree was a most unusual provision. It was to do away with the recommendation of the officer commanding, and in some respects take the matter of commissioning into our own hands. The clause reads:

(c) Normally, the initiative in recommending an airman for a commission will rest with his commanding officer, but an airman may apply to be recommended, and, if his application is endorsed and forwarded by his commanding officer, it will receive the same consideration as if it had been initiated by the latter.

An application for a commission by an airman of the Royal Canadian Air Force, even if it is not endorsed—

That is, even if the commanding officer does not agree that the man should be commissioned.

—will be forwarded through the usual channels. . . .

It goes all the way up from the commanding officer to the group, from the group to the command, from the command to the air ministry, and the air ministry have a look at it and, if they still do not want it, it goes to Royal Canadian Air Force headquarters, and these headquarters will be provided with all relevant documents and will arrange for the candidate to appear before a selection board convened by the air officer-in-chief, R.C.A.F. overseas. In other words, if the application of a Canadian had not been considered or had been turned down, even though he is in the Royal Air Force, even though he may be in the middle east, or in Burma; no matter where he is, subject always to the difficulties of communication and transportation, he may appeal to the Canadian board to see whether or not he will get his commission. We also provided that there would be a review of all aircrew within two months after the signing of this agreement. That was in order to give our boys overseas at least an opportunity of having their commissionable qualities judged by Canadians. I have been asked how this works.

Mr. STIRLING: The minister said he wrote that into the agreement.

Mr. POWER: Yes.

Mr. STIRLING: Does that mean that the other parties concurred?

Mr. POWER: The other parties concurred, but this refers only to Canada. This gives the conditions of service of aircrew of the Royal Canadian Air Force. I do not know whether Australia and New Zealand have since written something similar into their agreement, but I rather suspect that they are following our procedure.

That was the situation in June, 1942. We proceeded to establish the standard which was referred to. We entirely disagree with the system, a sort of casual, fortuitous system, whereby the top thirty-three per cent of any class would obtain commissions. That did not work well. There were some classes much better than others. There were men who were up against strong competition who were much better than men in a weaker class and they did not obtain their commissions. We found that it was a most illogical way of doing it. We therefore set up our standards very much after the system of university examinations. We said that if a man gets sixty per cent in each subject and seventy per cent over all, whether there be a hundred or ten in the class, it does not matter, if he gets these marks he will receive his commission. The result has been a considerable increase

in the number of commissions. I signed selection board papers last week from three different boards in regard to pilots. In one board 76 per cent obtained commissions, in another over 80 per cent; and I have known a board wherein there were only two Canadians, I must say, with 100 per cent, and another where there was 90 per cent. So that the 33 per cent is wiped out.

Mr. GRAYDON: Is there any examining board that will ensure uniformity?

Mr. POWER: The questions are pretty much the same and the syllabus is also much the same. The board is made up usually of the chief flying instructor and probably the chief instructor, ground. Ground subjects, flying subjects and other matters are dealt with. We go back now, in order to get these marks, and follow a man right from the first school he joins, from the I.T.S. He does not fly in the I.T.S., but he gets marks there for ground subjects, character and leadership, and at the elementary flying school he gets marks for the same subjects plus flying. Originally the judgment and perhaps—I say this without wishing to be offensive to anyone—the prejudice of the commanding officer or of someone in the last class in which the man passed was brought to bear. That is inevitable in matters of this kind. But now with the yardstick we have, form 211, wherein all a man's qualities are taken into account and marks are recorded from every school to which he goes, we obtain a pretty good idea of his value by the time he gets through after he has been with us over a year; and on that basis his marks are allotted and he gets his commission, or he does not get it, as the case may be. So far as its effect on the number of commissions is concerned, it has materially increased the number of commissions on graduation.

With regard to overseas, continual representations were being made, and I will give the figures to show that there has been a vast improvement. In November, 1941, there were 25 commissions and in December, 58. In 1942 these were the commissions: January, 32; February, 49; March, 65; April, 64; May, 32; June, 112; July, 44; August, 127; September, 102; October 74. Then in 1943: January, 228; February, 239; March, 167; April, 231; and I expect over 300 in May. That is not yet enough. We have many more to get. I believe, however, that the system is getting into its stride and we hope that within a short time pretty nearly all those who have been overseas for some time and those on active operations will have received commissions or reasons will be given by the commanding officer why they have not received them. When the reason is given it will be a matter for the Royal Canadian Air Force to decide whether it is valid or not. If the commanding officer makes a report indicating that the man is not in his opinion commissionable, and gives valid reasons for that opinion, I do not know whether we would overrule him or not, but that would be a matter for the discretion of the Canadian board, sitting at Canadian headquarters in London.

Mr. GRAYDON: Is the minister satisfied that this is the best arrangement that can be made?

Mr. POWER: I would much prefer to get 100 and let it go at that; it would save much correspondence and trouble. But we are in the empire training agreement with our partners, and if you cannot get everything in any deal you get what you can. Moreover, this must not be lost sight of. The large proportion of our men are serving with the R.A.F. As it is now a very much larger percentage of our men have commissions. They will be in R.A.F. units and it does cause some embarrassment to the R.A.F. You will probably say that I should answer them, "Do as we do", and I will come to that in a moment. The fact is, however, that they have a staunch deep-rooted objection to coming to our point of view. At any rate, a great deal of embarrassment is created, and it must also cause embarrassment here. There are R.A.F., Australian, New Zealand and Canadian airmen graduating in the same schools in Canada. Our men are on the basis of 60, 60, 60 and 70—60 in three subjects and 70 over all. If they get that they get a commission. There might be some Australian, New Zealander or Englishman who had higher marks, but because he was not in the first third he would not get his commission. They do not like that, and some embarrassment is caused overseas. The house will say perhaps that I am getting unduly perturbed about embarrassing people, but I can feel for them although I do not sympathize with their point of view.

Mr. GRAYDON: The only way to get over the embarrassment is to commission everyone in the aircrew.

Mr. POWER: We are getting a much higher proportion both on graduation and in the field than before, though we have not been able to attain the objective we have aimed at. The reasons the R.A.F. oppose this system are these. The R.A.F. have made up their minds from experience that not more than fifty per cent are commissionable. That is to say,

out of a population of a certain number of people who join the aircrew, not more than fifty per cent will be fit to be officers.

Mr. CASTLEDEN: Is there any reason for that?

Mr. POWER: They say that is their experience.

Mr. COLDWELL: Is it experience or tradition?

Mr. POWER: According to tradition it would be much smaller than that. However, they say that is their experience.

They say that is their experience. I deny them the right to say that they have any more experience than we have. We have trained more men in this country for flying than they have. And if it is a question of training citizen soldiers I am inclined to agree with them; if they want to carry it out on the basis of a permanent force and a permanent army, they know more about that than we do. They are sticking to that basis, I think, when they lay down the broad general rule that not more than 50 per cent of the men who come in are fit to be officers.

Mr. GRAYDON: The minister is speaking of aircrew only?

Mr. POWER: Yes.

Mr. GRAYDON: Exclusive of all except those on operations?

Mr. POWER: No; that is everything. They say that of those who have the educational, mental and physical qualities to be aircrew, 50 per cent are fit to be officers and 50 per cent non-commissioned officers.

Mr. GRAYDON: I hope that with very great respect you differed from them on that point.

Mr. POWER: I will show you. I have in my hand a document which is edited by British Information. It is an agency of the British government. It is entitled "Officers and Non-Commissioned Officers of the R.A.F." I am taking up a lot of time of the committee, but I think the committee is interested in this question—

Mr. GRAYDON: It is very important.

Mr. POWER: It says, and this is for American consumption no doubt:

Questions are frequently raised about the apparent disparity of rank between men who are flying and fighting aircraft.

Why are some of them commissioned officers and some of them airmen pilots? Why do some live in the officers' mess and some in the sergeants' mess? Why do some earn the Distinguished Flying Cross, and some the Distinguished Flying Medal for acts of gallantry which are in the same category?

Such questions are natural, but the suggestion of a class element in the choice between officers and other ranks is based on a misconception of facts.

It is clear througout the R.A.F. that class distinction has no influence in the selection of cadets for flying training.

There is no doubt about that:

All cadets are potential officers. All have a chance of securing a commission should they desire to be commissioned, and be judged fitted for holding a commission.

The young officer must rise on his own merits, and can come from any walk of life. Potential pilot officers and potential sergeant pilots start on the same level. Whatever the origin of the man he must enter the ranks of the R.A.F. as an aircraft hand under training, and win his "Wings" and possible commission by his industry, ability and daring.

If the entrant has the physical and mental equipment to handle and fight aircraft of modern war type and has also a certain standard of education, he is accepted for aircrew training and is graded as a cadet. Thereafter his future is entirely his own making.

At the other end of his training there must necessarily be a discrimination, for the flow of promotion to higher ranks in the service must go on, and must come from the pool of young pilots. In order to provide for the necessary numbers of flight commanders and officers of senior rank in a squadron, it is essential to find fifty young officers from every one hundred pilots.

Natural prudence dictates that more officers should not be made at the outset than are required. On the other hand it should be noted that there is never a time in the career of an airman pilot in which it can be said that he is "out of the running" for a commission.

There are also paragraphs to the effect that a great many of those in the Royal Air Force do not want commissions, that they are better off financially without them. It goes on to say:

In the battle of Britain fifty per cent of the fighter pilots who tackled the Luftwaffe over southeastern England were sergeants. To-day, when Hurricanes and Spitfires sweep out over the channel to meet the enemy in French skies, every other pilot of the raiding fighters is wearing the uniform of an N.C.O. beneath his flying suit.

In the forefront of all bombing attacks on the enemy are sergeants, either as captains of aircraft or the majority of the crews. And scarcely a list of R.A.F. awards is issued that does not contain the name of many sergeants.

In the words of a commanding officer, who also flew in the old Royal Flying Corps: "It was always reckoned that sergeants were the backbone of the British army—I think the same can be said of the modern air force."

Mr. GRAYDON: A sergeant would not be any poorer fighter if you gave him a commission.

Mr. POWER: He might be poorer financially according to this statement.

Mr. DIEFENBAKER: Would the minister explain why an officer receives flying pay of, I think, two dollars a day and the flight sergeant or sergeant pilot receives only seventy-five cents a day flying pay? Why is there not equality of payment there?

Mr. POWER: I really do not know. I will look into that. To come down to our discussions with the Royal Air Force and the British Air Ministry, I told the Air Ministry that this matter would have to come up in the house. I said that I wanted to be fair to everybody and that I should like to have a statement of the position they took. I have it here. It is called an "Aide Memoire." This is from the United Kingdom. I will quote a few paragraphs from this and then from my reply if the committee is interested. This "Aide Memoire" states:

When commissioning of pilots and observers first came to be considered it was estimated that no less than half the posts which graduates in these trades were designed to fill would need to be filled by commissioned officers and that accordingly a fifty per cent commissioning standard could safely be adopted, some 33 per cent to be commissioned on graduation and some 17 per cent after service.

This "Aide Memoire" is very recent. It is since the conference was held within the last month. It goes on to say:

When WO/AGs and AGs began to be needed in large numbers, position was (a) that qualification for these trades were more restricted than for pilots and observers and that candidates rejected for the latter trades could be accepted for the former—

That is quite true. It goes on:

—and (b) that a smaller proportion of posts for which WO/AGs and AGs were destined were posts which justified commissioned rank.

These, I take it, were posts on the establishment. It goes on to say:

It was necessary therefore not only to fix lower rates of pay for WO/AGs and AGs but also to fix lower commissioning percentage for them. Percentage fixed was 20 per cent (10 on graduation and 10 after service for WO/AGs and 5 and 15 per cent for AGs) and even this was not strictly justifiable on establishment grounds.

Experience shows that these percentages did not in fact operate to prevent commissioning of air crews who were clearly fit to be commissioned. On the contrary the difficulty was to get enough aircrews recommended to keep percentages filled, and this despite the fact that the monthly reports had to be rendered on all aircrews eligible for commissions. Had it been otherwise steps would have been taken to increase percentages.

Perhaps the committee will be interested in the reply I made to these two paragraphs. I am dealing specifically with the "Aide Memoire" paragraph by paragraph. The first plan in 1939 was that no aircrew would be commissioned. We insisted that we would not get the proper type unless we promised commissions particularly when we were competing in the open field with the army and navy since conscription did not exist in Canada. It had been said that we thought we should have more commissions in order to carry out our policy. I now quote from my reply to the Air Ministry:

Canada had proposed that all aircrew be commissioned, but in the light of strong opposition from the partners, and being unwilling to disturb the happy relations which had heretofore existed between all parties, agreed to the formula first suggested by the United Kingdom, and finally acceded to by all concerned, namely, "that all who were commissionable were to be commissioned", and on that basis undertook to set up its own standards for commissions. (This was done by substituting the "merit system" for the "quota system".)

The standard established by Canada was based on the marks obtained by the pupil in every stage of his training. The marks considered necessary to qualify for commission on graduation were 60 per cent in each subject and 70 per cent over all.

I went on:

The difference between us is simply this. You persist in the view that an arbitrary figure of 50 per cent of graduates, namely 33 per cent on graduation and 17 per cent after service in the field, are in fact commissionable and no more. We, on the other hand, contend that all those who by the marks obtained in their training and that extends over a period of a year, under the closest possible observation, show that they have commissionable qualities should be commissioned.

We do not hold to the view that an increased number of commissions on graduation will lower the standard in any appreciable degree, any more than an increased number of commissions granted for good service in the field will lower the efficiency of the units or of the individual personnel. On the contrary, we believe that our "merit system" has many advantages over your "quota system" which, however well it may operate with R.A.F. personnel, definitely militates against initiative, ambition and consequently efficiency in our men.

Still on this quota system. Possibly our friends in the British Air Ministry fail to see that although in Great Britain with their population and with the class distinctions that exist there, twenty-five per cent, let us say, or perhaps thirty per cent of the population are of a higher cultural and educational standard than the others, that condition does not exist in this country, where I would say eighty per cent if not ninety per cent of those who enter aircrew are of the same cultural or educational standard. I am not criticizing in any way the British system; it may apply perfectly there and may be good for them, but does not apply to us. Our boys have about the same class background, if you want to put it in that way;

they have the same school background, the same athletic background, and they can mix with one another without any class distinctions. I am not saying that in justification or otherwise of the system in force in the United Kingdom, but I think it should be said, and we have so expressed ourselves.

Mr. COLDWELL: I think that is quite right.

Mr. CASTLEDEN: But the fact is that our boys are being penalized because of their system, because if we grant more commissions than they do we embarrass them.

Mr. POWER: We are not being penalized; we are getting more and more commissions. We are coming up.

Mr. CASTLEDEN: According to a return tabled in the house, seventy-five per cent of the men—

Mr. POWER: But we have improved a great deal since February 28, when those figures were given. The thing is working better now.

Mr. CASTLEDEN: Has the minister any later figures?

Mr. POWER: I gave the figures for March and April. For some reason or other March was a bad month, but April was pretty good and I think May was better. There were other reasons given, and I am again speaking the British piece:

If all aircrews were to be commissioned, situation would soon arise that those of superior ability or whose duties require them to exercise command over others would need to be promoted to flight lieutenant. In that event difficulty of choice will not have been disposed of but will merely have been transferred to the next higher stage in rank.

There is one paragraph here in particular which I think the committee should hear:

When their representative agreed in Ottawa in June, 1942, to abolish percentage basis of commissioning for pilot, navigator and bomber categories, they were under the impression that no lowering of commissioning standards was contemplated and they expected therefore that no material increase in number of commissioned would result. Nevertheless it was felt that percentage basis for pilots, navigators and bombers would have a psychological value.

This is a reversion to the idea that fifty per cent were all that were fit to be officers. Then the committee will remember that there was some statement about a review being made every month, with a report being made on each member of aircrew. I took some objection to that, and said:

Canada has some doubts as to the efficacy of the monthly review referred to since of the nine hundred persons whose names had been presented to the air ministry in November, 1942, as having been recommended on graduation for commissions in the field after actual operational experience the United Kingdom high commissioner reported in January, 1943, that 172 had already become casualties and 200 had not as yet been traced.

In order to bring this thing to a head, last November we took a list of nine hundred men who had been recommended, and who would be in this seventeen per cent, and we found that before any action was taken 172 had become casualties and 200 could not be traced, so that we had some slight doubts as to the efficacy of the review made every month. Then I went on to say:

Canada has no objection to an increase in total percentage of commissions; on the contrary, it welcomes it. It believes that the "merit system" on graduation brings out leaders far more effectively than the "quota system". Furthermore, it considers that the procedure now in effect for commissioning overseas will raise the standard of all R.C.A.F. aircrews, both commissioned and n.c.o. rank. The fact that a commission may be won, irrespective of quota or establishment will provide all the incentive, improvement of morale and consequent efficiency stressed so forcibly in your paragraphs 6 and 7.

Then I go on:

. . . it is suggested that our standard of qualifications for commissions is being lowered, with which we do not agree.

Then with respect to another paragraph:

Canada agreed at the conference of June, 1942, to set up standards instead of commissioning all aircrews, and will loyally abide by its agreement, unless in the meanwhile it can persuade its partners, or what we think more likely, they themselves of their own initiative put into practice their own theory that "all aircrews commissionable are to be commissioned." instead of persisting in the belief that an arbitrary figure of 50 per cent is an immutable law.

The final paragraph in the United Kingdom memorandum is this, and I really think it must have been written by somebody who did not have much of an idea of Canadian public opinion. I am sure it was not written by a high official of the air ministry, because we do get on extremely well with them:

For the foregoing reasons the R.A.F. feel it necessary to maintain existing proportions on graduation. It is entirely for Canada to decide what proportion should be granted in the Royal Canadian Air Force and, whatever may be decided, Canadian authorities may count on loyal collaboration of the air ministry and R.A.F. It is only right to point out, however, that if the Canadian decision results in grant in R.C.A.F. of a substantially higher total percentage of commissions than in the R.A.F., then (apart from considerations already mentioned) belief may grow up in the R.A.F. that the R.C.A.F. are adopting a substantially lower standard of commissioning Whether or not

this were true, result would be a lowering of the prestige of commissioned rank in the R.C.A.F., with consequent adverse effects on existing spirit of cordial cooperation.

The natural answer to that is, "So what?" During the course of my discussions, however, I have learned some diplomacy.

Mr. ROSS (Souris): Would the minister permit a question at this point?

Mr. POWER: May I first read my reply?

Mr. STIRLING: Yes, do.

Mr. COLDWELL: I was going to ask the minister if he could tell us how many matriculated students there are in each of the two air forces.

Mr. POWER: I have not the faintest idea.

Mr. COLDWELL: I think that would have a bearing on this question; how many graduates in arts or science also.

Mr. POWER: We have it approximately, so far as we are concerned.

Mr. COLDWELL: I think you will find that we are very much higher.

Mr. POWER: In answer to this last paragraph I said:

> We desire to express the deepest appreciation for the assurance given that the Canadian authorities may count on the loyal collaboration of the air ministry and of the R.A.F. in whatever action it may take with respect to the proportion of Canadian graduates of the B.C.A.T.P. who may be commissioned.
>
> We are confident that the standard we have set is such as to ensure that those commissioned will have the capacity to measure up to their responsibilities in an efficient and satisfactory manner, and we therefore feel no great anxiety with regard to any repercussions which the implementing of the Canadian method may have on the personnel of the R.A.F. generally.

The battle is still on, I may tell hon. members; we are still continuing the fight.

Mr. GRAYDON: Don't surrender too quickly.

Mr. POWER: Well, I did give in as far as I could. I cannot go further, but I have kept on battling to try to get a hundred per cent commissions.

Mr. ROSS (Souris): Suppose members of aircrew are brought down over enemy territory and taken prisoner; would the minister say on what basis the commissions are granted or the promotions continued?

Mr. POWER: That part of the agreement reads:

> The commission will take effect from the date of the original recommendation by the commanding officer of the unit or, if the recommendation has not been made by the commanding officer, from the date of the recommendation by R.C.A.F. Overseas Headquarters, even if the candidate has become a casualty by the time the recommendation is approved.

I do not know that that will work out very well. It might not have worked out well, for instance, before we started really going to town on this commissioning policy, and when there were no recommendations from the commissioning officers. There would be taken into consideration the recommendation made when the boy graduated from the school in Canada—let us say in 1941. That is what we are attempting to do in some way, when we cannot get trace of them. At least we require a recommendation by his commanding officer, even though it may not be his commanding officer on operations. That is something he has on his file. If we can put that into effect it could have a retroactive effect on a great many of those who are now prisoners of war. But the difficulty is not there. The difficulty is that, in spite of repeated telegrams, I have not been able to find out whether or not Germany wholly recognizes any notification by transferring from Stlag which, I believe, is the camp for non-commissioned officers, to Offlag, which is the camp for officer prisoners. I have not been able to find out whether they recognize promotions of which they are notified after a man has become a prisoner of war. I can say that the Italians refused to recognize this. I happened to see a dispatch dealing with that matter, representations made by the British government to the Italian government, to the effect that they should recognize these promotions and commissions, because the Germans did. And I promptly sent, or had the Department of External Affairs send, a cable, saying, "What ho! who told you the Germans did?" I have not had an answer yet, and that happened some months ago.

Mr. ROSS (Souris): In no case has a prisoner been promoted unless the promotion was recommended before the capture?

Mr. POWER: That is correct.

Mr. COLDWELL: The minister deserves every support, and I believe the committee to-day has shown pretty well that it is behind him in his policy. I asked the question about the number of matriculated students and university graduates, knowing something about educational conditions in Great Britain and in this country, and how difficult it is for the average boy in England—even more difficult than in Scotland—either to get as far as matriculation in a secondary school, or subsequently to attend university, and how relatively simple it is in this country for a boy

who has the desire and the grit to make that progress. I am perfectly well aware that the depression in the early thirties enabled us to have a larger number of young men with higher education than was possible in Great Britain for boys from homes on the same income level. I think the argument of the British may apply to the British situation—although I doubt it much, because they are probably following tradition. There has been a tradition in Great Britain for years that even in cricket, for example, two teams may play in exactly the same way, but one might be termed gentlemen and the other merely players. That distinction remains throughout. It appears in the military institutions, and I imagine it is carried into the air force too.

The minister is to be congratulated. Most of us last year, when we heard him speak about the Canadianization of the air force, which subject he developed on the floor of the house, felt that he was doing an excellent job. I know that this group is glad to support him. As one who has the greatest possible regard for the old land, but who understands the class distinctions over there, and the way in which they are perpetuated, I think the sooner we have complete control of our own Canadian air force, the better it will be for Canada and for our relations with Great Britain herself.

Then, if I may allude to one other point while I am on my feet. The hon. member for Rosedale (Mr. Jackman) is in his seat, and he will recall that while we were at a bomber station in Great Britain a year ago last November we were approached, not by sergeants, but by commissioned officers, and were asked by them if we would use our good offices when we returned to London and came back to Canada to see to it that a common mess could be provided, where sergeant pilots, sergeant observers and so on could meet the pilot officers and other commissioned officers. To our boys over there it was distinctly irksome that the men who flew together and fought together, and sometimes died together, the moment they alighted from their planes were separated into two different messes. That suggestion, made by officers we met in England, enters into this very discussion. The men themselves want to see this distinction erased. I say to the minister that I hope he will go all out, and that he will have good results in the end.

Mr. POWER: There is one other very strong argument used by our opposite numbers in the Royal Air Force. I did refer at the conference to the idea of a joint mess. The matter was discussed, and I gathered from what was said that they had such a thing in the middle east command, and I think in India. I do not know how far we got with it—perhaps we did not get very far. The strongest argument used by the air ministry is this: They say that one does not give commissions for risk taken, for hazards, or for bravery. They say that one gives decorations for bravery; one could win the Victoria Cross. Commissions in their opinion are not given on those grounds, and it is their belief that to give commissions to all aircrew would be making them a kind of supermen.

Mr. GRAYDON: They pretty nearly are supermen.

Mr. POWER: Well, I am just stating their argument. They say we would be making supermen of these men whose duty it is to get into an aeroplane, fly away, fight the enemy, come back and be heroes. They do not put it in exactly those terms, but that is the gist of it. They point out further that if we did that we should take all the crew of a tank, and have them commissioned and, going beyond that, we should extend it to all members of the crew of a submarine—and so on down the list. I do not wish the committee to get the idea that they have not what appear to them to be pretty strong arguments. In the memorandum I received they point out that a man has duties other than his flying duties. I take exception to that, and say most of the boys in the flying squadrons do not do much more than take part in their sortie, and come back and rest. The boys in the fighter squadrons are not on such long operations.

I wish the committee to understand that in these discussions with the United Kingdom we have reached the point where we can be argumentative without being enemies, and where we can discuss and put forward our views in a straightforward, honest and frank manner without being acrimonious. My personal relations with those on the other side, and the members of the air council, are of the happiest. It is just a straight difference of opinion; I think, based upon a difference in temperament, character and upbringing. That is about the size of it. We have to stick to our own side of the question. We have taken this point of view, and I think we should stick with it. Of course if they do not wish to change their point of view, I do not see why they should be forced to do so. I must say however that we caused them some embarrassment.

Mr. JACKMAN: Would the minister say how the United States system is working out?

He said that they had some intermediate rank between their commissioned officers and top sergeants.

Mr. POWER: Yes; it is generally thought that the Americans commission more widely than other countries. As a matter of fact they do not. One of the things, I believe, which influenced the conference was the fact that the Americans were getting away more and more from what might be called wholesale commissioning, or the commissioning of everybody. They were going in the opposite direction from that in which we were going. I think in their permanent force, their pre-war or pre-Pearl Harbor force, they commissioned a much greater percentage of pilots, navigators and bombers than they do now. At the present time they commission only a percentage of their pilots, not 100 per cent, and a number of others are made flight something or other, it may be flight officer, but I cannot remember the name. They are on probation for three months' active service, and possibly longer if they do not make the grade or if they are serving at home. Navigators who must work harder to pass their examinations are commissioned 100 per cent. The percentage of bombardiers who are commissioned is less. I have not these figures at the moment but I shall place them on *Hansard* later. Their gunners or wireless operators are not commissioned at all, they are enlisted men. Their flight engineers, of which we are starting to have some and about which we have not yet come to any agreement with regard to commissioning, are I believe all enlisted men.

If any members of the committee saw the picture "Air Force" which was exhibited here recently and which gave the details of the flight of an aircraft which flew a fabulous number of miles from San Francisco to Hawaii, from Hawaii to Wake Island, from Wake Island to the Philippines and from the Philippines to Australia, will remember that the crew consisted of a pilot officer, a second pilot officer, a navigator officer, a wireless operator air gunner who was an enlisted man, an air gunner who was an enlisted man and who was very cross because he had been remustered from a pilot, as some of them have been here, and a flight engineer who was a sergeant of twenty years' experience.

I have the figures here which were obtained from the air attache and from the United States army, and they indicate that they do not commission as great a percentage of their aircrew as we do. The same thing applies to the German air force which commissions a smaller number than either the R.A.F. or the R.C.A.F. The French air force when it existed consisted to a large extent of non-commissioned officers. I have taken the trouble to get some comparisons. These are not strictly accurate but they will give some information to the committee and I shall place them on *Hansard* as soon as I find them.

Mr. McNEVIN: Mr. Chairman, I should like to make a few observations with respect to the matter under discussion, but before doing so I join with the other hon. members who have extended their congratulations to the minister upon the comprehensive and exhaustive review he has given of the operations of the Royal Canadian Air Force. Like many other districts, the district which I represent has given a substantial number of personnel to the R.C.A.F. and in common with many other districts has suffered a substantial number of casualties. To those who have been bereaved I extend my sincerest sympathy.

There is one item with respect to pay and allowances to which I wish to refer. I have two cases in mind of wives of pilot officers. The one wife is working for the civil service of Canada while the other is a member of the women's division of the R.C.A.F. In each case the pilot officer has assigned $50 per month to his wife. As I say, the one wife is employed in the civil service and receives a salary of approximately $95 a month. She also receives a marriage allowance of $45 a month, which gives her a total income of $190 a month. In the second case the wife has received a B classification in the women's division of the R.C.A.F. and is paid $1.30 per day, or $39 per month. I am not unmindful of the fact that the wife working for the civil service must provide herself with lodging and board and a certain amount of clothing, which would be a matter of expense. There appears to me to be discrimination in connection with the incomes received by the wives of these two officers who are serving in a similar capacity. The one has a total income of $190 a month while the other is receiving only $89 a month. I am of the opinion that in cases where the wife of a member of any branch of our forces enlists she should get the marriage allowance. I understand that in the Royal Air Force the dependent's allowance for a wife without other dependents amounts to four shillings a day, or about $30 a month. There is no distinction in that country between a wife serving in the women's division of the R.A.F. and one employed by the civil service or in some other capacity. I do not know to what extent attention has been given to this matter, but I trust that full consideration will be given these representations.

Mr. POWER: The question of women in the forces generally, that is, army, navy and air, receiving a dependent's allowance on enlistment, is a matter which has been considered seriously by the three services for some time past. There is now before the government for consideration, and I hope early adoption, a submission that the wives of members of the forces should retain their dependents' allowances upon appointment or enlistment to any women's division, to the same extent as if they were employed by the civil service at a salary and bonus of $3,000 or less per annum. As the committee knows, at one time women in the civil service whose husbands were in the forces were obliged to abandon their allowances or give up their jobs, but that system was abolished. The armed forces have been trying to get the same consideration for women in their divisions as is given to women in the civil service, and I have every reason to believe that the suggestion will be adopted.

Mr. JACKMAN: Is it the treasury board that is holding it up?

Mr. POWER: I do not want to blame them for everything.

Mr. CHURCH: This item which relates to pay and allowances was before the committee last year. At that time the minister made a statement and I quoted the discussion which had taken place in the British House of Commons in connection with this question of sovereignty. There are some Canadians who prefer to serve in the Royal Air Force. We had it in the last war. The whole scheme as operated then was that Canadians served in the Royal Air Force. There was no Royal Canadian Air Force then. The Royal Air Force had a headquarters in the city of Toronto, and trained 16,000 pilots and air mechanics. Now a change has come. We have a dual and a duplicate system.

The present minister is a child of the House of Commons; that is what Mr. Churchill called himself, or, as Mr. Churchill also put it, a servant of the House of Commons. It is a great credit to him. His father, too, was a member of the house. No matter to what party an hon. member belongs he knows that if he writes to the minister on any matter, the minister will give him full information to the best of his ability. I hope he will follow the same practice in the course of this discussion on commissions, a discussion which, in my opinion, is of no benefit to the empire training scheme. There should be no division in this matter, no attempt at and no emphasis on status or a divided sovereignty. From this point of view I am opposed to separate Canadian squadrons. Some people believe in separate squadrons, but I am not convinced that we are following the best practice. For instance, I believe that the right way to win the war and to get the best results for money spent is to adopt a system which will not overemphasize the educational test. Education is not everything in the equipment of an air officer.

Consider, too, how we are distributing commissions. There are in this branch no fewer than 5,459 civilians or men who have received commissions from the government without any prior war training. In addition to that, forty-one press officers have been given commissions, though very few have any training in air force work.

I contend that the empire air scheme can be used as a means of uniting this empire as it was never united before, not only during the present war but for what will happen after the battle.

When this item was under discussion last year, many inequalities were disclosed in the printed schedule or blueprint which the minister laid on the table of the house. Without any very evident reason, some had got commissions while others had to be satisfied with the rank and pay of sergeants. I believe too much attention is paid to the application of an educational test on entrance in the air scheme. Beurling could not qualify under those conditions; he, and many like him, had to go overseas at their own expense to enlist.

I wish to compliment the minister upon having a splendid assistant. He adopts the same principle as his chief, in giving the members of the house information about the department. He is one of the most learned men in Canada, and one of the best informed on modern warfare, and a fine soldier himself. He knows what this empire means and what we are fighting for. I have personal reason to thank him for what he has done in connection with one or two matters I took up with him last week.

The estimated expenditure this year on pay and allowances is $238,000,000 as against $148,000,000 last year, an increase of $89,000,000. This additional amount should be sufficient to take care of existing inequalities. Let me tell the minister that nothing has caused more dissatisfaction in all the armed forces than inequalities of pay, because this is a citizens' army, and I may add that few hon. members knew inequalities existed until the minister laid on the table last session a blueprint showing the pay of all ranks from the lowest right up to the top—pay, subsistence allowance and for two to four children and dependency. The inequalities extend to overseas men as well.

Arising out of what the minister said about commissions, I should like to see some allowance made to those young men who, without waiting on the outcome of the division of opinion as to whether we should maintain a separate staff and display our sovereignty in connection with the armed forces before this began and after, went overseas at their own expense, entered the ranks and got commissions in the United Kingdom. I contend that their out-of-pocket expenses should be refunded to them or to their parents, since they incurred a good deal of expense in getting overseas and taking their training. It would be a kind and, indeed, efficient action; it would also be only just to those who did not wait for the war to break out or for the establishment of any empire training scheme, but went over, some in cattle-boats, some with less than the educational requirements for commissions, and worked their way right up to the top of the ladder. In this connection we might bear in mind what other countries are doing. In Germany and in Russia, after many of their generals failed, what did they do? They went out and got civilian generals almost literally off the street. Some of them were called in from commercial pursuits and not only given commissions but put in command of units. I have in mind a speech delivered in the British House of Commons by a very fine soldier and distinguished member of the house, Major Markland, who returned from active service to take part in the debate on this particular subject. It is possible in Canada during the commission test to go too far in emphasizing the importance of educational requirements.

For a long time the department suffered in the city of Toronto from a sort of dual control wielded by the air force and by the civil service commission, and there was considerable complaint about inequalities in pay and allowances. However, the present minister has gone into the matter, and I had a letter from the chairman of the civil service commission stating that a satisfactory arrangement had been worked out whereby civilian workers, except in some very minor cases, were being appointed by the commission.

Inequalities in pay are, however, still continuing. I have already referred to the 5,459 officers reported in return No. 394. I have nothing but praise for the air scheme and system as a whole; it is one of the most glorious achievements in the history of the empire and has done a great deal to hold the empire together. But I cannot understand why it has been necessary to commission 5,459 civilian officers. They are distributed in part as follows: headquarters—430; No. 1 training command—1,148; No. 2 training command—623; No. 3—647; No. 4—577; eastern command headquarters—135; other units of the eastern command—526; western command—161; other units—281; overseas—565. Yet there are others doing good service with a much lower rank and pay. For instance, L.A.C.s, group A, $2.25; group B, $2; group C, $1.75; others, $1.50.

Return No. 216 relates to pay and allowances. It gives a list of forty-one press liaison officers and others engaged in the department, very few of them with any military experience whatever, who wear a uniform and get commissions and officers' pay. It states that they are entitled to "actual out-of-pocket expenses while absent from Ottawa." That may mean anything. A man may be in England; he may be travelling to Australia; he may be going to some other place. One went all over the world at a great cost. I think the committee is entitled to know in more detail what these allowances of rank are.

In conclusion, I wish to say that the work which the department has been doing this last year will write one of the most glorious pages in Canada's war record. Three or four weeks have been taken up in debating the army appropriation. I do not think so long will be occupied with the minister's department. But let me point out that, if the principle which I raised here in connection with pay and allowances in the debate of 1941, and again in 1942, had been carried out, seventy per cent of the questions which hon. members have had occasion to raise on the war appropriation bill could have been answered daily on the orders of the day. The matter can be stated in just a few sentences, and I placed it on *Hansard* in 1941 and early in 1942. In a new book on parliamentary procedure published last summer by G. F. M. Campion, second clerk assistant of the British House of Commons, now Clerk, and knighted, there appears the following: from a textbook which is almost as good as that of our own Clerk:

> Not later than three o'clock the question hour begins. This is a more important item of business than any yet described. It is expected to provide lively moments and seems to be of unfailing interest to members and the public. It is modern and affords a useful method of supervising the administration of the government. Its effectiveness is generally recognized. Questions "turn a searchlight upon every corner of the public service." (Lowel, i.332.) Their chief object is "the explanation to the public of the meaning of political events", and "they are often arranged by the government itself, so as to give them an opportunity of making announcements in a somewhat informal way."

(Redlich, ii, 241 and 242.) They are "serviceable as obviating the necessity in many instances of more extended debate and of motions for papers." (Todd, 1982, ii. 85.) And finally, "Questions afford to the private member under modern conditions almost his only opportunity." (Marriott, i. 571.)

Under our standing order 1, in all cases not provided for in our rules, the usages and customs of the British house shall be followed. I am quite certain that it is a member's right to ask pertinent questions of a minister on the orders of the day being called. The last time this question was before the house the Clerk gave that opinion to a committee revising the rules, and I suggest that, if that opportunity had been accorded us, seventy per cent of the time taken up by the three ministers in answering questions on the war appropriation bills could have been eliminated. Instead of that we have only one opportunity a year on this particular bill for appropriations.

I wish to compliment the minister upon the explanation he has given. In my opinion there should be an amendment to these educational tests now that we have high-school cadets. They are leaving school at sixteen and seventeen years of age to work on the farms, and they cannot have the educational tests that were given in the early days of the war to those entering the air force and going into the manning pools. There should be an amendment along this line, applicable to these recruits, because after all this is a voluntary organization, a citizens' army, and one in which the people of Canada have taken a great deal of interest and of which they are justly proud, and they are interested in it not merely on account of what the air force is doing in this war but on account of the service it will render afterwards to keep the empire together.

Mr. REID: Would the minister care to make a statement with regard to complaints reaching some members, including myself, on the subject of leave of absence granted to men who are fighting in Great Britain or other parts of the world? Complaints have reached me that there is a difference in the length of time of flights which an airman makes from Great Britain over France, depending upon whether he is a bomber or a fighter. For instance, I had a letter last week from a young airman who has been about two years in England and has made many flights over France and Germany. He is a fighter pilot. He states that up to the present he has done about thirty-two flights. Had he been a bomber, he says, he would have been given leave of absence to come back to Canada when he had thirty flights to his credit. He wonders whether, when one makes four flights in one night, those flights are counted as four or whether they are counted merely as one trip. Could the minister make a statement as to the procedure? How long must one of our airmen remain over there before he gets leave of absence, and how many flights has he to make over Germany or France before he is granted that leave?

Mr. POWER: Usually the sortie or mission of the fighter pilot is from half an hour to three-quarters of an hour, whereas the same kind of job of the bomber is from eight to ten hours. They have operational tours. I am not at liberty to state what length of time must be flown to complete an operational tour but certainly there are much fewer sorties in a bomber than in a fighter. Rules are laid down as to how many sorties shall constitute an operational tour for bombers, for fighter pilots, for coastal command, for army cooperation and so on. After an operational tour, the personnel obtain two weeks leave of absence and then are usually posted to an operational training school for about six months and sometimes are returned to make another operational tour. That is about all the information I can give at the moment.

Mr. BENCE: I should like to ask a question in regard to agricultural leave. I have received complaints with regard to No. 7 I.T.S., Saskatoon, in connection with applications for agricultural leave. Early in March application forms were made available for the men there who wished to apply for agricultural leave. I believe the leave is six weeks. Applications were sent out, and nothing further was heard about the matter until an order was issued refusing all leave in that particular station. I refer to air force administrative order A 24-5.

Mr. POWER: Will the hon. member read the order?

Mr. BENCE: I have not it here. A general order was sent out that no leave should be given to the personnel of No. 7, I.T.S.

Mr. POWER: That is aircrew?

Mr. BENCE: Yes. It is an initial training station.

Mr. POWER: They are aircrew?

Mr. BENCE: Yes. I should like to know why individual applications were not considered on their merits instead of a blanket order being issued refusing any leave for

these men, particularly in view of the fact that they had been given to believe, inasmuch as they were supplied with these application forms, that the cases would be dealt with on their merits.

Mr. POWER: At the present time I am keeping all the aircrew I can, and I will for the rest of the war. If a man is in the aircrew, he is not going to be a farmer and he will not get leave. I am not giving farm leave to aircrew. There is to be no extension of farm leaves for ground crew beyond two months. If anyone wants an extension, if he is ground crew and is not valuable otherwise, not a man on whom we have spent $10,000, he will either be in the air force or be a farmer. He will take his discharge if he wants more than two months, but I am not running an air force to go farming, but to fight overseas and to train here. If a man enlists in the aircrew he enlists of his own free will and he must go through the training for a most important job of work, costing us $25,000 if he is a pilot, $27,000 or $28,000 if he is an observer or navigator and so on. I do not think we can afford to let him go away on farm leave. I do not know whether the committee will agree with me, but so long as I have anything to do with the air force, either it will be an air force or they will be farmers and will go back to their farms. I do not wish to have a double-barrelled organization, running farms and an air force at the same time.

Mr. BENCE: That is all very well, and I am not disputing that statement. But I wish to know why these men were given application forms, and six weeks later this general order came through.

Mr. POWER: Probably because I changed the order some time in the last month or so. I am sorry, but I changed the order. It had reached the point where we had to lay down the rule that aircrew were not to be given farm leave, and that rule was laid down. I suppose it affected some particular men who had put in their application before. Whatever rule or regulation is made is bound to affect somebody who is a border-line case. I suppose that some discretion might have been allowed or a warning given, but probably I did not think of it. Perhaps I am to blame for that.

Mr. DIEFENBAKER: That order just applies to aircrew and not to ground crew securing leave.

Mr. POWER: Ground crew obtain leave on application to their commanding officer, but if they apply for an extension after two months we usually tell them: You had better stay home and farm.

Mr. DIEFENBAKER: I asked the minister a question a while ago about the inequality in flying pay between the commissioned officer and the non-commissioned officer in the aircrew. As the matter now stands, the officer receives two dollars a day flying pay, while the non-commissioned officer in the same crew, doing exactly the same work, and often in charge of the ship, receives only seventy-five cents a day. I have heard a great deal of complaint about that. The crew perform similar duties; they are aboard the same ship, all contributing equally in the work of the ship; yet there is this difference made in flying pay. I can understand a difference in pay so far as rank is concerned, but it does seem unfair that the commissioned officer and the non-commissioned officer should not be on the same footing so far as flying pay is concerned. I know the interest which the minister shows in the men, who honour him as their minister, and I would suggest that he give consideration to this matter.

The minister said a while ago, in answer to the suggestion of the hon. member for Rosetown-Biggar that there should be an aircrew mess, that that was being done in the east. As I understand it, the Australian air force has adopted that system and it has been a great contribution to morale among the crews to meet as equals in a common mess when they return from their tours of duty.

I also wish to say a word in regard to the women in the Royal Canadian Air Force and in the other services. As I understand the regulations, any woman who joins the air force and theretofore was in receipt of a dependents' allowance is immediately deprived of it.

Mr. POWER: I just answered that a moment ago.

Mr. DIEFENBAKER: I appreciate that, but it seems unjustified. I would like to know from the minister whether the intention this year is to increase the scope of activities of the women in the air force. I remember very well bringing this matter up in March, 1941, and suggesting to the Minister of National Defence the need of mobilizing the women of this country. He told me at that time that not more than fifteen hundred women could possibly be employed in the army. But with the passing months and years that estimate has been greatly exceeded. To-day, while we pay

tribute and deserved tribute to the men in the air force, we ought also to pay tribute to the women who to-day are serving not only in the air force but in the other armed services.

There is a matter which I had not intended to mention, but I feel that the members of this house owe it to the women in the armed services of this country to protect their names from calumny which all too frequently is indulged in. These women are giving of their best, and while they are honoured generally throughout the country there are some persons who indulge in slander against them. I personally feel that there is one way in which this unjustified slander could be and should be terminated, and that is by a series of prosecutions being taken under the defence of Canada regulations against the rumour-mongers. All of us have occasion to see the wonderful work that these women are doing in the air force and in the other services, and we as members and as Canadians owe it to them to uphold their good name and to assure those who dare to scandalize them that they will be fittingly punished. I suggest to the minister and to the other heads of the defence department that a few prosecutions would put an end to what is all too frequently the contribution of some people who seem to have nothing better to do than to cast aspersions on the good names of those who serve.

Mr. MacNICOL: I have a question to ask the minister in reference to pay and allowances in connection with the fleet air arm. The minister may have said something about it while I was out. If he has not, I shall be glad to get this information. I know a number of young men, highly educated, who have gone over to England recently and joined the fleet air arm. They are young lads less than nineteen years of age. Apparently they enlist one day and within a day or two afterwards are on the way to England. I understand that when they return they go down to the southern states for further training. If the minister is familiar with this—

Mr. POWER: That is the fleet air arm. I have not the faintest idea about that. That comes under the navy, and my hon. friend will have to ask the minister for naval services.

Mr. MacNICOL: Then I will ask about pay and allowances on the navy estimates.

There is another matter on which I wish to say a word. The papers to-day publish the decorations that have been well earned by Canadians. I notice that Mr. and Mrs. Deutscher of Odessa, who have eight sons in the Royal Canadian Air Force, were recently honoured at an outdoor gathering. They deserved it. Has any consideration been given to recognizing those parents who are giving a large number of sons to the armed services? There is a Scotch family in my riding, living at 82 Harvie avenue, Mr. and Mrs. David Seggie, who have seven sons in the armed services; and if any consideration is being given to recognizing in some way parents who have given so many sons to the armed services, this family might be considered. Of course I know it can be said that a family with only one son are contributing much because they are giving their all. Nevertheless I feel that the father and mother of seven or eight or nine sons in the armed services deserve some sort of recognition.

Mr. JACKMAN: The minister was very frank and as explicit as we could expect in regard to the commissioning of our pilots overseas. Might I ask if he could give any more information on the procedure which is being adopted? Are the deficiencies, if I may call them that, in the commissioned ranks of the boys who have been over there for some time being made up by reason of this periodical two-months' review of their record? I understand that the Royal Air Force authorities, in conjunction with Royal Canadian Air Force headquarters overseas, review the record of a man who has been overseas for more than two months. Once they do that; once the case is reviewed by the two authorities, is there a further automatic review every two months or six months? Then the other method of getting a commission is by the member of aircrew making his own application, when he is not recommended by his commanding officer. Are both these systems working, or is one not effective? Just how is the whole matter of rectifying the situation, as we see it, being handled?

Mr. POWER: I think both systems are working. We have liaison officers in, I think, six different districts in Great Britain, and of course in addition we have a headquarters in Cairo. Probably we shall have one in India before long and possibly also one in North Africa. They are intensely interested in going ahead with this commissioning. Our liaison officers visit stations wherever there are Canadians in the Royal Air Force or in Canadian squadrons, and by that means we are pushing forward these commissions. I gather from the air ministry that they are doing their best to bring them to the attention of the officers who finally pass upon them. Then last November, as I said a moment ago, we hit upon a plan of handing to the air

ministry nine hundred names of men who had been recommended, and said, "What about it? These fellows were recommended on graduation. Why don't you give them their commissions?" They have been looking for some of those men ever since. We have also hit upon another plan, of going right back to the inception of the training plan, and every one who has had 60-60-70 is given a commission. That is one way of getting more of them in. Usually we do consult the authorities, to see whether or not there is anything against a man, but we are commissioning back as quickly as we can in that way, so that we are making up for a good many who are of the backlog. With the representations we are making I think perhaps the provision with respect to personal application for a commission will not be so necessary as it appeared to be a year ago, when it was first introduced.

Mr. JACKMAN: In order that the review provision and also the personal application may not become dead letters, is there a special section of the Royal Canadian Air Force overseas set up to deal just with those matters?

Mr. POWER: No; but we have a personnel section overseas which deals with all the interests of our personnel. I do not think a week goes by without my reminding the air officer in command overseas that he has a job to perform in getting commissions through for our boys over there. This seems to be one of the important things we do, to stir up our own people and have them stir up the air ministry. I can assure my hon. friend we are just camping on their trail as constantly as we can.

Mr. JACKMAN: Then may I ask a question in regard to the marks of the boys who are now going through. As I understand it, the total marks are in three classifications; for ground work or theory, for actual flying, and for character and leadership.

Mr. POWER: Yes. The third classification used to be called, "officer qualities," but we changed it to "character and leadership."

Mr. JACKMAN: Is that simply a matter of what an officer thinks of a man from his observation, or has it to do with anything written? It is pretty much a matter of opinion, I suppose.

Mr. POWER: I could send my hon. friend a copy of form 211, which covers both sides of a very long page. It has to do with a man's aptitude, his initiative, how he acts, whether he does things without being pushed to do them, whether he gets along well with his fellow men, whether he does this, that and the other thing.

Mr. JACKMAN: It sounds pretty scientific.

Mr. POWER: I think it was made up by a man who was employed by one of the large insurance companies for the purpose of checking on personnel and by an officer by the name of Chant.

Mr. JACKMAN: I think there is a psychology professor by that name.

Mr. POWER: I believe he is a psychologist, and if I am not mistaken he was employed by one of the large insurance companies at Hartford. In any event, he had been doing this sort of work for an insurance company and, with the assistance of others, he drew up this form 211. I have no objection to showing it to anyone in the house. It is a complicated affair, but I am told that it does bring results.

Mr. JACKMAN: Perhaps hon. members would not succeed in that test any more than the minister succeeded in the other one.

Mr. POWER: There are a great many of my hon. friends who would not succeed on that test, I am sure; there are questions with regard to sociability, politeness, garrulousness. All the prominent characteristics of members of this house, as well as the general public, would be checked and marked. There are a great many to whom I would not give a commission under form 211.

Mr. CASTLEDEN: Perhaps the minister would answer a couple of questions which were asked yesterday. The first was, why does the air force not pay the members of the women's division the same pay as men for equal work? The other question was why dependents of members of the women's division are not given dependents' allowances.

Mr. POWER: In reply to the second question, that is under way, and I confidently expect that within a few days it will be settled. In regard to the first question, I really do not know why we do not give the same rate of pay to women. Originally in both the army and the air force women were paid two-thirds the basic male pay. I do not know where it came from, but I am told we followed the example of Great Britain. In any event, the suggestion now up for consideration is that the basic rate of pay for women be increased to four-fifths, or eighty per cent. I made some inquiry in the matter just before I came here to-day, and I am told that this is the ratio between men and women

in Great Britain. What that has to do with us, I do not know, but someone hit on that. Then the question arose as to trades pay, and some of us took a very strong stand that if a woman were performing the work of a man in a trade, at least she should get the same trade pay; she was getting only two-thirds before that. A man doing a job as parachute packer in our lot, say, would not be as good at that job as a woman, but he would be getting twenty-five or fifty cents trades pay, whatever it might be, while the woman would be getting only two-thirds of that. We have made representations that the women be put on a level with the men so far as trades pay is concerned. I think the provisions of the new pay schedule for women will be: first, a raise from two-thirds to four-fifths of what is paid the men; second, full trades pay for the work done; third, dependents' allowances, just the same as though the woman were employed in the civil service or in any civilian capacity.

Mr. CASTLEDEN: Has the minister any idea when these new rates of pay may come into effect?

Mr. POWER: They should come in soon, because the matter has been hanging for a long time.

Mr. EMMERSON: I should like to ask the minister if our men in the R.C.A.F. overseas are able to draw the full pay and allowances of their rank now, or is the situation the same as it was some time ago, that they are paid on the basis of the R.A.F. pay?

Mr. POWER: We are still deferring pay. I think, however, when the boys go on leave they are allowed to draw a portion of their deferred pay.

Mr. BRUCE: Perhaps it would not be inopportune to say a word at this time about the medical service the minister has established in connection with the air force. I know something of the work of the men connected with that service, and I wish to commend him upon the splendid staff he has been able to get together under, first, the able leadership of Doctor Ryan, whose rank I am never sure of—

Mr. POWER: The hon. member is not the only one who makes mistakes of that kind. The minister does not know all the ranks yet.

Mr. BRUCE: I believe Doctor Ryan was air commodore. I believe Air Commodore Ryan was the first medical officer who assisted the minister in the development of a medical service for the air force. Then, when he left he was followed by Air Commodore Tice, who is the very worthy succesor of Air Commodore Ryan. In that service we also have Professor Best who, I believe, is a squadron leader—or has he gone higher than that?

Mr. POWER: I do not know.

Mr. BRUCE: And there are a great many others, including Doctor Tisdale and Doctor Clark Noble, who are doing extraordinarily good work in connection with the scientific side of flying.

I do not think the public realizes fully what that service means. It is a highly specialized part of medicine. For the last two or three years some of these men have been undertaking scientific research in various parts of Canada, and the results of their efforts have led to a great improvement, not only in detecting men who are incapable of flying, but in developing methods which will improve the efficiency of the flying service. I do not think any words of mine could too greatly exaggerate the great value of the scientific contribution made by the medical service for air.

I have heard criticism from some parts of the house about there being three medical services. Well, there may be some merit in the criticism—I am not prepared to express an opinion at the moment. I can conceive of there being one head and three branches, for the air, the navy and the army. There might be efficient coordination, if that were done. But at any rate, starting from scratch, the minister has developed a medical service in his air force which is second to none anywhere.

I regret I was not present in the house the other evening when the minister made his first presentation. I wish to commend him upon his admirable report, and the frank manner in which it was given. I am sure the development of the air training plan has met with the approval of the majority of people in Canada, certainly the majority of those with whom I have talked. I always think that frankness has its own reward, and hon. members feel when they question the minister that they receive an honest, straight and quick reply.

Mr. MARSHALL: I should like to express my appreciation of the splendid work the minister has done in connection with the air training plan. Some little time ago I placed on the order paper some questions which related specifically to the recognition by way of promotion for merit of radio technicians in the Royal Canadian Air Force who are serving overseas. On that occasion the minister said that he would be pleased if the question could

be taken off the order paper, and that he would answer fully when the war appropriation bill was under consideration.

In connection with this matter I would quote briefly from a letter which, I believe, covers the matter I have in mind. This letter was received only a short time after my questions were placed on the order paper. It states:

As a member of the R.C.A.F. enlisted as a radio technician or "radio D.F. mechanic", as they are now called, I would like to bring to your attention certain facts regarding conditions in this branch of the R.C.A.F. . . .

While writing as an individual, I may state that my views expressed here are shared by a large number of people, both within and outside the R.C.A.F. These views are certainly those of the majority of radio technicians. As one of a group of 500 here waiting posting to Clinton, Ontario, I have been able to discuss the subject with a large number of them, and most of them feel the same way as I do on this matter.

Our main grievance is the lack of promotion in the R.C.A.F., once we complete our course and go on active duty. Our course is one of the hardest in the R.C.A.F., consisting of eighteen weeks study on radio principles at a university, and then courses on radio-location at Clinton, Ontario. Those passing the examinations at the end of the university course are reclassified from A.C.2 to L.A.C. and also get "B" trades pay, so that their pay increases from $1.30 to $2 a day. The Clinton course is six weeks, but approximately 50 per cent passing this course take a second course of two months. A very small percentage of those successful in the second course receive commissions. All the remainder are posted out as L.A.C.'s, "B" grouping, to active duty.

All the evidence that I have seen, both in the form of letters from radio technicians on active service, and press reports, show that we receive no further promotion. A number have obtained "A" trades pay (25 cents a day more) and a few, corporal's stripes, but the great majority remain L.A.C.'s. Many of these men are university graduates in arts or science, and a number qualified to obtain commissions in the army. They preferred the Air Force to the army, however, and being ineligible for aircrew, were told that their qualifications and education could be best used in the trade of radio technician. An examination of a list of graduates of any university who have enlisted in the R.C.A.F. shows that practically all those in any branch except radio-location work are commissioned officers, holding their rank because of their education and technical qualifications. But of those enlisted as radio technicians, 90 per cent will be found to be only L.A.C.'s. I have personally examined the lists appearing in the quarterly issues of the McGill *Alumni News* and know this to be a fact as regards McGill graduates, serving in the R.C.A.F.

Radio technicians feel strongly that they are getting a "raw deal" and that either their services and abilities are not being properly recognized or that, if they cannot advance beyond the rank of L.A.C., then their talents and abilities are misplaced and could be used to better advantage elsewhere in the R.C.A.F. or in the other services. This feeling is strengthened when they see large numbers of men receiving promotions to N.C.O. ranks in other branches of the R.C.A.F., often soon after they have completed their courses. They see "washouts" from the radio mechanics' course remustered into other trades where they quickly obtain N.C.O. rank. If they had joined the army for radio-detection work, they could have obtained sergeant's stripes; if they had enlisted in the navy for submarine detection work (a course similar to the R.C.A.F. radio-detection work) they would have been given the rank of petty officer. The American army gives either N.C.O. or specialist ranking to all their radio technicians. And when they find that being an L.A.C. makes them liable to fatigue and general duties and ordering around by disciplinarian N.C.O.'s, many with not half their intelligence, then they wonder why they entered the course at all. . . .

Most people with whom I have discussed this subject feel that radio mechanics should receive n.c.o. rank as corporals and sergeants following completion of their course, or they should be rated as technical n.c.o's and specialists as in the American army. Almost without exception, every member of the R.C.A.F., whether aircrew, radio technician or in some other trade, definitely believes that radio technicians are not getting their fair share of promotions in the R.C.A.F.

That was sent to me by a graduate of the university of Alberta who is a B.A. and also a Bachelor of Liberal Science of McGill. Would the minister be good enough to make a comprehensive statement with respect to this matter?

Mr. POWER: The matter of radio mechanics is another matter that requires a great deal of explanation. I have a statement that I am ready to make, but I do not think I could give it inside of ten minutes. A number of hon. members are interested in these radio mechanics and there is quite a story to be told. I should like to make this statement to-morrow.

In the meantime I can answer some of the questions asked by the hon. member for Lake Centre. First, he wanted to know why officers receive $2 a day flying pay when other ranks receive only seventy-five cents a day. In answering this question I may say the developed view regarding the flying pay is that it must be regarded primarily as payable for the qualifications of being graduated through a course and of being able to fly operationally as part of an aircrew and of being under continuous liability to fly. An officer meeting these qualifications receives $2 a day flying pay, whereas a sergeant pilot receives seventy-five cents a day flying pay and seventy-five cents trades pay, or a total of $1.50. The difference of fifty cents a day is attributed to the higher responsibilities devolving on an officer and the greater expense incurred by an officer in obtaining the recreational facilities which are so necessary for aircrew. The officer who sent me this communication adds what I

think is the crux of the situation when he says that the difference arising for officers and air men is a carryover from peace-time practice. I shall be ready to answer any questions dealing with pay and allowances and with aircrew even though we may pass this item to-night. However, if the committee does not wish to pass it, it is all one to me.

Mr. BRUCE: A moment ago I referred to Professor Best, who I wrongly stated was in the air force. He is actually in the navy, but it was an associate of his in the Banting institute, to whom I was referring, Squadron Leader Frank, who has made great progress in our knowledge of high altitude flying.

Mr. JACKMAN: There is another matter in connection with flying pay or whatever it is called technically in the service. Certain high administrative officers get this allowance even though they do no actual flying, or certainly do not pilot planes themselves. Is this not just a hangover from olden times? Is there any justification for a man who of necessity sits behind a desk, not because of any desire I admit, still receiving this $2 a day additional? It is like some other things we sometimes come across in this parliament. For doing something people receive money which they may be entitled to when one considers the over-all picture, but are not entitled to when the specific item is considered. Perhaps the pay of these officers who are receiving this $2 flying pay should be raised.

Mr. POWER: These officers are on what is called the general list. This list was revised some years ago, I am not certain just how long ago, and a certain number of officers who were fliers in every sense of the word and most of whom were performing duties connected with active flying although they might not actually pilot planes, were retained on the list even in peace time. Now that their duties call for more flying than they did before, it would be very difficult, in effect, to reduce their pay. They are general list officers, and they get that additional pay compared with the man who is on the non-flying list. During war time they have greater responsibilities and more work to do, and to reduce their pay would be contrary to what we have been doing generally.

Mr. JACKMAN: Some difficulty would arise where you have a man who was in the air force in the last war and who would not be on the general list. I know of one wing commander who has the Military Cross —he may have been in the infantry—and who is in charge of a station. He does not receive this pay, while another man with the same rank at another station does. There does not seem to be much reason to have this difference in pay to two men with the same rank and doing the same job. If this is a hangover from olden days, perhaps it could be rectified by an increase in pay to the one officer. No matter how large your air force may be in peace time, it will not be great enough to carry on during a war, and you will have to bring in additional men who may or may not be entitled to flying pay. I suppose this flying pay is paid simply because a man has his wings?

Mr. POWER: Flying pay is another thing. These are general list officers. The other is casual pay which an officer gets who is not a general list officer.

Mr. JACKMAN: Are you on the general list if you have your wings?

Mr. POWER: I could not say. At one time either the treasury board or the minister drastically reduced the number of men on the general list. Whether the number has been increased since the war started, I could not say. I shall have to look into it and I will let my hon. friend know.

Mr. FRASER (Peterborough West): Are the men stationed in Alaska or in the United States paid in United States funds?

Mr. POWER: I do not know, but I shall find out. We have under consideration now the granting of an increased rate of pay to men in Alaska, but I could not say whether they are paid in United States funds.

Mr. FRASER (Peterborough West): There are some men stationed in the United States.

Mr. POWER: There is some provision about those who are in the United States.

Mr. FRASER (Peterborough West): I know the men at the legation in Washington are paid in United States funds, and then deductions are made.

Progress reported.

At six o'clock the house adjourned, without question put, pursuant to standing order.

Thursday, June 3, 1943

The house met at three o'clock.

STANDING ORDERS

Third report of standing committee on standing orders—Mr. Golding.

PRIVILEGE—HON. MR. HANSON

PRESS REPORT OF VISIT OF MEMBERS OF PARLIAMENT TO BUFFALO

Hon. R. B. HANSON (York-Sunbury): Mr. Speaker, on a question of privilege, in the Montreal *Standard* of May 29 there appeared under an Ottawa dateline a news item which indicated among other things that fifty members of this House of Commons were derelict in their duty in leaving this house on Friday last, and in fact we were indicted as having played hookey. On behalf of all my colleagues who made that journey, as well as on my own behalf, I desire to repudiate the implications of this article. May I be permitted to say, sir, that those of us who journeyed to Buffalo last week, where we inspected the great plants of the Curtiss-Wright corporation and other companies, went not as schoolboys escaping from school. We went on an educational tour to see and to learn at first hand of the splendid progress being made in aeroplane production by our great and friendly neighbour, to learn of the great contribution being made to the cause of the united nations, both by industrial giants and by the working men and women of the United States; and over and above all that we went as ambassadors of good-will from Canada to the United States. It was my privilege, along with my friend the hon. Minister of National Revenue (Mr. Gibson) and my friend the hon. member for Vancouver Burrard (Mr. McGeer), to pay tribute and give full expression to that attitude of heart and mind on the part of the people of Canada to the people of the United States. I am firmly of the opinion that it would be of great advantage to the common cause if there were more of these journeys with the same intention. Finally, instead of chastising the hon. member for Hamilton East (Mr. Ross), by whose kind invitation we were enabled to make that journey, I think we should commend him and on behalf of my colleagues who are so much indebted to him for his kindness, I here and now offer him our generous and sincere thanks and commendation.

72537—208½

DOCTOR EDUARD BENES

ADDRESS TO MEMBERS OF SENATE AND HOUSE OF COMMONS TO BE PRINTED IN OFFICIAL REPORT OF DEBATES

On the order for motions:

Right Hon. W. L. MACKENZIE KING (Prime Minister): Mr. Speaker, hon. members of this house and such members of the senate as were in the city to-day had the privilege of listening to a memorable address at noon by His Excellency Doctor Eduard Benes, President of the Czechoslovak republic. It will, I am sure, be desired by hon. members generally that the address delivered by Doctor Benes should be given a permanent place in the records of this parliament. I would therefore move, seconded by Mr. Crerar:

That the speech of His Excellency Eduard Benes, President of the Czechoslovak Republic, delivered this day before the members of the Senate and the House of Commons, be printed as an appendix to the Official Report of the Debates of the House of Commons, and form part of the permanent records of this house.

Mr. E. G. HANSELL (Macleod): May I ask the Prime Minister if under this motion his introduction of His Excellency as well as the speeches given by the Speaker of the Senate and the Speaker of the House of Commons are also to be recorded? I am in favour of that. I do not understand French and was unable to grasp the speech of the Speaker of the Senate, but judging from the applause I think it should be recorded. May I at this time express my personal thanks to you, Your Honour, for your inspiring message this morning. I am sure that if the Prime Minister would include in his motion all that was said this morning, it would be acceptable to this house.

Mr. MACKENZIE KING: I might say that in the motion as I presented it I did not include the "et ceteras", either before or after, but I do thank my hon. friend for his suggestion, and if the house approves it, I shall regard its approval as a compliment, as I am sure also, will Their Honours the Speakers.

Mr. COLDWELL: Was a verbatim record made of what was said?

Mr. MACKENZIE KING: Yes.

Motion agreed to.

FALCONBRIDGE NICKEL COMPANY

REFERENCES BY PRESIDENT OF THE COMPANY TO NORWAY REFINERY

Right Hon. W. L. MACKENZIE KING (Prime Minister): The hon. member for Rosetown-Biggar (Mr. Coldwell) has drawn the attention of hon. members of this house to the following statement made at the annual general meeting on April 21 of the Falconbridge Nickel Mines Limited by the president of the company:

> Incidentally, you will be glad to learn—as I was—that through indirect channels it is reported that your Norway refinery is safe so far, and is being maintained. It is in operation by your Norwegian staff, under German control, on the same Norwegian nickel-copper ore production that we formerly handled on toll basis.

I regret to have to confirm that the statement to which attention has been drawn was in fact made by the president of Falconbridge Nickel Mines Limited, and is printed in the report of the annual meeting of the company. It is a deplorable statement, from which the inference could be drawn—I am sure unfairly—that the property interests of the company were being put above the prosecution of the war. We know that the German government is very short of nickel, and it cannot be doubted that it would be to the advantage of the united nations if the Falconbridge refinery in Norway were to be rendered wholly inoperative.

On behalf of the government, I should like to repeat the regret that such a thoughtless and ill-considered statement should have been made by the responsible head of an important Canadian mining company, which in its own operations in Canada is making a very useful contribution to the united war effort.

Mr. COLDWELL: I would ask the Prime Minister what the government propose to do about it, because this statement is much more subversive than some statements for which men have been incarcerated, or interned. I should like to know what the government proposes to do, not what it says.

Mr. MACKENZIE KING: Well, I may say that the statement which I have just made will, I believe, be more effective in its results than any other measure which the government could possibly take.

MAN-POWER

MOTION FOR ADJOURNMENT UNDER STANDING ORDER 31

Mr. JEAN-FRANÇOIS POULIOT (Témiscouata): Mr. Speaker, I ask for leave to move for the adjournment of the house to discuss a definite matter of urgent public importance, namely, that the government should take immediate steps to provide a solution of the agricultural man-power shortage.

Mr. SPEAKER: I received a copy of this motion before I came to the house. The hon. member for Témiscouata moves, seconded by the hon. member for Chambly-Rouville (Mr. Dupuis):

That, whereas agriculture is an essential industry and whereas seeding operations are an essential part of such an industry;

Whereas, according to the telegraphic crop report published June 1, 1943, 3 p.m., by authority of the Hon. Minister of Trade and Commerce, "spring seeding operations have been delayed in almost all sections of Canada but particularly in the five eastern provinces and British Columbia. In the maritimes the weather has been cool and backward with planting operations considerably delayed. Much seeding is still to be done. . . . In Prince Edward Island the season is backward. . . . In Nova Scotia not more than 10 to 20 per cent of the land is at present seeded. . . . In New Brunswick spring seeding operations are delayed, with probably 75 per cent now completed. . . . In Quebec farm work has been delayed by the backward spring and only a small percentage of spring seeding has been completed. The late, wet spring has hampered seeding operations in all sections of Ontario except the northern areas. . . . Spring has been exceptionally late in most areas of Quebec with heavy rains delaying seeding operations. Much of the heavy low lying lands are still unworkable. . . . In some districts no seeding has been attempted. . . . The late, wet spring has hampered seeding operations in all sections of Ontario except the northern district. In some sections no seeding has been attempted. . . .

Whereas the delays in seeding operations is partly due to weather conditions, it is mainly due to the shortage of experienced and physically fit agricultural man-power;

Whereas several experienced and physically fit farmers are actually in training camps of the army and of the Royal Canadian Air Force, and a number of others have been called for their military training;

Whereas, numerous applications made by farmers, farmers' sons and farm helps for leave have been turned down in too large a number by their commanding officers, and numerous requests for the postponement of the military training of the farmers, the farmers' sons and farm helps have been turned down in too large a number by the mobilization boards;

Whereas, unless those men are returned at once to the land for the seeding and other agricultural operations, the army and the civilian population as well are exposed to suffer from famine next fall, and it will be impossible for this country to supply our army overseas and our allied nations with necessary food;

This house shall be adjourned to discuss a definite matter of urgent public importance, the government should take immediate steps to provide for a solution of the agricultural man-power shortage.

The form of the motion is rather unusual; it is not the common practice to present an argument on a request for the adjournment of the house, but I have come to the conclusion that this is a matter the house might wish to discuss. Therefore, unless objection is taken, the hon. member has leave to proceed.

Mr. MACKENZIE KING: I do not wish to take any exception to the house discussing the important question of man-power, particularly in relation to agriculture; but the house already has devoted a great deal of time to that very subject, and a day or two ago it was understood that after we completed the statements of the ministers of defence we might take as the next order of business the question of man-power, even before going into matters pertaining to the Department of Munitions and Supply. I do not think it will be very long before we reach the discussion of man-power, and the question of agricultural labour and the measures necessary to meet the needs of agriculture inevitably will come up as soon as that discussion is entered upon.

The hon. member who has just offered this motion has devoted a good deal of time to discussing various matters in the house, including the subject now proposed for special discussion. He has not been deprived of the opportunity of speaking whenever he so desired, but I do think, however, that hon. members generally would prefer to go on with the business which is before the house at the moment, having to do with the appropriation necessary for purposes of the war, including the very matter to which my hon. friend refers in his motion, and not to have that discussion interrupted at this time and the time of the house if not wasted at least not turned to the greatest possible advantage as should be the case with all discussions at this stage of the session. I believe if the consensus of hon. members were taken before this motion is put, as to those who favour an immediate cessation of a consideration of the business set out for to-day in order to discuss this particular motion, it would be found that the house is overwhelmingly in favour of proceeding with its regular business.

Mr. GRAYDON: Do I take it from the remarks of my right hon. friend that he is going to accept the suggestion I made across the floor of the house the other day, that immediately the war appropriation estimates of the Minister of National Defence for Naval Services are concluded the Minister of Labour should go on with his estimates?

Mr. MACKENZIE KING: I have not had a chance to discuss the matter with my colleagues the Minister of Munitions and Supply and the Minister of Labour; unfortunately one or the other of us has been absent from the country during the last day or two, since the subject was mentioned by my hon. friend. However, I think he may take it for granted that in so far as it may give promise of expediting the business of the house, we will seek to meet the wishes of the opposition in the matter.

Mr. COLDWELL: I was unaware that any agreement had been reached with regard to the order in which the departments would be taken up.

Mr. MACKENZIE KING: It was discussed on the floor of the house; there was no definite agreement.

Mr. COLDWELL: I was surprised when the Prime Minister said the Department of Labour would be next, because it seems to me the logical order would be the Department of Munitions and Supply and then the Department of Labour. In any case, Mr. Speaker, I think the problem raised by the hon. member for Témiscouata is one which does affect a very large part of the country. Recently I was out west for a day or so, and I was told of the acute shortage of men on the prairies and of the difficulty of obtaining the necesary help even from men recently called for their basic training, who are the men required on the farms at this time in order to complete the seeding. I think there is some merit in the suggestion that this is a matter of urgent public importance.

Mr. BLACKMORE: I believe this matter is of sufficiently urgent public importance to justify our taking at least a short time to discuss it. We may go on for several days with each of the remaining departments, just as we did with the Department of National Defence, and by the time that discussion is concluded it will be too late to take care of the problem with which this motion is designed to deal. Therefore I would favour spending such time on this matter as the house sees fit to devote to it.

Mr. SPEAKER: Standing order 31 deals with a motion such as this, and subsection (3) reads:

He then hands a written statement of the matter proposed to be discussed to the Speaker, who, if he thinks it in order and of urgent

public importance, reads it out and asks whether the member has the leave of the house. If objection is taken, the Speaker requests those members who support the motion to rise in their places and if more than twenty members rise accordingly, the Speaker calls upon the member who has asked for leave.

I take it that objection has been raised to the motion now before the house; therefore I would ask hon. members who support the motion of the hon. member to rise in their places.

And more than twenty members having risen:

Mr. SPEAKER: A sufficient number having risen, the hon. member has leave to proceed.

Mr. POULIOT: Mr. Speaker, I shall not take much of the time of the house, but this matter is so important that it deserves immediate consideration, particularly in view of the telegraphic report of June 1 issued by the authority of the Minister of Trade and Commerce (Mr. MacKinnon). Most hon. members have read or heard of this report, which indicates that this is not a matter that can wait. This question must be settled at once, in view of the importance of agriculture in this country.

Let me say, sir, that I am not speaking with any political or partisan bias. I think it is my duty as a member of parliament to bring to the attention of the government the plight of many farmers who are too old to continue to look after their farms and who cannot get any help at all. I have a mass of files here which indicate that throughout the country farmers are suffering from an acute shortage of manpower. In British Columbia as well as in Ontario, Quebec and the maritime provinces, owing to weather conditions seeding operations are a month late; according to the official publication I have mentioned, in Nova Scotia only one-tenth of the seeding had been completed by June 1. I was in my own constituency not long ago and I noticed that the farmers are far behind in their work as compared with other years. What I want, and it is the desire of farmers I have met from all parts of the country, is that their case should be seriously considered now by those in charge of the Department of Labour and the Department of National Defence. It will be a very wise thing for the Minister of National Defence (Mr. Ralston) and the Minister of National Defence for Air (Mr. Power) to give definite instructions to the end that all young men of military age who are at present in training camps, who have had experience in agriculture and whose presence is needed on the farms may be given sufficient leave to enable them to help their fathers or those for whom they work in operations which are essential not only to the welfare of the country, including both military and civilian populations, but also to our soldiers overseas and the hungry people of the allied nations.

It is time to see to this matter, and we are not disturbing the work of the house by directing its attention to such an important problem. We shall not harvest what has been sown if the seed is not placed in time. The harvest will be nil. We cannot take it for granted that the weather will be just as auspicious this year as it was last. We know nothing about the weather we shall have this summer and fall. But we do know that the spring weather has been very bad, and for that reason nothing which can promote farming in this country should be neglected.

It is also important that definite instructions be given by the Minister of Labour to national selective service and the mobilization board that they shall not call at this time men who belong to the farm and the land. A certain number of men in the army are farmers, farmers' sons and farm help. Their presence is badly needed now on the land.

There are some who hold the view that some farmers have not complied with the regulations, and that therefore they should go to their commanding officers to ask for the granting of leave. What happens? I remember well the fight I have made for the farmers, right from the beginning. I remember, too, discussing the matter thoroughly with the late Mr. Lapointe, with the present Minister of National War Services (Mr. LaFleche), with certain officials of the Department of Labour and others of the Department of National War Services. I sent to all the ministers, so that they might have them translated, all the representations made on behalf of the farmers, articles which were published in a weekly appearing in my county. That publication informed them of the conditions of farmers in eastern Canada.

I remember well that the regulations of the Department of National War Services first described agriculture as a seasonal occupation. I had a long fight before I succeeded in having that occupation described not only as seasonal but also as essential. The grain growers in the west may put gasoline in their tractors in the spring and take it out in the fall. But the work of the eastern farmer and the farmer in British Columbia is entirely different. They must do a whole year's work, and each day must work from dawn to dusk. Those representations had to be made.

I remember that after the order in council was approved a publication was issued by the Department of National War Services giving some explanation with regard to the work of the farmer. That publication was not complete; it was an aftermath. It seemed to justify the assertion that the farmer's occupation is seasonal, whereas it is not. It is an essential occupation lasting the whole year.

After that we had to fight with the boards. Some progress has been made; but now we have reached the point where we want put into force or have fulfilled the solemn promise made in March of last year by the Prime Minister (Mr. Mackenzie King) that the farmers would be exempted from military service. A directive was issued the day after by the Minister of Labour; but in my seat in the house I heard the Prime Minister make that statement, and on the following day I saw in all the newspapers the statement: "Farmers Exempted from Service".

We shall not be afraid to come to the defence of the farmer. In peace time he is praised; in war time he deserves equal praise, because he ranks with the soldiers in the services in the importance of the task he performs for the country. I want a definite policy with regard to farmers. I do not want to have them deceived by fool talk; let them be told the truth. They should be told what the government has decided with respect to them.

Only a few days ago we heard an imperialist as noted as the hon. member for Parkdale (Mr. Bruce) speak about the stress placed on agriculture. He made that statement because he could not get enough man-power to help him on his farm, and had to sell his stock. He is not alone, because there are many farmers who either cannot work at all on account of physical disabilities, or cannot get help for their farming operations. This is a serious problem, and it is one with which the country is now confronted.

What happens now? The young man is called by the registrar to pass his medical examination. These examinations were not always satisfactory, but I shall not speak about them to-day. If the mobilization board decide that the reasons given by a man for staying on the farm are not sufficient, he is compelled to continue his training. These farmers have not received the attention they should from the board. If they stay a little longer on their farms for seeding operations or to do any other urgent work that may be needed to be done, they are told that the mobilization board has nothing to do with them and that they must return to their regiments and submit a request for leave to the commanding officer. What happens? In some cases it is granted, but in other cases it is turned down. When it is granted, what happens? It is sent to Ottawa to the adjutant-general's branch. According to a statement made by the Minister of National Defence in answer to a question asked by myself, there are no agricultural experts in the Department of National Defence. Such experts are necessary to decide the cases of farmers, but the view is held there that all young men of military age who are physically fit should be in the army. Apparently they consider that farming should be carried on by young men who are physically unfit or who have been rejected by the army.

That is one reason why we have so much difficulty; the army wants all the men who are physically fit. No one will deny that agriculture is an essential industry, but this would seem to be denied by the answers given in a large number of particular cases. When the theory is admitted by all, why is it not applied to all deserving and worthy cases? What do these men in the adjutant-general's branch of the Department of National Defence know about the work that the farmers in my constituency have to perform? They know nothing. If at least they were deciding these cases according to common sense, even though they had no particular experience in farming, I would say that they were showing some common sense, but they show none. I could quote innumerable cases where farmers have been fooled or foiled, where they have not been given justice. And yet we are told to produce more.

Many farmers in my community are interested in dairy farming, in hog raising, in stock and sheep raising and in other farming activities. Not all of them have tractors; some have fine horses and they must plough with a horse or two. Another thing I have noticed, a thing with which I think the majority of members will agree, is that most farmers who have reached the age of fifty years suffer from rheumatism. From boyhood they have had to work hard, and when they reach that age they are no longer able to do the work of the farm and must rely on their sons or on younger men who are physically fit. Those who drafted the regulations were not fair to the farmer.

The first Minister of National War Services was the present Minister of Agriculture (Mr. Gardiner). That was a bad arrangement, because the duty of a minister of agriculture is not to send boys to the training camps; it is to keep them on the farm so that they will be able to produce. But it was with the connivance of the Department of Agriculture that these young men were taken from their homes

and sent to the camps. Agriculture suffers now. Why? It suffers because of the injustice done to farmers by these mobilization boards. These farmers were told that they would have only one or two postponements at the most, after which they would have to join their regiments. Now it is not possible to get them out of the army to do the needed work on the farm.

We read in the public press and in magazines similar to the one published by the Canadian Chamber of Commerce about the manpower shortage on the farm. Everybody recognizes that there is such a shortage. It is the topic of conversation on trains, on street-cars and on our streets. People are wondering whether we shall have enough to eat next winter, whether our harvest will be good or not. We are then faced with the practical question of whether Joe or Tom is to go to the camp or is to stay on the farm. Some people contend that it is his duty to go to the camp, that if he does not do so he is not a good citizen and should not be regarded as such by the community at large. That is all wrong.

We must be logical about this thing. It is not pleasant to have to move for the adjournment of the house at this time when the session is concluding its work. However, I contend that with few exceptions the officials in charge—I say that in the broadest sense—have not been fair to the farmers. I know of one case where a young man from Témiscouata was in camp in British Columbia and he was given six weeks' leave to come home for the seeding season. Is that reasonable? I know of another case where the mobilization board in Quebec decided to grant leave to a young man who was in a regiment at Valcartier. The colonel of the regiment decided to pay no attention to the order of the board and brought the young man to British Columbia with the other soldiers of the regiment. I brought the matter to the attention of the Department of National Defence, and the result was that the commanding officer was obliged to pay the travelling expenses of that young man from British Columbia back home to his farm in Témiscouata county. That is the way to deal with these cases. We have to inspire in the commanding officer a profound respect for what is done within the regulations, but we have also to inspire in him another feeling, namely the equality of the farmer with every other citizen in this land. The farmer is no less an individual than is the first citizen of this country, the Prime Minister of Canada, or the Leader of the Opposition, or any big man that we have in this house. His usefulness is the same, and he must be ranked the same, not only in theory but also in practice, in any decisions that have to be rendered.

A friend of mine wrote me yesterday. He has a big orchard and in past years he had help. The young man who helped him is now in a training camp in the maritime provinces. The farmer wanted him back to help with the work in the orchard and on his farm, and he was told by the commanding officer the procedure to follow. He acted accordingly and wrote to the commanding officer but received no reply.

Do you remember, sir, when I asked the Minister of National Defence a long time ago to produce a copy of the king's regulations and orders, which are the law governing all those in the army? At first I was denied the privilege of getting a copy. I had to persist for a long time before getting a copy in English and in French with the amendments. There are two kinds of regulations, those governing the mobilization boards under the Department of Labour—that was sent to us—but did we get the regulations of the Department of National Defence passed under the National Resources Mobilization Act? I had a couple of copies, the first one and the second, but I have never had all the amendments, and we need them. We do not want to infringe on the law. We want to abide by the law, but we want the law to be interpreted liberally and according to the speeches that have been made in this house by such a large number of members since the beginning of this session. That is all we need; we need nothing else. What is platonic love for the farmer? The farmer does not care for platonic love from the members of parliament. The farmer does not care for love; the farmer needs help, assistance in fulfilling a national duty. That is how I consider the matter, sir, and that is the way I think all members should consider it. If at times, to my great sorrow, I have to complain of injustices that have been done to the farmers, I do so because I have a duty to perform. I have seen these farmers at work, producing the crops that come from their farms, the products that are so badly needed at this time when such a large number of countries are paralysed. I see the farmers at work and I respect them, and I am always ready to fight for them.

I thank my hon. friend the member for Chambly-Rouville (Mr. Dupuis) for seconding this motion. I also thank from the bottom of my heart all my hon. colleagues who have had the courage to rise in defence of the farmer this afternoon. I will tell them all that their action this afternoon will never be

forgotten and that when they go back home they will be thanked by that class of noble and humble citizens who are the farmers of Canada.

Mr. VINCENT DUPUIS (Chambly-Rouville): Mr. Speaker, I rise to support this motion because I consider this a matter of urgent public importance—very urgent indeed. I do not profess to be one of only a few members of this house to realize the difficulties in which the farmers of this country now find themselves, because I know very well that every member who represents a rural district is conversant with the situation in the rural areas. It is circumstances, the actual situation that compels me to rise and support this motion. We cannot wait another day. Because of weather conditions seeding time is already one month late. Added to that there is a shortage of help on the farms, a shortage which exists in every rural district, and particularly in areas of from fifty to a hundred miles square around large centres like Montreal. The farmers are acutely short of help, so much so that I have heard from many farmer organizations in my own district that if the present situation continues many farmers will be compelled not merely to reduce their production but to cease production altogether. It is important, I repeat, that we should do our utmost to see that the farmer be not bound by what he at the present time expects to be bound. The reasons are so clear, it seems to me, why we should act, and that immediately, whatever may be the means whereby we shall bring immediate help to the farmer.

So far as I am concerned I speak for myself. I do not want to be held responsible to my own conscience if next winter we are faced with famine. History teaches that when the great causes of war actually result in war, generally war has two nefarious companions, famine and pestilence. Now we have war. It is the greatest scourge that humanity suffers from. But are we to allow famine to come not only to our doors, not only to the doors of civilians, but to the ranks of the armed forces and those of our allies? I do not think we should allow such a thing to happen if we can at all prevent it, and that is the only reason why I am rising in my place to-day and submitting my humble opinion, asking the government and this House of Commons, which is composed of men of conscience who are, like myself, anxious to win the war, and the sooner the better, to unite, forgetting for the moment our party allegiances and our differences in race and religion, as well as the classes or localities we represent. Let us all forget that for the moment and unite in considering the position of this very important class in our society, the farming community, and give them the help they so badly need at the moment. And let us give that help immediately.

If it is necessary to get farmers' sons out of the army, let us get them out, because it is quite clear that there are three conditions that are requisite to the winning of the war. First, we must have men under arms in sufficient numbers to defeat the enemy; second, these men must be supplied with arms and ammunition; and third, these men must be fed and fed properly. That is nothing new. Napoleon, who was a very great strategist, a great general, declared that an army marches upon its stomach. That is true.

I will not delay the house. I know that we have great problems to solve, and the one now under discussion is one of the most important. We have also other matters of importance to consider, and I should like the house to unite at once in asking the government or those in authority to give to the farmers the help they need so that they will be able to produce more than ever to help our soldiers and the soldiers of our allies to win the war.

Mr. T. L. CHURCH (Broadview): While I have a great deal of sympathy with the farmers, I must point out that prior to two weeks ago, when coal was added, agriculture was the only national selective industry in Canada. There have been nine or ten debates in the past month or so on this question. On May 21 the Minister of Agriculture gave an elaborate description of the working of this new last-minute scheme of national selective service in Canada.

With all due respect I contend that the government have made a fatal mistake, as is only too apparent now that we are nearing the end of the fourth year of the war. In the first two years of the war and for three years before the war, I moved here for a national selective compulsory register to show the number of people available for every industry. We are told now that there are only 4,357 men needed on the farms, but that must be an impossible figure because there are 100,000 farms in Saskatchewan alone.

There are other urgent matters of great public importance not yet discussed than the question we are now considering, which has been up many times, and one of these is coal. We may be all frozen to death next winter, and nothing is being done about it. Housing is another important matter, and neither have had five minutes' discussion this session. No one can get any information in regard to the supply of fuel or the question

of housing. The people are tired of all this and the blame for the whole situation to-day must rest on the government.

There has been a great deal of suffering on the farms from lack of labour. I have seen a good many farming communities in the district around Toronto, and I had a good deal to do with the farmers of Ontario in connection with light, heat, power and transportation problems. Ontario has more production a year in agriculture than the three prairies put together and the farmers of this province are not complaining as much as those from some other places. Probably they are too silent in Ontario but the fact is that the main reason for the scarcity of labour to-day is the war. Lack of labour for agriculture is a world-wide condition, and if I had had my way I would have left agriculture where it belongs under a responsible minister of agriculture instead of handing it over to Donald Gordon and a number of controls and sub-controls. Some of these people were never on a farm in their lives and they are in control and deal also with selective service.

I have a great deal of sympathy also with the Minister of Labour. He has assumed what might be called the white man's burden in the many changes of selective service during the past year or so, and he cannot succeed where others have failed. We can blame ourselves in this house for not having done as the United States did. They instituted a national compulsory registration; they have a national register. We had only one national selective industry in Canada, agriculture, until two weeks ago, and we have allowed the sons and daughters of farmers to migrate to the cities and towns and earn large sums of money. They have been getting wages in munitions plants of $6, $7, $8 and $9 a day. The other day I saw a schedule of the rates they are making, and they are undoubtedly attractive; but I can tell you that whenever a young man leaves the farm to go to the city there is a vacancy on the farm; and with present conditions on the farms, a good many young people do not want to stay there.

From the public schools and high schools, from the separate schools and secondary schools of the country, there will be migration from the urban centres to the rural districts for the next three or four months. I know one collegiate institute from which several hundred students will start out presently. General Winter has also been to blame for a great deal of the farm trouble. We have had a very hard winter and a very late spring, and have suffered on our farms from lack of transportation and many war ills, and there has been a very late season for agriculture, all of which has contributed to the present unfortunate state of affairs. The army minister gave us a statement with regard to these applications for postponement. Look over the debates reported in *Hansard* since the session began and you will find that almost every week or almost every day someone has raised the question. I sympathize with the members from the province of Quebec; no doubt there is a great deal of lack of farm labour in parts of that province and it is difficult to get labour there, but their situation is no different from that in any other province of confederation.

Mr. DUPUIS: We are not speaking only for the province of Quebec.

Mr. CHURCH: The war is primary, and men for it. Do the people of Quebec want to wait until the enemy comes up the St. Lawrence and bombs the citadel? That would be much worse than taking men from the forces because of a scarcity of labour on the farms. Men are needed more for the armed services, and there is no use in trying to deny it. War is war and men are first needed for the armed services. But the government has changed the whole farm policy to ration labour and its past programme in Canada. It started off with a voluntary system for the war and farms which was followed by a plebiscite to change it, and the government did not carry that out. After three years they applied compulsion for home defence and for farms.

Mr. SPEAKER: Order. The question before the house involved in the motion with respect to agricultural man-power shortage does not afford the hon. member room for the remarks he is making. I do not think he is quite within the subject under discussion in dealing with plebiscites and matters of the kind.

Mr. CHURCH: You are right, Mr. Speaker. I was merely introducing that as a comparison, to show that the war is paramount and primary, and that farm labour is secondary. If you look over the figures given by the Minister of National Defence (Army) you will find that compulsion was established in all Canada for home defence but that it has been considerably relaxed in the interests of agriculture. The minister reported to the house on May 21, 24 and 25 last on the number of applications which had been made to the various boards for exemptions and postponements to enable applicants to go back on the farms, and while I have not the figures before me, my recollection is that about eighty per cent or over of the applications were granted.

Everything possible is being done by the city people to provide labour for the farms. There are two matters of urgent importance upon which I should like to move for the adjournment of the house. I have already named them as of urgent public importance —the fuel supply, and housing. But I thought it would be better not to do so, because an opportunity of discussing these matters may come later, when we have finished with the appropriation bill. It seems to me that if there is any class of the community whose case has been largely represented in the discussions, it is that represented by the labour problem on the farms. I have a great deal of sympathy for them and for their representatives; I know something of the difficulties which the war has caused them. But from what I know of the soldiers who have come from the farms of Ontario I am convinced that they do not want to remain at home and serve on the farms. The farmers of Ontario are true descendants of the patriots of 1812, and worthy of them. When Canada was attacked in the days of General Brock, the men of the Ontario farms went with Brock when he called to the York Rangers "Push on, York Volunteers", and served at Queenston Heights. They wanted first to defend their country. The first duty of the citizen is to defend his country and face his country's enemies. I cannot see that anything is to be gained by adopting this motion, because the question will be further discussed on the air and navy estimates, and there will be other opportunities on agriculture and wheat estimates, of dealing with the man-power situation.

Mr. MAURICE LALONDE (Labelle): In rising to speak on this motion I do not intend to offer destructive criticism of the government, but rather to give constructive criticism, concerning the requests made by recruits for postponement of their militia training or for leave. I heartily support the hon. member for Témiscouata (Mr. Pouliot) because I have had many complaints with regard to requests made by men who have been brought into the army under the mobilization act, and particularly by farmers' sons. Once in the army they have found that they had to follow difficult proceedings and build up a complicated record to obtain the leave which was so much needed, to help either their fathers or the men who were employing them.

I shall not take the time of the house longer than is necessary, but I have in my hand a letter which I received from the commanding officer of the camp at Joliette, in the province of Quebec, regarding the request made by Private Roland Clavel. This young man voluntarily reported six or seven months ago, in spite of the fact that he was a bona fide farmer's helper, because he believed at that time that leave would be given him later if it should be necessary for him to go back on his father's farm. At the beginning of November last, Private Roland Clavel came to my office, and together we filled up the necessary forms. We filed the three sworn letters required to show that his presence on the farm was absolutely necessary; otherwise it would be left uncultivated, because he was the only son capable of doing useful work on the farm. The demand was put before his commanding officer, who knows absolutely nothing of agricultural problems. It was submitted also to another board, the name of which I do not know; and from week to week, from month to month, Private Roland Clavel stayed in the army, in spite of the fact that all the work of the farm now falls upon his sick father, his mother, and his small sister, thirteen years old. There are twenty-four head of cattle to feed and more than a hundred and fifty acres of land to cultivate.

I cannot let this motion pass without saying a word, because I personally know that the case I have cited is similar to very many others in which I have been interested. Perhaps I am speaking on my own behalf only, but I know that many hon. members have had numbers of cases of this kind. I have before me about forty of them. Nothing is done, and these farmers' sons remain in the army while their parents are working hard to keep the farms under cultivation.

Should the proceedings not be modified in some way so as to give the commanding officer more details about the cases which are brought before him? I will say that the commanding officers in the camps are doing their best to accommodate everybody and to scrutinize every request which is put before them. I do not question their ability or their good faith. But one cannot stand on his feet and proclaim that every commanding officer knows something about agriculture. I urge the government, and more particularly the Minister of National Defence (Army) to set up some kind of easier proceedings so that the private who is in the army will not be obliged to know the law of the land better than the lawyers themselves. These fellows who come from the northern part of the province which I represent in this house do not know anything about these sworn affidavits, letters, forms to be filled out, and so on. They just write to their commanding officers, and sometimes to their members, asking for details. I am ready to work for these

boys, as I have worked for more than twelve hundred others who put their cases before me so far as mobilization was concerned; but for God's sake give them a chance, and when a clear case comes before the commanding officer let the farmer go back to his farm for a few months at least.

While I am on my feet, Mr. Speaker, I should like to say a few words on another subject. If I am out of order I shall be glad to sit down, but it will not take much time. I refer to the postponement of service for those indirectly connected with agricultural problems, particularly those employed in farmers' cooperatives. It is too bad that some registrars do not know the difference between—

Mr. HANSON (York-Sunbury): Did I understand the hon. member to say that he had twelve hundred cases of men whom he tried to keep out of the army?

Mr. LALONDE: No. I am glad the hon. member asked me that question. I had in my office more than twelve hundred requests for postponement of military training under the mobilization act.

Mr. HANSON (York-Sunbury): And how many postponements did the hon. member succeed in getting?

Mr. LALONDE: I could not tell the hon. gentleman offhand; the greater number of them have been granted a postponement of their military training. I do not complain about the work of the registrars in Montreal. If they granted those postponements it was because the men were needed on the farms, because they were employed in the essential industry of agriculture. We are not asking for favours; we are just asking for the right to work in that place where we are most necessary and most useful.

As I was about to say, the employees of these farmers' cooperatives should be granted postponement also; perhaps the Minister of Agriculture (Mr. Gardiner) would be good enough to support me in this matter in discussing it with his colleagues in the cabinet. If you break down the management of the farmers' cooperatives then the whole agricultural system of the community is broken down. The same thing applies to those working in sawmills, those employed as blacksmiths, and so on. I shall not speak about them, since that would be out of order. In reply to the hon. member for Broadview (Mr. Church), however, I would say that this motion is not made only on behalf of the farmers of Quebec. It is only necessary to look at the newspapers and listen to the radio to realize that these complaints come from every part of Canada. The hon. member says war is war. We all understand that, perhaps better than he does; for we understand that war may not continue to be war if our soldiers are not fed.

Finally, Mr. Speaker, I realize that it is very hard to draw the dividing line between what is an essential industry and what is a non-essential industry. So far as agriculture is concerned, however, I think the point is so clear that it is impossible for any intelligent man in this country or anywhere in the world to say that in time of war agriculture should be considered as anything but the most essential war industry, and I hope it will continue to be so considered.

Mr. J. H. BLACKMORE (Lethbridge): Mr. Speaker, I have no desire to detain the house unduly, but I wish to say a few words on this matter. Before the arrival of this much-delayed spring the agricultural situation in Canada in my opinion was not in the very best condition, even taking into consideration the fact that we are at war. I believed there were several things left undone that we might have done. Since the season has been so much delayed I have been greatly concerned lest we should be faced with a food shortage next year. As members of the house it is difficult for us to learn what emergency measures the government has been taking to meet the situation which has developed as a result of the late spring, but it seems to me that a good deal could be done. It would be possible, I should think, to organize special committees throughout the country—

Mr. MITCHELL: What does my hon. friend mean by a food shortage?

Mr. BLACKMORE: Well, I should think the words were so plain as to require no definition. If we run short of eggs I should think there would be a shortage of eggs; if we run short of potatoes, as we have run short of them in Ottawa, I would say that is a food shortage. Is that not the understanding of the minister?

Mr. MITCHELL: I am not being argumentative; I am just asking the question for my own information. If my hon. friend wants to feed China and other countries, there might be a food shortage, but I was wondering how much territory he would cover.

Mr. BLACKMORE: Well, it is quite true that if we do not produce enough food for ourselves we shall not be able to help feed our allies. I should hardly expect a responsible minister to raise that question, especially in view of the fact that within the last two or three days a statement was issued by the deputy minister of agriculture to the effect that

we would require all the food Canada could possibly produce. I should think that would cover the whole situation and give every member of the government cause for considerable anxiety. Let me proceed with what I was about to say.

Mr. MITCHELL: That would not be so in Canada only, would it? Of course we require all the food we can produce.

Mr. BLACKMORE: I could not catch what the minister said.

Mr. MITCHELL: I know the hon. member does not want to leave any false impression. Of course we require all the food we can produce, but I think the responsible official to whom the hon. gentleman referred had in mind shipments to Great Britain and other countries.

Mr. BLACKMORE: Of course; and I hope I did not convey any other idea. But undoubtedly we can be losing the war on the Chinese front if they are short of food, so that I should think I would be quite within the bounds of moderation in what I was saying. I believe probably a good deal could be done in the way of organizing special emergency committees in conjunction with the provinces and municipalities, to bring to their attention the fact that Canada is actually facing a grave emergency in the matter of food. I believe the situation is sufficiently serious to justify that action.

Mr. MITCHELL: I may tell my hon. friend that has been done already in his own province.

Mr. BLACKMORE: I am not saying it has not been done in my own province, but I have no assurance that it has been done in the minister's own province.

Mr. MITCHELL: It has been done in the minister's province, too.

Mr. BLACKMORE: And has it been done in other provinces?

Mr. MITCHELL: It has been done in every province in Canada.

Mr. BLACKMORE: That is very good. I said in the beginning that as private members we were not in a position to know all that had been done, but in case this had not been done I suggested that it should be done. I suppose the minister has no objection to that?

Mr. MITCHELL: Not at all.

Mr. BLACKMORE: Very good, that is the point I am making. It seems to me there should be some sort of committee, somewhere, to which a farmer could present his request for any special kind of assistance he might require. In some parts of the country farmers are at a loss to know where to get the help they need, and in many cases they are at a loss to know where to get machinery—trucks, tractors and ploughs. It seems to me a special committee should make up a list so as to assist any farmer in need of any particular item of machinery, to meet an emergency.

The matter which concerns me, in connection with potatoes, is that if the price of potato seed were so high that the farmer would not dare to buy seed and plant potatoes, it would be wise for the government to get possession of seed in Canada and reduce the price to such an extent that the farmer would be able to buy the seed required to plant his crop. I suggest that the government would do well to provide farmers across the country with a fairly good idea of the amount of potato planting which has already gone forward. A good deal of potato planting could be done in Alberta, I believe, if the farmers were assured that there have not been sufficient plantings throughout the rest of the dominion.

The idea in my mind is that since Ontario, Quebec and probably the eastern provinces may not be able to seed, on account of the lateness of the year, it would be well to organize the dominion as a dominion—which probably has been done. I repeat it would be well to organize the dominion as a dominion, so that Alberta, Saskatchewan and Manitoba, which are slightly more fortunate in their season this year, would be able to plant a few extra potatoes on land which otherwise would be summer-fallowed. I believe that is sufficient to illustrate the point I have in mind.

Mr. GARDINER: That was all done last December. The provinces were notified as to the acreages they would be expected to plant this year. That has been carried out fairly successfully, except where weather conditions have interfered. On the question of seed, I think what my hon. friend has in mind in most of his remarks is what is known as certified seed. I believe he will agree that there are very few farmers in Canada who plant certified seed potatoes. The price of certified seed has very little to do with the plantings on ordinary farms across Canada.

Mr. BLACKMORE: We will grant that, completely. All the minister has said, I grant is true. But the organization which was effected throughout Canada last December certainly would not in any way be adequate for the organization which should be—

Mr. GARDINER: The acreage required to be seeded in each province would be satisfactory, and the organizations spoken of are set up by and assisting each of the provincial governments.

Mr. BLACKMORE: What we are concerned about now is this: Has provision been made in Saskatchewan, Alberta, Manitoba and any other provinces which are able to plant extra potatoes, to make up for the potatoes which might not be planted in Ontario and Quebec?

Mr. GARDINER: They have been asked for a certain acreage.

Mr. BLACKMORE: Have they been asked to increase the acreage as the result of an emergency condition in Ontario and Quebec?

Mr. ROWE: The minister has said there is no emergency.

Mr. BLACKMORE: If they have not been so instructed, and if they have not planned to plant extra potatoes, there is grave danger of the development of a potato shortage in this country—even in Canada, where we can produce and have produced potatoes with the greatest of ease. I am fully aware of what the minister says, that most farmers do not plant certified seed. But the minister must know that in Ottawa at the present time it is next to impossible to buy a potato in many of the stores, no matter whether it is certified or uncertified. If anything like that condition exists in other principal centres throughout the dominion, unquestionably it will be difficult for farmers to get any kind of potatoes. And if they have to pay a high price, it will be to their disadvantage.

Mr. GARDINER: I would call attention to the fact that in the figures I placed on *Hansard* yesterday it was shown that there were five times as many potatoes in storage on May 1 in one province in Canada as there were a year ago. The fact that the potatoes are not in Ottawa does not necessarily mean that they were not produced.

Mr. HANSON (York-Sunbury): Is that statement correct, that there were five times as many potatoes in storage in New Brunswick?

Mr. BLACKMORE: I have the floor.

Mr. HANSON (York-Sunbury): But I should like to ask a question.

Mr. BLACKMORE: I have the floor.

Mr. HANSON (York-Sunbury): Will the hon. member allow me to ask a question?

Mr. BLACKMORE: The hon. gentleman can make a speech when I have finished.

Mr. HANSON (York-Sunbury): I am asking a question, arising out of the statement that there were five times as many potatoes in storage in one province as there were a year ago. That statement is challenged.

[Mr. Gardiner.]

Mr. GARDINER: I suppose every statement can be challenged. But they are the best figures available in Canada.

Mr. HANSON (York-Sunbury): Where are they from?

Mr. GARDINER: These are the official figures of the bureau of statistics, the only official figures we have.

Mr. HANSON (York-Sunbury): They are not correct.

Mr. BLACKMORE: The only thing we are concerned about is this, that we learn that in various parts of Canada there is a definite potato shortage, and that there are places in Canada where potatoes cannot be bought. If there is a shortage of potatoes, and if potatoes cannot be bought, it makes no difference at all to the ordinary individual how many thousands of tons of potatoes there are in storage.

Mr. GARDINER: How many you are going to produce makes a difference, if the farmer is to be able to sell his product at a price.

Mr. SPEAKER: The motion before the house is a motion for adjournment. The man-power shortage has nothing to do with the question of the present supply of potatoes in the country. If the hon. member is addressing himself to the question of an insufficient acreage of potatoes, or the suggestion that sufficient potatoes are not likely to be grown because of the shortage of man-power, he is in order.

Mr. BLACKMORE: I have been unceasingly interrupted by hon. members, and that has led me to discuss other than the matter I rose to discuss.

The possible potato shortage is in the minds of all hon. members, and I have no doubt was in the mind of the hon. member for Témiscouata when he made this motion. With Your Honour's permission I should like to say one further word about potatoes. It must be remembered that potatoes are perishable, and it matters not how many tons there are in storage to-day, those potatoes in all probability will not be available for use next fall. So that the minister's remarks are rather beside the point.

Mr. GARDINER: The shortage was last week, not next fall.

Mr. ROWE: Why are they still in storage, then?

Mr. BLACKMORE: The minister can have his say. Potatoes should be provided to farmers for seed, at prices they can afford.

A good deal could be done in this respect by a committee which could look into conditions which have arisen on account of the lateness of the season.

I have nothing further to say, except that the time spent in discussing this matter is well spent. Now is the time to discuss it, before a serious condition arises, and in my view the hon. member was wise in bringing it to the attention of the house.

Mr. WILFRID LaCROIX (Quebec-Montmorency) (Translation): Mr. Speaker, I am in complete accord with the motion of the hon. member for Témiscouata (Mr. Pouliot) and I am convinced, now as before, that there is no such thing as exemption from military service for farmers' sons. Although it may be referred to in speeches, it does not really exist. This is indicated by a letter I have received to-day and which, with your kind permission, I shall read to the house:

Quebec, June 1, 1943.

Mr. Wilfrid LaCroix, M.P.,
24 Carmel street,
Quebec.

Dear Mr. LaCroix,

I am one of your voters, Achille Légaré, of St. Joseph concession, Charlebourg. I am 41 years of age. The seeding season has arrived; my grain should be put in the ground immediately, otherwise, even in a few days, it will be too late. I have no help and cannot procure any.

I have been called by the militia and have reported at the camp. After explaining my situation, I asked to be released immediately so as to do my work.

Mr. MARTIN: How old is he?

Mr. LaCROIX (Quebec-Montmorency): I have just stated it.

Mr. MARTIN: I had forgotten.

Mr. LaCROIX (Quebec-Montmorency):

After explaining my situation, I asked to be released immediately so as to do my work. However, I am kept idle here; time flies and in a few days the seeding season will be over, and it will be too late. This will entail an important loss to me.

I beseech you to appeal to these gentlemen in my favour so they will release me and send me on my farm to do my work.

I rely on you to do this favour for me. Please accept my thanks and my respectful regards.

Achille Légaré.

It is an admitted fact that, at present, it is impossible to secure leaves for agricultural purposes. One has to apply for them to the officer commanding at Debert, Nova Scotia, Sussex, New Brunswick, or other places. The answer is ever the same: No.

We hear complaints about a decrease in production. How is production to increase when measures are taken that not only contribute to a scarcity of help but are of such a nature as to stop production?

I wish to give another example which is to the point and set out in detail. It was brought to my attention in a letter I received yesterday.

St. Laurent, Island of Orleans,
June 1, 1943.

Mr. W. LaCroix,
Member for Quebec-Montmorency.

Dear Sir,—

I am sending you this plea to acquaint you with the situation in which hog-breeders are now placed. There will be a catastrophe if that situation is not remedied. As you know, the government compel all breeders to sell their hogs to slaughter houses, which are paying $16.65 per hundredweight and the ceiling is $18, so that the breeders lose $1.35 per hundredweight. Moreover, if the hog is just one pound under 140 pounds the company deducts from $2 to $2.50 for each animal; if it weighs more than 170 pounds, there is another reduction of $2.50 to $3, which entails a loss of about $3.10 on each hog. Under the circumstances, the breeders are not even allowed to remove the hogs which are under or over weight.

It is now almost impossible to sell hogs. Those various factors have brought about a 75 per cent reduction in the production of hogs, and within a few months it will stop altogether and there will be a serious shortage of pork. The ceiling on lumber and wood was a terrible mistake, but it is nothing compared with the situation that will confront us as far as pork is concerned.

Please refer this letter to the department which has the responsibility of dealing with the matter.

Yours truly,

Albert Vaillancourt,
St. Laurent, Island of Orleans.

Mr. Speaker, it would seem that the government's policy has been contrived so as to prevent in the first place, the men who are essential to production from remaining on the land. In the second place, the stupid policy adopted by the various trade controllers, czars or dictators, whichever title may be given to them,—entails a curtailment in production. Now, it has always been said in this house that agricultural production is an essential part of our war activities. We must feed not only our army but also the forces of our allies.

Mr. Speaker, I sincerely regret that the government should have taken such a stand. At least the people should frankly be told what the situation is. When I hear about farmers being exempted, I am rather sceptical. True, some of them have been granted a

postponement, but the latter will have to be renewed at an early date or at some later time. And when it comes to renewing a postponement the matter becomes increasingly difficult. I wonder what the situation will be in one or two months. We are being told that conscription does not exist. Mr. Speaker, you know as well as I do that not one man between the ages of 19 and 45 can obtain work if he has not first enlisted for active service or has not been discharged from the army. In order to obtain his discharge, he must enlist for active service not in this country but overseas. It is just as if the men were being told: Enlist or starve. To-day, no man can work in any one of our war plants or obtain another position if he has not been discharged from the army. As I said, in order to obtain his discharge, he must enlist, undergo a medical examination and, before he undergoes this examination he must sign up for overseas service.

Mr. Speaker, similar conditions obtain in the case of farmers' sons. They are put to every kind of annoyance. As soon as they report they are told: You are farmers' sons, but now that you are here you shall not get out. That policy should be changed at once, if the war is to be efficiently prosecuted.

I do not wish to speak at any great length, but I may say in concluding that I heartily support the motion of the hon. member for Témiscouata. It is often said that he speaks volubly in this house. I wish to tell him that his services are quite helpful to the people of the province of Quebec, and that I congratulate him for having introduced this motion.

Mr. P. E. WRIGHT (Melfort): Mr. Speaker, it is not often that I find myself in agreement with the hon. member for Témiscouata (Mr. Pouliot), but on this occasion I believe he has called attention to a problem which will become quite serious in Canada during the next year. It seems to me that we have lulled ourselves into a position of false security on account of the climatic conditions which obtained last year and which permitted the production of one of the largest agricultural crops ever raised in Canada. This year we are likely to be faced with opposite conditions and may find ourselves in a very serious position.

The Department of Agriculture have issued a pamphlet called "Objectives for Canadian Agriculture in 1943" which sets out what the government expects from agriculture during the coming year. They ask for substantial increases in connection with almost every product of the farm. In oats, twelve per cent increase is asked for; barley, twelve per cent. Wheat is one commodity where a decreased production is asked for, a decrease of fourteen per cent. A small increase is asked in flaxseed, while in rye there is some decrease. An increase of twenty-eight per cent is asked for in hogs; cattle, nine per cent; sheep and lambs, twelve per cent; dairy products, an average of about twenty-five per cent; eggs and poultry, an increase of approximately twenty-five per cent; fruits and vegetables, an eleven per cent increase, while for other crops the increases asked for range from one per cent to as high as 189 per cent. Despite these increases that are being asked for, there is the fact, as stated just recently by the Minister of Agriculture (Mr. Gardiner), that approximately 350,000 men have been withdrawn from agriculture since the beginning of the war.

If we are to get these increases and do not have the favourable climatic conditions which prevailed last year, it will mean that we must have more help on our farms. It seems to me that the government have given a lot of lip-service to this question of increasing the supply of agricultural help. We understood that considerable leaves or postponements were to be granted for seeding operations. But what actually takes place is another matter. In many cases these leaves have been refused, and men in basic training are not granted leave at all. Apparently no effort was made to understand the necessities of the farm. I have had a number of cases drawn to my attention of men who were given leave to go on a farm where there was only a small acreage under cultivation, and other cases where men were refused leave whose relations really needed their help. These men could have contributed real service if leave had been granted.

Furthermore, no provision was made for the transportation of these men. If the government had been anxious that men from the army should go back to the farm they would have provided transportation for them. Many men serving on either coast had to pay transportation practically across the whole dominion on a month's leave or perhaps six weeks to help in seeding operations on the farm. If the government had been anxious to get help for the farmer they could have at least provided transportation for these men.

With respect to postponements, the Minister of National Defence (Mr. Ralston) stated the other day that 80 per cent of the requests for postponements for agricultural purposes had been granted, but these figures again are

misleading. Many postponements were granted for only a short time, sometimes a month, sometimes three months, and when an application was made for a further postponement it was refused. The granting of short postponements does not tend to help increase agricultural production.

Mr. MITCHELL: The short postponement has been changed since the matter has been under my jurisdiction. The shortest postponement granted for agriculture is six months.

Mr. HANSON (York-Sunbury): It "may" be for six months.

Mr. WRIGHT: I am glad if that has been done, but my information is not to that effect. A man must be able to plan his production one year ahead if he is to raise the products which are essential at this time—pork, dairy products, and other necessities. You cannot increase agricultural production by looking ahead for only three or six months, especially the things that are needed most. A short postponement is of little use if you want to increase production. You could provide that the men would be recalled from the farm only in case of national emergency.

Mr. MITCHELL: If my hon. friend would like me to answer that point now, you have to keep your finger on a man otherwise you have no check on him. We want to make sure that he stays on the farm.

Mr. WRIGHT: That could easily be done through national selective service. As it is now a man cannot leave the farm without obtaining permission from national selective service. That matter could easily be dealt with in that way. I know that these short postponements and refusal to grant further postponements have stopped farmers from increasing their production because they had no assurance that their help would be with them for any length of time.

The Minister of Labour (Mr. Mitchell) also stated that under his policy men were to be taken from non-essential industries and put on the farm, but I have not seen any evidence of that policy being carried out. So far as I have been able to observe, no men have been drafted to the farm from non-essential industry, and if the government is really anxious that help should be made available on the farms this policy should be put into effect immediately. Then men should be placed where they are really needed.

It seems to me that something more must be done in regard to supplying agricultural implements. Some of the farmers in western Canada have spoken to me about this matter. Just before I left home after the Easter recess I interviewed some firms who are in the agricultural implement business in my district and they told me that they did not have available any supply of repair parts for machinery needed in haying, and that parts would not be available until probably the first of June. So that we have the government on the one hand urging farmers to keep their implements in a good state of repair against the time when they will be needed, and on the other hand we find that the government is not making those supplies available to the farmer. I suggest that the government see to it that those repair parts be made available in sufficient quantities to enable the farmers to keep their implements in repair. In that way labour could be saved. Last year labour was sent from eastern Canada to western Canada to help harvest the crop. If more binders had been made available in the west much of that labour would not have been needed. If the government will see that this machinery is supplied to farmers, and at a price they can afford to pay, much labour can be saved.

I support the motion of the hon. member for Temiscouata, Mr. Speaker, because an army cannot fight unless it is fed, and if agricultural products are to be made available to our armed forces and to our people we must look ahead and not just deal with this matter from day to day.

Mr. ANTHONY HLYNKA (Vegreville): Mr. Speaker, I have just recently returned from a trip back home, and from my observation the farm labour shortage is indeed acute. Scores of farmers have been forced to quit farming and move into the city. How they will get along is another matter.

I have had to deal with a large number of applications for postponement. I find that they may be divided into two classes. There are those who apply for postponements before they have actually joined the armed forces, the other class is composed of those already in the service who ask for leaves. As regards the first class, those making applications for postponements, only a well qualified lawyer could help these young men to fill out properly the application forms. The ordinary farm boy could not possibly be expected to know all that is required in order that he may fill out the forms, the affidavits he needs, and things of that sort. I should like to see the government standardize the application forms. The draft boards right across the country would know whether a man should or should not be

granted a postponement. Of course, postponements should not be granted wholesale to all who ask for them. We could not possibly win the war in that way. At the same time, we should not force our farmers to fold up and sell out because that will not get us very far either. I suggest, therefore, that the Minister of Labour (Mr. Mitchell), who is charged with the responsibility for call-ups should draft a simple application form, giving instructions to every soldier who needs to apply for a postponement. The soldier would be able to fill out the application and, if the request seemed reasonable, the board would have less work in deciding each case individually. I am sure that many of these applications and affidavits, pages long, are never read by the boards. You cannot expect any board to read thousands of applications. That is an utter impossibility. The procedure must therefore be simplified. We may talk around the case as much as we want but it will not help matters at all. We are concerned with those cases where men are absolutely needed at home, perhaps the only son, the old father being compelled otherwise to sell out or engage in something else.

As regards leave, I know a number of soldiers who have applied for leave, six weeks, perhaps a month, or two months or whatever it may be. Again, the man is told to apply to his commanding officer. He must write to his parents and tell them to obtain sworn affidavits, three copies of each; he must obtain a letter of request in triplicate from his father; he must obtain medical certificates; and only then can he place the documents in the hands of the commanding officer. Then the commanding officer, if he feels like granting leave, will do so; if not, he refuses it and that is the end of the matter. Then the young man writes to his member of parliament. The only thing the member can do is to refer the matter to the Minister of National Defence (Mr. Ralston) or the Department of National Defence, and it is usually refused. If the commanding officer refuses it, the Department of National Defence refuses it also.

Why can we not get down to business and draft a proper and a uniform procedure in these matters? As it is, we have utter confusion. There are scores of young men who have not had any legal training, and you cannot expect them to draw up the documents required of them. I wish to emphasize this particular point, that the application forms, or the procedure followed, should be standardized throughout Canada. This does not apply only to the province of Quebec or Alberta or Saskatchewan; we must standardize the forms for the entire country.

[M. Hlynka.]

Another matter which I have brought twice to the attention of the government, as other members have done also, but to which no attention has been paid, is that there should be an appeal board in Ottawa to deal with cases that are absolutely deserving; otherwise if a man is refused postponement or leave he has no one to whom to refer his application. That is the end of it. That is absolutely unfair. Surely we can find three or five or ten men in Canada to deal with the legitimate appeals of men who are absolutely essential, and whose applications should be granted.

This particular question must be dealt with by two departments, the Department of Labour and the Department of National Defence, and the two ministers concerned should get together and divide their labours. The Minister of Labour has to deal with postponements and the Minister of National Defence with leaves, and they should devise a plan whereby we can get a little better satisfaction than the people have had in the past.

Agriculture is absolutely essential to the war effort; in fact, it is one of the major industries in that effort. It is the means of our livelihood; it has been the main industry in Canada, and yet we treat it as a matter of course. I do not want to get off the track, but I should like to mention that not long ago many of us on this side of the house pleaded with the government and the Minister of Labour to do something about coal miners. I do not wish to go into that question now, but on my arrival home I found many miners released after taking training for three or four months. It is the same story—muddling.

Mr. MITCHELL: Let us get the record straight on coal mines. A number of these men went from agriculture into the mines for the winter.

Mr. HLYNKA: I am sorry, but the minister is wrong. There are quite a number of miners released from military training to-day who have been sent back to the mines. Surely the minister should know that; he is the man in charge. But it shows—

Mr. MITCHELL: Where is the muddling in that?

Mr. HLYNKA: Well, it shows that you have picked up men who should have remained as miners in the mines and you should have tried to find another way of solving the manpower problem. These men have wasted four months and now they are allotted again to mining. The same will happen in agriculture. I regard it my duty to rise in my place and call the attention of the government to this problem, which is growing more serious as the days go by.

Mr. LOUIS PHILIPPE LIZOTTE (Kamouraska) (Translation): Mr. Speaker, the matter which has today been brought to the attention of the house is of prime importance, especially for those members who represent rural constituencies. I commend the hon. member for Témiscouata (Mr. Pouliot) for having introduced this motion and having pointed out that the matter involved is one of urgent public importance. I must also praise the hon. member for Chambly-Rouville (Mr. Dupuis), who has seconded the motion.

I represent a constituency where 90 per cent of the population is composed of farmers who are anxious to contribute to this country's war effort and increase production. That is what prompts me to participate in this debate.

All hon. members of this house, all those who have spoken during this session and especially in this debate are unanimous in considering agriculture as an essential industry. But they are not all in agreement as to the manner in which the policy announced by the government should be carried out. They all agree that if agriculture is essential in peace time it is all the more so in war time when we must feed our troops at home and those which we dispatch outside, as well as the people of the allied nations, where an overproduction of foodstuffs is absolutely necessary, especially in the case of those countries which, although at war, are not directly threatened by the enemy. There is complete agreement on that principle but apparently the same feeling does not prevail as regards the implementing of the policy which the government has announced some time ago, after protests had many times been voiced by a certain group in this house.

Why did the government let the press announce under glaring head-lines that farmers' sons would be exempted and that those who had been mobilized could easily obtain, even as a matter of right, leave of absence for going back to the farms? Why did the government let the press announce such a policy on the part of the government, when in some quarters every effort is made to put obstacles in the way of those who apply for postponements before they have been mobilized and of those who, having been mobilized, apply for leave of absence in order to go back to the land, which they should never have left? To my mind, Mr. Speaker, such a situation is utterly ridiculous and, it certainly induces the people to question the government's sincerity. On many occasions I have pleaded in this house for the bona fide farmers who want to increase their production as a contribution to the war effort and I do not hesitate to say that I will continue to take up their defence in this house and outside, because I know that in so doing, I am furthering the allied cause and helping my country, my constituency and especially the government which, in my humble opinion, should recognize in a practical manner that agriculture is an essential industry and give their closest attention to that problem.

It is a well-known fact, Mr. Speaker, that obstacles are put in the way of farmers' sons who apply for leave of absence, especially those who are now serving in the army, not only in the active forces, but also in the forces called up under the mobilization act and who wish to obtain leave of absence for helping in the seeding operations, the hay-cutting and the harvest. Many cases have been referred to me. I have always done everything I could to ensure the proper observance of the regulations, so that the farmers of my constituency might benefit from them and from the policy announced by the government with regard to farmers. My attention has been called to the case of a farmer's son who reported at the Valcartier camp on February 23, 1943. At that time, he applied for leave of absence for the purpose of going back to the farm. His father, who is 65 years old has but two sons; he is sick and almost unable to work. He has but two sons to work a farm of about 250 acres and to take care of a large herd of cattle. His production is quite large, considering the area of his farm. Well! To-day is the 3rd of June, and with reluctance I must admit that in spite of the fact that we sent all the necessary papers to obtain leave, and that this recruit's father writes me every week to ask whether his son will be allowed to go and help him sow his seed, since he cannot do all the work himself, this recruit has not yet been granted leave. When a man applies for leave, some commanding officers (although there are others who answer as they should and who do their duty) seem to take advantage of the situation and transfer the recruits who apply for leave from one camp to another. When the soldier has been sent to another camp, the same rigmarole must be gone through, the certificates filled once again, and affidavits from the mayor and the parish priest renewed. In some cases, I have had to prepare the same series of papers three times in order to secure leave for a farmer's son who was entitled to it according to the regulations in force and the policy openly adopted by the government.

Mr. Speaker, how do you expect a farmer who has only one or two sons to operate a

farm of two or three hundred acres, how can you expect him to decide that he will step up his production, raise one hundred pigs instead of fifty as he did before, when every morning he wonders if the postman will bring his son's notice for military training? The life of the farmer is one of worry and indecision; he does not know what the next day holds in store for him. Living in an atmosphere of uncertainty, the farmers cannot undertake to increase their production or to raise more cattle, both of which are so necessary in these troubled times.

A French author wrote a book entitled "La terre qui meurt". I would not like to see a Canadian write a book of the same title about our Canadian soil, where brawn which has limbs and numbers can well provide not only for ourselves but for others as well—

Mr. POULIOT: When hands are left there.

Mr. LIZOTTE: —and help on towards victory those who, on the battlefield, are fighting for liberty and defending each one of us.

The situation has become exceedingly serious! The hon. member for Témiscouata was quite right in saying that the matter is urgent.

The government should see to it immediately, it should grant leave to bona fide farmers' sons who are in the army and who can prove that they must be granted leave to continue tilling the soil to ensure best possible production. Farmers' sons must be granted postponements with the assurance that they will not be called to camp after a month or two. In this manner they will be able to work in peace and they will devote all their physical and intellectual energy, as well as all the attention necessary to agriculture, which is the industry in which they were employed and for which they possess all the required knowledge. I humbly submit that the best way to increase production and to put an end to this situation would be to refrain from calling up farmers during the summer. The registrar's office can easily obtain the information it needs from the national registration cards. When a man is registered as a farmer, he should not be called up during the agricultural season; and if he is scheduled to be called in winter he should be given the right to prove that he is essential to agriculture even during the slack season, though with the farmer there is no such thing as a slack season.

I do not intend to press the matter any further. We are discussing a motion for adjournment, and I do not want to be responsible for any waste of time in the house, since this question is one of immediate importance. I urge the government—and I hope my humble voice will be heard—to give early consideration to the shortage of agricultural man-power, which is a question of primary importance.

Mr. J. W. NOSEWORTHY (York South): Mr. Speaker, agriculture is not my forte, and I have no intention of pitting my meagre knowledge of agriculture against the minister's expert knowledge; nor do I represent an agricultural riding. However, as the Cooperative Commonwealth Federation member at large for Ontario I am constantly meeting with farmers in the communities I visit, and am constantly hearing from them. Two weeks ago I had the pleasure of spending a week-end at a conference which was attended by a considerable number of officials of farm and dairy organizations. Most of what I have to say this afternoon is information which was handed to me on that occasion, with the request that I bring it to the attention of the minister at the first opportunity.

The situation in Ontario in regard to farm labour is serious. Even if the government were to freeze farm labour in Ontario to-day and leave undisturbed every man now on the farms, it would not meet the present situation. I believe Ontario farms have been largely stripped of their man-power, with the result that, according to official reports, many shortages are already beginning to develop. The men with whom I have spoken have no desire whatever to reduce the number of men in the armed forces to the point where we cannot play our proper part in the invasion, when it comes, or cannot have a sufficient number of men in active service. They have no desire whatever to reduce the army reserves to the point where they will not be sufficient for the men who go into action. But when the government asks for an increase in food production, which they feel they simply cannot bring about, they become worried and anxious, and feel that some emergency measures should be taken to relieve the situation.

A few weeks ago a survey was made of Bruce county, and I am assured that the results obtained at that time are fairly representative of the Ontario situation. This survey covered 4,644 farms, of which 2,974 were being worked by only one able-bodied farmer each; 515 others were being worked exclusively by men over sixty years of age; there were only 322 hired men in the entire county, who

were assisting on only seven per cent of the farms. The survey further revealed that in that county this year 6,400 fewer acres of land are being ploughed than were ploughed last year. I mention that, notwithstanding the fact that production last year showed an over-all increase; but, as the record shows, that production was rather spotty and shortages due almost entirely to lack of man-power were already becoming evident.

A report of the Ontario department of agriculture which appeared in the press on April 15, 1942, in regard to the production of beef cattle in Ontario, stated that the total number of year-old or older steers has decreased slightly in Ontario in the period from December, 1942, to the present time. In certain communities, particularly in Middlesex county, the production of beef cattle dropped considerably. In a report of the activities of the federal-provincial conference held in Ottawa last December, appearing in the *Globe and Mail* of December 12, 1942, it was stated that Ontario marketed 163,000 fewer hogs in 1942 than in 1941. I think Canada's failure to fulfil on time its contract with Great Britain in the matter of bacon is pretty well known and has been reported in the press from time to time. A further report from the Ontario department of agriculture concerning hog production, which appeared in the press on April 13, 1943, states that Ontario hogs decreased by 44,000 in 1942, while a Canadian Press dispatch from Ottawa under date of January 25, 1943, quotes officials of the federal Department of Agriculture as saying that an over-all deficiency in pork products is in sight for 1943. The Ontario government agricultural representative in Middlesex county is reported in the press of May 29, 1943, as having said that on account of the prospective shortage of feed grains there has been recently a heavy marketing of sows, while the demand for young pigs has slackened. This reporter goes on to say that this is information gathered from a survey of farm conditions in that county. A report is published bearing date of April 5, 1943, with respect to dairy cattle, and showing that while there was an over-all increase in cattle production amounting to 7·1 per cent as of December, 1942, as compared with the same date in 1941, most of the increase was in respect of young stock and beef cattle, and very little of it in respect of milch cows.

The report of the Ontario department of agriculture dated April 13, 1943, reports that there was a decrease of 4,400 milch cows in Ontario during the preceding year. Numerous individual press reports would seem to indicate that the shortage of man-power on Ontario farms is producing or is likely to produce a shortage of foodstuffs such as Ontario raises.

Earl Kitchener, secretary of the Ontario Milk Producers' Association, speaking at Listowel on December 19, 1942, said that in several instances surveys had been made, all indicating that farmers were planning to cut down the production of dairy produce. In one district in which normally there were 10,000 milch cows, more than a thousand farmers had gone out of the production of milk entirely.

I understand that the Department of Agriculture has asked this year for an increase in the production of sugar beets. On May 22, 1943, the Ontario department of agriculture reports that there will be a marked reduction in the acreage of the sugar-beet crop. This is only one of the many conditions prevailing in Ontario, which indicate, or at least may be considered to be danger signals, so far as production is concerned.

The minister has assured us that there is likely to be a plentiful supply of potatoes. The report of the Ontario department of agriculture dated May 27, 1943, states that the yield from the early crop of potatoes will likely be at least twenty-five per cent below normal. With respect to the total crop it states there will be a considerable reduction in the aggregate acreage sowed to potatoes. I understand that the government is asking for an increase of 10·7 per cent. At this point I would say that regardless of the thousands of tons of potatoes being stored in one province, the citizens of Toronto—and I do not know the conditions in any other city—are faced with difficulty in securing a supply of table potatoes and, in numerous instances, are paying the price of seed potatoes in the purchase of potatoes for table use. That is the actual position in Toronto to-day.

If there is not a shortage, by reason of the number in storage, then somebody has fallen down in the matter of distribution. These potatoes are not available at ceiling prices to consumers in different Ontario centres.

On April 30, 1943, the London *Free Press* reported that after an extensive investigation in Huron, Bruce and Middlesex counties, and after talking with numerous farmers, they are of the opinion that field crops, including grain, will be at least twenty per cent below those of 1942, and that there will be an embarrassing shortage of feed grains and other dirt crops.

Just one further item, in support of my contention that there are danger signals on the horizon, so far as the production of agricultural products in Ontario is concerned, and that unless the man-power situation is faced immedi-

ately there will be increasing dangers of shortages. A report issued by a dairy authority on May 11, 1943, shows that cheese production for January, February, March and April, 1943, amounted to 11,684,530 pounds, as compared with 27,629,310 pounds for the same four months in the preceding year, indicating a decrease of fifty-seven per cent in those four months. Apparently some emergency measures must be taken to meet this situation.

I suggest that no one on Ontario farms wants to see our armies stripped of personnel, or their efficiency reduced. It has been suggested to me that there are two available labour pools from which farmers might draw. The minister's statement that only 4,000 applications had been received from farmers in Canada for farm help is, I am assured, in no way indicative of the present need for farm help. My opinion is that farmers have reached a conclusion somewhat as follows: What is the good of applying for farm help? Already 4,000 applications have been filed, and these are not being filled readily. "In any case", says the farmer, "if I get a man from the city or from the army, I cannot afford to pay him a proper wage, if he is any good, or a wage which will enable me to retain his services". In Ontario, farmers are becoming disheartened with the struggle. They are beginning to ask, "What is the use of trying to maintain the production level which we have tried to maintain during the past years?" The government has not told us how many divisions it is expected will be sent overseas or how many thousands of reserves will be required to supply these divisions when they get into action. We are told the number of men available in the home defence forces and that it is the policy of the government to raise another 25,000 during the year for home defence.

Most of the farmers with whom I have spoken feel that it would be in the interests of the war effort if something more helpful could be done by way of releasing some of these men now being trained for the defence forces. I am assured that the present regulations with regard to the release of men from the army, a copy of which I have under my hand, does not begin to meet the needs of the farmers of Ontario. There is, I believe, a pool of labour in industry. The speaker who preceded me referred to the hundreds of thousands of workers who have been drawn from the farm into industry and into the army. I have not the figures of those who have gone from agriculture into industry, but they must run into the hundreds of thousands.

[Mr. Noseworthy.]

With the process of levelling off that is going on, we hear continually of hundreds—in some instances it is as high as 1,500—of workers who are being changed from one industry to another or who are being laid off in one industry and then being placed in another by national selective service. I should like the minister to tell me how many men have been laid off at the John Inglis plant during recent months and how many have been reemployed. I was told by labour leaders on Sunday that there are still several hundred of the men who were laid off at this plant who have not yet been placed by national selective service.

Mr. MITCHELL: Is my hon. friend suggesting that they should be sent to the farm?

Mr. NOSEWORTHY: I am suggesting that in the interests of the war effort those men who have had farming experience might be placed on the farm. There are many thousands of young men in industry who have had agricultural experience. They were taken from the farm last winter and placed in industry for the winter months with the understanding that they would go back to the farm in the spring. The minister probably knows the actual number who have gone back, but my information is that there are still many thousands who have not yet been returned to the farms from which they came.

If help is to be given to the farmer, either from industry or the army, the government will have to face up to the necessity of subsidizing farm wages. Executives of farm organizations assure me that there is no other way of overcoming the shortage of farm help. If the farmer is paid a subsidy he will be able to compete with industry and the armed forces in the payment of his help. That is the first suggestion I would make. I am told that it would help immeasurably if the farmer were able to obtain the gasoline he uses for his tractor tax-free. I am speaking particularly of Ontario where the tractor is used on small farms. Many farmers feel that present prices do not permit them to buy gasoline for use in their tractors.

Another suggestion that has been passed on to me is that the government subsidize the purchase of feed grain as soon as seeding is completed. If this were made sufficiently attractive it would induce farmers to maintain or increase their herds. I am told that many farmers are reducing their herds. There

will be a plentiful supply of grass this season, and many farmers are likely to reduce their herds to a point where they can feed them without having to buy feed grain. Relief of this kind would help, not only in the production of meat but in the production of eggs and other agricultural products. I pass these suggestions on to the minister, not as a schoolteacher farmer but on behalf of the genuine dirt farmers of Ontario.

Mr. EMMANUEL d'ANJOU (Rimouski) (Translation): Mr. Speaker, I wish to say a few words on the matter at present before us. This question is vital to both the province of Quebec and the whole of Canada. I represent a farming constituency. I have never failed, ever since I have held a seat in this house, to fight on every occasion for the gallant agricultural class. Therefore, I am grateful to the hon. member for Témiscouata (Mr. Pouliot) for having moved this resolution, which gives me another opportunity of taking the defence of the farming class whom I humbly represent. I am glad to pay this tribute of gratitude to the hon. member for Témiscouata. He has always been, in this house, the gallant protector of the agricultural class and the upholder of every worthy cause. Some hon. members blame him for his numerous and lengthy speeches. Mr. Speaker, the hon. member for Témiscouata never fails to uphold the rights of his fellow-countrymen or fellow-citizens. I would wish this house had twenty-five members as energetic as the hon. member for Témiscouata, for then the present government would go through the mill time and again.

Frankly, it must be admitted that the agricultural class of this country is in a pitiable and discouraging situation. There is so much truth in this statement that, in my own riding, some farmers, unable to procure the help necessary for the operation of their farms, have had to sell or leave them. However, we hear on the radio, we read in the press passionate pleas begging the farmers to produce more and more, to increase their output. But they are being refused the help they need so much. The farmer is deprived of his sons who are sent to military camps, while the father, often far advanced in years and unwell, remains alone on his farm. Through discouragement, he very often forsakes his agricultural calling.

The agricultural class, as I so often repeat in this house, deserves every consideration on the part not only of hon. members, but also of the government and is entitled to all possible encouragement from them. A short while ago, an hon. member from Ontario stated that victory could not be attained without soldiers. If soldiers are essential to a victorious conclusion of the war, these troops must be properly fed and our farmers and their sons must be placed in such a position that they can till their land. It has been said that the land is the great provider. If our soldiers are to be earnest and energetic defenders of their country they must be well fed.

The present government have unfortunately deceived the farmers of Canada. Last year, large headings in the newspapers proclaimed that the administration had decided to grant exemptions from compulsory military service to farmers and their sons. This campaign was launched just before the holding of the plebiscite to incite farmers and their sons to vote "Yes". Once the subterfuge had had the desired results, exemptions were completely refused to them. Personally, hundreds of cases have been brought to my attention and I have voluminous files on the subject. I have applied everywhere to secure postponements and leaves, not exemptions, mind you, for they were unobtainable, in spite of the deceptive promises. I have applied for postponements or leaves for farmers' sons whose presence was absolutely essential on the farms and never have I been successful in obtaining practical results.

Why do not the present government, who draw their inspiration from the Union government of 1917, set up in the county seats, exemption boards or appeal boards whose members would be the worthiest citizens of the locality and whose duties would be to decide whether the farmers' sons whose exemptions are requested are really more useful on the farm or in the military camps? In 1917, the town of Rimouski had an exemption committee comprising the mayor of the town and two well-known citizens of my county, honest and sane people, to whom the farmers, accompanied by their sons, addressed their requests. These requests were carefully examined, and when the members of this board decided that the farmers and their sons or helpers were more useful on the farm than in the army, they granted them an exemption. The present government, and I repeat what I have already said, is even more nefarious than the 1917 government which was condemned so severely by the Canadian electorate at the time of the 1921 elections.

Mr. LECLERC: In that case, why don't you go over to the other side of the house.

Mr. d'ANJOU: Following the example of the hon. member for Témiscouata, I will tell the hon. member for Shefford (Mr. Leclerc) that the constituents of Rimouski elected me to this seat in the house, and here I stay; I will also speak as I see fit even at the risk of displeasing the hon. member.

Mr. Speaker, I really believe that the motion introduced by the hon. member for Témiscouata came at the right time, and I hope that the government will seriously consider all the reasons which he gave as well as those which were suggested by the hon. members who spoke before me in support of his views. We want to win the war, and yet, we will not allow the farmers to produce what is needed to feed not only the civilian population, but our soldiers as well. When justice is sought for a farmer, the same answer is always given, and that is the crowning argument; we are at war! The end of the war will not mean the end of the world; Canada will still be in existence. But unfortunately, as the hon. member for Kamouraska (Mr. Lizotte) said a while ago, a Canadian author may write "La terre qui meurt." Farms will be deserted in the other provinces just as in the province of Quebec. My province is primarily agricultural, and it will be greatly affected. Therefore, I shall be pleased to vote in favour of the motion introduced by the hon. member for Témiscouata who has, in all circumstances, and I say it once again, defended the rights of his fellow-countrymen and of his fellow-citizens; I hope that the number of members who are conscious of their responsibilities and who fully understand the position of the agricultural class will be broad enough to support the motion.

Mr. LECLERC: Mr. Speaker, I rise to a point of order. A while ago, I made a remark to the hon. member when he said that the present government was more nefarious than the union government of 1917. Such is not my opinion, but if it be the opinion of the hon. member, why does he not take his seat on the other side of the house?

Mr. d'ANJOU: In that case, I am not of the same opinion and it does not concern the hon. member whether I stay on this side of the house or go over to the other. Mr. Speaker, I shall be delighted to support the motion of the hon. member for Témiscouata.

At six o'clock the house took recess.

[Mr. Leclerc.]

After Recess

The house resumed at eight o'clock.

Mr. NORMAN JAQUES (Wetaskiwin): I suppose, Mr. Speaker, that if I were to suggest gold mines as a field for finding the needed farm labour I should be told that I did not know what I was talking about. It would seem that once a man works in a gold mine he is unfitted to work at anything else. At least that has been hinted in this house, and I might suggest that the same is true of those who think in terms of gold.

At a time when farmers by reason of war necessity have been deprived of a great deal of their labour, they have also suffered great losses in machinery, because they can neither buy new machines nor obtain repairs for their old machinery, and there is beyond question a considerable loss of efficiency on the farms in consequence. I might mention a case that was brought to my attention this session.

A number of elevators in my riding, at the request of their patrons, the neighbouring farmers, had intended to install machinery for cleaning grain and they went so far as actually to buy the grain cleaners, which are now and have been for the last eighteen months or so lying in the elevators. But they cannot get permission from the construction controller to install the cleaners because, as I am informed, and as the late controller of construction told me, they cannot spare either the labour or the materials from the war effort. That also is the answer which has been given to me in Alberta by the machine companies. They say that they cannot get the machinery or repairs for the farmers because the manufacturers cannot get the materials to put into the machines.

If that were strictly true, I would not be speaking to-night; but it is not true, because an immense amount of iron and steel, and other materials which the farmers could use, are at the present time and have been since the war started wasted in the mining of gold. I simply wish to say this just now. Surely in this time of war the needs of the farmers, that is, the needs of those who must produce the food of the nation, and the food of the allied nations, should come before the needs of gold miners.

Mr. FREDERIC DORION (Charlevoix-Saguenay): We certainly owe the hon. member for Témiscouata (Mr. Pouliot) congratulations upon having raised in the house a matter of such great importance. I cannot refrain from congratulating also the hon. member for

Chambly-Rouville (Mr. Dupuis), who did not hesitate to join the hon. member for Témiscouata, even if it did not please his colleagues.

Many members of the government looked scandalized this afternoon when this question was brought before the house. It was as if a crime was being committed.

Mr. MITCHELL: I do not think my hon. friend is serious when he says that we were scandalized and that it was a crime. That is not fair.

Mr. DORION: I said that many of them were scandalized, though this debate might interrupt only for a few hours the consideration of the war budget. When any hon. member raises a question, even of primary importance, such as this one, the majority of the members sitting to your right, Mr. Speaker, successfully hide their discontent. The whole trouble in this matter, as in so many others, comes from the fact that since the beginning of the war the government has not been able to foresee the consequences of its acts.

As regards the raising of men, the government has acted as if it were the same thing as the production of goods. They decide to raise 10,000 men and orders are given to those concerned to raise 10,000 men, without asking whether this can be done without endangering agriculture, the mines or any other essential industry. That is why we are faced to-day with a problem which is almost without solution.

I believe the government should be grateful to the hon. member for Témiscouata for having brought this problem to the attention of the house to-day. We must not forget that agriculture entered this war as one of the most depressed industries. Farmers were unable, owing to the prices they received, to pay the wages which their labour was entitled to expect. By its very nature, agriculture is not an industry which can suddenly turn over to new methods and increase its output, as many of the mechanized industries can. However, we have seen the government spending millions upon millions of dollars to build war factories. But how many millions did we give to agriculture to improve its means of production?

I was amazed not long ago to learn that some industries are allowed twenty per cent and even fifty per cent depreciation during the war. Are these industries more essential to the war effort than agriculture? The only thing the farmer demands is to keep on the farm those who can help him to make the land produce as much as possible.

One thing is certain: the farmer will not make money through this war; and this cannot be said of many other industries. It is urgent that the government take the necessary means to improve the situation. And do not forget that with this state of affairs, with all the restrictions imposed upon the farmers, their morale is getting lower and lower, and this may be the worst of all. It may be a good war effort to spend as many millions as possible; but we must not forget that the basis of all our war effort is agriculture.

Mr. J. H. LECLERC (Shefford) (Translation): Mr. Speaker, my speech will be a short one, as usual. I am not in the habit of taking up the time of the house where I consider that, speaking generally, a considerable amount of time is wasted. I do not hesitate to state that the session should be over by now. I simply wish to support the motion of the hon. member for Témiscouata (Mr. Pouliot), because certain statements are deserving of utterance. Various views have been expounded to-day. I approve of some speeches and disapprove of others. If, for example, the farmers are behind in their seeding, it cannot be attributed to the scarcity of manpower. The rainy season is to be blamed. Contrary to what the last speaker has said, the farmers make more money in periods of war. However, their income is still not large enough to allow them to compete on the labour market and pay two or three dollars a day for help. Butter would have to sell at from 75 cents to $1 a pound to permit them to do so. The farmers are unable to pay such high wages.

I specially wish to draw the attention of the house to the trouble we are faced with regarding the men called up for training. The government have amended their man-power policy. Since March, 1942, this policy is more liberal than heretofore. Before that time it was deemed advisable to call up every farmer because it was considered that they might help to protect their own homes. Our views have altered since that time. To-day there is no trouble in getting postponements for bona fide farmers' sons, but difficulties are met with when we are dealing with those who have been called up in 1940 and 1941.

In my riding, I have come across many very deserving cases. I shall call two or three of them to your attention. Last winter, a seventy-year-old widow, who has only two sons, requested that I try to get leave for one of her sons who had been called up before 1941. After months of work, I finally was successful in securing leave for that young

man who, however, did not reach the farm, where only one son remained, until late in the spring. On this farm, there were 25 milch cows and anyone who knows something about agriculture, realizes the amount of work the care of these animals represents. I may state in passing that, in Shefford, we have the largest herds in the province of Quebec. The mother exhausted her strength in attempting to help her son. Finally, in June or July, I believe, the other son, who had been called up for training, was granted leave for a few months. He went back to the army in the fall. This year, after some delay, I was again successful in securing further leave for him. He is now on the farm, having obtained leave of absence for three months. Mr. Speaker, that is not enough. He should have been granted at least six months, for, in my opinion, a farm on which there are 25 cows, as well as sheep and other animals requires at least two good men. The truth of this is evidenced by the fact that, at the time when there was only one son on the farm, although the latter includes a woodlot, they had to buy fuel wood.

I may mention another nearly similar case, where 25 cows were kept. The father and mother are at least seventy years old. Both became ill, and a nurse had to take care of them. They had only one son at home. This spring, I obtained a postponement for him but as every one will admit, two men are scarcely enough on a farm of that size, and at least three would be required. Those two men can scarcely do all the work and they should remain on the farm the whole year round. In the cases I have just mentioned, the men are not French-Canadians, but English-speaking people.

I could mention many other cases. A dairy farmer told me on Monday morning: "I keep 30 milch cows, but I have only one son at home". Moreover, this farmer sells his milk in town. All those cases deserve our consideration and I ask the Minister of National Defence (Mr. Ralston) and the Minister of Labour (Mr. Mitchell) to consider them most carefully. Farmers' sons whose services are essential on the farm, whether they were mobilized in 1940, in 1941 or even in 1942, are entitled to the same consideration shown to those who are liable to be called up this year and who are practically exempted.

Mr. C. E. JOHNSTON (Bow River): I am not going to occupy the time of the house as an effective means of hampering our war effort. My purpose is not in any way to detract from that great cause. But I do wish to say a few words upon this subject before it is allowed to pass. I believe the hon. member for Témiscouata (Mr. Pouliot) did well to bring this matter forward, because it is very timely.

A while ago the Minister of Labour (Mr. Mitchell) asked the hon. member for Lethbridge (Mr. Blackmore) where the shortage of food would be. I do not think it takes any stretch of the imagination to know where a food shortage may occur.

Mr. MITCHELL: It just depends upon what kind of imagination one has.

Mr. JOHNSTON (Bow River): That is the trouble with the Minister of Labour; he has not a good imagination.

Mr. MITCHELL: Coming from my hon. friend that is a compliment.

Mr. JOHNSTON (Bow River): That shows that I can at least pass the minister a compliment when he has it coming to him. There is no question as to where the shortage of food will be; it will be right here in Canada. One does not have to use imagination in that respect. The shortage is here now; otherwise there would be no necessity of rationing, and rationing is being extended all the time. I am not objecting to that, because it is the proper thing to do if there is a scarcity, but it is great folly for us to ration food without making any concerted effort at the same time to increase production.

So far as the shortage of food is concerned, the minister has in mind, as we all have, that Canada is raising more foodstuffs now than she ever did before. Nobody is denying that. But we have committed ourselves to definite obligations to countries overseas, obligations which we cannot escape. Therefore we must raise enough in addition to take care of our own wants, and I maintain we can do that without any difficulty if we have a proper man-power policy.

The Minister of Agriculture (Mr. Gardiner) has asked for greater production this year of all foodstuffs; and, speaking in the house some little time ago, he expressed the opinion that there was nothing in the way of reaching that objective, so far as man-power is concerned. I hope he is right, but I greatly fear he will find himself mistaken before next fall comes round. Just because we have on hand a good supply of certain commodities, such as wheat, I do not think we should sit down contentedly and say that all is well. This year, I believe we are in for a setback, even in regard to wheat; and if we should have a disastrous season, with the commitments we

already have for overseas delivery, we in Canada are going to find ourselves rather short even of wheat, as well as other commodities.

Mr. MITCHELL: So long as we do not run short of talk we shall be all right.

Mr. JOHNSTON (Bow River): If we do, I am sure the minister will make up any shortage; he has done very well in that direction so far; but that is about all he has done, for the onus of this whole question falls upon the shoulders of the Minister of Labour. I am not going to blame him personally; as I said once before, speaking of the strike in Montreal, he was asked to do an impossible thing, and I explained why I made that statement. I do not intend to go further into that matter now.

Some of the difficulties we shall face this year will come as a result of the late seeding which, together with the shortage of man-power to put in the crops, will make the harvest exceedingly late. Then, again, there will be a man-power problem; the harvest will be so late that there will be a great rush, and there simply will not be enough men to take it off. That is a problem we might as well face now, in order that we may make some preparation to meet it. I believe this whole question could be handled most efficiently if we would all face it honestly. Let me explain what I mean by that, and I do not think I could do better than quote the words of the Minister of National Defence for Air (Mr. Power) as reported at page 3275 of *Hansard* for yesterday:

> . . . I am not running an air force to go farming, but to fight overseas and to train here. If a man enlists in the aircrew he enlists of his own free will and he must go through the training for a most important job of work, costing us $25,000 if he is a pilot, $27,000 or $28,000 if he is an observer or navigator and so on. I do not think we can afford to let him go away on farm leave. I do not know whether the committee will agree with me, but so long as I have anything to do with the air force, either it will be an air force or they will be farmers and will go back to their farms. I do not wish to have a double-barrelled organization, running farms and an air force at the same time.

I wish to congratulate the minister on his frankness, and to say further that he has been staunch in his stand in that regard ever since the beginning of the war. That is the proper stand to take. You cannot fool around with this question; and I think if the Minister of National Defence (Mr. Ralston) would come out with a similar statement we would begin to clarify this matter.

Mr. BOUCHER: What about the Minister of Agriculture (Mr. Gardiner)?

Mr. JOHNSTON (Bow River): I am just coming to that. There is no use in talking; neither in the air force, the army nor the navy can you have a man here to-day and gone to-morrow, and the people in these departments are not to blame. That blame properly should be placed upon the man-power policy of this government; that comes under the Minister of Labour, and that was what I meant a moment ago when I said that the responsibility definitely fell upon the shoulders of the Minister of Labour. There is no man-power policy so far as agriculture is concerned. The Minister of Agriculture has also been placed in an impossible situation, and now he is trying to get out of it as best he can. I remember that I was talking to the chairman of one of the selective service boards in regard to agricultural postponements and he said, "I don't want to take these boys off the farms any more than you do, but here is the position in which I am placed. I get an order from Ottawa saying they want 25,000 men. Out here in the west, where am I going to get them? We have taken practically all the men we can get from the cities, though we can still pick up a few here and there. Anyone with an ounce of brains knows the only place we can get 25,000 men is from the farms, and as long as they tell me to get 25,000 men I am going to take them from the farms or any place else. If they don't like that, they can change the policy." That is talking straight, and there was no argument against it. There, again the responsibility was thrown directly where it belongs, right on the shoulders of the Minister of Labour, and whether or not he likes it he will have to accept that responsibility. When a man is taken off a farm and put into the army, apparently that is where he should be, and that is where he should stay. But if he is essential to agriculture he never should have been taken off the farm. Surely that is what the selective service boards are for.

If we look at agriculture in the proper light we must agree that agriculture is just as important as any other war industry in Canada. We have discovered the folly of saying, "Well, when harvest time comes we will send some of the school boys or school girls or what have you to the farms." We tried that experiment last year; no doubt the Minister of Labour did so in all good faith, in order to meet an emergency. These fellows from eastern Canada were sent to the west

but, as the hon. member for Vegreville (Mr. Hlynka) says, they could not take it. You cannot take a fellow from the city, I do not care whether he is a school boy or a full grown man, and put him on a farm at harvest time and expect him to keep up with the other men. It just cannot be done. I spoke to some of these fellows who were on their way back east last fall, and they acknowledged that they could not keep up with the work. It was not their fault; they just could not carry their end. It would be the same whether you paid them $7 or $8 a day. So that the farmers are reaping the benefit of our muddled labour policy, to the extent that in my own constituency as much as ten bushels to the acre have been lost on account of mice. Who should be blamed for that? The farmers were not to blame; it was definitely the fault of the government.

Mr. MITCHELL: The weather.

Mr. JOHNSTON (Bow River): Not altogether.

Mr. MITCHELL: The harvest was late last year.

Mr. JOHNSTON (Bow River): Well, if the labour had been available the threshing would have been done, though a small portion might have been left over. I know of machine after machine in my own area that was running with only three, four and five teams when it should have had twelve or fourteen. The threshing was not completed in those areas, and the farmers were penalized to the extent of ten bushels to the acre. Not only that, but in a great many cases the grain was swathed, and not in the stook. The grain in the swath this year was spoiled, and some of it sprouted before it could be threshed, with the result that the harvest carried from last fall to this spring resulted in late seeding.

Coming back to the question of man-power, and as to whether it is efficient or not, may I refer to postponements from the army. Mind you, I wish to make it definitely clear that I am not disagreeing with the army or the air force. I think it is the height of foolishness for either the army, the navy or the air force to take in men and then be forced to allow them out for other work. But let it not be misunderstood that I do not think the boys who are essential to agriculture, should ever have been taken off the farms and put into the army, and those who are there now should definitely be put back on the farms, with instructions to stay there. I think the agricultural leaves from the army, the navy and the air force are handled in an entirely wrong manner. In the last couple of months I have been convinced, from what I have seen, that once you begin to get a postponement for a young fellow in the army, the air force or the navy, and happen to write a commanding officer, or the boy writes his commanding officer, right then they begin to step on him. Delay after delay occurs, as was pointed out a while ago by one of the other speakers.

The boy who happens to be at the army or air force camp is first instructed to get affidavits. He has to write home to his father or mother and they have to run around the country getting these affidavits. Then they send those off to the boy, and he has to take the matter up with his commanding officer. And so the process goes on for three or four weeks. Then the commanding officer does not think he can let the boy go on the grounds stated. Then probably the boy, his father or his mother writes to their member of parliament, and the member takes it up through the department. By that time the boy is transferred, and probably he is sent overseas.

I have one case before me, one which came to my notice to-day, where that very thing happened. I started correspondence in connection with this matter last spring, when seeding first started. When finally I got a favourable reply from the department the boy was drafted for overseas, although he had not finished his basic training so very long ago. I have another case, right here, which occurred in connection with the navy, where the same is true. In this instance the boy was drafted to another ship, and away he went. The father and the mother wrote saying they imagined there was no use in going on with the matter. This boy was told that, so far as the armed services were concerned, no more leaves were being granted, and that all leaves were postponed.

This is definitely interfering with agricultural production. I fear lest this fall, when it is too late, we shall find out that we are falling far short of our expected production. Then we shall have a catastrophe on another front. That is too serious to be overlooked. Now is the time to take action, although even now is quite late.

I have in my hand a letter from a different part of Canada, namely, from Quebec, and I find that in that province conditions are no different from what they are in Alberta, Saskatchewan and Manitoba. I should like to read a portion of this letter, in which

a lady writes to me respecting her son. She had been at a meeting at which the deputy minister of agriculture was present, and following the meeting she wrote:

I protested to the meeting that there was even then, October, 1941, a serious lack of labour on eastern Canadian farms and that we had been forced only a month ago to sell at auction the highest producing pure bred Holstein herd in Quebec. . . . We had a succession of men who either enlisted or were drafted.

And then at a later point in the letter:

The fact that dairy herds were being sacrificed was recalled. Doctor Barton answered this by stating that individuals might be forced to liquidate here and there but such animals were purchased by other farmers and continued to produce.

And then in brackets she writes "Mr. Gardiner's theory". The letter continues:

To-day my husband and I are alone on a 300-acre farm within 55 miles of Montreal. Our son, 18, is in the R.C.A.F. He is better off out of it, we think. The farm, I mean. Here he too would be alone. . . . We have about 15 head of stock and milk one cow for ourselves, feeding a couple of calves.

There was a great dairy herd destroyed. She goes on in the letter to point out that in that neighbourhood other dairy herds had to be sacrificed because the boys were taken away.

Mr. McDONALD (Pontiac): Did the boy not enlist?

Mr. JOHNSTON (Bow River): I am glad the hon. member asked that question, because I had just picked up the speech of the Minister of National Defence for Air (Mr. Power), with regard to which I wished to refer to that very point. The hon. member asked if the boy did not enlist. May I refer for a moment to the statement by the minister:

If a man enlists in the aircrew he enlists of his own free will. . . .

That statement is absolutely wrong and misleading. This system of enlistment we have is the most scandalous that was ever put across a country. It is not enlistment in any sense of the word; it is coercion.

Mr. SPEAKER: Order. The hon. member will recall the motion before the house is one to adjourn the house because of a shortage of agricultural man-power. The question of enlistments is certainly not within the purview of that question of man-power.

Mr. JOHNSTON (Bow River): I was going to show the house that the method of taking men from the farms was the effect of that. The question was asked definitely and I intended to spend a second or so in answering it. It is definitely linked up with the shortage of man-power on the farms, and I think I can prove that to Your Honour in a few minutes.

Mr. MITCHELL: Before my hon. friend does any proving, surely when he refers to members of aircrew he must know they are the most courageous men who were ever born.

Mr. JOHNSTON (Bow River): That has nothing to do with the matter.

Mr. MITCHELL: Oh, that is all right; but you said they were coerced into aircrews.

Mr. JOHNSTON (Bow River): I did.

Mr. MITCHELL: Surely my hon. friend is not serious about that. He makes a charge against young fellows like that who are flying over France and Germany to-night.

Mr. JOHNSTON (Bow River): Do not try to bring a red herring across the path like that. The minister knows better than to do that.

Why did most of these fellows enlist?—because we did not have the gumption in this house to say what we thought. That is the fact, and every member sitting here knows it. And a good many members sitting in the cabinet know it, too. If we had had—I was going to say the intestinal fortitude, but I do not think that is parliamentary—if we had had the gumption to go out and state a definite policy we would not have the trouble we are having to-day. These fellows who were on the farms knew they would be called up. It is happening every day, and it is happening even now. They know they will be called up, drafted out of the farms and taken away from essential industry. They know they will be drafted into the army, and so they enlist.

Mr. MITCHELL: My hon. friend knows we are not drafting people from the farms into the army at this time. My hon. friend knows that.

Mr. JOHNSTON (Bow River): They certainly are being drafted at this time. That only shows the confusion that exists, even to-day. With all due respect to the Minister of Labour, I do not think he is serious, because I am sure he knows the difficulty he himself is finding with this man-power policy. But in my judgment he will never be able to settle the agricultural problem until he straightens out that question.

These young fellows on the farm, who are most anxious and willing to stay there, who know they are essential to agriculture, who know their parents cannot get along without them, must make a choice, they must either enlist or be conscripted. Hon. members

know the stigma that is attached to the word "conscription". If everyone physically fit had been conscripted and put where he was most fitted, put to his task under a decent and proper selective service, we would not have the difficulty we have to-day. That is what is the matter. We have not as yet a definite man-power policy.

I hope the Minister of Labour will be able to get some suggestions out of what I have to say. Here is another suggestion that will help to solve the agricultural problem if heed is taken of it. At this very minute we are entering into an unemployment period. That is what is happening right in the heart of war. Men in industry are being thrown out of work. At the Calgary Ogden shops fifty men were laid off at one time, and two hundred at another. Those shops are producing essential war materials, and yet a return tabled in the house shows that only fifty-three, if my memory serves me aright, of these men have been replaced by selective service. Something like sixty are on unemployment insurance, and selective service does not know where the rest are.

Some of those men were experienced agriculturists. Why did the selective service boards not get after them? The one lady to whom I referred to-night has one son in the navy; he enlisted because he knew he would be conscripted. The other boy enlisted in the army for the same reason. I received this letter only yesterday, and she tells me that they have six hundred acres which are not seeded. Does the Minister of Agriculture (Mr. Gardiner) or the Minister of Labour contend that we can reach our objectives in agricultural production with conditions like that? That is only one case and there are many more over the country.

I am not going to speak at any great length on this matter. If the Minister of Labour will be as frank as the Minister of National Defence for Air was, he will come out and say he knows where the difficulty is. There is no question about that; otherwise I do not think he would be occupying his present position. He knows he has been in an impossible position trying to operate under a two-way system. He will have to establish a man-power policy which will put these men where they belong and keep them where they are best suited. If they are essential to agriculture, put them there and see that they stay there. If they are in the army, you will have to take them out and put them on the farm.

Mr. MITCHELL: If my hon. friend is not careful I will put him in agriculture.

[Mr. C. E. Johnston.]

Mr. JOHNSTON (Bow River): If the minister puts me in the Department of Labour I know I shall not do any worse than he has done.

Mr. MITCHELL: My hon. friend misunderstands me; I said I would put him to work on the farm.

Mr. T. C. DOUGLAS (Weyburn): Mr. Speaker, the problem of the shortage of farm labour is not one that has risen over night. This problem is the direct outcome of the policy of the government for three and a half years and its failure to tackle courageously and intelligently the problem of the allocation of man-power. We are paying the price to-day in a threatened shortage of fuel and food. Four different ministers have had this problem tossed into their laps. The first one was the Minister of Agriculture (Mr. Gardiner), who for a while was Minister of National War Services. It was then passed over to Mr. Thorson, who was Minister of National War Services for a short time. Then it was the baby of the present Minister of National War Services (Mr. LaFlèche), and finally it was tossed into the lap or on to the doorstep of the Minister of Labour (Mr. Mitchell). He cannot be blamed entirely for the present situation because he has inherited it. But the problem is there, and it is always more difficult to solve a problem after three and a half years of muddling than it is if it is tackled properly in the first place.

We recognized at the outbreak of the war the need of and advocated an intelligently planned programme for handling this problem. On September 9, 1939, the hon. member for Rosetown-Biggar (Mr. Coldwell) set forth in this house the views of this group. Discussing this problem, he said among other things, as reported at page 57 of *Hansard*:

> We have tremendous resources. In modern war huge masses of men are being replaced by mechanized units which require vast quantities of supplies to maintain them in the line. Frenzied demands for the enlistment of more and more men, if granted, may defeat the very object in view, success in this struggle. This was to a more limited extent true in the last war. Sir Wilfrid Laurier, for example, noted that condition in a letter which he wrote on May 15, 1907, to Sir Allen Aylesworth, in connection with the problem of conscription, in which he said:
>
> "There is a shortage of labour in agriculture and industry, in fact in every field where brawn and muscles are needed, and in the face of this condition people there are still yelling for more men being taken away from occupations in which they are so much needed."

We have recognized that throughout the progress of the war there have been two extreme schools of thought with reference to the problem of man-power. There have been those who have cried for an ever-increasing army who could talk of nothing else than conscripting men and putting them into the armed forces as though that in itself would solve the whole problem. We have maintained that to do that would be to overlook the fact that we have certain commitments for the production of war materials and foodstuffs and that our effort must be a balanced effort rather than a one-sided one.

On the other hand there have been those at the other extreme who have sought to have almost total exemption for farmers and farmers' sons and who have wanted to use every possible excuse to deprive the armed services of man-power. We have dissociated ourselves from that point of view. We have never believed that any special class or group should have special privileges. In our opinion that is class legislation, and class legislation of any sort is nefarious and harmful. The point of view we took was that we wanted an intelligent plan for the allocation of man-power. First of all we should find out what is our total available man-power; how many physically fit men there are within certain age groups. Our man-power pool is not a bottomless pool; it has definite limitations. Our first task was to find out what that was, and we asked for that repeatedly. Registration was supposed to provide that information. It did not do so very effectively. Then, out of that pool of man-power we must decide first of all the minimum number of men that would be absolutely necessary to maintain our home economy—to run our railroads, our mines, our factories and our foundries.

Next we must decide what was the absolute minimum necessary to grow the foodstuffs which we ourselves required and sufficient in addition to meet the commitments which we have made to Britain and our allies. After we have decided the numbers that were needed at home and how they should be apportioned among these needs, we must decide what available man-power we had for the fighting services and how they should be allocated as between the army, navy and the air force. But that has never been done. Since the outbreak of the war, what there has been is a competition between the different departments of the government for the services of the same man. It did not matter what the man was doing, whether he was on the farm, in industry or in a mine. The army was asking for him; so were the air force, and the navy; munitions factories were beckoning to him; the coal mines wanted him in the mines; the railroads wanted him on the railways. All the different departments of the government were competing with each other for the services of the same man, and at the same time the Minister of Agriculture was setting a programme for the farms of this country. In other words, the policy this government was following was the policy of laissez-faire. The policy which this government followed in peace time it follows now in war time—the policy of doing nothing until public opinion makes you do it, and then do just as little as you have to do, and do it too late.

Mr. ADAMSON: And do it the wrong way.

Mr. DOUGLAS (Weyburn): What happened under that policy? The law of economics naturally took men from the low-paid industries into the higher paid industries. Men drifted from the farms into the munition factories, from the mines into the shipbuilding yards. All the time men were moving from the low paid industries into the higher paid industries. Also a large number of men went into the armed services. The result of it all was that on the prairies particularly, many of our rural areas were already completely denuded of man-power long before the government brought in compulsory military service. As a result of this unplanned confusion we find that Canada after three and a half years of war finds it has more men in non-essential industries than it had a year and a half ago.

Mr. MITCHELL: That is not true.

Mr. DOUGLAS (Weyburn): The last available figures in January showed that it was true. The minister can give his figures.

Mr. MITCHELL: I shall be glad to give them when discussing man-power.

Mr. DOUGLAS (Weyburn): The second thing that happened was this. After three and a half years of war we find the government asking the agricultural population, with 395,000 fewer men on the farm, to produce more foodstuffs than we ever produced before.

Mr. MITCHELL: Are we not asking all our people to make a similar effort? And they are doing a pretty good job at that.

Mr. DOUGLAS (Weyburn): They are. But I am trying to find out whether we have not gone beyond the limit in what we are asking our farmers to produce when we have 395,000 fewer men on the farm. We are asking them to produce quantities of foodstuffs that we would have thought a few years ago it was impossible for them to produce, even with hundreds of thousands more men on the farm than we now have. The result of it all is that to-day in Canada, one of the greatest

agricultural countries in the world, we are rationing meat; we are rationing butter; we have some restrictions on cream, and in certain cities of Canada potatoes are unobtainable. If we had told that to anybody in the House of Commons three and a half years ago they would have said that such conditions were impossible.

Mr. MITCHELL: Is it not because we are trying to feed the British people?

Mr. DOUGLAS (Weyburn): No; that is only part of the story. We are not exporting beef or butter to Great Britain.

Mr. MITCHELL: Cheese.

Mr. DOUGLAS (Weyburn): What we are shipping to Britain is only part of the story. There is something more, Mr. Speaker.

At the beginning of this session I made a plea to the Minister of Agriculture in which I said that unless something was done in connection with the man-power situation on the farms we would face actual food shortages in this dominion in the next twelve months and might not be able to meet our food commitments to Great Britain—and it is very important that we do. The Minister of Agriculture answered in a very eloquent speech, but there was more eloquence than logic in it. He said that last year we produced more than we had ever produced before and with less man-power. That is true, but it was because, first of all, we had the best climatic conditions right across Canada that we had had for the previous twenty years. Such conditions may not be duplicated. Second, it was done at the expense of the people on the farms whom we asked to make superhuman efforts. Old men, women and children—I saw them last fall out in the fields shovelling wheat and pitching stooks.

Mr. MacKINNON (Edmonton West): Pitching stooks?

Mr. MAYHEW: Some farmer!

Mr. DOUGLAS (Weyburn): I have done more farming than perhaps the hon. member for Victoria, British Columbia. We have no guarantee that these conditions will be duplicated. Weather conditions have been extremely bad; we may not have the same favourable climatic conditions we had last year. Second, the man-power available is reduced as compared with last year. It may be that we have reached the point where we have denuded the farms of man-power to such an extent that this country will not be able to meet its own food requirements and those of Great Britain. The great republic to the south of us also faces a critical situation. They find themselves with only feed grain enough for the next six months. They may need feed grain from us. We may not be able to supply it. There is talk there about bonusing people to grow grain because they are faced with a possible shortage and they may be unable to feed the stock which they will require to continue their war effort.

Alongside of this shortage of man-power on the farms and the danger that we may not be able to meet our production quotas is the fact that there has been scarcely a week during this session when some member has not asked the minister, what about certain men who have been laid off from this factory or from that, and how are they to be placed? Last fall and winter the number of unplaced applicants registered as unemployed ran around 100,000. It is hard to conceive of it—a hundred thousand persons in Canada registered in Canada for employment and not placed!

Mr. MITCHELL: It is not hard to conceive if you know what the figures mean. It can be understood by anybody who knows about the shifts in our industrial economy, part-time workers in the cities and so forth.

Mr. DOUGLAS (Weyburn): It is not only our industrial economy, may I point out to the minister?

Mr. MITCHELL: And in agriculture.

Mr. DOUGLAS (Weyburn): In *Votes and Proceedings* of March 22, 1943, I find that in Saskatchewan, which is not an industrial province, the number of persons registered for employment was 2,769. That was at a time when it was difficult to get workers on the farms and difficult to get men to work in the coal mines in the southern part of our province.

Let me review what the government has done to meet the shortage of agricultural man-power. The first thing the government did was to pass an order in council, P.C. 2252, on March 23, 1942, which was supposed to freeze men on the farms. The fact is, of course, that this did not keep men from being called up under the National Resources Mobilization Act, although it was intended to do so. The best proof of that is found in the figures which the Minister of National Defence put on *Hansard* the other day, as reported at page 3031. I quote:

The intake of new personnel into the army for the fiscal year 1942-43 by military districts, based on telegraphic reports from the districts, is as follows.

Then follow the figures. The total is 74,204, who were taken in during the fiscal year from April 1, 1942, to March 31, 1943. That year pretty well comes within the period since the order in council was passed. What do we find? In spite of the fact that it was an order in council which purported to prevent men from being taken off the farms, we find that in military district No. 12, which is Saskatchewan, nearly 7,000 men were taken off the farms and put in the army. And when we compare that with other military districts we find that Saskatchewan is the third highest in Canada, the only other districts which are higher being No. 2, with 10,908, and No. 4, with 15,886. That is an amazing thing.

If one needs further proof one has only to look at the table which I placed on *Hansard* at page 2920. That table showed that although in Saskatchewan 22,119 were called up, only 8,041 were granted postponements. When the hon. member for Labelle (Mr. Lalonde) this afternoon said that he had been handling 1,200 cases for postponement from military service and that more than half of them had been granted postponement, and when I look at administrative division F, Quebec, and observe that out of 26,565 on call, 21,474 were granted postponements, I begin to understand something of the 1,200 cases referred to by the hon. member for Labelle.

Mr. MITCHELL: I will give the hon. member much more interesting figures than those when we have the man-power debate.

Mr. DOUGLAS (Weyburn): I shall be glad to get them, but to me these figures are startling. In Saskatchewan 22,119 men are called and 8,041 are granted postponement, and in Quebec 26,565 are called and 21,474 are granted postponement. And Saskatchewan is a province which is almost entirely agricultural, a province wherein order in council P.C. 2252 was supposed to have been enforced in order to prevent men from being taken off the farms.

The fact is that it was not applied, and the hon. member for Bow River (Mr. Johnston) is correct when he says that the men who were administering these boards were put in a dilemma, being told by the military authorities, on the one hand, that they wanted so many men, and by the government, on the other hand, "You are not to call farmers off the farm." Well, they had to take them off the farms, or they could not meet their quotas. If one needs proof that the order in council did not work, one has only to look at the interpretative letter sent out last January, which shows that the government itself became alarmed at the extent to which farms were being denuded of the essential man-power if they were to produce the quotas of foodstuffs which the country had set.

When that did not meet the situation the government tried another measure. It was announced with some fanfare that men in the army were to be granted leave, and most people got the impression. through public statements which were made, and announcements over the radio, that this really amounted to something. But I fear the public were badly deceived. It did not affect more than an infinitesimal number of men. Look at the regulations and see who are eligible to receive agricultural leave. I think it is worth while putting it on the record:

> Agricultural leave may be granted to personnel of the Canadian army serving in the following formations and units:
>
> 1. Personnel on the strength of home war establishments district depots.
>
> 2. Other personnel on the strength of the district depots, less those awaiting dispatch to basic training centres and those awaiting allocation after completing advanced or trades training.
>
> 3. Personnel of Veterans Guard of Canada who have completed individual training and who can be spared from the duties on which their units or detachments are employed.
>
> 4. Personnel of units employed on operational duties less those earmarked for overseas service. Such personnel must have completed individual training before being granted leave, and the number granted leave must not exceed five per cent of the unit strength at any one time.

Let us review these exceptions. First of all, a man cannot be granted leave if he is taking basic training. In other words, the ones most recently taken off the farm and whose parents are finding it most difficult to get along in their absence, are the very ones who cannot come back for spring leave.

Those awaiting dispatch to training centres and those awaiting allocation after completing their advanced or trades training cannot be granted leave, and even where they may be granted leave, the number granted leave must not exceed 5 per cent of the strength of the unit. And before a man can be granted leave he must have the approval of his commanding officer, which in turn must be endorsed by the district officer commanding and the general officer commanding. Well, of course, under these regulations the provision that the men in the army would be granted leave to do farm work has had little or no beneficial effect upon the scarcity of farm labour.

Before I sit down I wish to suggest that there are three things that ought to be done. First and foremost, the men now on the

farms, men who are engaged in agriculture, should be kept there. The minister said a moment ago, interrupting the hon. member for Bow River, that men are not being called now. I cannot speak for the other groups in the house; but there is not a member in our group from Saskatchewan who does not get letters every week—one might almost say every day, but I think I am safe in saying every week—with regard to men who are still being called off the farms in Saskatchewan, and who have made application for postponement and in some cases had their applications rejected. That is the first thing. These men ought to be kept there, not because they are farmers. I do not want any man to be allowed to shirk his responsibility because of his occupation; but if the country decides that, in order to feed this nation and our allies, a certain amount of foodstuffs must be grown, then it is our job to say to these people, "Your task is to produce these foodstuffs, and in doing so you are doing your part toward winning the war, just as much as though we had put you in uniform or put you in some other field of service".

The second thing which the government ought to do is to consider very seriously how they will dispose of the 68,228 men who are known as home defence personnel or "R" recruits called up under the National Resources Mobilization Act. A great number of these men are off farms. I do not think it is being too optimistic to say that the danger of invasion of this country has receded to some extent in the last twelve months, and that if the invasion of Europe takes place the danger to this country will recede proportionately. It seems to me that the government must make up its mind what it is going to do with these men. Sixty-eight thousand men is quite a sizable pool of man-power; and, unless the government decides that it is going to convert these men into General Personnel and send them overseas, a great many of them ought to be returned to the farms, at least temporarily, if not permanently.

I agree with what the Minister of National Defence (Mr. Ralston) said, that you cannot have an army that is farming one day and fighting the next. So far as the general service personnel is concerned, I think that is correct. But here is a body of nearly seventy thousand men. The Minister of National Defence said that 25,000 more are to be called in the next year. That will be over 90,000 men who cannot be sent out of Canada. A great many are farmers or farmers' sons, and I think the government will have to make up its mind either to use them as soldiers or to put them back on the farms.

As I said to the minister the other night, it was my experience last fall to see in the province of Saskatchewan young men taking their basic training, most of them off the farms, husky, brawny specimens out doing route marches, within a stone's throw of women and school children out working in the fields. It seems to me that the situation is ridiculous and that, if this country is to be faced with a food shortage, and if because of the lateness of the spring we need man-power, there is a pool of man-power that could be utilized.

Just one other suggestion I make to the minister. A large number of people have gone out of agriculture not into the army, but, as he knows, into industry, and some of them into non-essential industry. I know many of them who have gone to take more lucrative jobs; you cannot blame them for that, but they are jobs which do not contribute to Canada's war effort. I think a country which has assumed the responsibility of saying to some men, "You must go out and risk your lives for this country", ought also to take the responsibility of saying to other men, "We do not think you need to be waiting on tables or serving in stores; we think, since you came from the farms, that is where you ought to go." That will mean, of course, making certain adjustments. We cannot ask a man to leave a job at $125 a month and go to work on a farm at $60 a month. In some cases it might not be a sacrifice for him, if he is a single man, but if he is a man with a wife and family, it would be a very serious sacrifice indeed; and one of the things the government should take into consideration would be the advisability of treating these men who would be taken out of non-essential industry and returned to agriculture in the same way that we treat the man in the army, namely, pay his dependents an allowance, in addition to whatever he himself earns on the farm.

The argument will be, of course, that we would be paying different groups of men different pay. But we are doing that every day in the army, the air force and the navy. Two men may be marching together in the same platoon; one man single, the other man married, with several dependents. The total amount of money they are receiving out of the public treasury is different even though the service they are rendering is the same. It is one of the anomalies which comes out of our war; and when the government ask a man to do a certain thing which they

think he ought to do, they must accept the responsibility for looking after his dependents. I suggest that if the 220,000 men who have left agriculture and are said to be in industry are to be returned to the farm, the government should give serious consideration to setting up a dependents' allowance for those men who have families, so that, should they return to work on the farms they will know their families will not suffer by virtue of the fact that the government has asked them to make their contributions in agriculture rather than in some other part of our war effort.

Mr. L. PHILIPPE PICARD (Bellechasse): Speaking on February 17, as reported in *Hansaard* at page 499, I concluded my address with the following words:

Let us not forget that the land is the first element that enters into the question of production. Farming is the primary industry and the most essential in carrying on a war, because the best trained men, with the best and most modern equipment, cannot fight on an empty stomach.

I hold the same view to-day; but, because of the importance of this question I have decided again to take a few minutes of the time of this house to express my views on the problem.

On that same day I had asked the government to examine—

. . . the difficult situation in which some farmers find themselves at this juncture. They do not know how to plan their production for the next year. They do not know where they will stand as far as help is concerned. On the one hand they are advised by the Department of Agriculture to produce more and more, which is good advice; on the other hand they face mobilization orders and varying interpretations in each district by the mobilization board. They do not know where they will be, if they are without the help of their sons or their farm hands. So far as production is concerned, they face a shortage in certain supplies which they need.

Prior to that, a year ago, on February 12, 1942, if I may be permitted again to quote myself, I stated in this house, as reported in *Hansard,* at page 529:

I admit readily that it would be hard to uphold that the agricultural class should benefit by special treatment that is not granted to other classes of people who do their share of war work.

I meant by that the same thing as the hon. member for Weyburn (Mr. Douglas), that, as a class, if their production were not needed, if we were not at the moment in a war when the need for more food was present daily, it would not be just and fair to state that one class in all the population should benefit more than another. But it is not just because they are farmers, but because at this moment the farming industry is the most important, after our armed services and our war munitions factories that they should get special consideration. As I stated before, the army cannot fight on an empty stomach; I said at the same time:

The primary consideration is the service rendered to the country by the land tiller and the necessity to maintain or raise the production of food in order to help feed Britain, and, above all, to maintain Canada's health and vigour by proper diets, ensured by increased supplies of food. Therefore what appears to be important is to maintain a sufficient number of experienced men to cultivate the farm lands of the country. Although I am a layman in agriculture, I imagine it could be very easy for experts in that domain to determine how many men are needed to farm land of a definite number of acres with a given type of equipment and a certain number of head of cattle and hogs, and so on.

At that time somebody told me that this was not a practicable thing to do. I now know that there are experts of the Department of Labour who are doing this very thing. They are analysing the food situation, the situation on the farms, the productivity of certain lands, the number of people needed on different lands. I have met some of these experts, and I think they are doing a great job. They were very much surprised when I told them I had been criticized for having said that it could be established how many men would be needed on a given farm in different parts of the country. If you have flat lands which can be cultivated easily with modern implements, in the west, that would be one thing; in Ontario and Quebec it may take a greater number of men for the same number of acres. These experts are, I know, at work at the present time, and we shall soon see that they can produce results.

In the course of the same speech I stated further:

It would be quite easy then to state that a farm of thirty acres operated with horse-drawn implements with fifteen head of cattle, three horses and the usual small poultry yard, needs so many men. The owner, with three boys of military age, whose farm would fall under a category considered to need three men, and who is still able-bodied, would be allowed to keep two sons on the farm and would give the third to the armed services.

Or to agriculture, to serve as a farm hand in another section of the country or in his own district.

This classification of farms could be fairly accurately established, and the decisions of boards of the war services department could then be arrived at with a maximum of security against favouritism and law-evasion.

I think the importance of agriculture during this war is better established than probably

at any other time in the history of our country. I should like to read a sentence from an address by Hon. Herbert Hoover to the conference of mid-west governors on March 15 of this year:

Germany in 1914 produced about eighty-five per cent of her food supplies despite the blockade. Her war leaders were sure they could ration the population down fifteen per cent, and therefore had no anxiety about food. They neglected the food front. In three years, Germany was dangerously short of food. In four years, mobs were demanding bread and the emperor's head. And Germany weakened on the military front.

The lesson we should take from this statement by Mr. Hoover is that during this war, while perhaps in many branches of agriculture we are one of the largest producers, we should not relax our efforts but should increase our production and do as much as we can, not only to feed ourselves but also to feed our allies and to anticipate the demands that will arise when the invasion of the continent takes place. Commenting on this statement by Mr. Hoover, the New York *Daily Mirror* of March 16 had this to say:

That lesson is that food production and distribution must be put on the same footing as the production of munitions.

I think that is one of the elementary truths we should realize at the present time. Then this newspaper went on to offer certain suggestions, which fortunately we have already adopted in our country. They said an immediate survey of their food resources was indicated. In a moment I will show that this already has been done by our Department of Agriculture. Then they stated that the responsibility for food production must be concentrated in one authority, because in the United States many people in addition to the secretary for agriculture have something to do with the production, control and distribution of food. Here we have control boards and the Minister of Agriculture (Mr. Gardiner). In my opinion the Minister of Agriculture should be made supreme in the control of the production and distribution of food in this country. Not only because he is capable of doing that work but because if this were done we would have the advantage of putting all branches of agriculture under one head, to be directed under one plan.

As I stated a moment ago, those were two suggestions in regard to the United States, offered by a newspaper in that country. Here in Canada we have made a survey of our food situation and a new programme has been drawn up. I have in my hand a booklet

[Mr. Picard.]

entitled "Objectives for Canadian Agriculture in 1943", containing a foreword by the Minister of Agriculture, from which I quote:

It is a challenging programme. It calls for larger quantities of foods than Canada has ever undertaken to produce before—particularly meats, dairy products, eggs, fresh fruits and vegetables. These foods are urgently required to meet Canada's needs for the civilian population, for the armed forces in Canada, for ships' stores, for the Red Cross, and for export commitments to Great Britain and others of the united nations.

Each year since the war began, farmers throughout Canada have contributed notably to the war effort by increasing their output of those food and fibre products called for.

Then the minister paid tribute to those who voluntarily entered that field, and went on to say that all those who joined the ranks of the farmers deserved the same credit.

Let us look for a moment at this programme and at the reasons why we should now consider agriculture in a different way from that in which we have considered it previously, and I quote not from the words of the minister but from the pamphlet drafted by his department concerning these objectives for agriculture in 1943:

When war came in September, 1939, there was an abundance of almost every kind of farm product. In the case of certain staple products there were large surpluses. Disposition of these at profitable prices had been a problem for some years. It was not surprising, therefore, that there should be little concern about food supplies.

Just in passing I may say that this might explain why a couple of years ago there was less interest shown by members of other parties or from other sections of the country, and fewer requests made that agricultural man-power be spared and left on the farms. To-day it is consoling to have people from all parts of Canada join with those of us who a few years ago stood almost alone in asking that special consideration be given agricultural needs in regard to mobilization. Then the report goes on:

With the invasion of France, Belgium, Holland, Denmark and Norway in the spring of 1940 the situation changed very considerably. Supplies hitherto available, particularly from Denmark, were cut off, but accumulated stocks of certain foods were large and these had to be worked off before additional supplies were required from overseas. Subsequently arrangements were made to ship larger quantities of certain products, notably bacon and cheese.

Canada was requested to increase her shipments in these different staple products. With these changes that took place agriculture and industry in Canada had to face a

new problem, a new situation, and everyone in Canada had to accept as his first consideration the necessity of producing more in the way of food. We even had to make sure there would be sufficient raw material for the manufacture of farm implements, which at one time we were tempted to lay aside, and we also faced the need of maintaining more men on our farms. The report goes on to say:

Full employment and a very marked increase in payrolls, together with the increased consumption resulting from having more men engaged in the armed services, caused a very marked increase to occur in domestic demand. The combination of these various factors had by the summer of 1942, reversed the position as far as farm products were concerned. Shortages instead of surpluses began to threaten in the case of a number of products and the necessity of restricting consumption became evident in some instances.

Later on the report says:

It was not until the changes in our food requirements and supply position occurring in 1942 directed attention to the whole agricultural position that the need for increased production in a much wider range of products became apparent.

The rapid change that occurred in the food situation in 1942 made it necessary to take stock of our position and to make plans for 1943 that would ensure maximum output.

Then looking more particularly at the part of the country which I know best, as I have noticed most hon. members are tempted to do at times, I find that in the acreage seeded to oats, for instance, Quebec last year stood fourth in the whole country, having more even than Manitoba and one other of the prairie provinces. When it comes to hay, Quebec had the largest production, and was even asked to increase it by another 7 per cent. In 1941, 3,871,000 acres of hay were under cultivation, whereas in 1943 the goal is 4,298,000.

We have the same situation in my province in several other fields. For instance, we see that this year in connection with hog production Quebec is asked for a 26 per cent increase over last year's production. When it comes to dairy production we find that the estimated milk requirement for 1943 is placed at 8,500,000,000 pounds, which represents an increase of approximately 1,000,000,000 pounds over 1942. In this respect Quebec is the second greatest producer, and is asked this year to raise her production by 10 per cent.

We are the third province in the production of eggs and poultry, and again we are asked to raise our production by about 22 per cent, and we are asked to increase by 46 per cent the production of poultry meat.

Then, going into the subject of potatoes, we find that Quebec is the largest producer. Despite the fact that it already has 172,700 acres under cultivation, it is asked to increase that area by ten per cent. This goes to show that the programme for this year in respect of all these different products will demand the work of more men than are usually required, with implements which are not more modern but have been used for two more years, and which cannot be replaced, and can be repaired only with great difficulty.

I should not like to speak at too great length respecting the hard life of the farmer—although some have done so. I know it is a hard life, not from personal experience, but because I have visited the people I represent. I know that in a climate such as we have in our part of Canada a great amount of energy is demanded, if our people are to carry on, and to face increased production when they are not sure of maintaining the same number of men they used to have for that type of production.

I should not like to change the rosy picture painted the other day by the hon. member for Brant (Mr. Wood), one which I thought was very touching, and which I admired. In his statement he expressed a great truth about the farmer when he said that everything, of course, in connection with agriculture depends upon

. . . our philosophy of life, and the importance people attach to certain things.

He said:

The best things of life are the things which money cannot buy.

Then he went on to say:

Many farmers keep up their homes and gardens and obtain from their farms an income which goes a long way to sustain them satisfactorily, and they get many pleasures there which it is impossible to get in the city. If one appreciates these finer and better things of life, an efficient farmer on good land has an advantage over the average city man.

But despite this rosy picture, the lot of the farmer, under the difficult conditions he faces in certain parts of the country, is not an easy one. For instance, we cannot compare acreages in western and eastern Canada, as some hon. members attempt to do, because the size of a farm does not necessarily indicate the number of men required to operate it.

I can assure the house my experience with the mobilization board has been that far from being too easy, as some hon. members have sought to insinuate, they have been just and

fair, and have taken into consideration all aspects of each case they have had under review, when men have been before them.

I have here, concerning the production of man-power, the text of—not a speech—a statement which was given over the radio.

Mr. DOUGLAS (Weyburn): Was the hon. member referring to me, when he said that insinuations had been made as to its being too easy?

Mr. PICARD: Yes.

Mr. DOUGLAS (Weyburn): I made no such insinuation. I merely pointed out that there was a great discrepancy between the number called in two different areas.

Mr. PICARD: I thank my hon. friend for his statement, and I am glad to hear he had no such intention. I thought, however, it was advisable to point out that this discrepancy in some way may have been accounted for by the fact that when the board examine a man who is called to service, they have very many things to take into consideration.

In the eastern part of Canada, as I said before, we must have consideration for the climate, to which I shall refer in greater detail in a moment. We must have consideration for the climate, the type of land, the implements with which they have to work, and their own ways of life. I might not approve of them, altogether; I might want them to be more modernized in certain ways. I would like them to be more modernized, and they are becoming so gradually. But yet we have to face the facts and recognize that with the implements they have, and the means they have at their disposal, they need more men for a given number of acres than are needed in other parts of Canada. I am glad, however, that the hon. member made his correction, so that my impression of what he said might not be the wrong one.

I was proceeding to refer to a statement made over the Canadian Broadcasting Corporation station at Montreal on April 5 during a programme entitled: "Rural Awakening." This is a lecture to farmers, explaining the conditions, and outlining the programme they have to face for the coming year. I shall have to translate, because, I did not have an opportunity to have the translation made:

> The farmers in Quebec, whose crops are often compared with those of farmers in other provinces, are operating under disadvantages which other parts of the country do not take into consideration often enough when production and other situations are compared.
>
> On March 31 of this year skating rinks were still operating in the open air, and the maples were still frozen. In May the temperature, which in other parts of Canada, chiefly Ontario, was gradually rising to a level favourable for vegetation, was still so low in the St. Lawrence valley, in the Lake St. John district, the Matapedia valley, and in all the northern country, that really it would be impossible to compare the results between these different districts. And it will remain about ten degrees lower than it is elsewhere, at all times, as it has in the past.

Then the agricultural expert goes on to say:

> These ten degrees are exactly the limit we would like to overcome, and the important item when we consider agricultural production. They are maintained throughout the summer, with the possible exception of July. A large number of farmers from Quebec have to operate at considerable disadvantage in all fields of their production, in the growth of their cereals, and the raising of their animals, which receive less vigorous nutrition in the fields because of the lack of late vegetation found there, and because the heat is not so favourable to their health.
>
> This is nobody's fault; but when comparisons on all points of agriculture are made it is most important not to forget that this disadvantage is also reflected in the need for men to operate these farms.

The expert goes on to say:

> The season is brief in two-thirds of the province, and the notable degree of heat in the summer has to be taken into account when the Quebec agricultural situation is compared with that of other parts of the country.

Some hon. members have suggested, but I am glad to see that other hon. members have objected to it, that we should put our old people and children or those who are unfit for military service to work on the farms and thus release able-bodied men for the army. Farmers of experience know that this experiment would not work out. I remember quite well when during an unemployment crisis in the coal mines of England a number of miners were brought out to western Canada to work on the prairie farms. A then member of the government, who is now a member of an independent international commission, who operated a large farm in the west, depicted to the house the situation that arose. Shortly after these men arrived they elected a committee and decided that they would work only union hours. They did not understand that the sun would not wait for them. They wanted to work as they were used to working. But they did not have the physical ability or the mental attitude toward farming to make a success of that work. For the most part they were found unsatisfactory. They were simply not fit and, although they may have tried hard, they could not be assimilated.

To those who think we can increase our production and at the same time reduce the number of farms in production I say, "Do you want us to hire ghosts and skeletons?" Do they think the aged, the lame, the blind and

the sick can do the work of the farm? This work requires men with sound bodies. This production is vital for Canada, and it is necessary that all bona fide farmers, all those who were raised on the farm or who have spent at least ninety per cent of their productive life on the farm, should be kept on the farm.

We are agreed as to the importance of the agricultural industry, and we are agreed also as to the importance of keeping experienced hands in agriculture. But there is one thing that has not been done to any great extent, namely, to compare the situation that faces the farmer during this war with the situation he had to face during the last war.

The system of mobilization as far as agriculture is concerned, was vastly different in 1917 from what it is to-day. At that time exemptions were granted, while during this war we grant deferments from service. This is a much fairer basis. Those doing essential work during this war find that the system works much better. People in my own constituency have reported to me that during the last war they had to go to considerable trouble, or even had to pay considerable sums of money to be sure that their sons would be exempted. During this war deferments are issued when a good case is put before the mobilization board. During the last war we had a system of tribunals, and in this connection I should like to quote from page 2190 of *Hansard* of June 11, 1917, where the then Prime Minister, Sir Robert Borden, was dealing with the setting up of the local tribunals. He quotes one section of the bill under consideration as follows:

6. (1) The minister may from time to time by proclamation or otherwise establish local tribunals at such places as he deems necessary and give each an appropriate designation.

He then went on to say:

Now, as to the constitution of these local tribunals, of whom shall they consist? That question raised a great deal of difficulty, because it was the desire of the government to adopt a method which would be absolutely above suspicion. We desire to make it clear that the personnel of the board was to be selected fairly and independently. Therefore we provided as follows:

(3) Each local tribunal shall consist of two members. One member shall be appointed by a board of selection to be established by joint resolution of the Senate and House of Commons; the other member shall be appointed by the following authority—

That member was appointed either by a judge of the magistrate's court, a county court judge or, in Quebec, a judge of the superior court. Sir Robert Borden continued:

The county court judge or district judge is to make the appointment. If there is no such judge within the area for which the tribunal is to be established, then one of the members of the tribunal is to be appointed by such county court judge as the minister shall designate for the purpose.

The present system during this war is to have a board made up of a judge of the high court of the province and two experts, one versed in matters industrial and the other versed in matters agricultural. The decisions of these boards are not the same as were made during the last war when exemptions were granted which permitted a man to work anywhere. It was stated in the same speech:

No certificate shall be conditional upon a person to whom it is granted continuing in or entering into employment under any specified employer, or in any specified place of establishment.

In those days, once an applicant was granted an exemption he could move around as he wished, but during this war deferments are issued and the man must stay on the farm where he will perform the most useful work. That system is better for the country, for agriculture, and I think it is more satisfactory for the men.

The opposition of farmers throughout the country to conscription or to military service is not a new thing. In order to give the point of view that existed during the last war I should like to quote from "The Crisis of Quebec, 1914-18", by Elizabeth H. Armstrong, which refers to a delegation of farmers from Ontario which attended at the House of Commons, in the following words:

The government undoubtedly hoped that this provision would dispose of the very vehement opposition to conscription which was prevalent among farmers, not only in Quebec, but also in Ontario, where a delegation of several thousand men marched to Ottawa and protested against the cancellation of exemptions.

The farmers of Canada, especially those of Quebec, know that during this war agriculture has been given better treatment in connection with mobilization. One hon. member has said that in this connection the government has uttered many words but has accomplished no deeds. I say that not only have words been spoken by the government, but there are deeds that have been accomplished. The instructions of the government have been carried out by the mobilization boards, and except in isolated cases I believe that justice has been rendered. I have nothing but the highest praise for the judges and their associates on the boards. Generally they are men of high calibre and have tried to be fair. The boards with which I have dealt in Quebec I feel have tried to be absolutely fair.

Reference has been made by the hon. member for Témiscouata (Mr. Pouliot) and others

to the fact that there are no agricultural experts in the Department of National Defence to pass upon these applications by farmers. I could hardly believe that although it had been stated in this house. I think it is elementary that men with a knowledge of farming should be passing on these cases. When further consideration is being given to the releasing of men from the army these cases should be reviewed by men who have had experience in the field of agriculture. I have here numerous files concerning cases in Quebec where possibly different decisions should have been rendered, but I shall not bother the committee with the details.

The hon. member for Bow River (Mr. Johnston) gave us a perfect story of a typical case, showing a deficiency in the operation of one branch of national defence which I think is badly in need of reform. But again I say that this is a matter which can easily be corrected, and it in no way weakens my argument that farmers in 1943 get a much better deal so far as mobilization is concerned than they did during the last war under another administration. They realize it too; those old enough to look back appreciate the difference in treatment.

The hon. member for Charlevoix-Saguenay (Mr. Dorion) said that the government supporters were ill at ease. I wish to assure him that I never felt better myself concerning this question. I have been out in my constituency nearly every week since the roads were opened, and I had the satisfactory experience two weeks ago of meeting the mayor of one of the important villages in my district. He was known as a Conservative, but he told me that at the next election not only was he going to vote in favour of the Liberal candidate, but he would go out and speak and canvas for him because of the better treatment which the farmers had received in this war as compared with the last.

Mr. GRAYDON: Better put him in a museum.

Mr. PICARD: Oh, no, they will be more numerous than you think. He stated to me that during the last war his father had two sons and had to pay substantial sums to get exemptions for them although they had a large tract of land to farm. "This year," he said, "I have three sons of military age, two of whom are married and have children and farms of their own. Their training period was indefinitely postponed so that they could continue to operate their farms. The youngest of these three sons is with me and because he is my only son on a large farm his training period is also indefinitely postponed. But even at that we are short-handed and we have to pool our energies to work the three farms, one of which is in a neighbouring village five miles from the two others. And all these postponements were granted in due course without disbursements, and solely upon producing the evidence of the size of our farms and the need of these men to work them. But two or three more farm hands are needed on the three farms to ensure their proper and efficient operation."

Let me in a few brief seconds compare the lot of the farmers in other respects in this war as compared with the last. Prices were higher in the last war but, although the prices of agricultural products might have been higher when there was no price control and no ceiling as there is this year, nevertheless the cost-of-living index soared to such a height for lack of control that the increased prices which the farmer got were all eaten up by the higher prices which he had to pay for the necessities of life. So that it was only a fictitious well-being for the farmer. The higher prices he got were more than spent to meet the higher cost of living. Then there was no organized system, no control of prices, and no selective service.

Therefore, Mr. Speaker, I think the government ought to be supported. The government's position should not be weakened by any vote which might imply a lack of confidence; for the farmers of my province, like the farmers throughout this country, have more reason to be satisfied with conditions during this war compared with conditions in the last war. The present question concerning the administration of a branch of one of the departments is not one which could induce me at any time to vote against the government in which I have more confidence than I would have in others that might be called to replace them. It is good that we have been given this opportunity to discuss this question at this moment, and I am sure that the government will realize the importance of the reform to be brought about in one branch of a department. From it will emerge the evidence, as I stated before, that the farming class has been better treated by the present administration during this war than it was treated during the last war. The government has shown an understanding of the pressing necessity for foodstuffs and recognizes that the farmer is doing a prime job in helping to win the war

Mr. E. G. HANSELL (Macleod): Mr. Speaker, I have listened with a good deal of interest to the debate to-day. Much has been said, and said with emphasis, and much of it has been of value. I can assure you that I am not going to exhaust my forty minutes, because the subject has been well covered. I wish to point out one or two simple things as I see them.

The present agricultural emergency resolves itself, as I see it, into two things. One is that agricultural leaves have been granted, but instructions evidently have been given that commanding officers have no authority to extend those leaves. That is my understanding of it. The other important point is that seeding is already late, and many of the agricultural leaves that were granted have been used up and the men have had to go back into the service before they were able to do very much on the farms because of the bad weather. That seems to be the problem at the moment. All that has been said to-day is of much value with respect to the man-power problem generally and as it applies particularly to agriculture in the coming year. The season is late, and every day's delay or every two days' delay may mean the difference between a crop of ten or fifteen bushels to the acre, and a crop of twenty-five or thirty bushels. That is how close we are running now.

Just about a week ago I was travelling around a little bit in the constituency of Wellington North, not far out of Toronto. The hon. member for that constituency is not here to-day. Perhaps he is out there, helping the farmers to put in their seed. But I doubt it, because when I was there the whole country looked like the delta of the Nile. No seeding had been done at all and the farmers were getting tremendously worried. That seems to be the immediate problem.

I would just add this. The minister is going to reply perhaps very soon now. Personally I do not wish to hear any apologies from him. I do not want him to rise and take a lot of time in the defence of his department or in defence of the government.

An hon. MEMBER: The last speaker did that.

Mr. HANSELL: Yes; the last speaker did that. What I want, and what I think the house wants and what the country wants is a straightforward announcement of what the government is going to do now in order to ensure that crops will be put in without delay and be harvested in the fall. I notice that the minister has his spectacles on. His desk is loaded with papers. His parliamentary assistant is sitting right behind him with another raft of notes on his desk. I am not concerned about the spectacles or the notes.

Hon. HUMPHREY MITCHELL (Minister of Labour): Mr. Speaker, I will not detain the house very long.

An. hon. MEMBER: Hear, hear.

Mr. MITCHELL: I think my hon. friend who says "hear, hear," will agree that the man-power question, while due regard must be had to the part which agriculture is playing in this war, is something that affects the industrial structure, the fishing industry, and the armed forces as well as the farming community. I did hope that this debate might have been deferred until I had been given an opportunity—

An hon. MEMBER: Until after seeding.

Mr. MITCHELL: I will come to seeding in a minute. I was going to say I had hoped that this debate would have been deferred until the whole man-power policy of the government could be reviewed by the House of Commons, because in my opinion that is the sound and logical way of facing up to the man-power problem as it exists in Canada to-day.

I wish to be frank with some of my hon. friends. Under the War Measures Act we cannot change the weather, unfortunately, but I do pay tribute to the farmers of the country, and I would remind the house that while we have been talking to-day the farmers have been planting the seeds. An hon. member asks, what are we going to do now? I will tell him what the farmers in his own province have done. Eighty-three per cent of the wheat in Alberta is already planted, according to a telegraphic report of June 1. May I say to my hon. friends from Saskatchewan that the whole of their crop has been planted. I say, to the credit of the farmers of Saskatchewan, that notwithstanding climatic conditions, notwithstanding that, as I am given to understand, they had approximately three million acres of wheat that had not been threshed last year, they measured up to their responsibility and until the fall, I am informed by the deputy minister of agriculture of Saskatchewan, they think the problem is well under the bridge. These are facts and not opinions. I am frank to admit that I do not understand as much about agriculture in its practical operation as some of the members who spoke this afternoon, but I do know, and I think the country should be told, what an admirable contribution

has been made by the farmers in every province of Canada to the war effort since the outbreak of hostilities.

I often used to say to my friends in the labour movement that if Hitler could be defeated by speeches and typewriters there would not have been any war, and I think it is a fair thing to say that you cannot plant wheat by making speeches. The farmers in the agricultural provinces have proved to the members of this House of Commons that while we have talked they have got on with the job, much to their undying credit.

I might refer now to the provinces that were discussed this afternoon—Alberta, Saskatchewan, Manitoba and largely Quebec.

An hon. MEMBER: And Ontario.

Mr. MITCHELL: Not much has been said about Ontario, but I shall come to that province. In the province of Quebec they, too, have been in difficulties owing to weather conditions. It has been cold and wet, and the report with reference to the province of Quebec is to the effect that those crops which are better because of wet conditions have improved. As a matter of fact, with their permit system in operation, all the persons who have been given temporary permits to go into industry during the winter season, when things are a little slack on the farms, have not yet been returned to agriculture, and the figures are rather illuminating. There were 2,127 temporary permits granted to go into other lines of work and vocations, and of that total, to date 620 have been cancelled; 1,057 have gone back to the farms voluntarily, and 879 permits have not been cancelled. So much for the province of Quebec.

Perhaps I should say a word with regard to cooperation between the provinces and the dominion. When people talk about manpower muddle as regards agriculture, it is fair to say that they do not know what they are talking about. The hon. member for Weyburn (Mr. Douglas) put it clearly this afternoon when he said that it was much easier to state a problem than to solve it.

Mr. LOCKHART: Would the minister give the Ontario figures, so as to complete the record?

Mr. MITCHELL: I should be grateful if my hon. friend would not interrupt my train of thought at the moment. I am speaking extemporaneously.

Mr. GRAYDON: He does not interrupt often.

Mr. MITCHELL: I appreciate that. He is in the next constituency to mine.

Mr. GRAYDON: Is that a compliment to him?

Mr. MITCHELL: It is a compliment to him. As I was saying, the hon. member for Weyburn remarked that it was much easier to state a problem than to solve it, and I think it is fair to say that in the evolutionary development of the man-power situation in this war the Canadian people will be found to have measured up with any other nation among the united nations. Make no mistake about that.

An hon. MEMBER: In spite of the government.

Mr. MITCHELL: My hon. friend, of course, for political reasons would have to say, in spite of the government. I listened to him this afternoon and he was not quite as honest as I was, though I may have been out of the house part of the time he was speaking. However, like myself, I do not think he is an expert on agriculture. He said he admitted it, and I am glad he did. Let me say this. In cooperation with the provinces, the farmers' organizations and the federal government, I believe that everything that is humanly possible to enable us to deal adequately with the man-power problem, so far as the farms are concerned, has been done.

My hon. friend who comes from the province of Quebec moved this resolution, and I would point out to him that at this very moment there are 900 local committees working in complete harmony with the government of Quebec and the federal government to meet the problem. An hon. member speaks of Ontario. That province, let me say, through the farm organizations, and in every other way, has been working in complete harmony with us. Take the constituency represented by my hon. friend the leader of the opposition (Mr. Graydon). I have lived for many years close to it and I know it is a representative farming community of the best type in Ontario. The agricultural war committee is made up of representative farmers in the county, and they list no requirements for hired men by the year, estimating that 450 seasonal workers will be required. This estimate was made as late as May 4.

Mr. GRAYDON: Who made that estimate.

Mr. MITCHELL: This is the committee of local farmers. These are known as victory committees.

Mr. GRAYDON: The minister had better give me the names of those farmers later.

Mr. MITCHELL: I shall be glad to give the names of the committee. I could go through all the provinces in a similar manner. I have been careful to canvass the situation in the different provinces with ministers of agriculture, and I wish to be frank with the house, because, after all, wisdom is not all on this side, and I deeply appreciate some of the suggestions made by my hon. friends across the floor this afternoon.

Mr. GRAYDON: Better be careful of these admissions.

Mr. MITCHELL: Oh, I think we are all grown up men. We can understand that.

Mr. KNOWLES: Will the minister put on the record the figures for other provinces, such as Manitoba?

Mr. MITCHELL: I think I said that when we come to the main debate I will do that. I shall have more time. Of course I have to stay here as long as my hon. friends want me. As I said, I was speaking extemporaneously, and I did not mean to make a long statement this evening, but only to inform hon. members from various provinces who have spoken, of the condition of the crops in those various provinces, and what has been done.

This is from the minister of agriculture of British Columbia:

This department desires to express its appreciation of the early consummation of the dominion-provincial farm labour agreements which we feel sure will prove helpful to agriculture generally. Result seeding should be made possible without great hardship. Compulsory transfer orders should when successfully carried out be of tremendous assistance and would respectfully suggest that mobilization regulations be definitely clarified in order to further agricultural production. Policy generally should be effective and believe that failing its adoption production could not have been maintained.

Mr. GRAYDON: What is the date of that telegram?

Mr. MITCHELL: This is a report to me on June 1. It may have come in a few days previously; I do not know.

Then, from Alberta, the provincial minister of agriculture reports that the dominion-provincial agreement will be helpful and that his department is prepared to give the fullest co-operation to make the joint programme a success. He does suggest that the effectiveness of the programme might have been considerably increased had the farm labour agreement been negotiated and approved at an earlier date. Reference is made in his reply to the additional task which farmers had this spring in completing threshing which had to be left over from last fall.

I think I quoted a telegraphic statement of the conditions of the crops in Alberta, which apparently is a little more hopeful than even this wire from the minister.

Then, from Saskatchewan:

Early completion dominion-provincial farm labour agreement has resulted in effective cooperation between dominion-provincial departments concerned. Seeding crop well advanced and will be completed with minimum delay but some individual hardship. Compulsory transfer orders have had limited value so far but should become more effective as season progresses. Clarification of mobilization regulations has greatly assisted agriculture. Postponements to agricultural workers granted since February first major factor in seeding crops on farms affected. I believe present policy will result in labour being generally available for ordinary year around farm work but severe shortage at harvest time possible. Early plans for labour supply at that time imperative.

May I say to my hon. friends from Saskatchewan that I think their victory committees are doing a magnificent job there in the allocation of farm labour. I have always believed that the best form of government and the best organization is that which is closest to the people, and it is to the credit of our farmers' organizations that in every province of the dominion, when we ask for their cooperation we have got it. The seeding reports which I have received are a vindication of the work which in large measure has been undertaken by these victory committees in the province of Saskatchewan.

From Manitoba, the provincial minister of agriculture states that Manitoba farmers are unable to meet present competition for labour and pay current wages from farm revenues. He describes the farm help problem in Manitoba as an all-year round one, and suggests that more experienced help must be transferred back to agriculture from other industries. The minister makes the observation that the farm labour agreement is a step in the right direction and has resulted in the coordinaton of effort to secure farm help. He expresses appreciation for the cooperation received from the labour department.

As regards Ontario, the minister of agriculture for Ontario writes that the dominion-provincial agreements will be helpful in solving the farm labour problem, but points out that, according to estimates secured through the offices of the agricultural representatives, there is still a very great shortage of seasonal and year-round help. The minister states it is his conviction that there must be a return to the farms of much of the experienced help which has migrated into industry and the home defence units. He is not hopeful that the present move for the compulsory transfer

of men back to agriculture will be of substantial benefit. He is of the opinion that some plan for subsidizing wages be offered to experienced farmers now in industry who might be brought back to agriculture.

The premier of Quebec stated in his wire that the "dominion-provincial agreement will be of great help to solve the Quebec farm labour problem." He mentions that late seeding has caused some difficulties, but these are being overcome. The premier believes that additional benefit might be secured through a further clarification of mobilization regulations so far as farm workers are concerned. He says that full use will be made of student labour which can be mobilized for farm work and advocates the temporary release of farmers' sons as well as experienced farm workers now taking military training.

As to New Brunswick, the dominion-provincial farm labour programme in New Brunswick is making good progress. A provincial director of the programme has been appointed and the agricultural field men for the province have been active with organization work. Close cooperation is being secured from the employment and selective service offices in New Brunswick.

As regards Nova Scotia, the provincial minister of agriculture regards the farm labour situation as critical. He advocates early release of farm labour now employed in other industry and asks that certain classes of men in the armed forces be released for temporary periods to assist with seeding and harvest. The use of Italian prisoners of war and conscientious objectors is recommended. The minister states that there has been an improvement in the administration of the mobilization regulations as they affect agricultural workers, but believes there is still room for further improvement. He offers the fullest cooperation of his department in the joint undertaking of the dominion and the province to meet the problem of farm labour.

The premier of Prince Edward Island suggests that the farm labour programme was organized too late for his province, but at the same time adds that the dominion-provincial agreement has been helpful in meeting the labour shortage on the farms. The premier states that as a result of the increased production of live stock and live-stock products the need for regular experienced help is a most diffcult one for farmers. He is sceptical about the effectiveness of the recent compulsory labour transfer orders in providing much assistance to agriculture. The reason cited for this conclusion is that little relief can be expected from directing inexperienced help to farms. The clarification of the mobilization regulations has been of assistance. The premier observes that there is much dissatisfaction among farm labourers on account of the difference in wages paid in industry compared with those of agriculture.

A lot of ground has been covered in the debate this afternoon and evening. Much of it spills over into the Department of National Defence, and much of it, of course, is out of order in relation to the resolution which is before the house at the present time.

I can assure my hon. friends that when the whole man-power problem is discussed I shall look for their comments and, may I say, criticisms, for, after all is said and done, the essence of democracy is criticism. Without criticism democracy could not exist.

Further, may I point out that this nation is not the only one of the united nations—indeed, I may include the axis powers—which is at the moment facing a man-power problem. When that problem is discussed by the house I hope to be able to indicate the position in which Germany finds itself at the moment and to compare it with our own. Much the same conditions prevail in the United States and Great Britain. I am in fact convinced of this, that if we did not have a shortage of men for the army, the navy, the air force, agriculture, industry, the mines, the base metals, and lumbering, this country would not be doing its duty in the present grave emergency. The fact that we have a shortage is a reflection of the contribution of this dominion on behalf of the united nations in the present struggle.

In the years to come I for one will look back with pride on the contribution made by the people of this dominion. We have had almost a revolution in the application of our man-power policies as they affect the Canadian people. Whoever thought we would live to see the day when well nigh all the man-power and woman-power of this country would pass through the employment service; that we would reach the point where in the great majority of cases we deny the individual the right to advertise in the newspapers for a job? That in itself is a revolution among a democratic people. Whoever thought we would live to see the day when a man would have to give seven days' notice before he could quit a job and when an employer would have to give seven days' notice before he could discharge a man? I know that in Germany and other countries where dictatorships exist, these things are taken as matters of course, but these are new policies to the freedom-loving people of this dominion, who I think are without a peer in the world when it comes to an appreciation of the basic principles of

freedom. Whoever thought that in the short space of six months these people would willingly—and I speak now in a broad way, of course—accept these changes? Of course there will be exceptions to that rule; we will get letters from people who think we have gone too far, but let us not forget that simply reading a letter in this House of Commons does not make it true. It is the easiest thing in the world to take the word of someone else before due investigation is made.

Some hon. gentlemen have expressed criticism—perhaps rightly so; I do not know—in regard to the application of the call-up for compulsory military training. I think when the figures are brought to their attention, at least since the latest policies have gone into operation, there will be very little criticism offered. But let me point out one fact. I would not want it to be said about any administration over which I presided that any vocation, any form of employment, could be made a hideaway, as it were, for people who should be meeting their obligations to the country. So that I say to hon. members: When you get these letters, at least give us a chance, because I think, speaking in a broad way, the work of these mobilization boards has constantly improved. As one hon. member from near Quebec city said this afternoon, they are an improvement over the boards which functioned during the last war. I do not say that with any desire to criticize the boards that functioned at that time, because in connection with many of our policies we have built on the mistakes of the past. That is the logical thing to do. I think our conception of the length of this war has been beclouded by the length of the last war. I am one of those who still think this war is going to last a long time. I am one of those who still think much more direction will have to be given our people before the man-power problem of this country is finally dealt with in an efficient way. Last fall it was my good fortune to be in Britain. Mr. Bevin, the minister of labour there, has, I suppose, even more power on paper than I have on paper, but notwithstanding that power ninety-five per cent of the movement of men and women in industry has been on a voluntary basis and compulsion has been necessary only in regard to the remaining five per cent.

Mr. COLDWELL: Could the minister tell us how that result was achieved? Was it not through close cooperation with the labour organizations?

Mr. MITCHELL: Since I have had charge of the direction of selective service, every move I have made has been in consultation with representatives of the employers and the workers of this country, through the national selective service advisory board. I do not think it serves any good purpose to say that we do not consult anyone. I speak for my own department, of course, but in every step I have made I have endeavoured to consult with the representatives of both employers and employees. I think there are well over three hundred representatives of these two very necessary parts of our industrial and agricultural structure serving on various boards under my jurisdiction, and I have always found it far more satisfactory to get their sage advice before moving in the direction in which we would like to move.

Mr. KNOWLES: Has any use been made of the trade unions by selective service, where transfers have to be made?

Mr. MITCHELL: I think we are very close to the trade unions; probably my hon. friend knows that.

Mr. COLDWELL: That is what we do not know.

Mr. MITCHELL: I have just stated that any move is taken after consultation. I should say, however, that sometimes you must move with expedition, in an emergency; sometimes you cannot wait. If my hon. friend were sitting here instead of there, perhaps he would be a little more rigorous than I have been. However, we have endeavoured to obtain the friendly advice of the trade unions in the operation of selective service. Sometimes it is rather difficult to give advice when occasionally you must be a couple of steps ahead of your own people, but to the credit of both great partners in industry I think it can be said that they have measured up to their responsibilities in connection with the selective service programme of the federal government, and I do not think it would be fair if I did not pay them this tribute.

Now, Mr. Speaker, I think I have pretty well covered all I wish to say at the moment, though I could say more. Something has been said about the loss of production. I could mention what is occurring in the various provinces, and perhaps it would be as well if I did.

Mr. LOCKHART: Having given the figures in connection with one province, the minister must have the figures for the other provinces. Could we not have them also? It would take only a moment to put them on record.

Mr. MITCHELL: I think my hon. friend will sympathize with me, because in the first place I was given no notice that this debate was coming on this afternoon.

Mr. LOCKHART: But the minister has the figures for one province.

Mr. MITCHELL: Yes; I collected a few things, but later I shall have a complete man-power statement to make. I think it was the leader of the opposition who asked that this statement be forthcoming.

Mr. GRAYDON: I certainly did.

Mr. MITCHELL: It will be given when I have an opportunity to do so. I am in the hands of the house; I have not been able to get on as soon as I should have liked, but my hon. friend may rest assured that I shall give any figures I can get.

Mr. LOCKHART: The minister has the figures for one province.

Mr. MITCHELL: I have no other figures before me. I am trying to get these figures up to the latest possible date, because the later they are the better. This statement in regard to provinces shows that in Prince Edward Island the percentage of cows milking to total numbers showed a marked increase in the month of March. The number of calves born was somewhat higher than that of the same month last year. In Nova Scotia more cows were reported on farms in the month of March. In New Brunswick the production of milk exceeded that of March. In Quebec there was no apparent change in the number of cows available for milking purposes. In Ontario a subsidy was offered for butter, and there has been increased milk production. Many farmers have been forced to change their plans on account of the labour shortage. In Manitoba the total production of milk increased. In Saskatchewan more milk was produced in March than in the same month of 1942. In Alberta cow numbers showed a substantial advance in March over those of the same month last year, and more cows were freshened for milking purposes.

And so, Mr. Speaker, I believe I have more or less effectively—at least I hope I have—answered the questions asked by my hon. friends this afternoon. The hon. member for Vegreville (Mr. Hlynka) said the forms necessary to fill out in connection with the compulsory call-up for military service are difficult to understand. I believe when I give the latest figures respecting the number of postponements, particularly in connection with agriculture, he will not find them so difficult.

I think I need not say more at the present time, except this: This has been a debate respecting agriculture, and on behalf of the House of Commons I should like to pay tribute to the cooperation, the hard work and, in many instances, the sacrifice of the farmers in this great dominion.

Mr. GORDON GRAYDON (Leader of the Opposition): Mr. Speaker, may I say a word at this stage in the debate respecting our position in connection with this motion for the adjournment of the house. We have been attempting to follow, as best we can, the procedure laid down—true, in an informal way, but nevertheless laid down—under which we would deal, department after department, with the war appropriation bill. There may have been times when there have been deviations from that informal arrangement. Nevertheless it has seemed to me that the most important measure before the house at this session has been, without any shadow of a doubt, the war appropriation bill. This party has felt that the man-power problem, in its relation to the war appropriation measure, was perhaps the major one to be faced at this time. It was that thought which prompted my suggesting to the Prime Minister (Mr. Mackenzie King) last week that, after the estimates of the three armed services had been discussed we should put aside our other business and proceed at once with the estimates of the Department of Labour, thereby affording ourselves an opportunity to come to grips with the man-power problem in Canada, a problem which we may justifiably regard as the chief one facing us to-day.

I was rather surprised this afternoon when I learned of the motion which, first of all, would deal with the man-power problem in a piecemeal fashion and, second, would have the inevitable result of delaying for another day the discussion of the estimates of the Minister of Labour (Mr. Mitchell). For these reasons I point out to the house that in my opinion we would have been better as a House of Commons, urgent as this matter is, to have at least dealt with it on a broad front, and a front which would have brought some results at the conclusion of debate. I believe the problem of man-power cannot be divided into departments. What has been done this afternoon has been to take one department, regardless of the whole.

While sitting in my seat this afternoon, listening to debate, I could not help wondering how much farm help we were giving our farmers in Canada through the talk to which

we have listened during the afternoon and evening. To my mind there is only one way in which we can help the farmers with their labour problems, and that is to give them help.

I do not agree with the minister, nor do I agree with some other hon. members who spoke this afternoon who seem to hold the view that the farmer does not need help. Those of us coming from agricultural constituencies know that he does.

Mr. MITCHELL: I do not think my hon. friend heard me say that the farmer does not need help.

Mr. GRAYDON: The minister said a number of things to-night when he was speaking; but may I say to the minister that he left the definite impression that things were not so very bad, so far as agriculture is concerned. If he will say to-night that things are good, in connection with the agricultural help situation, then I would like him to say it.

Mr. MITCHELL: I thought I made it plain to my hon. friend. I had not thought I created the impression he has indicated. If I did, then I certainly did not intend to. A man would be foolish to do that, under present circumstances. But I do say what I have said before, offering it as a tribute with all the sincerity in my being, and in the knowledge that we are all cooperating together, that notwithstanding the serious problem we are up against we are producing more than ever was produced in the history of this country. Surely that is to the credit of the farmers. I am frank to admit that in the very nature of things, when you have close to a couple of million people in the armed forces and in industry, you cannot have as many people on the farms. That is an actual fact—and the same condition exists in every other country in the world.

Mr. GRAYDON: I am glad to have the minister correct what I thought was the impression he had created in connection with the agricultural man-power policy. But he read very carefully telegrams and reports from various governmental departments in the provinces. Certainly, so far as my knowledge goes, the problem indicated in those reports in connection with man-power seemed to be a very simple one compared with the problem which is presented to members of parliament from time to time.

I say to the minister that he will find prevalent in the agricultural sections of the dominion a condition such as has never existed at any previous time in our history. He will find that there never before has been a time when farmers, their wives and families were so completely played out with hard work as they are to-day. I make that statement from personal experience because, as the minister knows, I have gone among them. I do not think I have ever seen the farming people more tired than they are to-day, and that condition has arisen largely because they have not been able to get the help necessary to operate their farms.

Mr. MITCHELL: I agree with the hon. member, and I think it would be safe to say the same about the men and women engaged in industry.

Mr. GRAYDON: We are not dealing with industry just now, but I would be glad to agree with his statement about the people engaged in industry. But when we talk about emergent conditions, and when we are confronted with a motion for adjournment to discuss a matter of urgent public importance, then I say that the problem of farm help was urgent months ago. It was urgent weeks ago; it was urgent yesterday; it is urgent to-day, and unless government policy is changed, it will be urgent to-morrow and in the months ahead. I should like to point out to those who are responsible for bringing up this motion that, so far as urgency is concerned, this motion is both too little and too late.

Mr. LALONDE: Why did you not start something before?

Mr. GRAYDON: My hon. friend made a very good speech and I am doing my best to keep up with him. There is no doubt that this question is urgent, but I repeat that it has been urgent for some time. In my opinion the policy of the government with respect to national selective service must be changed. This is not the time in the interests of the farmer to bring up this matter. I say that plainly and clearly. If I thought that we as a party could do something this afternoon or this evening for the farmer by simply talking about this matter, then we might take a different stand. But we are not doing anything by simply moving the adjournment of the house. During the debate on the estimates of the minister we shall have a chance at least to fight this thing through. I wish to say to the minister that, so far as our group is concerned, we have made some preparation to fight this thing through.

Mr. NOSEWORTHY: Where will you get?

Mr. GRAYDON: You have not got very far, but we still have hopes. I say to the ministry that we wish to come to grips with the whole question of the man-power policy.

We want to do that at as early a date as possible, and that is why we have not tried this afternoon to delay the house. I hope the house will understand our reasons for taking this action.

There is no question that the policy of the government with respect to man-power has been muddled, misconceived and misfitted; but I should like to reserve my remarks with respect to that for a more suitable time when the whole problem, integrated as it is with industry and the armed forces, can be properly discussed. I hope that we will have considerable support from the house in that connection.

This motion provides only a palliative for agriculture, and I do not think we want to spend much time on palliatives. I should have liked to see the hon. member for Témiscouata (Mr. Pouliot) put some teeth into this, as we hope to put teeth into it when we deal with man-power. I should have liked to see him rise in his place and do something more than move a milk-and-water resolution such as this. I should have liked to see the hon. member come through with a proper national selective service scheme, one which would have brought labour to the farms of Canada and not bring up something which has resulted simply in a lengthy debate which can give no help whatever to the farmers generally.

Mr. POULIOT: At the beginning of the session I sent to each hon. member an article which I had written on national selective service, and if the hon. member did not have his copy translated, it is his own fault.

Mr. GRAYDON: I think I have received everything the hon. member has sent me, and I thank him for his courtesy. I have given it close study and attention, and part of my remarks to-night are based on the study I have given to matters of this kind in general.

In closing, I wish to say to the government to beware of the existing situation. There are reasons behind the movement which has taken place this afternoon. One of them is that the government have failed to deal manfully with the man-power problem. We as a party take a back seat to no one, whether he has moved this or supported it, in our desire to see the farmers of Canada provided with adequate labour in the months that lie ahead. That is part of our policy. We may differ in the method of bringing it about. We hope to take some action that will bring results and give help to the farmers which I am doubtful will be given by talking in the House of Commons for a whole day and delaying a debate which we are waiting for and which we hope to be ready for when the time comes.

[Mr. Graydon.]

Mr. J. SASSEVILLE ROY (Gaspé) (Translation): Mr. Speaker, with your permission, I shall, at the outset, congratulate the hon. member for Témiscouata (Mr. Pouliot) on the timely action he has taken this afternoon, in moving the adjournment of the house for the discussion of the serious problem which agriculture is facing on account of the present labour shortage. This is not the first occasion on which the hon. member for Témiscouata has rendered a service to his country. During this session he has made numerous remarks and speeches which have been quite effective but which could have been still more helpful, had the oligarchy which rules the country at this time been more willing to accept the good suggestions he offered. As I said, I congratulate him on his action and I hope it will bring about very good results.

The leader of the opposition (Mr. Graydon) has just deprecated the action of the hon. member for Témiscouata. His criticism surprises me very much. If agriculture is in such a serious plight as has been stated, and it must be true, if the hon. members of this house, whatever their political affiliations may be, whether they be Liberal Conservative, Cooperative Commonwealth Federation, or Social Credit, who took part in the debate and represent various rural constituencies all over the country are aware of local conditions. I believe it was quite helpful that such representations should have been made to the government, in view of the fact that the seeding season is now so far advanced, as was stated this afternoon by the hon. member for Labelle, who I notice is now smiling. If the government would heed the representations that have been made by the hon. members and disregard the concerted oligarchy this government represents, and which will take advice from no one, the nation would perhaps not be so often confronted with problems as alarming as the one which it is now facing, the famine problem. In the light of what I have read in the newspapers and heard from hon. members of this house, I feel that if common sense prevailed, as well as a determination to do the right thing, with a view to serving the country efficiently and helping our allies in the war, if such a spirit moved all cabinet members the useful suggestions that were made would immediately have produced good results, and the leader of the opposition would not have referred to the futility or the uselessness of the present debate.

There is a labour shortage in Canadian agriculture. That is unquestionable. The numerous letters we receive from farmers

who ask us to endeavour to secure the release of their sons from military service are proof of this. There are a great many others. I have here a copy of the June 1, 1943, edition of the Montreal newspaper *La Presse* in which is reported a speech delivered in New York on that date by the hon. the Minister of Fisheries (Mr. Bertrand) of whom I caught a glimpse as he entered the house and to whom I am glad to extend my greetings. He discussed the problem brought about by the labour shortage, while dealing with fisheries. I wish to quote the following passage from the newspaper report I mentioned a few moments ago:

New York, June 1 (C.P.)—Owing to the labour shortage fish production in Canada this year may be reduced to 750,000,000 pounds as compared with 923,000,000 pounds in 1941, it was stated here to-day by the Hon. Ernest Bertrand, Minister of Fisheries in Canada.

Mr. Speaker, I believe I am in order in dealing with fisheries and fish, because the motive which prompted the motion introduced this afternoon, namely the labour shortage in agriculture, is indeed based on the shortage of foodstuffs in this country. Fisheries automatically come up alongside agriculture in this debate because foodstuffs are also derived from them. Further on, the honourable the Minister of Fisheries referred to the lack of young men and the labour shortage in the fishing industry. He said:

On the other hand, the problem is serious, because we have lost a considerable number of our young and most efficient fishermen who have enlisted in the army and the navy. Many others are employed in war plants, and quite a number of small fishing boats have been chartered for war patrol duties. On one side, there is an enormous demand, and on the other, a shortage of labour and equipment.

According to a statement of the hon. Minister of Fisheries, there is likely to be a decrease in the fish production this year, due to a scarcity of man-power attributable, so he states, to the fact that men have gone to the war industries or have been conscripted into the army.

The hon. Minister of Labour (Mr. Mitchell) proved this fact a while ago, but I doubt that this was the best argument in favour of the point he was attemping to make. Answering criticisms of the government policy, especially National War Services, of which I shall have a word to say later, the hon. Minister of Labour stated that the call-up of men for the army was not the only reason for the present scarcity of man-power. A large number of farmers, farmers' sons and farm employees, during the relatively slack winter season, asked permission to work in the war industries and have neglected to return to the farm. While I am on this question of work in the war industries, I shall point out that these men have not yet been released from their jobs, which they still hold, as suggested by the statement of the hon. minister. If they have not yet been sent on the farm or elsewhere, it is of course because industry needs them. Canada is expected to be alone responsible for winning the war. A sufficient number of men had to be trained and a fairly large number had to be sent overseas so as to be in a position to win the war by themselves. Moreover, Canada was to be the arsenal and the granary of all countries and supply allied nations with all they require in the way of munitions and armaments in order to win the war. At the same time, Canada was to feed the entire population of Great Britain because they are waging war and have suffered from air raids. It has also just been realized—and I wish to stress the point—that Canada should also feed the starving people of India and of China. The hon. minister replied to the hon. member for Lethbridge (Mr. Blackmore) that rationing was established not because of a shortage of potatoes but because we must think of China and remember that others go without. I would point out to the hon. Minister of Labour that although China had known poverty, hardship and famine prior to 1941, until then neither the minister nor the present government had ever thought of sending our food surpluses to China.

Never has the hon. minister or the present cabinet thought of sending there the food surpluses that were glutting our markets even in the west, and this applies to our butter which was so abundant, that its marketing offered quite a serious challenge to the administration a few years ago. No one has ever thought of sending our food surpluses to China, a country which was as much in need then as it is to-day. It is only after Canada, England and the United States declared war on Japan that this thought came to our minds. That is why such arguments make little impression and do not always carry conviction.

I revert to the colossal undertaking which consists in playing the game of our ambitious industrialists, by increasing production as well as profits, as we know, and by organizing a huge army, of a size comparable to that of vastly more populous countries; the hon. minister himself foresaw, as he stated in the course of last year's debate on bill 80, the conscription bill so-called, that deficiencies would develop in certain fields, unless we were very careful.

Still another minister was of the same opinion. I mean the then Minister of National

War Services, Mr. Thorson, who is now replaced by the hon. Minister of Labour to a certain extent. He stated, as reported in *Hansard* for 1942:

> Furthermore, our war industry programme contemplates and involves heavy man-power requirements. So does the programme for essential agricultural production. I shall not deal in detail with either of these programmes, except to say that the man-power necessary for their performance cannot be withdrawn from the essential purposes of war without hurting those purposes.
>
> It is the duty of the government to allocate man-power in accordance with the needs of the war purposes of Canada and the war objectives that I have mentioned.

At eleven o'clock the house adjourned, without question put, pursuant to standing order.

DOCTOR EDUARD BENES

Address of His Excellency Doctor Eduard Benes, President of Czechoslovakia, to members of the Senate and of the House of Commons, in the Railway Committee room, House of Commons, Ottawa, Thursday, June 3, 1943, at 12 noon.

Right Hon. W. L. MACKENZIE KING (Prime Minister): We in Canada are indeed greatly honoured to have in our country today His Excellency Doctor Eduard Benes, the President of the Republic of Czechoslovakia. I wish at once to extend to Doctor Benes the warmest of welcomes on behalf of the government, the parliament and the people of Canada. Doctor Benes is such a well-known international figure and has played such a prominent part in world events over the past three decades that he does not come to us in any sense a stranger, and needs no introduction to any democratic audience in any part of the world.

I should like to say to Doctor Benes what I said in the House of Commons yesterday, that he will have noticed a very close sympathy between the people of Canada and the people of the Czechoslovak republic. The agreement at Munich, which had the effect of partitioning his country and caused great sacrifices on the part of his people, sacrifices made, it was thought at the time, in the interests of the whole of Europe but which have since proved to have been on behalf of the whole world—that agreement was never recognized by Canada and is not recognized by Canada today.

We share in regard to Czechoslovakia the view of the British government that the Munich agreement has ceased to exist as a factor either in present or post-war relations.

We look forward to the day, which we hope is coming speedily, when the Czechoslovak republic in its entirety will again be restored to its full independence.

One expression, Mr. President, which we have sought to give to our feelings of close relationship with the people and government of Czechoslovakia has been to welcome to Canada Doctor Frantisek Pavlasek, who is seated to my left, as minister of the Republic of Czechoslovakia, and to appoint in London a minister from Canada to the country of which you are presently the head. I would take advantage of this opportunity to say how greatly Doctor Pavlasek as minister of Czechoslovakia has endeared himself to all those who have had the privilege of making his acquaintance while here. As you yourself told me, Mr. President, when we recently talked together in Washington, Doctor Pavlasek was a close friend of the founder of your great republic, Masaryk, the country of which you are a co-founder and that he was one of the most cultured gentlemen in Czechoslovakia. We here have come to appreciate through the personality of Doctor Pavlasek and in his public utterances not only much of the culture of Czechoslovakia but also the high ideals of your country.

I am not going to take time this morning to say more than one other word by way of welcome to Doctor Benes. It is that we welcome him not only as representing the brave people of Czechoslovakia and the great services they have rendered to democracy but we welcome him also and in great measure at this moment on account of himself. He has a career of public service that has been paralleled by very few men in the world's history. As all present know he was co-founder of the Republic of Czechoslovakia. He was the first Foreign Minister of that country and has been its President for many years. He bore the heaviest responsibilities throughout the trying period of the Munich discussions and the years which followed, a time when his country was passing through a terrible ordeal. He did all within his power to keep united the forces of freedom in his own and other lands. It is of interest to know that he came at that very time to America and was for a very short period associated with the university of Chicago. He found there a sphere from which as President in exile from his country he might be able to direct its affairs in its titanic struggle for freedom. He has, as you know, been responsible for the organization of the different forces of Czechoslovakia. I should like to say to him how much the people of Canada in common with people everywhere who love liberty appreciate the

great services which Czechoslovakia rendered to the cause of freedom in the last great war and the great services she has never ceased to render to the cause of freedom since and in the present war.

Czechoslovakia has had to bear some of the heaviest burdens any country has ever been called upon to endure by way of sacrifice for a great cause. These she bore at the time of Munich. These she has borne ever since. These she is bearing heroically to-day. Notwithstanding that at present the country is occupied by the enemy, her forces both within Czechoslovakia and in different parts of the world, are fighting in the cause of freedom with the allied and united nations of the world. That is a great tradition for a nation and we know that that heroic effort is going to win its due reward.

I need not touch on other aspects of Doctor Benes' career, of his presidency of the Assembly of League of Nations and of course his leadership at the present time of his government in exile. From the beginning and all through his life he has been the exponent of high and noble ideals and of those great aims, purposes and practical measures which seek not only the higher development of the peoples of his own country but also fraternity and unity between all nations.

When I was recently at Washington I asked Doctor Benes how it was that he came to venture on some of the prophecies that he had made, prophecies which are giving much in the way of hope to the world at this time. He said to me, in reply, that the so-called prophecies were not in reality prophecies, that as a matter of fact he has had the good fortune, in the many years he has been in public life, to form intimate friendships with men in many countries and had been particularly fortunate in being able for the most part to keep up these friendships through the period of the war, and that from information he had gathered at first hand in this way he has ventured to give open expression to some of the views which he holds regarding the present and the future.

I should like in this connection to read a statement that Doctor Benes publicly made before the war actually took place. All of us would, I think, regard it as a prophecy. Doctor Benes himself would say that it is based on logic and philosophy and expresses only a sequence of facts gathered from the confidences of the acquaintances he has maintained.

In November, 1938, the gentleman who this morning is seated to my right made the following statement in regard to what he believed was likely to happen within a short time after the Munich agreement had been entered into. He said at that time that he believed war was inevitable after Munich. He went on:

> I do not know when it will break out, possibly in a year, perhaps in two or three. I personally doubt whether it will take more than a year.

This was in November, 1938. The attack on Poland came on September 1, 1939.

> The first to suffer the blow will be Poland. . . . France will pay horribly. . . . Hitler will attack all—in the west, and even Russia—and in the end America, too, will be in it.

I do not think I need say anything further by way of introduction of the President of the Czechoslovak republic as one who is entitled to speak with great authority on international affairs.

Doctor EDUARD BENES (President of Czechoslovakia): Mr. Prime Minister, Mr. Speaker of the Senate, Mr. Speaker of the House of Commons: Let me first thank you very warmly and sincerely for the kind words with which I have been introduced to this distinguished audience.

It is the first time in the history of Canadian-Czechoslovak relations that a president of Czechoslovakia has the honour of addressing the Canadian parliament. I am cognizant of the great historical significance of this event, and I am profoundly grateful that the honour is mine.

The great contribution of Canada to the struggle of the world for the defeat of German nazism and for the reestablishment of liberty, the achievements this country has made in her war, the organization of her army, navy and air force, industrial and especially financial success in solving extremely difficult war problems, the steadiness and the spirit of this country, evoke a deep and sincere admiration.

The sympathy of the Canadian government and people for Czechoslovakia, expressed in words and deeds during the past four years, has been an encouragement and inspiration in this darkest period of modern Czechoslovak history.

You know that for centuries beginning with the middle ages this small nation in the heart of Europe had been a glorious independent kingdom and a prosperous state. The state that first began the fight for religious freedom in Europe. In the fifteenth and sixteenth centuries, Prague, its capital, was a great centre of learning, contributed largely to European cultural, spiritual and material development, and played an outstanding role in European history and particularly in the history of the Holy Roman Empire and the

Austro-Hungarian monarchy. Perhaps your government knew, too, the famous declaration made by the German Chancellor Bismarck after his victory over Austria in 1866:

> Whoever is master of Bohemia, is master of Europe. Europe must, therefore, never allow any nation except the Czechs to rule it, since that nation does not lust for domination. The boundaries of Bohemia are the safeguard of European security and he who moves them will plunge Europe into misery.

In my estimation there can be no better comment on the position of my country even to-day.

The recognition of our cause here in this country in 1918 was also undoubtedly due to the unmistakable determination of our people to live as a free and independent nation. More than one hundred and fifty thousand Czechoslovak soldiers, many of whom came from Canada to Europe, fought for their country's liberation in the first world war in Russia, France and Italy. When the war was drawing to a close, the epic march of the Czechoslovak legionnaires across the Siberian plains to Vladivostok fired the imagination of the Canadian people as well as the rest of the world. The first unit of our legionnaires made its way across the Pacific from Russia to the battlefields of France, landed in Vancouver and was enthusiastically welcomed by the Canadian people.

Czechoslovakia's twenty years' record as a free and independent democratic state is one of which we are justly proud. Surrounded on all sides by authoritarian countries and governments, she remained faithful to the democratic traditions which came to her very largely from the western hemisphere. Her social legislation and her educational system were progressive and advanced; her financial system was stable, her currency, one of the soundest in Europe; her general economic standard was very high and her import and export trade greater than that of Italy. Until 1938 this republic was one of the most prosperous and happy countries in Europe. Even the concentrated campaign of nazi Germany, beginning in 1936, using corruption, lying propaganda and threatening war and violence, failed to shake the inner harmony of the Czechoslovak republic.

In her foreign policy Czechoslovakia resolutely and consistently followed the policy of peace, international arbitration and collective security. She fostered and encouraged friendship with her neighbours—Austria, Poland, Yugoslavia, and Rumania. She was the most loyal member of the League of Nations. She supported the Locarno policy, was an original signatory of the Briand-Kellogg pact, and was ready to play the part demanded of her in any generally accepted system of collective security. In Geneva she resolutely opposed the Japanese invasion of Manchuria and China; I was President of the Assembly of the League of Nations when we voted the sanctions against Italy upon her invasion of Abyssinia. Czechoslovakia was ready to oppose militarily the occupation of the Rhineland and Austria. Our army and air force were ready and thoroughly efficient. Up to the year 1939 we did our duty completely, not only to our nation, but to Europe and democracy as well.

Czechoslovakia was in mortal danger from the moment that Hitler and the nazi leaders came to power. When Hitler saw that the policy of sanctioning against Italy was not strictly applied and when the German remilitarization of the Rhineland was not opposed by force, he thought that the countless seeds of bitterness and mistrust sown by the dictators would permit him to reap a harvest of destruction of democracy in Europe and bring about the realization of his pan-German plan. The success of the annexation of Austria in March led to the September crisis in 1938.

My own view then was that Hitler's demands and attacks against Czechoslovakia should have been rejected even at the cost of a war. We had ready one and a half million splendid soldiers. But the western powers were not ready for war in 1938, either morally, or materially. Through the sacrifice made by Czechoslovakia, Europe and the world gained a year's time in which to prepare better for the defence against the coming onslaught. In my opinion, the second world war began with the criminal occupation of Prague. And from the very day of occupation, March 15, 1939, all Czechoslovak citizens have been at war with Germany.

Since 1938 the Czechoslovaks at home have endured great hardships, sorrows and suffering. They know that many of their soldiers and airmen who escaped from their enslaved homeland lost their lives while fighting for its liberation in Poland and in France. They know that after the Franco-German armistice, Czechoslovak soldiers and airmen reassembled in Great Britain, and that in the decisive battle of Britain, Czechoslovak airmen played an honourable part. They know that Czechoslovak soldiers are now fighting in Russia and in Africa and manning the defences of Great Britain even while they see their own country being converted into an arsenal for a war against the united nations. Many are now

working as forced labourers in Germany and elsewhere. Those who resist the oppressors are either executed in masses or tortured in prisons and concentration camps. Their country is pillaged and germanized, their national education completely destroyed. The undying memory of the martyred village of Lidice forbids us ever to relax in the world-struggle now waged against the powers of evil and darkness.

We know what we are fighting for. Our every effort is, first of all, spent for the restoration of our democratic way of life, for those moral values that are fundamental to it, as opposed to the nazi creed which deprives individuals and nations not only of freedom but of human dignity and equality. We are fighting, too, for the return of international order, in which the sanctity of treaties and the pledged word will prevail, in contrast to their deliberate violation whenever the nazis consider it expedient. We are fighting for some sort of international charter—a charter which shall embody the rights of man and be applicable to the people of all countries; in short, for a world that is new and free. In my opinion, this entails the punishment of all those people who are guilty of perpetrating numberless crimes and cruelties of the past four years—not in the spirit of vengeance, but with a full measure of justice.

Secondly, we are fighting for a social and economic reorganization of the European continent, which will be in great danger of chaos and disruption after the present war. The consequences of this war will be far-reaching and social and economic difficulties far greater than those of 1918 in Europe. The democratic united nations will have the duty to remain politically and militarily together even after the present war. But the peace which comes after this war will necessitate their new close collaboration also in the social and economic spheres.

Thirdly, we are fighting for a more lasting peace in the future, one which will be guaranteed effectively by an international organization. A new system of collective security must be prepared and established, one which will be more practical and function more effectively than the last. The first steps have already been made in the treaty signed by the united nations, but more discussion and preparations on the far-reaching questions of peace will be necessary before unity among the united nations will be achieved.

This is directly connected with the fourth fundamental aim of the present war, the one which will perhaps be the most difficult and at the same time most decisive to realize: a new political reorganization of Europe and the world. All these aims are interrelated and inseparable.

All the united nations, the great British commonwealth in which Canada has so vital a part and which has played such a glorious role in the present war; your great neighbour, the United States, whose friendly three-thousand mile boundary is an example of good neighbourliness to the rest of the world; Soviet Russia, who first broke the legend of nazi invincibility; China, whose strength seems incredibly increased as we look back on her heroic fight against the Japanese aggressors, as well as the smaller united nations, all share in this global struggle and all agree in these four great peace aims, which must be achieved in this second world war. Poland, Czechoslovakia, Yugoslavia, Greece, the Netherlands, Belgium, and Luxembourg, Norway, Austria as well as France—all have to be liberated. France has had to come to humiliating terms with the enemy. Even to-day the enemy has not exacted his last full measure of humiliation and vengeance. Germany has torn up the armistice agreement, imprisoned her manhood, or compelled it to work at forced labour. Yet France has never ceased to be capable of greatness. I believe that before very long France will rejoin her allies as a fully sovereign and belligerent nation. She will take her place at a council table of Europe. Europe needs a strong and regenerated France—and the same is true of the other subjugated nations—and without her there will be no lasting peace on the European continent.

After the collapse of Germany the united nations must, in my opinion, remain an organized body which will create the basis for the new post-war international order and for the new system of international collaboration and security, in which every member will play its due and proportionate part.

All Czechoslovaks are greatly indebted to Canada as well as to Great Britain and to the British commonwealth for the magnanimity with which she received Czechoslovak citizens who fled from their homeland in the past several years. They only followed their fellow countrymen who came years before to establish themselves permanently in Canada and are now faithful Canadian citizens and true Canadian patriots. I firmly believe that they are fully sharing Canada's effort in this war and will always serve to promote and strengthen our mutual understanding and friendship.

Canadians of Czechoslovak origin are now fighting in the Canadian and partly in the Czechoslovak army abroad. Many fliers, Canadian and Czechoslovak, trained here in your great country, are bravely fighting together to defeat our common enemy, who brought this war upon us.

Czechoslovakia's gratitude for Canada's consistent policy toward Czechoslovakia since 1918 is boundless. Mr. Mackenzie King's repudiation of the wanton German aggression against Czechoslovakia in the House of Commons on March 20, 1939, Canada's refusal to recognize the occupation of Czechoslovakia on April 7, 1941, and the granting of full recognition to the government of Czechoslovakia in England on July 17, 1942, has been the rounding out of this mutual relationship. These are ties that bind Canada and Czechoslovakia together and will bind them forever; and my thanks for all this, Mr. Prime Minister, to you, to your Parliament, and to your great country.

Czechoslovakia's policy has not changed since 1918. Nor will it change after victory is ours. I feel authorized to declare on behalf of my nation that after the final victory in this great war is achieved, the Czechoslovak nation will reconstruct its old home rapidly and successfully by its untiring efforts, remaining faithful—as it always was during the difficult periods of its long, chequered and glorious history—to the democratic way of life, to the principles of spiritual and religious freedom and to the ideals of peace and peaceful international collaboration, of which Canada and its brave and freedom-loving people was always one of the most typical and courageous representatives in the policy of the whole world.

Mr. MACKENZIE KING: I would ask the Speaker of the Senate and the Speaker of the House of Commons if they would express on behalf of the members of parliament our appreciation of the memorable address to which we have just listened by the President of the Czechoslovakia republic. May I say to Doctor Benes that we follow in our parliament the practice he followed as President of the League of Nations, and speak in either one of two official languages. I know, had time permitted, the President, as was the custom of the League of Nations, would have wished to repeat in French the address which he has just delivered in English. I would suggest that one of the two gifted gentlemen who will express our thanks to Doctor Benes might take notice of the fact that we are a parliament which recognizes more than one language.

[Dr. Eduard Benes.]

Hon. THOMAS VIEN (Speaker of the Senate) (Translation): Your Excellency, it is for me a privilege which I highly prize to be called upon to convey to you the warmest thanks of the members of the Senate and of the House of Commons for the honour you have conferred upon us by your presence here to-day and for the memorable address which you have just delivered.

In discharging this very pleasant duty in my mother tongue, one of the two official languages of this country, I derive added satisfaction from the fact that you, sir, speak it yourself with such fluent elegance.

We have, for a long time ardently desired the privilege now so charmingly extended to us by your excellency. For more than a quarter-century we have witnessed your achievements and closely followed your rapid accession to a foremost rank in the political world.

We warmly cheered at the birth of the Czechoslovakian republic. We have shared her happiness, admired the heroic courage of her people, and shed burning tears, as we still do, over her misfortune. On their return from Geneva, your friends, our Prime Minister and our late and lamented Senator Raoul Dandurand often spoke to us with admiration of your illustrious master, Mr. Masaryk, and of yourself, his worthy successor. Your world-wide reputation has preceded you here. We admire in your excellency the wisdom and caution of the statesman; the vigilance and valour of the patriot; the indomitable courage of the apostle disseminating throughout the world the immortal principles upon which are founded true democracy, liberty, order and peace.

On one of the memorable occasions which marked your brilliant career, you declared yourself a citizen of this young Europe which had sprung from the embers of the most disastrous conflagration the world has ever known, and of a new state which has devoted its strength and energy to the reconstruction of a world perpetually in the making.

Like ourselves, you are seeking an ideal, a symbol, a formula for a civilization capable of guaranteeing to humanity as a whole the complete enjoyment of its rights and of freeing it for evermore from fear and want.

We thank you for having given, by the warmth of your eloquence, a new and more vivid ardour to our faith in truth, honesty and human fraternity. We shall keep of your visit an everlasting memory, and this day will remain deeply graven, in letters of gold, in our annals and our hearts.

Hon. J. A. GLEN (Speaker of the House of Commons): Mr. Prime Minister, Mr. President and ladies and gentlemen; There are many occasions, Mr. Prime Minister and Mr. President, during a man's life when the hopes and dreams of the past become the realization of the present. I think that Doctor Benes is in that position to-day. He to-day sees in the immediate future the realization of those hopes. Everyone will remember Doctor Benes during those days of Munich of 1938, and how he conducted himself with cool and calm courage, steady judgment and with a definite purpose in mind. He held for himself during that time a high honour—I think he will consider it a high honour—that he incurred the most bitter hatred of Hitler. For all of us will recall those days of the Sudeten incident when Doctor Benes was leading his people, how Hitler chose him as public enemy No. 1 and reviled him to the whole world as a traitor to Czechoslovakia and, therefore, a traitor to Germany! I shall always recall the steadiness with which that challenge was met, and the determination with which Doctor Benes carried on his high office in behalf of his country.

The Prime Minister has told you of the prophetic utterance by Doctor Benes in November, 1938, which was fulfilled to the last word. Now Doctor Benes has given us another prophecy, though he himself knows and says this is a very dangerous field. He predicts the end of this war; I think the words he used were: "in the winter of 1943-44." May he see the fulfilment also of that prediction. Doctor Benes' address to us is an inspiration to Canada. It conveys to us some measure of the courage and steadfastness which was exhibited by his people and by himself during those terrible days. I should like to recall a broadcast that was made by Doctor Benes some time ago, which has remained in my memory. I do not recall his exact words, but I remember that he asked himself one question: "What do I want?" The answer he gave was, "I want to go home. I want to go to my own country. I want a free Czechoslovakia in a free Europe."

Mr. President, on behalf of those who are gathered here at this joint meeting of both houses of parliament, I thank you for your presence here with us to-day. As I stated, you have again entered into the realm of prophecy, and we do hope that your prediction on this occasion will come true within at least another year. Whether or not, I want to assure you that all Canada joins with you and your country, that we shall prosecute and continue our efforts until this war is successfully finished. On behalf of this joint meeting I express to you that which has been so evident from time to time during your address, the great pleasure you have given us. I express the wish of every man and woman in this audience when I say to you that we hope in the very near future you may return to your own home, your own country, a free Czechoslovakian, in a free Europe.

Friday, June 4, 1943

The house met at three o'clock.

FUEL

CONDITIONS UNDER NATIONAL EMERGENCY

On the orders of the day:

Mr. E. G. HANSELL (Macleod): May I direct a question to the Minister of Labour. Perhaps it will do if he answers it on Monday, should he not be able to do so to-day. In view of the national fuel emergency declared by the Prime Minister a couple of weeks ago, will the Minister of Labour give to the house an explanation as to how the emergency has been cared for over the past couple of weeks and how the situation stands at the present time?

Hon. HUMPHREY MITCHELL (Minister of Labour): I shall be glad to do that, though we have not had much time after the policy was decided upon to create an organization to handle it. My hon. friend can rest assured that they are moving with expedition.

Mr. HANSELL: Monday or Tuesday will be all right.

FOOD

PERMANENT ORGANIZATION TO PLAN AND DISTRIBUTE GLOBAL RESOURCES

On the orders of the day:

Mr. M. J. COLDWELL (Rosetown-Biggar): I have a question to ask with reference to a newspaper report by Mr. J. F. Sanderson of the Canadian Press, appearing in yesterday's newspapers, that the united nations food conference has agreed to establish a permanent organization to plan and coordinate global food resources. Will Canada be represented on the interim commission that is being set up? If so, who is to represent this country on the commission?

Right Hon. W. L. MACKENZIE KING (Prime Minister): I should like at an appropriate moment to make a statement with reference to the food conference, and perhaps my hon. friend will permit me to do so some day next week.

INQUIRY AS TO FOOD IN STORAGE IN VICTORIA

On the orders of the day:

Mr. G. K. FRASER (Peterborough West): In the *Globe and Mail* of this morning the following item appeared:

Dr. Fred W. Routley, national commissioner of the Canadian Red Cross Society, said yesterday the goods in storage at Ogden Point Pier warehouse, Victoria, was not the property of the society, but belonged to the federal government. The Victoria *Times* yesterday said considerable piles of foodstuffs, originally destined for the Red Cross Society in Hong Kong for distribution among Canadian and allied prisoners of war had been in storage for more than a year and "nobody seems to know what to do about it."

To whom do these foodstuffs belong; what do they consist of; if they are not shipped out of Canada for use by our armed forces, will they be used by our armed forces in Canada?

Mr. SPEAKER: That is a question for the order paper.

SUGAR

SITUATION IN REGARD TO RHUBARB IN WESTERN CANADA

On the orders of the day:

Mr. T. C. DOUGLAS (Weyburn): I am in receipt of a telegram from some merchants in Weyburn, Saskatchewan, indicating a condition which may be prevalent in other cities of western Canada. They report that rhubarb is going to waste because there are no sugar permits available and consequently housewives are unable to make use of the rhubarb either for canning or for cooking purposes. Will the minister undertake to see that steps are taken immediately to deal with this unfortunate situation?

Hon. J. L. ILSLEY (Minister of Finance): I regret that I cannot give the undertaking. I have gone very carefully into the question of rhubarb since I received notice of this question, and I find that provision was made for one pound of sugar per capita of the population of Canada for the purpose of cooking rhubarb alone. That one pound of sugar would be sufficient to cook five pounds of rhubarb, which would mean twenty-five pounds for a family of five. If more sugar is required for this purpose it will have to come out of the canning allotment or out of the ordinary sugar ration.

Mr. DOUGLAS (Weyburn): The complaint is not that sugar is lacking but that the permits are not available. This is an important item of food for many people on the prairies.

[*Later:*]

Mr. ILSLEY: Mr. Speaker, I would like to revert to my answer to the hon. member for Weyburn. I understood that he was asking for an increase in the sugar ration, but if it is merely a matter of administration I shall be glad to look into it at once.

POSSIBLE INCREASE IN ALLOWANCE FOR CANNING

On the orders of the day:

Mr. NORMAN J. M. LOCKHART (Lincoln): I should like to offer a suggestion to the Minister of Finance which he may consider and perhaps reply to at some future time. In the fruit growing areas there is considerable misgiving as a result of the late season. If the weather should become very warm the fruit will ripen rapidly and perhaps will become a drug on the market because of the impossibility of shipping it all at once. These circumstances are well known to the producers of fruit. Perhaps some time later the minister would make it clear to the housewives whether, in the event of an emergency of this kind, there may be some slight increase in the sugar allowance for canning, or whether in his opinion the maximum has been reached, in the light of the information available to him.

Hon. J. L. ILSLEY (Minister of Finance): I shall take up that matter with the wartime prices and trade board, and if any change is to be made I shall be glad to announce it in the house.

ALLOCATION OF SUPPLIES FOR CANADA AS COMPARED WITH THE UNITED STATES

On the orders of the day:

Mr. HANSON (York-Sunbury): I think the Canadian public ought to be given some understanding as to the basis of the allocation of sugar supplies for Canada as compared with the United States. Sugar bowls are placed on the dining-room tables in leading hotels in the United States, and one may help himself as he did in days gone by. In Canada that condition does not obtain. Are we beholden to the United States for the quota

we get? What is the basis of allocation? Let us understand it. Are we getting the equivalent per capita of what the people in the United States are getting? It seems to me there is some discrimination—I do not suggest it is unjustified, but I do not know. The Canadian public ought to know about the basis of allocation.

Mr. ILSLEY: That is a reasonable request.

Mr. HANSON (York-Sunbury): I would not have made it if I had not thought it was.

FISH PRODUCTS

RELEASE OF BRITISH COLUMBIA HERRING FOR CANADIAN CONSUMPTION

On the orders of the day:

Mr. G. K. FRASER (Peterborough West): Is the Minister of Fisheries in a position to reply to my question of May 27 respecting British Columbia herring?

Hon. ERNEST BERTRAND (Minister of Fisheries): Mr. Speaker, we have allowed 85,000 cases of herring to be distributed in Canada.

MEAT BOARD

RECONSTITUTION OF BACON BOARD—CONTROL OF DISTRIBUTION

On the orders of the day:

Mr. M. C. SENN (Haldimand): I wish to address a question to the Minister of Agriculture. It is based on an article appearing in this morning's *Journal,* headed "Meat Board to Control Distribution". It contains a paragraph that reads:

> The Canadian bacon board has been reconstituted as a meat board, with power to control distribution of all meat, Minister Gardiner announced last night.

The article as a whole is short and in my judgment it is not comprehensive enough; that is to say, it does not set out sufficiently the powers of the new board. First, may I ask the minister why this announcement was not made in the house, rather than in the manner in which it has been made, seeing that the house is in session; and second, I should like to have the minister make a statement to the house outlining the powers of the new board, and informing the house whether these powers with regard to price ceiling and rationing, formerly under the wartime prices and trade board, are now being transferred to the new board so far as meat is concerned.

Hon. J. G. GARDINER (Minister of Agriculture): The terms of the order in council to all intents and purposes give the same powers to the new meat board as were previously held by the bacon board, but their activities will now extend to beef as well as pork. It does not make any change with regard to the control which the prices board has over rationing and over the setting of prices. There is no change whatsoever in that regard. It is simply a reconstituting of the bacon board as a meat board, and while I did not make the announcement to the house, I did mention it the other day in the committee on agriculture.

Mr. SENN: Will the Minister of Agriculture lay on the table the order in council setting up the new board?

Mr. GARDINER: Just as soon as a copy is available.

WHEAT

REQUEST FOR INCREASED INITIAL PAYMENT

On the orders of the day:

Mr. E. E. PERLEY (Qu'Appelle): I desire to direct a question to the Minister of Trade and Commerce, but first, in order to be fair to the minister, I should like to explain the situation. It will be recalled that on Tuesday last and again on Wednesday I asked if the minister had received a telegram from Canadian Cooperative Wheat Producers asking for an increase in the initial payment on wheat. On both occasions the minister answered in the negative. I was quite surprised at that reply and went down to the reading room, where I found large headlines in three of the western newspapers in reference to this request. Now, to be fair to the minister, I want to read a telegram which I received yesterday; had we reached the orders of the day yesterday I would have dealt with the matter then. It is dated Regina, Saskatchewan, June 3, and reads:

> Newscast this morning states reply your question MacKinnon said no request made by pools to increase initial payment wheat board act to one dollar. Find through mistake in Winnipeg office wire was not sent. Explanatory wire gone this morning to minister from W. J. Parker, Manitoba pool.

Would the minister now state whether he has received this telegram; would he tell the house the import of it, and whether the action suggested will be taken.

Hon. J. A. MacKINNON (Minister of Trade and Commerce): As the hon. member for Qu'Appelle has explained, there was a delay in sending the telegram and consequently a delay before I received it. The telegram reached me about noon yesterday, and it contained a statement that a covering letter was being sent by mail. This letter has not been received as yet, but I have had an opportunity

of discussing this telegram with my colleagues and all I can say in reply to my hon. friend is that the wheat policy for 1943-44 was announced by me in January. In that statement mention was made of an advance of 90 cents per bushel to be paid on wheat, f.o.b. Fort William.

LABOUR CONDITIONS

INQUIRY AS TO LAY-OFF BY CANADIAN INGERSOLL RAND COMPANY

On the orders of the day:

Mr. ANGUS MacINNIS (Vancouver East): Has the Minister of Labour been informed that workers employed on war contracts by the Canadian Ingersoll Rand company are being laid off? If that is so, I should like to know the reason for the lay-off and whether selective service is taking all necessary steps to direct these men to other employment.

Hon. HUMPHREY MITCHELL (Minister of Labour): I want to thank my hon. friend for giving me notice of this question. In reply I should like to state that national selective service officers are actively engaged in placing men who have been laid off, or are to be laid off, at the plant in question; there are plenty of vacancies available. As to the necessity for the lay-off, that is a matter which is under the jurisdiction of my colleague the Minister of Munitions and Supply (Mr. Howe). In addition, complaints have reached my department that men have been laid off because of union activity, and I have a commissioner on the ground to investigate these complaints.

CABLE MESSAGES

COMPLAINT AS TO DELAY IN DELIVERY AND RECEIPT OF MESSAGES FROM OVERSEAS

On the orders of the day:

Mr. P. C. BLACK (Cumberland): I have a complaint to lay before the Minister of National Defence for Air in regard to delays in the delivery and receipt of cable messages to our boys in the air force in Britain. I have a letter from a mother saying that the cable companies state that the delays are due to the system or lack of attention in the air force camps in England. The letter goes on to say:

> It is awful to think that there is no way to get in touch with our boy more quickly, and to have cables lying around undelivered for days and weeks is awful. Why do they accept cables if they won't deliver them? It is robbery to take the boys' money and not deliver their messages to us. Both the men, their relations and friends are entitled to know why we cannot get better service.

[Mr. J. A. MacKinnon.]

Hon. C. G. POWER (Minister of National Defence for Air): If my hon. friend will give me the particulars I shall be glad to look into that specific case.

Mr. GRAYDON: May I ask whether the minister has had similar complaints prior to this?

Mr. POWER: Yes, but not to the extent that we had them in the beginning. The Canadian postal authorities are doing the best they can under the circumstances.

Mr. GRAYDON: Apparently there are still some delays?

Mr. POWER: I would think so; in fact I would not hesitate to say that there are.

CIVIL SERVICE

REQUEST FOR TABLING OF REPORT OF ADVISORY COMMITTEE

On the orders of the day:

Mr. M. J. COLDWELL (Rosetown-Biggar): I should like to ask the Minister of Finance if he will table a copy of the Coon report to the treasury board on civil service conditions.

Hon. J. L. ILSLEY (Minister of Finance): Mr. Speaker, the Coon committee was appointed to advise treasury board and I regard its advice as confidential. The policy of the government is contained in the statement made and the orders in council passed some two or three days ago.

Mr. GRAYDON: May I ask whether the advisory committee was paid out of public funds for the work it did?

Mr. ILSLEY: No.

TRANS-CANADA AIR LINES

STATEMENT IN THE BRITISH HOUSE OF COMMONS ON QUESTION OF OWNERSHIP OR CONTROL

On the orders of the day:

Mr. J. W. NOSEWORTHY (York South): Mr. Speaker, may I direct the attention of the Minister of Transport (Mr. Michaud) to a Canadian Press dispatch report of two days ago setting out a debate which took place in the British House of Commons? In that debate a member of the British parliament is quoted as saying that sixty per cent of the money involved in Trans-Canada Air Lines came from the United States. I suggest that in the interests of our publicly-owned transportation system that statement should receive some special refutation.

Hon. C. D. HOWE (Minister of Munitions and Supply): As my hon. friend knows, Trans-Canada Air Lines is owned wholly by the government of Canada.

BUSINESS OF THE HOUSE

PROCEDURE IN CONSIDERATION OF APPROPRIATION BILL

On the orders of the day:

Right Hon. W. L. MACKENZIE KING (Prime Minister): Mr. Speaker, a few days ago when we were discussing questions related to the business of the house and the order of procedure my hon. friend the leader of the opposition (Mr. Graydon) mentioned to me across the floor of the house that he would ask the government to consider the question of allowing the Department of Labour to be considered next. My hon. friend at that time had reference to discussions under the war appropriation measure.

Two defence departments, namely those of the air and army, had made presentations. The army's presentation is now completed; that of the air force partly so; but there has not been at this time any presentation on the part of the navy. According to the original plan it was proposed that we should follow with the Department of Munitions and Supply, and then that upon a statement by the Minister of Labour (Mr. Mitchell) we might discuss the question of man-power generally.

I replied to my hon. friend that I should like to consult with the Minister of Munitions and Supply (Mr. Howe) and the Minister of Labour before giving a final answer. I did say I would seek to oblige hon. members opposite, and to meet their wishes as far as possible. I stated further at the time that I thought it was logical at least to continue discussions on the three defence departments, and my hon. friend opposite agreed.

The question came up again yesterday, at which time I intimated that up to that time I had not had a chance to confer with my colleagues. I did so last night. Both the Minister of Munitions and Supply and the Minister of Labour feel that a much more effective and intelligent presentation of the whole man-power problem could be made to the house if the Minister of Munitions and Supply were to make his statement first, and be followed later by the Minister of Labour. I must say that after discussing the matter with them I agree with their view. The whole man-power problem will I believe become much more intelligible, for purposes of discussion in the house if that order is followed. I believe there would be an avoidance of repetition and unnecessary discussion, and also there would be better and more effective understanding in the country if we had before us in the first instance a full statement of the needs of the services and of war industries. When the needs are presented to the house, then the Minister of Labour will be in a better position to deal more particularly with the manner in which those needs as well as others are being met and are to be met.

I am most anxious in every way to accommodate hon. members opposite, and I hope they will not think that I have anything in mind other than just what I have stated. This procedure will I hope materially shorten the discussion in the house, and would be not only the most logical method of presentation, but the most effective method of presentation of the whole problem. I mention this now in order that hon. members may understand the order in which we propose to proceed.

Up to the present the government has avoided introducing other measures, or bringing down new subjects for discussion while we have been dealing with the war appropriation bill. In some ways, that is a distinct disadvantage, because any discussion carried on for so many days at a time—even weeks at a time—soon becomes wearisome. On the other hand we have realized there is nothing the country is as much concerned about, or about which the government itself is so much concerned, as the war appropriation bill and the subjects to which it relates. We have felt we should not take any chances whatsoever of having other than the fullest discussion of that measure. I hope hon. members opposite will agree that the government in following the course I am suggesting is following the right one.

I might add that yesterday the leader of the Cooperative Commonwealth Federation (Mr. Coldwell) took exception to the government's departing from the original proposal, and this would seem to indicate that at least all hon. members opposite are not in agreement in the matter of following a different procedure.

Mr. GORDON GRAYDON (Leader of the Opposition): I may be under some misapprehension as to the agreement respecting the sequence of debates, but at the moment I know of no arrangement—at least I can recall none—whereby the Department of Munitions and Supply would follow directly after the Department of National Defence for Naval Services. However, I am not prepared to offer any challenge with respect to the accuracy of my understanding. I have stated my recollection.

Mr. MACKENZIE KING: I think my hon. friend is right. I have just spoken to my colleague the Minister of National De-

fence and he states that at the time the arrangement was made to which I first referred, when we discussed the matter with the leaders of the different parties, the Department of Munitions and Supply was not mentioned. There was mention of only the three services.

Mr. GRAYDON: I thank the Prime Minister for that statement, because that was my recollection. May I say at once that we cannot possibly meet my right hon. friend in this suggestion that the Department of Munitions and Supply should follow the Department of National Defence for Naval Services. There are good and sufficient reasons for this, one of which is that during the debate yesterday which was instituted by the hon. member for Témiscouata (Mr. Pouliot) this whole matter was discussed. I would point out to the Prime Minister that the understanding had a direct bearing on the progress of that debate. During the debate the Prime Minister said, as reported at page 3283 of *Hansard:*

A day or two ago it was understood that after we completed the statements of the ministers of defence we might take as the next order of business the question of man-power, even before going into matters pertaining to the Department of Munitions and Supply. I do not think it will be very long before we reach the discussion of man-power, and the question of agricultural labour and the measures necessary to meet the needs of agriculture inevitably will come up as soon as that discussion is entered upon.

Then the right hon. gentleman went on to indicate what he has indicated this afternoon, and in referring to the hon. member for Témiscouata (Mr. Pouliot) he said:

However, I think he may take it for granted that in so far as it may give promise of expediting the business of the house, we will seek to meet the wishes of the opposition in the matter.

If I may say to the Prime Minister, that had a very direct bearing upon the debate yesterday.

Mr. MACKENZIE (Vancouver Centre): How?

Mr. GRAYDON: If the Minister of Pensions and National Health will be as patient as he is sometimes, but not always, I will answer his question, because I was just about to come to that point. The reason why it had a bearing on the debate yesterday was that the discussion instituted by the hon. member for Témiscouata was only a piecemeal discussion of the whole problem of man-power. On another occassion in the house, after the Department of National Defence had been completed, I mentioned to the Prime Minister that we were somewhat handicapped as a party in dealing with the whole problem of man-power because the Minister of Labour had not given his statement. We did not want to be dealing with this matter department by department, and it was largely because of that that this party did not take more than a token part in the discussion yesterday in order to make our position clear.

Mr. MACKENZIE (Vancouver Centre): In any case the debate could not last beyond eleven o'clock.

Mr. GRAYDON: In my opinion that had nothing to do with our taking part in the debate. We had the statement of the Prime Minister, which perhaps was not a guarantee, that the Minister of Labour would come on, and it left the definite impression that the man-power problem would not be delayed and the whole picture would be laid before us. Certainly it was my understanding that he would come on before the Minister of Munitions and Supply.

As I said last night, in my opinion the problem of man-power in Canada is the major issue facing the Canadian people. The hon. member for Témiscouata raised only part of this problem; the whole problem must be dealt with. I understood the Prime Minister's argument this afternoon to be that we should have the services and their demands and requirements before us, that we should have the demands and requirements of the Department of Munitions and Supply before us, and that we should then go on with the Minister of Labour. If that argument were followed to its logical conclusion, we should have the Department of Agriculture before the man-power problem was actually discussed by the Minister of Labour.

I must take very strong exception to the suggestion made. I realize that the government has it in its power to arrange the sequence of business in connection with the war appropriation measure, but I submit to the government that it is a mistaken procedure to have the Department of Munitions and Supply follow the Department of National Defence for Naval Services. That would mean that we should be considerably further along with the session. On a previous occasion, I think in February or March, the Minister of Labour made a partial statement on man-power but—

Mr. CLEAVER: You would not let him go on.

Mr. GRAYDON: I do not know whether my hon. friend means that as an interruption.

Mr. CLEAVER: You would not let him finish his statement.

Mr. GRAYDON: I think the Minister of Labour should be given the opportunity to complete his statement which he gave partly on a previous occasion. So far as I can see there is no justification for a further postponement of the discussion of this problem which is so vital to this country. We should come to grips immediately with this man-power problem; we should not be delayed by having to take another department.

Mr. MACKENZIE KING: I hope I have made it quite clear that the government's desire is to expedite the business of the house and, with its knowledge of what has to be presented, it is I think in the best position to say how the complete picture can most effectively be presented to the house, presented that is, in a manner that will be most helpful to a discussion in the house. The desire to have the Minister of Munitions and Supply follow the defence departments has been entirely that of getting before the house the full picture of the requirements of the different defence forces and war industries. The question of farm labour comes of course into it.

If it will help to avoid any misunderstanding between us and enable the house to reach the man-power discussion more rapidly than might otherwise be possible, I may say to my hon. friend that I am quite prepared to suggest to my colleague the Minister of Munitions and Supply, that he make his statement which will set forth the essential features of the work of the Department of Munitions and Supply during the past year—I imagine that this statement may take two or three hours, but not more than that—and that he then allow the discussion on the statement to stand over until there has been a discussion of the man-power problem upon the statement of the Minister of Labour.

Mr. GRAYDON: Why does my right hon. friend suggest that the Minister of Munitions and Supply make his statement before the Minister of Labour makes his?

Mr. MACKENZIE KING: For the reason that the house will wish to know what man-power has been employed during this past year, is now being employed and will be required from now on in the war industries of the country.

Mr. GRAYDON: That may not come out except by cross-examination during the debate.

Mr. MACKENZIE KING: With all due respect to my hon. friend, recalling what the Minister of Munitions and Supply has said in previous years, I think we may assume that he will follow a similar line of procedure this year, and give to the house a very full statement with respect to the man-power required by the war industries. I do not see how a discussion on man-power can proceed intelligently or without a great deal of repetition unless that statement is made in the first instance. For that reason I hope that my hon. friend will acquiesce in this proposal. I make it because apparently there has been some difference of view between us and I am anxious to accommodate both sides of the house as far as I can.

With regard to the needs of agriculture, may I say that we had a debate on the question of the shortage of farm labour earlier in the session. At that time a formal motion was made and a debate took place upon the question. Under the rules of this house a second debate cannot take place on a question once it has been discussed and disposed of. I have not raised that point although it might have been raised yesterday. I simply point it out as an additional reason why the government, in controlling the business of the house, should follow the sequence that it feels to be necessary and desirable.

Mr. GRAYDON: The Prime Minister has asked me if I would be ready to acquiesce in his last suggestion. This last suggestion is very important because when he raises the question about the shortage of agricultural labour having been debated before in the house, it then forms part of the whole picture. The difficulty that we have been faced with from the beginning is that matters are being dealt with piecemeal. We have always had that difficulty. What we are trying to get as quickly as possible is a discussion of the whole problem of man-power. It is suggested that the Minister of Munitions and Supply make his statement and then further discussion stand over until the man-power problem has been disposed of. At the moment I am not able to assess accurately the position in which we may find ourselves with respect to dealing with the Department of Munitions and Supply. I am afraid we cannot acquiesce in the suggestion of the Prime Minister, but the matter is in his hands.

Mr. M. J. COLDWELL (Rosetown-Biggar): Mr. Speaker, I should like to say a word on this, if I may. It seems to me that the logical procedure is the one outlined by the Prime Minister in the first instance, that we have statements from the three defence de-

partments and from Munitions and Supply, because then we would be in a position intelligently to discuss matters. I felt that yesterday, and I feel it even more strongly to-day. The suggestion made by the Prime Minister to have the Minister of Munitions and Supply make a statement and then leave that in abeyance while we discuss the Department of Labour would lead to the defeat of the objective we had in view when we agreed to a discussion of the war appropriation bill department by department, because of necessity the figures presented by the Minister of Munitions and Supply would have a close bearing on matters coming within the Department of Labour. The two departments might almost be discussed interchangeably. If we are to follow the procedure outlined by the Prime Minister it might be better to take those two departments and discuss them together because they are so closely interrelated. Personally, as I said yesterday, I think the logical order is the order originally suggested, to take the Department of Munitions and Supply and then the Department of Labour. Then we shall know the labour problems arising out of all the war departments.

Mr. MACKENZIE KING: My hon. friend the leader of the opposition has quite rightly said that the responsibility is on the government and particularly on myself. I have made a suggestion to him which I thought would be helpful but he is not prepared to accept it. The hon. leader of the Cooperative Commonwealth Federation says that he thinks the suggestion is illogical and should not be followed. In the circumstances, I may say at once to my hon. friend that we will proceed as we originally intended. When discussion has been completed on the statements of the defence ministers, the Minister of Munitions and Supply will make his statement and discussion can then take place on his statement. We will then proceed with the statement of the Minister of Labour.

Mr. GRAYDON: Speaking of responsibility may I say that the responsibility rests squarely upon the government for the delay in bringing on the man-power discussion, and they will have to accept it.

PRIVILEGE—MR. POULIOT

REFERENCE TO ARTICLE IN "GLOBE AND MAIL" OF JUNE 4

On the orders of the day:

Mr. JEAN-FRANÇOIS POULIOT (Témiscouata): Mr. Speaker, although the leader of the opposition (Mr. Graydon) has not completed his self-assigned task of mending the numerous holes that he made yesterday in the Tory blue socks, I rise to a question of privilege and I have also a correction to make in a report that appeared in to-day's *Globe and Mail* regarding the sitting of yesterday. I quote from the *Globe and Mail*:

> It is reliably reported that Mr. Pouliot gave notice of his intention to move the motion to the Progressive Conservative caucus earlier in the day, and that caucus decision was against supporting it.

Here is what happened. I went in the first place to the agriculture and colonization committee and asked the committee if they would consider the same matter that was discussed in the house yesterday. No definite reply was given because it would require a special reference from the house. Afterwards a Conservative member came to my room and said he would support me if I discussed the matter in the house. I said that I might bring it before the house, and that is all that was said there. May I say further that I have nothing whatever to do with the Progressive Conservative caucus for the very reason that it gets its inspiration from the same "no brains" trust that brought the Bennett government to defeat.

Some hon. MEMBERS: Order.

Mr. SPEAKER: The hon. gentleman has risen to make a correction of an article that appeared in the newspapers. His question of privilege has nothing to do with the Progressive Conservative caucus.

Mr. POULIOT: Mr. Speaker, I have a correction to make in that article. It says: "Joining them were members of Bloc Populaire." No member of le Bloc Populaire was in the house. I hope a correction will be made accordingly.

CANADIAN FORCES

TELEGRAPH AND TELEPHONE COMMUNICATION SERVICES

On the orders of the day.

Mr. LIONEL CHEVRIER (Parliamentary Assistant to the Minister of Munitions and Supply): Mr. Speaker, on April 7 the hon. member for Témiscouata (Mr. Pouliot) referred to information of public interest regarding the creation of a new crown company for the amalgamation of telegraph and telephone lines. In answer to his request I desire to lay on the table order in council P.C. 3045 covering the establishment of Defence Communications Limited.

WAR APPROPRIATION BILL

PROVISION FOR GRANTING TO HIS MAJESTY AID FOR NATIONAL DEFENCE AND SECURITY

The house resumed from Wednesday, June 2, consideration in committee of a resolution to grant to his majesty certain sums of money for the carrying out of measures consequent upon the existence of a state of war—Mr. Ilsley—Mr. Bradette in the chair.

NATIONAL DEFENCE FOR AIR

2. Pay and allowances, $238,023,232.

Hon. C. G. POWER (Minister of National Defence for Air): Mr. Chairman, my friend and collaborator and myself have a number of questions to answer. We are quite prepared to answer them this afternoon but to do so will take some little time and the answers will be more in the nature of statements. We have only a two-hour sitting now and if the house prefers to continue the discussion and to ask further questions, as always I am the humble and obedient servant of the house.

Mr. GRAYDON: We will accept the word humble.

Mr. ADAMSON: Let the minister make his statements this afternoon.

Mr. POWER: Is it the pleasure of the committee that I give the answers now, or does the committee prefer to continue the discussion?

Some hon. MEMBERS: Give the answers.

Other hon. MEMBERS: Make your statements now.

Mr. BLACKMORE: It is impossible for me to hear what is going on down there.

Mr. POWER: I was making a suggestion to the committee, without in any way endeavouring to influence it, that we could use this afternoon in answering a number of questions which have been put to us during the two days' debate. But if we did that, it would take up a great deal of time and might deprive some members who feel like making a speech of the opportunity to do so. I am entirely in the hands of the committee.

Mr. GRAYDON: I thank the minister for extending this courtesy to us. I think there are one or two members who have some questions to ask. I do not think it will take long.

Mr. POWER: All right.

Mr. BLACKMORE: I am unable yet to learn what the minister offers as an alternative.

Mr. POWER: I offered to answer all the questions which have been put to me in the last two days. If the committee does not want me to answer these questions to-day, I take it that the committee wants to make speeches, and I will listen. I shall be on the other end; that is all.

Mr. BLACKMORE: The alternative is that the minister himself will make a little speech in which he will answer the questions. I would be in favour of having the minister answer questions in a speech.

Mr. DIEFENBAKER: The minister last evening gave me the opportunity, which I appreciate, of going over the new contracts with respect to the air observer and elementary flying training schools.

Mr. POWER: That had better come under another item, had it not? There is an item just for civilian schools.

Mr. DIEFENBAKER: If that is so, I will not continue.

Mr. GRAYDON: Well, this is a general discussion, of course.

Mr. HANSON (York-Sunbury): Surely; go ahead.

Mr. POWER: All right.

Mr. DIEFENBAKER: I have a number of questions to ask arising out of this matter. The minister very kindly, as I stated, had a comparison made between the old contracts covering elementary flying training and air observer schools and the new contracts covering these schools. I have taken the opportunity of perusing the contracts, and any objection which I have heretofore expressed to the operation of these schools generally is removed by the amendments to the contracts during the present year. There are however some matters which I think still could be improved upon.

I will outline in general so far as the elementary training schools are concerned the previous arrangements which were in effect. There was paid to the flying training companies a certain amount during each period of four weeks for maintenance. In addition there was a considerable profit allowed per flying hour. Amendments have been now made by which considerable reductions have taken place in the management fee; it is now entirely eliminated except so far as actual expenses are concerned. As to the saving or loss on operations, up to the time of the new agreement the crown has paid seventy-five per cent and the company twenty-five per cent, and under the new arrangements the division will be eighty per

cent and twenty per cent. Generally speaking the result will effect considerable savings in the operations of these schools. There are however some changes which I think might still be made, and I place them before the minister.

The first I have in mind is in connection with insurance to take the place of the workmen's compensation act insurance in effect in the various provinces. I have not the available figures now, but if my memory is correct the amount paid by each of these schools per month averages about $1,100. I speak subject to correction in that regard. There are ten air observer schools and some twenty elementary flying training schools in Canada. At the present time the insurance is carried by insurance companies. It covers the personnel of these various schools who have not available to them the protection granted under the provincial workmen's compensation acts. I ascertained, as a result of our investigation some two years ago into these items, that the amount which was being disbursed by way of compensation was about twenty per cent of the actual amount of the premiums. With the government receiving the profits at the conclusion of the contracts for disposal as indicated in the two contracts, a saving running well on to $150,000 a year could be effected if the government itself would assume the responsibility and liability for compensation to the employees.

Mr. POWER: May I ask the hon. member if he has thought this thing through? Would it mean the setting up of a sort of new insurance department by the government just for these schools? I have not thought it through.

Mr. DIEFENBAKER: No. In each of these schools there is already sufficient staff for the purpose. All the government would have to do would be from time to time, as accidents take place, deduct from the amount paid by each of the schools the equivalent amount now paid to the insurance companies sufficient to be disbursed among those who suffer injury and accident. In fact, the statement I make as to the savings is, I know, having regard to past payments, a considerable underestimate of the saving which could take place. In that connection I wish to ask the following questions: the amount paid during the past year for insurance premiums in the various schools; the amount paid by each school per year; and the names of the agents with whom the said insurance is placed.

My next point is in connection with the cost per flying hour—including oil and gas—in the air observer schools. I should think there would have been a large reduction in that connection. In 1941 the costs amounted to $5.68 per hour, which I submit could be greatly reduced. I would like to have the figures for the various schools.

The next matter I want to take up is that of catering. Under the old agreements the amounts which were allowed per pupil for staff amounted to ninety cents a day, and in most cases it was done by catering companies such as Crawley & McCracken Company Limited and George Coles Limited. The criticism I previously made of this item was that too much was being paid to these companies and that a considerable saving could take place; and I notice in the new agreement a saving which I compute at about ten per cent.

Mr. POWER: About ten cents a day, is it not?

Mr. DIEFENBAKER: From now on there is the 50-cent rate in place of the rate which heretofore applied.

Mr. POWER: But we have to pay the army for the rations which they supply. That would be about 40 cents. That is 90 cents instead of a dollar.

Mr. DIEFENBAKER: At any rate, it is a very considerable saving—

Mr. POWER: It is a saving.

Mr. DIEFENBAKER: —and along the line which has been indicated. I should like to have a statement showing the cost to graduate pupils in the air observer schools and elementary flying schools. The original amount was estimated at $1,653.57, but with the change under the new agreement I should like to get the figures in that connection.

In the press recently there was a statement to the effect that a considerable change had taken place with respect to the capital stock of the companies concerned. It was stated that the common stock had been called in, and I suggest that a statement in that regard would clear up many misconceptions touching the holding of stock. Under the arrangements with the elementary training schools, in most instances these schools were brought into being by flying clubs and sponsored by them. There are two or three of these schools, however, that are under private ownership.

Mr. POWER: One elementary school, I believe—Three Rivers.

Mr. DIEFENBAKER: There are two others, if my memory is correct, that were not directly sponsored by flying clubs. These flying clubs have secured large amounts of money in the form of surpluses, which are being held until the conclusion of the war by the various companies operating the schools,

at which time allocations will be made to the flying clubs that have sponsored the several schools, or such other disposition will be made of the moneys as may be determined by the minister.

Some indication of the profits which these elementary flying training schools have made was shown in a return, sessional paper 326, brought down in answer to a number of questions asked by myself on April 26 last. I am not going over the record of these profits in detail, but I have a suggestion to make as to the use that might very well be made of these moneys. Taking the schools in the order in which they appear, the answer is that profits, before making provision for income and excess profits tax, including the company's share of operation and maintenance savings, are fairly substantial. Take the first one, Fort William. For the first period of twenty-four weeks the amount was $16,732; for the second period $14,547; for the third period, $11,636; for the fourth period, $11,105. Then it falls away in the sixth period to $6,025.

Take Prince Albert, Saskatchewan. In the first period the amount was $9,589; then $12,166, $10,360, $3,392, $8,703, and $202. There are others but I will not refer to them by name. There are some in larger amounts—$19,000 surplus and profit during the period of twenty-four weeks; another, $25,300; another, $15,000; another, $26,900; and so on. These amounts are held, less the payment of course of income tax and excess profits tax, to the end of the war.

Mr. POWER: They have paid in $1,370,000. They are being made to give that eighty per cent to us now.

Mr. DIEFENBAKER: The minister says it is now being paid, but there is nothing to indicate that this was being done.

Mr. POWER: I do not think that was in the contract; my hon. friend is right. I have not seen anything in the contract, but we did have the right at any time to ask for a certain portion. Perhaps not the whole eighty per cent, but a large portion has been paid and the amounts come to $1,370,000.

Mr. DIEFENBAKER: That was a suggestion I made repeatedly.

Mr. POWER: Quite right.

Mr. DIEFENBAKER: I believe that to be one way in which these moneys could be controlled. On the other hand, in the operation of the air observer schools large profits are being made which will revert to the crown. As a result of the establishment of these civilian schools a large amount of money will be available after the war for aviation purposes, and I think that money might very well be used in the continuance of aviation facilities, in their extension, and to aid in the establishment of a post-war aviation scheme applicable to the British commonwealth of nations.

The other day a question was asked the Prime Minister as to whether or not conversations had been initiated between the United Kingdom and the self-governing dominions with respect to an empire plan for post-war civil aviation, to which the answer was no. To-day the British people and the British parliament itself, within the past two weeks, have been debating this question. An opportunity should be given to men who serve in the air force to become rehabilitated after the conclusion of hostilities, and it is my opinion that these moneys that now revert to the crown, already totalling a considerable sum, which will become increasingly larger as the years go by, and the facilities that are now being operated by these schools, belonging to the crown, might very well form the basis for the establishment in Canada of a basis for an empire scheme. I believe the civilian schools and the whole set-up in the old country will be utilized for the same purpose, and it is time for us in Canada to give the lead in this direction. It would benefit the men when they return after the war from service in the air force, to continue in this as a life work. Many of them will desire to do so and they should have that opportunity, and for this reason among others, we should now lay the foundations for such an all-empire air transport service.

A few days ago there appeared in the press an item setting out the attitude of the British people towards this matter. Canada has not yet participated in a conference regarding this post-war scheme with the other nations within the commonwealth of nations. I think she should, in order to establish, as it were, an all-family round-the-world transport system for the purpose of uniting still more the various nations of the empire, and, in addition to that, affording an opportunity to ensure to the men who serve in the air force jobs and positions when they return. Recently the Sunday *Times* dealt with this matter, and if I may be permitted I should like to quote what it said in an editorial; with this I shall conclude. In Great Britain there has been a most favourable reaction toward the establishment of this empire air transport system. As yet in Canada opinion has not been crystallized and there have been no representations made by Canada to the other empire nations, if I correctly understand the Prime Minister's

statement. I do think now is the time to lay the foundation for the continuance of this empire after the war, to bind it together more closely than ever before by the establishment of an empire air transport plan. In that connection I shall refer to the editorial, which sums up the attitude generally of the British people:

> London is now only eighteen hours from New York, ten hours from Cairo, eight hours from Moscow. Even the great ocean barrier of the Pacific is flown regularly many times a week at two hundred miles an hour or more.
>
> Air communication will play a major part in the lives of nations from now forward. Public discussions on both sides of the Atlantic are ahead of official thought, and reveal such weight of enterprise that international agreements on the air routes of the world are a pressing concern.
>
> A primary British need to-day is for a policy for empire air transport. At present there is none. R.A.F. transport command is doing invaluable work as a military unit. To suggest it should assume other than military functions in operating world air routes would be to court disaster.
>
> There is a strong case for starting now to design transport planes . . . but civil aviation will offer such a vast field for enterprise after the war that there seems to be no justification for restricting it to monopolistic control—unless the greater goal of full internationalization can be achieved, with all its manifest benefits.

Then it goes on to say that the British dominions and India should be parties to an Anglo-American understanding. My submission, Mr. Chairman, is that while in the past I have not always seen eye to eye in regard to the turning over to civilian companies of the elementary and air observer training of our air force, the results achieved have been tremendous. We have built up airfields and communications across Canada which will form a foundation upon which Canada can offer a great contribution toward an empire transport system. I think the minister now should lay plans, and should tell the people of Canada what those plans are, with reference to the use of our aerodromes and other facilities when the war is over, whether they will be still controlled by the government or whether it is the intention to turn them over to private companies.

I do not know that there are any other matters with which I want to deal. So far as the air observer schools and the elementary flying training schools are concerned, the new contracts do away with many of the things to which previously I took objection. I realize that while experience was being secured, naturally some portions of the agreement were not what they should have been, but I do think the minister is entitled to every commendation for having made the alterations to some of which I have referred to-day.

There is just one other point to which I should like to refer; that is the reclamation of oil in these various schools. To-day, with the shortage of oil that exists, everything possible should be done in the reclamation of oil. I know the figures so far as one school is concerned. The total value of the oil that would have been wasted at that school if a reclamation plant had not been set up was $4,104. A reclamation plant was set up at a cost of only $957, and it brought about the saving of $3,200 worth of oil within the first year. As I understand it, some of the schools do not have reclamation plants as yet, but I think for the small expense involved and the very large savings that are brought about, consideration should be given to the setting up of reclamation plants and units at each of these schools.

Mr. MacNICOL: May I ask the minister if the airfields which have been constructed either by or for his department across Canada and into the north permit the landing of planes carrying ten tons?

Mr. POWER: I am sorry I cannot answer my hon. friend. The elementary flying fields were not built for the operation of heavy types of planes, nor were the service flying fields. I do not know about ten tons, whether it is or is not a particularly heavy load. I know some of the planes weigh thirty and forty tons. I shall make inquiries, but offhand I could not say. I can tell my hon. friend that only a very small portion of our aerodromes are built for heavy machines. The elementary fields are built for the operation of light planes, generally speaking, and that is also the case in regard to the service flying fields.

Mr. MacNICOL: I have read that the heaviest load carried by the planes flying north to-day is six thousand pounds, or three tons, but that the United States bombers going to Alaska—

Mr. POWER: My hon. friend is talking about the aerodromes built for the purposes of the training plan. Normally they are not built for the operation of large transport planes, but aerodromes built for the purposes of these transport planes are capable of taking those planes carrying normal loads, and I should say possibly the ones to which he is referring are in that category.

Mr. MacNICOL: Then may I ask if the airfield being built northeast of the Pas—

Mr. POWER: I would not know.

Mr. MacNICOL: It is not under your department?

Mr. POWER: I shall inquire, but I could not say offhand.

Mr. MacNICOL: I understand that heavy bombing planes land there.

Mr. POWER: If they land there I presume it is built to accommodate such planes, but I could not say offhand whether a specific aerodrome would be capable of handling a plane carrying a ten ton load or a twenty ton load or a thirty ton load. I am not a technician, but I can tell my hon. friend that staging aerodromes, or aerodromes used for offensive or defensive purposes, normally can take almost any kind of plane. The ones built for elementary training take elementary training aircraft, which are light aircraft.

Mr. BLACKMORE: I was interested the other day when the minister indicated that he was in favour of granting commissions to as many of our young men as were qualified for them, regardless of quotas or any other ulterior motive or consideration. I wanted to raise a question in that regard. I have been told that boys who accept commissions are frequently a good deal worse off financially, after receiving their commissions, because of certain requirements made of them.

Mr. POWER: That is correct.

Mr. BLACKMORE: And which they find unavoidable.

Mr. POWER: The income tax.

Mr. BLACKMORE: No, not the income tax; certain things incidental to the dignity of their craft, so to speak. Is that so?

Mr. POWER: It is true.

Mr. BLACKMORE: Would I be in order if I were to ask the minister if that is the best way to have it? Would it not be better if the income of these boys was graduated so that the young man receiving a commission would not be worse off financially, and so that he could break even?

Mr. POWER: There does seem to be quite a discrepancy now between the pay of a sergeant pilot and that of a commissioned officer. I would hesitate to raise the pay of a commissioned officer without raising that of the sergeant pilot, and in that way we would be back to the place we started. I do not know what answer I can make to the question. Upon reading some literature from the United Kingdom government on this question I find they make the statement that a great many of their non-commissioned pilots do not wish to become officers because of the financial loss involved. I really do not know how I can grade these rates of pay in order to make it more attractive for someone to get a commission than to remain as a sergeant. I have no objection to looking into the matter, but I am afraid, if I may say so offhand, that my hon. friend is barking up the wrong tree.

Mr. BLACKMORE: The minister is quite right in his anxiety about the matter. In my view no consideration of financial reward should be troubling any of our prospective officers. I know of young men who in my opinion ought to be officers, because of the services they could render, but who, because of what to some people might be considered minor considerations, are deterred from going ahead.

Mr. POWER: Some men have refused commissions—not very many, actually, but some. But some warrant officers class 1 who are receiving equipment allowance would rather remain non-commissioned officers than accept commissions.

Mr. BLACKMORE: In any effort the minister makes which will result in our best boys becoming officers without their having to suffer anxiety because of financial arrangements, he will have my unswerving support.

Mr. GREEN: Would the minister answer the questions which were asked?

Mr. POWER: May we pass this item first?

Mr. ADAMSON: Before the item carries, a question has come to my notice to-day, and I think this is the proper place to take it up. I quote briefly from this letter:

> Enclosed please find letter read from the Montreal *Star*, regarding member of air force, aircrew, who may be grounded after honourable service, and yet whose stripes are apparently temporarily—

And so on. And then the quotation in the paper is—

Mr. POWER: I would much prefer to discuss the matter privately with the hon. member, if he does not mind.

Mr. ADAMSON: Apparently the matter appeared in the press; that was my reason for bringing it up.

Mr. POWER: If the hon. member will send it to me I shall look into it, and if necessary I will make a statement in the house.

Mr. ADAMSON: That is satisfactory.

Mr. CARDIFF: I believe about a year ago, or perhaps a little more than that, the security guards were set up. I do not know how many men enlisted in it, but I understand they are being dropped and shoved into some other part of the service. Are they being given a chance to remuster, or will they be transferred to another branch of the service without any choice in the matter?

Mr. POWER: I would say we can move them anywhere we like once they are in the service—and particularly the security guards. I do not think they had any very special qualifications. My recollection is that in respect of the security guards we just change their name. Without hesitation we would take security guards and put them on some other job without consulting them at all.

Mr. CARDIFF: Would a security guard not have the opportunity of choice?

Mr. POWER: He could talk to his commanding officer or his immediate commander, but he would not be in any category which would necessitate our consulting him if we were going to move him.

Mr. JOHNSTON (Bow River): What is the approximate number on the waiting list for air force?

Mr. POWER: Aircrew?

Mr. JOHNSTON (Bow River): Yes.

Mr. POWER: I cannot tell the hon. member the number on the waiting list.

Mr. JOHNSTON (Bow River): Approximately?

Mr. POWER: No, I cannot.

Mr. JOHNSTON (Bow River): I understand there are quite a number.

Mr. POWER: At this time there are fewer than there were. Is my hon. friend asking in connection with farm work?

Mr. JOHNSTON (Bow River): No. That brings me to a question brought up the other day, as to why it was we are not training more in the air force. I do not wish the minister to misunderstand me, because I am not trying to criticize his efforts in connection with the air force. As I said yesterday, I think his attitude is the proper one. But I have been talking to officers in the air force and their complaint was that they could train more men if they had the facilities at hand. They pointed out an insufficiency of training aircraft. I do not know whether we have not the training aircraft, or whether we have not the facilities in connection with air fields. Would the minister make a statement?

Mr. POWER: I can tell my hon. friend right away that we have a plant which is supposed to turn out a certain output of so many aircrew per annum. We have to build up our plant to its full capacity, and we are not proposing to increase it very much more. One very good reason is that we would not get the raw material if we kept on increasing it indefinitely, because there are not in Canada —I think I said this in my preliminary statement—an unlimited number of men fit for aircrew. I do not know yet; I may find out, to my cost, before I am through, that perhaps we have built a plant too big for the number of aircrew we may be able to get, as days go on. We are not being curtailed by lack of aircraft, and at this time we are not being curtailed by lack of aircrew.

Mr. GREEN: Will the minister give consideration to giving airmen on sick leave extra time to get to and from their homes? It is a pressing point in British Columbia.

Mr. POWER: That would be purely a medical matter, if they are on sick leave. The medical man would state how long the sick leave would last, and each case would be dealt with on its merits.

Mr. GREEN: For example, I have in mind a man who has been in hospital for some months, and at the expiration of that time will be given some furlough.

Mr. POWER: It depends on his condition, does it not?

Mr. GREEN: Men from British Columbia who have been in hospital in Ontario or the maritime provinces find some difficulty; for they have only a few days at home. The suggestion has been made that they should be allowed the time to travel to and from their homes.

Mr. POWER: Surely the medical man must take into consideration the injuries that have been received. I should be very glad to have particulars of any case of that kind.

Mr. GREEN: These men ought to be spending more of their time at home rather than on the train. I raised this question with the Minister of National Defence when his estimates were before us and he told me that he would discuss it with the minister. I think if the minister will look into this situation he will find that there is some hardship.

Mr. POWER: There cannot be any such thing as a uniform sick leave. A man may

have a certain disability and he is told to go away to recuperate. This period of recuperation will be longer for one disability than for another. I cannot imagine the medical men saying to a man, "You are sick and are going to get two weeks' leave," and then saying the same thing to a man who is recovering from a really serious illness.

Mr. GREEN: No, but I believe that once men in the air force are discharged from hospital they are given a sick furlough, either twelve or fourteen days.

Mr. DIEFENBAKER: I received a letter from a man who has two sons in the air force. Another son was called up recently under the provisions of the National Resources Mobilization Act and he now wishes to be transferred to the air force. There are a number of men in the army who are available for service only in Canada and who would like to transfer to the air force, but the opportunity is denied them. Apparently they are not permitted to make this transfer once they have been enrolled under the provisions of the mobilization act.

Mr. POWER: Before they actually enrolled, or whatever you call it, in the army they had the opportunity of going to the air force and volunteering for active service anywhere in the world. I will admit that there is no clear procedure laid down to provide for transfers from the army to the air force. Of course, if the army were willing to discharge them and they had the necessary qualifications for aircrew, we should be glad to have them.

Mr. DIEFENBAKER: One would think that if there are men who are not willing to serve overseas in the army and who have the qualifications and are desirous to serve anywhere in the air force, the opportunity should be given to them to transfer.

Mr. POWER: They had that opportunity when they were first called up.

Mr. DIEFENBAKER: I appreciate that but many of them did not realize their exact position.

Mr. POWER: I shall be glad to take that up with my colleague the Minister of National Defence. If there are any men who have not been willing to volunteer for active service overseas with the army and who would be willing to volunteer to go anywhere as aircrew, I should be glad to get them.

Mr. FRASER (Peterborough West): Is there a sea rescue service in the R.C.A.F.?

Mr. POWER: That is one of the answers I am to make to the hon. member for York West.

Mr. FRASER (Peterborough West): Are awards given only to the non-commissioned ranks in this service?

Mr. POWER: That is our marine service.

Mr. FRASER (Peterborough West): I understand that in Great Britain awards are given only to the non-commissioned ranks. Does that apply to the R.C.A.F.?

Mr. POWER: I should not think so, but I can inquire about that. It would be extraordinary in our service if we limited awards to non-commissioned officers or to other ranks. Is the limitation downward or upward?

Mr. FRASER (Peterborough West): Downward.

Mr. POWER: That is to say, officers do not get them?

Mr. FRASER (Peterborough West): It was stated in the British *Hansard* that officers do not get them.

Mr. POWER: There are certain awards which are not given to officers, and there are other awards which are not given to other ranks. This distinction applies through the whole service. The D.S.O. is not given to other ranks and the D.C.M. is not given to officers. The Military Medal is not given to officers and the Military Cross is not given to other ranks.

Mr. FRASER (Peterborough West): The way I read the British *Hansard* an officer in that service canot get an award; they are given only to the non-commissioned officers and other ranks.

Mr. POWER: I hardly think it applies here, but I shall inquire.

Mr. DIEFENBAKER: Will the minister give us the cost of recruiting during the past year?

Mr. POWER: We have it here.

Mr. DIEFENBAKER: We were given a statement the other day by the Minister of National Defence as to the cost of recruiting in the army.

Mr. POWER: I have it here.

Item agreed to.

3. Travel, transportation and freight, $20,838,068.

Mr. DOUGLAS (Weyburn): Would it be possible to do anything to reduce the amount of unnecessary travelling that sometimes takes place? I do not know what the experience of other hon. members has been, but in travelling back and forth across the country I have talked to many men in the

air force who seem to have done a lot of unnecessary travelling. I realize that this is not an easy thing to eliminate. Sometimes it is caused by red tape, and sometimes it has not been easy to plan ahead. I came across one glaring example, but this is not by any means an isolated one. This young man had graduated as a member of aircrew in the east and he was told to go home to Moose Jaw on leave and then to come back, when he would be posted. After his leave he came back to eastern Canada and was posted to Mossbank, which is just a few miles outside of Moose Jaw. As I say, I realize that it is not always easy to eliminate this sort of thing, but I should like to know whether it has been drawn to the minister's attention. In view of the congestion on our railroads, every effort should be made to reduce unnecessary travelling.

Mr. POWER: In the earlier days this was particularly bad, but I think it has improved lately. On my first trip to the Pacific coast I was astounded to find that most of the men there—in those days we had a surplus of aircrew and many of these men were on guard duty—had been enlisted in Nova Scotia. Some of them were as far away as Prince Rupert. There was a great deal of confusion in posting, but we have done our best to eliminate that. In the days of our early expansion, when pupils finished the elementary school training we wanted to fill up the service flying training school and we took them from almost anywhere, from the east and the west. I think in all commands to-day there are all categories of schools except the advanced training school. Probably the man referred to by the hon. member was shipped down east because they expected to send him overseas, and it may have been found that he would make a better instructor and they decided to send him to Mossbank. There has been and probably still is more travelling than there should be. I have done everything I can to eliminate it and will continue to do everything I can, because it is a serious problem.

Mr. REID: One of the complaints that has reached me has to do with the women who are joining the air force. It has been pointed out that if a girl desires to train as a wireless operator and enlists in Vancouver or New Westminster, she may be sent to Toronto or Montreal. Then when she completes her training the girl from the west is usually posted in the east, while the girl from the east is posted in the west. When a girl posted in Halifax earns leave she finds it will take twelve or thirteen days of her leave to go to the west coast and return. Could not a wireless school be established in British Columbia, and could not girls and men from the west be posted in the western provinces?

Mr. POWER: It would be pretty difficult to do that. We have a certain number of wireless schools established, I believe four. At one of them, in Montreal, we took out most of the men who were learning wireless operating, ground, and placed women there. There are not very many come in at each intake per month. We find it very difficult to establish another school, except at great cost; and even if we did, we might find that we could not take care of the output because there is a limited number of positions for wireless operators, ground, in Canada. The women who take up that course are mostly destined to remain in Canada.

Mr. MacNICOL: Has the minister the break-down of this item for travel, transportation and freight?

Mr. POWER: The amount of $13,255,695 for travel is made up as follows:

Staff travel	$ 3,848,000
Pupil postings	7,114,705
Pupils and escort parties (chiefly Australian and New Zealand)	1,111,790
Annual and pre-embarkation leave	1,091,421
University air training corps	7,779
Civilian travel, including departmental administration	82,000
Total	$13,255,695

The probable expenditure last year was $10,800,000. We are spending more this year because we have more personnel.

Mr. MacNICOL: What is the break-down of the items for transportation and freight?

Mr. POWER: I will get that in a moment.

Mr. BLACKMORE: I should not be surprised to learn that the minister had been working industriously to get free transportation for the men in the air force on embarkation leave and on furlough. Am I correct in my supposition?

Mr. POWER: I am afraid I have to say that I adhere to the established policy for the three services, which is not quite free transportation on embarkation leave. I have a long statement here on leave. It is similar to that which was given in connection with the army. We have a joint committee for army, navy and air force before which we

thresh out any suggestion of discrimination as between the three services. All three services follow the same rule as to leave.

Mr. BLACKMORE: I do believe that we should give free transportation on embarkation leave and on at least one furlough, no matter where the men may be stationed. As matters are now, the boys who come from poor families are at a disadvantage because all the money they can spare is used to help their folks. The result is that many are not able to go on leave. I think this matter should be taken up in the interests of justice.

Mr. POWER: That matter was thoroughly discussed when the army estimates were before the committee. I do not know that there is anything I can add. I think the Minister of National Defence said that he was going to give the matter further consideration. I have no objection to taking it up again at defence council, where the three services meet and discuss their common problems, to see what we can do about it.

Mr. BLACKMORE: I urge the minister to take it up and use all the pressure he can to put it through.

Mr. MARSHALL: The minister will recall that a couple of days ago I asked about radio technicians. Can he make a statement now on that?

Mr. POWER: I have the answer here but it will take some time to read it. Perhaps it would be as well if we got on the record all the questions that are to be asked so that we could have the week-end to work over them. If not, I will answer now the questions we have at present.

Mr. DOUGLAS (Weyburn): My colleague the member for Cape Breton South was called out of the house but he has one matter to bring up which I will mention and perhaps the minister will give the information. It is a complaint from a man in the air force who joined at Sydney, Nova Scotia, was moved to Halifax and then to Toronto. He claims in his letter he was three nights on the train without any berth and no meals supplied. He is under the impression, whether it is correct or not I do not know, that when men move west of Toronto they are supplied with meals and berths. But the writer of this letter says that these men who came to Toronto from the maritimes got no meals or berths and on the last night they had to stand up in the day coach. This man certainly seemed to have had an unfortunate experience.

Mr. POWER: If it is a trip of only one night he does not get a berth. There is no distinction made between travelling east and west of Toronto. I think the Minister of National Defence made a statement on this question with reference to the army. The same thing applies to the air force. We get the same treatment as the others.

Mr. DOUGLAS (Weyburn): This is a man in the air force, not the army.

Mr. POWER: They do not get a berth if they are travelling only one night. If it is more than that I cannot say at the moment what accommodation they get, but there is no regulation that prohibits a man from getting a berth. I think he would be entitled to one if he was travelling more than one night. I am informed that it is in the regulations that he should get one. If he did not, he should have made his complaint to the proper authorities.

Mr. DOUGLAS (Weyburn): He was three nights on the train and got no berth and no meals.

Mr. ADAMSON: I understand that members of the women's division are provided with berths, the same as in the army.

Mr. POWER: We changed the rule some time ago.

Mr. ADAMSON: They get a berth if they are travelling only one night?

Mr. POWER: Yes.

Mr. BLACKMORE: How is the amount spent on transportation divided between the Canadian National and the Canadian Pacific railways?

Mr. POWER: I do not think I have that information here, but I can get it for my hon. friend. It is about fifty-fifty.

Mr. BLACKMORE: Perhaps the minister will include those figures in his general statement on Monday. I have another question. Is any of the freight from central Canada to the maritimes routed through the United States on American lines? If so, how much?

Mr. POWER: I will look that up.

Mr. BLACKMORE: I have had one or two bitter complaints from Nova Scotia and one from New Brunswick that too much freight was being routed through the United States at the expense of Canadian railways.

Mr. POWER: My hon. friend is probably thinking of the short line through Maine to Saint John, New Brunswick, instead of going around by the Canadian National.

Mr. BLACKMORE: Yes.

Mr. POWER: We will check on that.

Mr. BLACKMORE: Many people in the maritimes feel that this is discrimination against them.

Mr. POWER: I spent a lot of time in that section of the country, and I can assure my hon. friend that freight trains there are passing so frequently that I think that is about all the traffic the Canadian National Railways can bear. That is, I would think so as a mere spectator.

Item agreed to.

4. Construction, purchases, repairs and operating expenses of properties:
(a) capital expenditure..... $93,421,100
(b) repairs, operating expenses and rentals..... 13,482,925

Mr. GREEN: This vote for capital expenditure is approximately $93½ millions. It is true that is a reduction from the amount spent last year, but it is a very large amount of money. Is any provision made for checking the types of buildings that are being put up for the air force, for example, the equipment depots? I have had complaints to the effect that they are far more expensive in construction than they need be—after all, they are only for use for a few years—and should be of a more temporary nature, and that a great deal of lumber and building material is being wasted in them, and also much labour is required which would be very useful in building homes and doing other construction work. Are all the plans made and passed in the air department alone, or is there some other department which checks to see that they are not too extravagant?

Mr. POWER: I do not know that there is any other department which checks them. We have a works and buildings development committee, composed of officers of our department, who go over the plans and specifications of every one of these buildings. There is no other department which checks; I do not see how there could be. The plans and specifications are submitted to the chief engineer, works and buildings—

Mr. GREEN: In the minister's department?

Mr. POWER: In our department. We have a branch of works and buildings. Then it goes to the deputy minister, and eventually comes to me for the financial encumbrance necessary to raise the money to put up the building. I think most of the equipment depots are on a model of some kind. In some places they may be greater in scope than in others, but I think the model is there; the type of building is one for which specifications were laid down some time ago. My hon. friend is thinking, perhaps, of the equipment depot in Vancouver. A lot of stuff has to go in there.

Mr. GREEN: I simply use the equipment depots as an illustration. Hundreds of millions of dollars are being spent each year on buildings by the Department of National Defence and apparently there is nobody to check them. Contractors have come to me and said it is ridiculous that the buildings should be of the type they are, that they are costing far more than they should; and it seems to me that some of the buildings I have observed in process of going up are far bigger than are required for the number of men who are to use them. Of course I am not an expert on the subject, but I think there should be some check, probably by the Department of Finance, on these plans and on the amount of money which is going into buildings most of which will be absolutely useless once the war is over. I believe the country is losing millions of dollars in this way.

Mr. POWER: I do not think the Department of Finance has at its disposal a corps of engineers or any thoroughly qualified person —a constructor or engineer or somebody like that—for purposes of checking. We go to treasury board or to council with an appropriation for so much money to build an equipment depot or some other building, but I am sure the Minister of Finance of his own knowledge cannot know whether I am building too extravagant a building or one which is too ornate for the purpose. I do not know how checking could be done other than by superimposing a corps of engineers over all construction, including that of the Department of Public Works.

Mr. GREEN: During the war would it not be wise to have some board of that kind set up in the Department of Finance?

Mr. POWER: So far as we are concerned it would not be of much use. We are practically finished. We are spending 39 millions this year on all these plans which are now in, and I imagine it would be more trouble than it would be worth to change the plans. Specifications have been drawn for everything we propose to build. If we have to put up a new school, we have the type of buildings which go with each school, so many buildings, so many feet long, so many feet high and so many feet wide, to accommodate so many people. The specifications are laid down for the mess hall, recreation hall, and so on; the hangar

is so big, or it is a double hangar. All that kind of thing is just a matter of taking the blueprint out of a drawer and going ahead with it, in any normal construction that we require.

Mr. GREEN: The point is a very serious one because of the difficulties in building homes across the country.

Mr. POWER: I will admit to my hon. friend that, in the hurry to get things done, put up buildings and have our schools going, perhaps at the start there may have been some lack of supervision. I was camping on the trail of these engineers to get the buildings built, the schools opened, and if they have spent a little more money than they need to have done I suppose I must take the blame for it. But now it is standardized, and I do not know how money could be saved unless we had a committee of some kind going all through every type of building we have and checking up on it.

Mr. GREEN: I believe there could yet be quite a saving on buildings to be erected in the future.

Mr. LOCKHART: In connection with this amount, which almost parallels the previous year's expenditures, could we have information as to more recent developments, with particular reference to the middle western provinces, and the amounts which have been or will be spent on totally new projects?

Mr. POWER: "Will be" or "have been"? If it is "have been", since when?

Mr. LOCKHART: I will not go back to the original commitments, but within recent months some very heavy expenditures have been entered upon. Could a break-down be given of where those are, the amounts which are to be expended, and perhaps some information as to why that large amount is being expended? I refer more particularly to the central part of Canada.

Mr. POWER: To Ontario?

Mr. LOCKHART: It has come to my attention that large amounts are going out—

Mr. POWER: Does my hon. friend want me to give him a list of the construction works going on in Ontario?

Mr. LOCKHART: The more recent commitments in the construction programmes.

Mr. POWER: I do not know what my hon. friend means by "more recent".

Mr. LOCKHART: Anything that has been developed in the past six to eight months, where purchases of sites have been made and large contracts have been entered into. Could we have the names and the locations of those places?

Mr. POWER: I think I can give that information. Perhaps this would satisfy my hon. friend. No. 1 training command, Ontario: I have a long list here, $4,122,000 of construction under way which started on September 1, 1942, and was still in progress on June 1, 1943, together with additional construction recently authorized. Would that be satisfactory?

Mr. LOCKHART: Yes.

Mr. POWER: That is about what my hon. friend wants?

Mr. LOCKHART: Could that be put on *Hansard*?

Mr. POWER: I could put some of the tables on *Hansard,* but I would not like to put them all on *Hansard,* because I would get in the eastern air command, which takes in home war stations, and the western air command, which also takes in war stations, and these are defensive or offensive aerodromes and for security purposes we do not like to record them publicly. I will give the hon. member all the training items if he wants them. Is that satisfactory?

Mr. LOCKHART: The criticism arises from competent contractors who have seen developments within the last six months to a year where large amounts have been paid for sites and large contracts have been entered into in the last year for buildings. They question the justification for the extravagant construction as well as the necessity for so tremendous an expenditure at this stage of the war.

Mr. POWER: I will read to my hon. friend a list of the places, and he can tell me which one of them is criticized.

Mr. LOCKHART: The minister might deal with the western part of Ontario and the central western provinces. That is where the criticism came from.

Mr. POWER: I will read the names rapidly: Belleville, Oshawa, Mohawk, Mohawk, Malton, Kapuskasing, Windsor, Jarvis, Kingston, Mountain View, Angus, Aylmer, Centralia, St. Catharines, St. Catharines, Goderich, Mountain View, Trenton, Dafoe, Winnipeg, Gimli, Gimli, Souris, Fort William, Davidson, Rivers, Neepawa, Rivers.

Mr. LOCKHART: Will the minister give a break-down of those that are included in the central western provinces, excluding British Columbia and Ontario. I should like

to get the western provinces, particularly the central western provinces, Alberta, Saskatchewan and Manitoba.

Mr. POWER: In No. 4 training command the names are: High River, Edmonton, Edmonton, DeWinton, Caron, Assiniboia, Calgary, Dawson Creek, Calgary, Mossbank, Edmonton, Macleod, Bowden.

Mr. LOCKHART: Could we have a break-down of these particular places?

Mr. POWER: Perhaps I had better put it in this way. In No. 1 training command, Ontario, there is $4,122,000 worth going on.

Mr. LOCKHART: That is mostly additions.

Mr. POWER: Yes. In No. 2 there is $2,600,000, all additions. In No. 3 there is $5,403,000. In No. 4 there is $1,767,000. I can give the total amounts in the eastern air command and the western air command. In the former it is $3,424,000, and in the latter, $11,591,000. They do not group headquarters on the eastern coast, but the amount for No. 1 group headquarters is $2,433,000. Miscellaneous amounts to $9,190,140. The total is $39,155,523. There are some very large figures such as Comox, $1,895,000. That is a new aerodrome.

Mr. LOCKHART: Will the minister put on the record new constructions that have developed within the year. He need not bother with the small extensions to different airports, but will he put on record the new programme that has been developed in any part in connection with which he can give information?

Mr. POWER: I will do that.

Mr. LOCKHART: Perhaps the minister could give us just a brief table indicating these large expenditures.

Mr. POWER: Anything over half a million?

Mr. LOCKHART: Anything that is considered new construction; anything which is an entirely new venture in connection with the department.

Mr. POWER: It is difficult to say what is a new venture because this was all planned two years ago—well, not all, but a good deal of it—and we were committed to it in advance by our arrangements. Perhaps the hon. member would like information on new construction started, or for which there were contracts.

Mr. LOCKHART: Make it two years instead of one.

[Mr. Lockhart.]

Mr. FAIR: Is a new airfield being constructed at Wainwright?

Mr. POWER: I do not think so, offhand, but I will find out. There was talk of one some time ago, but I am not sure. It may have been dropped.

Mr. FAIR: I understand that some land has been arranged for in that district.

Mr. POWER: I do not think there is construction going on at the moment, but I will inquire.

Mr. FRASER (Peterborough West): What is the value of the buildings which the air force owns in Britain, and what arrangements have been made with the British government with respect to buildings there?

Mr. POWER: I do not think we have purchased any. We have rented at different places. We have a rented building in London, and others in other places, and we are operating on a rental basis. I do not think we have purchased anything, but I will check on that.

Mr. FRASER (Peterborough West): Has the department built anything there?

Mr. POWER: I do not think so. It would be very small if we did. However, I do not believe there is anything. There may be small temporary buildings.

Mr. DOUGLAS (Weyburn): Could the minister give a break-down of the $110,000,000 last year, and $93,000,000 estimated this year, as apportioned to the three branches of his department, overseas, commonwealth air training and the western command.

Mr. POWER: I think I can give that, with a reservation. I would not give it for home war or hemisphere defence. I might give a lump sum, but I would not indicate where the aerodromes are.

Mr. DOUGLAS (Weyburn): Only the total.

Mr. POWER: As regards the air training scheme, I do not think my officers will object to my giving the whole amount itemized for each particular undertaking. That will cover the answer to the question asked by the hon. member for Lincoln (Mr. Lockhart):

Mr. POTTIER: Could the minister give the total amounts for the eastern defence area and the Pacific defence area? I should like to get the gross total in each case.

Mr. POWER: I will try to get that.

Mr. FRASER (Peterborough West): Will the minister give the reason for the increase in

rentals? I cannot see the exact amount, on account of the lights being out, but it is over $4,000,000.

Mr. POWER: The increase is, in all probability, due to the fact that the new schools are getting more accommodation. We have more personnel. Offhand, however, that would be the answer.

Mr. FRASER (Peterborough West): Why is all that rented?

Mr. POWER: We are probably getting more accommodation.

Mr. FRASER (Peterborough West): If the minister does not know now, perhaps he can answer afterwards.

Mr. POWER: I am trying to think of an instance where we have opened in the last year a school wherein we probably spent a considerable amount in rental.

Mr. FRASER (Peterborough West): Could the minister tell us on Monday? There is $4,000,000, which is a lot of rental.

Mr. DIEFENBAKER: Is it the intention of the department to start further elementary flying training schools under the Royal Canadian Air Force?

Mr. POWER: It is not the present intention.

Mr. DIEFENBAKER: One was established during the past year in Davidson, Saskatchewan?

Mr. POWER: Yes.

Mr. DIEFENBAKER: And it is not the present intention to start more?

Mr. POWER: It is not the present intention to increase the number of elementary schools.

Mr. MacNICOL: Before the item carries I wish to make an observation. I remember very well that when the minister was on this side of the house he was a really good questioner and nothing went through when he was not perfectly satisfied with the answers given to questions asked. But he sees how futile it is for us here to-day. We are completely helpless. What can we do? What can we ask? An item of $93,421,100 is before the committee, and the Chairman says, "Carried". What can we do? The country looks at us and says our efforts seem like a joke, and that is very largely true. An ordinary country grocer will receive a bill of goods. He has his invoice and he checks off that invoice: two dozen cans of Aylmer peas, two gross of clothes pins, one box of prunes, and so forth, but we are helpless; we have no details, nothing about which we can ask.

Mr. POWER: Why do you not ask the questions? I am willing to answer every question that is asked. I rise to a question of privilege, Mr. Chairman; I have not refused an answer to any question.

Mr. MacNICOL: I know, but the minister cannot give us the details.

Mr. POWER: I will give all the details; I have files of them right here. At the beginning of this sitting I stated that if the committee wanted me to answer questions I would do so, and if hon. members said they wanted me to answer the questions on Monday I would do so. I do not want my hon. friend to give the impression that I have refused to answer questions.

Mr. MacNICOL: I did not.

Mr. POWER: Let my hon. friend play the game; if he has any sensible questions to ask, let him do so.

Mr. MacNICOL: I do not ask anything but sensible questions, and I resent the minister's saying that. He is getting off very easily.

Mr. POWER: I do not care how hard you make it for the minister; I will answer every question that is asked.

Mr. MacNICOL: The minister could not answer the question of the hon. member for Lincoln.

Mr. POWER: The minister certainly could not give a list of over one hundred establishments out of his head, and he could not read it with the lights off.

The CHAIRMAN: The minister has raised a question of privilege. I am sure the committee realizes that the minister is ready and willing to answer all the questions possible. Then the hon. member for Davenport stated that the Chair called, "carried, carried". I very seldom say that; some hon. members often call "carried", but there is no desire on my part to rush or press the committee unduly.

Mr. MacNICOL: The sum of $93,421,100 is a large amount to pass in a few minutes' time.

The CHAIRMAN: I thought we might have to pause for a while because of the *Hansard* reporters, who have been writing in the dark, but now that they have some light we may be able to carry on.

Mr. MacNICOL: We cannot read the figures we have before us.

Mr. GRAHAM: Has the department any control or management over the expenditures or the training syllabus of the Royal Air Force schools in Canada?

Mr. POWER: The Royal Air Force schools in Canada are now part and parcel of the combined joint air training plan, and for purposes of expenses, control and administration they are under the control of the Royal Canadian Air Force.

Mr. HANSELL: The discussion has been very lively for the last few minutes, but perhaps we are still in the dark. Personally I do not expect the Minister of National Defence for Air to be able to answer every question in regard to the building programme of his department, and I will tell the committee why. I think it is generally recognized that the purchase of land, the letting of building contracts, the supplying of materials and so forth come under the Department of Munitions and Supply. I point out at this time, and suggest to the minister that I may elaborate upon it further when the estimates of the Department of Munitions and Supply come up, that I think it will be discovered that the engineers, perhaps the architects and others who come into the picture at the commencement of any building operation, have erred in their plans and their judgment too many times, with the result that when construction has been completed something has been found to be faulty or something has been discovered which has put the government to tremendous expense in connection with some mistake or something unforeseen which should have been discovered by the engineers or those responsible for letting the contract in the first place. I do not expect the minister to be able to answer all those questions, because in my understanding he is concerned with training men. He knows the location of these schools, of course; he knows the personnel, and so on, but I doubt whether he knows very much about the materials that go into the buildings.

Mr. POWER: I am afraid I must take some responsibility for that, because the plans and specifications are drawn up by my department, so that really I would be responsible for what the hon. member has mentioned. Those were the questions that were asked this afternoon by the hon. member for Vancouver South. The Department of Munitions and Supply is our contractor, but we give it the order, so that I must take responsibility at least for that.

[The Chairman.]

Mr. HANSELL: If the minister wishes to take the responsibility for what I have in mind he may do so, but I doubt very much if he will be able to tell us why certain things happened. I shall give him a specific case, and perhaps the Minister of Munitions and Supply will deal with it when his department comes on. A certain air training school was located at a certain place.

An hon. MEMBER: Name?

Mr. HANSELL: It was the air training school at Vulcan in Alberta. This is a large school; the buildings are well constructed, and I have no hesitation in saying that it is a fine location as far as appearances go. But when the school was located there and the construction completed they discovered that they did not have enough water to supply the school. Of course at first sight one would say that surely the engineers would have discovered that, because that is why they are sent out there. But they did not discover it. The result has been that they have had to dig huge ditches and put in huge pipes—pipes which could be used for other purposes in our war effort—in order to bring that water for a considerable distance, not yards but miles. If my memory serves me aright, that water has to be pumped about ten miles.

I mention that only as one instance. I do not know how often these things happen throughout the country. I am not offering severe criticism at the moment; I am using this only as an illustration. Surely we should have engineers capable of discovering these things before a project is commenced, and I might add that the particular project to which I have referred was not one of the early ones; it was completed only recently. Surely by this time the engineers should have learned that one of the essential things in connection with an air school is an adequate water supply.

Another matter to which I should like to direct the minister's attention has to do with the salvaging of materials after the construction of a school has been completed. I believe I can say—and the minister can correct me if I am wrong—that there is nothing salvaged after construction work is completed; that the contractors themselves will sell that material and that the government will not receive any benefit from the sale of it. How much it amounts to, I do not know; it may not amount to much. On the other hand it may amount to a great deal. I do not know whether a check is made of how much material is necessary for a building, but I do know that these air training schools are well built.

I have no complaint about that; they should be well built. There is a tremendous amount of material used in them, and also a tremendous amount left over when a building is completed.

I moved for a return some time ago in which I asked the names of those who had bid on salvage, together with any offers accepted. The only offers made were in respect of old buildings on the locations—farm houses and barns. I shall have more to say on that point later on. I know for a fact, however, that much of that material was sold. I know it because I know the people who bought it. The return did not indicate that the government had received payment for that material. How much it might have been, I do not know, nor do I know how much it was sold for.

Mr. GRAHAM: In the contract to which the hon. member refers, was there a tender price by the contractor, in which he supplied material; or did the government supply the material?

Mr. HANSELL: I do not know. Is the hon. member referring to the building of the school?

Mr. GRAHAM: Would that not be an important point?

Mr. HANSELL: It might be. The minister can give us that information, if he wishes.

Mr. POWER: Is this at Vulcan?

Mr. HANSELL: Yes, the Vulcan school. The hon. member for Swift Current has said that this is an important matter. Well, it might be important. But if it is, then surely there should be some check on the amount of material wasted, because, so far as I can see, if there is a clause in the contract stating that the contractor will own the material that can be salvaged, we had better make a careful check. Under such a contract he could waste a large amount of material.

These air training schools are not little shacks out on the prairie. They are huge institutions—and I am glad they are, because our boys should have the very best training and the very best accommodation. I am not complaining about that. But I do say that either the Minister of National Defence for Air or the Minister of Munitions and Supply should answer this question in respect of buildings.

I have another question on the order paper, but if I asked with respect to it, before it was answered, I might be accused of hitting below the belt. The point I make is that engineers should be absolutely qualified, and should make no mistake when they decide on a location for a school. The plans should be complete, so that no mistakes can be made which would lead to turning down the whole scheme, or to having water piped in for a considerable distance.

Mr. POWER: I have a break-down with respect to travel and transportation, and freight and drainage. It is as follows:

	Travel and transportation	Freight and drainage	Total
Combined training organization	$13,255,695	$3,500,000	$16,755,695
Home war	2,058,173	1,902,000	3,960,173
Overseas	117,200	5,000	122,200
Total	$15,431,068	$5,407,000	$20,838,068

Mr. MacNICOL: Has any part of this item to do with supplying water for the school at Mossbank, Saskatchewan?

Mr. POWER: Yes; it would be somewhere in there.

Mr. MacNICOL: I have neither my figures nor my maps before me, but I understand that the water for Mossbank comes from the water supply at Moose Jaw. Does it?

Mr. POWER: I know there was considerable trouble about the water supply at Mossbank a year ago, and I cannot tell my hon. friend whether it has been remedied. I would not think the water would come from Moose Jaw, because that is a long distance away, about forty miles, I believe. I shall try to find out whether the trouble has been remedied, and where the water comes from.

Mr. MacNICOL: And where does the water come from to replenish the water supply in Moose Jaw, from which the Mossbank supply is drawn.

Mr. POWER: I think it was carried.

Mr. MacNICOL: I do not know whether the water is supplied from a point near Riverhurst on the Saskatchewan.

Mr. POWER: My impression is that it had to be carried a long distance to that school, and there was considerable trouble about it.

Mr. DIEFENBAKER: I know something about this matter. Two locations, namely Mossbank and Dafoe in Saskatchewan, were chosen as locations, before any question of water was placed before officials of the Department of Transport. Then, when the airport was established at Mossbank I believe about $110,000 had to be spent before they got water. During that period a man hauled it.

Mr. POWER: Correct.

Mr. DIEFENBAKER: Following up what my hon. friend has said, I should like to obtain a record showing the cost for the securing of water at various airports. I understand the International Water Supply Company of London, Ontario, was hired to go out and locate water. Unfortunately, however, at two points in Saskatchewan locations were made and establishments begun before any question was raised as to the necessity of having available an adequate water supply.

Mr. POWER: I said in the house that this was the driest country on earth. It may be filled with lakes and rivers, but it seems to me that every time we started a school we ran short of water.

Mr. DIEFENBAKER: You picked two of the driest in the dry.

Mr. MacNICOL: Does the minister not think the original survey plans in connection with the building of an airport or a school at Mossbank should have shown whether there was any water for a camp, or whether water was available?

Mr. POWER: This was one of the early camps, and we were in a great hurry at that time to bring schools in and have them completed, so that we could place pupils in them. If I understand correctly, this contract was given by the Minister of Munitions and Supply, and I understand a contract was let to the International Water Supply company to find water for these camps throughout Canada.

Mr. MacNICOL: I shall leave my question, then, for the Minister of Munitions and Supply.

Mr. POWER: But I wish to say to my hon. friend that when we could not get water fast enough in certain cases we have had to make our own arrangements to have water carried to us. That is the matter to which he is referring, in connection with Mossbank. We paid for the carrying of water to Mossbank, because we had not developed a well which could feed us sufficient water. I think part of what my hon. friend wants would be under me, and the part about having made provision and having had the foresight to get the water would be under the Minister of Munitions and Supply.

Mr. MacNICOL: I hope the minister will not take any question I ask as criticism.

Mr. POWER: No; I am thankful for your having asked them.

Mr. MacNICOL: Those who know anything about the situation in that part of Saskatchewan realize the difficulty there is in getting water. My memory is that Moose Jaw is now trying to obtain water from the Saskatchewan river near Riverhurst. I believe a small dam has been built in the river and the water is to be or is being pumped over the height of land, which is rather high, and carried by pipe or trench to the water field that supplies Moose Jaw. If the airport and the school at Mossbank get their water from Moose Jaw, I was wondering if the government considered it their responsibility to pay part of the cost of building the conduit from the Saskatchewan river to the field from which Moose Jaw gets its water, and also part of the cost of pumping the water up over the height of land. If the government has paid anything, I should like to know how much. They should pay something, at least the cost of supplying their own water requirements.

Mr. POWER: I shall find out.

Mr. DOUGLAS (Weyburn): Could the minister give us similar information in connection with Dafoe and Assiniboia; that is, as to the condition of the water supply and what money has been spent, since these airports were opened, to haul water? I notice there is quite a large item for hauling water at Mossbank.

Mr. POWER: Right.

Mr. GRAHAM: In answer to a question by myself the minister stated that the Royal Air Force schools have now been made a part of the commonwealth air training plan. Does that mean that the appointment of officers will now be made by the minister's department?

Mr. POWER: No.

Mr. GRAHAM: Are they still to be made by the Royal Air Force?

Mr. POWER: I shall answer my hon. friend by quoting the agreement.

Mr. GRAHAM: In regard to pay and allowances.

Mr. POWER: The agreement is dated June 5, 1942, and covers the administration of Royal Air Force schools in Canada. It amends and extends the British commonwealth air training plan. I quote from page 14 of appendix 2 as follows:

The R.A.F. units in Canada will be administered by the Royal Canadian Air Force in the same manner as units constituted under the British commonwealth air training plan, provided that:

(i) they will preserve their R.A.F. identity.

(ii) existing arrangements concerning consultation with, and concurrence of, the United Kingdom air liaison mission on personnel and administrative matters will remain. Such arrangements may be varied by agreement between the governments of the United Kingdom and Canada, as required by circumstances.

Mr. JOHNSTON (Bow River): I think one of the first things that should be taken into consideration when deciding on an airport is the available water supply. Before any development is carried on at all, it should be definitely decided whether a water supply is available. However, that is not what I rose to speak about. I do not know whether the minister will be able to answer this question, but it has to do with airports. I have received certain correspondence from the amalgamated building workers of Canada, Calgary unit No. 1, which is located at the supply depot. It would appear that the cost of living bonus is paid to civilian carpenters working on this job, while the carpenters who are in the civil service, although at one time they did receive this bonus, are not being paid a bonus. This creates a good deal of hard feeling. At first the government employees received a cost of living bonus of three cents an hour, but this was stopped and since that time the bonus that was paid has been collected back. I will read a portion of the letter I received, as follows:

Cost of living bonus to civilian employees of the R.C.A.F. in all commands has been paid in accordance with the provisions of P.C. 6702, of August 26, 1941.

When the bonus was paid there was no objection. The letter continues:

In July, 1942, on receipt of Department of Labour correction sheet authorizing wage payment of ninety-five cents per hour plus cost of living bonus of three cents per hour to carpenters in Calgary and zone, a direction was issued in error by the air officer commanding No. 4 air training command, that wages and bonus were to be paid at such rate effective from August 1, 1942.

Later on not only was the bonus cut off, but the government is charging the employees for the overpayment. The net result is that they do not receive the bonus and are having to pay back that which they did receive, and the civilian employees are still being paid this bonus. There is a difference in wages to men who are doing the same type of work. I understand that a conference was to be called in an effort to bring about some uniformity in the wages paid to the civil service employees and the civilian employees. I will read another portion of this letter dated May 18, 1943, which I received from the treasury office, so that the minister will see exactly what has happened. I quote:

This department has had occasion previously to consult with the national war labour board regarding the difference in bonus payable to employees of the public service and those of private industry. We were advised some months ago that the situation had become so confused that a conference was being arranged with government departments and agencies concerned with the intention of establishing a uniform procedure which would result in equalizing bonus rates and payments to all civilian employees engaged in the same type of work in the same district or zone. However, to date no such conference has taken place so far as we are aware and until such conference is arranged and direction given this department has no alternative but to pay bonus to prevailing rate employees in accordance with bonus payment procedure previously laid down.

Apparently the question has risen on many occasions; the department is cognizant of that disparity, and there are hopes that something may be done. But they say that a conference was expected to be called. May I ask whether that conference was ever called?

Mr. POWER: I never heard about it.

Mr. JOHNSON (Bow River): Apparently there is considerable hard feeling about the matter, especially now when the government is paying a bonus to civilian employees and taxes these other people for payments already made through an error in the pay office. I do not know whether that would come under the minister's department, but I hope he will take note of it and do something about it.

Mr. POWER: I will look it up in *Hansard* and have it checked.

Mr. POTTIER: I understand that the Royal Air Force come within this estimated expenditure. Is that right?

Mr. POWER: Yes.

Item agreed to.

Personnel, supplies and services: Food, medical supplies and services, clothing and personal equipment, $50,451,918.

Mr. FRASER (Peterborough West): I wish first of all to congratulate Commodore Tice of the Royal Canadian Air Force Medical Service upon the pictures he has shown in

the railway committee room and upon the way in which he is trying to handle the venereal disease problem. I hope he goes all the way through with it, because it is absolutely necessary that that disease be checked not only in the army, navy and air force, but also in civilian life. May I ask whether our men who fly over enemy country are supplied with sulpha tablets?

Mr. POWER: Individually?

Mr. FRASER (Peterborough West): Yes. I ask because I know that the United States air force at Pearl Harbor were supplied with them and that saved many lives. That is why only three per cent of the casualties died.

Mr. POWER: I would not think that the men would be supplied with the tablets individually. I do not know enough about medicine to know how they could administer this drug to themselves. From the little I learned of medicine when I was in the health department I know that sulpha drugs are very dangerous to use except under medical supervision.

Mr. FRASER (Peterborough West): I understand that the United States air force took these tablets with them and that the drug saved many severely wounded men from dying.

Mr. POWER: I would not know about that.

Mr. GRAYDON: May I ask the minister whether he has given consideration to the point raised by the hon. member for Renfrew South while the army estimates were under consideration by the committee? Not being a medical man I hesitate to pass any opinion with respect to the position which he took, but he indicated that there should be a royal Canadian medical corps which would not be divided between the army, navy and air force. I think the Minister of National Defence rather indicated that there should be some joint system. Has the minister given any consideration to the suggestion of the hon. member for Renfrew South, and would he care to make a statement?

Mr. POWER: My officers do not think much of the suggestion. The medical officers of the department say that to a larger extent than was indicated by the hon. member for Renfrew South there is an air specialty, a special need for medical work in research and elsewhere in relation to the air force. I have sent over to my hon. friend some pamphlets prepared by our medical services. These have been prepared and printed in this expensive way—I show them to my hon. friend now—by the insurance companies of Canada, for distribution among the civilians of Canada. Here is one entitled, "What they eat to be fit is good for the health of all Canadians." I think this would indicate that in nutrition we are considerably in advance of the ordinary civilian medical practitioner. Our medical officers have gone into nutrition in its relation to flying. They have studied, for instance, what effect riboflavin has on eyesight. That has been carefully studied and many experiments have been made in connection with it. An hon. member spoke of films the other day. We have developed a film based on this training pamphlet. It has been shown recently in the United States. It was shown first of all to our own people and then to insurance executives throughout the country, and recently it was shown in Toronto to the executives of the Twentieth Century Fox Corporation, Famous Players and others. I have received this letter from the head of Famous Players Canadian Corporation which I think would be of interest to put on the record:

We are of the unanimous opinion that this subject, which is so well done—

It was done by ourselves in association with Associated Screen News.

—can be of inestimable value to the health of Canadian citizens and suggest that, if possible, the R.C.A.F. make the film available for motion picture theatres so that it can be shown to the civilian population throughout Canada.

We think so well of this subject that Famous Players, as a theatre operating company and as a service to the Canadian public, would cheerfully pay for the printing of the necessary positive film in colour to make this subject available for the theatres of Canada. To get proper coverage this would require 12 positive prints. Also, we would order one 35 mm. print in colour which would be delivered to the R.C.A.F. for use as they see fit.

Famous Players operate or have an interest in approximately 340 theatres having a total seating capacity of about 310,000. However, it is not our intention that the film should be shown exclusively in our theatres but it should be made available for all theatres in Canada that wish to show it and we estimate that during the life of this film it will be shown to somewhere around five million people.

Paramount Film Service of Canada have volunteered to distribute this film without charge and Canadian theatre owners generally will be advised through the Canadian Motion Picture Trade papers that this picture will be available for use in their theatres by applying to Paramount Film Service.

That was a specialty, nutrition, developed by our Royal Canadian Air Force Medical Service. We have also gone into other spheres, particularly pressure chamber work, black-outs—human black-outs—and things of that

kind. Our people really think they are doing a good job in their particular line, and I do not believe they would be keen on changing over to the army, where a good many of them came from.

Mr. FULFORD: I should like to call to the attention of the committee the service that is being rendered by the Red Cross society in the building up of blood banks. I do not believe there is any other contribution that the Red Cross is making to our war effort which is of more value than the blood banks. I believe the minister will corroborate me when I say that they are being used extensively not only in the air force but in the other two branches of the armed services.

Let me give one specific case. A young pilot officer whom I happen to know was shot down over the Mediterranean while serving in the defence of Malta. He was rushed to hospital in Malta, and one of the first things done for him was to pump blood plasma into his system. There is no doubt that this saved his life. Altogether he had fifteen pints of blood pumped into his system, of which six were of the plasma type collected by the Red Cross. My reason for mentioning that at this time is that I believe there are a great many right here in this House of Commons who would volunteer to give their blood to-morrow if they knew how simple the process was, and go to the Ottawa Red Cross on Metcalfe street. I happen to be a donor, and I can tell the committee frankly that it does not hurt any more to have your blood taken than it does to prick your finger; in fact, apart from having an abnormal thirst, you feel better afterwards than before you go in.

The hon. member for Peterborough West mentioned the efficacy of the sulfa drugs. I believe that blood plasma ranks in importance with the sulfa drugs in saving lives.

Mr. FRASER (Peterborough West): I agree with the hon. member on that.

Mr. FULFORD: All hon. members between the ages of twenty-one and sixty years who weigh over 120 pounds and whose blood is up to the proper standard can donate their blood. I know of no greater contribution that they can make to the armed forces of Canada than by becoming blood donors with the Canadian Red Cross.

Mr. FRASER (Peterborough West): I am pleased that the hon. member for Leeds brought this matter up, because I know that in the army everything possible is being done to enable men to go to the blood donors' clinics. I have not heard what is being done in the air force, but I trust that the ground crews, at least, will be able to go to the clinics.

Does the minister know what the findings were in regard to the investigation at No. 35 elementary flying training school, where one man died following toxoid inoculation, on May 19, and a number of others were in the hospital?

Mr. POWER: I saw an item in the paper on this matter and have made inquiries. When I last asked, yesterday or the day before, the inquiries were not quite completed. I do know that quite an investigation is going on. A man, whose name I think is Fraser, from the Connaught laboratories of Toronto, also the deputy minister of health for Manitoba, Dr. Jackson, and some other prominent civilians, went out to make inquiries. We are having an inquiry of our own, but I do not think it is completed. It looks as though the incident is one which needs to be thoroughly investigated; one man died and about thirty were laid up as a result of inoculation. Whether the blame is to be ascribed to the persons who did the inoculating, or whether there was something wrong with the material, or whether the incident is the result of some other circumstance, I have not yet been able to ascertain.

Mr. FRASER (Peterborough West): That is what I wish to find out.

Mr. POWER: Yes; I have the matter very much in mind.

Mr. GRAYDON: In connection with the clothing of the air force, I notice that there is a change in certain branches as far as summer uniform is concerned. Does that apply as well to the women's division?

Mr. POWER: Yes. We are going to have another summer uniform. It is out, but I have not seen it yet.

Mr. FRASER (Peterborough West): Are the members of the Royal Canadian Air Force who are going on night operations given vitamin A tablets? I believe these tablets are provided in some parts of the United States, also in Great Britain, in large doses.

Mr. POWER: I do not know. I will find out. I know we are doing our best to see that the eyesight of our men is improved and that they are generally in good condition. I do not know whether vitamin A is what is used.

Mr. FRASER (Peterborough West): Vitamin A is supposed to cure night blindness and also a certain amount of colour blindness.

Mr. POWER: This new drug, riboflavin is, I believe, supposed to be good for this purpose. I do not know what it is.

Mr. FRASER (Peterborough West): It is administered in 50,000 international units.

Mr. MARSHALL: Would the minister give the reason for such a decided decrease in the estimated expenditure?

Mr. POWER: Yes; we bought a lot of clothing and boots last year and our requirements are provided for well in advance.

Item agreed to.

6. Communications:
Signal and wireless equipment, line construction, et cetera, $26,838,773.

Mr. FRASER (Peterborough West): Why the increase?

Mr. POWER: There is a very big increase in our communication system for the purposes of defence along both coasts largely for what they call fighter control and for land line communication. I think it is eight miles on the Pacific coast and ten miles on the east coast, and is for wireless communications and fighter control facilities.

Mr. FRASER (Peterborough West): I believe that in April of last year—I have not the date here—I asked the minister about carrier pigeons. I think that comes under this vote. He refused to answer because it was not in the country's interest.

Mr. POWER: Oh; we have carrier pigeons, lots of them.

Mr. FRASER (Peterborough West): Then, on August 15, a Toronto paper publishes nearly a full page of information about carrier pigeons. Could the minister tell the committee—

Mr. POWER: Did I say last year, that we did not want them?

Mr. FRASER (Peterborough West): No. The minister said it was not in the country's interest—

Mr. POWER: —to have carrier pigeons?

Mr. FRASER (Peterborough West): Carrier pigeons, yes.

Mr. POWER: To disclose whether we had them or not?

Mr. FRASER (Peterborough West): To tell the house anything about the matter.

Mr. POWER: Someone must have just told me I should not; that is all. We have certainly given a lot of publicity to it since. I do not know why I said that. I might have had a reason. Some of my officers must have told me it should not be disclosed, but I cannot understand why I agreed with them.

Mr. STIRLING: Could the minister tell us whether all the instruments used, coming under this item, are of Canadian make?

Mr. POWER: I could not say. I would not think so. This is largely for wires and wireless.

Mr. STIRLING: A great deal of equipment comes under it.

Mr. POWER: Yes; there is a lot of equipment. I could not give the information now. Of course I can find out. Some equipment may be bought from the United States; some may come from England; but a good part of this is for poles and wires, where it happens to be land line communications, and some is probably in construction, where wires and different communication systems have to come into a sector, or whatever you call it, in this fighter control.

Mr. STIRLING: My reason for asking the question was that it may be that some of these instruments are made by one of the capital companies which have been set up, and in that case what I should like to find out is whether the capital companies come into competition either with Canadian companies whose lifework it is to make these instruments, or with instruments which are brought in from other countries.

Mr. POWER: Is my hon. friend referring to scientific research?

Mr. STIRLING: That is it.

Mr. POWER: I visited the place once. It is really under my colleague the Minister of Munitions and Supply, as the hon. member knows, but I gathered from conversation there that they do not compete with anybody in this country; that it is pretty nearly all new gadgets which they are making. But I would not be sure about that. That is a company set up by the Minister of Munitions and Supply.

Mr. ADAMSON: The question I have in mind is one which, if the minister does not object, I will ask on this item relating to clothing. Have any tests been made as to the relative efficiency of shearling and wool clothing? Shearling is the skin of the animal with the fur on it; and the woven wool clothing is the other. There has been quite a controversy. It happens that there is a plant manufacturing it in my constituency.

Would the minister ask his officers to see if there is any opinion in the air force on the relative merits of the two? The question has been brought up to me several times.

Mr. POWER: I will do so with pleasure.

Item agreed to.

7. Ammunition and bombs, $23,990,000.

Mr. GRAYDON: I do not want to prevent the item from being carried, but I wish the minister would take an opportunity over the week-end to look up some information for me on a matter which came to my attention only after other items had been passed, so that I was not able to ask about it then. The suggestion has come from one who is interested in the chaplain service of the air force that some change might profitably be made in connection with the position which the chaplains hold. I am told that they are not in the same position as ordinary officers. I do not know whether this condition applies to all three of the services. I believe they hold some kind of honorary appointment rather than the ordinary position of an officer. I received that complaint by letter this afternoon and I was wondering if the minister would look into it.

Mr. POWER: They are honorary officers and they always have been, and the same situation exists in the army. In the navy they have no rank at all, being just chaplains; they are not captains or lieutenant commanders or anything of that kind. However, there must be something in the way of complaint if my hon. friend says so.

Mr. GRAYDON: Yes. My correspondent was complaining about that condition. He has been himself in the past an officer, a chaplain officer in the air force—I am not sure—and he complains that there should be no distinction. He states that the chaplains are rendering a great service to the army, the navy and the air force, and there is no reason why they should be called honorary captain or honorary major as the case may be. He thinks they should be in the same position as the others.

Mr. POWER: I am under the impression that that has been so from time immemorial.

Mr. GRAYDON: I think that is so, but perhaps the minister will look into the matter.

Mr. POWER: They are only honorary. Does my hon. friend want a decision as to whether we will change the system? I cannot change it between now and Monday. I will look into it.

Mr. GRAYDON: The minister sometimes takes credit for doing things in a hurry. I do not know how quickly he can do this.

Progress reported.

On motion of Mr. Mackenzie (Vancouver Centre) the house adjourned at 6:05 p.m.

Monday, June 7, 1943

The house met at three o'clock.

QUESTIONS

(Questions answered orally are indicated by an asterisk.)

CANADIAN ARMY—OVERSEAS REINFORCEMENTS

Mr. ROY:

1. Are there actually a number of divisions of our army available for service as reinforcements for our troops overseas?
2. If so, (a) what is the number; (b) to what army corps do they belong?
3. Are these divisions composed exclusively of volunteers, or of men called up, or both?

Mr. POWER: Reference is made to statement of Minister of National Defence, *Hansard,* May 13, 1943, page 2667; May 14, 1943, pages 2691 and 2693 to 2696; and June 1, 1943, page 3219.

DEPARTMENT OF EXTERNAL AFFAIRS—APPOINTMENTS

Mr. FRASER (Peterborough West):

1. Does the civil service commission make all appointments to the Department of External Affairs?
2. If not, how are the other appointments made?
3. How many have entered the Department of External Affairs by this method during the past two years?

Mr. CRERAR:

1. No.

2. (a) In Ottawa, certain temporary appointments of senior personnel are made by order in council.

(b) (i) In offices abroad, as in Ottawa, certain temporary appointments of senior personnel are made by order in council. (ii) In offices abroad certain clerical and stenographic positions, of which the civil service commission has knowledge, are set up by order in council. Appointments thereto are made by the chief of mission with the approval of the department.

3. During the two years prior to the 27th of May, 1943, appointments by order in council numbered: (1) Ottawa, 17; (2) outside offices, 44.

MILITARY SERVICE—FARMERS—POSTPONEMENTS

Mr. WRIGHT:

1. How many medical notices were issued to farmers in each administrative division from December 1, 1942, to April 30, 1943?

2. How many postponements were requested by or on behalf of farmers in each administrative division?

3. How many postponements were granted farmers in each administrative division?

4. How many of those receiving one postponement applied for a second postponement?

5. How many received a second postponement?

6. How many of those receiving the second postponement applied for a third postponement?

7. How many received the third postponement?

Mr. MITCHELL:

1. Medical notices are sent to all persons in designated classes but no current record of the occupation of such persons is kept.

2 and 3.

Administrative Divisions	Number Requested	Granted
"A" London, Ont.	1,652	1,614
"B" Toronto, Ont.	4,219	3,722
"C" Kingston, Ont.	2,110	2,061
"D" Port Arthur, Ont.	94	82
"E" Montreal, P.Q.	5,478	5,461
"F" Quebec, P.Q.	4,129	3,869
"G" Halifax, N.S.	1,635	1,408
"H" Saint John, N.B.	541	493
"I" Charlottetown, P.E.I.	717	620
"J" Winnipeg, Man.	4,090	3,670
"K" Vancouver, B.C.	841	795
"M" Regina, Sask.	6,630	4,678
"N" Edmonton, Alta.	3,085	2,995
Total	35,221	31,468

4, 5, 6 and 7. No record maintained.

DEER LODGE HOSPITAL, WINNIPEG

Mr. ROSS (Souris):

1. Since January 1, 1942, what properties have been purchased in Winnipeg by the dominion government in connection with Deer Lodge hospital?

2. From whom were these properties purchased?

3. What was the purchase price paid, or agreed to be paid, in each case?

Mr. MACKENZIE (Vancouver Centre):

1. Property in the municipality of St. James, Manitoba, bounded on the north by Portage avenue and on the south by the Assiniboine river and forming an easterly extension of the Deer Lodge Hospital property, so bounded, already owned by the dominion government. The Department of Public Works was authorized to survey and value the property and the Department of Justice was authorized to complete the agreement of sale.

2. Alice Maud Wightman, St. James, Manitoba.

3. $8,500.

H. J. SYMINGTON, K.C.

Mr. DORION:

1. Is Mr. Symington serving as a dollar-a-year man?

2. If so, what is his actual address, and what was it before he entered the service of the government?

3. What are his duties as a dollar-a-year man?

4. What is his occupation other than his work with the government?

Mr. HOWE:

1. Yes.

2. 244 St. James street west, Montreal, Que. —both cases.

3. Power controller; member, Wartime Industries Control Board; member, Material Coordinating Committee U.S.-Canada.

4. Barrister at law and various executive positions.

*DEFENCE OF CANADA REGULATIONS COMMITTEE

Mr. NOSEWORTHY:

When will the chairman of the defence of Canada regulations committee call a meeting of that committee?

Mr. McLARTY: I note in *Votes and Proceedings* that a meeting of the defence of Canada regulations committee is to be held tomorrow. I assume this affords the answer to this question, which might well be dropped.

Mr. NOSEWORTHY: Yes.

PERTH, N.B., POSTMASTERSHIP

Mr. HATFIELD:

1. Is the position of postmaster at Perth, New Brunswick, being filled?

2. If so, when was the position advertised?

3. How many applications were received, and from whom?

4. Were any of the applicants returned soldiers? If so, which of them?

5. Had any of the returned soldier applicants post office experience? If so, where, and for how long?

6. Were any of the returned soldiers recommended by the Canadian Legion? If so, which of them?

7. If the vacancy is not filled, what is the reason for delay?

Mr. McLARTY:

1. Temporarily.

2. August 25, 1942.

3. Seven: Hallett, Cash William; Ingraham, Mrs. Ethel Opal; Jamer, Randolph; Palmer, Mrs. Jean; Stevenson, Angus Gordon; Tomlinson, Guy O.; Whitman, Mrs. Margaret Inch.

4. Four: Hallett, Cash William; Jamer, Randolph; Stevenson, Angus Gordon; Tomlinson, Guy O.

5. No.

6. No.

7. As indicated above, there were seven applicants in the competition. Of these, four were returned men. Doubt existed as to whether three of these were patrons of the office, and they were only permitted to enter the competition on the understanding that if they qualified their right to be considered for appointment should be determined. Two were not qualified and the other, who secured the necessary pass mark, was definitely not a patron of the office. The other returned man did not secure the average 70% necessary to be declared successful.

The three other candidates, all of whom were successful, are married women supported by their husbands, and in view of this circumstance, Mrs. Margaret Inch Whitman, who obtained the highest rating was selected for temporary employment only. Therefore, Mrs. Whitman, who had been selected locally for the position, has been continued as acting postmistress in a temporary capacity for the duration of the war, and at the close of hostilities another competition will be held thereby giving those now on active service a chance to compete.

QUESTIONS PASSED AS ORDERS FOR RETURNS

CENSORSHIP OF MAIL POSTED IN DEFENCE AREAS

Mr. COLDWELL:

1. Have censors authority to withhold letters posted at Halifax, Nova Scotia, or other defence areas and addressed to points within Canada?

2. Does censorship include R.C.M.P. investigation of personal opinions between friends expressing disagreement with the North African policies of the United States state department in its recognition of former supporters or members of the Vichy regime?

3. Are private letters critical of government policy copied in whole or in part, and forwarded systematically or otherwise to the departments concerned?

4. Have any letters or telegrams to or from members of parliament been so censored or dealt with?

Mr. LaFLECHE: Order for return, with any necessary reservations.

Mr. HANSON (York-Sunbury): Oh, well; what does that mean?

Mr. MACKENZIE (Vancouver Centre): The usual reservations.

Mr. GRAYDON: That is an unusual answer. My understanding is that in some instances in the past, ministers have said, "subject to the usual reservations". From time to time I have wondered just what that meant. But this is an extension given to the government which I am afraid will have to be stopped. It is a serious matter.

Mr. COLDWELL: I would point out that there are no "usual" reservations. The only reservations there can be are those applying to particular questions at particular times. I object to the use of the words "usual" or "necessary", because there are no necessary reservations.

Mr. HANSON (York-Sunbury): Purely arbitrary.

Mr. LaFLECHE: The reservations I make are on the ground of security.

CONSTRUCTION OF BUILDINGS FOR RECRUITING PURPOSES

Mr. DIEFENBAKER:

1. How many buildings designed for use in recruiting have been erected since the outbreak of war?

2. What is the location and cost of each of them?

MOBILIZATION ACT—DEFAULTERS

Mr. DIEFENBAKER:

1. How many defaulters, who had theretofore failed to answer calls under the National Resources Mobilization Act, reported pursuant to the offer of immunity issued by the Department of Labour some three months ago?

2. How many defaulters, by military districts, have been prosecuted to date?

3. How many defaulters, by military districts, have been located since March 22, 1943, by the Hooper-Holmes Bureau, of Toronto, Ontario?

MOBILIZATION ACT—REQUISITIONS BY MILITARY DISTRICTS

Mr. DIEFENBAKER:

1. How many men, by military districts, were requisitioned for by the Minister of National Defence for call-up under the National Resources Mobilization Act since October 31, 1942?

2. How many notices were sent out pursuant to requisition?

3. How many men, to whom notices were sent, reported?

4. How many of those reporting received medical examination, and of these, how many passed?

5. How many of the men to whom calls were sent were duly enrolled?

WARTIME INFORMATION BOARD—PUBLICATIONS IN ENGLISH AND FRENCH

Mr. DIEFENBAKER:

1. What pamphlets or booklets have been issued by the wartime information board, (a) in English exclusively; (b) in French exclusively; (c) in both English and French?

2. How many copies of each have been printed?

3. Who is the editor or compiler of each of the said pamphlets or booklets?

4. What was the cost of each?

Mr. CRERAR: Return tabled.

PUBLIC DEBT

Mr. FAIR:

1. What was the gross national debt of Canada at the end of each of the fiscal years: 1867-8, 1875-6, 1880-1, 1890-1, 1900-1, 1910-1, 1913-4, and each year thereafter to date?

2. What is the amount of, (a) accrued interest; (b) other related commissions and charges, at the end of each of the above years?

3. What percentage of the total national revenue of each of the above years was required to pay the interest, commissions and charges above?

4. What provision is being made to satisfy the above indebtedness?

5. If present policy is continued, can this debt ever be repaid?

Mr. ILSLEY: Return tabled.

VULCAN, ALTA., AIR TRAINING SCHOOL

Mr. HANSELL:

What use is being made of the residence and barn purchased with the property now being occupied by the Vulcan air training school at Vulcan, Alberta?

HARTNEY, ALTA., AUXILIARY AIRPORT

Mr. ROSS (Souris):

1. What was the total acreage purchased by the dominion government in Cameron municipality at Hartney, Manitoba, for auxiliary airport?

2. What was the purchase price paid, or agreed to be paid, for this property?

GROSSE ISLE, QUE., FEDERAL BUILDINGS

Mr. DORION:

What use is being made of the federal government buildings at Grosse Isle, in the St. Lawrence river?

RESERVE UNITS, MILITARY DISTRICT NO. 5

Mr. DORION:

1. Before September 1, 1939, what were the reserve units in military district No. 5, and, (a) what was the effective strength of each; (b) how long had they been in existence?

2. What were the reserve units in military district No. 5 on May 15, 1943?

[Mr. Diefenbaker.]

MOTIONS FOR PAPERS

WAGE NEGOTIATIONS—COAL AND STEEL

Mr. GILLIS:

For a copy of all correspondence, telegrams, and other documents in possession of the Department of Labour, from the United Mine Workers of America, district No. 26, Dominion Coal Company, Acadia Coal Company, Nova Scotia Steel and Coal Company, Cumberland Railway and Coal Company, and the Department of Labour, in the matter of wage negotiations, from February 15, 1943, to May 31, 1943.

Mr. MITCHELL: I am informed by my officials that the preparation of this return would entail a considerable amount of work. I suggest that the hon. member look over the files, and we could have copied for him whatever he wishes to have.

Mr. HANSON (York-Sunbury): Then it would be the property of the hon. member, not of members of the House of Commons. I object to that because other hon. members as well as the hon. member for Cape Breton South (Mr. Gillis) are interested in the correspondence.

Mr. MITCHELL: I am informed it would take three weeks to complete this file. I think it might be made a return of the correspondence the hon. member really wants to see—or any other hon. member, for that matter.

Mr. GRAYDON: Of course the time required in preparing answers to these motions is not the proper basis upon which a decision should be made. The question is whether the bringing down of the information sought in the motion is in the public interest. If it is in the public interest, and of importance to the public generally, then the question of time does not enter into it in the same degree.

Mr. MITCHELL: It is a question of man-power, expense and time.

Mr. CRERAR: It frequently happens, in respect of a long return involving a great deal of labour and preparation, that the hon. member asking for such information is interested in having only a certain portion of it. In order to get what they want, hon. members frequently ask for a return of the whole. If there is something in which the hon. member is particularly interested, I can see no objection to his looking over the files in the minister's office, getting the information he desires, and, if necessary, having copies made of what is required. That has happened before in similar circumstances.

Mr. GRAYDON: The minute an hon. member asks a question such as this, involving the tabling of correspondence, it becomes a matter of interest to all hon. members. For that reason I object to the minister's statement.

Mr. GILLIS: I cannot see how the amount of correspondence for which I asked would entail any considerable amount of work. I deliberately asked for correspondence only from February 15, 1943 to May 31, 1943, and in that period I do not suppose there would be more than two or three telegrams and half a dozen letters. I cannot see why a stenographer could not prepare the information in an hour.

Mr. MITCHELL: The hon. member can have it; I have no objection, but he will have to wait for it. I think I know what my hon. friend wants. There are submissions to the board, complicated wage structures and reports, and their preparation would require some time. I believe I know what he wants and, if he agrees with me, I shall get all he wishes to have.

Mr. GILLIS: I suggest that the motion stand, and in the meantime I will discuss the matter with the minister.

Mr. CRERAR: That is satisfactory.

Motion stands.

SASKATCHEWAN INDIAN RESERVES—INTEREST ON TRUST FUNDS

Mr. DOUGLAS (Weyburn):

For a copy of any letters, notices or circulars from the superintendent of Indian agencies at Regina to the Indians on the reserves located in Saskatchewan, asking them to forgo temporarily, in whole or in part, the distribution of interest earnings and other moneys held in trust for them.

SASKATCHEWAN INDIAN RESERVES—MILITARY SERVICE

Mr. DOUGLAS (Weyburn):

For a copy of any letters, notices or circulars from the superintendent of Indian agencies at Regina to the Indians on the reserves located in Saskatchewan, regarding the eligibility of the above-named Indians to call for military service.

REPORT OF CIVIL SERVICE ADVISORY COMMITTEE

Mr. McILRAITH:

For a copy of the report made by the advisory committee under the chairmanship of Mr. H. J. Coon, set up by order in council P.C. 2-584, and of all correspondence, recommendations and other documents in the possession of the government in relation thereto.

Mr. ILSLEY: Mr. Speaker, the report in question is really an intradepartmental communication. It was asked for the other day by the hon. member for Rosetown-Biggar (Mr. Coldwell), and I stated then, as I now state, that I regard it as confidential and not properly producible. If the hon. member wishes to redraft the motion so as to request the production of letters to and from the department respecting the matters dealt with in the report, I will have no objection. But the report itself I regard as confidential.

Mr. HANSON (York-Sunbury): On the point as to the confidential nature of the report, my understanding is that this report is the result of a public order in council which either was or could be tabled, and that there is nothing in the order in council to indicate that the report when made would be confidential. I regard this as a public document, and the house is entitled to have it. I am sure it would be a matter of keen interest to the public, especially to people in Ottawa. The Minister, knowing what is in it, declares it to be confidential; but that was not the basis of the order in council.

Mr. ILSLEY: I do not know how many times I am entitled to speak on the motion. I have made my position clear. There are many orders in council setting up departmental committees and interdepartmental committees which prepare reports containing advice for ministers. Certainly these have never been regarded as producible in the House of Commons. The government must take the responsibility for what they do after they get such advice as they are able to secure, but in my judgment the advice they get is not a public document.

Mr. McILRAITH: This is not a report of a departmental committee. I would point out to the house that the chairman of this committee was not connected with any department, nor was he a government employee; he was a person entirely outside the public service. Therefore I do not understand in what respect the committee can be regarded as a departmental committee.

Mr. ILSLEY: He was just as much an officer of the department when he was sitting with the other members of that committee as are many hundreds of persons who are brought in temporarily to assist the government from time to time and who are now and have been during the war years connected with the government service.

Mr. HOMUTH: How much was Mr. Coon paid?

Mr. ILSLEY: He was not paid anything.

Mr. COLDWELL: Mr. Speaker, I asked a question about this matter the other day, and I am glad it has been brought up again particularly in this form. The Coon report deals with conditions within the civil service of Canada. If a report has been made to any department—particularly, as has been pointed out by the hon. member for Ottawa West, when it has been made by a man not a member of one of our departments, a man who comes from outside the service and outside the city of Ottawa—this house should know what conditions have been revealed and what suggestions have been made with regard to the remedying of any conditions that may be bad. To my mind this is not a report which concerns the treasury board only or the government only; it is a report which concerns the House of Commons. The house should insist that the report be tabled in order that we may be apprised of conditions within the civil service, which is the civil service, not of the government, not of the ministers, not of the treasury board, but of the parliament of Canada of which this chamber is a part. I hope that the house will insist on the tabling of this document.

Mr. ILSLEY: If I may speak again, the same observations would apply to the report of every advisory committee, without exception. Every year the advisory committee to the wheat board presents a report, but we do not produce it, and there are scores of other advisory committees.

Mr. HANSON (York-Sunbury): They should.

Mr. ILSLEY: That is the issue, and I am stating my position. If the government sets up advisory committees to advise ministers or to advise the government, where the government is of the opinion that such advice is confidential, then the reports must be regarded as confidential. I do not regard this as being in any other category.

Mr. GRAYDON: I for one am unconvinced by the minister's argument against the tabling of this report. The press of Canada and the public generally have looked upon this committee as a committee which would make a report of much consequence, of much value and of much importance to the government. Its deliberations were not confidential so far as the press were concerned, because time after time they were referred to. The position ought to be made clear so far as the House of Commons is concerned. The minister has mentioned the advisory committee of the wheat board. This is also a matter of policy, and I think that question should be deliberated upon by this house.

Mr. ILSLEY: And twenty others.

Mr. GRAYDON: There should be a decision on these matters. I propose to vote in favour of the tabling of this report as called for by the hon. member for Ottawa West. I consider that this is a matter which should be pressed to the limit and we are prepared to do that.

Mr. ILSLEY: The issue is there and perhaps it should be settled; I do not know. If we are going to set up advisory committees, a great many of them by orders in council, if we are going to set up interdepartmental committees, departmental committees and so forth, every reason for the making public of this report will apply to the reports of those committees. If that is what the government must do in the future, let us have it settled.

Mr. GRAYDON: The minister is confusing the issue. This is not an interdepartmental committee. When the minister asks civil servants under him to set up an interdepartmental committee, with a deputy minister or someone else as chairman, the chairman of that committee is in an entirely different position from that of an outsider like Mr. Coon, who was brought in for a definite purpose.

Mr. ILSLEY: Not a bit.

Mr. SPEAKER: I would call the attention of the house to the fact that we are not in committee.

Mr. BOUCHER: Mr. Speaker, I feel that this report should be tabled. This is not a question of government policy, where secrecy should be maintained, where the contents of a report should not be divulged. The civil servants of Canada are affected in connection with their relations as employees of the government of Canada. A request has been made for the tabling of this report concerning civil servants and their employment. Surely the civil servants have the right to know what attention has been given to their representations. Surely they have the right to expect that members of the House of Commons will be acquainted with their conditions and with the result of any investigation that has been held. That should not affect government policy, and there should be no question of government responsibility in keeping secret the contents of this report dealing with the welfare of the civil servants. The members of this House of Commons are definitely inter-

ested in the welfare of the civil service and should be acquainted with the report of a committee which deals with civil service matters. I call upon the members of the house to ask for the tabling of this report. The civil servants are faithful, true and loyal servants of this House of Commons of Canada, perhaps a little more than of the people of Canada, and the members of the house should take an interest in them so that the civil servants themselves may know that we have a knowledge of their circumstances and are interested in their welfare.

The house divided on the motion (Mr. McIlraith) which was negatived on the following division:

Mr. GRAYDON: I was paired with the right hon. the Prime Minister (Mr. Mackenzie King). Had I voted I would have voted for the motion.

In view of the vote which has just been taken, will the Minister of Finance be good enough to table order in council P.C. 2-584 dated January 23, 1943? I was under the impression that it had been tabled, but I am now told that it has not.

Mr. ILSLEY: Is that the one setting up the committee?

Mr. GRAYDON: Yes.

Mr. ILSLEY: Yes, I will see that it is tabled.

EXCHEQUER COURT ACT

ACTIONS BY OR AGAINST THE CROWN—STATUS OF MEMBERS OF ARMED FORCES

Hon. L. S. ST. LAURENT (Minister of Justice) moved that the house go into committee at the next sitting to consider the following resolution:

That it is expedient to bring in a measure to amend the Exchequer Court Act to provide that for the purpose of determining liability in any action or other proceeding by or against His Majesty, a person who was at any time since the twenty-fourth day of June, one thousand nine hundred and thirty-eight, a member of the naval, military or air forces of His Majesty in right of Canada shall be deemed to have been at such time a servant of the crown.

He said: His Excellency the Governor General, having been made acquainted with the subject-matter of this resolution, recommends it to the consideration of the house.

Motion agreed to.

PRIVILEGE—Mr. POULIOT

REFERENCE TO ARTICLE IN "LE SOLEIL" OF JUNE 5

On the orders of the day:

Mr. JEAN-FRANCOIS POULIOT (Témiscouata) (Translation): Mr. Speaker, I rise to

a question of privilege. On page 8 of its June 5 edition *Le Soleil* reported as follows the statement which I had made in the house the day before on a question of privilege.

Mr. J. F. Pouliot (Témiscouata) at last ended the series of statements on the question of privilege by commenting on an article from the *Globe and Mail.*

Le Soleil goes on:

It is known that in moving for the adjournment of the house to discuss the man-power question, Mr. Pouliot has had, especially, the Progressive Conservative party's support.

That is absolutely untrue. Three Conservative members only rose when Your Honour put the question to the house. They were the hon. members for York-Sunbury (Mr. Hanson), for Kootenay-West (Mr. Esling) and for York-East (Mr. McGregor). .

Further on, *Le Soleil* states:

The Toronto newspaper to-day hints that the member for Témiscouata had supporters among the Conservatives and that before he introduced his motion he gave notice of his intention to certain Conservative Progressive members.
Mr. Pouliot acknowledges that this is true—

That is quite untrue. I said the very opposite on Friday last.

Le Soleil goes on:

—he (the member for Témiscouata) had a visit from a Tory member who assured him of his support if he raised the man-power question in the house.

Le Soleil further states:

Mr. Pouliot then gave him the assurance that he would raise that question.

That is the very reverse of the statement I made in the house on Friday. I have just this to say to *Le Soleil*: If it continues to publish such insinuations I shall ask its readers to cancel their subscriptions, as I did myself with good results twenty years ago.

MAN-POWER

POSITION OF DOCTOR W. J. COUPER—REPORT IN TORONTO "GLOBE AND MAIL"

On the orders of the day:

Mr. GORDON GRAYDON (Leader of the Opposition): I wish to ask the Minister of Labour a question. Press dispatches indicate that Doctor Walter J. Couper, who has been executive assistant to the minister and the deputy minister of labour, and who is reported to have expressed in public dissatisfaction with the man-power policy of the department—a matter which was dealt with, I believe, by some hon. member during the debate—has severed his connections with the department and is returning to his former position with the International labour office. Will the Minister of Labour kindly inform the house as to whether or not Doctor Couper severed his connections at the instance of the minister or the deputy minister of labour?

Hon. HUMPHREY MITCHELL (Minister of Labour): Mr. Speaker, I read in last Saturday's *Globe and Mail* the news item referred to by the leader of the opposition. I was much surprised that two unfair and unjust implications had been included. One of them was:

It is regarded as significant however that Doctor Couper was the last of some sixteen advisers, all in a more or less technical capacity, who have parted company with the department since Elliott M. Little resigned as director of national selective service.

The other is:

Possibility that Doctor Couper's views on the administration of selective service, and the general situation as to man-power, are at variance with the labour minister is not being overlooked, especially since, no later than the second week in April, he forcefully and clearly expressed his opinions in an address in Toronto on the cause of the labour situation.

I do not think I can give a better answer to the leader of the opposition than to read the text of a telegram dispatched by Doctor Couper on Saturday last after he read the news item about himself in the *Globe and Mail.* It is as follows.

Ottawa, June 5, 1943.

Editor
Globe and Mail
Toronto, Ontario.

It is true that the possibility of my return to duty on the staff of the International Labour Office is currently under discussion. It is not true as implied in Cragg's story that I have broken with the Minister of Labour on the question of man-power policy. I was and am a friend of Elliott Little but that does not affect my views about government policy. If you will obtain from Morley, manager, Industrial Accident Prevention Associations, stenotypist transcript my address from which you purport to quote, you will see that by wrenching statements from their context you create an impression exactly opposite to that which I intended to convey and which I think the full text does convey.

W. J. Couper.

I looked for this telegram in this morning's *Globe and Mail,* but I did not find it there. I think in fairness to myself—and to Doctor Couper more than myself, because he is not in the house to speak for himself, and in the nature of things cannot be—this newspaper might at least have had the decency to print a retraction of the story of last Saturday.

MEAT

SAUSAGES AND HAMBURGER—RATION REGULATIONS

On the orders of the day:

Mr. M. J. COLDWELL (Rosetown-Biggar): I wish to direct a question to the Minister of Finance with regard to rationing. Reports over the radio at noon to-day state that, in reply to protests of those interested in the manufacture of hamburger and sausages, which products are now rationed, it was announced that no decision would be given for at least a month. I wonder whether the minister would look into this matter and make a statement, because I feel that if these food products are going to waste owing to mistaken policy in regard to the rationing of such products, something should be done about it before a month elapses. The statement to which I refer was made over a local station at noon to-day.

Mr. ILSLEY: I do not understand the point. The hon. gentleman said that no statement would be given on something, but I do not know what it was.

Mr. COLDWELL: Nothing could be done about it for at least a month.

Mr. ILSLEY: About what?

Mr. COLDWELL: About changing the regulations regarding the rationing of hamburger.

Mr. ILSLEY: I will look into the matter.

Mr. GRAYDON: Hamburger won't keep for a month.

CENSORSHIP

BROADCAST BY CANADIAN AIRMAN FROM BERLIN—ARTICLE IN TORONTO "EVENING TELEGRAM"

On the orders of the day:

Mr. W. R. MACDONALD (Brantford City): I have a question to direct to the government or to the minister responsible for seeing that the censorship rules are carried out. It is based on two newspaper articles, and I trust the house will bear with me for a moment while I explain the basis on which my question is put.

A newspaper article appeared in the Toronto *Evening Telegram* of May 31, and it is entitled:

> Missing Son's Voice on Air from Berlin.
> Chases Worries of Parents in Toronto.

The article refers to a broadcast on the previous Friday by Doctor Goebbels, who stated that on the following day a certain young man from Toronto who is a prisoner of war in Germany would broadcast. The newspaper has pictures of the father and mother and members of the boy's family. It gives a full account of the feelings of the parents as they heard their son's voice. The newspaper states that "it brought unbounded joy to his parents", and goes on to say:

> As tears of happiness rolled down their cheeks, Mr. and Mrs. Morrison instantly recognized their son's voice.

I bring this to the attention of the government because Doctor Goebbels is endeavouring to have people in Canada listen to his broadcasts and this is one way of attracting their attention. The Canadian people, by listening to these broadcasts, will listen to many others; and as the *News* of June 5 states, the paper is helping the doctor. I am not suggesting that it is doing so knowingly. I know that the Toronto *Telegram* would not do anything to assist the enemy; it is one of the most patriotic papers in this dominion; but I do feel that unwittingly, by giving such publicity, by informing people that their sons' voices are likely to be heard over the German radio, it may cause many people to listen to German propaganda. Someone says, what if they do? Well, that is the way the Germans have carried on this war. They are spreading propaganda by such methods as this, and I feel it should not be encouraged. This particular boy had been missing for many months. He had not been reported by the Red Cross. The Red Cross society is doing a splendid service to Canada by reporting, as soon as it possibly can, all men who are missing. If the people of Canada are to get news of missing airmen and sailors—

Some hon. MEMBERS: Order.

Mr. HOMUTH: Give the people of Canada credit for a little more common sense.

Mr. SPEAKER: Perhaps the hon. member will put his question without making a speech. He has not the right to do that.

Mr. MACDONALD (Brantford City): I will put the question. Does the minister who is responsible for censorship, in view of the danger of German propaganda, censor the speeches which are sent forth by Goebbels to Canada? Are those speeches censored?

Some hon. MEMBERS: Oh, oh.

Mr. MACDONALD (Brantford City): I should say, is the report of the speech in the newspaper censored by the government?

Hon. L. R. LaFLECHE (Minister of National War Services): One might wish that

the hon. member had not explained his question, because everyone in this house would dearly love to censor Goebbels' messages and himself if it were possible. As to the real question, whether reports of broadcasts from Germany are censored in our newspapers, there is a very good understanding with the newspapers themselves, but I cannot answer in regard to this particular case. I will look it up and I shall let the hon. member know.

Hon. ANGUS L. MACDONALD (Minister of National Defence for Naval Services): I may add that the service forces take a very definite view on the question of broadcasts by prisoners of war, and within recent weeks or months instructions have gone out that broadcasting by prisoners of war in enemy hands should not be carried on.

Mr. GRAYDON: It has just occurred to me that if there is anything wrong with the publication of what the hon. member for Brantford City has indicated, it is doubtful whether he has cured it. He has rather exaggerated and overemphasized it by bringing it to the attention of the House of Commons.

Mr. MACDONALD (Brantford City): I think I should be allowed to reply to the leader of the opposition—

Some hon. MEMBERS: Order.

Mr. MACDONALD (Barntford City): I am speaking to a question of privilege. The only purpose I had in bringing this to the attention of the government was to prevent its repetition.

CANADIAN ARMY

REPORTS AS TO DISTURBANCES AT SUSSEX MILITARY CAMP

On the orders of the day:

Hon. R. B. HANSON (York-Sunbury): I should like to direct a question to the Minister of National Defence (Mr. Ralston). Unfortunately he is not present and therefore I will present it to his parliamentary assistant, who is in his seat. The question has to do with the minister's statement of May 10 last regarding the trouble at Camp Sussex. My questions are: (1) Has the minister any further information or statement to give to the house with reference to the disturbances of May 6 at Camp Sussex, in which one soldier unfortunately lost his life and several others were wounded? (2) Has an inquest been held? If so, what is the substance of the verdict? (3) Have the military authorities held a court of inquiry? If so, what is the result and will the findings of the court be laid on the table? (4) Is it true that the Dufferin and Haldimand battalion has been sent overseas, and the Voltigeurs of Quebec have been transferred to another district in Canada?

Hon. C. G. POWER (Minister of National Defence for Air): I cannot answer the last question, but as regards it and the others I shall inquire of the officers in the department and let my hon. friend know.

Mr. HANSON (York-Sunbury): I was not paying the minister the compliment, though perhaps I should have addressed my question to him in the first place. I was endeavouring to attract the attention of the parliamentary assistant. However, I am quite content to leave the question with the Minister of National Defence for Air.

LABOUR CONDITIONS

WINNIPEG TRADES AND LABOUR COUNCIL—FREEZING OF WAGES OF LOW-PAID WORKERS

On the orders of the day:

Mr. S. H. KNOWLES (Winnipeg North Centre): I should like to direct a question to the Minister of Labour. Has the minister been advised of the complaint of the Winnipeg and District Trades and Labour Council to the effect that the Winnipeg selective service officer, in cases where he cannot supply workers for plants paying unduly depressed wages, is assisting employers in such plants by freezing workers to their low-paid jobs? Is this practice in keeping with the policy of the government, and will the minister look into the situation?

Hon. HUMPHREY MITCHELL (Minister of Labour): The answer to the first question is, no. As to the second question, I shall be glad to look into it.

WAR APPROPRIATION BILL

PROVISION FOR GRANTING TO HIS MAJESTY AID FOR NATIONAL DEFENCE AND SECURITY

The house resumed from Friday, June 4, consideration in committee of a resolution to grant to his majesty certain sums of money for the carrying out of measures consequent upon the existence of a state of war—Mr. Ilsley—Mr. Bradette in the chair.

NATIONAL DEFENCE FOR AIR

7. Ammunition and bombs, $23,990,000.

Hon. CYRUS MACMILLAN (Parliamentary Assistant to the Minister of National Defence for Air): The minister has instructed me to answer a few questions that were asked

in the last two or three days. The first question was from the leader of the opposition (Mr. Graydon).

Mr. GRAYDON: A good place to start.

Mr. MACMILLAN: A splendid place. The question was with reference to chaplains. The answer is:

1. (a) Chaplains are not granted any powers of command and therefore only honorary rank is provided for them.

(b) Chaplains are not subject to accept or assume the full responsibilities of the rank granted them in comparison with all other R.C.A.F. officers; that is, they are not detailed to assume all the ordinary duties normally allotted to an officer, such as drill parades, orderly officer, etc., etc.

(c) The practice of granting honorary rank to chaplains follows the custom adopted by the other armed forces of Canada and the armed forces of the United Kingdom.

2. Although appointed to honorary rank, R.C.A.F. chaplains are paid at the same rates as other special reserve, non-flying list officers of equal rank.

The next question was from the hon. member for Yale (Mr. Stirling):

Is all signal equipment used by the R.C.A.F. in Canada of Canadian make?

The answer is, no. Approximately 50 per cent is Canadian; 15 per cent, American, and 35 per cent, United Kingdom.

Do Canadian capital companies come into competition with regular commercial signal equipment companies?

The answer is, yes. Research Enterprises Limited handle all secret radio equipment and were set up for this purpose.

The hon. member for Lake Centre (Mr. Diefenbaker) asked in regard to the situation in Canada with respect to transfers from the army to the air force for training as aircrew. Direct transfers are not possible under existing regulations. Personnel of the army desiring to serve in the R.C.A.F. must be discharged by the army before enlistment in the R.C.A.F. Regulations governing discharges from the army for the purpose of enlisting in any other force are set out in Canadian army routine order No. 1030 dated May 7, 1941.

Only applications from candidates for enlistment as aircrew and such other highly specialized trades as may be urgently required are considered from personnel in the army. A soldier of an active unit of the Canadian army desiring entry into another service must first submit an application in writing to his commanding officer requesting discharge for the purpose of enlisting into the service concerned. If the application is concurred in, the commanding officer will then forward his recommendation, accompanied by the soldier's application, to the nearest recruiting centre of the service concerned. If it is decided to accept the soldier for service in the R.C.A.F. the air force recruiting officer will notify the soldier's commanding officer by letter stating the trade in which he will be enlisted and the date he is to report for duty. Army discharge proceedings are then commenced.

At the present time, negotiations between the army and the air force are proceeding with the object of increasing the flow of men desiring aircrew training from the army and also to arrange for enlistment into the army of men who have failed in their aircrew training in the R.C.A.F. Final arrangements have not been made.

The hon. member for Fort William asked with regard to the Memorial Cross: Who gets the Silver Cross; how can distant relations get it; what are the regulations? As hon. members doubtless know, the Silver Cross is a memorial to airmen who were killed in action or who died while on active service or from causes attributable to service in the air force, either while serving on active duty or subsequent to discharge from the said force. The Silver Cross is granted to mothers and/or widows of Canadian airmen who have died in the service of their country during the present war. In case, after becoming entitled to the cross, the widow or mother has died, the cross will be delivered to the eldest of the airman's next of kin.

Mr. GRAYDON: The eldest female next of kin?

Mr. MACMILLAN: No, the eldest next of kin. Air force administrative order A.64/2 sets out the regulations, and is as follows:

Regulations pertaining to the grant of the Memorial Cross to the mothers and/or widows of Canadian airmen who have died in the service of their country during the present war.
Reason of Issue

1. A Memorial Cross will be issued as a memento of personal loss and sacrifice on the part of mothers and widows of Canadian airmen, who have laid down their lives for their country during the present war.
Description of Cross

2. The cross will be a cross patonce in silver, suspended by a purple ribbon; and at the end of the upright a crown; at the foot, and at the end of either arm, a maple leaf; in the centre,

within a wreath of laurel, with royal cipher "G.R.I." It will be engraved with the number and/or name of the airman commemorated.

3. A cross will be issued to the widow or mother in respect of every airman who was survived by either. If both survive him, two crosses will be issued, one to each.

4. If, after becoming entitled to the cross, the widow or mother has died or dies, the cross will be delivered to the eldest of the airman's next of kin.

In Respect of Whom Issued

5. The cross will be issued in respect of each airman, who:

(a) was killed in action; or
(b) died whilst on active service; or
(c) died or dies from causes attributable to service in the air forces whether while serving on active service or subsequent to his discharge from the said forces;

Provided that where death occurs subsequent to discharge, the Memorial Cross will be issued to the widow only if she was married to the airman at the time of his discharge.

Proof Required

6. Every applicant for the issue of a cross must produce such proof of death, service and eligibility as may be required by the Minister of National Defence for Air in respect of Canadian airmen.

Authority

7. The decision of the Minister of National Defence for Air shall be final in all matters pertaining to the issue of the cross in respect of Canadian airmen.

8. In the foregoing paragraphs;—

(a) "Widow" includes the legal widow of the airman killed and the unmarried widow who is pensionable by reason of the airman's death, but does not include a widow as so defined who,—

(i) Is known to be of dissolute character.
(ii) Was at the time of the airman's death, separated from him by agreement or legal process.

(b) "Mother" means the woman who gave birth to the airman.

(c) "Airman" means any person, male or female, who served in the Royal Canadian Air Force or who having been ordinarily resident in Canada on the 10th of September, 1939, or at any time during a period of 10 years prior to this date, served in the air forces of his majesty or any of his allies.

9. These regulations shall have force and effect as of and from the 1st September, 1939, and are made and established by order in council P.C. 4210, dated 27th August, 1940, as amended by order in council P.C. 2135, dated 28th March, 1941.

On Friday afternoon the hon. member for Cumberland (Mr. Black) asked a question with reference to the delivery of cables overseas. Postal letter telegrams are sent from cablehead, where they are received in England, by mail to the base post office where the last posting of the personnel is determined; the cable is then forwarded again by mail to the unit concerned. All direct cables are telegraphed from cablehead to the base post office at Manchester; then when the posting is determined they are forwarded by mail to the unit concerned. In all cases when telegrams or cables are received at the addressee's unit, they are delivered to him as quickly as possible. On account of the amount of mail handled at the base post office inevitably there are some delays, but there may be some at the units also, especially when the addressees are absent on operational duties.

The hon. member for Lethbridge (Mr. Blackmore) asked how the amount spent on transportation was divided between the Canadian National and the Canadian Pacific railways. The expenditure in 1942-43 for the services given by these railways was divided as follows:

	C.N.R.	C.P.R.
Passenger accounts.	$6,581,413 67	$5,768,781 39
Freight and express.	2,432,976 88	1,593,767 22
Totals.....	$9,014,390 55	$7,362,548 61

In each case there is a difference of about $800,000, or a total difference of over $1,600,000.

The hon. member for York West asked whether we will use cracked gasoline in aircraft. The answer is, yes. Tests have been carried on at No. 2 S.F.T.S. for the last six months, and the McColl-Frontenac product has been approved for 80 and 87 octane gasoline. Tests are still being carried out for other companies. The hon. member also asked a question with respect to the R.C.A.F. staff college, and if there is any suggestion of adding an R.C.A.F. college after the war. The answer is that a provisional syllabus for the course of training at the R.C.A.F. staff college has been drawn up and a suitable location for the school has been decided upon. The objective of the R.C.A.F. staff college is to give selected R.C.A.F. officers of relatively senior rank instruction in advanced administrative and staff work applicable to present day service conditions. There is no intention at the present time to add an R.C.A.F. college after the war, but the question may be considered at the appropriate time.

Mr. HANSON (York-Sunbury): When would that be, if not after the war?

Mr. MACMILLAN: The staff college is at Flavelle House, and it will be open about July 15. The hon. member for York West also asked whether an attempt is being made to get ground crew wherever possible from those unfit for aircrew and, if so, what categories we were taking. The answer is that

an attempt is being made wherever possible to fill ground crew quota with men physically unfit for aircrew duties. The medical category for ground crew has been lowered from A4B to A4HBH.

The hon. member for York West asked a question with respect to sea rescue. I shall try to summarize the answer, which is relatively long.

Mr. HANSON (York-Sunbury): What was the question?

Mr. MACMILLAN: Have any measures been developed for air-sea rescues. Early in the war steps were taken to establish an air-sea rescue service by the commissioning of vessels on the Atlantic and Pacific coasts, ocean-going vessels in addition to the salvage vessels and crash boats. Details of this cannot well be given. The hon. member may have them privately. Rather remarkable developments have taken place in respect of the type of emergency equipment provided. Hon. members are no doubt familiar with the report of that airman of matchless courage, Captain Rickenbacker, following his miraculous rescue after twenty-one days on a rubber raft. No doubt hon. members are familiar with the recommendations he made some months ago. The information is that practically all these recommendations have been carried into effect, with the result that the risk has been greatly decreased. That includes, of course, the provision of collapsible rubber boats which are automatically inflated, and the providing to each member of the crew of every Royal Canadian Air Force aircraft operating over the ocean of a Mae West life jacket, and also heavy clothing, with a special emergency supply apparatus containing food, water and other equipment. Then, there is a continuous watch throughout the twenty-four hours on the two coasts. There is further secret information which the hon. member may read.

Mr. FRASER (Peterborough West): Has Canada tried the carrying of small motor launches by aeroplanes, so that they can be deposited where crews are to be rescued?

Mr. MACMILLAN: Not up to the present time.

Mr. FRASER (Peterborough West): I notice they have them in Great Britain.

Mr. MACMILLAN: Development along that line is proceeding, however.

The hon. member for York West asked a question with respect to the commissioning or promotion of prisoners of war. Negotiations with Germany have been undertaken through the Department of External Affairs. Although there can be no definite statement regarding what the decision has been, there is no reason at the present time to doubt that the suggestion will be carried forward. Negotiations are pending with Italy, and it is not considered advisable by the department to discuss them in public at the present time, because such discussions might jeopardize their success.

The hon. member for York West asked respecting categories of aircrew, and concerning percentage of training received in Canada. The details are these:

Of bombing navigators, 94 per cent of the output receive all their training in Canada, and 6 per cent in the United Kingdom. Those who complete their training in the United Kingdom do 77 per cent of their training in Canada and 23 per cent in the United Kingdom.

Of general navigators, none complete their training in Canada, all completing their training in the United Kingdom. In this group 74 per cent of the training is done in Canada, and 26 per cent in the United Kingdom.

Of wireless navigators, 19 per cent of the output complete their training in Canada, and 81 per cent in the United Kingdom. Those who complete their training in the United Kingdom do 81 per cent of their training in Canada, and 19 per cent in the United Kingdom.

Of air bombers, none complete their training in Canada, all being completed in the United Kingdom. Seventy-three per cent of their training is in Canada, and 27 per cent in the United Kingdom.

Of wireless air gunners, 86 per cent of production complete their training in Canada, and 14 per cent in the United Kingdom. Those who complete their training in the United Kingdom do 76 per cent of their training in Canada, and 24 per cent in the United Kingdom.

In respect of air gunners, those who complete their training in the United Kingdom do 58 per cent in Canada, and 42 per cent in the United Kingdom.

In respect of pilots, those who complete their training in the United Kingdom do 76 per cent of their courses in Canada and 24 per cent in the United Kingdom.

Mr. ADAMSON: That includes fighter and bomber pilots?

Mr. MACMILLAN: Yes. The hon. member for York West asked a question with respect to experience in connection with shearling in wool. On the basis of many months of

fundamental research, developmental work and field trials, the use of shearling in flying suits has been shown to be less satisfactory than the new type Royal Canadian Air Force flying suits for the following reasons: Greater bulkiness of shearling suit; greater weight of shearling suit; poor snag resistance of shearling leather; poorer resistance to compression loads of shearling, and therefore less thermal insulation and decreased warmth; greater retention of gas fumes in exposed shearling, including collars and the like, with increased possibility of burns following gasoline fires; shearling much less flexible than new-type suit and, last, greater cost of shearling flying suits.

The new-type "E" flying suit was developed on the basis of a questionnaire answered by over 4,100 aircrew. The detachable lining is a newly developed flexible double-pile twenty-two-ounce wool lining employing 50 per cent 64's, 20 per cent 60's, 20 per cent 56's and 10 per cent 50's, Canadian wool, with a thickness of one-half inch uncompressed.

Shearling is still used in Royal Canadian Air Force flying boots, and due to the large stock on hand no change is contemplated in the near future.

The hon. member for Peterborough West (Mr. Fraser) asked with regard to payment of personnel in the United States and Alaska. Royal Canadian Air Force personnel in the United States receive their pay and allowances in United States funds, their net entitlement in Canadian dollars plus credit for loss on exchange as provided by an order in council, being converted to the equivalent in United States dollars. They are paid dollar for dollar in United States funds.

Mr. FRASER (Peterborough West): That is, they receive in United States money $1.30 a day.

Mr. MACMILLAN: Yes, in United States money. The second question asked by the hon. member for Peterborough West was with respect to the reason for the increase in rentals. The increase is not for rentals alone. The item under consideration was for rentals, water, light, power, heating, sanitary services, renewals, repairs and other maintenance costs of properties.

The expenditures for 1942-43 in the British commonwealth air training plan included the Royal Air Force schools from July 1, 1942, to March 31, 1943, a period of nine months, whereas for 1943-44 provision must be made for a full twelve-month period for these schools. All the expansion of the British commonwealth air training programme begun in the fall of 1942 will have its full effect in 1943-44. This applies also to a very substantial expansion in construction connected with the western hemisphere operations. The greater the amount of the property to be taken care of, the higher the expenditure will be for maintenance.

Another question asked by the hon. member for Peterborough West was with regard to the special treatment given night fliers to develop their eyes. The reply is that the night vision of aircrew is tested on a special apparatus for this purpose, but details can not be given, other than privately.

Another question had reference to the use of sulpha drugs. Sulpha drugs are used in the Royal Canadian Air Force in treatment of certain infections where elaborate clinical investigation has proved their worth. A greatly lessened mortality rate from pneumonia, streptococcal infections, war wounds and the like can be attributed to the use of sulpha drugs. Their application in preventing surgical infection is recognized. There are five varieties of sulpha drugs issued for emergency use to prevent infection in injuries and wounds, until the patient can be given more special medical attention.

Mr. FRASER (Peterborough West): The men have this themselves, have they?

Mr. MACMILLAN: Yes. The hon. member asked a question respecting a death resulting from inoculation at No. 35 elementary flying training school. This matter has been studied in the greatest detail. The results of the special investigation have been prepared for the coroner's inquest. No informed report can be given until the findings of the inquest are received. That report is expected within the next few days, and the hon. member will be given a copy.

Mr. McCANN: Is that the case at Neepawa?

Mr. POWER: Yes, from inoculations.

Mr. McCANN: The hon. member mentioned the coroner's inquest. Is he not following out in Manitoba the plan adopted in Ontario, under which there is no coroner's inquest?

Mr. POWER: This happens to be a special case. As a result of inoculations fifty-two or fifty-three people were made ill and the thing became a little complicated because of having to decide whether the toxoid itself was defective or whether it was faulty inoculation. The Connaught laboratories prepare nearly all the fluids or whatever it is that are used in inoculations, and they sent a Mr. Fraser out there.

Mr. FRASER (Peterborough West): No relation.

Mr. POWER: The department of health of Manitoba has a Doctor Jackson there. Inquiries have been made but we have not had a full report. Everything that can be done to find out who should be blamed will be done. The coroner's inquest will follow our inquiry. This will be under the presidency of Doctor Jackson of Manitoba.

Mr. McCANN: Is this a special investigation of just one case?

Mr. POWER: It is a special investigation. As a rule we do not have a public inquiry or investigation, as my hon. friend knows, but this was a case where the death should be inquired into.

Mr. MACMILLAN: The hon. member for Davenport (Mr. MacNicol) asked a question with respect to the supply of water at Mossbank, and the hon. member for Weyburn (Mr. Douglas) asked a similar question about Assiniboia and Dafoe. These questions will have to be answered by the Department of Transport, as that department is responsible for the supplying of water to building sites. This information has been requested and will be given later. The hon. member for Davenport asked about the type of runway at the airfield at the Pas, but this information is secret. However, I shall send it to the hon. member privately.

The hon. member for York South (Mr. Noseworthy), the hon. member for St. Paul's (Mr. Ross), the hon. member for Eglinton (Mr. Hoblitzell) and the hon. member for Rosetown-Biggar (Mr. Coldwell) inquired about provisions being made with regard to interrupted education. The hon. member for Rosetown-Biggar also asked about the educational qualifications of our airmen. A total of 68,000 occupational histories of members of the air force have been checked and checking is still in progress. The information obtained is extremely impressive. First there is the fact of their youth. I think the late Mr. Binyon's line applies to these young men more emphatically than to any other group—"They went with songs to the battle, they were young". Seventy per cent of the 68,000 checked are under twenty-seven years of age, and more than half of them are between the ages of eighteen and twenty-three years. Their high standard of education is amazing, and the minister has asked me to put the following figures before you because of their impressiveness.

Of this total number of 68,000, 6,800 in round figures have university degrees or were undergraduates at the time of enlistment; 5,500 had completed their senior matriculation, the equivalent of the first year in university; 5,600 had partly completed their senior matriculation; over 13,000 had completed their junior matriculation and 21,500 had completed it in part—that is, one or two or three subjects yet to be passed; 1,300 had completed technical school requirements and 4,200 had partly completed technical school courses; 700 had completed teachers' courses. About 54,000 out of 68,000 had junior matriculation in part or higher qualifications.

I am sure that every hon. member looks forward to the return of these young men and the question of their rehabilitation and repatriation will be a very serious problem.

Mr. HANSON (York-Sunbury): Their interrupted education.

Mr. MACMILLAN: I understand that the phrase "interrupted education" applies to members of the forces who were in educational institutions at the time of enlistment pursuing a course of studies or who had temporarily suspended their studies because of financial or health or other reasons. Unquestionably most of these men will wish to return and provision has been made already toward that end. Order in council P.C. 7633, passed on October 1, 1941, and amended on April 20, 1943, makes provision for their educational needs by providing for grants. This comes under the jurisdiction of the Department of Pensions and National Health, but I am sure the minister of that department will not mind my saying a word or two about it. The order in council provides for a grant of $10.20 per week in the case of an unmarried student and $14.40 per week in the case of a married student, with fees if required.

Mr. HANSON (York-Sunbury): In addition?

Mr. MACMILLAN: Yes. The universities are making provision to give refresher courses to these young men and women when they return. No man can say what intellectual power has been or will be lost, but we must do everything possible to help those who come back to attain their objectives. In olden days a pessimist said: Who shall restore the years that the locusts have eaten? These young people will be able to restore part of the lost years themselves if they are given assistance and encouragement and wise guidance. I am sure that nothing is closer to the heart of the minister than that.

Mr. PERLEY: We have been given some splendid information just now, but there is one point to which consideration should be

given, and that is the period of time that many of these men are kept in the army before being discharged. Many of these men left medical, dental and other practices, to which they are ready to go back. They will be anxious to get right back to work and will not want to be held in the army for one or two years after the war is over before being discharged.

Mr. MACMILLAN: The suggestion is that they be given the preference.

Mr. PERLEY: I should think so.

Mr. HANSON (York-Sunbury): Those who have positions to go to immediately.

Mr. MACMILLAN: I understand that the universities will give them precedence in admission.

Mr. POWER: The rehabilitation system that we are working on would permit a boy with a B.A. who wanted to go on to law to go to the university to study for that profession. It would be paid for by the government of Canada to give him a chance to complete his education.

Mr. MACMILLAN: The clause reads:

In case any discharged person becomes regularly admitted to a university and commences any such course—

Mr. PERLEY: I just wanted to make sure that the minister has my point. There are a great many men in the air force who were formerly practising his profession.

Mr. POWER: I think that is another problem. I do not know how we can rehabilitate the man who was practising, say, law or medicine, but as my colleague has said, there are so many who have interrupted their education to join the air force that we are trying to furnish them with an opportunity to complete it. I do not see how we could rehabilitate a man in his practice if he was a lawyer or a doctor.

Mr. PERLEY: Their practices are there awaiting them.

Mrs. CASSELMAN: Are the benefits that are being provided for the men being provided also for the women, at the same rate?

Mr. MACMILLAN: The answer is yes to both questions.

Mrs. CASSELMAN: The women will get the same rate of benefit pay?

Mr. MACMILLAN: The subsidy or assistance granted is the same to male and female —but not to a married woman. That is set out in the order in council.

Mr. MACDONALD (Brantford City): I think the point of the hon. member for Qu'Appelle is well taken. Many members have expressed themselves to the effect that when the war is over the men in the armed forces should not be suddenly discharged and thrown on the labour market. I think most hon. members will agree with that as a general submission. But as the hon. member for Qu'Appelle has said, there are many men who have left the professions in which they were established. I quite agree that these men should be encouraged when the war is over to go back to their professions, if they so desire, and not be held in the forces. Then there are students, as the parliamentary assistant to the minister has stated, whose studies were interrupted. There should be no delay in allowing these men to go back to their studies so that they may qualify themselves for whatever profession they have chosen. These two classes should not be any great problem. But there is a third class, men who have no trade, no profession and no business to which to return. I trust that when the war is over this class, which is composed of the great mass of men in the armed forces, will not be suddenly thrown on the labour market with nothing to do.

Mr. MACMILLAN: Mr. Chairman, the hon. member for Rosedale (Mr. Jackman) asked two or three questions: He asked: "Is there to be a fleet air arm formed in Canada?" The question of forming a fleet air arm in Canada has been under discussion but no definite decision has been arrived at. He also asked: "What becomes of obsolete material?" Obsolete material is disposed of as follows:

(1) Retained in the service for instructional use.

(2) Sold to civil air lines in mining communities or to contractors et cetera, who may require this equipment.

(3) Or issued to war extension training programme schools and air cadet squadrons for instructional purposes.

(4) If the equipment is not required for any of these purposes it is reduced to produce and disposed of by sale as scrap.

The hon. member for Rosedale also asked:

Is all equipment in depots modern?

Yes; stocks at equipment depots are reviewed continuously to ensure that equipment declared obsolete does not accumulate. Particulars of the obsolete items held are submitted to air force headquarters for disposal instructions.

The hon. member also asked for a comparison of personnel strength. At No. 2 Service Flying Training School at Uplands comparison of personnel strength as at May 31, 1941, and May 31, 1943, shows the following:

	May 31, 1941	May 31, 1943
Staff		
Service	703	897
Civilian	182	128
Total.....	885	1,025
Aircrew in training...	175	234
Grand total...	1,060	1,259

It will be seen that while the number of aircrew in training showed an increase of thirty-four per cent, the increase in staff was only sixteen per cent. Thus the ratio of staff to pupils decreased from 5·06 to one to the present figure of 4·38 to one.

The hon. member for Macleod (Mr. Hansell) asked how decorations were awarded. Recommendations for honours and awards may be submitted under the following classifications:

(a) Gallantry awards for any specific act of gallantry or series of acts of bravery. These may be submitted as immediate at any time or included in the periodic lists.

(b) (i) Chivalry awards for extreme meritorious service and devotion to duty. These may only be considered in the periodic lists.

(ii) Certain gallantry awards may also be awarded for devotion to duty and meritorious service, i.e., A.F.C., A.F.M., B.E.M., "M.I.D." and commendations.

I have a list here of the honours and awards granted to air force personnel, excluding those of last week. Hon. members might be interested in knowing that the total of awards for gallantry is 479.

The hon. member for Huron North (Mr. Cardiff) asked a question with reference to security guards:

Have they been given a chance to remuster to a trade of their choice or will they be transferred to another trade arbitrarily without any choice in the matter?

Yes. Given the necessary qualifications and provided there is room within the establishment of the trade preferred, security guards are given ample opportunity to remuster to the trade of their preference. For example, in the recent amalgamation of service police and security duties, all security guards were individually interviewed to ascertain how many wished to remuster to the trade of service police; several hundred were so remustered by their own expressed choice, but none was remustered against his will. Those who were not remustered to service police appeared before duly constituted trade selection boards to be remustered to other trades, according to their several capabilities and expressed preferences.

Mr. POWER: The hon. member for Camrose (Mr. Marshall) asked a question with regard to radio mechanics. It is a long story but I will try to make it as brief as possible. In January, 1941, we received a request from Sir Gerald Campbell to see if we could not recruit in Canada radio mechanics for the Royal Air Force. I happen to have discussed this matter of radio mechanics with a higher authority, Mr. Churchill, in England, and he ascribes the victory in the battle of Britain largely to radio mechanics or radio locators, and the United Kingdom government allotted the highest priority to them. The original request came in October, 1940, from Sir Gerald Campbell, then high commissioner. It had nothing to do with the joint empire training agreement; it was, so to speak, an extra. At that time they asked for 1,000 radio mechanics, but as things went on, eventually the request came for 5,000. They required a very high standard; so much so, that we thought the best people we could get would be university students. As a matter of fact in May, 1941, I made a speech calling on students of the universities to undertake this radio mechanic training, and we sent these people to the different universities all across Canada to follow a university course. Somehow or other we seem to have demanded too high qualifications. We had lawyers, doctors, clergymen: for instance, there is a clergyman up in the Hebrides who is a private in the air force, and a headmaster of a Toronto school who is somewhere in the Faroe islands, holding the position of acting lance corporal without pay. Evidently we rather exaggerated the required qualifications, but the man who invented the apparatus thought, like most other inventors, that he needed the best possible men to handle it, and he sold us the idea of obtaining the best educated men we could. We were asked for 5,000 and we supplied 5,000. These unfortunate fellows have been sent all over the world. Some of them went to West Africa, some to Singapore, some elsewhere. Nearly all are of the class of university student, and of course, they did not get the advancement which one would expect people of that class to get; they are still LAC's. This is nobody's fault, or if it is anybody's fault I suppose it is ours, because the work seemed so important. I must say I am more responsible than anybody else. I said, "We will send the best we can get," because apparently this was the most important thing that could be done. In any case they went overseas and, as I say, did not get much in the way of promotion.

But we have now provided for radio mechanics of two kinds. I cannot explain the details, because they are very secret. There are six categories. There is radio mechanic, air: he is the man who looks after whatever radio machines they put in the aeroplanes.

There is also radio mechanic, ground, who gets the radio locations from different parts and has all these secret devices. Apparently the ground men are all right. They have been sent all over the world: some are in Kenya, some in West Africa, others at Cape Town, and everywhere they are getting on pretty well. The trouble with the radio mechanics has been that this radio business changes so quickly that before they are fully trained their machines are obsolescent, so that they have had to begin all over again and learn a new system. The result is that they could not get promotion. They would be trade-tested on machine A, and by the time they got to their assigned place machine B was installed, and they were out of luck.

Mr. ADAMSON: The course was about six months, was it not?

Mr. POWER: I believe the university-trained boys had two months in Canada plus whatever they had in England. For a while they were unemployed or misemployed; there is no question about that. But now the thing has straightened itself out. I believe that, of the 5,000 required, all but 200 have been sent over; 638 have received their commissions, and now every one of them gets trade pay; he is either a corporal or a sergeant; and they are trade-tested by Canadian boards. So that the situation is pretty well cleared up. For a while it was very interesting. I do not know that I can say much more, except that the boys are happier than they were a year ago. We sent highly educated people—for instance, lawyers—to do what a man should do with a hammer and chisel: that is about the size of it. It was our fault, I think, somebody told us to require too much.

Mr. STIRLING: Can they get still further promotion? Is there anything else for them to go up to?

Mr. POWER: That has to do with the commissioning policy. I do not know of any class we have sent over who are more under the Royal Air Force. They are mixed up everywhere; they are not in Canadian squadrons. I do not know who is in charge of them. There is a group of some kind, and they can get commissions; they are on the basis of ten per cent on graduation and ten per cent for service in the field. After all it is not so bad, for what are they, really? They are signallers.

Mr. ADAMSON: I was going to ask the minister how they compare with the army, who did more or less the same thing but did it through the signal corps.

[Mr. Power.]

Mr. POWER: The complaint that my hon. friend has is that the army men get promotions more quickly. I am not sure about that, because I do not think the army enlisted very many of them. They may have enlisted them as straight signallers.

Mr. ROSS (Calgary East): Are they R.A.F or R.C.A.F.?

Mr. POWER: They are R.C.A.F. They wear R.C.A.F. uniforms, but their careers are dictated by R.A.F. If they go to England they can be sent to the Shetlands or anywhere else.

Mr. ADAMSON: I believe the army did the same thing, and the course was six months.

Mr. POWER: I do not think so. There are signallers who know the radio mechanic's job, but I do not think they went out to get them as radio mechanics.

Mr. McIVOR: I think the Minister of National Defence for Air showed his good sense in placing extra work upon his parliamentary assistant, for he does it well; which proves the old proverb that two heads are better than one, especially when they are good. It also proves that the appointment of parliamentary assistants is of splendid value to this house. On behalf of those in the homes where the boys have lost their mothers and the next of kin of casualties will receive the Silver Cross, I would thank the minister and his parliamentary assistant for this consideration. It will be like a drop of sweet oil poured into a very tender wound; because when a boy loses his mother when he is young, and an aunt or an older sister or someone else comes in and takes the place of that mother, she appreciates very much this Silver Cross, which tells her and all Canada that the ministers in charge have a little bit of heart and sympathy. I thank them.

Mr. KNOWLES: Has the parliamentary assistant supplied all the answers which he has thus far obtained?

Mr. MACMILLAN: No; I have some more to give.

Mr. KNOWLES: Why not finish them? I am interested in an answer to the question about civil servants in the air force.

Mr. MACMILLAN: The hon. member for Battle River (Mr. Fair) asked a question, which I will answer now. He asked, is there a new field in Wainwright, Alberta? The answer is yes, a single landing strip 5,000

feet long and 200 feet wide, near Wainwright. It is built to carry air exercises in connection with airmen's training.

Mr. MARSHALL: Will the parliamentary assistant state where that field is situated? Has it anything to do with the army training school which is now located very close to Wainwright?

Mr. MACMILLAN: The only information I have is that it is at Wainwright, Alberta.

Mr. MARSHALL: I know, but a large training centre is being built there at the present time for the army. It is the old Wainwright buffalo park, a huge place, and quite a large amount of building is going on. Has the parliamentary assistant any information as to the exact location of this airport?

Mr. MACMILLAN: I will try to give that information this evening. The member for Weyburn (Mr. Douglas) asked a question with regard to the expenditure last year and this year classified according to the three branches of the department, overseas, commonwealth air training and western command. The estimated expenditures for 1942-43 are: C.A.T.P. $45,000,000; western hemisphere operation, $65,000,000, or a total of $110,000,000; for 1943-44 the B.C.A.T.P. is $35,022,282 and western hemisphere operations, $58,398,818, or a total, as contained in the sheet before you, of $93,421,100. It will be noted that there are no expenditures overseas for 1942-43 and no provision is included in the estimate for such expenditures for 1943-44.

The member for Weyburn asked another question: what has been done to localize training, to eliminate the excessive use of railway travel.

Personnel are posted in such a manner as to minimize the use of transportation. In the case of staff personnel, movements must, of necessity, be in accordance with the trade qualifications and the unit requirements. In so far as aircrew trainees are concerned, enlistees are posted to the manning depot nearest to place of enlistment (except on such occasions as movements are effected to balance up deficiencies in recruiting considered in relation to training school intakes), from manning depots to schools in accordance with routing plan devised to synchronize with training requirements, with personnel proceeding in all instances to the nearest unit designed to accept them in the next stage of training.

The member for Hastings South (Mr. Stokes) asked whether we pay the same cost of living bonus as civilian employers.

No. Cost of living bonus to civilian employees of dominion government is governed by order in council P.C. 6702 dated 26th August, 1941. According to terms of order in council P.C. 6702 dated 26th August, 1941, and treasury board interpretation of September 6, 1941, any increase in basic rate authorized since August 1, 1939, is to be deducted from the cost-of-living bonus; therefore, any employee whose basic rate of pay has been increased sufficiently will receive no cost of living bonus, whereas those whose rate has not been increased will still receive bonus.

Mr. KNOWLES: Was that by order in council, or was it an interpretation by the treasury board?

Mr. MACMILLAN: It was an interpretation by the treasury board of September 6, 1941.

Mr. GILLIS: I also raised that question and I submitted a specific case to the minister. I wonder if the answer now given answers the question contained in the letter I sent him, because I know that when the civilian personnel at Syndey airport, for whom I was speaking, were hired they were distinctly given to understand that their rates of pay were 43½ cents an hour plus cost of living bonus of $18 a month. That agreement has not been carried out, and the men have discussed the position as well as they can with the adjutant of the station. I believe, though I would not say this positively, that he feels that the arrangement arrived at there with the men when they were employed is not being carried out. The unemployment insurance and selective service people also passed it back to the Royal Canadian Air Force for interpretation, and the answer just given by the minister's parliamentary assistant is not satisfactory to me. Does the minister intend to write to me on that matter, or is the answer just given to be regarded as final? I gave a specific case.

Mr. MACMILLAN: The specific case referred to by the hon. member will be considered and further information will be brought down.

Mr. POWER: The same answer is given to the hon. member for Bow River (Mr. Johnston) with reference to Calgary. At least, I fancy it is the same answer. If this ruling of the treasury board is to be accepted, then all I can do is to make further representations on the basis of what has been said in this house, and you may win.

Mr. KNOWLES: Does the minister know whether it is possible for us to get some report as to the nature of the treasury board's interpretation and the reason for the decision arrived at, in order that we may try to persuade them to change their mind?

Mr. POWER: The discussions in the house will indicate to anyone who is at all interested that the general opinion in this house is that the interpretation is a bad one. I will send copies of *Hansard* or pass on to them the representations made to me in the house. I do not say that the decision will be favourable, but I will do my best.

Mr. JOHNSTON (Bow River): I agree with the minister that the decision of the treasury board was bad. It was so bad that, I believe, there was a conference between the departments and representatives of the civilian services. In fact, the other day I read part of a letter I had received from one of the members of the treasury board. I do not recall the details now, but it is on *Hansard*. I think the situation is bad, where you have two services, one working for the government and the other in civilian occupations, and one receiving the cost-of-living bonus while the other does not. It is creating hard feeling among the men in the service, and they feel that they have a just claim. I am pleased to hear the minister say that he will take it up further with the treasury board and try to get them to change their minds. It is a most unfortunate situation and one which should be cleared up.

Mr. POWER: There are four ministers on the treasury board, and they may have listened to what my hon. friends have been saying and have decided to change their minds.

Mr. GILLIS: Who are the ministers?

Mr. POWER: The acting leader of the government is one, the Minister of Finance, the Minister of Justice and the Minister of Trade and Commerce, I believe.

Mr. KNOWLES: The hon. member for Bow River has emphasized the unfairness of paying different rates for the same sort of work. Is it not also true that the basic rate varies as between different places? The hon. member for Cape Breton South referred to a rate of 43½ cents for general labour in the maritimes. The basic rate in Winnipeg at one time was 40 cents and I believe is now 45 cents.

Mr. POWER: I am informed that the Department of Labour sets this rate. Let us say it costs more to live in Winnipeg than in Prince Edward Island. Would my hon. friend say the basic rate in Prince Edward Island should be the same as in Winnipeg, or should it not? I am just asking the question.

Mr. JOHNSTON (Bow River): Would not the cost of living bonus enter into it?

Mr. POWER: I do not know; I am just asking the question. I am not trying to justify it.

Mr. COLDWELL: Treasury board consists only of members of the cabinet, but they have certain advisers who sit with them. I should like to know the names of those gentlemen who sit with the treasury board; I think that would be interesting to the committee and to the country. May we have the names of those who sit with and advise treasury board?

Mr. POWER: Really it is so long since I had the honour of being a member of treasury board that I do not remember the name of the secretary. I am told it is Mr. Ronson.

Mr. COLDWELL: I think we would all like to know who are the gentlemen who advise the treasury board, because this seems to be a sort of super-cabinet; they seem to be able to make interpretations and decisions that do not coincide with what the House of Commons expects or, indeed, with what some of the ministers seem to expect.

Mr. POWER: That is true.

Mr. COLDWELL: I should like to know who the advisers are.

Mr. FAIR: I think it would be well if we could learn also the names of those who are the advisers to the advisers of the treasury board.

Mr. KNOWLES: A moment ago the minister asked me a question. In turn I would ask him if he would find out on what basis the different rates are determined, whether it is on the basis of a difference in the cost of living or whether it is on the basis of the going rates in the various parts of the country. Naturally I have no interest in seeing the rate at Winnipeg reduced to what it may be in the east, but it seems to me the difference should be explained, at least.

Mr. POWER: I really think these questions are more for the Department of Labour than for my department, but I am quite willing to make inquiries and see if I can get the information. At the moment I cannot give the answer because frankly I do not know why there should be a difference between the rates of pay in certain sections of the country. It may be based on the cost of living or what

have you, but I shall be only too glad to inquire and give the answer to-night if I can get it.

The CHAIRMAN: The minister did not raise a point of order, but I listened attentively to the last few questions and I believe they are out of order. The Minister of National Defence for Air cannot be expected to answer questions pertaining to the Department of Labour.

Mr. GILLIS: This is not a question for the Department of Labour, because it has been under consideration by the Royal Canadian Air Force for the past year, so far as my end of it is concerned. There is a difference in the rates; I have gone into the question to a certain extent with the people in the maritimes and I understand that the rates are fixed by National Defence, without regard to any other department, based upon the prevailing rates in the district.

Mr. POWER: That is right.

Mr. GILLIS: There is a difference as between different sections of the province. If they come in with a fixed rate and the district rate is lower, their rates are automatically lowered to conform to the highest local rate.

Mr. POWER: It is what I think they call the prevailing rates of pay.

Mr. GILLIS: That is right. What is in dispute so far as I am concerned is the cost of living bonus. At the moment I am satisfied with the minister's answer.

Mr. POWER: I shall do what I can to straighten it out.

Mr. JOHNSTON (Bow River): I realize that the basic rates of pay may be different in different places. The hon. member for Cape Breton South has stated that the basic rate of pay for general labour in his district is 40 cents. I think in Calgary the basic rate for carpenters was 80 cents, while those employed in civilian industry were receiving something like 95 cents. My point, however, is that the cost of living bonus should have no relation whatever to the basic rate of pay. That basic rate may be settled by the prevailing rate within a district, but certainly the cost of living bonus has nothing to do with that. The cost of living bonus is paid entirely because of the rise in prices due to the war, and I think that bonus should be general throughout the country. I do not think it would cost the people in Nova Scotia any more to live than it would cost the people in Calgary, at least so far as the cost of living bonus is concerned. Once you have decided what the cost of living bonus should be, then it should be applied to all industries and all branches of the service, and I should not think the basic rate would have anything to do with it. If the minister would bear that in mind when he is trying to persuade the treasury board that there should be some adjustments made, perhaps it might help. Personally I am afraid he has a hard nut to crack, having in mind the names he has given, along with Doctor Clark, the deputy minister of finance, who I think sits with the board in an advisory capacity. They seem like a pretty tough bunch and he will need a sledge hammer to work on them.

Mr. POWER: We shall do our best.

Item agreed to.

8. M.T. vehicles and marine craft: capital cost and repairs, $10,508,405.

Mr. KNOWLES: May I ask if other questions which have been asked will be answered in due course?

Mr. POWER: My colleague has a few more questions which he will answer. Was there anything special?

Mr. KNOWLES: There was a question in relation to the pay of civilian personnel.

Mr. POWER: I think we have it, and it will be put on the record.

Mr. KNOWLES: It may be in the form of a table.

Mr. POWER: Yes.

The CHAIRMAN: Did the minister say the parliamentary secretary had further answers to give?

Mr. POWER: Yes.

Mr. MACMILLAN: In reply to the hon. member for Winnipeg North Centre (Mr. Knowles), there is a very long answer with regard to salary increases for civil service employees. Is that the one he has in mind?

Mr. KNOWLES: I believe it is. I asked the minister if he would break down the civilian employees into three groups: those who were civil service commission appointees, those who were appointed by order in council, and those who were exempt.

Mr. MACMILLAN: That will be brought in this evening.

Mr. MARSHALL: I was not able to follow the answer the minister gave with respect to radio technicians; I suppose I shall have to read it in *Hansard* to-morrow. However, I should like to ask if any improvements have been made in the status of these radio

technicians since I placed my question upon the order paper last March. From the correspondence I have had I am led to believe nothing has been done, or that nothing had been done up to that time, and the question in my mind is what has been done since March of this year.

Mr. POWER: I can assure my hon. friend that their position is far better than it was at that time. They are getting trade tests now; they are getting trade pay, and more and more of them are being commissioned or remustered to other trades. I have a report which indicates that there is much less dissatisfaction amongst them now than there was two months ago.

Mr. MacNICOL: Did the minister or his assistant answer the question I asked in reference to Mossbank airport?

Mr. MACMILLAN: Yes. The Department of Transport is responsible for the water supply at all these sites, and that department has been asked for a report, which will be given to the hon. member for Davenport. With regard to the situation at the Pas, the answer will be given to the hon. member privately, because it involves secret information.

Mr. ADAMSON: I understood the minister was going to answer all questions before proceeding to the next item.

Mr. POWER: I do not know of any others. Has the hon. member one in mind?

Mr. ADAMSON: I was wondering if there were any which had not been answered.

Mr. MACMILLAN: The hon. member for Cape Breton South asked the Minister of National Defence a question with regard to travelling allowances, berths and meals between eastern and western Canada. While this question was not put to the Minister of National Defence for Air, the answer has been prepared by him. Present regulations regarding rail transportation, sleeping car accommodation, meals and the like in connection with the movement of personnel as laid down in F.R.I. part 13, article 209, were put into effect, after careful study and consultation with the army, and the regulations of both services are uniform in this regard.

These regulations provide that airmen below the rank of sergeant, when travelling on duty, are entitled to second-class transportation and necessary meals. If the trip is of such duration that personnel are required to spend two consecutive nights or more on continuous journey they may be provided with berths in tourist cars, if available.

[Mr. Marshall.]

Because of the present train service in effect on Canadian railways there are bound to be some inconsistencies. The instance quoted to the effect that personnel from the maritimes destined to No. 1 manning depot at Toronto did not get berths is correct. Such personnel would actually spend only one night on the train. Personnel from points, Winnipeg and west, destined to No. 1 manning depot at Toronto are compelled to spend two nights on the train, and are therefore provided with berths in tourist cars, if available.

Furthermore, personnel moving between units in western Canada, for instance from Winnipeg to Edmonton, would not be provided with berths, since the journey involves only one night on the train. In this regard they are treated similarly to personnel from the maritimes to Toronto.

The statement to the effect that there have been cases of personnel travelling between Halifax and Montreal who have not been provided with meals is difficult to reconcile, unless they were proceeding on leave, in which case the onus for obtaining transportation and meals en route is the responsibility of personnel concerned.

The further statement that cases have occurred where personnel did not even get seats on trains between Montreal and Toronto is difficult to check. This may have occurred during a week-end rush, when the situation complained of was not peculiar to service personnel only.

Mr. GILLIS: I have some complaints along these lines. In my opinion the joker in the arrangement is the words, "if possible." There should be no misunderstanding when a number of men in the air force are moved from place to place, on call of duty. That is not a decision made overnight. Those in charge of the situation must know they have a certain number of personnel who will be moving from point to point at a certain time. The railway company should be so informed, so that they would have sufficient time to guarantee that men coming from Halifax to Toronto would be provided with the accommodation stipulated in the regulations.

It was a considerable group of men—I believe it was five, although I cannot vouch for it—that moved from Halifax to Toronto. They were not provided with meals or sleeper accommodation, and they spent two nights on the train. The last night on the train from Montreal to Toronto it was so crowded they had to stand most of the way. These were recruits being sent from Halifax to Toronto to take

basic training. That was not a very pleasant introduction to the service. Even then, they did not complain until they reached Toronto, and were told that they had been given a raw deal, and that personnel moving west of Toronto for the same purposes were provided with berths and meals. Evidently service on that end of the line is good. These boys had a specific complaint. I am sure their complaints were sincere, because I know some of them personally.

In my opinion the expression, "if possible," is the one which should be eliminated. There should not be any misunderstanding. If anyone has to stand up or go without a berth on a train it should be the civilian, who can travel at his own convenience, when he is not under pressure. The services are required to move on order, and there should not be any interference with the regulations concerning their comforts and conveniences en route.

Mr. ADAMSON: Are the bombs dropped on Germany by the Royal Canadian Air Force squadrons paid out of this item of $23,000,000?

Mr. POWER: No; that would be out of item No. 13, for the maintenance of overseas squadrons. This is a per capita arrangement, under which they charge us a lump sum of so much for aircraft, bombs, military transport, food, and items of that kind. The $303,783,729 covers everything. We pay for the bombs our men drop.

Mr. ADAMSON: Bombs and ammunition in this instance would be for training purposes, such as dummy bombs, smoke bombs and the like?

Mr. POWER: Yes, many of them are practice bombs.

Mr. ADAMSON: And for the operational command?

Mr. POWER: Yes, east and west coasts.

Item agreed to.

8. M.T. vehicles and marine craft: Capital cost and repairs, $10,508,405.

Mr. MacNICOL: What are these marine craft?

Mr. POWER: Vessels one has to have, largely in connection with home war establishment, I would say.

Mr. FRASER (Peterborough West): Including boats carried on aircraft?

Mr. POWER: Under the joint empire plan we spend on marine craft $4,900,000; on home war establishment, $2,381,000, and overseas, $21,000. I do not really know what that item would be.

Mr. MacNICOL: What is the meaning of the term, "marine craft"?

Mr. POWER: Rescue vessels, such as were mentioned a short time ago. They would be called out in the event of a crash. Then, it would include tenders, ferries and that sort of thing.

Mr. FRASER (Peterborough West): Do they not carry small ones on the aircraft?

Mr. POWER: No. We have rubber dinghies. They would not come under this item, but would be included in aircraft equipment.

Mr. POTTIER: Is there not a marine section of the air force?

Mr. POWER: Yes.

Mr. POTTIER: And these marine craft would be under the control of that section?

Mr. POWER: Yes.

Mr. FRASER (Peterborough West): Has the Department of National Defence for Air any special designers for these rescue boats, or would that come under the Department of Munitions and Supply?

Mr. POWER: I would say that when we want special rescue boats we have someone make up specifications, and then ask the Department of Munitions and Supply to have them built for us. I think we still have a marine engineer in the department.

Mr. STIRLING: Has the minister the requirements of these refuelling tenders? Have they been supplied with reasonable rapidity?

Mr. POWER: I think as far as marine craft are concerned, we are in pretty good shape. I know we bought a boat of about 500 or 600 tons in Lunenburg to bring supplies to Newfoundland.

Mr. HAZEN: Is automobile transportation supplied to each air training school?

Mr. POWER: I think, all told, we have 3,500 vehicles of different description. Each establishment would have a certain number of vehicles. For example, at Uplands there would be so many staff cars, one, two or three as the case may be, so many caterpillars and so many vehicles of other descriptions. There would also be so many fire-fighting tenders.

Mr. ADAMSON: Would snow-clearing equipment come under this item?

Mr. HAZEN: Are there motor-buses attached to the different air training schools? I have in mind Pennfield in New Brunswick.

Mr. POWER: I am not absolutely sure about Pennfield.

Mr. HAZEN: I am referring to buses which would enable the men stationed there to get to Saint John or St. Andrews or St. Stephen.

Mr. POWER: I would think they would because there is no other way of getting there. It is about forty miles from Saint John?

Mr. HAZEN: About.

Mr. POWER: And about thirty miles from St. George. There must be some kind of transportation. I know we have buses in Ottawa to bring our W.D's. back and forth to Rockcliffe, and also in other places where they are necessary. I do not know about Pennfield, but we should have.

Mr. HAZEN: I do not know whether they have buses, but they should have because these young fellows there are pretty well cut off from the world. I pick them up on the road sometimes and give them a lift at least part of the way.

Mr. POWER: I recollect now that when I was last there they had a bus which went into Saint John in the morning and then would leave Saint John about eleven o'clock at night to reach the station about twelve.

Mr. PERLEY: What equipment is there at Mossbank and Dafoe?

Mr. POWER: I do not know what there would be at Mossbank particularly, but we have tractors, snow rollers, trucks and different kinds of equipment.

Mr. PERLEY: That is a special school.

Mr. POWER: There are graders, tractors, trailers, snow ploughs, snow removers, turf rollers and so on.

Mr. PERLEY: Could the minister give me what they have at Mossbank and Dafoe?

Mr. POWER: Each school is entitled to so many different kinds of motor vehicles, maybe one staff car for the commanding officer and a roller, a tractor and so on.

Mr. PERLEY: Could the minister give the break-down for these stations?

Mr. POWER: The establishment is made up for equipment just as it is for personnel; that is, so many men, so many cars, so many motor vehicles.

[Mr. Adamson.]

Mr. PERLEY: Would the minister give the information for Dafoe and Mossbank?

Mr. GRAYDON: Will the minister look into the question of transportation for the airmen who are stationed at Malton? There has been considerable complaint as to the adequacy of transportation from that school to Toronto. Many public-spirited people have interested themselves in the welfare of the airmen and have given a great deal of attention to this matter. I am not familiar with the recent developments with respect to transportation, but I ask the minister to look into this matter and, if it has not been remedied in the last few weeks, to see that this is done.

Mr. POWER: It is about twenty miles to Toronto?

Mr. GRAYDON: Not quite that far.

Mr. POWER: I will have the answer for my hon. friend.

Mr. MacNICOL: Up until a day or two ago the road was in very bad condition, especially during the wet weather.

Mr. POWER: Is it the condition of the road or the lack of vehicles?

Mr. MacNICOL: I do not know. There is some question about who should keep the road in order. Last time I was over it, it was in dreadful condition, there being a number of pitch holes of one kind and another. Someone undertook to fill in these holes with gravel and then put dirt on top, but when the weather got wet the whole thing went to pieces.

Mr. GRAYDON: My question was directed to the matter of transportation rather than the state of the roads.

Mr. HAZEN: Have any orders been issued to restrict the use of staff cars in order to save gasoline and, if so, to what effect?

Mr. POWER: I cannot say offhand what the orders are, but, like the army, we have issued strict orders about the use of staff cars, trucks and that kind of thing. I shall have the order for the hon. member to-night.

Mr. PERLEY: When the minister is getting the information with respect to the schools at Dafoe and Mossbank, will he also let me have the fuel costs in each case? Is a separate contract issued for the supplying of fuel to Mossbank, for instance?

Mr. POWER: All fuel is purchased through Munitions and Supply, and I think they have tried to divide the business between the different gasoline companies in Canada on an

equal basis. I could not tell whether the gasoline for Mossbank is purchased from Imperial Oil, McColl Frontenac, or some other company. The price is the same, so that there is no competition. We ask Munitions and Supply for the gasoline and they deliver it.

Item agreed to.

9. Fuel costs for aircraft, M.T. and marine craft, $29,368,636.

Mr. DOUGLAS (Weyburn): A complaint has come to me repeatedly—I am sure other members have heard the same thing—which I should like the minister to clear up, because I believe it would be a good thing from the point of view of the general public. It is said frequently by those who live close to airports that when planes come back from making trips they simply let their gasoline run out on the ground. I understand that there is an explanation for this, but I do not know what it is. If the minister could give a full explanation it would prevent constant rumours of wastage which one hears throughout the country. When the victory loan campaign was on, people said: "Here we are with gasoline rationed and these fellows are letting gasoline out on the ground instead of salvaging it. Why is that done? Is there not some way in which it can be salvaged?" I think the public should be given an explanation.

Mr. POWER: That question has come up at intervals during the past two years. I am sure my hon. friend must have heard it many a time. The rumour would arise in Nova Scotia at one time, say, and next you would hear of it in the western provinces. Therefore the head of No. 4 training command asked the *Calgary Albertan* to make an inquiry into the situation. They sent out their own men and I should like to send my hon. friend a copy of their report. Every time this rumour comes up we send out a copy of this report made by an independent newspaper, and therefore not to be considered prepossessed in our favour. I have a copy here and would gladly send it to my hon. friend.

Mr. PERLEY: But what is the answer?

Mr. MACMILLAN: When an aircraft completes a normal training or operational flight, the tanks are refilled, not drained, in readiness for the next flight.

Gasoline is drained from aircraft tanks prior to major repair and overhaul or transfer (when not under its own power), immediately after a crash and, normally, before being placed in storage. When gasoline is drained, it is returned to bulk storage or directly into refuelling tenders for re-issue to aircraft (when taken from undamaged tanks) or filtered, mixed with lead free gasoline and used as M.T. gasoline (when taken from damaged tanks).

Gasoline removed from tanks of aircraft flown into a civilian contractor's plant for repair and overhaul is drained into the contractor's tanks (or into R.C.A.F. tanks where such exist) and re-issued to the aircraft on completion of repair or used for engine test purposes.

Mr. PERLEY: How about the lubricating oil? There is a rumour that that is sold to certain parties.

Mr. MACMILLAN: I have a memorandum on that:

It is the unanimous opinion of petroleum technicians associated with national research council that the employment of re-refined oil in aircraft engines in Canada is not advisable at the present time.

While reclaimed oil is so used in the R.A.F., this is done for economic reasons which do not apply in Canada. In the United Kingdom, initial cost of oil is considerably greater; costs of collection and transportation are much lower, owing to shorter distances, and the volume of oil to be reclaimed is large enough to justify installation of the necessary machinery.

A large proportion of the used oil in Nos. 2 and 4 Training Command is being re-refined by a civilian company at Camsack, Sask., and returned for use in R.C.A.F. M.T. vehicles. There is no suitable contractor in the east, but the possibility of installing a plant in the Ottawa district, to be operated by the Royal Canadian Air Force, is being investigated. Such a plant, if installed, would serve Nos. 1 and 3 training commands.

The larger oil companies (who own practically all the oil drums used in the R.C.A.F.) are not particularly interested in purchasing used oil as an economic proposition, and the greatest difficulty is encountered in finding containers for accumulation of used oil for shipment to such smaller plants as are willing to accept it for reclamation. The small companies cannot supply drums and the large concerns require their prompt return owing to the war-time shortage of metals.

Reclamation of oil must be done to rigid specifications, under proper control. The experience of the army has shown that unit reclamation plants cannot be operated satisfactorily with the type of personnel available.

In the Royal Canadian Air Force as a whole, the only possible course at present is to dispose of used oil under contracts at the best prices obtainable. During the past nine months, 183,904 gallons have been sold for $10,515.09 —an average price of 5·7 cents per gallon.

Mr. MARSHALL: This sum of $29,000,000 odd seems a small amount for fuel oil. Surely it does not include the fuel oil required by the Royal Canadian Air Force overseas.

Mr. POWER: No; everything overseas is under item 13.

Mr. ADAMSON: The minister said in answer to my question about cracked gasoline that the octane rating was 80 to 87. What percentage of lead is used in gasoline for aircraft?

Mr. POWER: I would not know.

Mr. ADAMSON: For operational work it is 100 octane, is it not?

Mr. POWER: From 90 to 100; I could not say exactly, but it is 90 anyway.

Mr. ADAMSON: Has your experience with cracked gasoline been satisfactory?

Mr. POWER: My colleague tells me that they are now testing it out.

Mr. MacNICOL: If we are using gasoline with an octane rating of only 87 it must be used for training purposes. The Americans flying over the north country always use an octane rating of 100. You see it in barrels all over the north country route. The reason for using gasoline with that higher octane rating is that it has more power, will lift an aeroplane faster and carry a heavier load than the 87 rating.

Mr. POWER: It gives much better performance, yes.

Mr. MacNICOL: Is this $29,368,636 for gasoline to be used for aeroplanes purely in Canada? It is used for training purposes?

Mr. POWER: Yes. This covers training, home war operations, hemisphere operations; it does not cover overseas. Everything overseas comes under item 13.

Mr. JOHNSTON (Bow River): With regard to reclaimed oil, have the department investigated the question of cleaning this oil themselves? The minister's assistant stated a moment ago that this oil was being sold to reclaimers at five cents a gallon. When I was in Calgary not long ago I visited one of the plants. It was not a very large place. They bought the oil from the Royal Canadian Air force in Calgary and, if my memory serves me correctly, they were selling it as reclaimed oil for sixty cents a gallon. There was nothing complicated about the plant; it was a very simple affair. I do not imagine the whole set-up would cost very much. If they could buy the oil for five cents a gallon and resell it at sixty cents, and so far as I could see the oil was perfectly good and was being sold for use by all types of automobiles, would it not be worth while for the department itself to install an oil-cleaning plant? Then the oil they reclaimed could be used in the Royal Canadian Air Force transport vehicles, such as trucks, automobiles, and so forth.

[Mr. Power.]

Mr. POWER: All I can say is that this question has come up time after time. I have made inquiries and this is the information I get from the technical officers:

> It is the unanimous opinion of petroleum technicians associated with national research council that the employment of re-refined oil in aircraft engines in Canada is not advisable at the present time.

This question has come up a dozen times and they have always given me the same answer. There is a plant at Kamsack, Saskatchewan, for refining this oil, operated by a civilian company. The oil when reclaimed is used in Royal Canadian Air Force motor transport vehicles. The technical officers say in their report:

> There is no suitable contractor in the east.

I have not checked up on that. They go on to say that the possibility of installing a plant in the Ottawa district to be operated by the Royal Canadian Air Force is being investigated. Such a plant, if installed, would serve No. 1 and No. 3 training commands; that is, Toronto and Quebec.

Mr. JOHNSTON (Bow River): I was not referring particularly to any area, such as Ottawa, though it might be a good place to start one. I never suggested nor do I think it would be proper to use this refined oil in aircraft. My only purpose was—and I was referring to the Calgary case because that happened to be the place I was at—to draw attention to this refined oil which these fellows got at five cents a gallon and turned round and sold at sixty cents, giving them a pretty fair margin of profit. The machinery which they have is quite simple; there does not seem to be anything to it at all. It seems to me that wherever there is a large establishment such as the air force has in Calgary and surrounding districts, it would be well worth while to establish one of these plants.

Mr. PERLEY: Who operates the plant at Kamsack; how much was refined in the last year and how much was paid?

Mr. POWER: I would not know. This statement is that it is refined by a civilian company at Kamsack. It does not say how much they have actually refined.

Mr. PERLEY: Could the minister get the name of the company, and how much oil they secured, at the five-cent rate, to refine?

Mr. CASTLEDEN: What quantity of that used oil from aircraft engines is sold from the air force within a year?

Mr. POWER: I will try to find that out. In the R.C.A.F. as a whole the only possible

course at present is to dispose of used oil under contract at the best prices obtainable. During the past nine months, 183,904 gallons have been sold for $10,515, or an average price of 5·7 cents a gallon.

Mr. JOHNSTON (Bow River): What do they do with the other stuff? Just throw it away? That seems like a tremendous waste. They must have used much more oil than is shown to have been sold.

Mr. FRASER (Peterborough West): Probably the rest of it is burned up.

Mr. JOHNSTON (Bow River): There is not much burned up.

Mr. POWER: I will get one of the technical officers to prepare an answer.

Mr. ADAMSON: Does the minister know for how many hours' operation oil is used? There is a set standard in the air force; oil in the engines is changed after so many hours' operations.

Mr. POWER: I would not know that.

Mr. ADAMSON: I understand that in the Royal Air Force the oil is used considerably longer than we use it here.

Mr. POWER: It probably is. It would be.

Mr. ADAMSON: Has the minister information as to how many hours oil is used?

Mr. POWER: I will find out.

Mr. ROSS (Souris): When the minister is getting this information, in view of what has been said about it, would his advisers be able to tell us what percentage of the used oil they can reclaim? The statement made is that oil is sold at five cents and resold at sixty cents. In all fairness it would be desirable to inform the committee of the approximate percentage that is reclaimed.

Mr. POWER: I will try to get in touch between now and eight o'clock with the officer who does all this oil business and have the information which is asked for.

Mr. FRASER (Peterborough West): You have a reclamation plant at Rockcliffe, have you not—a small one?

Mr. POWER: I do not think so.

Item agreed to.

10. Aircraft, engines and spares, including overhauls, $231,846,296.

Mr. FRASER (Peterborough West): The parliamentary assistant to the minister mentioned that air cadets get part of the equipment which cannot be used for the regular force. What do the air cadets get for training; would they get an old aeroplane, or just the engine, or what?

Mr. POWER: No; we supply the air cadets aero engines and planes of the ordinary training type, wherever the cadets are well organized. There are always planes becoming obsolete or obsolescent, and we supply them to air cadet squadrons to let them learn something about how to run an engine and something about an air frame and so on. There was one on Laurier avenue at the air cadet place for three or four months; it may still be there. We supply the cadets with obsolescent craft so that they will know something about them.

Mr. FRASER (Peterborough West): Will the minister tell us whether the department has made any purchases of helicopters, or whether it intends to do so?

Mr. POWER: I think there are six, or sixteen, on order. I do not know when we are going to get them.

Mr. FRASER (Peterborough West): The minister has to buy them from the United States or Britain?

Mr. POWER: The United States.

Mr. FRASER (Peterborough West): Will they be equipped to alight on water as well as on land?

Mr. POWER: I think so. They are the latest type. But I do not know when they will be delivered. The R.C.A.F. have ordered a certain number of them every year. I cannot give the hon. member offhand the delivery dates, and I doubt if you can be always sure of delivery dates on machines which are constantly changing. They are putting on new gadgets all the time.

Mr. FRASER (Peterborough West): Oh, yes; they are entirely different from the old gyrocopters. I was wondering about their capacity to land on water because I understand it is desired to use them for rescue work.

Mr. POWER: Probably.

The CHAIRMAN: Carried?

Mr. ADAMSON: No, Mr. Chairman. This is the third largest item in the whole R.C.A.F. estimates. Does this include aircraft and engines for hemisphere operational work only?

Mr. POWER: It includes only Canada, not anything overseas. Overseas comes under item 13, $303,000,000.

Mr. ADAMSON: The minister has given us the number of aircraft in the joint training plan.

Mr. POWER: I have not given it exactly. I said, 10,000 plus.

Mr. ADAMSON: Has the minister had satisfaction with aircraft and things like, for instance, the Jacobs engine? I believe there was some trouble at the beginning.

Mr. POWER: I do not know of any engine or aircraft which has not been a headache at some time or other. Apparently the Jacobs engine is working pretty well now. There have been troubles with it. I know my hon. friend will not expect me to relate the technical details or to know what is wrong with piston rings or things like that. It was troublesome for a while, but I believe they have got what they call the "bugs" out of it.

Mr. FRASER (Peterborough West): Is the department buying gliders and transports for troops?

Mr. POWER: We did purchase some gliders but they have not been very satisfactory. We have them in Canada. We have given or sold or leased some to the United States. The kind of glider we bought is not fully developed. We bought them from Great Britain; I could not tell the hon. member how many there were.

Mr. FRASER (Peterborough West): It will be necessary to have transports to carry paratroops?

Mr. POWER: Yes.

Mr. ADAMSON: There is no air-borne training being done in Canada at the present time?

Mr. POWER: Not by us. It would be an army job, anyway.

Mr. ADAMSON: Yes, but the minister's department would have to provide the aircraft. We have a number of new heavy transport planes that could be used for air-borne troops, but they are not actually being trained.

Mr. POWER: They are not actually being carried.

Mr. HAZEN: What company is supplying the helicopters, and what do they cost?

Mr. POWER: I shall have to find that out. As I said a moment ago, these things are changing so rapidly that I do not suppose we would even have a fixed price for them.

Mr. HAZEN: Do you order them before you know the price?

[Mr. Power.]

Mr. POWER: Oh, you would, with a thing like that. We would say, "We want helicopters"; we would ask, "How much is it?" and they would say, "We don't know. We have to make this or that change. We will charge you the actual cost-plus," or whatever it is. Very often you do not know the price of equipment which is bought, because it is constantly changing; so that you cannot get a fixed price. I will try to find out. I suppose they give us a figure of some kind, but it would not be the actual figure until the thing is delivered.

Mr. FRASER (Peterborough West): Can the minister find out the carrying capacity? I think it is definite.

Mr. CASTLEDEN: Will the minister give an outline of procedure with regard to overhaul work done on R.C.A.F. aircraft as regards what they have in their own repair depots and what they do by letting contracts to civilian firms?

Mr. POWER: Most of the overhaul is done by civilian contractors, but we have five or six repair depots of our own where we do ordinary repairs. The larger and more important repairs are done by civilian contractors.

Mr. JOHNSTON (Bow River): That would be under the Minister of Munitions and Supply?

Mr. POWER: Yes. The companies are almost crown companies. He has supplied capital to a great many of them. There is a firm of Macdonald Bros. in Winnipeg who were largely assisted with government funds. They have large hangars and aerodromes and facilities there. A good part of that was supplied by Munitions and Supply. I do not know how they figure the capital cost into the cost of overhaul. That is worked out between Munitions and Supply and themselves.

Mr. CASTLEDEN: The ministers' department has nothing to do with setting the charges or the amounts to be paid for overhaul?

Mr. POWER: That is entirely Munitions and Supply.

Mr. MARSHALL: These figures have to do with home defence and not overseas?

Mr. POWER: Not overseas at all.

Mr. MARSHALL: Not connected with overseas?

Mr. POWER: No.

Item agreed to.

11. Miscellaneous stores and equipment: including machine guns and other armament, $26,623,160.

Mr. FRASER: (Peterborough West): Does this include metal runways?

Mr. POWER: Anything to do with runways would come under item 4, "construction, purchases, repairs and operating expenses of properties".

Mr. FRASER: (Peterborough West): I thought some of these transports carried runways for emergency fields.

Mr. POWER: I do not think metal runways would come under this.

Mr. MARSHALL: Does this include the storage fuel, oil containers and necessary equipment of that sort?

Mr. POWER: Fuel oil would be under operating expenses of properties.

Mr. MARSHALL. I am talking about the storage facilities of fuel oil, gasoline tanks. Perhaps if the minister would give us a break-down of the $26,000,000 we could find out.

Mr. POWER: I will furnish that to-night.

Mr. JOHNSTON (Bow River): Is there any shortage of gasoline barrels or oil barrels to take care of the oil they have there?

Mr. POWER: From what I read into the record, there is apparently a shortage of steel drums. The smaller companies have none to spare and the larger ones want to keep theirs for themselves.

Mr. JOHNSTON (Bow River): Would the R.C.A.F. possess these for themselves if they had the opportunity?

Mr. POWER: We have no drums of our own.

Mr. JOHNSTON (Bow River): Would the department buy any, supposing the public had some to sell? There are quite a number of gasoline barrels and oil storage barrels throughout the country. Would the R.C.A.F. purchase them and keep them as their own?

Mr. POWER: If we felt the need of these drums we would apply to the Minister of Munitions and Supply and he would get them. He is our contractor. We do not buy or order anything. If we want anything we ask Munitions and Supply who are our contractors.

Mr. GRAYDON: You do not buy directly, but you order them?

Mr. POWER: We ask them to buy what our technical officers think is required. But whether we are going to buy drums or not, I cannot say. If the technical officers say that we require something we ask Munitions and Supply.

Mr. JOHNSTON (Bow River): They would ask if they were short of barrels, and I take it from what the minister says that they are not short of storage barrels?

Mr. POWER: I do not think we use them at all.

Mr. ADAMSON: These machine guns are purely for Canadian use?

Mr. POWER: Absolutely.

Mr. MARSHALL: Could the minister give a break-down of the $26,623,160?

Mr. POWER: Yes, we will try to have that to-night.

Item agreed to.

12. Flying training contracts, $33,805,829.

Mr. GRAYDON: I suggest that the minister had better be prepared at eight o'clock to give a fairly comprehensive resumé of the position with respect to these training contracts. There must be a good many of them covering various schools.

Mr. POWER: The hon. member for Lake Centre told us all about them the other day. As my hon. friend knows, he is more familiar with that than almost anyone else in the house. I will give what details I have. Does my hon. friend want to know how much each civilian club received?

Mr. GRAYDON: I do not want to put the minister to unnecessary trouble.

Mr. POWER: It is easy; it is in the book.

Mr. GRAYDON: It would be interesting to have it, because there is a good deal of money involved in the item, and the public would not like to see an item of this kind passed without details in connection with the contracts, the amounts of them, those with whom the contracts are made, and so on, throughout Canada. That is a proper question.

Mr. POWER: I will put all that on *Hansard*.

At six o'clock the committee took recess.

After Recess

The committee resumed at eight o'clock.

Mr. MACMILLAN: A question was asked in regard to what companies are supplying helicopters, the number, the cost and the carrying capacity. Six helicopters have been ordered through the United States treasury, as is most

of our equipment not including lease-lend. The estimated cost of the six which are on order is $641,617.84 in American funds. The carrying capacity is a secret and cannot be divulged other than privately to the hon. member.

Mr. FRASER (Peterborough West): That is for six of them?

Mr. MACMILLAN: Yes. Then we were asked for a break-down of the expenditure on air observer schools. It is as follows, from the inception of the schools:

Malton	$1,988,265 47
Edmonton	1,901,011 40
Regina	1,893,216 97
London	1,727,888 35
Winnipeg	1,614,614 24
Prince Albert	1,072,399 61
Portage la Prairie	1,547,143 35
Ancienne Lorette	1,301,139 42
St. Johns, Quebec	1,365,506 48
Chatham, N.B.	1,279,092 76

Then the cost of the elementary flying schools from their inception is as follows:

Malton	$1,335,501 04
Fort William	1,468,702 67
London	750,070 61
Windsor	1,048,678 15
High River	1,700,060 01
Prince Albert	1,330,145 08
Windsor	1,047,656 14
Vancouver	537,137 85
St. Catharines	1,185,109 91
Mt. Hope	1,241,627 32
Cap de la Madeleine	1,227,857 89
Goderich	1,174,643 74
St. Eugene	1,219,979 75
Portage la Prairie	1,320,180 32
Regina	1,155,766 82
Edmonton	1,259,679 28
Stanley	521,025 41
Boundary Bay	1,502,055 68
Virden	1,492,148 29
Oshawa	1,343,695 26
Chatham, N.B.	997,165 70
Ancienne Lorette	306,097 87

That is the complete list.

Mr. REID: The hon. gentleman mentioned Vancouver. Did he mean Sea island?

Mr. POWER: That was Sea island, but it is closed down now. It is used as an operational station.

Mr. REID: That should not be called Vancouver, because it is in the riding of New Westminster.

Mr. GRAYDON: Is that a better place?

Mr. REID: It certainly is; that is why it was put there.

Mr. POWER: The hon. member for Peterborough West asked for a break-down of the next item. I am not trying to say that we have passed this one, but I had better give him the break-down immediately, and I shall send it over to him.

Mr. STIRLING: I believe the minister was to give some information with regard to oil reclamation and the handling of oil, and he thought he would have it at eight o'clock.

Mr. POWER: I thought I could get it, but I am afraid the officer in charge has not been able to give me the information. I shall have it during the evening or in the morning.

Mr. MACMILLAN: The hon. member for Qu'Appelle asked if there was a separate gasoline contract for each individual school. All schools using Turner valley gasoline have individual contracts. Schools receiving their supplies under lease-lend are allocated their aviation requirements from the major oil companies as proportioned by the oil controller.

The hon. member for York West asked what percentage of leaded gasoline is used. All aviation gasoline used by the R.C.A.F. is leaded. The same hon. member asked whether cracked gasoline of 100 octane is used. No cracked 100 octane gasoline is used by the R.C.A.F.

Mr. MacNICOL: The hon. member means none of the 100 octane gasoline is used in Canada?

Mr. MACMILLAN: It is used, but not refined in Canada.

The hon. member for Qu'Appelle asked how many gallons of oil were re-refined at Kamsack, Saskatchewan, and the name of the company doing the work. The Northern Petroleum Company of Kamsack, Saskatchewan is a privately owned company, and the R.C.A.F. has no knowledge of its output.

The hon. member for Bow River asked if the department had looked into the question of reclaiming oil, and not selling it. He asked if it would not be worth while for the R.C.A.F. to have reclaiming machinery of its own. The air force has made a constant study, since the spring of 1941, with regard to the possibility of reclaiming used aviation oil for re-use in aircraft engines. We have been unsuccessful in locating a unit of equipment which will reclaim such oil to the satisfaction of the rigid specifications set up by our engineering division for re-use in aerial engines.

The study has recently shown a new unit, known as Refinoil, manufactured in the United States, which indicates that it may

be possible to reclaim aviation oil for re-use in Canadian transport, on an economical basis. Purchase of one unit has been approved for installation in the Ottawa district, for this purpose.

The hon. member for Battle River asked how much used oil is sold altogether. The answer is 209,726 gallons, for which the sum of $10,236.75 was received. This covers the period from April 1, 1942, to March 31, 1943.

The hon. member for St. John-Albert asked what percentage of oil can be reclaimed. The answer is that approximately eighty-five per cent can be reclaimed.

Mr. STIRLING: I understand from what the minister has said that the only plant for this refining is that at Kamsack, and that there is no plant in eastern Canada.

Mr. POWER: Correct.

Mr. STIRLING: Does that mean that Kamsack has brought used oil a considerable distance?

Mr. POWER: No; as my colleague has said, we are now thinking of setting up a plant in eastern Canada, in the Ottawa district. But so far we have not done so.

Mr. STIRLING: Does the oil at Kamsack come from territory from Winnipeg to the coast?

Mr. POWER: I would say probably all of No. 2 and No. 4 commands, which would be as far as the Rocky mountains.

Mr. STIRLING: Very costly in freight, is it not?

Mr. POWER: It would be, yes. But there are concentrated in Saskatchewan and Alberta many of our training schools. I think they would all go into Kamsack, but it would not be economical to ship it east. We would have to have a plant of our own in the east, and that is what we are thinking of setting up. That would probably take everything from Fort William to Montreal. For instance, it would not be economical to ship from Mont Joli to Ottawa.

Mr. MacNICOL: I was shown through an aviation repair plant in the east end of London, Ontario. The gentleman showing me through the plant said that such-and-such equipment was for purifying oil.

Mr. POWER: I do not think we have a plant there.

Mr. MacNICOL: It may have been for trucks.

Mr. POWER: There was a very large plant there for trucks and motor vehicles coming from Windsor. There was storage at that point. But we are talking about the refining of oil, and I do not know of any such plant in London, Ontario. There is an army plant, and it has nothing to do with us. They ship motor vehicles from Windsor, and store them in London. I believe it was a big building in connection with the exhibition grounds.

Mr. MacNICOL: In the east end of London?

Mr. POWER: As a matter of fact I think they took over the whole exhibition grounds, and stored motor vehicles there for several months.

Mr. MacNICOL: They have the exhibition grounds, but the plant I have in mind is north of that. On second thought, however, I remember it was not for aeroplanes, but rather for army trucks and equipment.

Mr. POWER: Yes; that is correct.

Mr. CASTLEDEN: Can the minister give the quantity of aero-engine oil used from April 1, 1942 to March 31, 1943?

Mr. POWER: I can get that information, although I have not it just now.

Mr. CASTLEDEN: The minister has given us the figures of the amount of oil sold by the air force between those dates, and I should like to have figures showing the amount used in the same period.

Mr. POWER: It can be produced.

Mr. CASTLEDEN: I understand the minister will have a report to make later this evening or to-morrow morning. Can he get those figures?

Mr. POWER: I shall do my best.

Item agreed to.

13. Overseas squadrons and ancillary units, $303,783,729.

Mr. FRASER (Peterborough West): The minister supplied me a summary of costs overseas. I thought when I saw it first it was a break-down of the $303,783,729, but I find it is a break-down of the expenses of the air force overseas, including civil salaries, pay and allowances, gasoline and oil, laundry and the like. This is not the break-down I wanted because the $303,783,729 is not broken down at all.

Mr. POWER: No; this was a deal we made with the British government whereby we pay

for all our squadrons overseas. This includes food, dental and medical stores and supplies, the purchase and maintenance of aircraft, and all other cost of the squadron. The expense depends upon the type of squadron. If it is a fighter squadron, it costs a little less to buy aircraft than if it is a bomber squadron. I do not wish to give figures, but I would suggest that, say, a Lancaster would be worth around a quarter of a million dollars. We pay for all that. Of course the figure of a quarter of a million dollars is just a rough guess. On the other hand a Spitfire would be in the neighbourhood of possibly $40,000 or $45,000. Payment is made on the basis of so much per squadron overseas per annum.

Mr. FRASER (Peterborough West): It is paid to the British government?

Mr. POWER: Yes, to the British government.

Mr. FRASER (Peterborough West): And these other expenses, on top of that?

Mr. POWER: Yes. I believe the actual cost of the squadrons to us is this $303,783,729.

Mr. FRASER (Peterborough West): But when we add up the other total it comes to $383,277,800.

Mr. POWER: Correct.

Mr. FRASER (Peterborough West): I notice an item here of $15,000 for photographic equipment. I should consider that very small.

Mr. POWER: This is for overseas headquarters only. Everything we get overseas is paid for in this lump sum of $303,783,729. There is a break-down, but I suppose most of it is secret.

Mr. FRASER (Peterborough West): It fits into the other item, does it?

Mr. POWER: Yes. For instance for security reasons I cannot tell my hon. friend how many people we have overseas, but the pay and allowances for all our troops over there would come under this item.

Mr. MacINNIS: Would the minister explain the great difference between the estimate for 1942-43 and that for 1943-44?

Mr. POWER: Before answering the hon. member may I add something to what I said to the hon. member for Peterborough West, because I believe I made a mistake when replying to him? The pay and allowances go into the first item, No. 2 on the list, for pay and allowances. So that the $303,783,729 does not include pay and allowances.

[Mr. Power.]

Now, in answer to the hon. member for Vancouver East: Recently, in the month of April, we undertook to pay for all our troops overseas. Originally the men who went over were paid by the R.A.F. at R.A.F. rates of pay, and Canada made up the difference between the R.A.F. and the R.C.A.F. rates. We have now taken over the whole thing and are paying all our men the full Canadian rates. This runs into a considerable amount of money and it accounts for the difference the hon. member has mentioned.

Mr. DOUGLAS (Weyburn): That would appear in item 2?

Mr. POWER: It goes into item 2.

Mr. DOUGLAS (Weyburn): What about the clothing for these men?

Mr. POWER: Food and everything else are paid for on a per capita basis and is included in the $303,000,000. Clothing is on a per capita basis and is included under item 5. Item 13 covers medical and dental attention and everything else.

Mr. DOUGLAS (Weyburn): In other words, item 5, personnel supplies and services, does not cover the men overseas?

Mr. POWER: The $303,000,000 includes what is paid to the British government for feeding and everything else for our men overseas excepting clothing and pay.

Mr. DOUGLAS (Weyburn): We do not ship the clothing over?

Mr. POWER: The army does, but the air force does not.

Mr. DOUGLAS (Weyburn): The British government are responsible for clothing and feeding the men?

Mr. POWER: At so much per head.

Mr. CASTLEDEN: What is the rate?

Mr. POWER: I do not think that has been finally settled, although it is a matter of discussion between the two governments. The $303,000,000 is made up by estimating what it will cost to keep the men in the R.C.A.F. squadrons in England for a year. I do not think the rate for the last war has been settled, but at that time they paid something like $2 per man per month.

Mr. CASTLEDEN: It will be most important that someone find out some time.

Mr. POWER: They were still working on the rate for the last war ten years ago, and I do not know what settlement eventually was made. I think they arrived at one on a

hit-or-miss basis and decided to call it square because Canada owed them so much. I imagine that is what will happen in this war.

Mr. KNOWLES: Surely the minister does not mean $2 per man per month?

Mr. POWER: Per day. That covers food and clothing and ammunition, if it is an infantry man.

Mr. HANSON (York-Sunbury): From the very beginning Canada paid the pay and allowances and upkeep of her army overseas, but we have done this only recently in connection with our air force. Why was that?

Mr. POWER: Under the empire training agreement Canada undertook the responsibility of paying practically all costs in Canada, which amounted to eighty per cent of the total cost. Great Britain undertook to take the man from the moment he got on the boat at Saint John or Halifax or any other eastern port and pay him from then on. Canada undertook to pay the difference between the British and the Canadian rates of pay, because the British rates were somewhat lower. In April of this year we signed a new agreement whereby we become responsible for the pay and allowances of all the R.C.A.F.

Mr. TUSTIN: Is the difference in pay between the R.A.F. and the R.C.A.F. rates made up to the man who has joined the R.A.F.?

Mr. POWER: Who joined the R.A.F. pre-war?

Mr. TUSTIN: Yes.

Mr. POWER: If a man joined pre-war, he would probably still be R.A.F. The hon. member for York-Sunbury referred to one man who went over in a cattle-boat. We would not be paying the difference in pay to a man who is still R.A.F.

Mr. HANSON (York-Sunbury): He cannot get transferred back to Canada to the R.C.A.F.

Mr. POWER: That has been a matter of great discussion. The man to whom my hon. friend has referred could apply to his commanding officer for transfer to the R.C.A.F. If his commanding officer recommends it and we find that he will be useful to us, we would take him in. There have been only two or three cases of transfers because it is a very difficult matter. Take a man like Collishaw, who is now air vice-marshal. If he were transferred, there would be a matter of seniority to consider. The matter of transfer from the R.A.F. to the R.C.A.F. is rather difficult.

Mr. HANSON (York-Sunbury): I know of another case of a man from Canada who went overseas pre-war and joined up with the R.A.F. He became a very useful man and was sent to Canada for instructional purposes, still with the R.A.F. He has not been allowed to transfer to the R.C.A.F., although I have been trying to get him transferred.

Mr. POWER: He could make application to his commanding officer.

Mr. HANSON (York-Sunbury): He has made application and they do not seem to want to let him go. This man could be very useful to Canada.

Mr. POWER: The difficulty is that the more valuable a man is to the R.A.F., the less they want to transfer him to the R.C.A.F. That is one of the difficulties. The R.A.F. do not want to send back the good men; they may send us a lot of fellows who are not so good.

Mr. HANSON (York-Sunbury): I am still trying to get him transferred.

Mr. FRASER (Peterborough West): The minister has said that clothing and equipment are included in the $303,000,000, but there is an item here in this list of the R.C.A.F. overseas war establishment estimates for clothing and necessaries, $2,615,909. Would that be for men who are not really in the war establishment overseas?

Mr. POWER: I am advised that clothing is in another item altogether.

Mr. FRASER (Peterborough West): This item of $2,615,909 is exactly the same as it was last year.

Mr. POWER: That would be under item 5, "personnel supplies and services: food, medical supplies and services, clothing and personal equipment." That is how my hon. friend gets the $383,000,000 instead of the $303,000,000. The cash amount we are going to spend on the squadrons is $303,000,000.

Mr. FRASER (Peterborough West): The $303,000,000 will have added to it the other figures in here?

Mr. POWER: Absolutely.

Mr. FRASER (Peterborough West): Then there is a small item of $12,355 for medical supplies and services.

Mr. POWER: That would go into the $383,000,000; that would be for headquarters' personnel.

Mr. FRASER (Peterborough West): Perhaps the other figures are also headquarters?

Mr. POWER: Yes.

Mr. FRASER (Peterborough West): Would it not be wise to place this table on *Hansard* in order that it might be available to other hon. members.

Mr. POWER: I would be glad to make this available to my hon. friend personally.

Mr. MacINNIS: Is the Canadian government paying all the expenses in regard to the empire training plan in spite of the fact that we are taking care of our own men overseas?

Mr. POWER: At the conference held last January we hit on a figure of $1,400,000,000 odd to cover between now and 1945, and Great Britain undertook to pay $723,000,000, or about half. They are supplying that mostly in terms of gasoline and aircraft which they get from the United States. So far they are a little shy on their share.

Mr. MacINNIS: Does Canada pay the other part?

Mr. POWER: The actual cash is spent by Canada; then Britain owes us that much.

Mr. MacINNIS: Do New Zealand and Australia pay any part of the expenses?

Mr. POWER: The cost is divided half and half between Britain and Canada, and then Australia and New Zealand pay Britain so much per head.

Mr. DOUGLAS (Weyburn): Does the minister mean that the total cost of the air training scheme is cut in half; that Canada pays half and Britain the other half, and that Britain then charges Australia and New Zealand so much per head for training their airmen?

Mr. POWER: That is quite right. That is to say, in the agreement the cost up to 1945 was fixed at roughly $1,400,000,000; Great Britain undertook to pay through lease-lend or in kind, $723,000,000 approximately and Australia and New Zealand then make their own arrangements with Britain either through credits or some other system.

Mr. DOUGLAS (Weyburn): They pay so much per head to Great Britain?

Mr. POWER: Yes, the reason being that Canadian pupils constitute roughly fifty per cent and pupils from Britain, Australia and New Zealand the other fifty per cent. But Britain has the right to send us Netherlanders or men of any other race, provided they keep within the quota of fifty per cent. They may send Poles, Norwegians, Netherlanders up to Britain's quota of fifty per cent, and they are charged to Britain's share.

Mr. ADAMSON: Are our squadrons overseas paid for on a per diem basis? The expenses of a squadron might vary considerably depending upon the number of operations undertaken, the losses in operation and many other factors. Is it a fixed sum per squadron per diem, or what?

Mr. POWER: A Spitfire squadron, for example, would have a capital cost of roughly £185,000, and the cost of maintenance would probably be £540,000. When you get into the big bombers you run yourself into about £840,000 for equipment, and maintenance would be probably four times that, depending upon the operations.

Mr. ADAMSON: Do we estimate the maintenance at the beginning of the year, or does that depend on our losses?

Mr. POWER: Under the arrangements made with Britain in January the capital cost of the latest equipment is $74,000,000 and the annual maintenance cost of the latest equipment is $222,874,000.

Mr. STIRLING: That is an all-Canadian squadron?

Mr. POWER: No; for the authorized Canadian squadrons.

Mr. ADAMSON: And that is irrespective of the number of operations in which it is engaged? It is a figure arrived at empirically?

Mr. POWER: It is mostly guess work, subject to review every year.

Mr. ADAMSON: It is an empirical figure?

Mr. POWER: Yes.

Mr. STIRLING: Who pays for the establishment from which the squadrons operate—the hangars, the buildings, the administrative structures? Does Great Britain pay that, or does it come out of this item?

Mr. POWER: I am advised that we make a lump sum payment and the Royal Air Force pay everything else. It goes into the per capita cost. Suppose we have a group headquarters in the north of England and have to take over a castle or a house or something of that kind. That goes into the cost per squadron.

Mr. STIRLING: Suppose another hangar is wanted at such and such an aerodrome? Britain puts it up and—

Mr. POWER: That goes into the cost of the squadron. The Royal Air Force pay for it originally and charge the accommodation back to us.

Mr. MacNICOL: When item 9 was under discussion the minister said that gasoline for overseas use would come under item 13, if any. May I ask whether the gasoline used in the planes flown by Canadian pilots overseas is supplied by Great Britain or Canada?

Mr. POWER: That is what is called the ferry command. That is Royal Air Force.

Mr. MacNICOL: No; I mean planes flying from England to attack Germany or Italy.

Mr. POWER: That is charged in this $303,000,000.

Mr. MacNICOL: Is it supplied by Britain?

Mr. POWER: Yes, and paid for under this per capita system.

Mr. MacNICOL: The gasoline used over there is 100 octane, is it not?

Mr. POWER: I should think so.

Mr. MacNICOL: The British and the Americans all use 100 octane gas. The axis powers, I have read, have not been able to develop the 100 octane gas, although they have invented a process whereby they get over 87 octane. German gasoline is a good deal higher than 87 octane; it may be well up to 100, and I have been wondering just what would happen if German planes were transported across the ocean either in submarines or by some other method and came in contact with our aeroplanes on the Atlantic coast. If the Germans were using a gasoline close to 100 octane, their planes would be much faster because 100 octane gas drives the planes faster; they can also climb more quickly and carry a heavier load. A four-motored bomber, with four 1,500-horsepower engines, using 100 octane gas would carry five more 1,000-pound bombs than a plane could that was using 87 octane gas. I am just wondering what our planes on the Atlantic coast would do if attacked by German planes using this higher octane gas.

Mr. POWER: I would not be able to answer the somewhat involved technical question put by my hon. friend, but I do know that all our ships flying from Canada to Britain use 100 octane gas.

Mr. MacNICOL: That is the bombers on the ferry command?

Mr. POWER: All the planes used in our coastal operations would use 100 octane gas.

Mr. MacNICOL: But this afternoon the minister said a lower octane rating was used.

Mr. POWER: I was speaking of training planes. They would not necessarily use the 100 octane gas, but our operational planes would.

Mr. MacNICOL: That gives me a good deal of relief if our Atlantic coast planes are using 100 octane gas.

Mr. POWER: What my hon. friend has in mind probably are the planes flying on the northwest transport stage.

Mr. MacNICOL: No; I was thinking of our planes flying on the Atlantic coast.

Mr. POWER: They would all use 100 octane gas. I thought my hon. friend had in mind the planes on the northwest stage route that goes up north to Alaska. They are mostly American planes, carry American gasoline of 100 octane rating. I do not want to go into particulars, but the C47 and the Lodestar, for instance, both American planes, use 100 octane gas, like all American planes.

Mr. MacNICOL: All the gas used in the United States war planes is 100 octane. We make no 100 octane gas in Canada?

Mr. POWER: I do not think so.

Mr. MacNICOL: I hope after we win the war Canada will see to it that we get some of those vast boilers which the Germans use in the hydrogenation process to assist in making high octane gas.

Mr. KNOWLES: A few moments ago the minister was answering questions relating to the transfer of Canadians in the R.A.F. to the R.C.A.F. He left us rather up in the air, and I am still wondering if there is not something his department could do on behalf of Canadians who are anxious to make such a transfer. As he knows, there are cases of men—I have been in touch with the minister about one—

Mr. POWER: That has been under very active consideration and still is a matter of discussion with the Royal Air Force. The R.A.F., very naturally, do not want to lose some of their best men. Some of their men who joined before the war, say five or six years ago, have the natural feeling, now that we have a Royal Canadian Air Force that they would like to join us. They have first to go before their commanding officer. If he gives permission we check up on the applicant, and if he is suitable for our purposes we take him in. But so far the thing is still only being discussed.

Mr. KNOWLES: I fully understand the position of the Royal Air Force in that situation, but it seems to me that as yet the machinery is not very clear. The minister says that a Canadian in the R.A.F. who wishes transfer to the R.C.A.F. can go to his commanding officer; that is, I take it, to his commanding officer in the Royal Air Force. I have in mind a case of a Canadian, who—incidentally, he served in the last war—joined the R.A.F. before the R.C.A.F. was over there, and is now in Canada. He was posted to Canada at his own request because of the difficulties his family were facing under the lesser allowance, and he finds now that he is likely to be posted back to Britain. While he is perfectly happy to go back he would like to go back in the R.C.A.F. He tells me that he approached the R.A.F. commanding officer, and that that commanding officer told him to get in touch with the R.C.A.F. at Ottawa. He has been in touch with me, and I have taken the matter up with the minister, who has given me by letter the same reply he made this evening. There seems to be no other move which can be made; the man is stymied whichever way he turns.

Mr. POWER: The thing is in process of being settled. It is not settled yet. But the man to whom my hon. friend refers would not be suffering from lack of pay, because even if he is R.A.F., if he is in Canada he gets paid at R.C.A.F. rates of pay. Does my hon. friend understand that?

Mr. KNOWLES: I understand that perfectly. The point is that he expects to be posted back to Britain very shortly, and that if he is then in the R.A.F. his family's allowance will be reduced, whereas if he were transferred to the R.C.A.F. before being posted back, that would not happen.

Mr. POWER: My hon. friend is quite right. That is one of the things we are trying to settle.

Mr. KNOWLES: The minister will agree with me that this man faces quite a difficult situation.

Mr. POWER: Quite.

Mr. MacNICOL: I wonder if the minister has in hand a statement of the approximate number of gallons of gasoline that were used, say last year, or the number estimated to be used under this appropriation, by our air force overseas—

Mr. POWER: My hon. friend wants to know how much gasoline we use in our training schools in Canada?

[Mr. Power.]

Mr. MacNICOL: How many million barrels?

Mr. POWER: My hon. friend wants the figures of consumption in Canada, does he? I would not know what was being used by our squadrons in Britain. If my hon. friend wants to know how much gasoline is used in our training schools in Canada I will try to get that for him.

Mr. MacNICOL: I should like a compilation of the amount of gasoline Canada is using in all its war activities. I am not in a hurry to have the figures to-night. Would the minister give the number of barrels, and the octane content, first in Canada, then the number used on the sea-coasts in the defence of Canada, and also the number we pay England for, in the flying of our air service overseas?

Mr. POWER: As to the first two matters for which my hon. friend is asking, what we are using in training, I think I can get for him; then, what we call home war establishment on both coasts, I think I can give him that too; but I doubt very much whether the British government would let me know how many gallons of gasoline they use in our squadrons over there.

Mr. MacNICOL: I wondered how this estimate was made up. Would the minister not have some record from the British government of how many gallons of gasoline they call upon us to supply to fly our machines overseas?

Mr. ROSS (Souris): If the minister is getting that information as regards gasoline, I wonder if he would couple it with the amount of motor oil—lubricating oil for machines—used in Canada.

Mr. POWER: I think we can get that.

Mr. ADAMSON: Does the same agreement apply to Canadians in parts of the world other than England?

Mr. POWER: In Ceylon and—?

Mr. ADAMSON: Africa.

Mr. POWER: Absolutely.

Mr. ADAMSON: How about ground crew? The other night the minister was discussing the relative numbers of Canadians in the Canadian squadrons and Canadians in the R.A.F. squadrons. The Canadian squadrons now have Canadian ground crew. Are there any Canadian ground crew with R.A.F. squadrons, or are there any Canadian ground crew in other parts of the world than Great Britain?

Mr. POWER: We have something like 5,000 radio mechanics who are in the R.A.F. all over the world. They are ground crew; they are not flyers.

Mr. ADAMSON: Are they considered ground crew?

Mr. POWER: Yes. They do not fly. They are not aircrew.

Mr. ADAMSON: No; they do not fly, but I did not know that they are definitely considered as ground crew. One more thing: There is no formation in Canada corresponding to the R.A.F. regiment?

Mr. POWER: No.

Mr. ADAMSON: We have no such unit for aerodrome protection?

Mr. POWER: The army does that for us. It is mostly veterans' guard.

Mr. BLACKMORE: Referring to the matter of Canadians serving in the R.A.F., I wonder if there is any sufficient reason why Canada should not undertake to pay Canadians who are serving with the R.A.F. such an amount as, added to what they are receiving from the R.A.F., would put them on a basis equal to that enjoyed by those serving in the R.C.A.F.

Mr. POWER: We do that; all Canadians who enlisted in the R.C.A.F. originally and are overseas, whether they be in Burma or India or Ceylon, are being paid Canadian rates of pay. The only question is that of men from Canada who before the war went to England and joined the R.A.F. They never were R.C.A.F.; they joined the R.A.F. and still belong to it.

Mr. DOUGLAS (Weyburn): But they are Canadians.

Mr. POWER: They were born in Canada; they are Canadians. But the question becomes more and more complicated. If you go back twenty-five or thirty years you will recall that quite a large number of men—Collishaw, for instance—who were in the Royal Air Force, remained with it after the war. I doubt very much whether these people want to come to the Royal Canadian Air Force, and if they did I do not know just how they would fit in our picture if they are senior to many of our people. But the ordinary man who left here before the war—a great many of them went over in cattle-boats and the like because they were in a hurry to join up—can make application to his commanding officer, and if the commanding officer—who is Royal Air Force—approves it we will accept it. As, however, I told my hon. friend, the question is not quite settled; there are all kinds of difficulties about it. The man who enlists in the Royal Air Force joins for six years; with us in the Royal Canadian Air Force he joins for the duration of the war. The Royal Air Force would have the right to say to us, "This man has joined for six years. If you take him into the Royal Canadian Air Force, will you pay him for the services he does not render us?" The pension rates have been fixed by the Minister of Pensions and National Health and next-of-kin of the men would be paid at the Canadian rates of pension. If they left four years before the war they are on Canadian rates of pension. The only question for them is, do they want to come to the Royal Canadian Air Force. If they do we are most sympathetic, but we cannot buy them out of their contract with the Royal Air Force.

Mr. JOHNSTON (Bow River): Although they are on Canadian rates of pension, the British government has to pay the pension?

Mr. POWER: Yes; that is to say, if they have a disability when they come back; or if unfortunately they are killed, their widows or mothers, or whoever the next-of-kin may be, will be on Canadian rates of pension.

Mr. JOHNSTON (Bow River): Paid by the British government?

Mr. POWER: Paid by the Canadian government.

Mr. JOHNSTON (Bow River): The Canadian government?

Mr. POWER: The British pay according to their rates and we make up the difference.

Mr. KNOWLES: May I press further the case of the family of the man to whom I referred a few minutes ago. This man is one of those who got over to Britain probably on a cattle-boat before the Royal Canadian Air Force got there. He was a Canadian, with a home and a family in Canada. He went to join the Royal Air Force and is still in the Royal Air Force. While he was in England his family in Canada received allowances less than those received by dependents of Royal Canadian Air Force men, but he was posted to Canada and is here now and the allowance paid his family has been increased. When, however, as is quite likely, he is posted back to England in the near future, the allowance received by his family will go down again.

Mr. POWER: That is so.

Mr. KNOWLES: If it is possible for extra payment to be made to the family of this

Canadian in the R.A.F. while he is in Canada, why is it not possible for that same extra amount to be paid to a Canadian in the R.A.F. in England?

Mr. POWER: The hon. member states the case accurately; what he has said is quite true. I do not know, however, why the Canadian government should be charged with the payment of extra rates for somebody who is not serving this government. He is serving the British government.

Mr. KNOWLES: Who pays the difference between the British and the Canadian rates while this man is posted in Canada?

Mr. POWER: The Canadian government does.

Mr. KNOWLES: Then one might ask, why should the government do that? If the government does that while the man is in Canada, why not do it for him while he is in England?

Mr. POWER: I am advised that he is a servant of the air training plan and that a part of his salary would be charged to Great Britain. We pay the whole lot and Britain pays its share to us. That is the only way I can explain it.

Mr. HANSON (York-Sunbury): He is serving this government.

Mr. POWER: While he is here he is serving this government. When he goes back to England he is not serving this government and I do not know what justification there would be for us to pay extra to his wife or next-of-kin when he is no longer our servant.

Mr. KNOWLES: While he is in this country he is serving this government, and yet the minister is not in a position to make representations on the man's behalf in his endeavour to be transferred.

Mr. POWER: I could make representations, but I very much fear the British government would not listen to them. If this committee thinks that we should pay somebody who is serving some other government, that is a different matter. As I have told my hon. friend, this is one of the thorny points we have to discuss and decide. We could transfer him to the R.C.A.F. if the British government would allow him to be transferred, but they think he is too valuable.

Mr. HANSON (York-Sunbury): He is their enlisted man.

Mr. KNOWLES: I can see that the problem is thorny if you try to force the R.A.F. to allow the man to transfer to the R.C.A.F., but it is not quite so thorny to consider paying the dependents of a Canadian, when he is in England, just as you do when he is here. I wonder whether that point has been given consideration.

Mr. POWER: I am advised that we have made representations. If we want to pay R.C.A.F. dependents' allowances to all wives and next-of-kin—New Zealanders, Australians and everyone else—of men who serve in Canada, the other governments would not like to undertake that financial obligation. It is too much. They do not want to take it on. The R.A.F. have fixed their own rates and they do not see why they should pay Canadian rates.

Mr. KNOWLES: At the moment I am not suggesting that you should try to get the R.A.F. to increase its rates. I am suggesting, however, that the Canadian government, which pays the difference to the dependents of a Canadian while he is located in Canada, should also consider paying that difference to the dependents of a Canadian while he is posted in England.

Mr. POWER: I will look into the matter. I am serious about it when I say that I do not know how it can be done. After all, he is working for another government. He may be a Canadian, but he hired himself to another government. Why, therefore, should we pay him the difference between our rates and the salary which he contracted to take, including his dependents' allowance and what have you? If the Canadian people wish to do it I have no objection. Perhaps my hon. friend can make a good case.

Mr. KNOWLES: It is tough on the dependents here.

Mr. POWER: Yes; but why should we take over responsibilities that are not ours? We are not getting service for it from the man in question.

Mr. DOUGLAS (Weyburn): Does it not rather weaken the minister's argument when you reflect on what he said a few minutes ago? If this man, a Canadian in the R.A.F., is unfortunately killed overseas, this government will accept responsibility—

Mr. POWER: My hon. friend has me there.

Mr. DOUGLAS (Weyburn): —for dependents' allowance, in addition to the British dependents' allowance, although he was not this government's responsibility and was not serving them. This government, nevertheless,

have agreed to pay that difference. It is a very good idea, but if you carry the argument to its logical conclusion it weakens the minister's argument.

Mr. POWER: I fear my hon. friend has me there; he is logical and I was not. It is the Minister of Pensions and National Health, with his well-known sympathetic consideration, who has put it over for the pensions. The position is most illogical, but it exists.

Mr. NOSEWORTHY: Just what is the difference between your paying these boys the difference between the English and the Canadian standards and paying the R.C.A.F. boys who are serving the R.A.F. as you do? What is the material difference?

Mr. POWER: I do not quite understand that.

Mr. NOSEWORTHY: We pay the Canadian boys who are now serving in the R.A.F.—

Mr. POWER: Right.

Mr. NOSEWORTHY: —because they belong to the R.C.A.F., and we make up the difference?

Mr. POWER: Yes.

Mr. NOSEWORTHY: So far as their contribution is concerned, where is there any difference?

Mr. POWER: None.

Mr. NOSEWORTHY: Is it not all the same cause?

Mr. POWER: The only answer is that one contracted with the Canadian government and the other with the British government.

Mr. NOSEWORTHY: But it is all the same cause.

Mr. POWER: I agree with my hon. friend and I have been trying to work it out, but I have not yet done so. If the committee will let me struggle with it again we may succeed.

Mr. KNOWLES: May I make a further comment in connection with the minister's struggle. The man who joined the R.A.F., when he is over here in Canada, is rendering us a service, the minister says, and therefore we are liable for him. If you are to be consistent you should say that the man in the R.C.A.F. serving with the R.A.F. should not be our responsibility. I do not want the minister to adopt that principle, but it is logical. It seems to me that if we still maintain responsibility for those who are with the R.A.F. when they are here in Canada, it is perfectly consistent for us to accept responsibility for Canadians who are with the R.A.F. over on the other side.

Mr. POWER: Perhaps I did not make myself clear. If the man is serving in Canada in the empire training plan, it is the plan that is responsible for him while here, though Canada is the administrator of the plan. Britain pays fifty per cent of the cost, so that he is charged to the plan and Canada only pays fifty per cent of the increased pay and allowances. Then when he goes back to Great Britain, as my hon. friend suggests he is on R.A.F. rates of pay; he is not on the Canadian rates or the B.C.A.T.P. rates. Then he is working for the British government, not for us. I do not mind studying the point further, but I am convinced that it would not be logical for us to pay his salary and allowances any more than it would be logical for us to pay a share of the salary of the colonial secretary, say, or anything else. It is true, of course, that we are fighting for the same cause.

Mr. KNOWLES: As the hon. member for Weyburn says, it is just as logical as what is being done by the Minister of Pensions and National Health.

Mr. POWER: Yes; we have done an illogical thing in taking responsibility for the man's pension.

Item agreed to.

14. Sundries: including printing, stationery and other costs not included in the above items, $7,818,706.

Mr. FRASER (Peterborough West): Does the printing of the casualty lists come under this heading, the information bureau which sends out those casualty lists?

Mr. POWER: All printing comes under this including our publication called *Wings;* I do not know whether my hon. friend has ever seen it.

Mr. FRASER (Peterborough West): The information bureau sends it out?

Mr. POWER: The casualty list; not *Wings.*

Mr. PERLEY: Where is that edited?

Mr. POWER: At our headquarters here in the Jackson building. We have a printing establishment of our own, and we sell this paper for five cents. It is rather a good looking publication.

Mr. PERLEY: What is the cost of operating it?

Mr. MacNICOL: Does it pay for itself?

Mr. POWER: I do not know but it must come pretty close to it. We do not carry any advertising in it, so that the revenue comes from sales at five cents per copy.

Mr. CRUICKSHANK: Does it carry any of the speeches in this house?

Mr. POWER: No.

Mr. MacNICOL: How is the increase of $3,000,000 made up?

Mr. POWER: Does my hon. friend want a break-down of these sundries?

Mr. MacNICOL: A break-down of the additional amount. How is the increase made up?

Mr. POWER: There are four items I have here: photographic equipment, printing and stationery, air cadet expenses and air cadet capitation grant, and sundries. There is a sum provided under B.C.A.T.P. for photographic equipment.

Mr. MacNICOL: That is for taking photographs from the planes?

Mr. POWER: This amount in item 14 includes such things as public relations, photographs of our airmen and so on. We have a little procedure of our own; if unfortunately a man is killed we like to be able to send a photograph to his next-of-kin.

Mr. MacNICOL: It does not mean the equipment used to take photographs from planes?

Mr. POWER: No.

Mr. FRASER (Peterborough West): Does that include the photographing of the letters of airmen which are sent by air mail, the airgraph letters?

Mr. POWER: No; those come under the Post Office Department.

Mr. ADAMSON: The minister has not given any figures in regard to recruiting. What item do they come under?

Mr. POWER: They are in here.

Mr. ADAMSON: What is the cost of recruiting?

Mr. POWER: It comes under the sundries; I will get it. The total cost of advertising recruiting campaigns last year was $340,000. The total anticipated for this year is $750,000. That covers radio, advertising and all the things that go with recruiting.

[Mr. MacNicol.]

Mr. ADAMSON: Is the air force still carrying on that campaign of advertising in the small weekly newspapers, does the minister know?

Mr. POWER: I do not think so. I think principally we are publishing half-page advertisements in the metropolitan dailies and that sort of thing. It costs quite a lot for a half-page advertisement.

Mr. ADAMSON: And of course this includes the recruiting for the women's division?

Mr. POWER: Yes. We are now looking principally for aircrew.

Mr. BOUCHER: Could the minister give some explanation as to the rapid increase in the cost of recruiting, some general explanation?

Mr. POWER: Any explanation would only be this, that a year ago it was very easy for us to get aircrew; they were flocking into our recruiting depots, but now it is becoming tougher to get aircrew and we have to go out and look for them. At one time we really had too many; now we may be running short, though not very much.

Mr. BOUCHER: Could the minister give any particulars as to any new means or methods that are being employed in connection with recruiting, which would bring about this increase in cost?

Mr. POWER: By full-page or half-page advertisements in the newspapers; by radio talks; by moving pictures; by any sort of stimulation that would make the younger generation want to join the air force. We have the air cadet league and all these things which go to make people feel that they would like to join the air force, and what we really need are aircrew.

Mr. BOUCHER: Then the minister would say there is no new method of recruiting but rather a general expansion of the old methods?

Mr. POWER: Yes.

Mr. EDWARDS: Is the cost of the air cadet movement included under this item?

Mr. POWER: Yes. Expenses last year in connection with the air cadet league were $1,100,000, and the air cadet capitation grant—that is to say, we pay so much for the clothing of the air cadets—came to $20,000 last year and is estimated at $35,000 this year. We expect fifteen thousand more air cadets.

Mr. NOSEWORTHY: Are many transfers accepted from the army into the air force

ground crew? I am thinking of a number of men who have sought to be transferred from the army to the ground crew of the air force. Is there much of that being done?

Mr. POWER: I would not think so; certainly not at the moment. A man has to get permission from his commanding officer before he can transfer, or rather he must get his discharge from the army and be reenlisted in the air force, and that is rather difficult.

Mr. TUSTIN: To get back to the question of advertising, all over the country to-day we see large photographs which look like lithographed pictures in colour. As I go down the main street of my own town I see three or four of these large photographs in each store window. To me they look like costly photographs, and I should like the minister to tell us approximately the cost of each one. It seems to me this is a great waste of money. Surely we should be able to advertise the air force to better effect than through these pretty pictures, especially when we see three or four of them stuck in a small store window in a small town. I have had a great many people complain to me of the extravagance shown by scattering so many of these pictures around the country.

Mr. POWER: I would have to find out the cost. The problem of recruiting is, I suppose, like the problem facing a tobacco company, say, that wants to sell its cigarettes. It constantly impresses upon the public that its cigarette is much better than any other. That is what a company does when it wants to sell tooth-paste, and so on.

Mr. TUSTIN: And are you trying to show that the air force is better than any other service?

Mr. POWER: Therefore the air force has these pictures, but I could not tell my hon. friend what they cost per sheet.

Mr. TUSTIN: They are very extravagant-looking pictures.

Mr. POWER: Yes, they are very extravagant-looking. And the reason why we want to make them extravagant-looking is that we want to make people say they want to join the air force.

Mr. EDWARDS: Is this advertising, so-called, done through recognized commercial advertising agencies? Is the advertising placed through that sort of medium, or is it done directly by the air force through posters in the newspapers?

Mr. POWER: I think it is done through advertising agencies, usually. There is one in Toronto, I believe—Cockfield, Brown and Company. I am not sure of the name, but anyway there is one. In fact I think all the advertising agencies have got together now to carry most of the government advertising. I believe that organization is known as National Advertising. There has been an amalgamation anyway. I would not really know the name of the firm that carries our advertising, because it is all mixed up together.

Mr. JOHNSTON (Bow River): The thing which amazes me is that when the minister rises in his place to talk about his methods of recruiting he refers to the cost of advertising. It boils down to this, that the one of the three armed services which can do the best advertising gets the recruits. I can just imagine that when the Minister of National Defence for Naval Services is before the committee, and we ask him how he gets his men, he will say it is done by advertising. He will say that they have to go out and advertise, and that they have to advertise a little more attractively than does the Minister of National Defence for Air.

Therefore, in the final analysis, the fellow who makes a profit out of this thing is the advertising man. I must say the whole method is wrong.

Mr. ROSS (Souris): Is there any cooperation among the three armed services in the matter of going after recruits? I am wondering where national selective service enters into the picture. According to the minister's story, this is a matter of competition between each department to see who can put on the best show, to get the men. Is that correct?

Mr. POWER: I would not exactly say that. As a matter of fact the Minister of National Defence for Naval Services says he does not have to advertise for the navy, because it has an appeal of its own. For many months we in the air force did not have to advertise, either. But at this time we shall have to advertise, if we want to get the people we want. And I am not in competition with the Minister of National Defence, army, because we have a different class of people we take. Possibly I should not put that on *Hansard*—I should say not a better class.

An hon. MEMBER: Better put a soft-pedal on that.

Mr. ADAMSON: National selective service does not help you, at all?

Mr. POWER: They would not help in connection with the people we want. We want aircrew, and you cannot conscript men

to fly an aeroplane. They have to be either natural fliers, or volunteer for duty, because in no place in the world, so far as I know, have they had conscription for aircrew.

Mr. ADAMSON: I agree with that, entirely; but the young boy who leaves school, and is reaching his callable age, might go to the national selective service and say, "I am about to be called." The selective service man might say, "You had better hop around to an air force recruiting station, because you are a pretty bright-looking lad." Then he might say to the other fellow, "You had better wait until you are called up, because you are not so bright." One fellow is turned away because he may be none too bright, and the bright fellow goes into the air force.

Mr. POWER: I was not going to say exactly that, but that is about the truth of it.

Mr. ROSS (Souris): The minister has said he cannot conscript these people to fly. I am satisfied that many of the best men in the aircrew overseas have been chaps who in the early days of the war received their call, or were conscripted in Canada. But they decided they were going to join the air force.

Mr. POWER: Perhaps my hon. friend is right, in respect of many cases.

Mr. NOSEWORTHY: If the young men called up under the National Resources Mobilization Act were given some time after they were called to volunteer for air force or ground crew the minister would not have to advertise for recruits. He would not have to advertise if he were given that choice of going into the air force after they were called up for military service. He could take his pick of all he wanted.

Mr. POWER: I think when they are called up they are supposed to report to the army centre. But before they report they can come in and report to the air force.

Mr. STIRLING: And they do.

Mr. POWER: And they volunteer for air force. Many of our ground crew have been called up. But there are not so many in connection with aircrew, because they are mostly younger men. Our aircrew now are nearly all under twenty-one years of age. Originally we took them up to thirty-two years, but that class is now pretty well exhausted. We are taking them between eighteen and twenty-two.

Mr. EDWARDS: Is it possible, in respect of a young man who is anticipating a call-up probably in a year or six months, to take him on strength and give him leave to continue in his civilian occupation until such time as the air force requires him to report for duty. It has come to my attention at least on one or two occasions that it is possible for a young man to come to an air force recruiting station, be sworn on strength, taken into the force and then given indefinite leave for maybe three or four or five months, before being required to report for service, and in that way he avoids being taken into the army in the regular way.

Mr. POWER: That was the custom about a year ago. Since March, 1941, in connection with applications for enlistment as aircrew, men enlisted in the R.C.A.F. immediately upon application, even though some period might elapse before they could actually commence their training. In those days we had more than we knew what to do with. But now they might get a month or two months. A man might enlist to-day, and we would say, "Come back on July 15." They do not get more than a month.

Mr. JOHNSTON (Bow River): He is actually on strength, though, when he does enlist?

Mr. POWER: Yes, and he is paid one dollar when he is sworn in.

Mr. FRASER (Peterborough West): He is a dollar-a-year man.

Mr. JOHNSTON (Bow River): If he were discharged, and the question of pension arose, would the Minister of Pensions and National Health say he was not in the air force?

Mr. POWER: My hon. friend asked that question the other day. Immediately the applicant completed his enlistment he would become an airman and, as such, would be subject to air force law, and to the proper orders of superior air force authority. His leave of absence could therefore be terminated at any time by directing him to report for duty. During the period of leave of absence without pay, however, he would not be liable to perform any air force duties, and in consequence, in the event of his being injured or killed during that time no claim for pension would arise because the same would not be based upon an injury received arising out of the performance of an air force duty.

Mr. JOHNSTON (Bow River): My point was in connection with an enlisted man who was sent home for a month on leave, without pay—or just a dollar, as the minister indicated. He did not contract the sickness at that time, but contracted it after he was

called up again and was placed on duty under the R.C.A.F. It was then that the question of pension came up. They said, "You were not enlisted. You were not in the force at that time, and we can only count you in the force, so far as pension is concerned, from the time you were recalled." That is my point.

I say that when he came back, after being called the second time, he was actually on the force from the day he first enlisted. He contracted the illness after the second call, and his pension should begin from the time he actually enlisted.

Mr. POWER: My hon. friend is referring to the Sommerville case.

Mr. JOHNSTON (Bow River): Yes.

Mr. POWER: I am having it looked into. That is really a pension case, rather than an air force case, because, after all, once a man is discharged from the air force, his pension must be handled by the Minister of Pensions and National Health.

Mr. JOHNSTON (Bow River): I agree with the minister on that, namely, that it is really a pension case.

Mr. POWER: Yes.

Mr. JOHNSTON (Bow River): But it is also a matter of principle. If, after a man is called up the second time, an illness occurs, for purposes of pension he should be considered as having been on the force from the day he was sworn in, not from the day he received his second call-up. That is a matter of principle which should be cleared up. I am glad the minister is looking into the other case.

Mr. MacNICOL: I was going to ask a further question along the lines of one I asked a few days ago. I have just forgotten what answer the minister made with respect to the fleet air arm. We have not a fleet air arm here. But the British are recruiting in Canada, are they not? How are our young men being enlisted here and sent overseas?

Mr. POWER: My hon. friend the Minister of National Defence for Naval Services says he does not think they are. I do not know, really. There may be some who are being enlisted in the fleet air arm of the Royal Navy, but I cannot say, from my own knowledge.

Mr. MACDONALD (Kingston City): Not now.

Mr. POWER: The minister says it is not being done now.

Mr. MacNICOL: I do know about this, because just a few days ago a young friend of mine went overseas, to England. He was only nineteen years of age. He went to the fleet air arm, and it is my understanding that someone here in Canada induced him to join up, and to enter that branch of the service. Of course he may have wanted to go; but how did he get into the fleet air arm? How are they enlisting?

Mr. POWER: I do not know how to answer my hon. friend. I am trying to get all the recruits I can for the Royal Canadian Air Force. I really would not know how they are getting recruits for the fleet air arm. The Minister of National Defence for Naval Services says he does not think they are doing it. But if my hon. friend has a case in mind, then it must be done. There is nothing to stop its being done. But there is no encouragement by way of financial assistance being given by the Canadian government to people who are enlisting in the fleet air arm. That is the best answer I can give.

Mr. FRASER (Peterborough West): Early this year I had a call from two men who had joined the R.C.A.F. in January, and were told to report some time in March. They were given a card which instructed them to tell their employers that they had signed up, but to continue with their jobs. They told their employers, and they were immediately given notice that they would be through at the end of the week or at the end of the following week. They then had two months to put in before they would join the air force. I immediately took the matter up with the minister's department and these boys were called earlier, but this might happen in other cases where boys might be left out on a limb until they were taken into the force. I think these men should be warned that when they tell their employers they should watch out and let the air force know if they are fired from their jobs.

Mr. POWER: At the present time I doubt if there is more than one month from the time they actually sign on until they are called in.

Mr. FRASER (Peterborough West): In this case it was over two months.

Mr. POWER: In January we had a surplus; now we are running into a shortage, but we expect to have a surplus in June or July.

Mr. BOUCHER: Following up the matter referred to by the hon. member for Daven-

port, is it not a fact that when a man in Canada who is not subject to call under national selective service wishes to go overseas to join the fleet air arm or the ferry command he must first get a permit from the Department of Labour, and that the Department of Labour will not issue such permit unless it is concurred in by the air force?

Mr. POWER: I never heard of any such rule. It may exist, but the question has never come up. In the early days or before the war a great many young Canadians went overseas to join the R.A.F., but since the war, since they have had the opportunity of joining the R.C.A.F., very few have gone over.

Mr. BOUCHER: I was referring to men who might not be qualified for pilots' positions in the air force and who are not subject to military call.

Mr. POWER: If a man wants to join the ferry command he must be a pilot or a navigator or an observer and would have to be trained unless he was a former bush pilot.

Mr. BOUCHER: I am referring to men who have paid for their own tuition at flying schools and who might be above the age limit permitted by the R.C.A.F. I have known of one or two cases, and I wonder if this is the government policy?

Mr. TUSTIN: Is there not some establishment of the fleet air arm attached to certain stations in Canada?

Mr. POWER: Under a contract with the British admiralty we are training airmen at Kingston for the fleet air arm, but they all come from the other side. An elementary school will be opened in October; Kingston has been in operation for over a year, and there is another in Nova Scotia. These men train under the British commonwealth air training plan, but they go to the British navy. They come from Great Britain; they are not recruited in Canada, but they receive their full training here.

Mr. MacNICOL: I know of several young men who had passed the university school with the highest honours, and they were sent overseas almost immediately.

Mr. KNOWLES: Since this is the last item, perhaps the minister will tell us when we may expect answers to questions which have been asked, but which have not yet been answered.

Mr. POWER: I shall have to check *Hansard*. I shall be only too glad to ask my colleague to answer them on the opening of the house to-morrow. There are a great many questions that will have to be looked up, but we will put the answers on *Hansard*.

Mr. KNOWLES: I am particularly interested in one I asked with reference to the average rate of wages paid to civilian employees in various classifications and which appears on page 3251 of *Hansard*.

Item agreed to.

Mr. POWER: I do not want to block my own estimates, but I have a duty to perform. I made a statement on Thursday on commissioning, and the high commissioner for Great Britain wants me to correct any impression I may have left in the minds of hon. members. Therefore, I should like to read into *Hansard* a letter which he wrote me, as follows:

Dear Mr. Power:

In the course of your speech on air force commissioning in the House of Commons on the 2nd of June, you stated the Royal Air Force policy to be that an arbitrary figure of fifty per cent of graduates from training schools, namely thirty-three per cent on graduation and seventeen per cent after service in the field, were commissionable, and no more. This would mean that the R.A.F. had established 50 per cent as a rigid maximum of all pilots, observers, navigators and air bombers who could receive commissions.

That is not the case. The policy is that all members of aircrews of the above categories who qualify for commissions shall be commissioned, although the Royal Air Force view is that not more than about half of aircrew posts need to be filled by commissioned officers. It is also true that experience has shown that no more than 50 per cent qualify for commissions in practice. For this reason it was decided that some 33 per cent should be eligible for commissions on graduation, whilst a further 17 per cent should be recommended for commissions after a period of operational service. But these percentages do not exhaust the opportunities of commissioning, since the Air Ministry are always prepared to consider any number of additional recommendations on the strength of operational records. Whilst the suitability of a certain proportion of pupils for commissions can be clearly recognized at the stage of graduation from training schools, the R.A.F. feel that the test of the qualities of the others cannot really be satisfactory except in actual operations. No commanding officer of any squadron in the R.A.F. has then any limit placed upon the number of recommendations that he can make. On the contrary, he is encouraged to recommend any pilot, observer, navigator or air bomber who possesses the necessary qualities of leadership and command.

This policy was affirmed clearly during the Ottawa conference in May last year, and it is not qualified by any question of rigidity in the matter of establishment or any other consideration except the qualifications of the individual.

The Royal Canadian Air Force have adopted their own policy. They have as much right as the R.A.F. to adopt whatever policy they consider best, and the R.A.F. are cooperating fully in the implementing of that policy so far as

Canadian personnel are concerned. This is only one example of the spirit of comradeship in which our air forces are operating together against the enemy.

Mr. CASTLEDEN: That means in reality that you would not be embarrassing the Royal Air Force by granting commissions to more than fifty per cent.

Mr. POWER: Exactly.

NATIONAL DEFENCE FOR NAVAL SERVICES

Hon. ANGUS L. MACDONALD (Minister of National Defence for Naval Services): Mr. Chairman, on the 3rd of March of this year my colleague the Minister of Finance placed on *Hansard* a table showing the estimated expenditures of the Department of National Defence for Naval Services under some thirteen main heads. I should like now to place on *Hansard* a further table showing the same figures given three months ago by the Minister of Finance, which were for the present year, and showing also the estimated expenditure for the same items for the last fiscal year. It is as follows:

Department of National Defence
Naval Service

Comparison of Estimated 1943-44 Cash Requirements with Estimated 1942-43 Expenditures for all votes combined

Objects of expenditures	Estimated expenditure 1942-1943	Estimated expenditure 1943-1944	Increase
1. Civil salaries and wages	$ 3,645,222 28	$ 6,192,054 00	$ 2,546,831 72
2. Pay and allowances	63,236,432 19	89,565,119 00	26,328,686 81
3. Travel, transportation and freight	3,382,574 74	6,978,000 00	3,595,425 26
4. Construction, purchase, repairs and operating expenses of properties—			
(a) Capital expenditure	16,490,051 37	36,579,608 00	20,089,556 63
(b) Repairs, operating expenses and rentals	1,831,417 80	6,267,182 00	4,435,764 20
5. Personnel supplies and services: food, medical and dental stores, clothing and personal equipment	10,000,812 96	22,015,072 00	12,014,259 04
6. Signal and wireless equipment, line construction, etc.	986,447 64	4,592,188 00	3,605,740 36
7. Ammunition and bombs	3,100,416 01	14,245,890 00	11,145,473 99
8. Armament, including rifles, machine guns, naval guns, etc.	3,947,684 19	42,415,548 00	38,467,863 81
9. Fuel cost of ships	4,088,267 74	25,257,798 00	21,169,530 26
10. Acquisition, construction, charter, repair and upkeep of ships	74,979,157 67	167,571,202 00	92,592,044 33
11. Naval stores: small boats, minesweeping, degaussing, anti-submarine, fire-fighting and training equipment, etc.	19,738,111 08	57,651,110 00	37,912,998 92
12. Miscellaneous stores and services: printing, stationery, laundry, office machinery, teletype rental, etc.	1,268,148 72	6,552,959 00	5,284,810 28
13. Sundries: postage, pilotage, prize funds and other costs not included in above items	1,127,524 91	3,261,237 00	2,133,712 09
Totals	$207,822,269 30	$489,144,967 00	$281,322,697 70

It is now some thirteen months since I presented the last estimates of the Department of Naval Services. Much has happened in those months. We have undertaken certain new duties; we have continued and enlarged upon some old tasks. We have had some brilliant successes; we have had some tragic losses. But on all these matters a great deal has already been said through the medium of speeches, interviews with the press and statements in the press or by radio to the Canadian public. Therefore I doubt whether I can enlighten the committee to-day by presenting any new material. I can only hope to survey events that are already for the most part well known, to bring together in what I trust will be convenient form information that in one way or another is already, I am sure, in the minds of hon. members.

The story which I have to tell, Mr. Chairman, is in the main a story of progress, progress in the size of our navy, both in ships and in man-power, and now, I have to add, woman-power as well. When we began to build up a navy some three and a half years ago we were young to the task. Except for a few officers and men we lacked experience. We have learned something in the hard school of war, and while it would be vain to say that we are beyond the range of criticism; while it would be foolish to assert that we have not made mistakes, we can say, I think, that we have performed our duties with some credit to this country, and certainly we can state that we have won the approval and the praise of many authorities on naval matters in other countries.

"Where the treasure is, there is the heart also." The treasure of a navy is its ships, and the heart of a navy is its men. I shall speak first of these precious and vital elements in our naval story. I shall then tell the committee something about the operations in which the Canadian navy has engaged itself. My remarks on these three topics must necessarily be general, but further detailed discussion can be had as the individual items of the estimates are under consideration.

Ships. When I first spoke to the house in November, 1940, I pointed out that at the outbreak of war the Canadian navy had some fifteen ships but that, even as I spoke, the number had grown to 155 ships of all classes. Each succeeding year since then has seen more ships built and commissioned than we had estimated. For instance, in the last fiscal year we planned to add about 100 ships to our strength. As a matter of fact, we added over 150. To-day the Canadian navy boasts a fleet of over 550 ships of all types.

That is a remarkable rise from the little fleet of fifteen with which we began the war. It represents a 36-fold increase.

During the last year two Tribal destroyers were completed for the Canadian government in British shipbuilding yards. Two more of the same type will shortly be completed and commissioned in the same yards; and two more steel are under construction in a Canadian shipyard.

Tribal destroyers belong to the largest and most powerful type of destroyer in the world. It has been and it is our feeling that these ships should see service as fleet destroyers rather than as escort destroyers, and we have made arrangements with the United Kingdom authorities to that end. The two Tribals already in commission, the *Iroquois* and *Athabaskan,* are serving with the British fleet, and the others as they are completed will join the first two. Thus eventually we shall have a Canadian flotilla of Tribal destroyers assigned for service with the British fleet and manned by Canadian officers and men.

I am glad to be able to report that the Royal Navy has in its turn placed four of its own escort destroyers at our disposal, and these destroyers have become part of the Canadian convoy escort service in the north Atlantic. These four destroyers have been renamed, according to our policy of naming destroyers of this type after Canadian rivers. We have given to these ships the well known names of *Ottawa, Gatineau, Kootenay* and *Saskatchewan.*

Mr. BOUCHER: You have not Carleton there?

Mr. MACDONALD (Kingston City): It is possible that before the end of the year the British navy will be able to give us two more escort destroyers.

This gift by the British navy is very highly appreciated, and these destroyers will be of the greatest service to the Canadian government in its escort work on the Atlantic.

While the figures which I have given as to the increase in the number of ships are matters of gratification to the Canadian naval service, they speak eloquently of the work that has been done by Canadian shipyards, and in the factories and foundries where the steel and the machinery and the other materials required by these shipyards are manufactured. In the years immediately before the war, shipbuilding in Canada was practically non-existent. Last year the tonnage of ships built, that is both merchant ships and warships would aggregate about one million tons, and this year that figure will be greatly exceeded. I think we can say now that Canada is becoming a naval and a maritime power.

Our facilities for the training of men have been developed to a point where we are now able to man the ships which are available to us. The task has been difficult, I am bound to say, but we have always been able to keep the manning of ships abreast of construction, so that our ships are not kept out of operational duties through lack of trained personnel.

Men. I now come, Mr. Chairman, to the question of men. We began this war with an active service personnel of 1,774 men. At the end of the last fiscal year, that is on March 31, 1942, our personnel had grown to

31,000, and it was our plan to take men into the service last year at the rate of about 1,000 a month.

Now in the case of personnel, as in the matter of ships, we have far exceeded our estimate. In the year that has passed we took in about twice as many men as we had planned to take. To-day the man-power of the Canadian navy stands at approximately 60,000.

We have doubled our size in the last fourteen months. We have increased our stature thirty-four times since the outbreak of war.

That is a rate of expansion not paralleled, I believe, in all naval history. An article in the March issue of the British magazine *Shipping* described it as an all-time record. On the list of the navies of the British commonwealth we stand second—second only to the British navy itself.

If we maintain the rate of growth which we now contemplate we shall by the end of next year reach approximately the number of men that the British navy had in pre-war days. We shall have about 90,000 men.

I am sure that if, in the early days of September, 1939, anyone in this chamber had predicted that the Canadian navy would some time in 1944 have as many men as the British navy had before the war, he would be branded as a visionary of the wildest sort. Yet his vision will soon be justified. For there is no dearth of recruits for the Canadian navy. In fact, we still have a waiting list at some of our naval volunteer reserve divisions.

The men of the Canadian navy come from every part of Canada, and a few from beyond our borders. I should like to place on *Hansard* a table showing naval enlistments by provinces, complete to the 31st of March of this year:

Enlistments from September 1, 1939, to March 31, 1943

	Officers	Ratings
Prince Edward Island...	49	1,036
Nova Scotia	534	4,741
New Brunswick	119	1,651
Quebec	1,118	7,354
Ontario	1,722	20,590
Manitoba	218	4,208
Saskatchewan	130	3,657
Alberta	164	4,436
British Columbia	983	6,905
Others (incl. U.S.A. and Newfoundland)	133	222
Total.....	5,170	54,800

Some 1,400 of our officers and men are serving with the Royal Navy in widespread parts of the world. About 20,000 are serving in Canadian ships; the others are training at shore establishments.

Training. I come now to training. The training of our naval ratings is normally undertaken in one or the other of four ways. First, at Royal Canadian Navy Volunteer Reserve divisions of which there are eighteen throughout Canada, beginning with the division at Charlottetown in the east and ending at Vancouver in the west. Second, at our naval bases and training schools, of which we have seventeen. Third, in technical schools and universities, and fourth, in our ships.

It requires about six months' training for a man to qualify for the lowest rating. It takes about fourteen months to train fully a naval artisan. Stokers, engine room artificers, electricians, radio artificers, shipwright welders, motor mechanics, coppersmiths, boilermakers—these are some of the trades which have to be known and used in a modern navy. Stewards, cooks, supply assistants, waiters, also need training. Then we need gunners, torpedo men, asdic operators, men who understand the intricacies of radio direction finding, or R. D. F. as it is commonly called. We need also men who are skilled in the art of communication, who understand wireless, and visual signalling, coding and decoding.

A modern ship of war is in itself an intricate bit of machinery, and its operation requires skill, not merely in seamanship, but in a great variety of other trades as well.

The training of officers is now done at King's College, Halifax, and at Royal Roads, B.C. After an officer has completed successfully his training there, and has spent some time at sea, he may be given further courses of training ashore at H.M.C.S. *King's* or elsewhere, depending upon the specialty for which he wishes to qualify.

Early this year a new scheme for the entry of officers in the Royal Canadian Navy was adopted. In the first years of the war we followed the principle of what is known as "direct entry"; that is to say, a man could, if he was assumed to have the proper qualifications, enter into officer rank directly from civilian life. Concurrently with this system we also followed the practice of promoting promising men from the lower deck, and from the outbreak of war to the introduction of the new system, 1,086 ratings were promoted to officer rank in this way.

In February of this year we came to the decision that there should be no more direct entries into commissioned rank except in the special branches. All persons who wish to become executive officers in the naval service must enter the service as ordinary seamen and they must take at least six months' training as ratings. About three months or a little less

perhaps must be served at sea. If at the end of that six months' time a rating is considered worthy of a commission, he is commissioned as a probationary sub-lieutenant and he takes at *King's* the course of training laid down for such officers. This method of entry is new and has not been fully tested, but it is designed to put a premium on ability and adaptability to the requirements of the service.

In recent months we have made arrangements with several Canadian universities, and we hope to make arrangements with some more, for the establishment of what we call university naval training divisions. These divisions will correspond in a general way to the Canadian officers training corps establishments of the army. Preliminary instruction will be given during the academic year, and during the summer months a two weeks' training course will be provided on each coast. Students who enrol in these courses will be on divisional strength of the volunteer reserve division which is nearest to the university. I am happy to say that we received most satisfactory cooperation from the faculties of the universities in this matter, and we have also received much helpful advice and valuable assistance from the Canadian army through the units of the C.O.T.C. at the universities.

While on the subject of personnel, I should mention the fine work of the medical branch of the Royal Canadian Navy. We now have in that branch some 300 medical officers and 132 nursing sisters. Forty of our medical officers have been loaned to the Royal Navy, and many of these are seeing service with the ships of that navy in all parts of the world.

Since the outbreak of war the health of our personnel has been good; only three per cent of the days available for work have been lost through hospitalization. This represents a loss of less than ten days per man per year, and compares very favourably with the normal loss in industry. When we consider the difficult conditions under which our men often have to live at sea, the crowded living quarters, the exposure, the mental strain under which they labour, the incidence of a sickness is a matter of considerable satisfaction.

The naval medical research unit has continued to give careful study to the problem of suitable diet for men at sea, and it has made what I think are notable improvements in dietary conditions. It has also worked out an excellent type of emergency ration for lifeboats and rafts, and its improvements in this regard have won the attention and approval of naval medical men in other countries.

The studies which our medical research unit has made in rationing and in dietary problems, generally, should prove of great benefit after the war when the problem of rehabilitating and restoring the health of the populations of the conquered countries arises. I am sure that the services of such men as Commander Best of this unit, famous throughout the world for his researches in the treatment of diabetes, and of his associates, would be of great value in the solution of post-war health and dietary problems.

Sea cadets. Under the subject of personnel I must make reference to the sea cadet movement. Of striking interest during the past year has been the great growth in the sea cadet movement in this country, and in this work the navy league of Canada has rendered enthusiastic and powerful assistance. The boys who have been trained as sea cadets provide one of the finest sources of recruits which the navy has, and we estimate that to-day more than 4,000 former sea cadets are enrolled in the Royal Canadian Navy or in the Canadian merchant navy.

When I spoke to the committee a year ago, I said that there were 2,700 sea cadets in Canada. To-day there are 61 sea cadet corps and the enrolled membership is, in round figures, 10,000. Summer camps have been established in different parts of the country, and it is hoped that the majority of the cadets will be able to attend these camps. Here they will receive training in elementary naval work, in the handling of boats, in swimming, and in discipline.

We have recently held training classes for the officers of the sea cadet corps in Halifax, in Toronto, in Victoria, and these classes were attended by 175 sea cadet officers. Apart altogether from the value of this work to the navy, I am glad to say that highly satisfactory and gratifying reports have been received from the parents of the boys and from law enforcement authorities who have watched the beneficial effects which sea cadet training has had in decreasing juvenile delinquency.

W.R.C.N.S. I pass on now to the Women's Royal Canadian Naval Service. During the past year the Canadian naval service has begun to enlist women into the Women's Royal Canadian Naval Service. These women are commonly referred to as "Wrens". We have now some 2,500 in this corps. The basic training for ratings is conducted at Galt, Ontario, at an institution made available to us through the generosity of that province. The training of Wren officers is carried on at Ottawa.

Generally speaking, the services performed by the Wrens will be domestic, administrative and clerical. I must say that those who

have joined the corps have adapted themselves with great enthusiasm and efficiency to naval life and service conditions. They are working as stewards, clerks, cooks, sail-makers, laundresses, drivers, telegraphists, stenographers, and in many other positions. Members of the corps are now to be found on duty in Halifax and Deep Brook, Nova Scotia; in Ottawa; in seven of the volunteer divisions throughout Canada; as well as on the Pacific coast.

Naval College. An event of high importance in the last year, and one that I hope will be of increasing significance in the years to come, was the opening of the Royal Canadian Naval College at Royal Roads, British Columbia, on Trafalgar day, October 21, 1942.

Some 300 Canadian boys sought entrance to the institution, but the enrolment was limited to 100 students. Fifty of these, the older cadets, are taking a one-year course; fifty more have embarked on a two-year course. They come from every part of Canada, and they have been carefully selected not only on their scholastic qualifications, but also on a physical and personality basis. After they complete their work at the college these young men will undertake further training with the Canadian Navy or with the Royal Navy.

Operations. I pass on now to the third main part of this summary, namely, the part that deals with operations. The operations of the Canadian navy during the last year have taken its ships and its men to various points on the Pacific, to areas in the north and south Atlantic, and into the waters of the Mediterranean. Some of our ships have joined with United States forces in the waters of the Aleutians, and some of them still stand on guard on our western seaboard. Seventeen of our corvettes saw service in the North African expedition. The Canadian corvettes *Ville de Quebec, Port Arthur* and *Regina* definitely sank three enemy submarines and captured their crews, and other Canadian corvettes made promising attacks on submarines in that area. But our main work as a navy has been in the north Atlantic. It has lain in the protection of trade convoys, in the guarding of merchant ships, carrying food and war supplies from the ports of this continent to the harbours of Europe.

From time to time, both before the outbreak of war and since, we have received much advice as to how our naval effort could be best directed. There were some who felt that the proper role of the Canadian navy lay in the establishment of a fleet of fast motor-boats, presumably to guard our shores against the attacks of enemy surface ships. There were and there still are others who claim that we should have concentrated our efforts, at least in part, on the manning of cruisers, and still others who feel that we should have featured the building and operation of submarines.

It is true that there were several courses open to us at the outbreak of war. We could have attempted to man great ships, if we could have gotten the ships, such as battleships and heavy cruisers. These might find work to do in far away waters, but there would be very little scope for their activities in the seas that lie between America and Europe. Or, again we might have endeavoured to organize a fleet of motor-boats carrying torpedoes, or we might have attempted to form a submarine navy. These craft, too, would have to go far away from home to find work, for there were and there are few enemy surface ships in the open Atlantic. The British navy has seen to that.

But we chose another and, I believe, a truer and more natural course. We looked at our geographical position, at our great agricultural wealth and at our industrial possibilities. We knew that Canada would send across the seas not only thousands and hundreds of thousands of fighting men, but huge quantities of food and munitions of war. We knew that enemy submarines would threaten the ships which were to carry those men and supplies from Canada to Europe. Indeed, we believed from our experience of the last war that enemy submarines would be the greatest menace that our merchant ships and our troop ships would have to face.

That view, all too unfortunately, has proved correct. By almost unanimous agreement among spokesmen for Britain, the United States and Canada, the Atlantic is our first and major battle ground; it is there that the war against Hitler can be won or lost. And so we said in the Canadian navy: let us undertake the task that lies nearest to our hand. Let us build a fleet of escort vessels that will guard the lives of Canadian service men on their way to Europe, that will protect the products of Canadian farms and Canadian factories on their long journey over the seas. That seemed to be a distinctively Canadian type of effort—a close-knit, compact effort, with most of the ships being built here, the men trained here, the work directed from here. While from time to time we have assumed other tasks, in other places, we have clung to our original design, and it is on the north Atlantic that our chief work as a navy has been done.

72537—216½

Now, from the shores of this continent, over thirteen thousand vessels have sailed in convoy, carrying some eighty million tons of food and war supplies to the ports of the United Kingdom.

It must be admitted that in the early days our part in the Atlantic convoy system was small. We had at the beginning only six ships that were fit for the work. We had only a handful of men. We had to plan and to build and to train, and there is no more difficult task in all the preparation for warfare than the building up of a navy. The training of naval officers and petty officers takes time, much time. After all has been done on shore that can be done, officers and men still must have practical experience at sea. It takes time to rehabilitate shipyards and to build and equip ships. It takes time to construct ashore the facilities that are necessary to a navy—the docks, the wharves, the repair shops, the machine shops, the barracks, the training quarters for men. Bearing in mind the resources of the country in manpower, shipbuilding, ship repairing, and its possibilities as a training ground, our constant aim has been to develop a service that was properly balanced as to men, ships, training and shore facilities. Bit by bit we increased our strength and enriched our experience. From the small beginnings that I have already mentioned, we progressed step by step until last fall we were able to say that nearly one-half of the convoy escort work in the north Atlantic was being done by Canadian ships operated by Canadian officers and men.

The significance of that statement is worthy of most careful note. If the winning of the battle of the Atlantic is the first and most important of our tasks, surely it is significant that so large a share in the conduct of that battle has been entrusted to the Royal Canadian Navy. Of equal significance is the fact that on the first day of May of this year a Canadian officer was given the important post of commander in chief of the Canadian northwest Atlantic. That appointment arose out of discussions between the service forces of Britain, the United States and Canada, culminating in a conference held in Washington in March of this year. As a result of these discussions, the whole responsibility of escorting convoys between these shores and the shores of Great Britain is now divided between the navies of the United Kingdom and Canada.

Mr. HAZEN: What is the name of that officer?

Mr. MACDONALD (Kingston City): I am just coming to that. I am glad to be able to say that in selecting an officer for this important post we felt we could place our confidence in a graduate of our own Canadian naval college, in a man who has seen distinguished service with both our navy and the Royal Navy, Rear Admiral L. W. Murray, a Canadian, a Nova Scotian. He has operational control of all anti-submarine activity in the northwest Atlantic. Co-operating with him, working in the same building with him, is Air Vice-Marshal G. O. Johnson, who has been given control of all anti-submarine air activity in this area.

I am happy to say now that from the beginning the cooperation of the Royal Canadian Air Force and the Royal Canadian Navy has been close and complete. The new arrangement under which Rear Admiral Murray is made commander in chief of the Canadian northwest Atlantic, and Air Vice-Marshal Johnson is given control of the air command in that region, will mean that the resources at our command, in the way of both surface ships and airships, will continue to be utilized to the best advantage and in the closest cooperation.

I cannot pass from this topic without recognizing the assistance we have received from the United States and Royal navies. Our friends in the United States have always been glad to make available to us their ship repair and supply facilities, and sometimes their ships. Their experience and information have always been cheerfully placed at our disposal, and their air patrols over the Atlantic have been and are most welcome and helpful. The Royal Navy, as always, continues to assist our efforts. This assistance is most felt in the free use that we have been allowed to make of their unrivalled training facilities, of their plans and designs for ships and machinery and armament. We are glad to be able to offer a measure of reciprocity and the Royal Navy is now making use of some of our training facilities in this country.

The battle against the submarine ebbs and flows as the tides of the sea. We have had months when our losses of merchant ships were heavier than we expected. There have been times when our losses were lighter than we had estimated.

Hon. members will recall that in 1917 the depredations of German submarines became highly alarming. Indeed, it is clear now that there was a period of time in that year when many authorities in Great Britain feared that the war would be lost on the Atlantic. The sinking of merchant ships by German submarines had reached such proportions that many people in high places felt that if the

rate of sinking were maintained, the supply of food and munitions of war from these shores to the ports of Great Britain would dwindle and fade to such small proportions that the United Kingdom would be starved into submission. But in that year Great Britain answered the German submarine threat by introducing the convoy system. Instead of letting ships put to sea individually, Britain adopted the policy of grouping them together and sending them out with fast armed surface craft to repel submarine attacks. It is a matter of record now that after the introduction of the convoy system the losses from enemy submarine action dropped sharply.

To-day Germany is again relying on submarine warfare. She has made, within the last few months, many boasts and many threats. But so far she has not produced any new type of weapon, any novel type of submarine. She is, it is true, building stronger submarines. They are more difficult to sink. They are more heavily armed. They are better equipped. They have more bases in Europe at which they can repair, refit and refuel.

They attack now in groups, instead of singly, but beyond those things no new styles in German submarines or in German methods have yet come to our notice.

The exact number of submarines which the German navy has is known only to the Germans themselves. Undoubtedly the number is large, and their cruising range is long. We are often asked, "Where are the German submarine bases on this side of the Atlantic?" Many people think that German submarines must have some bases on this side of the ocean at which they can refuel and reprovision before starting on their homeward journey. All I can say in answer to this question is that if there are such bases on our coasts, we do not know of them. We do know, however, as I told the committee last year, that German submarines can leave their bases on the coast of Europe, make their way to the shores of Canada and the United States, operate against shipping for some time, and then return to their lairs without reprovisioning or refuelling.

Mr. GRAYDON: The minister referred to "some time". What does he mean by that, in point of actual time?

Mr. MACDONALD (Kingston City): I would say two or three weeks, depending upon how much territory they wished to cover. But I should think two or three weeks would be quite within their capacity.

Mr. ADAMSON: Two or three weeks of operations.

Mr. MACDONALD (Kingston City): Yes. In the last war German submarine bases were confined to German or Belgian territory. With the fall of France, Germany obtained bases farther to the west, and therefore nearer Canadian shores. She derived another advantage from her occupation of Norway, the low countries and France, namely that she could now establish submarine bases opening directly into the Atlantic, whereas in the last war her submarines, in order to operate against our shipping had to move out to the open sea, either through the English channel or through the North sea.

In consequence of these positional gains German submarines, even if they were only of the same type as were used in the last war, could operate much farther to the west. The result of all this was that the western Atlantic, which was practically immune from submarine attack in 1917, became in this war a very heavily infested submarine area. The fall of France was a heavy blow. In several respects it was nearly fatal to us. But in no way was it more serious than in its effect upon naval strategy. The whole Atlantic now became a submarine theatre. If the British navy, in addition to its tremendous tasks elsewhere, had to take on the added burden of protecting convoys in the waters off Canada and Newfoundland, the task would certainly have proved extremely difficult, if not indeed impossible.

It was in these months of late 1940, and in the months of 1941 that the Canadian navy, small though it was, filled the gap. In the words of Sir Percy Noble, spoken at Montreal in March of this year, "The Canadian navy sailed into the breach. The expansion of the Canadian navy solved the problem of Atlantic convoys". These are gratifying words from a man who during those difficult days, was admiral commanding the western approaches to Great Britain, and who probably knows more about convoy problems than any other living person.

It may be asked, "What is being done here and in Britain and in the United States to meet the submarine menace?" I should answer to that, in the first place, and to take events in their proper order, that the first effort of the united nations is to kill the serpent in the shell before he can be hatched. It is directed against enemy submarine bases and submarine building yards, and it takes the form of heavy air attack. The Royal Air Force, the American Air Force, and the Royal Canadian Air Force have made many such attacks, and there is no doubt that these attacks will have

their effect. But we must remember that German U-boat bases are strongly built and strongly defended. Heavy concrete cover is provided and other forms of defence are adopted, which makes the task of our air men difficult.

In the second place, we are meeting the German submarine threat by building in Britain, in the United States and in Canada, more anti-submarine vessels, more destroyers, more frigates, more corvettes. Not only are we turning out more and more ships; we are endeavouring to improve the quality of our ships, to increase their speed and to strengthen their striking power.

But it is not only on ships alone that we rely in our battle against the submarines. The aeroplane has become a most important weapon in submarine warfare. I disclose no secret when I say that the convoy which is protected by both surface craft and aircraft is in a much happier position than the convoy which is protected by one type of craft alone. If you have aircraft protecting the convoy, submarines are not nearly so likely to expose themselves by coming to the surface, because a plane in the air can spot a submarine on the surface of the water far more readily than a vessel can and the plane can, of course, speed to the attack much more readily than can surface craft.

This war has shown the value of aircraft carriers to a fleet, and we have been giving careful consideration to the possibility of establishing a Canadian fleet air arm. We have had discussions on the point with our friends in the R.C.A.F., as well as with naval authorities in Britain and the United States.

There are many factors to be taken into account, of course, and all I can say at the moment is that we are continuing to give most careful study to the whole matter, but we have not come to a definite conclusion. One of our high ranking naval officers is now abroad for the purpose of seeing at first hand the operation of carriers and of fleet air arms generally.

The Atlantic ocean is very wide and there are parts of it where air coverage is difficult to get at all times, but I can say again, as I said before, that the cooperation between the ships of the sea and the ships of the air is thorough and wholehearted.

Without disclosing a definite figure I can say, too, that both on the sea and in the air we are considerably stronger than we were last year. We have more ships, more planes, more men, more experience. Our coasts and coastal waters are more heavily defended and more ships are available for convoy escort work.

[Mr. A. L. Macdonald.]

This year the Canadian navy hopes to add some seventy fighting ships to its strength, besides a number of other ships, not of the combat type. We shall dispose of these ships to the best possible advantage. Some of them are to do transatlantic escort duty. Some of them will sweep up enemy mines, if such are sown along our coasts and shipping lanes. Others will patrol our coastal waters. The point to remember in connection with the protection of ships is that, as an English writer recently said, "The sea is one." If you have a sea lane to protect, you must protect all of it. It would be idle to mass all your protecting ships on one part of it and leave the rest of it unguarded. Naturally you put your strongest force where you expect the heaviest attacks. That is what we mean by saying that we shall dispose of our ships to the best advantage.

Last year the enemy penetrated the gulf of St. Lawrence and the lower reaches of the river and sank twenty allied ships in these waters. At that time the resources of the united nations at sea were strained to the utmost. This year a reasonable portion of our fleet is allocated to this theatre and the air protection is also stronger, so that we look on ourselves as reasonably well off in this area.

We are asked sometimes by cities or other communities whether we can guarantee that our defences are adequate, whether we can guarantee that certain localities are immune from attack. It is extremely difficult to give such guarantees. It is extremely difficult to say that under no circumstances whatever will enemy sea craft or enemy aircraft reach our shores at some point or other. Therefore, when a certain town or city or other locality asks for an assurance that nothing will ever happen to them, I find it very hard to give definite assurance.

I shall not attempt to say that we shall not have further losses at sea. Indeed, it is certain that even with our increased strength, and even if we became much stronger than we are to-day, or than we plan to be, we should still have losses. The U-boats lurking under the water, the floating or sunken mine, the enemy aircraft making a sudden thrust from the coast of Europe against our shipping lanes, the surface raider even, will continue to take their toll against our shipping.

At one time last year I made a calculation of the mileage of convoy routes which had to be protected by units of the British navy, and I estimated that 86,000 miles of sea lanes had to be guarded by that navy. When you add to that the great distances from the western coast of North America to the battle

theatres of the southwest Pacific, or even to the Aleutians, you have an immensely long line over which troop ships and merchant ships have to be protected, and you can see how difficult it is to guarantee absolute safety to any ship over these great distances.

When I add to that statement the remark that on any given day there are at least two thousand British merchant ships on the sea, not to speak of the merchant ships of the other united nations, the magnitude of the problem of protecting allied merchant shipping becomes apparent to us all.

But yet, when I look at the shipping and the submarine problem as a whole, I see no cause for alarm. Doctor Goebbels, it is true, declared a few weeks ago that the U-boats had England by the throat. There is no evidence whatever to support the statement of the eminent doctor. The fact is that in the very month of April of this year when he spoke, more merchant ships reached England from North America than in any other month this year or last year. Second, allied merchant ship losses due to submarine action in the first five months of this year were considerably less than they were in the first five months of 1942. Exactly how much less I shall not say, but I use the word "considerably" with due regard for the meaning of language. Third, we have done very well this year in sinking submarines, better than we did in the same period of last year. Fourth, there is no doubt whatever that we are now building merchant ships faster than they are being sunk. I know that this fourth answer is not a complete answer, because in some of the sinkings, unfortunately, we lose some of those excellent merchant officers and seamen who have carried on under such arduous conditions with such magnificent gallantry for nearly four years.

Therefore, while the activities of U-boats still constitute a grave problem, and while we must never for an instant relax our vigilant pursuit of them, I have no doubt as to the outcome of the struggle on the Atlantic and on other seas. I have no doubt that in time our surface ships and our air ships will triumph in that struggle.

The Canadian navy is, as to more than ninety per cent of its strength, what might be termed a civilian navy. I pay deserved tribute to our professional sailors, the nucleus on which our strength was built. Without their experience and their training the organization of the Canadian naval service to its present proportions would have been impossible. But I must at the same time render my homage to the more than fifty thousand men who have come from the ranks of the merchant service, or who have left the office, the farm, the fishing boat, the factory, the mine, the lumber camp, to join our ranks. They have quitted themselves like men and they have been strong.

Nearly one thousand men of the Royal Canadian Navy have already given their lives in this great struggle and twelve of our ships of war have been sunk. There is no sea of the world which is not hallowed as the last resting place of some of the best and bravest of our Canadian youth. They have died gallantly. They have died gloriously, and their memory will remain an inspiration to those who come after them in that service to which they gave their lives.

But they have not gone unavenged. Eight German submarines have been destroyed by Canadian ships of war. Many more have been damaged. Some more must be classed as "probably destroyed".

The heroism and the accomplishments of our men have been duly recognized. Their gallantry and devotion to duty have been rewarded by no fewer than 387 decorations and mentions in dispatches.

I have tried to give the committee in what must be rather factual and prosaic form a sketch of the Royal Canadian Navy and its work. I have only glimpsed the story. The full tale cannot be told until the veil of secrecy which necessarily surrounds so much of the navy's activities will be lifted at the conclusion of the war. He who would understand what this Canadian navy has done must himself go down to the sea in a ship. He must see for himself the hazards of convoy work, the trying weather conditions which our men have to face, whether they serve in the merchant marine or whether they fight under the white ensign. He must observe the gales, the high seas, the ice, the fog, the constant threat of the elements that must be faced, as well as the ever-present risks of war. He must talk to the men of the sea as they come in from their voyages and as they go out again, knowing that every minute of every day, for weeks on end, they run the risk of disaster and death.

He must learn the story of young Day, of Belleville, Ontario, an ordinary telegraphist aboard the Canadian ship-of-war *Otter,* who, dying on a raft in the cold of the salt winter air and water, rallied his strength to encourage his shipmates with these last inspiring words, "There'll always be an England".

He must hear sailors tell of the time when Commander Hibbard of the Canadian destroyer *Skeena* remained on the bridge of his

ship for sixty-six hours in midwinter, fighting off a bitter submarine attack on his convoy, and brought his ship safely into a United Kingdom port. For that act of enduring gallantry and for other consistently good work Commander Hibbard was rewarded with the Distinguished Service Cross.

He should listen to the story of Lieutenant Keefer, an Ottawa boy, who, when his ship was engaged in picking up survivors of a torpedoed Norwegian craft, leaped into the water to rescue a Norwegian woman and gave his own life in the endeavour to save the life of another. For his heroism he was awarded posthumously the Albert Medal and the Norwegian Medal of St. Olav, the latter being the highest award in the gift of the Norwegian government.

He ought to hear the tale of the coolness and courage of Petty Officer Bernays, of the Canadian destroyer *Assiniboine* who, in a battle with a German submarine, held to his post in the wheelhouse while flames lighted by German shells leaped around him, and while enemy bullets whistled close to him. For more than thirty minutes he stood at his wheel, receiving and executing in that time no fewer than one hundred and thirty-three helm orders and enjoying at the end the satisfaction of seeing the German submarine disappear, a broken hulk, beneath the waves, and her officers and crew captives aboard his own ship. For his superbly gallant conduct he received one of the rarest awards, the Conspicuous Gallantry Medal.

The exploits of these men and of many others like them are the stuff of which great traditions are made. These are the men who are writing indelibly the name of Canada on that great scroll which records the gallantry of the men of the sea.

Mr. Chairman, with every confidence, I put the record of the Royal Canadian Navy and the request for the moneys necessary to carry on its work before the committee and the house.

Mr. HAZEN: Mr. Chairman, the statement made by the Minister of National Defence for Naval Services about the work of his department and the activities of the Royal Canadian Navy has been a rather short one compared with those which were made by the Minister of National Defence for the Army and the Minister of National Defence for Air, but on the whole it has been an interesting and in some respects an informative statement. He spoke I think altogether for about eighty minutes.

The Canadian navy has grown greatly since the war commenced and it continues to grow.

The work of the minister and of his department has been greatly increased. Last year his estimates amounted to $258,542,713. This year they amount to $489,144,967.

In view of the development of the navy, its activities in various theatres of war, and the large expenditures involved, I expected that the minister would have made a somewhat longer statement. He painted the picture in rather broad strokes. There are many details that remain to be filled in. Many members of the committee will probably ask for more detailed information about the activities of the navy and of its administration. There are many expenditures about which we should be furnished with more detailed particulars.

Last May, when the war appropriation bill was before the house in committee, several hon. members paid tribute to the officers and men of the Royal Canadian Navy. Those tributes were well deserved. I concur in them. There is nothing of merit that I can add to what was said on that occasion.

From time to time I read in the casualty lists the names of men of the Royal Canadian Navy who died serving their king and country. Some of these men came from the constituency which I have the honour to represent, which extends for over a hundred miles along the waters of the bay of Fundy. I realize there is little if anything I can say that will assuage the feelings of the wives and children, the mothers and fathers, the sisters and brothers of these gallant men. But I know they take some comfort from the fact that their loved ones died fighting for the freedom of mankind, the preservation of our Christian civilization, and the continued existence of Canada as a free nation within the British commonwealth of nations; and I know, too, that they take pride in the fact that their kinsfolk in this tragic but glorious struggle, did not shirk their duties but played the parts of men.

It must be the firm resolve of those of us who remain that the sacrifices they made have not been made in vain, but that this war be continued at all costs and all sacrifices until Hitler and all the evils which he and his nazi party stand for are banished from this earth.

I have no sympathy with the members of this house who say that Canada is doing too much for a country of her size. How can we do too much when we fight for our existence? How can we do too much when we consider the sacrifices that each of these men and the men in our army and our air force have made? We cannot limit with any financial yardstick our contribution to this cause when we consider the contributions of those men who, dying,

have made us rarer gifts than gold. We cannot limit our monetary contribution in a cause in which they gave their lives.

There comes to my mind a statement which was made in this house about two years ago by the Right Hon. R. G. Menzies, then Prime Minister of Australia. He said, as reported in *Hansard* of 1941, at page 2632:

What does it matter if we come out into that world—

That is, the world after this war.

—bankrupt? What does it matter if we come out into that world with lower standards of material living than we have now? What does it matter if in that world the rich are not so rich? What does it matter if in the last resort the business of statesmanship in that new world becomes the business of sharing justly a new and honourable poverty? These things do not matter.

No; these things do not matter. We must keep faith with those who died in the defence of our country. We must be firmly resolved that the sacrifices they made were not and have not been made in vain.

On May 7 of last year, when the resolution to provide sums not exceeding $2,000,000,000 for the conduct of the war was before the house in committee—the amount asked for this year is $3,980,000,000—the Minister of National Defence for Naval Services informed us, as reported in *Hansard,* at page 2239, that the total amount asked for naval services for the year ending March 31, 1943, was $258,542,713. This evening before he spoke, the minister placed in our hands a table showing the estimated expenditures for 1942-43 and the estimated expenditures for 1943-44. But, sir, in the table he presented to us on May 7 of last year these items were set out in a different way; and I propose now to read into the record the manner in which he set those items out last year; for in a number of respects they are different, and perhaps quite different, although I have not had an opportunity to study the estimates he placed before us before he spoke.

The items he gave us last year were:

1. Civil salaries and wages	$ 3,768,000
2. Pay and allowances	53,195,000
3. Travel and transportation	2,585,000
4. Operating expenses of properties	1,455,000
5. Ships: acquisition by purchase, construction, charters, repairs and upkeep	80,153,000
6. Equipment division components	3,923,000
7. Purchase of new machinery and repairs to buildings and machinery	2,874,000
8. Buildings: acquisition, construction and purchase and rental of land and buildings	21,955,000
9. Stores, equipment and supplies	52,720,000
10. Armament stores	34,166,000
11. Sundries	1,743,000

On February 15, when the resolution for the supplementary war appropriation for the past fiscal year was introduced, the Minister of Finance stated that he did not think there would be any difficulty about examining the expenditures of the then fiscal year when the main appropriation bill was before the house, because that was the time, he said, when the minister gave an account of his activities over the last year. It was incidental to the passing of the new estimates, he said, that the various ministers concerned should state what had been spent and what had been done.

Now that the estimates of the Minister of National Defence for Naval Services are before the house in committee, I would ask him to tell us what has been spent and what has been done by his department during the past fiscal year. In the first place I would ask him to furnish us with more detailed particulars of the manner in which the amounts listed under the eleven headings I have quoted above were spent; and in the second place I would ask him to tell us what the increases or decreases in his estimates for the coming year are due to. I presume, in some cases if not in all, there will be increases, since the estimated expenditures for the coming year are $489,144,967, or over twice as much as last year's estimated expenditures.

The first heading in the list he furnished us with last year was civil salaries and wages, $3,768,000. This year, in the statement he furnished us with this evening, before he spoke, the amount is $3,645,222.28. I presume that must be approximately the correct amount, and the estimated expenditure for the present fiscal year he gives as $6,192,054, or an increase of $2,546,831.72.

With reference to last year's expenditure, will the minister tell us how many persons were employed and how much money was spent in salaries and wages at headquarters during the last fiscal year; how many persons were employed in each province and how much was spent in each province in salaries and wages during the last fiscal year; how many persons were employed in the United States and how much was spent there in salaries and wages; how many were employed in Great Britain and how much was spent there in salaries and wages.

On September 9, 1942, the war information board was set up by the government with the object, I believe, of informing the public, both

here and abroad, of the part Canada was playing in the war. According to a return tabled in this house on March 2 of this year, that board employed at that time about 121 persons and it had cost the country about $580,000 in a little less than six months. The supporters of the government in the house last month refused to permit the public accounts committee to investigate that expenditure. In addition to the information handed out by the war information board, each department of the government has its own publicity or propaganda department, or at any rate many of them have. Why it is necessary to have all these publicity departments or directorates of public information, and the war information bureau in addition, in view of the fact that the press has always been capable of obtaining news of the war and keeping the public informed on what is going on, is difficult for me to understand. Perhaps the minister will be able to explain it to this committee.

I would ask the minister to give the number of civilian personnel and the number of naval personnel employed in his publicity department, or in his directorate of public relations, during the past fiscal year or up to any subsequent date, and to let us know how the personnel is distributed by provinces or districts, how many are employed in Great Britain, and how many are employed in the United States.

Will the minister also furnish the committee with the names and salaries of the civilian personnel and the naval personnel employed in this branch of his department; and in addition will he give us the travelling expenses and all other expenses and costs incurred by the civilian and naval personnel in this branch of his department during the past fiscal year, in addition to their salaries and wages?

The second heading of last year's estimated expenditures is pay and allowances, $53.195,000. In the statement we are furnished with this evening that amount is greatly increased. It is $63,256,432.19. There was a considerable increase in the amount expended over the amount that it was estimated would be expended, and the amount which it is estimated will be spent this year is $89,565,119, or a further increase of $26,328,686.81.

Progress reported.

At eleven o'clock the house adjourned, without question put, pursuant to standing order.

[Mr. Hazen.]

Tuesday, June 8, 1943

The house met at three o'clock.

REPORTS OF COMMITTEES

STANDING ORDERS—CONCURRENCE IN THIRD REPORT

Mr. W. H. GOLDING (Huron-Perth) moved:

That the third report of standing committee on standing orders, presented to the house on Thursday, June 3, 1943, be concurred in.

Motion agreed to.

DEFENCE OF CANADA REGULATIONS—CONCURRENCE IN FIRST REPORT

Hon. ERNEST BERTRAND (Minister of Fisheries) presented the first report of the special committee on the defence of Canada regulations, and moved that the report be concurred in.

Mr. JEAN-FRANÇOIS POULIOT (Témiscouata): Mr. Speaker, I have just a word to say about this matter, one I have been thinking of for a long time. I have in mind the case of ex-mayor Houde, of Montreal.

Some time before the federal election of 1930 municipal elections were held in Montreal. In order to get information on the point, I asked taxi drivers what the result would be. I was told Mayor Houde was very popular and that he would be elected by a tremendous majority. The fact is that he was elected later on by a majority of 42,000. Some federal Liberal members—

Mr. SPEAKER: May I draw the attention of the hon. member to the report of the special committee. It is as follows:

The special committee on the defence of Canada regulations begs leave to present the following as its first report:

Your committee recommends (1) that it be given leave to sit while the house is sitting and (2) that from day to day stenographic reports of the proceedings be taken by the official reporters, and that seventeen copies thereof be transcribed for the confidential use of the committee.

Any discussion upon this report must necessarily be upon the report itself.

Mr. POULIOT: Yes. What I wish to say, as I am not a member of the committee, is that the part of the evidence referring to Mr. Houde should be made public. I should know what it is about. If hon. members are not informed—

Some hon. MEMBERS: Order.

Mr. POULIOT: I recognize that you, sir, are the only one to call me to order; when you

do I am ready to submit to your ruling. You know the respect I have for you, sir. I am sorry I cannot be so lavish in the conveying of my respects to others.

Here is the case of a man interned by virtue of the defence of Canada regulations. The committee meets to make suggestions. The committee is a committee of the house. I am a member of the house but I am not a member of the committee. I have suggestions to make. Is it not possible for me to make a few suggestions when the first report of this committee comes before us? It is not my intention to divulge anything that should be kept secret; it is not my intention to say anything that has not been told before to Liberal members. I desire to make some suggestions, which the committee may accept or throw in the waste-paper basket as they see fit. I consider it my duty to make these suggestions. Moreover, this is a debatable matter and it is rather hard to discuss only the way the transcription of notes will be made and so on.

When the first report of this committee comes before us for adoption we are entitled to make certain suggestions to the committee which, as I say, may be accepted or not accepted by the members of this committee. I say that most respectfully. If you allow me to continue I will say that at the time Mr. Houde was running for mayor in Montreal the member for Témiscouata intervened with the Liberal authorities so that the Liberal members did not interfere in the Montreal elections. Mr. Houde was most thankful to the Liberal members for that. When the 1930 election came along the member for Témiscouata approached him and asked him if he would take part in the election although he was then the leader of the opposition in Quebec. He agreed to that. He did not take any part in the dominion election and although he was then mayor of Montreal and leader of the Quebec Conservative opposition, he did not preside at Mr. Bennett's meeting at Maisonneuve. The Liberal party should be most grateful for what Mr. Houde has done and because of the way he received Their Majesties, the King and Queen, when they came to Montreal in 1939.

Mr. J. W. NOSEWORTHY (York South): Mr. Speaker, I should like to speak to this motion before it carries and I hope that what I have to say is in order. I should like to call the attention of the house, first, to the fact that this committee was set up on February 22; that the first meeting of the committee was called on March 26; that the second meeting was not called until June 8 after questions had been twice raised on the floor of the house and a question placed on the order paper. In my opinion the obvious purpose for the setting up of this committee was the study or the review of the application of the defence of Canada regulations. Apparently that was the purpose the Minister of Justice (Mr. St. Laurent) had in mind when he moved the resolution for the setting up of the committee. During that debate an amendment was introduced which was carried by the house. This morning the committee decided that it will deal first with the subject matter of that amendment.

Mr. SPEAKER: I presume the hon. member proposes to discuss what happened in the committee this morning? That is not in order.

Mr. NOSEWORTHY: I simply want to state publicly in the house that in my opinion the first matter which should come before the committee—

Mr. SPEAKER: The hon. member is proposing to discuss what the committee should discuss; that is a matter that should be discussed before the committee, not before the house.

Mr. COLDWELL: Mr. Speaker, I think the hon. member is discussing the terms of reference by this house to the committee; therefore I take it he is at liberty to say what in his opinion ought to be considered by the committee. The committee has asked leave to sit while the house is sitting; consequently some valid reason should be given to this house why that privilege should be granted. Therefore the matters that are to be come before the committee are relevant to the discussion of the request of the committee that it be allowed to sit while the house is sitting. I suggest that the hon. member is not discussing what took place before the committee, and he should be entitled to discuss what he believes to be the matters which should be considered by that committee.

Mr. SPEAKER: I have listened carefully to what the hon. member for Rosetown-Biggar has said, but he will realize that we are now dealing with a report from a committee. To discuss the terms of reference as to what should be discussed before that committee is certainly not in order on the motion for adoption of the report, and I so hold.

Mr. MacINNIS: On a point of order. May I draw your attention, sir, to the fact that what we are discussing is exactly what was before that committee this morning.

Mr. MAYBANK: Mr. Speaker—

Mr. SPEAKER: The hon. gentleman is rising to the point of order that has been raised by the hon. member for Rosetown-Biggar?

Mr. MacINNIS: May I proceed?

Mr. SPEAKER: The hon. gentleman is speaking to the point of order?

Mr. MacINNIS: I was just going to draw to Your Honour's attention the fact that the motion now before the house covers what took place in the committee this morning. If that cannot be discussed, surely there is no sense in bringing this motion before the house.

Mr. MAYBANK: Mr. Speaker, I do not know whether the hon. gentleman sat down because I am raising a point of order, or because he had concluded his remarks. The point of order I wish to raise is that the ruling you have given is no longer debatable. If that is what the hon. member is debating, then he has no right to do that. If the matter raised by the hon. member for York South (Mr. Noseworthy) is still open for discussion, then I crave leave to speak. On the other hand, if it has been disposed of by your ruling, I am equally content. But if it has been disposed of, I submit that the hon. member for Vancouver East (Mr. MacInnis) may not debate the matter further, nor may the hon. member for Rosetown-Biggar (Mr. Coldwell). If we are to have a free-for-all, then I want to get in on it.

Mr. SPEAKER: When the hon. member for Témiscouata was speaking I raised the point of order that he was speaking to something that was not before the committee. The hon. member for York South referred to what he thought should be the terms of reference, and, if I understood him correctly, he attempted to discuss the proceedings which had taken place before the committee this morning. The committee is the proper place to discuss what the hon. member has been discussing. We are now dealing only with the question whether the report asking for leave to sit, and also with regard to a stenographic report, should be adopted. The discussion must be confined solely to that.

Mr. NOSEWORTHY: Am I in order—

Mr. SPEAKER: The hon. member has spoken already.

Mr. COLDWELL: May I draw to Your Honour's attention the fact that you interrupted the hon. member during the course of his remarks, and he sat down because you rose.

[Mr. Maybank.]

Mr. SPEAKER: The hon. gentleman was rising before to a point of order?

Mr. COLDWELL: I was rising to a point of order.

Mr. SPEAKER: Then the hon. member has the right to speak.

Mr. NOSEWORTHY: I want to ask you, sir, if it is in order for me to suggest what in my opinion should come before that committee when the committee is asking for the privilege of sitting while the house is in session.

Mr. SPEAKER: I have ruled already that the hon. gentleman cannot do that. As I have said twice, what he is entitled to do is to bring these matters before the committee. After they have come before the committee they can then be discussed in the regular way when the report comes before the house.

Mr. C. E. JOHNSTON (Bow River): Mr. Speaker, the chairman of the committee has moved that the committee ask leave of the house to sit while the house is in session. May I inquire whether it would be in order for the chairman of the committee to explain to the house why they want this leave to sit? I am not a member of that committee, and the member of our party who is on the committee is sick in bed and has to stay there on the doctor's orders. As a member of this house I should like to know why the committee is asking leave to sit while the house is sitting.

Mr. SPEAKER: The hon. member has made a request to the chairman of the committee, but I cannot enter into consultations with regard to that which the chairman of the committee may explain as to what happens in a committee or the procedure to be adopted.

Mr. KNOWLES: On a question of privilege, Mr. Speaker, as a member of this house may I ask whether it is fair that along with other members I should be asked to vote on a motion to empower the committee to sit while the house is sitting without our first being informed as to what the committee intends to deal with, particularly when some question has been raised as to the order of the agenda agreed upon in the committee?

Mr. SPEAKER: The hon. member is referring again to the proceedings before the committee. His remarks should be addressed to the committee.

Mr. LIGUORI LACOMBE (Laval-Two Mountains) (Translation): Mr. Speaker, I

agree with the suggestions expressed a short while ago by the hon. member for Témiscouata (Mr. Pouliot) concerning the appeal for release from internment which was submitted by Mr. Camillien Houde, former mayor of Montreal. I should like to congratulate him on the recommendations which he suggested to the committee on the defence of Canada regulations, and I would ask the hon. Minister of Justice (Mr. St. Laurent) to make public the inquiry and the findings of the advisory board regarding this appeal.

Several hon. MEMBERS: Order!

Mr. SPEAKER: Order. I am informed that the hon. member is expressing approval of what the hon. member for Témiscouata said with regard to Mr. Houde. I have already stated that that is not in order, and I objected when the hon. member was speaking along the same lines.

Motion agreed to.

CANADIAN ARMED FORCES

ORDER IN COUNCIL WITH RESPECT TO PARTICIPATION IN POLITICAL MATTERS

Right Hon. W. L. MACKENZIE KING (Prime Minister): Mr. Speaker, I wish to table P.C. 3205, of May 31, 1943, an order in council defining the conditions under which members of the armed forces may participate in political matters. As this order has reference to members of parliament and will be of interest to them I believe it should be tabled forthwith.

[*Later:*]

On the orders of the day:

Hon. R. B. HANSON (York-Sunbury): I desire to address a question to the Prime Minister and to make a suggestion to him and to the three ministers representing the armed services. The question arises out of the order in council which has just been tabled, which is P.C. 3205, dated May 31. The recital in the order in council indicates that it is desirable to have uniformity of policy in respect of participation in political activities by members of the armed forces, and that would seem to indicate that there had not been uniformity in the past. The specific suggestion I have to make to the Prime Minister and to the three ministers is this, that there is a limitation of one month for a candidate preceding an election for the dominion or provincial house, or a by-election, and I suggest that this is not long enough. In the second place I suggest that the limitation of one month allowed to members of the armed forces to attend parliament or the legislature in a given year is not sufficient. I hope this will be reviewed.

NATIONAL DEFENCE

LOWER ST. LAWRENCE REGION—APPOINTMENT OF DEFENCE COORDINATION OFFICER

Right Hon. W. L. MACKENZIE KING (Prime Minister): Mr. Speaker, the ministers of national defence having made their respective statements to the house on defence matters generally, this would appear to be an appropriate moment for me to make a statement with respect to measures which have been adopted, in cooperation with civilian authorities, in the organization of the defences of the lower St. Lawrence region, with a view more particularly to countering expected submarine activities in that area.

These measures include the appointment of a defence coordination officer to coordinate civilian defence efforts and provide the necessary liaison with the service forces in the region.

Upon the advice of the chiefs of staff, Vice-Admiral Percy Nelles, Air Marshal Lloyd S. Breadner, and Lieutenant-General Kenneth Stuart, the government has appointed Squadron Leader J. P. J. Desloges, R.C.A.F., as defence coordination officer in the Gaspe and lower St. Lawrence.

The creation of this new position and the appointment to it of Squadron Leader Desloges complete an extensive and highly integrated organization of all civilian and service defence facilities of this region. The service-civilian organization will be operative against any type of enemy action, but it has been designed particularly with a view to providing the most powerful possible countermeasures to German U-boat activities which are to be expected in the waters of the river and gulf this season.

Squadron Leader Desloges' duties will be to supervise and coordinate the work of the civilian organizations which will operate in intimate cooperation with the navy, army, and air force, and to provide liaison between these civilian organizations and the armed forces. The civilian organizations are the Quebec civilian protection committee (A.R.P.), the Royal Canadian Mounted Police, the Quebec provincial police, and the aircraft detection corps. Partly in the civilian and partly in the service field, the reserve army also has an important role to play in the plan.

Specialized instruction in submarine detection and aircraft identification is being given

to the residents of every town, village and hamlet of the Gaspe and lower St. Lawrence region, and also to all persons in the rural districts, including remotely located farmers, fishermen and lumbermen. Four mobile instruction units are already at work and to date more than thirty community meetings have been held. These meetings, which are for the purpose of forming local civilian defence organizations and for hearing details of the plan, have almost all been called by the municipal authorities themselves. In nearly every instance, they have been presided over by the parish priest or the mayor. Speakers provided by the civilian protection committee, the aircraft detection corps, the local reserve army units, and by the other defence forces, have addressed these meetings, describing how each organization and service fits into the plan.

Briefly, the already smoothly working aircraft detection corps is being extended and trained to function equally well as a submarine detection corps. The aircraft detection corps, along with units of the Quebec civilian protection committee, will provide the means through which all citizens can render invaluable service. It need be no secret that members of the aircraft detection corps have already made valuable contributions in the battle against the U-boats, particularly off our Atlantic coasts, during the winter months.

At the present time members of the aircraft detection corps in the Gaspe and lower St. Lawrence region are turning in more than 500 reports of all kinds a week. Most of these reports have, of course, referred to the sighting of our own planes. The story of how members of the aircraft detection corps have facilitated the rescue of lost airmen is already well known.

This aircraft detection work has given a large organization excellent training and practice in handling reports swiftly. When a submarine is sighted this training, and the channels of communication already established, will enable a clear-cut report, devoid of the confusion of undue excitement, to reach operational units of the navy, army and air force in the shortest possible time.

To get action, any resident of the region who sights a submarine, or any aircraft detection corps observer who sights either an aircraft or a submarine, has only to go to the nearest telephone and ask the operator for "Aircraft Detection Corps". The operator will instantly clear all lines to a reporting centre connected with the operational units so that the persons reporting may give their messages directly to the service personnel who are on duty at the reporting centre twenty-four hours a day. The reporting centre passes the information by direct telephone to the operational units of the defence services concerned where immediate action is taken in accordance with pre-arranged plans for dealing with the enemy.

A point which I wish to emphasize is that the report goes from the reporting centre directly to operational units which not only have full authority but the duty of taking instant action. Every officer knows exactly what has to be done and knows that it is his job to get it done without waiting for instructions from any higher authority. Furthermore, among the services plans have been so fully worked out that combined operations by two or more of the services occur automatically without waiting for further instructions from higher authority.

Thus, the moment a report is received at an operational station, planes of the air force that are already in the air on anti-submarine patrol are directed by radio to the spot where the U-boat was sighted. Ships of the navy already on patrol in the same area are also directed by radio to the location. If the scene is one in which shore guns of the army can be effective, the appropriate battery is immediately notified and has full authority to go into instant action. Meanwhile other planes at aerodromes in the district and additional naval vessels at local harbours are in constant readiness.

After action orders have been given, or possibly simultaneously with them, reports of course go to superior authority. These are not only for the information of such authority but are also to enable senior officers to order into action, if they deem it necessary, any additional forces from neighbouring or perhaps distant districts which they think might add to the success of the operations, but let me again make it clear, in view of misconceptions on the part of some of the public last year, that a message does not go all the way to headquarters in Nova Scotia and orders come all the way back again before counter-action against the enemy is initiated.

In certain remote areas there are as yet no telephone lines. In these cases means are available for getting the messages through by telegraph. If neither telephone nor telegraph lines exist, radio communication is available. All operators, whether telephone, telegraph or radio, are already fully instructed in the means of getting messages through rapidly. An observer who spots a submarine in regions not served by phone can get his message through by getting it to any telegraph or radio operator. A further detail worth mentioning is that all three means of com-

munication will be available for emergency messages of this kind twenty-four hours a day. In districts where the rural telephone system, for example, has in the past closed down during the night, special arrangements through the cooperation of all concerned have been made for operators to answer at any hour all incoming calls reporting aircraft movements or enemy activity.

It has been mentioned that the reserve army, the Royal Canadian Mounted Police, the Quebec provincial police, and the Quebec civilian protection committee, all have important roles in the over-all plan. The job of the reserve army is a dual one. All its members in the Gaspé and lower St. Lawrence region have been made ex officio members of the aircraft detection corps organization. In this capacity they will function along with all other civilians as submarine and aircraft spotters. If, however, local defensive action is required, the reserve army units are equipped and trained to defend their communities and put up effective resistance pending the arrival of additional military forces or assistance from the naval or air services.

The Royal Canadian Mounted Police and the Quebec provincial police will maintain a vigilant watch for possible enemy agents and saboteurs. They will be assisted by the reserve and active army units located at isolated points along the coast and by information furnished by members of the civilian defence organizations.

I should like to point out that bringing thousands of civilians into our defensive system in this region implies no weakening or relaxing of the defensive facilities already provided by the armed services. On the contrary, naval, land, and air defences undertaken by the active service forces have all been considerably strengthened during the winter months. What has happened in bringing civilian organizations into active participation to a much greater degree than formerly, is that the armed forces and police authorities are being provided with thousands of additional eyes and ears—and these extra eyes and ears are being given technical instructions to make them extremely useful. The navy, army, air force, and police will maintain their patrols as usual, but all four will now have the advantage of the additional help provided by all residents of the region.

Along with the community meetings which are being held in the Gaspe and lower St. Lawrence region by the mobile instruction units (these units, by the way, will use boat and plane if necessary to get to places not served by roads), the system of instruction of the civilian population includes the use of pamphlets and posters and the cooperation of press and radio, The aircraft detection corps and the Quebec civilian protection committee are jointly responsible for the educational programme. This programme is planned to include aircraft detection corps exercises. In these exercises the residents of the various communities would have an opportunity to test their skill in aircraft recognition and their efficiency in making concise, clear reports. Other details which will be taken care of are educational work to make the "dim-out" in this region still more effective, and the civilian protection committee will explain to the citizens what this precautionary measure does and why it is necessary.

Another educational campaign that will be intensified is discouragement of careless talking about ship movements and military installations. The purpose of this, of course, is to keep the enemy from gaining any information useful to him.

The new defence coordination officer, Squadron Leader Desloges, whose headquarters will be in the Gaspe area, has not only had extensive experience in combat in this war, but is bilingual and has a personality which should make cooperation through him between all the participating organizations an easy matter.

Squadron Leader Desloges was a member of the Royal Canadian Mounted Police prior to his appointment to a commission in the R.C.A.F. in October, 1937. He was one of the early Canadian pilots to participate in the battle of Britain. He was wounded, losing the sight of an eye, in August, 1940, thus being eliminated from further front-line combat duty. As the result of a series of lectures which he gave, after returning to Canada he became widely known throughout the province of Quebec. Subsequently he was appointed to the command of an air gunners' ground training school.

Another prominent personality in the plan is Marcel Gaboury, K.C., who is not only commissioner of the Quebec provincial police, but also head of the Quebec civilian protection committee, both of which organizations are components of the new defence plan. Commissioner Gaboury will supervise the educational campaign sponsored by the Quebec civilian protection committee and will be assisted by the public relations officers of the three services.

The services feel that this fine cooperation by civilians will enhance the value of the coordinated defence facilities which they had already set up jointly. I need hardly say that I thoroughly agree with them. We have here

an ideal example of civilians and service personnel working in complete cooperation and coordination in the defence of our nation.

Mr. D. K. HAZEN (St. John-Albert): If I am in order I would ask the Prime Minister if any attention has been given to the establishment of a somewhat similar organization in that part of the province of Nova Scotia and of the province of New Brunswick which fronts on the waters of the bay of Fundy. There have been submarines in the waters of the bay of Fundy, and there is no reason to suppose that there will not be submarines there again.

Mr. MACKENZIE KING: I am not in a position to give my hon. friend any exact details, but I may find it convenient to answer his question later.

FOOD CONFERENCE

REQUEST FOR STATEMENT AS TO DELIBERATIONS AND DECISIONS

On the orders of the day:

Mr. GORDON GRAYDON (Leader of the Opposition): I have two questions I desire to direct to the Prime Minister. May I ask the Prime Minister if he is yet in a position to make, in accordance with his previous undertaking, a full statement to the house upon the deliberations and decisions reached at the united nations food conference recently held at Hot Springs, Virginia?

Right Hon. W. L. MACKENZIE KING (Prime Minister): I hope to be able before the end of the week to lay on the table a report of the committee and I shall ask the house at that time to permit the report to be printed and distributed to members as was done in the case of various proposals for exchange stabilization which were earlier presented to the house. In tabling the report I shall make a brief general statement to the house on the work of the conference and the programme for future action.

LEGATIONS

PRESS REPORT AS TO REPRESENTATION OF SWEDEN IN CANADA

On the orders of the day:

Mr. GORDON GRAYDON (Leader of the Opposition): I have another question to ask the Prime Minister. It arises out of a news item in the Ottawa *Journal* of yesterday, which carries a dispatch from Stockholm, the significant part of which reads:

Increase of Sweden's consular and legation representation abroad, especially in Canada and South America, is contemplated in plans for the expansion of Sweden's foreign service.

Will the Prime Minister inform the house whether or not negotiations have been entered into between the governments of Canada and Sweden along the lines indicated in the dispatch in question, and, if so, when such negotiations were commenced and how far they have progressed?

Right Hon. W. L. MACKENZIE KING (Prime Minister): Perhaps my hon. friend will allow the question to stand as a notice and I shall give a reply later.

Mr. GRAYDON: I sent my hon. friend a notice of the question but perhaps he has not received it.

Mr. MACKENZIE KING: I am sorry; I have not.

LABOUR CONDITIONS

CANADIAN MARCONI COMPANY—ORDER FOR REINSTATEMENT OF JACQUES ROULEAU

On the orders of the day:

Mr. J. H. BLACKMORE (Lethbridge): I desire to direct a question to the Minister of Labour. Did the Minister of Labour in April, 1943, order the Canadian Marconi Company of Montreal to reinstate Jacques Rouleau? If so, has the Canadian Marconi company obeyed the order? What measure has the government taken to see that the order of the Minister of Labour is obeyed?

Some hon. MEMBERS: Order.

MEAT

SAUSAGES AND HAMBURGER—RATION REGULATIONS

On the orders of the day:

Mr. M. J. COLDWELL (Rosetown-Biggar): May I direct a question to the Minister of Finance? Yesterday I drew his attention to a radio report regarding the rationing of meat. To-day on page 16 of the Montreal *Gazette* there is a long article which says that stores that handle sausages are confronted with loss of good edible food, since fresh sausages are perishable and no longer saleable after twenty-four hours, and the result is positive waste. The situation, the article states, is intolerable in the face of the request that all citizens use less meat. A telegram was sent to Mr. Donald Gordon with reference to the matter. The minister said yesterday that he would look into it. In view of the apparent urgency of it,

and the desirability of preventing a waste of foodstuffs, can he give a statement to the house?

Hon. J. L. ILSLEY (Minister of Finance): I happened to read the article in the *Gazette* to which the hon. member has referred. I have not had time to take it up with the board, but if the house thinks fit I can make a report to the house on the question. It is, however, a board matter.

Mr. COLDWELL: What about the question I asked yesterday? It seems to me that though it is a board matter the minister is responsible to the House of Commons.

Mr. ILSLEY: I agree with that, but my experience has been that the board deal with these things with great promptness. I have not had time to ask them, but I am sure they have been giving anxious consideration to these representations, which apparently are coming in to them from various quarters.

DAIRYING INDUSTRY

EFFECT OF RATIONING UPON THE PRODUCTION OF WHEY BUTTER BY CHEESE FACTORIES

On the orders of the day:

Mr. G. K. FRASER (Peterborough West): On May 11 I asked the Minister of Finance a question in regard to whey butter. I wished to know whether coupons would be necessary. On May 13 the minister said that the wartime prices and trade board were going into the matter. Can the minister tell the house whether they have decided what they are going to do, and whether coupons will be necessary?

Hon. J. L. ILSLEY (Minister of Finance): I cannot say. I took that matter up with them at once, however, and received an answer which I cannot repeat at the moment, but they were certainly giving attention to the subject. I will give information to my hon. friend, and if it is of general interest I will state it in the house.

Mr. FRASER (Peterborough West): I asked the question because the Minister of Finance a moment ago said to a member sitting to my left that the wartime prices and trade board treated every matter promptly. I was wondering if they would treat this question with the same promptitude.

FUEL

CONDITIONS UNDER NATIONAL EMERGENCY

On the orders of the day:

Mr. T. L. CHURCH (Broadview): May I ask the government a question on this the eighty-fourth day of the session? First, what is being done about the coal situation, and, second, what is the status of the housing situation?

Hon. HUMPHREY MITCHELL (Minister of Labour): I must have anticipated my hon. friend for I have here a statement with regard to a question asked on Friday last, June 4, by the member for Macleod (Mr. Hansell). The hon. member wanted to know whether I would give an explanation to show how the coal emergency has been cared for in the past two weeks and how the situation stands at the present time. At that time I promised to make a statement and with your permission, Mr. Speaker, I should like to make the following report:

Following the passing of P.C. 4092 on May 17, copy of the order was sent to every coal mine, and operators were instructed to submit amended demands for labour to our local offices, these demands to be based on the maximum possible production and to include additional staff for development work and additional shifts.

The coal emergency was publicized by newspaper advertisement, through the press and by radio. All local employment offices were directed by wire to dispatch miners who registered at their offices to the coal mines in which they had last worked, pending receipt of full and detailed instructions. These instructions have since been issued and provide for such controls as are necessary, in order that the men who register under the compulsory order may be directed to the mines most urgently requiring help.

A special staff is being arranged for through the civil service commission to give direct supervision to the movement.

The national registration of August, 1940, is being reviewed and particulars taken of all persons registered who had previous coal mining experience. Particulars of some 31,000 miners have been supplied to the employment service offices. These will be checked with the company payrolls and the information used as a check against the registrations.

On May 1 there were 2,651 vacancies registered with our employment offices; from May 1 to 31, 1,019 workers have been placed in the mines, and as at Saturday last the vacancies, including the additional demands referred to, totalled 3,146. This is broken down in the coal mining areas as follows:

	May 1 Vacancies	May 1-31 Placements	May 31 Vacancies
Pacific	559	340	219
Prairies	753	257	992
Maritimes ...	1,339	422	1,935
	2,651	1,019	3,146

Mr. CLARENCE GILLIS (Cape Breton South): May I inquire whether the government are aware that within the past few weeks, since the issuing of the emergency fuel order, there have been two major disasters in Nova Scotia, one in the Waterford district, affecting approximately 1,200 men, and the other, in the same district, consequent upon fire and flood, which displaced another 250 men? There is really a surplus now in Nova Scotia and I should like to know whether the minister is taking the necessary steps to see that the men so displaced shall be fully utilized before any men are forced from other industries by the war emergency order.

Mr. MITCHELL: I have knowledge of the disasters to which my hon. friend refers. It is hoped that the shut-down will not be too prolonged. My hon. friend can rest assured that we shall use common sense in the transfer of miners working in other industries back to the mines. I think we can be relied upon to do that.

WAR WORKERS

ORGANIZATION AND FINANCING OF RECREATIONAL PROJECTS

On the orders of the day:

Mr. A. W. ROEBUCK (Trinity): I would like to ask the Minister of Labour what progress has been made in the organization and financing of the programme of recreation for war workers. This is an enterprise designed to provide entertainment, exercise and recreation for war workers, and I understand that a community conference was held in Toronto not long ago at which plans were laid in this connection. This conference was attended by community organizations of Toronto, representatives of the provincial government and representatives of the Department of Labour. I understand that the Department of Labour gave certain assurances that contributions and help would be given to this programme, and with that understanding the citizens of Toronto have carried on. I am now told that they are in an embarrassing position because the work is being proceeded with under private subscription by certain individuals and cannot be long continued on this basis. I would like to know what progress is being made towards carrying out the understanding and putting this excellent work on its feet.

Hon. HUMPHREY MITCHELL (Minister of Labour): What my hon. friend says is true; conferences were held in the cities of Toronto, Hamilton, London, Windsor and Brantford for the purpose of organizing recreational facilities. On April 9 representatives of the established community councils on recreation, labour organizations, churches, universities and national organizations directly interested in recreation conferred with officials of the Department of Labour. Representatives of the governments of the provinces of Ontario and Quebec also attended the conference.

This conference asked for leadership in recreational plans, stressing the need for additional personnel to provide leadership to and coordination of efforts already made. Representatives stated that the existing physical facilities should be fully utilized but the required additional workers and publicity should be paid for by funds provided by the federal and provincial governments, industry and the workers, according to some satisfactory agreement.

A full statement of the conference was submitted to the national selective service advisory board. This board advised that a recommendation be sent to his excellency in council that, under the authority of the War Measures Act and subject to the approval of the governor general in council, the Minister of Labour might enter into agreements with provinces or municipalities to provide recreational facilities for war workers; and further, that an immediate initial expenditure of $40,000 be appropriated for this purpose. This recommendation is now before council.

An approach will be made to the provinces and other parties concerned to negotiate agreements. A national officer for recreation to promote the work will be appointed. It should be pointed out that in the past the development of recreational projects has been the concern of community groups and organizations, and of management. Government participation in direction and control is a new venture and one that requires careful consideration. There is little precedence to help direct the planning. So far as possible essential needs should be met and if war conditions have imposed too heavy a burden upon the voluntary community organizations, every consideration will be given to proposals placed before the government.

DEFENCE OF CANADA REGULATIONS

QUESTION RELATING TO THE PUBLICATION OF THE REPORT PRESENTED BY THE ADVISORY BOARD ON THE APPEAL OF MR. CAMILIEN HOUDE

On the orders of the day:

Mr. LIGUORI LACOMBE (Laval-Two Mountains) (Translation): Mr. Chairman, may I put a question to the hon. Minister of

Justice (Mr. St. Laurent)? Will the hon. minister make public the report of the inquiry, held on May 28 last, concerning the appeal for release from internment submitted by Mr. Camillien Houde, and if in the affirmative, when will he do so?

Hon. L. S. ST. LAURENT (Minister of Justice): The answer to question No. 1 is no. Question No. 2 is answered under question No. 1.

PENSIONS

REQUEST OF UNITED CHURCH OF CANADA FOR INCREASED PAYMENTS TO THE AGED AND THE BLIND

On the orders of the day:

Mr. S. H. KNOWLES (Winnipeg North Centre): I should like to direct a question either to the Prime Minister or to the Minister of Finance. Has the government received a communication from the Manitoba conference of the United Church of Canada, which met in Winnipeg last week, asking that there be an increase in the amount paid to our old age and blind pensioners? If so, what reply has been given to this communication?

Hon. J. L. ILSLEY (Minister of Finance): I am not aware of any communication of that kind having been received.

Right Hon. W. L. MACKENZIE KING (Prime Minister): May I say, supplementing the reply of my colleague, that I am not sure such a communication has not been received; I am inclined to think that it has. The reply that has gone forward or that would have gone forward would be that the matter is under consideration.

Mr. COLDWELL: And has been since 1926.

PRIVILEGE—MR. POULIOT

NEWSPAPER ARTICLE APPEARING IN "LE CANADA" OF JUNE 5

On the orders of the day:

Mr. JEAN-FRANÇOIS POULIOT (Témiscouata) (Translation): Mr. Speaker, it has been drawn to my attention that *Le Canada,* in its issue of Saturday, June 5, published the same fallacious remarks found in *Le Soleil* of the same date. My reply to *Le Soleil,* as recorded in yesterday's *Hansard,* applies *mutatis mutandis* to *Le Canada.*

WAR APPROPRIATION BILL

PROVISION FOR GRANTING TO HIS MAJESTY AID FOR NATIONAL DEFENCE AND SECURITY

The house resumed from Monday, June 7, consideration in committee of a resolution to grant to his majesty certain sums of money for the carrying out of measures consequent upon the existence of a state of war—Mr. Ilsley—Mr. Bradette in the chair.

NATIONAL DEFENCE FOR NAVAL SERVICES

1. Civil salaries and wages, $6,192,054.

Mr. HAZEN: Under the second heading, pay and allowances, which I was discussing last evening, I want to draw the attention of the minister to the conditions under which petty officers and men of the Canadian navy who are stationed in Newfoundland have to live. I am not speaking from personal knowledge, but I believe the information that has been furnished me is correct. I am informed that there are several hundred Canadian sailors stationed in Newfoundland. When they go ashore they are given a living allowance of $1.75 per day, out of which they have to pay for their board and lodgings. Living quarters are not obtainable at reasonable prices in Newfoundland; in fact it is very difficult to obtain them at all. If a vacancy does occur the prices quoted for a room are from $60 to $75 per month. One vacancy in a rooming house was available at $6 per week, but the room was poorly furnished; there were three beds in it which were already occupied by five sailors, and the only available accommodation was space in one of the double beds. As a consequence of the lack of rooming accommodation I am informed that our sailors are sleeping in sheds, trucks, coaches, attics or wherever else they can find accommodation. The sanitary conditions these men have to put up with are, I am informed, deplorable. In fact, in many cases there are practically no sanitary conditions available. The men are obliged to eat either in the Y.M.C.A. or in what are described to me as dumps and dives. They pay from sixty to seventy-five cents per meal. The high cost of living can be readily understood, since there are duties on foods entering Newfoundland, there is no price control and there is great inflation. The cost of living, my informant told me, was higher than in any country in which he had ever travelled.

It is quite impossible for our men to live properly under these conditions on $1.75 a day. The United States government provides in Newfoundland suitable barracks for the accommodation of its sailors. Our government has failed, I understand, up to the present time, to provide similar accommodation. My informant stated that the conditions were damnable, and that it was a disgrace to our government and country that such conditions should exist. I ask the minister if he is familiar with the situation, and if steps are being taken to rectify it.

There is another matter to which I should like to refer. According to figures tabled in the house on March 19 last the total number of male persons serving in the naval service, and stationed in Canada, was given as 39,820, as of April 1, 1943. The number serving in each province was given as follows:

Prince Edward Island	173
Nova Scotia	13,346
New Brunswick	137
Ontario	13,775
Manitoba	530
Saskatchewan	475
Alberta	749
British Columbia	7,161

The figure of 137 given for New Brunswick was given in error; it should have been 420. Then, serving in Canada, but not at present allocated, there were 949. It will be noticed that there were 13,346 men stationed in Nova Scotia at that time. This number will be greatly augmented when the training centre at Deep Brook, Annapolis county, Nova Scotia, is completed at a cost of $12,000,000.

New Brunswick adjoins Nova Scotia. It is bounded on three sides by the sea. It has a great marine tradition, and it has one of the two Canadian Atlantic ports that are open throughout the year. In that province there are stationed only 420 naval men. Nova Scotia has been exceptionally well looked after in the establishment of extensive training centres, which require large staffs, apart altogether from the operational naval personnel at the port of Halifax, and now perhaps at the port of Sydney, New Brunswick has been neglected. There are three natives of Nova Scotia in the dominion cabinet, namely, the Minister of National Defence (Mr. Ralston), the Minister of National Defence for Naval Services (Mr. Macdonald) and the Minister of Finance (Mr. Ilsley). It is in the latter's constituency that this $12,000,000 is being expended for a temporary training school for the naval service,—in this fourth year of the war, after 55,000 men have entered the navy and have received their training or are being trained.

Under the circumstances it is natural to assume that Nova Scotia would get its fair share of training establishments. There is no justification, however, for giving it a share out of all proportion to its population, or to the contribution it has made to Canada's war effort. It was hardly, of course, to be expected that New Brunswick would receive much consideration from the government, as it was represented in the cabinet by the present Minister of Transport (Mr. Michaud) who has failed since the beginning of the war to obtain for New Brunswick its fair share of the huge expenditures which were being made in connection with Canada's war effort.

An editorial appearing in the *Telegraph-Journal*, published in Saint John, New Brunswick, on April 20 last—and may I say at this point that the *Telegraph-Journal* is not a supporter of the Progressive Conservative party—states that:

> In naval matters New Brunswick is definitely and intentionally cold-shouldered. . . . in this province, with its unmatched maritime record, just over one per cent of the naval personnel in all Canada is stationed.

Mr. MACDONALD (Kingston City): Does the hon. member agree with that editorial?

Mr. HAZEN: Yes, I agree with it.

Mr. HANSON (York-Sunbury): We have been humbugged and hamstrung.

Mr. MACDONALD (Kingston City): Does my hon. friend say the record of New Brunswick is unmatched, so far as naval service is concerned?

Mr. HANSON (York-Sunbury): "Unmatched"—what does the minister mean?

Mr. MACDONALD (Kingston City): If my hon. friend would listen he would know what I mean. The editorial says New Brunswick has been deliberately and intentionally cold-shouldered, in spite of its "unmatched" record. I am asking my hon. friend to look at the figures I placed on *Hansard* last night, and tell me whether he agrees with the editorial in that particular respect.

Mr. HAZEN: I am not prepared to say the editorial is referring to that particular aspect. The editorial goes on to say:

> This is no oversight or accident. Here is a clear confirmation of what this newspaper has alleged time and again, that naval establishments are placed anywhere and everywhere except in New Brunswick. How does the Hon. Angus L. Macdonald, Minister of National Defence for Naval Services, explain this evidently deliberate policy? It no longer astonishes, it disgusts as an example of discrimination the equal to which it would be hard to find.

It seems to me some explanation is due New Brunswick by the Minister of National Defence for Naval Services, and also the Minister of Transport, as to why New Brunswick has been treated in this way. It is not surprising that the premier of New Brunswick, a supporter of the dominion government, said this in a statement he issued to the press on June 5 of last year:

> I am sure that the people of New Brunswick will persist in doing their bit, but the sooner, however, the tactics of discrimination and favouritism are abandoned, the better.

His words evidently fell on deaf ears. As one of the representatives in this house from New Brunswick I join with the premier of that province—and, I may say, with the provincial leader of the opposition, who on more than one occasion has raised his voice about this matter, in protesting against this discrimination and favouritism. I agree with the *Telegraph-Journal* when it says it no longer astonishes but disgusts, as an example of discrimination the equal to which would be hard to find.

The return of April 19, to which I have referred, gives a further example of this discrimination. It sets out that the number of military personnel, male and female, serving in the army on March 31, last in Nova Scotia and Prince Edward Island was 30,000. In New Brunswick there were 10,000. It sets out that the number of civilian personnel serving in the army in Nova Scotia and Prince Edward Island total 755, and in New Brunswick, 149. The number of service and civilian personnel serving in the air force on March 31 last in Nova Scotia was 15,459, and in New Brunswick 5,363.

It is not only in the armed services that this discrimination exists. A return tabled in this house, which appears as an addendum to *Votes and Proceedings* of March 22, is entitled, "Report on capital assistance to Canadian industries." This is compiled by the Department of Munitions and Supply and covers the period from the commencement of the war to December 31, 1942. It shows that the government has provided capital assistance to Canadian companies totalling $1,723,827,099, made up as follows:

Fixed capital	$821,042,913
Working capital	902,784,186

No details appear to be given for the working capital advanced to companies in New Brunswick, but of the fixed capital of $821,042,913, New Brunswick received about ·6 per cent, or $5,336,750.

New Brunswick can point with pride to the way in which her sons have voluntarily enlisted in all branches of the service. They have not shirked their duty. The province has provided its share of all war loans, and it was the first province to reach its objective in the last loan. As the premier has said, it will persist in doing its bit, but is it unfair or unreasonable to ask that it receive a fair share of the increased activities brought about by the war, and a fair share of the expenditures the government is making?

On Monday, May 31, a return was tabled in this house in reply to certain questions which I had placed on the order paper, being sessional paper 124-B. This return sets out the fact that the government has spent for the construction of buildings and the purchase of lands and buildings from September 1, 1939, to March 31, 1943, in Nova Scotia a total of $29,997,000 and in New Brunswick a total of only $19,000. Nearly $30,000,000 in Nova Scotia, only $19,000 in New Brunswick. I had to check these figures twice before I could believe my eyes. There is a cartoonist whose work appears regularly in many Canadian papers under the heading, "Believe it or not." He brings to the attention of his readers matters that seem incredible but which nevertheless are true. If Mr. Ripley is looking for material for another cartoon he will find it in these figures. If the *Telegraph-Journal* wants further evidence to substantiate its statement that in naval matters New Brunswick has been definitely and intentionally cold-shouldered, it will find it in these figures.

On May 7 of last year the minister told us that $635,500 was being set aside for the erection of buildings and other necessary works at the port of Saint John. I have asked the minister how many of these buildings have been built. A year has passed and my understanding is that none of them have been erected. In consequence the navy at Saint John is obliged to carry on its operations at a great disadvantage. They are housed in what might be termed a rabbit warren, and have been forced to carry on training operations under considerable handicaps. I ask the minister now if contracts have been awarded for the erection of these buildings. What buildings, if any, have been contracted for? If contracts have been awarded, who are the contractors? What buildings are to be erected and what is the contract or estimated price in each case? If tenders have not been awarded, when will they be awarded? When will the work be started? When is it expected that the buildings will be finished?

Considerable information will have to be furnished in connection with these expenditures. The third item covers travel, transportation and freight. I referred to the breakdown which the minister gave us last year, and under the heading of travel and transportation the estimated expenditure was given as $2,585,000, whereas the actual expenditure has been $3,382,574. I would ask the minister: Are the officers and men of the navy provided with free transportation when they are granted leave? If not, what arrangements are made about the amounts which they may have to pay for transportation? When officers and men are on duty, either in the Mediterranean or on

the west coast of Africa, and are given leave, are arrangements made to enable them to return to Canada? Will the minister tell us if the amount spent during the past fiscal year on travel and transportation was all spent in Canada? If it was all spent in Canada, was it all spent on railway travel? Was any spent for travel by air and, if so, how much? Was any spent for travel by water and, if so, how much? If it was not all spent for travel in Canada, how much was spent for travel outside of Canada, and under what circumstances was it spent? Where was it spent and what companies were paid for providing transportation?

The estimated expenditures under this heading for 1943-44 are $6,978,000. This would appear to be an increase of nearly 270 per cent. I use the words "appear to be" because I notice that the word "freight" has been added. I do not know whether freight was included in the estimates for last year. Will the minister tell us if it was included in last year's estimates, and, if not, under what item it was included? To whom were these payments for freight made, and how much did each person or each company receive?

If I might digress for a moment, I would ask the minister to tell us whether any steps have been taken to have the insurance principle, sometimes called the "incurred during service" principle, applied to the men of the navy who are killed, injured or incapacitated while serving in Canada or in her territorial waters, instead of the principle that came into force in 1941 known as the "attributable to service" principle. This matter was brought before the committee last May by one of the members for Halifax in what I thought was a very clear statement. He pointed out that if a man in the Canadian navy is killed outside the territorial waters of Canada his dependents are entitled to compensation, but if he is killed while in Canada his dependents will not necessarily obtain compensation; nor in case of injury or illness resulting in permanent disability will the man necessarily obtain a pension.

The CHAIRMAN: I have to inform the hon. member that he has spoken for forty minutes.

Mr. HANSON (York-Sunbury): Not to-day, Mr. Chairman.

The CHAIRMAN: He was speaking before the house adjourned last night.

Mr. HANSON (York-Sunbury): But under the rule that does not count.

The CHAIRMAN: I beg to differ. It does count.

[Mr. Hazen.]

Mr. HANSON (York-Sunbury): Then I will take up the parable, and afterwards go on again. I desire to make some remarks, Mr. Chairman, on the subject matter adverted to by the hon. member for Saint John-Albert.

The CHAIRMAN: Order. I saw the hon. member for Laval-Two Mountains first.

Mr. LACOMBE (Translation): Mr. Chairman, on April 19 last, I entered a series of questions concerning navigation on the St. Lawrence on the orders of the day. For weeks, I awaited a reply from the minister. His answers are less than satisfactory. He speaks of airplane attacks directed against the enemy, while the question invariably under discussion dealt with submarine attacks. What protection was given to convoys by the government when over twenty ships were torpedoed in the St. Lawrence? The protection afforded, in addition to being inadequate, was certainly not perfectly organized. Those disasters were the result of unpardonable negligence on the part of the government. In reply to the above-mentioned questions, the minister makes a great deal of the shorter distances to support his claim that transportation by land is more advantageous than convoyed transportation along the St. Lawrence. In this whole matter, however, I fear that the railways are being favoured beyond all justification. They seem to control the situation in their own interest, and to the prejudice of the public. That point should be cleared up without further delay. Do you want any proof, Mr. Speaker? The net revenue of the Canadian National Railways, over the last four years, was as follows: 1939, $20,854,418; 1940, $45,007,412; 1941, $66,608,341; 1942, $85,000,000.

The increase in the revenue of this railway is easily seen. The same applies to the Canadian Pacific Railways.

True, the St. Lawrence has not altogether been closed to navigation, but the situation is not far from that point. A mortal blow has been dealt the seaports of the St. Lawrence, and the fine port of Montreal particularly. The shipping of munitions, supplies and materials of all sorts by rail from Montreal to Halifax and Saint John, New Brunswick has resulted in over a million-dollar increase in the Canadian taxpayer's burden. This state of things is dishonest as well as unfortunate. Let us hear no more of those blinds as an excuse for the poor administration which time and again, for months and years past, has been brought to light. The same method is always used: thoughts are concealed the better to hide unmentionable intentions; words are uttered without point or the better to

deceive the public. Therefore, the ports in the St. Lawrence and our navigation on that river will be ruined as a result of our participation in this war which I opposed, seconded by the hon. member for Quebec-Montmorency, by an amendment objecting to this participation which threatens to carry all before it, our youth, our civil liberties, as was evidenced this afternoon, our natural resources, our commerce, our industry and even our agriculture.

To end my remarks, I shall read a letter written by an experienced pilot, Mr. Cyrille Pouliot, of Gros-Pin, Charlesbourg, Quebec:

The Editor of the *Standard*,
Montreal.

Dear Sir:

May I bring back to your attention the sound advice given to your valuable newspaper in an interview by an important British businessman, Mr. R. L. Holmes. This important interview was given to the *Standard* on October 13, 1934. Here are the words of Mr. Holmes:

"What you here in Canada must always remember is that the St. Lawrence is your front door, and when you block the front door no one can get in your house."

Mr. Holmes said that Canada would be like Siberia without the St. Lawrence.

Yes, sir, we have at our disposition this important water transport facility which since 1939 has been ousted by the railways and they have taken a place of vantage at the expense of the Canadian taxpayers.

Who is paying for all that? How much per ton from Montreal to Halifax or Saint John, New Brunswick? These are important questions for our members of parliament to ask at the session.

Give Halifax and Saint John, New Brunswick, their importance during winter months, but let us take the advantage which the St. Lawrence offers of cheaper transportation and thus save millions of dollars. This war is already a heavy burden on the taxpayers; why make it worse?

The ports of the St. Lawrence are known for their efficiency. Montreal was quoted by Mr. Holmes as a first-class ocean port. Often we St. Lawrence pilots have listened to praise spoken by ocean ships' masters of the skilful work done by the stevedores of Montreal and their quick ways of loading ships, the honest agents, and not the least, good pilots. Praise to the St. Lawrence pilots was given by your valuable newspaper on September 8, 1923—"The St. Lawrence pilots famed for efficiency." The St. Lawrence pilots are known the world over for their efficiency, et cetera.

The Canadian government and the engineering experts of the federal department of marine have contributed in making the St. Lawrence river safe for navigation and brought Montreal as a recommendable seaport. All this was done for cheaper transportation, shipping cargoes as far inland as possible. Now that we are learning that the submarines are going to operate the greatest battle this year, it would be advisable to sail ships as much as possible inland.

There is 860 miles from Montreal to Belle Isle. The entrance of the gulf, Cabot Strait, has a width of 41 miles from Cape Ray to St. Paul and 11 miles from St. Paul island to Cape North—Cape Breton island.

The Strait of Belle Isle is 10½ miles wide at Pt. Amour. It would be important to concentrate our patrol at the above mentioned entrances also using mines. The Strait of Belle Isle should be fortified, also Cape Ray, St. Paul island, Cape North, and the Gut of Canso.

Not only the Canadian shipment for England should be shipped from Montreal but also the American goods.

Comparative distances from Canadian and American ports to Liverpool and Glasgow:

	Montreal	Quebec	Saint John, N.B.	New York
Glasgow	2,695	2,552	2,706	2,997
Liverpool	2,762	2,626	2,793	3,074

One-third of the distance to England can be sailed inland safely by guarding the three entrances and patrolling the gulf. The gulf of St. Lawrence as far as Saguenay river is one of the clearest waters in the world, and cold 45 degrees Fahrenheit.

Cyrille Pouliot.

Pilot Cyrille Pouliot
Gros-Pin (Charlesbourg)
Quebec.

This very interesting letter was sent by Pilot Cyrille Pouliot to the *Standard*, and I want to draw it to the attention of the minister.

Mr. STIRLING: As we listened to the statement of the minister yesterday unfolding the story of the Canadian navy and what it has accomplished, my thoughts went back to not so very many years ago, when there were amongst us a certain number of people who took their pleasure in deriding and scoffing at Canada's navy. They were ignorant people, in my opinion, who were not possessed of the facts. They argued in some instances that the money which was voted annually for the upkeep of Canada's navy would be better devoted in other directions. I do not know that they did very much harm. They were scoffers who delighted in scoffing. But there were amongst them, unfortunately, a certain number of public men, and they were more dangerous because they had an audience. I wonder whether now, looking back at their foolish judgments, they are hopeful that we have forgotten their utterances and that their future statements may be given more credence. For, suppose that their opinions had been heeded, suppose Canada had dismantled her ships and distributed her men in other directions, the minister certainly would not have been able to tell the story he told yesterday of what Canada's navy has attained. If that navy had not been in existence in September, 1939, he would have had to start from scratch; he would not have been able to develop it as

it has been developed, and it would not have been possible for it to play the considerable part which it has played in these war years.

Certainly the story which the minister unfolded brings no blush to our cheek. In part, the progress, the development, the expansion which has been made has been due to the painstaking work of the chief of the naval staff and the officers associated with him, who, in those discouraging years, were able to carry on despite the taunts which were levelled at Canada's little navy, and laid the foundation for the structure which has been erected. What was that foundation? That foundation was the outcome of plans which began to be developed after the great war, when Canada received from Great Britain a certain number of naval craft with which to start the Royal Canadian Navy. The plan was laid so that there should be a small, efficient, permanent force, supported by two reserves: the Royal Canadian Naval Reserve, filled with officers and men from the mercantile marine; and the Royal Canadian Naval Volunteer Reserve, distributed through its divisions all across Canada, and to which were attracted the young men who desired to follow the sea if war came. The plan was based on an efficient, small, permanent force which would be enlarged from those two sources, the mercantile members of which would have received their training at sea, and the volunteer reserve would be filled by men who received their training in the volunteer reserve.

So we see that the Canadian navy of to-day has been built on a plan which was laid after the great war. Had it not been for that plan we should not have been able to get a navy of the stature which we have to-day. The essence of that plan was the efficiency of the permanent force. In order to attain efficiency Canada looked towards Great Britain for the assistance which the Royal Navy has been ready to give in the training of the young men of all the dominions who could go into its training courses with the young men of Britain and so receive that training and gain that experience by which we now benefit. After that training our young men went to sea in battleships and cruisers until they had served sufficient length of time to warrant their being passed on as acting sub-lieutenants to the Greenwich courses, and having graduated in those stiff courses at Greenwich Hospital, they then were able to return to Canada for the first time and be used in Canada's ships and shore establishments.

At the time that Canada's navy was being derided there was, fortunately, a far stronger school of thought in Canada which reminded the people that Canada at least had an expanding export trade, that in Canada's mind there was budding the idea of nationhood, that somebody would have to police these trade routes of the world, and that if Canada did not do so she should surely hang her head if she was not able to make plans necessary to take care of her commerce. That reasoning, mercifully for us to-day, was strengthened by the growth of public opinion, was kept alive by these establishments to which I have referred, scattered across Canada —the volunteer reserve—and to a smaller extent by the sea cadet corps, which are in a far stronger position to-day than they were.

The minister referred in one portion of his remarks to the four methods of entry of ratings into the Royal Canadian Navy. I trust that when we get to the question time the minister will elaborate those four methods, because I do not think they are properly understood. He referred to the first as being through the Royal Canadian Naval Volunteer Reserve, the second through the naval schools and bases, the third through the technical schools and universities, and the fourth through ships. What I do not follow about that statement is that those who come through into the navy by means of the three latter that I have referred to must pass on to the R.C.N.V.R. to receive the further training necessary. The efficacy of the training given by the permanent force has had the effect of enabling a very considerable number, running I would say into tens of thousands, of men passing through the volunteer reserve to receive the necessary training in the short time that has been available to enable them to man the ships which we have built.

The minister told of the tremendous increase in the number of ships, from 15 to 550. It has been no easy task to find officers, petty officers and men with sufficient training, with the little experience that time would permit, to man those ships, and it has been due to the benefits received from the plan that I have referred to, and the methods of training which have been evolved.

The minister did not refer to a matter which I think it would be well for him to explain in the course of the discussion, and that is the capital expenditures to government-owned and private companies for the purposes of the naval branch of the service. A return was brought down last year which indicated that the sum already expended was $80,487, and that the capital commitments were $283,959. That was up to a date last year, which I cannot recall; I have not the return before me at the moment. I should

like the minister to bring these figures up to date and I should like him also to explain why it is necessary for the naval branch of national defence to make these expenditures direct, because in most other directions the needs of the navy have been supplied by indenting on munitions and supply, through whose hands capital assistance to the companies, whether government-owned or private, has passed.

The minister referred to the entry of ratings and explained the two methods of entry of commissioned officers. He referred also to the fact that in future we shall be able to look to the sea cadet corps as a nursery from which to draw. I should like the minister to explain whether, under the auspices of the navy—for the sea cadet corps now work in much closer connection with the navy than they did before—the age of leaving the sea cadet corps has been raised. Hitherto the age at which a cadet had to leave his corps was sixteen, and so far as I am aware the lowest age at which a lad is allowed to enlist in the volunteer reserve is seventeen and a half. I wonder what arrangements there may be to cover that overlap, because in the sea cadet corps there are usually found a certain number of lads who are extremely well adapted to the navy. Perhaps there is a call in the blood, perhaps there is a particular interest which has grown up from childhood, and it is not advisable that there should be any gap when the time comes for that lad to leave the corps and before he is able to be looked over for naval entry.

I do not understand from the minister's remarks whether there is still direct entry into the Royal Canadian Navy as there has been hitherto for boy seamen. It is true that in the years of peace the requirements of the Royal Canadian Navy of boy seamen were very small indeed, and I know from experience with sea cadet corps, with which I have been connected for a great many years, that there was very keen disappointment on the part of a lad who earnestly desired a sea life but who, with so small an entry, found it very difficult to make it. I should like to know whether there is still opportunity to receive boys, as they leave the corps, direct into the Royal Canadian Navy for training. I should like the minister also to explain what deductions are made at the source from the pay of both ratings and warrant officers and commissioned officers.

I do not know under what circumstances, if any, the national defence tax is taken off, and I want to know what other deductions there may be for contributions to funds for the benefit of the navy. For instance, is there anything in Canada comparable to the Royal Navy Benevolent Trust, a trust set up in Great Britain which receives, I believe, a government grant, contributions from the public and, I believe, contributions paid in by officers and men? Its purpose is to take care of those cases which may turn up from time to time of grievous accident to a man or his dependents—cases of sickness, operations, financial trouble suddenly occurring. I believe that after the great war it was of great service indeed in assisting men to get reestablished, and I do not know whether in Canada we have anything comparable to that. The sailor in the navy of course comes under the pension act and receives what assistance is forthcoming in that regard; but if there is anything further than that to which a man or his dependents can turn I should like to hear more about it.

As the development of the navy has proceeded, Canada's worth has been recognized in the battle of the Atlantic, by giving command of this side of the Atlantic in the submarine war to Rear Admiral Murray, as described by the minister. That to my mind is not only a very excellent recognition of the part that Canada has played in the fight in the Atlantic, but it also emphasizes the necessity for cooperative work between the navy and the air. Ten years ago exercises were planned to prepare for cooperational work. The work was terribly handicapped by the short supplies of those days. I should like the minister to describe to what extent that cooperational work has been carried on since the beginning of the war, and whether it is developing apace. He has referred to the squadrons which have been set aside for purposes of cooperation in connection with the fight in the Atlantic, but to my mind he was not clear in his description of the command. Do those squadrons operate under the command of the commander in chief, Rear Admiral Murray, or is it a parallel operation with the naval chief and the air chief operating in close contact but not the one under the other? In the statement made by the Prime Minister this afternoon the same question arises in respect to the river and gulf of St. Lawrence. Is the squadron leader who has been appointed to take supreme charge in command of the naval forces with whom he will cooperate?

Then there is another matter in connection with entry. Will the minister explain to what extent, if any, there are categories of entry into the navy. We know something of the categories in regard to enlistment in the army.

As to the navy, however, we do not know whether there is only acceptance or rejection; whether a man who just fails of acceptance in a fighting capacity, shall we say, can be used even though he may have some slight disability, and whether that applies equally to the lower deck and to the executive officers. I would remind the committee that the assistance which the Royal Navy has always been ready to give in regard to training has not been confined to our young men when they first enter. As promotions come to our officers and petty officers there are further opportunities for those men to serve on ships of the Royal Navy and to take courses drawn up by the Royal Navy, particularly in connection with those young men who specialize in gunnery, torpedo work, navigation, signals, or anything else. In that way we have been able to give the officers and petty officers and some men of the permanent force the training and experience they have required in order that they may again impart it to the volunteers coming from the two reserves.

There are many other questions which will arise in the discussion of this matter. I shall not proceed further at the moment, beyond calling to the minister's attention these few points on which I have asked for further information.

Mr. GRAHAM: As I listened yesterday to the presentation by the Minister of National Defence for Naval Services I was impressed by the fact that he was relating to this committee a most important development in the history of our comparatively young country. Think of the facts as he told them to us. Canada now has some 550 warships, which number will be increased during the coming year by some 70 ships. Manning these ships, and taking care of the shore requirements, are some 60,000 young Canadians. To me this means that a nation such as ours cannot turn back in its path of destiny; and I believe the facts related by the minister will play an important part in the development of Canada into a powerful young nation.

As a matter of fact, Mr. Chairman, there was a time in the history of Canada when her ships sailed the seven seas; that was about the middle of the last century, the period known as the days of wood, wind and water. I like to read of our wonderfully self-sufficient forefathers in the maritimes who were equally capable in tilling the soil to produce the fruits of the earth; going into the forest, cutting down the trees and shaping the logs into lumber and using that lumber to build ships; sailing in those ships to carry on deep sea fishing and then journeying to every port in the world carrying the products of their farms, of the forests and the sea. Unfortunately, as we all know, the advent of steam spelled the doom of that particularly independent and self-sufficient era. I imagine to the people of the maritimes that change seemed to come slowly. However, that economic revolution, together with the railway development in the United States, became the determining factors that helped bring about confederation, which in turn has brought about the development of this dominion of which we are all so proud.

I believe that the present significant growth of our maritime strength marks another really important development in the history of this nation. Since that period of Canada's greatness—because Canada was comparatively great on the seas in the middle of the last century—we could not be described as a maritime nation. We all recall the heated discussion which took place in 1911 and 1912 as to what should be Canada's contribution to the commonwealth sea force. No doubt it now seems strange to the hon. members of this house that the discussion should have occurred, or that it should have been characterized by such heat. I cannot help but pay a tribute to the great leader of the Liberal party of that day, Sir Wilfrid Laurier, who even then had a vision of Canada, within the commonwealth, becoming an independent, fully autonomous nation, friendly with all and in close partnership with the mother country, yet capable of assuming the rights and prerogatives of nationhood and all the responsibilities that must go with the assumption of those rights. So that what is happening to-day is in effect a tribute to the vision of Sir Wilfrid Laurier and the policy that dictated his attitude toward the development of our young nation.

I have no desire to enter into the argument of sea power versus air power, let alone to attempt to settle this controversial question. History alone, I imagine, will decide the question; but notwithstanding that controversy let me say, as the hon. member for Yale (Mr. Stirling) has said, that the history of this war so far has shown that sea power is still a vital factor which will play an important part in the determination of the struggle in which we are now engaged. It will be remembered that Napoleon was unable to gain domination of the world because Britain in that day controlled the seas. Napoleon failed because of his inability to overcome Britain's naval strength and command of the seas. Hitler has found and will continue to find that he, too, is unable to storm or to break down the barriers of

that first bulwark of British defence, the sea power which has stood us in good stead throughout the ages.

When we think of the present war, and what sea power has contributed to the allied cause, we must admit that there would have been no embarkation at Dunkirk had Britain not possessed the ability to take the men out from that holocaust. It is also easy to realize that the magnificent efforts of those few members of the Royal Air Force in those terrible days would have been in vain if Britain had not kept the north Atlantic lane open, so that the new world could carry to her the food and munitions of war which enabled her to continue the struggle.

What would have happened in Egypt; what would have happened to the Suez canal, had control of the seas not enabled us to carry to that vital field of battle not only the sinews of war but the men to use those sinews of war.

And so throughout the history of this war —in Libya and in North Africa. To-day, when we face a moment of great decision; when we are about to invade Europe itself, where would we be if we did not possess that overwhelmingly important factor, namely sea power, with which to support the armed forces we propose to send to that continent?

Therefore I think, without in any way depreciating or taking away from the army or air force the warm and well deserved praise that is their due, we should never forget the overwhelming importance of this vital thing we designate as sea power.

Canada now has a very strong naval force. According to the figures given by the minister, Canada is now the third most powerful maritime country among the allied nations. That is a remarkable historical fact which must play an important part in the future growth and development of our country, and in its relationship to the world.

It will play a great part, too, when we come to the peace table. When I think of Canada's contribution through its army, its air force, its navy, its productive capacity, and through the immense supplies of food and war materials furnished the allied cause, I have a vision that Canada will come to the peace table as a fairly powerful voice; and more so because it is well recognized that Canada has not raised its army, developed its air force or its navy for purposes of aggrandizement, or for purposes of aggression or warfare, but for the very opposite. We have that potential strength to stand at the side of those who agree with us in developing a world in which there will be that degree of liberty and peace for which we are all striving.

I rise to-day because I come from what is possibly the most land-locked province in Canada. Sometimes I wonder if those who live down by the sea, in our coastal provinces, think that we have no interest in the magnificent creation of our Canadian navy. Of course the facts indicate that that is entirely wrong. These show that out of the 60,000 officers and ratings which go to make up naval personnel, almost forty per cent came from the four western provinces.

I read a discussion as to just what created the appeal in the minds of men from the prairies. One suggested that it was the love of the far-off seas. Another suggested that life on the prairies is so different from life on the sea, that the reason was to be found in the lure of strange places. I do not know the reason. Perhaps it is an atavistic trait gained from our forefathers who came from many lands, and many of whom undoubtedly dwelt near the sea.

I am delighted, however, to learn, both from the records and from conversations I have had with naval officers, of the splendid contribution made by our young men from the prairies. In some ways those vast prairies look like the great oceans. Our boys from the prairies have shown themselves to be first-class sailors, and I note that the official releases by the Royal Canadian Navy pay tribute to the splendid young men who have come from the prairie provinces, and who have directed their efforts to the navy.

I should like to place on record a brief dispatch setting out a deed of valour performed by one of the ships named after one of our western cities. I refer to the *Regina*, named after the capital city of my own province:

> On a pitch-black night, tracer bullets exploding against steelwork and vivid Mediterranean phosphorescent wakes revealed the targets to gunners.
>
> The submarine sprayed the corvette's forecastle, wheelhouse and bridge with steel and explosive bullets, hoping to kill the guns' crews and upper deck officers. By sheer luck, only one lad was grazed.
>
> Zig-zagging in hot pursuit of the U-boat, *Regina* brought port and starboard light guns to bear successively on the raider's decks—the one side reloading as the other fired. The captain, navigator, first lieutenant, after-gun's crew and several others, of the submarine, were killed as they attempted to direct offensive action against the corvette and man their armament.
>
> At the same time the corvette's four-inch gun's crew blasted their quarry at close range with heavy shells. Despite the zig-zagging of the ship their aim was good and their shells tore great gashes in the submarine's upper decks. One shell hit just at the base of the conning tower, tearing it loose from the deck of the submarine.

Regina drew first blood and was in command of the situation from the beginning. As she closed, ready to ram, the Italians lost all stomach for fight. Great shouts of "my friend" and "comrade!" arose from the deck of the U-boat, and the fight was over. *Regina* turned the beam of a large signal lamp on the conning tower, and men were seen swarming out, hands high.

The submarine sank soon after.

That is a tale respecting one of our ships named after a prairie city. Among the personnel aboard that ship were men from every province in the dominion, my own city of Swift Current contributing one in the person of Mr. John Grant.

I am sure the opportunity which came to the *Regina* on that occasion in the Mediterranean is the opportunity which every vessel of His Majesty's fleet seeks. That is the opportunity they seek constantly, in order that they may contribute to the valorous history of our navy, wherever their work may be.

In passing, may I pay tribute to the minister for adopting the idea of naming our corvettes and mine-sweepers after the towns and cities of the dominion. That procedure brings home in tangible form the identification of at least one ship to the city, town or village whose name that ship carries. I know in my own small city of Swift Current there is a personal relationship between that community and the craft that bears its name. I am certain that is true of all other cities, towns and villages, such as Kamsack, Moose Jaw, Melville, Battleford, et cetera, whose names have been chosen to designate ships of war. It seems to me that whoever thought of this idea performed a valuable service for the people of this country through linking them in a personal way with some of the things our armed forces are doing in the course of their duty. I am sure that the people of Saskatchewan, in common with the people of other provinces, take pride in the minister's story of the building up of the Canadian navy. As I have said, Saskatchewan is a land-locked province but it feels that it has a part to play in all that occurs in this great dominion. Nothing has been closer to our hearts than the valour and deeds of our Canadian navy.

I wish to close with one suggestion with reference to a matter which has been the cause of controversy in this country for some time. I confess that until recently I had not formed a decided opinion about the adoption of a Canadian flag, but I must say that I think the time has come when, in justice to the immense contribution which Canada is making; in fairness to the dignity of this nation of ours and without the least suggestion of disrespect to our mother country; in fairness to all our ships; in fairness to our army which has fought and will fight upon the battlefields of the world, and to our air forces, we should have a distinctive flag to symbolize this great country from which they sprang. I for one think the time is ripe—I believe the great majority of the people of Canada will agree—to have a distinctive Canadian flag.

Mr. ANTHONY HLYNKA (Vegreville): Mr. Speaker, during his most interesting and well delivered speech yesterday, the Minister of National Defence for Naval Services (Mr. Macdonald) gave us some of the highlights of the services which are being rendered to the common cause by the Canadian navy. Personally I have no quarrel with the Canadian navy because there is much in it that deserves commendation, but I hold the view that we cannot get very far by patting ourselves on the back for everything we do. I believe it is proper and desirable for hon. members to point out to the minister and the committee the mistakes which are being made from time to time in an endeavour to overcome and correct them. The Saskatoon *Star-Phœnix* of October 21, 1942, contained an article which I should like to quote. I wish to refer briefly to some of the practices of discrimination shown by certain officers in the naval service. It is an unpleasant task for any member to rise in his place and refer to these incidents, but someone must do it. This article points out the narrow-mindedness of some of the men who hold important positions in the service of this country, and it is as follows:

Navy willing to take men,
Probationary sub-lieutenants will be accepted, says commanding officer

The commanding officer, Lieutenant-Commander C. A. E. White, H.M.C.S. *Unicorn*, announces that a limited number of applications will be accepted for entry into the naval service as probationary paymaster sub-lieutenants.

Preference will be given to candidates with university degrees and to qualified accountants. In addition, some experience in accountancy, law or commercial training is required. Those in administrative positions or those who have already demonstrated an ability to take charge are most suitable candidates.

Here is the pertinent part:

In addition to the above qualifications candidates must be between the ages of 18 and 45 and be of British origin.

All hon. members know that our Canadian citizenship is made up of peoples who have come from many different lands and who have adopted Canada as their country. I know of several instances where school chums who have attended university together de-

cided to enlist in the navy, and the same thing applies to the army and the air force. When they were accepted, those with British names were eligible for officer material, whereas the others were left behind. This sort of thing in time of war is most undesirable. Surely there is no distinction drawn on the battlefield; surely no one cares about the origin of a Canadian soldier who is ready to give his life for Canada. Information about these cases leaks out only now and then, but the instances brought to my attention were so numerous that I was astounded.

In his speech last night the minister pointed out that the task ahead is still a great one. Why not then erase all these differences? Why bring up the racial origin of a Canadian who wants to serve his country? I should like the minister to answer some of these questions when I get through.

I wish to ask him this question: What is it that makes these men of non-British origin unfit for officer material? I should like to know, because scores of young men from my constituency are writing me that they want an opportunity to advance, but there is simply no possibility of it on account of this prejudice. This state of affairs is most regrettable in a time of war when we are fighting for our very existence, and a different policy should be adopted forthwith. It is true that the navy is a traditional British service. The British have naval traditions unequalled by any other nation in the world. At the same time I feel that we should accept for promotion those who are not of British origin, if they possess the requisite qualifications and physical standards. I think the time has come when Canada should once and for all erase at least some of these distinctions and fight for a common objective. No one has any choice in the matter of birth or racial origin.

Mr. MACDONALD (Kingston City): I do not want to interrupt my hon. friend, but he has repeatedly referred to an article in the Saskatoon *Star-Phoenix* stating that recruits must be of British origin. If such an article did appear it was entirely unauthorized. The regulations simply require that a man be a British subject. There is no regulation that he be of British origin. If my hon. friend will look at the navy list of officers, he will find a great many names that are not British in the ordinary sense of the term. My hon. friend will find a good many other names which indicate central European origin.

Mr. HLYNKA: I am glad the minister has made that statement and corrected what appeared in the Saskatoon *Star-Phoenix*. I feel it should be the duty of the departmental officers to check up on statements of that kind and correct them as they appear. That was not done in this case. I have known many young men in the navy, army and air force who have at different times complained to me about this discrimination. That condition of affairs should not prevail, and I am bringing it to the attention of the committee so that it will not recur. I am glad to learn the minister's attitude because we must accept all Canadians, regardless of their origin, as Canadians, particularly when they offer their very lives for this country and the cause for which we are fighting. The diversity of racial origin in Canada should be a source of strength rather than a source of weakness if our people are treated aright. There is an inestimable amount of cultural wealth brought along by the various peoples who have come to this country.

In closing, I should like to refer to the remarks made by the Prime Minister (Mr. Mackenzie King) in introducing Doctor Benes, President of the Czechoslovak republic, to the members of the two houses of parliament the other day. The Prime Minister said:

> May I say to Dr. Benes that we follow in our parliament the practice he followed as President of the League of Nations, and speak in either one of two official languages. I know, had time permitted, the President, as was the custom at the League of Nations, would have wished to repeat in French the address which he has just delivered in English. I would suggest that one of the two gifted gentlemen who will express our thanks to Doctor Benes might take notice of the fact that we are a parliament which recognizes more than one language.

I was deeply impressed by that statement of the Prime Minister, who took pride in the fact that we express ourselves in more than one language in this country. I commend that spirit and attitude to the various defence departments in the task which lies ahead of them. Canadians, regardless of their origin, and I would include those who are not of British origin, have pulled their weight admirably in this war and we should be proud of them all.

Mr. CHURCH: I had not intended to take part in this debate, Mr. Chairman, but I have one or two suggestions to offer. First, may I suggest to the minister that in view of the acoustics it would be much easier to hear him if he would occupy a seat in the front row and sit a little further down the chamber.

The minister made a very good opening statement. I would remind him that for many

years before the war started I had consistently urged upon this house rearmament and that we should be training from five to ten thousand naval men each year. We have the example of Gordon on the Nile in 1885. I had also urged for many years an empire shipbuilding policy, the extension of the navy, the building of a large merchant marine. When the agenda of the 1937 imperial conference was laid on the table of this house I urged that we should reopen and establish shipbuilding plants on the great lakes and the two ocean seaboards, and that we should be building merchant ships and all that kind of thing. I also urged that we should adopt the Jellico report regarding the Pacific and aid to the Singapore base.

I have no criticism except constructive to make of the department. I have never criticized, either in the two wars or between them, its personnel, the men who so ably carried on. Between the period of the two wars I did comment on the department not having given proper aid to the mother country in its great naval policy and shipbuilding policy, and also having allowed men who were faithfully serving us in the navy to put up with the conditions which then existed. We know what happened after the great war when Britain, on the urging of Canada, leading the dominions, threw away her defences and her friends and listened to the babble of the pacifists, and when his own predecessors treated the matter with some levity. However, that is all over. No doubt mistakes were made. Unfortunately the country and the house threw away its army, navy and air force and listened to the babble of the pacifists, with the result that when another war came upon us we were not ready and had no fleet except the merchant marine.

Starting from scratch, Canada has made, I believe a very fine contribution to the naval effort. But there are some matters in which I am interested in a constructive way. I have no criticism to make of the present minister; in fact I never saw him until he entered the house on the other side of the chamber. I have no quarrel with him. Criticism is a tonic which stirs governments to action and it is the function of an opposition, provided that the criticism is of a constructive character and is founded on fact and not raised for political purposes. I am a Conservative and have never been anything else. I want fair play. In the report of my statement to this effect the other evening the word "not" was inserted in front of Conservative; I did not use it. As I say, it is the duty of an opposition to give constructive criticism. Since the war began I have many times brought before the committee and the house suggestions and proposals for the improvement of the conditions of those who serve this country on land, on the sea and in the air. One was a bill in 1939-40 to provide free fares for soldiers on embarkation leave; another to supply cheaper meals and berths on trains and refreshments at canteens; also to ensure better transportation for the forces on rail and ocean services; to provide a high cost of living bonus to all soldiers and dependents, and not this pin-money to which I referred in connection with the debate on the army estimates the other night, something which is given to some and not to others. The bonus which is known as a dependent's allowance for board is, in my opinion, mere charity. There should be a proper bonus extending to all branches of the forces.

Regarding the chaplain service. I cannot see the necessity of three chaplains, one for each service, in a camp like the Exhibition grounds at Toronto. I do not believe it was ever intended when the services were divided that there should be duplication and triplication along such lines.

I have also tried to offer constructive suggestions concerning conscientious objectors, alien enemies in the universities, a national system of insurance to provide protection during and after the war against want and unemployment. Incidentally the 50-mile limitation on bus travel is causing a great deal of inconvenience to our soldiers. There should be a reduction in prices in the canteens for such things as cigarettes, tobacco, soft drinks, sandwiches, coffee and tea.

The government should give some attention to correcting inequalities of pay. Last session the minister after an order was passed by the house for it three months before, went to some trouble to produce a blueprint which was laid on the table of the house. It revealed a considerable number of inequalities especially affecting the lower paid ranks, as regards pay, subsistence, and transportation. We had also, on this order for return, a blueprint covering the pay of the women's army, all the three forces. If Canada has a citizens' army there should be less inequality of treatment. Many of our best men voluntarily enlisted at the lowest rate, which was $1.30 or $1.25 a day, when many had been receiving, in civil life, ten to twelve times that a day. I believe it was even lower for the navy, but the variation has since been corrected. Nevertheless there is too much of a difference between the pay of the ordinary seaman and that allowed to

the higher ranks. War is war. I am not criticizing the women's army, whose personnel are no doubt entitled to what they get, but the comparison of their pay with that received by other branches shows that the men who enter the ranks of our citizens' army—army, air force and navy—are not being fairly treated.

When a person enters the army, the navy or the air force he loses his civilian status. There is no doubt about that: once you sign your attestation papers you lose your civilian status. Now, we are a civilian army as much as the men who enlisted in the American armies during the war between the north and the south, and they did not lose their civilian status. The enlisted man retains his civilian status in England, in Australia, in New Zealand, but he loses it in Canada, together with all his rights of protection based on the liberty of the subject. He cannot even write to his own member of parliament if he has a complaint to make. Some letters which members receive are opened. I had a letter opened the other day which was written to me by a good soldier who won the Military Cross. It was concerned purely with a departmental matter, but it was opened by the censor. I wish to object to that.

There should be civilian inquests all over Canada for all the forces. I found it a good thing in the last war, as I told the Minister of National Defence (Army) the other night. In 1917 conditions in the hospitals were not what they should have been; in fact in our district they practically had no hospital. They opened the old base hospital on Gerrard street, Toronto, for some of the forces, although as a hospital trustee, as mayor, I closed it because it was not good enough for civilians, and we remember there was a flu epidemic in 1917 and 1918 which took away many of our men. I contend that a man who joins the forces is entitled to all the protection which the civil law accords him. Dear knows, he has enough to put up with as it is.

Mr. MACDONALD (Kingston City): I assume that my hon. friend has looked closely into this matter of civil rights of Canadian soldiers as compared with, say, British soldiers, but my strong impression is that there is no difference whatever there, that a British soldier has no more rights with regard to complaining in writing on service matters to, say, members of parliament than a Canadian soldier has. I wonder whether my hon. friend has looked closely into it.

Mr. CHURCH: My time is limited; I am not like the minister, who has unlimited time. But I can tell him that a man loses his civilian status by joining the army, the navy, or the air force.

Mr. MACDONALD (Kingston City): I assure the hon. member that he has as much time as I have, and I want to ask him if he has looked closely into this matter.

An hon. MEMBER: Order.

Mr. MACDONALD (Kingston City): Are we in committee; and if so, are we not to have a discussion? My hon. friend has made the statement that a Canadian service man—

Mr. GRAYDON: Mr. Chairman, is this a point of order? Is the minister rising on a point of order? If not, I am.

Mr. MACDONALD (Kingston City): I am not rising on a point of order. I am asking the hon. member for Broadview a question.

Mr. GRAYDON: I am rising on a point of order, and it is that I think the minister at least ought to ask the hon. member if he desires to allow an interruption, because this is twice that the minister has interrupted him. I believe that only on a point of order should an interruption be permitted.

Mr. MACDONALD (Kingston City): When we are in committee—

Mr. CHURCH: May I say to the minister that I, not the minister, am making this speech. He can make his own speech afterwards. He has the whole year to make speeches; we have just one opportunity, when his estimates are here, on the particular appropriation bill. I notice in connection with the debates in the British House of Commons that on the appropriation bill these questions are brought up which concern the three forces, and there is criticism of the gross mismanagement of the whole war. In any event I am just about through with this portion of my remarks.

In connection with summer uniforms, some get them and some do not. As regards the navy, I suggest that during the summer and winter there should be a better uniform for those men who walk around our streets. It is all very well for them to wear the ordinary uniform on board ship; no doubt that conforms to regulations and all that sort of thing. But there should be some improvement so far as training at home days are concerned.

This empire of ours came into being by the sea and it cannot exist without the sea. I believe that these vast expenditures which the minister brought down last night, nearly half a billion, while they are commendable as far as they go, do not represent the total com-

mitments which we shall have to make in the course of time after the war to protect us from another war. It is my opinion that even after the war we shall require very large expenditures for the upkeep of a national empire fleet as a part of the contribution of Canada to peace and collective security. The mother country has to import twenty-five out of twenty-seven articles of raw materials she uses, and we know what sea power has stood for down the ages, and what it has meant in particular to Great Britain and the British empire. I am sure the minister would receive the support of the Canadian people if he took steps to ensure a strong navy for this dominion even after the war; because I do not believe for a moment that the Canadian people will tolerate again such a state of affairs of complete disarmament as existed at the time the war broke out. Right alone is not enough. Right plus might will be right in the future, and right plus might will be the policy of the British empire, which will continue as an empire for all time.

So far as the navy is concerned, I would point out two appropriate prayers in the Book of Common Prayer. There are three prayers which have to do with our ships at sea in time of war, daily and before a battle, and the Rubric directs that these prayers shall be used daily at sea for use in His Majesty's navy, to be read at sea by all officers and men. In one of them, officers and men pray that they may be a safeguard unto Our Most Sovereign Lord King George and his dominions, and a security for all persons sailing upon the seas on their lawful occasions. That is a most eloquent tribute to the navy. It is a definition of the work of the navy in this war, and it indicates that the navy has a function wider than that of mere national and imperial defence or war effort. It is binding on Canada. The ultimate object of those who so gloriously serve in the navy is the establishment and maintenance of law and order, justice in the world and freedom from tyranny, as these prayers indicate.

The sea power of the British empire is not an instrument of injury or tyranny, though the navy has been an instrument for the overthrow of tyranny. It has always defeated tyrants, and it is the one power which the axis powers fear most to-day. It does not seek dominion but is an influence for freedom and for the protection of all those who go on the seven seas to pursue, as the prayer so beautifully states, their lawful occasions. Indeed, Mr. Chairman, I suggest that it would not be out of place for that prayer to be read here daily, seeing what a splendid page our officers and men have been writing in the history of Canada.

There is one question with regard to naval cadets which I wish to touch upon briefly. As everyone knows, this country excels in aquatic sports, but many of the rowing and canoe clubs, swimming and aquatic associations, yacht clubs and so on, have been driven to the wall by the great war, the depression and this war in succession. I was at a regatta last Saturday, where a great many secondary schools of Toronto and York county were taking part at the Argonaut club in Toronto, of which I was at one time president. I have always taken an interest in the secondary schools. I began to interest myself in this work when I was on the school board and later in connection with my activities in the aquatic clubs of the city, and harbour improvements, as chairman of the harbour board, and from my experience I have no hesitation in stating that we were wrong when we took the control of the cadet services away from the boards of education and school boards, public and separate, where it had been since confederation. There was a big parade in Toronto on Sunday, and I suggest that the minister and his department might very well cooperate with these agencies, the school boards, in the advancement of cadet services.

I notice that in a great many newspapers there are reports indicating that members of parliament from various military districts across Canada have been invited weekly to join all parades of the forces, Toronto excepted, in order to find out for themselves how the money to pay for the army, the navy and the air force has been expended. Those of us who come from Toronto and district have never had any invitation since this war began, to attend a single event in connection with the army, the navy or the air force, to see how one cent has been spent. Personally I do not want an invitation because I have not the time to attend in any event; but I object to members of parliament being passed over in that way when they represent the people in federal affairs.

I cannot understand why it is that a statement was not given long ago of Canada's part in money and munitions as to the great armada to Algiers and Morocco. There has been no such statement on behalf of the government so far. Probably the government will make a statement later on. He gave us a very good account of the expansion of his department, and the statement he made last night contained a great deal of useful information which I did not have, and which I do not believe other members had. But I think we should have had

long ago some sort of statement along the lines I suggest. Our military forces have written a glorious chapter in the story of the war so far; yet no one knows up to the present where Canada was in the desert victory, and it would be interesting to have a statement with regard to the part Canada played in North Africa in that connection.

I suggest also that it would be well to have a statement to clear up certain criticism that has been made with regard to the choice of barracks. As I said three years ago, with reference to the army and the other services, I could not understand then, any more than I can understand now, why certain camps were chosen in locations all over Canada for no military or strategic objective and where it was difficult to obtain water and sewers. I made inquiries in this connection at the session before last, and I was informed that it was the Minister of Munitions and Supply who had to do with the location of those camps. The navy has not as large a number as the other services, but in the choice of barracks in some of the large cities the minister, I am sure, has a great deal of difficulty in getting proper locations for the navy. He must find it difficult in Toronto. It is not very good advertising so far as I can see, although he has an excellent and popular real estate man in Lieutenant-Colonel Goodwin Gibson. In my opinion it is a wrong policy for us to have pages of advertisements in the newspapers displaying some large pictures of establishments like Sir Joseph Flavelle's house, one on Crescent road, and other mansions, when they are having such difficulties in housing the soldiers in the cities. There may be reasons for it which the minister can give; I do not know. Mind you, I am not criticizing the selection; I am simply calling attention to the policy, of our policy for certain of the forces, and no housing for soldiers' families.

I wish to encourage the department in its war effort. I am very much alarmed at what is going on in Canada. I do not like to see the apathy and political ignorance that prevail, as well as the false optimism. We seem to think the war is already won, and as I said the other day, red herrings are being drawn across the trail. You will hear throughout the country, in various public places, in the press, at public meetings and on the radio, suggestions to the effect that we have practically won the war already. Too many people in Canada seem to think there is a short-cut to victory, but there will be no short-cut to the winning of this war. There is no royal road to victory in this war, and we have no reason to expect it as a matter of divine right. We have no right to expect that we shall win by divine right, as is preached from some of the pulpits. It is not going to be an easy task, I can tell you; it is going to become harder all the time. We are now in the very darkest hours of the whole war, and we cannot win except by methods of total war. This is a struggle for the survival of the fittest. The fact is that we must fight through this war to the end; that we must kill Germans, Japs and Italians, with no thought of quarter, or ourselves and our forces be killed. Until the issue is decided, that fact should be dwelt upon by all who speak with authority; we should allow no red herrings of social security to be drawn across the trail to obscure the real issue, for this is a matter of primary importance. There are some people in Canada who in their speeches over the radio and otherwise would lead us to believe that the war will be over soon. Some of our government agencies do the same thing. Our publicity departments repeat the same propaganda cries: "This war is different from the last war", and tell us that non-essential and unimportant things are to play a decisive role. We must remember that the non-military things are secondary. War is war, and these should be faced as primary matters.

We are told that we are not fighting the German people at all, but only a lot of German dictators; we hear about propaganda successes; we are told of the stranglehold of the blockade and things of that kind. Over one and three-quarters million Germans have been killed so far in this war, but the German people as a whole support their leaders 100 per cent and have not changed one bit. In spite of all the damage that has been done by the air force, there is no doubt that we must regain command of the seas before we can embark upon a very large peninsular war, which will have to come before this war is won. No doubt the blockade is a major irritant, but in my opinion it never will be a deciding factor in this war.

There are one or two other matters to which I wish to refer. I do not think enough attention has been paid to the matter of records of the forces in this war. Why, in regard to the navy, the army and the air force we cannot tell to-day how many men have enlisted from any given municipality. The other day the navy minister gave a very fair statement in regard to the chaplain service, but his figures were given in the aggregate; there were no percentages as given by the air and army. When the war is over,

how is a municipality to know what men enlisted there; how is Hamilton or London or Toronto to know? These men in the forces from our cities are enlisting right across Canada. In connection with the victory loan we are told every day how much has been subscribed by each and every municipality in the smaller places throughout the country, but apparently we have no records in connection with enlistments. We can do a great deal to improve the matter of our records. The ministers tell us that it would be necessary to go over all the attestation papers to obtain this information. If that is so, it seems a queer system, a relic of the seven years' war; here we are spending over five billion dollars a year and we cannot tell how many men have enlisted from the various localities I have mentioned, or their names.

Then I fail to see why we should have all these press officers in the three war departments. I do not understand why one or two press officers could not handle all the work in cities like Hamilton and Toronto. I do not understand the reason for the large expenditures and these duplications that have been made in this connection. Yesterday the navy minister covered a great deal of ground in his remarks, and now I find a connection with the other services. Since this war began, there has been dual control as between the civil service commission and the various war departments. For example a return shows that in the air force 5,946 officers were appointed without having worn a uniform previously; they were just glorified civilians. I do not know the figures for the navy. Of course it is a newer organization, and I admit that a great deal of credit must be given for what has so far been accomplished. I believe, however, some solution should be found of this problem. I have another return showing that in the air force in the huts on our waterfront three or four hundred people were brought here from all over Canada, carpenters and all sorts of people, without the civil service commission knowing anything about the matter.

At six o'clock the house took recess.

After Recess

The committee resumed at eight o'clock.

Mr. CHURCH: Mr. Chairman, I would have concluded my moderate remarks before six o'clock, had it not been for the unnecessary interruptions of the minister. May I say regarding him, as I said before, that I have no objection to his department; far from it. I will say this, that before he came into the house I had been a warm supporter of this department, and of rearmament. I never criticized the personnel, or anything like that, at all.

However, I may say that he interrupted me. I was a former chairman of the Toronto harbour board, and it was during that time that the work was begun and completed on the whole waterfront. In addition to that, during the last war, as chairman of the board of police commissioners I insisted on civilian inquests into cases of deaths of soldiers in training in that city, for the protection of the soldiers on land, on sea and in the air, and with good results for recruiting and for the protection of civilian rights in our citizens' army during that war and since.

During the debate to-day the minister asked me if I was aware of what is being done in Britain. I certainly am. I was aware long before he came into the house—about eighteen years before he came to the House of Commons—of what is and was being done on land, sea and in the air in all our empire in this and the last war regarding protection for the soldiers; and I do not need a lecture from him in that connection.

I may say that since the war started I have had on the order paper a resolution for the better care and protection of soldiers, and men in the navy and other branches of the service. I have no personal quarrel with the minister or anyone else. I am told he is a very likeable personality. I do not know him very well. But that is what I have been told, and I believe it. But I will point out to him that, in connection with his department and this matter, I have had on the order paper since the war started a resolution for soldier protection, as follows:

That, in the opinion of this house, the government should immediately consider the advisability and urgent necessity of adopting improved measures for the better protection of all soldiers who serve in His Majesty's forces and more particularly—(a) that a system of life insurance on all soldiers be established to include provision for their dependents both during and after the war; (b) that a daily allowance be made for local car fare and for free fares on Canada's railways under the Railway Act (R.S.C.); (c) provision for a revision and improvement in rates of pay, subsistence and other allowances of all ranks, especially privates and non-commissioned officers and removal of existing inequality between all classes; (d) a high cost of living bonus be paid to all dependents of soldiers adjusted from time to time to include better allowances for all their children; (e) provision for a moratorium from foreclosure, eviction and certain other immunities from debt while absent on war duties and for six months after the war, and more adequate and improved housing for themselves and their families.

The minister is an old soldier, himself; there is no doubt about it. He has had more experience in war than I ever had—unfortunately, and through no fault of mine. But during the last war, and when this one broke out I proposed that a system of life insurance on all soldiers should be established, to include provision for their dependents both during and after the war. The hon. member for Davenport was kind enough when speaking the other night to refer to this fact, and also to many other soldier matters I had introduced into the house since the war first began. I am asking that a daily allowance be made for local carfare, and for free fares on Canada's railways. When I was mayor of Toronto the street railway was not publicly owned, but we persuaded the privately owned system to give free transportation to the soldiers in our city. That is done in many cities in the United States, including Detroit and others. It should be done in Canada.

Then, there should be free fares on the railways. Why not? A return brought down shows that the two railways in Canada made more money out of this war to the end of 1940 —a year and three months—than they made out of the whole four years of the last war, and two years thereafter. Is there any reason why the people of Canada, who own the national railways, should charge soldiers' families $2.05 to go from Camp Borden on a visit to our soldiers, and $1.05 for each child, or over a week's pay?

The other provision I have urged in the house is that provision be made for a revision and improvements in rates of pay, subsistence and other allowances for all ranks, especially privates, and non-commissioned officers, and the removal of existing inequalities between all classes. I have urged, too, that a high cost of living bonus be paid to all dependents of soldiers, to be adjusted from time to time to include better allowances for all their children. Then I have urged that provision be made for a moratorium.

They talk about the Sparkman act! I have correspondence with these various gentlemen at Washington. Some of them came to Toronto in 1940 and saw the late Mr. Thomas Bradshaw and myself about this matter. But the only hon. member who has been kind enough to refer to it was the hon. member for Davenport. We adopted that system in Toronto during the last war. I must admit that three of the defence ministers wrote me letters. The Minister of Pensions and National Health, who has taken a great deal of interest in this subject, wrote a letter, as did the minister for the army, and the ministers for the air force and navy. I might say that the three of them wrote very fine letters to me, after I had sent copies of the act to them, away back last fall, and said most of the provinces had in part Sparkman acts in the last war. We have had this system in Toronto, as the Minister of Pensions and National Health knows, in the last war, in insurance and other protection.

At the time of the last war many of the provinces passed legislation similar to the Sparkman Act, having to do with debts, moratoria and foreclosures. I asked in this resolution for a provision for a moratorium from foreclosure, eviction and certain other immunities from debt while men were absent on war duties, and for six months after the war, and more adequate and improved housing for soldiers and their families.

The minister, who was at one time premier of Nova Scotia, had legislation of that kind in the last war. He is a soldier. I appeal to him to-night, as a minister, to see if we cannot do something about getting a better Sparkman act for all Canada. That legislation was copied in the United States mostly from Canada; the provinces and municipalities had it.

Yesterday the minister referred to the U-boat menace. I am glad to see that the situation in that respect in the Atlantic has improved. I believe it was in 1937, 1938 and 1939 I read in the house a statement of what U-boats had done during the last war. At that time I pointed out the number of sinkings there had been. We nearly lost the last war on account of the situation in the Atlantic. I know something about it, because I was head of a municipality which sent 55,000 soldiers to war. Some of them were on ships that were attacked. At that time the hon. member for Davenport was president of the British Imperial Association in the Earlscourt division, one which sent so many people to that war.

I urged in 1937 and 1938, sitting where the hon. member for Lake Centre sits now, that something be done to solve the question of an empire shipbuilding policy. I urged rearmament and the opening up of all our shipbuilding plants and an all-empire shipping policy for the imperial conference of 1937. I predicted what would happen in this war, and pointed out that Great Britain had more mouths to feed by five million than in 1914 and had fewer ships than she had in 1914. I gave warning of the grave peril and danger we were in. I also have copies of many pages of British newspapers, including the *Times* and many other papers, showing where

ships were sold in Great Britain, including men-of-war and others, for death duties and taxes, or for as little as $50,000.

I call the attention of the committee to the great lakes, and to the Welland canal along which I counted sixty-four ships tied up, with nothing to do. I prophesied the disarmament disaster to come from our pacifism, lack of shipping and all that kind of thing, and called attention to the U-boat menace. The Pacific question has been mentioned before in the house, but for many years I saw the grave danger in the Pacific. In the debates here from 1937 to 1939 I urged the importance of the Pacific to this dominion, and to other countries in the empire, because there can be no such thing as collective security until this war is won. And I can tell you this, I saw Britain and her dominions not only throw away her defences, but also throw away her friends, and to-day we are facing a very powerful enemy—Japan. She has a first-class navy, and always did have.

Without going into a discussion of what has been done, I urged dealing with the grave Pacific situation. The Minister of Pensions and National Health, who was in charge of naval affairs at one time, brought down very moderate estimates. That was done in 1936 and 1937, but he was not supported by some of his own followers in the house. He was right, and I supported him then and always as far as he went. Probably he did not go far enough, but I supported him at any rate. I would say now that in the Pacific we deserve what we get. We refused to face the situation, with the result, as the minister has said, that he had to start off from scratch.

I have nothing further to say, except to mention the explanatory note in connection with my amendment to the Railway Act for free fares, which has been before the house since the war started, and the abolition of the 50-mile bus rule for soldiers. The purpose of the bill is to amend the Railway Act to provide that members of the forces, when in uniform, may be carried free on railway trains within Canada. The same principle as stated therein was set out in a resolution during the first month of the war.

In the last war the railways voluntarily carried men for single fare on week-ends. Now they carry them every day at half rate. The Railway Act does not at present provide for any special concessions to soldiers during the war, nor has the board of transport commissioners power to order it. In view of the fact that so many camps are far away from railways and the distribution of troops for training spread all over Canada, it is desirable to give soldiers some form of free transportation, because a large number have been killed on highways thumbing a ride in many places in Canada while in training.

Mr. MacNICOL: I shall have some questions to ask and some general remarks to make when the details are before the committee, but I rise now principally to express my appreciation as one of the honorary presidents of the Navy League of Canada, Ontario division, for the generous remarks made last evening by the Minister of National Defence for Naval Services commending the navy league. I have been associated with the navy league for a long time. The predecessor of the present minister did not have the same opportunities as the minister has had, but he gave effective assistance to the navy league in the work it was carrying on. But, to my mind, the present minister has been far ahead of any other minister in his efforts to inculcate the spirit of the navy and the love of the sea into the young men of Canada. The results obtained through the navy league have been tremendous.

If my memory serves me aright, the minister said last evening that there were sixty-one navy league corps in Canada, and approximately 10,000 sea cadets in these corps. That is a tremendous advance over any previous time in the history of this country. I can remember in my own time when we did not have more than a dozen corps in operation. However, in those days there were some wonderful corps. Apart from Toronto, which always had a good corps, the Winnipeg corps, for example, was always considered a show corps. They were well trained, well led and did wonderful work. They were sent to many places to demonstrate what could be done.

Through the assistance of the minister the navy league has spread as it never did before. I believe there are some thirty corps in Ontario. I have a list of the names of these corps but, since it would take a little time to read, perhaps I may be permitted to place it on *Hansard*. It will be noticed that each corps is named after a fighting ship. For instance, the Belleville corps is named "The Quinte", and the Port Hope-Cobourg corps is named "The Skeena". The list is as follows:

Sea Cadet Corps

Place	Name
Belleville	The Quinte
Burlington	The Iron Duke
Collingwood	The Hood
Fort William	The Admiral Craddock
Guelph	The Ajax
Hamilton	The Lion
Huntsville	The Lord Jellicoe

Sea Cadet Corps

Place	Name
Kitchener-Waterloo	The Warspite
London	The Courageous
Midland	.....
North Bay	.....
Ottawa	The Sir Francis Drake
Ottawa	The Falkland
Owen Sound	The Dauntless
Pembroke	The Iron Duke
Peterborough	.....
Port Arthur	The Vindictive
Port Hope-Cobourg	The Skeena
St. Catharines	The Renown
St. Thomas	The Admiral Beatty
Sault Ste. Marie	The Royal Sovereign
Stratford	The Royal Oak
Timmins-Porcupine	The Admiral Cunningham
Toronto—2 corps	The Temeraire I and II
Toronto-Riverdale	The Ark Royal
Welland	The Bellerophon
Weston	The Illustrious

I believe that those who read *Hansard* will be pleased to see that these famous names have been given to these sea cadet corps. On December 31, which is the date of the last report I have been able to get, there were 3,200 sea cadets in Ontario. I believe that by the end of the year there will be from 5,000 to 6,000. The Navy League of Canada has increased to a tremendous size. One might say that they are now in big business. Of course, this is largely the result of the war. They have done wonderful work. At Halifax, where the minister comes from, they have put up a recreation centre which is giving excellent service to the sailors and fighting men. They also have a hostel at which meals and rooms can be obtained, as well as supplies of writing paper and books, et cetera. These things have increased as a direct result of the support given by the minister, so that I am very happy to thank him for what he has done in this regard.

In Ontario there are sixty-seven branches in all, but they are not all corps. Practically all the larger towns and cities have corps. What do they do? The department send out instruction books on how to train the boys and give directions along the different lines of naval activity and merchant marine matters. I have just forgotten what the minister said last night, but he gave the number of the thousands of young men who had enlisted after having received training in different branches of the navy league. I am sure that the minister will support me when I say that the navy league has had a great deal to do with the enlistments in the naval service.

One would naturally expect a large number of enlistments from the maritime provinces, from the Pacific coast and also from Ontario and Quebec which are on considerable bodies of water, and there have been. But the great surprise is the results obtained in the western provinces, particularly the land-locked provinces of Saskatchewan and Alberta, in which there are no lakes of any size. They do have a magnificent river there, the Saskatchewan, which I hope to see improved some day. There are no lakes in the southern part of Saskatchewan, although there is one in the north. There is a fine corps in Regina which is well officered. This corps sends out speakers to different centres in the provinces, and I am sure the work they have been doing has done much to encourage enlisting.

While we expect boys from Nova Scotia, Prince Edward Island, New Brunswick, British Columbia, Ontario and Quebec to do big things on the water because they have been brought up close to the water, the surprising thing is what has been done by boys from the prairies, many of whom hardly knew how to row a punt. They have blazoned the skies with the honour and glory of their names because of what they have done on the corvettes and torpedo boats to which they have been assigned. I understand that many of these boys are commanders, and I am sure that what they are doing is a great tribute to the work of the league.

The league has raised a lot of money by means of tag days. Of course this money is given by the people, but it is spent judiciously. I understand that expenditures are audited by government officials. The minister paid a tribute to the league, but I wish to pay a tribute to the men and women who have assisted in making the league what it is. The hon. member for Danforth (Mr. Harris) is the principal officer of the Toronto-Riverdale corps. Here in Ottawa Mr. H. S. Southam and Mr. J. P. Kenny are president and vice-president of the Ottawa corps. I shall not take the time to read the names of the members of the main committee in Toronto. The principal ones are the president, Mr. Gordon C. Leitch, a big businessman, who devotes a great deal of time to seeing that the work of the league is carried on successfully; L. T. Spalding, J. C. M. MacBeth and Frank Trimble. Among the women I might mention Mrs. R. C. Matthews, Mrs. Rooney, Mrs. Ryland H. New, Mrs. J. Bruce MacKinnon, Mrs. Arthur Kirkpatrick and many others, all of whom are doing splendid work. Colonel Arthur Kirkpatrick, one of the police commissioners of Toronto, also takes a big part in the work of the war service branch of the league. So that the minister was right when he praised the navy league for the splendid work it is doing, and the navy league I am

sure in return has been doing its utmost to assist the minister in his work. They send out many comforts, books, magazines, ditty bags and so forth to the men in service. The few words which I have said, and which were inspired by what the minister himself said last night, are my humble tribute to what has been done both by the minister himself and by the navy league.

Mr. MacINNIS: Mr. Chairman, we all listened with great attention to the statement made by the minister last evening. That statement in conjunction with those made by the senior Minister of National Defence and the Minister of National Defence for Air outlined a record of achievement of which I think this house and the country may well be proud. The ministers concerned should feel gratified at the generous reception which their statements have received from the opposition side of the house. There has been, so far as I could observe, very little of what is generally called carping criticism. What criticism there has been has been of certain specific matters, and not at all directed to the whole programme which the ministers outlined.

The work of the navy of which the minister is head is not spectacular. Except when there are major naval engagements the navy is seldom heard of; its work is done quietly and unobtrusively. Nevertheless in this war it has performed a particularly essential service which has been of the greatest value. I felt myself from the time of the fall of France until the drive in North Africa began last November that the work done by the British and Canadian navies and the navies of the united nations had received perhaps less credit than to which they were entitled. The importance of their work was not properly understood or appreciated, and it was difficult to begin making comparisons between the work of the navies and the military effort of some of our allies for fear of creating disharmony and disunity in the ranks of the united nations. However, I think that phase is now passed. Personally I am glad at this time that I have no criticism to offer. I am not competent in the first instance to criticize the work of the minister, and, second, I am glad to say that I have had very few complaints so far as navy personnel and naval matters are concerned.

While we are justified in taking pride in what we have accomplished, we should be careful not to be carried away by these accomplishments but should realize that it was done under the stress of war. In other words, war became the country's great national purpose, and we allowed nothing, lack of money, lack of material or lack of anything else to interfere with that one purpose. Consequently we have performed what we may call a great achievement.

But what I wish to call attention to particularly is that the navy was built for one purpose, namely the winning of the war. After the war is over, we cannot live and prosper by expanding or building greater additions to our navy. The high speed with which we built our great war machines for all our fighting forces should give us pause to think what our productive power will mean to us when the war is over. We should stop to ask ourselves how quickly we can build the capital equipment necessary for the greatest production of consumer goods that we can imagine. That, in my opinion, once we have achieved victory, is what we should be thinking of. I read in a British periodical not so very long ago that two-thirds of the important war instruments which now are part of the equipment of all branches of the fighting forces was not even conceived in the mind of man when the war began.

The hon. member for Swift Current said this afternoon that the greatness of our military power should give us an important voice at the peace conference when that event takes place. There were great powers at the last peace conference, but that did not mean that they could build an enduring peace. Therefore I would say that we have to bring more to a peace conference than merely great military power. The greater the military power we have, the more important it is that we have ideas and ideals, and determination to put them into effect, if we are to build a world in which young men will not in another decade or two have to give their lives in world war No. 3.

When the minister was making his statement last evening, my mind continually went back to the time when so many young men who are now in the navy, and who are now our heroes, could not get sufficient to eat or a place to lay their heads. Unless we take care, when this war is over, these young men, instead of receiving the rewards of their heroism, will be, as too many returned soldiers were after the last war, an embarrassment to the country and a nuisance to themselves. While complimenting the minister and the country on this great achievement of building an efficient naval machine, let us remember that this is not the end; it is only a beginning.

Mr. McGEER: I think we can all join with the minister in the tribute he has paid to the shipbuilders who built the majority of the ships operating in the Canadian naval service to-day and built them substantially

with Canadian materials, and to the men and the officers and the ships they operate. We have some difficulty in appreciating the magnitude of what has been accomplished since this war began. I remember sitting here and listening to tremendous debates when we were determining whether or not we were spending too much in voting $30,000,000 a year for the army, the navy and the air service. I look back on those days with more amazement than comes to me as I hear the statements, by the ministers who have the responsibility of conducting this war, of the magnitude of the operations which they are still developing upon an expanding basis. I agree with the hon. member for Vancouver East that we should not lose sight of the fact that this war has disclosed the power which we as a people possess, and which, if properly used, will forever avert the return to the conditions of unemployment, poverty and misery which existed during the decade that preceded this war. I remember standing in my place in this chamber and saying to my colleagues, when I pleaded that we go on with any number of the millions of jobs for which there was crying need in this country, that if war ever came, the one thing we would find out was that we were not short of money. When you get a Scotsman as minister of naval defence, and he spends without batting an eye $489,000,000 on a naval service which was practically non-existent when he took office, in one year, you can fairly conclude that we were not short of money before he went to work and that certainly we have an abundance of reserves over and above the amount which he is spending. And, at that, he is getting only a small share of what we are spending—$489,000,000 for the navy, $4,600,000,000 for the army and the air force. Why, we were told, when we asked for a few million dollars to build some naval defences upon the Pacific coast and to maintain the nuclei of an army and an air force, that we were going beyond our means because we dared to spend $30,000,000. I hope the Canadian people will never forget this lesson or permit the government to forget it. "Where is the money coming from?" I used to hear. I hope we shall never hear that kind of nonsense again.

While I am on my feet may I draw attention to the fact that I was one of those who advocated the public ownership of the Bank of Canada, and I was told that that was heresy, and dangerous. I said that we ought to have our own bank and issue our own money. "Why", they said, "that is 'funny money'; you will wreck the economy of the nation." Do you know what we are doing to-day? We own the Bank of Canada; we have a thousand million dollars of our own securities in that bank, and in exchange for those securities we have a thousand million dollars of Bank of Canada bills operating in this nation, unsecured by gold, and operating as debt-free money. A great many of my colleagues, apparently, are as yet unaware of that fact, because there are some other features which indicate that we have not yet come to realize that the power which is in that new technique is, after all, the basis of the power we are able to demonstrate in these reports from the ministers of national defence.

I wish to pay a tribute to the Minister of National Defence for Naval Services, and to congratulate the government upon the selection of a man from the maritimes to administer our naval service during this war.

I often think I am one of the luckiest of men, because I happen to have been born in Winnipeg; I was taken to the Pacific coast of Canada when I was less than a year old, and I had the privilege of living in the maritimes and getting some of the education which they dispense on that coast.

An hon. MEMBER: You got your start in Winnipeg.

Mr. McGEER: I went both ways and I did not miss anything.

An hon. MEMBER: You got the continuation in Quebec.

Mr. McGEER: I had the privilege of visiting in Quebec, too. There is something about those who live on the seacoasts of Canada that gives them an understanding and appreciation of the motto that stands over the portals of this parliament building:

> The wholesome sea is at her gates,
> Her gates both east and west.

Sometimes, in this canoe-minded atmosphere of Ottawa, and in the pervading activity of the attitude of the great lakes, which was so completely hypnotized by the pacific influences of the Rush-Bagot treaty of 1817, Ottawa has forgotten that there is such a thing as a Pacific or an Atlantic ocean. The hon. member for Comox-Alberni (Mr. Neill) says, "hear, hear." Well, of course, he has had the same experience that I have had; but we have been awakened by this war to the fact that the sea is still the greatest of Canada's highways and the greatest of Canada's securities. It is sometimes a matter of wonderment that we should have ever forgotten in the Dominion of Canada the value of the sea to us and the importance, the growing importance, that it has always played and will ever continue to play in the life of the Canadian people.

I believe it was away back in 1789 that a former officer of the British navy reported to the British government that the Spaniards on the Pacific coast of Vancouver island had captured his ship, put him in prison and driven him off a piece of land on Nootka sound. It was as a result of that incident that England and Spain nearly went to war. A settlement was arrived at, and Captain George Vancouver was commissioned by the British government to go out to Nootka sound and take over that land. Quadra came up from California and offered to Vancouver the bare piece of land upon which Meares had erected a cabin. It was because Vancouver refused that settlement and proceeded to survey the whole coastline of what is now British Columbia, and a part of the United States and Alaska, that we from Canada's Pacific shores have the privilege of living as we do in the best country in the world; and more than that; in the best part of the best country in the world.

I congratulate the minister upon the leadership he has given and upon the fact that he is just as conscious of the importance of the Pacific ocean to the dominion as he is of the Atlantic. On the Pacific coast he has placed Canada's naval college; there he is building the foundation for a Pacific navy which will join with the United States in its operations and give to us not only future security but participation in an expansion during the post-war period over the Pacific area which I believe will be infinitely greater than the expansion that will take place across the Atlantic.

When we come to a recognition that this great naval achievement should take place under a Liberal administration conducting war, it may not be unfair to recall something of what Liberalism has always had in the way of a conception of what Canada's naval policy should be. I know that in laying foundations for the growth and development of a nation, its naval policy and its relations within an empire, there are always many things upon which men equally intelligent and equally loyal can disagree. Time alone can pass judgment upon such controversies, and to-day I believe in the development of our naval programme we are finding experience passing judgment upon the naval policy as it was laid down thirty-three years ago in this house in the naval bill of 1910.

After outlining at that time the naval service contemplated in that bill, which meant the establishment of a Canadian navy, to be owned, operated and controlled by the government responsible to the Canadian people, Sir Wilfrid Laurier said—I am quoting from *Hansard* at page 1736 of January 12, 1910:

[Mr. McGeer.]

The question arose as to what should be the extent and character of the fleet to be created in the beginning. Two plans were proposed and discussed, one involving the expenditure of $2,000,000 a year and the other involving the expenditure of $3,000,000 a year. The first one would have consisted of 7 ships; the second one would have consisted of 11 ships, namely, 4 Bristols, 1 Boadicea and 6 destroyers. We have determined to accept the second proposition, that is to say, the larger one of 11 ships.

And on page 1837:

The total cost of these eleven ships will be, according to the British figures, £2,338,000, or a little more than $11,000,000. According to Canadian prices, supposing the ships were to be built in Canada, we would have to add at least thirty-three per cent to the cost just given. I may say that it is our intention to start at the earliest possible moment with the construction of this fleet, and if possible, to have the construction done in Canada. These, Mr. Speaker, are the explanations I have to give upon this occasion, in introducing this bill, of which I now beg to move the first reading.

Of course, at that time they said we could not build ships in Canada; we could not use Canadian metals; we could not use Canadian coal; we could not develop a shipbuilding programme without spending too much money. Arguments raged across the country as to the folly of Canada trying to build naval ships. But there was another issue that has also been tested out in this war, as it was tested out in the last, and it was this. I quote again the words of Sir Wilfrid Laurier, at page 1733:

Coming now to the service which will be required from the force, "active service", as defined by the act, means service or duty during an emergency, and "emergency" means war, invasion or insurrection, real or apprehended.

The act provides also that at any time, when the governor in council deems it advisable, in case of war, invasion or insurrection, the force may be called into active service. There is also an important provision to which I at once call the attention of the house, that while the naval force is to be under the control of the Canadian government, and more directly under the control of the Department of Marine, yet in case of emergency the governor in council may place at the disposal of His Majesty for general service in the royal navy the naval service or any part thereof and any ships or vessels of the naval service and any officers or men serving on these vessels or any officers or men of the naval service. There is a subsequent provision that, if such action is taken by the governor in council at a time when parliament is not sitting, parliament shall immediately be called. This provision is taken from the Militia Act and reads as follows:

Then he quotes the section. Then Sir George Foster asked:

In that connection, would the right hon. gentleman give us the clause that defines "emergency"?

Sir Wilfrid Laurier: It is the clause taken from the Militia Act:

"Emergency means war, invasion, riot or insurrection, real or apprehended".

And, as I have already stated, in case of emergency the governor in council may exercise the power of calling out the naval force to be placed at the disposal of His Majesty, the only restriction being that parliament is to be immediately summoned.

Mr. Sproule: Is the "war" referred to war in any part of the empire or in Canada only?

Sir Wilfrid Laurier: War everywhere. When Britain is at war, Canada is at war; there is no distinction. If Great Britain, to which we are subject, is at war with any nation, Canada becomes liable to invasion, and so Canada is at war.

An election was fought upon that issue, that we should not have our own Canadian navy; that we should not build it, and that if we did anything of the kind it might mean that we would not associate with the British empire when the empire was at war. What happened? One of the striking statements made by the British foreign secretary when he spoke from the floor of this house not long ago was a tribute to the empire. That tribute was because of this fact, that when Britain declared war Australia, New Zealand, South Africa and the Dominion of Canada were at war at one and the same time. The policy of Sir Wilfrid Laurier, the policy of the Liberal party of 1910, was vindicated in 1914 under a Conservative regime, and more than vindicated in 1939 under a Liberal administration. Upon those issues there is no party cleavage in the Dominion of Canada. Never again, Mr. Chairman, should there be party cleavage in regard to the development and maintenance of the strength of Canada's naval forces and merchant marine services.

I am going to make a suggestion, because I think we should keep in mind the history of the British empire. It was my good fortune to be chief magistrate of the city of Vancouver when we celebrated our golden jubilee by erecting a new city hall. From its very inception our city was named after George Vancouver; and the proudest moment of my life came when I introduced the Lord Mayor of London, who unveiled a monument at the portal of our city hall to Captain George Vancouver, to whom we western Canadians on the Pacific owe so much. I often think of what a tribute it was to the British empire and to the British people, who have always moved forward, conquering not to master but conquering always to save, when Sir Wilfrid Laurier said:

England has proved at all times that she can fight her own battles, but if the day were ever to come when England was in danger, let the bugle sound, let the fire be lit on the hills, and in all parts of the colonies, though we might not be able to do much, whatever we can do shall be done by the colonies to help her.

The sun in his daily career does not shed his light upon any people on the face of the earth enjoying more liberty than my countrymen of French extraction. And my last words to the doubters, to the scoffers, is that freedom is worth fighting for and worth dying for.

That was a tribute to the British empire by a French-Canadian, and it stands now alongside the great tributes that have been paid by the Prime Minister of South Africa, the Right Hon. Jan Smuts, a South African Dutchman who spent his young manhood in fighting the British forces.

Well, that day when England was in danger did come. None of us has forgotten the dark days when England stood beleaguered in her island home and Churchill came forward to demonstrate that England in danger is England at her best. Will anyone ever forget when he sent this message to the world:

We shall fight on to the end. ... we shall never surrender. And even if, which I do not for a moment believe, this island or a large part of it were subjugated and starving, then our empire beyond the seas, armed and guarded by the British fleet, will carry on its struggle until in God's good time the new world with all its power and might sets forth to the liberation and rescue of the old.

It should have been a proud day for every Canadian when the Prime Minister of this nation heard Winston Churchill tell him of the magnificent service that Canada had rendered in men, food and ships, without which England could not have carried on; and his declaration that as a result of that effort Canada had become the lynchpin between the peoples of the United States and those of the British empire. We in our naval achievements are making history for future generations that is comparable with the history we inherited. That inspiration that we have taken from the history which is ours gives us faith that we can see through troubles of the direst kind and meet dangers with a confidence that we can overcome them, no matter what they are.

In conclusion, I wish only to say this, and I hope it will register with my colleagues in this house. The idea came to me from some remarks that were made by an hon. member on the other side, who referred to the statement made by the former prime minister of Australia, Mr. Menzies. There is no need for believing that we are going to come out of this war poor. Any poverty that is imposed upon us by this war can be none other than an artificial poverty, from which we have suffered in the past, and we should have done away with artificial poverty for all time to come.

We are one of the richest nations in the world, and we shall be enriched by the effort we are putting forth in this terrific struggle.

Our capacity to produce must be the measure of our capacity to distribute, and not our capacity to finance. Men must come before money.

And I offer this thought upon that issue: If we can spend five thousand million dollars on war; if we can give out of our goods and services the value of a thousand million dollars to England—which we did, and rightly, too—and distribute a thousand million dollars of war aid among our allies—and if that is not all the surplus we have, we should distribute more—then we ought to be able to do something better than $20 a month as an old-age pension for our own people of advanced age.

May I suggest to the minister that our naval service in the light of the achievements he has disclosed should be guaranteed against what happened after the last war. We want no post-war collapse in our naval or marine power this time. As a precaution against that possibility I suggest that we recast sections 7 and 8 of our Naval Service Act, and I offer this as a magna charta for Canada's naval service, as a reward for the achievements the naval service has accomplished in the last four years, under its able minister. I would amend the Naval Service Act of 1910 by recasting sections 7 and 8 into the following sections:

It is necessary for the nation's defence and development of its foreign and domestic commerce that the Dominion of Canada shall have a naval service and merchant marine.

(a) Sufficient to carry and protect its domestic waterborne commerce and a substantial portion of the waterborne export and import foreign commerce of the dominion, and to provide shipping service on all routes essential for maintaining the flow of such domestic and foreign waterborne commerce at all times,

(b) capable of serving as a powerful arm of defence in time of war or national emergency,

(c) owned and operated under the Canadian flag by the government and citizens of Canada, and

(d) composed of the best-equipped, safest, and most suitable types of vessels, constructed and equipped in Canada from Canadian materials, in so far as may be practicable and manned with a trained and efficient citizen personnel.

It is hereby declared to be the policy of the Dominion of Canada to foster the development and encourage the maintenance of such a naval service and merchant marine.

7a. The minister shall have the control and management of all naval affairs, including the purchase, maintenance and repair of the ordnance, ammunition, arms, armouries, stores, munitions, and habiliments of war intended for the use of the naval service.

7b. The minister shall have the control and management including the construction, purchase, maintenance and repair, of naval establishments and of ships and other vessels for the naval service.

7c. The minister shall have and exercise such control and management including the design, construction, aid to construction, purchase, maintenance and repair including operation and aid to operation of shipbuilding establishments and all ships and other vessels for the merchant marine as the Governor General in council may authorize from time to time.

[Mr. McGeer.]

What does that mean? It simply means that Canada must have ships, and have the best of ships. It means that the men in the mines of Nova Scotia, Ontario, British Columbia and other provinces will dig the metals and coal to build them. Others will drill for oil and cut the timber required. In a hundred cities and towns, men and women will form the plates, engines, gears and equipment and proudly build and launch them to their service on the sea.

Notwithstanding the fact that long since Canada has attained a ranking position among the leading maritime trading nations of the world, and has attained the position of fourth or fifth as a maritime trading nation, we allowed our merchant marine to disappear, and allowed our navy to die in its infancy from malnutrition.

Our Canadian boys were virtually denied the fulfilment of the dream that every British youngster has of some time sailing the seven seas under the flag of their own beloved land. But the seagoing career of the Canadian boy of the future should now be forever assured, from what has now been done under the far-sighted naval policy of 1910. And we certainly on this side of the house should not forget that everything that has been achieved in the naval programme, which has been so ably prosecuted by the minister and his officers and men, has been achieved under the naval bill of 1910, which has hardly been amended since it was enacted.

Yes, the experience which we have had since 1910, and the achievements which we have accomplished have demonstrated what can be accomplished in the future. Of course other nations may be able to build cheaper ships. They may be able to man them and operate them cheaper; but we, by maintaining a policy of cooperation between the government and the merchant marine services, can maintain upon the seas the same high standard of wages and the same high standard of living that we maintain along with the United States upon this continent, for our people.

After the last war we made a feeble attempt to establish a merchant marine. We allowed it to die, because we could not make any money out of it. How much did it cost us to build what we had thrown away, when we needed it in the war? What kind of economy was that?

Yes; Canadians can build a naval force with our own men out of our own materials. We can build a merchant marine, and we can go to work, produce and develop the cargoes. We can use Canadian dollars not only to take those cargoes to our shore lines, but to take them in our boats to the end of the line of distribution, and return. And if we do not do so, we shall find ourselves unable to compete in world trade with those nations which are going to do it.

Experience has taught us that as part of the British empire we must provide our own navy, and that we must provide part of the merchant marine which the empire requires. The magna charta for the Canadian navy I am now suggesting guarantees that we shall never again be short of naval strength or merchant marine service. In addition to that, if we carry out our policy, and prosecute it with the same intelligence and vigour with which we have prosecuted our war effort in this crisis, we shall find that "the wholesome seas are at our gates, our gates both east and west," is a message which will help us to go to work in the world with effectiveness when we stop fighting one another, and proceed to the business of feeding one another, on a better basis.

I congratulate the minister upon the magnificent work he has done since he took over his difficult office. While I appreciate the great work done by men of the army, I remember the days of the depression, when everyone was looking for a little bit of that $30,000,000 a year we were voting so hesitatingly. I remember when the present Minister of National War Services (Mr. LaFlèche) was deputy minister of national defence and when men like Major General Stuart and Crerar, Worthington and Sanson were wondering whether they had made a terrible mistake by adopting the career of the professional soldier. But they carried on, and Canada's army is a tribute to the men of the permanent service who never lost faith in their careers.

I remember the air force when there were such men as Air Marshal Breadner, Johnson and Croil and a number of others who were carrying on under the inspiration of the work of Billy Bishop and other heroic Canadians who had left behind them a tradition upon which Canada's marvellous air force is riding the skies to-day. But there was another group. There was Rear Admiral Nelles, Admiral Jones, and Murray and Brodeur. Incidentally I may say that Sir Wilfrid Laurier was not the only great French-Canadian who participated in the introduction of the Naval Service Act of 1910. The minister under whom it was introduced was the Hon. Mr. Brodeur, the father of the present naval attache of this country at Washington.

While the army maintained something of its strength; while it had the traditions of the last war; while the air force had the good fortune to be associated in the great British empire training scheme, our navy in this war travelled alone as a Canadian institution. Starting from scratch it has created a record upon its own bottoms, which I think is the proper naval term. Because of the ability which it has proven it made a contribution that has been a blessing to the cause of freedom throughout the world and has given to Canada a tradition that should ever make us true to the history of the people of both our great races, because both French-Canadians and Anglo-Canadians have always lived and thrived by and on the sea.

Let us never become canoe-minded again. Let us move forward and be true to our traditions, knowing that we are a great maritime power, that we are a two-ocean nation; with the arctic developing the way it is, are, may I say, a three-ocean nation. Let us not forget these lessons we have learned, and then there will be no need to fear poverty after the close of this war. We shall never need even to think that there ever will be misery and unemployment again in our land.

Mr. McIVOR: I should like to say just a brief word even though I was not born at Halifax, Vancouver or Winnipeg. I was born and I am still living, for which I am thankful. I appreciated very much the introduction the minister gave to the work of his department. I thought it was well done. He did not have an Irish accent, but he had the next best. His address was not so technical that an ordinary man like myself could not understand it. As I listened to the hon. member for Vancouver-Burrard (Mr. McGeer), I quite realized why he was able to stand on his own feet and express himself as forcefully as he did. Through hearsay I heard something of his dad when I first came to Winnipeg in 1894. The hon. member is a son of a man who could take care of himself. He got a splendid start in life and I am sure that he is living up to the start that his dad gave him.

I agreed with him thoroughly when he described the times through which we went and how difficult it was to get money. I was serving in the branch of a church the officers of which gave me permission to allow men to enter the boiler room to sleep overnight. One winter we averaged seven a night, and

we did not always have to give them porridge and toast the next morning because many of them had left. I have no patience with the clergyman or with the member of parliament or with any Christian man who says one thing and does another. I should like to think that I shall be spared to live until after this war is over. If I am, I shall be just as keen as any man in this house to see that fair play is done to every citizen of this country, that he will have a chance to earn his bread in an honest way. If he is not willing to work, then he will be put to work under other circumstances so that he may earn his keep.

The reason why I rose to speak to-night was the suggestion made by the hon. member for Swift Current (Mr. Graham) about the naming of vessels after certain places. There is a corvette called the *Fort William,* and of course that is always music in my ears. The men and women of Fort William vied with each other to equip this boat and I never saw finer stuff given to any group of men. The crew appreciated it very much. I am hoping that some day the corvette *Fort William* will be able to equal in valour the corvette which was named after our sister city of Port Arthur.

The crew of that corvette must think always of the son of our Minister of Munitions and Supply—William Hastings Howe. He is an officer in the navy who distinguished himself, but who nearly lost his life in action. We people at the head of the lakes also think of what the Minister of Munitions and Supply went through himself. I am sure that quite often when he sits in comfort, has enough to eat and enough clothes to cover himself, he must feel chills running through his body in memory of that eight-hour ride on the open sea. I know the crew of the corvette *Port Arthur* must think of what nearly happened to the Minister of Munitions and Supply and what a loss it would have been to all Canada. They must think of the near call that both father and son had. They must remember when the minister's assistant, Gordon Scott, lost his life. With that memory in their minds I can see the crew of the *Port Arthur* jumping into their outfits when a submarine came within hailing distance and blowing it to Palestine.

We in Fort William have paid our respects in every possible way to the crew of the *Port Arthur.* It is an advantage to call a ship after a city or town. Of course, we at the head of the lakes think we are the hub of Canada, but other people may not think so. We think that our young men from the head of the lakes who have joined the navy are second to none. I went over to the Port Arthur navy headquarters one day to see if there was an opportunity of a young man getting into the navy there and I found that four hundred local boys were already on the waiting list. I remember getting a letter from a boy who went over and he said, "Reverend Dan, we are just giving the enemy the same thing we said we would do for you when you were in the sub-box leading the hockey team. We give them everything we have." So that you can see what happened to that submarine when the *Port Arthur* struck it. The *Port Arthur* sent her sky-high.

Mr. DUPUIS: Mr. Chairman, I am anxious to say a few words concerning the illuminating and remarkable report made yesterday by the minister for naval services. He has told us that our navy, which at the beginning of the war consisted of about fifteen ships, has attained the remarkable growth of now numbering five hundred, while the crew which numbered about 1,700 at the start of the war has grown to 60,000. The minister added, not without pride, that he expects that by the end of next year the numbers of our crew will be equal to those of the British navy at the beginning of the war.

Before going any further I wish to pay my compliments to the hon. member for Vancouver-Burrard upon his remarkable speech. In everything he said about the navy I am pleased to concur. The dream of Laurier is now realized through the energy and good administration of our distinguished minister for naval services. I am sure that if Laurier were still living he would be proud of him just as he would be proud of the Canadian nation to-day. I am proud myself of my country. If Canada had attained the position she enjoyed in foreign trade at the beginning of this war, it was due in large measure to the protection of the British navy on the seven seas of the world. Since we may claim to be an independent nation; according to the statute of Westminster; since we have now attained manhood, nationally speaking, I think it is our duty to see that we build according to the expectations of a sound and healthy people. The hon. minister in doing what he has done for our Canadian navy has accomplished deeds which will lead us to that realization.

It was a very good idea of the minister and his staff to give the names of our towns and counties to corvettes and other ships of our Canadian navy. I am pleased to mention, as the previous speaker, the hon. member for Fort William did, that a corvette has been named after the town and county

of Chambly, which I have the honour to represent in this house. The corvette *Chambly* has accomplished many great deeds in the battle of the Atlantic. May I be allowed to mention one remarkable deed which the corvette *Chambly* accomplished in cooperation with the corvette *Moose Jaw;* that means that Quebec joined Saskatchewan in fighting the U-boat. They attacked a submarine and captured all its German crew. This heroic deed has been recognized and rewarded by granting to the commanding officer Prentiss the Distinguished Service Order of the British Empire. The men of our Canadian navy, it seems to me, have the real spirit of the men of the sea, as naval men are known the world over among nations whose navies travel the sealanes of the world. They are humble men and consider they are just doing their ordinary duty in gallantly fighting the enemy in this war. To give an illustration, may I quote from a letter which my wife received from the commanding officer of the corvette *Chambly,* thanking her and the women of my constituency for what they have done for the crew of that ship. I quote in part:

I am sorry that we are not in a place where you and Mr. Dupuis could visit the *Chambly* corvette and see for yourself the ship named after your town and county. I am sure that you would be as proud of her as we are. We have a fine bunch of men manning her. I could not ask for a keener or a better crew in any way. *Chambly* has steamed many miles since she was commissioned, all of which time I have served in her. Her tasks have been many and varied, often arduous, as they will continue to be till the war is won. We would not ask anything else.

I may be excused for having taken the time of the committee to recount these facts to hon. members from all across this country. *Chambly* corvette is only one ship of our Canadian navy; many other ships are fighting the good fight to-day and expecting, as this commanding officer says in his letter, to win the war, and, indeed, being sure they will win it. Such a spirit deserves, I believe, to be mentioned, and it is for this reason that I asked the privilege of saying a few words.

Item agreed to.

2. Pay and allowances, $89,565,119.

Mr. STIRLING: Would the minister see fit now to reply to some of the questions and suggestions made to him?

Mr. MACDONALD (Kingston City): I intended to do that. I will take first the questions asked last evening by the hon. member for St. John-Albert.

He asked in the first place for detailed particulars of the manner in which the amounts listed under the eleven heads of the estimates of last year had been spent. I shall be glad to give this to the committee now, and I may say that the reason for changing the manner of presenting the estimates was a desire to make it a little easier for members of the committee to follow the estimates of the three armed services. It will be noted that each of the armed services this year follows the same general statement with respect to the amounts required; they are divided in each case into thirteen items, and that plan was adopted in order that hon. members might compare the expenditure in one service with that in another.

To return to the first question asked by the hon. member for St. John-Albert; he gave the committee the items as presented in last year's estimates and, as I understand it, wanted to know what the comparative items for this year would be had we followed the same system. I shall give him now the items and figures on the basis he mentioned:

1. Civil salaries and wages.....	$ 6,192,054
2. Pay and allowances.....	89,565,119
3. Travel and transportation....	5,793,460

Mr. STIRLING: Is the difference in that one the addition of freight this year? The amount is $5,700,000 as against $6,900,000.

Mr. MACDONALD (Kingston City): It is partly due to the fact that last year travel and transportation stood alone; freight was charged in to the cost of the goods. This year freight is added, and that makes a very considerable difference; but in addition to that the amount required for travel and transportation is larger, on account of the increased personnel. I will continue:

4. Operating expenses of properties	$ 2,724,350
5. Ships: acquisition by purchase, construction, charters, repairs and upkeep.....	167,571,202
6. Equipment division components:	

These are not figured on at all this year, because that matter is now attended to by the purchasing branch of the Department of Munitions and Supply.

7. Purchase of new machinery and repairs to buildings and machinery.....	$ 1,674,000
8. Buildings: acquisition, construction and purchase and rental of land and buildings	35,952,187
9. Stores, equipment and supplies	119,749,920
10. Armament stores.....	56,661,438
11. Sundries	3,261,237

My hon. friend asked me in the second place to what were the increases or advances in the items due. I would say in a general

way that all the increases are due to the increased size of the service. The service has doubled in men and the number of ships has greatly increased; also the number of shore properties—barracks, buildings of one sort and another, mess rooms, wharves and the like—have increased. Without going into any greater particulars, that is the cause of the very considerable increase in the estimates for this year.

He then wanted to know how many persons were employed at headquarters; how many were employed in each province; how much was spent in each province on salaries and wages, and similar information with regard to the United States and Great Britain. I cannot give my hon. friend the information in the exact form that he requests, but I shall do the best I can.

The total number of civil servants employed in the department at the end of the last fiscal year was 3,915; that is, for Canada. These were divided as follows by provinces:

Ontario	1,648
Quebec	121
New Brunswick	53
Nova Scotia	1,342
British Columbia	749
Alberta	1
Saskatchewan	0
Manitoba	1

Outside Canada there were employed:

United States	1
Newfoundland	240
Great Britain	0

My hon. friend wanted to know what salaries and wages were paid. I cannot give him this in the exact form that he desires, but I can tell him this. At headquarters, which includes all of Ontario, Alberta and part of Quebec, the total amount spent in salaries of civil servants was $1,994,000, in round figures. On the west coast, which includes British Columbia, the amount spent in civil servants' salaries was $528,000. On the east coast, which includes New Brunswick, Nova Scotia, Prince Edward Island and part of Quebec, the amount spent in civil servants' salaries was $1,491,000; and in Newfoundland the amount spent was $145,000.

My hon. friend wanted to know the number of civilian personnel and the number of naval personnel employed in the publicity department as well as their travelling and other expenses. I have it, but I cannot lay my hand on it at the moment. However, I will get it before the sitting is over. In the meantime, I pass on to the next point which he made this afternoon and which was with regard to living conditions of petty officers and men in Newfoundland.

[Mr. A. L. Macdonald.]

The hon. member declared that quarters there were very poor, very difficult to obtain and very expensive, and I have no doubt that to a large extent he is correct. We have some 1,500 men in Newfoundland who are not provided by the navy with sleeping and messing quarters. I may say that all the work done at St. John's, Newfoundland, is done for the account of the British admiralty, though done under the supervision of the Canadian navy and by Canadian contractors. We do nothing there without having first obtained the consent and approval of the British admiralty. It is absolutely impossible for us, in a place such as St. John's, Newfoundland, to get buildings put up in time to house all the men.

I agree at once with my hon. friend, or with any other hon. member, who says that all the men should be housed. I agree with that entirely and we are making every effort to do that; but we have not been able to do it in the city of Halifax where we have some thousands of men still not quartered and not fed by the navy. We have not been able to do it in St. John's, but we are making every effort to overtake that condition as far and as quickly as we can.

My hon. friend then went on to speak of the amount of money spent in Nova Scotia as compared with the amount spent in New Brunswick. He said that Nova Scotia had received a share out of all proportion to its share in Canada's war effort. I must say, Mr. Chairman, that I regret very much the practice of endeavouring to allot war moneys according to sectional or provincial boundaries, without regard to the real merits and facts of the case. My hon. friend knows quite well, I am sure, that for nearly 200 years the city of Halifax has been a great naval base. It was established as a naval base by the British government in 1749, and ever since that time Halifax has been looked upon as the main British naval base or the main Canadian naval base, as time went on, in America.

The headquarters of the Canadian navy on the east coast have always been there, and it is only natural therefore that there should be a very considerable naval building programme in the city of Halifax in this war. It is also only natural that the outports near Halifax should receive some attention, because the matter of supervision is quite important, and it is much more convenient—to put it only on that ground—to have an outport at Lunenburg or Liverpool, 75 or 100 miles away from Halifax, than to have one 300 or 400 or 500 miles away in some other province.

While Deep Brook in Digby county, where there is a very considerable development in process of construction, is in the constituency of the Minister of Finance (Mr. Ilsley), I am bound to say, and I ought to say in justice to him, that not on a single occasion did the Minister of Finance ask that that development be placed there. The Deep Brook development and every other development that has taken place in eastern Canada, in western Canada, or in any other part of the world for that matter, have been undertaken on the advice and with the approval of the technical advisers of the department for naval services, the chief of naval staff, and his subordinates.

I can assure my hon. friend the member for St. John-Albert that it is not a matter of the Minister of Transport failing in his duty or of the Minister of Finance having an excess of zeal. That is not the way the department for naval services is run. Neither gentlemen has made representations to me, either for the province of Nova Scotia or for the province of New Brunswick. Each of them has taken the correct course and said, "Let those undertakings, those buildings and wharves and whatever else is needed in the way of naval development be placed where they can best serve the war effort." That is the stand that these gentlemen have taken, and I think it is a sounder stand than this attempt to total up figures showing that Nova Scotia has received $29,000,000 in the way of land and buildings and New Brunswick, $19,000. Alberta and Saskatchewan, those inland provinces, obviously cannot share to the same extent as the coastal provinces, if that is to be the basis. The only possible way in which they might share would be in the operation of two buildings in each province, where the naval volunteer divisions would be housed. They can have no wharves, no breakwaters, no marine railways or dry docks. So that I repeat that to attempt to divide this dominion into certain zones, to reckon up the money spent in each and to say that because not so much has been spent here as there, therefore there is something wrong with the attitude of the department for naval services, I think is an incorrect stand to take.

Then my hon. friend asked about certain contracts contemplated in the province of New Brunswick, particularly I think in and around the city of Saint John. The hon. gentleman knows that in a certain part of northern New Brunswick, at an inland point, there is quite an extensive development in the way of a magazine. At Coverdale, near Moncton, a contract has been let at a cost of $141,000, for a barracks and station. I think the hon. gentleman asked for the name of the contractors; in this case they are the firm of Forbes and Sloat. A contract has been let also at Saint John, New Brunswick, for the construction of certain buildings for the naval station at a cost of $329,000. That contract was awarded to M. A. Condon and Son on May 29. I might add that there has been some little difficulty in getting that work started, because one of the properties necessary to be had in order to erect these buildings has been very difficult to obtain. There has been difficulty in reaching any agreement with the owners, and probably it will be necessary for the department to take expropriation proceedings. In addition, plans are being prepared for the construction of an annex or addition to the present volunteer divisional quarters on Prince William street. I think all that building will be leased with the exception of the lower floor and perhaps the sub-basement, and some property adjoining will be obtained from the Canadian National railways on which will be erected a drill shed and sleeping quarters for the housing of approximately 130 men. In addition, certain mooring buoys will be laid in the harbour of Saint John which I think when in position will cost something over $100,000.

My hon. friend then went on to ask about travel and transportation, whether men are given free transportation when they are on leave, and I think he particularly inquired about men who return from foreign service, such as service in the Mediterranean. I may tell the hon. gentleman that men who return from foreign service are given free transportation, according to Canadian naval regulations. My hon. friend has asked whether the whole amount estimated for travel and transportation will be spent in Canada; whether it is all for railway travel, or whether some is for air and water travel, and how much in each case. I can say to my hon. friend that this amount provides for travel by rail, air and water. At the moment I cannot give him an analysis showing the amounts to be spent for travel on or in each of these elements. He wanted also to know which companies received the money paid for transportation. The amounts paid for railway transportation have been divided between the Canadian National Railways and the Canadian Pacific Railway. For travel the Canadian National received $1,499,000 and the Canadian Pacific $1,167,000; for freight, the Canadian National, $773,000, and

the Canadian Pacific, $119,000; for express, the Canadian National, $151,000, and the Canadian Pacific, $23,000.

Then my hon. friend wanted to know if the insurance principle applied to men serving in Canada or the waters thereof. My hon. friend the Minister of Pensions and National Health directed my attention to section 2, paragraph (o) (iii) of the act, which provides:

> in the case of the naval, military or air forces during the war with the German reich, service on the high seas, in the field or in the air in any place outside Canada; or service in Canada, in such coastal or inland waters, or in such localities, whether in the field or in the air, as may from time to time be designated by the governor in council. . . .

—shall be considered to be service in a theatre of actual war. Therefore I should say that a member of the Canadian naval service injured or killed in the coastal waters of Canada, on board a Canadian ship of war, would come under the application of the so-called insurance principle.

To return to the question about naval information, the particulars of which I now have under my hand, I may tell the hon. member for St. John-Albert that the civilian staff of the directorate includes the director himself and seven female clerks and stenographers. The director receives a salary of $4,500 a year and expenses. In the last year, which was not a complete year, his living expenses amounted to $568 and his travelling expenses to $95. The other members of the civilian staff are paid according to the civil service schedule. The total salaries of these others for the last fiscal year amounted to $10,523. The uniformed personnel of the directorate are as follows:

In British Columbia, Lieutenant Tate, who is in uniform and receives the pay and allowances of his rank.

In Ontario, Lieutenant Commander Strange; Lieutenant G. Richardson; Lieutenant Phillip Lee; Lieutenant K. Fosberry; Lieutenant J. Trepanier; Sub-Lieutenant Newton; Acting-Lieutenant Fyfe; Sub-Lieutenant Burwash and Sub-Lieutenant Willis, all of whom are in Ontario, and receive the pay and allowances of their rank. In addition there are two "Wrens", members of the Women's Royal Canadian Naval Service, who are employed at information headquarters in Ottawa.

In Nova Scotia there are Acting-Lieutenant Commander G. A. Lawrence and Lieutenant W. Slater, who receive the pay of their rank.

In Newfoundland is Lieutenant Shaw, who receives the pay of his rank.

In the United Kingdom are Lieutenant Commander Bartlett, Sub-Lieutenant McRitchie and Sub-Lieutenant Keate, all of whom receive the pay of their rank.

I believe those are all the questions asked by the hon. member for St. John-Albert, although I believe he has some to ask later on.

Then, dealing with the question asked by the hon. member for Laval-Two Mountains: The hon. member raised the question of the closing of the St. Lawrence. May I say in the first place that the St. Lawrence is not closed to traffic. I must point out, however, that the eastern Atlantic ports of Canada are considerably nearer the United Kingdom than are the cities of Montreal and Quebec. There is a difference of some hundreds of miles in the distance between Montreal and Liverpool, for instance, and that between Halifax and Liverpool. And in a war, where we must traverse dangerous waters, the natural inclination is to shorten as greatly as possible the distance to be travelled by water. Consequently, in some cases at any rate, it is desirable to have a larger proportion of shipments from Canada leaving eastern Atlantic ports than would otherwise be the case. Furthermore, ships can make more trips by sailing from Halifax to United Kingdom ports and back again, than they could if they sailed from Montreal. There is a quicker turn-around, as it is called in shipping circles.

But there is no question that traffic will be moving in the St. Lawrence, perhaps not in as great volume as in certain other years, but nevertheless in very considerable volume.

Then, the hon. member for Yale asked about expenditures for capital assistance, and wanted to know why this should be charged to the navy, as was indicated in a return tabled last year. I have not any recollection of the particular return the hon. member has in mind, but I may say it is not the practice to charge capital assistance to the Department of National Defence for Naval Services. Such assistance is provided by the Department of Munitions and Supply. It may be, however, that under the item of equipment and components in last year's estimates something was charged to the Department of National Defence for Naval Services. Whether that was done incorrectly, I am not sure; but I can tell my hon. friend that that practice is not continuing.

Then, a question was asked as to the age at which the boys may leave sea cadet units. Sea cadet regulations provide that the ages shall be between twelve and eighteen years. I understand that certain corps in different parts of the country have their own ideas about age limits. Some are inclined to admit the boys immediately upon their reaching the

age of twelve years, while others feel the boys should not be admitted until they are fourteen or fifteen years old. Some, I believe, want the boys to leave at the age of seventeen years instead of eighteen. That is a matter in respect of which there is some leeway allowed the corps. But the regulations do provide that boys may remain in the corps until they reach the age of eighteen, at which time they are old enough to join the Royal Canadian Navy. I may tell my hon. friend there is no entry into the Royal Canadian Navy at the moment for boy seamen, and I do not think there have been any entries since the beginning of the war.

Then, the hon. member wanted to know whether we have something in Canada like the royal naval benevolent trust. We have the royal Canadian naval benevolent fund. Whether it is exactly like the royal navy trust, I cannot say. No contribution is required from the men in connection with our fund, but a certain amount of unclaimed prize money, and certain other moneys contributed by various naval canteens have been put into the fund, which now amounts to a good many thousands of dollars, and which sum has been invested carefully, mostly I believe in victory bonds.

Mr. STIRLING: How is it used?

Mr. MACDONALD (Kingston City): No money has been paid out of this fund, as I understand it, up to date.

Mr. STIRLING: It is a new fund, is it?

Mr. MACDONALD (Kingston City): I think the prize fund is a carry-over from the last war. This unclaimed prize money, together with certain other funds, including canteen funds, some time after the beginning of this war was put into the Royal Canadian Navy benevolent fund. I understand from the authorities of the fund that nothing has been paid out, and that during the war it may not be necessary to pay any out. After the war, when men may find themselves in somewhat straitened circumstances, the real need for the fund may be felt.

Then, the hon. member asked a question about the air officer commanding at Halifax, and whether he was under the naval commander in chief. That is a difficult question to answer. The title of Admiral Murray, the naval officer, is that of Commander-in-Chief, Canadian Northwest Atlantic. The title of the air officer is that of Air Officer Commanding. I should think that without any great argument between the two of them as to seniority they will get along very well, Admiral Murray taking general charge of all anti-submarine activity, and the air officer taking charge of air activities over the sea.

Then the hon. member asked about Squadron Leader Desloges, who has been given certain duties in the St. Lawrence area. I can say that Squadron Leader Desloges is not in charge of any naval force. He is more in the nature of a liaison officer between the armed services—the navy, air and army—on the one hand, and the civilian defence corps, provincial police and other civilian services of that sort on the other.

The next question was with reference to categories on enlistment. We have certain people who are not fit for general duty but who are able to undertake certain other duties. We now have a special branch which employs some men who are not fit for sea duty for one reason or another. Then there is a shore branch where we employ sailmakers, blacksmiths and the like. We take them in up to sixty years of age, which is far beyond the age which would entitle them to enter for sea service.

Mr. STIRLING: Would the minister deal with the point I raised with regard to the four methods of entry for ratings? I did not quite follow the way it has been worked out.

Mr. MACDONALD (Kingston City): I was referring to the four methods of training. My hon. friend used the expression "entry". There are not four methods of entry. The common method of entry is through the divisions. Men are also recruited at Halifax or Sydney or Esquimalt.

Mr. STIRLING: Through the R.C.N.V.R.?

Mr. MACDONALD (Kingston City): Yes.

Mr. STIRLING: And then sent to training?

Mr. MACDONALD (Kingston City): Yes. They may be sent to university for a course in radio or to a technical school for a course as stoker; some may go to ships and so on.

Mr. STIRLING: Could the minister deal with the question of deductions in pay, if any?

Mr. MACDONALD (Kingston City): I have asked for some information on that, but I am sorry I have not received it. Perhaps I should not attempt to reply before I get it. My impression is that there are no deductions except where an income tax might be exigible, which would not happen in many cases, and such deductions as a man might make to his wife and so on. I will make sure on that point and let my hon. friend know to-morrow.

I wish to thank the hon. member for

Davenport (Mr. MacNicol) and other members who have been kind enough to speak well of the Canadian navy and the work it is doing. I want also to say a word, perhaps not quite in the same spirit, about the hon. member for Broadview (Mr. Church). In spite of what the hon. member said this afternoon and this evening about his great friendship for me personally and his great regard for the navy, it is difficult for me to reconcile these statements with others he has made from time to time in this house. My hon. friend's references to the Canadian navy go back a good many years.

In 1926 the house was discussing the procedure to be followed in ratifying treaties. The question was whether the procedure which had been recommended by the imperial conference of 1923 should be adopted by the parliament of Canada. The hon. member for Broadview—at that time he represented Toronto North West—took a very strong stand on the matter. He said that Sir John A. Macdonald had been satisfied with the status of Canada; that the soldiers who had died in France and Flanders were satisfied with it, and then he went on to say, as reported at page 4787 of *Hansard:*

> Talk about Canada being independent, . . . Why if we were independent a foreign fleet might sail up the St. Lawrence and we would not have as much as a rowboat to oppose it because our toy navy is locked up in a garage at Halifax.

Two years later, the hon. member was speaking on February 1, 1928, and is reported at pages 103 and 104 of *Hansard* as follows:

> We have a contemptible little navy which hugs the shores, never leaves our coasts and for the past year has been locked up in a garage at Halifax.

Then he went on, as reported at page 106—

Mr. GRAYDON: Was that denied?

Mr. MACDONALD (Kingston City): How can it be denied? It is in *Hansard.*

Mr. GRAYDON: I am not talking about his denial.

Mr. MACDONALD (Kingston City): I quote from page 106 as follows:

> Then I come to the Department of National Defence.

The department was then administered by the hon. gentleman who is now Minister of National Defence (Mr. Ralston).

> The minister of this department is also actively engaged in putting the Liberal party on the map, and the returned men off the map. I suppose he intends to unlock the door of the garage at Halifax and let our navy run up and down the coast. But really I hope he will not send the boat out to sea . . . for I am afraid it is not a seaworthy craft.

The gem of the whole collection, although it is not strictly to the point of naval matters, is to be found at page 107 where the hon. member is reported as having delivered himself in this most remarkable manner:

> Now, Mr. Speaker, I think I have talked—and also thought—for nearly forty minutes. Not every member can think for that period of time. But I have only dealt with the fringe of my subject. I am not supposed to be the leader but I have said more than the Prime Minister uttered during the three and a half hours that he held the floor.

That was 1928. I pass on to 1940.

Mr. GRAYDON: Who was Prime Minister then?

Mr. MACDONALD (Kingston City): The present Prime Minister, and if he lives I have no doubt he will be Prime Minister fifteen years from now.

Mr. GRAYDON: I hope that your prophecies on naval matters are better than that.

Mr. MACDONALD (Kingston City): I pass over the other years and come to 1940. On November 22 of that year the hon. member for Cumberland (Mr. Black) asked a question, as reported at pages 336 and 337 of *Hansard,* about the establishment of a naval college. The hon. member for Victoria, B.C. (Mr. Mayhew) had been quoted in a newspaper as having stated that the naval college would be established on the Pacific coast, and the hon. member for Cumberland wished to know whether it was to be established there or in Nova Scotia. The hon. member for Broadview then leaped to his feet and asked me as Minister of National Defence for Naval Services if in the future, I would give information to the house about the establishment of such an institution before it was disclosed to the newspapers over the head and against the regular practice of parliament. I had made no statement whatever about the college except to say that no site had been selected. The hon. member for Broadview then asked if the British admiralty had been consulted, implying that we did not have the power to erect a naval college in Canada at the place and time we wished. He then went on with a very gratuitous jibe at an officer of the navy named Lieutenant Farrow, who had been director of publicity for the navy but who at that time I think was serving at sea with the Canadian navy. My hon. friend apparently never liked this officer for some reason or

another, because he frequently asked questions about him, and his final compliment to the college was to say:

I suppose the minister will announce the appointment of Lieutenant Farrow as commandant of the college.

Then I turn to 1942, May 13, page 2391 of *Hansard*. There was some discussion that day about sinkings in the St. Lawrence. My hon. friend the member for Broadview said in a none too complimentary voice:

Where was your navy when all this was going on in the St. Lawrence?

Then on the 16th of July—I have not the exact date but it was about the middle of July, 1942—at a time when I was at a shipyard in Ontario which had been burned out with the loss of one ship and the partial loss of another, and when I was endeavouring to make arrangements with other shipbuilders around there to come to the assistance of this yard which has been destroyed, at that very moment when I was there the hon. member for Broadview asked some question in the house of the department for naval services. The Prime Minister replied that I would be back in a day or two and would answer it then, and my hon. friend's friendship for me manifested itself by saying:

He ought to be here.

I notice that my hon. friend is very rarely in his seat on Monday afternoon and for a good part of Friday afternoon, but when I was out trying to straighten out a shipyard in distress —I am glad to say that the boat builders rallied magnificently—that is the sort of thanks I get from the hon. member for Broadview.

Mr. JOHNSTON (Bow River): On a point of order, Mr. Chairman, I hate to interrupt the minister in this little political wrangle he is having across the floor with members of the Progressive Conservative party, but if I were to go back to 1908 and dig up things in *Hansard* and bring them before the committee on this item for pay and allowances I am wondering if you would grant me the same privilege as the minister is enjoying. It is just holding up the committee and I am getting sick of listening to this kind of talk.

Mr. GARDINER: Not half as sick as we have been listening to you.

The CHAIRMAN: On the point of order, we called an item this afternoon, and a lot of latitude has been given since the estimates for naval defence came before the committee. I believe that the same latitude has been maintained up to this minute as we are giving to the minister.

Mr. MACDONALD (Kingston City): I am not going to deal with the point of order, Mr. Chairman, but should like to make one or two further references.

On the 17th of March of this year—if the hon. member for Bow River wants recent occurrences, this is one that happened this session—the hon. member for Broadview said:

Will the minister make a statement about the escort strength? We seem to have been trusting to Providence more than the Canadian navy.

This is the kind of statement by the hon. member for Broadview to which I object, and I say that I am not for one moment misled by statements such as he made this afternoon to the effect that he was a great friend of mine and of the Canadian navy and that he had urged rearmament for the last twenty years, because the statements I have just quoted indicate that he is not a friend certainly of the minister or of the minister who occupied the position of Minister of National Defence some fifteen years ago.

My hon. friend asked a further question this afternoon. It was a complaint rather than a question, and the gist of it was that the enlisted man in Canada loses his civilian status whereas in Britain, Australia and New Zealand he retains it, and has all the rights of protection based on the liberty of the subject. He went on to indicate that the enlisted man in Canada lost those rights and could not even write to his own member of parliament if he had a complaint to make. I tried to correct my hon. friend at the time, but the leader of the opposition became very technical and did not want any interruptions. I wanted to tell the hon. member for Broadview that I was not aware of any difference whatever between the rules governing the Canadian serviceman and the serviceman in Great Britain. In fact I knew that all our King's Regulations and Admiralty Instructions for the army, navy and air force were based and drawn very largely upon the regulations in force in Great Britain for the particular service. I am supported in that by section 13 of King's Regulations and Admiralty Instructions, which reads as follows:

No person in the fleet is to enter into direct communication with any service or department of the state or with any subordinate officer of such service or department, at home or abroad, on subjects connected with the naval service or with his particular duties or present or future employment, unless authorized to do so by the regulations of the service or superior authority; but all communications on such subjects are to be made through the proper channels to the admiralty or to the commanders in chief abroad, in order that such steps may be taken therein as may be necessary.

That I interpret to mean quite clearly that a man in the fleet in Great Britain is not at complete liberty to write at any time he wishes to anybody to whom he wishes to write, but is bound and controlled by this article of the King's Regulations and Admiralty Instructions, and that is exactly the same article which governs and controls the actions of Canadian sailors.

Mr. ROY (Translation): Mr. Chairman, as I represent the constituency, bordering on the gulf of St. Lawrence, where we suffered heavy losses in ships during the past year, I was pleased to hear the statement which the Prime Minister made to the house this afternoon regarding the policy which the government proposes to adopt with a view to ensure better protection to the gulf this year.

When I fought last year, as the committee no doubt remembers, for improvements in our protection system, I was sure, as a result of the disasters which had unfortunately occurred in the gulf, that the three branches of the national defence, could, under better leadership, and with closer cooperation, afford us more efficient protection; I was sure that we were exposed to serious dangers in that connection and that our area was the one where the enemy menace was the greatest.

I have no doubt that the population scattered on the shores of the river and the gulf will generously support the fulfilment of that defence programme, and, if need be, help to preserve the integrity of our national territory, even if it should entail the greatest sacrifices. Besides, those people had realized long ago that the situation was fraught with serious dangers. I was sure, when I discussed those matters in the house and was confronted with opposition on all sides, that I was voicing such fears, which have clearly stood out in the Charlevoix-Saguenay election.

Our people knew that had the battle of the Atlantic taken a more favourable turn for the enemy, the latter could easily have driven an attack inland through that wide open gateway.

For those reasons, I was glad to hear the statement of the policy which the government proposes to adopt in order to afford to that part of our country a better protection which, undoubtedly, will give very good results and restore confidence in the minds of the people.

In conclusion, I wish to express the hope that during the present navigation season, with all those protective measures and the general support of the civil population of Gaspé, we shall not have to deplore disasters like those which occurred last year.

[Mr. A. L. Macdonald.]

Mr. POULIOT: In the first place I wish to congratulate very sincerely the hon. member for Vegreville and the hon. member for St. John-Albert, who spoke very well this afternoon. I could not be here all the time, but I listened to their speeches with deep interest, and what they said was worthy of note. With regard to the hon. member for Broadview, I do not think the minister is right in giving him the cold shoulder when he showed such a friendly disposition.

This afternoon I listened with great attention to the Prime Minister while he read his statement. It is an important statement because it recognized the valiant and courageous efforts in this chamber of the hon. member for Gaspe (Mr. Roy), and it was also a recognition of the true significance of the by-election in which the hon. member for Charlevoix-Saguenay (Mr. Dorion) was returned last fall. For a time the hon. member for Gaspé was almost alone in bringing to the attention of the government matters of defence, not only of the territory he represents here, but of the whole country; and although he has not been given all that he asked, I give credit to the government for admitting that it is a pressing matter and that something should be done. What was mentioned by the Prime Minister this afternoon was the civilian defence, the extension of the aircraft detection; also he said that planes would be in readiness and telephone lines would be open for urgent calls.

The purpose of the mobilization act was one month of training, extended to all, and if I remember what was said to me at the time, the idea was to have a force disseminated throughout the country in order to repel any invasion by an enemy. The late Mr. Lapointe, and the hon. member for Richelieu-Vercheres (Mr. Cardin), who was then a member of the cabinet, spoke on this line, and the fall of France made possible an attack from Germany or some other enemy. It meant that after the fall of France this country was more exposed to invasion, and therefore men should be on the spot ready to repel invasion. Well, afterwards it was changed and now we have recourse to civilian defence. But if the Pulhems system is put into force, and if the army keeps not only the physically fit men, but all the others, placed in different categories, who will form the civilian defence?

The minister said that defence should not be organized on the same lines as public works, which are distributed throughout the country. I agree with him to a certain extent; but on the other hand, if our country is exposed, where will be the invasion if we are to be invaded by an enemy? No one knows. I

hope that this country will not be invaded, but if the enemy decides to come here, where will he attack? No one knows. In the United States there is coast protection from Maine South to Florida, and as the minister well knows, they have 700,000 volunteers who search the sky for aeroplanes and have powerful projectors operating in the sky, on the sea and on the land. They do things very well there, and, even though we may not wish to follow all that is done in the United States, there are examples which it would be wise for us to follow.

There is another consideration. It is, that when the Canadian people show good will with regard to enlistments, as they do in my county, and with regard to subscriptions to victory loans, the amounts of which were always oversubscribed, although incomes are much reduced, it has to be taken into consideration, and these fellows want to see the colour of the money, not to derive any personal benefit but to be assured of reasonable protection. If we tell Canadian citizens, "this country is well defended," and then we add, "Look around and see if you are satisfied with it," and they see nothing, the answer is clear. They are not satisfied. They want adequate protection.

There must be cooperation between the three branches of the armed forces. The minister represents the naval services; there is also the air defence and the militia; and all three should work together. We need camps at different places. It is a mistake to have camps which are too large; it is good to have camps disseminated throughout the country. I have been insisting for a long time that there should be a training centre at Rivière du Loup; it is a much better place than even Montmagny or Rimouski. One camp was established at Montmagny, thirty miles from Quebec city, and the other one at Rimouski. Why should there be a camp at Rivière du Loup? For this simple reason, that there is close connection between the St. Lawrence river and the United States throughout the county of Témiscouata from north to south, and it is an old military route. It was built by the Royal Engineers at the time of the Fenian raid, and when the minister or any minister speaks of modern experts he might bear in mind that this road was built by experts who had as much knowledge of military business as those of to-day, if not more. It was to connect the United States and Canada. Very often I have asked the Minister of National Defence to see to it that that route is broadened and rebuilt to be serviceable for military purposes, and I have always been listened to with a deaf ear. I am not referring in this connection to the minister for naval services.

In case of invasion, if it comes to the east, this is the nearest approach by road and rail from the United States. It is a small railway which operates there, but we need improvements to that highway and they should be carried out by the defence department. For three or four years, in fact for many years, I have been advocating that. I took it up with the Minister of Labour before the war. The present Minister of Labour (Mr. Mitchell) can see the memoranda which I sent to his predecessor, who was afterwards Minister of National Defence and who died too early. I am sure that if the Hon. Mr. Rogers had lived a little longer, that route would have been widened and rebuilt by his own department.

That route is essential because, if this country becomes a theatre of war; if the enemy comes here, the railways may not be sufficient to transport all that we need. We may need transport by truck and, in fact, when there are military trucks that go to Halifax or Saint John, they pass over that highway, route No. 2. Now there is very little tourist traffic, and I suggest that it is time to do that work and to see to it that we have every facility extended to us for the improvement of our defence.

The third point is that we need some navy boats on the river at Rivière du Loup. The nearest point is Rimouski, a distance of sixty miles. Rivière du Loup is in front of the Saguenay river on the opposite shore of the river, and it would form a good base for some boats. Besides that, we have a naval college in the province of Quebec at St. Hyacinthe near a muddy river, a river in which there is very little water. There is more mud than water. I do not see why such a college is not near the St. Lawrence river. We shall need also an airport and some men to protect the railways and the railway approaches and bridges. That means that a great deal will have to be done, but it cannot be done by the civilian protection alone. It needs the cooperation of all men of good-will, who are ready to admit that eastern Canada is a part of Canada. That is all we want. I have been insisting on that year after year. Never, however, did I have a favourable report. I succeeded in having the engineer of the Department of Transport come to Témiscouata county in 1940, but he came early in the spring when the roads and the fields were covered with snow and it was hard to find a proper location for an airport. I do not see why that part of Canada should not be

entitled to an airport. It would afford excellent facilities to all Royal Canadian Air Force men who come to that district.

The defence of this country will not be effected by order in council; it must be carried out on the spot. There are things that appeal to common sense, things which cannot be denied. They must be admitted. Our people are willing to do their share and they are doing it very well, but they need that protection to which they are entitled as Canadian citizens.

Again I congratulate very warmly the hon. member for Gaspé upon what he has done in the past, and I am ready to admit that in very large part what has been decided is due to his painstaking efforts. I also congratulate the hon. member for Charlevoix-Saguenay upon his election, which was an eye-opener. Let me assure the minister that I do not approach this question of defence from any parochial point of view, but I want the country well defended. When my hon. friends from British Columbia argued their case—and they did it very well—I supported them, and I am ready to support any request they make for their part of the country. On the other hand, we want their support for eastern Canada as well. I hope that the fears which have been entertained, and which were justified to a large extent, will not materialize and that the enemy will not come to our shores. But the fact is that the enemy came within the St. Lawrence river, and I hope that the order in council which was read this afternoon was not passed simply to appease eastern Canadians who were not satisfied with the way in which the defence was organized in past years.

In conclusion, there are two questions I wish to ask the minister. There are interchangeable heads in the defence department, and I understand that the Minister of National Defence is first of the war ministers and that the minister for air is his associate. I wonder if the minister for naval services has something to do with the other two departments. If so, I would be thankful if he would say what it is.

There is another thing. Some time ago it was mentioned in the press that there would be ten parliamentary assistants. Some of them have been appointed. I do not know the number, but I do know that there are not ten. I should like to know something about this without having any names mentioned. One of our colleagues has been mentioned as assistant to the minister and he is very worthy of that honour, if I may so describe it. He could discharge the duties very well. I wonder why the minister does not have a parliamentary assistant just as there are parliamentary assistants for the Minister of National Defence and the Minister of National Defence for Air. The Minister for Naval Services may say that his budget is less than the budgets of the others. That is true, but his budget this year is as much as the whole of the civil estimates in a year before the war. I wonder if the minister will not have a parliamentary assistant in the near future. I do not wish him to disclose the name of the one who will be chosen.

Mr. GRAYDON: Does the hon. member think it will be the hon. member for Broadview?

Mr. POULIOT: It could have been possible until the minister spoke, because the hon. member for Broadview was in a very friendly mood, but I do not know what will be his disposition following the words of the minister. Let me tell the minister something else in regard to the hon. member for Broadview and himself. This discussion is not a matter of friendship; it is not a matter of saying, "After you, my dear Alphonse; after you, my dear Gaston." It is a matter of very serious business; it is the very serious matter of the defence of this country. Sometimes we may disagree with the minister, but there is no man more broad-minded than the hon. member for Broadview. While I often disagree with him on public matters, I have the highest regard for the hon. gentleman, and I can say that he is one of my very best friends. One has only to go to Toronto to see how popular he is with everyone, particularly with the underprivileged man about whom no one thinks.

The matter is very simple. The minister cannot expect hon. members to discuss such serious matters, matters of life and death, from a sentimental point of view. I am against sentiment in war. We must be matter of fact; we must get down to brass tacks; we must see to it that the country suffers as little as possible. The minister occupies an important post but, like all of us, he is only a man and a man can make mistakes. Because mistakes are made at times; because a member makes some remarks that may not please at the time, he should not be considered unfriendly. Having said that, Mr. Chairman, I hope the minister will take my remarks into consideration, for I shall have to repeat them when the bill is under consideration if no progress is made in regard to the matters I have mentioned.

Mr. MACDONALD (Kingston City): My hon. friend has asked two questions. The first was whether I have anything to do with the other two departments of defence. The statute provides that if one minister of defence is absent, one of the two remaining ministers acts in his behalf and with his authority, while, if two are absent, the remaining minister acts in behalf of those two. Otherwise the positions are not interchangeable. Of course there is very full consultation between the three defence ministers; at meetings of defence council, which are also attended by the chiefs of staff and the deputy ministers, and again at meetings of the war committee of the cabinet, which are attended by the three defence ministers as well as the Prime Minister and certain other members of the government.

The second question was why no parliamentary assistant has been appointed. My hon. friend knows very well that with such a tremendous surplus of excellent material on this side of the house, including the hon. member for Témiscouata, it is very difficult to select an assistant. I have not made any decision on the question as to who should be selected or whether anyone should be selected. Of course the matter is one for the Prime Minister as well as the minister directly concerned.

Mr. CHURCH: I regret to have to rise to a question of privilege, Mr. Chairman. I understand that in my absence from the chamber to-night, after having offered some constructive criticism, the minister insulted me and the whole opposition. After all, the opposition have some rights in this honourable house, and I object to that sort of thing. I never said that I was a friend of the minister; I do not know him well enough to be a friend. All I have done is humbly to do my duty as a member of parliament, and I certainly have something to say about a spendthrift department like this. It should be put back where it was under the army; there was no necessity for the creation of this department. It has been nothing but a sink-hole for the country's money, half a billion dollars, and I object to it. I have taken a consistent stand in this house for rearmament, and I know no friends except it be my duty as a member of parliament. I do object to a new minister lecturing the committee in this way. I shall read his remarks in *Hansard* to-morrow morning and make my reply later.

Mr. MACDONALD (Kingston City): We shall await that with great interest; my hon. friend has plenty of time to prepare replies.

Mr. CHURCH: I ask for a retraction by the minister, and I can tell him that I am going to discuss every item of his estimates. I have no quarrel with him or his department at all, but I have contended that while there should be an air department there was no necessity for the creation of this department, the expenditures of which are going up by leaps and bounds. I do wish to follow along the line of the remarks of the hon. member for Témiscouata, but the Toronto *Star* has published another report in regard to the speeches made in this house. I have not occupied one-half the time they said. I have discussed public affairs here fairly and squarely, in a decent and honourable manner; I have made no attacks upon the government or upon any minister. I have done my duty in this house as a gentleman, and I do not intend to be lectured by a newcomer from the maritime provinces. That may go in the Nova Scotia legislature, but so far as I am concerned it will not go another day in this house. The minister represents a constituency in Ontario, but so far as I can see Ontario has not been given fair treatment.

I have no wish to further take part in this debate. I believe I have done my duty as a member of parliament in calling the attention of the house and the country to these expenditures. I have supported rearmament; I have supported the navy; I have supported the action that has been taken by the government. I do not seek any quarrel with the minister. He is a newcomer; all I know about him is what I see of him over there, but he has no business to make remarks about me in my absence. I never said I was a friend of his. A member of parliament must do his duty. Criticism is a tonic which stirs governments to action, and, so far as I can see, the only action we have had has come as a result of criticism from this side of the house. I know no friendship except my duty to the returned men, and I do regret that personalities should enter into this debate. This is no place for them; this conflict is too serious for matters of that description. The minister has so many press agents who infest the newspaper offices that I fail to see where we are getting value for the money, and I am only one member of the opposition.

It is eleven o'clock, Mr. Chairman. I do not wish to offer any further criticism, but I can only repeat that I have no quarrel with the minister at all, and no desire except to do my duty.

Progress reported.

At eleven o'clock the house adjourned, without question put, pursuant to standing order.

Wednesday, June 9, 1943

The house met at three o'clock.

QUESTIONS

(Questions answered orally are indicated by an asterisk.)

RIDING MOUNTAIN NATIONAL PARK—CUTTING OF FUEL WOOD

Mr. MacKENZIE (Neepawa):

1. How many cords of fuel wood were cut in Riding Mountain national park for each of the months, March, April, and May, 1943, and how much of this cut is for use within the park?

2. How much of this work was done by alternative service labour?

3. How many alternative service men were employed at fuel wood cutting during each of the above months?

4. Were any alternative service men employed at other work in the park during above months? If so, how many?

Mr. CRERAR:

1. Amount of cordwood cut

Month	Under settlers permit	A.S.W. Operation
	Cords	Cords
February	2,304	374½
March	2,235	625½
April	679	425
May	603	264
	5,821	1,689

No material cut for park use.
1,689 cords available for sale.

2. Answered by No. 1.

3. Employment of A. S. Workers

Month	Total Strength	Projects on which employed: Fuelwood	Fire Protection
February	27	27	—
March	48	48	—
April	37	37	—
May	35	20	15

4. All employed on fuelwood cutting with exception of fifteen in May on fire protection.

SUGAR FOR CANNING PURPOSES

Mr. REID:

1. Is the amount of sugar to be allowed for canning purposes the same for all cities?

2. Is the amount of sugar to be allowed for canning purposes the same in all rural districts?

3. If different quantities or amounts of sugar for canning purposes are being allowed for different cities or rural districts, what are the reasons for the different quotas set?

[Mr. Church.]

4. What is the total amount of sugar for canning purposes being allotted for Canada and, (a) what is the amount allotted for each province; (b) the per capita amount of sugar allotted for each province?

Mr. ABBOTT:

1, 2 and 3. Applications which were received for sugar for home canning amounted to more than twice the available supply. The board therefore proceeded to make an allocation to each territory covered by a local ration board based on the number of applications from that territory. Each local ration board was then advised of the total amount of sugar which would be available for its territory and was asked to make such distribution as appeared equitable under all circumstances.

It was pointed out that in some areas it might be appropriate to draw a distinction between urban and rural areas, while in other areas a standard allocation to all applicants might be more equitable. The decision in each individual territory was left with the Local Ration Board concerned which accounts for the differences in actual distribution which is made in the various areas.

4. (a) The total amount of sugar for canning purposes to be allotted for Canada is 100,000,000 pounds of which 99,383,000 pounds was distributed pro rata among the provinces as follows,

Prince Edward Island	825,475
Nova Scotia	4,418,900
New Brunswick	3,552,100
Quebec	25,644,400
Ontario	34,807,400
Manitoba	7,291,825
Saskatchewan	8,211,600
Alberta	7,350,900
British Columbia	7,280,400
Total	99,383,000

The remaining 617,000 pounds were held in reserve and have since been distributed.

(b) The sugar allocated each province is not on a per capita basis but on a per application basis and was approximately 11 pounds per application.

CANADIAN ARMED FORCES—LIFE INSURANCE

Mr. HATFIELD:

1. What insurance is offered to the members of our armed forces?

2. What amount of insurance is offered?

3. Who pays the premium?

4. How much is the premium?

Mr. ABBOTT:

1. That made available by the various insurance companies.

2. Such amount as appears applicable in the circumstances.

3. The insured.

4. The amount of the premium varies according to age and plan.

CANADIAN FLAG

Mr. LaCROIX (Quebec-Montmorency):

What steps does the government intend to take to put an end to the deplorable condition of affairs arising from the fact that in all countries of the world Canada is the only one which does not possess a flag?

Mr. MACKENZIE KING: This question alleges a fact which I do not think can be established. In the first place, it is not true that Canada does not possess a flag. In the second place, I am far from sure that it can be said that the existing condition is a deplorable condition of affairs. I do not think the question merits an answer in the form in which it appears.

Question dropped.

CIVIL SERVICE—ADVISORY COMMITTEE

Mr. McILRAITH:

1. Has a report been made by the advisory committee under the chairmanship of Mr. H. J. Coon and set up by order in council P.C. 2-584?

2. To whom was this report made, and when?

3. Will the report be tabled or otherwise published?

Mr. ABBOTT:

1. Yes.

2. To the treasury board, on March 17, 1943.

3. No.

CONFERENCE ON INDUSTRIAL RECREATION

Mr. MacINNIS:

1. Did the Minister of Labour call a national conference on industrial recreation on or about April 9?

2. What recommendations were made to the Minister of Labour by this conference?

3. What action has been taken by the Minister of Labour in regard to these recommendations?

Mr. MITCHELL:

1. Yes.

2. Recommendations:

(1) Purpose: The purpose of a plan for recreation should be the provision of a programme of intrinsic worth to the individual, as well as to provide greater assurance of maintaining interest in production work on the part of the worker.

(2) Pattern of organization: National advisory committee, provincial advisory committees, regional and local committees. Properly qualified paid personnel appointed to undertake the work of promoting recreational plans on national, provincial, regional and local levels.

(3) Finances: There should be a four-way financial participation—workers, management, recreation councils or organizations, federal and provincial governments.

(4) Personnel: There should be provision made for training personnel, if the need arises.

(5) Facilities: Basic facilities already established in communities should be made available wherever required. Existing facilities should be fully used.

(6) Programme: The programme should be sufficiently flexible and diversified to meet the needs of the workers and their families. Industry should be urged to develop recreational programmes within the plant when such programmes are advantageous.

(7) Recreational programmes should be a community development within the areas where the establishment of war industries has created an urgent need.

3. An order in council, P.C. 4703, dated June 8, 1943, has been passed under authority of the War Measures Act authorizing the Minister of Labour to enter into agreement with provinces or municipalities to provide recreational facilities for war workers, and for an equitable sharing of costs by the dominion.

JAPANESE NATIONALS—STRIKE AT THUNDER RIVER, B.C.

Mr. NEILL:

1. Is the press report of a sit-down strike of about 100 Japanese at Thunder River, British Columbia, correct?

2. If so, what are the particulars?

3. What were the alleged grievances?

4. How long did the strike last?

5. What were the terms of settlement?

Mr. CRERAR:

1, 2 and 3. There was such a strike. The facts are briefly as follows:

On May 25 some 90 Japanese at the Thunder River camp, Yellowhead-Blue River highway project went on a sit-down strike alleging insufficient nourishment and lack of rice, jam, canned fruits and fresh vegetables. They complained of a shortage of meat and asked camp authorities to guarantee there would be no delays in meat shipments. They also expressed dissatisfaction that a doctor was not resident at the camp nor a hospital established there. The engineer in charge of the project met a Japanese committee, heard their complaints and explained difficulties of food supplies and general rationing.

4. May 25 to June 2.

5. As the Japanese at this camp were being treated in the same manner and receiving the same kinds and quantities of food as those in other camps, no changes were made in the rations or in camp regulations. The Japanese on strike returned to their work when they found there was no justification for their demands. They were not paid wages during the time they were on strike.

DOMINION GOVERNMENT ANNUITIES

Mr. WINKLER:

1. By years, how many dominion government annuities were bought in 1935, 1936, 1937, 1938, 1939, 1940, 1941, and 1942?

2. By years, what was the total in dollars for these annuities for the same period?

Mr. MITCHELL:

1. Individual contracts and certificates.—1935, 3,930; 1936, 6,357; 1937, 7,806; 1938, 5,724; 1939, 8,518; 1940, 9,014; 1941, 11,994; 1942, 8,593.

2. Net receipts under all contracts.—1935, $13,376,400.02; 1936, $21,281,981.31; 1937, $23,614,823.95; 1938, $13,550,483.22; 1939, $18,189,318.98; 1940, $20,001,533.26; 1941, $18,803,645.27; 1942, $19,630,644.58.

STORAGE OF GOODS IN OGDEN POINT, B.C., PIER WAREHOUSE

Mr. FRASER (Peterborough West):

1. Has the government goods in storage at the Ogden point pier warehouse, Victoria?
2. If so, of what do the goods consist?
3. How long have they been in storage?
4. Will they be released for use by the armed forces in Canada, or for civilian use?

Mr. MACDONALD (Halifax): The questions arise out of a news item in the *Globe and Mail* which was read in the house by the hon. member for Peterborough West on Friday last.

In July, 1942, the Canadian Red Cross was offered cargo space for a large shipment of relief supplies to the far east. The vessel which was chartered by the American Red Cross Society was expected to sail in a few days.

Because of the large quantities to be shipped and the limited time, the Canadian Red Cross was not able to handle the shipment alone and most of the Canadian supplies were furnished by the Department of National Defence to the Canadian Red Cross for forwarding.

By the most strenuous efforts the supplies were procured, shipped to San Francisco and loaded on to the vessel only to find that the United States government could not get a safe conduct for her from the Japanese government. The supplies had, therefore, to be unloaded. The part of the shipment owned by national defence was shipped to Victoria, placed in storage at Ogden pier and held intact in storage until the middle of January, 1943.

When it became evident that no means of transport under safe conduct was in sight, the part of the supplies that consisted of perishable foodstuffs was at once turned over to all arms of the service in the Pacific command for issue in the usual way. The balance of the foodstuffs was subsequently absorbed in the same way. Nothing was lost.

The only portions of the national defence supplies still held in storage at Ogden pier are clothing and a small quantity of medical supplies and these will be returned to stock and used by the armed forces.

CANADIAN FORCES—UNIVERSITY TRAINING

Mr. HATFIELD:

What are the names of the universities who propose to take high school students who have joined the army, and give them one year's college education as announced by the Department of National Defence on May 31?

Mr. MACDONALD (Halifax): As of 8th June, 1943: University of Western Ontario, University of Toronto, McMaster university, Queen's university, Ottawa university, McGill university, University of Montreal, Acadia university, Mount Allison university, University of British Columbia, University of Saskatchewan, University of Alberta.

MUNITIONS AND SUPPLY—TELETYPE MESSAGES IN FRENCH

Mr. POULIOT:

1. Have instructions been issued in the Department of Munitions and Supply not to send messages by teletype, or otherwise, in French?

2. If so, for what reasons?

Mr. HOWE:

1. No.
2. Answered by 1.

SOURIS RIVER—USE OF WATER FROM RESERVE STORAGE DAMS

Mr. MATTHEWS:

What steps, if any, are being taken by the government towards securing for southern Manitoba a larger release of water via the Souris river from the reserve storage dams being utilized in North Dakota.

Mr. MACKENZIE KING: On January 15, 1940, the governments of Canada and the United States referred to the International Joint Commission the question of the distribution of water of the Souris river as between the provinces of Saskatchewan and Manitoba

and the state of North Dakota. This reference was made under article 9 of the Boundary Waters Treaty of 1909. In the summer of 1940 representations were heard from all interested parties and on October 2, 1940, the commission handed down interim recommendations as to the use of the water. The interim recommendations were accepted by the government of Canada and the government of the United States and were approved by the governments of Manitoba and Saskatchewan. The recommendations provided for the release to Manitoba of a minimum quantity of water per year which amount was increased by a subsequent order of the commission dated November 17, 1942.

At present, the International Joint Commission has under consideration further representations made with respect to the equitable distribution of the water. Hearings were held in Minot, North Dakota, and Melita, Manitoba, on May 24 and May 26 respectively, at which all parties with an interest in the matter were given an opportunity to present their views. It is expected that a further interim recommendation will be made by the commission shortly. A permanent decision as to the distribution of the water will only be made after experience under interim orders has given further information and knowledge on which to base a satisfactory division.

QUESTIONS PASSED AS ORDERS FOR RETURNS

GOVERNMENT WASTE-PAPER CONTRACT

Mr. POULIOT:

1. Who had the contract for government waste-paper in 1921; what was the quantity then sold, and for what price?
2. Were public tenders afterwards called for such waste-paper?
3. If so, (a) when; (b) to whom was the contract awarded; (c) for what price; (d) for what quantity of paper?
4. Who has the contract now, and since when?
5. What is, (a) the quantity of waste-paper sold under the present contract; (b) the price paid by the contractor?
6. Since 1921, inclusive, how much was paid each year for government waste-paper?

Mr. MITCHELL: Return tabled .

[*Later*:]

On the orders of the day:

Mr. POULIOT: I will ask the Secretary of State if he will kindly table a supplementary report regarding waste-paper. In the return which has been tabled in answer to this question there is an answer only from the king's printer. It seems that there should be an answer from all departments.

CANTEENS AND RECREATION SERVICES

Mr. POULIOT:

1. Has the Minister of National War Services authorized certain organizations to receive contributions to aid canteens, recreation centres, etc., for the troops?
2. If so, (a) what are the organizations; (b) under what conditions are they recognized as auxiliary war services?
3. Has the Minister of National War Services himself granted subventions to these societies so that they will not make public appeals for contributions? If so, (a) when; (b) what sums has each organization annually received since the beginning of the war from public subscription, and by way of government grants?
4. Has each organization authority to withhold an amount for its own support from, (a) popular subscriptions; (b) government grants? If so, what is the percentage in each case?

MILITARY SERVICE—LOCATION OF DEFAULTERS OR DESERTERS

Mr. BERTRAND (Terrebonne):

1. Does the government employ agencies, organizations, or private companies, to locate those called for service who refuse to present themselves for training, or deserters from the armed forces?
2. If so, what are the names and addresses of such organizations so employed?
3. What is the basis of remuneration?
4. What has been paid to each to date?

MOTIONS FOR PAPERS

CANADA'S PARTICIPATION IN THE WAR

Mr. LACROIX (Beauce):

For a copy of all memoranda, correspondence, telegrams and other documents, addressed by the government of the province of Quebec to the federal government, from August 25 to October 1, 1939, on the subject of Canada's participation in the war.

Mr. MACKENZIE KING: Mr. Speaker, I have had search made as to memoranda, correspondence, telegrams and other documents addressed by the government of the province of Quebec to the federal government on the subject of Canada's participation in the war, and I am unable to discover any that have been received from the beginning of the war up to the present time.

Mr. HANSON (York-Sunbury): Were any oral representations made by the government of the province of Quebec?

Mr. MACKENZIE KING: I cannot speak for the whole government, but I can recall none at the moment.

Motion dropped.

WAGE NEGOTIATIONS—COAL AND STEEL

Mr. GILLIS:

For a copy of all correspondence, telegrams, and other documents in possession of the Department of Labour, from the United Mine Workers of America, District No. 26, Dominion Coal Company, Acadia Coal Company, Nova Scotia Steel and Coal Company, Cumberland Railway and Coal Company, and the Department of Labour, in the matter of wage negotiations, from February 15, 1943, to May 31, 1943.

MINING AND MARKETING OF NOVA SCOTIA COAL

Mr. BLACK (Cumberland):

For a copy of all correspondence and agreements between the dominion fuel board, the Department of Munitions and Supply, Department of Mines and Resources, Department of Finance, and the government of Nova Scotia, or the Department of Mines, from January 1, 1942, to June 1, 1943, with respect to the mining and marketing of coal produced in Nova Scotia.

SCOTT, SASK., EXPERIMENTAL FARM

Mr. POULIOT:

For a copy of the report of the auditor general, dated April, 1932, to the Department of Agriculture, on the subject of the experimental farm at Scott, Saskatchewan, together with a copy of all documents and vouchers.

SUMMERLAND, B.C., EXPERIMENTAL FARM

Mr. POULIOT:

For a copy of the report made by the auditor general in 1932 to the Department of Agriculture regarding the experimental farm at Summerland, British Columbia.

ARGENTINE REPUBLIC

QUESTION AS TO RECOGNITION OF THE NEW GOVERNMENT

On the orders of the day:

Mr. GORDON GRAYDON (Leader of the Opposition): Mr. Speaker, I desire to direct two questions to the Prime Minister arising out of reports respecting changes of government in the Argentine. What steps are in contemplation by this government towards a recognition of the new government of the Argentine? Has the Prime Minister received from the Canadian legation at Buenos Aires or the charge d'affaires of the Argentine legation in Ottawa sufficiently comprehensive reports upon which he could form a judgment as to how these events in the Argentine will affect the attitude of that republic towards Canada and the united nations generally?

Right Hon. W. L. MACKENZIE KING (Prime Minister): Mr. Speaker, perhaps I might reply to the second question first, as that will answer in part the first question. I may inform the leader of the opposition that we have received extensive reports from our legation in Buenos Aires but that the political situation in that city will have to be very much clearer than it is at present before it would be safe to venture a firm prophecy as to the future. The only official statement so far issued by the new Argentine government indicates an intention to continue, for the time being at least, a policy of neutrality in relation to the war against the axis.

I do not think the change of government in the Argentine indicates any change of friendly feeling on the part either of the Argentine, its people and government towards Canada, its people and government, and in the circumstances the position of the Argentine continues as it has in the past.

Mr. GRAYDON: The new government is being recognized by this government?

Mr. MACKENZIE KING: We are considering our recognition, just as I believe all other countries are. I do not know any that have changed since there has been a change of government in the Argentine.

LABOUR CONDITIONS

WINNIPEG TRADES AND LABOUR COUNCIL—FREEZING OF WAGES OF LOW-PAID WORKERS

On the orders of the day:

Hon. HUMPHREY MITCHELL (Minister of Labour): Mr. Speaker, on Monday, June 7, the hon. member for Winnipeg North Centre (Mr. Knowles) asked me if I had been advised of a complaint of the Winnipeg and district trades and labour council that the selective service officer in Winnipeg was freezing workers to low-paid jobs when other men were not available for the employers concerned. I had the director of employment service and unemployment insurance of my department telegraph to our regional employment officer at Winnipeg for a report. The reply which came yesterday is to the effect that no official complaint has been received from the trades and labour council. There had been a complaint made to that council by the business agent of the moulders union concerning a labour dispute between moulders and the Vulcan Iron Works of Winnipeg because of a decision on wages given by the Winnipeg regional war labour board. Forty moulders had requested the Winnipeg selective service office to grant permits for other jobs, but as the Vulcan Iron Works is designated an essential industry the

request was refused. The advice from Winnipeg is that the men are back at work in this plant pending an appeal of their case to the national war labour board.

[*Later*:]

Mr. KNOWLES: May I ask the Minister of Labour if he has any information as to the nature of the other work that these men were seeking? My understanding was that they were seeking the same kind of work, in essential industry, at higher wages. The complaint was that they were being frozen in a low-paid job against a better paid job in an essential industry.

Mr. MITCHELL: All I have is the advice I have received from the city of Winnipeg, and it is that the selective service officer told these men to return to their jobs in view of the priority of that industry.

Mr. KNOWLES: Could the minister get that further information?

Some hon. MEMBERS: Order.

GALT, ONTARIO, STEEL WORKERS—STATEMENT AS TO ALLEGED EVICTIONS

On the orders of the day:

Mr. CLARENCE GILLIS (Cape Breton South): I wish to direct a question to the Minister of Munitions and Supply. It arises out of a letter received this morning from one of the organizers of the Union Steel Works of America at Galt, Ontario, setting out that because of the stoppage of work occasioned by poor handling of the labour situation in that district, eviction notices are being issued by the administrator, Mr. K. S. Feader, of wartime housing, to employees of the plants involved in the work stoppage, that they will have to vacate the houses in which they are living on or before June 30. Could the minister inform the house if this is in accordance with the government policy, and does he think that action of this kind on the part of wartime housing is helpful in bringing about a solution to an already bad and aggravated labour situation?

Some hon. MEMBERS: Order.

Hon. C. D. HOWE (Minister of Munitions and Supply): I received notice of this question a few moments before I came into the house. I have tried without success to get in touch by telephone with Mr. Feader, so that I cannot speak with first-hand knowledge of the facts. But I can say definitely that no one is being evicted from any war-time house because he is on strike. In saying that I do not wish to imply that there may not be other reasons why people may be evicted. They may be bad tenants. But certainly no strike position will have any effect as far as eviction goes.

Mr. GRAYDON: May I ask the minister if what he has just said indicates a general policy which is followed in that regard by the government?

Mr. HOWE: Certainly.

MAN-POWER

FARM LABOUR—REPRESENTATIONS OF LA CORPORATION DES AGRONOMES OF THE PROVINCE OF QUEBEC

On the orders of the day:

Mr. J. SASSEVILLE ROY (Gaspé): Mr. Speaker, I should like to ask the Minister of Labour whether he has received a letter sent to him from Montreal on June 3 by La Corportation des Agronomes of the province of Quebec, and signed by Rene Monette, general secretary. This letter deals with the problem of shortage of man-power on farms and suggests suspension of recruiting of these men for the army. Has the minister received the letter and given any consideration to that demand, and if so, what action has been taken?

Hon. HUMPHREY MITCHELL (Minister of Labour): In reply to my hon. friend I may say that when the man-power debate comes up I can give an answer to the letter to which he refers.

PRIORITY RATINGS FOR INDUSTRIES

On the orders of the day:

Mr. J. H. HARRIS (Danforth): I wish to direct a question to the Minister of Labour: perhaps he will accept this as notice and answer it to-morrow. It came to my attention just before coming to the house to-day that industries in different parts of Canada are coming to the national selective board in Ottawa and getting a special confidential priority rating on labour, not only that available in industrial centres, but some labour which is at present employed by other industries which have no such confidential priority rating and whose employees are under the jurisdiction of the local selective service boards. Will the minister make a statement to the house as to the origin of the confidential selective ratings, and also as to how industries

that are doing what they deem to be war work may get on these preferential lists in order that they may obtain some labour.

Mr. MITCHELL: I shall be glad to give an answer to my hon. friend at the next sitting of the house.

TRANSFERS FROM ONE INDUSTRY TO ANOTHER

On the orders of the day:

Mr. P. C. BLACK (Cumberland): I should like to ask the Minister of Labour if it is the practice or policy of his department to confer with the heads of labour organizations and with the heads of industry where, under national selective service, men are being transferred from one industry to another industry. In the province of Nova Scotia there is some discontent because of this transfer, and I should be glad if the minister would care to give us some information on the matter.

Mr. MITCHELL: In the first place, the general policy is to consult with the national selective service board. I think my hon. friend will agree with me that when it comes to a question of administration, that must be the responsibility of the government agency. I think he will agree that where transferences are involved we should take the responsibility, of course after consulting with the national selective service advisory committee before the high policy is put into operation.

FUEL

PRESS REPORT AS TO PRODUCTION OF BUSH-WOOD—COAL SUPPLIES

On the orders of the day:

Mr. G. K. FRASER (Peterborough West): I wish to ask a question of the Minister of Munitions and Supply. In a press report of June 7, Mr. J. W. Cornett, mayor of Vancouver, is reported as having said that—

> . . . he believed the dominion government will announce within a few days that it will go into mass production of bush-wood to augment insufficient coal supplies. The mayor also expressed belief the government will assume responsibility for coal supplies.

If there is any truth in this report, will the minister tell the house what the government plans are?

Hon. C. D. HOWE (Minister of Munitions and Supply): I made a statement on the coal and wood fuel situation in the course of an all-day debate on that subject. The situation has not changed. The federal government is doing everything it can do to provide in every community sufficient coal and to assist every community in obtaining sufficient fuel. Coal we recognize as a federal problem. Fuel wood is a local problem in which the federal government is assisting to the utmost. We have certain operations for cutting quantities of fuel wood which can be moved into deficiency areas, but I think that that should not relieve any community of putting forth its own best exertions to meet its own fuel wood requirements.

HOUSE OF COMMONS

REFERENCE TO ENGLISH TRANSLATION OF REMARKS OF MR. POULIOT ON JUNE 2

Mr. JEAN-FRANÇOIS POULIOT (Témiscouata): As a member of this honourable house and as a French-speaking Canadian, I understand that at times translations of our debates and discussions are made in haste, but with regard to what was said on the occasion of the king's birthday the translation should have been polished *ad unguem*. Speaking on behalf of the young men of my constituency who are in the army, and being the last speaker on the subject, and speaking in French, on behalf of my fellow citizens whose maternal language is French, my last words on June 2 were as follow:

> . . . j'offre nos respectueux hommages a sa digne épouse.

It was translated:

> I present our humble respects to Her Majesty the Queen.

This is not at all what I said. It was "I pay our respectful homage to his worthy consort." As a member I feel very humble —I say that at times—but speaking as I did on behalf of the young men of the army and of the French-speaking citizens of Canada I was not feeling humble at all. But I was very respectful, and this is the shade of difference which should not be overlooked. I hope that in the future, as the translators do not come any more under you, sir, the Secretary of State will notify them accordingly.

MEAT

SAUSAGES AND HAMBURGER—RATION REGULATIONS

On the orders of the day:

Mr. D. C. ABBOTT (Parliamentary Assistant to the Minister of Finance): I should like to reply to the question which was put on Tuesday by the hon. member for Rosetown-Biggar (Mr. Coldwell) respecting the rationing of sausages and hamburger. I am informed by the wartime prices and trade

board that they have issued no official statement either over the radio or through the press to the effect that a decision with respect to the rationing of these commodities will be deferred for at least a month.

Mr. COLDWELL: That was given over the radio.

Mr. ABBOTT: So I understand, but I am informed by the board that they have issued no such statement. If there are defects in the meat rationing plan it is probably too soon to decide what they are, as the plan has not become fully operative. The fact that housewives bought meat liberally for a few days before meat rationing came into effect resulted in a slowing up effect on meat sales in retail stores. The situation is being closely watched and adequate steps will be taken promptly if considered necessary to forestall losses of meat resulting from the rationing regulations.

NAVAL SERVICE

REFERENCE TO REMARKS IN DISCUSSION ON JUNE 8

On the orders of the day:

Mr. ROBERT FAIR (Battle River): I wish to call the attention of the house to a discussion that took place yesterday afternoon on the estimates of the Minister of National Defence for Naval Services (Mr. Macdonald). I was not present at the time because I was attending a meeting of the agriculture committee. The hon. member for Vegreville (Mr. Hlynka), in the course of his remarks, protested against a press report with respect to officers in the navy and the question of discriminations. According to this morning's *Citizen:*

> Mr. Macdonald said that if an article like that mentioned by Mr. Hlynka had appeared it was unauthorized. Regulations required simply that a man be a British subject.

Then the following appears in quotation marks:

> "If my honourable friend will look at the navy list of officers he will find a great many names that are not British in the ordinary sense of the term," the minister continued.
>
> "I see in the list 10 people named Kelly, 10 or 12 named Murphy. These are not British in the broad sense . . .

I wish to direct two questions to the minister and I hope he will answer them correctly. First of all, let me say that I come from the country from which people of the names he mentioned, the Kellys and the Murphys, have come and I am as good a British subject as the minister or anyone else here. My question is this: What is the minister's reason for having this portion deleted from *Hansard?* That is the first question. The second question is: Does this make for national unity, about which we hear so much from the opposite side?

Hon. ANGUS L. MACDONALD (Minister of National Defence for Naval Services): I may say that the word I intended to use was English, not the word British.

Some hon. MEMBERS: Oh, oh.

Mr. FAIR: That is a pretty flimsy excuse.

Mr. MACDONALD (Kingston City): My hon. friend must realize that in the sense in which he is speaking, I myself am not British—that is, in the sense of being English. There is no English blood in my veins, and it is not likely that I would attempt to reflect upon my own race. What I intended to say was that there were a great many names in the book—English names, French names, and so on—and I went on to say to the hon. member for Vegreville that there were names which were evidently of central European origin.

Mr. FAIR: The second question is not answered.

Mr. MACDONALD (Kingston City): As to the second question, I am just as much concerned as my hon. friend, and a great deal more concerned, about national unity.

Mr. FAIR: Mr. Speaker—

Mr. HANSON (York-Sunbury): The minister—

Some hon. MEMBERS: Order.

Mr. CRERAR: One at a time.

Mr. HOMUTH: There are only two races, Irish and those that would like to be.

Mr. HANSON (York-Sunbury): I should like to know why there is an omission from *Hansard* and what authority the minister has to delete from *Hansard.* This has happened before. That was not answered.

Mr. MACDONALD (Kingston City): I can answer that. I said that by mistake I used the word British yesterday. I had intended to use the word English, and in order to make the correction really complete, and make the sentence read properly, I struck out that part of it.

LEGATIONS

PRESS REPORT AS TO REPRESENTATION OF SWEDEN IN CANADA

On the orders of the day:

Right Hon. W. L. MACKENZIE KING (Prime Minister): Yesterday the leader of the opposition drew my attention to a dispatch that had appeared in the Ottawa *Journal* of June 7, the significant part of which reads:

Increase of Sweden's consular and legation representation abroad, especially in Canada and South America, is contemplated in plans for the expansion of Sweden's foreign service.

My hon. friend then asked:

Will the Prime Minister inform the house whether or not negotiations have been entered into between the governments of Canada and Sweden along the lines indicated in the dispatch in question, and, if so, when such negotiations were commenced and how far they have progressed?

I am informed that the dispatch arises out of the inclusion in the Swedish foreign office estimates of financial provision for the establishment of Swedish legations in Canada and a number of other countries where Sweden has not, at present, diplomatic representation. I assume the Swedish government, like our own, is alive to the importance of developing, as opportunity permits, closer relations with other friendly countries and is making its plans for the necessary expansion in its diplomatic and consular services. Up to now, however, I have to inform the house, there have been no negotiations between the governments of Canada and Sweden looking toward the exchange of diplomatic representatives.

WAR APPROPRIATION BILL

PROVISION FOR GRANTING TO HIS MAJESTY AID FOR NATIONAL DEFENCE AND SECURITY

The house resumed from Tuesday, June 8, consideration in committee of a resolution to grant to his majesty certain sums of money for the carrying out of measures consequent upon the existence of a state of war—Mr. Ilsley—Mr. Bradette in the chair.

NATIONAL DEFENCE FOR NAVAL SERVICES

The CHAIRMAN: Item 2 is under consideration.

Mr. CHURCH: Last night when the house was about to rise for the evening—

Some hon. MEMBERS: Hear, hear.

Mr. CHURCH: Thank you for the applause. I may say that I am not surprised at the reaction of the present minister to some remarks I made. I have received nothing but brickbats since I started in this game, because it is more or less a game, but a few more will not do me any harm. But, Mr. Chairman, I wish to bring to the attention of the committee the exact facts and the record. In the first place the minister was absolutely unfair yesterday. So far as his department is concerned, I made a bare statement of the case on behalf of the only people whom I try to represent when I endeavour to have a better deal for the men in our armed forces. The minister complained of my absence from the house. Well, for that matter I think it would be a good thing for me if I stayed away from the house altogether, because, as I have said before, parliament might just as well close up. We have been allowed to do nothing because our powers, functions and privileges have been taken away from us as a parliament and handed over to various control bodies. I have urged in the house that we should close about the end of the month. As a matter of fact, however, when the minister speaks of my absence, I was here on Monday night for a short time; but even when I was away I did not miss much anyway. I wish to thank you, Mr. Chairman, for your invariable kindness and courtesy to members of the opposition, because we look to you, and to your superior officer, Mr. Speaker, as referees to judge the play. I am a sportsman and not a politician; I have never been a politician. I have tried in this house to conduct myself like a gentleman and I have never on any occasion indulged in personalities. I have always tried not to forget the duty of ordinary Christian charity towards one's political opponents, and I have given the government a great deal of credit since the war started for what they have done when their efforts were for a total war. I may say further that at the time the minister spoke last night, unfortunately I was not here. I was out of the building for about half an hour. I was here from eight fifteen in the morning until twenty minutes before the minister started to speak, at which time I went out. While I was away he was referring to me, in my absence. At the time he spoke last night about absence there were only fourteen Liberals on the benches over there, and over here, right to the end of the overflow—only fourteen Liberals.

Yesterday afternoon the only minister on the government benches was my good and kind friend who has done so much in this war, both he and his family. I refer to the Minister of Agriculture. At the time he was the only minister in the house. Of all members of parliament, why am I singled out for attack? Why am I, of all members of the House of Commons, singled out by the

minister for attack? It is because of one fact, namely, that I have supported in season and out of season rearmament and cooperation with Britain and our connection with the mother country, in peace, in war and all the time. I believe everything we have in this country by way of freedom, civilization and liberty we owe to the mother country. Our dominion was one of the chief drifters from the empire, between the two wars, and long before.

I may say that I referred to certain matters before the war started. I referred to what happened between 1938 and 1939, and after Munich. At that time I was bringing before the house consistently, when I was sitting in the seat now occupied by the hon. member for Lake Centre (Mr. Diefenbaker), the need for rearmament. On March 21, 1939, I called the attention of the Prime Minister, on a motion to go into ways and means, to the very grave danger this empire was in on land and sea and in the air, and the certainty of war. I said we had thrown away our defences, the finest army, air force and navy the world had ever seen. Then the huns entered Czechoslovakia. We had the Munich pact. And Munich was necessary because, as I say, France and Great Britain together, either singly or collectively, were no match for Hitler, were not ready for war, after throwing away their finest. Munich gave us a chance to get ready. As I said, on March 21, 1939, on a motion to go into ways and means, I called the attention of the house to this, that if the people were not told the facts, and if they were only told so much as their leaders let them know, then they were going to be led to disaster—which came in September.

On many other occasions I took the same stand. Return No. 140 was tabled—and I apologize to the committee for taking up this amount of time. However, it is not my fault. I was attacked, and I wish to place on record what the facts are. Facts are facts. As I said yesterday, I did not say and never have that I was a friend of the minister. I saw him only once, for a few minutes, at a football game in Toronto, I believe it was between Toronto in 1941—the Argonauts and Winnipeg. The last time I saw him, I believe, was about six o'clock last night, when I had a short conversation with him. That is the first time I had conversation with him about his department.

As I said, I received return No. 140 in 1939. In that I asked whether any steps had been taken by the government to secure a compulsory national register for Canada for defence or economic or industrial or labour purposes. Secondly, if so, what were they, and thirdly, whether a census or modern doomsday book or national register will be ordered or compiled of (a) industrial power; (b) economic power; (c) food power; (d) manpower; (e) military and defence power, and (f) unemployed. I did not receive an answer to that return until a long time after. On every occasion I have said the same thing. If one reads the records of the house for May 26 and 28, 1938, he will find that I said:

> At no time in the history of this empire has it been more necessary for the Dominion of Canada to give support, even if it is only moral support, to the motherland.

I called attention to our disarmament, that we had been wholly dependent on the mother country for our defence, on her navy, and that at no time had we been able to protect our own shores. I said at that time that I would have an opportunity to take it up with the Prime Minister later. He asked me to wait for the foreign affairs debate. He has known me a long time, and I have never had anything but great admiration for him and his family—because I have known him so long. I do not change. I have taken certain principles in the house, and I have stood by them. In that I have been consistent. I never have faltered once in changing my opinions with regard to the war, and the criminal mistake of disarmament, and what we owe to the mother country. In that connection the Prime Minister has taken a different stand. He is a gentleman who has extended a great deal of courtesy in the house. While I have not been of the same political faith, I have always found him courteous in debate toward opposition members, and always a gentleman.

There are just a few other matters I wish to refer to. I shall refer to the remarks last night of the Minister of National Defence for Naval Services, but will not read them. I shall give the page, and members who wish to do so may look it up. Last night the minister started off speaking about the Canadian navy and the navy league. I was connected with the navy league long before he was ever in politics. I was at that time chairman of the harbour board, had been on the school board, the police commission, and many organizations of that kind. We had the cadet movement in the school. The hon. member for Davenport had for many years taken a great deal of interest in the navy league. I believe he was in it before I was. And in that connection may I say that navy shows have been sent right across Canada at the expense of Canada with the Trade and Commerce department. The minister was kind enough to say that I should not expect kindness from him. I do

not want kindness from him. I never said I was a friend of his. I have not known him long enough to be a friend of his. I said I was a friend of the mother country and of the navy, when he was supporting separatism and isolation, and all that kind of thing. I was standing for a better navy, and for protection. Where was he then? Where were the people lined up with him then? I may say that the minister talks about the navy league. It has done splendid work, I admit. I had a great deal to do with it in the city of Toronto, from which I come, both at the time of the last war and before.

The minister goes on to say that in 1926 the house was discussing the procedure to be followed in ratifying treaties. Mr. Chairman, the house was not discussing any such thing. The house was discussing a motion by Mr. Bourassa, who was then the hon. member for Labelle, to declare Canada a country independent altogether of the British empire. At that time I took a strong stand in the house.

I did not seek this fight, Mr. Chairman, but I am going to put the record right, because I have the right to do so, on this very question. Speaking in the house on June 21, 1926, in connection with Mr. Bourassa's motion in respect of foreign affairs, I said:

> Of the links that used to bind Canada to the motherland, what links remain to-day? First, there is our allegiance to the British crown; secondly, there is the right of appeal to the privy council; thirdly, any treaties into which we enter must have the sanction of the mother of parliaments. . . . Sir John A. Macdonald was satisfied with the status of this country. He did not ask the British government to increase the status of Canada. Five hundred thousand soldiers who went to the front and fought for civilization in France and Flanders were satisfied with Canada's status. Fifty thousand of those gallant men lie buried in those countries; they were content to fight even unto death under Canada's status. They fought for Canada's status, but did not ask that any change should be made in it; they did not ask for any increased status for Canada. Such being the case I think the civilians who stayed at home should also be satisfied with the status of this dominion.

I opposed that resolution, and that is what it was. I said:

> The war did not change Canada's status. I am utterly opposed to any change in Canada's status. I am opposed to separatism autonomy, and further changing of our status. We are proud that Canada is an integral part of the greatest empire the world has ever known. The war left us our status as it was. What Canada has done the past thirty-five years she has done of her own volition and voluntarily and she would do the same thing over again, namely, come to the mother country's aid in her hour of peril. So the people of this country are satisfied with our present status.

Then in that speech I opposed the opening of the legation at Washington.

The minister made a further reference to 1926. Unfortunately I have not a staff of experts, as the minister has, to search the registry offices, to go to the newspaper offices and all that sort of thing. I can only write thirty letters a day, and as a member of the opposition I cannot get very much help, though I appreciate what has been done for me by the clerk and by you, Mr. Chairman. I have to do my own work, however, to dig up my own information, and to take part in these debates without any preparation. Yesterday in his remarks the minister referred to Collingwood, and I should like to say a word or two about the situation on the great lakes. Back in 1926 I referred to the situation which arose when a British ship was fired upon a number of times by a ship flying the United States flag, beyond the three-mile limit, and at that time I stated there were gun boats on the great lakes, contrary to the Rush-Bagot treaty. Then, at page 1335 of *Hansard* for February 25, 1926, when there were lake sailors drowned in the upper lakes in the November storms, I went on to say:

> It seems that we also in this country are content to sponge upon the hard earnings of the British taxpayers for the maintenance of our maritime freedom, and we forget the plight that this country would have found itself in during the late war if a German fleet had sailed up the St. Lawrence or attacked Halifax or Saint John. In such an event what would have happened to Halifax, Saint John, Boston and New York? The British fleet to-day, Mr. Speaker, constitutes the real league of nations, while the league of nations is only a debating society and the results are of little or no value. So far as Canada's contribution to maritime freedom is concerned, we have two toy ships. Where are those ships? Off the Bay of Fundy? No; they are locked up in a garage in Halifax. Is that a self-respecting policy for the people of Canada to be proud of, a people who did so much in the late war, in the darkest hours of the empire, in giving of its best blood to the defence of our liberties? Are we prepared to depend altogether upon the British fleet without contributing to its upkeep? We have not spent a cent for the purpose. I doubt whether Mr. Mackenzie King was ever authorized by his cabinet to take the stand which he is reported to have taken in regard to the Locarno treaty. . . . We talk about our nationalism, but we are not a nation; we are part and parcel of the British empire. . . .

I went on to say that sooner or later Canada would have to live up to her responsibilities as a member of the British commonwealth, or declare herself independent of that commonwealth.

Then the minister went on to quote from page 4787 of *Hansard* for June 21, 1926. At that time we had no fleet; we did have a small navy, consisting of two or three ships, most of them obsolete and used only for

purposes of good-will cruises and recreation. If they had put to sea from Halifax, what could they have done? As I said, if they saw an enemy ship coming along they could not fire their guns until they had cabled to Ottawa and an order in council had been passed. Otherwise they could not fire a pinwheel, a fire cracker or a sky rocket in defence of their country. Was that a self-respecting policy for the people of this country, the fifth trading nation of the world—to be completely dependent upon the mother country for the maritime freedom we then enjoyed? I say it was not, and I do not propose to have the stand I took on that or any other occasion misrepresented by anyone. I did not see the remarks of the minister until after twelve o'clock to-day and I have not had the necessary time to prepare a complete reply, but I should like to recall what I said in reference to a great disaster which occurred on the great lakes, and I quote from page 104 of *Hansard* for February 1, 1928:

> The mother country produced a great Liberal between 1870 and 1880, Samuel Plimsoll, M.P., who directed his efforts against what was known as coffin ships, and who forced legislation to provide for seaworthy ships and life saving aids and help to navigation. . . .

The Conservative party in Great Britain wanted to postpone the introduction of the Plimsoll legislation, but Mr. Disraeli, the great persuader, insisted that it be carried through. Then I said:

> There is no Plimsoll in the House of Commons here, and perhaps there is no public opinion to enable a man to do Plimsoll's work if he tried. There is no leader among the hon. gentlemen opposite who has as much true and genuine liberalism in his whole body as Benjamin Disraeli had in his little finger.

Then I went on to refer to the disaster on the great lakes:

> The closing days and nights of navigation in the season of 1927 recorded a great story of unbroken fortitude and of unshaken endurance which proved that our countrymen, the sailors on the decks of those doomed vessels, were blood brothers of the soldiers who brought glory to Canada at St. Julien, the soldiers who could not be blown off the ground they gained at Passchendaele, who climbed the heights of Vimy Ridge, who gained the victory at Amiens and many another field of glory, men whose names will forever thrill every true Canadian. These sailors struggled or waited hour after hour; if help came to them it was help organized by the valiant hearts and strong bodies of their own country, or if help came it was help bought and paid for by the taxes of the people of the United States. That is Canadian nationality for you. The struggle was a story of glory for Canada's sailors. The struggle was a story of shame for Canada's politicians. The tragedies of the great lakes in the closing hours of navigation last season showed in its true colours the stuff that Canadian nationalism is made of. . . . Canada is a proud and haughty nation. It sends its merchant ships into the winter storms with nothing to do but whistle for a United States service tug when the ship is in danger and to fill the air with the distress signals of a siren with the hope that a United States life saving vessel will put to sea and save the lives of Canadian sailors. Canada, a nation, and in trouble, has a navy maintained at the expense of the old country taxpayer to guard the safety of Canada's shores in war.

That is my reply to the minister. I admit my statements at that time, but the minister read only two or three sentences from an eight-page speech dealing with the whole history of Britain's aid to Canada; he read only a few words about the navy being locked up in a garage in Halifax. Well, it may have been just as well that they were locked up, because the ships were obsolete. If they put to sea in battle I doubt if anyone would be safe to go on them. Here is a return which the present Minister of Pensions and National Health (Mr. Mackenzie) tabled giving the names of the fleet and the total tonnage on February 14, 1938. It was not as much in total as one tramp vessel of 10,000 tons. Two or three thousand tons, and these tramp steamers have tonnages as high as nine or ten thousand tons. That was the navy we had. That was our defence. The result was that we faced invasion and insult. I predicted that the enemy would come up the St. Lawrence.

Reference was made to Lieutenant Farrow. Here are the facts about this gentleman. It is return No. 19. It asks:

1. Who is the incumbent of the position of controller of naval information?
2. When was he appointed?
3. What is his salary?
4. What is the nature of his duties?
5. What are his qualifications for such a position?
6. What is his nationality?
7. In what country or state was he domiciled prior to his appointment?
8. Does he hold any decorations or titles from any foreign power?

The answers are:

1. Lieutenant John Farrow, R.C.N.V.R. (temporary).

2. Lieutenant Farrow offered his services in case of emergency to the Royal Canadian Navy, and this offer of service was accepted, and recorded on the emergency list at naval service headquarters, October 7, 1936. He reported to the commanding officer, R.C.N.V.R., Vancouver.

3. Pay and allowances as prescribed by the regulations . . . pay $5 per diem; allowances, including marriage allowances, $3.60 per diem.

4. The controller of naval information is responsible for:

(a) Censorship in collaboration with the director of naval intelligence.

(b) Compilation of various reports on naval activities and of the war diary.

(c) Preservation and tabulation of sources for historical purposes.

(d) Organization and administration of the photographic section of the Royal Canadian Navy.

(e) Liaison duties connected with press, radio and motion pictures.

5. In civil life, Lieutenant Farrow is an author, historian and film director of exceptional ability.

We have to go to Hollywood to get a man to compile a history of the Canadian navy. The press gallery of the house and our newspaper offices contain many men who have forgotten more about this matter than this gentleman ever knew. I quote:

He has had wide experience as a deep sea yachtman.

I belong to a yacht club but I never had any deep sea experience. Our fleet at Halifax was not let out of the garage to go into the deep sea. When our ministers wanted to go to Europe for the league to abolish all navies they did not take the Canadian navy; they headed for New York and took the ss. *George Washington* and *Queen Mary* and other boats from there. The return continues:

The naval service was in urgent need of a qualified officer to take over the duties of naval information and naval historian.

6. British.

7. United States of America.

8. No information.

The government were not satisfied with this one instance; they brought a lot of people from Hollywood to film shows for our silent fleet and sent them on a trip across Canada to tell us all about the navy. The minister referred to the Minister of National Defence (Mr. Ralston). I never in my life criticized the Minister of National Defence. I was referring to what had taken place at Christie Street hospital when the government in 1926 fired a lot of overseas soldiers who had had considerable experience and replaced them with men who had been nominated by the Liberal ward association.

Then we pass on to 1940. At that time the hon. member for Victoria, B.C. (Mr. Mayhew), a most popular member, had been reported in the newspapers here as having stated that a naval college was to be located in Victoria. The minister was asked about this by the hon. member for Cumberland (Mr. Black) and he replied that he had no information. I understood that negotiations had taken place for a site there and I suggested that it would be better to let parliament know something about it first.

The minister went on to quote another statement of mine as to the need of great Atlantic escorts, but I was really quoting a statement by Mr. Lyttelton, the British minister of production, which had been made in New York on November 11 last and in which he warned the dominion and the United States of the great danger in the Atlantic from submarines. I said:

We seem to have been trusting to Providence more than the Canadian navy.

The words I used were:

We seem to have been trusting to Providence as well as to the Canadian navy.

I did not get the draft of my speech, but those were the words I used. I never cast any reflection upon the personnel of the department. If hon. members will read *Hansard* they will see that that is so, but what has been done is to take only one or two sentences of my remarks.

Then I brought up the question of holding civilian inquests. These soldiers are losing their civilian rights. I discussed this matter with the former attorney general of Ontario, Mr. Conant. It cost the province $65,000 to prosecute an airman for murdering a girl on Toronto island. We have 5,796 officers wearing uniform who before their appointment had never had any training. I was insisting that we should have a system, as in the last war, of civilian inquests in the three forces so that these men would not lose their civilian status.

I do not care a farthing what the minister says or thinks about me. I am not here for that purpose. There is something more noble than personalities to be considered. I have never attacked anyone personally since I have been in this house, and this is the first time I have been attacked. It was not until Monday night and last night when the minister made the statement he did. However, what I said in the past twenty years is on the record. The record would not be complete without giving a list of the speeches I have made on different occasions, calling attention in 1937 to 1939 to our danger of invasion. On May 18 I referred to the laissez faire policy of the government and I called attention to the fact that there should be more navy cooperation with the other dominions and the mother country in the great crisis that faced us. I contended that the government was not doing its duty and were not letting the people know all the facts. I refer hon. members to *Hansard* of February 9, 1937, page 759, and also remind them that in April, 1938, I predicted the war. On July 1, 1939, I referred to the crisis that was developing and again predicted the war. I called attention to the inadequacy of our fleet and stated that Canada was asleep

while her politicians dreamed and did nothing. I predicted that when war broke out we would be attacked. At page 794 of *Hansard* of 1926, on April 1, 1939, on May 24, 1938, and again in 1939 you will find statements about our duty to our navy and to the men of the navy. You will see where I praised the personnel of our navy and regretted that they had to suffer as they had. Here is a return which gives certain figures about the navy. I wanted a naval college established, and a grant to the Singapore base and to adopt the Jellicoe report, and I would train five or ten thousand cadets a year. The minister is quite proud that Britain has given us two destroyers, but we could have had these long before the war but we would not take them. We thought we were independent. We were depending on the Monroe doctrine, the League of Nations, the Locarno agreement, the Kellogg pact and all kinds of scraps of paper, for our defence on land and sea and in the air.

As I said last night, I have no quarrel at all with the minister, I have always looked upon the House of Commons as a gentleman's club, and have always treated everybody here with courtesy. I have never indulged in personalities. I have always obeyed the rulings of the Chair. I have said nothing inside or outside the house that I would not say to a member himself publicly in the house. If I did not think something of my responsibility as a member of parliament I would have walked across the floor of the chamber last night and settled this thing with the minister. I think that is far the better way. If I am going to be attacked any more I want to know about it. You know what fair play is, Mr. Chairman. I have known for many years the minister who preceded the present Minister of National Defence for Naval Services, the hon. member for Vancouver Centre. I call him master of ceremonies. But the other night he hauled his rule book out of his pocket and quoted the rules quite unnecessarily on me. You know, Mr. Chairman, that a referee does not want unseemly wrangles and to be forever hauling out his rule book and reading it to the players. The fact is that if we had more of the spirit of sportsmanship in this house we would get along far better and would not have such things as happened last night and this long debate on the war appropriation bill would have been ended long before now.

Mr. GILLIS: Mr. Chairman, I suppose now it is permissible to say something about the navy. It is difficult to know just how to begin, because so far I have heard everything discussed except the navy estimates. I am sure that most members of the house are not interested in the debate that has been carried on for the major part of this afternoon and last night. The people of Canada are fully aware that Canada was totally unprepared for war when war broke out and are not interested in any quarrels at this time across the floor of the house between the two major parties that held power from time to time in Canada. All such quarrels are irrelevant because both these parties must share responsibility jointly for our state of unpreparedness at the beginning of the war. I shall try, Mr. Chairman, to deal with the matters set out in the estimates. I want to bring to the minister's attention one or two things that come within his department and I do it not by way of criticism, but rather to focus his attention on them with a view to eliminating what I consider to be grievances.

But first let me say this. Personally I feel that our navy organization in Canada, starting from small things at the beginning of the war, is an organization distinctly Canadian. In the organization of our air force and our army we had the assistance to some extent of people from other parts of the world. But our navy started from nothing and it has been built up and has done a very creditable job as a purely Canadian organization. In addition, as the minister pointed out in his statement, the navy has in complete command on a war front the one and only Canadian who is in command in any theatre of war. That is to the credit of the navy. It indicates to me that in the administration of the navy regard is paid to the development of a Canadian force with Canadian responsibility and Canadian direction. I think that is as it should be, and I want to compliment those in charge of the navy, and particularly the minister, on that trend. Personally I do not think that Canada, in view of the contribution she made in the last war and is making in this war, should be taking direction from any other part of the world. It is time we began to stand on our own feet. Perhaps the reason we were in the mess we were in when war broke out was that we had been sitting back and doing no probing for ourselves but were just accepting everything as gospel that was given to us from another part of the world. That is something I never agreed with and never will agree with. I think we should use our own eyes and our own ears, build our own economy and protect ourselves, instead of blindly accepting a lead from any other part of the world. The responsibility for the mess we found ourselves in when this war broke out was not in my opinion Canadian.

It was because some people had been sitting back and doing a lot of wishful thinking and accepting somebody else's advice.

I would like to bring the minister's attention to the necessity of granting free transportation to the members of the naval forces when they go home on leave. I lay stress particularly on the position of the sailor who comes home on leave after being at sea for six or eight months, as many of them are. Many of these boys come from the central west, from Alberta, Saskatchewan and Manitoba, and whether they land on the east coast or the west coast they have a considerable distance to travel to reach their homes when they get a couple of weeks leave, which they need and have earned. As it is now, they are obliged to pay their own railway fare when going home across half this country on leave. I am sure that any member who has travelled to or from either coast will remember seeing many of these boys travelling second class, sitting up in the coaches two or three nights on end, and travelling under very uncomfortable conditions in order to get home on leave. It is not too much to ask that after coming off the water where they have to sleep in their clothes for weeks and months at a time, these boys should be given free transportation to and from their homes. I would ask the minister to think that over. We have already suggested free transportation for the army and the air force on embarkation leave and on their regular furlough.

Mr. MacNICOL: Does the hon. member mean that his party has suggested it?

Mr. GILLIS: Yes.

Mr. MacNICOL: So has this party.

Mr. GILLIS: Nearly every hon. member of the house has. There has been no disagreement there excepting on the part of those who have the power to implement the suggestion, and they have not done so as yet.

Mr. MACDONALD (Kingston City): My hon. friend is speaking of the regular leave?

Mr. GILLIS: The regular furlough and embarkation leave. I emphasize that it is absolutely necessary because many of our sailors have to travel a considerable distance to reach their homes in the central west, in Saskatchewan and Alberta, for instance. I hope the minister will give this request his sympathetic consideration.

Last session when the minister had his estimates before the house I spoke of the merchant marine and the necessity of having ship masters keep a registration of their men on board merchant ships in order that, if something happened to them, there would be some way of getting in touch with their next-of-kin and informing them of just what happened. During the past year I have received many letters from fathers and mothers on the east coast inquiring as to the whereabouts of a son who had left home perhaps a year or six months before and had gone aboard a certain ship. The ship is Norwegian, perhaps, or Greek, but is under British registry. The boy has been missing for some time. I write the shipping board in Montreal—that is, the British Ministry of Shipping. If the ship is of Norwegian registry one is obliged to get in touch with the Norwegian consul either in Saint John or Montreal; and my experience in writing these people on several occasions inquiring as to the whereabouts of a boy who had sailed on one of these ships is that I have never had an answer. As a result, some mother and some father go on month after month wondering as to the whereabouts of a missing boy. I know this matter comes under the Department of Transport, but I think it is time the naval authorities undertook the simple proceeding of issuing instructions to the shipping masters, where the boys ship out, or to the manning pools from which they are sent, that a register of the address of next-of-kin of Canadian boys who are shipping on these boats of foreign registry should be kept, so that the parents could get in contact with the different centres when enough time has elapsed to indicate that something may have happened to the boy. Consideration might be given to that by the minister's department.

Another complaint which I have comes from nurses throughout Canada who desire to enter the naval service. I have corresponded with the minister on two or three occasions during the past thirteen months endeavouring to ascertain if it was possible for nurses who wished to enter the naval service to obtain appointments. The minister advised me that there was a long waiting list and that they were not being taken into the service very rapidly. But I believe the system is not handled on the basis of first come first served, because in the cases as to which I corresponded with the department, applications had been in for the past fourteen months. One of the girls I referred to had received a call, was given her medical examination, and was advised that she would be notified in due course. That puts her in a position where periodically she has to spend money to replace her uniform and make certain

preparations if she is to stay in the hospital, though at the same time she is waiting a call to the navy. I am convinced that there is something to be desired in the consideration which is given to taking girls into the nursing service of the navy. If the merit system prevails, seniority of application and everything else being equal, that is the basis on which selections should be handled. I am reasonably sure that that is not the case at the present time. The girls to whom I make reference could have gone into other branches of the service but they did not want to, having a particular yen for the naval service. I suggest that the minister look into the situation with a view to establishing a system which is fair and equitable.

There is another matter upon which I wish he would make some observations, if not now, when he has had a chance to check up concerning it. On March 12, as reported in *Hansard,* page 2603, the Minister of Munitions and Supply, in discussing shipbuilding, was asked the following question by the hon. member for Vancouver South:

> That would mean that we would have over two hundred ships less sinkings.

The minister replied:

> Yes. Those ships are being chartered to the United Kingdom and will be reclaimed at the end of the war. We hope to have at that time sailors and officers from among the men presently in the Canadian navy. We expect that the Canadian merchant marine will be a substantial source of employment in the post-war years and that it will be of real benefit to Canadian post-war commerce. That is the policy.

What I am interested in is this. Canada is and will be for some time an exporting nation. In the past she had chartered ships from every part of the globe and paid out good Canadian money to have our produce taken to other parts of the world. I take it from the minister's statement that it is anticipated that full use will be made of our merchant marine in the aftermath of this war. That is as it should be. It will provide a means of livelihood for a large number of men who are now taking specialist training in that particular calling. As one who is interested in post-war employment I am in accord with that statement. What I would like the minister to comment on is, how it is anticipated that the merchant marine will be built up, and how men now serving in the navy and in the merchant marine will be employed; the basis upon which this will be done. Will it operate by private enterprise as it is done now, with a certain amount of governmental supervision? To what extent and in what capacity will officers and men now serving in the navy be utilized? Any information which the minister may have that will supplement the partial statement made by the Minister of Munitions and Supply would, I think, be welcome, because the statement we have already had requires some elaboration. It is something in which the Canadian people are definitely interested. We think it very necessary, instead of chartering ships from Japanese and all over the world to carry Canadian commerce to all parts of the globe, that it should be a definite phase of our own economic life after the war.

I am sorry I have had to occupy this amount of time and to deviate to some extent from the item we are considering, but after listening to the last speaker I thought I was justified in taking a little latitude and putting these particular questions to the minister to be answered after he has had time to study them.

Mr. DIEFENBAKER: I have not as yet taken any part in the discussion of this department under the war appropriation measure. May I begin by saying that all of us are proud of the navy and its activities, and those of us who come from western Canada, particularly far removed from the sea, are pleased that our provinces have made such a large contribution. Now that a new system has been evolved whereby ratings will be raised to commissioned rank, speaking on behalf of the western provinces our proportion of commissioned officers should be larger than it is now. An examination of the figures shown on page 3407 indicates an inequality in the percentages among the various provinces that is difficult to understand. In Prince Edward Island the proportion is 49 officers to 1,036 ratings, or one in 20; in Nova Scotia—one can understand this—one in 9; in New Brunswick, one in 13; in Quebec, one in 6½; Ontario, one in 12; and when you come to Saskatchewan the proportion is approximately one to 28; while in Manitoba it is about one in 20. Having regard to the quality of the men who are coming from the west I do think that there should be some equalization in the opportunities of commissioned rank and I have no doubt that will be so under the new arrangement.

Mention has been made of the fact that Canada's navy as a separate entity had its birth since the beginning of this war. In that connection I would point out that in 1918, on May 17, an agreement was made among the

various dominions of the empire respecting naval development in the dominions. I will read it:

The dominion ministers, having considered the admiralty memorandum of May 17, 1918, on the naval defence of the British empire, which was circulated to the imperial war conference of 1918, submit the following conclusions and observations:

1. The proposals set forth in the admiralty memorandum for a single navy at all times under a central naval authority are not practicable.

2. Purely from the standpoint of naval strategy, the reasons thus put forward for the establishment of a single navy for the empire under a central naval authority, are strong but not unanswerable. The experience gained in this war has shown that in time of war a dominion navy (e.g., that of Australia) can operate with the highest efficiency as part of a united navy under one direction and command established after the outbreak of war.

3. It is thoroughly recognized that the character of construction, armament and equipment, and the methods and principles of training, administration and organization, should proceed along the same lines in all navies of the empire. This policy has already been followed in those dominions which have established naval forces.

4. For this purpose the dominions will welcome visits from a highly qualified representative of the admiralty, who, by reason of his ability and experience, would be thoroughly competent to advise the naval authorities of the dominions in such matters.

5. As naval forces come to be developed upon a conisderable scale by the dominions, it may be necessary hereafter to consider the establishment for war purposes of some supreme naval authority upon which each of the dominions would be adequately represented.

In the very full statement that was given by the minister I do not find any reference to several of the matters covered by this memorandum of 1918, which to all intents and purposes has not since been altered. Are the principles of training, administration and organization alike, or have they proceeded along similar lines, in the various navies in the empire? Is there to-day a supreme naval authority within the empire upon which each of the dominions is represented? Is Canada represented on such a central board, and are any of the other navies within the empire represented on such a board?

The next matter I should like to deal with is one that has been referred to on previous occasions but it has yet to be answered by any of the ministers of defence. I intend to devote the time at my disposal to the consideration of a subject which is of interest not only to the men who serve in the navy but also to those who serve in the other armed forces,

[Mr. Diefenbaker.]

namely, the establishment, for the protection of service men and women, of a system of life insurance.

A number of questions were asked to-day by the member for Victoria-Carleton as to what insurance is offered to the members of the armed forces. Several other questions were asked at the same time, and the answer was, that insurance was made available by various insurance companies. I wish to place before the minister the necessity of action being taken now, before the commencement of the offensive overseas, for the establishment of a plan of life insurance which will be available to the men and women of the armed forces during the period of the war.

I realize that insurance can be secured from private companies, but the premiums are so high, having regard to the reasons incidental to war service, that it is impossible for service men and women to secure insurance to-day. It may be said that it is late in the war to suggest this, but I would point out that so far our casualties do not amount to over 8,000. It may also be argued that an insurance scheme will cost a great deal. It may cost the state a considerable outlay to protect the loved ones of those who are serving, who to-day, not being dependents, have no protection, but it would improve the morale of the armed forces in the knowledge that they would receive the same consideration and protection as given those in the United States armed services, and it would encourage thrift and give to those in the armed services a nest-egg after the war.

It has been most successful in the United States. Our armed forces serve alongside those from the United States, and I think that with a view to securing as nearly as possible an equality of terms of service, the introduction of this measure at this time would receive the approval not only of those in the armed forces but also of the people of Canada as a whole. The United States has had a national service life insurance scheme in effect since October 8, 1940. So successful has the scheme been that up to March 15, 1943, 7,750,000 applications had been received, with an average amount of $6,381 for each policy. It might be argued that to bring in such a scheme would impinge upon the field enjoyed by private insurance companies. However, experience in the United States of America is that fears such as that have not been justified in respect of the scheme introduced there. They had a similar scheme during the last war, altered in this war in order to meet the exigencies peculiar to present-day conditions.

In a recent article dealing with this matter the answer is given as to the effect on private insurance companies:

> The advent of the government into the life insurance business during the first world war, authorizing and emphasizing as it did a maximum of $10,000 protection on every serviceman's life, has generally been conceded to have been a great benefit to the institution of privately operated life insurance. At that time apprehension was felt in some quarters of the possible encroachment of government upon the field of life insurance. As a matter of fact the records disclose that on January 1, 1917, there was less than twenty-five billion dollars of commercial life insurance in force in the entire United States, and within two years after the close of the first world war this amount had increased to over forty billion dollars, exclusive of government life insurance.

I suggest—and I am going to ask the cooperation of the minister in this matter—the establishment in Canada of a system of life insurance, made available, as I have already suggested, for every serviceman and woman, in amounts up to $10,000 per year, at net premium rates based on the Canadian table of mortality, with interest at three per cent, the government bearing the excess mortality costs.

As I have already stated, a similar system is in effect in the United States, and it has worked out so successfully that wherever one goes among members of the service in that country, he hears good reports of the plan. I had an opportunity to speak to a number of servicemen on a recent trip to the United States, and they, along with those in public life, state that no scheme has ever been introduced in the United States which has done so much to improve the morale of those who serve.

I shall epitomize, in a very few words, the scheme in that country. It provides that insurance may be taken out by all who serve within 120 days after the scheme is brought into effect, or within that period after a person joins the armed forces. The premium is based on a five-year term insurance, with the privilege of conversion to ordinary life insurance, twenty-payment or thirty-payment, at any time within the period of five years. I shall not go into the scheme in detail, but I might say it is set out in the May issue of a publication called, "The Annals of the American Academy of Political and Social Science".

Policies on maturity, on the death of those in the service, are payable to the beneficiaries, irrespective of pension rates enjoyed by those beneficiaries, by monthly payments, on the basis of $3.97, and up, per $1,000 of insurance. The cost is very low, having regard to the service rendered. The cost to the state has not been very high. The cost to the serviceman, on the five-year plan in effect in the United States, at the age of twenty-five years, is only $6.70 per month for $10,000 of insurance, or approximately $79 a year. That amount is paid by the serviceman who takes insurance payable for a period of five years, if he survives the war. And at the end of or during that period he may transfer into an ordinary life insurance policy such as I have already mentioned. The rates are somewhat higher for persons over twenty-five years.

On many occasions the matter of insurance has been mentioned. I think the hon. member first to mention it in the house was the hon. member for Broadview (Mr. Church), whose contribution to the welfare of the men and women in the services of this country is recognized by all, irrespective of party. With the introduction of such a scheme at this time our servicemen would be placed in a position of equality with those in the United States who are in the services. They would be given an opportunity to have, at a low rate, that which the private insurance companies cannot give them. Provided they were disabled, if a similar scheme were in effect in Canada as is in effect in the United States, premiums would no longer be payable. In the event, however, of the insured dying in the services, he or she can provide protection not only for his or her dependents, but for others who, by reason of non-dependency, have no protection to-day. Thereby the morale of those who serve would in my opinion be immeasurably increased.

I do not ask consideration by the minister of this proposal. It is not something new; it is not utopia; it is not nebulous. Experience in the last war has shown that it worked. The experience in the United States since May, 1940, has altogether been of such a nature as to have won the approbation of men and women in all the services, and the universal approval of the legislators and those in authority in Washington.

Mr. JOHNSTON (Bow River): There are only one or two things I should like to mention, and I shall not take long with either of them. The one question I was about to bring up has already been mentioned by the hon. member for Lake Centre. That had to do with officers and ratings in the different provinces, as outlined by the minister at page 3407 of *Hansard*. I do not wish to be misunderstood in this regard. I am not complaining particularly about the number of officers appointed from Quebec, in relation to the number of men from that province.

But I do think there is an unfair distribution as related to the other provinces. And, as I have it figured out, in Prince Edward Island there was one officer for every twenty-one men; in Nova Scotia one for every 8·8 men; in New Brunswick one for every 14; in Quebec, one out of every 6; in Ontario, one out of 12; in Manitoba, one out of 19; in Saskatchewan one out of 28; in Alberta one out of 27, and in British Columbia one out of 7.

In view of that astonishing relationship of the number of officers to the number of men, I think there should be some explanation from the minister. I suppose he has an explanation for that, and I shall not dwell upon it further than to say, once again, that while I have no objection to the number of officers coming from Quebec, I do think there should be closer relationship between ratings and officers, having regard to the other provinces. I shall let any further remarks I have to make on that subject go until the minister has had an opportunity to explain the matter, because there may be some reason for it.

The other point I wish to bring to the minister's attention has to do with rates of pay in the navy. I have had a good deal of correspondence in regard to the pay of various ratings. I remember that the last time I came to Ottawa I had the privilege of discussing this subject with some sailors as well as three or four naval officers who were on the train at the time. The complaint has to do with the living allowance given those who have enlisted since June 1, 1942, when they are forced to live out of barracks or ashore. My understanding is that ratings who joined after June 1, 1942, receive $1.25 a day.

Mr. MACDONALD (Kingston City): That is their pay in the beginning.

Mr. JOHNSTON (Bow River): And I am told that those who enlisted before June 1, 1942, receive $1.45.

Mr. MACDONALD (Kingston City): That is right.

Mr. JOHNSTON (Bow River): These men complained very strongly of this difference, and I believe the protest is well founded. I do not see why a line should be drawn as between those who enlisted before June 1, 1942, and those who joined after that date; certainly it is penalizing those who joined later. So far as the cost of living is concerned they are in exactly the same position as those who joined before June 1, 1942, and it seems to me there is a great deal of discrimination here. You ask these men, some of whom enlisted before June 1, 1942, and others who enlisted later, to live under exactly the same conditions, to belong to the same force and fight for the same cause; yet one receives only $1.25 a day as against $1.45. A great deal has been said in eulogy of the boys of the navy. I would not want to detract in any way from what has been said in that regard, because I think the work they are performing is just as essential as the work of any other branch of our defence forces. I believe they are entitled to a little praise, but I think they are also entitled to a little financial consideration and in this respect I do not believe they are getting fair treatment. I am told that the reason why this change was made was to bring these rates into line with those of the other forces; the minister will correct me if I am wrong in that. Well, if that is true, it seems to me a very poor reward for the splendid service the navy is performing, to reduce the pay of the ratings by twenty cents a day. No doubt to some twenty cents a day may not seem very material, but when they were getting only $1.45 to start with and that has been reduced by twenty cents, it becomes a serious matter to these young fellows. Not only is it a consideration financially; it is a consideration in regard to their morale and feelings, and those are matters to which we should give attention.

Surely the excuse that this was done to bring them into line with the other services is hardly sound. It seems to me the fair thing in a case of that kind would be to increase the pay in the other services, instead of reducing the pay of these naval ratings, to bring them all somewhere near a decent standard. We cannot expect enlistments in the forces if we are not going to treat the men properly. Apparently the minister is having no difficulty in getting recruits; I think he said he has a waiting list, though not as large a list as he had previously. The air force also has a waiting list, though not as large a list as it had previously. The army is finding it difficult to get recruits; in fact we have had to resort to conscription for that purpose. This is a very poor way to encourage young fellows to join the navy. I suggest to the minister that this matter should be gone into a little more fully and that these men should be given their former pay and allowances when they are living out of barracks. If necessary, the allowances given in the other services should be increased as well. I need not say more on this matter until I have heard the minister's explanation. Those were the two subjects I wanted to bring to his attention.

Mr. FRASER (Peterborough West): I am not going to make a forty minute speech; I have only a few questions to ask. Yesterday, Mr. Chairman, you said you had allowed the committee a great deal of latitude; personally I thought you had also given a great deal of longitude. I wanted to ask the minister just what was the difference in the pay of the naval commandos, of whom I understand we have some training on the Pacific coast and in England. I should like to know also if the minister's department has anything to do with the training of the men of the merchant marine. I wish to know how many civilians are engaged by the navy department in connection with the organization of the sea cadets; where the sea cadet training camps will be this summer and, if possible, how many boys will be trained at each sea cadet camp. At the same time, if possible, I should like to have the minister give us the allowances the sea cadets receive during this training.

Then it has come to my attention that in some of the administration offices civilians are working alongside men in naval uniform; they are both doing practically the same jobs, but in most cases the men in uniform are receiving more money than the civilians are paid. I should like to know how many civilians there are in each branch of the service, including the administrative branches, and the number of those engaged in inland waters and also on convoy work. I believe that is all I have to ask now; I shall have a number of questions to ask later on, but I do not wish to take up more of the minister's time at present. However, I wish to say I am pleased that the minister is to name a corvette after the city of Peterborough.

Mr. COTÉ: I should like to invite the minister to make a statement in regard to a certain matter which has caused some discussion in my district. I refer to the decision of the minister in connection with my request and that of other citizens of my community that a corvette should bear the name of our city. I made this request in November, 1941, at the office of the naval secretary, and two weeks later I wrote to the department. I was given to understand that the name "Verdun" could not be used as the name of a Canadian warship because a British destroyer already bore that name. In the following year the minister was kind enough to write to the city officials of Verdun to ask them to suggest some other name, and the name of "Dunver" was chosen. A campaign has been carried on by a certain French language newspaper in Montreal and it has been stated that the name "Dunver" was chosen for other reasons. I do not intend to comment on what has been said, but I should like the minister to make an official statement as to whether my remarks as to the real reason for choosing this name are well founded. Would it be possible to have a name that would include "Verdun" given to some vessel?

While I am on my feet I wish to refer to a resolution which was passed by a division of the Catholic women's league of Canada located in my riding. This is dated May 25, and a copy was supposed to have been sent to each of the three ministers of defence. They point out that there are not sufficient facilities for divine worship in the different camps, and their opinion is that if chapels were built it would develop a religious spirit among the men. I ask the minister to comment upon this resolution which he should have received at the end of last month.

Mr. CASTLEDEN: I think it would clear matters up if the minister would give the committee an assurance that there is no regulation or order or agreement, either written or understood, which prevents the giving of a commission in the Canadian navy to a person of other than British origin, no matter what that origin may be.

Mr. MACDONALD (Kingston City): I think the best answer is the number of officers from Quebec. There are 1,175, or some such number, from the province of Quebec and many of them must be French officers. The navy list is full of French names.

Mr. CASTLEDEN: That does not answer the question.

Mr. MACDONALD (Kingston City): I think it shows that there is no rule or regulation requiring a person to be of British origin. Otherwise, how could these French Canadians get in?

Mr. HANSON (York-Sunbury): The only regulation is that they shall be British subjects.

Mr. MACDONALD (Kingston City): That is the only regulation, as I pointed out yesterday.

Mr. HAZEN: The minister stated the other evening, as reported at page 3407 of *Hansard*:

> About 20,000 are serving in Canadian ships; the others are training at shore establishments.

In addition to the officers and men who are serving in Canadian ships, are there any trained men serving on shore? If there are, would the minister give us the approximate number? It seems to me that all the trained men

cannot be serving in Canadian ships and perhaps this statement should be further explained.

Mr. MACDONALD (Kingston City): My hon. friend is quite right. It would be incorrect to say that all the trained men are at sea and none were on shore. Obviously there are some trained men on shore carrying out instructional duties and the like.

Mr. HANSON (York-Sunbury): And administrative.

Mr. HAZEN: I would ask the minister to give us the number of trained men who are serving on shore.

Mr. MACDONALD (Kingston City): I shall have to get that from all over the country and it will take me some time.

Mr. HAZEN: I do not recall whether the minister gave us the number of men who had lost their lives in the service during the war.

Mr. MACDONALD (Kingston City): Nearly a thousand.

Mr. HAZEN: How many have been wounded?

Mr. MACDONALD (Kingston City): It is a small number compared with the number killed.

Mr. HAZEN: How many have been discharged on account of wounds? How many on account of injuries? How many on account of illness? How many on other grounds? How many "Wrens" have been discharged from the service and for what reasons?

Mr. MacNICOL: I should like to ask the minister about a statement made by a gallant officer, Commander Andrew MacLean, to a naval volunteers' association some time in late April or early May. The dispatch from which I shall quote is dated May 8 and is copied from the Quebec *Chronicle-Telegraph*. Commander MacLean is quoted as saying:

> There must be equality of service in return for equality or greater sacrifice.

Apparently enlarging upon that statement, he said:

> For far too long have the naval volunteers of this country—officers and men of the R.C.N.R. and the R.C.N.V.R.—been subjected to the most unfair discrimination by the regulations and the interpretation of the regulations by the permanent force R.C.N.

And further:

> If a volunteer wishes to make a suggestion or to state a complaint, he is just wasting his time for the papers will proceed only as far as the first R.C.N. officer—and thence into the waste-paper basket.

And again:

> If a volunteer has an idea how to sink submarines, it is automatically deemed silly.

Speaking of his own experience, he said:

> I got so disgusted when ideas of mine were turned down that I copied one of the British admiralty's and sent it in as my own. You will all be amused to know that this device, in satisfactory use on hundreds of British ships, was described as entirely impractical by the self-appointed experts of the Royal Canadian Navy.

Would the minister state how much truth there is in these statements of Commander MacLean?

Mr. MACDONALD (Kingston City): I should have to look into the matter of the device which he says he submitted to the Royal Canadian Navy and which was rejected. I do not know anything about that. As to the general complaint which he makes of discrimination against the volunteer reserve and the naval reserve by members of the permanent force, I must say that I have no knowledge of any such discrimination. I do not think any member of the permanent force of the Royal Canadian Navy discriminates in any way against the men who have come in for hostilities only. On the contrary I think they admire tremendously the zeal and gallantry and courage of these civilians who have become sailors in a few months and have shown such remarkable aptitude for their tasks. So that I do not think there is anything in the story of discrimination.

Mr. MacNICOL: Had this man been on one of our warships?

Mr. MACDONALD (Kingston City): He was on a smaller type of warship called the Fairmile, which is a motor craft. He was in command of one of these in the early stages of the war.

Mr. HANSON (York-Sunbury): Did the minister himself investigate the complaints of Commander MacLean?

Mr. MACDONALD (Kingston City): Yes.

Mr. HANSON (York-Sunbury): Naturally the permanent force officers who are making the navy a career expect that they have a preferred position, and I can quite appreciate that. But my understanding of Commander MacLean's complaint is that he could not get his recommendations or his complaints through to headquarters, that they never got beyond the first officer simply because they came from him; they were automatically thrown in the waste basket. Has the minister ever investigated this matter himself because, after all, where there is smoke there may be fire, and there is a good deal of smoke

around Commander MacLean. I know him extremely well, and he thinks he has a real grievance against the permanent force officers of the navy. I do not know anything about the matter myself, but I suggest that the minister's reply does not indicate that he himself has made any investigation. We ought to know just what the position is with reference to the complaint of this man, who is certainly not a fool by any means. He is certainly a man who is actuated by high patriotic motives. He wanted to help but just did not get the opportunity to do so. Did the minister himself ever make any investigation of his complaint?

Mr. MACDONALD (Kingston City): Some months ago I made a long statement in the house. Perhaps the hon. member was not present.

Mr. HANSON (York-Sunbury): I remember reading it.

Mr. MACDONALD (Kingston City): If my hon. friend had read the statement and had it before him now, he would see that not all of Commander MacLean's complaints were substantiated. Some of them I was able to contradict flatly by unquestioned facts. As to the others, so far as I could make an investigation I made it. Obviously I could not call in officers from all over the earth, some of them at sea, some in England, and some perhaps in the Mediterranean at that time, but so far as it was possible for me to make an investigation I did make it and I was able to assure myself that the charges which Commander MacLean made were not substantiated to any worth-while extent. He complained of not having been listened to and of his recommendations not having been heard. The opinion of officers here, one after another, is that it was MacLean's fault. There lies the difference. MacLean blames a dozen other people, and they blame him. I prefer to accept the word of these officers. Some of them are officers of high rank. I am supported also by the view of English officers. I was obliged to give their views to this house as to Commander MacLean's abilities. I had to do that in justice to the service, and their opinion of Andrew D. MacLean was very low.

Mr. HANSON (York-Sunbury): What do they know about it?

Mr. MACDONALD (Kingston City): He had gone to England in 1940 and remained there until 1941.

Mr. HANSON (York-Sunbury): When he could not get into the Canadian navy.

Mr. MACDONALD (Kingston City): He was in the Canadian navy at the time and was loaned to the Royal Navy. I know the story. He was in the Canadian Air Force. Then he wanted to get into the Canadian navy. He was taken into the Canadian navy and was sent to England with a number of other men here, on loan to the British navy. That was in 1940. He remained there for, I think, nine months or so and served under British officers; two of these officers reported on Andrew D. MacLean, and their opinion of him was very low. When I have that evidence of British officers, who are certainly not prejudiced, and when I have the opinion of officers here, one after another, I think I am entitled to rely on these opinions rather than on the statement of Andrew D. MacLean.

Mr. MacNICOL: Did he serve in the great war?

Mr. MACDONALD (Kingston City): In the last war, 1914 to 1918, yes, mainly in the Mediterranean in smaller craft, and his record at that time was good. But MacLean is now a man of forty-seven or forty-eight years of age.

Mr. HANSON (York-Sunbury): Just a boy.

Mr. MACDONALD (Kingston City): It is our experience that in the smaller boats a man of that age finds the work rather difficult. It is all right on a great big ship but not on little ships, corvettes or destroyers or Fairmiles. The work there becomes pretty hard for a man who has passed his forties. But, apart from that altogether, the facts are as I have endeavoured to give them.

Mr. MacNICOL: Did he retire voluntarily during this war, or was he retired by the department since the war broke out?

Mr. MACDONALD (Kingston City): Commander MacLean came to me and I had several discussions with him. He submitted three or four, perhaps five different possibilities. One was that he might go back to the Royal Navy, another that he might be given something else with the Canadian navy, and another was that he might retire. After thinking over the whole matter I advised him that of these alternatives it seemed to me the best course was for him to retire, and he did retire at his own request.

Mr. HANSON (York-Sunbury): When he saw he had no future and could not go on. That is about the size of it.

Mr. GREEN: When the minister made his statement on June 7 he dealt quite fully with Canada's naval policy, which will be found summed up at page 3409 of *Hansard*. It

amounted really to a policy for Canada on the Atlantic. It was a policy largely of doing convoy work. Our fleet is obviously being built up for that purpose. Conditions on the Pacific may or may not be the same, but the minister said nothing at all about Canada's naval policy with regard to the Pacific. I think it would be of interest to the members of the committee if he would tell us just what the objective is on the Pacific. Are we to build up there an escort fleet such as we have on the Atlantic, or is there something else in mind? It does seem that there is a good deal of possibility there of an attack by a hostile fleet, not that it is likely at the moment, but there is far more chance of an attack of that type on the Pacific than on the Atlantic in view of the great expanse of the Pacific ocean and of the great strength of the Japanese navy. In any event, those of us who live on the Pacific would like to know what plan the government has for the development of naval forces on that coast.

Mr. MACDONALD (Kingston City): I should like to consider the matter.

Mr. GREEN: If the minister would like to consider it, he might make a statement at another time.

Mr. MACDONALD (Kingston City): I shall answer it some other time.

Mr. GREEN: I have another question. It has to do with the report of Admiral of the Fleet, Viscount Jellicoe, who came to Canada in 1919 at the request of the dominion government of the day and made quite an extensive report on possible naval plans for Canada. In this report he mentioned four types of fleets which Canada could build, depending upon how much money was to be spent, and in all his plans provision was made for the building of submarines. Each of the three smaller plans calls for eight submarines; the larger one calls for sixteen; also, in three of the four plans the recommendation is made that we should have a certain number of light cruisers. Other types of capital ships are also recommended. Has the government decided not to aim at acquiring ships of these various types; and has it decided not to follow the Jellicoe report? I think it would be of interest to the committee if the minister could give the government's stand on that question also. I realize that the report is twenty-four years old and that conditions have probably changed a great deal, but I would ask the minister to say a word with regard to this Jellicoe report. Perhaps he would also like to take time to look into that question.

[Mr. Green.]

Mr. FRASER (Peterborough West): Will the minister answer my questions at the next sitting of the house, or now?

Mr. MACDONALD (Kingston City): I should prefer to answer them later. I shall have to look up some papers.

Mr. HAZEN: Dependents' allowances are granted to what are known as common-law wives of men who enlist in the army. I do not think there is in our law any such thing as a common-law wife: the term is used in a very broad sense. Is there any similar provision in connection with men who enlist in the navy? I have been informed by somebody that there is not. If there is not any provision, why is this distinction made between the men who enlist in the army and the men who enlist in the navy?

Mr. MACDONALD (Kingston Ctiy): I shall have to look into that. I do not know whether common-law wives exist in the navy or not.

Mr. HANSON (York-Sunbury): I'll bet they do.

Mr. FRASER (Peterborough West): The dependents' allowance regulations refer to "child or children." Now, as to whether they are of an unmarried mother or not—

Mr. MACDONALD (Kingston City): That is the same problem.

Mr. FRASER (Peterborough West): Children's societies throughout Canada are very much interested in that.

Item agreed to.

3. Travel, transportation and freight, $6,978,000.

Item agreed to.

4. Construction, purchase, repairs and operating expenses of properties:

(a) capital expenditure	$36,579,608
(b) repairs, operating expenses and rentals	6,267,182

Mr. HANSON (York-Sunbury): I wish to ask the minister something about the installation at Deep Brook. Why was it located there? Is it intended to be a permanent institution; if so, why was it located there? Or is it a war-time institution; and if it is, why were so many millions spent there? And, generally speaking, why this concentration in Nova Scotia when something like that might have been built in the neighbouring province of New Brunswick, which is just as much interested in the navy as is Nova Scotia? I must say that I was astonished to learn that a

training school was being built at a place like Deep Brook which is not on the sea. It is hardly on the Annapolis basin.

Mr. MACDONALD (Kingston City): Oh, yes.

Mr. HANSON (York-Sunbury): Well, it is on an arm of the Annapolis basin, where the tide ebbs and flows twice in twenty-four hours and leaves the flats dry.

Mr. MACDONALD (Kingston City): Oh, no.

Mr. HANSON (York-Sunbury): Of course it is not a naval station; it is, as I understand, a naval school. Why was it located there? Has the fact that the Minister of Finance is the representative of the county anything to do with the situation? Why was it necessary to put it there, and why such a large expenditure? Then I wish to ask the minister some questions with respect to the building of a naval base on Sydney harbour. I think the name of the place is Port Osborne.

Mr. MACDONALD (Kingston City): Point Edward.

Mr. HANSON (York-Sunbury): I assume it is a wise thing not to have all the naval bases concentrated at one place. I think there is too much concentration in Halifax now. The Canadian admiralty built, I believe, a huge new graving dock at Halifax.

Mr. MACDONALD (Kingston City): No.

Mr. HANSON (York-Sunbury): I may not be correct in the designation of the plant which was built there, but an extensive operation was undertaken and is at that point. Also there are huge ammunition dumps in the locality, and one bomb from a submarine could explode the whole thing. Why was there so much concentration at that point? Point Edward, I understand, is on Sydney harbour. My information is that Sydney harbour proper is frozen for four months in the year; ships have to use the outside port in winter time. How can you have a naval base which is infested with ice? Not only is the harbour proper frozen over, according to the information I have, but the drift ice in the early part and the latter part of the season makes it more or less inaccessible. Is it intended to use ice-breakers to maintain this as an open port the year round?

Then I should like to have the minister's explanation as to the character of the construction there. My understanding is that the buildings were put upon filled land, that the concrete was poured and that on account of the instability of the foundation the backbone of the building was broken and the work had to be done over again at great expense. It would appear from what I have heard that faulty judgment was used with respect to the construction at Point Edward. I should like to have the minister's defence on these two projects.

Then I wish to know why the minister has not gone ahead with the proposals for the arrangements at Saint John. Surely they are entitled to that, after all that has been said and done. It is a very moderate installation that was contemplated. The land was purchased, I believe, but no construction has taken place. I once told the minister that if he would come to Saint John, New Brunswick, we would bring out the bagpipes and give him a good, decent reception, but I am afraid that invitation will not hold out indefinitely unless he does something. I undertake that if he visits that city he will have a friendly greeting, because Saint John is intensely interested in the navy. There is no doubt that the people are navy-minded. They have had a volunteer naval reserve there for a long time, and I remember that, years ago, when I was connected with the navy league, no community was more ready to befriend it than the city of Saint John.

Mr. MacNICOL: They used to have a large corps there.

Mr. HANSON (York-Sunbury): Yes, that is so. Since I have not been connected with the league for a good many years I do not know what the position is now. I think the minister owes an explanation of why New Brunswick has been, if I may use the expression, ignored. The minister took great exception to an editorial in the Saint John *Telegraph-Journal* which the hon. member for St. John-Albert quoted at some length here the other evening, but I wish to tell the minister that that editorial exactly reflects the views of the people of that city, and he might as well know that from me.

I am not critical of the minister. I want to see the navy grow; I want to be considered a friend of the Canadian navy. I am very proud of our navy; I have a number of friends serving in it, and I hope it will be perpetuated after the war as one of the armed services of which Canadian citizens can be proud. I am sure it will be. I only wish we had more capital ships—I used inadvertently once before the expression "fighting ships" when I meant capital ships—in order that we could take a real part in the invasion of Europe, and so that it could be said to our glory that the Canadian navy had a part in what happened on the other side. It is not our fault; it is not the fault perhaps of anybody present, that

we have not done more in this regard, but I have always felt that Canada was derelict in her duty towards the navy that protected our trade lines, our sea lines, our life lines; and during the period three years ago, just after the fall of Dunkirk, the one arm of the British service that stood between us and invasion was the British navy. Yet we had never contributed a single dollar toward its upkeep or support in all those years. I invite the minister, therefore, to give us some information about these capital expenditures, and I should like him to defend Deep Brook. Why for a temporary installation it was necessary to spend $13,000,000 at Deep Brook—

Mr. MACDONALD (Kingston City): The contract price is $8,000,000.

Mr. HANSON (York-Sunbury): We all know what that means. That may be the figure on paper, but the complete construction and equipment of Deep Brook will run to $12,000,000, and after the war it will be gone.

Mr. HAZEN: I was surprised to hear the minister say that the contract price of Deep Brook was $8,000,000. I should like him to tell us how much of this item 4, $16,490,051.37, was spent on Deep Brook. The minister did not tell us last May when the training centre was to be established there, although in all probability plans had been decided on at that time. We were not told that the work was to be done without calling for tenders. I have some other questions I wish to ask the minister. We were not told that work was to be done without tenders, and we did not know why the undertaking was kept secret until it got under way. We did not know that this training school would cost, not $8,000,000 as the minister has said, but upwards of $12,000,000, or that the contract had been made on a cost plus a fixed fee basis, until a return was tabled in the house on March 30 of this year to a question asked by the hon. member for Cumberland (Mr. Black). According to the return, the estimated cost of the completed project is: Land, $55,200; buildings, $7,775,000; gradings and roadways, $227,000; drainage and water supply, $295,000; electric services, $248,000; wharves, $455,000; furniture and equipment, $733,000; other expenditures, $1,294,766, or a total of $11,082,966.

It seems to me that an expenditure of upwards of $12,000,000 to establish a naval training centre in the fourth year of the war calls for some explanation, and in my opinion it is open to criticism. Our present naval strength is between 55,000 and 60,000. Many of these men have completed training. The minister has told us that 20,000 are at sea; I have asked for figures showing how many are on land who have completed training; and the remaining number are now being trained at training centres that have been established at great cost in various parts of Canada. They are being trained, as the minister told us, at 18 R.C.N.V.R. divisions, sixteen or seventeen naval bases and training schools, at technical schools and universities and on ships. Why at this late date of the war, when the present naval strength is between 55,000 and 60,000, it is necessary to expend such an enormous sum of money for another training centre is a question which I think the minister should answer. Does the minister expect that this war will last forever? Does he count on an inexhaustible supply of man-power? Will he tell us what the size of the Canadian navy is to be when at full strength? Is there any over-all plan?

We know that Canada has plans to maintain an army overseas, an army consisting of two corps. Has any plan been made by the government to determine what the size of the Canadian navy is to be? It seems to me that at this stage of the war there should be some over-all plan. The government should know what its objectives are and exactly what it plans to do. When the Deep Brook training centre is completed, and I should like to know when it is expected that it will be completed, will any of the present training centres be closed? Is it the intention of the government to train both men and officers at Deep Brook? What is the nature of the training they are to receive there, and how long will the course or courses of training last which they are to receive?

The minister told us the other day that it requires six months' training for a man to qualify for the lowest rating. The return to which I have just referred, brought down for the hon. member for Cumberland, states that when the work is completed, it is planned to have 6,000 men under training at one time and 2,178 of an operating staff. In other words, it will take 2·75 persons for every six persons being trained. The camp that was established at Debert in Nova Scotia cost about $5,000,000, and the Minister of National Defence told us the other day that it has accommodation or training capacity for 13,000 men. Here we are spending at least $12,000,000; it will probably be a great deal more than that before we are through, and we shall have training capacity for only 6,000. At this late stage of the war when many thousands of men have been trained for the navy, when training centres have been established all over the country at a cost of millions of dollars, this expenditure is open to some criticism, and it is the duty of the min-

ister to tell us why it had to be undertaken. Twelve million dollars is a tremendous sum of money, and to spend that money on a temporary building which will be torn down after the war, when there are training centres established all over the country, and to have it established at this late stage, is, I repeat, open to criticism. It is something that the minister will have to explain.

Mr. MACDONALD (Kingston City): I may say in reply to the hon. member who has just taken his seat that I am first of all surprised to hear him ask what is the over-all plan for naval strength. I thought my hon. friend, and those who think with him, had urged from the beginning that there should be no limit to anything—no limit to the number of men we should train, no limit to the number of men we should send overseas, no limit—

Mr. HAZEN: There has to be a plan, though.

Mr. MACDONALD (Kingston City): That has been the cry, and nobody has been more vociferous than my hon. friend.

Mr. HANSON (York-Sunbury): There has to be a plan, though.

Mr. MACDONALD (Kingston City): A plan, yes; and the plan of the hon. member for York-Sunbury, from the beginning, has been that we should send overseas every man we could possibly train.

An hon. MEMBER: And another division to Australia.

Mr. MACDONALD (Kingston City): Yes, and another division to Australia. My plan is to train as many men as I can get for the Canadian navy, and as I have ships to hold. That is my plan, and I have never wavered from it.

An hon. MEMBER: And the air force, and the army?

Mr. MACDONALD (Kingston City): The air force will get some. Not every man wants to go into the navy, or is suitable for it. But I am prepared to go ahead, as long as I can get the men and the ships to put them in. My hon. friend talks about Deep Brook. He says that last May some question was asked me about Deep Brook, and that the matter was kept secret. I may say to my hon. friend I resent that statement coming from him, or anybody else.

Mr. HAZEN: I rise to a point of order.

Mr. MACDONALD (Kingston City): Well, rise.

Mr. HAZEN: I did not say that last May some question had been asked with respect to Deep Brook. The minister misunderstood me.

Mr. MACDONALD (Kingston City): No, I did not. It was quite evident on this side of the house. I think I must say that my hon. friend sometimes when he wishes not to be heard has the habit of not allowing himself to be heard.

Mr. HANSON (York-Sunbury): That is unnecessary; take that back.

Mr. HAZEN: I resent that remark, and I think it should be withdrawn. I have never attempted to speak in a voice which could not be heard, although I must say sometimes it is difficult to hear in this chamber. I admit that. I will ask that that remark be withdrawn.

The CHAIRMAN: There is no point of order. There is no withdrawal of a statement of that kind.

Mr. GRAYDON: I rise to a point of order. We have been attempting, so far as this party is concerned, to facilitate the passage of these estimates on the war appropriation bill. I think the minister will not be able to direct any remark to the contrary, so far as I am concerned personally, because I have scarcely risen during the discussion of the whole of the estimates. But I wish to say this, that the conduct of the minister last night and the conduct of the minister again now is of a character that makes it difficult for us to facilitate the passage of the estimates as quickly as might be possible. But I do suggest to the minister, in all friendliness, that I think he ought to adopt a little better manner toward us with respect to the whole matter. I say that because, after all, we are trying to help him. Certainly we are not trying to hinder.

Mr. MACDONALD (Kingston City): Well, what is the point of order?

Mr. GRAYDON: May I say this to the minister, that his reference to the hon. member for St. John-Albert was that the hon. member had, by virtue of some preconceived idea, spoken so as not to be heard in the house. In that way he imputed a motive to the hon. member, and because he did impute a motive I ask him to withdraw. Let us not have all this bickering that has been going on. I may say that a large part of the responsibility rests with the minister, and I say that in the most friendly fashion, because he knows how it is directed. But could the minister not be good-tempered during debate from now on, and make sure that we are able to facilitate the passage of these estimates?

Mr. MACDONALD (Kingston City): Mr. Chairman, I think I should clear up the point about some controversy between the hon. member for Broadview—who, I notice, is not in his seat at the moment—and myself. But I must say—

Mr. GRAYDON: You have been watching him pretty carefully.

Mr. MACDONALD (Kingston City): I must say I was amazed. I did not wish to interrupt the hon. member for Broadview as he spoke this afternoon—

Mr. HAZEN: Before we get to the hon. member for Broadview, I rise to a point of order. The minister has imputed a motive by suggesting that I dropped my voice so that I could not be heard.

Mr. GRAYDON: Deliberately.

Mr. HAZEN: That is the motive he imputed to me. I ask him to withdraw it.

The CHAIRMAN: On the point of order, I have listened attentively to the discussion, and I could hear no unparliamentary expression, any more than when I listened to the leader of the opposition, when he made reference to the temper of some of the statements made by the Minister of National Defence for Naval Services.

Mr. MACDONALD (Kingston City): Thank you, Mr. Chairman. I wish to observe, in answer to the remarks of the leader of the opposition—and I am sorry the hon. member for Broadview is not in the chamber at the moment—that I never saw or read anything like the statement which the hon. member made. I simply placed on *Hansard* last night a series of quotations from speeches made by the hon. member for Broadview, dating back to 1926. Those were references to the Canadian navy. They were made one after the other—1926, 1928, 1940, 1942 and 1943. And I ended up by saying I had to have regard to the nature of those references rather than to the protestations whch the hon. member might have made last night.

This afternoon the hon. member rose in his place in the house, and spoke of personalities, asking why he should be singled out for attack, and stating again that he has been attacked. But nothing of the kind was done. If an hon. member in the house cannot quote the record of another hon. member on a certain point—in this instance the naval policy of Canada, and the quality of the Canadian navy—then we are coming to a curious state of affairs. And it is absurd for the hon. member for Broadview to attempt for one minute to shift the whole burden of proof, by saying that I started this attack, when for twenty years he has been referring to toy navies, tin-pot navies, navies locked up in garages, contemptible little navies, navies that cannot put to sea, and the like. It is absurd for him to think he can say that, and it will be perfectly all right, but when I draw attention to it, and put things on the record one after the other, to show the character of his remarks, that will be terrible! I am making an attack on him when I put his own record on *Hansard!*

Now, as to the hon. member for St. John-Albert, I say that this afternoon he suggested—there is no doubt in the world that he suggested that last May it was known that Deep Brook would be the site for this—

Mr. HAZEN: That is just what you did not say, You said that I stated that last May you had been asked a question about it.

Mr. MACDONALD (Kingston City): Whether I was asked a question or not, my hon. friend's inference this afternoon was that last May—and I do him justice when I say it—I knew that this establishment would be in Deep Brook, and yet said nothing about it in the house. My hon. friend implied that. In that case my hon. friend implies I concealed something from the house that I should disclose to it. I resent that implication, and my hon. friend ought to retract it.

Mr. HAZEN: The statement I made was that "in all probability"—

Mr. MACDONALD (Kingston City): Oh, well, that is the same thing.

Mr. HAZEN: No, it is not the same thing.

Mr. MACDONALD (Kingston City): My hon. friend had better sit down.

Mr. HAZEN: Quote me correctly, then.

Mr. LOCKHART: Have it taken from *Hansard,* if it is not right.

Mr. MACDONALD (Kingston City): What I wish to say to the hon. member for St. John-Albert is this: The decision to build a base at Deep Brook was reached by the naval authorities. I could give him the history. The first idea was that the base should be built at Shelburne, Nova Scotia. At that point there is a good harbour, open the year round. It had a certain number of naval buildings and air force buildings, and some army buildings. That was the spot originally chosen for the base. But when the engineers and contractors looked at Shelburne they found that the drilling for the excavation work necessary would be very expensive, owing to the character of the soil. It is a very heavy, rocky

soil. They said that the expense of laying the foundation of the buildings would be too great, and that, if possible, some other spot should be selected.

Mr. HANSON (York-Sunbury): Was it not because the harbour was too much exposed?

Mr. MACDONALD (Kingston City): No, no.

Mr. HANSON (York-Sunbury): Exposed to attack?

Mr. MACDONALD (Kingston City): Oh, no.

Mr. HANSON (York-Sunbury): There is something in that.

Mr. MACDONALD (Kingston City): Well, of course, if my hon. friend knows more about this than I do, and knows more about what went on than I do, he ought to come over here.

Mr. HANSON (York-Sunbury): I think I could do as good a job as the minister is doing, anywhere, at any time.

Mr. MACDONALD (Kingston City): There was never any question about the exposed nature of Shelburne harbour. The whole question was the expensive type of excavation that would be required.

Mr. HANSON (York-Sunbury): I do not want to be misunderstood as attacking the harbour, for it is a good harbour. What I was trying to convey was that it was on the Atlantic coast and, therefore, might be more exposed to attack than a harbour in the interior waters. I want that made quite plain.

Mr. MACDONALD (Kingston City): No, I do not think that feature came into the matter at all. It was largely because so many pipes have to be run in an establishment of that kind, water pipes, sewer pipes, perhaps gas pipes; foundations had to be dug, and if you had to go through rock the engineers and construction people said the cost would be almost prohibitive, so that another place had to be selected somewhere. Various places were considered; some place in Lunenburg, some place in Yarmouth. Finally this Deep Brook site was selected by those interested in training and by the admiral commanding the Atlantic coast, and it is an excellent site from the point of view of building, at any rate. The basin of Annapolis is salt water; when you pass through Digby gut you are out into the bay of Fundy. It is fairly near Halifax, from the point of view of supervision, and can be reached by the Canadian Pacific either through Saint John and Digby or by way of Halifax.

My hon. friend talks about training centres established in other parts of Canada at great cost, and his view is that as a result there was no need, in the fourth year of the war, to spend some $11,000,000, as he has it, on Deep Brook. I have the figure here of $8,800,000, which is for the buildings. My hon. friend's figure covers the wiring, the wharves and the other incidentals to a base.

Mr. HANSON (York-Sunbury): It is all public expenditure.

Mr. MACDONALD (Kingston City): That is right; I took the buildings and he was looking at the whole expenditure. I may tell my hon. friend that when I came to Ottawa, nearly three years ago, the department of naval services did not own a single foot of land except at Halifax on the east coast and Esquimalt on the west coast. Not another bit of land was owned by the department, which was operating in rented buildings. We have had a great deal of difficulty in trying to get matters straightened out in Saint John, but I believe within a short time they will be straightened out. In Montreal, Toronto, Winnipeg, and everywhere else the navy was operating in that way; it did not own a single foot of land or a single building. I will say this, that the training facilities in this country are not at all sufficient for the training of our men. Furthermore, even though some men are trained at sea, a great many of them are being brought back for advanced courses. The man who starts out at sea as an ordinary seaman may require to be brought ashore for a specialist course in torpedo work or gunnery or asdic operation or signalling or any one of a great variety of courses. So that, while I believe there are some twenty thousand men at sea, there are some thirty-five thousand or so training in Canada, and there will be a constant flow of men back from the sea to receive further training at Deep Brook.

As to the situation at Sydney, I shall investigate what my hon. friend said. I do not think there is any fill there; the general lay-out of the land is very good—

Mr. HANSON (York-Sunbury): Is that Point Edward?

Mr. MACDONALD (Kingston City): Yes.

Mr. HANSON (York-Sunbury): I can tell the minister that I have first-hand information that the buildings were constructed on filled land; that the foundations gave way; that the

backbone of one of the main buildings was broken, and they had a terrible time fixing it up.

Mr. MACDONALD (Kingston City): Well, I do not know; some of the buildings may have been constructed on filled land. I saw some of the buildings while they were being erected, and they were not on filled land, but there may have been a building on such land and I shall look into it.

Mr. STIRLING: Will the minister say how many miles it is from the city of Sydney?

Mr. MACDONALD (Kingston City): It is just across the harbour. I think if you drive around by land it is about five miles.

Mr. STIRLING: It is in the same inlet?

Mr. MACDONALD (Kingston City): Yes. By boat it is a very short distance, less than a mile.

Mr. HANSON (York-Sunbury): It is part of Sydney harbour, is it not?

Mr. MACDONALD (Kingston City): Yes.

Mr. ADAMSON: Can the minister say what is the rise and fall of the tide?

Mr. MACDONALD (Kingston City): At Sydney?

Mr. ADAMSON: No; at Deep Brook.

Mr. MACDONALD (Kingston City): I cannot say exactly; it is not as great as in the bay proper. Probably it is ten or twelve feet, but there is always ample water in the basin.

Mr. HANSON (York-Sunbury): There is twenty-eight feet in the basin at full tide.

Mr. MACDONALD (Kingston City): Perhaps; I can find out. There is always ample water in the basin.

Mr. HANSON (York-Sunbury): It is mostly dry land, except at high water.

Mr. MACDONALD (Kingston City): No; ships go right up the basin, beyond Deep Brook.

Mr. HANSON (York-Sunbury): At high water.

Mr. MACDONALD (Kingston City): Oh, no.

Mr. CHURCH: I wish to ask a question in regard to some property in the city of Toronto. The minister said I was absent from the chamber on two occasions. I have complained to this minister, Mr. Chairman, about the fact that in the city of Toronto the whole exhibition grounds on the water front have been given over to this department. It has the large automotive building right near the Prince of Wales gate; then along the water front there is a whole system of huts running from the foot of Yonge street as far down as Sherbourne street. The minister says I have been attacking the navy for twenty years. How could I attack the navy when there was no navy?

Mr. MACDONALD (Kingston City): That is an attack in itself—

Mr. CHURCH: I have the floor.

Mr. MACDONALD (Kingston City): —and that is what you have been doing for twenty years.

Mr. CHURCH: I am not going to be interrupted by this hon. gentleman any more. I have the floor, and the rules of the house prevail in committee, which is something the minister apparently does not know.

Mr. MACDONALD (Kingston City): I know a great deal more about the rules than the hon. member does.

Mr. CHURCH: That may not be the rule in Nova Scotia, but it is the rule up here.

Mr. MACDONALD (Kingston City): I may tell my hon. friend that the Nova Scotia rules are a great deal older than the rules of this parliament.

Mr. CHURCH: Hon. members may bang their desks all they please; I am going to ask a question in regard to a number of properties purchased or rented in the city of Toronto. I shall take only two or three moments.

The CHAIRMAN: Six o'clock.

Mr. MACDONALD (Kingston City): What is the question?

The CHAIRMAN: By consent of the committee the hon. member may ask the question.

Mr. CHURCH: I was given a return in regard to certain properties purchased in the city of Toronto for the use of the navy. A mansion house was one of them on Crescent road. May I point out that there has been an absolute wastage of money in this regard in repairs and upkeep. They have the exhibition grounds—

Mr. MACDONALD (Kingston City): Order. Is the hon. gentleman asking a question, or is he not?

Mr. CHURCH: I asked a question in regard to a mansion house on Crescent road in the city of Toronto; the navy moved as far away as that. The question was made an order for return; it asked the cost of the property and the cost of the repairs, but the reply was, "No information." Then they went

over to Queen's Park crescent and took Sir Joseph Flavelle's house. My point is that there should be some coordination between the three departments on heavy repairs and maintenance, so as not to have this duplication and waste in the city of Toronto; and further that they should begin to look after the housing of our soldiers' families instead of putting people in mansions like those. There may be some explanation, but if there is the minister has never given it to me, and I think I am entitled to it.

Mr. MACDONALD (Kingston City): The rent for the Crescent road property is a dollar a year, I believe.

Progress reported.

At six o'clock the house adjourned, without question put, pursuant to standing order.

Thursday, June 10, 1943

The house met at three o'clock.

PRINTING OF PARLIAMENT

First report of joint committee of both houses on the printing of parliament.—Mr. Ferland.

NATIONAL REVENUE ACT

AUTHORIZATION OF APPOINTMENT OF DEPUTY MINISTERS FOR TAXATION AND CUSTOMS AND EXCISE

Hon. C. W. G. GIBSON (Minister of National Revenue) moved for leave to introduce Bill No. 108, to amend the Department of National Revenue Act.

Some hon. MEMBERS: Explain.

Mr. GIBSON: Mr. Speaker, owing to the appointment of Mr. Hugh D. Scully as consul general in New York there is a vacancy in the office of commissioner of customs. This bill provides for the combining of the office of commissioner of customs with that of commissioner of excise and raising the status of the commissioner to that of a deputy minister. It also provides for raising the status of the commissioner of income tax and succession duties to that of a deputy minister.

Section 2 of the bill is to authorize the Minister of National Revenue to administer certain sections of the Special War Revenue Act. Under the Department of National Revenue Act the minister is responsible for administering sections 4 to 14 of the Special War Revenue Act. This bill places section 2 and sections 15, 16 and 17 of the Special War Revenue Act under the jurisdiction of the Minister of National Revenue.

Mr. GRAYDON: Will the new deputy minister of customs and excise be the present commissioner of excise?

Mr. GIBSON: That appointment has not been made. It will be made by order in council.

Mr. GRAYDON: But he is not barred?

Mr. GIBSON: Certainly not.

Motion agreed to and bill read the first time.

QUESTIONS

(Questions answered orally are indicated by an asterisk).

WARTIME PRICES AND TRADE BOARD—MONT LAURIER OFFICE

Mr. LALONDE:

1. Who is the representative of the wartime prices and trade board at Mont Laurier, Quebec?

2. Have any complaints been received by the board with respect to the management of the office at Mont Laurier?

3. Have any investigations been made of such complaints?

4. If so, (a) on what date; (b) by whom?

5. What were the findings of such investigations with regard to, (a) the purchase by said representative of an automobile tube from a garage owner at Mont Laurier; (b) the resale of said tube to a third party?

6. Was said representative discharged or sued before the competent court?

Mr. ABBOTT:

1. Mr. J. Alphonse Forget.

2. Yes.

3. Yes.

4. (a) November, 1942; January, 1943; February, 1943; May, 1943. (b) Inspector for the controller of supplies in the province of Quebec. The Wartime Prices and Trade Board. Royal Canadian Mounted Police.

5. (a) (b) In the month of July, 1942, Mr. J. Alphonse Forget purchased from a garage owner in Mont Laurier one new 600 x 16 tube for the sum of $2.76 tax included and later sold this tube to a resident of Mont Laurier for the same amount. An investigator has filed a written statement of Mr. Forget to the effect that the above purchase and sale was made with a view to possible prosecution proceedings which however, for reasons outlined in the statement, were not instituted. In the absence of any evidence to the contrary, the explanation contained in this statement has been accepted.

6. No.

MILITARY SERVICE—MEDICAL REVIEW BOARD

Mr. BERTRAND (Terrebonne):

1. Has the Department of National Defence a medical review board in Montreal where recruits are called after having been already declared unfit for military duties by the Registrar of National War Services?
2. If so, where is it located?
3. How long has it been in operation?
4. Who is the doctor in charge? Is he a military or civilian doctor?
5. Who are the other doctors attached to such board, and are they military or civilian doctors?

Mr. MACDONALD (Halifax):

1. No. The Department of National Defence at the request of the Department of Labour has provided the personnel for a medical board in Montreal which is responsible to the Minister of Labour and which operates under national selective service regulations. Its function is to review the medical status of men who have been placed in categories "C", "D" and "E" by the family physician. The board works exclusively as a revision board for national selective service and does not act as an army examining board.

2. 1121 St. James Street (formerly located in the Transportation building).

3. Since 7th January, 1943.

4. Major J. B. Trudelle, R.C.A.M.C. He is a military medical officer.

5. The following are attached to the board:

Military.—Captain J. A. Guy, Lieut. M. Thiberge, Lieut. J. C. L. Goudreault, Lieut. J. F. Mutch, Lieut. J. C. Preece, Lieut. E. Peterson, Captain E. Bruneau (Reserve Army).

Civilian.—Dr. J. Lussier, Dr. J. Tetreault, Dr. G. A. Thiboutol.

H. J. SYMINGTON, K. C.

Mr. DORION:

What are the various executive positions held by Mr. Symington, a dollar-a-year man?

Mr. CHEVRIER: Refer to page 2927, *Hansard,* May 24, 1943.

TREASURY BOARD AND ADVISORY COMMITTEE

Mr. COLDWELL:

1. Who are the members of the treasury board?
2. Who are the members of the advisory committee to the treasury board?
3. What other positions are held by the members of this advisory committee?

Mr. ABBOTT:

1. Minister of Finance, Chairman; Minister of Mines and Resources; Minister of Justice; Minister of Agriculture; Minister of National Revenue; Minister of Trade and Commerce.

2 and 3. Under the terms of order in council P.C. 2/584, dated January 23, 1943, a committee was set up to advise the treasury board on matters of administration and personnel. The members of this committee and their positions are as follows: H. J. Coon, Executive Assistant, Head Office, Bank of Nova Scotia; C. H. Bland, Chairman, Civil Service Commission; B. J. Roberts, Member, National Harbours Board; A. Thivierge, Civil Service Commissioner; W. C. Ronson, Assistant Deputy Minister of Finance.

CANADIAN FORCES—DELIVERY OF MAIL TO MEN IN CAMPS

Mr. POULIOT:

1. Has the Department of National Defence given instructions to training camp authorities not to immediately deliver correspondence sent to conscripts, (a) by their relatives; (b) by members of parliament?

2. If so, (a) what are the instructions; (b) to what camps were they sent?

Mr. MACDONALD (Halifax):

1. (a) No. (b) No.

2. (a) Answered by 1 above. (b) Answered by 1 above.

UNEMPLOYMENT INSURANCE COMMISSION—ALLAN M. MITCHELL

Mr. STOKES:

1. Is Allan M. Mitchell a member of the unemployment insurance commission?
2. If so, when was he appointed?
3. What is his remuneration?
4. What positions did he hold, and/or what was the nature of his business or employment during the ten-year period prior to his appointment?

Mr. MITCHELL:

1. Yes.

2. September 24, 1940.

3. $8,000 per annum.

4. (a) Managing Director, President and Chairman of Robert Mitchell Company (Manufacturers of railway equipment, architectural bronze and iron, brass and iron foundries). President of Garth Company (Plumbing, Heating and Ventilating Engineers and Steamfitters Supplies). President of National Bronze Company (Manufacturers of railway car bearings). Director of Canadian Cutler Mail Shute Company (Manufacturers of mail chutes). Vice-President of Mitchell, Holland Company (Interior decorators). Director of Thrift Stores, Limited (Grocery chain stores). Director of Investment Foundation, Limited (Investment Trust). Director and Vice-President of United Gold Equities, Limited (Investment Trust). Treasurer of Montreal Board of Trade. Director of Canadian Chamber of Commerce. Governor of Lower Canada College. (b) General business administration and investments.

QUESTIONS PASSED AS ORDERS FOR RETURNS

CANADIAN FORCES—POST-WAR REHABILITATION—FARM LABOUR

Mrs. NIELSEN:

1. Has a questionnaire been placed before the armed forces having reference to post-war rehabilitation?

2. If so, how many expressed a desire to return to farms?

3. What percentage of the total number was this?

WABASSO COTTON COMPANY—CONTRACTS

Mr. GAUTHIER:

1. Has the Wabasso Cotton Company, of Three Rivers and Shawinigan Falls, any contracts with the federal government?

2. If so, (a) for what amount; (b) are they subject to the wage scale imposed by the government?

CANADIAN FORCES—SUMMER UNIFORMS

Mr. CHURCH:

1. How are summer uniforms supplied, (a) for the army, navy and air force at home and overseas; (b) for the women's army?

2. What provision has been made to give the army a better type of summer uniform; one more adapted to the climates of the various camps throughout Canada?

3. What action has been taken, and are all army camps now supplied with summer clothing and uniforms?

LIVE STOCK

ALLEGED DIFFICULTY IN MARKETING CATTLE—COMPLAINT OF CARDSTON FEEDERS' ASSOCIATION

On the orders of the day:

Mr. J. H. BLACKMORE (Lethbridge): Mr. Speaker, I desire to ask a question of the Minister of Agriculture. Has it been brought to his attention that the Feeders' Association Limited of Cardston is having difficulty in marketing finished cattle,—is finding the packing houses indifferent? Will the minister investigate this matter and report to the house at an early day?

Hon. J. G. GARDINER (Minister of Agriculture): The hon. member was kind enough to send me a copy of the question he desired to ask, and that is the first intimation I have had that any difficulty is being experienced. As was announced to the house last week, the meat board was set up to deal with situations of this kind so far as it is possible to do so.

HOUSING

CONDITIONS IN THE TOWNSHIP OF ETOBICOKE AND MUNICIPALITY OF NEW TORONTO

On the orders of the day:

Mr. A. R. ADAMSON (York West): I should like to ask a question of the Minister of Munitions and Supply. It has to do with the emergent situation now existing in the township of Etobicoke and the municipality of New Toronto. In view of this emergent situation which now exists in the township of Etobicoke with regard to the controversy between the township council and Wartime Housing, will the minister make a statement concerning what proposals can be made to alleviate the situation; and further would the minister or a representative of his department meet a group of officials and let us get the question settled?

Hon. C. D. HOWE (Minister of Munitions and Supply): I made inquiries on receipt of notice of this question. I am advised that certain negotiations are in progress between the officers of Wartime Housing Limited and the municipalities which are mentioned. Satisfactory progress seems to be indicated, and I see no purpose in myself meeting the officers of the township. I am not at the moment a party to the negotiations.

MILK

REQUEST OF TORONTO DAIRY COMPANIES FOR HIGHER STANDARD OF BUTTER FAT CONTENT

On the orders of the day:

Mr. BRUCE McNEVIN (Victoria): I wish to direct a question to the Minister of Finance with respect to the recent request of the dairy companies operating in the Toronto area to have the standard of butter fat content of milk supplied them by the producers raised from 3·4 to 3·6 per cent without increasing the prevailing price paid per hundredweight for milk. If such a change were authorized, the net result would be a reduction of the price paid to the producer amounting to seven cents per hundredweight.

Some hon. MEMBERS: Order.

Mr. McNEVIN: My question is: could the present arrangement with respect to the sale of whole milk by producers to distributors in the Toronto area for consumption be altered without sanction of the wartime prices and trade board?

Mr. D. C. ABBOTT (Parliamentary Assistant to the Minister of Finance): The answer to my hon. friend's question is, no. He was

good enough to give notice of it; and I am advised that no request for the approval of such an order has been received by the war-time prices and trade board. If it is, the interests of the milk producers will, I can assure him, be protected.

LABOUR CONDITIONS

SHERBROOKE, QUE.—LAY-OFF OF EMPLOYEES OF CANADIAN INGERSOLL RAND COMPANY

On the orders of the day:

Mr. ANGUS MacINNIS (Vancouver East): I wish to direct a question to the Minister of Labour. On Friday last I brought to his attention the lay-off of the employees of the Canadian Ingersoll Rand company at Sherbrooke. He mentioned at the time that there was a report that this lay-off was caused by union activities among the employees, but he was to investigate. I would like to know if he has any further information.

Hon. HUMPHREY MITCHELL (Minister of Labour): I did say there was a lay-off and also that there had been a complaint received from employees that some had been laid off because of union activity, and that a commissioner was being sent to Sherbrooke to investigate. I shall be glad to see if the commissioner's report has now been received by my department and shall inform my hon. friend.

PRISONERS OF WAR

QUESTION AS TO STEPS TO ENSURE MORE HUMANE TREATMENT

On the orders of the day:

Mr. T. C. DOUGLAS (Weyburn): I have a question to ask the Minister of National Defence (Army), and since he is absent I will direct it to his parliamentary assistant. Word continues to reach me that Canadian troops captured at Dieppe are still in chains. Will the Minister of National Defence outline what steps are being taken to endeavour to have the German government treat these men in a more humane manner? Also, will the government take into consideration making an announcement of the measures that will be taken after Germany is defeated, to punish those responsible for this barbarism unless it is discontinued at once?

Right Hon. W. L. MACKENZIE KING (Prime Minister): Mr. Speaker, perhaps I had better answer that question. The whole matter of the shackling of prisoners in Germany has been the subject of very careful consideration between the British government and our own and other governments of the empire. Without agreement on the part of all it is generally understood that no statement will be made, for the present at least. What may be done after the war is over will be decided by the parliament that is in existence at that time. It may be this parliament; it may be another.

MAGNESIUM

INQUIRY AS TO UTILIZATION OF WILDMAN PROCESS

On the orders of the day:

Mr. S. H. KNOWLES (Winnipeg North Centre): Yesterday's edition of the Ottawa *Journal* contained a news item to the effect that reports have been made to the government concerning the possibilities of producing magnesium in Canada in unlimited quantities. Reference was made in particular to the new Wildman process. May I ask whether such a report has been received by the government; if so, what department is in possession of it; and has the government any statement to make at the present time?

Hon. C. D. HOWE (Minister of Munitions and Supply): I may say that the government has already organized the production of the magnesium that is required for its own war effort, with a surplus for export. I do not know whether the report mentioned has been received, but I can assure my hon. friend that the government has no intention of enlarging the present production of magnesium.

INCOME TAX

REFERENCE TO REFUNDABLE PORTION OF 1942 LEVY

On the orders of the day:

Mr. G. K. FRASER (Peterborough West): In the press of June 8 an article appeared with regard to the refundable proportion of the 1942 income tax. Can the Minister of National Revenue tell the house what the position is in that regard?

Hon. C. W. G. GIBSON (Minister of National Revenue): I have not seen the article.

Mr. FRASER (Peterborough West): It was in the newspapers on June 8.

INQUIRY OF THE MINISTRY

PROCEDURE IN QUESTIONS ASKED ON THE ORDERS OF THE DAY

On the orders of the day:

Mr. J. H. BLACKMORE (Lethbridge): I desire to direct a question to the Minister of Finance. Will the minister cause the war-time prices and trade board or some other authority to investigate the prices at which

beef feeders in western Canada are at present being obliged to sell their beef, to determine whether or not beef feeders are able to derive such a remuneration for their 1942 and 1943 efforts as will encourage them to feed beef in other years?

Mr. SPEAKER: Order. The question is one to which the hon. member cannot expect an answer to-day. I have already brought to the attention of the house, not only during last session but also in this session, the matter of questions on the orders of the day. It is quite evident that many of these questions which are being asked, even though they are drafted as notice of motion to the ministers concerned, are not in accordance with the rules of the house. Any question requiring the deliberation of a minister or his department should be placed upon the order paper so that the minister and the department may have an opportunity to reply.

I may say at the same time that it is again becoming a general practice to refer to telegrams, reports in newspapers, and things of the kind which are reported in the daily press, and make them the subjects of questions on the floor of the house, although such questions cannot and should not be answered on the orders of the day. I would ask the house and I would ask hon. members who may be inclined to indulge in this practice to have some consideration not only for the Chair, who dislikes extremely to be always interrupting on these orders of the day, but to have regard for the rules of the house, with which all hon. members are conversant, and I think they ought to support the Chair in the attitude he is endeavouring to adopt.

Right Hon. W. L. MACKENZIE KING (Prime Minister): I should like as the leader of the house to support what His Honour the Speaker has just said about the observance of rules and regulations, particularly as to the asking of questions on the orders of the day. I do that at this moment, because I know hon. members are hoping that we shall reach before long a stage when we will begin to wind up the business of this session. I think I may be able by conference with leaders of the different sides of the house to work toward that end without depriving any hon. members of full opportunities to discuss the questions which they wish to discuss. There are times and places to ask questions. Many of the questions which are being asked on the orders of the day should either appear on the order paper or might be taken up when the affairs of the departments are under consideration. The Speaker has referred to the practice of reading telegrams and extracts from newspapers and of basing questions thereon. Hon. members are aware that this is against the rules of the house. I believe that we shall all gain in the end if there is a close observance of the rules in that particular. Hon. members will be interested, I believe, in looking over *Hansard,* to see how much time has been taken up each week by questions that have been asked on the orders of the day, practically any of which, with one or two exceptions, might have been put upon the order paper and answered in the regular way. We are in this position in the house at the present time, that the government faces really four oppositions, if not more, and when one opposition raises a question, if it happens to be the official opposition, very often members of the Cooperative Commonwealth Federation party feel that they too must ask some question or other arising out of that one, and our friends of the Social Credit group have similar feelings and wish to ask questions—

Mr. BLACKMORE: Very seldom.

Mr. MACKENZIE KING: —while some members at the other end of the house feel that unless they also ask questions it may appear that their party is gradually disappearing. I say all this in the best of good humour for the sake of avoiding if possible an unnecessary waste of time from now until the end of the session and, as well, of helping to preserve the decorum of the house.

Mr. GORDON GRAYDON (Leader of the Opposition): I may say to the Prime Minister that the members of the house generally are anxious that there shall not be any undue delay in dealing with the various matters which are still to be disposed of before the end of this session. With reference to the right hon. gentleman's remarks about questions asked before the orders of the day, it is very difficult to lay down a yardstick that shall govern questions that are put at that time. There are many questions that are of urgent importance, particularly those that are of a public nature, which we as His Majesty's Loyal Opposition feel should be brought to the attention of the government, and we should not like to have our privileges in that respect too far curtailed. As far as possible we have tried to bring up on the orders of the day only such questions as in our judgment fall within this category, and I should not like to have the Prime Minister's statement, indicating a tendency to the curtailment of questions, to be taken by the house generally as implying the curtailment of those privileges

and rights which we as members of the opposition enjoy. I quite understand that he has not that in mind and I can assure him that in the questions that we do prepare and put to the government from this side of the house we try to keep within the limits laid down by the rules, and we shall continue to observe that policy so far as it lies in our power to do so. We would ask Your Honour, however, in view of the conditions of emergency that exist in the country to-day, not to apply the rule too strictly under extraordinary circumstances where the actual work of the house is not being interfered with by a number of unnecessary interrogations.

Mr. J. H. BLACKMORE (Lethbridge): While Your Honour did not definitely refer to my second question as being an example of questions that are out of order, nevertheless, the fact that your observation came after I had asked my question would carry that implication. May I ask whether or not Your Honour was able to detect that I asked merely for a report at a future sitting of the house? May I call the attention of the Prime Minister to the fact that the question of the price at which the feeders of beef cattle are obliged to sell their beef at the present time is a vital matter. They cannot sell their beef two or three weeks after they are finished—

Some hon. MEMBERS: Order.

Mr. BLACKMORE: The matter is vitally important—

Some hon. MEMBERS: Order.

Mr. BLACKMORE: If the beef feeders are obliged to sell their stock at prices too low it simply means that next year we shall have less beef, which is an exceedingly important matter.

Mr. SPEAKER: When the leader of the government was speaking he was referring to questions which were of an urgent character. I have always been very lenient and have given the widest latitude to questions to which an answer should be given immediately, and in the future I propose to continue to do so. Many questions, however, are being asked which, although they may have the appearance of urgency, have relation to the operations of departmental administration and should not be asked either on the orders of the day or as notice to the minister.

[Mr. Graydon.]

WAR APPROPRIATION BILL

PROVISION FOR GRANTING TO HIS MAJESTY AID FOR NATIONAL DEFENCE AND SECURITY

The house resumed from Wednesday, June 9, consideration in committee of a resolution to grant to his majesty certain sums of money for the carrying out of measures consequent upon the existence of a state of war—Mr. Ilsley—Mr. Bradette in the chair.

NATIONAL DEFENCE FOR NAVAL SERVICES

The CHAIRMAN: Item 4.

Mrs. CASSELMAN: I wanted to say a few words when the estimates of the Minister of National Defence for Naval Services were under consideration before, but I was not able to do so; some of the long distance speakers got in before me. Yesterday the radio committee met while the house was in session and I hope that I am not out of order now in what I am going to say, because it would probably have come in better under one of the earlier items.

Some hon. members who have spoken on this question have come from the east coast and the west coast. May I point out that Alberta has done its part. In fact, all the western provinces have had their share in naval affairs, although we are far from either sea. In the prairie provinces we have 502 officers and 12,302 ratings, and the province of Alberta has led with 164 officers and 4,436 ratings, even though, as I say, we are a long distance from either ocean. Our men have taken part in the rigors of training, in the hardships of convoys, in the perils of combat. Our men have taken their share in the work and danger, in the deeds of gallantry and, at times, in the sacrifices that had to be made. We honour these men equally with the men of the air force and of the army, and I believe that those who have not yet had a chance to show what they can do will do so later and they will prove their worth.

I wanted to ask this question of the Minister of National Defence for Naval Services. Our men from Alberta, particularly those in the navy, when on leave have to travel a long distance from either coast, and I wonder if the minister would consider the question of free transportation for sailors on leave. This question was brought up before when the estimates of the Minister of National Defence were under review. I suggested that if free transportation could not be given, at any rate a ceiling should be put on railway fares so that men from the central provinces would not have to spend a couple of months' pay when coming home on leave. I hope the Minister of National Defence for Naval Services will consider the question.

May I speak again of the women in uniform. It is true that they are not in combat, not in actual physical danger, but if they take the place of those who are fighting, then it seems to me that they should be given the recognition which that deserves. I wanted to bring these two matters to the attention of the minister.

I do not think that we need fear that our men and women in uniform in any of the forces will let us down in the hour of combat, but we must see that they get the proper backing at home, not only from those who work in our shops or on our farms but from those who talk. It seems to me that in this connection we in this house have a definite duty to perform in the winning of the war. We should look at the matter in a broad light and not with too much detail, and try to keep up the morale of our people at home and abroad. Surely Mr. Churchill's winged words have shown more than anything else how much the morale of a country can be increased by those who talk.

Mr. McIVOR: While the minister is protecting his navy and explaining the service they have been giving to this country, he has received splendid support from the government. I should like to announce something that appears in this morning's papers, that the corvette *Port Arthur* has sunk another submarine and has sent it to the same place it sent the last one. I want to congratulate the minister from Port Arthur.

Mr. CHURCH: I want to see the minister's estimates go through, but there are one or two matters I should like to raise. I ask for the protection of the Speaker of the house from an editorial which appeared in the Montreal *Star* last night, Wednesday, June 9, attacking me. The editorial page is headed:

> The Montreal *Daily Star*.
> "Canada's Greatest Newspaper".
> Founded in 1869.

The headquarters are given as 241 St. James Street West, Montreal. The names of the editors are not given, but that of J. D. MacKinnon, secretary-treasurer, is mentioned. I have had a long connection with newspapers, especially away back in the days of the transportation fight in Toronto. As I said then, there is no use in trying to answer a newspaper, because they always have the last word. But I do object to criminal libel; I will not tolerate it. I appeal to you, Mr. Chairman, as representing His Honour the Speaker. I did not want to raise this matter on the orders of the day. I should like to quote citation 161 of the learned Clerk's textbook. This reads:

> —and the libel must be based on matters arising in the actual transaction of the business of the house.

A libel against an hon. member is a libel on the whole house of which he is a member. What are the facts? I will read the editorial and then under the rules of the house I will lay the article complained of on the table for whatever action Mr. Speaker sees fit to take.

On Tuesday afternoon I rose in my place to make a few moderate remarks. Ninety-five per cent of my time was taken up in discussing soldier problems and asking for greater care and better treatment of our men in the navy, army and air force. Yet this libellous article appears in this paper. This is not the first time this has happened. The correspondent of this paper in the press gallery states that I have criticized and ridiculed the Canadian navy. This article is false and malicious; it is not in the public good; it is not proper, it is not a fair comment. This paper has gone beyond the limits not only of civil law but of the rules of this house. A member of parliament should have protection, especially when the high court of parliament is meeting. I am not going to be intimidated, otherwise I might just as well resign. I never in my life attacked our soldiers or the navy. I know too much of what they have done since this war has started, the glorious record which has been rewritten in the history of courage by the brave men of our services on land and sea and in the air.

A few years ago I can remember Admiral Kingsmill and the other great man Commander Hose, and in addition there is the present head of the navy, Admiral Nelles, all splendid men and patriots. I urged that they be sent to the Singapore base before the war started and be given a chance to reorganize the department. I will read this article, and having read it I will place it on the table of the house. It is headed: "Beneath Contempt," and it goes on to say:

> —but surely nothing quite so contemptible as the attack on the Canadian navy made by Mr. T. L. Church, member for Toronto-Broadview, last night.

I never made any attack on the navy.

> Mr. Church, who is notorious for irresponsible statements, went on record in his comments on the navy department as follows:

Let them name one irresponsible statement. I am always sure of my facts before I make a statement.

—"locked up in a garage in Halifax," and "a tin-pot navy".

I do not like to mention names, but in the past there have been men who gave glorious services to the Liberal party and the country. Back in 1926 there were three or four ministers, such as Mr. Graham, a wonderful man, and there was Edward Macdonald, another splendid man; then there was the Hon. Mr. Lapointe, who was minister of justice, and, before that, Jacques Bureau. In addition there was my late colleague, the former member for Parkdale, Mr. David Spence, a beloved member of this house; "Admiral" William Duff and some twenty other members of parliament. If you go over the record of the house you will see some bits of levity about the navy and its good-will cruises and regarding the contribution made. It is not right to take two or three lines out of a seven- or eight-page speech. I never used the words "tin-pot navy." I made no remarks on March 17 of this year or last year. Then the article goes on to say that I said there was no necessity for the department. When the Minister of National Defence (Mr. Ralston) gave up the portfolio of finance to take over his present department, he received many bouquets, but since he has been at work he has been attacked, as I have been, on many occasions. Brickbats will not prevent me from doing my duty; I have been accustomed to them all my life. I never used that language in the editorial, as no navy could be operated without a department. Everybody knows what our navy has done; it started with nothing after the last war and it now has the admiration of the world.

I am a responsible member of parliament. Then they not only add insult to injury; they add innuendo when they say:

Inferentially, it is also a despicable insult to the splendid men who are fighting so gallantly and so worthily upholding the finest traditions of the British navy in defence of Canadian freedom.

In decency I move to have that stricken from the record. This particular paper is a Judas and we have never been able to elect a man within sixty miles of where it circulates. I now lay this upon the table of the house. Since I have been here I have not indulged in personalities; I have not said anything against the men of the navy; in fact I have referred many times to the glorious part played by the navy, and I urged that its chief officers be sent to the opening of the base at Singapore in 1938.

[Mr. Church.]

I want to point out that in and out of season I have worked for the men of the army and all the forces, and have recognized the matchless courage they have displayed during this war. I have never criticized the personnel of the navy. I have criticized the plant; I have criticized the policy of this government, in refusing to follow the lead of the mother country. Then these press officers seem to go into all the newspaper offices with articles of this kind. I was told by a newspaper man only within the last twenty-four hours that he had been given one of these articles. I do not know who writes them, but I say the editorial is false, untrue and malicious, and that it is not for the public benefit. Mr. Harold Ickes, who has been attacked in the United States in the same way, has called columnists of this kind calumnists, and that is what this one is. They have no right to try to intimidate me or libel me or the high court of parliament. That is all I want to say on that point, but if the minister has anything more to say about me personally I may speak again on the third reading.

Last night I asked a question with regard to the property administered by this department in the city of Toronto. I did not say Sir Joseph Flavelle's house was on St. George street; as one who saw the house built, and as one who was head of the city at that time, I think I know better than that. I am now referring to a dispatch in the Toronto *Globe and Mail* of this morning which says I referred to the huts on the waterfront. I did not say the huts on the waterfront were for the navy, but there was a large amount of money expended in the construction of those huts. I looked over some of them some time ago, and only about one-third are occupied at the present time, and surely if there were better coordination between the navy, the army and the air force some better use could be made of them. The army are using a post office on Bay street, which was built not for that purpose but for a post office. I was chairman of the harbour board when the land on which those huts were built was filled in, and I know something about it; I also handled the viaduct case, which had to do with twelve miles of the water front. I know something about Toronto; I do not have to learn anything from these newspaper columnists who have not been there long enough to know anything about the city. I told the minister yesterday I did not want to criticize what had been done, and that any criticism I had to offer would be constructive. I said I thought a great many of these navy services in the city of Toronto should be coordinated. Look at the exhibition grounds, on which the city of

Toronto spent nearly $24,000,000 for grounds, buildings and permanent exhibits. The city has given that property for the use of the government during the war for nothing, and there is an agreement about it. The navy has a large building at the entrance to the exhibition grounds, and the officers in the district there have done splendid work. Talk about criticizing the navy; why, the sea cadets have been at the Argonaut club since the beginning of the war; they took them in, and the club has not received a nickel for it, nor have any of the other aquatic clubs in the city. They have put on regattas and allowed the use of boats and equipment for the last fifteen or twenty years, ever since the last war.

As I said yesterday, I did not object to the navy having a lot of mansion houses if they want them and need them. There was a return brought down this year in reply to these questions which I asked:

1. Has the navy taken over a home on Crescent road, Toronto?
2. If so, for what purpose and at what cost?
3. How many officers and ratings are housed therein?
4. What are the terms of the lease and what is the cost of repairs and maintenance for the first year?
5. What fuel is used, from whom was it purchased, and were tenders called?
6. Who negotiated the use of this site?
7. What staff is there and how many of them have served in this war at sea?
8. How many are pay officers, what are their ages and navy services?

I know who negotiated the lease; it was a good man, a friend of mine, Colonel Gibson, who comes from a very patriotic family. We are told that the rental is $1 a year, but that is not the whole cost of the property. Then there is the other property, Trinity House, the old location of Trinity college, Toronto, over on St. George street, and there is also Sir Joseph Flavelle's property. Within a quarter or a half mile of Sir Joseph Flavelle's house, over on University avenue, only a few yards away from the house where Mary Pickford was born, people are living in trailers and so on; in some cases the father is away overseas and the mother is working in a munition plant and the children are in these shacks. I say there should be equality of treatment for the families of our soldiers, and when this sort of thing goes on it is bad advertising for the services. Here we have the Wrens in the mansion of Sir Joseph Flavelle while further down, on University avenue, we have the condition I have described. Mine is a great soldier constituency; it is a constituency of the working classes and the underprivileged people, and I have pointed out the situation that exists to the Minister of Munitions and Supply as to housing, for whom I have a very high regard and whom I knew when he was an engineer, in connection with the building of the harbour.

With regard to the property at Deep Brook, I suppose that might be compared with what was done at the Singapore base. There have been many mistakes made in the selection of sites and the construction of these bases. I have been to Halifax only twice in my life, and that was during the last war. I was in Halifax in 1917, when I said good-bye to several thousand of our troops who were going overseas. I have not been there since, but it is a splendid city. The British had an admiral there; I believe he was living in a tent, and there is another admiral of our own navy there also. I believe we should have greater cooperation with the British government in navy matters. In the past I have brought up other matters in this house, and rightly so; I referred to St. Pierre and Miquelon and in connection with the escort work in the Atlantic I simply quoted what Mr. Lyttelton had said in New York on November 11.

I do not take back anything, but you cannot pick just two or three sentences out of a whole speech in 1926 or 1928 and say I criticized the navy. I have never done that in my life. That is all I desire to say on the minister's estimates, but if he wants me down here again I shall be ready to come at a moment's notice. If he wants to get his estimates through, however, I suggest that he leave me alone, because never in my life have I attacked a soldier.

Mr. ROSS (Souris): I should like to ask the minister whether the purchase of property and the construction of buildings is entirely under his department or whether there is an association with the Department of Munitions and Supply or the Department of Public Works in that connection? Has the minister's department been offered the use of any large residences in the city of Winnipeg, for a small consideration, for the housing of Wrens, and is it the decided policy of the minister's department that in all such cases these houses must be either rented or purchased outright?

I had another question to ask yesterday but, like the hon. member for Edmonton East (Mrs. Casselman), I was attending a meeting of the committee on agriculture, which sat during the afternoon. Would the minister give the number of commissioned naval officers now stationed in Ottawa, or at headquarters?

Mr. MACDONALD (Kingston City): I shall come to my hon. friend's questions in due course, but first I think I should answer those asked yesterday, in the order in which they were asked.

First, the hon. member for Cape Breton South (Mr. Gillis) raised the question of free transportation for men in the naval service. The same question was discussed this afternoon by the hon. member for Edmonton East. The giving of free transportation to sailors would have to go along with free transportation for the other services. I can assure my hon. friends that the matter has been discussed frequently by the three defence ministers, but up to the present time the provisions which have been made seem to be about as far as we can go. I shall be glad, however, to take the matter up again with my colleagues, to see whether anything further can be done.

Then the hon. member for Cape Breton South asked some questions about merchant shipping, and the records of men serving. Strictly speaking, that question should be answered by the Department of Transport. Mr. Arthur Randles, of that department, who is director of merchant seamen, can, I am sure, deal with it. There is a record of all merchant seamen who sign on through what we call the manning pools, and the ships in which they serve are known. There is also a central index of seamen made in the Department of Transport by Mr. J. G. Macphail, director of marine services.

The hon. member wanted to know why some nurses were taken on and some rejected. The answer is that we have at least 2,500 applications from nurses in Canada who wish to join the naval nursing service, but up to date we have been able to take on only 132. It is obvious therefore that some must be disappointed. Other things being equal, I would say first come first served would be the rule. But we have to remember that some of those who apply have just graduated, while others have had four or five or sometimes ten years' experience. Naturally those with the longer experience would be favoured.

The hon. member for Lake Centre (Mr. Diefenbaker) raised some points of great interest—and raised them very fairly, as he always does. He wanted to know whether throughout the empire there was a uniform system of training, organization and the like. I believe throughout all empire navies the model and the plan used in Great Britain would be followed pretty generally. We would use the admiralty textbooks to a very large extent, and from this country at any rate there is always some interchange of officers with the British navy. I would not say of course that we could not vary that procedure or that British practice if we desired to do so. But generally speaking I think it will be found that the training of all empire navies is very similar.

The hon. member wanted to know if there was a central board controlling empire navies. My answer is, no.

Mr. DIEFENBAKER: In respect of the other dominions—other than Canada—is there such a central authority?

Mr. MACDONALD (Kingston City): I do not think so, although I have not looked into it. For instance I believe Australia would run its own navy. However, if a section of the Canadian or the Australian navy went to serve with a part of the British navy, thereby becoming part of the British force, they would normally be under the command of the senior British officer.

The hon. member for Bow River (Mr. Johnston) wanted to know something about the proportion of officers to men and pointed out what is quite true, namely, that some provinces have a very large proportion of officers to men as compared with other provinces. I think one of the explanations for that state of affairs would be that there are enlisted now in the Canadian Navy nearly one thousand officers of the merchant marine service. I should think the great majority of those officers would be from British Columbia, from the great lakes, Quebec and the maritime provinces. Most of the thousand men would come from those areas, thereby increasing the quota of officers from the provinces concerned. I would say to the hon. member however that in the training under the new system everybody starts in at the lower deck and works up to his commission; and under it there would seem to be no reason why the best men should not rise to the top. I am sure that under this new system men from the western provinces will prove themselves worthy of commissions to the same extent as men from the other provinces.

The hon. member for Bow River also raised a question as to the differential in allowances as between certain men in the naval service, pointing out that some are getting $1.45 a day as living allowance while certain others get only $1.25. The hon. member is right in that; that is a true statement. But may I say that when we took up the question of pay in the navy and endeavoured in some way to make the rates of pay in the three armed services uniform we found that some of our men were getting more pay and some were getting less than their corresponding army or air force brothers. We found that while we were paying $1.45 a

day for subsistence to sailors the army was paying only a dollar—I believe it was a dollar. And so when we said that the pay of certain junior officers, which was very low in comparison with other services, should be raised, we were confronted with the fact that these men, ordinary sailors in the navy, who were on subsistence were getting 45 cents a day more than army men on subsistence. What happened was that army men on subsistence were raised to $1.25 a day, and all men joining the navy after that date, June 1 of last year, were also given $1.25 a day. However we did not reduce the allowance of the men who had already been in the navy, because we felt they had joined on the understanding that they were to be given $1.45 a day subsistence and that it would be unfair to reduce them at some later time during their period of service.

The hon. member for Peterborough West (Mr. Fraser) asked as to the training of merchant mariners, and a good many other questions as to sea cadets. As to merchant mariners, the naval service does give gunnery training to merchant seamen who are to form part of the gun crews of merchant ships. That training is given to Canadian merchant seamen and the merchant seamen of our allied countries who are in Canadian ports No other type of training is given by the navy to merchant seamen.

The hon. member also wanted to know how many civilians were active in organizing sea cadet corps throughout the country. There are two that are particularly active. I do not attempt to mention all those excellent men in different localities such as are to be found in my hon. friend's own city, Winnipeg, Toronto and other cities where there are sea cadet corps. The hon. member for Danforth (Mr. Harris) and the hon. member for Broadview (Mr. Church) mentioned that they had been interested in sea cadet work. I regret that I cannot give the names of all those who have taken a great interest in this work, but the two chief organizers who range over the country at large are Mr. R. C. Stevenson of Montreal, who is called coordinator of sea cadet activities—he gives his services free, receiving only travelling expenses—and Mr. J. R. K. Millen, who has particularly charge of the western sea cadet corps.

My hon. friend also wanted to know where the sea cadet camps would be. I have a list of the camps here, but it might be added to later. There are to be camps at Comox, British Columbia; Chestermere lake, near Calgary; lake Wabamun, near Edmonton; Shepley island, on the Saskatchewan river; Stevenson's Point, on lake Winnipeg; lake Eva, 125 miles west of Port Arthur; Goderich, Ontario; Beausoleil island, in Georgian bay; Rotary island, near Gananoque; Minnicog island, in Georgian bay; Isle St. Quentin, near Three Rivers; Camp Buchan, in the Northumberland strait, thirty-one miles east of Charlottetown; Cole Harbour, twelve miles from Halifax. There is also to be a camp for the St. Lawrence cadet corps but I have not information as to just where it is to be.

The total number of cadets going to these camps, according to my figures, will be 2,275. That is the accommodation of these camps in their entirety. Some camps remain open longer than others. The usual camp period is two weeks. Some camps propose to give three two-week periods, while others propose to give only two, and some only one period.

As to allowances for sea cadets, they receive no pay. They are given transportation to and from the camps. The sea cadet officers receive pay only while they are under instruction or while they are at the camps. When in the camp the sea cadet receives, of course, board and lodging and medical attention at government expense.

Mr. STIRLING: There is some allowance for uniform, is there not?

Mr. MACDONALD (Kingston City): Yes, one-half the cost of the uniform is provided by the government and the other half by the cadet himself.

Mr. FRASER (Peterborough West): I asked also what extra pay the naval commandos get.

Mr. MACDONALD (Kingston City): I am sorry I overlooked that. I have it on a separate sheet of paper here. Naval personnel engaged in combined operations overseas—I think this is what my hon. friend wants—receive when serving at sea the following emoluments in addition to their regular rates of pay: Officers above the rank of sub-lieutenant get one shilling and six pence a day extra, sub-lieutenants one shilling a day extra, and ratings six pence per day extra.

Mr. FRASER (Peterborough West): That is the commandos?

Mr. MACDONALD (Kingston City): Yes. We call them combined operations personnel, but I think commandos describes them.

Mr. FRASER (Peterborough West): That is what they call themselves when they write home.

Mr. MACDONALD (Kingston City): I think so.

Mr. FRASER (Peterborough West): I had another question in regard to civilians working in administrative offices with naval men and receiving less pay than the naval men.

Mr. MACDONALD (Kingston City): I have looked into that, and if my hon. friend would give me any case he has in mind, even confidentially if he does not want to give the names here, it would simplify matters.

Mr. FRASER (Peterborough West): I will do that.

Mr. MACDONALD (Kingston City): The hon. member for Verdun (Mr. Coté) raised the question of the name of the ship *Dunver*. It is our practice before naming a ship to be very careful to see that the name is not already borne by a British ship or even by a ship of the United States navy, so that there shall not be confusion in receipt of signals by these ships. We found that the British navy had a ship of war called the *Verdun*. They had no doubt given her that name in honour of the great stand made by the French troops at Verdun in the last war. We therefore could not use the name Verdun and we asked the city of Verdun—I have not the correspondence here, but my recollection is pretty clear—to suggest some other name, and they suggested the name "Dunver", which is an anagram or rearrangement of the letters of the word "Verdun." That name has been criticized in certain newspapers and it has been suggested that we here in Ottawa invented the name because we were unwilling to give the name of the city of Verdun to a ship. There is absolutely no truth in that story. We wanted to honour the city of Verdun, which is one of our larger cities. We are taking the cities now in the order of population. When we found we could not use the name of Verdun we took the name which the city itself decided was the next best name. My hon. friend the member for Verdun wanted to know if we could not incorporate Verdun with other names such as the "City of Verdun" or "La Ville de Verdun." If that can be done we shall do it. The hon. member also spoke of certain resolutions which had been forwarded to him by branches of the Catholic Women's League of Canada protesting against the lack of chapel facilities at certain bases. I have received a great many such resolutions. The building of chapels is going on as fast as I can have it gone on with, but it must proceed I think simultaneously with the building of the other parts of the base. We are doing the best we can in that matter.

Mr. MacNICOL: Are the chapels to be open to members of any denomination?

[Mr. A. L. Macdonald.]

Mr. MACDONALD (Kingston City): Yes. The three services agreed on a standard type of chapel. In the middle part of it is a reading room, which has folding doors; on one end there is one chapel, and on the other, another; so that each denomination can have the end which is allocated to it, and if it wants more room it can take out those folding doors and have the reading room as well. I am speaking now more of morning services, which I believe some men at a camp might want to attend and which perhaps they are unable to attend unless a private chapel is provided. For the large services at a big camp on Sundays we do not pretend to be able to build a church adequate to accommodate the men: they will have to hold the services on that day in a drill hall or a gymnasium or something of the kind, and it can be done without any great inconvenience. But I am speaking of a place where a chaplain can have an office, where the men can consult him, and where week-day religious services can be held.

The hon. member for Vancouver South (Mr. Green) raised the question of naval policy on the Pacific, and the Jellicoe report. I have the Jellicoe report under my hand. It is quite true, as my hon. friend stated, that it recommends the provision of battle cruisers, light cruisers, destroyers and submarines. My hon. friend wanted to know whether we had decided to aim at ships of this type after the war, and generally he inquired what our naval policy on the Pacific was. I may say to my hon. friend that we have not by any means forgotten that this is a two-ocean war, that there is a Pacific ocean, and that that coast has to be guarded. My hon. friend will not misunderstand me, though, when I say that up to the moment in this war it has been necessary for our main work to be done in the Atlantic. That is because we have regarded, as I think the people of Britain do, Germany as the great enemy and we have put our main emphasis on convoy work. I think this is probably not the time to begin to plan exactly the sort of navy we should have after the war. My own feeling is that we should go to work as best we can with the task we have in hand, namely convoy work, which is essentially work for small ships; but undoubtedly, after the war, in the establishment of a Canadian navy, such ships as the Jellicoe report mentions—cruisers and destroyers—should form part of that navy, and for an all-round navy, of course, submarines. But up to the moment in this war, even if we had a strong fleet of submarines manned by well trained men, there would be very little

for them to do unless we sent them to far distant theatres such as the Mediterranean or the southwest Pacific. What we need in this war is ships to fight submarines, not submarines themselves.

Mr. GREEN: Does the minister feel that that is the position on the Pacific ocean as well as on the Atlantic? When I mentioned yesterday a policy for the Pacific I was not referring to the period after the war; I meant at the present time. Is it the opinion of the government that the same type of fleet is needed on the Pacific as we have on the Atlantic, which is in reality an escort fleet?

Mr. MACDONALD (Kingston City): My hon. friend knows that there is very little convoy work to be done on the Pacific coast.

Mr. GREEN: It is a question of defending our coast on the Pacific.

Mr. MACDONALD (Kingston City): That is right; there is a difference right there. Consequently if my hon. friend asks me what the ideal combination would be for the Pacific coast, so far as I can see we should perhaps have to make some changes from the sort of ship we have in the Atlantic. But for the moment we have looked on the Atlantic struggle as our great struggle and we have built the ships which are useful for that purpose. That is not to say that they are not of some use, and of great use too, on the Pacific coast. Then of course in this war, as my hon. friend knows, the association between the British empire and the United States is very close. The fortunes of war have given a certain area more or less to British care and another area more or less to the Americans. We do not overlook that fact when we are disposing of our own navy to what we consider to be the best advantage. I do not know if I am answering my hon. friend exactly, but it is a little difficult for me to give the disposition of the ships, the numbers and the kinds of ships which are here or which are there. I can only tell him that when the war is over, and when plans for what I hope will be a permanent and solidly established Canadian navy are formulated, whoever is here at that time will give full attention, I am sure, to the conditions on the Pacific and to the provision of the proper kinds of ships to meet those conditions.

Mr. GREEN: In effect, then, Canada's naval policy on the Pacific at the present time is to depend on the United States fleet to protect the west coast?

Mr. MACDONALD (Kingston City): No, I would not want to put it in that way. We have to rely largely on our friends, as on the Atlantic we have to rely on the great protection of the British fleet. It is true that in this war the British empire is taking a certain area more or less as its own. We have taken the Atlantic, north and south, pretty well, the Mediterranean, and other oceans: the main task of the United States has fallen into other places and it is assuming a great burden there. But I do not quite want to say that we are doing nothing but depending on our United States friends for the defence of the Pacific. We are doing what we can there. We have some ships there still, and they have cooperated with United States ships in expeditions up to the Aleutians, where the Americans have done such signal work in recent weeks. But our main strength undoubtedly is on the Atlantic.

Mr. BLACK (Cumberland): What about aeroplane carriers for the convoy work?

Mr. MACDONALD (Kingston City): I mentioned in my address that we have that under consideration. One of our officers has been away for some weeks now and will be away some weeks more, in the United States and England, examining the whole question of aircraft carriers, the acquisition of ships, the training of officers and men, the cost and all that sort of thing. I cannot tell my hon. friend anything more definite.

Mr. GREEN: The minister has said that it will probably be necessary for Canada to have certain capital ships after the war. Is any attempt being made during the war to give Canadian naval men training on capital ships of the British navy? I believe that New Zealand has been carrying on in that way. This would seem to be a splendid opportunity for Canada to get at least some of her men trained on the capital ships and the submarines of the British navy, so that after the war they will be able to man any ships of that type we may acquire.

Mr. MACDONALD (Kingston City): Nearly fifteen hundred Canadians, officers and men, are now serving with the Royal Navy. Some of them are on capital ships—on battleships and cruisers. Take these men we have now in the high command, like the chief of the naval staff, Admiral Murray at Halifax, or Admiral Jones, vice-chief of the naval staff: these men have served on all sorts of ships of the British navy, including battleships and cruisers, and have had a very wide experience. So that of the fifteen hundred with the British navy, I am sure many must be on capital ships and some on submarines. I know that one Canadian officer is in command of a submarine. I think he is a boy

from Ottawa. If I mistake not his name is Toller. There may be others. So that they are gaining experience in that way.

Mr. GREEN: Is it a definite policy to see that some Canadian naval men do get that experience.

Mr. MACDONALD (Kingston City): Yes. There always has been a flow of Canadian naval officers to the Royal Navy for training, and that has been going on for the last thirty years or more.

Mr. COLDWELL: I have received some complaints about pay and allowances in connection with some young men drafted from Hamilton. The minister will know something about that—

Mr. MACDONALD (Kingston City): Too well I know it.

Mr. COLDWELL: I was asked to inquire as to the treatment of young men who are loaned or transferred to the Royal Navy. One of the complaints made to me was that when they went to the United States they were given no special pay or allowances to compensate for the difference in exchange as between the two countries. If that is so, I can sympathize with the complaint, because having been to the United States recently, I realize the extent to which prices have advanced in that country, and however much we may be critical of our own price control, when you step across the border you realize that something has been done here to prevent prices from rising. If the situation is as indicated the department should give some consideration to young men who are drafted into the Royal Navy and who then serve out of United States ports or who train on ships of the Royal Navy in United States ports, to see that there is no loss in regard to pay and allowances during the time they are serving there, and that this does not interfere in any way with the possibility of promotion. As I say, I know nothing about these cases and the minister probably does, and I thought that this was an opportune point at which to raise the question of pay and allowances and the question of the standing of young men transferred or loaned, or whatever the term may be, to the Royal Navy.

Mr. MACDONALD (Kingston City): When a Canadian is loaned to the Royal Navy he continues at his Canadian rate of pay, which is usually higher than the British rate. The particular case to which my hon. friend refers has to do with some men who were in the Canadian navy and who were asked to volunteer for service with the British navy in combined operations work. Their contention—or rather the contention of a few of them because there are only three men involved out of a much larger number—was that they were not fully informed of the terms and conditions. They thought that they would be with the Canadian navy and would be serving under Canadian officers and as a unit. Twenty-five or fifty of the first detachment felt that they would always remain together but instead they have been broken up into smaller detachments, some having gone overseas. Parents have written complaining that misrepresentations were made, and three of the parents have expressed a very strong desire to have their sons brought back to the Canadian navy on the ground that the conditions were not fairly presented to them. The officers who recruited these men for this service assure me that no representations whatever were made of the kind indicated by the men. It is the old story of one man saying one thing and another saying something else. I hope to be able to straighten out the matter.

As to pay in the United States, that was another source of complaint. They said first that they were not getting any pay for a long time. I had to send an officer to the United States to look into the whole matter and he came back and reported. He did not see these three men because they had gone away. He reported that as far as he could find out there was no justifiable complaint on the question of pay. They were given certain advances in United States funds when they went to the United States. The member for Wentworth (Mr. Corman) had several conversations with me on the point and the whole subject is receiving my best attention.

The member for St. John-Albert (Mr. Hazen) wanted to know if there is provision for common law wives, as they are called, in the navy. I think he means dependents' allowance there. The navy up to the moment does not provide dependents' allowance in these cases but an amendment to the Canadian naval regulations is under consideration which will provide some allowance for them, and that has yet to have the approval of the treasury board. As to unmarried mothers, that too will be dealt with shortly on the same basis as it is dealt with in the army.

There were some other questions about Deep Brook, as to whether the establishment there was justified or not. I was asked to explain why this establishment was to cost so much money; why it was required if the 18 R.C.N.V.R. divisions are to be maintained; were other training centres to be closed; would officers be trained there; and, I believe,

I was also asked to say why it was not established in New Brunswick. Well, there are two things which must be taken into consideration when we speak of training for the Canadian navy. The first is that for many years there were no training establishments in this country in the full sense of the word except perhaps at Halifax and Esquimalt. The result is that the training of nearly all the men required to man our ships has had to be done during war time. We must remember that the Canadian navy is largely a civilian navy enlisted and trained during the war. I may say specifically to my hon. friend that the importance of the 18 R.C.N.V.R. divisions throughout Canada is not affected in any way by the establishment of the school at Deep Brook. Training at these divisions, such as the Brunswicker, Saint John, is elementary training and lasts for a period of from six to eight weeks. It is necessary to acquaint newcomers to the navy with the elementary ideas of life and work in the navy, and I think that work can be done very well at the divisional centres throughout Canada.

There is another thing to be kept in mind. The Canadian navy, up to the present, is a small-ship navy. Most of the actual training for these ships must be done ashore. In this respect our navy is different from navies that have large battleships. Large battleships can carry as many as 250 men, sometimes, in training aboard, and if anyone has visited a large battleship or a large cruiser he would find attached there a considerable number of young ratings or young officers for training purposes. We cannot do that in our ships. The ships are too small and the accommodation is not there. A large central training establishment is the most economical method of dealing with our problem. The equipment for training is costly and if it were scattered it could not be used to the same advantage. Moreover, it is highly technical equipment and the problem of securing it in these times is a difficult one. There is also another matter to be considered, the shortage of instructors. This is due to the fact that the permanent service was so small for a long period of time that adequate numbers of trained officers were not available for instructional work when the ranks began to grow. Therefore, to concentrate our instructors in a central training establishment means that those available are used in the most economical way. To have civilians in a large training establishment means that they become imbued with the discipline and customs of the navy. They are all lodged and housed by the service, which means a great saving in cost. We pay a man $1.25 a day if he is living out in civilian quarters and it does not cost us that much when we provide barracks and feed him ourselves. The discipline and health of the men is much better.

Deep Brook is used to requalify officers and men and to provide refresher courses, and therefore it should be as near as possible to the naval bases. Deep Brook answers this problem, without placing the training establishment too close to the main naval base at Halifax, which might not be sound strategically. Of course Halifax is the heart and centre of naval activity in eastern Canada, and has been, as I said the other night, for nearly two hundred years. When drafts coming in from the sea are to be sent for training in gunnery or torpedo work or any other specialist branch, we could not conveniently send them seven or eight or nine hundred miles away. They must be sent to some place not too remote from Halifax, because that is where the ships come in and that is where the drafts come and go.

The training establishment at Deep Brook is not a place where men go to drill. I would point out to my hon. friend that that is one of the great differences between the camp at Debert and the one at Deep Brook. As I understand it, the camp at Debert is purely a drilling camp and the cost was not anything like $5,000,000; I understand it was something like $7,000,000.

Mr. HAZEN: I was taking the figures of the Minister of National Defence.

Mr. MACDONALD (Kingston City): What are the figures?

Mr. HAZEN: He gave them when his estimates were up the other night.

Mr. MACDONALD (Kingston City): It depends upon what you call cost. I am taking the cost of Debert to include buildings, lands, roads, and other accessories, and on that basis the cost is about $7,000,000. As I say, it is largely a drilling camp and all you need is a parade ground, places for the men to sleep and places for the men to eat. But that is not the case at Deep Brook. In a certain sense Deep Brook is a university where officers and men go to be instructed in very technical work, in things like gunnery, asdic work, navigation, divisional training and so on. These things require a good deal of equipment in order that proper instruction may be given, and it will all be found at Deep Brook.

Mr. STIRLING: Would the minister deal with Point Edward now?

Mr. MACDONALD (Kingston City): The hon. member for York-Sunbury (Mr. Hanson) stated that he had heard that some of the

buildings at Point Edward had been erected on filled land and had sagged, in some cases breaking their backs. I instructed the department of works and buildings to call our own representative at Sydney, not the contractor, and he informed them that no such condition exists as was indicated last night. He confirmed what I had seen of the buildings, that the majority of them are not built on filled land. There are one or two, perhaps more, down near the wharf which are built on land which is filled to some extent. All that has happened, however, is that one building, a workshop or a machine shop, showed a crack, but it was of such a minor nature that it has not been thought worth while to repair it.

Mr. STIRLING: What are the ice conditions there? It is alleged that there is a considerable period during the winter when Sydney harbour is not usable because of the ice.

Mr. MACDONALD (Kingston City): There is a period of time when Sydney harbour is closed to ocean traffic because of ice. The harbour at Louisburg, about twenty miles away, is an all year round harbour.

Mr. STIRLING: What about Point Edward?

Mr. MACDONALD (Kingston City): Point Edward is in Sydney harbour, and the comments I have made about Sydney harbour would apply to Point Edward. As a shipping port it would be closed for perhaps three months every year.

Mr. MacNICOL: Has Louisburg harbour been reequipped for service?

Mr. MACDONALD (Kingston City): Some ship repair work is being undertaken there, but I do not think any great change has been made.

Mr. MacNICOL: Has it been fortified?

Mr. MACDONALD (Kingston City): I do not think it has in the sense that we speak of fortifying a harbour, but there are guns all around that area. The army is protecting Sydney and all that country, but I would not care to say about naval fortifications, whether we have made any particular defence preparations.

Mr. STIRLING: For what purpose is Point Edward to be used, bearing in mind the fact that it is closed to navigation for a certain time in the winter? Will that be Admiral Murray's headquarters?

Mr. MACDONALD (Kingston City): No; Admiral Murray's headquarters will be at Halifax. As my hon. friend knows, Sydney is quite an important point. I need not go into all the reasons why it is important, but considering the geography of Canada and the manner in which ocean traffic moves around this country, Sydney has become a most vital point. That is one of the main reasons why buildings are necessary there. There is also a marine slip capable of taking a ship up to the size of a destroyer, and I expect that there will always be some ships in Sydney harbour refitting and repairing. It can also be used to some extent for training, although not to the same degree as Deep Brook.

Mr. BLACK (Cumberland): I want to commend the minister and the department for having located a major naval establishment in the northern part of Nova Scotia where it can give protection to the St. Lawrence route, but I should like to know why preference was not given to Louisburg which is open the year round and is only twenty miles from Sydney. It would appear to me that Louisburg would have advantages over Sydney.

Mr. MACDONALD (Kingston City): Sydney is a bigger harbour, of course. Louisburg has not a very big harbour.

Mr. BLACK (Cumberland): Still it would be much better than to have a harbour which is closed for several months during the year.

Mr. MACDONALD (Kingston City): The main purpose for which we want Sydney is not affected by the fact that it is closed by ice. We are concerned with Sydney mainly while there is shipping going up and down that coast; as long as that goes on Sydney is very important. But when the ice comes the purpose for which Sydney is mainly used, in regard to river traffic, disappears.

Mr. BLACK (Cumberland): A great deal of sea traffic passes the year round not far from northern Nova Scotia, even traffic from New York and other United States points as well as Canadian traffic.

Mr. MACDONALD (Kingston City): I know it passes there, in a general way, but it does not have to use that harbour as we use Sydney in the summer.

I was coming to what the hon. member for Broadview asked in regard to our properties in Toronto. I would tell the hon. member that we have in Toronto five different buildings. There is the Flavelle residence at Queen's Park. That is used by the Wrens and is rented for the sum of $3,000 per year. Then there is a building at 142 Crescent road which is used as the headquarters of the commanding officer of all divisions of the R.C.N.V.R. The rental of that building is $1 per year plus taxes and insurance. Then there is the automotive building in the exhibition grounds,

which we are given rent free. That is used as the headquarters of the Toronto division of the Royal Canadian Naval Volunteer Reserve.

Mr. GRAYDON: Has the minister the particulars in regard to the taxes and insurance on the second property he mentioned?

Mr. MACDONALD (Kingston City): For the Crescent road property the rental is only $1 per year and we pay the taxes and insurance.

Mr. GRAYDON: That is what I was inquiring about; how much does that amount to?

Mr. MACDONALD (Kingston City): I have not that information, though I can get it. Perhaps my hon. friend knows the property?

Mr. GRAYDON: No, I do not.

Mr. MACDONALD (Kingston City): It is a good property, but I would not say it was a mansion, as it has been called.

Mr. ROSS (St. Paul's): What is the rental of the Flavelle property?

Mr. MACDONALD (Kingston City): It is $3,000. Then we have a building at 120 Wellington street, a large storage building, where we lease two whole floors and part of another, at a rental of $9,650. We also have what is called the Nerlich building at the corner of University avenue and Wellington street. We occupy about five floors in that building for storage and pay $13,000 a year. These are the only buildings we have in the city of Toronto.

Mr. MacNICOL: Did the minister say $13,000 a year?

Mr. MACDONALD (Kingston City): Yes, for the Nerlich building.

Mr. GILLIS: There was a question which the minister has either forgotten or has not had time to look up. Yesterday I asked if he could give the house some information in reference to the statement made by the Minister of Munitions and Supply as to the extension of the Canadian merchant marine after the war and the part that would be played in that connection by the navy.

Mr. MACDONALD (Kingston City): Frankly I have not had a chance to look into that matter. I think my hon. friend wanted to know on what basis the merchant marine would be carried on after the war?

Mr. GILLIS: That is right.

Mr. MACDONALD (Kingston City): I could not answer that. Whoever is in charge of naval services after the war would not be operating the merchant marine, however; that would still come under the Department of Transport. It is difficult to say at this time exactly how the merchant marine would be operated. I suppose there is no doubt that some men now in the naval service might join the merchant marine after the war; probably that will be so, if the merhant marine is a good, going concern at that time, but I do not think anyone can say much more at this moment. I hope there will be a Canadian merchant marine after the war, as well as a Canadian navy, but I doubt whether at this time one could plan exactly in what way that might be accomplished. However, I shall be glad to look at the statement made by the Minister of Munitions and Supply. At the moment I forget what he said, but I shall look into it and answer my hon. friend later.

Mr. GREEN: Has any survey been made among the men in the navy to see how many of them wish to follow the sea after the war? I believe a survey has been made in the army to find out how many men propose to go farming, and I should think it would be very useful if the navy knew the approximate number of men who are anxious to go into the merchant marine or to stay with the navy when the war is over.

Mr. MACDONALD (Kingston City): That is right.

Mr. GREEN: In that event might it not be wise to lay some plans now for training these men, so that those who do wish to transfer to the merchant marine after the war will be able to do so? Is the training they receive in the navy sufficient to qualify them to go right into the merchant marine, without anything further?

Mr. MACDONALD (Kingston City): It is pretty good training, of course, but with all the stress of work we have now I do not think we could begin to undertake to train men for some other service. That would be a little too much to expect. I will say to my hon. friend, however, that we are making a survey of those men in the navy who might want to choose the navy itself as a career after the war; that is under way at the present time. The Canadian navy now has an authorized complement after the war of about eight thousand, I think, and we have not that many in the Royal Canadian Navy proper, that is the permanent force; we have only about half that number. So that we have caused questions to be distributed at

the various bases and ports to ascertain how many men at present in the volunteer reserve, let us say, or the naval reserve, might wish to adopt the navy as a career after the war.

Mr. GREEN: Would it not be possible to find out also how many would like to adopt the merchant navy as a career?

Mr. MACDONALD (Kingston City): Yes, that could be done.

Mr. POTTIER: The other evening the minister referred to the divisions of the Royal Canadian Naval Volunteer Reserve, of which he said there were some eighteen. Is one of those divisions located in the province of Nova Scotia?

Mr. MACDONALD (Kingston City): No, there is not a division of the R.C.N.V.R. in Nova Scotia.

Mr. POTTIER: Why is that?

Mr. MACDONALD (Kingston City): Well, in view of the permanent base at Halifax we have always felt that this took care of the matter so far as Nova Scotia was concerned. My hon. friend, I take it from his language, would favour the establishment of a division there.

Mr. POTTIER: Yes.

Mr. MACDONALD (Kingston City): I agree with him. I think there should be a division in Nova Scotia; and I hope—I believe—there will be.

Mr. POTTIER: Would there be any difficulty in establishing one now?

Mr. MACDONALD (Kingston City): I think there would be a little difficulty. Halifax is very much crowded at the present time. As my hon. friend knows, it is very hard to get accommodation there. That would be the logical place for the establishment of a division. I agree that in peacetime it would help matters if there were a division at that point.

Mr. POTTIER: I think it important, coming from Nova Scotia, that this matter be given some thought. The question of rentals may be raised. But here we have in Canada eighteen reserve divisions; and I believe every province, with the exception of Nova Scotia, has a division of the Royal Canadian Naval Volunteer Reserve. We have just heard the hon. member for Vancouver South (Mr. Green) point out that men should be trained with a view to entering the merchant marine. The men who have been in the reserve unit have the first chance, because they have had training. They form groups; young men talk to each other, and we find these units throughout Canada, except in the province surrounded by the sea, where one would expect to find them. After the war is over the other provinces are going to have the advantage, when one would expect men for the merchant marine to come from Nova Scotia. I urge upon the minister that serious thought be given to placing Nova Scotia in the same position as other provinces.

Mr. MACDONALD (Kingston City): That will be done.

Mr. ROSS (Souris): Some time ago I mentioned to the minister the matter of purchasing property and constructing buildings for the navy department, and I asked whether this was entirely within the purview of the department. I ask this because similar operations are conducted entirely within the Department of National Defence, for the army, and the Department of Munitions and Supply does most of the work for the air force. I asked further about certain large residences in Winnipeg. Have they been offered to the minister's department for the payment of taxes? These are residences which people thought would be useful for the accommodation of Wrens. Then I asked further about the number of naval officers at headquarters in Ottawa.

Mr. MACDONALD (Kingston City): We would buy property on the recommendation of the real estate adviser of the Department of National Defence. We would conduct the negotiations in connection with buying the property. If a building were to be erected, it would be done by the Department of Munitions and Supply, at our request. I believe that is the same procedure for all three services.

Mr. ROSS (Souris): The three armed services operate in the same way in this respect?

Mr. MACDONALD (Kingston City): If we wish to erect a building we notify the Department of Munitions and Supply of the kind of building we want, give them the plans, and they call for tenders. That is the way we do it, and the way it is done by the air force, I believe. I think the army does the same, although it may look after some of its own work.

Mr. GREEN: The Minister of National Defence said the other day that they do all their work themselves.

Mr. ROSS (Souris): I understood the Minister of National Defence to say they did it all.

Mr. MACDONALD (Kingston City): Then perhaps they do.

Mr. ROSS (Souris): Who would decide as to the type and cost of building?

Mr. MACDONALD (Kingston City): That would be decided by the works and buildings branch of the naval services.

Then, there was a suggestion that the department had been offered the use of property in Winnipeg for the accommodation of the Wrens. If the hon. member means that it was offered free, then I must reply that I do not think that is so.

Mr. ROSS (Souris): For the payment of taxes.

Mr. MACDONALD (Kingston City): I do not know of any such offer, but I shall be glad to look into it. Two or perhaps three properties in Winnipeg have been suggested as places where the Wrens might be housed and fed, where they might establish barracks. I do not recall any place offered for taxes. I have not looked into the matter in the last day or so, and I might be wrong about it.

A question was asked as to the number of officers in Ottawa. I had that information with me a moment ago, but it has been mislaid. I shall give it later.

Mr. KNOWLES: I should like to ask a question of the minister, but before doing so may I join with other hon. members from the prairies who have called attention to the large number of young men from our part of the country who are in the navy. In view of our great distance from either coast we feel justified in being proud of the type and number of our young men who have joined this service.

My question comes under item 4(a), and relates to the purchase by the Department of National Defence for Naval Services of the property formerly owned by the Winnipeg winter club. I shall remind the minister of some of the facts surrounding the purchase, and I take the facts from sessional paper No. 193 and from *Hansard* of March 25. The sessional paper was tabled and the answers in *Hansard* were given in response to questions I had placed on the order paper. We find that this property was purchased last October by the minister's department, and that the price paid was $256,000, or a little more than a quarter of a million dollars. The assessed value of the property, according to the assessment department of the city of Winnipeg, and confirmed in sessional paper 193, was $94,090. However the portion of that assessment which relates to the buildings is on a basis of 66⅔ per cent of the market value. Accordingly when you adjust that figure so as to arrive at a figure representing 100 per cent of the market value you find that the land and buildings, according to the city of Winnipeg, were worth $129,365.

According to *Hansard* of March 25, 1943, pages 1536, 1537, 1538 and 1539, the department purchased, in addition to the land and the buildings, all the equipment contained in the buildings. There was a variety of it, and the items are listed on the pages of *Hansard* I have indicated. The department placed a value of $40,000 on this wide range of equipment.

Then, in addition, according to the information in *Hansard*, the department made an allowance for fuel, moving expenses, compensation and other incidentals, amounting in all to $8,057.49. These figures I have given—the 100 per cent market value of the land and buildings, the value placed on the equipment contained in the buildings and the item for special allowances—total $177,422.49. The amount paid for the entire property was $256,000. The question which I wish to direct to the minister is, will he explain that difference of $78,577.51? I might point out at once that upon analysis of these figures he will find that the entire difference is between the value placed on the land and buildings by the city of Winnipeg and the value placed on the land and buildings by the Winnipeg winter club, namely, $78,577.51. I could understand it if there had been some sort of compromise between these two evaluations, but with that difference it seems rather hard to explain why the department paid the Winter club's own evaluation 100 per cent.

In the return which was made by sessional paper 193 and in the answers given in *Hansard* on March 25 it was pointed out by the minister that this price was arrived at after consultation between a member of the Montreal real estate board, members of the Winnipeg real estate board and the real estate adviser of the Department of National Defence. I point out that it does not state that the real estate boards of these cities were in on this evaluation but rather that it was done by private members of these boards. It was also pointed out that a condition of this sale was that the Winnipeg winter club—perhaps I had better read this direct from *Hansard*—

Mr. MACDONALD (Kingston City): What page?

Mr. KNOWLES: Pages 1539-40 of *Hansard*.

Mr. MACDONALD (Kingston City): That is the second return?

Mr. KNOWLES: That is correct. The first return was not placed on *Hansard*. As a matter of fact, however, this particular information is given both in the return and in the answers that were placed on *Hansard*. I will read from pages 1539-40 of *Hansard:*

It was further agreed that the Winter Club would undertake to invest the net proceeds of the sales, less the amount necessary to discharge the mortgage and other encumbrances, if any, in victory loan bonds, and would undertake to have such bonds registered in its name; and further would undertake to retain, and not dispose of by sale, at least 50 per cent of the said bonds for the duration of the present war, or for a period of two years, whichever period shall be the lesser, but this condition shall not prevent the pledging or disposal of said bonds for the purpose of securing funds to purchase property or equipment for the establishment of new quarters for the club.

Just on the side, the investing of fifty per cent of the net proceeds in victory bonds, particularly when it was understood that the bonds might be used to secure other funds, hardly seems to me to justify the deal. It might be argued that it has no bearing on it at all. Certainly in my opinion it does not justify it.

I come back to the figures I have already given. The total amount spent in purchasing this property and all this equipment, the allowances for everything which the club listed as on hand at that time, exceeded one-quarter of a million dollars. From the figures which I have given it would seem that the price paid was $78,577.51 more than it should have been. I would appreciate it very much if the minister would answer my question as to why the higher price was paid, particularly when there was such a wide spread between the city's evaluation and the club's evaluation of that property.

Mr. MACDONALD (Kingston City): I do not remember all the facts at this time and I have not the papers here, but I recall, as my hon. friend has pointed out, that not only was the chairman of the Winnipeg real estate board—

Mr. KNOWLES: The return says members.

Mr. MACDONALD (Kingston City): Perhaps it was the whole board; I do not know. But there was also a prominent real estate man from the city of Montreal and the real estate advisers of our department, and it was their opinion that $256,000 was a fair price. The assessed value of properties of this kind is not in many cases an accurate guide, and I think it would be a very poor guide in the city of Winnipeg. It is difficult for a property of that sort to be sold, as my hon. friend knows. It is not like a house that a man has a chance of disposing of to many people. There are very few people in the market for buildings like the Winnipeg winter club. This was the situation we were faced with. We had a fine naval division in Winnipeg. Winnipeg has always been a strong naval city. We had also there a fine cadet corps, a fine branch of the navy league and a fine naval training base. But these men had no place to eat and no place to sleep except as civilians in restaurants or in homes. We felt that something should be done to improve that condition.

As I said yesterday three years ago this department did not own a single stick of lumber or a single foot of ground between Halifax and Vancouver. We were living entirely in rented buildings and usually in very poor quarters. We felt we should do something and the question was: Will you buy or will you build at Winnipeg? I can tell my hon. friend that if we had started to build a building in Winnipeg to accommodate the division we would not have been able to build it for $256,000. We have now a magnificent building for our purpose. It has a swimming pool. It has a skating-rink surface which can be used for drill purposes on wet days. It has accommodation for sleeping and eating and some recreational facilities. I think we did the right thing in buying that building. As to the price all I can say is that three real estate men and others—I think some prominent businessmen of Winnipeg were also consulted—considered the price not unreasonable. In view of the fact that the building was there and could be had more cheaply than a new building, we felt it was the right thing to take over that building. I can look more closely into the whole correspondence but I do not know that I can ever tell my hon. friend more than that. We acted on the advice of these men, one an outside, disinterested party; the Winnipeg man I am sure was disinterested; and the naval real estate men certainly had only one thought, to get the best price they could for the navy. I am not in a position to say and I do not know that anyone is in a position to say that the price paid was excessive.

Mr. KNOWLES: I should like to make it clear, in response to the first remarks made in reply to me, that I agree that it was highly desirable to secure proper quarters for this establishment in Winnipeg, and further I agree that these quarters are ideal for the men of this unit. But the question of the price is another matter, and it still seems to me to call for an investigation. The minister has offered to look into it further. I wish to emphasize what I said earlier, that

there is a terrific spread between the valuation placed on this property by the city assessor's department and by the club. As I said before, if there had been a compromise figure in between those two, one would feel a little more confidence as to the price arrived at; one would feel that it had been looked into and all the factors taken into consideration. But when, instead of that, the club's value on its books, 100 per cent—for that is the reply which the minister gave back in March—is paid, I feel that the matter should be looked into further and that the minister ought to make a further statement to the committee.

Mr. MACDONALD (Kingston City): I shall be glad to do so at some future date, if my hon. friend will allow me.

The hon. member for Souris asked as to the number of officers in Ottawa. I have now the figures. The total number in one building and another—eight different buildings are devoted to headquarters—is 498.

Mr. FULFORD: Does the Canadian navy give any recognition or assistance to sea scout troops? We have heard a great deal about the sea cadets, and I can understand the affiliation between the cadet movement and the department proper. But I feel also that the sea scouts are performing a valuable service. I wonder whether on enlistment there is any report from the navy as to the training these men have received before entering active service?

Mr. MACDONALD (Kingston City): I know my hon. friend is very much interested in the sea scout movement. I cannot give him at this time the number of former sea scouts who have joined the navy; I have no doubt that it is quite large. I believe that some sea scouts go into the sea cadets later on; in that way they come to the navy by three stages. We have not the same close affiliation with the sea scouts that we have with the sea cadets. I am sure, however, that if the heads of the sea scout movement want to discuss the matter with us we shall be very glad to see whether the association cannot be made somewhat closer.

Mr. DIEFENBAKER: Yesterday I asked a question as to whether consideration is being given to the establishment of an insurance system. I should like to secure a statement now from the minister in reference to that, and then there are certain other matters under the particular item before the committee which I wish to ask about.

Mr. MACDONALD (Kingston City): I am sorry I forgot that question. The point the hon. member raises is very interesting, and I shall be glad to look into the system—what is called the American system—which he described yesterday, and to discuss it with my colleagues. Of course any plan of this sort would have to be uniform in the three services. I shall be glad to take it up with the Minister of National Defence and with the Minister of National Defence for Air.

Mr. DIEFENBAKER: In regard to this item, "construction, purchase, repairs and operating expenses", amounting to approximately $42,800,000, we have as yet very few details other than those connected with the Deep Brook proposition. I would ask the minister to give the committee the capital expenditures which were made in each of the provinces; further, the repairs in each of the provinces, and the rentals paid. I would also ask him in that connection what properties were purchased by the navy during the year other than the one mentioned, in the city of Winnipeg, and the particulars of the rentals. I believe I have already asked for that. Further, would the minister advise whether or not the matter of hospital expenditures is comprised within the ambit of this particular item?

Mr. MACDONALD (Kingston City): I understand that the matters to which my hon. friend has referred in the main were the subject of a return brought down some time ago on the motion of the hon. member for St. John-Albert. That return should be available somewhere to my hon. friend. There is some difficulty in connection with this return as brought down in the manner asked for—some five hundred man-hours of labour were spent on it—because, when you ask for the amount spent in each province, we do not keep records in that way and it is very difficult to say exactly how much of a certain expenditure is to be charged to Alberta, or British Columbia, or Nova Scotia, or New Brunswick. I have here particulars of the individual bits of land purchased in the east and in the west and elsewhere. Perhaps my hon. friend would look at this return, which I think the hon. member for St. John-Albert also has.

Mr. DIEFENBAKER: The difficulty is that we have items here of a total of about $44,000,000 and there is not one which we know anything about at all. I have here a return brought down in answer to the hon. member for New Westminster, and the particulars are limited to rentals.

Mr. MACDONALD (Kingston City): Rentals? Well, no. The return of which I speak, and which was brought down on the motion of the hon. member for St. John-Albert, gives

rentals, purchases of land, buildings and everything else. I can read over some of the items.

Mr. DIEFENBAKER: Let us have the major items in the different provinces.

Mr. MACDONALD (Kingston City): My hon. friend is now speaking of buildings, is he?

Mr. DIEFENBAKER: Yes.

Mr. MACDONALD (Kingston City): I will give some of the larger ones. Starting with Deep Brook, I find the contract price, in round figures, is $8,815,000; the naval ordnance department at Dartmouth, $2,588,000. I am giving now total costs. Some of this work has been already done; some was done two years ago. Then, Nelson barracks, Halifax, $7,324,000; Halifax dockyard, $1,535,000; Shelburne naval base, $1,307,000; Point Edward, the Sydney base, $5,701,000.

Mr. BLACK (Cumberland): Has the minister an estimate of what additional expenditures will be necessary?

Mr. MACDONALD (Kingston City): These are contract prices, the full job; the $5,701,000 is the estimate. Gaspe naval buildings, $732,000; naval service building at Ottawa, $866,000. That has already been spent. That will give my hon. friend an idea. On the west coast there is the Royal Roads naval college, $325,000; Prince Rupert, a certain expansion, $322,000 in one item alone.

Mr. DIEFENBAKER: They are just the buildings without the land?

Mr. MACDONALD (Kingston City): These are the contract prices of the buildings. There are smaller items running all the way down to a few hundred dollars, but that gives some idea of the building problem. I have taken only a few items.

Mr. BLACK (Cumberland): I should like to have the figures for the total cost at Point Edward. The minister has given the contract price of the buildings, $5,701,000. There are many additional expenditures for equipment, sewage, waterworks, electric lights, wharves and fills. I should like to have a statement of expenditures complete to date, including the cost of the land and the estimated cost of the project completed. If the minister is not able to give it now, he can give it later.

Mr. MACDONALD (Kingston City): The estimated cost of the buildings, the contractor's figure, is $5,701,000. That is for barracks, stores, canteen and the other work there. Coming to the cost of the land, I have the whole cost here by individual purchases. There are a great many of them and I shall have to total them up and give them to my hon. friend. It looks as if the land at Point Edward would run to somewhere between $60,000 and $75,000. There are about thirty or forty different lots. I will give the exact figures.

Mr. BLACK (Cumberland): Has the minister the estimated cost of the project completed, including all equipment?

Mr. MACDONALD (Kingston City): I have the cost of the building but not the cost of such equipment as is necessary.

Mr. BLACK (Cumberland): Including wharves and fills.

Mr. MACDONALD (Kingston City): I will give all that.

Mr. ROSS (St. Paul's): Are the rates of pay and allowances in the Canadian navy the same as those in the British navy?

Mr. MACDONALD (Kingston City): Generally speaking, they are higher in the Canadian navy, certainly in the rating class.

Mr. ROSS (St. Paul's): In the Canadian navy?

Mr. MACDONALD (Kingston City): Yes.

Mr. ROSS (St. Paul's): When our Canadian officers and men go to the British navy for training do they get British pay?

Mr. MACDONALD (Kingston City): I believe I also dealt with that this afternoon. No; they are paid by the Canadian navy at Canadian rates.

Mr. ROSS (St. Paul's): Some of our men went over earlier and joined the British navy in the earlier part of the war. What is done with any requests they make to be returned to the Canadian navy? Is there any way whereby they can get back?

Mr. MACDONALD (Kingston City): That is up to the British navy. If they went to Britain and joined the British navy out and out, we have no more control over or business with them.

Mr. ROSS (St. Paul's): There is no comparison then with the air force in this regard. Some Canadians who joined the Royal Air Force are now coming back to the Royal Canadian Air Force. Is there any arrangement whereby the same thing can be effected in the navy?

Mr. MACDONALD (Kingston City): It is entirely up to the Royal Navy. The men would have to apply to them for permission to transfer to the Canadian navy. We could not transfer them of our own volition.

Mr. ROSS (St. Paul's): Is there any way whereby they could go about it? If they wanted to come back to the Canadian navy would they make a request to the Royal Navy?

Mr. MACDONALD (Kingston City): The usual thing would be to take it up with the commanding officer. If the man were a rating he would take it up with the captain and, if an officer, he would take it up with his senior officer and indicate that he would like to transfer. Then, I assume, the Royal Navy would ask us, "Do you want this man, or have you a place for him, or are you anxious to get him?" If we were, I suppose the transfer could be arranged.

Mr. ROSS (St. Paul's): Would we not rather like to have such a man, who had had that experience? The minister said it was difficult to get instructors. Some of these men might be very valuable back here as instructors in the Canadian navy.

Is it proposed that there should be any distinguishing mark or badge for officers and men who have served at sea? I have had complaints from men who have had quite a lot of service; they are not exactly complaints, but they express the opinion that there should be some such distinguishing badge to indicate that they have actually served at sea for a certain length of time.

Mr. MACDONALD (Kingston City): Has the hon. member heard complaints from the navy or from other services?

Mr. ROSS (St. Paul's): The navy. In the March issue of *Boating* there are some suggestions from the naval volunteers' association. They appear on page 26. The minister probably knows about this. I will not read it, but there are many suggestions which are made by the naval volunteers' association. I suppose this has been brought to his attention. Has it been thoroughly discussed and has any action been taken in connection with it?

To come to the item we are on at the moment, the minister gave $13,000 for the lease of the building on University avenue and Front street, I believe it is. Can he tell me how many feet of floor space that involves, how much per square foot, whether it includes taxes, and what is the basis of the agreement?

Mr. MACDONALD (Kingston City): The space in the Nerlich building is approximately 32,500 square feet, and the rental paid is $13,000 per year. Nothing is said about the taxes, so I assume that they are paid by the owner of the building.

Mr. ROSS (St. Paul's): Has the minister seen these recommendations?

Mr. MACDONALD (Kingston City): I think they are from Andrew D. MacLean, but I have received so many letters from that gentleman that I do not remember. However, I will look at the article again.

Mr. ROSS (St. Paul's): Does the minister know what the naval volunteers' association is?

Mr. MACDONALD (Kingston City): I have no knowledge of that association, but I imagine it is something in which Andrew D. MacLean is particularly interested. It has no official status and is not connected with the naval department in any way.

Mr. ROSS (St. Paul's): Is there any proposal under consideration that men who have served at sea shall be permitted to wear a distinctive badge?

Mr. MACDONALD (Kingston City): I think there is an arrangement now whereby men who go overseas on ships are entitled to wear a badge with "Canada" on it on the sleeves of their uniforms. Beyond that I know of no suggestion to provide any other distinctive mark to those who go overseas. All men in the navy are on active service and are liable for service anywhere.

Mr. FRASER (Peterborough West): This afternoon the minister said that plans for buildings were prepared by his department, but I should like to know how many architects or engineers there are in the department and who passes upon the final plans. Some time ago I believe there were two engineers in the department who drew up plans. I understand they were dollar-a-year men and that they left the department because someone else with no knowledge of architecture was put over them.

Mr. MACDONALD (Kingston City): The director of works and buildings is Mr. Young.

Mr. FRASER (Peterborough West): Does he pass finally on the plans?

Mr. MACDONALD (Kingston City): They are passed upon finally by the deputy minister and myself. He has a staff under him of roughly fifty architects and engineers, but I can get the exact number later for my hon. friend.

Mr. FRASER (Peterborough West): Has the deputy minister any knowledge of architecture or engineering?

Mr. MACDONALD (Kingston City): He is a valuable public servant, but his experience has been in business rather than in archi-

tecture. I have no great knowledge of architecture. What the deputy minister and I would be concerned with would be whether the building under consideration was right as to cost and size and so on. If we wanted a barracks, we would consult the men who were experienced in training men and ask how much space they wanted for a certain number of men. The plans would then be prepared and approved, and the Department of Munitions and Supply would be asked to call for tenders and let the contract.

Mr. FRASER (Peterborough West): Does the Department of Munitions and Supply also check on the plans?

Mr. MACDONALD (Kingston City): No, I do not think so. Once it goes from our department, they just act as our agents, so to speak.

Mr. DIEFENBAKER: I asked the minister a while ago for a computation of the amounts expended in the different provinces. I realize that it would be impossible for him to give this without having a staff in front of him, but I ask that he place this information on *Hansard* either this evening or to-morrow. I should like the amounts expended in each of the provinces under the various heads.

There is another matter which I did not have an opportunity of bringing to his attention yesterday because I was attending a committee meeting. I refer to the training of probationary officers. I should like a statement as to the number which it is anticipated will be trained this year and what facilities are available for this training. Over the week-end I was in Toronto and met two young men who joined a class of probationary sub-lieutenants last September. At the time I understand there were some sixty in the class. These men are subject to control and direction at all times. They gave up their positions in civil life in order to take this training in Toronto, but for some reason there seemed to be a bottle-neck in the training of these officers and thirty of them are now receiving only a small amount of training. I speak subject to correction, but my information is that they are receiving only two hours a week of training.

Mr. MACDONALD (Kingston City): I cannot understand why these young men should have given up their civilian jobs.

Mr. DIEFENBAKER: They expected to be called at any moment.

Mr. MACDONALD (Kingston City): It looks to me as if these men were attached to the division but had not been called for active service. In that event they should have continued with their civilian tasks until informed that they were required for full-time service, when, of course, they would have to go. The training of officers is done at King's college at Halifax, and it may be that there is a considerable waiting period for some of these officers who have joined the divisions and are waiting for their official calls. When Deep Brook gets going, some training of officers can be done there and I believe we shall be able to put them through more rapidly.

Mr. DIEFENBAKER: They are down to two hours a week now, but they started off with fairly lengthy training courses.

Mr. MACDONALD (Kingston City): There is something strange about the matter, but I shall look into it.

Mr. HAZEN: There are one or two questions which I asked the minister yesterday to which he has not referred. First, I asked about the number of trained men who are serving on shore. The minister said he would have to get that from all over the country and it would take some time; possibly he has not as yet had time to obtain the information. The other question was: How many men have been discharged from the navy on account of wounds; how many on account of injuries; how many on account of illness, and how many on other grounds; and another question was how many Wrens have been discharged from the navy. I do not know whether the minister is in a position now to answer those questions.

Mr. MACDONALD (Kingston City): Yes, I am, and I must apologize to my hon. friend for having overlooked them; I endeavour to note down the questions on separate slips of paper. In regard to the first point, it is very difficult to be accurate about this because, as I said, these men are all over the country; but from the information available I estimate that there are about nineteen thousand trained men on shore. Many of these, of course, are at work in dockyards in the maintenance and repair of ships; they are at manning pools; some of them are instructors; some are at signal stations on shore, and so on. I believe nineteen thousand would be an approximate figure. Then my hon. friend asked as to the number of casualties in the navy from wounds. The number of men wounded is, I think, 159.

Mr. HAZEN: Have they all been discharged?

Mr. MACDONALD (Kingston City): No; I am coming to the number of discharges in a moment. I shall find them directly, but if my hon. friend has any other questions I shall be glad to have them now rather than later on.

Mr. HARRIS (Danforth): Did I understand the minister to say that he would be glad to have any other questions now?

Mr. MACDONALD (Kingston City): Yes, on this item. I thought the hon. member for St. John-Albert had another question on this item.

Mr. STIRLING: There was a question I asked in regard to deductions; the minister did not have the information at the time.

Mr. MACDONALD (Kingston City): I am sorry; I do not think I have it yet.

Mr. HAZEN: Do I understand that the minister is looking up the answers to the questions I asked?

Mr. MACDONALD (Kingston City): Yes, I am; I thought I had the information right under my hand, but for the moment it is mislaid. Did my hon. friend have any other questions, while I am looking for this information?

Mr. HAZEN: I was going to revert for a moment to the extraordinary expenditure of $12,000,000 at Deep Brook, Annapolis county, Nova Scotia. This afternoon the minister told us that none of the eighteen Royal Canadian Naval Volunteer Reserve divisions would be closed up. He did not say, or at least if he did say it I did not hear him, whether or not any of the training schools at those seventeen or eighteen naval bases would be closed, or whether any of the technical schools at the universities would be closed. Will any of the training schools at the naval bases be closed, or will any of the technical schools now being operated at the universities be closed? I would also ask the minister to tell us what percentage of the trained men in the navy take refresher courses, and how often those courses are taken. Then yesterday the minister informed us that the decision to build a base at Deep Brook was reached by the naval authorities. I would ask him when that decision was reached, and also if he would tell us just whom he meant by the naval authorities.

Mr. MACDONALD (Kingston City): By that I meant naval officers.

Mr. HAZEN: Does he mean the Canadian naval board, or who are the naval authorities?

Mr. MACDONALD (Kingston City): They would have the ultimate decision, yes.

Mr. HAZEN: The minister says they would have the ultimate decision. I thought they were only an advisory board, according to a statement he made in this house in February of this year, when dealing with Commander MacLean's charges. At that time I think the minister said they were only an advisory board.

Mr. MACDONALD (Kingston City): That is true.

Mr. HAZEN: If that is true, how would they make the ultimate decision?

Mr. MACDONALD (Kingston City): If my hon. friend is endeavouring to suggest that I made the decision in connection with Deep Brook, I can tell him at once that I did not make the decision to go to Deep Brook. Naval officers, including the admiral commanding the Atlantic coast and the officers of the works and buildings branch, surveyed up and down the province of Nova Scotia and certain parts of the province of New Brunswick and eventually came to the decision that Deep Brook was the most satisfactory site. They so recommended to naval service headquarters, and their recommendation was approved.

Mr. HAZEN: I think the minister will have to admit that the final decision rests with him if this board is only advisory. It is not like the admiralty board in England.

Mr. MACDONALD (Kingston City): It is very much like the admiralty board in England.

Mr. HAZEN: It is very much like the admiralty board, but it is quite different from the admiralty board.

Mr. MACDONALD (Kingston City): How?

Mr. HAZEN: In the statement the minister made last year in reference to the charges made by Commander MacLean, at page 491 of *Hansard* for February 17, 1943, he said:

> In this connection, I should like to observe that the board of admiralty in Britain has no reserve officers on it.

Then he went on:

> The Canadian naval board is modelled on the British board of admiralty—

Mr. MACDONALD (Kingston City): Exactly.

Mr. HAZEN: But he went on to say:

> —with this difference, however, that the board of admiralty is an executive body whereas the Canadian naval board is a body advisory to the minister of naval services.

Mr. MACDONALD (Kingston City): That is right.

Mr. HAZEN: If it is an advisory body to the minister of naval services, is it not up to him as minister to make a final decision?

Mr. MACDONALD (Kingston City): In a matter of this kind, does my hon. friend think I could go all over Newfoundland? He

complained once in the house because I went around the country lecturing too much. He said I should go to Saint John.

Mr. HARRIS (Danforth): He did not suggest that.

Mr. MACDONALD (Kingston City): My hon. friend says he did not suggest it. How was I to judge the character of these sites and places, unless I visited them? But even then, would I be in a position to judge, as well as these naval officers? I think not. I did not go up and down the province of Nova Scotia or the province of New Brunswick. In this matter I relied on the opinions of my officers. And I think that having looked at the matter as they did, their choice was certainly wiser than mine could have been, had I gone over the ground myself.

Mr. HAZEN: Yesterday the minister went on to give reasons why this school or training centre should be established at Deep Brook. He said:

> I will say this, that the training facilities in this country are not at all sufficient for the training of our men. Furthermore, even though some men are trained at sea, a great many of them are being brought back for advanced courses.

I do not understand that statement by the minister. It is undoubtedly correct, but if the training facilities that existed last year were sufficient to train officers and men for 150 vessels added to the Canadian navy last year, it seems to me that this expenditure of $12,000,000 for a new naval school should have some further explanation than has been given up to the present by the minister.

Mr. MACDONALD (Kingston City): My hon. friend of course realizes that the navy is much larger than it was a year ago. Facilities that might be perfectly adequate in 1940, 1941 or 1942 might be entirely too small in 1943 or 1944.

Mr. HAZEN: Well, the minister is going to add this year to the navy the same type of ships he added last year. Last year he added 150 ships, but he has not said the number to be added this year. Last year he had sufficient training schools to train officers and men for 150 ships. On Monday evening, speaking about facilities, he said:

> Our facilities for the training of men have been developed to a point where we are now able to man the ships which are available to us. The task has been difficult, I am bound to say, but we have always been able to keep the manning of ships abreast of construction so that our ships are not kept out of operational duties through lack of trained personnel.

Mr. MACDONALD (Kingston City): Right.

[Mr. A. L. Macdonald.]

Mr. HAZEN: If the minister was able to keep the trained personnel up to the number of ships being supplied, and if 150 ships were supplied last year, why is it necessary to go out now and spend $12,000,000 for another training centre, in this fourth year of the war? Have the pros and cons of this matter been thoroughly considered? Have they all received his attention?

If the facilities existing last year were not large enough to supply the men who are needed for the ships which will be added this year, was any consideration given to enlarging the training centres which are at present in existence across Canada, and which have cost hundreds of thousands of dollars? Was any consideration given to extending those training centres, or are they now to be abandoned? Or is the minister to keep them up, and also develop this new $12,000,000 training establishment at Deep Brook?

Those are questions concerning which the committee should have further information.

I have one or two further questions about expenditures at Deep Brook. In addition to information in connection with amounts expended, I should like some further information about buildings to be erected there. How many buildings have been or are to be erected at Deep Brook? What kind of buildings are they to be? What will each of them be used for? What is the total estimated cost of those buildings? A return brought down recently showed a figure of $7,775,000.

Then, will the minister give particulars as to furniture and equipment for the establishment at Deep Brook, at an estimated cost of $733,000? Of what did this furniture consist, and what quantities of each kind are being obtained? What firms are supplying it, and what prices are being paid for the different kinds of furniture being supplied?

What was the cost of the equipment obtained? Of what nature was that equipment? Were tenders called before it was purchased? I would ask, also, to have furnished a detailed break-down of the last item in the return under the heading "other expenditures, $1,294,766". This is a large amount of money, and we are entitled to know how and why it was spent. I ask for these particulars in some detail.

Mr. MACDONALD (Kingston City): It will take some time. I cannot get it to-day or to-morrow, but I shall do my best to obtain it.

At six o'clock the committee took recess.

After Recess

The committee resumed at eight o'clock.

Mr. MACDONALD (Kingston City): Mr. Chairman, some questions were asked this afternoon about discharges from the navy. I have here figures showing that from September 1, 1939, to April 30, 1943, there were 1,727 persons discharged from the navy on account of a very long list of physical conditions, and there have also been discharged in the same period four Wrens. A question was also asked as to the number of persons wounded. There were ninety-one wounded and injured who have been discharged.

Mr. NICHOLSON: Mr. Chairman, a year ago when these estimates were before the house I raised the question of giving consideration to providing housing for the personnel. I notice, according to information which the minister gave the other day, that there are 20,000 ratings from Ontario, 4,208 from Manitoba, 3,657 from Saskatchewan and 4,436 from Alberta. It is obvious that it will be necessary for these ratings to be away from their permanent homes for the duration of the war. The minister admitted last year that there were two centres, Halifax and Esquimalt, where there was a very serious shortage of housing. I would draw the attention of the committee to the fact that the United States navy pioneered in the field of war-time housing right from the entry of the United States into the war. It was recognized over there that the providing of houses for as many as possible of the officers and men would make a valuable contribution to the morale of the navy. They admit that it has not been possible to provide housing for all the men who joined, but they have gone a long way toward making it possible for the men to live as nearly normal a life as possible when they were home from the sea. In view of the fact that the minister has found it possible to make commitments for the present year of over $12,000,000 at Deep Brook, over $2,000,000 at another point, over $7,000,000 at another point, over $1,500,000 at another point, over $1,300,000 at another point, and over $5,700,000 at another point, it seems to me that if we can make such large capital expenditures in the fourth year of the war it should be possible for us to make capital expenditures for the providing of housing for the families of the men who go to sea. I would appreciate it if the minister would state whether he has made recommendations to the Minister of Munitions and Supply with a view to providing housing for the men in the navy, especially at Halifax and Esquimalt.

Mr. MACDONALD (Kingston City): The question raised by my hon. friend is one that has given a great deal of concern to the three defence ministers. It is not an easy problem to solve. A city such as Halifax is already greatly overcrowded, and the normal peacetime facilities of that city in the way of water mains, restaurants and the like are heavily taxed. It is just a question whether we should endeavour to tax them more heavily still by providing housing for the relatives of service men. I agree that there is an argument on the part of the relatives of the service men who see persons working in factories provided with housing. They may with a good deal of justice say that they are entitled to the same sort of treatment. But up to the present we have not endeavoured to meet that problem. It is a very difficult one.

In reply to a question that was asked this afternoon I would say that there are now some 17,000 members of the Canadian naval service in Canada who are not accommodated in naval barracks. That is one of the reasons why such places as Deep Brook have had to be built. Those 17,000 are being paid $1.25 a day out of which they provide their own lodging and subsistence. It is not the best system, I am bound to say, and as quickly as we can we are endeavouring to provide barracks not only at the coasts but at different points in between where such men can be housed and fed and trained.

Mr. NICHOLSON: Will the minister state whether his officials have visited some of the centres in the United States where the naval authorities have built housing, and whether reports have been received as to the value of these expenditures by the United States government?

Mr. MACDONALD (Kingston City): I do not think any of our people have visited those centres. I shall be glad to look into that. I am not sure that the United States government has endeavoured to provide housing for the families of all naval personnel. There is of course in this country always a number of our naval personnel at Halifax and elsewhere who are provided with houses. But to house all personnel and their families in and around bases involves the assumption of a very heavy task.

Mr. NICHOLSON: I did not wish to give the impression that they had provided housing accommodation for all naval personnel in the United States; my understanding was that the United States navy was the first department to recognize the importance of building houses. While I have not been able to get accurate information, I understand

that they have built between thirty-five and forty thousand units for the families of those men in the United States, and I would appreciate it if the minister would try to get some report from the United States navy as to the value of these projects, and give further consideration to making some similar commitments for the next year, particularly in Halifax.

Mr. MACDONALD (Kingston City): I thank my hon. friend for drawing this to my attention. I shall look into it very shortly.

Item agreed to.

5. Personnel supplies and services: food, medical and dental stores, clothing and personal equipment, $22,015,072.

Mr. FRASER (Peterborough West): Has the minister investigated the possibility of using pocket distillers for supplying water to lifeboats? Pocket distillers are being supplied to lifeboats by the British war transport ministry. The pocket distiller is a compact little machine which makes fresh water of undrinkable salt water. The apparatus weighs forty pounds and costs about $50. It turns out hot water for steaming drinks, as well as drinking water, and uses virtually anything in the way of fuel. In a pinch it will throw smoke signals to a passing ship.

Also, could the minister tell us what arrangements are made to have doctors on our corvettes and other boats, and what position pharmacists have on these ships?

Mr. MACDONALD (Kingston City): In answer to my hon. friend's first question, our research units, as I mentioned the other day, have carried on significant experimental work in the matter of life rations for men on rafts and boats. With these rations is a water-can and the water therein is treated in such a way as not to be contaminated by the tin of which the can is made. I cannot say that any conclusions have been reached as to the feasibility of distilling fresh water from salt water, but I shall be glad to look into that.

As to doctors on board ships, the smaller ships do not have doctors; the larger ones do.

Mr. FRASER (Peterborough West): Who looks after the men in the smaller ships? Is that the duty of pharmacists?

Mr. MACDONALD (Kingston City): There would be a sick berth attendant, at any rate.

Mr. FRASER (Peterborough West): That is what I am trying to find out. Is the man in charge a pharmacist?

Mr. MACDONALD (Kingston City): He would not necessarily be a druggist. I believe some of them are; but he is a man who has taken some special training in what you might call nursing and in what we call sick-bay work. He has some skill in treating wounds and that sort of thing.

Mr. ADAMSON: Does the Canadian dental corps take care of the navy as well as the other services?

Mr. MACDONALD (Kingston City): Yes; the army dental corps.

Mr. ADAMSON: There is one dental corps for the three services?

Mr. MACDONALD (Kingston City): It takes care of ours and, I believe, the air force also.

Mr. ADAMSON: Yes, it does.

Mr. FRASER (Peterborough West): Does the minister's department allow men who have enlisted or men in training to donate to the Red Cross blood-donor clinics? What arrangements has he made in that regard?

Mr. MACDONALD (Kingston City): I believe that a great many of the men do go. I do not know that we make it compulsory.

Mr. FRASER (Peterborough West): Does the department encourage them to go?

Mr. MACDONALD (Kingston City): The matter is brought before them; the importance of it is emphasized, and they are urged to go, if possible.

Mr. DIEFENBAKER: I think it must be under this item, namely "personnel services", that the matter of recruiting staffs comes. I would ask the minister whether consideration has been given by his department, as well as by the Department of National Defence and the Department of National Defence for Air, to eliminating the competition which is now carried on between the three services in the matter of recruiting. I believe we all realize that there is a certain pool of volunteers available; it is restricted to young men who have not yet received their call and to those who are within the ages of twenty to thirty-eight and who as yet, too, have not been called, the first being not yet subject to the call, the latter not having yet received the call. A few days ago the hon. member for Parkdale had a return brought down which shows clearly the competition between the armed services today for the same pool of men. According to that return, the Canadian active army maintains throughout Canada 122 recruiting stations with a personnel of ninety-three officers and 548 other ranks; the Royal Canadian Air Force has sixteen recruiting stations located in the principal cities with an administrative

staff of 140, including specialist staff, seventy-one medical officers, 533 other ranks and fourteen civilians; and the Royal Canadian Navy has twenty recruiting stations with personnel of twenty officers and forty ratings, together with thirty-one Women's Royal Canadian Naval Service officers and ratings. Having regard to the desire and the necessity of conserving man-power, also the effecting of such savings as would come from the concentration of recruiting under one head, has consideration been given by the minister and the other defence ministers to the advisability of eliminating what does appear an unnecessary expense through overlapping and competition?

Mr. MACDONALD (Kingston City): We do not maintain recruiting stations as such in the sense of setting up separate establishments in separate buildings. What we do have is, at each one of these eighteen divisions and also at other places, a recruiting officer. But in the sense of having a separate recruiting establishment in a separate building, we do not have it. Consequently I do not think there is any great additional expense; in fact there is no additional expense to the navy as a result of the policy we pursue in recruiting.

Mr. HAZEN: This item involved an expenditure last year of over $10,000,000. That is a large amount of money. I would ask the minister to give us in some detail a break-down of how that amount was spent. The general break-down we receive respecting expenditure of over $200,000,000 includes only thirteen items. We have been given similar very general data in connection with the army and the air force. I think these break-downs in all cases should have been furnished in much more detail. Had this been done, a considerable amount of time would have been saved by this committee and we would have been furnished at first hand with information to which we are entitled. I would ask the minister to let us know how much was paid for food, how much for medical and dental stores, how much for clothing and personal equipment; and also to give some idea of the nature of the food, material and clothing provided.

Mr. MACDONALD (Kingston City): I can give some estimate of cost per man, which is the method we follow in arriving at our total.

Mr. HAZEN: I did not ask for estimates of cost per man. I asked for the amount that had been expended under these different headings.

Mr. MACDONALD (Kingston City): I thought my hon. friend wanted figures to show of what this item was made up this year rather than expenditures for last year.

Mr. HAZEN: I am referring to last year.

Mr. MACDONALD (Kingston City): My book indicates what the proposed expenditures for this year will be, and we arrive at that by taking—

Mr. HAZEN: If I may interrupt again, I was referring not to expenditures for the coming fiscal year but to the amount that was expended during the last fiscal year, which came to a little over $10,000,000. We are entitled to know, and the taxpayers are entitled to know, just where that money went.

Mr. MACDONALD (Kingston City): I shall be glad to get that for the last fiscal year. I understood that we were dealing with the estimates for the coming fiscal year, and that my hon. friend wanted information on that point, which I am prepared to give. If, however, he wants last year's figures I shall have to get them.

Mr. ADAMSON: Let us have this year's.

Mr. MACDONALD (Kingston City): Take first the estimated cost of clothing per man. For chief petty officers and petty officers the estimated average cost of a uniform is $183, and for seamen the average cost per year is $139.50.

Mr. ADAMSON: Uniform without equipment?

Mr. MACDONALD (Kingston City): That is clothing and kit such as brushes and that sort of thing, what one might call the personal requirements of the sailor—$183 in one case and $139.50 in the other. For Wrens, the average cost of uniform is $140.17. Multiply that by 5,000, that being the estimated average number of Wrens, and we find the total amount necessary to provide clothing for Wrens. As for sea cadets, $7.50 per uniform for each cadet is the amount. Winter clothing per man is furnished at the average cost of $8.10; that is mitts, heavy caps, jerseys.

Mr. ADAMSON: Would that include such an item as the bridge coat of sheepskin?

Mr. MACDONALD (Kingston City): The duffle coat? No. A certain number of these are issued to the ship rather than to individual men.

Mr. ADAMSON: And they are not included here?

Mr. MACDONALD (Kingston City): I shall come to that in a moment. These are the main items under clothing. Then we come to victualling stores in the proper sense, such as dishes, knives and so on. Twenty dollars per man is the cost of the things that are

needed. This includes all the appliances and all the paraphernalia necessary for cooking, such as basins, boards, meat-choppers and the like. The medical stores are estimated to cost $3.58 per man per year. We took the average number of men for the year beginning April 1, 1943, and ending March 31, 1944, which was 70,000, multiplied that item by that number and got the figures which appear in the estimates.

Mr. GREEN: To what extent are members of the fishermen's reserve furnished with supplies? In his statement the other day the minister said nothing about this reserve, and it would be interesting if he would make a short statement as to whether the number of men has been increased or decreased and outlining the work they are doing.

Mr. MACDONALD (Kingston City): The clothing, victualling supplies and medical necessities furnished to these men would be the same as are furnished to men in the navy.

Mr. GREEN: Are they on full time?

Mr. MACDONALD (Kingston City): Oh, yes, in war time.

Mr. GREEN: What is the number of men in the reserve?

Mr. MACDONALD (Kingston City): I think it is something like four hundred, but I am speaking purely from memory and I do not want to put myself definitely on record. This reserve exists only on the Pacific coast and perhaps the hon. member knows more about it than I do.

Mr. GREEN: How many ships?

Mr. MACDONALD (Kingston City): I would have to look that up.

Mr. McNIVEN: Were we to cast our minds back to this day three years ago I think we would all agree that it was the bleakest, the most barren and the blackest day in our history up to that time. Following Dunkirk, June 10 stood out as a tragic hour, the most fateful day in our history. France had fallen, and on this date three years ago Italy declared war against the allies, the most cowardly, the most dishonourable act in the history of the world. Then on that date there was cast a pall of gloom over this city, over the entire country, for three years ago to-day, the Hon. Norman Rogers passed away, killed in the service of his country, than which there can be no more honourable death. The late Hon. Norman Rogers was a gentleman, a kindly, friendly man, a distinguished scholar and one who had rendered conspicuous service to his country.

[Mr. A. L. Macdonald.]

The Hon. Norman Rogers as Minister of National Defence laid the foundations for the armed forces of this country, the navy, the army and the air force. All agree that in the untimely passing of the late Hon. Norman Rogers Canada lost a distinguished son, one that we could ill afford to lose. However, emerging from the pall of gloom which fell on June 10, 1940, there came a voice that carried inspiration for us as well as sinister portent for the enemy. There emerged a figure, a veritable Gibraltar of democracy, whose indomitable courage electrified his people and galvanized an empire into action. That man was the Right Hon. Winston Churchill, and his was the speech that will stand as the greatest battle-cry of all history. He said:

> Come then, let us to the task, to the battle and the toil. Each to our part, each to our station, fill the armies, rule the air, pour out the munitions, strangle the U-boats, sweep the mines, plough the land, build the ships, guard the streets, succour the wounded, uplift the downcast and honour the brave. Let us go forward together in all parts of the empire, in all parts of this island. There is not a week, nor a day, nor an hour to be lost.

Three years have slipped by. With those three years in perspective can it be doubted for a moment that Canada and the Canadian people heard the call? "Fill the armies." Can we doubt that the call was heard after having listened to the magnificent story narrated by the Minister of National Defence (Mr. Ralston)? "Rule the air." Can we doubt it when we listened to the magnificent story unfolded by the Minister of National Defence for Air (Mr. Power)? "Strangle the U-boats, sweep the mines." Who can doubt that we have heard that call after having listened to the thrilling story told by the Minister of National Defence for Naval Services (Mr. Macdonald)? "Pour out the munitions." When we think of the continuous flow and tide of munitions that have been turned out by Canada in the last three years, there can be no doubt in anyone's mind that industry heard that call. "Build the ships." There is no doubt that the shipyards and labour of this country heard that call. "Plough the land." When we think of what agriculture has accomplished in the last three years in the growing of grain and foodstuffs, in producing the supplies that have been shipped across the Atlantic, there can be no doubt that the farmer and agriculturist of this country heard that call.

Not only did the Canadian people hear that call, but we in western Canada, the part of Canada farthest removed from the sea, heard that call. In my own city of Regina

there was established H.M.C.S. *The Queen.* The naval department fitted out and furnished the winter club and converted it into naval headquarters for Saskatchewan. Out of these quarters located in the most central part of Canada have been turned out over two thousand recruits for the Canadian navy.

Just here I should like to say a word by way of tribute to the men who made that possible, the men who in times of peace with great vision saw to it that in the city of Regina there was maintained the nucleus of a naval company. I think of Lieutenant Commander Hall, the first to command H.M.C.S. *The Queen,* who now is performing important duties on the Pacific coast. I think of Lieutenant Commander Grant, the second officer to have command, and of Lieutenant Commander Ellison, both of whom are now at naval headquarters here in the city of Ottawa. I think of Lieutenant Commander Pickersgill, who is now in charge of that establishment and who, as a Canadian officer serving in the Royal Navy, spent the last two years on active service, sailing the seven seas, coming back to our midst to perform other important duties. I should like to mention also chief petty officers Jeffries and Smith, who, after all, have had the responsibility for training these two thousand and more recruits who have made such a notable contribution to the defence of our country.

I like to think of his majesty's Canadian ship the corvette *Regina,* which was christened on October 25, 1941, and which distinguished itself in the Mediterranean when it literally blew an Italian submarine out of the water and captured the entire crew. There have been many references to the policy of the minister in naming corvettes after cities, and the results that have flowed from that policy. At the christening of that boat the citizens of Regina donated four radios and four electric toasters, and the Fidelio club, a group of young girls in the city of Regina, have taken the officers and crew of that boat under their wing and kept them supplied with comforts. I like to think of the action of the department, in naming that ship the *Regina,* as a tribute to the gallant young men from the city of Regina and the province of Saskatchewan who have enlisted in the Canadian navy.

I like to think, too, of his majesty's Canadian ship the destroyer *Saskatchewan.* I have taken the naming of that ship as a tribute to the men of western Canada who have enlisted in the Royal Canadian Navy. When the department announced its policy of naming destroyers after leading Canadian rivers, I wrote the minister pointing out that the Saskatchewan was truly representative of western Canada in that it had its source in the foothills of the Rockies, wended its way right across the province of Alberta and across the province of Saskatchewan into the province of Manitoba, where it empties into lake Winnipeg. So that, in the naming of that destroyer the *Saskatchewan,* there was paid a tribute to the men of the three western provinces who have enlisted in our navy. I like to think of the action of the department in naming a cargo boat the *Regina;* I regard that as a tribute to the farmers and to labour in Saskatchewan. The department and the government have recognized the work done and the foodstuffs produced on our farms, which this boat is destined to carry across the Atlantic to the scene of hostilities.

I am reminded, too, of a passage which I picked out not very long ago, and which no doubt will have a familiar ring:

> The British nation can be counted upon to carry through to victory any struggle that it once enters upon, no matter how long such a struggle may last, or however great the sacrifice that may be necessary, or whatever the means that have to be employed.

I do not know of any words that more accurately describe the British point of view or the conduct of the British empire during the last three years. One wonders who uttered that statement. One might think it was Pitt; one might think it was Churchill, or some other great British statesman, but the author of those words was none other than Adolf Hitler, in "Mein Kampf". Twenty-two years ago he accurately appraised the British people; but no doubt on this very night he will regard himself as a greater prophet than warrior.

Mr. DIEFENBAKER: Again reverting to the duplication in the matter of recruiting, if I understood the minister correctly he stated that he did not feel there was any extra cost incurred by reason of the existence of three distinct recruiting staffs, one for the army, one for the navy and one for the air force. The other day I asked the Minister of National Defence what was the cost during the year 1942-43 of recruiting for the army, and at page 3137 of *Hansard* the following particulars were given:

Pay and allowances of military personnel, $870,000, of which $510,000 is chargeable to recruiting	$510,000
Salaries and wages of civilian personnel	50,000
Advertising—newspaper, radio, billboards, etc.	375,000
Travelling expenses	225,000
Miscellaneous — comprising rentals, office expenses, etc., plus costs of special recruiting campaigns not included under above heads	130,000

That makes a total of $1,290,000. The minister indicated that the campaign for recruits for the navy did not add any extra cost, but I am sure he must be mistaken in that regard, for one sees an advertising campaign being carried on everywhere. The point I am trying to make is this, that if these three services would conduct one advertising campaign and one recruiting campaign, there would be a substantial reduction in the cost of securing man-power. There is only one pool, but to-day we have three services competing for the same men. These men are not allocated to the service in which they can contribute the maximum; each service has officers and men endeavouring to secure recruits for that service. So that I should like the minister to give the committee particulars of the pay and allowances of the naval personnel engaged in recruiting; the salaries and wages of the civilian personnel, if any; the advertising costs, travelling expenses, rentals and so on.

Having done that, I would ask him to answer the question I asked a while ago which he failed, I know through inadvertence, to answer. I asked whether consideration had been given by the defence services to the elimination of what must necessarily be a duplication of effort and of cost.

Mr. MACDONALD (Kingston City): The hon. member has said something about advertising by the armed services. So far as I know there has been no advertising for recruits by the Canadian navy. It is true that sometimes one may see posters on billboards, put up by advertising companies, and advertising certain products. But we have not paid out any money in advertising for recruits.

As I said before, our recruiting officers are stationed at the various divisions throughout Canada, and they do other work in addition to recruiting. They are merely there to attend to the recruits who come in to offer their services. In some instances they are paymaster officers, and in other instances, executive officers. But I would not be willing to admit for a moment that that should be charged up to recruiting. We would have those officers in the division in any event. We simply assign one man whose job it is to look after recruits as they come in; but he has other duties, as well. Consequently I find it difficult to allocate to the cost of recruiting any particular amount in these estimates, because, strictly speaking, I do not think there is any amount chargeable to recruiting.

Mr. DIEFENBAKER: I do not wish to press unfairly, but to whom is the advertising charged?

[Mr. Diefenbaker.]

Mr. MACDONALD (Kingston City): It is not charged to the navy; I can say that.

Mr. DIEFENBAKER: Then it must be chargeable to recruiting. Those are the figures I am trying to get. The Minister of National Defence points out, as I said before, that there are military personnel included in the figure of $510,000, who perform additional duties as well as recruiting. He states that $510,000 of the total salaries of military personnel, amounting to $870,000, is chargeable to recruiting. If the minister will say that he has no information on this, and that he cannot say under what authority or head the advertising is charged—

Mr. MACDONALD (Kingston City): What advertising? I do not wish to interrupt, but what is my hon. friend speaking about? Is he talking about advertising for the navy?

Mr. DIEFENBAKER: Yes.

Mr. MACDONALD (Kingston City): I say there is no advertising paid for by the navy; none.

Mr. DIEFENBAKER: Then I do not know where the ads come from which appear on the billboards. I have, I am sure, seen such ads, with the words, "Join the navy".

Mr. MACDONALD (Kingston City): Well, they do not come from the navy. We do not have to do it because, as I have said, we have a waiting list. There are people waiting to get into the navy. It may be that local firms are using pictures of sailors, and that sort of thing, in connection with their advertising. Possibly cigarette firms or victory loan committees are doing something of that kind. But I do not recall any instance where a single cent was authorized to be spent for advertising.

If my hon. friend wishes me to attempt to segregate the recruiting activities in these twenty establishments, as distinct from other duties, I shall try to do so. But it will be extremely difficult, because recruiting forms a very secondary part of their task.

Mr. McIVOR: Why do you not advertise?

Mr. MACDONALD (Kingston City): Because we do not need to advertise.

Mr. DIEFENBAKER: Then I should like to understand the meaning of the return brought down on June 7. It sets out in detail the fact that the Royal Canadian Navy has twenty recruiting stations, with personnel of twenty officers and forty ratings, plus thirty-one Women's Royal Canadian Naval Service voluntary ratings. Is that a mistake? If it is, then I can understand what the minister

has in mind. But the return brought down only the other day set out in detail the officers both of the navy and of the women's auxiliary who were engaged in recruiting, and it was pointed out that there are twenty recruiting stations.

Mr. MACDONALD (Kingston City): Those are the divisions. Those are the men at the divisions, and the divisions would be there in any event. I am sure my hon. friend finds nothing in the return about advertising.

Mr. DIEFENBAKER: No.

Mr. MACDONALD (Kingston City): Not a word is mentioned about advertising.

Mr. DIEFENBAKER: No.

Mr. MACDONALD (Kingston City): Then my hon. friend comes down to the matter of recruiting. I say, yes; there are recruiting officers in the navy, who have other duties as well to perform. For instance, in a division such as the one at London, Ontario, a recruiting officer would not be busy all the time in handling recruits coming in. I must add, however, that that city has done very well indeed. It has given some 2,700 or 3,000 men since the beginning of the war, but that would be at the rate of only three or four men a day. That is not enough to keep a recruiting officer busy. Whoever would do that work at the London office would have other duties to perform as well.

If my hon. friend wishes me to attempt to analyse the time spent on recruiting as compared with the time spent on ordinary, naval divisional duties, I shall be glad to do so. But it will have to be general and rather haphazard.

I repeat that no money is spent on advertising, and that recruiting officers in the navy do other work as well. We may have to come to advertising; I do not know. The time may come when we may have to advertise for certain special branches, where we may find a shortage of men. But at the present time no money has been spent by this department for advertising.

Mr. ROSS (Souris): I understand the minister to say nothing has been earmarked for recruiting. Has the department a publicity and public relations branch?

Mr. MACDONALD (Kingston City): Yes; I gave the details of it the other day.

Mr. ROSS (Souris); In general, or was there a break-down?

Mr. MACDONALD (Kingston City): I placed on *Hansard* the number of officers and the number of civilians, with salaries and wages.

Mr. ROSS (Souris): In the entire naval department there is nothing set up for recruiting purposes, except these offices. Is the minister's auditing department on the same basis as the auditing branches of the other two defence departments? Who is the chief of the auditing branch, and how long has he been in that office?

Mr. MACDONALD (Kingston City): The auditor general is, of course, over our department, as he is over the others. He is the chief.

Mr. ROSS (Souris): Is there any auditing system organized in each defence department?

Mr. MACDONALD (Kingston City): There is a chief treasury officer in the Department of National Defence for Naval Services, who is appointed by the treasury. He is not our appointee. In addition, we have our own financial superintendent, who is a naval appointee. That is the general set-up.

Item agreed to.

6. Signal and wireless equipment, line construction, et cetera, $4,592,188.

Mr. HAZEN: I should like to have a break-down of this item. I am referring to the amount of $986,447.64 expended last year. What part of this was spent for signal equipment; what part for wireless equipment; what for line construction, and what for the items included in the term "et cetera"? From whom were these materials purchased? There is an increase of $3,605,740.36 in the item over the amount expended last year. Why is there such an increase?

Mr. MACDONALD (Kingston City): I cannot give the figures for last year. I am dealing with the estimates for the current year. I shall have to ask my hon. friend to wait until to-morrow or some subsequent day for the information for which he has asked.

Mr. BLACK (Cumberland): What progress has the department been able to make in utilizing or developing devices and appliances to detect the passage of either friendly or hostile ships on the surface or submerged, especially in narrow waters such as the strait of Belle Isle, the strait of Canso and Northumberland strait? There is a belief that at this period of scientific progress we should be able to detect the passage of enemy ships in these narrow waters, and certainly no ship either friendly or hostile should be permitted to move in these narrow waters without a permit. Can the minister give the committee any information on that?

Mr. MACDONALD (Kingston City): It would be excellent if we could prevent hostile ships from moving on our waters simply by denying them a permit, but we cannot do that.

Mr. BLACK (Cumberland): That is not fair. I did not suggest that a hostile ship should get a permit. I say that no friendly ship should be allowed to pass through these waters without a permit, and I am asking whether the department is making any use of the latest devices to detect the passage of hostile ships within a certain distance from the shore.

Mr. MACDONALD (Kingston City): As to our own ships, they do not move in these waters without some sort of permit. There are naval control officers at all the main ports and sub-officers at minor ports. The movement of our own ships is fairly carefully regulated. As to hostile ships and measures to be taken for their detection, I cannot go into that publicly, as my hon. friend will realize, but I can tell him that the matter is under constant investigation by the experts at the British admiralty in London and elsewhere, by the United States naval authorities and by ourselves. Every new device that can be developed to assist in the detection of enemy ships is being studied and developed. Beyond that, I do not think I should go except to say that everybody realizes the importance of the matter raised by my hon. friend and everybody is, I think, working hard on it.

Mr. BLACK (Cumberland): I do not wish to press the minister if he thinks it is not in the public interest to make a statement on the matter. But in narrow waters like the strait of Canso or the strait of Belle Isle it should not be possible for a hostile ship either on the surface or submerged to pass without being detected. I do not press this question for reasons of safety, but I do think that in these narrow waters there should be a certain distance from the shore within which it would be impossible for a hostile vessel to pass without being detected. Can the minister make the positive statement that in the strait of Canso or in the strait of Belle Isle no hostile ship can pass without being detected.

Mr. MACDONALD (Kingston City): I would ask my hon. friend to remember this. As I have said before to this house, the English channel for some part of its length is only twenty-one miles wide; yet the British with all the strength of their navy and with air coverage from the shores have not been able to deny the English channel completely to enemy ships. That will give my hon. friend an indication of the tremendous difficulties in absolutely preventing the passing of a ship even through narrow waters. Not much more than a year ago, as my hon. friend will recall, a German battleship and several smaller German ships sailed through the English channel. That battleship got away in spite of the fact that it was heavily attacked by British warships, aeroplanes and submarines.

Mr. BLACK (Cumberland): Because it took advantage of the foggy weather.

Mr. MACDONALD (Kingston City): There was fog when they started out, but the German ships were heavily attacked in the channel and yet they got through. So that the problem of trying to guarantee complete immunity from attack by enemy ships in this place or that place is very great. All I can say to my hon. friend is that in certain waters in the province of Nova Scotia and on the eastern coast there are certain devices and certain protective measures taken, so far as we can take them, so far as we know enough about them.

Mr. FRASER (Peterborough West): Such as listening posts and detectors?

Mr. MACDONALD (Kingston City): There are various devices which can be used. Beyond that, I do not think I can go.

Item agreed to.

7. Ammunition and bombs, $14,245,890.

Mr. FRASER (Peterborough West): How much of this $14,000,000 is paid to the Department of Munitions and Supply? Is any of this money being paid to the British government for bombs?

Mr. MACDONALD (Kingston City): Part of this money will be paid to the British government. The Department of Munitions and Supply buys all these requirements for us.

Mr. GRAYDON: I suppose that depth charges are included in this?

Mr. MACDONALD (Kingston City): Yes.

Item agreed to.

8. Armament, including rifles, machine guns, naval guns, et cetera, $42,415,548.

Mr. FRASER (Peterborough West): I think the minister should give us a break-down of this. Some of this money will, I imagine, be paid to the British government.

Mr. MACDONALD (Kingston City): Some, yes. I can give my hon. friend the cost for a certain type of ship. Take a destroyer, for example. We estimate that the armament stores would cost $204,300 for the year. We estimate that the armament for a frigate would cost us $187,000.

Mr. FRASER (Peterborough West): That is the new type of ship which is being built?

Mr. MACDONALD (Kingston City): It is a new type of ship. Some of them are built. I am afraid I have not the exact figures for a corvette; it will be somewhat less than a frigate, probably fifty to seventy-five per cent.

Mr. FRASER (Peterborough West): It is only an estimate, anyhow.

Mr. MACDONALD (Kingston City): That is all.

Mr. FRASER (Peterborough West): The minister cannot compute how many days or in how many engagements a frigate or a corvette will be operating during the year?

Mr. MACDONALD (Kingston City): That is right. All we can do is offer an estimate.

Mr. FRASER (Peterborough West): Because if a frigate were in battle for only a week during the year, it would blow away the equivalent of $204,000.

Mr. MACDONALD (Kingston City): We average it, realizing that some would fight a good deal, some not so much, and some would be laid up for a certain time. That is about as close as we can strike it as an estimate.

Mr. FRASER (Peterborough West): Out of that, how much do you figure you would be paying to the British government?

Mr. MACDONALD (Kingston City): I cannot give my hon. friend that at the moment.

Mr. FRASER (Peterborough West): The minister could give me that to-morrow?

Mr. MACDONALD (Kingston City): A good bit of it would come from there. Some of the armament, including certain guns, would be manufactured here; certain others, in Great Britain.

Item agreed to.

9. Fuel cost of ships, $25,257,798.

Mr. FRASER (Peterborough West): Has the fuel capacity of corvettes been increased?

Mr. MACDONALD (Kingston City): The old type corvettes, the hon. member means?

Mr. FRASER (Peterborough West): The corvettes and the frigates. Has the fuel capacity been increased on account of the long distance they have to travel?

Mr. MACDONALD (Kingston City): Of course the new type of frigate has a longer range and a greater fuel capacity than the corvettes.

Mr. FRASER (Peterborough West): That is what I was getting at.

Mr. MACDONALD (Kingston City): I could give my hon. friend some figures concerning costs. The fuel bill is up very greatly, not merely because we have more ships but also because the cost of fuel has advanced very considerably. Take, for instance, destroyers; it is estimated that to fuel them for the year will cost about $5½ million. We estimate that fuel for our corvettes will cost more than $7 millions, and for mine-sweepers, over $5 millions.

Mr. ROSS (Souris): How many corvettes are in service?

Mr. MACDONALD (Kingston City): I do not know whether I should give exact figures, although perhaps it does not make much difference. There are over seventy and under 100. Fuel for Fairmiles will cost about $900,000.

Mr. BLACK (Cumberland): Of this total amount of $25,257,798, has the minister the amounts expended for oil fuel and for coal fuel respectively?

Mr. MACDONALD (Kingston City): Yes. There are not very many coal-burning vessels in the navy, and the amount expended for coal fuel is quite small in comparison with the total sum. Destroyers, frigates, corvettes, mine-sweepers and auxiliary cruisers are all oil-burners; Fairmiles are gasoline-burning boats.

Mr. CASTLEDEN: While the minister is getting these figures, would he include the costs and quantities of each of the different types of fuel?

Mr. MACDONALD (Kingston City): I have not that at hand. I would have to take out the ships which use gasoline and calculate the total accordingly. I am sorry I have not at the moment the total by species of fuel. I know what ships burn gasoline and what burn oil; I could add them together, but it would take some time.

Mr. CASTLEDEN: Could the minister give us the total gallonage of each and the cost of each?

Mr. MACDONALD (Kingston City): I will get that. It will take some time.

Mr. BLACK (Cumberland): The minister has not under his hand the exact costs of the coal fuel and the oil fuel. I wonder if we could get that later.

Mr. MACDONALD (Kingston City): Yes; I will get that.

Mr. BLACK (Cumberland): Has the minister's department explored the possibilities of using powdered coal to a certain extent as an alternative to oil fuel?

Mr. MACDONALD (Kingston City): I cannot say that we have. Our ships are designed, of course, on British models, and naturally we would be guided very much by what is done in England with regard to powdered fuel. I have not heard of any new researches in that field lately.

Mr. JACKMAN: Would the minister say whether any of the ships newly constructed in Canada or elsewhere are equipped for coal consumption, or are practically all of them oil-fuel burning?

Mr. MACDONALD (Kingston City): I do not know of any widening of the field in which coal-burning ships are used. In the Canadian navy there are a few relatively small ships which burn coal. As I say, I do not know of any extension of the coal-burning type of ship.

Mr. JACKMAN: Is coal less economical or less convenient, or are there reasons of space which determine the building of entirely oil-burning ships? The reason why I ask is, of course, that we have coal available on our own coast, in Nova Scotia, whereas there is great difficulty in obtaining oil at the present time, for transportation reasons. Are any coal-burning cargo vessels now being constructed in the United States or Great Britain?

Mr. MACDONALD (Kingston City): As to cargo vessels, I cannot say whether or not any of these are being constructed to burn coal. The whole matter of coal versus oil was thought out in Britain thirty years ago or thereabouts. The old ships of course burned coal. There was a tremendous argument in British naval circles at the time the change was proposed, and the change came before the last war when Mr. Churchill, I think, was First Lord of the Admiralty. At that time, most of the ships changed over to oil for the reason that the range of ships was increased by the substitution of oil. They could carry much more fuel in the same space than if they burned coal. I have never heard of the matter being reopened in England so far as warships are concerned. I have always looked upon the question as having been settled in favour of oil. It must be remembered, of course, that Britain herself has great supplies of coal in England, Wales and Scotland, and her problem of getting oil fuel is much greater than ours because all her oil fuel has to come overseas. So that I should think, if anything could be done to make coal available, either in its ordinary form or in the form suggested by the hon. member for Cumberland, namely powdered fuel, none of these possibilities would be overlooked in Britain.

Mr. ROSS (St. Paul's): Has the number of classes of lubricatng oils been reduced? Can the minister tell us that?

Mr. MACDONALD (Kingston City): I am sorry, I cannot. I shall have to look into it and get a report on the question.

Mr. ROSS (St. Paul's): I know there were seventy-five or eighty classifications of lubricating oil, and at one time they were trying to reduce the number.

Mr. MACDONALD (Kingston City): I shall have it looked into.

Item agreed to.

10. Acquisition, construction, charter, repair and upkeep of ships, $167,571,202.

Mr. ROSS (St. Paul's): I wish to say a few words about this item, and this is the only time I shall have an opportunity to do so. The other night the member for Vancouver-Burrard (Mr. McGeer) used these words:

> Sometimes, in this canoe-minded atmosphere of Ottawa, and in the pervading activity of the attitude of the great lakes, which was so completely hypnotized by the pacific influences of the Rush-Bagot treaty of 1817, Ottawa has forgotten that there is such a thing as a Pacific or an Atlantic ocean.

That would seem to be quite a slur on us in the central provinces and on the great lakes. There are a great many ships on the great lakes, and a great deal of shipping goes through the Soo canal; indeed, before the war it was the largest amount of shipping that went through any canal in the world. We have our master mariners and our sailors on the great lakes, and while a great many of them are still today on lake boats, a great many of them are on the ocean, as are also a great many of our lake boats. They are on the routes where the submarines are and these men are risking their lives. I want to pay a tribute to them. A great many of our sailors who are now in the merchant marine risking their lives in that way come from the great lakes, and many of the men in the Royal Navy and in the Royal Canadian Navy have also come from the great lakes. A great many of our men in the Royal Navy and in the Royal Canadian Navy—officers and men—have come from our yacht clubs. There has been a great activity in the city of Toronto for many years in connection with naval cadets, and our yacht clubs have always been

proud of their affiliations both with the Royal Navy and with the Royal Canadian Navy. A great part of the training of these men was obtained on the great lakes, and we have never exerted any pacific influences on Ottawa with regard to the navy. As a matter of fact, my own city of Toronto has been more navy-minded than any other city in Canada.

I do not know how many men from Toronto are in the Royal Canadian Navy; but, according to the minister's figures, there are 1,722 officers and 20,590 men from the province of Ontario itself. That does not look as if we who are on the great lakes and bordering the great lakes were pacifically minded or had been all these years; had we been, we would not have had that wonderful showing from the province of Ontario.

I take my hat off, and give a great deal of credit, to the officers and men of the navy who are doing such a wonderful job at the present time. Some of them went to the Royal Navy because they could not get into the Royal Canadian Navy at the beginning of the war, and I pay tribute to them for their valour and gallantry in the performance of their duty. I wish to put that on record lest I should be misunderstood. I have no criticism to make of the men of the Royal Canadian Navy or the naval volunteer reserve or the naval reserve. As I say, they are doing a wonderful job under very difficult circumstances. Their job is not a showy one; they are plugging away day in and day out. I know a great many of them and I know the difficulties they have to face. Some have been doing good work as far away as the Mediterranean. They have been through the "shows" over there, but they do not get the glory that some of the other forces do.

I do not think there is as yet any ship in the navy named after either my own province or my own city, and I suggest that when we get one of the new and bigger destroyers we might have it called the *Toronto*.

Could the minister say in a few words what the functions of the various types of ships are? It is not very well understood what the functions of the Fairmile or the corvette are; what a frigate has to do; what is a destroyer, and so on with regard to other ships we may have. A resumé on that question would be interesting. I do not know whether the minister can tell us what the range is or how far they can go and how they are armed, or the number of each classification of ships we have in the navy. There is great misunderstanding on the part of a good many people as to the functions of these various ships.

Mr. MACDONALD (Kingston City): Before I discuss my hon. friend's remarks, somebody asked about the total amount of fuel consumption. I have here the total amount estimated for the year. For bunker in barrels we estimate that we need 5,694,000 barrels; for diesel fuel in barrels we estimate 227,000 barrels; and for gasoline in gallons we estimate 5,336,000 gallons. These are the figures which were asked for by the hon. member for St. Paul's and which I could not put my hand on at the moment.

Mr. CASTLEDEN: What was the cost of each item?

Mr. MACDONALD (Kingston City): The estimated cost of bunker oil is $4.44 a barrel; of diesel oil, $4.66 a barrel; of ordinary gasoline, 27·93 cents a gallon; of high octane gasoline, 32·04 cents a gallon.

Mr. BLACK (Cumberland): What were the tonnage and cost of coal fuel used?

Mr. MACDONALD (Kingston City): I cannot lay my hands on that figure, but I will get it for my hon. friend. It is a small item. I am not sure whether it is 1,000 or 10,000 tons. I know I looked it up some time ago and was rather surprised that it was so low.

I can say to the hon. member for St. Paul's that I hope we shall be able to call a ship of the Canadian navy after his great city. We have adopted the policy of naming destroyers after Indian tribes or rivers, and we do not wish to break away from that practice. It is a simple and convenient way of naming ships, to name them after a river or a tribe or a town, or after a flower as is sometimes done in Great Britain.

Mr. ROSS (St. Paul's): You might name our first cruiser after Toronto.

Mr. SENN: When an application is made to name a ship after a town or city, how is it dealt with and in what way is the final decision arrived at?

Mr. MACDONALD (Kingston City): Years ago when we began to use the names of towns for corvettes we began in a rather unscientific manner and took names as they occurred to us, some of them being of towns that were quite small. As the navy expanded we began to see that we would have to systematize this practice, and for some time we have been using the towns and cities in order of population.

Mr. SENN: Are there any counties that have been honoured in this way?

Mr. MACDONALD (Kingston City): There are one or two. The city of Cornwall asked

to have a ship named after that place, but there is already a famous ship in the British navy called the *Cornwall.* The citizens of Cornwall stated that they would be glad to have a ship named after the county of Stormont, and consequently that name was given to a ship. Yes; we can consider the names of counties.

Mr. SENN: I believe an application was made at one time by my own county. In the first victory loan Haldimand was the first county to go over the top, and the people asked that the county should be honoured by naming a vessel after it. I do not know just what was done, but the request was never acceded to.

Mr. MACDONALD (Kingston City): I shall give consideration to what my hon. friend has said.

My hon. friend from Toronto inquired about the uses to which these ships are put. Shortly after the outbreak of the war the auxiliary cruisers, of which we have three, were converted to their present uses. Their range is considerable, one of them having made a trip to Hong Kong and back to Vancouver. They do escort work, guarding unarmed merchant ships, and carrying out other duties which may be assigned to them. I think everybody knows that destroyers are so named because they were first built to destroy U-boats. That is still their chief purpose. They carry torpedoes, and apart from some motor craft are probably the fastest type of warship afloat. They are very useful in providing a screen for the larger ships and are used to protect ships in convoy.

Mr. ROSS (St. Paul's): They have considerable fire power.

Mr. MACDONALD (Kingston City): The corvette was designed mainly for escort duty with the convoys. It is built somewhat on the lines of the whaling ship. Corvettes can be turned out relatively easily for a ship of war, and they have done excellent work in this war. If it had not been for these little ships, the situation might be very different for us to-day. It takes about as much time to build a destroyer either in Great Britain or here, as it does to build three corvettes. They can be built on the lakes and taken down to the ocean through our canals and rivers, something which could not be done with a destroyer. We were fortunate in having started to build these ships early in the war. We have more than seventy of them in our navy, and we have built a great many for the navy of Great Britain. Then the frigate I would classify as being in between the corvette and the destroyer.

Mr. ROSS (St. Paul's): We have not any of them yet?

Mr. MACDONALD (Kingston City): Some of them are afloat, but they are just coming into use. Generally speaking, they serve the same purpose as the corvette. They have more speed and a greater range than a corvette. They are larger and have more accommodation for the crew, which is larger than that on a corvette.

Mr. HAZEN: Is it expected that the frigates will take the place of the corvettes?

Mr. MACDONALD (Kingston City): I think we shall always have corvettes.

Mr. DOUGLAS (Weyburn): Has the frigate heavier fire power?

Mr. MACDONALD (Kingston City): About the same, so far as guns are concerned. The corvette is not to be trifled with because it has good hitting power. It lacks the speed of the destroyers or the larger ships. The frigate is about the same as the corvette in fire power; it has more guns, but they are of about the same strength.

Mr. ROSS (St. Paul's): Is it as good a sea boat as the corvette?

Mr. MACDONALD (Kingston City): It is said to be better. Those who have tried them are very much delighted with the frigates, which are said to be splendid in every way.

Mr. REID: Could the minister tell the committee the speed of the corvette as compared with that of the submarine?

Mr. MACDONALD (Kingston City): I think about the greatest speed a submarine can make on the surface, so far as we know, is about nineteen or twenty knots. It is difficult to estimate these things accurately, I suppose, because actions of this kind are carried through so rapidly. When a submarine submerges, however, its speed is cut down to less than half the surface speed; I think about eight knots is the best it can do under water. A corvette can easily deal with a submarine when it is submerged, but on the surface it would be desirable if the corvette had a little more speed; I will put it in that way. The frigate supplies that need and is consequently a welcome addition to the fleet.

The mine-sweepers are, of course, intended to sweep up and destroy mines laid by the

enemy in our waters. As a matter of fact, we have used a great many of these mine-sweepers in the same way as corvettes, and in many respects they are the same sort of ship. They have guns; they have depth charges; they have asdics and so on.

Mr. ROSS (St. Paul's): Have we about enough mine-sweepers now?

Mr. MACDONALD (Kingston City): We have a good fleet of mine-sweepers. Fortunately we have not been bothered very much by enemy mines, but we are ready to deal with them if they do show up in our waters.

Then I pass on to the Fairmile, which is a wooden ship with a fairly good turn of speed, but of course without the endurance or the strength or the seagoing qualities of the corvette. In its present form at any rate the Fairmile will never be a transatlantic escort ship. It is very useful in coastal waters, such as the Irish sea or the English channel or the Bristol channel, and on this side it is useful in such waters as the river and gulf of St. Lawrence, and thereabouts.

Then we have the fishermen's reserve, about which my hon. friend asked previously. I have counted up the number here, and I think we have about fifty fishermen's reserve boats. In addition, of course, we have a great many other harbour craft, which are not fighting ships at all, such as tugs, some tankers, and gate vessels, which are used at the gates which guard the entrance to certain of our harbours, where there are nets stretched across which can be opened and shut at will. These gate vessels attend to that work. There are a great many of these other ships, which I do not think I need mention particularly, but which in their own way are all useful.

Mr. ROSS (St. Paul's): The Fairmile is not really a fighting ship, is it?

Mr. MACDONALD (Kingston City): Yes, it can fight; it has the means.

Mr. ROSS (St. Paul's): That is what I do not quite understand. Is it not more of a reconnaissance ship? It has no torpedo tubes, like the British ship of the same sort, and it has not much fire power. Of course it has depth charges—

Mr. MACDONALD (Kingston City): Yes.

Mr. ROSS (St. Paul's): —and I suppose its speed would make up for whatever it might lack in dealing with a submarine, but I was wondering if it was really a fighting ship.

Mr. MACDONALD (Kingston City): Yes; it has depth charges and guns, but it is a wooden ship and it is not extremely powerful. It has more speed than a corvette but, as I say, it is mainly useful in coastal patrols and narrow waters, such as the gulf and river St. Lawrence.

Mr. DOUGLAS (Weyburn): Is it customary, when ships are sunk, to give the same names to new ships? I ask this because the minister mentioned the practice of naming some of these ships after cities across Canada. The town of Weyburn was greatly honoured by having a corvette named after it, and the citizens of that town took great interest in the welfare of the officers and men of that ship. We sent radios for the entertainment of the men, and the women of the town supplied them with comforts and kept in contact with the crew. Naturally we felt very badly about the loss of the ship, and we are hoping that at some future date there will be another *Weyburn* and that the citizens will be allowed to take the same interest in the welfare of that ship. I wondered if there was any tradition in the navy against that.

Mr. MACDONALD (Kingston City): No, not if the ship has been lost in action; we consider it quite a good thing to give the same name to another ship. If it has been lost through a marine disaster, a collision or something of the kind, it is not considered lucky to use that name again, at least for some time. But when a ship has gone down fighting, as the *Weyburn* did, I am sure it would be an honour to the navy to have another ship of that name, and in due time we shall have another *Weyburn*. I do not know whether any ship is available now; it may be some months, but we have not forgotten the *Weyburn*. A ship called the *Charlottetown* was lost in action last year; this year we have given that name to another ship. So it is with the destroyer *Ottawa,* which went down fighting while protecting a convoy last summer. We have given that name to one of the destroyers lately received from Britain.

Mr. CLEAVER: On behalf of my constituents in the riding of Halton I should not like these naval items to pass without saying a word of appreciation and congratulation to the minister, the officials of his department, and the officers of the navy in regard to the tremendous expansion that has taken place in Canada's navy. We in Halton are rather navy-minded, since we were so fortunate as to have two of these little ships named after towns in the riding, the *Burlington* and the *Oakville,* and the minister and the admiral of the fleet were so gracious as to come to the riding for the christening

of these vessels. So that it is only natural that the people of Halton should be very navy-minded.

On looking over the record, I cannot help but be very proud of my native province of Ontario in this connection. The hon. member for St. Paul's has referred to this matter already this evening, but I know he will not mind if I say something about it also. Our little navy, at the opening of the war, had just fifteen small ships and a personnel of fewer than two thousand. As we know, it has grown until now it has something over 550 ships and a personnel amounting to two-thirds the peace-time establishment of the British navy. The story is almost unbelievable and would not have been possible but for the very best and most efficient management and direction on the part of the minister's office and the permanent naval force, as well as the greatest of cooperation on the part of the civilians of this country.

I should like to put on record a few items of particular interest to Ontario. Though a land-locked province, except for the waterways of the St. Lawrence, Ontario has contributed nearly forty per cent of the manpower of the Canadian navy as it stands to-day, and has built just over one-half of the ships of that navy. Within Ontario there are seven reserve divisions of the Royal Canadian Navy. These divisions are the recruiting and basic training establishments of the Royal Canadian Naval Volunteer Reserve. They are situated at the following centres: Hamilton, H.M.C.S. *Star*; Kingston, H.M.C.S. *Cataraqui*; London, H.M.C.S. *Prevost*; Ottawa, H.M.C.S. *Carleton*; Port Arthur, H.M.C.S. *Griffon*; Toronto, H.M.C.S. *York*; and Windsor, H.M.C.S. *Hunter*. Depending upon the area and population which they serve, these Ontario training establishments vary in size. H.M.C.S. *York*, at Toronto, with a complement sometimes as high as 1,800, is the largest inland training base in Canada, and one of the largest in the entire British Empire.

These seven divisions, as are all R.C.N.V.R. divisions in Canada, are under the command of Captain E. R. Brock, R.C.N.V.R., commanding officer, reserve divisions.

H.M.C.S. *Conestoga* at Galt, Ontario, has the distinction of being the only ship in the Royal Canadian Navy manned entirely by women. It is the W.R.C.N.S. basic training centre, with a complement approaching the 600 mark.

So that hon. members can fully appreciate how thrilled the people in my constituency were when, less than a year after the minister and the admiral visited Oakville for the christening of the ship *Oakville*, we read in the press that the *Oakville* had made her first kill. In the middle of the night the corvette *Oakville* had rammed a German submarine three times, and on the third occasion had made a really good job of it. The crew were taking no chances, and a boarding party of two, in the dark of night, jumped from the *Oakville* aboard the submarine, and bumped off three men on the deck. One man went below to take care of the German crew.

Mr. FULFORD: One of them was a Brockville boy.

Mr. CLEAVER: Quite true. Checking over the crew of the *Oakville*, it would seem that it was the *Oakville* only in name. Men were there from all parts of Canada.

At the outbreak of war our naval officers had a rather serious choice to make. There were three types of navy to choose. One was a navy of capital ships, the second a navy of submarines, and the third a navy for convoy duty. Fortunately for Canada I believe—and I believe the house believes—the correct choice was made. Canada decided we would specialize in convoy work. Look at the result to-day. To-day the Canadian navy is doing half the convoy duty on the Atlantic ocean, and has safely convoyed something over 13,000 vessels, with a loss of less than one per cent. A Canadian naval officer and a Canadian air officer have complete operational command over the entire western half of the Atlantic. Therefore I wish to add my word of congratulations and appreciation with respect to the tremendous task which has been so well carried out.

Just one word in closing. It is difficult for us to appreciate the size of the Canadian navy. Looking over figures which might make a comparison possible I happened to find this: Do hon. members know that in this year of this war we are spending on the Canadian navy an amount greater than Canada's total expenditures during the peak year of the great war?

Mr. HAZEN: In the course of his statement on Monday night about the work of his department and the activities of the Canadian navy, the minister said, as reported at page 3406 of *Hansard:*

> To-day the Canadian navy boasts a fleet of over 550 ships of all types.

That statement must have been carefully prepared. I believe it was given fairly wide publicity in the press. I regret to say it was not correct, and upon reflection I think the minister will agree with me that it was not

correct. I think the record should be kept straight, and the size of our navy should be kept in its proper perspective. We get nowhere by boasting.

We have no capital ships. We have no ships of many other large classes. The minister was much nearer the mark, and much more accurate this afternoon when he said that our navy is a small-ship navy. With that statement I find no fault. But the statement he made on Monday evening should be corrected.

How many of the 550 ships, or thereabouts, in our navy are manned by over 100 men? How many have establishments of over fifty men? How many are manned by over twenty-five officers and men? If we have seventeen destroyers—and I do not know the exact number—and if each destroyer has a crew of 160—and that is about the establishment of a destroyer; it may be a little more or less—then we would have 2,720 men on our destroyers. If we have 120 corvettes—and I do not know the exact number—and the establishment of a corvette is fifty-eight men, then we would have 6,960 men on our corvettes. This accounts for 9,680 men out of the 20,000 men in our navy who are at sea. Then, of that 20,000 we have 1,400 in the British navy. The remainder of men at sea would be about 8,920, and they would be distributed among 413 ships, or an average of about twenty-one officers and men to a vessel.

Vessels of this size cannot be described or regarded as very large fighting ships. Last May when the minister's estimates were before the house he told us we had about seventy-five corvettes, about forty-five mine-sweepers, about a dozen armed yachts, about two dozen Fairmiles and between twelve and twenty destroyers in the navy. Would he tell us how many destroyers, corvettes, mine-sweepers and Fairmiles we have in the navy to-day? Have improvements been made in the corvettes? How many Fairmiles are in commission? Of those in commission how many, on an average, are on active service, and how many laid up for repairs? Is it the intention of his department to increase the number of Fairmiles? Have they given satisfaction?

The break-down that he furnished us with states that $74,979,157.67 was spent for the acquisition, construction, repair and upkeep of ships during the past fiscal year. This year the estimated expenditure is $167,571,202. That is an increase of over 100 per cent. I would ask the minister if this means that the number of ships which were taken into the navy last year, namely about 150, is to be doubled, or does it mean that different and more expensive ships are to be built? I would also ask the minister if there are many ships under charter by his department, and whether he can tell us the approximate number under charter and just what kind of ships they are and the nature of their charter parties.

Mr. MACDONALD (Kingston City): First of all I would ask my hon. friend, in what respect does he allege that my statement as to the Canadian navy consisting of 550 ships of all classes is not correct?

Mr. HAZEN: I state that you cannot say you have a navy of all classes when you have no battleships, when you have no first-class, no second-class and no third-class cruisers, when you have no submarines, when you have no aircraft carriers and when you lack several other types of ships which are found in any of the great navies of the world.

Mr. MACDONALD (Kingston City): When I speak of a navy of 550 ships of all classes what I mean is, not that we have every type of ship in our navy, but that 550 is the total number of ships of all kinds, great and small, that we have. That is what I mean, and I think my hon. friend might once in a while give the benefit of the doubt to this department, and not constantly put the most unfavourable possible construction on what is said or done.

Mr. PERLEY: I am sure we all admit that the Canadian navy has made wonderful strides and that a great deal of credit is due to Canada and to the department for what has been accomplished. While sitting here I have been listening to a number of members doing a little boasting about the corvettes and other ships named after their towns or districts. The hon. member for Regina gave quite an oration to-night along that line and we listened to another just a few moments ago. I did not intend to take any part in this debate, but after what other members have said I feel impelled to speak of my town and the province of Saskatchewan. Saskatchewan itself has a splendid record so far as the navy is concerned, because out of the total navy personnel of 59,000 officers and ratings that province has contributed 3,787, and we shall contribute a great many more officers because I am sure that those who are now undergoing instruction will acquit themselves creditably.

My own district and in particular the town in which I reside have a splendid record. A great number of our boys have joined the navy, and I should like to mention in particular two boys from my town, Garden and Cooke, one of whom has distinguished himself by working his way up until he is now

second in command on one of the corvettes. His name is Grant Garden. The other boy from my town, Leighton Cooke, is in the medical service in the navy, serving as one of the chief officers on a hospital ship which has sailed on the Atlantic and which at last reports was in the Mediterranean. I wish that to go on the record here, and if there are to be any more ships named after certain districts or towns I think the Minister of Agriculture will join with me in suggesting that Qu'Appelle be given to a corvette or some other naval vessel. It is a historic name in our province. Fort Qu'Appelle was an important fort in the days of the early settlement of our province and in the northwest rebellion. So that I suggest to the minister that the name Qu'Appelle be given to one of our new corvettes.

Mr. HAZEN: I asked the minister a number of questions a few minutes ago about the establishments on the ships in the Canadian navy. Could he furnish me with an answer to those questions this evening?

Mr. MACDONALD (Kingston City): My hon. friend wants to know the number of men in the crew on each type of ship; is that it?

Mr. HAZEN: No. My question was this: How many of the 550 ships or thereabouts in our navy are manned by crews of over 100 men; how many have an establishment of over fifty men; how many have an establishment of over twenty-five men?

Mr. MACDONALD (Kingston City): I do not know that I can give my hon. friend the exact number of ships, but I can tell him that all destroyers would have a crew of over 100 men, and frigates also. Corvettes and mine-sweepers would all have crews of more than fifty men. The usual crew of a Fairmile would be less than twenty-five. I do not think I can give publicly the exact number of destroyers, corvettes, mine-sweepers or any other class of fighting ship that we have. I have never given that. I have always stated that we have something like 500. That is as near as I can give it. Our auxiliary cruisers would have a complement of something over 200.

Mr. HAZEN: I also called the minister's attention to the fact that last year when his estimates were before the house he gave us in round figures, and I presume they were approximately correct, the number of destroyers, the number of corvettes, the number of yachts, the number of Fairmiles, and I think some other types of vessels in the Canadian navy. I wonder if it is not possible for the minister to give us to-night in round figures similar information, in view of the fact that the navy has increased by about 150 ships during the past year.

Mr. MACDONALD (Kingston City): I cannot give my hon. friend exact figures. To be very general, the number of destroyers is more than twelve and not quite two dozen. As I told the hon. member for Cumberland, we have over seventy corvettes in commission at the moment. We have nearly as many mine-sweepers as corvettes, and about an equal number of motor launches of one kind and another. We have also various patrol craft and auxiliary vessels—harbour patrol craft, fishermen's reserve vessels, and the like—making up the rest of the navy.

Mr. GREEN: Is the minister satisfied with the position in escort vessels? Last February a statement was made by Desmond A. Clarke, director general of shipbuilding, that it was most important that we should get more men to work building these escort ships. He estimated the number of men required as "in the thousands"—

> "And we need them right now, not for cargo ships but for fighting escort vessels," he said. "We must lick the submarine. There is no use building more cargo ships to have them sunk."

That was in February, and I understand that considerable progress has since been made in getting additional escort vessels. But what is the situation at the present time? Is Canada building sufficient escort vessels to give the navy a reasonable chance to do its job?

Mr. MACDONALD (Kingston City): It is difficult to say whether we have enough escort vessels. We could use more, of course; so could every navy in the world, I suppose, if it had the men to man them. I can only say that we have tried to keep reasonable accord between our training of men and our production of ships. We are getting just about as many ships as we can comfortably man.

Mr. GREEN: The minister is satisfied, then, with the production of escort vessels in Canada?

Mr. MACDONALD (Kingston City): So far, on the whole, yes. There have been occasional disappointments; there have been delays, and many of them are unavoidable. Take the procurement of machinery; it is very difficult to get all the machinery for these ships on time. Much of it is delicate and intricate; some of it has to be obtained from factories outside this country, and all sorts of things may occur to delay the furnishing of materials, but these are disappointments which one has to expect. On the whole I am not dissatisfied.

Not long since, the First Lord of the Admiralty of Great Britain, speaking in the House of Commons, I think on his own estimates, said that this country had made remarkable progress in shipbuilding, considering what it began from before the war. My hon. friend knows that the shipyards in the west and on the east coast were practically idle. I do not suppose that the tonnage built in Canada before the war, say in 1938 and 1939, would amount to more than a few thousand tons a year. Now it is well over a million tons, including cargo and naval ships. Mr. Alexander was happy and generous enough to pay a deserved tribute to what had been done.

Mr. GREEN: The minister is satisfied with the production of escort vessels in Canada now?

Mr. MACDONALD (Kingston City): On the whole, yes.

Mr. GREEN: What progress has been made in the production of destroyers? We commenced some time ago. How is the work progressing? There were newspaper dispatches in March of this year to the effect that there was difficulty in getting some of the equipment from the British manufacturers, that is, some of the data, that they were holding out on information which was necessary in order to proceed with the construction of these ships. If that was so, it was a serious situation. Would the minister tell us the position at the present time, and would he also let us know whether more destroyers are to be built in Canada, and whether this work is being carried on in such a way that it will be possible for us to build destroyers after the war in this country?

Mr. MACDONALD (Kingston City): I am glad my hon. friend raised the question about the supply of machinery and materials from Great Britain. Statements were made, I am sure in all good faith, that the British manufacturers were not willing to part with their plans for machinery. I think that arose over an act of the British censor, in stopping some plans which were being sent out from Britain to a shipbuilding firm which is building destroyers in Halifax. The British censor, acting I have no doubt under the censorship regulations, returned these plans and said he would not let them pass through to this country. That delayed for some months the securing of these plans, and it was supposed by some that British manufacturers were holding them up, when as a matter of fact the delay was caused by the British censor. I am glad my hon. friend brought that matter up, because I wish to do justice to the British manufacturers and not have it thought that they deliberately withheld plans in order to concentrate all shipbuilding construction in their own country. That was not the situation. On the other hand, I understand how the people in Halifax would feel. Not being able to explain this delay, knowing the plans should be there, and not finding them there, they would assume that there was some deliberate policy of selfishness behind it. So much for that.

Mr. GREEN: What about the rest of my questions, namely the progress which is being made in the construction of these destroyers, whether more are to be built in Canada, and whether it will be possible for Canada to build destroyers after the war?

Mr. MACDONALD (Kingston City): We have two destroyers building in Britain, very near completion. I hope they will be completed within a couple of months. In addition, we have two building in Canada. My hon. friend asks as to the progress made on these two. It is on the whole satisfactory, considering that this is the first job of the kind. Again, we are finding some difficulty about getting the machinery in on time, but we are endeavouring to speed it up. We hope to get the ships out not too far away from the contemplated completion date.

As to whether we in Canada will continue to build destroyers after the war, if there is a Canadian navy, as I hope there will be, destroyers will form part of it, and there is no reason why they cannot be built in Canada, particularly in peace time. There will not be nearly as much trouble about getting skilled help from Great Britain in peace time if we need it, as there is today. It is very difficult to get skilled shipbuilders out of Britain now because they need them all there. After the war that condition will not apply to nearly as great an extent as it does now and consequently there will not be the same obstacle to the building of destroyers in this country. The construction will cost more, probably, than if they were built in Britain; otherwise there is no reason why we could not train skilled shipbuilders here to do the work and do it well.

Mr. GREEN: Would we be able also to build light cruisers in Canada?

Mr. MACDONALD (Kingston City): Yes; I think a cruiser would be easier to build than a destroyer, which is one of the most difficult of all warships to build on account of its tremendous hitting power and strength contained in a very narrow space. If you can build a destroyer, I think you can easily build a cruiser.

Mr. ESLING: Early this year Nelson, in the eastern portion of British Columbia, through the board of trade of that city, submitted to the minister's office blueprints and specifications and the fullest details of the community centre in which the city has invested $300,000. It asked the minister if he would not give consideration to the use of the civic centre for the purposes of a naval training school. There are recreation grounds and there are ample facilities in this community centre. There is ample accommodation for the purposes of residence, and the city of Nelson has contributed generously in men to the three arms of the services. It has responded most creditably to the six loans. But it has not had recognition of any kind whatsoever from the government in the way of war industries or the establishment of any war service.

I want to ask the minister if in all fairness he will not give consideration to the request of the city of Nelson. Will he not look into these plans. We have there not only accommodation in the civic centre but about 100 miles of waterfront including Kootenay lake, which offers the most acceptable facilities for naval training. Perhaps the minister in a moment of generosity will give consideration to the request from that city.

Mr. MACDONALD (Kingston City): I thank my hon. friend and I certainly will give consideration to his request. I remember very well the letter from the board of trade. The best I have been able to do is to give the name of *Kootenay* to one of the destroyers, and while that is not a material advantage to the people, it is some recognition. I shall keep fully in mind the possibilities of Nelson, and again I thank my hon. friend for having drawn the matter once more to my attention.

Mr. ROSS (St. Paul's): How does a mine-sweeper compare with a corvette in cost? Are they not about the same price?

Mr. MACDONALD (Kingston City): Cost?

Mr. ROSS (St. Paul's): Yes; cost of production.

Mr. MACDONALD (Kingston City): The larger mine-sweepers cost more than corvettes. There are various grades of mine-sweepers. The larger ones are more expensive than the ordinary type of corvette, and then you grade down to the smaller ones, which are about the same as the corvette, while there are some others not so expensive as the corvette. They run in various sizes.

Mr. ROSS (St. Paul's): I have in mind the larger mine-sweepers which cost more than the corvettes, and I was wondering if they were continuing to make these vessels. Has the corvette not proved better as far as convoy work is concerned?

Mr. MACDONALD (Kingston City): I think they are both needed; both have their uses. We have more corvettes than mine-sweepers, it is true, but the difference is not very great, and we are continuing to build both.

Mr. ROSS (St. Paul's): The mine-sweeper has not the same range as the corvette. Is that not one of the difficulties?

Mr. MACDONALD (Kingston City): Usually that would be true. It depends on the type of mine-sweeper the hon. member has in mind. The corvette has a little more than some of the mine-sweepers. There are several grades of mine-sweepers. Generally speaking, the corvettes have greater endurance, but some of the mine-sweepers come up fairly close to them—the larger type.

Mr. HAZEN: What is the tonnage of the corvette and the tonnage of the Fairmile? Can the minister give some idea of the tonnage of the smaller craft that are fitted for the many duties of modern sea warfare?

Mr. MACDONALD (Kingston City): I do not quite see the point of the question and I am not sure whether it should be answered. I do not see the point of asking for the tonnage of corvettes and making such things public. We do not usually do it.

Mr. HAZEN: I will not press for it if the minister does not think it should be answered.

Mr. MACDONALD (Kingston City): I can tell my hon. friend privately what it is for the various types of mine-sweepers, but I am inclined to think we should not make it public. We have never given to the public the exact dimensions of ships, and I do not think I should do so.

Mr. KNOWLES: There is just a word I should like to say. At the moment I happen to be the only one of the Winnipeg members in the house, and so I feel I would be remiss in my duty if I did not join with others who have expressed pleasure at the honour conferred on various cities and towns in the names given recently to Canadian ships of war. The people of Winnipeg are quite honoured in the decision made to name a ship after our city, and already considerable interest is being taken in this ship, as will be taken in the crew. Perhaps the committee might enjoy a bit of a slip which the minister made in this connection. I understand he wrote to the

mayor of Winnipeg suggesting that his wife might come to the head of the lakes and christen the ship. It so happens that Mayor Coulter, although he is anxious to serve his country in every possible way, has been unable, I understand, to find a wife for the occasion. He happens to be a bachelor.

Mr. McNIVEN: The hon. member said he was the only Winnipeg member in the house. Is he aware that two Winnipeg members are on active service?

Mr. KNOWLES: I thank my hon. friend for mentioning that fact. I had it in mind and intended to state it while I was on my feet. I am grateful to him for mentioning it.

Mr. ADAMSON: As one of the members who happen to have taken part, a rather inglorious part, being merely blown out of a window in the Halifax explosion in 1917, having subsequently gone to sea on convoy duty, I wish to say one or two words on behalf of the men who are now carrying out this duty. In those days the convoy that left Halifax immediately after the explosion travelled at an official speed of four knots. Actually it was about three and one-half knots, or about a good walk. If anyone wants to know how long it would take to walk across the Atlantic, I may say that it would take thirty-one days, because that is how long we took on that convoy across the ocean. Fifty-seven ships went loaded with munitions, ships similar to the *Mont Blanc* that blew up, one caught fire half way across the Atlantic, and we had to go and put out the fire. There is no job that requires the same constant vigilance, unseen and unsung, and the same attention to detail, as the convoy. There are few medals issued and many of the men do not get a chance for action. The success is measured by the delivery of the convoy to the other side. The other day Mr. Churchill said that a full ship delivered is a great deal more valuable than a ship built. That can be easily understood when one visualizes what a ship can carry.

The minister has been twitted about matters of expenditure. There is an incident I always remember about my first trip to sea in an escort vessel with a convoy. We were battened down below decks; the watertight doors were shut, and I am free to admit that I was nervous. I was concerned about our chances if we were hit, and I asked the chief engineer, who was of course, Scotch, about this. He said to me, "My boy, the Germans are a sensible race; they know how much it costs to run this ship, and they know she is far more use to them afloat than sunk, so that there is no use in worrying". I suggest to the minister that he remember that when he is asked what it costs to run the navy.

There is a question I wish to ask with regard to our armed merchant cruisers. Is it the policy of the government to have a commodore with each convoy, and is that commodore a British or a Canadian officer? Do our armed merchant cruisers still go out with convoys? I know the *Jervis Bay* and other ships saw action at one time, but I should like to know if we have armed merchant cruisers in our navy. My next question may have to do with the Minister of Munitions and Supply. For some time I have been seeing a number of mine-sweepers in a Toronto shipbuilding yard; I know them by number, if not by name, because I have been passing them week after week. Why have these ships not reached tide-water? Is it on account of man-power? Why are they afloat but unfinished?

Mr. MACDONALD (Kingston City): It would be only in the last month that a ship could leave Toronto for tide-water, because of ice conditions in the river and lake and canal.

Mr. ADAMSON: They have been there since last October.

Mr. MACDONALD (Kingston City): Unless they were got out before the freeze-up they would have to stay all winter. It would not be on account of man-power, so far as we are concerned. There may be some question of machinery, and I shall find out about that. There is a commodore with every convoy, and so far as I know these are British officers. As to whether auxiliary cruisers and the like make up the escorts for convoys, I think that is a matter I would have to discuss privately with my hon. friend.

Mr. FULFORD: I wish to thank the minister for having named two Canadian warships after two towns in my constituency. Great honour has been paid to the towns of Gananoque and Brockville by making ships bearing those names an integral part of the Canadian navy. It would do the minister's heart good to see the way in which the people of these towns have constituted themselves foster parents of these ships and the spirit with which they have organized to see that comforts are sent periodically to the men. I should like to enlarge upon the statement made by the hon. member for Halton (Mr. Cleaver) in whch he referred to two men from the corvette *Oakville* having boarded a German submarine. As I stated previously, one of

these men came from Brockville, but I neglected to say that by now he probably wears the D.S.O.

Mr. BLACK (Cumberland): There is the greatest good-will toward the navy in Nova Scotia, as is evidenced by the comforts sent to the men of the navy by the ladies of the I.O.D.E. and other organizations. However, there is some criticism and misgiving about the time that some of these ships spend in port undergoing repairs or for other causes. When the *Cariboo* which ran between Nova Scotia and Newfoundland, and certain ore boats were sunk, many felt proper patrol had not been furnished. Yet navy vessels were tied up at the port of Halifax. I am not offering any criticism, but I think the minister should make a statement with regard to the cost of repairs and the time it takes to carry them out. The item we are now considering is for $167,571,202, and covers the upkeep of ships.

Mr. MACDONALD (Kingston City): It is impossible to keep a ship at sea for 365 days in the year, but there are people who think that should be done. Every time they see a ship at Halifax, Saint John or Sydney or in any other port they express surprise. It just cannot be done because ships must come in for a refit or repair, sometimes made necessary by enemy action, or sometimes by ordinary marine casualty. Instead of spending too much time in port, I think our men are being driven too much. Some have not been having the leave they should have. As my hon. friend knows, much of this repair work is carried on in private yards. A considerable strain has been placed upon these yards as well as upon our own dockyards. The skilled men are not available. When you enlarge an industry some twenty or thirty times, as we have the shipbuilding industry, you are bound to have a good deal of dilution; you will have many green men. The result is that repairs are not carried on as rapidly as they would be in peace time when experienced shipwrights were available everywhere. I can say, however, that so far as we are concerned we are hastening the repairs of ships just as much as possible. We are not allowing ships to remain in ports any longer than is absolutely necessary, and so far as I know no sinkings have occurred anywhere through any carelessness or complacency in these respects.

Mr. ISNOR: Does the hon. member refer to ships being repaired at H.M.C. dockyards or the Halifax shipyard?

Mr. BLACK (Cumberland): I made no special complaint about any particular yard.

I was referring to some misgivings that for some reason or another some of our ships have been in port when they should have been performing useful and necessary services in connection with convoy duties. Again I wish to point out that there is not the slightest reflection on the crews of these ships; there is the utmost good-will toward them on the part of people in the seaport towns of Nova Scotia, but I think it well to get an explanation and some reassurance from the minister that there is no cause for complaint in this regard.

Mr. ISNOR: I agree entirely with the thought expressed by the minister in regard to the time spent ashore by the crews of these ships. I was anxious to ascertain just what the hon. member for Cumberland had in mind in seeking this information, because I know that the workmen at both H.M.C. dockyard and the Halifax shipyard are working at top speed practically all the time. It must be borne in mind also that many of the ships of the Canadian navy are old, particularly those which were turned over to us by the United States.

Mr. MACDONALD (Kingston City): Twenty-five years old.

Mr. ISNOR: They range from twenty-five to thirty years old and require a great deal more attention than do the more modern ships. If I remember correctly, I believe it is estimated that they require something like thirty out of every ninety days for overhaul and general repair, which means that the average twenty-five-year old destroyer must spend one-third of the time in port being overhauled.

While I am on my feet I feel that as one member from the maritimes I should take exception to the attitude which has been exhibited by the hon. member for St. John-Albert. Like the minister, I was at a loss to follow the reasoning of the hon. member in his questions not only this evening but also a few days ago. He took exception to the amount of money being spent in the maritime provinces in construction, and in general to the expenditures in connection with the expansion of the Royal Canadian Navy. It may be true that in New Brunswick not as much has been spent as the hon. member would like, but on the other hand an exceptionally large amount has been spent in Nova Scotia. Any member from the maritimes, or any member who had an opportunity of visiting Nova Scotia in 1940 and viewing the work being done by the navy at H.M.C. dockyard, Halifax, would appreciate at once the common sense and reasonableness displayed by the officials of

the navy department in making those expenditures there. It is the natural gateway for outgoing and incoming ships, both Canadian and British. Any hon. member would appreciate the manner in which convoys are assembled in Halifax harbour and Bedford basin, that great sheet of water four miles wide by six miles long where the combined fleets can assemble and manoeuvre at any time, where convoys can be drawn up and taken out to sea.

I say it does not become any member from the maritimes to be critical in regard to the expenditures in that part of Canada, which certainly is doing its part not only so far as the army is concerned but also, and principally, so far as the navy is concerned. I know that in the early days the navy department could not accept all those from the fishing villages who wished to join up; they were postponed time and again. With regard to enlistments in the army, the percentage figure for Nova Scotia is something like 44·1 per cent as against 12 per cent or as low as 9 per cent for some of the other provinces. So also have we made an exceptionally fine showing in regard to enlistments in the navy. Therefore I say to the minister that we appreciate the money that has been spent in Nova Scotia, and I do not believe the people of the maritimes will accept with good grace the statement of the hon. member for St. John-Albert, in somewhat slighting terms, that perhaps the fact that three ministers of the cabinet came from Nova Scotia accounted for the large amount of money spent in that province. I say it is a credit to Nova Scotia to have in the cabinet three men such as the Minister of National Defence (Mr. Ralston), the Minister of Finance (Mr. Ilsley), and the Minister of National Defence for Naval Services (Mr. Macdonald). I think it is to the credit of any province that it can produce such men. Instead of criticizing the efforts of one particular minister from the maritimes, I think every maritime member should be ready to compliment the minister upon the excellent work he is doing for Canada.

If the hour were not so late, Mr. Chairman, I should like to offer one or two further observations. I do not know whether or not this item will be carried over until to-morrow, but perhaps I might proceed to present one or two criticisms or rather suggestions. Coming up on the train a short time ago, I talked with a number of ratings, who questioned the wisdom of the minister's statement with respect to the use of aircraft carriers in a navy such as ours. I do not wish to hold up the estimates, so that I shall proceed to enlarge upon this thought as quickly as possible; it is offered to the minister not as expert opinion but rather so that he might think it over. It is suggested that instead of an expenditure such as would be entailed in connection with an aircraft carrier, the money would be better invested in a cruiser or cruisers or in high-powered tribal-class destroyers, such as we are now adding to the navy. A craft more powerful and faster can carry out the duties which I believe rests with this country, namely, that of convoying and defending the ships which are carrying munitions and supplies and troops overseas. I could enlarge on that to a great extent, but the hour is late, and I shall reserve anything further until a later date. I thought, however, I should at least take my stand in support of the minister, who is doing his best. The people of Nova Scotia know he is doing his best to bring about the object for which we are all striving, namely that Canada may have a navy of which she may be justly proud.

Mr. HAZEN: The senior member for Halifax (Mr. Isnor) has just made reference to my remarks in the house on Tuesday afternoon or evening in connection with the discrimination shown against New Brunswick by this government, since the commencement of the war. He takes exception to my attitude.

Mr. ISNOR: General attitude.

Mr. HAZEN: My general attitude. He is at a loss to understand just why I should protest and why I should demand, on behalf of my province, that it get a fair share of war activities and war expenditures.

Mr. MacNICOL: You would be slow if you did not protest.

Mr. HAZEN: As a member representing a New Brunswick constituency I have the absolute right to protest. And I will add that so long as this discrimination continues I propose to rise in my place in the house on every available opportunity and protest against this obvious discrimination. In making my protest I do not have to cite any prejudiced or partisan authorities. The other evening I quoted a statement by the Hon. J. B. McNair, premier of New Brunswick and a supporter of this government. This is what he said on June 5 of last year:

> I am sure that the people of New Brunswick will persist in doing their bit. But the sooner however the tactics of discrimination and favouritism are abandoned, the better.

I concur absolutely in his remarks. The sooner the tactics of discrimination and favouritism are abandoned, the better. Thirty million dollars spent by the navy department

since the outbreak of war for the erection of buildings and the purchase of land in Nova Scotia; yes, thirty millions of dollars, in the province from which the Minister of National Defence for Naval Services and the Minister of Finance come! Of course there is no politics in that! Oh, no, we are all above anything like that! Nobody would think of anything like that in this house—Liberals on that side of the house, or Liberals in Nova Scotia! Nobody would think of anything like that! But just the same, thirty millions of dollars were spent in Nova Scotia, while during the same time in New Brunswick it spent just $19,000!

Am I justified in protesting about discrimination and unfairness of that kind? While New Brunswick is not quite as large as Nova Scotia, yet it is nearly as large, and in every way it has contributed its fair share to the furtherance of the war effort. Have I no right to protest when discrimination of that kind exists? I repeat what I said last night, that if Ripley, the cartoonist, whose drawings appear every day in the newspapers, were furnished with these figures, he would have material for another illuminating cartoon.

I do not wish to repeat everything I said the other night. The senior member from Halifax may be at a loss to understand my attitude. But let me tell him this—and he may take it to heart—that the people of New Brunswick will not be at a loss to understand my attitude, and the stand I have taken in this matter.

Mr. MACDONALD (Kingston City): And thereby hangs a tale.

Mr. HAZEN: Thereby hangs a tale, yes; and it will be more than a "tail" that will hang, I can tell you, at the next election.

Let me say to the senior member for Halifax that I do not envy Nova Scotia anything she gets, or anything to which she is justly and fairly entitled. At an earlier session I spoke on the floor of the house about the lack of assistance and the lack of contracts for war munitions and supplies awarded not only to New Brunswick, but to Nova Scotia as well. Time does not permit my looking up my remarks, or making reference to what I said on that occasion. But at that time I spoke not only for New Brunswick but for Nova Scotia. I was speaking for the maritime provinces. On that occasion I quoted from the Rowell-Sirois report the statement that New Brunswick shares with Nova Scotia the unhappy distinction of having the most unfavourable economic history of any part of Canada since confederation. The statement made by the commission at that time was, I believe, correct. It is only as the maritime provinces stand together and work in their own interests that conditions will ever be improved.

But, sir, that is one thing. It is another thing for me to rise in my place in the house and protest against the lack of capital assistance received by New Brunswick for war industries; the lack of assistance we have been given in other respects; the manner in which we have been disregarded in connection with the establishment of air fields, air establishments, military establishments and naval establishments since the war commenced.

I do not wish to read into the record what I said the other night. For the present I shall let the matter remain as it is.

There are one or two questions that I asked the minister which he has not yet answered.

Item stands.

Progress reported.

At eleven o'clock the house adjourned, without question put, pursuant to standing order.

[Mr. Hazen.]

Friday, June 11, 1943

The house met at three o'clock.

AGRICULTURE COMMITTEE

Second report of standing committee on agriculture and colonization.—Mr. Weir.

POST-WAR RECONSTRUCTION

CREATION OF UNITED NATIONS RELIEF AND REHABILITATION AGENCY

On the orders of the day:

Mr. GORDON GRAYDON (Leader of the Opposition): I wish to direct the following question to the Prime Minister. A Canadian press dispatch under Washington dateline of June 10 states that:

> "The first step has been taken in the creation of a united nations relief and rehabilitation agency to feed, clothe, shelter and guide back to health the people of war-ravished nations as they are redeemed from axis domination," the United States State Department announced to-day.

The dispatch goes on to say:

> A draft agreement, providing for machinery to carry out this objective has been approved by Great Britain, United States, Russia and China.

Will the Prime Minister indicate to the house the role which this nation will play in connection with this new development? I should be glad if the Prime Minister would also comment on the report current in Washington that in view of our enormous

agricultural resources the chairmanship of the supplies committee of this agency may go to Canada.

Right Hon. W. L. MACKENZIE KING (Prime Minister): May I say to my hon. friend that the announcement which he has just quoted as appearing in a Canadian press dispatch of dateline June 10 is correct, namely, that—

> The first step has been taken in the creation of a united nations relief and rehabilitation agency to feed, clothe, shelter and guide back to health the people of war-ravaged nations as they are redeemed from axis domination.

The next statement of the dispatch, to the effect that a draft agreement providing for machinery to carry out this objective has been approved by Great Britain, the United States, Russia and China, is also correct. The proposals at the present time are simply in draft form, but I hope to be able some day next week to lay them on the table as they are finally approved.

Mr. GRAYDON: Has the draft proposal been submitted to Canada?

Mr. MACKENZIE KING: Oh, yes. The proposals will be finally tabled next week. As to the role which Canada will play in connection with this new development, I may say that Canada is prepared to play her full part. As to commenting upon the report current, to the effect that the chairmanship of the supplies committee of this agency may go to Canada, I should prefer to say nothing about that at present. Later I may have something to say.

FOOD CONFERENCE

INQUIRY AS TO APPOINTMENT OF INTERIM COMMITTEE—CANADIAN REPRESENTATION

Mr. M. J. COLDWELL (Rosetown Biggar): I was going to ask the Prime Minister a question supplementary to the one asked by the leader of the opposition, in regard to the recent food conference. Has an interim committee been appointed? If so, is Canada represented on that committee and, in that event, by whom?

Mr. MACKENZIE KING: Speaking of the food conference, my hon. friend means the conference that met at Hot Springs?

Mr. COLDWELL: Yes.

Mr. MACKENZIE KING: I have said that I hoped to be able to make a full statement to the house this week with respect to the conference. I am ready to do so, but the report itself has not yet been translated into French. I am therefore going to ask the house to allow me to table the documents on Monday and to make a full statement with regard to the conference at that time.

BUSINESS OF THE HOUSE

PROCEDURE IN DISCUSSION OF WAR APPROPRIATION BILL

On the orders of the day:

Right Hon. W. L. MACKENZIE KING (Prime Minister): May I say that I had a further reason for not desiring to make to-day the statement on the food conference. It would I believe suit the convenience of hon. members if the Minister of Munitions and Supply (Mr. Howe) were to be allowed right of way, at this afternoon's session, to present his statement under the war appropriation measure. The Minister of Munitions and Supply was to have followed immediately after the Minister of National Defence for Naval Services, but I understand the latter is quite prepared to delay if the house is agreeable to making way for the Minister of Munitions and Supply to proceed with his statement. The statement would then be on *Hansard* and hon. members would have an opportunity to study it in detail and with care between now and Monday. I have had an informal conference with the leaders of the different groups and I understand that they are agreeable to having this done. If so, the minister's statement might be made the first order to-day.

Mr. GRAYDON: It would be understood of course that the Minister of Munitions and Supply would simply close his part of the debate at the end of his statement, and then we would go on with the Minister of National Defence for Naval Services, and when he is through—I am optimistic about this—we would go on with the order mentioned by the acting leader of the government last night, namely, supply.

Mr. MACKENZIE KING: The house would have the choice between going on with supply in agriculture or going on with the Minister of Munitions and Supply, as it might prefer.

Mr. GRAYDON: If the choice I suggest were made we would be agreeable to the Minister of Munitions and Supply going on when the war appropriaton bill is called. If we are to make a change of the kind the Prime Minister mentions we would ask the Minister of Munitions and Supply to leave his statement until such time as the Minister of National Defence for Naval Services is through.

Mr. MACKENZIE KING: After the Minister of National Defence for Naval Services is through, we will go on with either agriculture or the Minister of Munitions and Supply.

Mr. GRAYDON: That is not my understanding of any informal arrangement made. We are not agreeable to that, and I want to make it clear.
